See suggestion in posting on Constant Acquiring of network address indication

## SP 52505: Enable the “Network Location Awareness (NLA)” service in Windows

**Symptom:** When you start the Services applet in “Start -> Control Panel -> Administrative Tools”, the “Startup Type” setting for the “Network Location Awareness (NLA)” service will be set to “Disabled”.

**Resolution:** Modify the system registry settings to enable “Manual” startup for the “Network Location Awareness (NLA)” service.

**Additional Information:** The “Network Location Awareness (NLA)” service collects and stores network configuration and location information, and notifies applications when this information changes. The Internet Connection Sharing (ICS) service requires this service to be running.
