163. First, the recovery rates established in Annex I to Paragraph 6 of the Packaging Ordinance are calculated as a percentage of the total of the marketed material which is actually taken back and recovered and not according to the number or type of packaging concerned. Point 1(1) of Annex I to Paragraph 6 of the Ordinance thus states that manufacturers and distributors of packaging must meet the requirements relating to the recovery of the packaging which they have marketed and that the same applies to operators of exemption systems for packaging in respect of which manufacturers and distributors participate in those systems. In that regard, it is stated in point 1(2) of Annex I to Paragraph 6 of the Ordinance that the quantities of relevant packaging are determined as a percentage of the total', whether it concerns packaging marketed by the manufacturer or by the distributor or packaging in respect of which the manufacturer or the distributor participates in an exemption system. In addition, since 1 January 2000, selfmanagement solutions and exemption systems have been subject to the same recovery rates per material (recital 21 of the contested decision).

164. Moreover, it is apparent from the fourth and fifth sentences of Paragraph 6(1) of the Ordinance

that the take-back and recovery obligations on distributors with a sales area greater than 200 m2 include product packaging bearing marks which they do not sell in so far as that packaging is the same type, shape and size as that in their range. Thus, the recovery rate of those distributors is not calculated in relation to packaging actually put on the market, but on the basis of packaging which is similar in terms of type, shape and size.

165. Second, it follows from the above that the division of the quantities of packaging between the different systems, decided by the manufacturer or the distributor of packaging, does not concern predetermined quantities of packaging, but totals of the material which correspond to that packaging. That means, in practice, that where a packaging manufacturer decides to entrust to DSD the take back and recovery of half of the plastic packaging which it markets in Germany, DSD assumes the responsibility of taking back and recovering a quantity of material corresponding to half of that packaging. In order to achieve the recovery rates laid down in the Ordinance, DSD must therefore show the German authorities that it has submitted for recovery 60% of the total amount of plastic entrusted to it by that manufacturer (60% is the recovery rate applicable to plastic). Similarly, if the manufacturer can show that it has placed on DSD the burden of its obligation to take back and recover in respect of half of the quantity of plastic marketed, the manufacturer must also prove that it took back and recovered the remaining quantity of the material, corresponding to the other half, by means of a selfmanagement solution or another exemption system.

166. In addition, it should be pointed out that it is perfectly possible, as stated in recital 170 of the decision, to divide up, by means of quotas, the quantities collected by collection facilities between different systems. The applicant's own example in respect of packaging made of paper and card, which is collected by the DSD system at the same time as printed matter (newspapers and magazines), shows that collection facilities may be shared without any problems. The applicant can thus not seek to prohibit its competitors from using a technique which it uses itself. In addition, at the hearing, Landbell referred to the existence of a compensation agreement, adopted following the decision, which allows different system operators to share the quantities of material recovered by the collection undertakings to which they have recourse depending on the quantities of the material which they are responsible for under the contracts signed with manufacturers and distributors of packaging.

167. In any case, DSD's claim that the division of the quantities collected of packaging made of paper, card and printed matter (newspapers and magazines) would be complicated and expensive is not sufficient to call into question the proportionality of the first obligation in light of the Packaging Ordinance. Even supposing that to be the case, it should be noted that complexity and cost are not criteria which make it possible to establish an infringement of the Ordinance and that such criteria cannot, as such, justify conduct which is likely to lead to the elimination of competition on the relevant markets. In addition, in the present case, the decision states expressly that the first obligation does not prevent DSD from reducing the fees paid to the collection undertakings in the case of shared use of collection facilities in order to ensure that it is not charged for any service provided for a third party (see paragraph 35). Therefore, in the case of shared use, DSD could make sure that the fee payable to the collection undertaking takes account only of the take-back and recovery service supplied for the benefit of the DSD system and that the fee does not finance a service supplied for the benefit of another system.

168. Similarly, no reliable evidence has been adduced in support of DSD's assertion that the quota technique used for packaging made of paper, card and printed matter led to unfair results for it. In any case, the shared use advocated in the decision is not likely to undermine DSD's interests, for the very reason that the objective of such a provision is to guarantee each exemption system the possibility of collecting the packaging attributed to it by the relevant manufacturers and distributors. It is also to guarantee that objective that the Commission imposes the second obligation on DSD

(see paragraphs 213 to 217).

169. Consequently, since the competition between systems does not take place on the basis of the attribution of specific packaging but on the basis of an allocation of totals of material corresponding to that packaging, the first obligation cannot be considered to be disproportionate, contrary to the applicant's claim.

170. It follows from the above that the first obligation cannot be considered to be disproportionate because it is contrary to the Packaging Ordinance.

171. Finally, as regards the applicant's claim that it could, on the basis of the Ordinance, oppose the sharing with self-management solutions of the collection facilities used by the DSD system, it should be pointed out that the Court has held that the term organisations competing with DSD', used to define the field of application of the first obligation, should be interpreted as including only systems in respect of which the contested decision considered that it was necessary to guarantee the shared use of the collection facilities, namely exemption systems competing with DSD (see paragraph 129). In those circumstances, the first obligation has no bearing on DSD's possible ability to rely on the Ordinance to oppose such shared use with selfmanagement solutions.

b) The likelihood of distortion of competition to the detriment of DSD

Arguments of the parties

172. The applicant submits that the first obligation is disproportionate because it enables its competitors to target the most profitable collection facilities by leaving it with the most expensive ones. Such free-riding is also open, without restriction, to selfmanagement solutions, which do not have any obligations as regards the territory to be covered, in respect of the areas of overlap with exemption systems, namely collection points treated as households and packaging sold by mail order. Other exemption schemes could also lead to free-riding to the detriment of the applicant and conflicts of interest might arise in the case of shared use of collection facilities, given that DSD could no longer regulate in detail the organisation of its system as it does at present. In addition, the applicant relies on the observations of the German authorities, which refer to the risk of exemption systems becoming less efficient and distortions of competition arising within the meaning of Article 7(1) of European Parliament and Council Directive 94/62/EC of 20 December 1994 on packaging and packaging waste (OJ 1994 L 365, p. 10) if selfmanagement solutions... could, independently of the region of distribution of the packaging, choose the place where, possibly restricted regionally to important collection points, they collect or buy waste packaging'.

173. The Commission, supported by Landbell, challenges the alleged threat which the first obligation constitutes for the DSD system. As the Packaging Ordinance applies in the same way to all exemption systems, none of those systems may restrict itself to the allegedly more lucrative sectors. Equally, self-management solutions must, in principle, collect their packaging from where it is delivered to the consumer and the structure of their collection points differs, for that reason, from that of exemption systems.

Findings of the Court

174. Contrary to the applicant's submission, the shared use of collection facilities does not have the effect of enabling exemption systems competing with DSD to favour, within the same Land , the most profitable zones to the detriment of others which remain the responsibility of the DSD system. All exemption systems are subject to the same obligations, whether it be the obligation of territorial coverage, the obligation to comply with recovery rates or the obligation to prove volume flows.

175. In any case, the decision states expressly that the first obligation does not prevent DSD

from reducing, in consequence, the fees paid to collection undertakings (see paragraph 35).

176. In addition, as regards the alleged incompatibility of the shared use of the collection facilities with Article 7(1) of Directive 94/62, which provides that the systems aimed at assuring the return and collection of packaging are to be designed so as to avoid barriers to trade or distortions of competition, it should be pointed out that the contested decision seeks precisely to guarantee the conditions of competition on the relevant markets and in conformity with the objectives of the Ordinance, the amendment of which in 1998 sought to enable the development of competition between exemption systems (recital 169 of the contested decision).

177. It follows from the above that the first obligation cannot be regarded as disproportionate in that it could entail a risk of distortion of competition to the detriment of the applicant.

178. In addition, as regards the alleged competition risk that the first obligation could represent in the case of shared use of collection facilities between the contractual partners of DSD and selfmanagement solutions, it should be recalled that the Court has found above that the term organisations competing with DSD', used to define the field of application of the first obligation, should be interpreted as including only systems in respect of which the contested decision considered that it was necessary to guarantee the shared use of the collection facilities, namely exemption systems competing with DSD. In those circumstances, the first obligation cannot have any bearing on the relations between DSD and the selfmanagement solutions.

c) The alleged adverse effect on the function of the mark Der Grüne Punkt

- Arguments of the parties

179. The applicant submits that the first obligation is disproportionate because it adversely affects the indication-of-origin of the mark Der Grüne Punkt, which is to identify the take-back and recovery service of the DSD system and not that of another system. The applicant points out that its mark is registered in Germany as a collective mark affixed to the packaging of the manufacturers and distributors which participate in the DSD system and as an individual mark affixed to the collection facilities used by the DSD system. In particular, the indication-of-origin of the collective mark Der Grüne Punkt has been recognised by several German courts (judgment of the Bundespatentgericht (Federal Patent Court, Germany) of 18 September 1996, which considers that the mark indicates the ecological commitment of the manufacturer; judgment of the Landgericht Hamburg (Hamburg Regional Court, Germany), of 23 December 1996, and the judgment of the Kammergericht Berlin (Court of Appeal, Berlin, Germany) of 14 June 1994, which consider that the mark makes people aware of participation in the DSD system; judgment of the Oberlandesgericht Köln (Higher Regional Court, Cologne, Germany) of 8 May 1998, which refers to the vital importance of the mark as a result of its dissemination and the fact that it is well known; and the judgment of the Bundesgerichtshof (Federal Court of Justice, Germany) of 15 March 2001, which takes the view that the manufacturers and distributors indicate their participation in the DSD system by affixing the mark to their packaging). In the present case, the applicant submits that the shared use of collection facilities adversely affects both the collective and individual marks Der Grüne Punkt, in so far as the consumer knows, because of advertising, that packaging which bears that mark is part of the DSD system and not part of a rival system and that it is to be returned to the collection facilities of the DSD system which, generally speaking, also bear the mark Der Grüne Punkt. However, in the case of shared use of collection facilities, the organisation of the take-back and recovery of packaging collected by the DSD system is, in part, carried out - contrary to the consumer's expectations - by organisations competing with DSD. The shared use of collection facilities forming part of the DSD system thus has the effect of misleading consumers.

180. The applicant adds that the first obligation forces it to encourage competition by granting

its competitors a free, compulsory licence to affix the mark Der Grüne Punkt on collection facilities. It claims that such a licence is unlawful since it infringes the principles applicable in that context (Article 21 of the Agreement on TradeRelated Aspects of Intellectual Property Rights (TRIPS) of 15 April 1994 (Annex 1C of the Agreement Establishing the World Trade Organisation), approved by Council Decision 94/800/EC of 22 December 1994 concerning the conclusion on behalf of the European Community, as regards matters within its competence, of the agreements reached in the Uruguay Round multilateral negotiations (1986-1994) (OJ 1994 L 336, p. 1 and 214), and the Opinion 1/94 of the Court of Justice [1994] (ECR I5267).

181. As a preliminary point, the Commission submits that certain complaints raised by the applicant do not concern the Service Agreement, which is the subject-matter of the contested decision, but the Trade Mark Agreement, which is the subjectmatter of Decision 2001/463 and thus does not have to be examined in the context of the present case. The Commission states that the applicant appears to want to claim an exclusive right over the use of the collection facilities due to the fact that it authorises their owners to affix the logo Der Grüne Punkt on their facilities. That cannot be accepted. That would mean that a collection undertaking which affixes the Der Grüne Punkt logo on a packaging collection van could use that van only when transporting packaging for the DSD system and not for other waste. Not only does the Service Agreement not contain a provision capable of supporting that reasoning, but the answers given by collection undertakings to requests for information sent by the Commission show, in particular, that those undertakings use their vehicles for other orders. The applicant can thus not rely on the exclusive right which it claims to have. In addition, the Commission states that the consumer is not misled when he puts packaging bearing the Der Grüne Punkt logo in a collection facility which is part of the DSD system since the question of shared use has no bearing on his conduct. Furthermore, the final user of the take- back and recovery service offered by the DSD system is not the consumer but the manufacturer or distributor of the packaging. Therefore, there is no proof that the deception alleged by the applicant adversely affects the mark Der Grüne Punkt.

182. As regards the compulsory licence, the Commission claims that the applicant fails to stipulate who exactly the decision forces to grant a licence. The applicant remains free to authorise collection undertakings to use its mark by affixing it to their containers, or to recommend it to them and, also, to withdraw such authorisation from them.

Findings of the Court

183. In essence, the applicant alleges that the first obligation infringes the principle of proportionality because shared use adversely affects the mark Der Grüne Punk, by which its services may be distinguished from those offered by other undertakings. By allowing for access to the collection facilities put in place by the collection undertakings, which are already used by the DSD system, the exemption systems competing with DSD also benefit from the fact that the mark is well known to consumers, who would be mistaken if they were to place their packaging into facilities which they believed to be part of the DSD system and not part of a system of one of its competitors.

184. It must be found, however, that that line of argument cannot succeed.

185. First, the Service Agreement does not prevent a collection undertaking which is a contractual partner of DSD from offering its collection facilities to a competitor system of the DSD system. Under the Service Agreement, it is stated only that when promoting the system, collection undertakings shall display, in an appropriate and visible manner, the Der Grüne Punk logo conferred by DSD, for example by printing it on writing paper, on its advertisements and on collection bins and on vehicles and equipment used in the running of the system' (the fourth sentence of the first subparagraph of Paragraph 2(5)) and that use of the Der Grüne Punkt logo is free for collection undertakings' (third subparagraph of Paragraph 2(5)). The fact that DSD authorises collection undertakings

to affix, free of charge, the mark Der Grüne Punkt to their collection facilities is not sufficient for DSD to claim that it has exclusive use of those facilities. On the contrary, it is apparent from the Service Agreement that the affixing of that logo serves no other purpose than to state for promotional purposes' that the facility concerned is part of the DSD system.

186. The provisions of the Service Agreement concerning the mark Der Grüne Punkt do not prove that the affixing of that mark to a collection facility has the effect of preventing that facility from serving other purposes.

187. Second, no provision of the Packaging Ordinance imposes an obligation to make the system used visible on collection facilities. A fortiori, no provision of the Ordinance establishes that collection facilities which are identified is such a way must be reserved to a single system in order to prevent consumers from mistaking the system responsible for taking back and recovering the packaging deposited there. In addition, as regards the importance to be given to the affixing of the Der Grüne Punkt logo on packaging - one of the possibilities laid down in the second sentence of point 4(2) of Annex I to Paragraph 6 of the Ordinance to inform consumers that the packaging at issue is part of an exemption system (see paragraph 6) - the Court held in the judgment in Case T151/01 DSD v Commission , paragraph 133, that, as of the moment when the recovery rates laid down in the Ordinance are achieved and the quantities of packaging are divided between the systems on the basis of the mass of material concerned and not by reference to the packaging as such, whether it bears the Der Grüne Punkt logo or not, that logo ceases to have the role or importance which the applicant claims. Thus, a manufacturer or distributor of packaging which decides to entrust DSD with the taking back and recovery of part of the packaging which it markets in Germany and to deal personally with the taking back and recovery of the other part of that packaging, by means of a self-management solution or by assigning it to another exemption system, must merely divide the quantities of materials between the different systems concerned and comply with the conditions for identification laid down in the Ordinance without worrying about a specific definition of the conduct of the final consumer as claimed by the applicant.

188. In that regard, the provisions of the Ordinance do not establish that the affixing of the mark Der Grüne Punkt to a collection facility or to packaging intended to be recovered by the DSD system has the effect of preventing the shared use of collection facilities.

189. Third, it is also apparent from the documents before the Court that not all of the collection facilities used by the DSD system bear the Der Grüne Punkt logo. It is thus legitimate to think that, when depositing packaging in the collection facilities, consumers do not associate those installations with the mark Der Grüne Punkt, but with the type of packaging (sales packaging) and especially with the type of material which it is made of (lightweight materials, paper/card, glass etc.) to be deposited in the different kinds of collection facilities. In that regard, the applicant does not show that the consumer attaches importance to the fact that DSD and not another exemption system is in charge of the taking back and disposal of the packaging. Admittedly, consumers may have concerns about the environment, but, in so far as all exemption systems are subject to the same obligations, the question as to which system will actually deal with the taking back and recovery does not appear to be decisive. None of those obligations is affected by the shared use of existing collection facilities. Similarly, the applicant does not dispute that packaging made of paper and card is collected in the same facilities as printed matter (newspapers and magazines), which is the responsibility of the local authorities and not the DSD system. The applicant does not claim, in that regard, that, as a result of the possible affixing of the mark Der Grüne Punkt to those installations, consumers would think that the DSD system assumes responsibility for the collection and recovery of printed matter.

190. Consequently, it may be sufficient, to avoid any risk of confusion for consumers, to indicate

on shared collection facilities that packaging is recuperated for both the DSD system and for one or more other competing exemption systems and not be necessary to prohibit any shared use of those collection facilities as claimed by the applicant.

191. Finally, neither the first obligation nor the technical constraints of the shared use of collection facilities requires that the organisations competing with DSD be authorised by it to use the mark Der Grüne Punkt. It is thus conceivable that shared collection facilities have no logo or indication at all or, on the other hand, that every system be equipped with a means of identifying itself with that mark. Therefore, it cannot be claimed that the first obligation requires DSD to grant, free of charge, a compulsory licence to use the mark Der Grüne Punkt.

192. It follows from the above that the first obligation cannot be regarded as disproportionate by excessively impairing the role played by the mark Der Grüne Punkt in the context of the DSD system.

d) The effect of the first obligation on the right of access to the national courts

Arguments of the parties

193. The applicant states that the first obligation prohibits it from preventing' collection undertakings from concluding shared-use agreements with its competitors. Such an obstacle in their way could be constituted by the bringing of an action by DSD against those collection undertakings before the national authorities or courts in order to claim that the shared use of collection facilities is incompatible with the Ordinance. In that case, the first obligation would thus be incompatible with the fundamental right of access to justice laid down in Article 6 of the European Convention for the Protection of Human Rights and Fundamental Freedoms (Case 222/84 Johnston [1986] ECR 1651, paragraphs 17 and 18, and Case T111/96 ITT Promedia v Commission [1998] ECR II2937, paragraph 60).

194. The Commission states that the first obligation in no way prevents the applicant from referring to a German administrative court the question of the compatibility of the shared use of the collection facilities with the Packaging Ordinance (see, to that effect, the judgments of the Verwaltungsgerichtshof Kassel of 20 August 1999 and of the Verwaltungsgericht Gieen of 31 January 2001). It is, however, the task of the Community judicature to examine the legality of the commitment and of the obligations.

Findings of the Court

195. In essence, the applicant alleges that the first obligation prevents it from claiming before the German national courts and authorities that the shared use of the collection facilities is contrary to the Ordinance.

196. The first obligation cannot be interpreted in that way. It requires DSD not to prevent the shared use of the collection facilities by competitor exemption systems. The Court has found above that that obligation was consistent with Article 81(3) EC and Article 8 of Regulation No 17 (see paragraph 151) because it was necessary to enable competition to be maintained on the market for collection from consumers and the market for the organisation of the taking back and recovery of packaging from consumers.

197. However, the first obligation does not prevent DSD from bringing an action before a national court or authority to oppose the shared use of collection facilities imposed on it in the context of the decision granting exemption. DSD thus retains the right to oppose the shared use of the collection facilities of its contractual partners by alleging infringement of the German Packaging Ordinance or other national provisions. However, although DSD has that possibility, it cannot disregard the fact that the Commission might then consider that such action infringes the obligation imposed on it in order to secure the decision granting exemption and in accordance with the applicable

provisions of Community law. In addition, when national courts rule on agreements or practices which are already the subject of a Commission decision they cannot take decisions running counter to that of the Commission, even if the latter's decision conflicts with a decision given by a national court of first instance (Case C344/98 Masterfoods and HB [2000] ECR I11369, paragraph 52).

198. The fundamental right of access to justice claimed by DSD can thus not authorise it to disregard a decision adopted on the basis of Community law.

199. It follows from the above that the first obligation cannot be considered to be disproportionate by allegedly depriving DSD of the right to bring an action before the national courts and authorities.

5. Conclusions on the first plea in law

200. It is apparent from the above that the first obligation prevents the applicant from impeding the access of competing exemption systems to the collection facilities of its contractual partners. That obligation is based on the Commission's intention to guarantee systems competing with DSD access to the market for collection from consumers and, consequently, to the market for the organisation of the taking back and recovery from consumers. None of the arguments submitted by the applicant in the context of the first plea is capable of calling that conclusion into question.

201. Consequently, the first plea must be dismissed in its entirety in respect of exemption systems.

202. In addition, in order to respond to DSD's arguments in that regard, the Court considers it necessary to recall (see paragraph 121) that the term organisations competing with DSD' used to define the field of application of the first obligation does not include selfmanagement solutions, since it is apparent from the contested decision that those systems only play a peripheral role on the relevant markets and that they have, in those cases of overlap, sufficient possibilities at their disposal for gaining access to collection undertakings or collection facilities other than those used by the DSD system.

203. Consequently, since the first obligation does not concern selfmanagement solutions, it is not necessary to rule any further on the arguments raised by the applicant in that regard.

B - The second plea in law, alleging that the obligation laid down in Article 3(a) of the contested decision infringes Article 86(2) EC

1. Arguments of the parties

204. The applicant states that it collects and recovers packaging all over Germany, including unattractive rural regions, and does so as a means of protecting the environment. It also points out that the DSD system was approved by the competent authorities in all of the Länder . According to the applicant, such approval has the effect of entrusting it with a service of general economic interest within the meaning of Article 86(2) EC. In that regard, the applicant states that the fact that any operator of an exemption system may be approved by the authorities of a Land is irrelevant, since Article 86(2) EC refers only to the assumption of a service of general economic interest and not to the existence of special or exclusive rights within the meaning of Article 86(1) EC. In that respect, the applicant submits that the attainment of the guarantee obligations to which DSD is subject (regular collection throughout the country, recovery rates and proof of volume flows) would be threatened by the shared use of collection facilities laid down in the first obligation, since that obligation is likely to call into question the approval of the DSD system. In addition, such shared use would lead to distortions of competition to the d etriment of DSD by enabling organisations competing with DSD to free-ride on its system. Consequently, the rules on competition laid down in Article 81 EC should not apply to the present case in so far as they impede the accomplishment of the specific task entrusted to DSD.

205. The Commission and Landbell state that the applicant does not adduce any evidence of the

threat represented by shared use to its activity or an alleged task covered by a service of general economic interest, since that shared use does not bother the collection undertakings used by DSD in any way. Landbell also states that serving unattractive rural regions forms an integral part of the service sought by the clients of exemption systems. They want to be able to benefit from a collection throughout the whole of the territory concerned in order to be freed of their own obligations under the Ordinance.

2. Findings of the Court

206. Under Article 86(2) EC, undertakings entrusted with the operation of services of general economic interest are to be subject to the rules contained in the Treaty, in particular to the rules on competition, insofar as the application of such rules does not obstruct the performance, in law or in fact, of the particular tasks assigned to them. That article also states that the development of trade must not be affected to such an extent as would be contrary to the interests of the Community.

207. In the present case, it must be pointed out that, even supposing that the applicant is entrusted with a service of general economic interest within the meaning of Article 86(2) EC and in the same way as all exemption systems approved by the authorities of the Länder , the fact remains that the risk of that task being called into question as a result of the contested decision has not been shown.

208. Contrary to the applicant's claim in the context of the present plea in law, the obligation imposed on DSD not to impede collection undertakings from concluding with DSD's competitors contracts authorising them to use their bins and other collection and sorting facilities for packaging and to apply those agreements in no way proves that the contested decision threatens the attainment, on economically acceptable conditions, of the take back and recovery service entrusted in the DSD system.

209. In particular, none of the documents before the Court leads to the conclusion that as a result of the contested decision DSD will no longer be able to collect packaging on a regular basis throughout Germany, to achieve the recovery rates imposed by the Ordinance, or to furnish proof of the quantities required under that ordinance. Similarly, the Court has already found, in the context of the first plea, that the applicant had not shown that the implementation of the first obligation was likely to lead to distortions of competition to its detriment.

210. Consequently, the second plea in law must be dismissed.

C - The third plea, alleging that the obligation laid down in Article 3(b) of the contested decision infringes Article 81(3) EC and Article 86(2) EC

211. The applicant submits that the obligation laid down in Article 3(b) of the contested decision (the second obligation'), according to which, where collectors conclude agreements with competitors with DSD providing for the joint use of containers or other facilities for the collection and sorting of used sales packaging, DSD may not require that they inform DSD of volumes of packaging not collected for the DSD system', infringes Article 81(3) EC and Article 86(2) EC. It refers, in that respect, to the arguments previously raised in the context of the first and second pleas.

212. In addition, the applicant observes that, in the Packaging Ordinance, the German authorities require it to recover the quantity of packaging actually collected' (see part 1(5) of Annex I to Paragraph 6 of the Ordinance), and that, to furnish the proof of that quantity, it requests collection undertakings to inform it on a monthly basis of the quantities collected'. However, the second obligation calls for DSD not to require those collection undertakings to provide it with proof relating to volumes of packaging not collected for the DSD system' in the case of shared use of

collection facilities. According to the contested decision, that obligation is necessary in order to ensure that... where there is joint use of collection facilities, competitors with DSD should be able to make unrestricted use of packaging collected for them' (recital 182 of the contested decision). In that regard, the applicant states that the purpose of the second obligation is to ensure that, in the case of shared use, the quantities collected are not used to establish the proof of volume flows treated by DSD but are, on the contrary, attributed to competitors. However, that obligation should not exclude the possibility for DSD to request collection undertakings to provide it with information relating to the whole of the packaging collected in the collection facilities in order to be able to furnish the proof of the quantities collected.

213. The Court points out, first, that the applicant does not set out, in its third plea, any new or specific arguments which are capable of showing how the second obligation infringes Article 81(3) EC and Article 86(2) EC. In those circumstances, the third plea must be dismissed for the same reasons as those given in the context of the first and second pleas.

214. In addition, the Court notes that, at the hearing, the Commission and DSD agreed on the interpretation to be given to the content of the second obligation defined by Article 3(b) of the contested decision.

215. Thus, in the light of the pleadings and the answers given by the parties to the questions asked at the hearing, the Court considers that although, under the second obligation, DSD cannot request collection undertakings to provide it with information on the quantities of packaging which have been collected in the context of a competitor exemption system, DSD is, however, still able to request those undertakings to provide it with the information required for it to be able to furnish the proof of the quantities collected by the DSD system. That right to information is also laid down explicitly in recital 175 of the contested decision.

216. When questioned on that point at the hearing, the Commission stated that the second obligation did not prevent the applicant from knowing the total quantity of packaging collected by the collection undertakings or the part of that packaging attributable to DSD; what is important is that DSD does not seek to attribute to itself quantities of packaging collected by those collection undertakings for a competitor system. The Commission's stance in that regard is in line with that of the applicant (see paragraph 212).

217. In those circumstances, the second obligation must be interpreted as meaning, first, that DSD cannot require that collection undertakings which are its contractual partners under the Service Agreement attribute to it quantities of packaging collected for a competitor system and, second, that that obligation does not prevent DSD from knowing the total quantity of packaging collected by collection undertakings and the part of that packaging which is attributable to DSD.

D - The fourth plea in law, linked to the application for annulment of the commitment laid down in recital 72 of the contested decision and alleging infringement of the fundamental right of access to justice

1. Arguments of the parties

218. The applicant observes that, at the Commission's request, it gave the commitment to refrain from seeking to restrict use in the manner referred to in the judgment of the Cologne Regional Court of 18 March 1997 in [the] particular case of VfW' (recital 72 of the contested decision), following an action brought by DSD to oppose the free use of the collection facilities of the DSD system by VfW. According to the applicant, that commitment is incompatible with the fundamental right of free access to justice (ITT Promedia v Commission , paragraph 60). That infringement is all the more serious because an action for an injunction brought by DSD against one of its contractual partners is not manifestly unfounded' and thus abusive under German law (ITT Promedia

v Commission , paragraph 56). It is apparent from the judgment of the Landgericht Köln that DSD could legitimately bring proceedings, on the basis of the German law on unfair competition, to prevent VfW from using, free of charge, the collection facilities financed by DSD. According to that judgment, the shared use of those collection facilities requires DSD's approval and payment of a sort of royalty' directly to DSD.

219. The Commission, supported by Landbell, states that the applicant criticises a commitment given in response to the observations addressed to the Commission by several third parties, according to which DSD, contrary to the commitment reproduced in recital 71 of the contested decision, did not allow free access to the collection facilities of its contractual partners. The Commission thus states that if the applicant cannot prevent collection undertakings from authorising the shared use of their facilities, it can not have the right to prohibit a competitor from that shared use.

2. Findings of the Court

220. Following the publication of the notice in the Official Journal announcing the Commission's intention to declare itself in favour of the various agreements relating to the DSD system, several interested third parties made comments to the Commission stating that, contrary to the commitments given by DSD during the administrative proceedings in relation to the opportunity for third parties to gain free access to the collection facilities of its contractual partners, DSD brought proceedings challenging the shared use of those facilities. Thus, the judgment of the Landgericht Köln of 18 March 1997 showed clearly DSD's intention to oppose a self-management system, namely VfW, wishing to gain free access to the collection facilities used by the DSD system in certain German hospitals.

221. In that regard, the Commission informed DSD, by letter of 21 August 1997, that conduct consisting of preventing third parties from using the collection facilities of its contractual partners could fall within the ambit of Article 82 EC and it stressed the significance of such conduct for the exemption procedure in so far as, under the fourth condition laid down in Article 81(3) EC, an agreement notified for the purpose of exemption must not afford the possibility of eliminating competition in respect of a substantial part of the products in question.

222. Following that statement of position, DSD gave the following commitment - set out in recital 72 of the contested decision - in order to address the concerns raised by the Commission in its letter of 21 August 1997:

DSD is prepared to refrain from seeking to restrict use in the manner referred to in the judgment of the Cologne Regional Court of 18 March 1997 in [the] particular case of VfW and in comparable cases. DSD may however pursue claims for information and settlement against collectors in a contractual relationship with DSD.'

223. It cannot be alleged that such a commitment constitutes an infringement of DSD's right of access to justice. DSD proposed that commitment to the Commission without any constraint in order to prevent it from taking further action following its letter of 21 August 1997. Therefore, in accordance with the principle that it is possible to waive a right, and with full knowledge of the facts, DSD essentially informed the Commission, of its own volition, that it was waiving its right to bring an action before the German courts to the agreements likely to take effect between the collection undertakings which have concluded a Service Agreement with DSD and the various systems which might be interested in the shared use of their collection facilities.

224. Moreover, DSD's waiver in the commitment set out in recital 72 was not made without anything in return from the Commission.

225. Thus, it is incontestable that the Commission did not initiate proceedings under Article

82 EC following the commitment given by DSD, unlike in the case of the Trade Mark Agreement where the Commission initiated such proceedings following the observations on the notice in the Official Journal submitted by interested third parties.

226. Similarly, it is not disputed that the Commission took account of the commitment given by DSD in refraining from examining in further detail the existence of a possible competition problem as regards, for example, the access of self-management solutions to the collection facilities in hospitals in Germany or in other market sectors. Such an analysis could have been necessary to enable the Commission to examine the effect which DSD's conduct could have had in the context of the case which gave rise to the judgment of the Landgericht Köln of 18 March 1997 on its analysis of the Service Agreement under Article 81(1) and (3) EC. In the present case, the Commission's analysis, in that regard, remained vague, even though the decision states that it appears conceivable for a hospital to have several collection facilities on its premises (recital 128 of the contested decision). That assertion cannot be presumed from the results that a detailed analysis of the conditions of competition in the field of the collection of packaging delivered to hospitals might have produced.

227. In those circumstances, the Commission was rightly able to find, in the light of Article 81(3) EC and Article 8 of Regulation No 17, that it could not be content with just the commitment given by DSD in relation to the access of exemption systems to the collection facilities of DSD's contractual partners but that it had to go further and couple the decision granting exemption with an obligation making it possible to guarantee that the Service Agreement was not going to enable DSD to eliminate the competition on the relevant markets.

228. In that regard, the fact that the first obligation does not concern selfmanagement solutions because it is not necessary to guarantee the access of those systems to the collection facilities of DSD's contractual partners on account of the alternative solutions offered by the collection undertakings which have not concluded a Service Agreement with DSD (see paragraphs 120 to 129 and recital 159 of the contested decision) cannot lead to the conclusion that the commitment set out in recital 72 of the contested decision is unlawful because it does not respond to a competition problem identified in the contested decision. That commitment responds to different reasoning from that which led the Commission to adopt the first obligation. Although that obligation seeks to guarantee the attainment of the fourth condition laid down in Article 81(3) EC, namely to ensure that the Service Agreement does not eliminate competition on the relevant markets, the commitment seeks merely to facilitate the Commission's task when it issues a negative clearance or an exemption. As is pointed out in paragraphs 225 and 226 above, the commitment given by DSD enabled the Commission to avoid analysing questions which could, as such, have called into question the contested decision or have given rise to the initiation of a proceeding under Article 82 EC.

229. If follows from the above that the commitment given by the applicant reproduced in recital 72 of the contested decision does not adversely affect its right of access to justice in so far as it was adopted by DSD in full knowledge of the facts in order to cause the Commission to stop examining questions which might give rise to a proceeding under Article 82 EC or call into question its analysis in the context of Article 81 EC.

230. Consequently, the fourth plea in law must be dismissed.

231. It follows from all the above that the action must be dismissed in its entirety both in so far as it concerns the first and second obligations and in so far as it concerns the contested decision as a whole or merely the commitment reproduced in recital 72 of the contested decision.

Costs

232. Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. However, Article

87(3) of the Rules of Procedure provides that where each party succeeds on some and fails on other heads, the Court may order that the costs be shared or that each party bear its own costs. In the present case, the Court considers that the interpretation of the first obligation, to the effect that it concerns only exemption systems competing with DSD and not self-management solutions, and of the second obligation partially upholds the claims made by that applicant on those points. Consequently, the Court will make an equitable assessment of the case in holding that the Commission is to bear a quarter of the applicant's costs and a quarter of its own costs. The applicant is to bear three quarters of its own costs, three quarters of the costs incurred by the Commission, and the costs incurred by Landbell.

PROCEDU Action for annulment - unfounded

DATES of document: 24/05/2007
of application: 27/11/2001

Case T-201/04

Microsoft Corp.

v

Commission of the European Communities

(Competition – Abuse of dominant position – Client PC operating systems – Work group server operating systems – Streaming media players – Decision finding infringements of Article 82 EC – Refusal of the dominant undertaking to supply and authorise the use of interoperability information – Supply by the dominant undertaking of its client PC operating system conditional on the simultaneous acquisition of its media player – Remedies – Appointment of an independent monitoring trustee – Fine – Determination of the amount – Proportionality)

Summary of the Judgment

1. *Competition – Administrative procedure – Commission decision finding an infringement – Decision requiring a complex economic or technical assessment*

   (Arts 81 EC and 82 EC)

2. *Procedure – Application initiating proceedings – Reply – Formal requirements*

   (Statute of the Court of Justice, Art. 21; Rules of Procedure of the Court of First Instance, Art. 44(1)(c))

3. *Competition – Dominant position – Abuse – Definition – Obligations on the dominant undertaking*

   (Art. 82 EC)

4. *Competition – Dominant position – Abuse – Definition – Obligations on the dominant undertaking*

   (Art. 82 EC)

5. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

   (Art. 82 EC)

6. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

   (Art. 82 EC)

7. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

   (Art. 82 EC)

8. *Competition – Dominant position – Relevant market – Definition – Criteria*

   (Art. 82 EC; Commission Notice 97/C 372/03)

9. *Competition – Dominant position – Abuse – Leveraging*

(Art. 82 EC)

10. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

(Art. 82 EC)

11. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

(Art. 82 EC)

12. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

(Art. 82 EC)

13. *International agreements – Community agreements – Primacy only over secondary legislation – Consequences for interpretation of Community law – Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS)*

14. *Competition – Dominant position – Abuse – Refusal to grant a licence for the use of a product covered by intellectual property rights*

(Art. 82 EC)

15. *Competition – Dominant position – Abuse – Tying*

(Art. 82 EC)

16. *Competition – Dominant position – Abuse – Tying*

(Art. 82 EC)

17. *Competition – Dominant position – Abuse – Tying*

(Art. 82 EC)

18. *Competition – Dominant position – Abuse – Tying*

(Art. 82 EC)

19. *Competition – Dominant position – Abuse – Definition – Obligations on the dominant undertaking – Competition on the basis of merit*

(Art. 82 EC)

20. *Actions for annulment – Pleas in law – Not possible to rely on WTO agreements to challenge the lawfulness of a Community act – Exceptions*

(Art. 230 EC)

21. *Competition – Administrative procedure – Commission decision finding an infringement – Remedies*

(Art. 82 EC; Council Regulation No 17, Arts 3, 14 and 16)

22. *Competition – Fines – Amount – Determination – Criteria*

(Art. 82 EC)

1. Although as a general rule the Community Courts undertake a comprehensive review of the question as to whether or not the conditions for the application of the competition rules are met, their review of complex economic appraisals made by the Commission is necessarily limited to checking whether the relevant rules on procedure and on stating reasons have been complied with, whether the facts have been accurately stated and whether there has been any manifest error of assessment or a misuse of powers.

   Likewise, in so far as a Commission decision is the result of complex technical appraisals, those appraisals are in principle subject to only limited review by the Court, which means that the Community Courts cannot substitute their own assessment of matters of fact for the Commission's.

   However, while the Community Courts recognise that the Commission has a margin of appreciation in economic or technical matters, that does not mean that they must decline to review the Commission's interpretation of economic or technical data. The Community Courts must not only establish whether the evidence put forward is factually accurate, reliable and consistent but must also determine whether that evidence contains all the relevant data that must be taken into consideration in appraising a complex situation and whether it is capable of substantiating the conclusions drawn from it.

   (see paras 87-89, 379, 482, 564)

2. Under Article 21 of the Statute of the Court of Justice and Article 44(1)(c) of the Rules of Procedure of the Court of First Instance, each application is required to state the subject-matter of the proceedings and a summary of the pleas in law on which the application is based. According to consistent case-law it is necessary, for an action to be admissible, that the basic matters of law and fact relied on be indicated, at least in summary form, coherently and intelligibly in the application itself. Whilst the body of the application may be supported and supplemented on specific points by references to extracts from documents annexed thereto, a general reference to other documents, even those annexed to the application, cannot make up for the absence of the essential arguments in law which, in accordance with the abovementioned provisions, must appear in the application.

   Furthermore, it is not for the Court to seek and identify in the annexes the pleas and arguments on which it may consider the action to be based, since the annexes have a purely evidential and instrumental function.

   The Court may take into account only those documents annexed to the application which support or supplement matters of fact or of law expressly set out in the body of the procedural documents by the applicant or defendant.

   That interpretation of Article 21 of the Statute of the Court of Justice and Article 44(1)(c) of the Rules of Procedure of the Court of First Instance also applies to the conditions for admissibility of a reply, which according to Article 47(1) of the Rules of Procedure is intended to supplement the application.

   (see paras 94-95, 99, 483)

3. Article 82 EC deals with the conduct of one or more economic operators involving the abuse of a position of economic strength which enables the operator concerned to hinder the maintenance of effective competition on the relevant market by allowing it to behave to an appreciable extent independently of its competitors, its customers and, ultimately, consumers.

   Furthermore, whilst the finding of a dominant position does not in itself imply any criticism of the undertaking concerned, that undertaking has a special responsibility, irrespective of the causes of that position, not to allow its conduct to impair genuine undistorted competition on the common market.

   (see para. 229)

4. In proceedings brought on the basis of Article 82 EC, the Commission may define the concept of 'interoperability' as the capacity for two software products to exchange information and to use that information mutually in order to allow each of those software products to function in all the ways envisaged, without being bound by the definition given by Directive 91/250 on the legal protection of computer programs, from which it does not depart.

In that context, the Commission may determine the 'degree of interoperability' of software products by reference to what, in its view, is necessary, in the light of Article 82 EC, in order to enable developers of work group server operating systems competing with the dominant developer to remain viably on the market. Should it be established that the existing degree of interoperability does not enable those developers to remain viably on the market, it follows that the maintenance of effective competition on that market is being hindered.

In requiring, by way of remedy, that an undertaking in a dominant position disclose the interoperability information, the Commission refers to a detailed technical description of certain rules of interconnection and interaction that can be used within the work group networks to deliver work group services. That description does not extend to the way in which the undertaking implements those rules, in particular, to the internal structure or to the source code of its products.

The degree of interoperability thus required by the Commission enables competing operating systems to interoperate with the dominant undertaking's domain architecture on an equal footing in order to be able to compete viably with the latter's operating systems. It does not entail making competitors' products work in exactly the same way as its own and does not enable its competitors to clone or reproduce its products or certain features of those products.

(see paras 192, 206, 225, 227-228, 230, 234, 236-238, 241, 259, 374-375)

5. In a decision penalising the refusal by a dominant undertaking to provide competing undertakings with interoperability information of software products, the Commission may refrain from making a finding on the issue whether the dominant undertaking's communication protocols or the specifications of those protocols are covered by intellectual property rights and assume that the undertaking is able to rely on such rights. Thus the Commission may proceed on the premiss that the refusal to supply interoperability information might not be a mere refusal to supply a product or a service indispensable to the exercise of a specific activity but a refusal to license intellectual property rights. The Commission thus chooses the strictest legal test and therefore the one most favourable to the accused dominant undertaking. In such a situation, it is therefore necessary to ascertain whether the criteria which determine when an undertaking in a dominant position can be required to grant a licence relating to intellectual property rights are satisfied.

(see paras 283-284, 290)

6. Although undertakings are, as a rule, free to choose their business partners, in certain circumstances a refusal to supply on the part of a dominant undertaking may constitute an abuse of a dominant position within the meaning of Article 82 EC unless it is objectively justified.

The refusal by an undertaking holding a dominant position to license a third party to use a product covered by an intellectual property right cannot in itself constitute an abuse of a dominant position within the meaning of Article 82 EC.

It is only in exceptional circumstances that the exercise of the exclusive right by the owner of the intellectual property right may give rise to such an abuse and that, accordingly, it is permissible, in the public interest in maintaining effective competition on the market, to encroach upon the exclusive right of the holder of the intellectual property right by requiring him to grant licences to third parties seeking to enter or remain on that market.

The following circumstances, in particular, must be considered to be exceptional: in the first place, the refusal relates to a product or service indispensable to the exercise of a particular activity on a neighbouring market; in the second place, the refusal is of such a kind as to exclude any effective competition on that neighbouring market; in the third place, the refusal prevents the appearance of a new product for which there is potential consumer demand.

Once it is established that such circumstances are present, the refusal by the holder of a dominant position to grant a licence may infringe Article 82 EC unless the refusal is objectively justified.

Finally, in order that a refusal to give access to a product or service indispensable to the exercise of a particular activity may be considered abusive, it is necessary to distinguish two markets, namely, a market constituted by that product or service and on which the undertaking refusing to supply holds a dominant position and a neighbouring market on which the product or service is used in the manufacture of another product or for the supply of another service. The fact that the indispensable product or service is not marketed separately does not exclude from the outset the possibility of identifying a separate market. It is sufficient that a potential market or even a hypothetical market can be identified. Such is the case where the products or services are indispensable to the conduct of a particular business activity and where there is an actual demand for them on the part of undertakings which seek to carry on that business. It is decisive that two different stages of production are identified and that they are interconnected in that the upstream product is indispensable for supply of the downstream product.

(see paras 319, 331-335, 691, 1336)

7. For the purposes of application of Article 82 EC to the refusal of a dominant undertaking to grant a licence in the market for work group server operating systems, the 'interoperability information' must be regarded as being 'indispensable', inter alia because the interoperability is of significant competitive importance in that market, even if their lack of availability leads to competition being eliminated only gradually and not immediately.

(see paras 381, 428)

8. As stated in the Commission Notice on the definition of the relevant market for the purposes of Community competition law, '[a] relevant product market comprises all those products and/or services which are regarded as interchangeable or substitutable by the consumer, by reason of the products' characteristics, their prices and their intended use'. Supply-side substitutability may also be taken into account when defining markets in those situations in which its effects are equivalent to those of demand substitution in terms of effectiveness and immediacy. That means that suppliers are able to switch production to the relevant products and market them in the short term without incurring significant additional costs or risks in response to small and permanent changes in relative prices.

With respect to operating systems, the Commission may correctly find that there is a market for work group server operating systems which is separate from the market for client PC operating systems.

(see paras 484-485, 531)

9. Where, in the context of proceedings relating to the application of Article 82 EC, the Commission takes issue with an undertaking for having used, by leveraging, its quasi-monopoly on a product market to influence a second product market, the abusive conduct alleged against the undertaking has its origin in its dominant position on the first product market. Thus, even if the Commission were wrongly to have considered that the undertaking was in a dominant position on the second product market, that could not of itself suffice to support a finding that the Commission was wrong to conclude that there had been an abuse of a dominant position.

(see para. 559)

10. For the purposes of application of Article 82 EC, the expressions 'risk of elimination of competition' and 'likely to eliminate competition' are used without distinction by the Community judicature to reflect the same idea, namely that Article 82 EC does not apply only from the time when there is no more, or practically no more, competition on the market. If the Commission were required to wait until competitors were eliminated from the market, or until their elimination was sufficiently imminent, before being able to take action under Article 82 EC, that would clearly run counter to the objective of that provision, which is to maintain undistorted competition in the common market and, in particular, to safeguard the competition that still exists on the relevant market.

In the case of a refusal by a dominant undertaking to grant a licence on the work group server operating systems market, the Commission has all the more reason to apply Article 82 EC before the elimination of competition has become a reality because that market is characterised by significant network effects and because the elimination of competition would therefore be difficult to reverse.

It is not necessary to demonstrate that all competition on the market would be eliminated. What matters, for the purpose of establishing an infringement of Article 82 EC, is that the refusal at issue is liable to, or is likely to, eliminate all effective competition on the market. It must be made clear that the fact that the competitors of the dominant undertaking retain a marginal presence in certain niches on the market cannot suffice to substantiate the existence of such competition.

(see paras 561-563, 593)

11. The fact that the dominant undertaking's conduct prevents the appearance of a new product on the market falls to be considered under Article 82(b) EC, which prohibits abusive practices which consist in 'limiting production, markets or technical developments to the … prejudice of consumers'.

The circumstance relating to the appearance of a new product cannot be the only parameter which determines whether a refusal to license an intellectual property right is capable of causing prejudice to consumers within the meaning of Article 82(b) EC. As that provision states, such prejudice may arise where there is a limitation not only of production or markets, but also of technical development.

Article 82 EC covers not only practices which may prejudice consumers directly but also those which indirectly prejudice them by impairing an effective competitive structure.

(see paras 643, 647, 664)

12. Although the burden of proof of the existence of the circumstances that constitute an infringement of Article 82 EC is borne by the Commission, it is for the dominant undertaking concerned, and not for the Commission, before the end of the administrative procedure, to raise any plea of objective justification and to support it with arguments and evidence. It then falls to the Commission, where it proposes to make a finding of an abuse of a dominant position, to show that the arguments and evidence relied on by the undertaking cannot prevail and, accordingly, that the justification put forward cannot be accepted.

The mere fact that a product is covered by intellectual property rights cannot constitute objective justification to refuse to grant a licence. If the mere fact of holding intellectual property rights could in itself constitute objective justification for such a refusal, the exception established by the case-law could never apply.

It is for the dominant undertaking which maintains that the granting of access to third parties to technology covered by intellectual property rights would have a significant negative impact on its incentives to innovate to support it with arguments and evidence.

(see paras 688-690, 697, 1144)

13. The primacy of international agreements concluded by the Community over provisions of secondary Community legislation means that such provisions must, so far as is possible, be interpreted in a manner that is consistent with those agreements. That principle of consistent interpretation applies only where an international agreement prevails over the provision of Community law concerned. Since an international agreement, such as the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), does not prevail over primary Community law, that principle does not apply where, as here, the provision which falls to be interpreted is Article 82 EC.

Moreover, in a situation where the Commission is required to apply Article 82 EC to the factual and legal circumstances of a particular case and in which it must be presumed, in the absence of proof to the contrary, that the conclusions which it reached in that regard are the only ones that it could validly adopt, the Commission is not, strictly speaking, required to make a choice between several possible constructions of a text of Community law.

(see paras 797-799)

14. Where the Commission is penalising infringement of Article 82 EC and orders an undertaking in a dominant position to disclose 'interoperability information' to undertakings wishing to develop and distribute work group server operating systems and to allow them to use that information 'subject to the application of reasonable and non-discriminatory conditions', there is nothing to prevent the undertaking from giving access to that information through a licence if the information relates to a technology covered by a patent or by another form of intellectual property right.

The fact that there is a requirement that the conditions to which any licences are subject be reasonable and non-discriminatory does not mean that the dominant undertaking must impose the same conditions on every undertaking seeking such licences. It is not precluded that the conditions may be adapted to the specific situation of each of those undertakings and vary, for example, according to the extent of the information to which they seek access or the type of products in which they intend to implement the information.

(see paras 808, 810-811)

15. In order to determine whether the conduct of the dominant undertaking constitutes abusive tying, the Commission is entitled to base its finding on the following factors: first, the tying and tied products are two separate products; second, the undertaking concerned is dominant in the market for the tying product; third, the undertaking concerned does not give customers a choice to obtain the tying product without the tied product; and fourth, the practice in question forecloses competition. The Commission also takes into account the fact that the tying is not objectively justified.

Such justification may not be inferred from the advantages arising from the fact that tying ensures a uniform presence of the product on the market. Such a result cannot be allowed to be imposed unilaterally by an undertaking in a dominant position by means of tying.

Since the list of abusive practices set out in the second paragraph of Article 82 EC is not exhaustive, bundling by an undertaking in a dominant position may also infringe Article 82 EC where it does not correspond to the example given in Article 82(d) EC. Accordingly, in order to establish the existence of abusive bundling, the Commission is entitled to rely on Article 82 EC in its entirety and not exclusively on Article 82(d) EC.

(see paras 842-843, 852, 859-861, 1151-1152)

16. The distinctness of products for the purpose of an analysis under Article 82 EC has to be assessed by reference to customer demand. In the absence of independent demand for the allegedly tied product, there can be no question of separate products and no abusive tying.

Complementary products can constitute separate products for the purposes of Article 82 EC.

The fact that there are on the market independent companies specialising in the manufacture and sale of the tied product constitutes serious evidence of the existence of a separate market for that product.

The fact that tying takes the form of the technical integration of one product in another does not have the consequence that, for the purpose of assessing its impact on the market, that integration cannot be qualified as the bundling of two separate products.

Moreover, even when the tying of two products is consistent with commercial usage or when there is a natural link between the two products in question, it may none the less constitute abuse within the meaning of Article 82 EC, unless it is objectively justified.

Client PC operating systems, on the one hand, and streaming media players, on the other hand, constitute two separate products for the purposes of Article 82 EC, in the light of the nature and technical features of the products concerned, the facts observed on the market, the history of the development of the products concerned and also the dominant undertaking's commercial practice on the market for client PC operating systems.

(see paras 917-918, 921-922, 925, 927, 933, 935, 942, 1341)

17. It does not follow from either Article 82(d) EC or the case-law that consumers must necessarily pay a certain price for the tied product in order for it to be concluded that they are subject to supplementary obligations within the meaning of that provision.

Moreover, neither Article 82(d) EC nor the case-law on bundling requires that consumers must be forced to use the tied product or prevented from using the same product supplied by a competitor of the dominant undertaking in order for the condition that the conclusion of contracts is made subject to acceptance of supplementary obligations to be capable of being regarded as satisfied.

(see paras 969-970)

18. While it is true that neither Article 82(d) EC nor, more generally, Article 82 EC contains any reference to the anti-competitive effect of bundling, the fact remains that, in principle, conduct will be regarded as abusive only if it is capable of restricting competition.

For the purposes of applying Article 82 EC to bundling, although the Commission may examine the actual effects which tying has had on the market and the way in which that market is likely to evolve, rather than merely considering – as it normally does in cases of abusive tying – that the tying has by its nature a foreclosure effect, does not mean that it adopted a new legal theory.

The fact that an undertaking in a dominant position in the market for client PC operating systems bundles the streaming media player with the client PC operating system – the operating system pre-installed on the great majority of client PCs sold throughout the world – without the possibility of removing that media player from the operating system, allows the media player to benefit from the ubiquity of that operating system on client PCs, which cannot be counterbalanced by the other methods of distributing media players. Thus, owing to the bundling, the media player enjoys an unparalleled presence on client PCs throughout the world, because it thereby allows that media player automatically to achieve a level of market penetration corresponding to that of the dominant undertaking's client PC operating system, without having to compete on the merits with competing products. Such a tied sale is moreover capable of having an appreciable impact on content providers and software designers, since the market for streaming media players is characterised by significant indirect network effects.

(see paras 867, 1035-1036, 1038, 1058, 1060-1061)

19. Article 82 EC is intended to prohibit a dominant undertaking from strengthening its position by recourse to means other than those based on competition on the merits.

(see para. 1070)

20. Given their nature and structure, agreements of the World Trade Organisation (WTO) are not in principle among the rules in the light of which the Community judicature is to review the legality of measures adopted by the Community institutions. It is only where the Community has intended to implement a particular obligation assumed under the WTO or where the Community measure refers expressly to specific provisions of the WTO agreements that the Community judicature must review the legality of the Community measure in question in the light of the WTO rules.

There is nothing in the provisions of the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) to prevent the competition authorities of the members of the WTO from imposing remedies which limit or regulate the exploitation of intellectual property rights held by an undertaking in a dominant position where that undertaking exercises those rights in an anti-competitive manner. Thus, it follows expressly from Article 40(2) of the TRIPS Agreement that the members of the WTO are entitled to regulate the abusive use of such rights in order to avoid effects which harm competition.

(see paras 801-802, 1189-1190, 1192)

21. When the Commission finds in a decision that an undertaking has infringed Article 82 EC, that undertaking is required to take, without delay, all the measures necessary to comply with that provision, even in the absence of specific measures prescribed by the Commission in that decision. Where remedies are provided for in the decision, the undertaking concerned is required to implement them – and to assume all the costs associated with their implementation –, failing which it exposes itself to liability for periodic penalty payments imposed pursuant to Article 16 of Regulation No 17.

The Commission it is not entitled to delegate to a third party the powers of investigation and enforcement conferred on it by Regulation No 17. On the other hand, it is entitled to monitor the implementation by the undertaking concerned of the remedies ordered in an infringement decision and to ensure that the other measures necessary to put an end to the anti-competitive effects of the infringement are fully implemented without delay. For those purposes, it is entitled to use the powers of investigation provided for in Article 14 of Regulation No 17 and, where necessary, to use an external expert in order, inter alia, to resolve technical issues.

Moreover, where the Commission decides to obtain the assistance of an external expert it may communicate to that expert any information and documents which it may have obtained in the exercise of its powers of investigation under Article 14 of Regulation No 17.

By establishing a monitoring mechanism involving the appointment of an independent monitoring trustee required to act on his own initiative and upon application by third parties, whose role is not limited to putting questions to the undertaking concerned and reporting the answers to the Commission, who has access to information, documents, premises and employees and also to the source code of its relevant products, without limit in time, the Commission goes far beyond the situation in which it retains its own external expert to provide advice when it investigates the implementation of remedies.

There is no provision of Regulation No 17 that authorises the Commission to require an undertaking to bear the costs which the Commission incurs as a result of monitoring the implementation of remedies.

It is for the Commission, in its capacity as authority responsible for applying the Community competition rules, to pursue the implementation of infringement decisions in an independent, objective and impartial manner. It would be incompatible with its responsibility in that regard for the effective implementation of Community law to depend on or be influenced by the willingness or the capacity of the addressee of the decision to bear such costs.

Moreover, the Commission does not have unlimited discretion when formulating remedies to be imposed on undertakings for the purpose of putting an end to an infringement. In the context of the application of Article 3 of Regulation No 17, the principle of proportionality requires that the burdens imposed on undertakings in order to bring an infringement to an end do not exceed what is appropriate and necessary to attain the objective sought, namely re-establishment of compliance with the rules infringed.

(see paras 1256, 1264-1266, 1268-1270, 1274-1276)

22. In the case of an undertaking which has been found to have committed two abuses of a dominant position, the Commission may, in order to assess the gravity of the infringement for the purposes of determining the amount of the fine, take account of the fact that those two abuses form part of a leveraging strategy whereby the dominant position on one product market is used to extend that dominant position to other adjacent markets.

In such a case, the Commission may take a single starting point for the fine for the two abuses, without having to explain what that amount represented or how it was apportioned between the two types of abuse.

The obligation to state reasons does not require the Commission to indicate in its decision the figures relating to the method of calculating the fines.

The Commission may apply a weighting to that amount to ensure that the fine was sufficiently deterrent and to reflect the dominant undertaking's significant economic capacity. In that regard, the possibility cannot be precluded that the undertaking might commit the same type of infringement in future with other products.

(see paras 1344, 1352, 1360-1361, 1363)

Judgment of the Court of First Instance (Grand Chamber)
First Instance (Grand Chamber)First Instance (Grand Chamber)September 2007. Microsoft Corp. v Commission of the European Communities. Competition - Abuse of dominant position - Client PC operating systems - Work group server operating systems - Streaming media players - Decision finding infringements of Article 82 EC - Refusal of the dominant undertaking to supply and authorise the use of interoperability information - Supply by the dominant undertaking of its client PC operating system conditional on the simultaneous acquisition of its media player - Remedies - Appointment of an independent monitoring trustee - Fine - Determination of the amount - Proportionality. Case T-201/04.

In Case T-201/04,

Microsoft Corp., established in Redmond, Washington (United States), represented by J.-F. Bellis, lawyer, and I. Forrester QC,

applicant,

supported by

The Computing Technology Industry Association, Inc., established in Oakbrook Terrace, Illinois (United States), represented by G. van Gerven and T. Franchoo, lawyers, and B. Kilpatrick, Solicitor,

DMDsecure.com BV, established in Amsterdam (Netherlands),

MPS Broadband AB, established in Stockholm (Sweden),

Pace Micro Technology plc, established in Shipley, West Yorkshire (United Kingdom),

Quantel Ltd, established in Newbury, Berkshire (United Kingdom),

Tandberg Television Ltd, established in Southampton, Hampshire (United Kingdom),

represented by J. Bourgeois, lawyer,

Association for Competitive Technology, Inc., established in Washington, DC (United States), represented by L. Ruessmann and P. Hecker, lawyers, and K. Bacon, Barrister,

TeamSystem SpA, established in Pesaro (Italy),

Mamut ASA, established in Oslo (Norway),

represented by G. Berrisch, lawyer,

Exor AB, established in Uppsala (Sweden), represented by S. Martínez Lage, H. Brokelmann and R. Allendesalazar Corcho, lawyers,

interveners,

v

Commission of the European Communities, represented initially by R. Wainwright, F. Castillo de la Torre, P. Hellström and A. Whelan, acting as Agents, and subsequently by F. Castillo de la Torre, P. Hellström and A. Whelan,

defendant,

supported by

Software & Information Industry Association, established in Washington, DC, represented by J. Flynn QC, C. Simpson and T. Vinje, Solicitors, and D. Paemen, N. Dodoo and M. Dolmans, lawyers, Free Software Foundation Europe eV, established in Hamburg (Germany), represented by C. Piana, lawyer,

Audiobanner.com, established in Los Angeles, California (United States), represented by L. Alvizar Ceballos, lawyer,

European Committee for Interoperable Systems (ECIS), established in Brussels (Belgium), represented by D. Paemen, N. Dodoo and M. Dolmans, lawyers, and J. Flynn QC,

interveners,

APPLICATION for annulment of Commission Decision 2007/53/EC of 24 March 2004 relating to a proceeding pursuant to Article 82 [EC] and Article 54 of the EEA Agreement against Microsoft Corp. (Case COMP/C3/37.792 - Microsoft) (OJ 2007 L 32, p. 23) or, in the alternative, annulment or reduction of the fine imposed on the applicant in that decision,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Grand Chamber),

composed of: B. Vesterdorf, President, M. Jaeger, J. Pirrung, R. GarcíaValdecasas, V. Tiili, J. Azizi, J.D. Cooke, A.W.H. Meij, N.J. Forwood, E. Martins Ribeiro, I. Wiszniewska-Biaecka, V. Vadapalas and I. Labucka, Judges,

Registrar: E. Coulon,

having regard to the written procedure and further to the hearing on 24, 25, 26, 27 and 28 April 2006,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Grand Chamber)

hereby:

1. Annuls Article 7 of Commission Decision 2007/53/EC of 24 March 2004 relating to a proceeding pursuant to Article 82 [EC] and Article 54 of the EEA Agreement against Microsoft Corp. (Case COMP/C-3/37.792 - Microsoft), in so far as:

- it orders Microsoft to submit a proposal for the establishment of a mechanism which is to include a monitoring trustee with the power to have access, independently of the Commission, to Microsoft's assistance, information, documents, premises and employees and to the source code of the relevant Microsoft products;

- it requires that the proposal for the establishment of that mechanism provide that all the costs associated with the appointment of the monitoring trustee, including his remuneration, be borne by Microsoft; and

- it reserves to the Commission the right to impose by way of decision a mechanism such as that referred to in the first and second indents above;

2. Dismisses the remainder of the application;

3. Orders Microsoft to bear 80% of its own costs and to pay 80% of the Commission's costs, with the exception of the costs incurred by the Commission in connection with the intervention of The Computing Technology Industry Association, Inc., Association for Competitive Technology, Inc., TeamSystem SpA, Mamut ASA, DMDsecure.com BV, MPS Broadband AB, Pace Micro Technology plc,

Quantel Ltd, Tandberg Television Ltd and Exor AB;

4. Orders Microsoft to bear its own costs and to pay the Commission's costs relating to the interim measures proceedings in Case T201/04 R, with the exception of the costs incurred by the Commission in connection with the intervention of The Computing Technology Industry Association, Association for Competitive Technology, TeamSystem, Mamut, DMDsecure.com, MPS Broadband, Pace Micro Technology, Quantel, Tandberg Television and Exor;

5. Orders Microsoft to pay the costs of Software & Information Industry Association, Free Software Foundation Europe, Audiobanner.com and European Committee for Interoperable Systems (ECIS), including those relating to the interim measures proceedings;

6. Orders the Commission to bear 20% of its own costs and to pay 20% of Microsoft's costs, with the exception of the costs incurred by Microsoft in connection with the intervention of Software & Information Industry Association, Free Software Foundation Europe, Audiobanner.com and ECIS;

7. Orders The Computing Technology Industry Association, Association for Competitive Technology, TeamSystem, Mamut, DMDsecure.com, MPS Broadband, Pace Micro Technology, Quantel, Tandberg Television and Exor to bear their own costs, including those relating to the interim measures proceedings.

Background to the dispute

1. Microsoft Corp., a company established in Redmond, Washington (United States), designs, develops and markets a wide variety of software products for different kinds of computing devices. Those software products include, in particular, operating systems for client personal computers (client PCs'), operating systems for work group servers and streaming media players. Microsoft also provides technical assistance for its various products.

2. On 15 September 1998, Mr Green, a Vice-President of Sun Microsystems, Inc. (Sun'), a company established in Palo Alto, California (United States) which supplies, in particular, servers and server operating systems, wrote to Mr Maritz, a Vice-President of Microsoft, as follows:

We are writing to you to request that Microsoft provide [Sun] with the complete information required to allow Sun to provide native support for COM objects on Solaris.

We also request that Microsoft provide [Sun] with the complete information required to allow [Sun] to provide native support for the complete set of Active Directory technologies on Solaris.

We believe it is in the industry's best interest that applications written to execute on Solaris be able to seamlessly communicate via COM and/or Active Directory with the Windows operating systems and/or with Windows-based software.

We believe that Microsoft should include a reference implementation and such other information as is necessary to insure, without reverse engineering, that COM objects and the complete set of Active Directory technologies will run in full compatible fashion on Solaris. We think it necessary that such information be provided for the full range of COM objects as well as for the full set of Active Directory technologies currently on the market. We also think it necessary that such information be provided in a timely manner and on a continuing basis for COM objects and Active Directory technologies which are to be released to the market in the future.'

3. That letter will be referred to below as the letter of 15 September 1998'.

4. By letter of 6 October 1998, Mr Maritz replied to the letter of 15 September 1998. In his letter, he said:

Thank you for your interest in working with Windows. We have some mutual customers using our products, and I think it is great you are interested in opening up your system to interoperate with Windows. Microsoft has always believed in helping software developers, including [its] competitors, build the best possible products and interoperability for [its] platform.

You may not realise that the information you requested on how to interoperate with COM and the Active Directory technologies is already published and available to you and every other software developer in the world via the Microsoft Developer Network (MSDN) Universal product. MSDN contains comprehensive information about the services and interfaces of the Windows platform and is a great source of information for developers interested in writing to or interoperating with Windows. In fact, Sun currently has 32 active licenses for the MSDN Universal subscription. Furthermore, as your company has done in the past, I assume you will be sending a significant number of people to attend our Professional Developers Conference in Denver October 11 - October 15, 1998. This will be another venue to get the technical information you are seeking in order to work with our systems technologies. Some of the 23 Sun employees that attend[ed] last year[']s conference should be able to provide you with their comments on the quality and depth of information discussed at these Professional Developers Conferences.

You will be pleased to know that there is already a reference implementation of COM on Solaris. This implementation of COM on Solaris is a fully supported binary available from Microsoft. Source code for COM can be licensed from other sources including Software AG.

Regarding the Active Directory, we have no plans to port [it] to Solaris. However, to satisfy our mutual customers there are many methods with varying levels of functionality in order to interoperate with the Active Directory. For example, you can use the standard LDAP to access the Windows NT Server Active Directory from Solaris.

If after attending [the Professional Developers Conference] and reading through all the public MSDN content you should require some additional support, our Developer Relations Group has account managers who strive to help developers who need additional support for Microsoft's platforms. I have asked Marshall Goldberg, the Lead Program Manager, to make himself available should you need it...'

5. Mr Maritz's letter of 6 October 1998 will be referred to below as the letter of 6 October 1998'.

6. On 10 December 1998, Sun lodged a complaint with the Commission pursuant to Article 3 of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-62, p. 87).

7. Sun's complaint related to Microsoft's refusal to give it the information and technology necessary to allow its work group server operating systems to interoperate with the Windows client PC operating system.

8. On 2 August 2000, the Commission sent Microsoft a first statement of objections (the first statement of objections'), which related in effect to questions concerning the interoperability of Windows client PC operating systems and other suppliers' server operating systems (client/server interoperability).

9. Microsoft responded to the first statement of objections on 17 November 2000.

10. In the meantime, in February 2000, the Commission, acting on its own initiative, launched an investigation relating, particularly, to Microsoft's Windows 2000 generation of client PC and work group server operating systems and to the integration by Microsoft of its Windows Media Player in its Windows client PC operating system. The client PC operating system in the Windows 2000 range was intended for professional use and was called Windows 2000 Professional', whereas the server operating systems in that range were presented under the three following versions: Windows

2000 Server, Windows 2000 Advanced Server and Windows 2000 Datacenter Server.

11. That investigation concluded on 29 August 2001, when the Commission sent Microsoft a second statement of objections (the second statement of objections'), in which it reiterated its previous objections concerning client/server interoperability. The Commission also addressed certain questions relating to interoperability between work group servers (server/server interoperability). In addition, the Commission raised a number of questions concerning the integration of Windows Media Player in the Windows client PC operating system.

12. Microsoft responded to the second statement of objections on 16 November 2001.

13. In December 2001, Microsoft sent the Commission a report containing the results and the analysis of a survey carried out by Mercer Management Consulting (Mercer').

14. Between April and June 2003, the Commission conducted a wide-ranging market enquiry, sending a series of requests for information to a number of companies and associations pursuant to Article 11 of Regulation No 17 (the 2003 market enquiry').

15. On 6 August 2003, the Commission sent Microsoft a third statement of objections, which was, according to the Commission, intended to supplement the two earlier statements of objections and to indicate the remedies it proposed to order (the third statement of objections').

16. By letter of 17 October 2003, Microsoft responded to the third statement of objections.

17. On 31 October 2003, Microsoft sent the Commission a report containing the results and the analysis of two further surveys conducted by Mercer.

18. A hearing was held by the Commission on 12, 13 and 14 November 2003.

19. On 1 December 2003, Microsoft presented supplemental observations on the third statement of objections.

20. On 24 March 2004, the Commission adopted Decision 2007/53/EC relating to a proceeding pursuant to Article 82 [EC] and Article 54 of the EEA Agreement against Microsoft Corp. (Case COMP/C-3.37.792 - Microsoft) (OJ 2007 L 32, p. 23; the contested decision').

The contested decision

21. In the contested decision, the Commission finds that Microsoft infringed Article 82 EC and Article 54 of the Agreement on the European Economic Area (EEA) by twice abusing a dominant position.

22. The Commission first identifies three separate worldwide product markets and considers that Microsoft had a dominant position on two of them. It then finds that Microsoft had engaged in two kinds of abusive conduct. As a result it imposes a fine and a number of remedies on Microsoft.

I - Relevant product markets and geographic market

23. The contested decision identifies three separate product markets, namely the markets for, respectively, client PC operating systems (recitals 324 to 342 to the contested decision), work group server operating systems (recitals 343 to 401 to the contested decision) and streaming media players (recitals 402 to 425 to the contested decision).

24. The first market defined in the contested decision is the market for client PC operating systems. Operating systems are defined as system software' which controls the basic functions of the computer and enables the user to make use of the computer and run application software on it (recital 37 to the contested decision). Client PCs are defined as general-purpose computers designed for use by one person at a time and capable of being connected to a network (recital 45 to the contested

decision).

25. As regards the second market, the contested decision defines work group server operating systems as operating systems designed and marketed to deliver collectively basic infrastructure services' to relatively small numbers of client PCs connected to small or medium-sized networks (recitals 53 and 345 to the contested decision).

26. The contested decision identifies, more particularly, three types of services. These are, first, the sharing of files stored on servers, second, the sharing of printers and, third, the administration of groups and users, that is to say, the administration of the means whereby those concerned can access network services (recitals 53 and 345 to the contested decision). This last type of services is that of ensuring that users have access to and make use of the network resources in a secure manner, first, by authenticating users and second, by checking that they are authorised to perform a particular action (recital 54 to the contested decision). The contested decision states that, in order to provide for the efficient storing and checking of group and user administration information, work group server operating systems rely extensively on directory service' technologies (recital 55 to the contested decision). The directory service included in Microsoft's Windows 2000 Server operating system is called Active Directory' (recital 149 to the contested decision).

27. According to the contested decision, the three types of services described above are closely interrelated in work group server operating systems. They may be broadly described as a single service', but viewed from two different perspectives, namely that of the user (file and print services) and that of the network administrator (group and user administration services) (recital 56 to the contested decision). The contested decision characterises those different services as work group services'.

28. The third market identified in the contested decision is the streaming media player market. Media players are defin ed as software products capable of reading audio and video content in digital form, that is to say, of decoding the corresponding data and translating them into instructions for the hardware (for example, loudspeakers or a display) (recital 60 to the contested decision). Streaming media players are capable of reading audio and video content streamed' across the Internet (recital 63 to the contested decision).

29. As regards the relevant geographic market, the Commission finds in the contested decision, as stated at paragraph 22 above, that it has a worldwide dimension for each of the three product markets (recital 427 to the contested decision).

II - Dominant position

30. In the contested decision, the Commission finds that Microsoft has had a dominant position on the client PC operating systems market since at least 1996 and also on the work group server operating systems market since 2002 (recitals 429 to 541 to the contested decision).

31. As regards the client PC operating systems market, the Commission relies essentially on the following factors to arrive at that conclusion:

- Microsoft's market shares are over 90% (recitals 430 to 435 to the contested decision);

- Microsoft's market power has enjoyed an enduring stability and continuity' (recital 436 to the contested decision);

- there are significant barriers to market entry, owing to indirect network effects (recitals 448 to 464 to the contested decision);

- those network effects derive, first, from the fact that users like platforms on which they can use a large number of applications and, second, from the fact that software designers write applications for the client PC operating systems that are the most popular among users (recitals 449 and 450 to the contested decision).

32. The Commission states at recital 472 to the contested decision that that dominant position presents extraordinary features' in that Windows is not only a dominant product on the market for client PC operating systems but, in addition, is the de facto standard' for those systems.

33. As regards the work group server operating systems market, the Commission relies, in substance, on the following factors:

- Microsoft's market share is, at a conservative estimate, at least 60% (recitals 473 to 499 to the contested decision);

- the position of Microsoft's three main competitors on that market is as follows: Novell, with its NetWare software, has 10 to 25%; vendors of Linux products have a market share of 5 to 15%; and vendors of UNIX products have a market share of 5 to 15% (recitals 503, 507 and 512 to the contested decision);

- the work group server operating systems market is characterised by the existence of significant entry barriers, owing in particular to network effects and to Microsoft's refusal to disclose interoperability information (recitals 515 to 525 to the contested decision);

- there are close commercial and technological links between the latter market and the client PC operating systems market (recitals 526 to 540 to the contested decision).

34. Linux is an open source' operating system released under the GNU GPL (General Public Licence)'. Strictly speaking, it is only a code base, called the kernel', which performs a limited number of services specific to an operating system. It may, however, be linked to other layers of software to form a Linux operating system' (recital 87 to the contested decision). Linux is used in particular as the basis for work group server operating systems (recital 101 to the contested decision) and is thus present on the work group server operating systems market in conjunction with Samba software, which is also released under the GNU GPL' licence (recitals 506 and 598 to the contested decision).

35. UNIX' designates a number of operating systems that share certain common features (recital 42 to the contested decision). Sun has developed a UNIX-based work group server operating system called Solaris' (recital 97 to the contested decision).

III - Abuse of a dominant position

A - Refusal to supply and authorise the use of interoperability information

36. The first abusive conduct in which Microsoft is found to have engaged consists in its refusal to supply its competitors with interoperability information' and to authorise the use of that information for the purpose of developing and distributing products competing with Microsoft's own products on the work group server operating systems market, between October 1998 and the date of notification of the contested decision (Article 2(a) of the contested decision). That conduct is described at recitals 546 to 791 to the contested decision.

37. For the purposes of the contested decision, interoperability information' is the complete and accurate specifications for all the protocols [implemented] in Windows work group server operating systems and ... used by Windows work group servers to deliver file and print services and group and user administrative services, including the Windows domain controller services, Active Directory services and group Policy services to Windows work group networks' (Article 1(1) of the contested decision).

38. Windows work group network' is defined as any group of Windows client PCs and Windows work group servers linked together via a computer network' (Article 1(7) of the contested decision).

39. A protocol' is defined as a set of rules of interconnection and interaction between various instances of Windows work group server operating systems and Windows client PC operating systems running on different computers in a Windows work group network' (Article 1(2) of the contested decision).

40. In the contested decision, the Commission emphasises that the refusal in question does not relate to Microsoft's source code', but only to specifications of the protocols concerned, that is to say, to a detailed description of what the software in question must achieve, in contrast to the implementations, consisting in the implementation of the code on the computer (recitals 24 and 569 to the contested decision). It states, in particular, that it does not contemplate ordering Microsoft to allow copying of Windows by third parties' (recital 572 to the contested decision).

41. The Commission further considers that Microsoft's refusal to Sun is part of a general pattern of conduct (recitals 573 to 577 to the contested decision). It also asserts that Microsoft's conduct involves a disruption of previous, higher levels of supply (recitals 578 to 584 to the contested decision), causes a risk of elimination of competition on the work group server operating systems (recitals 585 to 692 to the contested decision) and has a negative effect on technical development and on consumer welfare (recitals 693 to 708 to the contested decision).

42. Last, the Commission rejects Microsoft's arguments that its refusal is objectively justified (recitals 709 to 778 to the contested decision).

B - Tying of the Windows client PC operating system and Windows Media Player

43. The second abusive conduct in which Microsoft is found to have engaged consists in the fact that from May 1999 to the date of notification of the contested decision Microsoft made the availability of the Windows client PC operating system conditional on the simultaneous acquisition of the Windows Media Player software (Article 2(b) of the contested decision). That conduct is described at recitals 792 to 989 to the contested decision.

44. In the contested decision, the Commission considers that that conduct satisfies the conditions for a finding of a tying abuse for the purposes of Article 82 EC (recitals 794 to 954 to the contested decision). First, it reiterates that Microsoft has a dominant position on the client PC operating systems market (recital 799 to the contested decision). Second, it considers that streaming media players and client PC operating systems constitute separate products (recitals 800 to 825 to the contested decision). Third, it asserts that Microsoft does not give consumers the opportunity to buy Windows without Windows Media Player (recitals 826 to 834 to the contested decision). Fourth, it contends that the tying in question restricts competition on the media players market (recitals 835 to 954 to the contested decision).

45. Last, the Commission rejects Microsoft's arguments to the effect that, first, the tying in question produces efficiency gains capable of offsetting the anti-competitive effects identified in the contested decision (recitals 955 to 970 to the contested decision) and, second, Microsoft had no interest in anti-competitive' tying (recitals 971 to 977 to the contested decision).

IV - Fine and remedies

46. In respect of the two abuses identified in the contested decision, a fine of EUR 497 196 304 is imposed (Article 3 of the contested decision).

47. Furthermore, the first paragraph of Article 4 of the contested decision requires that Microsoft bring an end to the infringement referred to in Article 2, in accordance with Articles 5 and 6 of that decision. Microsoft must also refrain from repeating any act or conduct that might have the same or equivalent object or effect to those abuses (second paragraph of Article 4 of the contested decision).

48. By way of remedy for the abusive refusal referred to in Article 2(a) of the contested decision, Article 5 of that decision provides as follows:

(a) Microsoft... shall, within 120 days of the date of notification of [the contested decision], make the interoperability information available to any undertaking having an interest in developing and distributing work group server operating system products and shall, on reasonable and non-discriminatory terms, allow the use of the interoperability information by such undertakings for the purpose of developing and distributing work group server operating system products;

(b) Microsoft... shall ensure that the interoperability information made available is kept updated on an ongoing basis and in a timely manner;

(c) Microsoft... shall, within 120 days of the date of notification of [the contested decision], set up an evaluation mechanism that will give interested undertakings a workable possibility of informing themselves about the scope and terms of use of the interoperability information; as regards this evaluation mechanism, Microsoft... may impose reasonable and non-discriminatory conditions to ensure that access to the interoperability information is granted for evaluation purposes only;

...'

49. By way of remedy for the abusive tying referred to in Article 2(b) of the contested decision, Article 6 of that decision orders Microsoft to offer, within 90 days of the date of notification of that decision, a full-functioning version of the Windows client PC operating system which does not incorporate Windows Media Player, although Microsoft retains the right to offer a bundle of the Windows client PC operating system and Windows Media Player.

50. Last, Article 7 of the contested decision provides:

Within 30 days of the date of notification of [the contested decision], Microsoft... shall submit a proposal to the Commission for the establishment of a suitable mechanism assisting the Commission in monitoring [Microsoft's] compliance with [the contested decision]. That mechanism shall include a monitoring trustee who shall be independent from Microsoft...

In case the Commission considers [Microsoft's] proposed monitoring mechanism not suitable it retains the right to impose such a mechanism by way of a decision.'

Proceedings for violation of United States antitrust law

51. In parallel with the Commission's investigation, Microsoft was the subject of an investigation for violation of the United States antitrust legislation.

52. In 1998, the United States of America, 20 States and the District of Columbia brought proceedings against Microsoft under the Sherman Act. Their complaints concerned the measures taken by Microsoft against Netscape's Internet Navigator and Sun's Java technologies. The States concerned also brought actions against Microsoft for violation of their own antitrust legislation.

53. After the United States Court of Appeals for the District of Columbia Circuit (the Court of Appeals'), on appeal by Microsoft against the judgment of 3 April 2000 of the United States District Court for the District of Columbia (the District Court'), had given its judgment on 28 June 2001, Microsoft reached a settlement with the United States Department of Justice and the Attorneys General of nine States (the United States settlement') in November 2001, in which two types of commitment were given by Microsoft.

54. First, Microsoft agreed to draw up the specifications of the communication protocols used by the Windows server operating systems in order to interoperate', that is to say, to make them compatible with the Windows client PC operating systems and to grant third parties licences relating to those specifications on specific conditions.

55. Second, the United States settlement provides that Microsoft must allow original equipment manufacturers (OEMs') and end users to activate or to eliminate access to its middleware. Windows Media Player is one of the products in that category, as defined in the United States settlement. Those provisions are intended to ensure that suppliers of media software can develop and distribute products that function properly with Windows.

56. Those provisions were confirmed by a judgment of the District Court of 1 November 2002.

57. On 30 June 2004, the Court of Appeals, on appeal by the State of Massachusetts, affirmed the judgment of the District Court of 1 November 2002.

58. Pursuant to the United States settlement, the Microsoft Communications Protocol Program (the MCPP') was set up in August 2002.

Procedure

59. By application lodged at the Registry of the Court of First Instance on 7 June 2004, Microsoft brought the present action.

60. By separate document lodged at the Court Registry on 25 June 2004, Microsoft lodged an application under Article 242 EC for suspension of operation of Article 4, Article 5(a) to (c) and Article 6(a) of the contested decision.

61. By order of 22 December 2004 in Case T201/04 R Microsoft v Commission [2004] ECR II4463, the President of the Court dismissed that application and reserved the costs.

62. By order of 9 March 2005, the President of the Fourth Chamber of the Court granted the following associations and companies leave to intervene in the proceedings in support of the form of order sought by Microsoft:

- The Computing Technology Industry Association, Inc. (CompTIA');

- DMDsecure.com BV, MPS Broadband AB, Pace Micro Technology plc, Quantel Ltd and Tandberg Television Ltd (DMDsecure and Others');

- Association for Competitive Technology, Inc. (ACT');

- TeamSystem SpA and Mamut ASA;

- Exor AB.

63. By the same order, the President of the Fourth Chamber of the Court granted the following associations and companies leave to intervene in the proceedings in support of the form of order sought by the Commission:

- Software & Information Industry Association (SIIA');

- Free Software Foundation Europe eV (FSFE');

- Audiobanner.com, trading as VideoBanner';

- RealNetworks, Inc.

64. By letters of 13 December 2004, 9 March, 27 June and 9 August 2005, Microsoft requested that certain confidential matters in the application, the defence, the reply, Microsoft's observations on the statements in intervention and the rejoinder not be communicated to the interveners. The applicant produced a non-confidential version of those procedural documents and only those non-confidential texts were furnished to the interveners referred to in paragraphs 62 and 63 above. Those interveners raised no objections in that regard.

65. The interveners referred to in paragraphs 62 and 63 above lodged their own statements in intervention within the prescribed period. The main parties submitted their observations on those statements in intervention on 13 June 2005.

66. By order of 28 April 2005 in Case T201/04 Microsoft v Commission [2005] ECR II1491, the President of the Fourth Chamber granted the European Committee for Interoperable Systems (ECIS) leave to intervene in the proceedings in support of the form of order sought by the Commission. As that association's application to intervene was lodged after expiry of the period referred to in Article 116(6) of the Rules of Procedure of the Court, it was ordered to submit its observations during the oral procedure, on the basis of the Report for the Hearing, with which it was provided.

67. By decision of the Plenary Conference of 11 May 2005, the case was referred to the Fourth Chamber, Extended Composition, of the Court of First Instance.

68. By decision of the Plenary Conference of 7 July 2005, the case was referred to the Grand Chamber of the Court of First Instance and assigned to a new Judge-Rapporteur.

69. By order of the President of the Grand Chamber of 16 January 2006, RealNetworks was removed from the case as intervener in support of the form of order sought by the Commission.

70. On 1 February 2006, the parties were invited by the Court to attend an informal meeting before the President of the Grand Chamber and the Judge-Rapporteur with a view to finalising the arrangements for the hearing. That meeting took place at the Court on 10 March 2006.

71. Upon hearing the Judge-Rapporteur, the Court of First Instance (Grand Chamber) decided to open the oral procedure and, pursuant to Article 64 of its Rules of Procedure, invited the main parties to produce certain documents and to answer a series of questions. They complied with those requests within the prescribed period.

72. The parties presented oral argument and their answers to the questions put by the Court at the hearing on 24, 25, 26, 27 and 28 April 2006.

73. At the hearing, Microsoft was requested by the Court to lodge a copy of the requests for information sent by the Commission in connection with the 2003 market enquiry, concerning the question of media players, and of the answers to those requests for information, and also of the reports containing the results and analysis of the surveys conducted by Mercer (the Mercer reports'). Microsoft produced those various documents within the prescribed periods.

74. By letter from the Court of 3 May 2006, Microsoft was requested to produce a copy of the other requests for information issued by the Commission in connection with the 2003 market enquiry and of the replies to those requests. Microsoft complied with that request within the prescribed period.

75. The President of the Grand Chamber closed the oral procedure by decision of 22 June 2006.

Forms of order sought by the parties

76. Microsoft claims that the Court should:

- annul the contested decision;

- in the alternative, annul or substantially reduce the fine;

- order the Commission to pay the costs;

- order SIIA, FSFE and Audiobanner.com to pay the costs relating to their intervention.

77. The Commission contends that the Court should:

- dismiss the action;

- order Microsoft to pay the costs.

78. CompTIA, ACT, TeamSystem and Mamut claim that the Court should:

- annul the contested decision;

- order the Commission to pay the costs.

79. DMDsecure and Others claim that the Court should:

- annul Article 2(b), Article 4, Article 6(a) and Article 7 of the contested decision;

- order the Commission to pay the costs.

80. Exor claims that the Court should:

- annul Articles 2 and 4, Article 6(a) and Article 7 of the contested decision;

- order the Commission to pay the costs.

81. SIIA, FSFE, Audiobanner.com and ECIS contend that the Court should:

- dismiss the action;

- order Microsoft to pay the costs.

Law

82. It is appropriate to examine, first of all, the pleas relating to the forms of order seeking annulment of the contested decision and, next, those relating to the forms of order seeking annulment or a reduction of the fine.

I - Forms of order seeking annulment of the contested decision

83. The pleas in law which Microsoft puts forward in support of its application for annulment of the contested decision are centred on three issues, namely, first, the refusal to supply and authorise the use of interoperability information; second, the tying of the Windows client PC operating system and Windows Media Player; and, third, the obligation to appoint an independent monitoring trustee responsible for ensuring that Microsoft complies with the contested decision.

A - Preliminary issues

84. In its written pleadings, the Commission raises a number of issues relating to the extent of review by the Community Courts and the admissibility of a number of annexes to the application and the reply.

1. The extent of review by the Community Courts

85. The Commission claims that the contested decision rests on a number of considerations involving complex technical and economic assessments. It submits that, according to the case-law, the Community Courts can carry out only a limited review of such assessments (Case C269/90 Technische Universität München [1991] ECR I5469, paragraph 13; Joined Cases C204/00 P, C205/00 P, C211/00 P, C213/00 P, C217/00 P and C219/00 P Aalborg Portland and Others v Commission [2004] ECR I123, paragraph 279; and Case T28/03 Holcim (Deutschland) v Commission [2005] ECR II1357, paragraphs 95, 97 and 98).

86. Microsoft, citing by way of example Case T62/98 Volkswagen v Commission [2000] ECR II2707, paragraph 43, responds that the Community Courts do not refrain from conducting searching inquiries into the soundness of the Commission's decisions, even in complex cases'.

87. The Court observes that it follows from consistent case-law that, although as a general rule the Community Courts undertake a comprehensive review of the question as to whether or not the

conditions for the application of the competition rules are met, their review of complex economic appraisals made by the Commission is necessarily limited to checking whether the relevant rules on procedure and on stating reasons have been complied with, whether the facts have been accurately stated and whether there has been any manifest error of assessment or a misuse of powers (Case T65/96 Kish Glass v Commission [2000] ECR II1885, paragraph 64, upheld on appeal by order of the Court of Justice in Case C241/00 P Kish Glass v Commission [2001] ECR I7759; see also, to that effect, with respect to Article 81 EC, Case 42/84 Remia and Others v Commission [1985] ECR 2545, paragraph 34, and Joined Cases 142/84 and 156/84 BAT and Reynolds v Commission [1987] ECR 4487, paragraph 62).

88. Likewise, in so far as the Commission's decision is the result of complex technical appraisals, those appraisals are in principle subject to only limited review by the Court, which means that the Community Courts cannot substitute their own assessment of matters of fact for the Commission's (see, as regards a decision adopted following complex appraisals in the medico-pharmacological sphere, order of the President of the Court of Justice in Case C459/00 P(R) Commission v Trenker [2001] ECR I2823, paragraphs 82 and 83; see also, to that effect, Case C120/97 Upjohn [1999] ECR I223, paragraph 34 and the case-law cited; Case T179/00 A. Menarini v Commission [2002] ECR II2879, paragraphs 44 and 45; and Case T13/99 Pfizer Animal Health v Council [2002] ECR II3305, paragraph 323).

89. However, while the Community Courts recognise that the Commission has a margin of appreciation in economic or technical matters, that does not mean that they must decline to review the Commission's interpretation of economic or technical data. The Community Courts must not only establish whether the evidence put forward is factually accurate, reliable and consistent but must also determine whether that evidence contains all the relevant data that must be taken into consideration in appraising a complex situation and whether it is capable of substantiating the conclusions drawn from it (see, to that effect, concerning merger control, Case C12/03 P Commission v Tetra Laval [2005] ECR I987, paragraph 39).

90. It is in the light of those principles that the Court must examine the various pleas which Microsoft puts forward in support of its application for annulment of the contested decision.

2. Admissibility of the content of certain annexes

91. The Commission, supported on this point by SIIA, claims that in a number of annexes to the application and to the reply Microsoft relies on arguments not found in the actual body of those pleadings. On various occasions, moreover, Microsoft makes a general reference to reports annexed to its pleadings. The Commission further criticises the fact that certain expert opinions produced by Microsoft are based on information to which neither the Commission nor the Court had access, and contends that the Court cannot take account of those arguments, reports or expert opinions.

92. Microsoft asserts that the relevant passages of [the] application' contain the essential matters of fact and of law on which the action is based. According to the case-law, specific points in the text of the application can be supported and completed by references to specific passages in documents attached (order in T56/92 Koelman v Commission [1993] ECR II1267, paragraph 21). Furthermore, the applicant submits that it took a deliberate decision to limit the number of annexes as it did not wish to make the file too bulky, that it is under no obligation to submit every document referred to in the footnotes in its annexes, that the Commission has copies of all the documents lodged during the administrative procedure and that it cannot be disputed that Microsoft is entitled to provide information to its experts.

93. At the informal meeting of 10 March 2006 (see paragraph 70 above), the Judge-Rapporteur drew Microsoft's attention to the fact that in certain annexes to its pleadings it seemed to rely on

arguments not expressly set out in the actual body of those pleadings and questioned Microsoft on that point. As recorded in the minutes of that meeting, Microsoft replied that it was not claiming reliance on arguments ... which would not be expressly referred to in the application or in the reply'.

94. The Court recalls that, under Article 21 of the Statute of the Court of Justice and Article 44(1)(c) of the Rules of Procedure of the Court of First Instance, each application is required to state the subject-matter of the proceedings and a summary of the pleas in law on which the application is based. According to consistent case-law it is necessary, for an action to be admissible, that the basic matters of law and fac t relied on be indicated, at least in summary form, coherently and intelligibly in the application itself. Whilst the body of the application may be supported and supplemented on specific points by references to extracts from documents annexed thereto, a general reference to other documents, even those annexed to the application, cannot make up for the absence of the essential arguments in law which, in accordance with the abovementioned provisions, must appear in the application (Case C52/90 Commission v Denmark [1992] ECR I2187, paragraph 17; orders in Koelman v Commission , paragraph 92 above, paragraph 21, and Case T154/98 Asia Motor France and Others v Commission [1999] ECR II1703, paragraph 49). Furthermore, it is not for the Court to seek and identify in the annexes the pleas and arguments on which it may consider the action to be based, since the annexes have a purely evidential and instrumental function (Case T84/96 Cipeke v Commission [1997] ECR II2081, paragraph 34, and Case T231/99 Joynson v Commission [2002] ECR II2085, paragraph 154).

95. That interpretation of Article 21 of the Statute of the Court of Justice and Article 44(1)(c) of the Rules of Procedure of the Court of First Instance also applies to the conditions for admissibility of a reply, which according to Article 47(1) of the Rules of Procedure is intended to supplement the application (see, to that effect, Joined Cases T305/94 to T307/94, T313/94 to T316/94, T318/94, T325/94, T328/94, T329/94 and T335/94 Limburgse Vinyl Maatschappij and Others v Commission [1999] ECR II931, paragraph 40, not set aside on that point by the Court of Justice, on appeal, in Joined Cases C238/99 P, C244/99 P, C245/99 P, C247/99 P, C250/99 P to C252/99 P and C254/99 P Limburgse Vinyl Maatschappij and Others v Commission [2002] ECR I8375).

96. In the present case, the Court finds that in a number of documents annexed to the application and the reply, Microsoft puts forward legal or economic arguments not limited to supporting or supplementing matters of fact or of law expressly set out in the body of those procedural documents, but which introduce fresh arguments.

97. Furthermore, on a number of occasions Microsoft supplements the text of the application and of the reply on specific points by references to attached documents. However, certain of those references to an attached document are in general terms and therefore do not permit the Court to identify precisely the arguments that might be regarded as supplementing the pleas in law developed in the application or in the reply.

98. The Court notes, however, that while the Commission considers that there is no need to take account of the developments in those various annexes, it none the less comments on those developments in notes annexed to its own pleadings.

99. In accordance with the case-law referred to at paragraphs 94 and 95 above and with Microsoft's statement at the informal meeting of 10 March 2006 (see paragraph 93 above), the annexes referred to at paragraphs 96 to 98 above will be taken into consideration by the Court only in so far as they support or supplement pleas or arguments expressly set out by Microsoft or the Commission in the body of their pleadings and in so far as it is possible for the Court to determine precisely what are the matters they contain that support or supplement those pleas or arguments.

100. As regards the Commission's criticisms of the fact that Microsoft has not provided the information underlying certain expert opinions attached to its pleadings, it is sufficient to state that it is for the Court to appraise, where necessary, whether the assertions in those opinions are without probative value. If, in the absence of access to certain information, the Court should consider that those assertions do not have sufficient probative value, it will not take them into account.

B - The refusal to supply and to authorise the use of interoperability information

101. In this first issue, Microsoft relies on a single plea alleging infringement of Article 82 EC. This plea may be broken down into three parts. In the first part, Microsoft claims that the criteria which permit an undertaking in a dominant position to be compelled to grant a licence, as defined by the Community judicature, are not satisfied in this case. In the second part, Microsoft claims that Sun did not request access to the technology' that the Commission ordered Microsoft to disclose and that the letter of 6 October 1998 cannot in any event be interpreted as containing an actual refusal on its part. Last, in the third part, Microsoft claims that the Commission does not properly take account of the obligations imposed on the Communities by the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) of 15 April 1994 (Annex 1 C to the Agreement Establishing the World Trade Organisation (WTO)) (the TRIPS Agreement').

1. First part: the criteria on which an undertaking in a dominant position may be compelled to grant a licence, as defined by the Community judicature, are not satisfied in the present case

a) Introduction

102. It may be useful first in this place to give a general outline of the positions taken by the main parties on the issue of the refusal to supply and authorise the use of interoperability information.

103. According to the contested decision, Microsoft abused its dominant position on the client PC operating systems market by refusing, first, to supply Sun and other competitors with the specifications for protocols implemented in Windows work group server operating systems and used by the servers running those systems to deliver file and print services and group and user administration services to Windows work group networks and, second, to allow those various undertakings to use those specifications in order to develop and market work group server operating systems.

104. The Commission contends that the information to which Microsoft refuses access is interoperability information within the meaning of Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs (OJ 1991 L 122, p. 42). It claims, in particular, that that directive envisages interoperability between two software products as being the ability for them to exchange information and mutually to use that information in order to allow each of those software products to operate in all the ways contemplated (see, in particular, paragraph 256 of the first statement of objections, paragraph 79 of the second statement of objections and paragraph 143 of the third statement of objections). The Commission maintains that the concept of interoperability which Microsoft advocates is inaccurate (recitals 749 to 763 to the contested decision).

105. The Commission finds, on the basis of a series of factual and technical factors, that the proper functioning of a Windows work group network relies on an architecture of client/server and server/server interconnections and interactions, which ensures a transparent access to the core work group server services (for Windows 2000/Windows 2003, this Windows domain architecture can be termed an Active Directory domain architecture)' and that [t]he common ability to be part of that architecture is an element of compatibility between Windows client PCs and Windows work group servers' (recital 182 to the contested decision). The Commission describes that compatibility in terms of interoperability with the Windows domain architecture' (recital 182 to the contested decision) and maintains that such interoperability is necessary for a work group server operating system vendor in order to viably stay on the market' (recital 779 to the contested decision).

106. The Commission further contends that in order that Microsoft's competitors can develop work group server operating systems capable of achieving such a degree of interoperability when the servers on which they are installed are added to a Windows work group, it is essential that they have access to information relating to interoperability with the Windows domain architecture (recitals 183 and 184 to the contested decision). It maintains, in particular, that none of the five methods described by Microsoft of ensuring interoperability between operating systems supplied by different vendors constitutes a sufficient substitute for the disclosure of that information (recitals 666 to 687 to the contested decision).

107. Last, the Commission asserts that, according to the case-law, while undertakings are, as a rule, free to choose their business partners, under certain circumstances a refusal to supply by an undertaking in a dominant position may constitute an abuse of a dominant position within the meaning of Article 82 EC. It maintains that the present case presents a number of exceptional circumstances' which show that Microsoft's refusal to supply was an abuse, even on the strictest hypothesis - and therefore the one most favourable to Microsoft - that the refusal is regarded as a refusal to supply to third parties a licence relating to intellectual property rights (recitals 190 and 546 to 559 to the contested decision). The Commission maintains that it is entitled to take account of exceptional circumstances' other than those identified by the Court of Justice in Joined Cases C241/91 P and C242/91 P RTE and ITP v Commission [1995] ECR I743 (Magill ') and approved by the Court of Justice Case C418/01 IMS Health [2004] ECR I5039, but that in any event those exceptional circumstances are present in this case.

108. Microsoft has argued since the beginning of the administrative procedure that the concept of interoperability employed by the Commission in the present case is not consistent with the concept of full interoperability' envisaged by Directive 91/250 and that it does not correspond to the way in which undertakings organise their computer networks in practice (see, in particular, paragraphs 151 to 157 of the response of 16 November 2001 to the second statement of objections and pages 29 and 30 of the response of 17 October 2003 to the third statement of objections). It claims, in particular, that full interoperability is available to a developer of server operating systems when all the functionality of his program can be accessed from a Windows client operating system' (paragraph 143 of the response of 17 November 2000 to the first statement of objections; see also, to the same effect, pages 29 and 63 of the response of 17 October 2003 to the third statement of objections). Microsoft thus adopts what the Commission describes as a one-way' definition, whereas the Commission relies on a two-way relationship' (recital 758 to the contested decision).

109. In Microsoft's submission, the full interoperability referred to above may be achieved through the disclosure of interface information which it already provides, notably by its MSDN' product or the conferences which it organises for Professional Developers' or through certain other methods available on the market (see, in particular, paragraphs 12, 57 to 63, 73 to 83 and 147 of the response of 17 November 2000 to the first statement of objections; paragraphs 6, 72, 94 to 96, 148 and 149 of the response of 16 November 2001 to the second statement of objections; and page 31 of the response of 17 October 2003 to the third statement of objections).

110. Microsoft claims that the Commission's concept of interoperability means, on the other hand, that its competitors' operating systems must function in every respect as a Windows server operating system. That situation could be achieved only if those competitors were allowed to clone' its products, or some of their features, and if information on the internal mechanisms of its products were communicated to those competitors (see, in particular, paragraphs 7, 20, 27, 144 to 150 and 154 to 169 of the response of 17 November 2000 to the first statement of objections; paragraphs 158 to 161 of the response of 16 November 2001 to the second statement of objections; and pages 10 and 20 of the response of 17 October 2003 to the third statement of objections).

111. Microsoft maintains that a requirement that it disclose such information would amount to an interference with the free exercise of its intellectual property rights and with its incentive to innovate (see, in particular, paragraphs 162, 163 and 176 of the response of 16 November 2001 to the second statement of objections and pages 3, 10 and 11 of the response of 17 October 2003 to the third statement of objections).

112. Last, Microsoft submits that the present case must be appraised in the light of Magill and IMS Health , paragraph 107 above, since the refusal must be analysed as a refusal to grant third parties a licence relating to intellectual property rights and because, accordingly, the contested decision implies compulsory licensing. It maintains, however, that none of the criteria which in its submission were exhaustively accepted by the Court of Justice in those judgments is satisfied in the present case. Microsoft concludes that the refusal at issue cannot be characterised as abusive and that the Commission cannot therefore order it to disclose the interoperability information. In the alternative, Microsoft relies on Case C7/97 Bronner [1998] ECR I7791 and submits that the criteria laid down in that judgment are not satisfied in the present case either.

113. In the second place, it is appropriate to describe the way in which Microsoft structures its argument in the first part of the plea and the way in which the Court will examine that argument.

114. Thus, before developing its actual reasoning (see title (d) of the first part, below), Microsoft puts forward a number of considerations concerning interoperability, which may be summarised as follows. First, it claims that there are five methods of achieving interoperability between Windows client PC and server operating systems and competing server operating systems. Second, it criticises the degree of interoperability required by the Commission in the present case (and claims, in essence, that the Commission's real intention is to allow Microsoft's competitors to clone' its own products or certain of their features) and also the scope of the remedy prescribed in Article 5 of the contested decision.

115. In addition to those various considerations, Microsoft puts forward a series of arguments in order to demonstrate that the communication protocols which it is required to disclose to its competitors pursuant to the contested decision are technologically innovative and that those protocols, or their specifications, are covered by intellectual property rights.

116. Microsoft's actual reasoning in the first part of this plea may be set out as follows:

- the present case must be appraised in the light of the various circumstances recognised by the Court of Justice in Magill , paragraph 107 above, and approved in IMS Health , paragraph 107 above;

- the circumstances in which a refusal by an undertaking in a dominant position to grant third parties a licence covering intellectual property rights may be characterised as abusive are, first, where the product or service concerned is indispensable for carrying on a particular business; second, where the refusal is liable to exclude all competition on a secondary market; third, where the refusal prevents the emergence of a new product for which there is potential consumer demand; and, fourth, where the refusal is not objectively justified;

- none of those four circumstances is present in this case;

- as a subsidiary point, the criteria applicable are those recognised by the Court of Justice in Bronner , paragraph 112 above, which correspond to the first, second and fourth circumstances referred to above and identified in Magill and IMS Health , paragraph 107 above;

- nor, accordingly, is any of the three Bronner criteria, paragraph 112 above, satisfied in the present case.

117. The Court will begin by examining Microsoft's allegations concerning the varying degrees

of interoperability and the scope of the remedy prescribed in Article 5 of the contested decision. The applicant's arguments relating to the existence of five methods of achieving interoperability between its operating systems and its competitors' systems will be analysed when the Court examines what is claimed to be the indispensable nature of the interoperability information. The Court will then deal with Microsoft's arguments concerning the intellectual property rights which in its submission cover its communication protocols or the specifications for those protocols. Finally, the Court will appraise the actual reasoning which Microsoft develops in the first part of the plea and determine, first, the circumstances by reference to which Microsoft's impugned conduct must be analysed and, second, whether those circumstances are present in this case.

b) The varying degrees of interoperability and the scope of the remedy prescribed in Article 5 of the contested decision

Arguments of the parties

118. Microsoft maintains, in essence, that the concept of interoperability on which the Commission bases its conclusion that the refusal to supply interoperability information constitutes an abuse of a dominant position and which serves as the basis for the remedy prescribed in Article 5 of the contested decision is incorrect.

119. Microsoft emphasises that interoperability occurs along a continuum' and that it is not an absolute standard'.

120. While [t]here may well be a minimum level of interoperability that is required for effective competition', that level is not difficult to achieve and there are various ways to achieve interoperability in the sense of having operating systems supplied by different vendors work well together'.

121. Microsoft contends that in the contested decision the Commission adopts a wholly different concept of interoperability from the one set out in Directive 91/250 and used in practice by undertakings when they organise their computer net works. The Commission imagines that it is possible for a server operating system produced by one of Microsoft's competitors to function in all respects' like a Windows server operating system (that is to say, to achieve perfect substitutability' or plug replaceability'). In fact, that level of interoperability could be achieved only if Microsoft's competitors were authorised to clone' its products or certain features of those products. Two server operating systems are able to interoperate in the sense of exchanging information with each other or providing services to each other without necessarily having to be exactly the same'. It is thus important to distinguish the concept of interoperability' from the concepts of cloning' or duplication'.

122. In support of its assertions, Microsoft refers to a report by two computer experts which it had attached to its response of 16 November 2001 to the second statement of objections, in which those experts explain the concepts of tight coupling' and loose coupling' and also explain why efforts to achieve tight coupling' with software products from different designers have failed (annex A.9.2 to the application). Those efforts have failed for both technical and business reasons.

123. Microsoft also states that during the administrative procedure it produced 50 statements from undertakings, both public and private, operating in all industry sectors and from what were then the various Member States. In their statements, those undertakings attest to the high level of interoperability between Windows client and server operating systems and its competitors' server operating systems, due to the use of methods already available on the market. Furthermore, the Mercer reports show that an undertaking's choice of server operating system is not dictated by concerns about interoperability with Windows client and server operating systems.

124. In the reply, when introducing the reasoning designed to show that its communication protocols are protected by intellectual property rights, and also in its answer to one of the written questions

put to it by the Court, Microsoft makes a series of allegations concerning the scope of the remedy prescribed in Article 5 of the contested decision. By those allegations, Microsoft also raises the question of the level of interoperability required by the Commission in the present case.

125. Thus, in the reply, Microsoft claims that there is an inconsistency between the remedy and the standard of interoperability' employed by the Commission in the contested decision for the purpose of assessing the relevance of the alternative means of interoperability'. In its answer to one of the written questions put by the Court, Microsoft asserts that the scope of the disclosure obligation prescribed by Article 5 of the contested decision has been given different interpretations by the Commission.

126. On that last point, Microsoft observes that, at recital 669 to the contested decision, the Commission states that open industry standards fall short of enabling competitors to achieve the same degree of interoperability with the Windows domain architecture as Windows work group server operating systems do'. Microsoft also observes that, at recital 679 to the contested decision, the Commission states that Novell's clientless work group server operating systems cannot use the full capabilities of the Windows client PCs and work group servers in the same way that [Windows] work group server operating systems can'. Microsoft concludes from those statements that the Commission initially envisaged interoperability as being the capability for its competitors to make their products work in exactly the same way as Windows server operating systems. The Commission thus envisages that there be a quasi identity between Windows server operating systems and its competitors' server operating systems.

127. In order for the degree of interoperability thus advocated by the Commission to be achieved (a degree which Microsoft refers to variously as plug replacement', plug-replaceability', drop-in', functional equivalent' and functional clone'), Microsoft would have to disclose much more information than that referred to in Article 5 of the contested decision, notably information on the internal mechanisms of its server operating systems (including algorithms and decision rules').

128. Microsoft submits that the Commission adopted a second approach and advocated a narrow interpretation of Article 5, taking the view that that article required the applicant to license to its competitors only on the wire' communication protocols. In support of that assertion, Microsoft relies on the fact that at the hearing in the interim measures proceedings the parties which had then been granted leave to intervene in support of the form of order sought by the Commission stated that they were not interested in obtaining access to information about the internal mechanisms of the Windows server operating systems. Furthermore, the Commission confirmed in the defence and the rejoinder that it did not propose to allow Microsoft's competitors to clone' the file and print services or group and user administration services delivered by the Windows server operating systems. However, the thousands of pages of specifications which Microsoft communicated to the Commission pursuant to the contested decision will none the less allow its competitors to copy certain features' of its products that it developed through its own research and development efforts. Thus, for example, by having access to the DRS (Directory Replication Service) protocol, third parties would be able to reverse-engineer other parts of the Windows server operating system that use Active Directory.

129. Taking a third approach, in October 2005, and thus several months after the closure of the written procedure in the present case, the Commission again interpreted Article 5 of the contested decision as meaning that the information that Microsoft was to disclose must allow its competitors to create functional equivalents' of the Windows server operating systems or, in other words, systems that were perfectly substitutable' for those systems. Microsoft again asserts that such an interpretation of Article 5 requires that it give access to information on the internal mechanisms of its Windows server operating systems.

130. At the hearing, Microsoft discussed the multimaster replication' mechanism at length and,

in that context, submitted arguments to the same effect as those set out above.

131. Microsoft explained that in the past directory services were executed by a single server which was very large and very expensive. Nowadays those services are generally carried out by a multitude of small, less expensive servers situated in different places and linked in an ensemble which Microsoft illustrated on various slides shown at the hearing by a blue bubble'. Microsoft submitted that the software installed on the servers forming part of that blue bubble' and involved in supplying directory services must share the same internal logic so that the servers are able to work together as though they were a single unit. Each of those servers must, in effect, presume that the others will react in exactly the same way in response to a given request. Furthermore, the communications between servers operating under a given operating system within the blue bubble' are of a very special nature.

132. The multimaster replication mechanism allows any change made to the data contained on a server acting as a domain controller within the blue bubble' (for example, a change in a user's password) to be automatically replicated on all the other servers acting as domain controller and belonging to the same blue bubble'.

133. The first company to succeed in developing such a mechanism was Novell, in 1993. However, the mechanism in its NetWare server operating system allows only a maximum of 150 domain controllers to function in a perfectly synchronised manner within a blue bubble', whereas the mechanism used by Active Directory in the Windows 2000 Server system can deal with several thousand domain controllers simultaneously.

134. With further reference to the multimaster replication mechanism, Microsoft reiterated that the contested decision was designed to allow its competitors to develop server operating systems containing functional equivalents' of its own Windows server operating systems. The decision intended, in particular, that servers implementing directory services on which a non-Microsoft server operating system is installed would be able to replace, within a blue bubble', existing servers on which a Windows server operating system using Active Directory is installed. In order for such a result to be capable of being achieved, however, non-Microsoft server operating systems would have to function in exactly the same way - and therefore share the same internal logic - as Windows server operating systems using Active Directory. That would be possible only if Microsoft's competitors had information relating to the internal mechanisms of its server operating systems, including certain algorithms, namely information going well beyond interoperability information within the meaning of the contested decision.

135. Multimaster replication could not therefore intervene between servers operating under operating systems from different suppliers. For example, a server on which a Sun operating system is installed could not be placed within a blue bubble' containing servers operating under a Novell operating system or using Active Directory. Microsoft explained, however, that since Active Directory relies on standard protocols such as LDAP (Lightweight Directory Access Protocol), it is capable of functioning, within the same computer network, with the directory services provided by its competitors' server operating systems. It makes no difference whether that interoperability operates between two separate servers or between one server and a group of servers within a blue bubble'.

136. The Commission rejects Microsoft's claims.

137. It begins by referring to the definition of interoperability information' and protocols' in Article 1(1) and (2) of the contested decision. According to the decision, Microsoft is required to provide technical documentation, called specifications', which describes those protocols in detail. The specifications show how to format the messages, when to originate them, how to interpreter them, cope with incorrect messages, etc.'. It is essential to distinguish that technical documentation

from the source code of Microsoft's products, and a competitor wishing to write a server operating system which understands' Microsoft's protocols will have to ensure that its product includes source code that implements the protocol specifications. However, two programmers implementing the same protocol specifications will not write the same source code and their programs will perform differently (recitals 24, 25, 698 and 719 to 722 to the contested decision). From that point of view, protocols may be compared with a language whose syntax and vocabulary are the specifications, in so far as the mere fact that two persons learn the syntax and vocabulary of the same language does not guarantee that they will use it in the same way. Furthermore, the fact that two products provide their services through compatible protocols says nothing about how they provide the services'.

138. The Commission asserts that Microsoft advocates a narrow definition of the concept of interoperability, and one that is incompatible with Directive 91/250. It refers to recitals 749 to 763 to the contested decision and observes that Microsoft adduces no new argument by comparison with the assertions already made during the administrative procedure. At the hearing, the Commission stated that it had relied on that directive not only in order to demonstrate the importance of interoperability in the software sector, but also for the purpose of appraising the concept of interoperability.

139. The Commission also recognises that there is a whole range of possible degrees of interoperability between PCs running Windows and work group server operating systems and that some interoperability' with the Windows domain architecture is already possible. It did not fix a priori a given level of interoperability which is indispensable to the maintenance of effective competition on the market but, following its investigation, it established that the degree of interoperability that competitors could achieve using the available methods was too low to enable them to remain viably on the market. The Commission refers to the section of the contested decision in which it shows that interoperability is the key factor driving the uptake of Microsoft's work group server operating systems' (recitals 637 to 665 to the contested decision) and observes that it became apparent that those methods did not permit the level of interoperability required by customers [to be achieved] in an economically viable manner'.

140. In the rejoinder, the Commission contends that, in the contested decision, it does not conclude that it is indispensable that Microsoft's competitors be allowed to reproduce its interoperability solutions'. What matters is that they are able to achieve an equivalent degree of interoperability by their own innovative efforts.

141. Last, the Commission submits that, contrary to Microsoft's contention, the contested decision is not designed to enable non-Microsoft server operating systems to function in all respects like a Windows server operating system and, consequently, to permit its competitors to clone' the features of its products. The contested decision is in fact intended to enable those competitors to develop products which w[ould] function differently [but would be] able to understand the messages conveyed by Microsoft's relevant products'. Furthermore, the interoperability information that Microsoft must disclose to its competitors under the contested decision will not enable them to create exactly the same products as Microsoft's products.

142. On that point, the Commission stated at the hearing that it was necessary to distinguish the concept of functional equivalent' from that of functional clone'. A functional equivalent' is not a system operating identically to the Windows work group server operating system which it replaces but rather a system that can provide the appropriate response to a specific request under the same conditions as that Windows operating system and can make a Windows client PC or server react to its messages in the same way as if they came from that Windows operating system.

143. The Commission submits that tight coupling' and loose coupling' are not clearly-defined technical terms, especially in the field of operating systems software. In any event, it does not agree that the tightly-coupled interface details' referred to in the report in annex A.9.2 are innovative.

144. The Commission has already discussed the customer statements submitted by Microsoft during the administrative procedure, at recitals 357, 358, 440 to 444, 511, 513, 595, 602, 628 and 707 to the contested decision. Those statements, which date back to 2000 and 2001, relate in essence to undertakings which had to a large extent adopted Windows as the standard' for their work group networks. As for the Mercer reports, the Commission submits that it has already stated at recital 645 to the contested decision that the data analysed in those reports suggest precisely the opposite of what Microsoft claims.

145. The Commission proceeds to reject the argument which Microsoft derives from the alleged inconsistency between the remedy prescribed in Article 5 of the contested decision and the standard of interoperability used in the decision to appraise the relevance of the alternative means of interoperability'.

146. The Commission professes to find it difficult to understand the meaning of that argument. In the excerpts from recitals 669 and 679 to the contested decision which Microsoft cites, the Commission does not reject certain alternatives to disclosure of interoperability information on the ground that those alternatives do not permit the cloning' of Microsoft's products, or certain features of those products, but merely notes that those alternatives provide a lesser degree of interoperability with Microsoft's dominant products (a lesser ability to access the features of [those] products) than Microsoft's own offering enjoys'. What is at stake, therefore, is the ability to work with' the Windows environment.

147. It is clear from recitals 568 to 572, 740 and 749 to 763 to the contested decision, moreover, that the decision concerns only disclosure of interface specifications. Microsoft does not substantiate to the requisite legal standard its assertion that, by having access to its communication protocols specifications, third parties would be able to reverse engineer other parts of the Windows server operating system that use Active Directory.

148. At the hearing, the Commission disputed the merits of the assertions which Microsoft made on the basis of the multimaster replication mechanism. It confirmed that the contested decision was intended to ensure, in particular, that servers running a work group server operating system produced by one of Microsoft's competitors would be able to form part of a blue bubble' consisting of servers on which a Windows work group server operating system is installed and that, accordingly, the disclosure obligation prescribed in Article 5 of the contested decision would also cover information on communications between servers within that blue bubble'. However, it rejected Microsoft's assertion that that purpose could be achieved only by providing access to information on the internal mechanisms of its products.

149. SIIA emphasises the crucial role that interoperability plays in the software sector. There is no doubt that consumers place great significance on the fact that computer programs are interoperable with the quasi-monopolistic products represented by Windows client PC operating systems. In normal competitive circumstances, software developers have every incentive to favour interoperability between their products and their competitors' products and to disclose interoperability information. They thus compete on the basis of normal' factors such as price and product security, processing speed or innovative functionality. Microsoft, on the other hand, uses its quasi-monopoly position on certain markets to leverage that position into adjacent markets. More specifically, Microsoft restricts its competitors' capacity to achieve interoperability with its quasi-monopolistic' products by failing to comply with industry standard protocols, by making minor (and unnecessary) additions' to them and by then refusing to disclose information about those extended protocols' to its competitors.

150. SIIA also disputes Microsoft's assertion that the contested decision seeks to allow Microsoft's competitors to develop server operating systems that function in all respects like a Windows server operating system. The purpose of the contested decision is to allow non-Microsoft work group server operating systems to interoperate with Windows client PC and work group server operating systems

in the same way as Windows work group server operating systems do.

Findings of the Court

151. In the various arguments set out at paragraphs 118 to 135 above, Microsoft raises two main issues: first, the degree of interoperability required by the Commission in the present case; and, second, the scope of the remedy prescribed in Article 5 of the contested decision.

152. Those two issues are intrinsically linked, since, as is apparent in particular from recital 998 to the contested decision, the purpose of the remedy is to require Microsoft to disclose what in the Commission's contention it has abusively refused to disclose, and to disclose it both to Sun and to its other competitors. The scope of the remedy must therefore be assessed in the light of the abusive conduct in which Microsoft is found to have engaged, which depends in particular on the degree of interoperability envisaged by the Commission in the contested decision.

153. For the purpose of deciding those issues, the Court will begin by reviewing a series of factual and technical findings made in the contested decision. It was on the basis of its examination of, in particular, the way in which Windows work group networks are organised and the links between the various operating systems within those networks that the Commission evaluated the degree of interoperability required in the present case and thus concluded that access to the interoperability information was indispensable. The Court will also define at the outset the nature of the information at which the contested decision is directed.

- Factual and technical findings

154. At recitals 21 to 59, 67 to 106 and 144 to 184 to the contested decision, the Commission makes a series of factual and technical findings concerning the products and technologies concerned.

155. The Court notes at the outset that Microsoft does not, in effect, dispute those various findings. To a large extent, moreover, they are based on statements made by Microsoft during the administrative procedure (especially in its responses to the three statements of objections) and also on documents and reports published on its Internet site. Furthermore, the technical presentations by the parties' experts at the hearing, including Microsoft's, confirm the substance of those findings.

156. In the first place, the Commission, after observing that the word interoperability' could be used in different contexts by technicians and lent itself to different uses, cites, first of all, the 10 th , 11 th and 12 th recitals in the preamble to Directive 91/250 (recital 32 to the contested decision).

157. Those recitals read as follows:

... the function of a computer program is to communicate and work together with other components of a computer system and with users and, for this purpose a logical and, where appropriate, physical interconnection and interaction is required to permit all elements of software and hardware to work with other software and hardware and with users in all the ways in which they are intended to function;

... the parts of the program which provide for such interconnection and interaction between elements of software and hardware are generally known as interfaces;

... this functional interconnection and interaction is generally known as interoperability;... such interoperability can be defined as the ability to exchange information and mutually to use the information which has been exchanged.'

158. The Commission then states that Microsoft criticises it for adopting in the present case a concept of interoperability that goes beyond what is contemplated by Directive 91/250. None the less, the Commission and Microsoft are agreed that interoperability is a matter of degree and that various software products in a system interoperate (at least partially) when they are able to exchange

information and mutually to use the information which has been exchanged' (recital 33 to the contested decision).

159. In the second place, the Commission observes that nowadays computers increasingly operate in conjunction with other computers in a network. Depending on the specific tasks that they want to carry out, client PC users use both the computing capability of their own client PC and at the same time the capabilities of the various types of more powerful multi-user' computers, namely servers', which they access indirectly through their client PCs (recital 47 to the contested decision). In order to ensure easy and efficient access to network resources', the applications must be distributed across several computers, each of which hosts different components that interoperate', and the computers linked within the network must be integrated into a consistent distributed computing system' (recital 48 to the contested decision). Last, [s]uch a system would ideally make the complexity of the underlying hardware and software transparent (that is to say, invisible) to the user and distributed applications alike, so that users and applications can easily find their way through this complexity in order to access computing resources' (recital 48 to the contested decision).

160. In the third place, the Commission emphasises that the present case focuses on work group server services', namely the basic infrastructure services used by office workers in their day-to-day work (recital 53 to the contested decision). It identifies, more particularly, the following three types of services: first, the sharing of files stored on servers; second, the sharing of printers; and, third, the administration of groups and users. The third type of services involves in particular ensuring secure access to network resources and the secure use of those resources, notably, first by authenticating users and then by checking that they have the right to perform a particular action (recital 54 to the contested decision).

161. Those different services, moreover, are closely interrelated and may in fact to a large extent be regarded as one and the same... service', but viewed from two different perspectives, namely that of the user (file and print services) and that of the network administrator (group and user administration services) (recitals 56 and 176 to the contested decision). Although Microsoft maintains in its reasoning relating to the elimination of competition that the Commission adopted an artificially narrow' definition of the relevant product market by including only the three types of services referred to above (see paragraphs 443 to 449 below), it does not dispute the existence of such links between those services.

162. In the light of those factors, the Commission defines work group server operating systems' as operating systems designed and marketed to deliver file and print services, and also group and user administration services, collectively to relatively small numbers of client PCs linked together in small to medium-sized networks (recitals 53 and 345 to the contested decision). In order to store and query the group and user administration information effectively, those operating systems generally rely on directory service' technologies (recital 55 to the contested decision).

163. In the fourth place, the Commission examines the way in which interoperability is achieved in Windows work group networks' (recitals 144 to 184 to the contested decision), namely group[s] of Windows Client PCs [on which a Windows client PC operating system is installed] and Windows Work Group Servers [on which a Windows work group server operating system is installed] linked together via a computer network' (Article 1(7) of the contested decision).

164. To that end, the Commission focuses on Microsoft's Windows 2000' generation of operating systems, while observing that the essential characteristics of those systems are similar to those of the next generation of systems (namely the Windows XP Home Edition' and Windows XP Professional' operating systems for client PCs and the Windows 2003 Server' operating system for servers) (footnote 182 to the contested decision).

165. First, the Commission sets out a series of considerations concerning the group and user administration services (recitals 145 to 157 to the contested decision). Within the Windows work group networks, the Windows domains' lie at the core of the provision of those services; the Commission characterises those domains as administrative units' whereby the Windows work group server operating systems administer client PCs and work group servers (recitals 145 and 146 to the contested decision). In particular, each resource' (computer, printer, user, application, etc.) in a Windows domain has one domain account', which defines its identity for the whole domain, and within the same Windows domain there is a single user logon', in the sense that when the user logs on to a domain resource (generally his client PC) he is recognised' by all the other resources in the same domain and does not need to enter his name and password again (recital 146 to the contested decision).

166. The Commission emphasises the importance of the role played within the Windows domains by servers known as domain controllers', in contrast to other servers, which are known as member servers' (recital 147 to the contested decision). Domain controllers are responsible for storing domain accounts and the related information. In other words, they act as switchboard operators' of the Windows domain (recital 147 to the contested decision).

167. The Commission emphasises, more particularly, the key role played by Active Directory and the changes which the introduction of that full-fledged directory service' to the Windows 2000 Server operating system has made to the way in which domain controllers relate to each other in Windows 2000 domains by comparison with the earlier Windows operating systems, namely those of the Windows NT generation (recital 149 to the contested decision).

168. The Windows NT 4.0 operating system had primary domain controllers and backup domain controllers. In that system, changes to domain accounts could be made only by the primary domain controller and were then periodically and automatically propagated to all backup domain controllers. In a Windows 2000 domain, on the other hand, all domain controllers operate as peers', so that it is possible to make changes to domain accounts an any of them, those changes then being automatically propagated to the other domain controllers (recital 150 to the contested decision). Those operations are carried out by means of new synchronisation protocols, which are different from those used by the Windows NT 4.0 operating system.

169. Another new feature of Windows 2000 domains is that they can be organised hierarchically, with trees' of Windows 2000 domains linked to each other by automatic trust relationships, while several trees' can then be linked by trust relationships in a forest' (recital 151 to the contested decision). Windows 2000 domain controllers can be set up as global catalog servers', which means that they store not only information on the resources available on the domains which they control but also a summary' of all the resources available in the forest', namely the Global Catalog'. The data stored in the global catalog are updated by various protocols.

170. The Commission goes on to explain that the move from Windows NT technology to Windows 2000 technology has also entailed changes with respect to the security architecture of Windows work group networks (recitals 152 to 154 to the contested decision). In particular, in the Windows 2000 domain authentication is based on the Kerberos' protocol and no longer on the NTLM (NT LAN Manager) protocol, which provides a series of advantages as regards connection speed, mutual authentication and trust management. The Key Distribution Centre' foreseen by the Kerberos protocol is integrated with other Windows 2000 security services running on the domain controller and uses the domain's Active Directory as its security account database' (recital 153 to the contested decision). However, the Kerberos protocol implemented in the Windows 2000 Professional and Windows 2000 Server operating systems is not the standard version developed by the Massachusetts Institute of Technology (MIT), but a version extended' by Microsoft (recitals 153 and 154 to the contested decision).

171. Last, the changes brought about by the move from Windows NT technology to Windows 2000 technology

and Active Directory include the fact that a number of functions are integrated both in the Windows 2000 Professional operating system and in the Windows 2000 Server operating system, in order to simplify the administration of Windows client PCs in Windows domains (recitals 155 to 157 to the contested decision). Those functions - the Commission cites, more particularly, the Group Policy' and Intellimirror' functions - are significantly enhanced', or even available solely, in a Windows 2000 domain managed from a Windows 2000 domain controller using Active Directory (recital 156 to the contested decision). The Commission notes that, according to Microsoft, [Group Policy was] a feature of Windows 2000... that allow[ed] administrators centrally to manage collections of users, computers, applications and other network resources instead of managing [those] objects on a one-by-one basis'. Groups may be defined locally for a given computer or defined for the whole Windows domain, while Intellimirror, which is available only in a Windows 2000 domain, allows users to have their working environment' (data, software, etc.) available with their personal settings, whether they are connected to the network or not and wherever they are on the network (recital 157 to the contested decision).

172. Second, the Commission sets out a series of considerations concerning file and print services (recitals 158 to 164 to the contested decision).

173. In particular, modern work group server operating systems provide support for distributed file systems' and at the end of the 1990s Microsoft marketed such a system, called Dfs' (Distributed File System), in the form of an add-on that could be installed on client and server PCs running Windows NT 4.0. Windows 2000 is the first generation of Microsoft products to include native support for Dfs both on the client PC and the work group server side (recitals 161 to 163 to the contested decision).

174. Under Windows 2000, Dfs may be installed either in stand-alone' mode or domain-based' mode, but the latter mode, which provides a number of advantages in terms of intelligent' retrieval of the Dfs information from client PCs, is available only in Windows domains and is enhanced by the presence of domain controllers running Active Directory (recital 164 to the contested decision).

175. Third, the Commission explains that Microsoft has developed its own set of distributed object-based system technologies, encompassing COM (Component Object Model) and DCOM (Distributed Component Object Model) technologies (recital 166 to the contested decision). Those two technologies are closely interrelated and COM, which is implemented in both Windows client PC operating systems and Windows work group server operating systems, links those two operating systems into a consistent platform for distributed applications (recital 166 to the contested decision). In its response to the third statement of objections, Microsoft stated that COM [was] fundamental to the architecture of Windows operating systems, with the result that many interfaces in Windows [were] COM-based' (recital 167 to the contested decision). More particularly, many interactions between client PCs and the Active Directory service in Windows work group servers involve COM/DCOM. Furthermore, the DCOM protocol' is involved in client/server communications whereby Windows servers deliver authentication services or file services to Windows client PCs (recital 167 to the contested decision).

176. Fourth, the Commission explains that in many ways Microsoft encourages natural migration' from its Windows NT operating systems to its Windows 2000 operating systems, both by its customers and by software developers (recitals 168 to 175 to the contested decision).

177. Thus, in a Windows domain it is possible to upgrade' computers using previous versions of Windows by having them migrate' to Windows 2000 without using Active Directory. However, customers can take full advantage of the upgrade' only by installing a Windows 2000 domain running Active Directory in native mode', which means that all the domain controllers in the domain concerned migrate' to Windows 2000 and Active Directory. The work group servers of the domain which do not act as domain controllers must also be compatible with Windows 2000 (which assumes, in particular,

that they implement the Kerberos protocol, in the version extended by Microsoft). When a Windows 2000 domain is installed in mixed mode' (when the primary domain controller has migrated' to Windows 2000 but some of the backup domain controllers are still running Windows NT), the user does not benefit from all the advanced features of the Windows 2000 domain. In particular, the user must forego most of the additional flexibility that Active Directory brings to the management of groups of users. Once the user switches his primary controller to native mode he can no longer use as a domain controller a server that is interoperable only with the Windows NT 4.0 generation of Microsoft products (including work group servers running non-Microsoft systems).

178. Software developers are strongly encouraged by Microsoft to use the new features of the Windows operating systems, in particular Active Directory, notably by means of the certification programmes which it has set up (recitals 171 to 175 to the contested decision).

179. Fifth, the Commission draws a series of conclusions (recitals 176 to 184 to the contested decision).

180. It reiterates, first of all, that in Windows technologies file and print services and group and user administration are delivered to users of Windows client PCs as a set of interrelated services'. By way of illustration, the Commission states that, in a Windows 2000 domain, the server message block (SMB) client and server underlying [Dfs], [DCOM], LDAP authentication,... all use [Microsoft] Kerberos automatically for authentication' (recital 176 to the contested decision). Furthermore, besides authentication, the authorisation process depends on the ability to create, modify and interpret Access Control Lists' (ACL), which involves communication with the domain controllers of the domain (recital 176 to the contested decision).

181. Next, the Commission states that, in order to be able to deliver their services transparently' to client PC users, Windows work group servers use specific pieces of software code in the Windows client PC operating system (recital 177 to the contested decision). In that regard, the Commission observes, in particular, that Microsoft stated that Dfs [had] a local component that [would] run even if a Windows 2000 Professional client [PC] [was] operating in standalone mode' and that Windows 2000 Professional contain[ed] a client code that [could] be used to access Active Directory' (recital 177 to the contested decision). Quoting the author of a work entitled Understanding Active Directory Services' published by Microsoft Press, the Commission also states that Active Directory is completely - often invisibly - integrated into the [Windows client PC]' (recital 177 to the contested decision).

182. The Commission emphasises that it is important, however, that the interconnection and interaction involving the Windows 2000 Professional source code should not be viewed solely as being intended to enable a particular Windows work group server to communicate with a particular Windows client PC. It is more accurate to describe that interconnection and that interaction in terms of interoperability within a computer system encompassing several Windows client PCs and several Windows work group servers, all linked together in a network. Interoperability within such a computer system thus has two inseparable components, namely client/server interoperability and server/server interoperability (recital 178 to the contested decision).

183. In many cases, moreover, there is symmetry between server/server and client/server interconnection and interaction' (recital 179 to the contested decision). The Commission mentions, by way of example, the fact that the same application program interface' (API), namely ADSI' (Active Directory Service Interface), is implemented both on Windows 2000 Professional and Windows 2000 Server to handle access to Active Directory domain controllers. A further example given by the Commission is the fact that, in a Windows domain, the Kerberos protocol, as extended by Microsoft, is used for authentication both between a Windows client PC and a Windows work group server and between several Windows work group servers.

184. In certain circumstances, servers will query other servers on behalf of a client PC' (recital 180 to the contested decision). By way of example, the Commission mentions, in particular, Kerberos delegation', a functionality present in the Windows 2000 Server operating system which allows a server to borrow the identity of a client PC and to request a service from another server on behalf of that client PC. Thus servers quite frequently address requests to other servers and therefore act as client PCs (see also footnote 51 to the contested decision).

185. Some client/server communications build on the expectation that certain server/server communications have already taken place. In particular, when a client PC running Windows 2000 Professional queries the domain controller in a Windows 2000 domain, the client PC will expect some preparatory coordination to have taken place between the domain controllers running Windows 2000 Server' (recital 181 to the contested decision). According to the Commission, [that] includes, for example, both the fact that domain controllers will hold a full copy of the Active Directory data, which are kept updated through synchronisation protocols[,] and the fact that Global Catalog servers are able to store information about computers of the forest that are outside their domain, which is possible through various Global Catalog-related products' (recital 181 to the contested decision). In such a situation, the server/server communication is logically linked' to the client/server communication, since it occurs in preparation for the client/server communication.

186. It follows from all of the foregoing matters - which Microsoft does not substantially contest and the correctness of which was largely confirmed by the technical presentations made at the hearing - that, as the Commission correctly observes at recital 182 to the contested decision, Windows work group networks rely on an architecture' of both client/server and server/server interconnections and interactions and that that architecture' - which the Commission characterises as Windows domain architecture' - ensures transparent access' to the main services provided by work group servers.

187. Those various factors also show that, as found at various points in the contested decision (see, in particular, recitals 279 and 689 to the contested decision), those interconnections and interactions are closely interlinked.

188. In other words, the proper functioning of the Windows work group networks relies both on client/server communication protocols - which, by their nature, are implemented both in Windows client PC operating systems and in Windows work group server operating systems - and on server/server communication protocols. As the Commission explained at the hearing, for numerous tasks, server/server communication protocols appear, in fact, as extensions' of the client/server communication protocols. In certain cases, a server acts as a client PC vis-à-vis another server (see paragraph 184 above). Likewise, while it is true that certain communication protocols are implemented only in Windows work group server operating systems, the fact remains that, from a functional point of view, they are linked to the client PCs. The Commission refers on that point, without being contradicted by Microsoft, to the Global Catalog-related protocols and to the synchronisation and replication protocols between domain controllers.

189. The Court therefore finds that the Commission is quite correct to conclude that the common ability to be part of [the Windows domain architecture] is a feature of compatibility between Windows client PCs and Windows work group servers' (recital 182 to the contested decision).

190. Finally, it is necessary to bear in mind the major role played by directory services on the work group server operating systems market. Microsoft itself observes in the reply that on that market the directory service is a key competitive feature responsible in large part for the success of particular products' and emphasises, in particular, that Active Directory is... at the heart of Windows server operating systems', after stating that [f]or both file and print services and user and group administration services, it [is] important to know with precision which user [is] entitled to access which network resources'.

191. Active Directory logs all network object information and allows it to be administered centrally. It fully integrates administration and user authentication and access control functionalities and thus ensures the security of the information. In addition, Active Directory uses the multi-master replication mechanism.

- The nature of the information referred to in the contested decision

192. The first abusive conduct in which Microsoft is found to have engaged is its refusal to supply the interoperability information to its competitors and to allow its use for the purpose of developing and distributing work group server operating system products between October 1998 and the date of the contested decision (Article 2(a) of the contested decision).

193. By way of remedy for that refusal, the Commission ordered Microsoft, inter alia (Article 5(a) of the contested decision), to do the following:

Microsoft ... shall, within 120 days of the date of notification of [the contested decision], make the interoperability information available to any undertaking having an interest in developing and distributing work group server operating system products and shall, on reasonable and non-discriminatory terms, allow the use of the interoperability information by such undertakings for the purpose of developing and distributing work group server operating system products[.]'

194. It is appropriate to bear in mind the way in which the Commission defined and assessed the principal concepts of relevance to the present issues.

195. Thus, in Article 1(1) of the contested decision, it defines interoperability information' as the complete and accurate specifications for all the protocols [that are] implemented in Windows work group server operating systems and that are used by Windows work group servers to deliver file and print services and group and user administration services, including the Windows domain controller services, Active Directory services and Group Policy services, to Windows work group networks'.

196. Protocols' are described by the Commission as rules of interconnection and interaction between various pieces of software within a network (recital 49 to the contested decision). More specifically, the protocols at issue in the present case are defined as a set of rules of interconnection and interaction between various instances of Windows work group server operating systems and Windows client PC operating systems running on different computers in a Windows work group network' (Article 1(2) of the contested decision).

197. The Court notes that Microsoft does not contest the Commission's concept of protocols'. On the contrary, in the application Microsoft itself describes protocols as enabling computers connected via a network to exchange information to accomplish predefined tasks'. Indeed, in a report by one of its experts, Mr Madnick, annexed to the applicant's observations on the statements in intervention, the applicant draws a distinction between two categories of communication protocols, depending on whether they are simple' or complex' and mentions the DRS protocol as coming within the second category (annex I.3 (Madnick, Response to Mr Ronald S. Alepin's Annex on Interoperability and the FSFE's Submission')). However, in making that distinction Microsoft does not seek to challenge the correctness of the definition referred to above, but only to establish that complex protocols govern interactions between various similar elements of a network which deliver a joint service in close coordination and that they reveal' much more detailed and more valuable information than simple protocols.

198. Specifications' are not defined in the operative part of the contested decision. However, it is common ground that specifications take the form of detailed technical documentation, which, indeed, reflects the way in which that concept is generally understood in the computer industry.

199. At recital 24 to the contested decision, the Commission states that it is important to distinguish the concept of specifications' from the concept of implementation', in the sense that [a] specification is a description of what the software product must achieve, whereas the implementation relates to the actual code that will run on the computer' (see, to the same effect, recital 570 to the contested decision). In other words, specifications describe the interfaces by means of which a given element of a computer system can use another element of the same system. They describe, in particular, and in a very abstract manner, what functionalities are available and the rules which allow those functionalities to be called up and received.

200. At recital 571 to the contested decision, the Commission states that it is possible to provide interface specifications without disclosing implementation details, and that it is common practice to do so in the computer industry, especially when open interoperability standards are adopted (see also, on that point, recital 34 to the contested decision). In its statement in intervention, SIIA puts forward arguments to the same effect.

201. A number of factors confirm the correctness of those different assertions. First, the practice to which the Commission refers is supported by a set of examples - not disputed by Microsoft - which are mentioned in the contested decision, namely the POSIX 1' specifications (recitals 42 and 88 to the contested decision), the Java' specifications (recital 43 to the contested decision), the specifications of the Kerberos version 5' protocol (recital 153 to the contested decision), the specifications of the NFS' (Network File System) protocol developed by Sun (recital 159 to the contested decision) and the CORBA' specifications drawn up by the Object Management Group (recital 165 to the contested decision). Second, as the Commission states at recital 571 to the contested decision, under the MCPP set up pursuant to the United States settlement, licensees are not granted access to Microsoft's source code, but to specifications of the relevant protocols.

202. Nor does Microsoft call in question, other than quite incidentally, the abovementioned distinction between the concepts of specifications' and implementation', as it merely makes a general reference in footnote 74 to the application to an opinion drawn up by its experts Mr Madnick and Mr Nichols, which was submitted to the Commission during the administrative procedure and is annexed to the application (annex A.12.2 to the application). For the reasons stated at paragraphs 94 and 97 above, the Court considers that it cannot take that opinion into account. Furthermore and in any event, the argument in that opinion is largely based on an incorrect premiss, namely, that the degree of interoperability required by the Commission in the present case means that Microsoft's competitors must be capable of reproducing or cloning' Microsoft's products or certain of their functionalities (see paragraphs 234 to 239 below).

203. The Court notes, moreover, that in the contested decision the Commission expressly states that the abusive refusal to supply imputed to Microsoft concerns only the specifications of certain protocols and not the source code (see, in particular, recitals 568 to 572 to the contested decision).

204. To the same effect, the Commission emphasises on a number of occasions that it is not its intention to order Microsoft to disclose its source code to its competitors. Thus, at recital 999 to the contested decision, it states that the term specifications makes clear that Microsoft should not be required to disclose its own implementation of [those] specifications, that is to say, its own source code'. Likewise, it observes at recital 1004 to the contested decision that the decision does not contemplate compulsory disclosure of Windows source code as [that] is not necessary to achieve the development of interoperable products'. At the same recital, the Commission states that [t]he disclosure order should concern the interface specifications only'.

205. In an opinion entitled Innovation in Communication Protocols that Microsoft is ordered to license to its server operating system competitors', enclosed as annex C.4 to the reply, Mr Lees, one of Microsoft's experts, himself draws a distinction between the protocols used for communications

between servers and... the algorithms/decision rules that operate internally on each server', before observing that it is the protocols that have to be disclosed pursuant to Article 5 of the contested decision. In his opinion, Mr Lees focuses on the DRS protocol, used for the multimaster replication mechanism, and states that it represents one of numerous protocols to which Microsoft grants its competitors access in application of the contested decision.

206. It follows that the information to which the contested decision refers constitutes a detailed technical description of certain rules of interconnection and interaction that can be used within the Windows work group networks to deliver work group services. That description does not extend to the way in which Microsoft implements those rules, namely, in particular, to the internal structure or to the source code of its products.

- The degree of interoperability required by the Commission in the contested decision

207. The Commission adopted a two-stage approach in determining whether the information at issue was indispensable. It first examined the degree of interoperability with the Windows domain architecture that the work group server operating systems supplied by Microsoft's competitors must achieve in order for those competitors to be able to remain viably on the market. It then proceeded to determine whether the interoperability information to which Microsoft refused access was indispensable to the attainment of that degree of interoperability.

208. The Court will examine below the degree of interoperability required by the Commission in the contested decision. At this stage, however, it will not examine the question as to whether the Commission was justified in concluding that Microsoft's competitors could viably remain on the market only if their products were capable of achieving that degree of interoperability. That question, together with the other aspects of the Commission's reasoning as described above, will be appraised when the Court examines what the Commission alleges to be the indispensable nature of the information at issue (see paragraphs 369 to 436 below).

209. It is appropriate, first of all, to summarise briefly the arguments of the main parties.

210. Microsoft shares the Commission's view that interoperability is a matter of degree' (recital 33 to the contested decision).

211. It contends, however, that the degree of interoperability required by the Commission in the present case is inappropriate in that it goes beyond the concept of full interoperability' envisaged by Directive 91/250. That concept - which Microsoft also describes as multivendor interoperability' - requires only that different developers' operating systems are capable of functioning correctly' together.

212. More specifically, Microsoft claims that the Commission's real intention is that competing operating systems for servers should function in every respect as a Windows server operating system. It refers variously to plug replacement', plug-replaceability', drop-in', functional equivalent' and functional clone', and asserts that such a degree of interoperability could be achieved only if it allowed its competitors to clone' or to reproduce' its products (or features of those products) and communicated to those competitors information on the internal workings of its products.

213. Last, Microsoft maintains that multivendor interoperability may be achieved by the methods already available on the market.

214. The Court notes that Microsoft's position as thus described corresponds to the position which it maintained throughout the administrative procedure.

215. Thus, in its response of 17 November 2000 to the first statement of objections, Microsoft states that the degree of interoperability apparently required by the Commission is not consistent with Community law and does not exist on the market. Relying, more particularly, on the 10 th

recital (in the English and French versions) to Directive 91/250, the applicant submits that full interoperability is available to a developer of server operating systems when all of the functionality of his program can be accessed from a Windows client operating system' (paragraph 143 of the response; see also recital 751 to the contested decision). The applicant maintains that the Commission wrongly defines interoperability much more broadly when it considers that, for there to be interoperability between two software products, all the functionalities of both products must function correctly. That, in Microsoft's contention, is tantamount to requiring plug-replaceability' or cloning' (paragraph 144 of the response). Microsoft criticises the fact that the Commission thus subscribes to the position of Sun, according to which it should be possible to replace, within the computer network of an undertaking composed of client PCs running Windows, a server running Windows 2000 by a server with a Solaris operating system, without that entailing a reduction in the functionalities to which users have access (paragraphs 145 and 162 of the response). In order to achieve full interoperability, it is sufficient that Microsoft should disclose the interfaces exposed by the Windows client PC operating systems which developers of competing server operating systems need in order to make the functionalities of those systems available to users of Windows client PCs.

216. Likewise, in its response of 16 November 2001 to the second statement of objections, Microsoft, reiterating, in effect, the same reasoning which it had developed in its response to the first statement of objections, claims that the Commission's criticisms are based on an incorrect definition of interoperability' (paragraphs 149 to 163 of the response). It repeats, in that regard, that Directive 91/250 does not require plug-replaceability' but full interoperability, and that the disclosure of information which it already makes is sufficient to achieve that.

217. In its response of 17 October 2003 to the third statement of objections, Microsoft again adopts the same effective line of reasoning and reiterates that the Commission considers that its competitors must have access to all the information necessary to be able to create copies of the Windows server operating systems' and that it thus treats interoperability in the same way as cloning' (pages 29 to 32 of the response). It contends that interoperability contemplates the availability of sufficient information about the interfaces exposed by Windows client [PC] and server operating systems to enable competitors' products to work with those Windows client [PC] and server operating systems in all the ways [in which] the competitors' products were intended to function' (page 29 of the response). Likewise, Microsoft states that it has agreed with the Commission from the outset that a competition law issue could potentially arise if competitors were unable to develop server operating systems whose functionality is fully accessible from Windows client [PC] operating systems' (page 63 of the response). It claims that the Commission did not, however, establish the existence of such an issue in any of its three statements of objections.

218. The Commission contends that the concept of interoperability employed in the contested decision is consistent with that envisaged by Directive 91/250. In particular, it rejects Microsoft's one-way' interpretation of that concept.

219. The Commission accepts that a certain degree of interoperability with the Windows domain architecture is already possible, but claims that it is clear from its investigation that the degree of interoperability that can be achieved using the available methods is too low to enable Microsoft's competitors to remain viably in the market (footnote 712 to the contested decision).

220. In the Windows work group server networks, client/server and server/server interoperability are closely interlinked and, in order that full interoperability can be achieved between a Windows client PC and a non-Microsoft server operating system, Microsoft must give access both to the client/server communication protocols and to the server/server communication protocols (recitals 177 to 182 and 689 to the contested decision), including those which are pure' server/server protocols, that is to say, protocols which are not implemented on the client PC which are but functionally

related to the client PC' (recitals 277, 567 and 690 to the contested decision).

221. The Commission denies that the contested decision envisages that Microsoft's competitors should develop products functioning in all respects like a Windows server operating system. In fact, the decision is intended to enable competing products [to] be created that w[ould] function differently, whilst being able to understand the messages conveyed by Microsoft's relevant products'. Thus, the interoperability information at issue will be used by Microsoft's competitors not to develop exactly the same products as Microsoft's, but to develop improved products, with added value'.

222. In the first place, the Court finds that it follows from the foregoing considerations that Microsoft and the Commission disagree as to whether the concept of interoperability employed in the contested decision is or is not compatible with that envisaged by Directive 91/250.

223. At recitals 749 to 763 to the contested decision, the Commission sets out in detail the grounds on which it believes that Microsoft's one-way' interpretation of the concept of interoperability is incorrect.

224. The Court notes, first of all, that in its written submissions, Microsoft does not advance any argument capable of casting doubt on the Commission's assessment in that regard. It merely asserts, with reference to certain passages in its responses to the second and third statements of objections, that [t]he contested decision adopts a wholly different notion of interoperability [from] the one set forth in ... Directive [91/250]' (paragraph 95 of the application).

225. Next, the Court finds that the concept of interoperability employed in the contested decision - according to which interoperability between two software products means the capacity for them to exchange information and to use that information mutually in order to allow each of those software products to function in all the ways envisaged - is consistent with that envisaged in Directive 91/250.

226. Thus, as the Commission explains at recitals 752 to 754 and 759 and 760 to the contested decision, the 10 th recital to Directive 91/250 - whether in the English or the French version - does not lend itself to the one-way' interpretation advocated by Microsoft. On the contrary, as the Commission quite correctly emphasises at recital 758 to the contested decision, the 10 th recital to Directive 91/250 clearly shows that, by nature, interoperability implies a two-way' relationship in that it states that the function of a computer program is to communicate and work together with other components of a computer system'. Likewise, the 12 th recital to Directive 91/250 defines interoperability as the ability to exchange information and mutually to use the information which has been exchanged'.

227. In any event, it must be borne in mind that what is at issue in the present case is a decision adopted in application of Article 82 EC, a provision of higher rank than Directive 91/250. The question in the present case is not so much whether the concept of interoperability in the contested decision is consistent with the concept envisaged in that directive as whether the Commission correctly determined the degree of interoperability that should be attainable in the light of the objectives of Article 82 EC.

228. In the second place, the Court observes that the Commission assessed the degree of interoperability by reference to what, in its view, was necessary in order to enable developers of non-Microsoft work group server operating systems to remain viably on the market (see, in particular, footnote 712 and recital 779 to the contested decision).

229. The correctness of that approach is not open to dispute. Article 82 EC deals with the conduct of one or more economic operators involving the abuse of a position of economic strength which enables the operator concerned to hinder the maintenance of effective competition on the relevant market

by allowing it to behave to an appreciable extent independently of its competitors, its customers and, ultimately, consumers (Joined Cases C359/96 P and C396/96 P Compagnie maritime belge transports and Others v Commission [2000] ECR I1365, paragraph 34). Furthermore, whilst the finding of a dominant position does not in itself imply any criticism of the undertaking concerned, that undertaking has a special responsibility, irrespective of the causes of that position, not to allow its conduct to impair genuine undistorted competition on the common market (Case 322/81 Michelin v Commission [1983] ECR 3461, paragraph 57, and Case T228/97 Irish Sugar v Commission [1999] ECR II2969, paragraph 112). Should it be established in the present case that the existing degree of interoperability does not enable developers of non-Microsoft work group server operating systems to remain viably on the market for those operating systems, it follows that the maintenance of effective competition on that market is being hindered.

230. It follows from the contested decision that, by adopting that approach and taking as its basis a factual and technical analysis of the products and technologies concerned and also of the way in which interoperability is achieved in Windows work group networks, the Commission concluded that, in order to be capable of competing viably with Windows work group server operating systems, competing operating systems had to be able to interoperate with Windows domain architecture on an equal footing with Windows work group server operating systems (see to that effect, in particular, recitals 182 and 282 to the contested decision).

231. The interoperability thus required by the Commission has two indissociable components, namely client/server interoperability and server/server interoperability (recitals 177 to 182 and 689 to the contested decision).

232. The Commission also maintains that when a non-Microsoft work group server operating system is installed on a Windows work group server network, it must be capable not only of delivering all its functionalities to Windows client PCs but also of using all the functionalities offered by those client PCs.

233. In the light of those various factors, the Commission maintains, in particular, that a server running a non-Microsoft work group server operating system must be capable of acting as a domain controller, and not merely as a member server, within a Windows domain using Active Directory and, accordingly, be capable of participating in the multimaster replication mechanism with the other domain controllers.

234. The Court finds that, contrary to Microsoft's claim, it cannot be inferred from the degree of interoperability thus required by the Commission that the Commission intends in reality that non-Microsoft server operating systems must function in every respect like a Windows server operating system and, accordingly, that Microsoft's competitors must be in a position to clone' or reproduce' its products or certain features of those products.

235. The assertions thus made by Microsoft are founded on a misreading of the contested decision.

236. The Court observes, in that regard, that, according to recital 1003 to the contested decision, the objective of the decision is to ensure that Microsoft's competitors can develop products that interoperate with the Windows domain architecture natively supported in the dominant Windows client PC operating system and hence viably compete with Microsoft's work group server operating system'.

237. As the Commission explained in greater detail at the hearing, the attainment of that objective assumes that non-Microsoft work group server operating systems are capable of receiving a specific message from a Windows client PC or work group server operating system and giving the required response to that message on the same conditions as a Windows work group server operating system and also of enabling Windows client PC or work group server operating systems to react to that response just as though it came from a Windows work group server operating system.

238. In order for such operations to be practicable, it is not necessary that non-Microsoft work group server operating systems should function internally in exactly the same way as Windows work group server operating systems.

239. Those various considerations are not vitiated by the passages from recitals 669 and 679 to the contested decision cited by Microsoft (see paragraph 126 above). In the first passage, the Commission merely states that the degree of interoperability with the Windows domain architecture that may be achieved by non-Microsoft work group server operating systems using standard protocols is lower than that achieved by Windows work group server operating systems. In the second passage, the Commission states only that non-Microsoft work group server operating systems are capable of using the functionalities of Windows client PC and work group server operating systems only to a lesser degree than Windows work group server operating systems.

240. In the same way Microsoft's assertion that the contested decision intends that its competitors should develop exactly the same products as Windows work group server operating systems must be rejected. As the Court will explain in greater detail at paragraphs 653 to 658 below, in its examination of the circumstance relating to the appearance of a new product, the aim pursued by the Commission is to remove the obstacle for Microsoft's competitors represented by the insufficient degree of interoperability with the Windows domain architecture, in order to enable those competitors to offer work group server operating systems which differ from Microsoft's on important parameters such as, in particular, security, reliability, processing speed or the innovative nature of certain functionalities.

241. The Court also notes that, as Microsoft itself expressly acknowledges in its written submissions (see, for example, paragraphs 14 and 48 of the reply), its competitors will not be in a position to develop products which are clones' or reproductions of Windows work group server operating systems by having access to the interoperability information at which the contested decision is aimed. As stated at paragraphs 192 to 206 above, that information does not relate to Microsoft's source code. In particular, Article 5 of the contested decision does not require Microsoft to disclose implementation details to its competitors.

242. Furthermore, as will also be explained in greater detail at paragraph 658 below, when the Court examines the circumstance relating to the new product, Microsoft's competitors would have no interest in developing exactly the same work group server operating systems as Microsoft's.

243. Nor can the Court accept Microsoft's claim that it follows from the undertakings' statements which it produced during the administrative procedure that there is already a high degree of interoperability between Windows client PC and server operating systems and non-Microsoft server operating systems, owing to the use of methods already available on the market.

244. On that point, it is sufficient to observe that the statements in question have already been fully examined in the contested decision (see, in particular, recitals 357, 358, 440 to 444, 511, 513, 595, 598, 602, 628, 702 and 707 to the contested decision) and that Microsoft puts forward no specific argument capable of establishing that the Commission's assessment of those statements is flawed. In essence, as the Commission states at recital 707 to the contested decision, those statements relate to organisations which had, to a large extent, adopted a Windows solution' for their work group networks.

245. Microsoft's claim that the Mercer reports show that an undertaking's choice of server operating system is not dictated by its interoperability with Windows client PC and server operating systems is incorrect, as will be explained in greater detail at paragraphs 401 to 412 below.

- The scope of Article 5(a) of the contested decision

246. Article 5(a) of the contested decision applies to the complete and accurate specifications of all the protocols implemented in Windows work group server operating systems and used by the servers on which those systems are installed in order to deliver work group services to Windows work group server networks.

247. As established in the technical and factual findings made at paragraphs 154 to 191 above, the proper functioning of the Windows work group networks relies on an architecture' of both client/server and server/server interconnections and interactions.

248. Thus the Commission states, at recital 999 to the contested decision, that the disclosure obligation imposed by the decision includes both direct interconnection and interaction between a Windows work group server and a Windows client PC, as well as interconnection and interaction between a Windows work group server and a Windows client PC that is indirect and passes through another Windows work group server'.

249. The specifications that Microsoft is required to draw up and disclose to its competitors relate to client/server communication protocols, which are implemented both in Windows client PC operating systems and in Windows work group server operating systems, and also to server/server communication protocols.

250. It is clear that the information which Microsoft is required to disclose to its competitors pursuant to Article 5(a) of the contested decision must, in particular, enable computers running non-Microsoft work group server operating systems to assume, within a Windows domain using Active Directory, the role of member server or that of domain controller and, accordingly, to participate in the multimaster replication mechanism. The remedy prescribed by Article 5(a) therefore relates, specifically, to communications between servers within the blue bubble'.

251. The scope of Article 5 of the contested decision, as thus defined, derives from a series of recitals to that decision, notably recitals 194 to 198, 206, 564 and 690 to the contested decision.

252. Thus, at recitals 194 to 198 to the contested decision, the Commission mentions, among other examples of interoperability information that Microsoft refuses to disclose either to Sun or to its competitors, certain information relating to the replication mechanism used by Active Directory.

253. At recital 206 to the contested decision, the Commission expressly rejects Microsoft's assertion in its response of 16 November 2001 to the second statement of objections that the replication and Global Catalog features of Active Directory do not bear on interoperability'. The Commission explains, on that point, that a domain controller in an Active Directory domain (native mode) replicates the data stored in Active Directory with the data stored in the Active Directory of other domain controllers through certain synchronisation protocols.' It also observes that, by means of other protocols whose specifications constitute interoperability information, Global Catalog data are exchanged between domain controllers in the forest'.

254. Likewise, where recital 564 to the contested decision mentions the fact that Microsoft persisted in its refusal' after receiving Sun's complaint and the three statements of objections adopted by the Commission, it refers to recital 194 et seq. to the contested decision.

255. Furthermore, at recital 690 to the contested decision, the Commission explains that the CPLC does not address the broader issue that is at stake in this case', in particular because it does not cover protocols that are pure' server/server protocols but that are functionally related to the client PC, including replication protocols or Global Catalog exchange of data'.

256. In addition, Microsoft interprets Article 5(a) of the contested decision in the same way. Thus, in the application, in order to demonstrate the innovative nature of the communication protocols in respect of which it is required to communicate information to its competitors, it relies specifically

on the multimaster replication mechanism used by Active Directory (see, in particular, the opinion of Mr Campbell-Kelly, Commentary on Innovation in Active Directory', in annex A.20 to the application). Likewise, in the reply, it relies mainly, for that purpose, on the DRS protocol, which is used by Active Directory to achieve, inter alia, replication functions (see, in particular, the opinion of Mr Lees cited at paragraph 205 above). In his opinion, Mr Lees explains that the DRS protocol created by Microsoft incorporates a series of new features, namely it can combine updates from many servers simultaneously; it is integrated with the standard Domain Naming Service (DNS) protocol (for naming) and the Kerberos protocol (for mutual authentication); it transmits information describing the way a particular company has architected its directory service; it [transmits] information about the role that particular servers play in managing the directory service; and it automatically communicates directory updates between servers'. Mr Lees states that the DRS protocol is just one of many communication protocols that Microsoft is required to disclose to its competitors pursuant to the contested decision. He also identifies the following protocols: Microsoft Remote Procedure Call (MSRPC), Network Authentication (Kerberos extensions'), Dfs and File Replication Service (FRS).

257. Last, the scope as thus defined in Article 5 of the contested decision also covers the information to which Sun had requested access in its letter of 15 September 1998. As the Court will explain in greater detail at paragraphs 737 to 749 below, by its request Sun sought, in particular, that its Solaris work group server operating system should be able to act as a fully compatible domain controller in the Windows 2000 work group networks or as a member server (in particular as a file or print server) that was fully compatible with the Windows domain architecture.

258. Furthermore, Microsoft's contention that the scope of the remedy prescribed in Article 5(a) of the contested decision is not consistent with the interoperability standard' used by the Commission in assessing the relevance of the alternative interoperability methods' (see paragraphs 125 to 129 above) must be rejected as unfounded.

259. That contention is based on the misconception that the Commission considers interoperability to be the capability for Microsoft's competitors to make their work group server operating systems work in exactly the same way as Windows operating systems and seeks to enable those competitors to clone' those systems (see paragraphs 234 to 242 above).

260. Contrary to Microsoft's assertion, moreover, the position which the Commission defends in its written submissions concerning the degree of interoperability required in the present case and the scope of the remedy prescribed by Article 5(a) of the contested decision is perfectly consistent with the position which it adopted in the contested decision. Nor is Microsoft entitled to rely on any statements which may have been made by the interveners at the hearing in the interlocutory proceedings as the basis for ascribing a specific interpretation of the contested decision to the Commission. It must be borne in mind that, according to the case-law, the lawfulness of a Community measure must be assessed on the basis of the matters of fact and of law existing at the time when the measure was adopted (Joined Cases 15/76 and 16/76 France v Commission [1979] ECR 321, paragraphs 7 and 8, and Joined Cases T177/94 and T377/94 Altmann and Others v Commission [1996] ECR II2041, paragraph 119).

261. Last, the arguments based on the multimaster replication and the blue bubble' which Microsoft put forward at the hearing must also be rejected as unfounded.

262. By those arguments, Microsoft attempts to show that the objective of the contested decision can be achieved in full only if Microsoft discloses to its competitors certain information on the internal mechanism of its server operating systems and, in particular, of the algorithms, that is to say, information going beyond that defined in that decision. Microsoft's essential argument is that, in order for a domain control running under a non-Microsoft work group server operating system to be capable of being placed in a blue bubble' composed of domain controllers using a Windows

work group server operating system employing Active Directory, those different operating systems must share the same internal logic.

263. First, Microsoft fails to demonstrate that, in order to function together within the blue bubble', its work group server operating systems and those of its competitors must necessarily have the same internal logic.

264. Second, the applicant also fails to demonstrate that even if such identity of internal logic were required, this would necessarily mean that Microsoft had to communicate to its competitors information relating to the internal mechanisms of its products and, in particular, to the algorithms. It must be borne in mind, on that point, that in an opinion annexed to the reply, one of Microsoft's experts, commenting on the DRS protocol used for the multimaster replication mechanism, himself draws a distinction between protocols used for communications between servers' and the algorithms/decision rules that operate internally on each server', before stating that it is the protocols that have to be disclosed pursuant to Article 5 of the contested decision (see paragraph 205 above).

265. Third, as regards the Intersite Topology' algorithm which Microsoft mentioned specifically at the hearing, it is quite possible that, as the Commission also submitted at the hearing, competitors need only be in a position to implement an algorithm giving the same result as that algorithm. In other words, Microsoft would not be required to give any information about the implementation of that algorithm in its work group server operating systems, but could merely give a general description of that algorithm, leaving it to its competitors to develop their own implementation of it.

266. The Court thus concludes from the foregoing that there is no inconsistency between the scope of Article 5(a) of the contested decision and the interoperability standard' required by the Commission in that decision.

c) The assertion that Microsoft's communication protocols are protected by intellectual property rights

Arguments of the parties

267. Microsoft first of all puts forward a series of arguments designed to demonstrate that its communication protocols are technologically innovative. Communication protocols are often developed in connection with the performance of specific tasks by server operating systems and are intimately linked with the way in which those tasks are performed. Licensing those communication protocols therefore necessarily means providing competitors with information about the internal features of the server operating systems with which those communication protocols are used. In addition, a large number of engineers and significant financial resources are used in developing and improving communication protocols.

268. Microsoft emphasises, more particularly, the innovative nature of Active Directory, after first observing that directory services constituted an essential aspect of competition on the work group server operating systems market. In that regard, the applicant refers to a note drafted by one of its experts, Mr Campbell Kelly, in which the author describes the innovations which Active Directory presents and, in particular, its method of replicating itself across different server computers in a computing network' (annex A.20 to the application). Microsoft also refers to the opinion of Mr Lees, in annex C.4 to the reply (see paragraphs 205 and 256 above), in which the author describes the innovative aspects of one of the protocols used by Active Directory, namely the DRS protocol, in respect of which Microsoft considers that it is required to provide information to its competitors pursuant to the contested decision. Last, Microsoft refers to annex C.8.1 to the reply, in which one of its engineers, Mr Hirst, describes a series of specifications relating to the multimaster replication mechanism used by Active Directory which Microsoft claims it is required to draw up pursuant to the contested decision.

269. Next, Microsoft puts forward numerous arguments in order to demonstrate that its communication protocols are protected by intellectual property rights.

270. In the first place, it submits that the innovative aspects of those communication protocols are patentable. Microsoft has obtained several patents for those protocols in Europe and the United States and some 20 patent applications are pending there. Furthermore, two opinions (annex A.21 to the application and annex C.6 to the reply) given by Mr Knauer, a lawyer specialising in patent law, support the assertion that Article 5 of the contested decision requires the compulsory grant of patent licences.

271. In the second place, Microsoft contends that the specifications of the server/server communication protocols that it is required to draw up and disclose to its competitors in application of the contested decision are copyright.

272. In the reply, Microsoft examines the question of copyright from two distinct angles. First, it refers to the concepts of forced creation' and forced publication', and claims that if the contested decision had not ordered it to do so, it would not have developed the specifications in question or licensed them to its competitors. Second, relying on Article 4 of Directive 91/250, it raises the question of the adaptation or alteration of copyright works'. The applicant maintains, in particular, that a competitor which uses the specifications to make its server operating system interoperate with the portions of Windows server operating systems that provide work group services will not be creating a distinct work'.

273. In the third place, Microsoft claims that the communication protocols are valuable trade secrets. In particular, it makes its client/server communication protocols available only under licence agreements that impose confidentiality and recognise the applicant's status as owner of the technology. It claims that trade secrets are a form of industrial property and that their protection is a matter for national law. Last, it refutes the Commission's notion that an undertaking suffers less damage when it discloses a business secret than when it is required to allow infringement of its patents or copyright.

274. Microsoft concludes that the requirement that it license the specifications of its communication protocols to its competitors would deprive it of the benefits of its research and development efforts which it devotes to the design and improvement of the communication protocols. It would also reduce the incentive for it and its competitors to invest in communication protocols.

275. The Commission disputes the various arguments set out at paragraphs 267 to 274 above.

276. First of all, it rejects Microsoft's assertion that the communication protocols in question are innovative and its assertion that licensing those protocols entails providing information about the internals' of its work group server operating systems. In particular, the documents prepared by Mr Lees (annex C.4 to the reply) and Mr Hirst (annex C.8.1 to the reply) do not demonstrate that the information in question includes any intrinsically valuable invention'. The Commission refers to two notes drafted by its consultant, OTR (annexes D.2 and D.3 to the rejoinder), which comment on Mr Lees' and Mr Hirst's documents, and explains why the ideas and principles underlying the applicant's communication protocols are not new.

277. Next, the Commission rejects Microsoft's argument that, first, the communication protocols are protected by intellectual property rights and, second, the contested decision involves compulsory licensing.

278. In the first place, the Commission claims that Microsoft does not demonstrate that the alleged innovations presented by the communication protocols in question are covered by a patent. Furthermore, a number of factors demonstrate that Microsoft's refusal was not justified by considerations associated

with patent protection. More particularly, it was only at the end of the administrative procedure, or a few weeks before the adoption of the contested decision, and at the Commission's insistence, that Microsoft identified a patent (patent EP 0669020).

279. In the second place, the Commission rejects Microsoft's assertions concerning copyright. While the specifications at which the contested decision is aimed may, as such, be covered by copyright, it does not follow that the use of the information thus documented' when it is implemented in an operating system constitutes a breach of copyright. The implementation of a specification is not a copy, but results in a clearly distinct work. Furthermore, the question whether the specifications are covered by copyright is by nature purely incidental, since what is central to the present case is the obligation imposed on Microsoft to disclose information and to authorise its use, which necessarily involves the drafting of a document. Last, Microsoft put forward two new arguments relating to copyright in the reply (see paragraph 272 above), which, in the Commission's submission, must be declared inadmissible pursuant to Article 48(2) of the Rules of Procedure and are in any event unfounded.

280. In the third place, the Commission acknowledges that the information that Microsoft is required to disclose pursuant to the contested decision has thus far been kept secret from its competitors on the work group server operating systems market. However, it is by no means obvious that Microsoft is correct to equate those trade secrets' with intellectual property rights created by law'. The case-law on compulsory licensing does not as such apply to trade secrets and the protection that such secrets enjoy under national law is normally more limited than that given to copyright or patents. While there may be a presumption of legitimacy of a refusal to license an intellectual property right created by law', the legitimacy under competition law of a refusal to disclose a secret which exists solely as a result of a unilateral business decision depends more on the facts of the case and, in particular, the interests at stake. In the present case, the value of the secret' concerned lies not in the fact that it involves innovation but in the fact that it belongs to a dominant undertaking.

281. SIIA puts forward essentially the same arguments as the Commission does on this point and contends that Microsoft does not demonstrate that the contested decision infringes its intellectual property rights or entails compulsory licensing.

282. FSFE claims that the technology' which Microsoft refuses to disclose to its competitors is neither new nor innovative. Microsoft has a policy of adopting pre-existing protocols and then making minor and pointless changes to them with the aim of preventing interoperability. FSFE refers, in particular, to the following protocols: CIFS/SMB (Common Internet File System/Server Message Block), DCE/RPC (Distributed Computing Environment/Remote Procedure Call), Kerberos 5 and LDAP.

Findings of the Court

283. Although the parties devoted lengthy argument, both in their written pleadings and at the hearing, to the question of the intellectual property rights which cover Microsoft's communication protocols or the specifications of those protocols, the Court considers that there is no need to decide that question in order to resolve the present case.

284. The arguments which Microsoft derives from the alleged intellectual property rights cannot, as such, affect the lawfulness of the contested decision. The Commission did not take a position on the merits of those arguments but adopted the decision on the assumption that Microsoft was able to rely on such rights in the present case. In other words, it proceeded on the premiss that, so far as it relates to the interoperability information, the conduct at issue in the present case might not be a mere refusal to supply a product or a service indispensable to the exercise of a specific activity but a refusal to license intellectual property rights, and thus chose the strictest

legal test and therefore the one most favourable to Microsoft (see paragraphs 312 to 336 below). The Commission did not therefore decide whether or not Microsoft's impugned conduct constituted a refusal to grant a licence or whether or not the remedy prescribed by Article 5 of the contested decision entailed compulsory licensing.

285. Thus, at recital 190 to the contested decision, the Commission states that during the administrative procedure Microsoft relied on the existence of intellectual property rights and the fact that the interoperability information at issue constituted trade secrets. The Commission notes that it is not excluded that Microsoft relied on those rights to prevent Sun from implementing the specifications in question in its own products. It also acknowledges that it is possible that those specifications contain innovations and constitute trade secrets. More generally, the Commission observes that it cannot be excluded that ordering Microsoft to disclose the interoperability information to third parties and to allow them to use it will interfere with the free exercise of its intellectual property rights. It reiterates that last consideration at recital 546 to the contested decision. In footnote 249 to the contested decision, the Commission explains that [i]n any case, since the relevant specifications are not available for scrutiny, it is not possible for the Commission to determine to what extent Microsoft's claims relating to various intellectual property rights are justified'.

286. Furthermore, at recitals 1003 and 1004 to the contested decision, the Commission, in describing the scope of the remedy for Microsoft's refusal, states, first, that the remedy applies only to interface specifications and not to the source code and, second, that the intention is that Microsoft's competitors be authorised to implement the disclosed specifications in their work group server operating systems. Thus, it states, inter alia, that the specifications should also not be reproduced, adapted, arranged or altered, but should be used by third parties to write their own specification-compliant interfaces' (recital 1004 to the contested decision). The Commission concludes that, [i]n any event, to the extent that [the contested decision] might require Microsoft to refrain from fully enforcing any of its intellectual property rights, [that] would be justified by the need to put an end to the abuse' (recital 1004 to the contested decision).

287. In its written pleadings, the Commission puts forward arguments to the same effect. Thus, in the rejoinder, it describes as misleading' Microsoft's assertion in the reply that the [contested decision] requires [it] to grant a licence to whatever [intellectual property rights] may be necessary to implement the specifications in its own products'. The Commission explains, first of all, that the [contested decision] requires Microsoft to grant the right to use the specifications for the purposes of building interoperable products' and that [t]o the extent that [that] may limit Microsoft's ability to fully enforce certain of its [intellectual property rights], [it] will be justified by the need to put the infringement to an end'. The contested decision does not take a position as to whether Microsoft's [intellectual property rights] are affected or not'. The Commission goes on to state that it is not to be inferred, however, that Microsoft's refusal is justified by the exercise of intellectual property rights or that compulsory licensing i s involved in the present case. Nor is there any evidence in the case file or in the application that that is so or, in particular, that competitors need a licence to certain Microsoft [intellectual property rights] in order to achieve interoperability with the Windows domain architecture'.

288. Furthermore, the Commission confirmed, in answer to one of the written questions put by the Court, that the contested decision did not establish that the interoperability information was not covered by a patent or by copyright or, on the contrary, that it was. There was no need to decide that issue since, in any event, the conditions for finding an abuse and for imposing the remedy [prescribed by Article 5 of the contested decision] were satisfied whether or not the information is protected by any patent or copyright'.

289. It follows from the foregoing considerations that the appraisal of the merits of the first

part of the plea must proceed on the presumption that the protocols in question, or the specifications of those protocols, are covered by intellectual property rights or constitute trade secrets and that those secrets must be treated as equivalent to intellectual property rights.

290. The central issue to be resolved in this part of the plea therefore is whether, as the Commission claims and Microsoft denies, the conditions on which an undertaking in a dominant position may be required to grant a licence covering its intellectual property rights are satisfied in the present case.

d) The specific arguments invoked in support of the first part of the plea

(i) The circumstances by reference to which the abusive conduct must be analysed

Arguments of the parties

291. Microsoft, supported by CompTIA and ACT, maintains primarily that the first issue must be assessed in the light of the criteria recognised by the Court of Justice in Magill , paragraph 107 above, and reiterated in IMS Health , paragraph 107 above.

292. In support of that argument, Microsoft reiterates, in the first place, that Article 5 of the contested decision implies the compulsory licensing of its communication protocols, which are technologically innovative and are covered by intellectual property rights.

293. In the second place, Microsoft interprets the Commission's argument as set out at paragraph 302 below as meaning that the Commission considers that it is not required to apply those tests where technological tying' is involved. In Microsoft's submission, that argument finds no support in Case T-83/91 Tetra Pak v Commission [1994] ECR II755, upheld on appeal in Case C333/94 P Tetra Pak v Commission [1996] ECR I5951 (Tetra Pak II '), on which the Commission relies.

294. In the third place, Microsoft rejects the arguments whereby the Commission seeks to show that the circumstances of the present case can be distinguished from the circumstances of IMS Health , paragraph 107 above.

295. First, IMS Health involved strong network effects and it was precisely because of those effects that the 1 860 brick structure created by IMS Health was considered to be an industry standard. Furthermore, in the contested decision the Commission did not rely on the argument that, by refusing to allow compatibility', Microsoft was acting contrary to the public-policy objectives defined in Directive 91/250. In any event, vague public policy considerations cannot provide a ground for ordering an undertaking to grant licences. Last, Microsoft claims that Directive 91/250 does not establish any positive obligation to disclose information.

296. Second, Microsoft rejects the Commission's assertion that Microsoft used its market power on the client PC operating systems market to conquer the work group server operating systems market. Neither the contested decision nor the defence indicates clearly what market power Microsoft is supposed to have used or the way in which that power was exercised.

297. Third, Microsoft contends that the Commission's assertion that Microsoft disrupted previous levels of supply is wrong both in fact and in law and that it fails to take account of the principles laid down in Bronner , paragraph 112 above. The applicant never provided Sun or any other supplier of competing operating systems with a licence on the specifications of its communication protocols. It licensed a network technology to AT & T in 1994 which allowed the development of a product called Advanced Server for UNIX' (AS/U)' and a number of AS/U-based products were created by leading UNIX suppliers, including Sun's PC NetLink'. Although the applicant and AT & T agreed in 2001 not to extend the licensing agreement to include new technology, the AS/U technology' and the products based on it remain available. The fact that the applicant thus licensed a specific technology to AT & T more than 10 years ago cannot mean that it is required to license all

related technologies, including communication protocols, for the indefinite future.

298. Fourth, Microsoft observes that, at recital 577 to the contested decision, the Commission states that Microsoft's refusal to supply Sun is part of a broader conduct of not disclosing interoperability information to work group server operating systems vendors'. It contends that the pattern of conduct thus attributed to it corresponds to [the application] on a non-discriminatory basis [of] a policy that virtually all technology companies adopt to protect the fruits of their research and development efforts' and that such conduct cannot constitute an exceptional circumstance' within the meaning of Magill and IMS Health , paragraph 107 above.

299. In the alternative, Microsoft, supported by CompTIA and ACT, submits that, should the Court find that no intellectual property right is at stake in the present case, the applicable criteria would be those recognised by the Court of Justice in Bronner , paragraph 112 above, which correspond to the first, second and fourth criteria in IMS Health , paragraph 107 above, as set out at paragraph 116 above.

300. Last, Microsoft, CompTIA and ACT claim that none of the four criteria of IMS Health , paragraph 107 above, and, consequently, none of the three criteria of Bronner , paragraph 112 above, is satisfied in this case.

301. The Commission, supported by SIIA and FSFE, contends primarily that, even if the Court should find that the refusal at issue was justified by the exercise of intellectual property rights and that the contested decision entails compulsory licensing, it would not follow that the present problem must automatically be assessed against the criteria established by the IMS Health case-law'.

302. In that connection, the Commission maintains, in the first place, that the exceptional circumstances' rule laid down in the case-law cannot apply as such, and without further qualification' to a refusal to disclose trade secrets that has the effect of technologically tying' a separate product with a dominant product.

303. In the second place, the Commission claims that IMS Health , paragraph 107 above, does not establish an exhaustive list of exceptional circumstances. In that judgment, as in Magill , paragraph 107 above, the Court of Justice defined the conditions on which a decision ordering compulsory licensing could be adopted, in the light of the specific circumstances of those cases. Thus, in IMS Health , paragraph 107 above, the Court of Justice merely established a list of criteria which it was sufficient' to satisfy. In reality, in order to determine whether the conduct of an undertaking in a dominant position which refuses to supply constitutes an abuse, the Commission must examine the entire range of factors surrounding that refusal and in particular the economic and regulatory background to it.

304. In the third place, the Commission lists the factors which distinguish the circumstances of the present case from those of IMS Health , paragraph 107 above, and which permit the conclusion that Microsoft's refusal constitutes an abuse of a dominant position.

305. First, the Commission observes that the contested decision has the particular feature that it deals with a refusal to supply interoperability information in the software industry. The decision aims to permit the development of products that are compatible with Microsoft's products whereas the precedents cited by Microsoft concern situations in which the protected product' was to be incorporated in competitors' products for reasons which went beyond ensuring mere compatibility between two distinct products. Furthermore, those precedents do not concern the specific problems raised in sectors where network effects are pervasive. Unlike the sector concerned in the present case, the economic sectors concerned in those precedents were not sectors where the [legislature] has clearly recognised that compatibility was favourable to society in general'. More particularly, the Commission, referring to recitals 745 to 763 to the contested decision, recalls the importance

which the Community legislature ascribed to interoperability, notably in the context of Directive 91/250, and also the position taken by the legislature, namely that disclosure of information for interoperability purposes is beneficial for society as a whole.

306. Second, the Commission invokes the fact that the present issue involves a supplier in a dominant position which uses its market power on a particular market, in this case the client PC operating systems market, to eliminate competition on a neighbouring market, namely the work group server operating systems market, thereby increasing the barriers to entry in its original market and securing an additional monopoly rent'. That situation reinforces the harm to consumers that results from the restriction of the development of new products.

307. Third, the Commission submits that the present issue concerns a supplier in a dominant position which disrupts previous levels of supply (recitals 578 to 584 to the contested decision). Microsoft's initial policy was to disclose interoperability information, not to retain it, which, among other things, helped Microsoft to introduce its own work group server operating systems on the market and did not discourage it from innovating. However, once its server products' were sufficiently established on the market, Microsoft changed its strategy and chose to foreclose its competitors by refusing to give them access to that information (recitals 587, 588 and 637 et seq. to the contested decision).

308. The Commission maintains that Microsoft cannot deny having disrupted its previous levels of supply. First of all, the agreement between Microsoft and AT & T, which allowed AT & T to develop AS/U, involved the disclosure not only of interoperability information of the type at issue in the contested decision, but also of additional information. Next, the Commission contends that the fact that the AS/U technology is still available is irrelevant. The Commission refers to recitals 580 to 583 to the contested decision and submits that the disclosures made in the context of AS/U' are now outdated, as Microsoft modified the relevant protocols in subsequent versions of Windows. Last, the Commission contends that Microsoft's assertion that the fact that it licensed a specific technology to AT & T more than 10 years ago cannot oblige it to license all related technologies for the indefinite future is irrelevant to the approach taken in the contested decision. The question of the disruption of previous levels of supply is treated in that decision not as an abuse in itself but as one factor relevant to the assessment of Microsoft's refusal to supply (recital 578 et seq. to the contested decision).

309. In the fourth place, the Commission does not claim that the mere fact that a refusal to license an intellectual property right is part of a general pattern of conduct is in itself an exceptional circumstance' sufficient to render that refusal abusive. It merely contends that the fact that Sun is not the only competitor to which Microsoft has refused access to the interoperability information is a circumstance relevant to the assessment of the compatibility of Microsoft's conduct with Article 82 EC.

310. The Commission submits that Microsoft's alternative argument, that the present case must be examined by reference to the criteria established in Bronner , paragraph 112 above, cannot be upheld. Bronner concerned access to an infrastructure that had required significant investment, and if it should be established that the information at issue in the present case is not protected by intellectual property rights, but consists of purely arbitrary combinations of messages, that judgment would surely not be a relevant point of comparison'.

311. In the alternative, the Commission, supported by SIIA and FSFE, claims that, even on the assumption that the lawfulness of the contested decision, in so far as it relates to the first issue, must be assessed against the criteria recognised by the Court of Justice in IMS Health , paragraph 107 above, those criteria are satisfied in the present case.

Findings of the Court

312. It must be borne in mind that Microsoft's argument is that its refusal to supply interoperability information cannot constitute an abuse of a dominant position within the meaning of Article 82 EC because, first, the information is protected by intellectual property rights (or constitutes trade secrets) and, second, the criteria established in the case-law which determine when an undertaking in a dominant position can be required to grant a licence to a third party are not satisfied in this case.

313. It must also be borne in mind that the Commission contends that there is no need to decide whether Microsoft's conduct constitutes a refusal to license intellectual property rights to a third party, or whether trade secrets merit the same degree of protection as intellectual property rights, since the strict criteria against which such a refusal may be found to constitute an abuse of a dominant position within the meaning of Article 82 EC are in any event satisfied in the present case (see paragraphs 284 to 288 above).

314. While Microsoft and the Commission are thus agreed that the refusal at issue may be assessed under Article 82 EC on the assumption that it constitutes a refusal to license intellectual property rights, they disagree as to the criteria established in the case-law that are applicable in such a situation.

315. Thus, Microsoft relies, primarily, on the criteria laid down in Magill and IMS Health , paragraph 107 above, and, in the alternative, on those laid down in Bronner , paragraph 112 above.

316. The Commission, on the other hand, contends that an automatic' application of the criteria laid down in IMS Health , paragraph 107 above, would be problematic' in this case. It maintains that, in order to determine whether such a refusal is abusive, it must take into consideration all the particular circumstances surrounding that refusal, which need not necessarily be the same as those identified in Magill and IMS Health , paragraph 107 above. Thus it explains at recital 558 to the contested decision, that [t]he case-law of the European Courts... suggests that the Commission must analyse the entirety of the circumstances surrounding a specific instance of a refusal to supply and must take its decision [on the basis of] the results of such a comprehensive examination'.

317. At the hearing, the Commission, questioned on this issue by the Court, confirmed that it had considered in the contested decision that Microsoft's conduct presented three characteristics which allowed it to be characterised as abusive. The first consists in the fact that the information which Microsoft refuses to disclose to its competitors relates to interoperability in the software industry, a matter to which the Community legislature attaches particular importance. The second characteristic lies in the fact that Microsoft uses its extraordinary power on the client PC operating systems market to eliminate competition on the adjacent work group server operating systems market. The third characteristic is that the conduct in question involves disruption of previous levels of supply.

318. The Commission contends that in any event the criteria recognised by the Court of Justice in Magill and IMS Health , paragraph 107 above, are also satisfied in this case.

319. In response to those various arguments, the Court observes that, as the Commission rightly states at recital 547 to the contested decision, although undertakings are, as a rule, free to choose their business partners, in certain circumstances a refusal to supply on the part of a dominant undertaking may constitute an abuse of a dominant position within the meaning of Article 82 EC unless it is objectively justified.

320. The Court of Justice thus considered that a company in a dominant position on the market

in raw materials which, with the aim of reserving such raw materials for the purpose of manufacturing its own derivatives, refused to supply a customer which was itself a manufacturer of those derivatives, and was therefore likely to eliminate all competition on the part of that customer, abused its dominant position within the meaning of Article 82 EC (Joined Cases 6/73 and 7/73 Commercial Solvents v Commission [1974] ECR 223; see, concerning a refusal to supply a service, Case 311/84 CBEM [1985] ECR 3261).

321. In Case 238/87 Volvo [1988] ECR 6211, the Court of Justice, on a reference for a preliminary ruling under Article 234 EC, was asked whether the refusal by a car manufacturer which was the proprietor of a design right covering car body panels to license third parties to supply products incorporating the protected design must be considered to be an abuse of a dominant position within the meaning of Article 82 EC. In its judgment, the Court of Justice emphasised that the right of a proprietor of a protected design to prevent third parties from manufacturing and selling or importing, without his consent, products incorporating the design constitutes the very subject-matter of his exclusive right. The Court of Justice concluded (paragraph 8) that an obligation imposed upon the proprietor of a protected design to grant to third parties, even in return for a reasonable royalty, a licence for the supply of products incorporating the design would lead to the proprietor thereof being deprived of the substance of his exclusive right, and that a refusal to grant such a licence cannot in itself constitute an abuse of a dominant position'. The Court of Justice added, however, that the exercise of an exclusive right by the proprietor of a registered design in respect of car body panels [might] be prohibited by Article [82 EC] if it involve[d], on the part of an undertaking holding a dominant position, certain abusive conduct such as the arbitrary refusal to supply spare parts to independent repairers, the fixing of prices for spare parts at an unfair level or a decision no longer to produce spare parts for a particular model even though many cars of that model [were] still in circulation, provided that such conduct [was] liable to affect trade between Member States' (paragraph 9).

322. In Magill , paragraph 107 above, the Court of Justice, on appeal, had also been called upon to adjudicate on the question of the refusal by a dominant undertaking to license a third party to use an intellectual property right. That case concerned a decision in which the Commission had found that three television companies had abused their dominant position on the market represented by their respective weekly programme listings and the market for the television guides in which those listings were published by relying on their copyright in those listings to prevent third parties from publishing complete weekly guides to the programmes broadcast by the various different television channels. The Commission had therefore ordered those television companies to supply their advance weekly programme listings to each other and to supply them to third parties on request and on a non-discriminatory basis and to permit reproduction of those listings by those third parties. The Commission had also stipulated that any royalties requested by the television companies should they choose to grant reproduction licences should be reasonable.

323. In Magill , paragraph 107 above (paragraph 49), the Court of Justice, referring to Volvo , paragraph 321 above, stated that the exclusive right of reproduction form[ed] part of the author's rights, so that refusal to grant a licence, even if it is the act of an undertaking holding a dominant position, cannot itself constitute abuse of a dominant position'. Still with reference to Volvo , paragraph 321 above, the Court of Justice explained, however, that the exercise of an exclusive right by the proprietor may, in exceptional circumstances, involve abusive conduct' (paragraph 50).

324. The Court of Justice considered that the following circumstances were relevant for the purpose of establishing that the conduct of the television companies in question was abusive. In the first place, their refusal concerned a product (the television channels' weekly programme listings) the supply of which was indispensable to the exercise of the activity in question (the publication of a complete weekly television guide) (paragraph 53). In the second place, the refusal prevented

the appearance of a new product, a comprehensive weekly guide to television programmes, which the television companies in question did not offer and for which there was a potential consumer demand, which constituted an abuse under Article 82(b) EC (paragraph 54). In the third place, the refusal was not justified (paragraph 55). Finally, in fourth place, the television companies, by their conduct, had reserved to themselves a secondary market, the market for weekly television guides, by excluding all competition on that market (paragraph 56).

325. In Bronner , paragraph 112 above, the Court of Justice, on a reference for a preliminary ruling under Article 234 EC, had been requested to rule on whether the refusal by a press group holding a very large share of the daily newspaper market in Austria, and operating the only nationwide newspaper home-delivery scheme in Austria, to allow the publisher of a rival newspaper to have access to that scheme for appropriate remuneration, or to allow that publisher to purchase certain complementary services from the group, constituted an abuse of a dominant position contrary to Article 82 EC.

326. In its judgment (paragraph 38), the Court of Justice first of all observed that although in Commercial Solvents v Commission and CBEM , paragraph 320 above, it had held that the refusal by an undertaking holding a dominant position on a given market to supply an undertaking with which it was in competition on a neighbouring market with raw materials and services respectively, which were indispensable to carrying on the rival's business, constituted an abuse, it had done so to the extent that the conduct in question was likely to eliminate all competition on the part of that undertaking.

327. Next, the Court of Justice stated (paragraph 39) that at paragraphs 49 and 50 of Magill , paragraph 107 above, it had held that the refusal by the owner of an intellectual property right to grant a licence, even if it is the act of an undertaking holding a dominant position, cannot in itself constitute abuse of a dominant position, but that the exercise of an exclusive right by the proprietor may, in exceptional circumstances, involve an abuse.

328. Last, the Court recited the exceptional circumstances which it had established in Magill , paragraph 107 above, and stated (paragraph 41):

[E]ven if that case-law on the exercise of an intellectual property right were applicable to the exercise of any property right whatever, it would still be necessary, for [that] judgment to be effectively relied upon in order to plead the existence of an abuse within the meaning of Article [82 EC] in a situation such as that which forms the subject-matter of the... question, not only that the refusal of the service comprised in home delivery be likely to eliminate all competition in the daily newspaper market on the part of the person requesting the service and that such refusal be incapable of being objectively justified, but also that the service in itself be indispensable to carrying on that person's business, inasmuch as there is no actual or potential substitute in existence for that home-delivery scheme.'

329. In IMS Health , paragraph 107 above, the Court of Justice again ruled on the conditions in which a refusal by an undertaking holding a dominant position to grant to a third party a licence to use a product protected by an intellectual property right might constitute abusive conduct within the meaning of Article 82 EC.

330. The Court of Justice first of all confirmed (paragraph 34), with reference to Volvo , paragraph 321 above, and Magill , paragraph 107 above, that, according to settled case-law, the exclusive right of reproduction formed part of the rights of the owner of an intellectual property right, so that refusal to grant a licence, even if it is the act of an undertaking holding a dominant position, cannot in itself constitute abuse of that position. The Court of Justice also observed (paragraph 35) that it was clear from that case-law that exercise of an exclusive right by the owner might,

in exceptional circumstances, involve abusive conduct. Next, after reciting the exceptional circumstances found to exist in Magill , paragraph 107 above, the Court held (paragraph 38) that it followed from that case-law that, in order for the refusal by an undertaking which owns a copyright to give access to a product or service indispensable for carrying on a particular business to be treated as abusive, it was sufficient that three cumulative conditions be satisfied, namely, that that refusal prevents the emergence of a new product for which there is a potential consumer demand, that it is unjustified and that it is such as to exclude any competition on a secondary market.

331. It follows from the case-law cited above that the refusal by an undertaking holding a dominant position to license a third party to use a product covered by an intellectual property right cannot in itself constitute an abuse of a dominant position within the meaning of Article 82 EC. It is only in exceptional circumstances that the exercise of the exclusive right by the owner of the intellectual property right may give rise to such an abuse.

332. It also follows from that case-law that the following circumstances, in particular, must be considered to be exceptional:

- in the first place, the refusal relates to a product or service indispensable to the exercise of a particular activity on a neighbouring market;

- in the second place, the refusal is of such a kind as to exclude any effective competition on that neighbouring market;

- in the third place, the refusal prevents the appearance of a new product for which there is potential consumer demand.

333. Once it is established that such circumstances are present, the refusal by the holder of a dominant position to grant a licence may infringe Article 82 EC unless the refusal is objectively justified.

334. The Court notes that the circumstance that the refusal prevents the appearance of a new product for which there is potential consumer demand is found only in the case-law on the exercise of an intellectual property right.

335. Finally, it is appropriate to add that, in order that a refusal to give access to a product or service indispensable to the exercise of a particular activity may be considered abusive, it is necessary to distinguish two markets, namely, a market constituted by that product or service and on which the undertaking refusing to supply holds a dominant position and a neighbouring market on which the product or service is used in the manufacture of another product or for the supply of another service. The fact that the indispensable product or service is not marketed separately does not exclude from the outset the possibility of identifying a separate market (see, to that effect, IMS Health , paragraph 107 above, paragraph 43). Thus, the Court of Justice held, at paragraph 44 of IMS Health , paragraph 107 above, that it was sufficient that a potential market or even a hypothetical market could be identified and that such was the case where the products or services were indispensable to the conduct of a particular business activity and where there was an actual demand for them on the part of undertakings which sought to carry on that business. The Court of Justice concluded at the following paragraph of the judgment that it was decisive that two different stages of production were identified and that they were interconnected in that the upstream product was indispensable for supply of the downstream product.

336. In the light of the foregoing factors, the Court considers that it is appropriate, first of all, to decide whether the circumstances identified in Magill and IMS Health , paragraph 107 above, as described at paragraphs 332 and 333 above, are also present in this case. Only if it finds that one or more of those circumstances are absent will the Court proceed to assess the particular

circumstances invoked by the Commission (see paragraph 317 above).

(ii) The indispensable nature of the interoperability information

Arguments of the parties

337. Microsoft maintains that the interoperability information required by the contested decision is not indispensable to the activity of supplier of work group server operating systems. A particular technology cannot be characterised as indispensable if it is economically viable' for the competitors of the undertaking in a dominant position to develop and market their products without having access to that technology.

338. Microsoft contends that the contested decision contains an error of law and an error of fact on that point.

339. It submits, in the first place, that the error of law lies in the fact that the Commission used an inappropriate, extraordinary and absolute standard when examining whether competition could exist'. The applicant refers to recitals 176 to 184 to the contested decision and submits that the Commission considers that non-Microsoft server operating systems must be able to communicate with Windows client PC and server operating systems in exactly the same way that Windows server operating systems do: yet the case-law does not require that such optimal access' to the market be granted.

340. In the reply, Microsoft criticises the fact that the Commission assessed the requisite degree of interoperability by reference to what was necessary to enable its competitors to remain viable on the market. The concept of interoperability used by the Commission at recitals 666 to 687 to the contested decision is unreasonable in that it implies virtual identity' between Windows server operating systems and competing operating systems. Microsoft refers to the passages from recitals 669 and 679 to the contested decision reproduced at paragraph 126 above and submits that, if such a concept had to be accepted, any technology would be indispensable'. Furthermore, the only justification put forward in the contested decision for the assertion that such a level' of interoperability is required if competitors are to remain in viable conditions on the market is that access to the specifications at issue might enable competitors to avoid having users log on twice' (recital 183 to the contested decision). That justification is inadequate, since, first, multiple vendors already provide single sign on' solutions; second, having to log on twice is plainly an alternative solution (even if it is marginally less advantageous); and, third, the remedy prescribed in Article 5 of the contested decision goes far beyond what is necessary to resolve that minor problem.

341. Also in the reply, and after referring to the arguments set out at paragraphs 125 to 128 above and reiterating that the remedy prescribed in Article 5 of the contested decision will not permit its competitors to develop products that are virtually identical' to Windows server operating systems, Microsoft claims that the Commission has failed to show a causal link between the non-availability' of specifications for its communication protocols and the supposed inability of competitors to remain viably on the market.

342. In its observations on the statements in intervention, Microsoft denies that industry and consumers require plug replaceability' and asserts that such a requirement goes far beyond the test of indispensability' laid down by the Court of Justice in Bronner , paragraph 112 above, and IMS Health , paragraph 107 above. In particular, the applicant's competitors do not need Active Directory', since their server operating systems have their own directory services which can provide work group services to Windows client PC and server operating systems.

343. In the second place, Microsoft contends that the contested decision is vitiated by an error of fact in so far as the Commission fails to take account of the fact that several work group server

operating systems are present on the market. Undertakings in Europe continue to maintain different types of computer networks, in that their operating systems are supplied by different distributors.

344. During the administrative procedure, Microsoft submitted reports in which computer scientists describe the ways in which interoperability could be achieved in computing networks'. The responses to the Commission's requests for information confirm that interoperability between different types of operating systems is common in computer networks in Europe. Thus, 47% of companies which responded to those requests for information stated that they used non-Microsoft server operating systems to supply file and print services to Windows client PC operating systems. Similar proof exists in respect of user and group administration services. Microsoft reiterates that the Mercer reports demonstrate that undertakings do not feel that their choice of servers is constrained by interoperability concerns.

345. Microsoft also asserts that interoperability between non-Microsoft server operating systems and Windows client PC and server operating systems can be achieved by five different methods. Each of those methods constitutes an alternative to disclosure of the communication protocols at issue and allows those different operating systems to work well together'. Admittedly, the perfect substitutability' that the Commission considers essential cannot be obtained by those various methods, but they do make it possible to achieve the minimum level of interoperability... required for effective competition'.

346. The five methods to which Microsoft refers are as follows: first, the use of standard protocols such as TCP/IP (Transmission Control Protocol/Internet Protocol) and HTTP (Hyper Text Transfer Protocol); second, the addition of a software code to a Windows client PC or server operating system in order to allow that operating system to communicate with a non-Windows server operating system using communication protocols specific to that non-Microsoft operating system; third, the addition of a software code to a non-Microsoft server operating system in order to allow it to communicate with a Windows client PC or server operating system using communication protocols specific to Windows operating systems; fourth, the use of a server operating system as a bridge' between two different sets of communication protocols; and, fifth, the addition of a block' of software code to all the client PC and server operating systems in a given network to achieve interoperability by means of communications between the different blocks' of software code.

347. Microsoft further submits that the evidence which the Commission assembled during the administrative procedure shows that those methods work in practice for Linux and for the other work group server operating systems. Distributors of Linux products have constantly increased market share on the work group server operating systems market without having access to the specifications of Microsoft's communication protocols. Microsoft refers to sections D and E of a report by Evans, Nichols and Padilla (annex C.11 to the reply) and further submits that Linux products will continue to gain ground on Windows server operating systems. It is generally acknowledged that Linux is a serious competitor to Microsoft and that the 10 largest suppliers of servers costing under USD 25 000 offer work group servers running Linux.

348. CompTIA and ACT put forward arguments which are essentially the same as Microsoft's.

349. CompTIA criticises, in particular, the fact that the Commission considers that non-Windows work group server operating systems must achieve a level of interoperability with the Windows client PC operating systems that is as good as that achieved by Microsoft itself'.

350. ACT refers to Microsoft's arguments on this point in its written pleadings and submits that there are several methods of ensuring sufficient interoperability between the operating systems of different suppliers. It also has concerns that the Commission's interpretation of the indispensability criterion will have negative effects on innovation.

351. The Commission claims that Microsoft's disclosure of the interoperability information is indispensable if its competitors are to continue to compete on the work group server operating systems market.

352. It contends, in the first place, that Microsoft's allegation of an error of law rests on a misrepresentation of the Commission's position and on confusion between different questions analysed in the contested decision. The indispensability criterion entails an examination of the degree of interoperability necessary to remain as a viable competitor on the market and of whether the withheld information is the only economically viable source for achieving that degree of interoperability.

353. The Commission emphasises that the information that Microsoft refuses to disclose is functionally related to the client PC' and explains that the indispensability of that information derives from the importance for work group server operating systems of interoperability with client PCs (recitals 383 to 386 to the contested decision) and from Microsoft's quasi-monopoly on the client PC operating systems market.

354. The Commission analysed the indispensability criterion, as defined in the case-law, at recitals 666 to 686 to the contested decision and examined whether there were alternative solutions to disclosure of the relevant information that would enable undertakings to compete viably with Microsoft on the work group server operating systems market.

355. The Commission observes that in Microsoft's view the mere existence of inefficient interoperability solutions that allow competitors to achieve only de minimis market penetration shows that the indispensability criterion is not satisfied. Such an argument cannot be accepted, as that criterion must be assessed against the aim of preserving an effective competitive structure that benefits consumers. The question is whether the information that Microsoft refuses to disclose is indispensable to any competitor seeking to carry on business on the relevant market as a viable competitive constraint and not as a de minimis player who has effectively left the market for a niche position'.

356. In the rejoinder, the Commission makes clear that its position is that a dominant undertaking is not entitled to compromise effective competition on a secondary market by abusively refusing to allow its competitors access to an input' necessary for their viability. If there is no alternative to the input to which access is refused that could allow competitors to exercise effective competitive pressure on the dominant undertaking on the secondary market, it is then clear that the input is indispensable to the maintenance of effective competition.

357. Also in the rejoinder, the Commission reiterates that there is a whole range of possible degrees of interoperability between Windows PCs and work group server operating systems. The Commission did not fix a priori a given level of interoperability that is indispensable for the maintenance of effective competition on the market, but based its findings on the manifestly unsatisfactory nature of the alternative methods which Microsoft's competitors had already used and which did not permit the level of interoperability required by customers in an economically viable manner'. The Commission again denies having taken into account a degree of interoperability achieving the virtual identity' to which the applicant refers, and submits that what is indispensable is not that Microsoft's competitors be allowed to reproduce the interoperability solutions implemented by Microsoft but that they be able to achieve an equivalent degree of interoperability by their own innovative efforts'. Last, the Commission observes that at recitals 590 to 692 to the contested decision it examines the severe consequences' which the limited degree of interoperability with Windows client PC operating systems has for competitors and customers. In particular, Microsoft's conduct has the effect of progressively ousting all its competitors from the work group server operating systems market, even though some of them originally had a significant commercial or technical advantage over Microsoft on that market (recitals 587 and 668 to the contested decision).

358. In the second place, the Commission rejects the allegations of an error of fact.

359. First, it is not demonstrated that the solutions proposed by the computer scientists in the reports produced by Microsoft during the administrative procedure are commercially viable alternatives to disclosure of interoperability information.

360. Second, the argument which Microsoft derives from the responses to the Commission's requests for information is not relevant in so far as it means that interoperability with smaller players is enough, or that some interoperability already exists'. In reality, Microsoft overlooks the fact that its competitors entered the work group server operating systems market before Microsoft began to distribute products of that type. The fact that the information at issue is indispensable if Microsoft's competitors are to be able to continue to represent a competitive constraint for Microsoft's products means that those competitors will be gradually eliminated from the market. That fact that their elimination is not yet complete does not show that the indispensability criterion is not fulfilled, since the essential thing is whether the information is indispensable in order to remain as a viable competitor on the market.

361. Third, by its reference to the five alternative methods of achieving interoperability between the operating systems supplied by different distributors Microsoft does not contest the findings made on that point in the contested decision but merely asserts that those methods are feasible' and that they allow its own products and its competitors' products to work well together'.

362. The Commission recalls that it has already examined those methods in the contested decision and, in particular, the question whether reverse engineering might constitute an alternative to disclosure of the interoperability information (recitals 683 to 687 to the contested decision), and it demonstrated that they do not constitute viable substitutes' to disclosure of the interoperability information at issue.

363. Fourth, the Commission rejects Microsoft's allegation that the analysis in the contested decision is contradicted by the entry and alleged growth of Linux on the work group server operating systems market.

364. First of all, the figures for Linux [do] not represent the penetration of the market by a single operator but rather the best efforts of a number of competing vendors who build upon Linux (Red Hat, Novell/SuSE, IBM, Sun, etc.)'. The respective market shares of those competing distributors are therefore miniscule'.

365. The Commission proceeds to criticise the findings in section D of the Evans, Nichols and Padilla report in annex C.11 to the reply; it asserts that:

- as stated, in particular, at recitals 487 to 490 to the contested decision, the data from International Data Corporation (IDC) used by those experts in drafting that report are approximate and are therefore not on their own appropriate for assessing market development;

- that applies a fortiori as regards quite marginal annual changes relative to the overall size of the market';

- there is no proof that Linux's market share of 6.75% of units sold, which Microsoft calculates using an extrapolation factor concerning all servers, applies to the work group server operating systems market;

- the two examples of responses to the 2003 market enquiry to which the experts refer in order to demonstrate that it is possible to use, in relation to Linux, interoperability solutions based on reverse engineering are not representative in that the entities concerned are two of only three entities, out of a total of more than 100 which participated in that market enquiry, that made a non-insignificant use of Linux/Samba';

- the experts provide no information on how the four other methods which Microsoft claims can ensure interoperability between operating systems supplied by different distributors could have allowed the alleged expansion of Linux on the market during the period covered by the abuse consisting in the refusal to supply.

366. Likewise, the Commission criticises the findings in section E of that report. It claims that:

- it has already rejected, at recitals 605 to 610 to the contested decision, the arguments which Microsoft bases on IDC's projections and the results of the third Mercer survey;

- IDC tends to overestimate its projections of Linux's market share of the networking' and file/print' subcategories;

- the migration from the Windows NT operating systems to the Linux operating system mentioned in the Meryll Lynch report of 8 March 2004 (annex 7 to annex C.11 to the reply) is likely to be a one-off phenomenon, as Windows NT is an outdated product that is no longer supported by Microsoft';

- the Yankee Group report of 25 May 2004 (annex 9 to annex C.11 to the reply) relates to server operating systems in general and not to work group server operating systems, and is therefore largely irrelevant in the present case;

- the Forrester Research report of 27 May 2004 (annex 10 to annex C.11 to the reply) is not primarily concerned with work group server operating systems and contains findings which contradict Microsoft's argument, notably the finding that 92% of those questioned will use Active Directory in 2006.

367. SIIA submits essentially the same arguments as the Commission. It maintains that it is essential for competition on the merits in the software industry that work group server operating systems suppliers are able to achieve interoperability with Microsoft's quasi-monopolistic products on a level playing field'. In order to be able to compete effectively on the market, those suppliers must have access to the interoperability information at issue.

368. SFE rejects the argument which Microsoft bases on the five alternative methods of ensuring interoperability. It claims that, [t]echnically, all these ways describe realistic scenarios', but that they have a fundamental omission: [a]uthentication'. Microsoft has tightly coupled' its Windows client PC operating systems with its own [a]uthentication servers', so that it is simply impossible to separate the authentication task from the other tasks carried out by Windows work group servers.

Findings of the Court

369. As already pointed out at paragraph 207 above, the Commission adopted a two-stage approach in determining whether the information at issue was indispensable, in that, first of all, it considered what degree of interoperability with the Windows domain architecture non-Microsoft work group server operating systems must achieve in order for its competitors to be able to remain viably on the market and, second, it appraised whether the interoperability that Microsoft refused to disclose was indispensable to the attainment of that degree of interoperability.

370. Microsoft claims that that reasoning is incorrect in law and in fact.

- The alleged error of law

371. Microsoft's arguments concerning the Commission's supposed error of law relate to the first stage of its reasoning.

372. Microsoft takes issue first of all with the degree of interoperability required by the Commission in the present case: it contends, in substance, that the Commission's position effectively requires that its competitors' work group server operating systems be able to communicate with Windows client PC and server operating systems in exactly the same way as Windows server operating systems do.

The applicant reiterates that that degree of interoperability implies virtual identity between its systems and its competitors' systems.

373. Those assertions must be rejected.

374. The Court has already defined, at paragraphs 207 to 245 above, the degree of interoperability which the Commission required in the contested decision. The Court observed, in particular, that the Commission had concluded that, in order to be able to compete viably with Windows work group server operating systems, competitors' operating systems must be able to interoperate with the Windows domain architecture on an equal footing with those Windows systems (see paragraph 230 above). The Court has held that interoperability, as thus envisaged by the Commission, had two indissociable components, client/server interoperability and server/server interoperability and that it implied in particular that a server running a non-Microsoft work group server operating system could act as domain controller within a Windows domain using Active Directory and, consequently, would be able to participate in the multimaster replication mechanism with the other domain controllers (see paragraphs 231 and 233 above).

375. The Court has also already found that, contrary to Microsoft's contention, by requiring such a degree of interoperability the Commission did not intend that non-Microsoft work group server operating systems should function in every respect as a Windows work group server operating system and, accordingly, that the applicant's competitors could develop work group server operating systems that were identical, or even virtually identical', to the applicant's (see paragraphs 234 to 242 above).

376. Next, Microsoft criticises the fact that the Commission appraised the requisite degree of interoperability according to what in its view was necessary to allow designers of non-Microsoft work group server operating systems to remain viably on the market.

377. It is sufficient to observe, in that regard, that the Court has already confirmed, at paragraph 229 above, the correctness of the approach thus adopted by the Commission.

378. Finally, Microsoft claims that it is not necessary for its competitors' work group server operating systems to attain the degree of interoperability required by the Commission in order for them to be able to remain viably on the market.

379. It must be emphasised that the Commission's analysis of that question in the contested decision is based on complex economic assessments and that, accordingly, it is subject to only limited review by the Court (see paragraph 87 above).

380. It follows from the considerations set out below that Microsoft has not demonstrated that the Commission's analysis is manifestly incorrect.

381. In that regard, it must be observed, in the first place, that Microsoft has not established that the Commission's finding that interoperability with the client PC operating system is of significant competitive importance in the market for work group server operating systems' (recital 586 to the contested decision) is manifestly incorrect.

382. On the contrary, a number of factors confirm the correctness of that finding.

383. Thus, as may be seen from the technical explanations of the relevant products at recitals 21 to 59 to the contested decision and also from the explanations given by the parties' experts at the hearing, it is necessary to bear in mind that, by nature, computer programs do not function in isolation, but are designed to communicate and function with other computer programs and hardware, especially in network environments (see also, at paragraph 157 above, the 10 th recital in the preamble to Directive 91/250).

384. Furthermore, within the computer networks installed in organisations, the need to be able to function together is particularly pressing in the case of client PC operating systems and work group server operating systems. As the Commission emphasises at recital 383 to the contested decision, and as the Court has already observed at paragraph 161 above, file and print services and group and user administration services are intimately connected to the use of client PCs and are provided to users of client PCs as a set of interconnected tasks. As the parties' expert witnesses explained at the hearing, in computer networks the relationship between work group servers and client PCs is stimulated' or provoked' by actions or requests originated by client PC users, such as, in particular, the entry of a name and password, the creation of a file or a request to print a document. The Commission was likewise correct to find, at recital 532 to the contested decision, that [c]lient PCs and work group servers represent nodes in a computer network and are therefore physically linked with each other'. Last, it must be borne in mind that one of the essential functions of work group server operating systems is specifically the administration of client PCs.

385. Furthermore, as stated at recitals 383 to 386 to the contested decision, certain results of the Mercer surveys confirm the importance of the interoperability of work group server operating systems with client PC operating systems. Apart from the results of the second and third Mercer surveys, which are more specifically concerned with Windows client PCs and which will be examined at paragraphs 401 to 412 below, the first Mercer survey shows that the ease with which a product can be integrated in an existing or planned future computer environment is one of the main factors which IT executives take into account when deciding what products to purchase. It follows from a comparison of certain results of that survey with certain results of the third Mercer survey, moreover, that the importance of interoperability with client PC operating systems is more clear-cut for work group server operating systems than for other types of server products (recital 386 to the contested decision).

386. In the second place, the Court considers that the interoperability of work group server operating systems with client PC operating systems is even more important in the case of Windows client PC operating systems.

387. Microsoft's dominant position on the client PC operating systems market exhibits, as the Commission states at recitals 429 and 472 to the contested decision, extraordinary features', since, notably, its market shares on that market are more than 90% (recitals 430 to 435 to the contested decision) and since Windows represents the quasi-standard' for those operating systems.

388. As the Windows operating system is thus present on virtually all client PCs installed within organisations, non-Windows work group server operating systems cannot continue to be marketed if they are incapable of achieving a high degree of interoperability with Windows.

389. In the third place, the Court observes that, according to the contested decision, it is important that non-Windows work group server operating systems can interoperate not only with Windows client PC operating systems but also, more generally, with the Windows domain architecture.

390. More specifically, the Commission considers that, in order to be able to be viably marketed, non-Windows work group server operating systems must be capable of participating in the Windows domain architecture - which consists of an architecture' of both client/server and server/server interconnections and interactions, closely interlinked (see paragraphs 179 to 189 above) - on an equal footing with Windows work group server operating systems. That means, in particular, that a server running a non-Microsoft work group server operating system is able to act as domain controller within a Windows domain using Active Directory and, consequently, is capable of participating in the multimaster replication mechanism with the other domain controllers.

391. The Court therefore finds that Microsoft has not established that that assessment is manifestly

incorrect.

392. In that regard, the Court finds first, that, in light of the very narrow technological and privileged links that Microsoft has established between its Windows client PC and work group server operating systems, and of the fact that Windows is present on virtually all client PCs installed within organisations, the Commission was correct to find, at recital 697 to the contested decision, that Microsoft was able to impose the Windows domain architecture as the de facto standard for work group computing' (see, to the same effect, recital 779 to the contested decision, where the Commission states, inter alia, that the quasi-monopoly that Microsoft has held on the client PC operating systems market for many years enables it to determine to a large extent and independently of its competitors the set of coherent communications rules that will govern the de facto standard for interoperability in work group networks').

393. Second, as the Commission states at recital 637 to the contested decision, various sources of evidence, such as Microsoft's own marketing documents, reports by industry analysts, evidence obtained during the 2003 market enquiry and the Mercer surveys, show that interoperability with the Windows environment is a factor that plays a key role in the uptake of Windows work group server operating systems.

394. Thus, at recitals 638 to 641 to the contested decision, the Commission describes various facts which demonstrate that, for marketing purposes, Microsoft systematically uses interoperability with the Windows environment as a key marketing argument for its work group server operating systems. Those facts are not disputed by Microsoft.

395. Likewise, at recitals 642 to 646 to the contested decision, the Commission refers to certain results of the 2003 market enquiry in order to demonstrate that interoperability with the Windows environment plays a key role in the decisions taken by the organisations questioned on the purchase of work group server operating systems.

396. In the application, Microsoft merely asserts that organisations do not choose server operating systems for reasons linked with their interoperability with Windows operating systems and makes a global reference to certain documents annexed to the application (annex A.12.1 to the application (Matthews, The Commission's Case on Microsoft's Interoperability: An Examination of the Survey Evidence'), and annex A.22 to the application (Evans, Nichols and Padilla, The Commission Has Failed to Address Major Flaws in the Design, Conduct, and Analyses of Its Article 11 Inquiries')). For the reasons set out at paragraphs 94 to 99 above, the Court cannot take those annexes into account.

397. In any event, the Court finds that the abovementioned results of the 2003 market enquiry confirm the correctness of the Commission's case.

398. Thus, during that enquiry, the Commission requested the entities questioned to indicate whether they had already implemented (or decided to implement) Active Directory in the majority of the Windows domains in their computer network (question 15). It also requested the entities who answered that question in the affirmative, that is to say, 61 entities out of 102, to indicate from a list of factors those which had been important in their decision to implement Active Directory (question 16). Of those 61 entities, 52 (approximately 85.2%) mentioned as being such a factor the fact that Active Directory offers a better integration with Windows workstations - including applications running on the client PC or integrated into the client PC (e.g. Outlook, Office) than competing directory services' or the fact that Active Directory is required by applications used in [their] organisation' (question 16). On the other hand, only 17 entities (approximately 27.9%) mentioned one of the following factors as having been important in their decision to implement Active Directory: Active Directory offers a better integration with Web services than competing directory services';

Active Directory is a more mature product than competing directory services'; and Active Directory offers a better compliance and quality of implementation of directory standards than competing directory services'.

399. Likewise, the entities taking part in the 2003 market enquiry were also asked whether they relied primarily on Windows servers to provide file and print services (question 13). If so, they were to state whether certain interoperability factors set out in that question had been important in their decision to make use of such servers. Of the 77 entities who answered that question, 58 (approximately 75.3%) mentioned at least one of the factors in question.

400. In footnote 101 to the application and also in footnote 68 to the reply, Microsoft suggests, while merely making a general reference to the arguments in certain annexes (annex A.22 to the application and section A of annex C.13 to the reply (Evans, Nichols and Padilla, Response to the Commission's Annex B.6 Regarding Its Article 11 Inquiries')), that a number of the questions put by the Commission in connection with the 2003 market enquiry were flawed' or biased'. The Court considers that that argument cannot be accepted. Apart from the fact that such a global reference to annexes cannot be accepted, for the reasons stated at paragraphs 94 to 99 above, the Court finds that Microsoft's argument is intrinsically contradictory in that, in the parts of its pleadings to which the footnotes concerned relate, the applicant specifically relies, in support of its own case, on certain results of the 2003 market enquiry.

401. Contrary to Microsoft's contention, moreover, the results of the second and third Mercer surveys lead to the same conclusions as the 2003 market enquiry as regards the importance for consumers of interoperability with Windows operating systems.

402. Thus, in its second survey, Mercer, citing the same interoperability-related factors as those set out in question 13 of the 2003 market enquiry (see paragraph 399 above), asked a number of IT executives whose organisations mainly used Windows operating systems to supply file and print services to indicate whether one or more of those factors had played a key role in the decision to adopt those operating systems, giving those factors a mark on a scale of 1 (low importance) to 5 (high importance). Of the 134 IT executives concerned, 99 (or approximately 73.9%) stated that at least one of those factors had played such a role. Furthermore, it is significant that 91 IT executives (or approximately 67.9%) awarded a mark of 4 out of 5 to at least one of those factors.

403. In the same survey, the IT executives questioned had also been invited to evaluate the role played by 21 different factors in their purchasing decisions concerning operating systems for the execution of file and print services, giving those factors a mark on a scale of 0 (no importance) to 5 (high importance). The factor interoperability with (Windows) work stations' received an average mark of 3.78 and was placed in fourth position, behind the factors reliability/availability' (average mark 4.01), available functions and availability of help (internal or external' (average mark 3.93) and security' (average mark 3.80).

404. The results of the second Mercer survey also show that when the IT executives concerned were asked to evaluate the role played by 18 factors in their decisions concerning the acquisition of directory services, they gave the factor interoperability with (Windows) work stations' an average mark of 3.94 (first position).

405. In the third Mercer survey, the IT executives were asked to evaluate the role played by 13 different factors in their decisions concerning the acquisition of work group server operating systems by giving those factors a mark on a scale from 0 (no importance) to 5 (high importance). In response to that request, the factor interoperability with Windows work stations' received an average mark of 4.25. While it is true that that factor was only placed in second position, between reliability/availability of the server operating system' (average mark 4.47) and integrated security in the server operating

system' (average mark 4.04), the fact remains that the results which it obtained show that to a very large extent the decisions of purchasers of work group server operating systems are dictated by considerations to do with interoperability with Windows client PCs.

406. It is true that in the third Mercer survey the IT executives were also invited to evaluate the relative importance of each of the 13 factors referred to in the preceding paragraph and that, on that basis, the gap between reliability/availability of the server operating system' (in first place, with 34%) and interoperability with Windows work stations' (in second place, with 9%) is much wider. However, those results must be qualified, because, as the Commission explains at recitals 643 and 659 to the contested decision, interoperability is a factor which influences other factors that purchasers take into consideration when choosing a work group server operating system. Thus, purchasers may believe that a non-Microsoft work group server operating system has disadvantages in relation to security or processing speed, whereas, in reality, those disadvantages are attributable to a lack of interoperability with Windows operating systems (see the two examples given by the Commission in footnote 786 to the contested decision). Those purchasers thus have a tendency to underestimate the importance of interoperability with Windows.

407. The results of the third Mercer survey are also important in so far as they show that Microsoft's manifest and increasing lead over its competitors on the work group server operating systems market (see the examination of the circumstance relating to the elimination of competition at paragraphs 479 to 620 below) is to be explained not so much by the merits of its products as by its interoperability advantage.

408. Furthermore, the IT executives concerned were requested not only to evaluate the relative importance of 13 different factors in their decisions concerning the acquisition of work group server operating systems (see paragraph 406 above), but also to evaluate, for each of those factors, the respective performances of Linux, NetWare, UNIX and Windows operating systems.

409. In fact, for reliability/availability of the server operating system', which had been considered the most important factor (with 34%) by the IT executives questioned, Windows obtained the lowest average mark (3.63). UNIX systems came first by a significant margin (average mark 4.55), followed by Linux (average mark 4.10) and NetWare (average mark 4.01).

410. Likewise, Windows obtained the lowest average mark for its performance for integrated security in the server operating system' (average mark 3.14), far behind UNIX (average mark 4.09), NetWare (average mark 3.82) and Linux (average mark 3.73), although that factor plays a very important role in the organisations' decisions concerning the acquisition of work group server operating systems (see paragraph 405 above). Those results are all the more revealing since, as stated at paragraph 406 above, purchasers have a tendency to believe that problems are security-related when, in reality, they are the consequence of a lack of interoperability with Windows systems.

411. On the other hand, it is striking to note that, as regards performances relating to interoperability with Windows work stations', Windows was awarded the highest average mark (average mark 4.87) of all the average marks given to the different server operating systems concerned for each of the 13 factors used by Mercer. It is in relation to that factor, moreover, that the gap between Microsoft and its competitors' operating systems is widest, since NetWare obtained an average mark of 3.78, Linux an average mark of 3.43 and UNIX an average mark of 3.29.

412. On the same subject, the Court notes that, as the Commission quite correctly states at recital 662 to the contested decision, if the average marks given to Linux, NetWare, UNIX and Windows for each of the 13 factors concerned with the percentage of relative influence' attributed to those factors are weighted, and if the weighted marks are added up, it is UNIX that gets the highest result, followed, first, by Windows and then, with close results that are not significantly lower

than Windows' results, by Linux and NetWare.

413. Third, the Court observes that, at recital 183 to the contested decision, the Commission asserts that [w]hen a [non-Windows] work group server is added to a Windows work group network, the degree of interoperability with the Windows domain architecture that such a work group server is able to achieve will have an impact on the efficiency with which that work group server delivers its services to the users of the network'.

414. The Court considers that the correctness of this assertion is confirmed by the contested decision in a number of respects. The decision refers to a series of problems which Microsoft's competitors' work group server operating systems encounter because they cannot interoperate with the Windows domain architecture to the same degree as can Windows work group server operating systems.

415. A first example given by the Commission is the fact that, if a work group server does not interoperate sufficiently with the security architecture' of the Windows work group network, the user might be required to log on twice if he wishes to have access to both Windows-based resources' and resources offered by... work group servers [using competing operating systems]' (recital 183 to the contested decision). In its pleadings, Microsoft does not deny that that problem exists, but merely attempts to minimise it (see paragraph 340 above). Indeed, the Court takes note of the fact that at the hearing, one of Microsoft's expert witnesses himself underlined the risks that multiple user names and passwords created for network security and the disadvantages, in terms of efficiency and productivity, due to the fact that users had to enter several user names and passwords.

416. Another example is set out at recital 196 to the contested decision, where the Commission reproduces a statement made by Microsoft in its response of 16 November 2001 to the second statement of objections, namely that more policy-based [user group] management is possible if a Windows 2000 Professional client is attached to a Windows 2000 server running Active Directory than if it is running in standalone mode or is part of a non-Windows 2000 domain or realm'.

417. At recital 240 to the contested decision, the Commission states that, more than a year after the launch of Windows 2000, Microsoft had still not fully disclosed the updated CIFS/SMB specification to its competitors. In footnote 319, the Commission correctly states that even if Microsoft had disclosed the updated specification, that would not have been sufficient to ensure proper administration of the file service'.

418. It is also appropriate to cite the factors which the Commission quite correctly identifies concerning the ADSI interface developed by Microsoft to enable software writers to access the LDAP protocol which supports Active Directory (recitals 243 to 250 to the contested decision). In particular, the Court notes the limitations of the ADSI provider' developed by Novell (recital 250 to the contested decision).

419. At recitals 251 to 266 to the contested decision, the Commission explains that Microsoft introduced a proprietary' extension to the Kerberos standard protocol and that the work group server operating systems which run the unextended' version of that security protocol encounter authorisation problems when they work in a Windows environment (see also footnote 786 to the contested decision). It should be borne in mind that the Kerberos protocol, as modified by Microsoft, offers advantages as regards, in particular, faster connection and efficiency (see recital 152 to the contested decision and paragraph 170 above).

420. At recitals 283 to 287 to the contested decision, the Commission correctly explains that the directory synchronisation tools' to which Microsoft refers allow the directory services in its competitors' systems to achieve only limited synchronisation with Active Directory. It emphasises, in particular, that those tools only synchronise a limited part of the information contained in a directory' and that they do not suppress the need to manage the users, permissions, group memberships

and security policies separately for the Windows work group servers and the non-Microsoft work group servers' (recital 285 to the contested decision).

421. It follows from all of the foregoing considerations that Microsoft has not established that the Commission made a manifest error when it considered that non-Microsoft work group server operating systems must be capable of interoperating with the Windows domain architecture on an equal footing with Windows work group server operating systems if they were to be marketed viably on the market.

422. The Court also concludes from those considerations that the absence of such interoperability with the Windows domain architecture has the effect of reinforcing Microsoft's competitive position on the work group server operating systems market, particularly because it induces consumers to use its work group server operating system in preference to its competitors', although its competitors' operating systems offer features to which consumers attach great importance.

- The alleged error of fact

423. The arguments which Microsoft derives from the Commission's alleged error of fact are of two types.

424. In the first place, Microsoft claims that the Commission's case is contradicted, first, by the fact that several work group server operating systems are present on the market and by the heterogeneous nature of computer networks within undertakings in Europe and, second, by the fact that, even though they do not have access to the interoperability information at issue, distributors of Linux products have recently entered the market and have consistently gained market share.

425. The Court considers that the first of those arguments is not sufficient to call in question the validity of the Commission's argument.

426. First of all, contrary to Microsoft's contention, interoperability considerations play a key role in decisions concerning the acquisition of work group server operating systems (see paragraphs 381 to 412 above).

427. Also, the third Mercer survey shows that interoperability with Windows work posts' is the factor in respect of which the gap between Microsoft's work group server operating system and its competitors' systems is the widest (see paragraph 411 above).

428. Next, as will be explained in greater detail at paragraphs 569 to 582 below, Microsoft's competitors, with the exception of distributors of Linux products, had been present on the work group server operating systems market for several years before Microsoft began to develop and market such systems. While it is true that on the date of adoption of the contested decision those competitors were still present on the market, the fact remains that their market share fell significantly as Microsoft's share increased rapidly, notwithstanding the fact that some of them, particularly Novell, had a considerable technological advantage over Microsoft. The fact that competition is eliminated gradually and not immediately does not contradict the Commission's argument that the information at issue is indispensable.

429. In fact, as the Commission stated in answer to one of the written questions put by the Court, the fact that Microsoft's competitors were able to continue to sell work group server operating systems during the years immediately preceding the adoption of the contested decision is explained in part by the fact that at that time there was still, within organisations, a not insignificant basis of client PCs using a Windows operating system belonging to a range of products predating the Windows 2000 range (see recitals 441 to 444 to the contested decision). For example, the table at recital 446 to the contested decision shows that in 2001 the Windows 98, Windows Millennium Edition (Windows Me) and Windows NT client PC operating systems were still being licensed in significant numbers. It is precisely with the Windows 2000 operating systems that interoperability

problems arose in a particularly acute manner for Microsoft's competitors (see paragraphs 571 to 573 below). At the same time, there was also a non-negligible installed base of work group servers using Windows NT operating systems, which caused fewer interoperability problems than the systems which succeeded them. It must be borne in mind, in that regard, that organisations modify their work group server networks only once in a period of several years, and do so only incrementally (see recital 590 to the contested decision).

430. The second argument referred to at paragraph 424 above, based on the entry and growth of Linux products on the work group server operating systems market, must also be rejected.

431. First of all, as the Commission explains at recitals 487 and 488 to the contested decision, and as the Court will explain at paragraphs 502 and 553 below, the IDC data on which Microsoft relies to describe the evolution of the position of Linux products on the market present certain flaws. Those data come from a database which IDC established by identifying eight main categories of tasks (or workloads') carried out within organisations and distinguishing a number of sub-categories' within those main categories. The two tasks most closely related to the work group tasks referred to by the contested decision, namely file and print sharing and user and user group administration, are those known, respectively, as file/print sharing' and networking' (recital 486 to the contested decision). However, the tasks within those two sub-categories are not a perfect match for the services which constitute the work group server operating systems market. What is more, a number of those tasks can be performed with a much lower level of interoperability between client PCs and servers than the work group tasks identified by the Commission and are therefore more likely than the latter tasks to be carried out by non-Microsoft operating systems.

432. Next, account must be taken of the fact that the growth of Linux products on the work group server operating systems market was only modest during the years immediately preceding the adoption of the contested decision. When those Linux products were used in conjunction with Samba software (developed with the use of reverse engineering) they could attain a certain degree of interoperability with Windows operating systems. However, that degree of interoperability was significantly reduced following the launch of the Windows 2000 generation. Thus, in October 2003 - that is to say, several months after Microsoft had already begun to market the Windows 2003 server operating system, which had succeeded the Windows 2000 server system - the degree of interoperability that Linux products had managed to achieve enabled them to act only as member servers within a domain using Active Directory (see recitals 296 and 297 to the contested decision).

433. Finally, as will be explained in greater detail at paragraphs 595 to 605 below, the projected growth of Linux products on the work group server operating systems market is lower than Microsoft claims and will come about to the detriment not of Microsoft's systems but, in particular, of Novell's systems and the systems of distributors of UNIX products.

434. In the second place, Microsoft claims that the Commission failed to take account of the fact that several methods other than the disclosure of the information at issue ensure sufficient interoperability between different suppliers' operating systems.

435. On that point, it is sufficient to observe that Microsoft itself has recognised, both in its written pleadings and in answer to a question put to it at the hearing, that none of its recommended methods or solutions made it possible to achieve the high degree of interoperability which the Commission correctly required in the present case.

436. It follows from all of the foregoing considerations that Microsoft has not demonstrated that the circumstance that the interoperability information was indispensable was not present in this case.

(iii) Elimination of competition

Arguments of the parties

437. Microsoft submits that the refusal at issue is not such as to exclude all competition on a secondary market, namely, in this case, the work group server operating systems market.

438. In support of that assertion, Microsoft claims, in the first place, that the Commission applied a test that was wrong in law.

439. Microsoft observes that, at recital 589 to the contested decision, the Commission refers to a mere risk' of elimination of competition on the market. In cases dealing with compulsory licensing of intellectual property rights, on the other hand, the Court has always ascertained whether the refusal in question was likely to eliminate all competition' and required, in that regard, something close to certainty'. The Commission therefore ought to have applied a stricter test, namely the test of a high probability' of eliminating effective competition. Contrary to the Commission's contention, the words risk', possibility' and likelihood' do not mean the same thing.

440. Microsoft further submits that the reference in the contested decision to Commercial Solvents v Commission and CBEM , paragraph 320 above, is irrelevant. Those cases did not involve a refusal to license intellectual property rights. In each of those cases, moreover, the prospect of eliminating competition was immediate and real, as there were no alternative sources of supply.

441. In the second place, Microsoft claims that the Commission's argument that competition on the server operating systems market could be eliminated owing to its refusal to disclose its communication protocols to its competitors is contradicted by market conditions. The applicant reiterates, first, that it is commonplace for undertakings in Europe to have heterogeneous computer environments composed of Windows client PC and server operating systems and non-Microsoft server operating systems and, second, that the Mercer reports show that enterprise customers base their decisions relating to the purchase of operating systems on a range of criteria such as reliability, scalability and applications compatibility and do not consider the criterion of interoperability with Windows client PC operating systems to be a determinative criterion.

442. Microsoft also observes that, six years after the alleged refusal to supply, there were still numerous competitors on the work group server operating systems market, including IBM, Novell, Red Hat and Sun, and a number of suppliers of Linux products. The applicant reiterates that Linux is a recent entrant to the market and has grown rapidly and that it is an incontrovertible fact that Linux products, either on their own or together with Samba products or with Novell's Nterprise server software, compete directly with Windows server operating systems in performing a wide range of tasks, including the provision of work group services to Windows client PC operating systems. Furthermore, IDC, which describes itself as the premier global market intelligence and advisory group in the information technology and telecommunications industries, estimated that there was no risk of competition being eliminated. IDC's projections indicate that over the period 2003 to 2008 Microsoft's share of the market for work group server operating systems used on servers costing under USD 25 000 will remain virtually stable, whereas Linux's share will double.

443. In the third place, Microsoft criticises the Commission's artificially narrow' definition of the second product market.

444. Microsoft contends that [c]ompetition with Windows server operating systems is even more vigorous' if the definition also covers tasks other than the provision of file and print services and user and group administration services that Windows server operating systems can perform.

445. Microsoft observes that the Commission does not deny that the basic version of its Windows Server 2003 operating system enables a wide range of tasks to be performed, many of which are outside the second product market as defined in the contested decision. According to the Commission's approach,

the same Windows server operating system is inside the relevant market when it provides file and print services to Windows client PC operating systems and is outside the market when it provides proxy services or firewall services to those same operating systems.

446. Microsoft maintains that the Commission is not entitled to rely on the fact that its Windows Server 2003 operating system is marketed in different versions at different prices to support its assertion that the basic version of that system is in a different market from the other versions of the same system. The more expensive' versions of that system provide the same work group services as the basic version.

447. In the reply, Microsoft expands somewhat on its complaint relating to the incorrect definition of the second product market. It states, first of all, that on the market for server operating systems in general it has a market share of around 30%. Next, it asserts that [n]o one in the industry uses the term work group server in the way the Commission has used it to define [that product market]' and that when industry observers' occasionally do refer to work group servers' they generally include servers that perform a wide range of tasks, including Web, database and application serving'. Last, it claims that none of the major server vendors on the market sells work group servers that are limited to performing the tasks identified by the Commission.

448. Microsoft also rejects the explanations which the Commission sets out in the defence to justify its definition of the market. First of all, Microsoft states that [v]endors do not charge different people different prices for the same server operating system edition depending on how they will use it'. Next, it denies that the server operating systems considered by the Commission to be work group server operating systems' are optimised' to provide work group services: the IDC data on which the Commission relied when calculating market share show that, with the sole exception of Novell's NetWare, [those] operating systems spend far more time devoted to non-work group tasks than to work group [tasks]'. Last, the applicant asserts that [t]he cost of modification in many cases would be zero [and] in the other cases ... would be negligible'.

449. Furthermore, Microsoft refers generally to two reports by Evans, Nichols and Padilla, in annex A.23 to the application and annex C.12 to the reply.

450. In the fourth place, Microsoft, in the reply, criticises the methodology used by the Commission to calculate the market share of operators on the second product market, which consists in taking into account only the time which server operating systems spend in performing work group tasks and only sales of server operating systems costing under USD 25 000. That leads to the absurd consequence that a copy of an operating system is counted as [being] both inside and outside the market, depending on the tasks it is performing at any given time' and provides no relevant information about dominance'.

451. CompTIA claims, first of all, that the Commission applied the wrong legal standard when ascertaining whether Microsoft's refusal involved a mere risk of elimination of all effective competition' when it ought to have examined whether that refusal gave rise to the likelihood that all competition would be eliminated from the secondary market. Next, CompTIA asserts that the evidence in the file does not demonstrate that that refusal was likely to have such a consequence. It emphasises, in particular, the growing success' of Linux.

452. ACT emphasises the very close link between the indispensability criterion and the elimination of competition' criterion. It claims, in particular, that the contested decision is contradictory in so far as, on the one hand, it recognises that up to 40% of the work group server operating systems market is held by competitors who are able to provide substitute products without having had access to the interoperability information and, on the other, it states that competition on that market is impossible without such access because the information is indispensable.

453. ACT also disputes the Commission's argument that there is no need to take into account competition

by de minimis players. It also criticises the fact that the Commission relies on a mere risk' of elimination of competition, and emphasises that Linux's position on the market continues to grow.

454. The Commission asserts that the applicant's refusal creates a risk that all effective competition on the secondary market for work group server operating systems will be eliminated.

455. In the first place, the evidence analysed at recitals 585 to 692 to the contested decision clearly shows that there is a high likelihood' that that risk will be realised in the near future'. The Commission refers to recital 700 to the contested decision and submits that if Microsoft's conduct remains unfettered, there is a serious risk that its competitors' products will be confined to a niche' existence or will not be profitable at all.

456. The Commission contends that the Commercial Solvents v Commission and CBEM cases, paragraph 320 above, provide valuable guidance for the purpose of assessing Microsoft's conduct in the light of Article 82 EC, even though those cases did not involve a refusal to license intellectual property rights. In that context, the expressions risk', possibility' and likelihood' used by the Court of Justice in its case-law on abusive refusals to supply have the same meaning.

457. The Commission submits that most of Microsoft's arguments are based on the incorrect premiss that the Commission must establish that competition has already been eliminated or, at least, that its elimination is imminent. The Commission demonstrated in the contested decision that the degree of interoperability that can be achieved on the basis of Microsoft's disclosures is insufficient to enable competitors to stay viably on the market' (footnote 712 to the contested decision). Microsoft has not adduced evidence that that conclusion is vitiated by a manifest error of assessment.

458. In the second place, the Commission deals with the arguments which Microsoft bases on the facts observed on the market.

459. It states, first of all, that the risk of elimination of all competition was already present in 1998, as it is present today': the only difference is that now [that] elimination of competition is more imminent than it was in 1998'.

460. Next, the Commission disputes the conclusions that Microsoft draws from the Mercer reports. In the Commission's view these reports demonstrate that customers choose Windows as a work group server operating system because of Microsoft's unfair interoperability advantage', in spite of the fact that Windows is lagging behind' other products on a number of features that customers consider important.

461. The argument which Microsoft bases on the growth of Linux products is refuted as wholly unsupported; the Commission refers to recitals 506 and 632 to the contested decision, in which it is clearly shown that the past growth of Linux has been de minimis '. The last two Mercer surveys demonstrate that Linux has only a very low market share, in the order of 5%, on the work group server operating systems market.

462. The Commission contends that the IDC projections are exaggerated and based on imperfect data (see paragraphs 365 and 366 above). In reality, the IDC data suggest that Microsoft rapidly acquired a dominant position on the relevant market, that it is continuing to increase its market share and that it is facing an increasingly fragmented fringe of niche players.

463. In the third place, the Commission rejects Microsoft's criticism of its definition of the second product market.

464. In reaching that definition, the Commission first of all identified a list of core work group services, which closely correspond to a specific customer need'. Those core services are the key services that customers take into account when purchasing a work group server operating system. The Commission based its analysis on a variety of evidence, including the information gathered

in the 2003 market enquiry (recitals 349 to 352 to the contested decision), statistical correlation' between the use of a given operating system for one of the core work group services and its use for the other core services (recital 353 to the contested decision) and Microsoft's description and pricing of its products (recitals 359 to 382 to the contested decision).

465. The Commission contends that work group server operating systems are optimised' to provide work group services and that the way in which they provide those services plays a decisive role in the decision to purchase such systems. The fact that work group servers are sometimes used to run an application does not have the effect of temporarily' excluding them from the market or of temporarily' including in the market enterprise servers which are optimised' to run enterprise applications.

466. In response to Microsoft's argument that its Windows work group server operating systems may be used to provide proxy services or firewall services, the Commission refers to recital 58 to the contested decision and states that those tasks are implemented by specialised edge servers'. Those servers cannot therefore exercise a competitive constraint on Microsoft on the work group server operating systems market.

467. In the rejoinder, the Commission claims, first of all, that the terminology which it uses to designate the product market is irrelevant to whether it correctly defined that market. Furthermore, the expression work group server operating system' is indeed used in the industry to designate the type of products at stake in the [contested] decision'.

468. Next, the Commission rejects Microsoft's criticisms of the explanations set out in the defence (see paragraph 448 above).

469. First, contrary to Microsoft's contention, both it and its competitors do... charge customers different prices for the same server operating system depending on how they will use it'. Prices vary according to the number of client PCs which have access to the server concerned. Furthermore, server operating systems vendors offer a number of different editions - at different prices - of systems forming part of the same family'. More generally, the Commission observes that Windows server operating systems are licensed by Microsoft to customers and [that] there is in principle no reason why Microsoft should not be able to discriminate depending on use'.

470. Second, the Commission submits that Microsoft's assertion that work group server operating systems spend far more time devoted to non-work group tasks than to work group [tasks]' is based on IDC data processed according to an inappropriate method.

471. Third, in response to Microsoft's assertion that the cost of modification in many cases would be zero', the Commission refers to recitals 334 to 341 and 388 to 400 to the contested decision, which show that there is no supply side substitutability for either client PC operating systems or work group server operating systems.

472. Still in the rejoinder, moreover, the Commission emphasises that Microsoft does not deny that interoperability with client PCs - and, more especially, with Windows client PCs - is particularly important for the performance of work group tasks by a server operating system. Microsoft's refusal to disclose interoperability information significantly harms its competitors' capacity to meet consumer expectations concerning the performance of those tasks and thus alters the conditions of competition for servers sold for those tasks by comparison with those sold for different tasks. In the Commission's submission, [that] remains true even assuming... that, for each of both Microsoft and its rivals, the various editions of its server operating systems currently on the market are all equally suited ... for the performance of both work group server tasks and certain other low-end tasks (non-mission critical applications such as e-mail, etc.)'.

473. The Commission further submits that, [a]s for the supply side, it is obvious that, if one

accepts for present purposes (i) the demand-side requirements of customers as regards work group services (undisputed by Microsoft) and (ii) Microsoft's own hypothesis that the various editions of each vendor's respective server operating systems have identical capacities as regards work group tasks, then the very same distorted market forces which force the exit of Microsoft's competitors from the sale of server operating systems for work group tasks will prevent supply-side substitution through (re)entry on the basis of the high-end editions of the same operating system families'.

474. Last, the Commission refers to annex B.11 to the defence and annex D.12 to the rejoinder, in which it comments on the observations set out in annex A.23 to the application and annex C.12 to the reply.

475. In the fourth place, the Commission rejects Microsoft's criticisms of the method which it used to calculate market share. First of all, for the purpose of its assessment, there is no need for Microsoft to have already acquired a dominant position on the relevant secondary market by means of its abusive conduct: what matters is that there is a risk of elimination of competition on that market. Next, the Commission's method gives a sufficiently reliable picture of the imbalance of forces on the market for work group server operating systems'. The Commission did not consider only the time allocated to different tasks by a given server, but examined, in respect of the undertakings which participated in the 2003 market enquiry and responded to the second and third Mercer surveys, what proportion of the work group tasks was performed by servers from different suppliers. Neither that market enquiry nor those surveys indicate that Microsoft held a market share of less than 60% for any one of those work group tasks.

476. The Commission further contends that applying the filters identified by Microsoft makes it possible to use [the IDC] data as a rough proxy for the sale of the editions of various vendors identified as being work group server operating systems'. It maintains that, to the extent that Microsoft's own exclusionary behaviour has the effect of partitioning sales of server operating systems purchased primarily for work group tasks from those primarily purchased for other tasks, a workload filter permits one to form an impression of Microsoft's relative strength in sales primarily for the former tasks'. In any event, even if only the [USD] 25 000 filter' were applied, without any distinction based on workload, Windows' share would be 65% by volume and 61% by relevant turnover (recital 491 of the contested decision).

477. SIIA claims that, owing to the indispensability of the interoperability information, the refusal at issue is by nature such as to eliminate competition on the work group server operating systems market. In particular, Microsoft's market share on that market rose significantly and rapidly at the time when it placed its Windows 2000 Server operating system on the market. SIIA also contends that the arguments which Microsoft bases on the alleged growth in Linux products on the market are unfounded.

478. FSFE asserts that Linux products do not exert a competitive threat on the work group server operating systems market.

Findings of the Court

479. The Court will examine in the following order the four categories of arguments which Microsoft puts forward in support of its contention that the circumstance relating to the elimination of competition is not present in this case: first, the definition of the relevant product market; second, the method used to calculate market shares; third, the applicable criterion; and, fourth, the assessment of the market data and the competitive situation.

- The definition of the relevant product market

480. Microsoft's arguments in respect of the definition of the relevant product market concern

the second of the three markets identified by the Commission in the contested decision (see paragraphs 23 and 25 to 27 above), namely, the work group server operating systems market. The Commission describes those systems as being designed and marketed to deliver collectively file and print sharing services and group and user services to a relatively small number of client PCs linked together in a small or medium-sized network (recitals 53 and 345 to the contested decision).

481. Microsoft contends, in effect, that the Commission defined that second market too restrictively by including only server operating systems used to supply the services mentioned in the preceding paragraph, namely what are known as work group' services. Microsoft's objective in challenging the Commission's definition of the market is essentially to establish that the evolution of the market is different from that described at recitals 590 to 636 to the contested decision and does not represent the elimination of all competition.

482. The Court notes at the outset that in so far as the definition of the product market involves complex economic assessments on the part of the Commission, it is subject to only limited review by the Community judicature (see, to that effect, Case T342/99 Airtours v Commission [2002] ECR II2585, paragraph 26). However, this does not prevent the Community judicature from examining the Commission's assessment of economic data. It is required to decide whether the Commission based its assessment on accurate, reliable and coherent evidence which contains all the relevant data that must be taken into consideration in appraising a complex situation and whether it is capable of substantiating the conclusions drawn from it (see, to that effect, Commission v Tetra Laval , paragraph 89 above, paragraph 39).

483. The Court notes, moreover, that Microsoft on the one hand repeats arguments which it already submitted during the administrative procedure and which the Commission expressly rejected in the contested decision, but fails to indicate in what way the Commission's findings are incorrect, and, on the other, makes a general reference to two reports in annex A.23 to the application and annex C.12 to the reply. For the reasons set out at paragraphs 94 to 99 above, those reports will be taken into account by the Court only to the extent to which they support or complement pleas or arguments expressly set out by Microsoft in the body of its pleadings.

484. In arriving at the contested definition of the product market, the Commission took into account the demand-side substitutability and the supply-side substitutability of the products. It must be borne in mind that, as stated in the Commission Notice on the definition of the relevant market for the purposes of Community competition law (OJ 1997 C 372, p. 5), point 7, [a] relevant product market comprises all those products and/or services which are regarded as interchangeable or substitutable by the consumer, by reason of the products' characteristics, their prices and their intended use'. As indicated at point 20 of that notice, moreover, supply-side substitutability may also be taken into account when defining markets in those situations in which its effects are equivalent to those of demand substitution in terms of effectiveness and immediacy. That means that suppliers are able to switch production to the relevant products and market them in the short term without incurring significant additional costs or risks in response to small and permanent changes in relative prices.

485. The Court would point out straight away that the definition of the second market is not based on the idea that there is a separate category of server operating systems exclusively implementing file and print services and user and group administration services. Quite to the contrary, at a number of points in the contested decision the Commission expressly acknowledges that work group server operating systems may also be used to carry out other tasks, and, in particular, may run non-mission critical' applications (see, in particular, recitals 59, 355, 356 and 379 to the contested decision). At recital 59 to the contested decision, the Commission states that non-mission critical' applications are those whose failure would impact the activity of some users [but] would not impact the overall activity of the organisation'. In that regard, the Commission refers, more specifically,

to the running of internal email services. As will be explained in greater detail below, the Commission's definition is based in fact on the finding that the capacity of work group server operating systems to supply collectively file and print services and also user and group administration services constitutes, without prejudice to the other tasks which they are capable of performing, an essential feature of those systems, and that those systems are primarily designed, marketed, purchased and used to provide those services.

486. As regards, in the first place, demand-side substitutability, the Commission concludes at recital 387 to the contested decision that there are no products that... exercise sufficient competitive pressure on work group server operating systems such that they should be included in the same relevant product market'.

487. In arriving at that conclusion, the Commission established, first, that it followed from the information gathered in the 2003 market enquiry that work group servers performed a distinct set of linked tasks which were demanded by consumers (recitals 348 to 358 to the contested decision).

488. The Court considers that that finding is confirmed by the evidence in the file and that Microsoft has raised no argument which disp roves it.

489. In its request for information of 4 June 2003, the Commission asked the organisations concerned whether within those organisations a particular type of server was used to supply file and print services and group and user administrative services (first part of question 1). Of the 85 organisations which answered that question, 70 (approximately 82.3%) said that that was so.

490. The Commission also asked the organisations whether they considered that those services constituted a set of server tasks that go together' (second part of question 1). Of the 83 organisations which answered that question, 51 (61.4%) endorsed that proposition.

491. Those results are explained, in particular, by the fact that those services constitute the basic services which client PC users use in their daily activities. Entity I 06, for example, explains its positive answer to both parts of question 1 by describing servers that supply work group services as infrastructure servers' and those services as standard desktop services'. It states that [e]ach user shall be identified/authenticated; he/she will create/modify files, print them, exchange/share them'. Likewise, other organisations refer to the servers as being infrastructure server providers' (see response of entities I 13 and I 30).

492. It is also significant that, as the Commission observes at recital 352 to the contested decision, several organisations explained their positive response to both parts of question 1 by the need to have a single sign-on identification' for users accessing the resources of the network or a single point of administration of the network (see, inter alia, the responses of entities I 30, I 46-16, I 46-37 and Inditex). Other organisations mention cost considerations, stating, in particular, that the use of the same operating system to supply work group services allows a reduction in administration costs (see, inter alia, the responses of entity I 49-19 and Inditex).

493. It is true that in the description of work group tasks' in its request for information of 4 June 2003 the Commission also included support for internal email and collaboration services and other non-mission critical applications' and that a number of the organisations questioned approved the inclusion of those services in that description. It is also true that, in answer to question 2 in the same request for information, 62 organisations out of 85 (approximately 72.9%) stated that they appreciated the flexibility offered by a work group server operating system which, in addition to file and print services and user and group administration services, was able to supply non-mission critical' services.

494. However, it cannot be inferred from those findings alone that the Commission defined the second

product market too narrowly.

495. First, those findings must be qualified. Thus, in their response to question 1 of the request for information of 4 June 2003, a number of the organisations questioned stated that in their operations internal email or collaboration services were performed on specialist servers and they distinguished those services from the other work group services mentioned by the Commission (see, in particular, the responses of entities I 091, I 11, I 22, I 37, I 53, I 46-13, I 4615, I 59 and I 72, and also those of Danish Crown, Spardat and Stork Food & Dairy Systems). For example, while entity I 37 considered that the work group tasks defined by the Commission constituted a set of linked server tasks, it stated that file/print [services] [went] together', whereas internal email [services] [belonged to] a different set of servers'. Likewise, entity I 4615 stated that it had a server that provided file and print services and workstation management only'.

496. Second, as the Commission observes at recitals 353 and 354 to the contested decision, and as it reiterates in its answer to one of the written questions put by the Court, the 2003 market enquiry also shows that when organisations use a given operating system to supply file or print services, they generally use the same operating system to supply user and group administration services. The Court notes that Microsoft does not dispute the findings in footnotes 436 and 438 to the contested decision relating to the correlation coefficients' calculated by the Commission on the basis of the responses to question 5 of its request for information of 16 April 2003. The Commission explains in those footnotes that the correlation coefficient' between the workload share of a NetWare system (or a Windows system) for one of the work group services (namely file sharing, printing and user and group administration) and the workload share of the same system for another of the same services is particularly high. On the other hand, the correlation coefficient' is much lower between the workload share of a NetWare system (or a Windows system) for one of the work group services and the workload share of the same system for a different type of service, in particular internal email services or other applications which are non-mission critical'. The Commission adds that the same conclusions may be deduced from results of the second and third Mercer surveys. In other words, it is apparent from that evidence, which Microsoft does not dispute, that it is much more usual to combine, on the same server, the work group services identified by the Commission than one of those services and a service of another type.

497. Consequently, while it is true that users attach a certain importance to the possibility of using work group server operating systems to perform certain non-mission critical' tasks in addition to work group services, that does not at all affect the conclusion that there is a separate demand for server operating systems that supply work group services. Since it is settled that it is the three categories of services thus considered that determine the choice of demand, it is immaterial that the server operating systems belonging to the relevant market are capable of performing certain additional tasks.

498. Furthermore, as indicated at recitals 357, 358 and 628 to the contested decision, the customer statements produced by Microsoft during the administrative procedure confirm the correctness of the Commission's analysis.

499. Those statements show that while, admittedly, as Microsoft emphasises at a number of points in its pleadings, organisations often have heterogeneous' computer networks (that is to say, networks in which server and client PC operating systems from different suppliers are used), they nevertheless use different types of servers to perform different types of tasks. More particularly, it is clear from those statements that work group services as defined by the Commission are generally supplied by other types of servers than those performing mission critical' services. Thus, it appears from those organisations' descriptions of their computer environment that work group services are normally supplied by entry-level servers running a Windows or NetWare system, while mission critical' applications

run on more expensive and larger UNIX servers or on mainframes.

500. For example, a large chemical and pharmaceutical group states that the business-critical' applications which it uses to pay its staff salaries and for internal banking transactions run on mainframes, while other business-critical' applications used, inter alia, for the administrative and technical management of certain of its divisions are supplied by UNIX servers. On the other hand, within that group non-business-critical' tasks, in particular file and print services and user and group administration services, are performed by separate servers which mainly run Windows operating systems. Likewise, a large airline explains that the applications which it uses especially for flight planning and reservation services are supplied by UNIX servers, whereas non-mission critical' applications are supplied by Windows servers. A further relevant example is provided by a banking group, which states that it uses UNIX servers for essential financial applications, Solaris servers for other financial applications and applications which it develops in-house, and Windows NT servers to support infrastructure functionality such as domain services (especially login and permissioning) and file and print services'.

501. The Court notes that, as indicated particularly at recitals 58 and 346 to the contested decision, low-end servers are not all used to supply work group services. Some of those servers are installed at the edge' of networks and are intended to perform specialist tasks, such as Web serving, Web caching and firewall tasks.

502. Last, Microsoft's argument to the effect that the IDC data show that, with the single exception of Novell's NetWare system, the operating systems which the Commission describes as work group server operating systems' spend much less time performing work group tasks than performing other tasks cannot be upheld. That argument is based on IDC data which establish that only 24% of sales of servers, across all price ranges, running a Windows operating system correspond to file', print' and network administration' tasks (see footnote 93 to the reply). However, as may be seen from recitals 487 and 488 to the contested decision, and as the Court will explain in greater detail at paragraph 553 below, the method which IDC uses to calculate market shares has a number of flaws. In any event, even if the tasks mentioned above were to be considered to correspond to the work group services referred to in the contested decision, the percentage calculated on the basis of IDC's data would represent only Microsoft's share of sales of server operating systems, in all versions, which relate to the work group server operating systems market. Contrary to Microsoft's assertion, the percentage in question is not limited to work group server operating systems.

503. Second, the Commission found, relying in particular on Microsoft's own description of its products, that the server operating systems were optimised' for the tasks which they were to perform (recitals 359 to 368 to the contested decision).

504. The Court considers that the evidence in the file confirms the correctness of that finding.

505. Thus, information published by Microsoft on its Internet site shows that the server operating systems in the Windows 2000 range are marketed in three different versions, namely, Windows 2000 Server, Windows 2000 Advanced Server and Windows 2000 Datacenter Server, and that each of those versions is intended to meet a specific task-based user demand.

506. Microsoft describes Windows 2000 Server as the entry-level' version of its Windows 2000 server operating systems and as the right solution for work group file, print and communication servers' (recital 361 to the contested decision). Windows 2000 Server scales from 1 to 4 processors and up to 4 gigabytes' (recital 364 to the contested decision).

507. Windows 2000 Advanced Server is presented by Microsoft as the right operating system for essential business and e-commerce applications that handle heavier workloads and high-priority processes' (recital 362 to the contested decision). Windows Advanced Server not only contains all the functionalities

offered by Windows 2000 Server but also offers additional scalability and reliability features, such as clustering, designed to keep... business-critical applications up and running in the most demanding scenarios' (recital 362 to the contested decision). Microsoft also states that Windows 2000 Advanced Server scales from 1 to 8 processors and up to 64 gigabytes' (recital 364 to the contested decision).

508. Last, Microsoft presents Windows 2000 Datacenter Server as offering maximum reliability and availability' and as constituting the right operating system for running mission-critical databases [and] enterprise resource planning software' (recital 363 to the contested decision). Windows 2000 Datacenter Server is designed for enterprises that need very reliable high-end drivers and software' and scales from 1 to 32 processors and up to 64 gigabytes' (recitals 363 and 364 to the contested decision).

509. Microsoft gives a similar presentation of the different versions of the range of server operating systems that replaced the Windows 2000 range, namely Windows Server 2003 Standard Edition, Windows Server 2003 Enterprise Edition, Windows Server 2003 Datacenter Edition and Windows Server 2003 Web Edition.

510. Thus, it describes Windows Server 2003 Standard Edition as the ideal multipurpose network operating system for the everyday needs of organisations of all sizes, but especially small businesses and work groups' and as permitting intelligent file and printer sharing, secure Internet connectivity, centralised desktop policy management and Web solutions that connect employees, partners, and customers' (recital 365 to the contested decision).

511. Windows Server 2003 Enterprise Edition, according to Microsoft's description, offers, in addition to the functionalities present in Windows Server 2003 Standard Edition, reliability features needed for business-critical applications' (recital 366 to the contested decision).

512. Windows Server 2003 Datacenter Edition, according to Microsoft, is built for mission critical applications that demand the highest levels of scalability, availability, and reliability' (recital 366 to the contested decision).

513. Last, Windows Server 2003 Web Edition is described by Microsoft as being designed for building and hosting Web applications, pages, and services' and as being designed specifically for dedicated Web serving needs' (recital 367 to the contested decision). Microsoft emphasises that that system can be used solely to deploy Web pages, Web sites, Web applications, and Web services' (recital 367 to the contested decision).

514. That publicity material shows that Microsoft itself presents the different versions of its server operating systems as being designed to meet distinct task-based user demands. It is also apparent from that publicity material that the different versions are not designed to run on the same hardware.

515. The Court also notes that the products of other operating system suppliers are also optimised' for work group services. That is so particularly for the products of Red Hat, whose Red Hat Enterprise Linux ES' and Red Hat Enterprise Linux AS' operating systems are clearly designed to meet distinct user demands. Thus, as the Commission states at footnote 463 to the contested decision, on Red Hat's website its Red Hat Enterprise Linux ES' system is described as being ideally suited for network, file, print, mail, Web, and custom or packaged business applications'. On the other hand, its Red Hat Enterprise Linux AS' system is presented as being targeted at high-end and mission-critical systems' and as the ultimate solution for large departmental and datacenter servers'. That is consistent with the finding that operating systems running on high-end servers are designed to perform mission critical' tasks and must therefore be more reliable and have more functionalities than work group server operating systems (recitals 57 and 346 to the contested decision).

516. Third, the Commission relied on Microsoft's pricing strategy' and, in particular, on the fact that it charged different prices for different versions of its server operating systems (recitals 369 to 382 to the contested decision).

517. First of all, it is clear from the information set out at recitals 370 to 373 to the contested decision, and not disputed by Microsoft, that there are significant price differentials between the different versions of its server operating systems, both in the Windows 2000 Server range and in the Windows 2003 Server range.

518. Thus, based on 25 Client Access Licences' (CALs'), the selling price of Windows 2000 Advanced Server is 2.22 times the price of Windows 2000 Server, while Windows 2000 Datacenter Server costs 5.55 times the price of Windows 2000 Server (based on 25 CALs).

519. Likewise, based on 25 CALs, the selling price of Windows Server 2003 Enterprise Edition is 2.22 times the price of Windows Server 2003 Standard Edition. The selling price of Windows Server 2003 Datacenter Edition is 5.55 times the price of Windows Server 2003 Standard Edition (based on 25 CALs). Windows Server 2003 Web Edition, which can be used only to perform certain specific tasks (see paragraph 513 above), is sold at a much lower price than Windows Server 2003 Standard Edition.

520. Next, contrary to what Microsoft appears to suggest (see paragraph 446 above), the Commission does not infer from the sole fact that Microsoft charges different prices for the different versions of its server operating systems that those versions belong to separate product markets. From the aspect of demand-side substitutability, the Commission takes into account not only those price differentials but also, and primarily, the fact that each of the different versions is designed to meet a specific user demand.

521. Nor is Microsoft entitled to rely on the fact that the more expensive' versions of its Windows Server 2003 range, namely Windows Server 2003 Enterprise Edition and Windows Server 2003 Datacenter Edition, allow the same work group tasks to be performed as Windows Server 2003 Standard Edition. Even though that may be true, the fact remains that the first two systems are intended to meet demands which are different from the third system and that it is unlikely that a user interested only in work group services will purchase a much more costly system than Windows Server 2003 Standard Edition for that purpose.

522. As the Commission correctly observes at recital 376 to the contested decision, Microsoft itself shares that opinion when, in its own marketing material, it states, with reference to the systems in the Windows 2000 Server range:

[T]he three offerings in the family - Windows 2000 Server, [Windows 2000] Advanced Server, and [Windows 2000] Datacenter Server - allow you to tailor your investment to provide the level of system availability that's appropriate for your various business operations, without overbuying for operations that don't require maximum uptime.'

523. In the same context, Microsoft cannot rely on the fact that the Windows Server 2003 Standard Edition operating system also allows tasks other than work group tasks to be performed. That argument ignores the fact that Microsoft charges different prices for that operating system depending on whether it is intended to be used to supply work group services or other types of services. As explained at recitals 84 and 380 to the contested decision, the prices charged by Microsoft for the Windows Server 2003 Standard Edition operating system include a fee for each server on which it is installed and a fee (CAL) for each client PC to which that server supplies work group services. By contrast, the user does not need to purchase a CAL if he wishes to use that operating system to perform unauthenticated' tasks, such as firewall, proxy or cache serving. Those findings show, moreover, that Microsoft's assertion that [v]endors do not charge different people different prices

for the same server operating system edition dep ending on how they will use it' is incorrect.

524. Fourth, and last, the Commission observed that server operating systems other than work group server operating systems did not need to interoperate as fully with the client PCs in an organisation as work group server operating systems (recitals 384 and 383 to 386 to the contested decision).

525. In that regard, it is sufficient to point out that it has already been found at paragraph 385 above that the Commission was correct to make such an appraisal. In any event, its appraisal is not disputed by Microsoft.

526. It follows from the foregoing considerations that Microsoft has not established that the Commission's finding that there are no products that, from the demand-side perspective, exercise sufficient competitive pressure on work group server operating systems to justify their inclusion in the same relevant product market (recital 387 to the contested decision) was manifestly incorrect.

527. In the second place, the question of supply-side substitutability is analysed by the Commission at recitals 388 to 400 to the contested decision.

528. The Commission considers that other operating system vendors, including in particular vendors of server operating systems, would not be able to switch their production and distribution assets to work group server operating systems without incurring significant additional costs and risks and within a time framework sufficiently short so as to consider that supply-side considerations are relevant in this case' (recital 399 to the contested decision). More specifically, the Commission rejects the argument developed by Microsoft in its response of 16 November 2001 to the second statement of objections, that there is a virtually instantaneous supply-side substitution', in that it is sufficient to disable' the more complex functionalities' in higher-end server operating systems in order to obtain a product comparable to a work group server operating system.

529. It is clear to the Court that, in the body of its pleadings, Microsoft puts forward no specific argument capable of calling in question the analysis carried out by the Commission in the recitals to the contested decision referred to above. In the reply, it merely makes the general assertion that [t]he cost of modification in many cases would be zero' and in the other cases... would be negligible', without even indicating whether it thereby intends to contest the Commission's finding that there was no supply-side substitutability.

530. In those circumstances, the Court finds that Microsoft has not established that the Commission manifestly erred when it concluded that there was no supply-side substitutability in this case.

531. The Court concludes from the foregoing that the Commission was correct to define the second product market as the work group server operating systems market.

532. That conclusion is not called in question by Microsoft's assertion that [n]o one in the industry uses the term work group server in the way the Commission has used it to define [the relevant product market]'. First, as the Commission quite correctly states, the terminology which it uses to designate the market makes no difference whatsoever to whether it defined the market correctly. Second, Microsoft's assertion in any event has no basis in fact, since the file shows that the expressions work group server' and work group server operating system' are used in the industry to designate the type of products covered by the contested decision. Thus, in its complaint of 10 December 1998, Sun expressly states that the complaint relates to Microsoft's conduct in the work group server operating systems sector'. Likewise, it must be borne in mind that in its marketing material Microsoft itself presents its Windows 2000 Server as the right solution for work group file, print and communication servers' (see paragraph 506 above).

- The method used in calculating market shares

533. Microsoft takes issue with the Commission for having used an inappropriate method to calculate

the market shares of the various operators on the second product market. It maintains, in particular, that that method provides no relevant information about dominance'.

534. The Court finds that, for the reasons given below, Microsoft has not demonstrated that the method used by the Commission is vitiated by any manifest error of assessment.

535. At recitals 473 to 490 to the contested decision, the Commission explains its method in detail.

536. The Commission states, first of all, that it uses two categories of proxies' to assess the position of the various operators on the market, namely, first, estimates of new sales by IDC based on price-band proxies and workload shares for various tasks and, second, estimates of market shares based on the results of the 2003 market enquiry and the second and third Mercer surveys (recital 473 to the contested decision).

537. It must be pointed out at the outset that the statement in the preceding paragraph shows that Microsoft's assertion that the Commission, when calculating market shares, took into account only the time spent by the server operating systems in performing work group tasks and sales of server operating systems costing under USD 25 000 is clearly incorrect. Microsoft fails to mention that the Commission also took into consideration data from sources other than IDC. As will be shown at paragraph 556 below, the market shares established on the basis of the latter data correspond globally to those determined on the basis of the IDC data.

538. Next, the Commission states that market shares must be estimated on the number of units of the product shipped and the turnover generated by sales of software and hardware together (recitals 474 to 477 to the contested decision).

539. Last, the Commission contends that the IDC data must be adjusted by means of two filters' (recitals 478 to 489 to the contested decision). First, it takes account only of servers costing less than USD 25 000 (or EUR 25 000, since, as stated in footnote 6 to the contested decision, at the material time EUR 1 corresponded roughly to USD 1). Second, it took into consideration only certain of the categories of tasks defined by IDC.

540. Microsoft's complaint is directed against the use of those two filters.

541. As regards the first filter, in the body of the reply Microsoft merely contests, quite generally, its relevance. In annex C.12 to the reply, it expands somewhat on its argument, first, by claiming that the 2003 market enquiry - some of the results of which were used by the Commission to justify the application of that filter - concerns the behaviour of a particular group of customers' and, second, by criticising the fact that the Commission takes account of the selling price of servers and not the selling price of operating systems. On that last point, the applicant submits that the same work group server operating system can run on servers of very different prices, and in particular on servers costing more than USD 25 000.

542. Those arguments cannot be accepted.

543. First of all, the entities questioned by the Commission in connection with the 2003 market enquiry do not represent a particular group of customers'. As stated at recital 8 to the contested decision, those entities are companies selected at random by the Commission, established in different Member States, of different sizes and from different activity sectors.

544. Next, as the Commission stated in answer to one of the written questions put by the Court, the price limit of USD 25 000 (or EUR 25 000) applies to the total cost of the system (that is to say, hardware and software)'. The Court finds that the Commission was correct to take account of the selling price of hardware and software to evaluate the market shares of the operators on the work group server operating systems market. As stated at recitals 69 and 474 to the contested decision, some vendors (including Sun and most UNIX vendors) develop and sell server operating

systems bundled with the hardware. The Court takes account, moreover, of the fact that during the administrative procedure Microsoft itself recommended the approach thus adopted by the Commission (see recital 476 to the contested decision).

545. Last, the Court finds that the Commission was quite correct to apply a maximum price of USD 25 000 (or EUR 25 000), which corresponds to the maximum selling price of servers in the first of the three categories of servers according to which IDC divides the market for the purposes of its analyses (recital 480 to the contested decision). In effect, the results of the 2003 market enquiry show that work group server operating systems generally run on relatively cheap servers, unlike mission critical' applications, which are run on high-level servers.

546. Thus, in connection with that enquiry, the Commission asked the organisations concerned to state what price they were prepared to pay for a work group server (question 3 of the request for information of 4 June 2003). Of the 85 organisations which answered that question, 83 (approximately 97.6%) stated that they would not pay more than EUR 25 000.

547. Likewise, in its request for information of 16 April 2003, the Commission asked the organisations a number of questions concerning their past and planned purchases of servers intended to supply file and print services (questions 8 and 9). It appears from the answers to those questions that, of the 8 236 servers purchased for that purpose by those organisations, 8 001 (approximately 97.1%) cost less than EUR 25 000 and that, of the 2 695 planned purchases of such servers, 2 683 (approximately 99.6%) cost less than EUR 25 000 (recital 479 to the contested decision).

548. As regards the second filter, Microsoft merely observes in the body of its reply that the application of that filter leads to the absurd consequence that a copy of an operating system is counted as [being] both inside and outside the market, depending on the tasks it is performing at any given time'. In annex C.12 to the reply the applicant adds that a large part of the (artificially) excluded sales almost certainly represent sales of [server operating systems] editions that are within the Commission's candidate market [namely, the work group server operating systems market]'.

549. Those arguments cannot be upheld either.

550. The Court finds not only that the Commission was quite correct to use that second filter, but also that Microsoft greatly exaggerates the consequences of its being used.

551. It is important to bear in mind why the Commission considered it necessary to use that filter. As stated at recital 482 to the contested decision, the Commission's reason for doing so was that not all the operating systems running on servers costing under USD 25 000 (or EUR 25 000) supply work group services. In particular, some of those systems are devoted exclusively to specific tasks outside, or at the edge of, work group networks, such as Web services or firewall services. That is the case, for example, of Windows Server 2003 Web Edition, which according to its licence conditions cannot be used to supply work group services and which normally runs on servers costing below USD 25 000 (or EUR 25 000).

552. The Commission therefore correctly concluded that it was necessary to qualify the IDC data on sales of computers costing below USD 25 000 (or EUR 25 000) by also taking into account the various types of tasks performed by those servers (recital 483 to the contested decision). To that end, the Commission used the IDC data in a database called IDC Server Workloads 2003 Model'. Those data were obtained from consumers whom IDC requested to specify the tasks (or workloads') carried out by the servers which they used in their organisation. As already stated at paragraph 431 above, IDC identified eight main categories of tasks and distinguished a number of sub-categories within those categories. The Commission used the sub-categories file/print sharing' and networking', which were the ones that most closely corresponded to the file and print' and group and user administration' services referred to in the contested decision (recital 486 to the contested decision).

553. Admittedly, the tasks in those two sub-categories do not correspond exactly with the services constituting the work group server operating systems market. The Commission was however fully aware of that as may be seen from the examples which it gives at recitals 487 and 488 to the contested decision and which show, in particular, that certain tasks performed on high-end servers may be placed in one or other of those sub-categories although they clearly do not represent work group tasks.

554. However, it was precisely the combination of the two filters of which Microsoft complains that allowed that problem of consistency between the tasks defined by IDC and those identified by the Commission to be reduced.

555. In any event, it is clear that the market shares obtained if only the first filter is applied are not significantly different from those obtained when both filters are used together. Thus, Microsoft's market share for 2002, when calculated on the basis of all servers sold for below USD 25 000, is 64.9% by units shipped and 61% by turnover (recital 491 to the contested decision). When, for the same servers, only the sub-categories file/print sharing' and networking' are taken into consideration, Microsoft's market shares are as follows: 66.4% by units shipped (65.7% by turnover) for the first sub-category and 66.7% by units shipped (65.2% by turnover) for the second (recital 493 to the contested decision).

556. More generally, as noted at recital 473 to the contested decision, the percentages obtained using the IDC data, when both filters are applied together, correspond globally with those obtained on the basis of the 2003 market enquiry and the second and third Mercer surveys (see, for example, recitals 495, 497 and 498 to the contested decision). It must be emphasised in that context that each time the Commission erred on the side of caution. Thus, in Microsoft's case, it took the lowest market share, at least 60%' (recital 499 to the contested decision).

557. The Court concludes that Microsoft has not demonstrated that the method which the Commission used when calculating market shares is vitiated by a manifest error of assessment or, consequently, that the estimates of market shares given at recitals 491 to 513 to the contested decision must be considered manifestly incorrect.

558. Nor did the Commission base its finding that Microsoft held a dominant position on the work group server operating systems market solely on its market shares on that market. It also took into account the fact that there were barriers to entry to that market (recitals 515 to 525 to the contested decision), owing in particular to the presence of network effects and obstacles to interoperability, and also the close commercial and technological links between that market and the client PC operating systems market (recitals 526 to 540 to the contested decision).

559. Last, as regards the abusive refusal to supply, it must be borne in mind that in the contested decision the Commission takes issue with Microsoft for having used, by leveraging, its quasi-monopoly on the client PC operating systems market to influence the work group server operating systems market (recitals 533, 538, 539, 764 to 778, 1063, 1065 and 1069). In other words, Microsoft's abusive conduct has its origin in its dominant position on the first product market (recitals 567 and 787 to the contested decision). Even if the Commission were wrongly to have considered that Microsoft was in a dominant position on the second market (see, in particular, recitals 491 to 541, 781 and 788 to the contested decision) that could not therefore of itself suffice to support a finding that the Commission was wrong to conclude that there had been an abuse of a dominant position by Microsoft.

- The applicable criterion

560. In the contested decision, the Commission considered whether the refusal at issue gave rise to a risk' of the elimination of competition on the work group server operating systems market (recitals 585, 589, 610, 622, 626, 631, 636, 653, 691, 692, 712, 725, 781, 992 and 1070 to the contested decision).

Microsoft contends that that criterion is not sufficiently strict, since according to the case-law on the exercise of an intellectual property right the Commission must demonstrate that the refusal to license an intellectual property right to a third party is likely to eliminate all competition', or, in other words, that there is a high probability' that the conduct in question will have such a result.

561. The Court finds that Microsoft's complaint is purely one of terminology and is wholly irrelevant. The expressions risk of elimination of competition' and likely to eliminate competition' are used without distinction by the Community judicature to reflect the same idea, namely that Article 82 EC does not apply only from the time when there is no more, or practically no more, competition on the market. If the Commission were required to wait until competitors were eliminated from the market, or until their elimination was sufficiently imminent, before being able to take action under Article 82 EC, that would clearly run counter to the objective of that provision, which is to maintain undistorted competition in the common market and, in particular, to safeguard the competition that still exists on the relevant market.

562. In this case, the Commission had all the more reason to apply Article 82 EC before the elimination of competition on the work group server operating systems market had become a reality because that market is characterised by significant network effects and because the elimination of competition would therefore be difficult to reverse (see recitals 515 to 522 and 533 to the contested decision).

563. Nor is it necessary to demonstrate that all competition on the market would be eliminated. What matters, for the purpose of establishing an infringement of Article 82 EC, is that the refusal at issue is liable to, or is likely to, eliminate all effective competition on the market. It must be made clear that the fact that the competitors of the dominant undertaking retain a marginal presence in certain niches on the market cannot suffice to substantiate the existence of such competition.

564. Last, it must be borne in mind that it is for the Commission to establish that the refusal to supply gives rise to a risk of the elimination of all effective competition. As already stated at paragraph 482 above, the Commission must base its assessment on accurate, reliable and coherent evidence which comprises all the relevant data that must be taken into consideration in order to assess a complex situation and which are capable of substantiating the conclusions drawn from them.

- The assessment of the market data and the competitive situation

565. In the contested decision, the Commission analyses together the circumstance that interoperability is indispensable and the fact that the refusal is likely to eliminate competition (recitals 585 to 692 to the contested decision). Its analysis has four parts. In the first place, the Commission examines the evolution of the work group server operating systems market (recitals 590 to 636 to the contested decision). In the second place, it establishes that interoperability is a factor which plays a determining role in the use of Windows work group server operating systems (recitals 637 to 665 to the contested decision). In the third place, it states that there are no substitutes for disclosure by Microsoft of the interoperability information (recitals 666 to 687 to the contested decision). In the fourth place, it makes a number of observations about the CPLC (recitals 688 to 691 to the contested decision).

566. The arguments which Microsoft puts forward in support of the present complaint relate essentially to the first part of the Commission's analysis. Microsoft claims, in effect, that the market data contradict the Commission's argument that competition on the work group server operating systems market is at risk of being eliminated as a consequence of the refusal at issue.

567. In the first part of its analysis, the Commission began by examining the evolution of the market shares of Microsoft and its competitors on the second product market. It established, essentially, that Microsoft's market share had experienced rapid and significant growth and that it continued

to increase to the detriment of Novell in particular. The Commission then noted that the market share of UNIX vendors was weak. Last, it considered that Linux products had only a very small presence on the market, that they had made no headway on the market during the years immediately preceding the adoption of the contested decision and that certain forecasts concerning their future growth were not capable of calling in question its finding that effective competition would be eliminated on the market.

568. The Court considers that those different findings are confirmed by the evidence in the file and that they are not called in question by Microsoft's arguments.

569. First, the file shows that initially Microsoft supplied only client PC operating systems and that it was a relatively late entrant to the server operating systems market (see, in particular, paragraph 47 of the response of 17 November 2000 to the first statement of objections). It was only in the early 1990s that Microsoft began to develop a server operating system - it marketed its first system, Windows NT 3.5 Server', in July 1992 - and it was only with Windows NT 4.0', released in July 1996, that it first encountered real commercial success (see, in particular, paragraph 50 of the response of 17 November 2000 to the first statement of objections and paragraphs 50 and 56 of the application).

570. It is apparent from the IDC data, as reproduced at recital 591 to the contested decision, that Microsoft's market share, by units shipped, on the market for operating systems for servers costing under USD 25 000 grew from 25.4% (24.5% by turnover) in 1996 to 64.9% (61% by turnover) in 2002, a leap of almost 40% in just six years.

571. It also follows from the IDC data mentioned at recital 592 to the contested decision that Microsoft's market share increased continuously following the launch of the Windows 2000 generation of operating systems. As the Commission rightly observes at a number of places in the contested decision (see, for example, recitals 578 to 584, 588 and 613 to the contested decision), it was specifically with the Windows 2000 range of operating systems that the problems of interoperability arose in a particularly acute fashion for Microsoft's competitors.

572. Thus, for example, the NDS for NT' software, which had been developed by Novell by reverse engineering, made interoperability possible between Microsoft's competitors' work group server operating systems and the Windows domain architecture (in this instance Windows NT). NDS for NT could be installed on a Windows NT domain controller and enabled clients to use Novell's NDS (Novell Directory Service) (later called eDirectory) to administer the different aspects of Windows NT domains. Because Microsoft failed to communicate certain information to Novell, however, NDS for NT does not work with the Windows 2000 Server operating system (see recital 301 to the contested decision).

573. Another example is AS/U, which AT & T had been able to develop in the 1990s by using certain Windows source code which Microsoft had agreed to disclose to it under a licence. AS/U enabled a server running UNIX to work as main domain controller in a Windows NT domain (see recital 211 to the contested decision). Likewise, Sun, on the basis of the AS/U source code licensed to it by AT & T, had developed a product comparable to AS/U, PC NetLink', which, when installed on a Solaris server, enabled that server to provide transparent Windows NT file, print, directory, and security services to Windows 3.X/95/98/NT clients' (and to do so natively', that is to say, without users having to install additional software on their client PCs) and to act as a primary domain controller (or backup domain controller) in a Windows NT domain (see recital 213 to the contested decision). In 2001 Microsoft and AT & T decided not to extend their licence agreement to certain new server operating system technologies. Thus, Microsoft did not supply AT & T with the source code relating to the systems which replaced Windows NT 4.0. Consequently, PC NetLink was no longer capable of working except with Windows NT client PCs - in particular,

it did not work with Windows 2000 - and gradually lost its attraction.

574. In the same context, it is appropriate to mention the various changes which followed the migration from Windows NT technology to Windows 2000 technology and Active Directory (see paragraphs 167 to 171 above).

575. Second, it is apparent from the file that, alongside the evolution of Microsoft's position as described above, Novell experienced a continuous decline on the work group server operating systems market and in just a few years became a secondary player. At the time when Microsoft entered the server operating systems market, the leading product for the supply of work group services was Novell's NetWare (see paragraph 56 of the application), which had been present on that market since the mid-1980s.

576. Thus, the IDC data mentioned at recital 593 to the contested decision show that, when the file/print sharing' sub-category and servers costing under USD 25 000 are taken into account, NetWare's market share fell from 33.3% in 2000 to 23.6% in 2002 by units shipped and from 31.5% in 2000 to 22.4% in 2002 by turnover.

577. Novell's decline is confirmed both by the statements of market analysts and by Microsoft itself (see recital 596 to the contested decision).

578. Similarly, in the report containing the analysis of the results of its third survey, Mercer expressly states that numerous organisations have reduced their use of NetWare. Mercer observes, in particular, that when asked about their usage of each of the server operating systems for work group server functions over the last five years, organisations that have reduced their usage of NetWare outnumber those that have increased their usage of NetWare by a nearly 7:1 ratio' (page 25 and table 16 of the report).

579. Furthermore, as the Commission correctly observes at recitals 594 and 595 to the contested decision, certain results of the 2003 market enquiry and certain customer statements produced by Microsoft during the administrative procedure clearly show a tendency within organisations to replace NetWare by Windows 2000 Server. On the other hand, there are only very few examples of migration' from Windows to NetWare (see recitals 594 and 632 to the contested decision).

580. Third, the evidence in the file shows that Microsoft's other competitors were able to maintain only a very marginal position on the work group server operating systems market.

581. Thus, first of all, the IDC data mentioned at recital 508 to the contested decision show that the market share of UNIX vendors (including Sun) represented, when the file/print sharing' subcategory and servers costing under USD 25 000 were taken into account, only 4.6% by units shipped and 7.4% by turnover. For the network administration' sub-category, the corresponding figures were 6.4% by units sold and 10.8% by turnover.

582. The results of the 2003 market enquiry and the customer statements produced by Microsoft show that UNIX systems are effectively used not to perform work group tasks but to run mission-critical' Web supply and firewall applications and also, to a lesser extent, to run internal email services (see recitals 509 to 511 to the contested decision).

583. Next, the IDC data, the results of the 2003 market enquiry and Microsoft's customer statements show that, contrary to Microsoft's assertions, Linux products also had only a marginal presence on the work group server operating systems market at the time of adoption of the contested decision.

584. Thus, the IDC data reproduced at recital 599 to the contested decision show that the combined market share of vendors of Linux products, by units shipped, fell, for the file/print sharing' subcategory and servers costing under USD 25 000, from 5.1% in 2000 to 4.8% in 2002. When measured by turnover, that combined market share remained at 3.9% over that period.

585. Admittedly, for the network administration' sub-category and servers costing under USD 25 000, the combined share of vendors of Linux products, by units shipped, rose, according to the IDC data mentioned in footnote 728 to the contested decision (see also recital 505 to the contested decision), from 10.1% in 2000 to 13.4% in 2002 (and from 8% to 10.8% over the same period, by turnover). However, that increase has to be qualified in light of the fact that, as the Commission observes at recital 488 to the contested decision and in the above footnote to the contested decision, that sub-category includes services which are not work group services within the meaning of the contested decision. IDC describes that sub-category as includ[ing] the following networking applications: directory, security/authentication, network data/file transfer, communication, and system data/file transfer' (recital 488 to the contested decision). Such a description is likely to lead the users questioned by IDC to include in that sub-category certain tasks which do not belong there (and do not belong in the relevant product market) and which are generally performed by Linux or UNIX systems. For example, that description might be interpreted as covering network edge tasks', such as firewall (which might be considered to relate to security') and routing (which might be considered to relate to system data/file transfer'). As stated, in particular, at recitals 58, 346, 482, 600 and 601 to the contested decision, however, tasks of that type are generally performed by Linux on high-end servers. Accordingly, the IDC data relating to the network administration' sub-category overestimate Linux sales on the work group server operating systems market.

586. It is true that, at recital 487 to the contested decision, the Commission observes that the IDC data on the file/print sharing' sub-category are also less than perfect, notably in that, because high-end servers which perform mission critical' applications may be used to print certain documents (for example invoices), the users questioned may form the view that those servers perform tasks belonging to that sub-category when it is clear that they are not work group servers. However, the application of the EUR 25 000 (or USD 25 000) filter allows such inaccuracy to be reduced (see recital 489 to the contested decision, where the Commission observes that mainframes that print invoices will generally cost more than that amount). The IDC data are therefore more flawed with respect to the network administration' sub-category than with respect to the file/print sharing' sub-category.

587. The results of the 2003 market enquiry contain no flaws of the type referred to in the preceding paragraph. Those results confirm that Linux had only a marginal presence on the work group server operating systems market. Thus, in its request for information of 16 April 2003, the Commission requested the organisations concerned whether they used Linux servers in conjunction with Samba software to perform work group tasks (question 25). Of the 102 organisations which participated in that enquiry, only 19 used Linux servers for work group tasks, and in most cases did so to a very limited extent (recital 506 to the contested decision). Thus, out of a total of more than 1 200 000 client PCs covered by the 2003 market enquiry, fewer than 70 000 (less than 5.8%) were served by Linux/Samba servers for file and print tasks (recitals 506 and 599 to the contested decision).

588. Likewise, as the Commission submits in the defence (paragraph 140), the second Mercer survey reveals, for Linux products, a combined market share of 4.8% for file and print tasks and 5.2% for group and user administration tasks (the third Mercer survey reveals, for the same products, a market share of 5.4% for file and print services and 4.5% for group and user administration tasks).

589. In reality, the results of the 2003 market enquiry show that, like UNIX, Linux products are generally used to perform tasks other than work group tasks, namely, to provide Web and firewall services and to run mission-critical' applications (see recitals 600 and 601 to the contested decision, where the Commission comments on the responses to questions 5 and 6 of the request for information of 16 April 2003).

590. That finding is confirmed, moreover, by the customer statements submitted by Microsoft during

the administrative procedure, as the Commission correctly observes at recital 602 to the contested decision.

591. Furthermore, the presence of vendors of Linux products on the work group operating systems market, apart from the fact it is by no means comparable to the market presence which Microsoft managed to acquire in just a few years, was achieved not at Microsoft's expense but at the expense of Novell and UNIX vendors. As the Commission stated in the rejoinder (paragraph 104), among the entities questioned by Mercer whose use of Linux for work group server tasks had increased over the previous five years, 67% had decreased their use of NetWare or UNIX, while only 14% had decreased their use of Windows. As the Commission correctly states at recital 632 to the contested decision, moreover, the 2003 market enquiry revealed only two instances of migration from Windows to Linux for work group server tasks.

592. Microsoft's assertions to the contrary in annex C.11 to the reply are scarcely credible, having regard particularly to the consistent increase in its market share on the relevant product market throughout the period covered by the abusive refusal in question.

593. The above factors confirm that Microsoft's refusal has the consequence that its competitors' products are confined to marginal positions or even made unprofitable. The fact that there may be marginal competition between operators on the market cannot therefore invalidate the Commission's argument that all effective competition was at risk of being eliminated on that market.

594. In light of the factors referred to at paragraphs 583 to 593 above, the Court considers that the Commission was correct to find, at recital 603 to the contested decision, that Linux vendors did not represent a significant threat to Microsoft on the work group server operating systems market.

595. Microsoft also claims that the presence of Linux products on the work group server operating systems market will continue to increase in the future. It expands on that argument in annex A.19 to the application and in annex C.11 to the reply. The Commission provides a detailed response to that argument in annex B.10 to the defence and in annex D.11 to the rejoinder.

596. In support of that argument, Microsoft refers, first of all, to certain results of the third Mercer survey.

597. In that survey, Mercer asked the IT executives whose organisations already used Linux operating systems for work group tasks whether they planned to increase that use within the next five years. Table 19 in the Mercer report, in which the results of that survey are analysed, shows that of the 70 IT executives concerned by that question, 53 responded in the affirmative.

598. The Court finds that the Commission was correct to conclude, at recital 605 to the contested decision, that that factor was not conclusive. On the one hand, those 53 IT executives represented only approximately 17.9% of the 296 IT executives who participated in the third Mercer survey (226 of those executives stated that their organisation did not use Linux systems to supply work group services). On the other hand, the 53 I T executives in question did not quantify their intended increase in use of Linux systems to perform work group tasks, nor did they specify whether that increase would be at the expense of Windows.

599. Furthermore, table 18 in the same Mercer report shows that 58 IT executives considered that Linux would not even become viable' for the performance of work group tasks within the next five years.

600. It is true that the same table shows that 60% of the IT executives questioned stated that their organisation planned to adopt Linux systems within the next five years to supply work group services. However, as the Commission correctly observes at recital 606 to the contested decision,

those executives were not invited to quantify their takeup of Linux nor to say whether it would be at the expense of Windows.

601. Next, Microsoft relies on certain projections by IDC which establish that Linux's market share will double between 2003 and 2008.

602. The Court observes that the IDC data contain a number of flaws, as its sub-categories include tasks which do not belong to the work group server operating systems market covered by the contested decision. IDC's growth projections must therefore be qualified.

603. Furthermore, as the Commission correctly observes at recital 609 to the contested decision, the limited growth that Linux is forecast to achieve on the market, according to those projections, would be at the expense, not of Windows, but of competing systems and, more particularly, of NetWare. The Court observes, in that context, that in April 2003 Novell announced that from 2005 its NetWare 7.0 operating system would be sold in two different versions, one based on the traditional NetWare platform and the other on the Linux operating system (see recital 95 to the contested decision).

604. Last, in annex A.19 to the application and annex C.11 to the reply, Microsoft refers to the opinion expressed by certain industry observers'. It refers, more expressly, to certain passages in a report of 8 March 2004 by Merrill Lynch (annex 7 to annex C.11 to the reply) which contains the results of a survey carried out by Merril Lynch among 50 IT executives. The applicant observes that half of those executives proposed to increase their use of Linux systems in their organisation and that, of that half, 34% envisaged doing so in order to replace Windows NT for file and print tasks.

605. That argument is not convincing. All that it means is that 17% of the IT executives questioned intended to replace Windows NT by Linux systems for the tasks referred to in the preceding paragraph, whereas it says nothing about the extent to which Windows would be thus replaced. In reality, in light of the fact that at the time of the Merril Lynch survey Windows NT technology was already outdated' (see recital 583 to the contested decision), it is highly probable that the installed base of Windows NT servers was relatively small and, accordingly, that the migration' referred to above would be on only a small scale. It should also be borne in mind that non-Microsoft server operating systems could achieve a higher degree of interoperability with the Windows NT generation of systems than with subsequent generations of Windows produced by Microsoft. As the Commission emphasises in its assessment of the circumstance relating to the indispensability of the information at issue (see paragraph 366 above), the migration' referred to in the Merril Lynch report is likely to be a one-off phenomenon and cannot therefore affect the Commission's findings in respect of the risk of the elimination of competition.

606. Continuing with the first part of its analysis (the part relating to the evolution of the work group server operating systems market), the Commission then established that Windows 2000, and in particular Active Directory, were quickly gaining traction in the market' (recitals 613 to 618 and 781 to the contested decision). The Commission further observed that, [owing] to Microsoft's disruption of interoperability-related disclosures, interoperability with... Windows 2000 features is significantly more difficult for non-Microsoft work group servers than used to be the case with the analogous technologies in Windows NT', before concluding that the uptake [of the new features of the Windows domain specific to Windows 2000] contributes to the lock-in of the customers that embrace them in a homogeneous Windows solution for work group networks' (recital 613 to the contested decision).

607. The Court finds that a number of documents in the file substantiate the correctness of those findings.

608. Thus, in a bulletin published in November 2001, IDC stated that [f]or the vast majority

of users, the question is not if, but when, they will implement directory services to support Windows 2000 Server and future Windows server operating systems' and that for Windows 2000 users, the directory of choice is overwhelmingly going to be Active Directory' (recital 614 to the contested decision).

609. Likewise, as the Commission notes at recital 616 to the contested decision, an Evans Data Corporation survey conducted in 2002 shows that, when asked about the directory services for which their applications were designed, 50.3% of the in-house developers concerned mentioned Active Directory.

610. Certain results of the 2003 market enquiry also confirm the impressive interest caused by Active Directory. Thus, in its request for information of 16 April 2003, the Commission asked the entities concerned whether they had already implemented (or decided to implement) Active Directory in the majority of the Windows domains in their computer network (question 15). Of the 102 entities covered by the survey, 61 answered that question in the affirmative.

611. The interest in Active Directory is also apparent from certain results of the second Mercer survey, as the Commission notes at recital 618 to the contested decision.

612. It was stated at paragraphs 571 to 574 above, moreover, that the interoperability that work group server operating systems can achieve with products of the Windows 2000 generation is much lower than they were able to achieve with systems of the previous generation.

613. Last, the Commission concluded the first part of its analysis by rejecting three categories of arguments that Microsoft had put forward during the administrative procedure to dispute the risk of elimination of competition identified by the Commission. Microsoft had referred to certain statements made by its competitors, relied on the fact that the computer networks within undertakings were heterogeneous and claimed that replacement solutions for Windows existed.

614. In its pleadings, Microsoft referred to the customer statements which it had produced during the administrative procedure and reiterated its argument that networks within undertakings are heterogeneous.

615. On that point, it is sufficient to observe that it has already been found at paragraphs 498 to 500 above that those statements confirmed that, so far as work group servers were concerned, those customers' computer networks consisted primarily of Windows systems.

616. In its pleadings, Microsoft also relies on the fact that professional customers adopt their purchasing decisions in respect of server operating systems according to a set of criteria and that the question of interoperability with Windows client PC operating systems is not a determining factor in that regard. As already demonstrated at paragraph 426 above, that assertion is incorrect.

617. Furthermore, Microsoft's argument that, six years after the alleged refusal to supply, there were still numerous competitors on the work group server operating systems market (see paragraph 442 above) must be rejected for the reasons set out at paragraph 429 above.

618. It follows from all of the foregoing that the Commission did not make a manifest error of assessment when it concluded that the evolution of the market revealed a risk that competition would be eliminated on the work group server operating systems market.

619. The Commission had even more reason to conclude that there was a risk that competition would be eliminated on that market because the market has certain features which are likely to discourage organisations which have already taken up Windows for their work group servers from migrating to competing operating systems in the future. Thus, as the Commission correctly states at recital 523 to the contested decision, it follows from certain results of the third Mercer survey that the fact of having an established record as proven technology' is seen as a significant factor by the large majority of IT executives questioned. At the time of the adoption of the contested decision, Microsoft, at a conservative estimate, held a market share of at least 60% on the work group server

operating systems market (recital 499 to the contested decision). Likewise, certain results of that survey also establish that the factor available skill-sets and cost/availability of support (in-house or external)' is important for the majority of the IT executives questioned. As the Commission quite correctly states at recital 520 to the contested decision, [that] means that the easier it is to find technicians skilled in using a given work group server operating system, the more customers are inclined to purchase that work group server operating system' and, [i]n turn, however, the more popular a work group server operating system is among customers, the easier it is for technicians (and the more willing are technicians) to acquire skills related to that product'. Microsoft's very high market share on the work group server operating system market has the consequence that a very large number of technicians possess skills which are specific to Windows operating systems.

620. The Court therefore concludes that the circumstance that the refusal at issue entailed the risk of elimination of competition is present in this case.

(iv) The new product

Arguments of the parties

621. Microsoft cites paragraphs 48 and 49 of IMS Health , paragraph 107 above, and maintains that it has not been established that its refusal prevented the appearance of a new product for which there is unsatisfied consumer demand.

622. The applicant already markets server operating systems which implement the communication protocols in question and its competitors market their own server operating systems, which use communication protocols which they have selected to provide work group services.

623. Microsoft refers to recital 669 to the contested decision and claims that the contested decision seeks to allow its competitors to make their products behave in exactly the same way as Windows server operating systems and that it is the Commission's intention that the applicant's communication protocols should be used by its competitors to create server operating systems that compete directly with the applicant's products by mimicking their functionality.

624. Microsoft also claims that the contested decision fails to identify any new product that its competitors would develop using the applicant's communication protocols and to demonstrate that there is any demand for such a product. The Commission merely claims that Microsoft's competitors could use the disclosures to [develop] the advanced features of their own products' (recital 695 to the contested decision).

625. Microsoft observes that neither the letter of 15 September 1998 nor Sun's complaint of 10 December 1998 gives the slightest indication that Sun intended to use Microsoft's technology' to create anything other than a work group server operating system.

626. Microsoft disputes the Commission's assertion that in order to be described as new, it is sufficient for a product to contain substantial elements contributed by the licensee's own efforts. It maintains that the [a]ddition of a feature taken from a competitor's products can hardly be viewed as the creation of a new product'.

627. Microsoft also challenges the Commission's claim that the applicant's refusal is a refusal to allow follow-on innovation' (see paragraph 632 below). It disputes the accuracy of the statements set out at recital 696 to the contested decision and submits that Novell never used AS/U and that sales of work group server operating systems supplied by Sun and several other vendors' who had been licensed to use AS/U were always modest. In reality, the compulsory licensing ordered in the contested decision is likely to reduce innovation, because the applicant will have less incentive to develop a specific technology if it is required to make that technology available to its competitors.

628. Last, Microsoft denies that the refusal at issue harms consumers. The Mercer report on which

the Commission relies (see paragraph 635 below) relates to products currently on the market and is therefore irrelevant to the question whether the refusal to supply prevented the emergence of new products for which there is unmet consumer demand. Much more significantly, none of the Mercer reports shows that Microsoft lags behind' its competitors. More specifically, the Commission fails to mention that Windows server operating systems scored higher than NetWare and Linux systems in 10 out of 13 categories and higher than UNIX systems in 9 out of 13 categories; and throughout the administrative procedure no customer claimed that it had been forced to use Windows server operating systems as a result of the applicant's alleged refusal to disclose interoperability information to its competitors.

629. CompTIA submits that the Commission has not shown in the contested decision that Microsoft's refusal had prevented the appearance of a new product.

630. The Commission rejects Microsoft's assertion that its refusal did not prevent the appearance of a new product for which there is unmet consumer demand.

631. The Commission submits that, in the first place, it follows from paragraph 49 of IMS Health , paragraph 107 above, that a new product' is a product which does not limit itself essentially to duplicating the products already offered on the market by the owner of the copyright. It is sufficient, therefore, that the product concerned contains substantial elements that result from the licensee's own efforts. As Microsoft is required to disclose only the specifications and not the implementation of its interfaces, its competitors will not limit themselves to duplicating its products and, indeed, will not be able to do so. Competitors will use the interoperability information to constantly market improved products and offer... added value over their own and Microsoft's previous offerings', instead of being eliminated from the market as a consequence of Microsoft's refusal to disclose that information (recital 695 to the contested decision). Nor will any feature of Microsoft's products, and in particular any portion of its software code, be integrated in other work group server operating systems.

632. In the second place, the Commission did not confine itself in the contested decision to a mere analysis of the new product' criterion as defined in IMS Health , paragraph 107 above. It examined that criterion by reference to the prohibition laid down in Article 82(b) EC of abuses of a dominant position that limit technical development to the prejudice of consumers. The Commission thus took particular care to ascertain that Microsoft's refusal was a refusal to allow follow-on innovation', that is to say, the development of new products, and not a mere refusal to allow copying.

633. In support of those assertions, the Commission claims, first, that it examined the conduct which Microsoft's competitors had adopted in the past when Microsoft supplied interoperability information to them or inadvertently allowed them to employ workarounds' (recital 696 to the contested decision). In response to Microsoft's criticisms of that point, the Commission explains that, as Novell was not a UNIX vendor', it was not interested in UNIX-based implementations' such as AS/U. However, Sun and other UNIX vendors offered innovative products which could have met demand from those consumers if Microsoft had not refused to supply interoperability information.

634. Second, the Commission observes that, at recital 698 to the contested decision, it noted that numerous different implementations of the same specification were possible.

635. Third, the Commission cites recital 699 to the contested decision and asserts that it follows from the results of the third Mercer survey that, in spite of the fact that Microsoft lags behind its competitors' on several features considered important by server operating systems consumers, those consumers content themselves with Microsoft's products because of the interoperability barrier to adopting alternatives'. Microsoft scores higher than its competitors only because interoperability with Windows is a factor taken into account and because less important factors are given the same

weight as important factors. In response to Microsoft's argument that no customer has complained about having to adopt a Windows operating system because of its refusal to supply, the Commission refers to recitals 702 to 708 to the contested decision.

636. Fourth, the Commission observes that Microsoft's competitors undertake research and development, but that they need access to Microsoft's protocols to enable organisations using Windows work group servers and PCs to take advantage of their innovation without being penalised by the lack of interoperability. It states that [a]s such, the refusal does not directly impair competitors' ability to innovate, but rather the consumer's ability to benefit from such innovation, as well as the competitors' ability to earn a return on their innovation - and hence in the long er term their incentives to innovate'.

637. Last, the Commission asserts that Microsoft's arguments concerning its own incentives to innovate are not relevant to the assessment of the consequences which the abusive practice has for its competitors' incentives to innovate.

638. In the third place, the Commission claims that Microsoft's argument that the new product' criterion is not satisfied in this case is based on a misinterpretation of the case-law.

639. First, that criterion does not require a concrete demonstration that the licensee's product will attract customers who do not buy the products offered by the existing dominant supplier. In IMS Health , paragraph 107 above, the Court of Justice focused on product differentiation which could affect consumer choices or, in other words, whether there was potential demand' for the new product. The new product' criterion emphatically does not apply solely to restrictions on production. In the rejoinder, the Commission asserts that the proposed new products will clearly respond to potential demand and that they will build upon operating systems currently marketed by Microsoft's competitors, which have features that consumers value, often more highly than the corresponding features of Microsoft's work group server operating systems.

640. Second, Microsoft cannot rely on the fact that the contested decision focuses on its competitors' ability to adapt their own existing products'. The relevant question is whether those competitors will essentially confine themselves to reproducing the existing products developed by the holder of the intellectual property right. Microsoft's competitors' products will implement the same set of protocols as Windows work group server operating systems do but will differ widely in terms of performance, security and functionality.

641. Third, the Commission asserts that the case-law does not preclude the possibility that the licensee's future products will compete with the products of the owner of the intellectual property right, as may be seen from the facts of Magill and IMS Health , paragraph 107 above.

642. SIIA claims that the refusal at issue prevents the emergence of new and innovative non-Microsoft work group server operating systems meeting the interoperability needs of customers'. If they have the interoperability information, Microsoft's competitors will be able to offer not only enhanced functional capabilities' but also, and most importantly, interoperable products. SIIA also observes that there would be no competitive advantage for Microsoft's competitors in merely duplicating Microsoft's products' and that, moreover, they would be unable to do so if they had access to the information covered by the contested decision.

Findings of the Court

643. It must be emphasised that the fact that the applicant's conduct prevents the appearance of a new product on the market falls to be considered under Article 82(b) EC, which prohibits abusive practices which consist in limiting production, markets or technical developments to the... prejudice of consumers'.

644. Thus, at paragraph 54 of Magill , paragraph 107 above, the Court of Justice held that the

refusal by the broadcasting companies concerned had to be characterised as abusive within the meaning of that provision because it prevented the appearance of a new product which the broadcasting companies did not offer and for which there was a potential consumer demand.

645. It is apparent from the decision at issue in that case that the Commission had, more specifically, considered that by their refusal, the broadcasting companies limited production or markets to the prejudice of consumers (see the first paragraph of recital 23 to Commission Decision 89/205/EEC of 21 December 1988 relating to a proceedings under Article [82 EC] (IV/31.851, Magill TV Guide/ITP, BBC and RTE) (OJ 1989 L 78, p. 43). The Commission had found that that refusal prevented publishers from producing and publishing a weekly television guide for consumers in Ireland and Northern Ireland, a type of guide not then available on that geographic market. Although each of the broadcasting companies concerned published a weekly television guide, each guide was devoted to that particular broadcaster's own programmes. In finding an abuse of a dominant position by those broadcasting companies, the Commission had emphasised the harm which the absence of a general weekly television guide on the market in Ireland and in Northern Ireland caused to consumers, who, if they wished to know what programmes were being offered in the coming week, had no alternative to buying the weekly guides of each channel and themselves extracting the relevant information in order to make comparisons.

646. In IMS Health , paragraph 107 above, the Court of Justice, when assessing the circumstance relating to the appearance of a new product, also placed that circumstance in the context of the damage to the interests of consumers. Thus, at paragraph 48 of that judgment, the Court emphasised, with reference to the Opinion of Advocate General Tizzano in that case ([2004] ECR I5042), that that circumstance related to the consideration that, in the balancing of the interest in protection of the intellectual property right and the economic freedom of its owner against the interest in protection of free competition, the latter can prevail only where refusal to grant a licence prevents the development of the secondary market, to the detriment of consumers.

647. The circumstance relating to the appearance of a new product, as envisaged in Magill and IMS Health , paragraph 107 above, cannot be the only parameter which determines whether a refusal to license an intellectual property right is capable of causing prejudice to consumers within the meaning of Article 82(b) EC. As that provision states, such prejudice may arise where there is a limitation not only of production or markets, but also of technical development.

648. It was on that last hypothesis that the Commission based its finding in the contested decision. Thus, the Commission considered that Microsoft's refusal to supply the relevant information limited technical development to the prejudice of consumers within the meaning of Article 82(b) EC (recitals 693 to 701 and 782 to the contested decision) and it rejected Microsoft's assertion that it had not been demonstrated that its refusal caused prejudice to consumers (recitals 702 to 708 to the contested decision).

649. The Court finds that the Commission's findings at the recitals referred to in the preceding paragraph are not manifestly incorrect.

650. Thus, in the first place, the Commission was correct to observe, at recital 694 to the contested decision, that [owing] to the lack of interoperability that competing work group server operating system products can achieve with the Windows domain architecture, an increasing number of consumers are locked into a homogeneous Windows solution at the level of work group server operating systems'.

651. It must be borne in mind that it has already been stated at paragraphs 371 to 422 above that Microsoft's refusal prevented its competitors from developing work group server operating systems capable of attaining a sufficient degree of interoperability with the Windows domain architecture, with the consequence that consumers' purchasing decisions in respect of work group server operating

systems were channelled towards Microsoft's products. The Court has also already observed, at paragraphs 606 to 611 above, that it was apparent from a number of documents in the file that the technologies of the Windows 2000 range, in particular Active Directory, were increasingly being taken up by organisations. As interoperability problems arise more acutely with work group server operating systems in that range of products than with those of the preceding generation (see paragraphs 571 to 574 above and recitals 578 to 584, 588 and 613 to the contested decision), the increasing uptake of those systems merely reinforces the lock-in' effect referred to in the preceding paragraph.

652. The limitation thus placed on consumer choice is all the more damaging to consumers because, as already observed at paragraphs 407 to 412 above, they consider that non-Microsoft work group server operating systems are better than Windows work group server operating systems with respect to a series of features to which they attach great importance, such as reliability/availability of the... system' and security included with the server operating system'.

653. In the second place, the Commission was correct to consider that the artificial advantage in terms of interoperability that Microsoft retained by its refusal discouraged its competitors from developing and marketing work group server operating systems with innovative features, to the prejudice, notably, of consumers (see, to that effect, recital 694 to the contested decision). That refusal has the consequence that those competitors are placed at a disadvantage by comparison with Microsoft so far as the merits of their products are concerned, particularly with regard to parameters such as security, reliability, ease of use or operating performance speed (recital 699 to the contested decision).

654. The Commission's finding that [i]f Microsoft's competitors had access to the interoperability information that Microsoft refuses to supply, they could use the disclosures to make the advanced features of their own products available in the framework of the web of interoperability relationships that underpin the Windows domain architecture' (recital 695 to the contested decision) is corroborated by the conduct which those competitors had adopted in the past, when they had access to certain information concerning Microsoft's products. The two examples which the Commission gives at recital 696 to the contested decision, PC NetLink' and NDS for NT', speak volumes in that regard. PC NetLink is software developed by Sun on the basis of AS/U, which had been developed by AT & T using source code which Microsoft had licensed to it in the 1990s (recitals 211 to 213 to the contested decision). A document submitted by Microsoft during the administrative procedure shows that the innovative features and added value that PC NetLink brought to Windows work group networks was used as a selling point for that product (footnote 840 to the contested decision). Likewise, in its marketing material, Novell highlighted the new features which NDS for NT - software which it had developed using reverse engineering - brought to the Windows domain architecture (in this instance Windows NT) (footnote 841 to the contested decision).

655. The Commission was careful to emphasise, in that context, that there was ample scope for differentiation and innovation beyond the design of interface specifications' (recital 698 to the contested decision). In other words, the same specification can be implemented in numerous different and innovative ways by software designers.

656. Thus, the contested decision rests on the concept that, once the obstacle represented for Microsoft's competitors by the insufficient degree of interoperability with the Windows domain architecture has been removed, those competitors will be able to offer work group server operating systems which, far from merely reproducing the Windows systems already on the market, will be distinguished from those systems with respect to parameters which consumers consider important (see, to that effect, recital 699 to the contested decision).

657. It must be borne in mind, in that regard, that Microsoft's competitors would not be able to clone or reproduce its products solely by having access to the interoperability information covered

by the contested decision. Apart from the fact that Microsoft itself acknowledges in its pleadings that the remedy prescribed by Article 5 of the contested decision would not allow such a result to be achieved (see paragraph 241 above), it is appropriate to repeat that the information at issue does not extend to implementation details or to other features of Microsoft's source code (see paragraphs 194 to 206 above). The Court also notes that the protocols whose specifications Microsoft is required to disclose in application of the contested decision represent only a minimum part of the entire set of protocols implemented in Windows work group server operating systems.

658. Nor would Microsoft's competitors have any interest in merely reproducing Windows work group server operating systems. Once they are able to use the information communicated to them to develop systems that are sufficiently interoperable with the Windows domain architecture, they will have no other choice, if they wish to take advantage of a competitive advantage over Microsoft and maintain a profitable presence on the market, than to differentiate their products from Microsoft's products with respect to certain parameters and certain features. It must be borne in mind that, as the Commission explains at recitals 719 to 721 to the contested decision, the implementation of specifications is a difficult task which requires significant investment in money and time.

659. Last, Microsoft's argument that it will have less incentive to develop a given technology if it is required to make that technology available to its competitors (see paragraph 627 above) is of no relevance to the examination of the circumstance relating to the new product, where the issue to be decided is the impact of the refusal to supply on the incentive for Microsoft's competitors to innovate and not on Microsoft's incentives to innovate. That is an issue which will be decided when the Court examines the circumstance relating to the absence of objective justification.

660. In the third place, the Commission is also correct to reject as unfounded Microsoft's assertion during the administrative procedure that it was not demonstrated that its refusal caused prejudice to consumers (recitals 702 to 708 to the contested decision).

661. First of all, as has already been observed at paragraphs 407 to 412 above, the results of the third Mercer survey show that, contrary to Microsoft's contention, consumers consider non-Microsoft work group server operating systems to be better than Windows work group server operating systems on a number of features to which they attach great importance.

662. Next, Microsoft cannot rely on the fact that consumers never claimed at any time during the administrative procedure that they had been forced to adopt a Windows work group server operating system as a consequence of its refusal to disclose interoperability information to its competitors. In that connection, it is sufficient to point out that Microsoft does not dispute the Commission's findings at recitals 705 and 706 to the contested decision. Thus, at recital 705 to the contested decision, the Commission observes that it is developers of complementary software required to interoperate with Microsoft's systems who depend on the interface information' and that [c]ustomers will not always exactly know what is disclosed by Microsoft to other work group operating system vendors and what is not'. At recital 706 to the contested decision, the Commission states [w]hen confronted with a choice between putting up with interoperability problems that render their business processes cumbersome, inefficient and costly, and embracing a homogeneous Windows solution for their work group network, customers will tend to opt for the latter proposition' and that [o]nce they have standardised on Windows, they are unlikely to report interoperability problems between their client PCs and the work group servers'.

663. Furthermore, Microsoft's own statements concerning the disclosures made under the United States settlement show that those disclosures had the consequence of offering greater choice to consumers (see recital 703 to the contested decision).

664. Last, it must be borne in mind that it is settled case-law that Article 82 EC covers not

only practices which may prejudice consumers directly but also those which indirectly prejudice them by impairing an effective competitive structure (Case 85/76 HoffmannLa Roche v Commission [1979] ECR 461, paragraph 125, and Irish Sugar v Commission , paragraph 229 above, paragraph 232). In this case, Microsoft impaired the effective competitive structure on the work group server operating systems market by acquiring a significant market share on that market.

665. The Court concludes from all of the foregoing considerations that the Commission's finding to the effect that Microsoft's refusal limits technical development to the prejudice of consumers within the meaning of Article 82(b) EC is not manifestly incorrect. The Court therefore finds that the circumstance relating to the appearance of a new product is present in this case.

(v) The absence of objective justification

Arguments of the parties

666. In the first place, Microsoft claims that the refusal to supply the information was objectively justified by the intellectual property rights which it holds over the technology' concerned. It has made significant investment in designing its communication protocols and the commercial success which its products have achieved represents the just reward. It is generally accepted, moreover, that an undertaking's refusal to communicate a specific technology to its competitors may be justified by the fact that it does not wish them to use that technology to compete with it.

667. In the reply, Microsoft relies on the fact that the technology which it is required to disclose to its competitors is secret, that it is of great value for licensees and that it contains significant innovation.

668. In its answer to one of the written questions put by the Court, the applicant adds that it had an objective justification for not licensing the technology given the prejudice to incentives to innovate that would have resulted if Sun (or others) had used that technology to build a functional equivalent that would compete against Microsoft's products on the same market'.

669. In the second place, Microsoft claims that the Commission rejected its arguments on the basis of a new test, which is legally defective and marks a radical departure from the tests defined in the case-law. At recital 783 to the contested decision, the Commission considered that a refusal to communicate information protected by intellectual property rights constituted an infringement of Article 82 EC if, all things considered, the positive impact on the level of innovation in the whole industry outweighed the negative impact of the dominant undertaking's incentives to innovate.

670. Microsoft contends that the application of such a balancing test' will have the consequence that dominant undertakings will have less incentive to invest in research and development, because they will have to share the fruits o f their efforts with their competitors. Intellectual property rights give the holder an incentive to continue to innovate and they also encourage competing undertakings to undertake their own innovative activities in order to avoid being left behind'. Nor does the Commission make any attempt to quantify' the negative impact that the compulsory licensing required by the contested decision will have on the applicant's competitors, who will wait to see what technology they can obtain under a licence rather than take the trouble to create their own technology.

671. Microsoft also criticises the vagueness and the unforeseeable consequences of that test; it observes, in particular, that the Commission provides no guidance which would enable undertakings in a dominant position to assess whether preserving [their] incentives to innovate can justify a decision to retain [their] intellectual property for [their] own use'. More generally, the contested decision gives no indication of the way in which that test was applied in the present case or of how it should be applied in the future.

672. In the third place, Microsoft disputes the relevance of the Commission's references to the

United States settlement and the settlement with Sun (see paragraph 687 below).

673. Under the United States settlement, the applicant is required to license communication protocols implemented in Windows client PC operating systems for the sole purpose of being implemented in server software. Under the contested decision, on the other hand, it is required to license its server/server' communication protocols so that they can be implemented in directly competing server operating systems. The applicant's obligations under the United States settlement are limited to a five-year period, moreover, and an undertaking has a greater incentive to continue to develop technology when, after a fixed period, it will again have exclusive use of the improvements to that technology.

674. The settlement with Sun provides for a reciprocal commitment to share technology and intellectual property rights on negotiated terms, for a period of six years only. Under the contested decision, on the other hand, the applicant cannot choose its licensees and will be granted no licence in return; royalties and other licensing terms will be subjected to regulation by the Commission; and the applicant's licensing obligations extend indefinitely into the future'.

675. CompTIA emphasises, first of all, the importance of innovation for competition in the IT and communications industry and the need to have a robust system of [intellectual property rights] protection'. It submits, in particular, that those intellectual property rights encourage companies to improve existing products and to bring new products to the market.

676. Next, CompTIA, with reference to recital 783 to the contested decision, claims that the Commission applied a new balancing test in this case and submits that that test is inconsistent with the case-law.

677. The Commission, in the first place, asserts that it properly took into consideration the justification put forward by Microsoft.

678. First of all, Microsoft acknowledged in the application that it had relied on a single justification, namely the fact that it held intellectual property rights in the technology' concerned. Such justification cannot be accepted, particularly since in Magill , paragraph 107 above, where there was no doubt whatsoever that the effect of the contested decision for the companies concerned was the compulsory licensing of copyright, the Court of Justice held that the refusal was not objectively justified. The Commission is supported on that point by SIIA.

679. Next, the Commission explains that it took Microsoft's argument to mean that the facts of the case, and in particular the likely impact [which] an order to supply [would have] on [its] incentives to innovate', were so exceptional that the Commission could not apply the existing precedents.

680. It was for Microsoft to prove that its abusive conduct was objectively justified. More particularly, the applicant was at the very least required to show that the obligation imposed on it to disclose the interoperability information would have a negative impact on its incentives to innovate and also that there was a risk that that negative impact would outweigh the set of factors identified by the Commission which would otherwise make the behaviour abusive'. However, the only arguments which Microsoft put forward were purely theoretical and wholly unsubstantiated.

681. The Commission also contends that Microsoft cannot justify its refusal by the fact that the technology concerned is secret and valuable and that it contains significant innovations. Furthermore, that justification was not presented in the application.

682. In the second place, the Commission denies having applied a new evaluation test in this case.

683. First, the Commission rejects Microsoft's assertion that an undertaking is justified in refusing to supply a given technology to its competitors where it wishes to prevent them from using that technology to compete with it. That argument might be interpreted as meaning that even if the first

three criteria established by the Court of Justice in Magill and IMS Health , paragraph 107 above, are satisfied, a refusal to license is lawful if competitors intend to use the licence to compete with the dominant undertaking. That argument is manifestly incorrect. Again, that assertion might be interpreted as meaning that the principles laid down in Magill , paragraph 107 above, do not apply where the intellectual property right concerned covers technology. Apart from the fact that Microsoft fails to explain what it means by technology' in this context, it would be extremely difficult to draw a distinction between technological' intellectual property rights and non-technological' intellectual property rights. Nor is it certain that the interoperability information at issue constitutes such technology, in particular if it represents what is a purely arbitrary convention without any innovative character.

684. Second, the Commission disputes Microsoft's assertion that because of the contested decision its competitors will no longer have any incentive to create their own technology. Microsoft fails to address the finding at recital 697 to the contested decision that, in view of Microsoft's quasi-monopoly on the client PC operating systems market, its competitors are not in a position to develop viable alternatives to its communication protocols.

685. Third, the Commission observes that Microsoft merely refers to its incentives to innovate in protocol design and ignores other aspects of its products. The Commission refers to recital 724 to the contested decision and submits that such an approach is incorrect.

686. Fourth, the Commission contends that Microsoft glosses over the fact that the information at issue is information necessary for interoperability within the meaning of Directive 91/250. It is clear from Article 6 of that directive that the Community legislature considers that the disclosure of interoperability information is beneficial for innovation.

687. In the third place, the Commission refers to certain statements made by Microsoft during the administrative procedure and after the adoption of the contested decision. Thus, at the administrative hearing, Microsoft stated, in response to a question from the Commission's services, that it had not noticed that the United States settlement had had any negative impact on its incentives to innovate. Likewise, at a joint press conference with Sun following the settlement concluded with that undertaking, Microsoft stated that both companies would continue to compete and innovate and that the impact of the settlement [would] not be less innovation, but more innovation'. The Commission contends that the argument which Microsoft bases on the fact that the United States settlement provides for reciprocal commitments is irrelevant and notes that when Sun concluded that settlement it already had a policy of disclosing the relevant protocols to the entire industry.

Findings of the Court

688. The Court notes, as a preliminary point, that although the burden of proof of the existence of the circumstances that constitute an infringement of Article 82 EC is borne by the Commission, it is for the dominant undertaking concerned, and not for the Commission, before the end of the administrative procedure, to raise any plea of objective justification and to support it with arguments and evidence. It then falls to the Commission, where it proposes to make a finding of an abuse of a dominant position, to show that the arguments and evidence relied on by the undertaking cannot prevail and, accordingly, that the justification put forward cannot be accepted.

689. In the present case, as the Commission found at recital 709 to the contested decision and as Microsoft expressly confirmed in the application, Microsoft relied as justification for its conduct solely on the fact that the technology concerned was covered by intellectual property rights. It made clear that if it were required to grant third parties access to that technology, that would... eliminate future incentives to invest in the creation of more intellectual property' (recital 709 to the contested decision). In the reply, the applicant also relied on that fact that the technology

was secret and valuable and that it contained important innovations.

690. The Court considers that, even on the assumption that it is correct, the fact that the communication protocols covered by the contested decision, or the specifications for those protocols, are covered by intellectual property rights cannot constitute objective justification within the meaning of Magill and IMS Health , paragraph 107 above. Microsoft's argument is inconsistent with the raison d'être of the exception which that case-law thus recognises in favour of free competition, since if the mere fact of holding intellectual property rights could in itself constitute objective justification for the refusal to grant a licence, the exception established by the case-law could never apply. In other words, a refusal to license an intellectual property right could never be considered to constitute an infringement of Article 82 EC even though in Magill and IMS Health , paragraph 107 above, the Court of Justice specifically stated the contrary.

691. It must be borne in mind that, as stated at paragraphs 321, 323, 327 and 330 above, the Community judicature considers that the fact that the holder of an intellectual property right can exploit that right solely for his own benefit constitutes the very substance of his exclusive right. Accordingly, a simple refusal, even on the part of an undertaking in a dominant position, to grant a licence to a third party cannot in itself constitute an abuse of a dominant position within the meaning of Article 82 EC. It is only when it is accompanied by exceptional circumstances such as those hitherto envisaged in the case-law that such a refusal can be characterised as abusive and that, accordingly, it is permissible, in the public interest in maintaining effective competition on the market, to encroach upon the exclusive right of the holder of the intellectual property right by requiring him to grant licences to third parties seeking to enter or remain on that market. It must be borne in mind that it has been established above that such exceptional circumstances were present in this case.

692. The argument which Microsoft puts forward in the reply, namely that the technology concerned is secret and of great value to the licensees and contains important innovations, cannot succeed either.

693. First, the fact that the technology concerned is secret is the consequence of a unilateral business decision on Microsoft's part. Furthermore, Microsoft cannot rely on the argument that the interoperability information is secret as a ground for not being required to disclose it unless the exceptional circumstances identified by the Court of Justice in Magill and IMS Health , paragraph 107 above, are present, and at the same time justify its refusal by what it alleges to be the secret nature of the information. Last, there is no reason why secret technology should enjoy a higher level of protection than, for example, technology which has necessarily been disclosed to the public by its inventor in a patent-application procedure.

694. Second, from the moment at which it is established that - as in this case - the interoperability information is indispensable, that information is necessarily of great value to the competitors who wish to have access to it.

695. Third, it is inherent in the fact that the undertaking concerned holds an intellectual property right that the subject-matter of that right is innovative or original. There can be no patent without an invention and no copyright without an original work.

696. The Court further observes that in the contested decision the Commission did not simply reject Microsoft's assertion that the fact that the technology concerned was covered by intellectual property rights justified its refusal to disclose the relevant information. The Commission also examined the applicant's argument that if it were required to give third parties access to that technology there would be a negative impact on its incentives to innovate (recitals 709 and 712 to the contested decision).

697. The Court finds that, as the Commission correctly submits, Microsoft, which bore the initial burden of proof (see paragraph 688 above), did not sufficiently establish that if it were required to disclose the interoperability information that would have a significant negative impact on its incentives to innovate.

698. Microsoft merely put forward vague, general and theoretical arguments on that point. Thus, as the Commission observes at recital 709 to the contested decision, in its response of 17 October 2003 to the third statement of objections Microsoft merely stated that [d]isclosure would... eliminate future incentives to invest in the creation of more intellectual property', without specifying the technologies or products to which it thus referred.

699. In certain passages in the response referred to in the preceding paragraph, Microsoft envisages a negative impact on its incentives to innovate by reference to its operating systems in general, namely both those for client PCs and those for servers.

700. In that regard, it is sufficient to note that, at recitals 713 to 729 to the contested decision, the Commission quite correctly refuted Microsoft's arguments relating to the fear that its products would be cloned. It must be borne in mind, in particular, that the remedy prescribed in Article 5 of the contested decision does not, and is not designed to, allows Microsoft's competitors to copy its products (see paragraphs 198 to 206, 240 to 242 and 656 to 658 above).

701. It follows that it has not been demonstrated that the disclosure of the information to which that remedy relates will significantly reduce - still less eliminate - Microsoft's incentives to innovate.

702. In that context, the Court observes that, as the Commission correctly finds at recitals 730 to 734 to the contested decision, it is normal practice for operators in the industry to disclose to third parties the information which will facilitate interoperability with their products and Microsoft itself had followed that practice until it was sufficiently established on the work group server operating systems market. Such disclosure allows the operators concerned to make their own products more attractive and therefore more valuable. In fact, none of the parties has claimed in the present case that such disclosure had had any negative impact on those operators' incentives to innovate.

703. The Court further considers that if the disclosures made under the United States settlement and the MCPP as regards server-to-client protocols had no negative impact on Microsoft's incentives to innovate (recital 728 to the contested decision), there is no obvious reason to believe that the consequences should be any different in the case of disclosure relating to server/server protocols.

704. Last, the Court finds that Microsoft's assertion that in the contested decision the Commission applied a new evaluation test when rejecting the objective justification which Microsoft had submitted is based on a misreading of that decision.

705. That assertion is based on a single sentence in recital 783 to the contested decision, which is in a part of that decision containing the findings of the Commission's analysis, at recitals 560 to 778, of the refusal at issue.

706. That sentence reads as follows:

[A] detailed examination of the scope of the disclosure at stake leads to the conclusion that, on balance, the possible negative impact of an order to supply on Microsoft's incentives to innovate is outweighed by its positive impact on the level of innovation of the whole industry (including Microsoft)'.

707. However, that sentence must be read in conjunction with the one coming immediately afterwards in the same recital, which states that ... the need to protect Microsoft's incentives to innovate

cannot constitute an objective justification that would offset the exceptional circumstances identified'.

708. It must also be compared with recital 712 to the contested decision, where the Commission sets out the following considerations:

It has been established above... that Microsoft's refusal to supply [creates a risk of elimination of] competition in the relevant market for work group server operating systems, that this is due to the fact that the refused input is indispensable to carry on business in that market and that Microsoft's refusal has a negative impact on technical development to the prejudice of consumers. In view of these exceptional circumstances, Microsoft's refusal cannot be objectively justified merely by the fact that it constitutes a refusal to license intellectual property. It is therefore necessary to assess whether Microsoft's arguments regar ding its incentives to innovate outweigh these exceptional circumstances.'

709. In other words, in accordance with the principles laid down in the case-law (see paragraphs 331 to 333 above), the Commission, after establishing that the exceptional circumstances identified by the Court of Justice in Magill and IMS Health , paragraph 107 above, were present in this case, then proceeded to consider whether the justification put forward by Microsoft, on the basis of the alleged impact on its incentives to innovate, might prevail over those exceptional circumstances, including the circumstance that the refusal at issue limited technical development to the prejudice of consumers within the meaning of Article 82(b) EC.

710. The Commission came to a negative conclusion but not by balancing the negative impact which the imposition of a requirement to supply the information at issue might have on Microsoft's incentives to innovate against the positive impact of that obligation on innovation in the industry as a whole, but after refuting Microsoft's arguments relating to the fear that its products might be cloned (recitals 713 to 729 to the contested decision), establishing that the disclosure of interoperability was widespread in the industry concerned (recitals 730 to 735 to the contested decision) and showing that IBM's commitment to the Commission in 1984 was not substantially different from what Microsoft was ordered to do in the contested decision (recitals 736 to 742 to the contested decision) and that its approach was consistent with Directive 91/250 (recitals 743 to 763 to the contested decision).

711. It follows from all of the foregoing considerations that Microsoft has not demonstrated the existence of any objective justification for its refusal to disclose the interoperability at issue.

712. As the exceptional circumstances identified by the Court of Justice in Magill and IMS Health , paragraph 107 above, were also present in this case, the first part of the plea must be rejected as wholly unfounded.

2. Second part: Sun did not request Microsoft to supply the technology which the Commission orders it to disclose

a) Arguments of the parties

713. In the first place, Microsoft claims that Sun did not request access to interoperability information within the meaning of the contested decision.

714. The applicant refers to a passage in Sun's complaint and maintains that the request contained in the letter of 15 September 1998 did not relate to the full and complete specifications' for its communication protocols but to detailed information about the internal features of its Windows server operating systems.

715. Accordingly, even on the assumption that the letter of 6 October 1998 might be interpreted as containing a refusal, quod non , it cannot be claimed that Microsoft refused to supply Sun with the technology which, according to the contested decision, it did not disclose.

716. In addition, the breadth of Sun's request could not have put Microsoft on notice that Sun was seeking a licence [in respect of its] communication protocols'.

717. The applicant further observes that Sun's complaint contains no reference to communication protocols.

718. Last, in the letter of 15 September 1998, Sun expressed the belief that Microsoft should include a reference implementation and such other information as is necessary to insure, without reverse engineering, that COM objects and the compete set of Active Directory technologies will run in fully compatible fashion on Solaris'. Microsoft claims that access to such technology' would have enabled Sun to mimic virtually all the functionalities of Windows server operating systems; and, furthermore, Sun's request related to technology still under development', as Windows 2000 Server and Active Directory were not marketed until December 1999.

719. In the second place, Microsoft contends that Sun's request did not meet with a flat refusal' in the letter of 6 October 1998: the applicant invited Sun to discuss ways in which the two firms might improve interoperability between their respective products for the benefit of mutual customers'. That letter also mentioned various ways in which Sun might achieve interoperability'. The applicant cites recital 565 to the contested decision and asserts that the Commission cannot maintain that the technologies concerned were so complex that Sun could not be expected to know what technology it needed: Sun is a highly specialised distributor of server operating systems and in any event it was Sun's responsibility to clarify its request.

720. Microsoft claims, moreover, that Sun did not take up its invitation and observes, in particular, that Sun failed to attend a meeting which had been arranged in order to discuss the interoperability of their products.

721. Last, Microsoft contends that there is no contradiction between its position that it is unclear whether it would have refused to disclose the specifications of its communication protocols if Sun or anyone else' had asked it to do so and the fact that it seeks annulment of the contested decision. There is a significant difference between a negotiated cross-licensing agreement with another leading operating system vendor' and a duty to supply the entire world with proprietary technology under mandate from the public authority'.

722. In the third place, Microsoft maintains that Sun did not request it to license its intellectual property rights so that Sun could develop work group server operating systems in the EEA. Microsoft was therefore under no obligation, when it replied to the letter of 15 September 1998, to have regard to its special responsibility under Article 82 EC not to hinder effective and undistorted competition.

723. In that context, Microsoft points out that Sun is a United States company and that the letter of 15 September 1998 was sent from Sun's headquarters in the United States to the United States headquarters of Microsoft, which is also a United States company. In the absence of any connection with the EEA, and as the letter did not mention that the technology concerned was necessary for the development and distribution of work group server operating systems on the territory of the EEA, Microsoft had no reason to consider that Sun wished to obtain a licence for the EEA.

724. The Commission rejects Microsoft's arguments in their entirety.

725. In the first place, the Commission contends that Sun's request in the letter of 15 September 1998, although broader in certain respects than the scope of the [contested] decision', was sufficiently clear for Microsoft to understand (i) that Sun sought access to interoperability information and (ii) that some of that information pertained to certain features of Windows work group networks (the Active Directory domain') which were indispensable if Sun were to be able to exert viable

competition on the work group server operating systems market.

726. The Commission contends that Microsoft misrepresents Sun's request when it claims that the request related to source code and not interface information. In its request, Sun sought a means of enabling its products to seamlessly communicate' with the Windows environment and in the letter of 6 October 1998 Mr Maritz clearly stated that he understood that request as relating to interoperability information. Furthermore, Sun made clear in its complaint that it wished to have access to interface information'.

727. The Commission refers to recitals 713 to 722 to the contested decision and further submits that access to interoperability information will not allow Microsoft's competitors to clone' or mimic' the functionalities of Windows work group server operating systems.

728. The fact that Sun did not use the expression communication protocol' is irrelevant, since a request for access to the information necessary to interconnect and interact with Windows and a request for access to protocol specifications are one and the same thing'.

729. The Commission also observes that in the letter of 6 October 1998 Microsoft did not mention the fact that Sun's request related to technology still under development'. In any event, such an argument cannot be accepted, because when Sun sent the letter of 15 September 1998 to Microsoft it was already one year since the first beta version of Windows 2000 Server had been released.

730. In the second place, the Commission contends that Microsoft cannot deny having refused Sun's request.

731. First, Microsoft's position is inconsistent with its claim that Article 5 of the contested decision should be annulled.

732. Second, the Commission refers to recitals 194 to 198 to the contested decision and claims that Microsoft explicitly confirmed to the Commission that it refused to give access to certain interoperability information. As stated at recitals 573 to 577 to the contested decision, that refusal forms part of a general pattern of conduct. Likewise, during the interlocutory proceedings, Microsoft stated that the refusal was part of its business model'.

733. Third, the Commission is not convinced that Microsoft would have supplied the requested information to Sun if Sun had responded more positively to Microsoft's alleged offer' to discuss interoperability. The Commission refers to certain statements by Microsoft managers set out at recitals 576 and 778 to the contested decision. The Commission finds it unlikely that Mr Goldberg, the Microsoft employee referred to in the letter of 6 October 1998, was authorised to take decisions concerning such matters. Mr Terranova, of Sun, met Mr Goldberg on 25 November 1998 and Microsoft does not explain how the fact that Mr Terranova had to cancel a further meeting due to take place on 8 March 1999 prevented discussions on interoperability. Last, the Commission observes that the agenda of that last meeting, as suggested by Mr Goldberg, did not contain the slightest reference to the relevant technologies, such as Active Directory.

734. In the third place, the Commission considers it irrelevant that Sun did not specifically refer to the EEA in the letter of 15 September 1998. First, as the relevant geographic market was worldwide, the EEA was necessarily covered by the request in that letter and, second, Sun lodged a complaint with the Commission on 10 December 1998.

b) Findings of the Court

735. By its argument in support of the second part of its single plea, Microsoft seeks to establish that the Commission had no valid ground on which to find, in the contested decision, that Microsoft had abused its dominant position by refusing to disclose the interoperability information, since it cannot in fact be accused of any real refusal. In support of that argument, Microsoft relies,

in substance, on the exchange of letters between it and Sun in the latter part of 1998. Its argument comes under three main heads. In the first place, Microsoft claims that Sun's request in the letter of 15 September 1998 did not relate to interoperability information as referred to in the contested decision. In the second place, it denies in any event having refused that request in the letter of 6 October 1998. In the third place, Microsoft maintains that in the letter of 15 September 1998 Sun did not seek a licence covering intellectual property rights which Microsoft held in the EEA.

736. Each of those heads must be examined separately.

The scope of Sun's request

737. First of all, it is appropriate to recall the precise content of the letter of 15 September 1998 and the Commission's analysis of that letter in the contested decision.

738. In that letter, Sun identifies the information which it seeks from Microsoft, as follows:

- first, the complete information required to allow it to provide native support for COM objects on Solaris;

- second, the complete information required to allow Sun to provide native support for the complete set of Active Directory technologies on Solaris.

739. In the letter, Sun specified the extent of the information requested and also the objective of its request, indicating that:

- applications written to execute on Solaris should be able to seamlessly communicate via COM and/or Active Directory with the Windows operating systems and/or with Windows-based software;

- Microsoft should include a reference implementation and such other information as was necessary to ensure, without reverse engineering, that COM objects and the complete set of Active Directory technologies would run in fully compatible fashion on Solaris;

- the information should be provided for the full range of COM objects as well as for the full set of Active Directory technologies currently on the market;

- the information should be provided in a timely manner and on a continuing basis for COM objects and Active Directory technologies which would be released on the market in the future.

740. At recital 186 to the contested decision, the Commission interprets the second part of Sun's request in the letter of 15 September 1998 (see the second indent of paragraph 738 above) as meaning the ability for Solaris to act as fully compatible domain controller in Windows 2000 work group networks or as a member server (in particular as a file and print server) fully compatible with the Active Directory domain infrastructure (security, directory service)'. Furthermore, the fact that Sun's request covers both client/server interoperability and server/server interoperability is consistent with the fact that the Windows domain architecture' closely connects both types of interoperability. In other words, Sun's request encompassed the specifications for the protocols used by Windows work group servers in order to provide file, print and group and user administration services to Windows work group networks', which include both direct interconnection and interaction between a Windows work group server and a Windows client PC, as well as interconnection and interaction between a Windows work group server and a Windows client PC that is indirect and passes through another Windows work group server' (recital 187 to the contested decision).

741. At recital 188 to the contested decision, the Commission examines the first part of Sun's request (see the first indent of paragraph 738 above). The Commission observes that COM/DCOM is a technology which is relevant to the delivery of file, print and group and user administration in Windows' and considers that there is an overlap between that part of Sun's request and the second

part of its request, concerning Active Directory. At the following recital, the Commission states, however, that the only part of Sun's request for information concerning the COM technology that is relevant to the refusal to supply considered in [the contested decision] is what is encompassed in Sun's request for compatibility with Active Directory'. That observation must be compared with the Commission's statement at recital 566 to the contested decision that, first, the only refusal at stake in [the contested decision] is a refusal to provide a full specification of the protocols underlying the Windows domain architecture, which organises the way through which Windows work group servers deliver work group server services to Windows client PCs' and, second, [t]he fact that Microsoft has also turned down Sun's request for information that would facilitate cross-platform portability of COM does not form part of the conduct treated in [the contested decision] as a refusal to supply'.

742. The Commission further observes, at recital 190 to the contested decision, that it is implicit in Sun's request that Sun is seeking access to specification in order to be able to implement them in its products.

743. At recitals 199 to 207 to the contested decision, the Commission sets out a series of considerations in order to demonstrate that the information to which Sun requests access in the letter of 15 September 1998 is connected with interoperability. First, it rejects Microsoft's assertion in its response of 17 October 2003 to the third statement of objections that Sun wished Microsoft to create a version of Active Directory that could be used on Solaris. Second, the Commission rejects Microsoft's argument, also put forward during the administrative procedure, that Sun's request concerned the internal make-up of Windows server operating systems' and therefore went beyond interoperability information. On that last point, the Commission observes that in the letter of 15 September 1998 Sun expressly states that it is its intention to achieve seamless communication' between the Solaris environment and the Windows environment (recital 207 to the contested decision). The Commission also observes that the letter of 6 October 1998 shows that Microsoft had fully understood that Sun wished to have access to information on interoperability with certain features of Windows' (recital 207 to the contested decision).

744. Next, in the light of those various factors, the Court finds, first, that while, as the Commission itself recognises in the defence, the scope of the request in the letter of 15 September 1998 was wider in certain regards than that of the contested decision, the fact remains that in that letter Sun qualified the scope of its request by stating that all that it wanted was that its products should be able to seamlessly communicate' with the Windows environment. Likewise, Sun also stated in its letter that the information requested should insure, without reverse engineering, that COM objects and the complete set of Active Directory technologies will run in fully compatible fashion on Solaris'. In other words, it is clear from the wording of the letter of 15 September 1998 that Sun was seeking access to information and that the information should allow it to achieve interoperability between its products and the Windows environment.

745. It is also apparent from the wording of the letter of 15 September 1998 that Sun wished to be able to achieve a high level of interoperability between its products and the Windows domain architecture. In the letter of 6 October 1998, when Mr Maritz indicates that Microsoft has no plans to port the Active Directory to Solaris' and that there are varying levels of functionality [designed to allow other operating systems] to interoperate with the Active Directory', he clearly draws a distinction between the high level of interoperability that can be achieved when the elements of one operating system are ported' to another operating system and the lower or varying' levels that can be achieved by using the other methods suggested in that letter.

746. Second, Microsoft cannot reasonably rely on the fact that Sun did not use the expression communication protocols' in its complaint. As stated at recital 49 to the contested decision, and

as the Commission correctly observes in its pleadings, a protocol' represents a set of rules of interconnection and interaction between various pieces of software in a network (see also paragraphs 196 and 197 above). As stated at paragraph 740 above, it was precisely about such rules that Sun wished to obtain information. Microsoft's argument is all the less acceptable because it is purely formalistic. In the letter of 6 October 1998, Mr Maritz makes a number of references to interoperability between Microsoft's products and those of Sun or other software vendors. Microsoft had thus fully understood the scope of Sun's request, in spite of the fact that there is no formal reference to communication protocols' in the letter of 15 September 1998.

747. Third, Microsoft's assertion that access to the technology would have enabled Sun to mimic' virtually all the functionalities of the Windows server operating systems cannot be upheld. It is clear from the preceding considerations that Sun sought access to the information necessary to be able to achieve interoperability between its products and the Windows domain architecture. As stated at recitals 34, 570 and 571 to the contested decision, and as already stated at paragraphs 199 to 206 above, such a result may be achieved by communicating only the specifications of certain protocols, that is to say, without disclosing implementation details. In so far as Microsoft's assertion is based on the fact that Sun indicates in the letter of 15 September 1998 that Microsoft should communicate a reference implementation', the Court finds that even if Sun had thereby intended to request communication of details of Microsoft's source code, Sun's qualification of the scope of its request (see paragraph 744 above) meant that Microsoft could not conclude that Sun's request did not also relate to the protocol specifications referred to by the contested decision, while the conduct penalised by that decision is limited, as stated at recital 569 to the contested decision, to Microsoft's refusal to communicate those specifications.

748. Fourth, Microsoft cannot effectively claim that the request in Sun's letter of 15 September 1998 concerned technology still under development'. That assertion is wholly irrelevant to the question whether that request concerned interoperability information as referred to in the contested decision. Nor does it take account of the fact that, as stated at recitals 398 and 790 to the contested decision, Microsoft had already released the first beta version of Windows 2000 server on 23 September 1997, almost one year before the date of Sun's letter.

749. The Court concludes from all of the foregoing considerations that, contrary to Microsoft's assertion, Sun's request in the letter of 15 September 1998 clearly concerned the interoperability information referred to in the contested decision and forming the subject-matter of the remedy prescribed in Article 5 of that decision.

The scope of the letter of 6 October 1998

750. The second head of Microsoft's argument in support of the second part of the plea, namely the head relating to the letter of 6 October 1998, cannot be accepted either.

751. When the wording of that letter, examined in the light of the context in which it was written, the identity of its author, the extent of his knowledge of the technologies concerned and the approach adopted by Microsoft up to the time of the adoption of the contested decision, is taken into account, it must be concluded that the Commission was correct, in the contested decision, to interpret that letter as containing a refusal to disclose to Sun the information which it had requested.

752. It must be borne in mind, first of all, that, as stated in the first part of the plea, Microsoft's arguments concerning the refusal to supply and authorise the use of the interoperability information rely largely on the degree of interoperability that must be achieved between its own and its competitors' products. Throughout the administrative procedure and in these proceedings, Microsoft contended that it was sufficient that the various operating systems should be capable of exchanging information or of reciprocally supplying services, or, in other words, that they could work properly' together.

Microsoft maintains that the information and methods already available on the market allow such a result to be achieved, so that it cannot be required to disclose additional information, in particular the information relating to the communications that come within the blue bubble'. The applicant claims, in particular, that the Commission requires a degree of interoperability that goes far beyond what is envisaged by Directive 91/250 and which does not correspond to the way in which undertakings organise their computer networks in practice. It maintains that it is the Commission's intention that operating systems that compete with Microsoft's systems should function in all respects like a Windows server operating system, which would require Microsoft to communicate to its competitors much more than information on the interfaces of its products and would interfere with its intellectual property rights and reduce its incentives to innovate.

753. As the Court has already found at paragraphs 207 to 245 above, the way in which Microsoft interprets the degree of interoperability required by the Commission and, accordingly, the scope of the information referred to by the contested decision is incorrect.

754. It is necessary to take those factors into account when assessing the way in which the Commission interpreted the letter of 6 October 1998 and the arguments which Microsoft has put forward on that point.

755. As demonstrated at paragraph 746 above, Microsoft had fully grasped the scope of Sun's request in the letter of 15 September 1998 and, in particular, had understood that Sun sought to obtain the information necessary for its products to be able to seamlessly communicate' with the Windows environment or, in other words, to establish a high level of interoperability between its products and that environment.

756. Furthermore, the purpose of the letter of 15 September 1998 was clearly to obtain access to information belonging to Microsoft that was not already in the public domain or available by means of the licences offered on the market.

757. The response in the letter of 6 October 1998 contains the following six points:

- first, Mr Maritz thanks Mr Green for the letter of 15 September 1998 and informs him that Microsoft has always been willing to help its competitors to build the best possible products and interoperability for [its] platform';

- second, he draws Mr Green's attention to the fact that information about the services and interfaces of the Windows platform' is already available through the MSDN' product;

- third, he invites Sun to attend a conference organised by Microsoft to be held in Denver on 11-15 October 1998;

- fourth, he refers to a reference implementation of COM on Solaris that already exists and informs Mr Green that source code for COM can be licensed, notably from Software AG;

- fifth, he states that Microsoft has no plans to port' the Active Directory to Solaris, but mentions the existence of a number of methods, with varying levels of interoperability, of interoperating with Active Directory, including use of the standard LDAP protocol;

- sixth, he invites Sun, should it need additional support', to contact the account managers' of the Developer Relations Group', who are there to help developers who need additional support for Microsoft's platforms', naming Mr Goldberg as the person to contact for that purpose.

758. The Court notes, in the first place, that in the letter of 6 October 1998 Mr Maritz wholly fails to answer the specific requests made by Sun in the letter of 15 September 1998 and merely refers Sun to sources of information and methods which were already in the public domain or available under licence. As Mr Maritz was clearly aware of the significance of the specific requests stated

by Mr Green, such a reference cannot be interpreted as anything other than a refusal to communicate the information requested.

759. The fact that Mr Maritz states in the letter of 6 October 1998 that Microsoft has no plans to port' Active Directory to Solaris confirms the correctness of that interpretation, since it shows that Mr Maritz was fully aware that Microsoft's competitors, including Sun, aspired to achieve a higher level of interoperability than they could achieve by using the methods mentioned in that letter (see paragraph 745 above).

760. That point is established all the more clearly because, in the case, first of all, of MSDN, Microsoft does not dispute in the present part of the plea the Commission's analysis in the contested decision that that mechanism does not allow Microsoft's competitors to achieve a sufficient degree of interoperability with Windows client PC operating systems (recital 563 to the contested decision, which refers to Section 4.1.3 and, in particular, to recitals 209 and 210 to the contested decision).

761. As regards, next, the possibility that Sun could use a freely-available COM reference implementation, which Microsoft also mentions in the letter of 6 October 1998, Microsoft has also not maintained in the present part of the plea that the Commission had erred in considering, in the contested decision, that that product did not constitute a sufficient solution (recital 563 to the contested decision, which refers to Section 4.1.3 and, in particular, to recitals 218 to 230 to the contested decision; see also recitals 288 to 291 to the contested decision).

762. As regards, last, the possibility for Sun to use the LDAP protocol, which is also expressly mentioned in the letter of 6 October 1998, Microsoft has not maintained in the present part of the plea, and did not demonstrate in the preceding part of the plea, that the Commission had erred in concluding, particularly at recitals 194 and 195 and 243 to 250 to the contested decision, that that protocol was not sufficient to achieve a suitable level of interoperability with Active Directory.

763. In the second place, Microsoft cannot rely on Mr Maritz's offer of additional support from Mr Goldberg to substantiate its claim that that letter does not contain a refusal. The additional support mentioned in the final paragraph of that letter relates only to the information and methods mentioned in the second and third paragraphs of the letter. In essence, Microsoft thereby proposes to assist Sun only in the same way as the account managers' of the Developer Relations Group' assist any developer requiring support in connection with Microsoft's platforms'.

764. Nor can Microsoft usefully rely on the minute it prepared summarising the exchanges between itself and Sun in order to maintain that Sun had no intention of acting on Mr Goldberg's proposals. At no point in that minute, as the Commission correctly observed at recital 193 to the contested decision, is there any mention of a formal proposal by Microsoft to supply the information which Sun requested, that is to say, information going beyond that which was publicly available.

765. It should be added, in the third place, that in the contested decision the Commission had all the more reason to interpret the letter of 6 October 1998 as containing a refusal to give access to the interoperability information requested by Sun because, during the administrative procedure, Microsoft expressly recognised that it had not disclosed some of the information requested and that it continued to refuse to do so (see recitals 194 to 198 to the contested decision). Although at the hearing Microsoft questioned the exhaustive nature of one of the citations set out at recital 195 to the contested decision, it did not deny having stated during the administrative procedure that the replication among different copies of Active Directory was proprietary'.

766. Microsoft's argument that the letter of 6 October 1998 does not constitute a refusal must therefore be rejected as unfounded.

767. It is appropriate, moreover, to analyse the letter of 6 October 1998 in the more general context

described in the contested decision. In the decision, the Commission did not rely on that letter alone, but, as may be seen from recitals 194 to 198 and 573 to 577 to the contested decision in particular, it considered that the conduct which it evidenced formed part of a general pattern of conduct on Microsoft's part.

768. At recital 573 to the contested decision, which refers specifically to recital 194 to the contested decision, the Commission stated, in particular, that a number of Microsoft's competitors had confirmed that they did not obtain sufficient interoperability information and that some of them had also claimed that Microsoft had refused to provide information that they had requested, or had failed to answer their requests.

769. At recital 576 to the contested decision, moreover, the Commission reproduced excerpts from testimony given to the United States courts by a manager of the Windows Source Licensing Program, which, according to the Commission, indicates that Microsoft places restrictions on licence agreements concerning technologies necessary for interoperability with the Windows domain architecture.

770. Microsoft did not specifically deny those matters before the Court.

771. Furthermore, the Court observes that, at recital 778 to the contested decision, the Commission, in refuting Microsoft's denials of the existence of a refusal, given Microsoft's claim that it never had any reason to exclude competitors by leveraging, cited an extract from a speech given by Mr Gates, President of Microsoft, in February 1997 to members of Microsoft's sales force. That extract confirms the existence of a pattern of general conduct designed to restrict the communication of interoperability information, containing as it does, the following declaration:

What we are trying to do is use our server control to do new protocols and lock out Sun and Oracle specifically... Now, I don't know if we'll get to that or not, but that's what we are trying to do.'

The geographic scope of the request contained in the letter of 15 September 1998

772. The third head of the argument which Microsoft develops in support of the second part of its single plea is based on the fact that in the letter of 15 September 1998 Sun did not expressly request a licence over Microsoft's intellectual property rights in the EEA in order to develop work group server operating systems in the EEA. Microsoft concludes that when it responded to Sun it was under no obligation to have regard to its particular responsibility not to hinder effective and undistorted competition.

773. Those arguments are purely formal and must be rejected.

774. In the letter of 15 September 1998, Sun did not, admittedly, expressly request Microsoft to grant it a licence over intellectual property rights held in the EEA. However, there was no need for Sun to assess in its request whether the information to which it sought access was protected by intellectual property rights and whether the use of that information needed to be licensed by Microsoft. It is clear, moreover, that Sun wished Microsoft to supply the information at issue so that it would be able to implement that information in its own work group server operating systems. Furthermore, as the relevant geographic market for those systems is worldwide (see recital 427 to the contested decision), the territory of the EEA was necessarily covered by Sun's request, which was drafted in general terms. Last, as the Commission observes in its pleadings, as Sun had lodged a complaint pursuant to Article 3 of Regulation No 17 a few weeks later, Microsoft could in any event no longer fail to be aware that the EEA was also concerned.

775. It follows that the Commission was correct to find at recital 787 to the contested decision that when Microsoft had responded to the letter of 15 September 1998 it had not taken sufficiently into account its special responsibility not to hinder effective and undistorted competition in the

common market. The Commission was also correct to state, at the same recital, that that particular responsibility derived from Microsoft's quasi-monopoly' on the client PC operating systems market. As is apparent from the considerations set out at paragraph 740 above, the refusal at issue concerned interface specifications that organise a network of Windows work group servers and client PCs and that, as such, are not attributable to one of the two [types of product] at stake (client PCs or work group servers), but rather represent a rule of compatibility between those two products' (recital 787 to the contested decision).

776. It follows from all of the foregoing considerations that the second part of the single plea put forward by Microsoft in connection with the refusal to supply and authorise the use of the interoperability information must be rejected as unfounded.

3. Third part: the Commission did not take proper account of the obligations imposed on the Communities by the TRIPS Agreement

a) Arguments of the parties

777. Microsoft claims that, by requiring it to license to its competitors the communication protocol specifications which it owns, the contested decision infringes Article 13 of the TRIPS Agreement. It submits that the cumulative conditions laid down in that agreement are not met in the present case.

778. In the first place, the requirement in question goes further than is necessary to achieve interoperability and, consequently, violates the condition that limitations' or exceptions' can be applied to intellectual property rights only in special cases'. By imposing that requirement, the Commission seeks to enable other server operating systems suppliers to create products that mimic' the functionality of Windows server operating systems. Microsoft also criticises the requirement that it make its communication protocols available to its competitors, irrespective of whether or not they are affected by its allegedly anti-competitive conduct.

779. In the second place, Microsoft claims that the licensing requirement conflicts directly with the normal exploitation' of its intellectual property rights. Rather than license their innovative technologies to third parties, commercial software writers like the applicant normally exploit their intellectual property rights by developing and marketing products that implement those technologies. The requirement will also have negative effects on its sales, since its competitors will be able to use its communication protocols to create server operating systems that are interchangeable with its own products.

780. In the third place, Microsoft claims that the requirement unreasonably prejudice[s] [its] legitimate interests', because it is disproportionate to the Commission's stated objective of eliminating the effects of anti-competitive conduct. The Commission's new balancing test appears to legitimise compulsory licensing whenever a dominant undertaking's competitors would benefit from access to the applicant's intellectual property, regardless of whether such a measure is necessary to remedy anti-competitive conduct.

781. Last, Microsoft acknowledges that the TRIPS Agreement may not be directly applicable in Community law, but observes that the Court of Justice has established the principle that Community law, including Article 82 EC, must be interpreted in the light of the international agreements concluded by the Community, such as the TRIPS Agreement (Case C61/94 Commission v Germany [1996] ECR I3989, paragraph 52).

782. ACT maintains that the principle of interpretation referred to in the preceding paragraph must apply not only to secondary Community legislation but also to norms of primary Community law.

783. Next, ACT claims that the Commission's interpretation of Article 82 EC in the contested

decision is inconsistent with the Community's international obligations under the TRIPS Agreement, in three respects.

784. In the first place, the remedy prescribed in Article 5 of the contested decision is incompatible with Article 13 of that agreement.

785. In the second place, in so far as the remedy entails the compulsory licensing of Microsoft's patents, it violates Article 31 of the TRIPS Agreement.

786. More particularly, ACT observes that that article provides, in particular, the following:

Where the law of a Member allows for other use of the subject-matter of a patent with the authorisation of the right holder, including use by the Government or third parties authorised by the Government, the following provisions shall be respected:

a) authorisation of such use shall be considered on its individual merits'.

787. ACT maintains that that provision means that licences must be granted only on a case-by-case basis. However, Article 5 of the contested decision provides for compulsory licensing that sweeps within it patents that have been granted, those that are the subject of current applications, and all of those that may be applied for and granted in future'. That decision means the compulsory licensing of categories of inventions'.

788. In the third place, by reference to Article 39 of the TRIPS Agreement (the only article in Section 7 of that agreement), in so far as Article 5 of the contested decision requires Microsoft to disclose business secrets to its competitors, it not only means the loss of the right to control the use of those business secrets, but also results in the complete destruction' of those secrets.

789. The Commission observes, first of all, that it is settled case-law that, having regard to their nature and structure, the WTO agreements are not in principle among the rules in the light of which the Court is to review the legality of measures adopted by the Community institutions' (Case C149/96 Portugal v Council [1999] ECR I8395, paragraph 47). In Joined Cases C300/98 and C392/98 Dior and Others [2000] ECR I11307, paragraph 44, moreover, the Court of Justice held that the provisions of [the TRIPS Agreement], an annex to the WTO Agreement, are not such as to create rights upon which individuals may rely directly before the Courts by virtue of Community law'. Commission v Germany , paragraph 781 above, is not relevant to the present case, since it refers to the interpretation not of a provision of the EC Treaty but of a measure of secondary Community law. In any event, Microsoft's essential argument is that the contested decision is unlawful because it violates the TRIPS Agreement.

790. Next, the Commission contends that Microsoft's argument is based on the mistaken premiss that the contested decision requires it to license to its competitors the copyright specifications for its proprietary communication protocols. The question of copyright is, at most, purely incidental' in the present case, and as the right of disclosure' on which Microsoft relies is a moral right', it cannot be covered by the TRIPS Agreement.

791. Last, the Commission submits that Microsoft's assertion that the conditions laid down by Article 13 of the TRIPS Agreement are not met in the present case is based on erroneous assumptions'. What is claimed to be the compulsory licensing imposed by the decision does not go beyond what is necessary to attain interoperability and the Commission did not apply any new balancing test in this case.

792. The Commission contends that ACT's arguments must be rejected as inadmissible in so far as they are based on Articles 31 and 39 of the TRIPS Agreement, since they were not submitted by Microsoft. In any event, its arguments are wholly unfounded.

793. SIIA supports the Commission's arguments.

b) Findings of the Court

794. In the third part of this single plea, Microsoft criticises the Commission for having interpreted Article 82 EC in a way that is inconsistent with Article 13 of the TRIPS Agreement. The applicant contends that if the Commission had properly taken that provision into account, it would not have been able to conclude, in Article 2(a) of the contested decision, that the refusal at issue constituted an abuse of a dominant position, or have been able to impose the remedy provided for in Articles 4, 5 and 6 of that decision, in so far as that measure concerned interoperability information.

795. Microsoft bases its argument on paragraph 52 of Commission v Germany , paragraph 781 above, in which the Court stated that Community law, including Article 82 EC, must be interpreted in the light of binding international agreements, such as the TRIPS Agreement. At the hearing, Microsoft emphasised that it did not claim that the provisions of the TRIPS Agreement had direct effect.

796. The Court considers that Microsoft cannot properly rely on Commission v Germany , paragraph 781 above.

797. Paragraph 52 of that judgment states, in particular:

[T]he primacy of international agreements concluded by the Community over provisions of secondary Community legislation means that such provisions must, so far as is possible, be interpreted in a manner that is consistent with those agreements.'

798. The Court holds that the principle of consistent interpretation thus invoked by the Court of Justice applies only where the international agreement at issue prevails over the provision of Community law concerned. Since an international agreement, such as the TRIPS Agreement, does not prevail over primary Community law, that principle does not apply where, as here, the provision which falls to be interpreted is Article 82 EC.

799. In the present case, moreover, unlike the situation referred to by paragraph 52 of Commission v Germany , paragraph 781 above, the Commission was not, strictly speaking, required to make a choice between several possible constructions of a text of Community law. The present case concerns a situation in which the Commission was required to apply Article 82 EC to the factual and legal circumstances of the particular case and in which it must be presumed, in the absence of proof to the contrary, that the conclusions which it reached in that regard are the only ones that it could validly adopt.

800. Furthermore, the Court considers that, under the guise of the principle of consistent interpretation, Microsoft is in reality simply challenging the legality of the contested decision on the ground that it is contrary to Article 13 of the TRIPS Agreement.

801. It is settled case-law that, given their nature and structure, WTO agreements are not in principle among the rules in the light of which the Community judicature is to review the legality of measures adopted by the Community institutions (Portugal v Council , paragraph 789 above, paragraph 47; Joined Cases C27/00 and C122/00 Omega Air and Others [2002] ECR I2569, paragraph 93; Case C76/00 P Petrotub and Republica v Council [2003] ECR I79, paragraph 53; and Case C93/02 P Biret International v Council [2003] ECR I10497, paragraph 52).

802. It is only where the Community has intended to implement a particular obligation assumed under the WTO or where the Community measure refers expressly to specific provisions of the WTO agreements that the Community judicature must review the legality of the Community measure in question in the light of the WTO rules (Portugal v Council , paragraph 789 above, paragraph 49, and Biret International v Council , paragraph 801 above, paragraph 53).

803. As the circumstances of the present case clearly do not correspond with either of the two situations described in the preceding paragraph, Microsoft cannot rely on Article 13 of the TRIPS Agreement in support of its claim for annulment of Articles 2, 4, 5 and 6 of the contested decision. Accordingly, there is no need to examine the arguments which Microsoft, supported by ACT, puts forward to substantiate its assertion that the conditions envisaged by Article 13 of the TRIPS Agreement are not satisfied in this case.

804. ACT's argument that Article 5 of the contested decision is incompatible with Articles 31 and 39 of the TRIPS Agreement (see paragraphs 785 to 788 above) must be rejected, for the same reasons as those set out at paragraphs 796 to 803 above.

805. Furthermore, ACT's argument that Article 5 of the contested decision fails to have regard to Article 31(a) of the TRIPS Agreement rests on the wholly erroneous idea that the remedy provides for the compulsory licensing of categories of inventions' and does not allow for any individual assessment. Even assuming that, in order to comply with Article 5 of the contested decision, Microsoft were obliged to grant licences authorising certain of its competitors to exploit one or more of its patents, there is nothing in the contested decision to prevent it from negotiating the terms of that licence on a case-by-case basis.

806. It follows from the contested decision that the remedy referred to in Article 5 must be implemented according to a three-stage procedure and which complies with the conditions set out at recitals 1005 to 1009 to the contested decision.

807. Thus, Microsoft is first of all required to draw up the interoperability information within the meaning of Article 1(1) of the contested decision and to implement the evaluation mechanism referred to in Article 5(c) of that decision.

808. At the second stage, Microsoft is required to give access to the interoperability information to the undertakings wishing to develop and distribute work group server operating systems in order to allow them to evaluate the business value to them of implementing that information in their products (recital 1008(i) to the contested decision). The conditions on which Microsoft authorises that evaluation must be reasonable and non-discriminatory.

809. At the third stage, Microsoft is required to give access to the information concerned to any undertaking interested in all or part of the interoperability and to authorise that undertaking to implement that information in work group server operating systems (recital 1003 to the contested decision). In that context too, the conditions which it intends to impose must be reasonable and non-discriminatory (recitals 1005 to 1008 to the contested decision).

810. It is clear from those various provisions of the contested decision that there is nothing to prevent Microsoft, where the interoperability information sought by a given undertaking relates to a technology covered by a patent (or by another form of intellectual property right), from giving access to and authorising the use of that information by granting a licence, subject to the application of reasonable and non-discriminatory conditions.

811. The mere fact that the contested decision requires that the conditions to which any licences are subject be reasonable and non-discriminatory does not mean that Microsoft must impose the same conditions on every undertaking seeking such licences. It is not precluded that the conditions may be adapted to the specific situation of each of those undertakings and vary, for example, according to the extent of the information to which they seek access or the type of products in which they intend to implement the information.

812. It follows from all of the foregoing considerations that the third part of the single plea must be rejected as unfounded.

813. It follows that the single plea put forward in connection with the first issue must be rejected as unfounded in its entirety.

C - The bundling of Windows Media Player with the Windows client PC operating system

814. In this second issue, Microsoft relies on two pleas: first, infringement of Article 82 EC and, second, breach of the principle of proportionality. The first plea concerns the Commission's finding that Microsoft's conduct in making the availability of the Windows client PC operating system conditional on the simultaneous acquisition of Windows Media Player constitutes an abusive tied sale (Article 2(b) of the contested decision). The second plea relates to the remedy prescribed in Article 6 of the contested decision.

815. Before examining those pleas, the Court will summarise a number of factual and technical findings in the contested decision forming the background to the conduct in question which the Court notes are not in effect disputed by Microsoft.

1. Factual and technical findings

816. At recitals 60 to 66 to the contested decision, the Commission describes digital media.

817. First of all, the Commission defines media players as software products that are able to play back' audio and video content, that is to say, to decode the corresponding data and translate them into instructions for the hardware, such as loudspeakers or a display (recital 60 to the contested decision).

818. Next, at recital 61 to the contested decision, the Commission explains that the audio and video content is arranged in digital media files according to certain specific formats and that compression and decompression algorithms have been developed in order to reduce the storage space required by that content without any loss of audio or video quality. Those algorithms are implemented in media players and in encoding software which make it possible to generate compressed files. The piece of code in a media player that implements a compression/decompression algorithm is called a codec' and, in order to be able to act correctly with a compressed media content in a specific format using a specific compression/decompression algorithm, a media player needs to understand that format and that compression/decompression algorithm, that is to say, it needs to implement the corresponding codec.

819. At recital 62 to the contested decision, the Commission explains that the end user is able to access audio and video content via the Internet by downloading the relevant file to his client PC, that is to say, by copying the file and transferring it to his client PC. Once it has been downloaded, the file may be played back' by a media player compatible with the file's format.

820. At recital 63 to the contested decision, the Commission states that the end user may also receive audio and video content streamed over the Internet. Where that method is used, there is no longer any need to wait for an entire file to be downloaded, as the file is sent to the client PC in the form of a sequence of small pieces, that is to say, as a stream' of data which the media player plays as it goes along. Streaming requires the presence of a streaming media player on the client PC.

821. The Commission points out that the streaming of audio and video content to an end user often entails specific streaming protocols which govern communications between the media player and the software server which distributes the content over the Internet. In order to access sound and video content streamed using a given protocol, the user must have a media player that understands' that protocol (recital 64 to the contested decision).

822. Last, at recital 66 to the contested decision, the Commission explains that by using encoding software streaming servers and media players which are compatible in terms of codec, format and

streaming protocol support, it is possible to build a software infrastructure for delivery and consumption of streamed digital audio or video content over IT networks. Such an infrastructure will also be able to provide a platform for the development of other applications, which will use the services provided by it. In particular, media players may exhibit APIs which other applications will call in order, for example, to trigger the playback of a file by the player.

823. At recitals 107 to 120 to the contested decision, the Commission briefly describes the economic factors that characterise supply, competition and consumption patterns in the digital media industry.

824. In the first place, at the beginning of the digital media content chain are the content owners, who generally have copyright in the content and can therefore control its reproduction and distribution (recital 108 to the contested decision).

825. In the second place, the content is then aggregated by content providers, who distribute the content to consumers, in particular by storing it on servers connected to the Internet which consumers are able to access from their client PCs (recitals 109 to 111 to the contested decision).

826. In the third place, the software infrastructure that enables the creation, transmission and playback of digital content is provided by software developers, including Microsoft, RealNetworks and Apple (recital 112 to the contested decision). Those three companies have the specific feature that, as well as supporting certain industry standard formats, they offer a comprehensive solution, from encoding software to player, based essentially on their own digital media technologies and on their own proprietary file formats (recital 113 to the contested decision). Thus, Microsoft owns the following formats: Windows Media Audio' (WMA), Windows Media Video' (WMV) and Advanced Streaming Format' (ASF). RealNetworks' formats are called RealAudio' and RealVideo', while Apple's QuickTime' formats have the file extensions .qt',.mov' and.moov'. Other software developers do not offer an end-to-end solution for delivery of media content, but generally license the technology from one of the three companies mentioned above or use open industry standards (recital 117 to the contested decision).

827. In the fourth place, there are various channels through which media players may be distributed to end users (recitals 119 and 120 to the contested decision).

828. First, media players may be installed on client PCs by OEMs under agreements between the OEMs and the software developers. End users thus find a media player and possibly other software pre-installed on their client PCs in addition to an operating system. According to recital 68 to the contested decision, OEMs are companies which assemble computers using a variety of components supplied by different manufacturers. That assembly generally includes the installation of an operating system supplied by a software developer or developed by the OEM itself, together with the bundling of several applications required by the end users. The devices thus assembled are then purchased by resellers', who resell them with additional software.

829. Second, end users may download media players on to their client PCs over the Internet.

830. Third, media players may be sold in retail outlets or distributed with other software products.

831. At recitals 121 to 143 to the contested decision, the Commission describes Microsoft's products and those of its competitors.

832. Microsoft's media player is called Windows Media Player and at the time of the contested decision the most recent version of that player was called Windows Media Player 9 Series' (WMP 9). WMP 9, which allows the playback of downloaded or streamed audio and video content, has been available since 7 January 2003 and since November 2003 has also worked with the Mac OS and UNIX operating systems. WMP 9 does not support the Real and QuickTime formats.

833. As regards Microsoft's competitors, the Commission describes, in particular, the products

of RealNetworks (recitals 125 to 134 to the contested decision) and Apple (recitals 135 to 140 to the contested decision).

834. In 1995, RealNetworks - which was then called Progressive Networks Inc. - was the first large company to market products allowing the streaming of digital audio content, including RealAudioPlayer'. In February 1997 RealNetworks released RealPlayer 4.0', which played live and on-demand audio and video.

835. Apple developed, in the early 1990s, a media player called QuickTime Player', which initially ran only on Macintosh computers. In November 1994 Apple released QuickTime 2.0 for Windows' and, in April 1999, QuickTime 4.0', which supported media streaming.

836. The Commission also mentions MusicMatch's MusicMatch Jukebox' and Nullsoft's Winamp Media Player', which rely not on their own codecs or file formats but on technologies owned by Microsoft, Apple or RealNetworks or on open formats (recitals 141 to 143 to the contested decision).

837. Recitals 302 to 314 to the contested decision contain a chronology of Microsoft's activities in the media software industry, which may be summarised as follows:

- in August 1991, Microsoft released a version of its Windows 3.0' operating system, which contained Multimedia Extensions' that allowed users to view still photographs and to listen to sounds, but did not enable media streaming;

- in 1993, Microsoft released Video for Windows', which included Media Player 2.0' and allowed users to play downloaded video files on their client PCs;

- in August 1995, Microsoft released the Windows 95' operating system, in which it subsequently integrated its Internet Explorer' browser, which included RealNetworks' RealAudio Player';

- in September 1996, Microsoft released NetShow 1.0', which was developed to work with Windows 95 and which allowed audio and video distributed over intranets to be played;

- on 21 July 1997, Microsoft and RealNetworks announced an agreement to collaborate on streaming media, under which Microsoft licensed from RealNetworks, first, RealAudio and RealVideo 4.0 codecs for inclusion in its NetShow software and, second, RealPlayer 4.0 for inclusion in Internet Explorer;

- in October 1997, Microsoft announced that RealPlayer 4.0 was included in Internet Explorer 4.0;

- on 4 May 1998, Microsoft released the beta version of Microsoft Media Player', which was capable of streaming media across the Internet and of supporting, in particular, MPEG, QuickTime, RealAudio and RealVideo formats, and also the beta version of its Netshow 3.0 Server' software;

- on 25 June 1998, Microsoft released its Windows 98' operating system, the installation CD of which included the NetShow 2.0' player, which played streamed content but did not feature in the default configurations which Windows 98 offered to users;

- on 7 July 1998, Microsoft released Windows Media Player 6' (WMP 6), which played content streamed over the Internet and worked with Windows 95, Windows 98 and Windows NT 4.0 and which supported RealAudio 4.0, RealVideo 4.0, ASF, AVI, WAV, MPEG and QuickTime;

- on 5 May 1999, Microsoft released Windows 98 Second Edition' for client PCs, which included the media player WMP 6; that media player could not be removed by OEMs or by users and was also included in subsequent versions of Windows, namely Windows Me', Windows 2000 Professional' and Windows XP';

- in August 1999, Microsoft released the Windows Media Technologies 4' architecture, which included

Windows Media Player, Windows Media Services', Windows Media Tools' and Microsoft's own digital rights management technology;

- that software no longer provided native support for RealNetworks' or QuickTime's formats;

- in September 2002, Microsoft announced the release of the beta version of its Windows Media 9 Series' technology, which included, inter alia, the WMP 9 player.

838. It should be noted that Microsoft complied with its obligation under the United States settlement to allow OEMs and consumers to enable or remove access to its middleware software, by releasing Windows 2000 Professional Service Pack 3 on 1 August 2002 and Windows XP Service Pack 1 on 9 September 2002 (recital 315 to the contested decision).

2. First plea, alleging infringement of Article 82 EC

839. The first plea raised by Microsoft in relation to the Windows Media Player issue may be broken down into four parts. In the first part, Microsoft claims that the Commission applied a new, speculative, argument with no basis in law, in order to establish the existence of a foreclosure effect. In the second part, it claims that the Commission failed to take sufficient account of the advantages flowing from the architectural concept' of its operating system. In the third part, it submits that the Commission failed to establish the existence of an infringement of Article 82 EC, and in particular of Article 82(d) EC. Last, in the fourth part, Microsoft maintains that the Commission failed to take account of the obligations imposed by the TRIPS Agreement.

840. Furthermore, by way of introduction to the arguments which it develops in connection with the Windows Media Player issue, Microsoft makes a number of assertions concerning the conditions necessary to establish the existence of abusive bundling.

841. The Court will first examine the assertions referred to in the preceding paragraph. Next, in the light of the conclusions which it reaches (see paragraph 869 below), it will analyse the arguments which Microsoft puts forward in the first three parts of the first plea. It will consider finally the fourth part of the plea.

a) The necessary conditions for a finding of abusive tying

Arguments of the parties

842. Microsoft refers to recital 794 to the contested decision and asserts that the Commission based its finding that there was abusive tying in the present case on the following factors:

- first, the tying and tied products are two separate products;

- second, the undertaking concerned is dominant in the market for the tying product;

- third, the undertaking concerned does not give customers a choice to obtain the tying product without the tied product; and

- fourth, the practice in question forecloses competition.

843. The applicant refers to recital 961 to the contested decision and observes that the Commission also took into account the fact that the tying was not objectively justified.

844. Microsoft asserts that those various factors depart from the conditions laid down in Article 82(d) EC, in two respects.

845. First, the applicant claims that the Commission replaced the condition that the conclusion of contracts [must be made] subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts' by the condition that the dominant undertaking does not give customers a choice

to obtain the tying product without the tied product'.

846. Second, the Commission is alleged to have added a foreclosure requirement, not expressly provided for in Article 82(d) EC and which is not normally taken into account when assessing the existence of abusive tying. More specifically, the Commission, after acknowledging at recital 841 to the contested decision that the present case was not a classical tying case', based its conclusion that there was a foreclosure effect on a new and highly speculative' theory that the widespread distribution of media functionality in Windows would compel content providers to encode their content in Windows Media format, which would have the effect of excluding all competing media players from the market and would then, indirectly, compel consumers to use only that media functionality.

847. Microsoft further submits that the contested decision is contradictory in that the Commission asserts at recital 792 to the contested decision that the conditions of Article 82(d) EC are satisfied in the present case, while at the same time taking into account conditions which derogate from that provision.

848. ACT claims that the Commission took three different categories of conditions into account in order to find that there had been abusive tying in the present case, namely, first, those laid down in Article 82(d) EC, second, those laid down in Article 82 EC in general and, third, the four conditions set out at recital 794 to the contested decision. ACT contends that, whatever category of conditions is applied, the Commission's appraisal is flawed.

849. The Commission, referring to recital 831 to the contested decision, claims that the tying at issue infringes Article 82 EC generally and Article 82(d) in particular'. It explains that it referred to those two provisions jointly in view of Microsoft's arguments during the administrative procedure and for the avoidance of doubt' and also to avoid semantic debate on the interpretation [of Article 82(d) EC]'. The conditions which the Commission applied in the present case in finding that there was abusive tying are consistent with those recognised in the case-law.

Findings of the Court

850. The Court finds that Microsoft's arguments are purely semantic and cannot be accepted.

851. It is appropriate to recall the way in which the Commission structures its argument relating to bundling in the contested decision.

852. At recital 794 to the contested decision, the Commission states that tying prohibited under Article 82 EC requires the presence of the four factors set out at paragraph 842 above.

853. Next, it examines Microsoft's conduct in the light of those four factors (recitals 799 to 954 to the contested decision).

854. So, the Commission first observes that Microsoft has a dominant position on the client PC operating systems market (recital 799 to the contested decision). The Court notes that Microsoft does not dispute that fact.

855. Second, the Commission says that streaming media players and client PC operating systems are two separate products (recitals 800 to 825 to the contested decision).

856. Third, the Commission states that Microsoft does not give customers the choice of obtaining Windows without Windows Media Player (recitals 826 to 834 to the contested decision).

857. Fourth, the Commission claims that the tying of Windows Media Player forecloses competition in the media players market (recitals 835 to 954 to the contested decision). It observes, in particular, that in classical tying cases both it and the Community Courts considered the foreclosure effect for competing vendors to be demonstrated by the bundling of a separate product with the dominant product' (recital 841 to the contested decision). The Commission states, however, that in the present

case there are good reasons not to assume without further analysis that tying Windows Media Player constitutes conduct which by its very nature is liable to foreclose competition (ibid.). The Commission considers, in essence, that tying [Windows Media Player] with the dominant Windows makes [Windows Media Player] the platform of choice for complementary content and applications which in turn [creates a risk of] foreclosing competition in the market for media players' (recital 842 to the contested decision). Furthermore, [t]his has spillover effects on competition in related products such as media encoding and management software (often server-side), but also in client PC operating systems for which media players compatible with quality content are an important application' (ibid.).

858. Last, the Commission examines the basis on which Microsoft relies in its attempt to demonstrate that the abusive conduct imputed to it is objectively justified (recitals 955 to 970 to the contested decision).

859. The Court considers that the Commission's analysis of the constituent elements of bundling is correct and that it is consistent both with Article 82 EC and with the case-law. The Commission was correct to rely on the factors set out at recital 794 to the contested decision and on the fact that the tying was without objective justification in deciding whether Microsoft's conduct constituted abusive tying. Those factors can be deduced both from the very concept of bundling and from the case-law (see, in particular, Case T30/89 Hilti v Commission [1991] ECR II1439, upheld in Case C53/92 P Hilti v Commission [1994] ECR I667 (both cases being referred to below as Hilti ') and judgments of the Court of First Instance and the Court of Justice in Tetra Pak II , paragraph 293 above).

860. It must be borne in mind that the list of abusive practices set out in the second paragraph of Article 82 EC is not exhaustive and that the practices mentioned there are merely examples of abuse of a dominant position (see, to that effect, Case C-333/94 P Tetra Pak II , paragraph 293 above, paragraph 37). It is settled case-law that the list of practices contained in that provision is not an exhaustive enumeration of the abuses of a dominant position prohibited by the EC Treaty (Case 6/72 Europemballage and Continental Can v Commission [1973] ECR 215, paragraph 26, and Compagnie maritime belge transports and Others v Commission , paragraph 229 above, paragraph 112).

861. It follows that bundling by an undertaking in a dominant position may also infringe Article 82 EC where it does not correspond to the example given in Article 82(d) EC. Accordingly, in order to establish the existence of abusive bundling, the Commission was correct to rely in the contested decision on Article 82 EC in its entirety and not exclusively on Article 82(d) EC.

862. In any event, the Court holds that the constituent elements of abusive tying identified by the Commission at recital 794 to the contested decision coincide effectively with the conditions laid down in Article 82(d) EC.

863. The Court thus rejects Microsoft's argument that in the present case the Commission applied conditions which differ, from two perspectives, from those laid down in Article 82(d) EC.

864. In the first place, when the Commission states that it is necessary to examine whether the dominant undertaking does not give customers a choice to obtain the tying product without the tied product', it is merely expressing in different words the concept that bundling assumes that consumers are compelled, directly or indirectly, to accept supplementary obligations', such as those referred to in Article 82(d) EC.

865. In the present case, as the Court will explain in greater detail at paragraphs 962 and 965 below, that coercion is mainly applied first of all to OEMs, who then pass it on to the end user. The end user is directly exposed to that coercion in the less frequent situation in which, rather than deal through an OEM, he acquires a Windows client PC operating system directly from a retailer.

866. In the second place, it cannot be claimed that the Commission introduced a new condition relating to the foreclosure of competitors from the market in order to establish the existence of abusive bundling within the meaning of Article 82(d) EC.

867. In that regard, the Court observes that, while it is true that neither that provision nor, more generally, Article 82 EC as a whole contains any reference to the anti-competitive effect of bundling, the fact remains that, in principle, conduct will be regarded as abusive only if it is capable of restricting competition (see, to that effect, Case T203/01 Michelin v Commission [2003] ECR II4071 (Michelin II '), paragraph 237).

868. Furthermore, as will be made explicit at paragraphs 1031 to 1058 below, the applicant cannot claim that the Commission relied on a new and highly speculative theory to reach the conclusion that a foreclosure effect exists in the present case. As indicated at recital 841 to the contested decision, the Commission considered that, in light of the specific circumstances of the present case, it could not merely assume, as it normally does in cases of abusive tying, that the tying of a specific product and a dominant product has by its nature a foreclosure effect. The Commission therefore examined more closely the actual effects which the bundling had already had on the streaming media player market and also the way in which that market was likely to evolve.

869. In light of the foregoing, the Court considers that the question of the bundling must be assessed by reference to the four conditions set out at recital 794 to the contested decision (see paragraph 842 above) and to the condition relating to the absence of objective justification.

870. The second condition set out at recital 794 to the contested decision must be considered to be met, because it is common ground that Microsoft has a dominant position on the market for what is alleged to be the tying product, namely client PC operating systems. The arguments which Microsoft puts forward in relation to the first three parts of the first plea (see paragraph 839 above) will be examined in conjunction with the four other conditions which must be satisfied to substantiate the finding of abusive tying. In carrying out that examination, the Court will proceed as follows. First, it will examine the condition relating to the existence of two separate products in the light of the arguments advanced by Microsoft on the second and third parts of the plea. Second, it will examine the condition to the effect that the conclusion of contracts is made subject to supplementary obligations, in the light of the arguments which Microsoft puts forward in support of the third part of the plea. Third, the Court will analyse the condition relating to the restriction of competition on the market in the light of the submissions made by Microsoft in connection with the first part of the plea. Fourth, it will examine the objective justifications on which the applicant relies, taking into account the arguments which it puts forward in connection with the second part of the plea.

871. The fourth part, relating to the alleged failure to take into account the obligations imposed on the Communities by the TRIPS Agreement, will then be examined.

b) The existence of two separate products

Contested decision

872. The Commission deals with this first condition at recitals 800 to 825 to the contested decision. Its analysis comes under three heads. In the first place, it takes particular care to demonstrate that streaming media players and client PC operating systems are separate products (recitals 800 to 813 to the contested decision). In the second place, it rejects Microsoft's argument that it began to bundle its media player technology with its Windows operating system before 1999 (recitals 814 to 820 to the contested decision). In the third place, it rejects Microsoft's argument that bundling a streaming media player with an operating system is normal commercial practice (recitals 821 to 824 to the contested decision).

873. Under the first head of its analysis, the Commission explains, first, that, according to the case-law, the fact that there are independent manufacturers who specialise in the manufacture of the tied product indicates the existence of separate consumer demand and therefore of a distinct market for the tied product (recital 802 to the contested decision). The Commission therefore considers that the distinctness of products for the purposes of an analysis under Article 82 EC must be assessed in the light of consumer demand, in the sense that if there is no separate demand for what is alleged to be a tied product the products at issue are not distinct (recital 803 to the contested decision).

874. Second, the Commission observes that the market provides media players separately' and that there are vendors who develop and supply media players on a standalone basis, separately from operating systems (recital 804 to the contested decision).

875. Third, the Commission refers to Microsoft's practice of developing and distributing versions of Windows Media Player for Apple's Mac and Sun's Solaris operating systems (recital 805 to the contested decision). It also notes that Microsoft releases upgrades of its media player, distinct from Windows operating system releases or upgrades (recital 804 to the contested decision).

876. Fourth, the Commission states that a not insignificant number of consumers choose to obtain media players separately from their operating system, including RealPlayer from RealNetworks, which does not develop or sell operating systems (ibid.).

877. Fifth, the Commission points out that some operating system users will not need or want a media player (recital 807 to the contested decision).

878. Sixth, the Commission rejects Microsoft's argument that there is no material demand for operating systems without media player technologies (recital 809 to the contested decision).

879. Seventh, the Commission observes that Microsoft engages in specific promotions of Windows Media Player, independent of the operating system (recital 810 to the contested decision).

880. Eighth, the Commission explains that client PC operating systems and streaming media players are also different in terms of their functionalities (recital 811 to the contested decision).

881. Ninth, the Commission states that the two products involve' different industry structures, as may be seen from the fact that Microsoft still has some competitors on the media players market, whereas its competitors on the client PC operating systems market are insignificant (recital 812 to the contested decision). The price points of the two products are also different (ibid.).

882. Tenth, the Commission explains that Microsoft applies software developer's kit licences (SDK licences') which differ according to whether the software developer's kit (SDK') relates to the Windows operating systems or the Windows Media technologies (recital 813 to the contested decision).

883. Under the second head of its analysis, the Commission asserts that Microsoft's argument that its media player technology has been bundled with Windows since 1992 cannot affect the Commission's conclusion that there are two separate products. It states, in particular, that it takes issue with Microsoft's conduct at a juncture where tying became more harmful than it had previously been', and observes, in that regard, that in 1999 Microsoft tied a product (WMP 6) which matched other vendors' products in the essential functionality that many customers came to expect from a media player (media streaming over the Internet) and with which Micro soft had entered the market for streaming media players in 1998' (recital 816 to the contested decision). The Commission also observes that the first streaming media player which Microsoft distributed together with Windows, in 1995, was RealNetworks' RealAudio Player, as at the time Microsoft did not yet have a viable' streaming media player (recital 817 to the contested decision). The Commission states that the RealAudio Player software code could be fully uninstalled (ibid.).

884. Under the third head of its analysis, the Commission refutes Microsoft's argument that bundling a streaming media player with a client PC operating system is normal commercial practice. First, that argument does not take account of the fact that there are independent suppliers of the tied product; second, Sun and the Linux vendors do not bundle their own media players but third-party media players; and, third, none of those operating system vendors links the media player with the operating system in such a way that it cannot be uninstalled (recitals 821 to 823 to the contested decision).

Arguments of the parties

885. In the first place, Microsoft, supported by CompTIA, DMDsecure and Others, ACT, TeamSystem, Mamut and Exor, claims that the contested decision does not establish that Windows and its media functionality belong to two separate product markets.

886. The media functionality in question is a long-standing feature of the Windows operating system'. In Windows, the software code that permits users to play audio and video content is no different from the code that permits them to access other types of information, such as text or graphics. Furthermore, other parts of Windows and of third-party applications running on top of the Windows operating system call on the same software code.

887. Microsoft takes issue with the fact that in the contested decision the Commission considers only the question whether what it alleges to be the tied product, namely media functionality, is available separately from what it alleges to be the tying product, namely the client PC operating system. In reality, the appropriate question is whether the tying product is regularly offered without the tied product. In fact, there is no real consumer demand for a client PC operating system without media functionality and no operator therefore markets such a system.

888. Microsoft submits that the Commission punishes dominant undertakings which improve their products by integrating new features in them, when it requires that such features be made removable whenever a third party markets a standalone product that provides the same or similar functionalities.

889. Furthermore, the position adopted by the Commission is even less acceptable, because the alleged abuse is not the result of the integration of media functionality in Windows - which goes back to 1992 and has been the subject of continuous improvement - but of the improvement which Microsoft made to that functionality in 1999, when it added its own streaming capability. In other words, the Commission challenges the presence of media functionality in Windows only in so far as it permits audio and video content found on the Internet to be played before it is completely downloaded.

890. Microsoft also claims that all the other major client PC operating systems, namely Mac OS, Linux, OS/2 and Solaris, contain media functionality capable of playing content streamed over the Internet. Its competitors all consider that the integration of such functionality in client PC operating systems is normal commercial practice that responds to consumer demand. That shows that streaming capability is a natural feature' in client PC operating systems and not a separate product. In that regard, Microsoft emphasises that a product should be defined primarily in terms of customer expectations and demands'. As stated at recital 824 to the contested decision, however, the Commission appears to accept that customers do in fact want operating systems to have media functionality.

891. Microsoft further submits that the Commission expressly recognises, at recital 1013 to the contested decision, that it would not have committed an abuse if it had in 1999 offered two versions of Windows at the same price, namely one with Windows Media Player and the other without it. However, there is no evidence that there would have been any demand for a version of Windows that, at the same price, contained fewer features. That lack of demand also shows that Windows with media functionality' is a single product.

892. Furthermore, Microsoft, supported on this point by DMDsecure and Others and ACT, asserts that the Commission cannot rely on Tetra Pak II , paragraph 293 above, and Hilti , paragraph 859 above, to substantiate its argument that Windows and its media functionality belong to two separate product markets. First of all, those cases concerned consumable products which were used with durable equipment over the lifetime of that durable equipment and which were physically separate'. In those two cases, unlike in the present case, there was evidence of demand for the tying product without the tied product. In the present case, moreover, the Commission has never identified a customer wishing to obtain what is alleged to be the tying product without what is alleged to be the tied product.

893. Last, Microsoft takes issue with certain arguments put forward by the Commission in the defence to demonstrate that Windows is a separate product from Windows Media Player. First, it submits that the United States courts never found that Windows Media Player belonged to a separate market from the market to which the Windows operating system belonged. Second, it contends that the fact that it releases versions of Windows Media Player separately from Windows does not demonstrate the existence of demand for Windows without Windows Media Player. In addition, those versions of Windows Media Player are in fact merely updates of the media functionality present in Windows. Third, the Commission's assertion that the files that constitute Windows Media Player are readily identifiable is irrelevant. In any event, that assertion is incorrect.

894. Microsoft also asserts that the Commission has not demonstrated that the media functionality is not linked, by its nature or according to commercial usage, to the client PC operating systems.

895. The applicant claims that the integration of media functionality is a natural step' in the evolution of those operating systems, as may be seen from the fact that all vendors of operating systems include such functionality in their products. Microsoft is constantly seeking to improve Windows in response to technological advances and to changes in consumer demand, and Windows and other client PC operating systems have evolved over time to support an increasingly wider range of file types. For software developers and consumers, there is no fundamental difference between files that contain text or graphics and files that contain audio or video. In reality, a modern operating system is expected to support both types of files.

896. Operating systems and media functionalities have also become strongly connected' by commercial usage. The applicant integrated media functionality in Windows in 1992 and has steadily improved that functionality since then. The streaming capability which it added in 1999 was just one of the many capabilities [which it] added to keep pace with rapid changes in technology'.

897. Last, Microsoft contends that the Commission cannot rely on the Court of Justice's statement, at paragraph 37 its judgment in Tetra Pak II , paragraph 293 above, that even where tied sales of two products are in accordance with commercial usage, such sales may still constitute abuse within the meaning of Article 82 EC unless they are objectively justified. Unlike the situation in Tetra Pak II , suppliers of third-party media players are not excluded from the market by the presence of media functionality in Windows.

898. In the reply, Microsoft further contends that the Commission's argument that an undertaking in a dominant position may be deprived of the right to adopt a course of conduct which would be unobjectionable if it were adopted by an non-dominant undertaking, and that it is not permissible to refer to industry practice in certain circumstances, is irrelevant to the issue whether the Commission has demonstrated that the conditions laid down in Article 82(d) EC were satisfied.

899. The Commission, supported by SIIA, disputes Microsoft's assertion that the contested decision does not establish that Windows and its media functionality' belong to two separate markets.

900. The Commission makes the preliminary observation that Microsoft's argument rests on a diffuse

notion of media functionality'. What Microsoft calls media functionality' is not one general, indivisible block of code. In practice, Microsoft itself draws a distinction between the underlying media infrastructure of the operating system, which acts as a platform for media applications and provides basic system services to the rest of the operating system, and the media player application which runs on top of the operating system and which decodes, decompresses and plays digital audio and video files downloaded or streamed over the Internet: the Commission gives the example of Microsoft's product Windows XP Embedded'. The Commission emphasises that the contested decision is concerned with Microsoft's tying of the streaming media application Windows Media Player and not with the underlying media infrastructure.

901. The Commission refers to recital 802 to the contested decision and submits that the Community Courts have held that the existence of independent manufacturers which specialise in the manufacture of the tied product indicated a separate consumer demand and therefore a distinct market for the tied product. The distinction that Microsoft draws between the present case and Tetra Pak II and Hilti , on the basis that the latter cases concerned consumables that were physically separate from the equipment with which they were used, lacks conviction. The judgments delivered in those cases, paragraphs 293 and 859 above, cannot be interpreted as meaning that the application of Article 82 EC must be limited to the tying of consumables.

902. The Commission disputes Microsoft's assertion that it ought, rather, to have considered whether there was a demand for the tying product without the tied product, which in the Commission's submission amounts to an incorrect claim that complementary products cannot constitute two separate products for the purposes of Article 82 EC. The United States courts have rejected similar arguments which Microsoft had raised before them and have consistently held that there was a separate market for Intel-compatible client PC operating systems and excluded middleware' products (which include Windows Media Player) from that market.

903. The Commission also maintains that Microsoft's commercial practice of developing and distributing versions of Windows Media Player for Apple's Mac and Sun's Solaris operating systems, and even for non-PC platforms - notably television decoders - provides further indication that client PC operating systems and media players are not just parts of the same product (recital 805 to the contested decision). Likewise, Microsoft releases upgrades of Windows Media Player distinct from Windows operating systems releases or upgrades, engages in promotion specifically dedicated to Windows Media Player and applies different SDK licence agreements depending on whether the SDK concerns Windows or Windows Media technologies (recitals 805 and 813 to the contested decision).

904. Furthermore, particular importance should be attached to the role of OEMs, which, in their relationships with software vendors, act as intermediaries on behalf of end users and provide them with an out-of-the-box' product, by combining hardware, client PC operating system and applications for which there is demand (recitals 68 and 119 to the contested decision). The great majority (75%) of Microsoft's sales of client PC operating systems are made through OEMs and the fact that consumers want to find a media player pre-installed on their computers is no reason for Microsoft to tie its own media player with its PC operating system. OEMs could meet such consumer demand by adding a media player to the client PCs which they sell, just as they offer the possibility of other software applications being included. Microsoft's argument that there is no demand for a Windows operating system without a media player ignores the role thus played by OEMs.

905. The evidence in the Commission's possession shows that users of operating systems do not necessarily want those systems to have a streaming media player (recital 807 to the contested decision) and that, to the extent that they do, their demand for streaming media players is distinct from the demand [for] operating systems'.

906. The Commission refers to recitals 814 to 820 to the contested decision and submits that Microsoft's

assertion that the alleged abuse is the result of the improvement which it made to its media functionality in 1999 is misleading.

907. In response to Microsoft's arguments that other operating system vendors are doing exactly the same as it does, the Commission observes that tying practices have a different impact depending on whether or not they are engaged in by a dominant undertaking. Furthermore, some operating system vendors, such as Sun and Linux distributors, do not bundle their own media player with their operating system but bundle a different media player offered by independent suppliers, and they do not link the media player concerned with their operating system in such a way that it is impossible to remove it (recitals 822 and 823 to the contested decision).

908. The Commission denies having acknowledged, at recital 1013 to the contested decision or anywhere else in that decision, that Microsoft would not have committed an abuse if in 1999 it had offered, at the same price, two versions of Windows, one with and the other without Windows Media Player. Should Microsoft now decide to sell the unbundled version of Windows at the same price as the bundled version, the Commission would examine that price by reference to the present market situation and in the light of Microsoft's obligation to refrain from any measure having an equivalent effect to tying and, if necessary, adopt a new decision pursuant to Article 82 EC.

909. Last, the Commission disputes Microsoft's assertion that it has not been shown that media functionality is not linked, by its nature or according to commercial usage, to client PC operating systems.

910. The Commission refers to recital 961 to the contested decision and observes that a dominant undertaking may be deprived of the right to adopt a course of conduct which would be unobjectionable if it were adopted by a non-dominant undertaking. The Court of Justice held in Tetra Pak II , paragraph 293 above, that even if tied sales of two products are in accordance with commercial usage, they may none the less constitute abuse within the meaning of Article 82 EC unless they are objectively justified. In the Commission's submission, it is tautological' to refer to commercial usage or practice in an industry that is 95% controlled by Microsoft; and it is established case-law that reference to industry practice in a market where competition is already restricted by the very presence of a dominant undertaking is not admissible.

911. Last, the Commission disputes Microsoft's argument that the integration of media functionality in Windows client PC operating systems forms part of a natural evolution. Microsoft was unable to develop a streaming media player using its own technology and it was only after it acquired VXtreme in 1997 that it was able to create a media player capable of competing with RealNetworks' player. The Commission also refers to an email sent to Mr Gates in January 1997 by Mr Bay, a Microsoft executive, in which the latter proposed to reposition [the] streaming media battle from NetShow vs. Real to Windows vs. Real' and to follow the [Internet Explorer] strategy wherever appropriate'.

Findings of the Court

912. Microsoft contends, in substance, that media functionality is not a separate product from the Windows client PC operating system but forms an integral part of that system. As a result, what is at issue is a single product, namely the Windows client PC operating system, which is constantly evolving. In Microsoft's submission, customers expect that any client PC operating system will have the functionalities which they perceive as essential, including audio and video functionalities, and that those functionalities will be constantly updated.

913. The Court notes, by way of preliminary observation, that the IT and communications industry is an industry in constant and rapid evolution, so that what initially appear to be separate products may subsequently be regarded as forming a single product, both from the technological aspect and from the aspect of the competition rules.

914. It is by reference to the factual and technical situation that existed at the time when, according to the Commission, the impugned conduct became harmful, and therefore the period after May 1999, that the Court must assess whether the Commission was correct to find that streaming media players and client PC operating systems constituted two separate products.

915. The Court must thus ascertain whether the Commission was correct to conclude in the contested decision that when, from May 1999, Microsoft released the version of Windows incorporating Windows Media Player, that conduct involved the bundling of two separate products for the purposes of Article 82 EC.

916. The Court notes, by way of further preliminary observation, that, as the Commission correctly explains, the argument which Microsoft puts forward in connection with the bundling of Windows and Windows Media Player relies to a large extent on the vague concept of media functionality. In that regard, it must be emphasised that it is clear from the contested decision that, so far as that issue is concerned, the impugned conduct concerns only the application software that is Windows Media Player, to the exclusion of any other media technology included in the Windows client PC operating system (see, in particular, recitals 1019 and 1020 to the contested decision). As the Commission and the parties intervening in its support observed in their pleadings and at the hearing, Microsoft itself differentiates, in its technical documentation, the files which constitute Windows Media Player from the other media files, in particular those relating to the basic media infrastructure of the operating system. It is also appropriate to mention the example of the Microsoft product called Windows XP Embedded, referred to at recitals 1028 to 1031 to the contested decision and discussed at the hearing. From the technical aspect, that product is a genuine client PC operating system, but Microsoft's licensing conditions limit its use to certain specialised machines, such as bank automatic teller machines and decoders. The particular feature of that product is that it enables IT engineers to select the components of the operating system. In order to do so, they use a tool called Target Designer' to access a menu of the components which they can include in, or exclude from, their operating systems. Those components specifically include Windows Media Player. Furthermore, the menu contains separate entries for the media infrastructure and for the media applications, and Windows Media Player is expressly included among the latter applications.

917. First of all, it must be observed that, as the Commission correctly states at recital 803 to the contested decision, the distinctness of products for the purpose of an analysis under Article 82 EC has to be assessed by reference to customer demand. Furthermore, Microsoft clearly shares that opinion (see paragraph 890 above).

918. The Commission was also correct to state, at the same recital, that in the absence of independent demand for the allegedly tied product, there can be no question of separate products and no abusive tying.

919. Microsoft's argument that the Commission thus applied the wrong test and that it ought in reality to have ascertained whether what was alleged to be the tying product was regularly offered without the tied product or whether customers want[ed] Windows without media functionality' cannot be accepted.

920. In the first place, the Commission's argument finds support in the case-law (see, to that effect, Case C333/94 P Tetra Pak II , paragraph 293 above, paragraph 36; Case T30/89 Hilti , paragraph 859 above, paragraph 67; and Case T83/91 Tetra Pak II , paragraph 293 above, paragraph 82).

921. In the second place, as the Commission correctly observes in its pleadings, Microsoft's argument, based on the concept that there is no demand for a Windows client PC operating system without a streaming media player, amounts to contending that complementary products cannot constitute separate

products for the purposes of Article 82 EC, which is contrary to the Community case-law on bundling. To take Hilti , for example, it may be assumed that there was no demand for a nail gun magazine without nails, since a magazine without nails is useless. However, that did not prevent the Community Courts from concluding that those two products belonged to separate markets.

922. In the case of complementary products, such as client PC operating systems and application software, it is quite possible that customers will wish to obtain the products together, but from different sources. For example, the fact that most client PC users want their client PC operating system to come with word-processing software does not transform those separate products into a single product for the purposes of Article 82 EC.

923. Microsoft's argument ignores the particular intermediary role played by OEMs, who combine hardware and software from different sources in order to offer a ready-to-use PC to the end user. As the Commission very correctly observes at recital 809 to the contested decision, if OEMs and consumers were able to obtain Windows without Windows Media Player, that would not mean that they would choose to obtain Windows without a streaming media player. OEMs follow consumer demand for a pre-installed media player on the operating system and offer a software package including a streaming media player that works with Windows, the difference being that that player would not necessarily be Windows Media Player.

924. In the third place, and in any event, Microsoft's argument cannot succeed because, as the Commission observes at recital 807 to the contested decision, there exists a demand for client PC operating systems without streaming media players, for example by companies afraid that their staff might use them for non-work-related purposes. That fact is not disputed by Microsoft.

925. Next, the Court finds that a series of factors based on the nature and technical features of the products concerned, the facts observed on the market, the history of the development of the products concerned and also Microsoft's commercial practice demonstrate the existence of separate consumer demand for streaming media players.

926. In the first place, it must be borne in mind that the Windows client PC operating system is system software while Windows Media Player is application software. As the Commission explains at recital 37 to the contested decision, [s]ystem software controls the hardware of the computer, to which it sends instructions on behalf of applications fulfilling a specific user need, such as word processing', and [o]perating systems are system software products that control the basic functions of a computer and enable the user to make use of such a computer and run application software on it'. More generally, it is clear from the description of those products at recitals 324 to 342 and 402 to 425 to the contested decision that client PC operating systems and streaming media players clearly differ in terms of functionalities.

927. In the second place, there are distributors who develop and supply streaming media players on an autonomous basis, independently of client PC operating systems. Thus, Apple supplies its QuickTime player separately from its client PC operating systems. A further particularly convincing example is that of RealNetworks, Microsoft's main competitor on the streaming media players market, which neither develops nor sells client PC operating systems. It must be pointed out, in that regard, that according to the case-law the fact that there are on the market independent companies specialising in the manufacture and sale of the tied product constitutes serious evidence of the existence of a separate market for that product (see, to that effect, Case C333/94 P Tetra Pak II , paragraph 293 above, paragraph 36; Case T30/89 Hilti , paragraph 859 above, paragraph 67; and Case T83/91 Tetra Pak II , paragraph 293 above, paragraph 82).

928. Likewise, in the third place, Microsoft, as it confirmed in answer to a written question put by the Court, develops and markets versions of Windows Media Player which are designed to work

with its competitors' client PC operating systems, namely Apple's Mac OS X and Sun's Solaris. Similarly, RealNetworks' RealPlayer works with, inter alia, the Windows, Mac OS X, Solaris and some UNIX operating systems.

929. In the fourth place, Windows Media Player can be downloaded, independently of the Windows client PC operating system, from Microsoft's Internet site. Likewise, Microsoft releases upgrades of Windows Media Player, independently of releases or upgrades of its Windows client PC operating system.

930. In the fifth place, Microsoft engages in promotions specifically dedicated to Windows Media Player (see recital 810 to the contested decision).

931. In the sixth place, as the Commission pertinently observes at recital 813 to the contested decision, Microsoft offers SDK licences which differ according to whether they relate to the Windows client PC operating system or to Windows Media technologies. There is thus a specific SDK licence for Windows Media Player.

932. Last, and in the seventh place, in spite of the bundling applied by Microsoft, a not insignificant number of customers continue to acquire media players from Microsoft's competitors, separately from their client PC operating system, which shows that they regard the two products as separate.

933. The foregoing facts demonstrate to the requisite legal standard that the Commission was correct to conclude that client PC operating systems and streaming media players constituted two separate products for the purposes of Article 82 EC.

934. That conclusion is not undermined by Microsoft's other arguments.

935. In the first place, as regards Microsoft's argument that the integration of Windows Media Player in the Windows operating system from May 1999 constitutes a normal and necessary step in the evolution of that system and is in keeping with the constant improvement of its media functionality, it is sufficient to observe that the fact that tying takes the form of the technical integration of one product in another does not have the consequence that, for the purpose of assessing its impact on the market, that integration cannot be qualified as the bundling of two separate products.

936. As Microsoft itself acknowledged in answer to a question put to it by the Court at the hearing, its decision to supply WMP 6 as a functionality integrated in the Windows operating system from May 1999 was not the consequence of a technical constraint. At that time there was nothing to prevent Microsoft from distributing WMP 6 in the same way as it had distributed its previous player, NetShow, which since June 1998 had been included on the Windows 98 installation CD: and none of the four Windows 98 default installations provided for the installation of NetShow, which had to be installed by users if they wished to use it.

937. Furthermore, Microsoft's argument that the integration of Windows Media Player in the Windows operating system was dictated by technical reasons is scarcely credible in the light of the content of certain of its own internal communications. Thus, it follows from Mr Bay's email of 3 January 1999 to Mr Gates (see paragraph 911 above) that the integration of Windows Media Player in Windows was primarily designed to make Windows Media Player more competitive with RealPlayer by presenting it as a constituent part of Windows and not as application software that might be compared with RealPlayer.

938. In the second place, Microsoft cannot claim that the Commission fails to show that media functionality is not linked, by nature or according to commercial usage, to client PC operating systems.

939. First, it follows from the considerations set out at paragraphs 925 to 932 above that client PC operating systems and streaming media players do not, by their nature, constitute indissociable

products. While it is true that there is a link between a client PC operating system such as Windows and application software such as Windows Media Player, in the sense that both products are on the same computer from the user's perspective and that a media player will only work when an operating system is present, that does not mean that the two products are not dissociable in economic and commercial terms for the purpose of competition rules.

940. Second, as the Commission rightly observes, it is difficult to speak of commercial usage in an industry that is 95% controlled by Microsoft.

941. Third, Microsoft cannot rely on the fact that vendors of competing client PC operating systems also bundle those systems with a streaming media player. On the one hand, Microsoft has not adduced any evidence that such bundling was already carried out by its competitors at the time when the abusive bundling commenced. On the other hand, moreover, it is clear that the commercial conduct of those competitors, far from invalidating the Commission's argument, corroborates it. As may be seen from recitals 822 and 823 to the contested decision and as the Commission observes in its pleadings, some vendors of non-Microsoft operating systems who supply their operating systems with a media player make the installation of the media player optional, or allow it to be uninstalled, or offer a selection of different media players.

942. Fourth, and in any event, it is settled case-law that even when the tying of two products is consistent with commercial usage or when there is a natural link between the two products in question, it may none the less constitute abuse within the meaning of Article 82 EC, unless it is objectively justified (Case C-333/94 P Tetra Pak II , paragraph 293 above, paragraph 37).

943. Finally, in the third place, the argument which Microsoft put forward at the hearing, that the unbundled version of Windows which it placed on the market pursuant to the remedy had met with no success, must also be rejected. As already stated at paragraph 260 above, the lawfulness of a Community measure must be assessed on the basis of the matters of fact and of law existing at the time when the measure was adopted. Furthermore, any doubts as to the effectiveness of the remedy ordered by the Commission do not in themselves prove that its finding as to the existence of two separate products is wrong.

944. The Court concludes from all of the foregoing considerations that the Commission was correct to find that client PC operating systems and streaming media players constituted separate products.

c) Consumers are unable to choose to obtain the tying product without the tied product

Contested decision

945. At recitals 826 to 834 to the contested decision, the Commission seeks to demonstrate that the third condition necessary for a finding of abusing bundling, namely the condition relating to coercion, is satisfied in the present case, in that Microsoft does not give consumers the option of obtaining the Windows client PC operating system without Windows Media Player.

946. In the first place, the Commission states that the OEMs who license the Windows operating system from Microsoft for pre-installation on a client PC are direct addressees' of that coercion and pass it on to end-users (recital 827 to the contested decision). It explains that under Microsoft's licensing system, OEMs must license the Windows operating system with Windows Media Player pre-installed. In effect, Microsoft does not license Windows without Windows Media Player. OEMs who wish to install a different media player on Windows can do so only by adding it to Windows Media Player. At recital 829 to the contested decision, the Commission adds that there are no technical means of uninstalling Windows Media Player.

947. In the second place, the Commission asserts that the United States settlement does not alter that situation, since [r]emoval of end-user access does not restore the choice of Microsoft's customers

as to whether to acquire Windows without [Windows Media Player]' (recital 828 to the contested decision).

948. In the third place, the Commission considers that Microsoft cannot rely on the fact that consumers are not required to pay extra for Window Media Player, since Article 82(d) EC makes no mention of paying' where it refers to supplementa[ry] obligations' (recital 831 to the contested decision). Furthermore, the price of Windows Media Player is probably hidden' in the overall price for the bundle of Windows and Windows Media Player (footnote 971 to the contested decision).

949. In the fourth place, the Commission observes that there is no suggestion in the language of Article 82 EC that consumers must be compelled to use the tied' product. It submits that, in so far as the tied sale gives rise to a risk that competition will be restricted, it is immaterial whether consumers are forced to buy or use Windows Media Player (recitals 832 and 833 to the contested decision).

Arguments of the parties

950. Microsoft, supported by CompTIA, DMDsecure and Others, ACT, TeamSystem, Mamut and Exor, claims that the question of supplementary obligations' within the meaning of Article 82(d) EC does not arise in the present case.

951. In support of that assertion, Microsoft submits, first of all, that consumers are not required to pay anything extra for the media functionality of Windows. Media functionality is a feature of Windows and is included in the overall price of the operating system. Unlike the situation in Hoffmann-La Roche v Commission , paragraph 664 above, and Hilti , Microsoft does not impose any financial disadvantage that might discourage consumers from using its competitors' products.

952. Nor are consumers required to use the media functionality in Windows. They can even use the Set Program Access & Defaults' function in Windows, which Microsoft created pursuant to the United States settlement, confirmed by decision of the District Court of 1 November 2002, to remove all end-user access to that functionality and set a competing media player as the default handler of various media file types.

953. Last, Microsoft contends that, unlike in Tetra Pak II and Hilti , consumers are not prevented from installing and using third-party media players instead of, or in addition to, the media functionality in Windows. At recital 860 to the contested decision, moreover, the Commission notes that consumers use on average 1.7 media players each month and states that that figure is increasing.

954. In the reply, Microsoft further submits that the Commission's argument has the consequence of depriving Article 82 EC of its useful effect. If the Commission's argument were to be accepted, it would have the consequence of eliminating the requirement of coercion' as an element of abusive tying, which would be contrary to sound economic principles.

955. The Commission submits that the arguments which Microsoft puts forward in support of its proposition that the question of supplementary payments' within the meaning of Article 82(d) EC does not arise in the present case have already been rejected at recitals 826 to 834, 960 and 961 to the contested decision. Those arguments find no support in the case-law and would deprive Article 82 EC of its useful effect. Coercion exists when a dominant undertaking deprives its customers of the realistic choice of buying the tying product without the tied product.

956. Article 82(d) EC makes no mention of payment'. By its arguments, Microsoft suggests that there can be no question of harm to competition where a dominant undertaking charges a uniform price, rather than two separate prices, for two products or imposes a product on consumers without charging a supplement. Microsoft is thus confusing the question of coercion and the question of harm to competition.

957. Nor, in the Commission's submission, does it follow from the wording of Article 82 EC that

customers must be forced to use the tied product or prevented from using competitors' substitutes for the tied product. The question whether or not consumers or suppliers of complementary software and content are likely to use the bundled product at the expense of competing non-bundled products is clearly relevant to the examination of the condition relating to foreclosure of competition.

958. In response to Microsoft's assertion that an average of 1.7 media players are used each month by consumers, the Commission contends that consumers cannot replace Windows Media Player by another media player on their PCs, but can only add a second media player. That average figure of 1.7 must not obscure the fact that Windows Media Player is always pre-installed on Windows PCs.

959. Last, in answer to a written question put by the Court, the Commission stated that the United States settlement did not require Microsoft to suppress end-user access to Windows Media Player but only to hide that access, so that Windows Media Player remained pre-installed and fully active on the PC. OEMs and end users are therefore still compelled to acquire Windows Media Player and Windows simultaneously. Referring to recital 852 to the contested decision, the Commission also maintained, in its answer, that Microsoft had conceived the hiding' mechanism in such a way that Windows Media Player could override the default parameters and reappear when the user accessed media files streamed over the Internet via Internet Explorer.

Findings of the Court

960. Microsoft contends, in essence, that the fact that it integrated Windows Media Player in the Windows client PC operating system does not entail any coercion or supplementary obligation within the meaning of Article 82(d) EC. In support of its argument, it emphasises, in the first place, that customers pay nothing extra for the media functionality of Windows; in the second place, that they are not obliged to use that functionality; and, in the third place, that they are not prevented from installing and using competitors' media players.

961. The Court observes that it cannot be disputed that, in consequence of the impugned conduct, consumers are unable to acquire the Windows client PC operating system without simultaneously acquiring Windows Media Player, which means (see paragraph 864 above) that the condition that the conclusion of contracts is made subject to acceptance of supplementary obligations must be considered to be satisfied.

962. As the Commission correctly states at recital 827 to the contested decision, in most cases that coercion is applied primarily to OEMs, and is then passed on to consumers. OEMs, who assemble client PCs, install on those PCs a client PC operating system provided by a software producer or developed by themselves. OEMs who wish to install a Windows operating system on the client PCs which they assemble must obtain a licence from Microsoft in order to do so. Under Microsoft's licensing system, it is not possible to obtain a licence on the Windows operating system without Windows Media Player. The Court notes, in that regard, that it is common ground that the vast majority of sales of Windows client PC operating systems are made through OEMs, that is to say, by means of licences purchased when a client PC is purchased, while only 10% of sales of those systems are generated by the sale of individual Windows licences.

963. The coercion thus applied to OEMs is not just contractual in nature, but also technical. In effect, it is common ground that it was not technically possible to uninstall Windows Media Player.

964. As OEMs act in their relationships with software producers as intermediaries on behalf of end users, and as they supply end users with an out-of-the-box' PC, the impossibility of acquiring the Windows client PC operating system without simultaneously acquiring Windows Media Player applies ultimately to those users.

965. In the less common case where the end user acquires a Windows client PC operating system directly from a retailer, the abovementioned contractual and technical coercion is applied directly to that end user.

966. The Court considers that the arguments which Microsoft puts forward must be rejected.

967. Thus, in the first place, Microsoft cannot rely on the fact that customers are not required to pay anything extra for Windows Media Player.

968. First, while it is true that Microsoft does not charge a separate price for Windows Media Player, it cannot be inferred that the media player is provided free of charge. As is evident from paragraph 232 of Microsoft's application, the price of Windows Media Player is included in the total price of the Windows client PC operating system.

969. Second, and in any event, it does not follow from either Article 82(d) EC or the case-law on bundling that consumers must necessarily pay a certain price for the tied product in order for it to be concluded that they are subject to supplementary obligations within the meaning of that provision.

970. Nor, in the second place, is it relevant for the purposes of the examination of the present condition that, as Microsoft claims, consumers are not obliged to use the Windows Media Player which they find pre-installed on their client PC and that they can install and use other undertakings' media players on their PCs. Again, neither Article 82(d) EC nor the case-law on bundling requires that consumers must be forced to use the tied product or prevented from using the same product supplied by a competitor of the dominant undertaking in order for the condition that the conclusion of contracts is made subject to acceptance of supplementary obligations to be capable of being regarded as satisfied. For example, as the Commission correctly observes at recital 832 to the contested decision, in Hilti users were not forced to use the Hilti branded nails which they obtained with the Hilti branded nail gun.

971. The Court observes that, as will be explained in greater detail when it examines the condition relating to the restriction of competition on the market due to the bundling in question, first, OEMs are deterred from pre-installing a second streaming media player on client PCs and, second, consumers have an incentive to use Windows Media Player at the expense of competing media players, notwithstanding that the latter players are of better quality.

972. The argument which Microsoft bases on certain measures which it adopted pursuant to the United States settlement (see paragraph 952 above) must also be rejected.

973. First, it was only in November 2001 that that settlement was concluded and only in August and September 2002 that Microsoft adopted the measures required by that settlement concerning middleware (including Windows Media Player); however, the abusive bundling began in May 1999. Furthermore, the United States settlement was concluded for a limited period, until 2007.

974. Second, as the Commission correctly observes at recital 828 to the contested decision, the measures which Microsoft adopted under the United States settlement did not have the consequence of allowing consumers to acquire the Windows client PC operating system without having to acquire Windows Media Player at the same time. Under that settlement, Microsoft was only required to remove the Windows Media Player icon which appeared on the screen and the similar points of access and also to disable the automatic implementation of that player. As Windows Media Player thus remained pre-installed and fully active, OEMs and customers continued to be compelled to acquire both products together. Furthermore, as stated at recital 852 to the contested decision, Microsoft devised the mechanism in such a way that Windows Media Player could override the default setting and reappear when the user used Internet Explorer to access media files streamed over the Internet.

975. It follows from all of the foregoing considerations that the Commission was correct to find that the condition relating to the imposition of supplementary obligations was satisfied in the present case.

d) The foreclosure of competition

Contested decision

976. At recitals 835 to 954 to the contested decision, the Commission analyses the fourth condition necessary for a finding of abusive bundling, namely the condition relating to the foreclosure of competition.

977. The Commission's analysis takes as its starting point recital 841 to the contested decision, which is worded as follows:

There are ... circumstances relating to the tying of [Windows Media Player] which warrant a closer examination of the effects that tying has on competition in this case. While in classical tying cases, the Commission and the Courts considered the foreclosure effect for competing vendors to be demonstrated by the bundling of a separate product with the dominant product, in the case at issue, users can and do to a certain extent obtain third party media players through the Internet, sometimes [free of charge]. There are therefore indeed good reasons not to assume without further analysis that tying [Windows Media Player] constitutes conduct which by its very nature is liable to foreclose competition.'

978. Next, the Commission's reasoning in the contested decision follows three stages.

979. In the first stage, it establishes that the tied sale ensures that Windows Media Player is ubiquitous on client PCs worldwide (recitals 843 to 878 to the contested decision).

980. In that context, first, the Commission observes that the Windows client PC operating system is pre-installed on more than 90% of client PCs shipped worldwide, so that, by bundling Windows Media Player with Windows, Microsoft ensures that its media player is as ubiquitous as Windows on client PCs. Users who find Windows Media Player pre-installed on their client PCs are generally less inclined to use another media player (recitals 843 to 848 to the contested decision).

981. Second, the Commission considers that the option of entering into distribution agreements with OEMs constitutes a less efficient means of obtaining media player distribution than Microsoft's bundling (recitals 849 to 857 to the contested decision).

982. Third, the Commission asserts that neither the downloading of media players from the Internet nor other distribution channels, including the tied sale of a media player with other software or Internet access services and retail sale of media players, can offset Windows Media Player's ubiquity (recitals 858 to 876 to the contested decision).

983. In the second stage, the Commission examines the effects of that bundling on content providers and software developers, and on certain adjacent markets (recitals 879 to 899 to the contested decision). The Commission considers, in substance, that in view of the indirect network effects that obtain in the media player market, the ubiquitous presence of the [Windows Media Player] code provides [that media player] with a significant competitive advantage, which is liable to have a harmful effect on the structure of competition in that market' (recital 878 to the contested decision).

984. In that context, the Commission emphasises, first of all, that it is on the basis of the percentages of installation and use of media players that content providers and software developers choose the technology for which they will develop their complementary software. Those operators tend to develop their solutions on the basis of Windows Media Player, since that enables them to reach all users of Windows, that is, more than 90% of client PC users. Furthermore, once complementary software

is encoded in the proprietary Windows media formats, it will work with competitors' media players only if Microsoft licenses the relevant technology.

985. At recitals 883 to 891 to the contested decision, the Commission examines, more particularly, the situation of content providers. More particularly, since supporting many different technologies generates additional development, infrastructure and administration costs, content providers tend to give priority to a single set of technologies. Furthermore, the fact that a given media player incorporating a number of media technologies is widely installed is an important factor likely to convince content providers to create media content for the technologies used by that player. By supporting the most widely-disseminated media player, content providers maximise the potential reach of their own products. The Commission concludes that the ubiquity of Windows Media Player on Windows client PCs therefore gives Microsoft a competitive advantage unrelated to the intrinsic qualities of its product.

986. At recitals 892 to 896 to the contested decision, the Commission examines the situation of software developers. In substance, software developers have an incentive to create applications designed to run on Windows Media Player alone, rather than on several different platforms, as they can thereby reach virtually all potential users of their products, recover their costs and make the most efficient use of their limited development resources. The Commission emphasises that some results of the 2003 market enquiry show that designing applications which support several media technologies gives rise to additional costs.

987. At recitals 897 to 899 to the contested decision, the Commission states that the ubiquity of Windows Media Player on client PCs has effects on certain adjacent markets, such as the markets for media players on wireless information devices, set-top boxes, DRM (Digital Rights Management) solutions and on-line music delivery.

988. Last, in the third stage, the Commission examines market development in the light of market surveys carried out by Media Metrix, Synovate and Nielsen/NetRatings (recitals 900 to 944 to the contested decision). In substance, the data obtained in those surveys consistently point to a trend in favour of usage of [Windows Media Player] and Windows Media formats to the detriment of the main competing media players (and media player technologies)' (recital 944 to the contested decision).

Arguments of the parties

989. First of all, Microsoft claims that the Commission added a further condition, namely foreclosure, which is not normally taken into account for the purpose of assessing the existence of abusive tying. At recital 841 to the contested decision, the Commission acknowledged that the present case was not a classical tying case' and that there were good reasons not to assume without further analysis that tying [Windows Media Player] constitute[d] conduct which by its very nature [was] liable to foreclose competition'. The Commission then concluded that there was a foreclosure effect, and in reaching that conclusion it relied on a new and highly speculative theory (see paragraph 846 above).

990. Microsoft refers to recital 842 to the contested decision and submits that the Commission's new theory is based on the existence of indirect network effects and on the notion that competition may be foreclosed at some unidentified point in the future if, as a result of the widespread distribution of media functionality in Windows, software developers and content providers have an incentive to design their products solely for Windows Media Player. That theory thus bases a presumption that anti-competitive effects exist on a single prediction about the future conduct of third parties over which Microsoft has no control.

991. Next, Microsoft claims that it took all necessary measures to ensure that the integration

of media functionality in Windows did not have the effect of excluding competing media players from the market. Furthermore, a number of those measures were codified' in the decision of the District Court of 1 November 2002.

992. In support of that argument, Microsoft relies, in the first place, on a series of considerations about the way in which it designs Windows.

993. First, it ensures that the inclusion of media functionality does not interfere with the functioning of third-party media players. It is thus technically possible - and indeed common practice - for a Windows-based client PC to run one or more third-party media players in addition to the media functionality in Windows. Second, third-party media players are easily accessible from the Windows user interface. Third, Microsoft designs Windows in such a way that third-party media players can automatically supply certain aspects of the media functionality that Windows itself is capable of supplying. Fourth, OEMs and consumers can use a dedicated tool created by Microsoft to remove end-user access to Windows Media Player. Fifth, Microsoft facilitates the development of applications that compete with the media functionality in Windows by exposing that functionality through published APIs.

994. In the second place, Microsoft claims that in its agreements with Windows distributors - that is, essentially, OEMs - it ensures that vendors of competing media players retain the possibility of distributing their own products. Thus, it expressly provides that OEMs are free to install whatever software products they please on client PCs running Windows, including media players that compete with Windows Media Player. It also authorises them to offer Internet access by placing icons on the Start' menu and on the Windows desktop, by showing those offers on screen when Windows is started for the first time. In fact, Internet access providers frequently distribute and promote third-party media players.

995. In the third place, Microsoft states that in its contracts with software developers, content providers or anyone else, it never requires them to distribute or otherwise promote Windows Media Player either exclusively or as a fixed percentage of their total distribution of media software.

996. In the fourth place, Microsoft contends that the integration of media functionality into Windows does not prevent the use of third-party media players on Windows or their widespread distribution'. Media players can be distributed by various methods, including pre-installation by OEMs on new client PCs, downloading from the Internet or corporate intranets, inclusion in other developers' software and distribution to users of products and services by content providers or Internet service providers.

997. In the same context, Microsoft states, with reference to an analysis in annex A.24.1 to the application, that a recent survey shows that most OEMs, both in the United States and in Western Europe, install media players that compete with Windows Media Player, such as RealPlayer and QuickTime, on their client PCs. The Commission's assertion that OEMs will not install third-party media players on a client PC unless they can remove Windows Media Player is therefore untrue. Furthermore, even the market data set out in the contested decision show that the use of third-party media players continues to increase, sometimes as much as or more than growth in the use of the media functionality in Windows.

998. Last, Microsoft, supported on this point by ACT, claims that the Commission's foreclosure theory fails to take account of certain relevant factors and that it is based on predictions which are contradicted by the facts. The applicant emphasises that the burden of proof borne by the Commission is particularly heavy when it carries out such a prospective analysis.

999. In the first place, Microsoft submits that the Commission ignored the factors that lead content providers to write to formats other than Windows Media format'. There is no basis for the belief

that it is the extent of distribution of media software associated with a particular format that determines a content provider's choice of the format in which it will encode its products. Microsoft criticises the Commission for not having asked content providers, in the 2003 market enquiry, whether other factors influenced their encoding decisions.

1000. Microsoft criticises the Commission's assertion that content providers bear additional costs when they make their products available in more than one format. The Commission ought to have proved that the costs involved in providing content in an additional format outweigh the benefits of doing so. In reality, the Commission collected, but ignored, evidence that the costs of making content available in a given media format represented an insignificant portion of overall costs. Microsoft refers to recital 894 to the contested decision and further submits that encoding in a second media technology costs only 50% as much as to support the first'. Supported on this point by CompTIA and ACT, the applicant concludes that offering several media formats brings economies of scale and that a second format will be offered even if it is much less popular with users.

1001. Microsoft also submits that even some content providers who rely on only one format did not choose Windows Media, even after the alleged abuse began. Thus, Apple does not use Windows media technology either for its iPod or for its iTunes music store. Furthermore, software developers informed the Commission that they used on average two or three major sets of APIs (Windows, Real or QuickTime)'.

1002. In the reply, Microsoft, supported on this point by DMDsecure and Others, claims, with reference to a report drawn up by one of its experts (annex C.16 to the reply), that media players would be susceptible to tipping' only if (i) users or content providers faced significant costs if they used multiple media players and (ii) media players were perceived as homogeneous with respect to their intrinsic characteristics and the content accessible by such media players. Neither of those two conditions is met in the present case.

1003. In the second place, Microsoft claims that the prediction made at recital 984 to the contested decision that tipping' in favour of Windows Media format will occur in the foreseeable future' is contradicted by the facts and by the evidence in the file, which show that content providers continue to make content available in different formats; that, far from having disappeared from the market, third-party media players are flourishing; and that consumers are not forced to use Windows Media Player.

1004. In that regard, Microsoft observes, first, that the 2003 market enquiry shows that 10 of the 12 content providers who encoded their content in Windows Media format also encoded it in other formats. Thus, numerous content providers continue to use formats developed by Apple, RealNetworks or other producers. A survey of the 1 000 Web sites most visited in the United States between 2001 and 2004 shows that the number of sites with any media content' rose by 47%, whereas the number of sites using RealNetworks' formats rose by 59% and the number of sites using QuickTime formats rose by 79%.

1005. Second, Microsoft asserts that OEMs continue to offer several media players on the PCs which they sell. Thus, in May 2004, the average number of third-party media players installed on home or small office computers sold by the main OEMs was 4.3 on United States models and 2.4 on European models.

1006. Third, Microsoft claims that the average number of media players per person used each month rose from 1.5 at the end of 1999 to 2.1 in 2004. The Commission's contention that the number of users of Windows Media Player is increasing is irrelevant; what matters is whether the number of users of other formats is sufficient for content providers to find it worthwhile to encode their products in those formats. Microsoft also disputes the relevance of the analogy which the Commission draws with Netscape Navigator.

1007. Microsoft further submits that the Commission's foreclosure theory clearly lacks objectivity. It is apparent from the contested decision that that theory applies only where the media functionality bundled with Windows is developed by Microsoft. In particular, the Commission did not apply that theory between 1995 and 1998, when RealNetworks' streaming media player was integrated into Windows.

1008. DMDsecure and Others, ACT, TeamSystem, Mamut and Exor put forward essentially the same arguments as Microsoft.

1009. The Commission first of all recalls the findings made at recital 841 to the contested decision and claims that it follows from earlier well-known cases' that the mere fact that an undertaking in a dominant position bundles a separate product with a dominant product in itself permits the conclusion that there is a foreclosure effect on the market. In the present case, however, the particular features of the market led the Commission to consider that there [were] therefore ... good reasons not to assume without further analysis that tying [Windows Media Player] [constituted] conduct which by its very nature [was] liable to foreclose competition'. The Commission did not conclude that the impugned conduct was not abusive in itself but considered that it must be analysed in its specific market context'. The Commission finds it surprising that Microsoft should criticise it for having taken the trouble to examine the real foreclosure effect created by the tying at issue and contends that the fact that it demonstrated such a foreclosure effect in a case where it is normally presumed does not mean that it applied a new legal theory.

1010. The Commission claims that it found, at the close of its analysis, that Microsoft thus [interfered] with the normal competitive process' (recital 980 to the contested decision) and that there [was] therefore a reasonable likelihood that tying [Windows Media Player] with Windows [would] lead to a lessening of competition so that the maintenance of an effective competition structure [would] not be ensured in the foreseeable future' (recital 984 to the contested decision). Contrary to Microsoft's contention, the Commission did not assert at recital 984 to the contested decision, or at any other point in that decision, that the abusive conduct at issue would lead to the elimination of all third-party media players in the foreseeable future. It demonstrated that Microsoft distort[ed] the choices and incentives of market participants through its tying' and maintains that such a distortion of the competitive process amounts to a restriction of competition within the meaning of the case-law, as it is liable to foreclose competition'. The Commission also analysed the actual foreclosure effects of Microsoft's abusive conduct on the basis of data on the development of the market and submits, with reference to recital 944 to the contested decision, that those data point to a consistent trend in favour of Windows Media Player and the Windows Media formats and confirm that there was already a degree of foreclosure on the market.

1011. Next, the Commission disputes Microsoft's assertion that it took all necessary steps to ensure that the tying at issue did not foreclose third-party media players from the market. That abusive conduct began in May 1999 and was still continuing on the date on which the defence was lodged. The United States settlement was not concluded until November 2001 and the measures adopted pursuant to that agreement were not taken until August and September 2002. Furthermore, those measures are clearly insufficient to remedy the tying abuse found in the contested decision. As for the various methods of distributing third-party media players described by Microsoft, the Commission states, with reference to recitals 849 to 877 to the contested decision, that they do not allow those players to achieve the ubiquity that Microsoft can ensure for Windows Media Player by bundling it with Windows.

1012. The Commission also reviews the findings of foreclosure of competition which it made in the contested decision, in particular at recitals 844 to 846 and 879 to 882 to the contested decision.

1013. Supported on this point by SIIA, the Commission contends that its finding that the tying at issue created a risk of foreclosure of competition on the market is not speculative but is based on a factual assessment of the specific characteristics of the market and also of the incentives of content providers and software developers. It follows from Case T65/98 Van den Bergh Foods v Commission [2003] ECR II4653 that it is acceptable to take into account the likely reactions of third parties, and in particular competitors or customers, to the unilateral action of a dominant undertaking when assessing whether that action is likely to lead to foreclosure. In the present case, it is beyond dispute that Microsoft does not give customers the choice to acquire Windows without Windows Media Player. Furthermore, the tying at issue has a direct influence on third parties and therefore interferes with their free choice (recitals 845, 851, 870, 883, 884 and 895 to the contested decision).

1014. The Commission refers to recitals 879 to 896 to the contested decision and observes, in that context, that it undertook a detailed analysis of the impact of the impugned conduct, including by sending extensive questionnaires to a large number of content providers, software developers and content owners.

1015. On the basis of the responses to those questionnaires, the Commission made the following findings:

- all the content providers that responded to the questionnaires stated that the creation of specific content for more than one technology generated additional costs (recital 884 to the contested decision);

- those content providers considered that the number of users of a given technology and the presence of media software on PCs were significant factors in deciding which technology to support (recital 886 to the contested decision);

- some of those providers even stated that the number of users of a given technology was the single most important factor' (recital 889 to the contested decision);

- so long as third-party media players' usage is still significant, the trade-off of supporting additional formats may be positive for content providers (recital 890 to the contested decision);

- software developers responded along the same lines as content providers (recitals 893 to 896 to the contested decision);

- thus, 12 software developers out of 13 answered in the affirmative the question whether the additional costs of multiple format support' were in the future likely to influence their decisions on whether to develop applications for technologies other than Windows Media (recital 890 to the contested decision);

- by tying Windows Media Player to Windows, Microsoft assures content providers and software developers that end users will be able to play back their content, in other words that they will reach a wide audience; the ubiquity of Windows Media Player on Windows client PCs therefore secures Microsoft a competitive advantage unrelated to the merits of that product (recital 891 to the contested decision).

1016. Last, the Commission rejects Microsoft's assertion that the theory applied in the present case does not take account of certain relevant factors and is based on predictions that are contradicted by the facts.

1017. In the first place, the Commission denies having ignor[ed] factors that lead content providers to write to non-Windows Media formats'. In the requests for information which it sent to those content providers, it did not refer solely to the question of the reach' of a media reader; and in the contested decision it did not state that reach was the only relevant factor, but merely highlighted the importance of that factor. In any event, Microsoft recognises that content providers take that factor into consideration when choosing the encoding format of their products and therefore implicitly accepts that the unmatched ubiquity achieved through [its] tie distorts that [choice]'.

1018. It follows from the questions put to content providers and software developers, moreover, that those third parties do balance and give more weight to the costs of multi-technology support than to its benefits. The Commission observes that Microsoft itself has stated that to encode streaming content for delivery to multiple formats [was] expensive and time-consuming for content providers' (recital 883 to the contested decision) and refers to certain evidence gathered in the 2003 market enquiry (recital 884 to the contested decision). Even if the cost of supporting several technologies is not the only factor that determines content providers' choice of whether or not to encode in several formats, it is clearly one significant factor that they do take into consideration. The Commission also denies having gathered, in the 2003 market enquiry, evidence showing that the cost of making content available in a specific media format represented only a trivial portion of overall costs. On the contrary, the feedback which the Commission received on the estimation of content preparation costs rather indicates that those costs are significant.

1019. The Commission also disputes the merits of the findings in the report in annex C.16 to the reply (see paragraph 1002 above). First of all, the contested decision demonstrates that downloading cannot offset the ubiquity that Windows Media Player acquires through the tying at issue and that its ubiquity distorts the incentives of content providers. Next, the Commission's conclusion that there is an abuse of a dominant position does not rely on a finding of complete elimination of competition or tipping' of the market. Last, the author of that report (i) does not substantiate his claim, (ii) ignores various material aspects of the present case, such as the distortions caused to network effects by monopoly leveraging' and (iii) does not demonstrate that the conditions which he claims are necessary for tipping have not been fulfilled.

1020. In the second place, the Commission, supported on this point by SIIA, disputes Microsoft's assertion that the analysis of foreclosure in the contested decision is contradicted by the facts.

1021. The Commission reiterates, first of all, that Microsoft has misrepresented recital 984 to the contested decision, which does not refer to the tipping' of the market but states only that Microsoft's tying is likely to affect the structure of competition on the media player market.

1022. Next, the Commission submits that the industry data which it used in the contested decision invariably reveal a tendency in favour of the use of Windows Media Player and Windows Media formats to the detriment of the main competing media players (recitals 906 to 942 to the contested decision). Those data show that until the second quarter of 1999 RealPlayer was the market leader, with almost twice as many users as Windows Media Player and QuickTime (recital 906 to the contested decision). From the second quarter of 1999 to the second quarter of 2002, on the other hand, the total number of users of Windows Media Player increased by approximately 39 million, which was roughly equal to the combined increase in users of RealNetworks' and Apple's media players (recital 907 to the contested decision). More recent data from Nielsen/NetRatings show that Windows Media Player attained a distinct lead over RealPlayer (more than 50% more unique users) and QuickTime (three times as many users) and that its lead increased further between October 2002 and January 2004 (recital 922 to the contested decision). That trend is similar to the situation on the web browser market, which was the subject of the proceedings for violation of United States antitrust law.

1023. The Commission maintains that Microsoft does not contest those various data, but presents new data, some of which postdate the adoption of the contested decision and for that reason clearly could not be taken into consideration.

1024. Last, the Commission claims that in any event the foreclosure effect established in the contested decision is confirmed by more recent data.

1025. Thus, first, the Commission states that the data relating to content providers presented by Microsoft (see paragraph 1004 above) are not substantiated and that Microsoft's presentation of them is misleading. The Commission maintains that it is clear that during the period 2001-04 the number of Internet sites with any' media content increased, so that it is not surprising that there are more Internet sites which offer non-Windows Media formats. Microsoft also fails to mention that during the same period the number of Internet sites supporting Windows Media formats rose by 141%, or to give any real indication of the actual quantity of content in non-Windows Media format offered by the Internet sites in question or of the actual usage of the content in those media formats.

1026. Second, the Commission asserts that the data relating to the average number of media players pre-installed on client PCs by OEMs are not conclusive (see paragraph 1005 above). In any event, Microsoft's evidence shows that more than 70% of PCs shipped in Europe and more than 80% of those shipped worldwide typically have just one media player and that, because of the tie, that player is always Windows Media Player. Furthermore, in so far as OEMs pre-install competing media players on PCs, that pre-installation is overshadowed' by the fact that Windows Media Player is automatically present on 95% of PCs shipped worldwide. Last, Microsoft's data are not reliable, since they relate in particular to competing media players which were pre-installed following legacy deals' which were not renewed and to software which does not satisfy the streaming media player' criteria.

1027. Third, the Commission claims that there is a clear trend in favour of Windows Media Player and Windows Media format usage. The Nielsen/NetRatings data on United States media player usage show that in March 2005 Windows Media Player's usage share had risen to over 80%, RealPlayer's usage share had fallen to below 40% and QuickTime's usage share had fallen to just over 10%. Recent Nielsen/NetRatings data also show that Windows Media Player's share of exclusive users has steadily increased, with 53 to 55% of users currently using Windows Media Player exclusively, against 10 to 13% for RealPlayer and 3 or 4% for QuickTime Player.

1028. In response to Microsoft's assertion that the foreclosure theory lacks objectivity, in that it did not apply when RealNetworks' media player was integrated in Windows (see paragraph 1007 above), the Commission refers to recital 818 to the contested decision and observes that it cannot be precluded from pursuing a given infringement of Community competition law on the ground that it did not pursue another possible infringement.

1029. SIIA makes essentially the same arguments as the Commission.

1030. Audiobanner claims that the bundling in question has a negative impact on third-party investment in non-Microsoft technologies, on innovation in the digital streaming media industry and on consumers. On that last point, Audiobanner emphasises that bundling precludes competition on the merits.

Findings of the Court

1031. Microsoft claims, in substance, that the Commission has failed to prove that the integration of Windows Media Player in the Windows client PC operating system involved foreclosure of competition, so that the fourth constituent element of abusive tying, as set out at recital 794 to the contested decision, is not fulfilled in this case.

1032. In particular, Microsoft contends that the Commission, recognising that it was not dealing with a classical tying case, had to apply a new and highly speculative theory, relying on a prospective analysis of the possible reactions of third parties, in order to reach the conclusion that the tying at issue was likely to foreclose competition.

1033. The Court considers that Microsoft's arguments are unfounded and that they are based on a selective and inaccurate reading of the contested decision. Those arguments essentially focus on the second of the three stages of the Commission's reasoning set out at recitals 835 to 954 to the contested decision.

1034. In fact, it is clear that in the contested decision, the Commission clearly demonstrated, inter alia, that the fact that from May 1999 Microsoft offered OEMs, for pre-installation on client PCs, only the version of Windows bundled with Windows Media Player had the inevitable consequence of affecting relations on the market between Microsoft, OEMs and suppliers of third-party media players by appreciably altering the balance of competition in favour of Microsoft and to the detriment of the other operators.

1035. As already observed at paragraph 868 above, the fact that the Commission examined the actual effects which the bundling had already had on the market and the way in which that market was likely to evolve, rather than merely considering - as it normally does in cases of abusive tying - that the tying has by its nature a foreclosure effect, does not mean that it adopted a new legal theory.

1036. The Commission's analysis of the foreclosure condition begins at recital 841 to the contested decision, where the Commission states that in the present case there are good reasons not to assume without further analysis that the bundling of Windows and Windows Media Player constitutes conduct which by its very nature is liable to foreclose competition (sere paragraph 977 above). In substance, the conclusion which the Commission reached is based on the finding that the bundling of Windows Media Player with the Windows client PC operating system - the operating system pre-installed on the great majority of client PCs sold throughout the world - without the possibility of removing that media player from the operating system, allows Windows Media Player to benefit from the ubiquity of that operating system on client PCs, which cannot be counterbalanced by the other methods of distributing media players.

1037. The Court considers that that finding, which is the subject-matter of the first stage of the Commission's reasoning (see recitals 843 to 878 to the contested decision, as summarised at paragraphs 979 to 982 above), is entirely well founded.

1038. Thus, in the first place, it is clear that owing to the bundling, Windows Media Player enjoyed an unparalleled presence on client PCs throughout the world, because it thereby automatically achieved a level of market penetration corresponding to that of the Windows client PC operating system and did so without having to compete on the merits with competing products. It must be borne in mind that it is common ground that Microsoft's market share on the client PC operating systems market is more than 90% and that the great majority of sales of Windows client PC operating systems (approximately 75%) are made through OEMs, who pre-install Windows on the client PCs which they assemble and distribute. Thus, the figures cited at recital 843 to the contested decision show that in 2002 Microsoft had a market share of 93.8% by units shipped on the client PC operating systems market (see also recital 431 to the contested decision) and that Windows - and, as a result, Windows Media Player - was pre-installed on 196 million of the 207 million client PCs shipped in the world between October 2001 and March 2003.

1039. As will be explained in greater detail below, no third-party media player could achieve such a level of market penetration without having the advantage in terms of distribution that Windows Media Player enjoys as a result of Microsoft's use of its Windows client PC operating system.

1040. It should be added that Microsoft's combined offer of the Windows operating system and the NetShow 2.0 player from June 1998 did not guarantee NetShow 2.0 the same degree of presence on client PCs. As already explained at paragraphs 837 and 936 above, NetShow 2.0 was included on the Windows 98 installation CD but was not installed by any of the four default installations of that system. In other words, users had to make the effort to install NetShow 2.0 separately and could therefore decide not to install it. Similarly, that combined offer did not prevent developers of third-party media players from competing with Microsoft on the intrinsic merits of their products or prevent OEMs from taking advantage of that competition.

1041. In the second place, it is clear that, as the Commission correctly states at recital 845 to the contested decision, [u]sers who find [Windows Media Player] pre-installed on their client PCs are indeed in general less likely to use alternative media players as they already have an application which delivers media streaming and playback functionality'. The Court therefore considers that, in the absence of the bundling, consumers wishing to have a streaming media player would be induced to choose one from among those available on the market.

1042. In that regard, it is necessary to bear in mind the circumstance to which the Commission refers at recitals 119, 848, 869 and 956 to the contested decision, namely the importance that users attach to being able to buy out-of-the-box' client PCs or systems, that is to say, those that can be installed and used with a minimum of effort. Thus, the supplier whose software is initially pre-installed on the client PC and is launched automatically as soon as the PC is started clearly has a competitive advantage over any other supplier of similar products.

1043. In the third place, the Court considers that the Commission was correct to state, at recital 857 to the contested decision, that the impugned conduct created disincentives for OEMs to ship third-party media players on their client PCs.

1044. On the one hand, as stated at recital 851 to the contested decision, OEMs are reluctant to add a second media player to the package which they offer consumers, as a second media player uses hard-disk capacity on the client PC while offering functionality similar, in essence, to that of Windows Media Player and when it is unlikely that consumers will be prepared to pay a higher price for such a bundle.

1045. On the other hand, the presence of several media players on the same client PC creates a risk of confusion on the part of users and an increase in customer support and testing costs (see recital 852 to the contested decision). The Court points out in that regard that during the administrative procedure Microsoft itself emphasised that OEMs generally operate on thin profit margins and that they would therefore prefer to avoid having to bear such costs (see footnote 1006 to the contested decision).

1046. Thus, the release of the bundled version of Windows and Windows Media Player as the only version of the Windows operating system capable of being pre-installed by OEMs on new client PCs had the direct and immediate consequence of depriving OEMs of the possibility previously open to them of assembling the products which they deemed most attractive for consumers and, more particularly, of preventing them from choosing one of Windows Media Player's competitors as the only media player. On this last point, it must be borne in mind that at the time RealPlayer had a significant commercial advantage as market leader. As Microsoft itself acknowledges, it was only in 1999 that it succeeded in developing a streaming media player that performed well enough, given that its previous player, NetShow, was unpopular with customers because it did not work very well' (recital 819 to the contested decision). It must also be borne in mind that between August 1995 and July 1998 it was RealNetworks' products - first RealAudio Player, then RealPlayer - that were distributed with Windows. There is therefore good reason to conclude that if Microsoft had not adopted the impugned conduct competition between RealPlayer and Windows Media Player would have been decided on the basis of the intrinsic merits of the two products.

1047. Furthermore, even if developers of media players competing with Microsoft succeeded in reaching an agreement with OEMs for the pre-installation of their product, they would still be in a disadvantageous competitive position by comparison with Microsoft. First, as Windows Media Player cannot be removed by OEMs or by users from the package consisting of Windows and Windows Media Player, the third-party media player could never be the only media player on the client PC. In particular, the bundling prevents developers of third-party media players from competing with Microsoft for that purpose on the intrinsic merits of the products. Second, as the number of media players that OEMs are prepared to pre-install on client PCs is limited, developers of third-party media players compete with each other in order to have their products pre-installed, while, owing to the bundling, Microsoft evades that competition and the significant additional costs which it entails. On this last point, it is pertinent to refer to recital 856 to the contested decision, where the Commission mentions the distribution agreement for RealPlayer concluded in 2001 between RealNetworks and Compaq and also the fact that Microsoft acknowledged during the administrative procedure that RealNetworks paid OEMs to pre-install its products.

1048. It follows from those findings that the Commission was correct to conclude that the option of entering into agreements with OEMs [was] a less efficient and effective means of obtaining media player distribution in the face of Microsoft's tying' (recital 849 to the contested decision).

1049. In the fourth place, the Court finds that the Commission was also correct to find that methods of distributing media players other than pre-installation by OEMs could not offset Windows Media Player's ubiquity (recitals 858 to 876 to the contested decision).

1050. First, while it is true that downloading via the Internet enables suppliers to reach a large number of users, it is less effective than pre-installation by OEMs. First, downloading does not guarantee competing media players distribution equivalent to Windows Media Player's (recital 861 to the contested decision). Second, downloading, unlike using a pre-installed product, is seen as complicated by a significant number of users. Third, as the Commission observes at recital 866 to the contested decision, a significant number of download attempts - more than 50%, according to tests carried out by RealNetworks in 2003 - are not successfully concluded. While it is true that broadband makes downloading faster and less complex, it must be borne in mind that in 2002 only one in six households in Europe with Internet access had a broadband connection (recital 867 and footnote 1037 to the contested decision). Fourth, users will probably tend to consider that a media player integrated in the client PC which they have bought will work better than a product which they install themselves (recital 869 to the contested decision). Fifth and last, in most undertakings employees cannot download software from the Internet as that complicates the work of the network administrators (ibid.).

1051. Some data provided by Microsoft itself during the administrative procedure, and mentioned at recitals 909 to 911 to the contested decision, confirm that downloading via the Internet is less effective as a method of distribution than pre-installation by OEMs. Microsoft stated that 8.8 million copies of WMP 6 were downloaded during the 12 months following its release and also that it sold 7.9 million Windows 98 SE operating systems between July and September 1999. In other words, in three months WMP 6 obtained almost the same distribution by being bundled with the Windows operating system as it achieved in a year by downloading.

1052. As the Commission asserts at recital 870 to the contested decision, while downloading is in itself a technically inexpensive way of distributing media players, vendors must deploy major resources to overcome end-users' inertia and persuade them to ignore the pre-installation of [Windows Media Player]'.

1053. Second, Microsoft has put forward no argument capable of calling in question the Commission's finding that the other methods of distributing streaming media players mentioned in the contested decision, namely bundling the media player with other software or Internet access services, and retail sale, are only a second-best solution and [do] not rival the efficiency and effectiveness of distributing software pre-installed on [Windows] PCs' (recitals 872 to 876 to the contested decision).

1054. It follows from the foregoing that in the analysis set out at recitals 843 to 878 to the contested decision, which is the first stage of its reasoning, the Commission demonstrated to the requisite legal standard that the bundling of Windows and Windows Media Player from May 1999 inevitably had significant consequences for the structure of competition. That practice allowed Microsoft to obtain an unparalleled advantage with respect to the distribution of its product and to ensure the ubiquity of Windows Media Player on client PCs throughout the world, thus providing a disincentive for users to make use of third-party media players and for OEMs to pre-install such players on client PCs.

1055. Admittedly, as Microsoft contends, a number of OEMs continue to add third-party media players to the packages which they offer to their customers. It is also common ground that the number of media players and the extent of the use of multiple players are continually increasing. However, those factors do not invalidate the Commission's conclusion that the impugned conduct was likely to weaken competition within the meaning of the case-law. Since May 1999 vendors of third-party media players have no longer been able to compete through OEMs to have their own products placed instead of Windows Media Player as the only media player on the client PCs assembled and sold by OEMs.

1056. It should further be noted that the merits of the findings made above are borne out by data examined by the Commission in the third stage of its reasoning. More particularly, as will be explained at paragraphs 1080 to 1084 below, the data mentioned at recitals 905 to 926 to the contested decision show a clear tendency in favour of using Windows Media Player to the detriment of competing media players.

1057. It follows from information communicated by Microsoft itself during the administrative procedure and referred to at recitals 948 to 951 to the contested decision that the significant growth in the use of Windows Media Player has not come about because that player is of better quality than competing players or because those media players, and particularly RealPlayer, have certain defects.

1058. In the light of all the foregoing considerations, the Court concludes that the Commission's findings in the first stage of its reasoning are in themselves sufficient to establish that the fourth constituent element of abusive bundling is present in this case. Those findings are not based on any new or speculative theory, but on the nature of the impugned conduct, on the conditions of the market and on the essential features of the relevant products. They are based on accurate, reliable and consistent evidence which Microsoft, by merely contending that it is pure conjecture, has not succeeded in showing to be incorrect.

1059. It follows from the foregoing that it is not necessary to examine the arguments which Microsoft puts forward against the findings made by the Commission in the other two stages of its reasoning. None the less, the Court considers that it should examine them briefly.

1060. In the second stage of its reasoning, the Commission seeks to establish that the ubiquity of Windows Media Player as a result of its bundling with Windows is capable of having an appreciable impact on content providers and software designers.

1061. The Commission's theory is based on the fact that the market for streaming media players is characterised by significant indirect network effects or, to use the expression employed by Mr Gates, on the existence of a positive feedback loop' (recital 882 to the contested decision). That expression describes the phenomenon where, the greater the number of users of a given software platform, the more there will be invested in developing products compatible with that platform, which, in turn reinforces the popularity of that platform with users.

1062. The Court considers that the Commission was correct to find that such a phenomenon existed in the present case and to find that it was on the basis of the percentages of installation and use of media players that content providers and software developers chose the technology for which they would develop their own products (recital 879 to the contested decision). The Commission correctly stated, first, that those operators tended primarily to use Windows Media Player as that allowed them to reach the very large majority of client PC users in the world and, second, that the transmission of content and applications compatible with a given media player was in itself a significant competitive factor, since it increased the popularity of that media player, and, in turn, favoured the use of the underlying media technology, including codecs, formats (including DRM) and server software (recitals 880 and 881 to the contested decision).

1063. First, as to the effects of the bundling on content providers, the Court considers that the Commission's assessment of that issue at recitals 883 to 891 to the contested decision is well founded.

1064. More particularly, the Commission was quite correct to find that the provision of several different technologies gave rise to additional development, infrastructure and administrative costs for content providers, who were therefore inclined to use only one technology for their products if that allowed them to reach a wide audience.

1065. Thus, it follows from the evidence gathered by the Commission, and especially from the replies to the requests for information which it sent to content providers in connection with the 2003 market enquiry, that encoding streamed content in several formats is expensive and time-consuming. In its request for information of 16 April 2003, the Commission asked those content providers, inter alia, whether it cost more for them to make available the same content based on more than one technology (question 19). All the entities who responded did so in the affirmative, mentioning mainly additional person/hours for content preparation, additional hardware/infrastructure costs and additional licensing costs. When asked to estimate those costs, the entities concerned put them within a range of 20 to 100% by reference to the initial costs of providing content in only one format, or on average additional costs of approximately 50% (question 20). As the Commission observes at recital 884 to the contested decision, one of the entities questioned even stated that the relatively high costs of content preparation [might] reduce the economic incentive for record companies and/or online portals to support multiple formats with different reaches' and that [i]ndividual record companies [would] balance these additional costs against the benefits of extended reach and supporting multiple [t]echnologies'.

1066. The Court notes that, contrary to Microsoft's contention, the Commission examined whether the advantages resulting from encoding in several formats could outweigh the additional costs created by such encoding. The Commission had questioned content providers about that point in the 2003 market enquiry and the content providers expressed their views on the subject (see recitals 884, 887, 889 and 890 to the contested decision).

1067. It is also apparent from the evidence gathered by the Commission that the more widely distributed a media player is, the more content providers are inclined to create content for the technology implemented in that media player. As the Commission rightly states at recital 885 to the contested decision, by supporting the widely disseminated media player, developers maximise the potential reach of their own products.

1068. Thus, as stated at recital 886 to the contested decision, in its request for information of 16 April 2003 the Commission had asked content providers whether a particular technology's reach and the presence of media client software on client PCs were significant factors in deciding which technology to support (questions 33 and 34). All the companies which answered those questions did so in the affirmative.

1069. In view of the foregoing, and of the fact that Windows is present on almost all client PCs in the world, it must be held that the Commission was correct to conclude, at recital 891 to the contested decision, that [b]y tying [Windows Media Player], Microsoft [could] assure content providers that end-users [would] be able to play back their content, that is to say, that they [would] reach a wide audience', that [u]biquity of [Windows Media Player] on Windows PCs therefore [secured] Microsoft a competitive advantage unrelated to the merits of its product' and that, [once] content based on a given format [was] widespread, the competitive standing of compatible media players [was] reinforced [and] entry for new contenders [was] difficult'.

1070. It must be borne in mind, in that context, that Article 82 EC is intended to prohibit a dominant undertaking from strengthening its position by recourse to means other than those based on competition on the merits (Case T229/94 Deutsche Bahn v Commission [1997] ECR II1689, paragraph 78, and Van den Bergh Foods v Commission , paragraph 1013 above, paragraph 157).

1071. In the second place, the Court considers that the Commission, at recitals 892 to 896 to the contested decision, correctly assessed the effects of the bundling on software developers.

1072. More particularly, the Commission was correct to observe, at recital 892 to the contested decision, that software developers were inclined to create applications for a single platform if that enabled them to reach virtually all potential users of their products, whereas porting, marketing and supporting other platforms gave rise to additional costs.

1073. Thus, it is apparent from the answers to a number of questions which the Commission asked software developers in connection with the 2003 market enquiry (see, in particular, questions 8 and 48 of the request for information of 16 April 2003) that the development of software for several media technologies entails additional costs in terms of person/hours, licensing and customer support. The software developers concerned placed those additional costs on a scale of 1 to 100% by reference to the costs of developing applications for a single technology, or an average additional cost of approximately 58% (see recital 894 to the contested decision).

1074. It is also apparent from the answers to the request for information of 16 April 2003 that the fact that the development of applications for additional technologies, other than Microsoft's, entails additional costs for software developers is likely to influence their decision on whether to develop applications for additional technologies (see recital 894 to the contested decision; see also the statement of Entity T30 at recital 893 to the contested decision).

1075. In view of those factors, and of the fact that, owing to the bundling, Windows Media Player is present on the great majority of client PCs in the world, it must be held that the Commission was correct to find, at recital 895 to the contested decision, that software developers who wrote applications that relied on a media player had incentives to write foremost to Windows Media Player. It should be noted, in that regard, that in the 2003 market enquiry the Commission had requested the software developers questioned to state the factors which determined their choice of the technology for which they wrote their applications (question 7 of the request for information of 16 April 2003). Of the 14 entities who answered that question, 10 identified the degree of presence of a media player on PCs as being the most important or the second most important factor (recital 896 to the contested decision). The Commission had also asked the software developers whether it was important to them that the interfaces of Windows Media Player were on almost all Windows PCs (question 14 of the request for information of 16 April 2003). Of the 13 entities who answered that question, 10 did so in the affirmative (recital 896 to the contested decision).

1076. In the third place, the Court recalls that, at recitals 897 to 899 to the contested decision, the Commission states that the ubiquity which Windows Media Player enjoys by virtue of the bundling also has effects on adjacent markets, such as media players on wireless information devices, set-top boxes, DRM solutions and on-line music delivery. On that point, it is sufficient to state that

Microsoft has put forward no argument capable of vitiating that assessment.

1077. In light of the foregoing considerations, the Court concludes that the second stage of the Commission's reasoning is well founded.

1078. In the third stage of its reasoning, the Commission examines the evolution of the market in light of market surveys carried out by Media Metrix, Synovate and Nielsen/NetRatings and concludes that the data in those surveys consistently point to a trend in favour of usage of [Windows Media Player] and Windows Media formats to the detriment of the main competing media players (and media player technologies)' (recital 944 to the contested decision).

1079. The Court finds that the conclusion referred to in the preceding paragraph is correct.

1080. Thus, in first place, as regards media players usage, it is apparent from the data gathered by Media Metrix that until the second quarter of 1999, when the bundling began, Windows Media Player was a considerable way behind the market leader, RealPlayer, which had almost twice as many users (recitals 905 and 906 to the contested decision). Between the second quarter of 1999 and the second quarter of 2002, on the other hand, the total number of users of Windows Media Player increased by more than 39 million, which was comparable with the combined increase in the number of users of RealPlayer and QuickTime Player (tables 8 and 9 of recital 907 to the contested decision).

1081. The data gathered by Synovate on behalf of Microsoft and mentioned at recitals 918 to 920 to the contested decision also clearly show a tendency towards Windows Media Player and away from RealPlayer and QuickTime Player.

1082. In particular, it is apparent from the Synovate data set out at recital 920 to the contested decision that while a number of users did make use of more than one media player, in August 2003 45% of the multiple users' questioned stated that the media player which they used most often was Windows Media Player, against 19% for RealPlayer and 11% for QuickTime Player. By comparison, in October 1999 the media player most used by multiple users was RealPlayer (50%), followed first by Windows Media Player (22%) and then QuickTime Player (15%).

1083. In that context, it is appropriate to add that Microsoft's assertion that consumers used an average of 1.7 media players in June 2002 - a figure which had increased to 2.1 in 2004 - must be put in context. As the Commission correctly observes at recital 860 to the contested decision, downloading over the Internet - even though it is less effective as a means of distribution than pre-installation by OEMs - at the most enables users to add a second media player to their client PC and not to replace Windows Media Player. Windows Media Player is always present on the client PC, while the additional player is RealPlayer in some cases and QuickTime Player in others, or a different third-party media player.

1084. Last, the data gathered by Nielsen/NetRatings (see recitals 921 and 922 to the contested decision) also show that between October 2002 and January 2004 Windows Media Player significantly increased its lead over both RealPlayer and QuickTime Player.

1085. In second place, as regards the use of formats, the Nielsen/NetRatings data mentioned at recitals 930 to 932 to the contested decision clearly show a tendency towards the Windows Media formats and away from the RealNetworks formats and Apple's QuickTime formats.

1086. In third place, the Court considers that the Commission was correct to find, at recitals 934 to 942 to the contested decision, that the data on the media formats used on Internet sites gathered by Netcraft, a company providing Internet services, which Microsoft had submitted during the administrative procedure were not conclusive. In particular, the Commission demonstrated to the requisite legal standard that the faulty methodology affecting Netcraft's surveys, as identified at recitals 940 to 942 to the contested decision, undermined Microsoft's assertion that in November

2002, RealNetworks' formats continued to be much more common on the [Internet]' (recital 937 to the contested decision).

1087. Last and in fourth place, the Court considers that the Commission was correct to reject, at recital 943 to the contested decision, the argument which Microsoft based on the fact that in 2001 RealPlayer was present on 92% of home PCs in the United States and therefore had an installed base comparable with Windows Media Player's for client PCs. In fact, as stated at the same recital, by 2003 RealPlayer was present on only 60 to 70% of home PCs in the United States. Furthermore, it must be borne in mind that the rate of installation of Windows Media Player is 100% on Windows client PCs and more than 90% on client PCs, whether for home or work use, worldwide.

1088. It follows from the foregoing considerations that the final conclusion which the Commission sets out at recitals 978 to 984 to the contested decision concerning the anti-competitive effects of the bundling is well founded. The Commission is correct to make the following findings:

- Microsoft uses Windows as a distribution channel to ensure for itself a significant competitive advantage on the media players market (recital 979 to the contested decision);

- because of the bundling, Microsoft's competitors are a priori at a disadvantage even if their products are inherently better than Windows Media Player (ibid.);

- Microsoft interferes with the normal competitive process which would benefit users by ensuring quicker cycles of innovation as a consequence of unfettered competition on the merits (recital 980 to the contested decision);

- the bundling increases the content and applications barriers to entry, which protect Windows, and facilitates the erection of such barriers for Windows Media Player (ibid.);

- Microsoft shields itself from effective competition from vendors of potentially more efficient media players who could challenge its position, and thus reduces the talent and capital invested in innovation of media players (recital 981 to the contested decision);

- by means of the bundling, Microsoft may expand its position in adjacent media-related software markets and weaken effective competition, to the detriment of consumers (recital 982 to the contested decision);

- by means of the bundling, Microsoft sends signals which deter innovation in any technologies in which it might conceivably take an interest and which it might tie with Windows in the future (recital 983 to the contested decision).

1089. The Commission therefore had ground to state, at recital 984 to the contested decision, that there was a reasonable likelihood that tying Windows and Windows Media Player would lead to a lessening of competition so that the maintenance of an effective competition structure would not be ensured in the foreseeable future. It must be made clear that the Commission did not state that the tying would lead to the elimination of all competition on the market for streaming media players. Microsoft's argument that, several years after the beginning of the abuse at issue, a number of third-party media players are still present on the market therefore does not invalidate the Commission's argument.

1090. It follows from all of the foregoing considerations that Microsoft has put forward no argument capable of vitiating the merits of the findings made by the Commission in the contested decision concerning the condition relating to the foreclosure of competition. The Court must therefore conclude that the Commission has demonstrated to the requisite legal standard that the condition was satisfied in the present case.

e) The absence of objective justification

Contested decision

1091. At recitals 955 to 970 to the contested decision the Commission examines the argument whereby Microsoft seeks to show that the bundling produces efficiency gains that would outweigh the anti-competitive effects identified.

1092. In the first place, the Commission rejects Microsoft's argument that the bundling produces efficiencies related to distribution (recitals 955 to 961 to the contested decision).

1093. First of all, the Commission considers that Microsoft cannot claim that the fact that a set of options are defined by default on an out-of-the-box' computer has advantages for consumers by saving time and reducing the risk of confusion. Microsoft is thus confusing the benefit to consumers of having a media player pre-installed along with the client PC operating system and Microsoft selecting the media player for consumers' (recital 956 to the contested decision).

1094. Next, the Commission emphasises the role played by OEMs and, in particular, the fact that they customise client PCs with respect to both hardware and software in order to differentiate them from competing products and to meet specific consumer demand. It explains that [t]he market would therefore respond to the efficiencies associated with the purchase of a full package [consisting of] hardware, operating system and software applications such as media players and, in addition, the market would be free to offer the variety that consumers demand' (recital 957 to the contested decision). Consumers could choose, from among the bundles of client PC operating systems and media players offered by OEMs, the one that suited them the best.

1095. The Commission further considers that Microsoft is also unable to rely on the fact that the economies made by the tied sale of two products can mean a saving in financial resources which would otherwise be spent on maintaining a distribution system for the second product and that those economies would be passed on to consumers, who could save costs related to a second purchasing act, including selection and installation of the product' (recital 958 to the contested decision). It contrasts, in particular, the low distribution costs associated with software licensing with the importance of consumer choice and innovation regarding software such as media players.

1096. Last, the Commission rejects Microsoft's assertion that by prohibiting the bundling it placed Microsoft at a competitive disadvantage by comparison with most of its competitors, who provide multimedia capabilities with their operating systems. First, the contested decision does not prevent Microsoft from entering into agreements with OEMs to pre-install the Windows operating system and a media player - possibly Windows Media Player - in order to meet consumer demand. It emphasises that [w]hat is abusive is that Microsoft invariably imposes its own media player through tying' (recital 959 to the contested decision). In addition, Microsoft fails to take account of the fact that tying has different effects on the market, depending on whether it is done by an undertaking in a dominant position or by an undertaking not having such a position. Furthermore, an undertaking in a dominant position may be deprived of the right to adopt a course of conduct which would not be objectionable if it were adopted by non-dominant undertakings.

1097. In the second place, the Commission rejects Microsoft's argument that the tying at issue produces efficiencies related to Windows Media Player as a platform for content and applications (recitals 962 to 969 to the contested decision).

1098. The Commission asserts, in substance, that Microsoft has not adduced evidence that the integration of Windows Media Player in Windows enhances the technical performance of the product or, more generally, that the tying at issue is indispensable in order for the pro-competitive effects on which it relies to be achieved. In particular, Microsoft neither claims nor demonstrates that software developers would not have been able to develop applications if Windows Media Player had been distributed independently of the Windows client PC operating system (recital 965 to the contested decision).

1099. The Commission also states that the fact that media players of different makes are able to work with Windows has contributed significantly to the dissemination of multimedia streaming technology and to the consequent development of a host of multimedia-enabled applications (recital 966 to the contested decision).

1100. In the third place, the Commission concludes, at recital 970 to the contested decision, that Microsoft has not established to the requisite legal standard that the tying at issue was objectively justified by pro-competitive effects which would outweigh the barrier to competition caused by that practice. The benefits which Microsoft presents as being the result of the tying could be achieved without it. Furthermore, the other benefits on which Microsoft relies consist essentially in increased profitability for Microsoft and are disproportionate to the anti-competitive effects of the tying.

1101. At recitals 1026 to 1042 to the contested decision, the Commission examines the arguments which Microsoft bases on the alleged interdependencies between Windows and Windows Media Player and also on those between Windows and third-party applications.

Arguments of the parties

1102. By way of introduction to the arguments which it develops in connection with the bundling of Windows and Windows Media Player, Microsoft makes a series of factual observations.

1103. Thus, first, it claims that the integration of new functionalities generally into successive releases of its Windows client PC operating system brings benefits for software developers, OEMs and consumers.

1104. Microsoft states, first of all, that for software developers the Windows client PC operating system provides a stable and well-defined platform for software development. The integration of new functionality into Windows makes it easier and faster to develop software that works with Windows. The fact that software developers are able to use the functionality offered by Windows enables them to reduce the number of functionalities which they need to design, develop and test in their own products and also the overall size of those products. Last, Microsoft observes that the less software code an application contains, the less likely it is that the application will malfunction and require technical support.

1105. OEMs, according to Microsoft, depend on the addition of functionality to Windows to create PCs that will appeal to customers and that will support the creation of interesting new applications'.

1106. Consumers expect that Windows will be continually improved. In addition, new users of PCs, particularly those with limited technical knowledge, want PCs to be easy to set up and use.

1107. Second, Microsoft describes the benefits that result from the integration, more particularly, of multimedia functionality in Windows. First, third-party applications can call upon that functionality, which makes it easier for software developers to include audio and video content in their products. The uniform presence of media functionality in Windows, which is exposed to software developers through published APIs, encouraged the creation of numerous applications that make use of such content. Next, media functionality in Windows offers a series of functions, such as the ability to play audio CDs and video DVDs and to download music over the Internet, which are popular with consumers and help to increase sales of client PCs. Last, the presence of media functionality in Windows makes PCs more attractive and easier to use for consumers.

1108. Microsoft submits that the main justification for its conduct is that the integration of new functionality into operating systems in response to technological advances and changes in consumer demand is a core element of competition in the operating system business and has served the industry well for more than 20 years. The integration of streaming capacity into Windows is one of the aspects of its successful business model' and has contributed to the increasing use of digital media. Supported on this point by DMDsecure and Others and Exor, Microsoft claims that the Commission made a manifest error of assessment by not sufficiently considering the real benefits flowing from the integration of new functionality into the Windows operating system.

1109. In support of the arguments set out in the preceding paragraph, Microsoft formulates three series of considerations.

1110. In the first place, Microsoft, supported by DMDsecure and Others, TeamSystem, Mamut and Exor, contends that the integration of media functionality in Windows is essential to allow software developers and Internet site creators to make efficient use of the stable and well-defined' Windows platform. By calling on that functionality, those software developers and Internet site creators can easily include audio and video content in their products and thus do not need to develop the complex software code required to play such content and are able to concentrate on improving the features of their products.

1111. Microsoft refutes the Commission's assertion at recital 1031 to the contested decision that it does not matter whether the media functionality bundled with Windows is provided by Microsoft or by a third party, because it is possible to redistribute the software code that supplies that functionality or to rely on functionality supplied by third-party media players. It claims that if software developers did not have a common platform that provides a reliable set of system services they would need to determine in each individual case what functionality is present on the version of Windows installed on a particular customer's PC and then to supplement that functionality as necessary. That would render applications larger and more complex and thus more expensive to develop, test and support.

1112. Microsoft, supported on this point by Exor, submits that adding components to Windows on a piecemeal basis is likely to create conflicts between the different versions of those components, which would cause Windows or the application being installed to malfunction.

1113. Microsoft also claims that, as regards applications that are already in broad use', there is no ready mechanism to distribute the components of Windows on which they rely in order to obtain media functionality. Those applications will no longer work correctly with a version of Windows without Windows Media Player. Furthermore, the media functionality in Windows is not fungible', so that an application designed to call on that functionality cannot call on similar functionality provided by a competing media player without being substantially revised.

1114. Microsoft further disputes the Commission's assertion that competing media players are capable of replacing Windows Media Player for much of its functionality. It claims, in particular, that the Commission does not demonstrate that any third party will decide to offer substitute functionality for all the media functionality integrated into Windows'.

1115. In Microsoft's submission, the absence of media functionality in some copies of Windows will also be damaging for Internet site creators, who rely on it to distribute audio and video content. If they can no longer count on the uniform presence of media functionality in Windows, they will have to incorporate in their products mechanisms for detecting the presence of the requisite media functionality and, if it is missing, for downloading the necessary software code to the user's PC.

1116. Last, in the reply, Microsoft disputes the Commission's assertion that the benefits flowing from the integration of media functionality in Windows cannot constitute valid justification under Community law. When the Commission applies Article 82 EC it cannot ignore the benefits that flow from the conduct regarded as abusive; and, furthermore, it is not correct to claim that the standardisation that would come about in the present case would not be the result of a competitive process.

1117. In the second place, Microsoft contends that the integration of media functionality in Windows is indispensable to achieving other benefits'.

1118. The applicant explains that Windows is composed of a large number of specialised blocks of software that perform specific functions. In order to avoid duplicating the same functionality in each of those blocks, particular blocks of software code - the components' - call upon one another to perform specific tasks. A single component may thus be used to perform several functions. For example, a component which plays audio content may be used both for the Help' system in Windows and for the text-to-voice narration feature that makes Windows more accessible to the visually impaired. That method of software design, known as componentisation', relies on the interdependency of the components, so that if one of them were removed many others will malfunction. Thus, numerous features of Windows XP, including the Help system, will no longer work if media functionality is removed from the operating system. Furthermore, because of the interdependency of the components, Microsoft will be unable to develop other parts of Windows that are designed to rely on the media function if it cannot be sure that that functionality will be present in all Windows client PCs. Computer manufacturers must not therefore be free to remove the components of Windows, especially those that supply media functionality.

1119. In the reply, Microsoft denies that it has never argued that the integration of Windows Media Player in Windows produced efficiencies. It explained in detail the reasons why it was technically efficient to include media functionality in Windows that is available to be called upon by other parts of the operating system as well as by applications running on top of the operating system'. In addition, the fact that many software developers freely choose to rely on the media functionality in Windows is itself evidence that uniform integration' of such functionality generates technical efficiencies. Last, Microsoft claims to have shown during the administrative procedure that Windows operated faster' when media functionality was integrated.

1120. In the third place, Microsoft claims that enforcement of the remedy prescribed in Article 6(a) of the contested decision will have harmful consequences.

1121. First, it submits that removing components from the integrated whole made up of Windows and Windows Media Player would degrade the operating system, especially when those components are used to provide basic services, such as the ability to play audio and video content.

1122. Second, Microsoft asserts that if the contested decision were to apply as precedent against future integration in its Windows operating system, it would quickly become impossible to design, develop and test that operating system. For each block of software code that had to be made removable, Microsoft would face an exponential increase in the amount of work required. Thus, for example, if the Commission decided to apply to a second block of software codes the same principles as those established in the contested decision, it would have to offer four different versions of Windows. Such fragmentation' would have the effect that it would be impossible to know whether any given copy of the operating systems contained functionality on which software developers, manufacturers of peripherals or users wished to rely. There would therefore be one version, or indeed several versions, of Windows per computer manufacturer, each offering a different set of functionalities. In the long term, the ability to remove Windows functionalities would reduce consumer choice, since consumers would be tied to particular brands of client PCs running idiosyncratic versions of Windows, with no assurance that applications, such as graphics, would work on other versions of Windows. It would also become much more difficult to mix and match different brands of client PCs within the same computer network. In Microsoft's submission, the only way to avoid such fragmentation would be to freeze' Windows in its current version.

1123. The Commission first of all rejects the factual observations formulated by Microsoft. It claims, in particular, that the applicant's general assertions concerning the benefits of the integration of new functionalities unrelated to Windows Media Player into client PC operating systems are irrelevant.

1124. Next, the Commission, supported by SIIA, submits that Microsoft has failed to show that the impugned conduct is objectively justified.

1125. In the first place, at recitals 955 to 970 to the contested decision, the Commission rejected Microsoft's argument that the tying at issue produced efficiencies capable of outweighing the anti-competitive effects identified. As regards, more particularly, the alleged distribution efficiencies, the Commission observes that Microsoft's arguments are based on confusion between the benefits to consumers of having a media player pre-installed along with the client PC operating system, and Microsoft selecting the media player for consumers'. Referring to recital 962 to the contested decision, the Commission further submits that Microsoft has not put forward any technical efficiency for which integration of Windows Media Player into Windows would be a precondition. Microsoft's assertion, first submitted in the reply, that Windows operates faster when media functionality is integrated, is not supported by any evidence. Last, by the tying at issue, Microsoft shields itself from effective competition from vendors of potentially more efficient media player vendors which could challenge its position. Microsoft thus reduces the talent and capital invested in innovation in respect of media players and reduces its own incentive to innovate in that sphere.

1126. In the second place, the Commission examines the three series of considerations formulated by Microsoft.

1127. First, the Commission observes that media players exhibit both application and platform software characteristics. In other words, although they build on the client PC operating system, other applications may build on them. Media players offer their platform services irrespective of whether or not they are tied to a PC operating system.

1128. The Commission claims that the benefit that the bundling offers to software developers and content providers is that it allows them to avoid the efforts of competition', which cannot constitute valid justification under Community competition law. Because of the bundling of Windows Media Player with the ubiquity of the Windows monopoly', software developers and content providers who base their products on Windows Media Player do not need to convince users to install that player. By contrast, those who base their products on a third-party media player platform typically provide an incentive for users to install the necessary media play er on their own computer, for example by including links for downloading the player through the Internet.

1129. The Commission further submits that the bundling has the effect of increasing the costs which vendors of competing media players and third-party software developers who rely on those media players necessarily incur in convincing users to install those media players, because competitors need to overcome the disincentives generated by the automatic presence of Windows Media Player to install a different media player product, but with essentially similar characteristics (learning, support, and storage costs are examples of such disincentives)'.

1130. The Commission also maintains that Microsoft's arguments relating to the uniform platform' amount to asserting that it should be allowed to extend the Windows monopoly by tying other software products to Windows, for the simple reason that such other software products also offer platform capabilities to third-party developers. Microsoft essentially claims that the integration of Windows Media Player in Windows leads to de facto standardisation and that this provides benefits to third parties, since they know that Windows Media Player will always be present in Windows. However, standardisation cannot be imposed unilaterally by a dominant undertaking through tying (recital 969 to the contested decision).

1131. Furthermore, even if software code is not completely fungible (see paragraph 1113 above), the fact remains that competing media players can replace Windows Media Player for a large part of its functionality. As regards other functionality, third-party media player vendors may choose not to implement it at present because they know that it is available in Windows Media Player. However, that does not exclude the possibility that they will develop that functionality immediately after implementation of the remedy in order to take advantage of the unbundled version of Windows and to meet the demand of software developers.

1132. In the rejoinder, the Commission insists that it never asserted that third-party media players were complete substitutes' for the media functionality in Windows. It merely explained in the contested decision that third-party media players running on top of an unbundled version of Windows could to a large extent replace features' of Windows Media Player. Streaming media players compete on the basis of a number of parameters, such as the quality of streaming, the method of organising content and the format in which the file is provided.

1133. Last, the Commission refutes Microsoft's assertion that some applications will no longer work properly when they are used with the version of Windows imposed by Article 6(a) of the contested decision. Referring to the example given at recital 1038 to the contested decision, moreover, the Commission observes that professional Internet sites normally incorporate mechanisms that automatically detect the absence of components needed to run an Internet page and allow them to be downloaded. In the rejoinder, it further submits that in any event developers who base their products on Windows Media Player have a variety of ways of dealing with the possibility that a PC user has not already installed Windows Media Player.

1134. Second, the Commission rejects the arguments which Microsoft bases on componentisation.

1135. It claims, first of all, that those arguments are wholly abstract, as Microsoft refers to media functionality in general. It reiterates that the remedy prescribed in Article 6(a) to the contested decision does not affect the basic media functionality of Windows.

1136. Next, the Commission submits that the files constituting Windows Media Player which must be removed pursuant to the contested decision have been clearly identified by Microsoft. It refers to a letter of 13 September 2004 from Mr Heiner, a Microsoft employee, and contends that Microsoft cannot claim that it is not technically feasible' to design an unbundled version of Windows.

1137. The Commission further observes that the contested decision requires Microsoft to develop and offer an unbundled version of Windows without Windows Media Player and to ensure that that version is full-functioning and of good quality, but does not prevent Microsoft from continuing to offer a version of Windows bundled with Windows Media Player in line with its current software design methodology'.

1138. Last, the Commission observes that Microsoft gives only a single example of component cross-dependency', namely the Windows XP Help' system. In so far as that Help system relies on audio and video, it relies on media infrastructure that will remain in the unbundled version of Windows without Windows Media Player. It will therefore work well irrespective of the presence of Windows Media Player, as has been demonstrated by a test report submitted by RealNetworks in the interim measures proceedings. Furthermore, Microsoft's assertion that numerous other features of Windows XP will no longer work if media functionality is removed from the system consisting of Windows and Windows Media Player is wholly unfounded.

1139. The Commission further submits that it examined in detail, at recitals 1026 to 1042 to the contested decision, the question of the alleged interdependencies between Windows and Windows Media Player. It noted that it was obvious that if Windows Media Player were removed from Windows certain functionalities which it normally delivered would not be available (recital 1033 to the contested decision). That does not mean, however, that the operating system will not work properly or that the product will be degraded'. In addition, the example of Windows XP Embedded shows that it is technically possible for Windows to cope with the absence of multimedia capabilities caused by code removal without entailing the breakdown of operating system functionality (recitals 1028 to 1030 to the contested decision).

1140. Third, the Commission contends that the arguments which Microsoft puts forward concerning the future negative effects of the remedy prescribed in Article 6(a) of the contested decision are hypothetical, conjectural and wholly irrelevant.

1141. First of all, pursuant to the contested decision, Microsoft is to retain the right to offer the bundled version of Windows.

1142. Next, the Commission, supported on this point by SIIA, observes that Microsoft already markets a number of different versions of its client PC operating system which are not all interchangeable, such as Windows 98, Windows 2000, Windows Millennium Edition, Windows NT and Windows XP. Those different versions of Windows do not support the same applications.

1143. Last, the Commission rejects Microsoft's assertion that it would have to freeze' Windows in its current version. The remedy prescribed in Article 6(a) of the contested decision fully preserves Microsoft's incentives to innovate both in the media player market and in the client PC operating systems market and it allows consumers to exercise their choice on the basis of the merits of the products. Supported on this point by Audiobanner.com, the Commission claims that, in reality, it is the bundling that deters innovation, in particular on the media player market (recital 981 to the contested decision). Furthermore, that practice discourages investment in all the technologies in which Microsoft could conceivably take an interest in the future (recital 983 to the contested decision).

Findings of the Court

1144. It must be borne in mind, as a preliminary point, that although the burden of proof of the existence of the circumstances that constitute an infringement of Article 82 EC is borne by the Commission, it is for the dominant undertaking concerned, and not for the Commission, before the end of the administrative procedure, to raise any plea of objective justification and to support it with arguments and evidence. It then falls to the Commission, where it proposes to make a finding of an abuse of a dominant position, to show that the arguments and evidence relied on by the undertaking cannot prevail and, accordingly, that the justification put forward cannot be accepted.

1145. In its pleadings, Microsoft submits in substance two series of arguments to justify its conduct, which to a large extent cover those which it submitted to the same end during the administrative procedure and which were examined and correctly rejected by the Commission at recitals 955 to 970 and 1026 to 1042 to the contested decision, as appears from the following paragraphs.

1146. First, Microsoft takes issue with the Commission for having ignored the benefits flowing from its business model, which entails the ongoing integration of new functionality into Windows. In that context, it claims, more particularly, that the integration of media functionality in Windows is indispensable in order for software developers and Internet site creators to be able to continue to benefit from the significant advantages offered by the stable and well-defined' Windows platform.

1147. Second, Microsoft claims that the removal of media functionality from the system consisting of Windows and Windows Media Player would create a series of problems to the detriment of consumers, software developers and Internet site creators. It refers, in particular, to the fact that its Windows operating system relies on the method know as componentisation' (see paragraph 1118 above) and that the withdrawal of media functionality would result in the degrading and fragmentation' of that system.

1148. As regards the first series of arguments invoked by Microsoft, it is appropriate, first of all, to recall the precise scope of the abuse found in Article 2(b) of the contested decision and of the remedy prescribed in Article 6(a) of that decision.

1149. The circumstance to which the Commission takes exception in the contested decision is not that Microsoft integrates Windows Media Player in Windows, but that it offers on the market only a version of Windows in which Windows Media Player is integrated, that is to say, that it does not allow OEMs or consumers to obtain Windows without Windows Media Player or, at least, to remove Windows Media Player from the system consisting of Windows and Windows Media Player. Thus, while Article 6(a) of the contested decision requires Microsoft to offer a full-functioning version of the Windows Client PC Operating System which does not incorporate Windows Media Player', it expressly states that Microsoft... retains the right to offer a bundle of the Windows Client PC Operating System and Windows Media Player' (see, to the same effect, recitals 1011 and 1023 to the contested decision).

1150. Thus, the Commission does not interfere with Microsoft's business model in so far as that model includes the integration of a streaming media player in its client PC operating system or the possibility for that operating system to allow software developers and Internet site creators to take advantage of the benefits offered by the stable and well-defined' Windows platform. The Commission takes issue with the fact that Microsoft does not market the version of Windows that corresponds to its business model and at the same time a version of that system without Windows Media Player, thus permitting OEMs or end users wishing to do so to install the product of their choice on their client PC as the first streaming media player.

1151. Next, the Court considers that Microsoft is not entitled to rely on the fact that the bundling ensures the uniform presence of media functionality in Windows, which enables software developers and Internet site creators to avoid the need to include in their products mechanisms which make it possible to ascertain what media player is present on a particular client PC and where necessary to install the necessary functionality (see paragraphs 1107, 1111 and 1115 above). The fact that that tying enables software developers and Internet site creators to be sure that Windows Media Player is present on virtually all client PCs in the world is precisely one of the main reasons why the Commission correctly took the view that the bundling led to the foreclosure of competing media players from the market. Although the uniform presence to which Microsoft refers may have advantages for those operators, that cannot suffice to offset the anti-competitive effects of the tying at issue.

1152. As the Commission correctly observes (see paragraph 1130 above), by such an argument Microsoft is in fact claiming that the integration of Windows Media Player in Windows and the marketing of Windows in that form alone lead to the de facto standardisation of the Windows Media Player platform, which has beneficial effects on the market. Although, generally, standardisation may effectively present certain advantages, it cannot be allowed to be imposed unilaterally by an undertaking in a dominant position by means of tying.

1153. The Court further notes that it cannot be ruled out that third parties will not want the de facto standardisation advocated by Microsoft but will prefer it if different platforms continue to compete, on the ground that that will stimulate innovation between the various platforms.

1154. Furthermore, as the Commission and SIIA rightly submit, the other benefits on which Microsoft relies could just as easily be obtained in the absence of the impugned conduct.

1155. Thus, consumer demand for an out-of-the-box' client PC incorporating a streaming media player can be fully satisfied by OEMs, who are in the business of assembling such PCs and combining, inter alia, a client PC operating system with the applications desired by consumers (recitals 68 and 119 to the contested decision). Nor does the contested decision prevent Microsoft from continuing to offer the bundled version of Windows and Windows Media Player to consumers who prefer that solution.

1156. Similarly, Microsoft cannot rely on the fact that OEMs depend on the addition of functionality to Windows to create PCs that will appeal to customers and that will support the creation of interesting new applications'. OEMs are capable of offering client PCs with such features by pre-installing on them applications obtained from software developers. In the same way, the functionalities offered by Windows Media Player may be supplied by Microsoft on an independent basis, that is to say, without that media player being tied to the Windows operating system.

1157. Nor can Microsoft claim that the integration of media functionality in Windows is essential in order to enable software developers and Internet site creators to use the Windows platform effectively and that it enables those operators to avoid having to develop the requisite software code themselves.

1158. For the reasons set out at recitals 962 to 967 to the contested decision, that argument must be rejected as unfounded. It must be borne in mind, in that regard, that although streaming media players - and this applies both to Windows Media Player and to competing media players - constitute application software, they none the less expose APIs and may therefore also serve as platforms for third-party applications. It is wholly unnecessary for a streaming media player to be integrated in a client PC operating system in order to be able to provide such platform services. In particular, contrary to the impression that Microsoft would give, the absence of such integration does not have the consequence that software developers must write the requisite software code. Thus, as stated at recital 966 to the contested decision, a large number of software developers and Internet content providers develop their products using APIs exposed by RealPlayer even though that is not integrated in any client PC operating system. Similarly, the Court notes that software developers can - and do - write applications designed to work with WMP 9, although that player was not pre-installed on Windows (recital 965 to the contested decision).

1159. Last, the Court notes that, as the Commission observes both in the contested decision and in its pleadings, Microsoft does not show that the integration of Windows Media Player in Windows creates technical efficiencies or, in other words, that it lead[s] to superior technical product performance' (recital 962 to the contested decision).

1160. In the reply, Microsoft asserts, for the first time, that Windows ... operate[s] faster when media functionality is integrated'. In that regard, it is sufficient to state that that assertion is unsupported.

1161. Also in the reply, Microsoft asserts that the fact that numerous software developers freely choose to call on the media functionality in Windows shows that the uniform integration' of such functionality creates technical efficiencies. That assertion must be rejected: the contested decision refers to Windows Media Player and not to media functionality in general, and the mere fact that software developers rely on Windows Media Player does not prove that the tying produces technical efficiencies.

1162. The second series of arguments on which Microsoft relies must also be rejected.

1163. First of all, as regards Microsoft's claim that applications that are already in broad use' will no longer work correctly when they are implemented on the version of Windows without Windows Media Player, it is sufficient to state that this has not been demonstrated to the requisite legal standard.

1164. Next, the Court finds that Microsoft's assertion that the removal of media functionality from the system consisting of Windows and Windows Media Player will affect the functioning of parts of the Windows operating system itself is unfounded. The only examples that Microsoft provides on that point, namely the examples of the Help' system and the text-to-voice system contained in

Windows, are unconvincing. Those systems rely on the basic media infrastructure of the Windows operating system and not on Windows Media Player. As already stated at paragraph 916 above in connection with the bundling issue, the impugned conduct concerns only the application software that constitutes Windows Media Player, to the exclusion of any other multimedia technology in the Windows client PC operating system, and the basic multimedia infrastructure of that system remains in the version of Windows imposed by Article 6(a) of the contested decision. It was also stated at paragraph 916 above that Microsoft itself differentiates in its technical literature the files which constitute Windows Media Player from the other multimedia files, notably those relating to the basic multimedia infrastructure.

1165. The Court further considers that Microsoft cannot contend that the removal of Windows Media Player from the system consisting of Windows Media Player and Windows will entail a degrading of the operating system. Thus, Windows XP Embedded can be configured in such a way as not to include Windows Media Player without having any effect on the integrity of the other functionality of the operating system. Furthermore, throughout the period between June 1998 and May 1999, when Microsoft first integrated WMP 6 in its Windows client PC operating system without allowing OEMs or users to remov e it from that system, Microsoft offered its streaming media player as separate application software, without any effect on the functioning of the Windows operating system. The Court further notes that, pursuant to the remedy prescribed in Article 6(a) of the contested decision, Microsoft placed on the market a version of Windows without Windows Media Player and that that version is fully functional.

1166. Last, the Court also rejects Microsoft's argument based on the risk of fragmentation' of its Windows operating system (see paragraph 1122 above). As the Commission states in the defence, that argument is hypothetical and speculative. Furthermore, it is inconsistent with Microsoft's own business practice. Thus, over recent years, Microsoft has successively marketed a number of different versions of its Windows operating system which are not all interchangeable, namely Windows 98, Windows 2000, Windows Me, Windows NT and Windows XP. In addition, as regards, for example, Windows XP, that operating system can be broken down into seven distinct versions.

1167. It follows from all of the foregoing considerations that Microsoft has not demonstrated the existence of any objective justification for the abusive bundling of Windows Media Player with the Windows client PC operating system.

f) Failure to comply with the obligations imposed on the Communities by the TRIPS Agreement

Contested decision

1168. At recitals 1049 to 1053 to the contested decision, the Commission examines Microsoft's argument that the remedy for the abusive refusal to supply fails to comply with the obligations imposed on the Community by the TRIPS Agreement and also the argument that the remedy for the abusive tying fails to comply with the Agreement on Technical Barriers to Trade (TBT) of 15 April 1994 (Annex 1A to the Agreement establishing the WTO (the WTO Agreement').

1169. The Commission maintains, in effect, that the contested decision is fully consistent with its obligations under the TRIPS Agreement and the WTO Agreement (recital 1052 to the contested decision).

1170. The Commission further asserts that, for the reasons set out at paragraphs 801 and 802 above, Microsoft cannot invoke those agreements in order to challenge the legality of the contested decision (recital 1053 to the contested decision).

Arguments of the parties

1171. Microsoft claims that the contested decision forces it to develop a version of its Windows operating system from which nearly all' the media functionality has been removed and to offer that degraded product', under the Microsoft and Windows trade marks, to consumers in Europe. The contested decision thereby infringes its trade mark rights and its copyright, two categories of rights which the Communities are legally bound to protect under the TRIPS Agreement.

1172. In the first place, Microsoft claims that the contested decision infringes its trade mark rights, contrary to Articles 17 to 20 of the TRIPS Agreement. Under Article 17 of the TRIPS Agreement, any exceptions to trade mark rights must be limited and must take account of the legitimate interests of the owner of the trade mark and of third parties, while Article 20 of the TRIPS Agreement provides that the use of a trade mark cannot be unjustifiably encumbered by special requirements, such as use in a special form or use in a manner detrimental to its capability to distinguish the goods or services of one undertaking from those of other undertakings'.

1173. Microsoft maintains that by requiring it to offer to license a version of Windows without media functionality, the Commission requires it to place its most valuable' trade mark on a product which it did not design and which it knows will not work in the desired way. In addition, there is a likelihood of confusion between the version of Windows without media functionality and the version with media functionality. The contested decision also infringes Microsoft's right to control the quality of the products to which the trade mark is affixed and, in that regard, the applicant reiterates that the version of Windows imposed by Article 6(a) of the contested decision will affect the functioning of a series of elements of the Windows operating system itself and also applications and Internet sites which call on that media functionality. The encumbrances' thus created by the contested decision do not form part of the type of limited' exceptions envisaged by Article 17 of the TRIPS Agreement and the requirement that it place its Windows and Microsoft trade marks on inferior products over which it is unable to exercise design control runs directly counter to its own interests and also to those of consumers and third-party software developers.

1174. There is a breach of Article 20 of the TRIPS Agreement in so far as, in spite of the existence of equally effective alternatives, the Commission forces Microsoft to encumber the Windows trade mark in a manner that reduces its function as an indicator of source and quality, which causes confusion in the minds of consumers and harms the goodwill of the trade mark.

1175. In the second place, as regards its copyright, Microsoft claims that the contested decision infringes its exclusive rights - protected by the TRIPS Agreement - to authorise adaptations, arrangements and other alterations of its works, to authorise the reproduction of its works, in any manner or form, and to distribute copies of Windows to the public. The contested decision forces it to create an adaptation of Windows which is not of the applicant's own design and which represents a substantial alteration of its copyrighted work, and also to license the use of copies of that compelled adaptation of its copyrighted work'. The compulsory licensing of a copyrighted work is authorised by the TRIPS Agreement only on the conditions laid down in Article 13 of that agreement, which are not fulfilled in this case.

1176. The Commission claims, primarily, that the legality of the contested decision cannot be reviewed by reference to the TRIPS Agreement (see paragraph 789 above).

1177. In the alternative, the Commission contends that Microsoft's arguments are in any event wholly unfounded.

1178. In the first place, the Commission rejects Microsoft's arguments relating to its trade marks.

1179. First of all, it submits that those arguments are difficult to understand and that Microsoft fails to make clear whether the alleged breach of the TRIPS Agreement refers to the finding of the tying abuse made in the contested decision or to the remedy for that abuse.

1180. Next, the Commission submits that, under Article 16(1) of the TRIPS Agreement, the owner of a registered trade mark is to have the exclusive right to prevent third parties acting without its consent from using identical or similar signs. Microsoft fails to explain how that right would be affected by the contested decision or to what extent the use of its trade marks might, on account of the contested decision, be unjustifiably encumbered by special requirements within the meaning of Article 20 of the TRIPS Agreement. In the Commission's submission, the exclusive right referred to above is therefore preserved in the present case, as is the function of the trade mark as a guarantee of origin of the products.

1181. The Commission further submits that the remedy prescribed by Article 6(a) of the contested decision does not infringe Microsoft's right to control the quality of the products to which the trade mark is affixed, since Microsoft would retain total control of the quality of its own products'. Furthermore, the argument that the version of Windows without Windows Media Player was a degraded product has already been refuted, and the risk of confusion on which Microsoft relies can be avoided with adequate information and labelling.

1182. Last, the Commission asserts that, even on the assumption that the contested decision does infringe Microsoft's trade marks, the derogation provided for in Article 17 of the TRIPS Agreement, read together with Article 8(2) and Article 40(2) of that agreement, would allow the infringement of competition law identified in the contested decision to be brought to an end.

1183. In the second place, the Commission rejects the arguments which Microsoft bases on its copyright.

1184. First of all, the contested decision does not authorise any third party to adapt or reproduce Microsoft's copyright works and Microsoft cannot rely on an integrity right', which is a moral right and is therefore not covered by the TRIPS Agreement.

1185. Next, the Commission submits that the arguments which Microsoft bases on Article 13 of the TRIPS Agreement cannot be upheld. In particular, the contested decision deals with a special case' within the meaning of that article, since it applies to instances of tying which would constitute an abuse of a dominant position'.

1186. Last, the Commission contends that, even on the assumption that the contested decision does infringe Microsoft's copyright, the exception provided for in Article 13 of the TRIPS Agreement, read together with Article 8(2) and Article 40(2) of that agreement, would allow the infringement of competition law identified in the contested decision to be brought to an end.

1187. SIIA essentially supports the Commission's arguments.

Findings of the Court

1188. The Court notes that Microsoft is challenging the legality of the contested decision on the ground that it is contrary to various provisions of the TRIPS Agreement, and in particular to Articles 13, 17 and 20 of that agreement.

1189. However, as the Court has already stated at paragraph 801 above, it is settled case-law that, given their nature and structure, WTO Agreements are not in principle among the rules by reference to which the Community judicature will review the legality of measures adopted by the Community institutions.

1190. As the Court has also already observed at paragraph 802 above, it is only where the Community has intended to implement a particular obligation assumed under the WTO or where the Community measure refers expressly to specific provisions of the WTO Agreements that the Community judicature must review the legality of the Community measure in question in the light of the WTO rules. As the circumstances of the present case clearly do not correspond to either of those two situations, Microsoft cannot rely on the TRIPS Agreement, in particular its Articles 13, 17 and 20, in support of its application for annulment of the contested decision in so far as it concerns the bundling of Windows and Windows Media Player.

1191. It follows that this part of the first plea must be rejected without there being any need to examine the arguments which Microsoft has raised in support of it.

1192. In any event, there is nothing in the provisions of the TRIPS Agreement to prevent the competition authorities of the members of the WTO from imposing remedies which limit or regulate the exploitation of intellectual property rights held by an undertaking in a dominant position where that undertaking exercises those rights in an anti-competitive manner. Thus, as the Commission correctly observes, it follows expressly from Article 40(2) of the TRIPS Agreement that the members of the WTO are entitled to regulate the abusive use of such rights in order to avoid effects which harm competition. Article 40(2) provides as follows:

Nothing in this Agreement shall prevent Members from specifying in their legislation licensing practices or conditions that may in particular cases constitute an abuse of intellectual property rights having an adverse effect on competition in the relevant market. As provided above, a Member may adopt, consistently with the other provisions of this Agreement, appropriate measures to prevent or control such practices, which may include for example exclusive grantback conditions, conditions preventing challenges to validity and coercive package licensing, in the light of the relevant laws and regulations of that Member.'

1193. It follows from all of the foregoing that the first plea must be rejected as unfounded in its entirety.

3. Second plea, alleging breach of the principle of proportionality

a) Contested decision

1194. By way of remedy for the abusive tying referred to in Article 2(b) of the contested decision, Article 6 of that decision orders Microsoft to offer, within 90 days of the date of notification of that decision, a full-functioning version of its Windows client PC operating system which does not incorporate Windows Media Player, although Microsoft is to retain the right to offer a bundle of its Windows client PC operating system and Windows Media Player. Article 6 also provides that Microsoft is to communicate to the Commission, within the same period, all the measures which it has taken to comply with that obligation.

1195. At recitals 1011 to 1042 to the contested decision, the Commission provides details of that remedy.

1196. In the first place, the Commission describes the scope of the remedy (recitals 1011 to 1014 to the contested decision).

1197. In particular, the obligation imposed on Microsoft to offer a version of Windows without Windows Media Player applies both where Windows is licensed directly to end users and where it is licensed to OEMs. Likewise, the option which Microsoft retains to offer a bundle of Windows and Windows Media Player applies with respect both to end users and to OEMs.

1198. The Commission also prohibits Microsoft from adopting any technological, commercial, contractual or other measure which would have an effect equivalent to tying Windows and Windows Media Player, and states in particular that the version of Windows without Windows Media Player must perform as well as the version of Windows with Windows Media Player. Recital 1013 to the contested decision contains a non-exhaustive list of practices which are prohibited on that ground.

1199. In the second place, the Commission fixes at 90 days the period within which Microsoft must implement the remedy in question (recitals 1015 to 1017 to the contested decision).

1200. In the third place, the Commission rejects Microsoft's assertion that the remedy prescribed in Article 6(a) of the contested decision is not sufficiently precise, since Microsoft knows exactly what software code it must remove from its product (recitals 1018 to 1021 to the contested decision). The Commission gives, inter alia, the example of Windows XP Embedded and makes clear that the contested decision does not require Microsoft to remove all media files from Windows, but only those which constitute Windows Media Player.

1201. In the fourth place, the Commission puts forward a series of considerations in order to demonstrate that the remedy in question is proportionate (recitals 1022 to 1042 to the contested decision).

1202. First, it maintains that the remedy is necessary to remove the restriction of competition resulting from Microsoft's conduct (recital 1022 to the contested decision).

1203. Second, the remedy prescribed in Article 6(a) of the contested decision does not prevent Microsoft from marketing its media player and places no restrictions on Microsoft apart from prohibiting the tying practice at issue or the adoption of any measures having an equivalent effect to that practice (recital 1023 to the contested decision). The Commission reiterates that Microsoft can continue to market a bundle of Windows and Windows Media Player (ibid.).

1204. Third, the Commission rejects Microsoft's argument that there is no significant consumer demand for client PC operating systems without multimedia functionality (recitals 1024 and 1025 to the contested decision). The Commission states, in substance, that OEMs can respond to consumer expectations by pre-installing the media player chosen by the consumer on the client PCs which they sell to them.

1205. Fourth, at recitals 1026 to 1034 to the contested decision, the Commission examines Microsoft's arguments concerning the interdependencies between Windows and Windows Media Player. Referring again to the example of Windows XP Embedded, the Commission rejects the assertion that the elimination of the Windows Media Player code would harm the integrity of the operating system. It also contends that Microsoft has not shown that the integration of Windows Media Player in Windows was a precondition for efficiency gains, and asserts, in particular, that [i]f developers devise their own solutions or integrate a third party's redistributable code in their application, they do not depend on the presence of the media player on the user's client PC' (recital 1032 to the contested decision).

1206. Last, and fifth, at recitals 1035 to 1042 to the contested decision the Commission examines Microsoft's arguments relating to the alleged interdependencies between Windows and third-party applications. More specifically, it rejects the assertion that the elimination of the Windows Media Player code would have harmful consequences for content providers and software developers. The Commission submits that it is not uncommon for content providers to implement solutions which determine what media player is installed on a given client PC and that they foresee the measures to be taken where the presentation of their content requires a particular media player or a particular version of a given media player (recital 1037 to the contested decision), and it rejects Microsoft's argument that there is an advantage in preserving Windows as a consistent platform' (recital 1041 to the contested decision). The Commission considers, in substance, that Microsoft cannot rely on the fact that its practice allows software developers whose products rely on media players to have a focal point' for that purpose, since that practice distorts competition on the merits (recital 1042 to the contested decision).

b) Arguments of the parties

1207. Microsoft claims that the remedy prescribed in Article 6(a) of the contested decision infringes the principle of proportionality from three perspectives.

1208. In the first place, the remedy ignores the legitimate interest of software developers and

Internet site creators in preserving Windows as a stable and consistent platform'.

1209. In the second place, the remedy infringes Microsoft's moral rights by requiring it to degrade its Windows operating system and to license that degraded version of its product to third parties. In particular, the remedy ignores Microsoft's right to object to changes in its work or to the deformation, mutilation or other impairment of it.

1210. In the third place, Microsoft maintains that the remedy prescribed in Article 6(a) of the contested decision is internally inconsistent' and impossible for Microsoft to comply with, because it is required to remove important functionality from Windows and at the same time ensure that the degraded version of Windows is not less performing than the version with Windows Media Player.

1211. The Commission contends that the remedy is proportionate, especially since Microsoft retains the right to offer a bundled version of Windows with Windows Media Player. Nor does the remedy prevent Microsoft from marketing its media player or from continuing to offer it separately for downloading.

1212. The Commission disputes Microsoft's assertion that it is impossible to identify the software code of Windows Media Player or to comply with the remedy prescribed in Article 6(a) of the contested decision, and points out that Microsoft itself acknowledges that it has already developed an unbundled version of Windows which is ready to be placed on the market. It refers, moreover, to recitals 1018 to 1021 to the contested decision.

1213. The Commission further contends that Microsoft has adduced no evidence capable of showing that third parties would suffer harm or that the operating system would be degraded as a result of the remedy.

1214. As regards the alleged infringement of Microsoft's moral rights, the Commission asserts that Microsoft is not normally considered [to be] the rightholder of moral rights in Europe'. Nor does the remedy prevent the authors of the work from claiming paternity' or involve any disclosure of the code.

1215. Last, the Commission, supported on this point by SIIA, contends that the measures provided for by the judgment of the District Court of 1 November 2002 are not sufficient to remedy the tying abuse identified in the contested decision. That judgment does not require Microsoft to remove the Windows Media Player code from the client PC operating system, but only to provide a means for OEMs and end users to hide the on-screen icon and menu entries used to access the Windows Media Player software. Furthermore, Microsoft designed the hiding' mechanism in such a way that Windows Media Player can be reactivated and can override the default settings chosen by users. The remedies referred to in that judgment therefore do not affect the ubiquity of the Windows Media Player code on client PCs or, consequently, the incentives for software developers and content providers to focus on Windows Media Player as the platform technology for their complementary offerings'.

c) Findings of the Court

1216. First of all, the Court notes that, in support of the present plea, Microsoft reiterates in essence the same arguments it submitted in the first plea on the condition relating to the absence of objective justification (see paragraphs 1102 to 1122 above).

1217. The grounds on which the Court held that those arguments were unfounded must apply also in the examination of the present plea.

1218. Thus, in the first place, as regards the argument that the Commission failed to take account of the interest of software developers and Internet site creators in having a stable and well-defined platform, it is sufficient to refer to paragraphs 1148 to 1153 above.

1219. In the second place, Microsoft's argument that the remedy prescribed in Article 6(a) of the contested decision requires it to degrade its Windows operating system and to license such a degraded version of its product to third parties has already been refuted at paragraph 1165 above.

1220. In that regard, it must be borne in mind that the contested decision does not require Microsoft to offer a version of Windows from which all multimedia files, including those relating to the basic multimedia infrastructure of the operating system, have been removed. The only files affected are the files constituting Windows Media Player, which Microsoft itself distinguishes from the other files in its technical documentation (see paragraphs 916 to 1164 above). It must also be borne in mind that the example of Windows XP Embedded shows that the absence of Windows Media Player from the operating system does not harm the integrity of the other functionalities of that system (see paragraph 1165 above).

1221. Furthermore, between June 1998 and May 1999 Microsoft offered its streaming media player as separate application software, without any effect on the Windows operating system. As already stated at paragraph 936 above, Microsoft acknowledged at the hearing that there was no technical reason in May 1999 to prevent it from continuing to supply its media player in that form, that is to say, without integrating it in the Windows 98 Second Edition operating system.

1222. In the third place, it follows from the considerations set out at paragraphs 1219 to 1221 above that Microsoft's assertion that the remedy prescribed in Article 6(a) of the contested decision is internally inconsistent and impossible to comply with is unfounded. That assertion rests on the incorrect premiss that the version of Windows imposed by Article 6(a) is a degraded version of Microsoft's operating system. As the Commission correctly submits in its pleadings, while it is clear that when Windows Media Player is removed from Windows the functionalities offered by that player are no longer available on such a version of the operating system, it cannot be inferred that that version is degraded or that it performs less well in other respects than a version of the operating system bundled with Windows Media Player. The requirement that Microsoft offer a full-functioning' version of its Windows client PC operating system without Windows Media Player (Article 6(a) of the contested decision) must be seen in the light of, in particular, the requirement at recital 1012 to the contested decision that [t]he unbundled version of Windows must in particular not be less performing than the version of Windows which comes bundled with [Windows Media Player], regard being had to [Windows Media Player]'s functionality which, by definition, will not be part of the unbundled version of Windows'.

1223. Next, the Court considers that, far from being disproportionate, the remedy prescribed in Article 6(a) of the contested decision is an appropriate means of putting an end to the abuse in question and of resolving the competition issues identified, while causing the least possible inconvenience to Microsoft and its business model.

1224. Thus, the implementation of that measure does not entail any change in Microsoft's current technical practice other than the development of the version of Windows imposed by Article 6(a) of the contested decision.

1225. In particular, Microsoft retains the right to continue to offer the bundle of Windows and Windows Media Player. It must be borne in mind that the Commission's sole intention is to make it possible for consumers to obtain Windows without Windows Media Player.

1226. Furthermore, as the Commission correctly observes, the remedy does not affect Microsoft's ability to market its media player and, in particular, to offer it for downloading over the Internet.

1227. Last, the Court finds that, for the reasons set out at paragraph 974 above, the Commission was correct to consider that the measures taken by Microsoft pursuant to the United States settlement were not sufficient to put an end to the abuse and to resolve the competition issues identified.

1228. It follows from all of the foregoing considerations that the second plea must be rejected as unfounded.

1229. It follows that the claims relating to the annulment of the contested decision must be rejected in so far as they concern the bundling of Windows and Windows Media Player.

D - The independent monitoring trustee

1. Contested decision

1230. The first paragraph of Article 4 of the contested decision provides that Microsoft is to bring to an end the abusive conduct established in Article 2, in accordance with the procedures laid down in Articles 5 and 6 of that decision. Microsoft is also required to refrain from repeating any act or conduct having the same or equivalent object or effect as that abusive conduct (second paragraph of Article 4).

1231. By way of remedy for the abusive refusal to supply the interoperability information, Article 5 of the contested decision orders Microsoft to disclose, within 120 days of notification of that decision, that information to any undertaking having an interest in developing and distributing work group server operating systems and to allow, on reasonable and non-discriminatory terms, those undertakings to use the information in question to develop and distribute work group server operating systems. Microsoft is also required to ensure that the interoperability information disclosed is kept updated on an ongoing basis and in a timely manner. Last, Article 5 of the contested decision orders Microsoft, within 120 days of the date of notification of that decision, to set up an evaluation mechanism that will give interested undertakings a workable possibility of informing themselves about the scope and terms of use of the interoperability information.

1232. By way of remedy for the abusive bundling of the Windows client PC operating system and Windows Media Player, Article 6 of the contested decision orders Microsoft, inter alia, to offer, within 90 days of notification of the decision, a full-functioning version of its Windows client PC operating system which does not incorporate Windows Media Player, although Microsoft is to retain the right to offer a bundle of the Windows client PC operating system and Windows Media Player.

1233. Article 7 of the contested decision, moreover, provides for the establishment of a suitable mechanism to assist the Commission in monitoring Microsoft's compliance with the contested decision and including, in particular, the appointment of an independent monitoring trustee. Article 7 provides that that mechanism is to form the subject-matter of a proposal by Microsoft within 30 days of notification of the decision, while in the event that the Commission considers that the proposed mechanism is not suitable, it is to retain the right to impose such a mechanism by way of a decision'.

1234. At recitals 1043 to 1048 to the contested decision, the Commission describes in greater detail the monitoring mechanism referred to in the preceding paragraph and, in particular, sets out the [g]uiding principles for Microsoft [when it draws up its proposal for the appointment of an independent monitoring trustee]' (recital 1044 to the contested decision).

1235. Thus, at recital 1045 to the contested decision, the Commission states that the monitoring trustee's primary responsibility' is to issue opinions, and to do so upon application by a third party or by the Commission, or on his own initiative, on whether Microsoft has, in a specific instance, failed to comply with [the contested decision], or on any issue that may be of interest with respect to the effective enforcement of [that decision]'.

1236. At recitals 1046 and 1047 to the contested decision, the Commission describes the task of the monitoring trustee with respect to each of the two abuses at issue (see paragraph 1261 below).

1237. At recital 1048 to the contested decision, the Commission establishes the principles which

Microsoft must take into account in its proposal concerning the monitoring trustee. In the first place, the monitoring trustee is to be appointed by the Commission from a list of persons submitted by Microsoft and Microsoft is to devise a procedure which allows the Commission to appoint a monitoring trustee of its choosing if it does not deem any of the persons proposed by Microsoft adequate for the task. In the second place, the monitoring trustee must be independent of Microsoft and provisions [must] be established to ensure that [he] is not and will not become exposed to a conflict of interest'. The monitoring trustee must possess the necessary qualifications to carry out his mandate and it should be possible for him to hire experts to carry out certain precisely-defined tasks on his behalf. In the third place, provisions must be established in order to guarantee that the monitoring trustee has access to Microsoft's assistance, information, documents, premises and employees to the extent that he may reasonably require such access in carrying out his mandate'. In the fourth place, the monitoring trustee must have full access to the source code of the relevant Microsoft products. Last, in the fifth place, all costs of establishment of the monitoring trustee, including a fair remuneration for the monitoring trustee's activities, should be borne by Microsoft'.

2. Arguments of the parties

1238. Microsoft contends that the obligation imposed on it by Article 7 of the contested decision to appoint an independent monitoring trustee is unlawful, since the Commission lacks authority, first, to delegate to a private individual the enforcement powers conferred on it by Regulation No 17 and, second, to require Microsoft to bear the costs of monitoring its compliance with the contested decision, including remuneration of the monitoring trustee.

1239. As a preliminary point, Microsoft denies that its application for annulment of Article 7 of the contested decision is premature. In particular, the Commission cannot rely on the fact that it could have imposed a monitoring mechanism by adopting a separate decision if it had not been satisfied with Microsoft's proposal and that Microsoft could then have sought annulment of that decision.

1240. Next, in the first place, Microsoft asserts that it is clear from recitals 1043 to 1048 to the contested decision that the powers delegated to the monitoring trustee in the present case are powers of investigation and enforcement that normally belong to the Commission. Although the monitoring trustee's primary task is to issue opinions on compliance with the contested decision, he also has the power to investigate the measures taken by Microsoft to comply with that decision. Microsoft points out that footnote 1317 to the contested decision states that [t]he monitoring trustee should not only be reactive, but should play a proactive role in the monitoring of Microsoft's compliance'. The contested decision is thus intended to establish an independent source of measures of investigation and enforcement.

1241. Under Articles 11 and 14 of Regulation No 17 and Articles 18 to 21 of Council Regulation (EC) No 1/2003 on the implementation of the competition rules laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1), however, the powers of investigation and enforcement in connection with those rules belong exclusively to the Commission and the national competition authorities. Neither of those regulations authorises the Commission to delegate those powers to third parties or, a fortiori , to private individuals.

1242. Furthermore, by thus delegating its powers, the Commission deprives Microsoft of guarantees recognised to undertakings by the case-law to safeguard their rights of defence.

1243. In the reply, Microsoft makes clear that it has no objection to an independent monitoring trustee advising the Commission on technical questions. However, the Commission ought to have appointed its own expert for that purpose.

1244. In the second place, Microsoft observes that Article 7 of the contested decision, read with recital 1048(v) thereto, requires it to bear all costs of establishment of the monitoring trustee, including a fair remuneration for the monitoring trustee's activities'. In applying the competition rules, the Commission cannot impose on the undertaking concerned any pecuniary charges other than fines and periodic penalty payments.

1245. Microsoft submits that the Commission cannot invoke its power to order an undertaking to bring an infringement to an end as a ground for making that undertaking responsible for the costs associated with the monitoring trustee. The imposition of such a pecuniary charge has no legal basis in Regulation No 17, Regulation No 1/2003 or any other provision.

1246. The Commission contends, primarily, that Microsoft's arguments concerning the question of the monitoring trustee are inadmissible in that they are premature, conjectural and insufficient to warrant annulment of Article 7 of the contested decision. That article requires Microsoft to submit a proposal for the establishment of a monitoring mechanism, while reserving to the Commission the right to impose such a mechanism by adopting a decision should it consider that Microsoft's proposed mechanism is not suitable. Recitals 1044 to 1048 to the contested decision set out the guiding principles that Microsoft should take into account in drawing up that proposal, but most of those principles are not imposed on Microsoft by Article 7 of the contested decision. In particular, that article does not specify either the independent monitoring trustee's precise functions or the source' of his remuneration. Microsoft is thus free to suggest a narrower scope of action than that envisaged in the contested decision and different arrangements for remuneration. The Commission would then be able to reject those proposals and impose a differently-worded mandate by decision. Such a decision would not merely be confirmatory of the contested decision and would be open to challenge.

1247. In the alternative, the Commission contends that Microsoft's arguments are unfounded.

1248. In the first place, the Commission submits that it does not follow from recitals 1044 to 1048 to the contested decision that it delegated to a private individual the powers of investigation and enforcement conferred on it by Articles 81 EC and 82 EC. From the perspective of information-gathering', the contested decision provides only for a consensual mechanism' which permits the swift resolution of many of the technical issues that are likely to arise concerning the implementation of the remedies. Admittedly, recital 1048 and footnote 1317 to the contested decision provide that the independent monitoring trustee can put questions to Microsoft and have access to documents and to the source code of the relevant products, but there is nothing to prevent Microsoft from specifying in its proposal for the mandate that it could refuse to answer such questions or to grant access to the requested information. In the event of such a refusal, the Commission would consider whether it would be appropriate to take action pursuant to Chapter V of Regulation No 1/2003 and would thus retain full discretion as concerns the use of its powers of investigation.

1249. In answer to a written question put by the Court, the Commission stated that Article 7 of the contested decision was based on Article 3 of Regulation No 17 and that it constituted an expression' of the power conferred on it by that article to adopt decisions ordering undertakings to bring an infringement to an end.

1250. In the second place, the Commission claims that the obligation imposed on Microsoft to bear the costs associated with the remuneration of the monitoring trustee clearly does not form part of the sanctions provided for in Regulation No 17 and Regulation No 1/2003. If Article 7 of the contested decision must be understood as imposing an obligation as regards the remuneration of the monitoring trustee, that obligation must have its legal basis in Article 3 of Regulation No 17. A decision adopted on the basis of that article may include an order to do certain acts or provide certain advantages which have been wrongfully withheld as well as prohibiting the continuation of certain action, practices or situations which are contrary to the Treaty and will entail some costs for the addressee. The Commission refers to recital 1044 to the contested decision and observes that the implementation of the remedies requires effective monitoring of compliance with the obligations imposed on Microsoft by the contested decision.

3. Findings of the Court

1251. Microsoft seeks annulment of Article 7 of the contested decision on the ground that, by unlawfully delegating its powers of investigation and enforcement to a third party, the Commission exceeded its powers under Article 82 EC and Regulation No 17. Microsoft maintains that the imposition on an undertaking of a monitoring mechanism such as that referred to in Article 7 of the contested decision, and the charging to that undertaking of the remuneration of a third party appointed by the Commission to assist its task of monitoring compliance with the remedies ordered in an infringement decision, have no legal basis in Community law.

1252. The Commission contends that that application for annulment is premature and therefore inadmissible, in that Article 7 of the contested decision imposes no obligation on Microsoft but merely invites it to submit a proposal for the establishment of a monitoring mechanism; and in any event, that article entails no delegation of the Commission's powers. The Commission claims that that monitoring mechanism and the charging to Microsoft of the remuneration of the independent monitoring trustee have their basis in Article 3 of Regulation No 17, which allows it to order the undertakings concerned to bring to an end an infringement which the Commission has found.

1253. It must be borne in mind that the legality of Article 7 of the contested decision falls to be assessed by reference to the facts and the law as they existed at the time of adoption of the contested decision. At that time Regulation No 17 was still in force, whereas Regulation No 1/2003, which replaced it, became applicable on 1 May 2004.

1254. It must also be borne in mind that the powers of investigation and enforcement which the Commission enjoyed at the time of adoption of the contested decision, in so far as they are relevant to the application for annulment of Article 7 of that decision, were its power under Article 3(1) of Regulation No 17 to require the undertakings concerned to bring to an end an infringement, its powers under Article 11 of that regulation to request information, its powers of investigation under Article 14 of that regulation and the power under Article 16 of that regulation to impose periodic penalty payments on undertakings in order to compel them to put an end to the infringement found.

1255. First of all, the Court rejects the Commission's argument that the application for annulment of Article 7 is premature in that the article merely invites Microsoft to submit a proposal prior to the adoption by the Commission of a final decision on the establishment of a monitoring mechanism. The fact that Article 7 of the contested decision contains an invitation to submit a proposal cannot alter the binding nature of that article in so far as it constitutes the exercise by the Commission of its power to order that an infringement be brought to an end.

1256. When the Commission finds in a decision that an undertaking has infringed Article 82 EC, that undertaking is required to take, without delay, all the measures necessary to comply with that provision, even in the absence of specific measures prescribed by the Commission in that decision. Where remedies are provided for in the decision, the undertaking concerned is required to implement them - and to assume all the costs associated with their implementation -, failing which it exposes itself to liability for periodic penalty payments imposed pursuant to Article 16 of Regulation No 17 (see paragraph 1259 below).

1257. It follows from the wording of Article 7 of the contested decision, and in particular from the period of 30 days imposed on Microsoft, that it was precisely such a binding measure that was provided for by that provision. Although the first reaction envisaged in the event that Microsoft should fail to submit a suitable proposal is that referred to in the second paragraph of Article 7, namely the imposition of a monitoring mechanism by way of a decision, the fact remains that if Microsoft fails to comply with the obligation to submit a proposal it also incurs the risk of periodic penalty payments. The binding nature of the measure thus ordered cannot be affected by the mere fact that the Commission retains the right to impose such a mechanism itself in the event that it considers that Microsoft's proposal is not suitable. Failure to comply with such a specific measure ordered in a decision designed to put an end to an infringement of Article 82 EC constitutes a separate infringement of Community law, in this particular case Article 3 of Regulation No 17.

1258. That assessment is not invalidated by the Commission's argument that Microsoft could have submitted a different proposal better tailored to its own perception of what the Commission was entitled to require it to do. It is settled case-law that the operative part of an act is indissociably linked to the statement of reasons for it and when it has to be interpreted account must be taken of the reasons that led to its adoption (Case C355/95 P TWD v Commission [1997] ECR I2549, paragraph 21; Case C91/01 Italy v Commission [2004] ECR I4355, paragraph 49; and Case T137/02 Pollmeier Malchow v Commission [2004] ECR II3541, paragraph 60).

1259. The Court considers that in the light of the role which the Commission envisages for the monitoring trustee, as summarised at paragraph 1261 below, and of the powers conferred on the Commission by Articles 3 and 16 of Regulation No 17, Article 7 of the contested decision has the effect that if Microsoft failed, within the prescribed period of 30 days, to submit a proposal consistent with the principles set out, in particular, at recitals 1045 to 1048 to the decision, it would infringe the contested decision and incur the risk of being ordered to pay periodic penalty payments pursuant to Article 16 of Regulation No 17. It follows that Microsoft's legal situation was directly affected by Article 7 of the contested decision and that the application for annulment of that provision cannot be characterised as premature or as speculative, as the Commission contends.

1260. Next, the Court considers it appropriate to examine whether Article 7 of the contested decision has a legal basis in Regulation No 17 or whether, as Microsoft maintains, the Commission exceeded its powers of investigation and enforcement in so far as it ordered Microsoft to accept the establishment of an independent monitoring trustee endowed with the role and powers in question.

1261. It follows from recitals 1043 to 1048 to the contested decision that the monitoring trustee's task includes, in particular, the following functions:

- his primary responsibility' is to issue opinions on whether Microsoft has, in a specific instance, failed to comply with the contested decision (including compliance with the obligation to implement the remedies correctly);

- those opinions will be given either upon application by a third party or by the Commission, or by the monitoring trustee acting on his own initiative;

- on that point, the monitoring trustee must not only be reactive but must play a proactive role in the monitoring of Microsoft's compliance (footnote 1317 to the contested decision);

- as regards the abusive refusal to disclose the interoperability information, the monitoring trustee is required to assess whether the information made available by Microsoft is complete and accurate, whether the terms under which Microsoft makes the specifications available and authorises their use are reasonable and non-discriminatory and whether the ongoing disclosures are made in a timely manner;

- as regards the abusive tying, the monitoring trustee is required to advise the Commission whether substantiated complaints by third parties about Microsoft's compliance with the contested decision are well founded from a technical point of view and, in particular, whether the version of Windows without Windows Media Player is less performing than any bundled version of Windows that Microsoft would continue to market. The monitoring trustee is also required to advise whether Microsoft hinders the performance of rival media players through selective, inadequate or untimely disclosures of Windows APIs.

1262. At recital 1048 to the contested decision, the Commission sets out the principles which Microsoft must take into account in its proposal concerning the independent monitoring trustee pursuant to the decision. Those principles are, in particular, as follows:

- (i) the monitoring trustee should be appointed by the Commission from a list of persons submitted by Microsoft;

- (ii) the monitoring trustee is to be independent of Microsoft and provisions should be established to ensure that the monitoring trustee is not and will not become exposed to a conflict of interests; he should possess the necessary qualifications to carry out his mandate, and be entitled to hire experts to carry out certain precisely-defined tasks on his behalf;

- (iii) provisions are to be established in order to guarantee that the monitoring trustee has access to Microsoft's assistance, information, documents, premises and employees to the extent that he may reasonably require such access in carrying out his mandate;

- (iv) the monitoring trustee should have full access to the source code of the relevant Microsoft products (any controversy as to the accuracy and completeness of the specifications that will be disclosed can only be resolved if the technical information is checked against the actual source code of Microsoft's products);

- (v) all costs of establishment of the monitoring trustee, including a fair remuneration for the monitoring trustee's activities, are to be borne by Microsoft.

1263. It is clear from that description that the Commission sees the monitoring trustee's role as being to evaluate and monitor the implementation of the remedies, by having access where necessary to the resources referred to in the preceding paragraph, at (iii) and (iv), while acting independently and, indeed, on his own initiative.

1264. The Commission expressly acknowledges in its pleadings that it is not entitled to delegate to a third party the powers of investigation and enforcement conferred on it by Regulation No 17. It does not accept, however, that the monitoring mechanism provided for in the contested decision entails such a delegation of powers.

1265. On the other hand, as Microsoft acknowledges, the Commission is entitled to monitor the implementation by the undertaking concerned of the remedies ordered in an infringement decision and to ensure that the other measures necessary to put an end to the anti-competitive effects of the infringement are fully implemented without delay. For those purposes, it is entitled to use the powers of investigation provided for in Article 14 of Regulation No 17 and, where necessary, to use an external expert in order, inter alia, to resolve technical issues.

1266. Nor can it be disputed that where the Commission decides to obtain the assistance of an external expert it may communicate to that expert any information and documents which it may have obtained in the exercise of its powers of investigation under Article 14 of Regulation No 17.

1267. Under Article 11(4) and Article 14(3) of Regulation No 17, undertakings are required to provide the information requested by the Commission and to submit to the investigations which it orders. However, such requests and investigations are subject where necessary to the control of the Community Courts.

1268. The Court considers that by establishing a monitoring mechanism involving the appointment of an independent monitoring trustee as referred to in Article 7 of the contested decision, and charged with the functions set out, in particular, at recital 1048(iii) and (iv) to that decision, the Commission went far beyond the situation in which it retains its own external expert to provide advice when it investigates the implementation of the remedies prescribed in Articles 4, 5 and 6 of the contested decision.

1269. In effect, by Article 7 of the contested decision, the Commission requires the appointment of a trustee who, in the performance of his tasks, is independent not only of Microsoft but also of the Commission itself, in so far as he is required to act on his own initiative and upon application by third parties in the exercise of his powers. As the Commission observes at recital 1043 to the contested decision, that requirement goes beyond a mere obligation to report to the Commission on Microsoft's actions.

1270. Furthermore, the role envisaged for the monitoring trustee is not limited to putting questions to Microsoft and reporting the answers to the Commission, or to advice concerning the implementation of the remedies. As regards the obligation imposed on Microsoft to allow the monitoring trustee, independently of the Commission, access to information, documents, premises and employees and also to the source code of its relevant products, the Court notes that no limit in time is envisaged for the continuing intervention of the monitoring trustee in monitoring Microsoft's activities related to the remedies. Furthermore, it is clear from recital 1002 to the contested decision that the Commission considers that the obligation to disclose interoperability information must apply in a prospective manner' to future generations of Microsoft's products.

1271. It follows that the Commission has no authority, in the exercise of its powers under Article 3 of Regulation No 17, to compel Microsoft to grant to an independent monitoring trustee powers which the Commission is not itself authorised to confer on a third party. The second subparagraph of Article 7 of the contested decision is therefore without legal basis, particularly in so far as it entails the delegation to the monitoring trustee of powers of investigation which the Commission alone can exercise pursuant to Regulation No 17.

1272. If, moreover, as the Commission maintains, its intention was to establish a purely consensual mechanism, there was no need to order such a mechanism in Article 7 of the contested decision.

1273. Last, the Commission exceeds its powers in so far as Article 7 of the contested decision, read with recital 1048(v) to that decision, makes Microsoft responsible for all the costs associated with the appointment of the monitoring trustee, including his remuneration and the expenditure incurred in carrying out his functions.

1274. There is no provision of Regulation No 17 that authorises the Commission to require an undertaking to bear the costs which the Commission incurs as a result of monitoring the implementation of remedies.

1275. It is for the Commission, in its capacity as authority responsible for applying the Community competition rules, to pursue the implementation of infringement decisions in an independent, objective and impartial manner. It would be incompatible with its responsibility in that regard for the effective implementation of Community law to depend on or be influenced by the willingness or the capacity of the addressee of the decision to bear such costs.

1276. The case-law shows, moreover, that the Commission does not have unlimited discretion when formulating remedies to be imposed on undertakings for the purpose of putting an end to an infringement. In the context of the application of Article 3 of Regulation No 17, the principle of proportionality requires that the burdens imposed on undertakings in order to bring an infringement to an end do not exceed what is appropriate and necessary to attain the objective sought, namely re-establishment of compliance with the rules infringed (Magill , paragraph 107 above, paragraph 93).

1277. If the Commission is not competent to adopt a decision pursuant to Article 3 of Regulation No 17 imposing remedies on an undertaking which has infringed Article 82 EC, including the costs associated therewith, which exceed what is appropriate and necessary, then it is even less competent to make that undertaking responsible for the costs which are to be borne by the Commission in fulfilling its own investigation and enforcement responsibilities.

1278. It follows from all of the foregoing considerations that Article 7 of the contested decision has no legal basis in Regulation No 17 and therefore exceeds the Commission's powers of investigation and enforcement under Regulation No 17 in so far as it orders Microsoft to submit a proposal for the establishment of a mechanism which must include the appointment of an independent monitoring trustee empowered to access, independently of the Commission, Microsoft's assistance, information, documents, premises and employees and also the source code of its relevant products and also provides that Microsoft is to bear all the costs of the appointment of the monitoring trustee, including his remuneration. The Commission cannot therefore retain the right to impose such a mechanism by adopting a decision in the event that it considers that the mechanism proposed by Microsoft is not suitable.

1279. It follows that Article 7 of the contested decision must be annulled to the extent described in the preceding paragraph.

II - The claims that the fine should be annulled or that its amount should be reduced

A - Contested decision

1280. For the two types of abuse identified in the contested decision, a single fine of EUR 497 196 304 is imposed (Article 3 of the contested decision).

1281. The question of the fine is examined by the Commission at recitals 1054 to 1080 to the contested decision.

1282. In the first place, the Commission states that it took into account the provisions of Article 15(2) of Regulation No 17 (recital 1054 to the contested decision) and observes that, in fixing the amount of the fine, it must have regard to the gravity and duration of the infringement and also to any aggravating or attenuating circumstances (recital 1055 to the contested decision).

1283. In the second place, the Commission rejects the arguments which Microsoft had put forward during the administrative procedure in support of its argument that no fine ought to be imposed on it in the present case (recitals 1056 to 1058 to the contested decision).

1284. First, the Commission states that the contested decision establishes to the requisite legal standard that Microsoft intentionally, or at least negligently, infringed Article 82 EC and Article 54 of the EEA Agreement (recital 1057 to the contested decision). Second, it denies having introduced a new rule of law' and concludes that Microsoft ought to have been aware that it was infringing those provisions (ibid.). Third, it rejects Microsoft's argument that the abusive tying cannot have begun in 1999, since certain media functionality has been integrated in Windows since 1992 (ibid.).

1285. In the third place, the Commission explains the way in which it calculated the fine (recitals 1059 to 1079 to the contested decision).

1286. First, the Commission determined the basic amount of the fine according to the gravity and duration of the infringement (recitals 1059 to 1078 to the contested decision).

1287. The Commission observes that, in order to assess the gravity of the infringement, it must take into consideration the nature of the infringement, its impact on the market and the size of the relevant geographic market (recital 1060 to the contested decision).

1288. As regards the nature of the infringement, the Commission draws attention, at recitals 1061 to 1068 to the contested decision, to the following factors:

- the Court of Justice has on several occasions declared that refusals to supply by undertakings in a dominant position and tied sales by such undertakings are unlawful;

- Microsoft has a dominant position on the client PC operating systems market, with a market share of over 90%;

- that market, and the other two markets identified in the contested decision, are characterised by the existence of significant direct and indirect network effects;

- in those circumstances, Microsoft adopted a leveraging strategy which constitutes two separate abuses;

- as regards the abusive refusal to supply, Microsoft adopted a general pattern of conduct aimed at the creation and exploitation to its advantage of a range of privileged connections between its client PC operating system and its work group server operating system and which entails a disruption of previous higher levels of supply;

- that abusive practice enables Microsoft to extend its dominant position to the market for work group server operating systems, which is of significant value';

- Microsoft's capture of that market is likely to have other harmful effects on competition;

- as regards the abusive tying, it ensures that the ubiquity of Microsoft's client PC operating system is shared by Windows Media Player, which creates disincentives for OEMs to pre-install third-party media readers on client PCs and harms competition on the streaming media player market;

- that abusive practice also has significant effects on competition for the delivery of content over the Internet and in the multimedia software industry;

- last, domination of the streaming media player market may constitute a strategic gateway to a range of related markets, some of which are very profitable.

1289. In the light of the factors mentioned in the preceding paragraph, the Commission concludes that the infringement must, by its nature, be characterised as very serious' (recital 1068 to the contested decision).

1290. As regards the effects of the infringement on the market, the Commission finds that [t]he pattern of exclusionary leveraging behaviour engaged in by Microsoft has a significant impact on the markets for work group server operating systems and for streaming media players' (recital 1069 to the contested decision).

1291. The Commission bases that finding on the following factors:

- the abusive refusal to supply interoperability information already allowed Microsoft to acquire a dominant position on the work group server operating systems market and created a risk that competition would be eliminated on that market (recital 1070 to the contested decision);

- the abusive tying already enabled Microsoft to achieve a leading position on the streaming media players market and the evidence examined in the contested decision shows that the market may already be tipping in favour of [Windows Media Player]' (recital 1071 to the contested decision).

1292. As regards the size of the relevant geographic market, the Commission states that the three markets identified in the contested decision cover the whole of the EEA (recital 1073 to the contested decision).

1293. At recital 1074 to the contested decision, the Commission concludes from the foregoing analysis that Microsoft committed a very serious infringement of Article 82 EC and Article 54 of the EEA Agreement, for which the likely fine is above EUR 20 million. At the following recital, it fixes an initial amount for gravity at EUR 165 732 101, the starting point of the basic amount of the fine (the starting amount').

1294. At recital 1076 to the contested decision, the Commission states that, in order to ensure a sufficient deterrent effect on Microsoft, and in the light of that undertaking's significant economic capacity, the starting amount should be doubled, which brings the amount of the fine at that stage to EUR 331 464 203.

1295. Furthermore, as regards duration, the Commission states that the abusive refusal to supply began in October 1998 and had not yet finished, while the abuse tying began in May 1999 and has not yet finished (recital 1077 to the contested decision). The Commission concludes that the total duration of the infringement committed by Microsoft is therefore five years and five months, which corresponds to an infringement of long duration (ibid.). The Commission therefore increases the amount stated in the preceding paragraph by 50% and thus fixes the basic amount of the fine at EUR 497 196 304 (recital 1078 to the contested decision).

1296. Second, the Commission considers that there is no aggravating or attenuating circumstance to be taken into account in the present case (recital 1079 to the contested decision). The final amount of the fine is therefore set at EUR 497 196 304 (recital 1080 to the contested decision).

B - Arguments of the parties

1297. Microsoft submits, primarily, that the fine imposed by Article 3 of the contested decision is wholly unfounded in the absence of an infringement of Article 82 EC.

1298. In the alternative, Microsoft claims that the fine is excessive and disproportionate and that it should therefore be annulled or substantially reduced.

1299. In the first place, Microsoft contends that there is no justification for imposing a fine when the infringements result from novel theories of law'. In support of that assertion, Microsoft refers to extracts from press releases issued by the Commission concerning competition cases (Press Releases IP/01/584 of 20 April 2001 and IP/04/705 of 2 June 2004) and to the Commission's practice of not imposing fines in cases which raise novel or complex issues. In some cases, moreover, the Commission has imposed only a symbolic fine on the undertakings concerned because they could not easily have concluded from its previous practice in taking decisions that their conduct infringed the competition rules.

1300. Microsoft contends that the principles applied by the Commission in the present case represent a significant departure from established case-law and are the product of substantial modification of the Commission's theories as the case progressed over the last five years'.

1301. Thus, as regards the abusive conduct consisting in its refusal to supply its competitors with interoperability information and to authorise its use, Microsoft asserts that the Commission has never precisely identified the information concerned. Microsoft reiterates that Sun did not ask it to license its intellectual property rights for use in the development of work group server operating systems in the EEA. Last, the Commission's position is unprecedented in that it imposes an obligation to license valuable intellectual property rights to facilitate the development of products that compete directly against Windows server operating systems. For those various reasons Microsoft had good reason to believe that the present case did not present the exceptional circumstances required by the Court of Justice.

1302. Furthermore, as regards the abusive conduct consisting in the fact that Microsoft made the supply of its Windows client PC operating system conditional upon the simultaneous acquisition of Windows Media Player, Microsoft observes, first of all, that the Commission's tying theory was not even mentioned in the first statement of objections. Next, this is the first time that the Commission has considered that improving a product through the integration of improved' functionality, in this instance media functionality incorporating streaming capacity, without simultaneously offering a version of that product at the same price without that functionality, could constitute an infringement of Article 82 EC.

1303. In the second place, Microsoft claims that the amount of the fine is excessive. In support of that assertion, it puts forward three series of arguments.

1304. First, it submits that the starting amount of the fine is not justified. First of all, the way in which that amount is set at EUR 165 732 101 is arbitrary and lacks proper reasoning. Next, the applicant disputes the Commission's assertion that the infringement was very serious'. It took the Commission more than five years to arrive at the conclusion that the conduct in question was objectionable, and even longer to determine what remedies were appropriate. Last, Microsoft was unable to predict that its conduct might be regarded as constituting an infringement of the competition rules, still less a very serious' infringement.

1305. In the reply, Microsoft challenges the Commission's assertion that the abuses have a significant impact on the relevant markets.

1306. Also in the reply, Microsoft claims that the Commission did not merely take into account the products... concerned by the infringements' when setting the starting amount, but took as its basis Microsoft's turnover on the market for server operating systems in general. In fact, less than one quarter of the applicant's revenues from those systems can be attributed to the work group server operating systems market as defined by the Commission.

1307. Second, Microsoft contends that the Commission was not correct to double the starting amount on account of its significant economic capacity' and the need to ensure a sufficient deterrent effect. The Commission does not claim that Microsoft was unwilling to comply with the law and, on the contrary, Mr Monti, the then Member of the Commission responsible for competition, commended Microsoft's efforts to arrive at an amicable settlement of the case and also the professionalism of the members of its team. Nor can the Commission invoke the need to deter other undertakings from committing similar infringements. Last, the starting amount is based on Microsoft's worldwide turnover and profits and the same figures are used to justify the multiplier for deterrence (footnote 1342 to the contested decision), which amounts to double counting'. The other factors mentioned in footnote 1342 to the contested decision do not justify the doubling of the starting amount.

1308. Third, Microsoft claims tha t the increase of the fine by 50% of double the starting amount, to reflect the duration of the infringement, is excessive. First of all, the Commission has not taken account of the measures Microsoft took to address the issues raised by the Commission during their discussions and in the statements of objections or of the commitments which Microsoft made under the United States settlement. Next, the Commission failed to take account of the duration of the administrative procedure and Microsoft cannot be criticised for having attempted to reach a settlement with the Commission. And Microsoft could not have brought the alleged abuses to an end earlier, since the Commission's theories changed so much over six years'.

1309. The Commission contends that Microsoft's main argument must be rejected, since it has not established that the Commission erred in finding that it had infringed Article 82 EC.

1310. The Commission also disputes Microsoft's alternative argument.

1311. In the first place, the Commission maintains that the fine is justified.

1312. First, it did not apply any new rule of law in the present case.

1313. Thus, as regards the abusive refusal, the Commission took account of the possibility that [intellectual property rights] are involved'. Consequently, in reliance on judgments such as Magill , paragraph 107 above, it devoted a large part of the contested decision to showing that in exceptional circumstances a refusal to license intellectual property rights could be an abuse of a dominant position. Furthermore, as the recitals to Directive 91/250 specifically indicate that withholding interoperability information may constitute an abuse of a dominant position, Microsoft cannot seriously maintain that it was not aware that it was infringing Article 82 EC.

1314. Furthermore, the Commission has already rebutted Microsoft's arguments relating to the scope of Sun's request and has already stated that the possibility that the products of the copyright owner and the future products of the licensee would compete was not precluded by the case-law. In the rejoinder, the Commission further submits that it had identified at the time of the first statement of objections a certain amount of information that was wrongfully withheld by Microsoft' and reiterates that Microsoft had been fully aware that it was refusing to give its competitors access to the interoperability information referred to in the contested decision.

1315. As regards the tying abuse, the Commission acknowledges that the present case may differ from previous tying cases in that in the contested decision it conducted an assessment of the actual effects of that conduct. However, it cannot be inferred that the Commission developed a new theory and its findings are based on well-known legal and economic principles.

1316. Second, the Commission submits that Microsoft's significant financial and legal resources were such that it was capable of predicting that its conduct in using its dominant position on one market to conquer another market would be characterised as abusive. Furthermore, the Community Courts have consistently rejected the argument that no fine should be imposed when the undertaking concerned could not be aware that it was infringing the competition rules. Last, Microsoft cannot rely on the fact that the Commission did not impose a fine on an undertaking in a different case.

1317. In the second place, the Commission contends that the fine is not excessive and points out that it represents only 1.62% of Microsoft's worldwide turnover in the business year ending 30 June 2003.

1318. First, the Commission has a margin of discretion when setting the amount of a fine and is not required to apply specific mathematical formulae. Its obligation to state reasons does not require it to set out in its decision the statements of figures relating to the calculation of the fines. In accordance with the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) [CS] (OJ 1998 C 9, p. 3; the Guidelines'), moreover, it assessed the gravity of the infringement in the light of its nature, its impact on the market and the size of the relevant geographic market.

1319. The Commission set the starting amount of the fine not on the basis of Microsoft's worldwide turnover but on the basis of its turnover in the EEA on the market for client PC and work group server operating systems. In footnote 217 to the defence, the Commission states that the starting point represents 7.5% of that turnover. The Commission concludes that Microsoft's assertion that there is double counting is unfounded. In response to Microsoft's assertion that it took into account its turnover on the market for operating systems for servers in general, the Commission states that it relied on the figures provided by Microsoft in response to a request for information concerning work group server operating systems. The Commission refers, on that point, to a letter which Microsoft sent to it on 9 March 2004 (annex D.16 to the rejoinder).

1320. Second, the Commission claims that it was entitled to apply a weighting of 2 to the starting amount of the fine. That starting amount represented less than 1% of Microsoft's turnover during the last business year, which would not have made the fine sufficiently deterrent. When fixing that multiplier, it took account of the fact that large undertakings generally have resources which make them better able to be aware of the requirements and consequences of competition law than smaller undertakings are.

1321. The Commission also submits that it is clear from the case-law that the objective of deterrence which it is entitled to pursue when setting the amount of fines is intended to ensure that undertakings comply with the competition rules laid down in the Treaty when conducting their business within the Community or the EEA (Case T224/00 Archer Daniels Midland and Archer Daniels Midlands Ingredients v Commission [2003] ECR II2597, paragraphs 110 and 111). It follows that the deterrent nature of a fine imposed for infringement of the Community competition rules cannot be assessed by reference solely to the particular situation of the undertaking sanctioned. It is necessary not only to deter that undertaking from repeating the same infringement or from committing infringements of the competition rules but also to deter other undertakings of similar size and resources' from committing similar infringements.

1322. The Commission also emphasises that it did not claim that Microsoft had obstructed its investigation and that it did not find any aggravating circumstance on Microsoft's part.

1323. Third, the Commission denies that the increase of 50% which it applied to the amount determined for gravity, in order to reflect the duration of the infringement, is excessive. It followed the normal practice of applying, for long duration, an increase of 10% for each year of participation in the infringement.

1324. The Commission submits that Microsoft cannot rely on the measures which it took to remedy the issues raised by the Commission or under the United States settlement, which have no relevance to the calculation of the duration of the infringement. The Commission refers to recitals 241, 242 and 270 to 279 to the contested decision and submits that those measures did not bring the infringement to an end.

1325. Last, the Commission disputes Microsoft's argument relating to the duration of the administrative procedure and observes, in particular, that that duration was objectively justified by the complexity of the case and the need to ensure Microsoft's rights of defence.

C - Findings of the Court

1326. The present submissions call upon the Court to examine the legality of Article 3 of the contested decision and, if appropriate, to exercise its unlimited jurisdiction and annul or reduce the fine imposed on Microsoft by that article.

1327. The Commission imposed a single fine on Microsoft for the two abuses found in Article 2 of the contested decision. It is apparent from recitals 1061 to 1068 to that decision that the Commission, while recognising the existence of two separate abuses, none the less considered that Microsoft committed a single infringement, namely the application of a strategy consisting in leveraging its dominant position on the client PC operating systems market (see, in particular, recital 1063 to the contested decision).

1328. It follows from recitals 1054 to 1080 to the contested decision that, even though the decision does not expressly say so, the Commission calculated the amount of the fines according to the method set out in the Guidelines.

1329. Microsoft claims, primarily, that Article 3 of the contested decision should be annulled in that, as there has been no infringement of Article 82 EC, the fine has no legal basis.

1330. That argument must be rejected. It follows from the assessment of the refusal to supply and authorise the use of the interoperability information, and also of the bundling of the Windows client PC operating system and Windows Media Player, that the Commission was correct to find that Microsoft had infringed Article 82 EC by adopting those two courses of conduct.

1331. In the alternative, Microsoft maintains that the fine is excessive and disproportionate and should therefore be annulled or substantially reduced. In particular, the two types of conduct referred to in Article 2 of the contested decision are wholly new forms of abuse of a dominant position and Microsoft could not have predicted that its conduct, consisting in exercising its intellectual property rights with respect to a valuable technology which it developed and in introducing new technology to an existing product, would be interpreted by the Commission as constituting an infringement of Article 82 EC.

1332. The Court finds that the arguments put forward by Microsoft in the alternative are unfounded and, in particular, that Microsoft has not shown that the Commission erred in assessing the gravity and duration of the infringement or in setting the amount of the fine.

1333. It must be borne in mind that in the examination of the issues arising in the first abuse, the Court confirmed the validity of the Commission's finding that Microsoft's refusal - and the Commission proceeded on the premiss that the refusal might represent a refusal to license Microsoft's intellectual property rights to a third party - was abusive since, first, it took place in exceptional circumstances such as those envisaged in the case-law, which, in the public interest in maintaining effective competition on the market, permitted an interference with the exclusive right of the owner of the intellectual property right and, second, it was not objectively justified.

1334. It must also be borne in mind that, in the examination of the issues of the second abuse, the Court found that the Commission had established to the requisite legal standard that the fact that Microsoft made the supply of the Windows client PC operating system conditional on the simultaneous acquisition of the Windows Media Player software satisfied the conditions for a finding of abusive tying within the meaning of Article 82 EC and was not objectively justified.

1335. In the first place, as regards Microsoft's argument that the two abuses found in Article 2 of the contested decision result from a new interpretation of the law' (see paragraphs 1299 to 1302 above), it is sufficient to state that it has already been established by the Court, in its examination of the two sets of claims of annulment of the contested decision, that Microsoft's argument was unfounded. That examination shows that the Commission did not apply any new rule of law in the present case.

1336. Thus, as regards, first, the abuse found in Article 2(a) of the contested decision, it has already been explained that, at the time when the facts took place, the Court of Justice had already held, in Magill , paragraph 107 above, that while a refusal by the owner of an intellectual property right to grant a licence, even where it is the act of an undertaking in a dominant position, cannot in itself constitute an abuse of a dominant position, the exercise of the exclusive right by the owner might however, in exceptional circumstances, give rise to abusive conduct.

1337. Microsoft's assertion that it could not easily be aware that its conduct infringed the competition rules is also difficult to reconcile with the position which it adopted throughout the administrative procedure. In effect, Microsoft claimed that if the Commission were to find that the refusal at issue constituted abuse, that could upset the careful balance between copyright and competition policies' struck by Directive 91/250 (recital 743 to the contested decision). It should be added that the 26 th recital to that directive states that the provisions of the directive are without prejudice to the application of the competition rules under Articles [81 EC and 82 EC] if a dominant supplier refuses to make information available which is necessary to interoperability as defined in [that] directive'.

1338. It follows that the Commission was correct to conclude that Microsoft ought to have been aware that its refusal might infringe the competition rules.

1339. The same applies as regards, second, the abuse found in Article 2(b) of the contested decision, as the arguments alleging the application of a new theory have already been rejected during the examination of the bundling issue (see, in particular, paragraphs 859 and 863 to 868 above). The Court therefore finds that the Commission was correct to state, at recital 1057 to the contested decision, that its examination of the tying at issue and its conclusion that Microsoft's conduct was abusive were based on a practice that was well established, notably in Hilti and Tetra Pak II.

1340. The fact that the abusive tying was not mentioned in the first statement of objections is of no relevance to the question whether the Commission applied a new legal theory.

1341. Nor can the assertion that the contested decision is the first decision in which the Commission has characterised as abusive the improvement of a product consisting in the integration of an improved' functionality in that product be upheld. As stated at paragraphs 936, 937 and 1221 above, the integration of that product was not dictated by technical grounds. Furthermore, for the reasons stated at paragraph 935 above, that assertion does not invalidate the Commission's finding that there were two separate products, which constitutes one of the criteria on which it is possible to identify abusive tying, according to the case-law cited at paragraph 859 above.

1342. It follows from the foregoing considerations that Microsoft cannot validly claim that the Commission ought not to have imposed a fine on it or that it ought to have imposed a symbolic fine.

1343. In the second place, Microsoft's argument that the amount of the fine is excessive must also be rejected. The Court finds that the Commission made a correct assessment of the gravity and duration of the infringement.

1344. First, as regards the gravity of the infringement, it must be borne in mind at the outset that the two abuses at issue form part of a leveraging infringement, consisting in Microsoft's use of its dominant position on the client PC operating systems market to extend that dominant position to two adjacent markets, namely the market for work group server operating systems and the market for streaming media players.

1345. First of all, as regards the abuse found in Article 2(a) of the contested decision, the Commission evaluated the gravity of that abuse by taking into consideration its nature (recitals 1064 and 1065 to the contested decision), its actual impact on the market (recitals 1069 and 1070 to the contested decision) and the size of the relevant geographic market (recital 1073 to the contested decision). The Commission characterised the infringement of which that abuse formed part as very serious' and therefore likely to incur a fine of over EUR 20 million.

1346. The Court finds that the matters taken into consideration by the Commission in the recitals mentioned in the preceding paragraph justify the description of the infringement as very serious'. That assessment is not called in question by Microsoft's arguments.

1347. The Court would observe that a number of internal Microsoft documents in the file confirm that Microsoft made use, by leveraging, of its dominant position on the client PC operating systems market to strengthen its position on the work group server operating systems market. Thus, at recital 774 to the contested decision, the Commission cites an extract from an email from Mr Bayer, a senior director of Microsoft, to Mr Madigan, another senior director of Microsoft, in which he states that [Microsoft] has a huge advantage in the enterprise computing market by leveraging the dominance of the Windows desktop'.

1348. At the following recital to the contested decision, the Commission refers to a passage from another email between those two senior directors which shows that conquering the work group server operating systems market was regarded as a means of implementing the same leveraging strategy against the Internet. That passage reads as follows:

Dominance on the server infrastructure on the Internet is a tougher nut to crack [but] we just might be able to do it from the enterprise out if we could own the enterprise (which I think we can).'

1349. Furthermore, as the Commission correctly observes at recital 778 to the contested decision, it is clear from an extract from a speech given by Mr Gates in February 1997 that the most senior directors of Microsoft regarded interoperability as a tool in that leveraging strategy. That extract reads as follows:

What we are trying to do is use our server control to do new protocols and lock out Sun and Oracle specifically... Now, I don't know if we'll get to that or not, but that's what we are trying to do.'

1350. The Court notes that Mr Gates' speech was given in February 1997, well before the date on which Microsoft rejected the request contained in the letter of 15 September 1998. The Commission was therefore correct to consider that Microsoft's refusal formed part of an overall strategy consisting in Microsoft's use of its dominant position on the client PC operating systems market to strengthen its dominant position on the adjacent market for work group server operating systems.

1351. Next, as regards the tying of Windows Media Player and Windows referred to in Article 2(b) of the contested decision, the Court finds that the Commission also made a correct assessment of the gravity of the infringement by characterising it as very serious'.

1352. It should be noted first that it follows from the email sent to Mr Gates by Mr Bay in January 1999 (see paragraph 911 above) that the second abuse also formed part of a leveraging strategy.

1353. Second, the Commission was correct to find, at recital 1068 to the contested decision, that the abuse constituted by its nature a very serious infringement of Article 82 EC and Article 54 of the EEA Agreement.

1354. Tying practices had already clearly been declared unlawful by the Community Courts, notably in Hilti and Tetra Pak II , and the impugned conduct satisfied the conditions laid down in that case-law. It must be borne in mind, in particular, that, as stated at paragraphs 859 and 863 to 868 above, the Commission did not apply a new legal theory in this case, especially when it examined whether the foreclosure condition was satisfied.

1355. The Commission was quite correct, moreover, to observe, at recital 1066 to the contested decision, that the tying ensured the worldwide ubiquity of Windows Media Player, which created disincentives for OEMs to pre-install competing media players on their client PCs and harmed competition on the market for streaming media players (see paragraphs 1031 to 1058 above).

1356. Last, as the Commission properly emphasises at recital 1067 to the contested decision, the abusive tying has significant effects on competition for the delivery of content over the Internet and also on the multimedia software industry. As stated at paragraphs 1060 to 1075 above, the ubiquity that tying confers on Windows Media Player gives content providers an incentive to distribute their content in Windows Media formats and gives software developers an incentive to develop their products so that they rely on certain functionalities of Windows Media Player, in spite of the fact that competing media players are of similar or even better quality than Windows Media Player. It has also been shown at paragraphs 1076 above that the Commission was quite correct to find, at recitals 897 to 899 to the contested decision, that the abusive tying had also had effects on some adjacent markets.

1357. Third, the Commission was correct to observe, at recitals 1069 and 1071 to the contested decision, that the abusive tying has a significant effect on the market for streaming media players.

The tying enabled Microsoft to become market leader with Windows Media Player.

1358. Fourth, it is common ground that the market for streaming media players covers the whole of the EEA (recital 1073 to the contested decision).

1359. It follows from the considerations set out at paragraphs 1344 to 1358 above that the Commission was correct to take as a starting point for the fine imposed for the infringement a minimum amount of EUR 20 million.

1360. In the present case, after taking into consideration the nature of the infringement, its effects on the relevant product markets and the geographical size of those markets, the Commission took a single starting point, which it set at EUR 165 732 101 (recital 1075 to the contested decision). The Commission does not explain in the contested decision what that amount represented or how it was apportioned between the two types of abuse. It is apparent, however, upon reading footnote 217 to the defence together with the content of Microsoft's letter of 9 March 2004 (see paragraph 1319 above), that that amount represents 7.5% of Microsoft's overall EEA turnover on the markets for client PC operating systems and work group server operating systems in the business year ending 30 June 2003. Contrary to Microsoft's contention, the starting amount cannot therefore be considered to have been fixed arbitrarily.

1361. As regards Microsoft's assertion that the Commission failed to state the reasons for fixing the starting amount of the fine at EUR 165 732 101, it is sufficient to observe that it is settled case-law that the obligation to state reasons does not require the Commission to indicate in its decision the figures relating to the method of calculating the fines (Case C291/98 P Sarrio v Commission [2000] ECR I9991, paragraphs 76 and 80, and Limburgse Vinyl Maatschappij and Others v Commission , paragraph 95 above, paragraph 464).

1362. Nor can Microsoft's assertion that the Commission took account of its turnover on the market for server operating systems in general, that is to say, a wider market than the second market identified in the contested decision, be upheld. The Commission relied on the figures which had been given to it by Microsoft in its letter of 9 March 2004 (see paragraph 1319 above) in response to a request for information of 2 March 2004 (annex D.16 to the rejoinder) expressly referring to the Windows work group server operating systems which Microsoft was still supplying at the time.

1363. Furthermore, the Court finds that the Commission was correct to apply a weighting of 2 to that amount to ensure that the fine was sufficiently deterrent and to reflect Microsoft's significant economic capacity. Since Microsoft is very likely to maintain its dominant position on the client PC operating systems market, at least over the coming years, it cannot be precluded that it will have other opportunities to use leveraging vis-à-vis other adjacent markets. Furthermore, Microsoft had already faced proceedings in the United States for a practice similar to the abusive tying at issue, namely the tying of its Internet Explorer browser and its Windows client PC operating system, and the possibility cannot be precluded that it might commit the same type of infringement in future with other application software.

1364. Second, as regards the duration of the infringement, Microsoft's argument that the increase of 50% of the basic amount of the fine is excessive must be rejected. As the Court has already held when examining the second part of the refusal to supply interoperability information, the Commission was correct to consider that the letter of 6 October 1998 contained a refusal to communicate to Sun the information which it had requested. It follows that the Commission was correct to find that, from that date, Microsoft was guilty of an infringement of Article 82 EC. It has been established that that infringement continued until the date of adoption of the contested decision and that, from May 1999, a second type of abusive conduct was added to that infringement.

1365. Third, the Court finds that the Commission was correct to take the view that no aggravating or attenuating circumstances were to be taken into account in the present case.

1366. It follows from all of the foregoing considerations that Microsoft's argument that the fine is excessive and disproportionate must be rejected.

1367. The application must therefore be rejected as unfounded in so far as it seeks annulment or a reduction in the amount of the fine.

Costs

1368. Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Article 87(3) provides that where each party succeeds on some and fails on other heads, or where the circumstances are exceptional, the Court may order that the costs be shared or that each party bear its own costs.

1369. In the present case, Microsoft has been unsuccessful in its claim that the contested decision should be annulled in its entirety and in its claim that the fine should be annulled or reduced, and the Commission has been unsuccessful in its claim that the entirety of the application should be dismissed.

1370. In the main action, it is appropriate, in those circumstances, to order that the costs be shared. Microsoft shall bear 80% of its own costs and pay 80% of the Commission's costs, with the exception of the costs which the Commission has incurred in connection with the intervention of CompTIA, ACT, TeamSystem, Mamut, DMDsecure and Others and Exor. The Commission shall bear 20% of its own costs and pay 20% of Microsoft's costs, with the exception of the costs which Microsoft has incurred in connection with the intervention of SIIA, FSFE, Audiobanner.com and ECIS.

1371. In the interim measures proceedings, Microsoft shall bear its own costs and pay the costs incurred by the Commission, with the exception of the costs which the Commission incurred in connection with the intervention of CompTIA, ACT, TeamSystem, Mamut, DMDsecure and Others and Exor.

1372. CompTIA, ACT, TeamSystem, Mamut, DMDsecure and Others and Exor shall bear their own costs, including those relating to the interim measures proceedings. As the Commission did not request that those interveners be ordered to pay the costs which it incurred in connection with their intervention, they shall bear only their own costs.

1373. The costs incurred by SIIA, FSFE, Audiobanner.com and ECIS, including those relating to the interim measures proceedings, shall be paid by Microsoft.

PROCEDU Action for annulment;Appeal against penalty

DATES of document: 17/09/2007
of application: 07/06/2004

Case T-201/04

Microsoft Corp.

v

Commission of the European Communities

(Intervention – Representative association – Article 116(6) of the Rules of Procedure of the Court of First Instance – Application to participate in the written procedure – Unforeseeable circumstances or force majeure – Exceptional circumstances)

Summary of the Order

1. *Procedure – Intervention – Interested persons – Application to intervene submitted by a representative association in a case raising questions of principle liable to affect its members – Whether permissible*

   (Statute of the Court of Justice, Arts 40, second para., and 53, first para.)

2. *Procedure – Intervention – Scope of the procedural rights of the intervener linked to the date of submission of the application to intervene*

   (Rules of Procedure of the Court of First Instance, Arts 115(1) and 116(2), (4) and (6))

3. *Procedure – Intervention – Limitation of the procedural rights conferred on an intervener who submitted his application more than six weeks after publication in the Official Journal of the notice of initiation of the action – Exceptions – Unforeseeable circumstances or force majeure – Definition – Withdrawal of another intervener – Not included*

   (Statute of the Court of Justice, Art. 45, second para., Rules of Procedure of the Court of First Instance, Arts 99 and 115(1))

ORDER OF THE PRESIDENT OF THE FOURTH CHAMBER OF THE COURT OF FIRST INSTANCE

28 April 2005(*)

(Intervention – Representative association – Article 116(6) of the Rules of Procedure of the Court of First Instance – Application to participate in the written procedure – Unforeseeable circumstances or force majeure – Exceptional circumstances)

In Case T-201/04,

Microsoft Corp., established in Redmond, Washington (United States), represented by J.-F. Bellis, lawyer, and I. Forrester QC,

applicant,

supported by

Association for Competitive Technology, Inc., established in Washington, DC (United States), represented by L. Ruessmann, lawyer,

DMDsecure.com BV, established in Amsterdam (Netherlands), **MPS Broadband AB,** established in Stockholm (Sweden), **Pace Micro Technology plc,** established in Shipley, West Yorkshire (United Kingdom), **Quantel Ltd,** established in Newbury, Berkshire (United Kingdom), **Tandberg Television Ltd,** established in Southampton, Hampshire (United Kingdom), represented by J. Bourgeois, lawyer,

Exor AB, established in Uppsala (Sweden), represented by S. Martínez Lage, H. Brokelmann and R. Allendesalazar Corcho, lawyers,

Mamut ASA, established in Oslo (Norway), and **TeamSystem SpA,** established in Pesaro (Italy), represented by G. Berrisch, lawyer,

The Computing Technology Industry Association, Inc., established in Oakbrook Terrace, Illinois (United States), represented by G. van Gerven and T. Franchoo, lawyers, and B. Kilpatrick, Solicitor,

interveners,

v

Commission of the European Communities, represented by R. Wainwright, F. Castillo de la Torre, P. Hellström and A. Whelan, acting as Agents,

defendant,

supported by

AudioBanner.com, trading as VideoBanner, established in Los Angeles, California (United States), represented by L. Alvizar, lawyer,

Free Software Foundation Europe eV, established in Hamburg (Germany), represented by C. Piana, lawyer,

RealNetworks, Inc., established in Seattle, Washington (United States), represented by A. Winckler, M. Dolmans and T. Graf, lawyers,

Software & Information Industry Association, established in Washington, DC (United States), represented by C. Simpson, Solicitor,

interveners,

APPLICATION for annulment of Commission Decision C(2004) 900 final of 24 March 2004, relating to a proceeding under Article 82 EC (Case COMP/C-3/37.792 – Microsoft), or for reduction of the amount of the fine imposed on the applicant,

THE PRESIDENT OF THE FOURTH CHAMBER OF THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES

makes the following

Order

Background

1 Microsoft Corp. (‘Microsoft’) develops and markets computer software, including operating systems for client personal computers (‘PCs’), known as Windows, work group server operating systems, known as Windows Server, and streaming media players, known as Windows Media Player.

2 On 10 December 1998, Sun Microsystems, Inc., established in Palo Alto, California (United States), lodged a complaint with the Commission. That complaint related to Microsoft’s refusal to supply Sun Microsystems, Inc. with the information necessary to allow interoperability of its work group server operating systems with Windows. The Commission opened an investigation into the matter.

3 In February 2000 the Commission opened a second investigation into Microsoft. The object of that investigation was the integration of Windows Media Player in Windows.

4 The two investigations were subsequently joined under Case No COMP/C-3/37.792.

5 On 24 March 2004, the Commission adopted Decision C(2004) 900 final relating to a proceeding under Article 82 EC in Case COMP/C-3.37.792 – Microsoft (‘the Decision’).

6 In assessing Microsoft’s conduct, the Commission, first, defined three relevant markets. Those markets were the client PC operating system market (recitals 324 to 342 to the Decision), the work group server operating system market (recitals 343 to 401 to the Decision) and the streaming media player market (recitals 402 to 425 to the Decision).

7 Second, the Commission found that each of those markets was worldwide (recital 427 to the Decision).

8 Third, the Commission found that Microsoft held a dominant position on two of those markets, namely the client PC operating system market (recitals 429 to 472 to the Decision) and the work group server operating system market (recitals 473 to 541 to the Decision).

9 Fourth, the Commission concluded that, by its conduct on those two markets, Microsoft was infringing Article 82 EC. It considered that Microsoft was abusing its dominant position by refusing to supply the interoperability information and to authorise its use for the development and distribution of products competing with its own products on the work group server operating system market during the period October 1998 to the date of notification of the Decision (recitals 546 to 791 to and Article 2(a) of the Decision). The Commission also considered that Microsoft was abusing its dominant position by making the availability of Windows conditional on the simultaneous acquisition of Windows Media Player during the period May 1999 to the date of notification of the Decision (recitals 792 to 989 to and Article 2(b) of the Decision).

10 Fifth, the Commission ordered Microsoft to bring those infringements to an end, to refrain from any conduct having the same or equivalent object or effect and to implement a series of remedies within certain periods (recitals 994 to 1053 to and Articles 4 to 8 of the Decision).

11 Sixth, the Commission imposed a fine of EUR 497 196 304 on Microsoft (recitals 1054 to 1080 to and Article 3 of the Decision).

Procedure

12 By application lodged at the Registry of the Court of First Instance on 7 June 2004, Microsoft brought the present action.

13 By application lodged at the Registry of the Court of First Instance on 17 December 2004, European Committee for Interoperable Systems ('ECIS'), established in Brussels (Belgium), represented by D. Paemen and N. Dodoo, lawyers, applied to intervene in the proceedings in support of the form of order sought by the Commission.

14 The Commission and Microsoft submitted their written observations on that application to intervene by documents lodged at the Registry of the Court of First Instance on 1 and 7 March 2005 respectively.

The application to intervene

Admissibility of the application to intervene

15 Microsoft submits that the application to intervene is inadmissible on the ground that it does not satisfy the procedural conditions laid down in the Rules of Procedure of the Court of First Instance.

16 Under Article 115 of the Rules of Procedure, in order to be admissible, an application to intervene must comply with certain conditions relating to the period within which the application must be made (paragraph 1), its material content (paragraph 2, first subparagraph) and the applicant having proper representation (paragraph 3).

17 In this case the application to intervene satisfies those conditions.

18 Furthermore, under the second subparagraph of Article 115(2) of the Rules of Procedure the admissibility of an application to intervene is conditional upon compliance with the procedural conditions laid down in Articles 43 and 44 of those Rules. Article 44 of the Rules of Procedure provides, in particular, in paragraph 5(b) that where the applicant for leave to intervene is a legal person governed by private law it is to attach to its application proof that the authority granted to its lawyer has been properly conferred on him by someone authorised for the purpose.

19 In the present case, Microsoft submits, essentially, that the decisions to request leave to intervene in the proceedings and to confer authority on D. Paemen and N. Dodoo for that purpose were improperly adopted by the ECIS Executive Committee on 16 December 2004. It acknowledges that the ECIS General Assembly ratified those decisions on 12 January 2005, but submits that ratification took place only after the application to intervene had been submitted and may be invalid in itself.

20 It cannot be precluded that the validity of the decisions adopted by the ECIS Executive Committee on 16 December 2004 should be treated with caution and it cannot therefore be taken as certain that D. Paemen and N. Dodoo held authority properly conferred by someone authorised for that purpose when ECIS lodged its application to intervene on 17 December 2004. However, it must in any event be noted that, by resolution of 12 January 2005, the ECIS General Assembly, 'properly constituted', declared that it 'unreservedly confirmed' that decision and, 'although not strictly required to do so by the statutes of ECIS or Belgian law, ratif[ied]' it. That declaration leads to the conclusion that the application to intervene satisfies the requirements of Article 44(5)(b) of the Rules of Procedure (see Joined Cases 193/87 and 194/87 *Maurissen and Others* v *Court of Auditors* [1989] ECR 1045, paragraph 33).

21 ECIS therefore has locus standi to apply to intervene in the proceedings.

The merits of the application to intervene

Arguments of the applicant for leave to intervene and of the parties

22 ECIS submits that it satisfies the conditions determining the right to intervene recognised to representative associations and that it must therefore be granted leave to intervene in the proceedings in support of the form of order sought by the Commission.

23 Microsoft disputes that claim. It is not convinced that ECIS is a representative association, that it therefore satisfies all the conditions determining the right to intervene recognised to representative associations and that it may therefore be granted leave to intervene.

24 The Commission submits that ECIS may be granted leave to intervene.

Findings of the President

25 The second paragraph of Article 40 of the Statute of the Court of Justice, which, pursuant to the first paragraph of Article 53 thereof, is applicable to the procedure before the Court of First Instance, provides that any person establishing an interest in the result of a case other than a case between Member States, between institutions of the Communities or between Member States and institutions of the Communities is entitled to intervene in cases.

26 Such an interest is established by a representative association whose object is to protect its members and which applies to intervene in a case raising questions of principle liable to affect those members. That broad interpretation of the right to intervene is intended to facilitate assessment of the context of cases while avoiding multiple individual interventions which would compromise the effectiveness and proper course of the procedure (orders of the President of the Court of Justice in Joined Cases C-151/97 P(I) and C-157/97 P(I) *National Power and PowerGen* v *British Coal and Commission* [1997] ECR I-3491, paragraph 66, and in Case C-151/98 P *Pharos* v *Commission* [1998] ECR I-5441, paragraph 6; and order of the President of the Fourth Chamber of the Court of First Instance of 9 March 2005 in Case T-201/04 *Microsoft* v *Commission* [2005], not published in the ECR, paragraph 31).

27 In the present case, ECIS presents itself as a representative association of undertakings operating in the information technologies sector. The representative list of its members and the list in the minutes of its General Assembly of 12 January 2005 confirm that, although the members of ECIS are limited in number and although not all of them are active in the information technologies sector, a number of them carry out significant activities in that sector. ECIS can therefore be regarded as a representative association.

28 Next, ECIS states that its object is, inter alia, the promotion and defence of the intangible and tangible interests of its members. Article 4 of its statutes confirms that that is so. ECIS must therefore be regarded as having the object of protecting its members.

29 Last, certain of the questions raised by the case may be regarded as questions of principle concerning the information technologies sector and the judgment determining the merits of the case is therefore liable to affect the members of ECIS who operate in that sector.

30 It follows from the foregoing that ECIS has established an interest in the result of the case.

31 ECIS must therefore be granted leave to intervene in the case in support of the form of order sought by the Commission.

The procedural rights of the intervener

Arguments of the parties

32 ECIS seeks leave to participate in the written procedure. It submits that the provisions on intervention (Articles 115 and 116 of the Rules of Procedure) allow the Court to grant that application. In any event, such a solution is justified by the existence of unforeseeable circumstances or force majeure (second paragraph of Article 45 of the Statute of the Court of Justice), or at the very least of exceptional circumstances. On that point, ECIS relies on the fact that

Computer & Communications Industry Association ('CCIA'), some of whose members are also members of ECIS, withdrew on 10 November 2004 the application to intervene in support of the form of order sought by the Commission which it had submitted on 23 June 2004.

33 Microsoft disputes that application. It contends that Articles 115 and 116 of the Rules of Procedure do not allow the Court to grant the application. Furthermore, ECIS has not established either the existence of unforeseeable circumstances or force majeure, or the existence of exceptional circumstances of such a kind as to justify a derogation from those provisions.

34 The Commission submits that if an intervener such as ECIS may be authorised to participate in the written procedure, it must only be allowed to do so in exceptional circumstances, and that the withdrawal of CCIA in the present case could be an exceptional circumstance.

Findings of the President

35 Article 115(1) of the Rules of Procedure provides that the application to intervene must be made within six weeks of the publication in the *Official Journal of the European Union* of the notice of initiation of the action or, failing that, before the decision to open the oral procedure.

36 Article 116(2) of the Rules of Procedure provides that if an application to intervene made within the six-week period is granted, the intervener is to receive a copy of every document served on the parties.

37 Article 116(4) of the Rules of Procedure provides that, in the cases referred to in Article 116(2) of the Rules of Procedure, the President is to prescribe a period within which the intervener may submit a statement in intervention containing the form of order sought by the intervener in support of or opposing, in whole or in part, the form of order sought by one of the parties, its pleas in law and arguments and also, where appropriate, the nature of any evidence offered.

38 Article 116(6) of the Rules of Procedure provides that, where the application to intervene is made after the expiry of the six-week period referred to above, the intervener may, on the basis of the Report for the Hearing communicated to him, submit his observations during the oral procedure.

39 It is apparent upon reading those provisions together that the procedural rights of the intervener differ according to whether he submitted his application to intervene before the expiry of the six-week period beginning with the publication in the *Official Journal of the European Union* of the notice of initiation of the action, or after the expiry of that period but before the decision to open the oral procedure.

40 Where the intervener submitted his application before the expiry of that period, he is entitled to participate in both the written procedure and the oral procedure. In that capacity, he must receive a copy of the documents and may submit a statement in intervention containing the form of order which he seeks in support of or opposing, in whole or in part, the form of order sought by one of the main parties, his pleas in law and arguments and also, where appropriate, the nature of any evidence offered.

41 On the other hand, where the intervener submitted his application after the expiry of that period, he is only entitled to participate in the oral procedure, provided he submitted his application to the Court of First Instance before the opening of that procedure. In that capacity, he must receive a copy of the Report for the Hearing and may submit his observations on the basis of that report during the oral procedure.

42 As those provisions are mandatory (order of the Court of First Instance of 30 May 2002 in Case T-52/00 *Coe Clerici Logistics* v *Commission* [2002] ECR II-2553, paragraphs 24 and 31), they are not within the discretion of either the parties or even the Court.

43 In the present case, the notice of the initiation of the action was published on 10 July 2004 (OJ 2004 C 179, p. 18). ECIS's application to intervene was lodged at the Registry of the Court of First Instance on 17 December 2004. Clearly, therefore, it was submitted after the expiry of the six-week period provided for in Article 115(1) of the Rules of Procedure, plus the period of 10 days on account of distance provided for in Article 102(2) of the Rules of Procedure.

44 Accordingly, ECIS can claim only the procedural rights provided for in Article 116(6) of the Rules of

Procedure.

45 ECIS maintains, however, that CCIA's withdrawal constitutes unforeseeable circumstances or force majeure.

46 The second paragraph of Article 45 of the Statute of the Court of Justice provides that no right is to be prejudiced in consequence of the expiry of a time-limit if the party concerned proves the existence of unforeseeable circumstances or of force majeure.

47 The provisions on procedural time-limits are of strict application, which serves the requirements of legal certainty and the need to avoid any discrimination or arbitrary treatment in the administration of justice (judgment in Case 209/83 *Ferriera Valsabbia* v *Commission* [1984] ECR 3089, paragraph 14, and order of the Court of Justice of 18 January 2005 in Case C-325/03 P [2005], not yet published in the ECR, paragraph 16).

48 The second paragraph of Article 45 of the Statute of the Court of Justice, which derogates from that principle and must therefore be interpreted strictly, applies to the mandatory procedural time-limits the expiry of which entails the loss of the right previously open to a natural or legal person to initiate an action (judgment in Joined Cases 25/65 and 26/65 *Simet and Feram* v *High Authority* [1967] ECR 33, 43) or to submit an application to intervene (order of the President of the First Chamber of the Court of First Instance of 22 March 1994 in Joined Cases T–244/93 and T–486/93 *TWD Textilwerke Degendorf* v *Commission*, not published in the ECR, paragraphs 18 to 20).

49 In so far as the second paragraph of Article 45 of the Statute of the Court of Justice also applies to the six-week period provided for in Article 115(1) of the Rules of Procedure, the expiry of which entails not the loss of the right to submit an application to intervene but, as in this case, the limitation of the procedural rights conferred on the intervener, it is settled case-law that it is only in wholly exceptional circumstances, of unforeseeable circumstances or of force majeure, that that article permits any derogation from the provisions on procedural time-limits (judgment in *Ferriera Valsabbia* v *Commission*, cited above, paragraph 14, and order in *Zuazaga Meabe* v *OHIM*, cited above, paragraph 16).

50 The concepts of unforeseeable circumstances and force majeure contain an objective element relating to abnormal circumstances unconnected with the person concerned and a subjective element involving the obligation, on his part, to guard against the consequences of the abnormal event by taking appropriate steps and, in particular, by paying close attention to the course of the procedure and demonstrating diligence (judgment in Case C-195/91 P *Bayer* v *Commission* [1994] ECR I–5619, paragraph 32, and order in *Zuazaga Meabe* v *OHIM*, cited above, paragraph 25).

51 In the present case, CCIA's withdrawal may perhaps constitute an event unconnected with ECIS, although, as the latter acknowledges, the two representative associations have members in common.

52 However, it is not an abnormal event. Any intervener is always entitled to withdraw his intervention, just as any applicant is always entitled to discontinue his action, in accordance with Article 99 of the Rules of Procedure. The withdrawal of an intervener therefore does not in itself assume an abnormal nature. Nor, in the present case, does any of the factual elements relied on by ECIS permit CCIA's withdrawal to be described as abnormal. In particular, where a person such as CCIA participates, as an interested third party, in any administrative procedure in order to convince the Commission that there has been an infringement of the competition rules, where the Commission adopts a decision to that effect, where the author of the infringement seeks annulment of that decision and where the person in question intervenes in the dispute in order to assert his interest, it cannot be considered abnormal that he should ultimately decide to change his strategy, to settle his dispute with the applicant by extrajudicial means and, should he consider it appropriate, against payment of financial consideration.

53 Last, ECIS does not show, and, moreover, does not seriously seek to show, that it discharged its obligation to forearm itself against the consequences of that event by taking appropriate steps.

54 Accordingly, ECIS has not established the existence of unforeseeable circumstances or of force majeure.

55 ECIS contends, last, that CCIA's withdrawal constitutes an exceptional circumstance.

56 Even on the assumption that certain exceptional circumstances permit an intervener who has submitted his application to intervene after the expiry of the six-week period provided for in Article 115(1) of the Rules of Procedure to benefit from a procedural right other than those conferred on him by Article 116(6) of the Rules of Procedure, it must be recalled that the factual elements invoked by ECIS do not permit CCIA's withdrawal to be considered either abnormal or exceptional.

57 It follows from the foregoing that ECIS's rights will be those provided for in Article 116(6) of the Rules of Procedure.

58 In so far as ECIS's application to participate in the written procedure should be interpreted, not as claiming a right, but as manifesting its availability to respond to a measure of organisation of procedure whereby the Court might wish to invite it to make written submissions pursuant to Article 64(3)(b) of the Rules of Procedure, it must be observed that it will be for the Fourth Chamber of the Court of First Instance, when the time comes, to contemplate the need for such a measure.

Costs

59 Article 87(1) of the Rules of Procedure provides that a decision as to costs is to be given in the final judgment or in the order which closes the proceedings.

60 At this stage of the proceedings, costs must therefore be reserved.

On those grounds,

THE PRESIDENT OF THE FOURTH CHAMBER OF THE COURT OF FIRST INSTANCE

hereby orders:

1. European Committee for Interoperable Systems is granted leave to intervene in Case T-201/04 in support of the form of order sought by the Commission.

2. European Committee for Interoperable Systems will be able to present its observations at the oral procedure, on the basis of the Report for the Hearing, which will be communicated to it.

3. Costs are reserved.

Luxembourg, 28 April 2005.

H. Jung	H. Legal
Registrar	President of the Fourth Chamber

---

* Language of the case: English.

Case T-201/04 R

Microsoft Corp.

v

Commission of the European Communities

(Proceedings for interim relief – Article 82 EC)

Summary of the Order

1. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Prima facie case – Urgency – Cumulative nature – Need to weigh up all the interests involved – Discretion of the judge dealing with the application for interim relief*

   (Rules of Procedure of the Court of First Instance, Art. 104(2))

2. *Applications for interim measures – Interim orders – Duty to state reasons – Limits*

   (Rules of Procedure of the Court of First Instance, Art. 107(1))

3. *Applications for interim measures – Formal requirements – Submission of applications – Statement of the essential elements of fact and law in the application for interim relief itself and the documents annexed thereto – General reference to an annexed document, setting out the details of the argument – Not permissible*

   (Parts VII(1) and (2) of the Practice Directions)

4. *Applications for interim measures – Production during the proceedings, in order to respond to the arguments of another party, of documents predating the lodging of the application for interim relief – Lawfulness*

5. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage – Burden of proof*

6. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage – Obligation placed on an undertaking to issue licences affecting its intellectual property rights – Assessment on a case-by-case basis*

7. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Serious and irreparable damage – Obligation placed on an undertaking to disclose secret information – Not in itself serious damage – Burden of proof on the undertaking*

8. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage – Financial loss*

9. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage – Obligation placed on an undertaking in a dominant position to alter its business policy – Insufficient*

   (Art. 82 EC)

10. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage – Irreversible developments in market conditions –*

Included

11. *Applications for interim measures – Suspension of operation of a measure – Dismissal of application – Possibility of submitting another application – Condition – New facts*

    (Rules of Procedure of the Court of First Instance, Art. 109)

12. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage – Financial loss*

13. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Urgency – Serious and irreparable damage suffered by the applicant*

14. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Serious and irreparable damage – Interference with intellectual property rights – Assessment of actual situation*

1. Under Article 104(2) of the Rules of Procedure of the Court of First Instance, an application for interim relief must state the circumstances giving rise to urgency and the pleas of fact and law establishing a prima facie case for the interim measures applied for. Those conditions are cumulative, so that an application for interim relief must be dismissed if any one of them is absent. Where appropriate, the judge hearing an application for interim relief must also weigh up the interests involved. In the context of that overall examination, the judge dealing with the application must exercise the broad discretion which he enjoys when determining the manner in which those various conditions are to be examined in the light of the specific circumstances of each case.

(see paras 71-72)

2. The judge dealing with an application for interim relief cannot be required to reply explicitly to all the points of fact and law raised in the course of the proceedings. In particular, it is sufficient that the reasons given by the judge dealing with the application at first instance validly justify his order in the light of the circumstances of the case and enable the Court of Justice to exercise its powers of review.

(see para. 73)

3. Under Part VII(1) of the Practice Directions adopted by the Court of First Instance, an application for interim relief must be intelligible in itself, without necessitating reference to the application lodged in the main proceedings. It follows that the merits of such an application can be assessed only by reference to the elements of fact and law as they emerge from the application for interim relief itself and from the documents annexed to that application and intended to illustrate its content. While it cannot be concluded that every assertion based on a document that is not annexed to the application for interim relief must necessarily be excluded from the proceedings, evidence to support such an assertion cannot however be regarded as having been adduced if the assertion in question is challenged by the other party to the proceedings or by a party intervening in support of that other party. While an application may be supported and supplemented on specific points by references to particular passages in documents which are annexed to it, a general reference to other documents, even if they are annexed to the application for interim relief, cannot make up for the absence of essential elements in that application. In this regard, Part VII(2) of the Practice Directions, which requires that the pleas of fact and law on which the main action is based (establishing a prima facie case on the merits in that action) be stated with the utmost concision, cannot, without circumventing that rule, be construed as permitting the general reference to an annexed document setting out the details of the argument.

(see paras 86-88, 97)

4. In interim proceedings, a party cannot be criticised for having produced documents only in the course of the proceedings, provided that it did so in order to support its observations in response to the arguments put forward by the opposing party or by the interveners in their pleadings, little significance attaching in this regard to the fact that the document annexed bears a date prior to that on which the application for interim relief was lodged or that it is identical or comparable to a document annexed to the main application.

(see para. 93)

5. The urgency of an application for interim relief must be assessed in relation to the necessity for an interim order in order to prevent serious and irreparable damage to the party applying for those measures. It is for that party to prove that it cannot wait for the outcome of the main proceedings without suffering damage of that kind. The alleged damage must be certain or at least established with sufficient probability, while the applicant is required to prove the facts forming the basis of the supposed damage.

(see paras 240-241, 427)

6. To take the view that a breach of the exclusive prerogatives of the holder of an intellectual property right constitutes in itself, and irrespective of the circumstances particular to each case, serious and irreparable damage, would mean that the urgency requirement of a suspension of operation is always satisfied when an undertaking is obliged by a Commission decision to issue licences affecting such rights. In such circumstances, the judge hearing an application for interim relief must therefore examine whether, in the light of the elements of the case, the fact that those rights will be affected until a decision has been given on the merits of the case is likely to cause, over and above the simple breach of the exclusive prerogatives of the holder of the rights in question, serious and irreparable damage.

(see paras 248, 250-251)

7. While it is an indisputable fact that, once acquired, knowledge of information previously kept secret – whether because it is the subject of an intellectual property right or because it constitutes a trade secret – may be retained, that annulment of the Commission decision ordering such disclosure would therefore not delete the knowledge of that information from memories and that compensation would be very difficult as the value of the transfer of knowledge would be difficult to quantify, it is none the less for the undertaking seeking a stay of enforcement of such a decision to show what irreparable damage might be caused to it by the simple fact that third parties had knowledge of data disclosed by it, as opposed to the developments resulting from the use of that knowledge. Nor does the disclosure of information previously kept secret necessarily mean that serious damage will occur.

(see paras 253-254)

8. The serious nature of the financial damage on which an undertaking relies in order to justify the urgency of the suspension of operation which it seeks before the judge dealing with the application for interim measures must be assessed by reference to its financial power.

(see para. 257)

9. In principle, any decision taken under Article 82 EC and requiring a dominant undertaking to bring an abuse to an end necessarily entails a change in its business policy. The obligation imposed on an undertaking to alter its conduct cannot therefore be regarded as constituting serious and irreparable damage in itself, short of considering that the urgency requirement is always satisfied when the decision whose suspension is sought orders the addressee to bring abusive conduct to an end. Where an applicant invokes an interference with its business freedom to demonstrate that the interim measure applied for must be ordered as a matter of urgency, it must adduce evidence either that implementation of the contested measure will oblige it to alter certain essential elements of its business policy and that, even after judgment in its favour has been given in the main proceedings, the effects of the implementation of that measure will prevent it from resuming its initial business policy, or that those effects will cause it serious and irreparable damage of another kind, it being borne in mind that it is in the light of the circumstances of each case that the alleged damage must be assessed. Thus the judge dealing with the application for interim measures must assess the consequences of the interference with the undertakings' freedom to define their business policies in the light of the effects of the implementation of the measure.

(see paras 291-293, 409)

10. It cannot be precluded that disclosure of the information relating to the interoperability of a product with competitors' products which an undertaking in a dominant position is ordered by a Commission decision to effect might alter market conditions in such a way that that undertaking would not only lose market share but also, should the decision be annulled, would no longer be able to regain the market share lost and, accordingly, that such an obligation might be considered to be serious and irreparable harm permitting the undertaking concerned to seek, by way of provisional measure,

suspension of operation of the decision. However, it is for the undertaking concerned to adduce any factual evidence to support its argument, in particular by demonstrating that there would be obstacles preventing it from regaining a significant part of the share which it could have lost as a result of the remedy.

(see para. 319)

11. Under Article 109 of the Rules of Procedure of the Court of First Instance, rejection of an application for an interim measure does not bar the party who made it from making a further application on the basis of new facts. In the present case, it cannot be ruled out that a continuing disagreement as to details of the means of implementation of the impugned decision might be regarded as a 'new fact'.

(see para. 325)

12. Damage which would essentially consist of additional development costs for the applicant and which, therefore, in the absence of proof to the contrary, would constitute financial damage, does not, save in exceptional circumstances, constitute irreparable damage.

(see paras 413, 435)

13. The urgency of an application for interim relief must be assessed in relation to the necessity for an interim order in order to prevent serious and irreparable damage to the party applying for those measures. Consequently, in so far as damage may be caused to third parties, it cannot be taken into account under the head of urgency, unless it is shown that the damage would, conversely, cause damage to the party seeking the measure.

(see para. 416)

14. The mere fact that a Commission decision may to a certain extent affect intellectual property rights is, in the absence of explanations to the contrary, insufficient to support the conclusion that there is serious and irreparable damage, at least independently of the actual effects of such interference.

(see para. 473)

ORDER OF THE PRESIDENT OF THE COURT OF FIRST INSTANCE
22 December 2004 (1)

(Proceedings for interim relief – Article 82 EC)

In Case T-201/04 R,

Microsoft Corporation, established in Redmond, Washington (United States of America), represented by J.–F. Bellis, lawyer, and I.S. Forrester QC,

applicant,

supported by

The Computing Technology Industry Association, Inc., established in Oakbrook Terrace, Illinois (United States of America), represented by G. van Gerven and T. Franchoo, lawyers, and B. Kilpatrick, Solicitor,

Association for Competitive Technology, Inc., established in Washington, DC (United States of America), represented by L. Ruessmann and P. Hecker, lawyers,

TeamSystem SpA, established in Pesaro (Italy),

Mamut ASA, established in Oslo (Norway),

represented by G. Berrisch, lawyer,

DMDsecure.com BV, established in Amsterdam (Netherlands),

MPS Broadband AB, established in Stockholm (Sweden),

Pace Micro Technology plc, established in Shipley, West Yorkshire (United Kingdom),

Quantel Ltd, established in Newbury, Berkshire (United Kingdom),

Tandberg Television Ltd, established in Southampton, Hampshire (United Kingdom),

represented by J. Bourgeois, lawyer,

Exor AB, established in Uppsala (Sweden), represented by S. Martínez Lage, H. Brokelmann and R. Allendesalazar Corcho, lawyers,

interveners,

v

Commission of the European Communities, represented by R. Wainwright, W. Mölls, F. Castillo de la Torre and P. Hellström, acting as Agents, with an address for service in Luxembourg,

defendant,

supported by

RealNetworks, Inc., established in Seattle, Washington (United States of America), represented by A. Winckler, M. Dolmans and T. Graf, lawyers,

Software & Information Industry Association, established in Washington, DC, represented by C.A. Simpson, Solicitor,

Free Software Foundation Europe eV, established in Hamburg (Germany), represented by C. Piana, lawyer,

interveners,

APPLICATION for suspension of the operation of Articles 4, 5(a) to (c) and 6(a) of Commission Decision C (2004) 900 final of 24 March 2004 relating to a proceeding under Article 82 EC (Case COMP/C 3/37.792 – Microsoft),

THE PRESIDENT OF THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES

makes the following

Order

The background to the dispute

1 Microsoft Corporation ('Microsoft') develops and markets a variety of software products, including, in particular, operating systems for servers and 'client PCs'.

2 On 10 December 1998, Sun Microsystems Inc. ('Sun Microsystems'), a company established in California (United States of America) which supplies inter alia server operating systems, lodged a complaint with the Commission. In its complaint, Sun Microsystems criticised Microsoft's refusal to disclose to it the technology necessary to allow interoperability of its work group server operating system with the Windows Client PC operating system. Sun Microsystems claimed that the technology which it requested was necessary to allow it to compete on the work group server operating system market.

3 On 2 August 2000, the Commission sent Microsoft a statement of objections. That statement of objections related essentially to certain issues concerning interoperability between Windows Client PC operating systems and the server operating systems of other suppliers ('client-to-server interoperability'). Microsoft replied to that first statement of objections on 17 November 2000.

4 On 29 August 2001, the Commission sent Microsoft a second statement of objections, in which it repeated its previous objections concerning client-to-server interoperability. It also raised a number of issues concerning interoperability between work group servers ('server-to-server interoperability'). Finally, the Commission raised certain issues relating to the integration of the Windows Media Player software in the Windows operating system. Notification of this latter objection resulted from an investigation launched in February 2000 at the Commission's initiative. Microsoft replied to the second statement of objections on 16 November 2001.

5 On 6 August 2003, the Commission sent Microsoft a statement of objections designed to supplement the two previous statements of objections. Microsoft replied to this supplementary statement of objections by letters of 17 and 31 October 2003.

6 A hearing was held by the Commission on 12, 13 and 14 November 2003. By letter of 1 December 2003, Microsoft lodged written observations on the issues which had been raised during the hearing by the Commission, the complainant and interested third parties. Following a final exchange of correspondence between the Commission and Microsoft, the Commission adopted, on 24 March

2004, a decision relating to a proceeding under Article 82 EC in Case COMP/C–3/37.792 – Microsoft ('the Decision').

The Decision

7 According to the Decision, Microsoft infringed Article 82 EC and Article 54 of the Agreement on the European Economic Area ('EEA') by reason of two abuses of a dominant position.

8 The Commission first identified three distinct product markets and found that Microsoft had a dominant position on two of them. The Commission then identified two types of abusive conduct by Microsoft on those markets. Consequently, the Commission imposed a fine and a number of remedies on Microsoft.

I – *The relevant markets identified in the Decision and Microsoft's dominant position on two of those markets*

A – *The relevant markets identified in the Decision*

9 The first product market identified in the Decision is the client PC operating system market (recitals 324 to 342). An operating system is a software product which controls the basic functions of a computer and allows the user to use the computer and to run applications on it. Client PCs are multifunctional computers designed to be used by one person at a time and may be linked to a network.

10 The second product market identified in the Decision is the work group server operating system market (recitals 343 to 401). The Decision defines 'work group services' as the basic network infrastructure services used by office workers in their day-to-day work for three sets of distinct services, namely sharing files stored on servers, sharing printers, and the 'administration' of the manner in which users and groups of users can access network services ('group and user administration') (recital 53). This latter set of services consists in particular in ensuring that users can access and use the network resources securely, by, inter alia, first authenticating users and then checking that they are authorised to perform a given action (recital 54).

11 According to the Decision, the three sets of services identified in the preceding paragraph are closely interrelated within server operating systems (recital 56). The Decision adds in that regard that 'work group server operating systems' are operating systems designed and marketed to deliver those three sets of services collectively to a relatively small number of client PCs linked together in a small to medium-sized network (recitals 53 and 345 to 368). The Decision also states that the absence of demand-side substitutable products is confirmed by Microsoft's pricing strategy (recitals 369 to 382) and by the importance of the interoperability of work group server operating systems with client PCs (recitals 383 to 386). Having, moreover, established that the existence of supply-side substitutable products was limited for work group server operating systems (recitals 388 to 400), the Commission concluded that those operating systems form a distinct product market.

12 The third market identified in the Decision is the streaming media players market (recitals 402 to 425). A media player is a software product capable of reading sound and image content in digital format, i.e. of decoding the corresponding data and translating them into instructions for hardware (loudspeakers, screen). Streaming media players are capable of reading content 'streamed' over the Internet.

13 In the Decision, the Commission found, first, that a streaming media player is a product distinct from an operating system (recitals 404 to 406), second, that such products are under no competitive pressure from non-streaming players (recitals 407 to 410), third, that only media players with similar functionalities exert competitive constraints on Windows Media Player (recitals 411 to 415), and, fourth, essentially, that the presence of supply-side substitutable products is limited (recitals 416 to 424). The Commission concluded from those factors that streaming media players constitute a distinct product market.

14 As regards the geographic dimension of the three product markets previously identified, the Commission found that the relevant geographic market was world-wide (recital 427).

B – *Microsoft's dominant position on the client PC operating system market and on the work group* *server operating system market*

15 First, on the client PC operating system market, the Commission found that Microsoft has, at least since 1996, held a dominant position by virtue, inter alia, of the fact that it holds market shares in excess of 90% (recitals 430 to 435), and of the very significant barriers to entry attributable to indirect network effects (see, in particular, recitals 448 to 452). The Commission states in the Decision that those indirect network effects are attributable to two factors: (i) the fact that end consumers appreciate platforms on which they can use a large number of applications and (ii) the fact that software designers develop applications for the PC operating systems that are most popular with consumers.

16 Second, on the work group server operating system market, the Commission found that, at a conservative estimate, Microsoft's share of that market is at least 60% (recitals 473 to 499).

17 The Commission also evaluated the position of Microsoft's three main competitors on that market. First, it found that Novell, with its NetWare software, held a market share of between 10% and 15%. Second, Linux products accounted for a market share of between 5% and 15%. Linux is a 'free' operating system distributed under a GNU General Public Licence ('GNU GPL'). According to recital 87 to the Decision, Linux provides a limited set of core tasks of an operating system but may be combined with other software to form a 'Linux operating system'. Linux is present on the work group server operating system market in association with Samba software, which is also distributed under a 'GNU GPL' licence (recitals 294, 506 and 598). Third, UNIX products, which comprise several operating systems sharing certain common features (recital 42), account for a market share in the order of 5% to 15%.

18 The Commission then found that the work group server operating system market is characterised by the existence of numerous barriers to entry (recitals 515 to 525) and by particular links to the client PC operating system market (recitals 526 to 540). The Commission concluded that Microsoft holds a dominant position on the work group server operating system market.

II – *Types of abusive conduct identified in the Decision*

A – *Refusal identified in the Decision*

19 The first type of abusive conduct by Microsoft, described at recitals 546 to 791 to the Decision, consists in Microsoft's refusal to provide its competitors with 'interoperability information' and to allow its use for the purpose of developing and distributing products competing with Microsoft's own products on the work group server operating system market from October 1998 until the date of the Decision (Article 2(a) of the Decision). For the purpose of the Decision, 'interoperability information' means 'the complete and accurate specifications for all the Protocols implemented in Windows Work Group Server Operating Systems and … used by Windows Work Group Servers to deliver file and print services and group and user administration services, including the Windows Domain Controller services, Active Directory services and Group Policy services, to Windows Work Group Networks' (Article 1(1) of the Decision). 'Protocols' are defined as 'a set of rules of interconnection and interaction between various instances of Windows Work Group Server Operating Systems and Windows Client PC Operating Systems running on different computers in a Windows Work Group Network' (Article 1(2) of the Decision).

20 For the purpose of identifying such conduct, the Decision emphasises in particular that the refusal in issue does not relate to elements of Microsoft's source code but solely to specifications for the protocols in question, a specification being a description of what is expected from the software in question, in contrast to 'implementations' (also referred to, for purposes of the present order, as 'realisations'), constituted by the running of the code on the computer (recitals 24 and 569). The Commission also found that Microsoft's conduct was part of a general pattern of conduct (recitals 573 to 577), that it involved a disruption from previous levels of supply (recitals 578 to 584), that it created a risk that competition might be eliminated (recitals 585 to 692), and that it had a negative effect on technical development, to the prejudice of consumers (recitals 693 to 708). The Commission also rejected Microsoft's arguments that there was objective justification for its refusal (recitals 709 to 778).

B – *Tying identified in the Decision*

21 The Commission identified a second type of abusive conduct on Microsoft's part, which is described at recitals 792 to 989 to the Decision. According to the Commission, that conduct consisted in the

fact that Microsoft made the availability of the Windows Client PC operating system conditional on the simultaneous acquisition of Windows Media Player from May 1999 until the date of the Decision (Article 2(b) of the Decision).

22 In that regard, the Commission found that Microsoft's conduct satisfied the conditions for a finding that there had been abusive tying for the purposes of Article 82 EC (recitals 794 to 954). First, according to the Decision, Microsoft has a dominant position on the market for client PC operating systems (recital 799). Second, streaming media players and client PC operating systems are regarded in the Decision as being two separate products (recitals 800 to 825). Third, Microsoft does not make it possible for consumers to buy Windows without Windows Media Player (recitals 826 to 834). Fourth, the tying which the Commission had identified affects competition in the market for media players (recitals 835 to 954).

23 In ascertaining whether that fourth condition was satisfied, the Commission pointed out that in classical tying cases the Commission and the Community judicature 'considered the foreclosure effect for competing vendors to be demonstrated by the bundling of a separate product with the dominant product' (recital 841). The Commission, however, considered in the Decision that, as users to a certain extent obtained media players in competition with Windows Media Player through the Internet, sometimes free of charge, there were in the present case good reasons not to assume without further analysis that tying Windows Media Player constituted conduct which by its very nature was liable to foreclose competition (recital 841).

24 In the context of that further analysis, the Commission found, first, that the tying in question afforded Windows Media Player ubiquity on client PCs world-wide which could not be affected by alternative distribution channels (recitals 843 to 877), second, that that ubiquity gave content providers an incentive to distribute their content in Windows Media formats and software developers an incentive to develop their products in such a way as to rely on certain functionalities of Windows Media Player (recitals 879 to 896), third, that that ubiquity affected certain related markets (recitals 897 to 899) and, finally, fourth, that the available market studies invariably pointed to a tendency in favour of the use of Windows Media Player and Windows Media formats to the detriment of its main competitors (recitals 900 to 944). From those various considerations, the Commission concluded that there was a reasonable likelihood that the tying in question would lead to a lessening of competition so that the maintenance of an effective competition structure would no longer be ensured in the foreseeable future (recital 984).

25 Finally, the Commission rejected Microsoft's arguments, first, that the tying in question resulted in increased efficiencies such as to offset the anti-competitive effects identified by the Commission (recitals 955 to 970) and, second, that it did not provide incentives to restrict competition (recitals 971 to 977).

III – *The remedies and fine imposed on Microsoft*

26 The two abuses which the Commission identified in the Decision were penalised by the imposition of a fine amounting to EUR 497 196 304 (Article 3 of the Decision).

27 Moreover, Microsoft was required, under Article 4 of the Decision, to bring to an end the abuses established in Article 2 in accordance with Articles 5 and 6 of the Decision. Microsoft is also required to refrain from repeating any act or conduct described in Article 2 and from any act or conduct having the same or equivalent object or effect.

28 By way of remedy for the abusive refusal identified in the Decision, Article 5 of the Decision orders Microsoft to act as follows:

'(a) Microsoft ... shall, within 120 days of the date of notification of this Decision, make the interoperability information available to any undertaking having an interest in developing and distributing work group server operating system products and shall, on reasonable and non-discriminatory terms, allow the use of the interoperability information by such undertakings for the purpose of developing and distributing work group server operating system products;

(b) Microsoft ... shall ensure that the interoperability information made available is kept updated on an ongoing basis and in a timely manner;

(c) Microsoft ... shall, within 120 days of the date of notification of this Decision, set up an evaluation mechanism that will give interested undertakings a workable possibility of informing themselves about the scope and terms of use of the interoperability information; as regards this evaluation mechanism, Microsoft … may impose reasonable and non-discriminatory conditions to ensure that access to the interoperability information is granted for evaluation purposes only;

…'

29 The 120-day period referred to in Article 5 of the Decision expired on 27 July 2004.

30 By way of remedy for the abusive tying identified in the Decision, Article 6 of the Decision orders as follows:

'(a) Microsoft … shall, within 90 days of the date of notification of this Decision, offer a full-functioning version of the Windows Client PC operating system which does not incorporate Windows Media Player; Microsoft … retains the right to offer a bundle of the Windows Client PC operating system and Windows Media Player;

…'.

31 The 90-day period referred to in Article 6 of the Decision expired on 28 June 2004.

Proceedings for breach of United States antitrust law

32 Concurrently with the investigation conducted by the Commission, Microsoft was the subject of an investigation for breach of United States antitrust legislation.

33 In 1998, the United States of America and 20 Federal States brought proceedings against Microsoft under the Sherman Act. Their complaints related to the measures taken by Microsoft against Netscape's Internet browser 'Netscape Navigator' and Sun Microsystems' Java technologies. The 20 Federal States in question also brought actions against Microsoft for breach of their own antitrust laws.

34 After the United States Court of Appeals for the District of Columbia Circuit ('the Court of Appeals'), to which Microsoft had appealed against the judgment delivered on 3 April 2000 by the United States District Court for the District of Columbia ('the District Court'), delivered its judgment on 28 June 2001, Microsoft reached a settlement in November 2001 with the United States Department of Justice and the Attorneys General of nine States ('the United States Settlement'), under which Microsoft entered into two types of commitment.

35 First, Microsoft agreed to establish document specifications for the communications protocols used by Windows server operating systems in order to 'interoperate', i.e. render those systems compatible, with Windows Client PC operating systems, and to license those specifications to third parties on defined terms.

36 Second, the United States Settlement provided that Microsoft was to allow original equipment manufacturers ('OEMs') and end consumers to enable or remove access to its middleware products. The Windows Media Player software is one of the products belonging to that category, as defined in the United States Settlement. Those provisions are designed to ensure that middleware suppliers will be able to develop and distribute products which function correctly with Windows.

37 Those terms were approved on 1 November 2002 by the District Court, which also rejected the remedy proposals made by the nine States which had not accepted the United States Settlement.

38 Upon appeal by the State of Massachusetts, the Court of Appeals on 30 June 2004 upheld the District Court's decision.

39 In order to give effect to the United States Settlement, the Microsoft Communications Protocol Program ('the MCPP') was put in place in August 2002. According to the documents produced before the Court of First Instance, 17 licensees benefited from the MCPP between August 2002 and July 2004.

Procedure

40 By application lodged at the Registry of the Court of First Instance on 7 June 2004, Microsoft brought an action under the fourth paragraph of Article 230 EC for annulment of the Decision or, in the alternative, annulment of or a substantial reduction in the fine.

41 By separate document lodged at the Court Registry on 25 June 2004, Microsoft also applied under Article 242 EC for suspension of operation of Articles 4, 5(a) to (c) and 6(a) of the Decision. By that document Microsoft also sought, on the basis of Article 105(2) of the Court's Rules of Procedure, suspension of operation of those provisions pending a decision on the application for interim relief.

42 On the same date, the President of the Court of First Instance, in his capacity as judge dealing with the application for interim relief, requested the Commission to state whether it intended to enforce the Decision before an order had been made on the application for interim relief.

43 By letter received at the Court Registry on 25 June 2004, the Commission informed the President of its decision not to enforce Articles 5(a) to (c) and 6(a) of the Decision while the application for interim relief was pending.

44 By application lodged at the Court Registry on 25 June 2004, Novell Inc. ('Novell'), established in Waltham, Massachusetts (United States of America), represented by C. Thomas, M. Levitt and V. Harris, Solicitors, and A. Müller-Rappard, lawyer, requested leave to intervene in support of the form of order sought by the Commission in the interim relief proceedings.

45 By application lodged at the Court Registry on 30 June 2004, RealNetworks Inc. ('RealNetworks') requested leave to intervene in support of the form of order sought by the Commission in the interim relief proceedings.

46 By application lodged at the Court Registry on 30 June 2004, Computer & Communications Industry Association ('CCIA'), established in Washington, DC (United States of America), represented by J. Flynn QC, D. Paemen and N. Dodoo, lawyers, requested leave to intervene in support of the form of order sought by the Commission in the interim relief proceedings.

47 By application lodged at the Court Registry on 1 July 2004, Software & Information Industry Association ('SIIA') requested leave to intervene in support of the form of order sought by the Commission in the interim relief proceedings.

48 By application lodged at the Court Registry on 1 July 2004, The Computing Technology Industry Association Inc. ('CompTIA') requested leave to intervene in support of the form of order sought by Microsoft in the interim relief proceedings.

49 By application lodged at the Court Registry on 2 July 2004, The Association for Competitive Technology ('ACT') requested leave to intervene in support of the form of order sought by Microsoft in the interim relief proceedings.

50 By application lodged at the Court Registry on 5 July 2004, Digimpro Ltd, established in London (United Kingdom), TeamSystem SpA, Mamut ASA and CODA Group Holdings Ltd, established in Chippenham, Wiltshire (United Kingdom), requested leave to intervene in support of the form of order sought by Microsoft in the interim relief proceedings.

51 By application lodged at the Court Registry on 5 July 2004, DMDsecure.com BV, MPS Broadband AB, Pace Micro Technology plc, Quantel Ltd and Tandberg Television Ltd (hereinafter referred to collectively as 'DMDsecure.com and Others') requested leave to intervene in support of the form of order sought by Microsoft in the interim relief proceedings.

52 By application lodged at the Court Registry on 8 July 2004, IDE Nätverkskonsulterna AB, established in Stockholm (Sweden), Exor AB, T. Rogerson, residing in Harpenden, Hertfordshire (United Kingdom), P. Setka, residing in Sobeslav (Czech Republic), D. Tomicic, residing in Nuremberg (Germany), M. Valasek, residing in Karlovy Vary (Czech Republic), R. Rialdi, residing in Genoa (Italy), and B. Nati, residing in Paris (France), requested leave to intervene in support of the form of order sought by Microsoft in the interim relief proceedings.

53 By application lodged on 13 July 2004, Free Software Foundation Europe ('FSF-Europe') requested leave to intervene in support of the form of order sought by the Commission in the interim relief proceedings.

54 In accordance with Article 116(1) of the Rules of Procedure, those applications for leave to intervene were served on the applicant and the defendant, which, depending on the case, either submitted their observations within the prescribed periods or did not submit any observations. By letters of 6 and 8 July 2004, Microsoft requested confidential treatment vis-à-vis such parties as should be granted leave to intervene for the data contained in the Decision which the Commission had accepted would not be made public in the version available on its Internet site.

55 The Commission submitted its written observations on the application for interim relief on 21 July 2004. Those observations were notified to Microsoft on the same date.

56 By order of 26 July 2004, the President of the Court of First Instance granted leave to intervene to CompTIA, ACT, TeamSystem SpA, Mamut ASA, DMDsecure.com and Others, Exor AB, Novell, RealNetworks, CCIA and SIIA and dismissed the applications for leave to intervene submitted by Digimpro Ltd, CODA Group Holdings Ltd, IDE Nätverkskonsulterna AB, T. Rogerson, P. Setka, D. Tomicic, M. Valasek, R. Rialdi and B. Nati. The President of the Court of First Instance also ordered that the non-confidential version of the procedural documents be forwarded to the interveners and reserved his decision on the merits of the request for confidential treatment.

57 On 27 July 2004, the President of the Court of First Instance, in his capacity as judge dealing with the application for interim relief, organised an informal meeting which, in addition to Microsoft and the Commission, the parties granted leave to intervene by the order of the President of the Court of First Instance of 26 July 2004 and also FSF-Europe were invited to attend. At that meeting the President provisionally granted leave to FSF-Europe to intervene in the interim relief proceedings in support of the form of order sought by the Commission and set out for the parties the timetable for the various procedural stages in the present interim relief proceedings.

58 By order of 6 September 2004, FSF-Europe was granted leave to intervene in support of the form of order sought by the Commission.

59 Each of the parties granted leave to intervene lodged its observations within the periods prescribed.

60 In accordance with what had been decided at the informal meeting on 27 July 2004, Microsoft replied on 19 August 2004 to the Commission's observations of 21 July 2004.

61 By application lodged on 31 August 2004, Audiobanner.com, trading as VideoBanner ('Videobanner'), established in Los Angeles, California (United States of America), represented by L. Alvisar Ceballos, lawyer, requested leave to intervene in the interim relief proceedings in support of the form of order sought by the Commission. As neither of the two main parties objected to that application for leave to intervene, VideoBanner was provisionally granted leave to intervene and was requested to submit its observations directly at the hearing.

62 In reply to Microsoft's observations of 19 August 2004, the Commission lodged fresh observations on 13 September 2004.

63 The applicant and the defendant also lodged their written observations on the statements in intervention on 13 September 2004.

64 By way of measures of organisation of procedure, the President of the Court of First Instance, in his capacity as judge dealing with the application for interim relief, put written questions to Microsoft, the Commission and a number of the interveners. The replies given to those questions within the periods prescribed were notified to all of the parties.

65 All of the parties, including VideoBanner, presented oral argument at a hearing held on 30 September 2004 and 1 October 2004.

66 By letter of 8 October 2004, RealNetworks lodged at the Registry a number of additional details which the President had requested it to produce at the hearing. The other parties received notification of that letter and were invited to submit their observations on it.

67 By letter of 27 October 2004, Microsoft submitted observations on RealNetwork's letter of 8 October 2004. None of the other parties submitted observations.

68 By letters of 10 November and 19 November 2004 respectively, CCIA and Novell informed the Court that they were withdrawing their intervention in the present case. The Commission, Microsoft and the interveners submitted their observations on those withdrawals within the period prescribed.

69 Following the withdrawals of CCIA and Novell, an informal meeting was held on 25 November 2004 in the presence of all the parties in order to address certain procedural consequences of those withdrawals. The minutes of that meeting were forwarded to all the parties on 26 November 2004.

Law

70 Under the combined provisions of Articles 242 EC and 225(1) EC, the Court of First Instance may, if it considers that the circumstances so require, order that application of a contested act be suspended.

71 Article 104(2) of the Rules of Procedure provides that an application for interim relief must state the circumstances giving rise to urgency and the pleas of fact and law establishing a prima facie case for the interim measures applied for. Those conditions are cumulative, so that an application for interim relief must be dismissed if any one of them is absent (order of the President of the Court of Justice in Case C‑268/96 P(R) *SCK and FNK* v *Commission* [1996] ECR I‑4971, paragraph 30). Where appropriate, the judge hearing an application for interim relief must also weigh up the interests involved (order of the President of the Court of Justice in Case C‑445/00 R *Austria* v *Council* [2001] ECR I‑1461, paragraph 73).

72 In the context of that overall examination, the judge dealing with the application must exercise the broad discretion which he enjoys when determining the manner in which those various conditions are to be examined in the light of the specific circumstances of each case (order of the President of the Court of Justice in Case C‑393/96 P(R) *Antonissen* v *Council and Commission* [1997] ECR I‑441, paragraph 28).

73 Article 107(1) of the Rules of Procedure states that '[t]he decision on the application shall take the form of a reasoned order'. It has, however, been held that a judge dealing with an application for interim relief cannot be required to reply explicitly to all the points of fact and law raised in the course of the interim proceedings. In particular, it is sufficient that the reasons given by the judge dealing with the application at first instance validly justify his order in the light of the circumstances of the case and enable the Court of Justice to exercise its powers of review (order in *SCK and FNK* v *Commission,* cited at paragraph 71 above, paragraph 52, and order of the President of the Court of Justice in Case C‑159/98 P(R) *Netherlands Antilles* v *Council* [1998] ECR I‑4147, paragraph 70).

74 Because the abuses of a dominant position which Microsoft is alleged to have committed are mutually distinct, as may be seen, moreover, from both the structure of the Decision and the way in which Microsoft has marshalled its arguments, the President considers it appropriate to examine separately the arguments developed in support of the application for suspension of operation of Article 5(a) to (c) of the Decision, read with Article 4 of the Decision (the section dealing with the interoperability information issue), and the arguments developed in support of the application for suspension of operation of Article 6(a) of the Decision, also read with Article 4 (the section dealing with the issue of the tying of the Windows operating system and the Windows Media Player software). Before doing so, however, the President will consider the request for confidential treatment, VideoBanner's application for leave to intervene, the effects of the withdrawal of CCIA and Novell, and also whether the applicant complied with certain procedural requirements relating to the written submissions.

I – The request for confidential treatment

75 At the stage of the interim relief proceedings, it is appropriate to grant confidential treatment, vis-à-vis the parties granted leave to intervene, for the data contained in the Decision which the Commission has accepted should not be made public in the version available on its Internet site, since such information is prima facie liable to be regarded as being secret or confidential within the terms of Article 116(2) of the Rules of Procedure.

II – *VideoBanner's application for leave to intervene*

76 As noted at paragraph 61 above, VideoBanner lodged an application for leave to intervene in the interim-relief proceedings in support of the form of order sought by the Commission.

77 As that application was made in accordance with Article 115(2) of the Rules of Procedure and the main parties have not raised any objections, it must be granted, pursuant to the second paragraph of Article 40 of the Statute of the Court of Justice, which is applicable to the Court of First Instance by virtue of the first paragraph of Article 53 thereof.

III – *The effects of the withdrawal of certain interveners*

78 As CCIA and Novell informed the Court that they were withdrawing their intervention in support of the form of order sought by the Commission in the interim relief proceedings, the President of the Court, in his capacity as judge dealing with the application, organised an informal meeting in the presence of all the parties to examine some procedural consequences of their withdrawal.

79 As is clear from the minutes of that meeting, the parties agreed, first, that the documents lodged by CCIA and Novell in the interim relief proceedings, including all annexes to their written submissions, and the arguments presented at the hearing should remain part of the file for purposes of the present interim relief proceedings; second, that all the parties should be able to rely on those matters for the purposes of their arguments and the President should be able to rely on them for his appraisal; and, third, that all the parties had had an opportunity to present argument in respect of all material placed on the file in the present case.

80 RealNetworks, moreover, submitted in its observations on CCIA's withdrawal that CCIA did not have the power to withdraw in the present case.

81 The President takes the view in this regard that it is not for him to examine RealNetworks' objection in so far as, first, he has no jurisdiction to adjudicate on whether the decisions of the Board of CCIA were taken in accordance with the provisions of its articles and, second, the application to withdraw was submitted by CCIA in accordance with the requirements laid down in the Rules of Procedure of the Court of First Instance.

IV – *Compliance with the procedural requirements governing the written documentation*

82 The Commission and a number of the parties intervening in support of the form of order which it is seeking have claimed, first, that certain references to documents annexed to Microsoft's main application are inadmissible; second, that certain documents produced by Microsoft in the course of the present proceedings are inadmissible; third, that there is no evidence to support a number of assertions; and, fourth, that the applicant has failed to comply with other procedural requirements.

A – *The references to the main application*

83 In its observations of 21 July 2004, the Commission listed the paragraphs of the application for interim relief which contain references to the main application and to the documents annexed to that application but not annexed to the application for interim relief (Annexes A.9, A.9.1, A.9.2., A.11, A.12.1, A.17, A.18, A.19, A.20, A.21, A.22 and A.24). The Commission concludes that Microsoft cannot effectively rely on those documents.

84 In its observations of 13 September 2004, the Commission added that the new references to the main application which Microsoft made in its observations of 19 August 2004, in particular with regard to the agreement of the World Trade Organisation (WTO) on the trade-related aspects of intellectual property rights ('the TRIPS Agreement') must, like the preceding ones, be excluded. To attach the corresponding sections of the main application as an annex (Annex T.9) to the observations does not allow the conclusion to be drawn that the application for interim relief is self-sufficient.

85 It must be borne in mind in this regard that, at the informal meeting held on 27 July 2004 (see paragraph 57 above), the President drew Microsoft's attention to the large number of references to the main application contained in the application for interim relief and questioned the applicant on that point. As recorded in the minutes of that meeting: '[Microsoft] confirmed that its application for interim measures should be seen as self-sufficient and that the multiple references made in its

application for interim measures to annexes to the application in the main case could be ignored for the purposes of the interim measures proceedings'.

86 That position is in accordance with Part VII(1) of the Practice Directions (OJ 2002 L 87, p. 48), which provides that an application for interim relief 'must be intelligible in itself, without necessitating reference to the application lodged in the main proceedings'.

87 It follows that the merits of Microsoft's application for interim relief can be assessed only by reference to the elements of fact and law as they emerge from the application for interim relief itself and from the documents annexed to that application and intended to illustrate its content (see, to that effect, the order of the President of the Court of First Instance in Case T-306/01 R *Aden and Others* v *Council and Commission* [2002] ECR II-2387, paragraph 52). While it cannot be concluded that every assertion based on a document that is not annexed to the application for interim relief must necessarily be excluded from the proceedings, the fact remains that evidence to support such an assertion cannot be regarded as having been adduced if the assertion in question is challenged by the other party to the proceedings or by a party intervening in support of that other party.

88 So far as the reference to Annex T.9 is concerned, it must be borne in mind that, while an application may be supported and supplemented on specific points by references to particular passages in documents which are annexed to it, a general reference to other documents, even if they are annexed to the application for interim relief, cannot make up for the absence of essential elements in that application (order in *Aden and Others* v *Council and Commission,* paragraph 87 above, paragraph 52). It is necessary to point out in this regard that Part VII(2) of the Practice Directions, which requires that 'the pleas of fact and law on which the main action is based (establishing a prima facie case on the merits in that action)' be stated 'with the utmost concision', cannot, without circumventing that rule, be construed as permitting the general reference to an annexed document setting out the details of the argument.

89 Without prejudice to the documents placed subsequently on the case-file and the oral submissions at the hearing before the President, the decision in the present proceedings will be taken without reference to either the annexes to the main application or Annex T.9.

B – *The production of documents in the course of the proceedings*

90 In its observations of 13 September 2004, the Commission maintains, first, that the arguments which Microsoft had put forward in its observations of 19 August 2004, in particular those relating to intellectual property rights set out in detail in two separate annexes (Annex T.3, entitled 'Prescott, Opinion', and Annex T.6, entitled 'Galloux, Opinion'), went beyond those set out in the main application. Nor was any explanation provided as to why Annex T.3, a document dated 3 June 2004, was not produced as an annex when the application for interim relief was made.

91 The Commission then states that Microsoft annexed to its observations of 19 August 2004 a document which it had annexed to the main application (Annex A.21, which became Annex T.5, Knauer, 'Aspects of Patent Law of the [Decision]', and a document the content of which appears to be similar to that of an annex to the main application (Annex T.8, Evans, Nichols and Padilla 'Economic Evidence on the Foreclosure Issues Raised by the Commission's Refusal to Supply and Tying Claims', similar to Annex A.19).

92 In their replies to the written questions put by the Court before their withdrawal, Novell and CCIA stated that certain documents are inadmissible inasmuch as they ought to have been produced along with the application for interim relief, whereas they were produced only subsequently (Annexes T.3, T.5, T.8 and U.2, Campbell-Kelly, 'Commentary on Innovation in Active Directory').

93 The President finds that documents T.3, T.5, T.6 and T.8 were annexed to Microsoft's observations of 19 August 2004 and that they are intended to support the content of those observations. Microsoft cannot therefore, in those circumstances, be criticised for having replied in detail to the arguments which the Commission had put forward in its observations of 21 July 2004; little significance attaches in this regard to the fact that the document annexed bears a date prior to that on which the application for interim relief was lodged or that it is identical or comparable to a document annexed to the main application. Likewise, for the same reasons, Microsoft could validly use Annex U.2 as a basis for its observations on the statements in intervention.

C – *The lack of evidence*

94 The Commission points out that Annex T.5 and Annex T.8 are based on information to which it has not had access (paragraph 4 of Annex T.5 refers to information received from Microsoft, without further specification; in the case of Annex T.8, the reports referred to in paragraph 6 thereof (prepared by Merrill Lynch and Forrester and dealing with server market data) are not attached, as is the case with regard to those referred to in footnote 35 (surveys conducted by Microsoft), footnotes 42 and 43 ('Digital Media Tracker Survey'), footnote 48 ('Analysis of Media Players Installed on PCs') and footnote 50 ('NERA submission')).

95 It is sufficient in this regard to point out that it is for the judge dealing with the application for interim relief to determine, as appropriate, whether the assertions based on the above reports and information are lacking in probative value.

D – *The failure to comply with certain other procedural requirements*

96 The Commission and CCIA, prior to its withdrawal, submit that Microsoft refers in its application for interim relief to Annex R.6 (Carboni, 'Trade Marks Opinion'), without explaining the relevance of the document in question, and that no account should therefore be taken of that annex.

97 As already pointed out at paragraph 88 above, the general reference to other documents, even if they are annexed to the application for interim relief, cannot make up for the absence of the essential elements in that application. In the present case, Annex R.6, to which the application for interim relief refers, is used to support an argument concerning the risk of harm to Microsoft's trade marks, which reads as follows: '[t]he immediate implementation of Article 6(a) of the Decision would also cause serious injury to the valuable Microsoft and Windows trademarks because Microsoft would be required to sell a downgraded product inconsistent with its basic design concept.' In so far as it is sufficiently clear from this phrase that Annex R.6 is intended to illustrate the risk identified, the President considers that that annex should not be excluded from the proceedings.

V – *Substance*

A – *The interoperability information issue*

1. Arguments of the parties

a) Arguments of Microsoft and the parties granted leave to intervene in support of the form of order which it seeks

A prima facie case

98 Microsoft states that there is a serious dispute between it and the Commission regarding the compulsory licensing of its communications protocols, with the consequence that the requirement that it demonstrate a prima facie case as to the illegality of Article 5(a) to (c) of the Decision is satisfied.

99 Microsoft maintains that the four criteria which must be satisfied before an undertaking can be required to license its products, as defined by the Court of Justice in Case 238/87 *Volvo* [1988] ECR 6211, Joined Cases C-241/91 P and C–242/91 P *RTE and ITP* v *Commission* [1995] ECR I-743 ('*Magill*'), C-7/97 *Bronner* [1998] ECR I-7791 and judgment of 29 April 2004 in Case C-418/01 *IMS Health*, not yet reported, are not satisfied in the present case.

100 First, the intellectual property that the Decision would require Microsoft to deliver to its competitors is not indispensable for the purposes of carrying on a business as a supplier of work group server operating systems.

101 First of all, Microsoft claims that there are five ways of achieving interoperability between operating systems supplied by different vendors, namely: (i) by using standard communications protocols such as TCP/IP (Transmission Control Protocol/Internet Protocol) and HTTP (HyperText Transfer Protocol); (ii) by adding software code to a Windows Client PC or server operating system to permit it to communicate with a non-Microsoft server operating system by using communications protocols specific to that server operating system; (iii) by adding a software code to a non-Microsoft server operating system to permit it to communicate with a Windows Client PC or server operating system

using communications protocols specific to Windows operating systems; (iv) by adding a block of software code to all of the client PC and server operating systems in a network in order to achieve interoperability by means of communications between those blocks of software code; and (v) by using a Windows server operating system as a 'bridge' between the Windows Client PC operating system and the non-Windows server operating system.

102 Next, Microsoft refers to the absence of customer complaints about the existing degree of interoperability.

103 Last, Microsoft refers to the continued presence of several competitors carrying on that business.

104 Second, Microsoft's refusal to make its intellectual property available to its competitors has not prevented the emergence of any new product for which there is unsatisfied consumer demand. No evidence of lack of satisfaction has been adduced. Nor has it been established that Microsoft's intellectual property will be used by its competitors to develop new products and not simply to replicate the functionality of existing Microsoft products.

105 Third, the fact that Microsoft has retained its technology for its own use has not had the effect of eliminating competition on a secondary market, since, as shown by the steady growth of Linux, there is substantial competition among vendors of work group server operating systems. Six years after Microsoft's alleged refusal to supply its technology, the market is therefore competitive.

106 Fourth, the refusal to license its technology to vendors of non-Microsoft server operating systems is objectively justified. Unlike the information protected by the national legislation then at issue which the companies involved had refused to disclose in *Magill* and *IMSHealth*, paragraph 99 above, the information protected in the present case relates to secret and valuable technology. In the present case, in order to arrive at the conclusion that the refusal to communicate information protected by intellectual property rights was not objectively justified and therefore constituted an infringement of Article 82 EC, the Commission applied an imprecise test which represented a marked departure from those recognised in previous case-law. Thus, the Commission itself considered that such a refusal constitutes an infringement of Article 82 EC if, on balance, the possible negative impact of an order to supply on Microsoft's incentives to innovate is outweighed by its positive impact on the level of innovation of the whole industry (recital 783). In addition to the fluid nature of that new test, it is not demonstrated, on the basis of evidence or analysis, that innovation in the sector would be spurred should Microsoft's technology be delivered to its competitors. Microsoft maintains, on the contrary, that a compulsory licence would reduce competition between server operating system vendors.

107 Microsoft further claims that Sun Microsystems did not request it to provide the technology which the Commission now orders it to disclose. Moreover, as no licence for the purpose of developing software in the EEA was ever requested by Sun Microsystems, Microsoft maintains that it was under no duty to regard Sun Microsystems' request as susceptible of leading it to adopt a course of conduct that might fall within the scope of Article 82 EC.

108 Last, by requiring Microsoft to license protected information, the Commission fails to take proper account of the obligations imposed on the Communities by the TRIPS Agreement (see paragraph 84 above).

109 In its observations of 19 August 2004, Microsoft submits that the Commission cannot validly maintain that the Decision does not impose new conduct on it but only has the effect of requiring it to revert to a business policy that it had initially pursued. Microsoft observes, first of all, that the Commission does not suggest that the information referred to in Article 5 of the Decision was supplied in the past. If the Commission was thus referring to the networking technology information licensed to AT&T in 1994 to permit the creation of a product called 'Advanced Server for UNIX' ('AS/U'), then the supply of that information has not been discontinued. The product called 'PC Net Link' developed by Sun Microsystems, to which AT&T licensed AS/U, is still available on the market today. Sun Microsystems still advertises PC Net Link as providing 'native Windows NT network services' – including file and print services and user and group administration services – on the Solaris server operating system. Sun Microsystems also claims that PC Net Link works well with Microsoft's latest Windows Client PC operating systems, including Windows 2000 Professional and Windows XP.

110 Nor can Microsoft be required to license its communications protocols in the future because it decided to license networking technology to AT&T in 1994. It was a term of the contract between

Microsoft and AT&T, moreover, that their business relationship would not be extended to new technologies.

111 Last, Microsoft states that competing vendors of server operating systems are not dependent on the interoperability information whose supply Microsoft is alleged to have interrupted. Novell has never used AS/U and has never expressed the slightest interest in doing so. Novell's NetWare supplies file and print services and user and group administration services to Windows operating systems using Novell's own suite of communications protocols. Linux vendors have no use for AS/U either. Their server operating systems supply file and print services and user and group administration services to Windows operating systems using the Samba open-source software product, which was developed by reverse engineering Microsoft's communications protocols.

Urgency

112 Microsoft contends that the immediate enforcement of Article 5(a) to (c) of the Decision would give rise to three types of serious and irreparable harm.

– Infringement of intellectual property rights

113 The Decision has the effect of requiring Microsoft to license valuable information protected by intellectual property rights. The resulting infringement of intellectual property rights constitutes serious and irreparable harm.

(i) Valuable information

114 Microsoft states that the communications protocols constitute a technology owned by Microsoft and used by Windows Client PC and server operating systems to exchange information with other copies of those operating systems, and that they have significant commercial value (report by S. Madnick and B. Meyer, 'Harm caused by forcing Microsoft to disclose all communications protocols used to provide "work group" services', in annex R.2 ('the Madnick & Meyer report')). Its communications protocols are the fruit of many years of very expensive research and development. Significant efforts were expended in designing communications protocols that provide useful functionality and enhance the speed, reliability, security and efficiency of interactions between Windows operating systems.

115 The specifications for the communications protocols, which are detailed descriptions of the design and operation of the communications protocols, would allow a competitor in possession of them to use Microsoft's communications protocols in its own server operating system.

116 In its observations of 19 August 2004, Microsoft claims that the compulsory licensing of specifications for communications protocols that enable multiple Windows server operating systems to function jointly in providing work group services would have the effect of disclosing a great deal of information about the internal design of Windows operating systems. As the Madnick & Meyer report shows, licensing the communications protocols that enable interaction between a number of Windows server operating systems would reveal extensive information about how the directory in those operating systems, called Active Directory, works.

(ii) Information protected by intellectual property rights

117 Microsoft's communications protocols and the specifications describing them are protected by intellectual property rights. In answer to an argument put forward by the Commission in its observations of 21 July 2004, Microsoft states, first, that a distinction must be drawn between protocol design, protocol specifications and protocol implementation and, second, that intellectual property protection is not limited to any one of those three categories.

Copyright protection

118 Communications protocols are protected by copyright under the Berne Convention for the Protection of Literary and Artistic Works of 9 September 1886, as last amended on 28 September 1979, and by Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs (OJ 1991 L 122, p. 42), by virtue of the preamble and Article 1(1). The specifications for those protocols are preparatory design material, which is also protected by copyright (opinion of Mr Prescott, annex T.3, referred to at paragraph 90 above).

119 Consequently, Microsoft, like any copyright owner, has the exclusive right to authorise publication of its protected works or to make them available to the public in any other form. The copyright laws of various Member States expressly authorise owners of protected works to determine whether those works will be published or disclosed in any form. The Decision deprives Microsoft of the right to decide in what form, to whom, when and on what conditions it wishes to make the specifications for its communications protocols available, if at all. The Commission cannot therefore recognise that the specifications for Microsoft's communications protocols are protected by copyright and at the same time maintain that the requirement imposed on Microsoft by the Decision to license those specifications does not infringe the very substance of that right.

120 The copyright owner also has the exclusive right to authorise the creation of derivative works, under both Article 12 of the Berne Convention and Article 4 of Directive 91/250. That exclusive right to authorise the creation of derivative works is infringed, since the implementation of the specifications for Microsoft's communications protocols by its competitors would almost certainly be an adaptation, or a translation, of those specifications which would fall within the ambit of copyright and could therefore not be regarded as a work developed independently. Furthermore, even on the assumption that the licensees were capable of implementing certain specifications without infringing Microsoft's copyright, the Decision does not require them to do so, since it requires Microsoft to 'allow the use' of the specifications for its communications protocols without setting a limit to the way in which the licensees will develop their creations. There is therefore no reason to believe that the licensees will confine themselves to developing applications that would not be unlawful, even on the assumption that it were possible to do so.

121 Last, Microsoft claims that, in the context of the United States Settlement, all the parties agreed that the specifications for its client-to-server communications protocols were protected by copyright.

Patent protection

122 In its application for interim measures, Microsoft states that certain of the communications protocols that the Commission requires it to provide are covered by patents or patent applications and that it intends to file, before June 2005, a large number of patent applications covering various aspects of the Windows Client PC and server operating systems covering the communications protocols referred to in the Decision. The fact that the effects of the Decision are not limited as to time means that future patents would be covered by the compulsory licensing requirement contained in the Decision.

123 In its observations of 19 August 2004, Microsoft identifies three existing European patents and two pending European patent applications covering the communications protocols subject to compulsory licensing. According to the opinion of Mr Knauer, annex T.5, referred to at paragraph 91 above, a number of communications protocols used by Windows server operating systems to provide file and print services and user and group administration services are covered by patents, namely (i) the DFS (Distributed File System) protocol, covered by Patent EP 0 661 652 B1; (ii) the SMB Protocol, covered by Patent EP 0 438 571 B1; and (iii) the Distributed Component Object Model Remote protocol, covered by Patent EP 0 669 020 B1. The patent applications relate to the Constraint Delegation and Active Directory Sites protocols.

124 In that context, Microsoft states that the Commission does not exclude patented technology from the remedy and requires that Microsoft license all its intellectual property rights relating to communications protocols, including every patent. Its competitors would thus have no reason to attempt to develop applications which did not use the patented methods.

Protection of trade secrets

125 Microsoft maintains that the communications protocols are trade secrets which have not been disclosed to third parties, unless they have undertaken to be bound by a contractual confidentiality obligation.

126 In answer to the Commission's observations of 21 July 2004 that, first, the legitimacy under competition law of a refusal to reveal a 'secret' whose existence is purely the consequence of a unilateral business decision should be dependent upon the interests at stake and, second, the damage caused to Microsoft by the requirement to reveal its trade secrets is less serious than the damage caused by the requirement that Microsoft allow reproduction of its copyrighted works or infringement of its patents, Microsoft contends that at the moment it can transfer its

communications protocols to third parties in exchange for financial consideration and can bring proceedings against those who unlawfully use those protocols (opinions of Mr Prescott and Mr Galloux, annexes T.3 and T.6, referred to at paragraph 90 above) and that, consequently, compulsory licensing will undermine the value of those assets. Nor can it be inferred from the judgment in Case T-83/91 *Tetra Pak* v *Commission* [1994] ECR II-755, paragraphs 84 and 139, that the Court of First Instance accepted that secret information in the form of specifications is not protected in the same way as other intellectual property, since the Court was not called upon to determine whether the specifications for cartons were protected trade secrets.

The necessity for the information

127 In its observations of 21 July 2004, the Commission asserts that the specifications for Microsoft's communications protocols constitute 'information necessary to achieve interoperability' within the meaning of Directive 91/250 and that, consequently, the compulsory licensing ordered by the Decision does not provide Microsoft's competitors with anything which they could not obtain by decompiling Windows server operating systems in accordance with the derogation in Article 6 of that directive.

128 However, Microsoft contends that that assertion is incorrect, for a number of reasons.

129 First, Article 6(2) of Directive 91/250 offers only a limited exception to the exclusive rights of the owner of a protected software program as set out in Article 4 of that directive. In certain well-defined circumstances, a 'legitimate user' is permitted to 'discover' interfaces in a protected software program by 'decompiling' the machine-readable code that exposes those interfaces. Such 'decompilation' is permitted only if the interfaces are indispensable to support functionality in an independently-created software program and have not been made available by the owner of the program. In the present case, apart from the fact that Microsoft states that it has already disclosed the interfaces that third-party software programs need in order to call upon the functionality of Windows server operating systems, the specifications for its communications protocols are not necessary to support functionality in an independently-created work group server operating system. On the contrary, the Decision requires Microsoft to allow competitors to create products providing the same file and print services and user and group administration services as Windows server operating systems provide by developing their own implementations of Microsoft's communications protocols. Thus, Microsoft is required to provide its competitors with valuable commercial information in circumstances in which they would have no right to decompile under Article 6(2) of Directive 91/250.

130 Second, Article 6 of Directive 91/250 allows information to be obtained by decompilation, but in paragraph 2 it places three strict limits on the use of that information, including a prohibition on using the information to create a program reproducing the decompiled program. However, the Decision contains no limit in that sense; on the contrary, it authorises licensees to develop applications which infringe Microsoft's copyright in its specifications for its communications protocols.

131 Third, the specifications are more valuable than the information that Microsoft's competitors could obtain through legitimate decompilation.

Serious and irreparable damage

132 Microsoft maintains, in the second place, that the disclosure of information protected by intellectual property rights would cause serious and irreparable harm.

133 By allowing Microsoft's competitors to use the communications protocols in order to provide server operating systems capable of replacing those supplied by Microsoft, Article 5(a) of the Decision deprives Microsoft of the competitive advantages which it has acquired through research and development. Intellectual property rights imply the right to choose whether or not to use the protected property and the way in which to use it. It has already been held that compulsory licensing undermines the 'fundamental rationale' of intellectual property, which 'affords the creator of inventive and original works the exclusive right to exploit such works' (order of the President of the Court of First Instance of 26 October 2001 in Case T-184/01 R *IMSHealth* v *Commission* [2001] ECR II-3193, paragraph 125). For that reason, the Court of First Instance has recognised that to require an undertaking to license its intellectual property, even on a 'purely temporary' basis, risks causing 'serious and irreparable damage' even when the information concerned is already in the public domain (ibid., paragraph 127).

134 The irreversible nature of the delivery of intellectual property is particularly obvious in the case of trade secrets. In the present case, the intellectual property relates to Microsoft's insights into the ways of accomplishing certain tasks that server operating systems need to perform, whether by themselves or in collaboration with client PC and server operating systems. Disclosure of those insights reveals knowledge that can never be erased from the memory of the recipients.

135 The compulsory licensing of copyrighted information also has irreversible effects on competition. By studying the specifications for copyrighted communications protocols, Microsoft's competitors will be able to obtain detailed knowledge of the inner workings of its operating systems and to use that knowledge in their own products. It will be impossible to determine subsequently that that knowledge is not being used by Microsoft's competitors.

136 The compulsory licensing of patents also causes irreparable harm. Admittedly, following annulment of the Decision, Microsoft would be able to bring proceedings against third parties in order to prevent them from using the patented technology, but it would be a particularly complicated and inefficient exercise to attempt to ascertain whether or not Microsoft's technology was still being used, and products created in the meantime and incorporating Microsoft's inventions would probably remain in distribution channels and in the hands of customers.

137 Although the Decision allows Microsoft to license its intellectual property on 'reasonable and non-discriminatory terms', which presumably implies payment of a royalty, the damage to its intellectual property rights would not be cured by the receipt of such a royalty (see, to that effect, the order in *IMS Health* v *Commission*, paragraph 133 above, paragraph 125).

– Interference with Microsoft's business freedom

138 Microsoft refers to the orders of the President of the Court of First Instance in Case T-41/96 R *Bayer* v *Commission* [1996] ECR II-381, paragraph 54, and *IMS Health* v *Commission*, paragraph 133 above (paragraph 130) and maintains that, as in the cases in which those orders were made, its ability to determine freely the crucial elements of its business policy would be compromised by the implementation of the Decision.

(iii) Freedom to communicate information

139 In the present case, it is not Microsoft's business policy to offer a general licence for its communications protocols. The licensing of its client-to-server protocols was agreed in the United States Settlement, but that settlement does not cover the licensing of its server-to-server communications protocols. By requiring Microsoft to deliver the specifications for its server-to-server communications protocols, most of which have never been drawn up, the Decision forces Microsoft to become a purveyor of technology to its competitors in the server operating system sector.

140 Microsoft then explains the differences between, on the one hand, the United States Settlement and the agreement with Sun Microsystems and, on the other hand, the Decision.

141 The United States Settlement provides for the licensing of client-to-server communications protocols for the sole purpose of ensuring interoperability with Windows client PC operating systems, unlike the Decision, which requires the licensing of the same protocols for use in work group server operating systems which provide file and print services and user and group administration services to any Windows Client PC or server operating system.

142 The settlement concluded with Sun Microsystems – the only complainant before the Commission – in April 2004 comprises a series of reciprocal agreements whereby the parties agreed to collaborate in product development and to conclude cross-licences, including licences covering the types of communications protocols concerned by the Decision. Microsoft emphasises that the cross-licences make provision for consideration in the form of access to Sun Microsystems' intellectual property and provide Sun Microsystems with an incentive to respect Microsoft's intellectual property in its licensed technology. The reciprocal nature of those agreements provides Microsoft with the consideration specifically lacking in the compulsory licensing ordered by the Decision.

(iv) Freedom to develop products

143 Microsoft maintains that implementation of the Decision would deprive it of its capacity to develop

its products. The compulsory licensing of its communications protocols would definitively compromise its freedom to decide how to develop its products. The future improvement of those protocols and, ultimately, Microsoft's capacity to innovate would be affected, as the Madnick & Meyer report shows. Once third-party products begin to depend on the design features of a Windows server operating system rather than calling upon its functionality through published interfaces, Microsoft's capacity to change those design features with the aim of improving the product will be reduced. The Commission's assertions to the contrary in its observations of 21 July 2004 ignore commercial reality. It is already an engineering challenge for Microsoft, in the context of successive releases of new Windows server operating systems, to maintain backward compatibility with the thousands of published interfaces used by third-party software programs. The task of adding new functionalities and improving the performance, security and reliability of existing functionality would be made considerably more difficult if third-party software programs were calling upon Windows functionality using what were formerly confidential protocols (Madnick & Meyer reports, annexes R.2 and T.7).

(v) The need to 'harden' the protocols

144 Private protocols are not designed to be used in unknown third-party software products. Consequently, the disclosure of a large number of private communications protocols might lead to malfunctions, crashes and security risks. Microsoft would then have to devote part of its resources to 'hardening' the protocols against inadvertent and malicious use, which often requires the addition of protective code or substantial additional testing before products using the communications protocols can be released. In that regard, the Decision irreversibly affects Microsoft's freedom to develop its products in whatever way it deems appropriate.

145 In its observations of 19 August 2004, Microsoft further states that providing competitors with specifications for communications protocols that were never intended for any purpose other than communicating between Windows server operating systems would expose customers to technical vulnerabilities. It refers on that point to the Madnick & Meyer reports, annexes R.2 and T.7. Such protocols make numerous assumptions about the internal workings of the server operating systems that jointly provide work group services. Consequently, they do not have the protective mechanisms which they would have if they had been designed to communicate with third-party software products. While it would be possible for Microsoft to 'harden' the implementations of its communications protocols in the future, there are millions of Windows server operating systems in customer networks using the protocols in their current state. It is not feasible to retrofit those products to protect them against improper use of the communications protocols, because adding the necessary protective mechanisms would require extensive changes to products already in use. Although the Commission derides what it refers to as 'security through obscurity' (annex S.2), customers would be unhappy to learn that disclosures ordered by the Commission made existing Windows server operating systems vulnerable to malfunction (Madnick & Meyer report, annex T.7). The protocols are complicated and the chances of a mistake in implementing them in another work group server operating system are high. Such a mistake could lead to significant data loss and data corruption, with concomitant harm to Microsoft and its customers. Needless to say, customers take data loss and corruption seriously and Microsoft would suffer serious harm, in particular to its reputation, if the existing base of Windows server operating systems were placed at risk by the incorrect use of Microsoft's communications protocols. The Commission suggests that 'any harm would be reversible … once the Decision is annulled'. However, annulment could not restore lost or corrupted data, nor would it restore Microsoft's good name.

– Irreversible change in market conditions

146 Microsoft maintains that compulsory licensing would irremediably change prevailing market conditions to its disadvantage. It is apparent that the Commission sought to bring about that change: recital 695 to the Decision states that '[i]f Microsoft's competitors had access to the interoperability information that Microsoft refuses to supply, they could use the disclosures to make the advanced features of their own products available in the framework of the web of interoperability relationships that underpin the Windows domain architecture'.

147 In order to demonstrate the irreversible change that will occur on the market, Microsoft claims that examination of the detailed specifications for communications protocols which it owns, made possible by compulsory licensing, will reveal to competitors important aspects of the design of Windows server operating systems. As explained in the Madnick & Meyer report, the specifications for formerly private communications protocols would be particularly likely to reveal information about the internal design of operating systems because those protocols are often dependent on their specific implementation in software code. The use of such communications protocols by third

parties would therefore entail specifying many details, although those details remain implicit when the protocols are used privately by different copies of the same operating system running on different servers.

148 The large-scale disclosure of such information would enable Microsoft's competitors to reproduce in their server operating systems a range of functionality that Microsoft has developed through its own research and development efforts. The resulting damage to Microsoft would extend beyond the scope of the compulsory disclosure, beyond the work group server operating system market and indeed beyond the geographic scope of a compulsory licence.

The balance of interests

149 Microsoft maintains, first, that the Communities' interest in imposing an effective remedy does not require the immediate implementation of Article 5(a) to (c) of the Decision.

150 First of all, as the purpose of Article 82 EC is 'to safeguard the interests of consumers, rather than to protect the position of particular competitors' (order in *IMS Health* v *Commission*, paragraph 133 above, paragraph 145), significant weight should be given to the absence of harm to consumers. In the present case, customers benefit from various interoperability solutions. Thus, in five years of proceedings before the Commission, not a single undertaking stated that it wanted to choose a non-Windows server operating system but was forced by interoperability concerns to choose a Windows server operating system.

151 Next, the implementation of the remedy provided for in Article 5 of the Decision is unnecessary, since Microsoft's competitors have no urgent need for access to its communications protocols. Furthermore, in Microsoft's submission, the Commission itself does not claim that competition between vendors of work group server operating systems would disappear in the short term should Article 5 of the Decision be suspended.

152 On that point, Microsoft claims that its competitors' products are competitive at present and provides various studies and projections concerning Linux, UNIX and Novell in support of that contention.

153 Microsoft further submits that the Commission has not established a link between the remedy provided for in Article 5 of the Decision and any request formulated by suppliers of work group server operating systems. Neither Sun Microsystems, Novell nor Free Software Foundation/Samba have asked Microsoft to licence its communications protocols.

154 The advantage which those competitors may derive from being able to discover how Microsoft has addressed certain issues in the design of server operating systems cannot prevail over Microsoft's legitimate interest in protecting its own technology. When the interests are weighed up, the public interest in maintaining effective competition must clearly take precedence over the interests of Microsoft's competitors alone.

155 The risk that competing server operating systems suppliers might exit the market should the effects of Article 5 of the Decision be suspended does not exist. Microsoft's competitors have been licensing their server operating systems to enterprise customers for many years without providing access to the specifications for the communications protocols that the Decision would require Microsoft to deliver to them. In support of its analysis, Microsoft provides various data relating to certain of its competitors on the market in question.

156 Last, Microsoft contends that it cannot be maintained that the implementation of the Decision is urgent, since the administrative procedure, during which the Commission's assessment of the situation constantly changed, lasted five years.

157 Second, in the exercise consisting in balancing the interests, account should be taken of the Communities' obligations under international treaties, including the TRIPS Agreement, and also of the merits of the main action. On that last aspect, Microsoft submits, in reliance on the order of the President of the Court of Justice of 11 April 2002 in Case C-481/01 P(R) *NDC Health* v *IMS Health and Commission* [2002] ECR I-3401, that the merits of its main action must be taken into account in the balancing of interests. In the present case, it is particularly clear that the Commission has not established that the criteria laid down in the case-law (judgment in *IMS Health*, paragraph 99 above) which permit an undertaking in a dominant position to be compelled to grant licences to its

competitors were satisfied.

158 Third, and last, Microsoft states that since the adoption of the Decision Sun Microsystems has reached an agreement with Microsoft which addresses all the concerns underlying its complaint to the Commission. There is therefore no immediate need to implement the Decision while the main action is pending.

159 ACT claims that unless the remedy is suspended it will produce serious and irreparable effects owing to the damage to the strength and value of its members' intellectual property rights in the EEA.

160 More specifically, ACT maintains, first, that the immediate applicability of the remedy would constitute a groundbreaking precedent in the compulsory licensing of intellectual property rights which would quickly and substantially reduce the value of the intellectual property rights owned by its members. In that regard, ACT claims that the Commission has interpreted and applied Article 82 EC in a way that is inconsistent with the Community's obligations under Articles 13, 31 and 39 of the TRIPS Agreement.

161 ACT maintains, second, that disclosure of the communications protocols which have thus far been the exclusive property of Microsoft would result in the instability of Windows Client PC and server operating systems, which would immediately cause significant harm for its members.

162 CompTIA submits that, in so far as it requires Microsoft to supply its intellectual property to any undertaking present on the servers market, the remedy provided for in Article 5 of the Decision will reduce the level of protection for the entire information technology and communications industry, give rise to legal uncertainty and have the immediate effect of reducing investment in the technology sector and therefore the general level of economic activity.

163 CompTIA further contends that the serious and irreparable damage which that remedy will cause to the entire sector, and also to the members of CompTIA, exceeds any possible adverse effect which the lack of immediate disclosure could have on the public interest or the interest of third parties. In that context, CompTIA states that no evidence has been brought to its attention of an interoperability problem on the servers market, even though it plays a greater role than any other trade association in certifying the qualifications of technology industry workers in the servers sector.

b) Arguments of the Commission and the parties granted leave to intervene in support of the form of order which it seeks

164 The Commission contends, by way of preliminary submission, that the application for suspension of implementation of Article 5(a) to (c) of the Decision relies to a large extent on the assessment of the impact which the Decision is supposed to have on the exercise of Microsoft's 'intellectual property rights'; it makes a number of introductory observations in that regard. In its observations of 13 September 2004, the Commission states that even on the assumption that Microsoft has expressly shown that the Decision would force it to license its intellectual property rights, the Commission's argument would remain just as valid. FSF-Europe supports the Commission's argument.

Preliminary observations

165 First of all, the Commission states that Article 5(a) to (c) of the Decision requires Microsoft to provide technical documentation, called 'specifications', which describes in detail the 'protocols' referred to in Article 1(1) of the Decision. However, it is important to distinguish that technical documentation from the source code of Microsoft's products. A competitor wishing to write a server operating system that understands Microsoft's protocols will have to write code in its product that implements the specifications. Two programmers implementing the same protocol specifications will not write the same source code and the performances of their programmes will be different (recitals 24, 25, 698 and 719 to 722). From that aspect, the protocols may be compared with a language whose syntax and vocabulary are the specifications, since the mere fact that two persons learn the syntax and the vocabulary of the same language does not mean that they will use it in the same way.

166 Next, against that background, the Commission examines the various intellectual property rights on which Microsoft relies.

– Copyright

167 As regards, first, copyright, the Commission maintains that Microsoft's contentions are inaccurate, if not misleading. Microsoft wrongly gives the impression that the use of interoperability information in order to make interoperability effective normally constitutes breach of copyright. Microsoft is also wrong to state that copyright protection extends to the communications protocols and to rely on copyright in the 'specifications' to support its contention that the use of the knowledge contained in those specifications constitutes breach of copyright.

168 Although the Commission does not rule out the possibility that those specifications may, as such, be covered by copyright, it maintains that that does not mean that the use of the information contained in that document, in the form of implementation in an operating system, constitutes a breach of copyright, since, as the Decision states, implementation of a specification does not constitute copying, but leads to a clearly distinct work (recitals 25, 570 et seq. and 719 et seq.)

169 In its observations of 13 September 2004, the Commission maintains, essentially, that implementation of the communications protocols does not constitute a form of exploitation prohibited by copyright.

170 From the many comments made by the Commission on Microsoft's observations of 19 August 2004, it is appropriate to mention the answers made more specifically to five categories of arguments.

171 First, the Commission states that Microsoft relied for the first time in its observations of 19 August 2004 on a right of 'disclosure' (paragraph 119 above). The Commission observes that Article 6bis of the Berne Convention, which sets out the 'moral rights' of the copyright owner, does not mention that right and that, accordingly, an obstacle to the exercise of that alleged right cannot be contrary to the 'normal exploitation of the computer program' as defined in Article 6(3) of Directive 91/250, since that provision provides that that exploitation must be interpreted 'in accordance with the provisions of the Berne Convention'. At most, the right of disclosure is a 'moral right' which cannot be licensed. Furthermore, reliance on a right of disclosure is difficult to reconcile with the fact that Microsoft's products are on the market, that persons are able to observe, study or test them and, under certain circumstances, to decompile them. Last, Microsoft's reasons for refusing disclosure of the information concerned are purely economic and therefore have nothing to do with the rationale of the right in question.

172 Second, the Commission disputes that the technical documentation which will have to be disclosed can be regarded as a 'computer program' protected by Directive 91/250, on the ground that it constitutes 'preparatory design material' for a computer program (paragraph 118 above). The information in question is not composed ex ante as an internal aid to the creation of Microsoft's programs but written ex post for the sole purpose of disclosing only limited information to Microsoft's competitors.

173 In response to Microsoft's assertion, based on Article 4 of Directive 91/250, that implementation of the protocols in question would 'almost certainly' be an adaptation or translation of the specifications covered by Microsoft's copyright (paragraph 120 above), the Commission states that the applicant fails to substantiate that assertion. The text of Directive 91/250 and its legislative history lead to the conclusion that writing interfacing software on the basis of interface specifications is not normally covered by Article 4 of that directive. Article 6 of Directive 91/250 is based on the premiss that the use of interoperability information, extracted by decompilation – which is 'exempted' – in order to 'achieve the interoperability of an independently created computer program with other programs' is not an act in breach of copyright, unless the information is 'used for the development, production or marketing of a computer program substantially similar in its expression' to the decompiled program. If Microsoft were correct, Article 6 of Directive 91/250 could never be invoked to build compatible products, since the creation of those products would be an 'act which infringes copyright' and therefore prohibited by Article 6(2)(c).

174 Third, the Commission refutes the restrictive interpretation by Mr Prescott (Annex T.3) of Article 1 (2) of Directive 91/250, which provides that '[i]deas and principles which underlie any element of a computer program, including those which underlie its interfaces, are not protected by copyright'. Mr Prescott's argument that the whole, or the structure, of the 'ideas' in question is protected by copyright where they form a 'substantial part of the protected work' is flawed because, first, it is not consistent with Article 1(2) and Article 6 of Directive 91/250 and, second, the judgments of the English courts on which he bases his analysis have nothing to do with the present case.

175 Fourth, as regards Microsoft's arguments, referred to at paragraph 120 above, which suggest, first of all, that the remedy would lead to a particular 'temptation', as it were, for Microsoft's competitors to develop implementations which infringed its copyright and, next, that the Decision makes no provision for any safeguard against such 'temptation', the Commission states that the remedy does not require disclosure of the source code and that, consequently, the prohibition in Article 6(2) of Directive 91/250 on using the information obtained by decompilation 'for the development, production or marketing of a computer program substantially similar in its expression' is not applicable.

176 Fifth, the Commission maintains that, contrary to Microsoft's contention (paragraph 129 above), Microsoft has not disclosed the interfaces that third-party software programs need to call upon the functionality of Windows server operating systems. The interfaces to which Microsoft refers are 'application programming interfaces' ('APIs') which allow applications running on a Windows server operating system to use the services of that server operating system, whereas the interfaces at issue in the present case are those through which a Windows work group server delivers its services to Windows work group networks (recital 210).

– Patents

177 As regards patents, the Commission notes at the outset that during the administrative procedure Microsoft mentioned only one patent application, whereas during the judicial procedure it refers to three European patents and two pending patent applications. Microsoft has not produced the documentation from which it might be determined whether a licence in respect of one or more of those patents would be indispensable for a person implementing the relevant protocols.

178 In its observations of 13 September 2004, the Commission states that before the adoption of the Decision Microsoft mentioned the existence of only one patent, on 20 January 2004, whereas the three European patents referred to in the document setting out Mr Knauer's opinion (Annex T.5; paragraph 91 above) were granted before the end of 2001 and the two European patent applications were, according to that document, filed before the end of 2002. As regards the content of Mr Knauer's opinion, the Commission observes that Mr Knauer had to 'rely on information received from Microsoft in regard to the selection of protocols that fall under Article 5 of the Decision'. Neither is it obvious to the Commission that a competitor of Microsoft taking advantage of the implementation of the Decision will be infringing some of the claims in those patents. The doubts expressed as to whether a developer of server software using the relevant protocols in order to communicate with Windows clients would infringe the claims in question are confirmed by Microsoft's behaviour towards Samba, an 'open source' product which implements certain Microsoft communications protocols that the Samba group developers have identified using reverse-engineering techniques. Samba appears to have incorporated SMB's 'opportunistic locking' as early as January 1998 (version 1.9.18) and Dfs as early as April 2001 (version 2.2.0). So far as the Commission is aware, the Samba group has never licensed the patents in question from Microsoft and Microsoft has never claimed that its patents were being infringed by the Samba group. The Commission observes that the three patents in question were all granted before the end of 2001 and that, in view of the technical description which they propose, they appear to relate to the NT 4.0 generation of Microsoft's products, which predates Windows 2000.

179 The relationship between Microsoft's patent claims and the Decision therefore remains unclear.

180 The Commission concludes on that point that Microsoft has not proved that any of its patents would be infringed should Article 5(a) to (c) of the Decision be implemented.

– Trade secrets

181 The Commission maintains that the parallel which Microsoft draws between trade secrets and intellectual property rights is not self-evident. It refers to the Tetra Pak II case (Commission Decision 92/163/EEC of 24 July 1991 relating to a proceeding pursuant to Article 86 of the EEC Treaty (IV/31043 – Tetra Pak) (OJ 1992 L 72, p. 1)), which culminated in the judgment in *TetraPak* v *Commission*, paragraph 126 above (paragraphs 84 and 139).

182 While there may be a presumption of legitimacy in respect of a refusal to license an intellectual property right created by law, the legitimacy in competition law of a refusal to disclose a secret the existence of which depends purely on a unilateral business decision should depend on the facts of the case and, in particular, on the interests at stake. In the present case, Directive 91/250 shows that the interest in the protection of the inventive effort underlying the software does not entitle the

inventor to hinder the use of interoperability information inherent in that software for the purpose of achieving interoperability.

183 The Commission acknowledges that Directive 91/250 does not require the inventor to disclose the information on his own initiative. However, from the aspect of any trade secret that Microsoft may have, disclosing interoperability information for the purpose of achieving interoperability is not comparable to licensing a competitor to copy a work protected by intellectual property rights legislation. That assertion is supported by the technical relevance of such disclosure, by the practices existing in the software industry and by Microsoft's own behaviour when it entered the market.

184 In its observations of 13 September 2004, the Commission rejects the idea that the protocols reflect important innovation, since the truth of that assertion has not been established by Microsoft either in its application, or in its subsequent observations, or in annex T.3. The Commission also regards as unfounded the argument that the remedy would have the effect of 'transferring' the innovation in question to Microsoft's competitors, since, first, disclosure of the information would not entail a transfer of the essential value of the Windows operating system and, second, under Article 82 EC an undertaking in a dominant position may be ordered to license an essential element of one of its products, as demonstrated by *Magill* and *IMSHealth*, paragraph 99 above.

185 FSF-Europe submits, in essence, that the information which the Decision requires Microsoft to disclose has little value in terms of innovation and contains a number of incompatibilities deliberately introduced in pre-existing written protocols. Microsoft's approach consists in adopting pre-existing protocols and then altering them with the aim of preventing or prohibiting interoperability. It has acted in that way in regard to several work group server protocols, disclosure of which the Samba group sought in order to create a compatible product, namely the CIFS, DCE/RPC (Distributed Computing Environment/Remote Procedure Call), DCE/RCP IDL ('Interface Definition Language'), Kerberos 5 et LDAP (Active Directory) protocols.

A prima facie case

186 The Commission rejects at the outset Microsoft's assertions that the present case is merely about its relationship with Sun Microsystems and that Sun Microsystems did not request the information which the Decision orders Microsoft to disclose.

187 Next, the Commission recalls that it stated in its preliminary observations that no copyright owned by Microsoft would prevent the interoperability information from being used for the purpose of achieving interoperability (paragraphs 167 and 168 above). None the less, it comments on the four criteria laid down in the case-law in respect of compulsory licences and assumes, for the sake of argument, first, that some intellectual property right issues may be at stake and, second, that no other criterion is relevant to a finding of exceptional circumstances, although in the Commission's view the second assumption is contradicted by the wording of the *IMSHealth* judgment, paragraph 99 above (paragraph 38).

188 As regards, first, the indispensability of the information alleged to be covered by intellectual property rights, the Commission contends that Microsoft's claims that there are 'many other ways of achieving interoperability' have already been refuted in the Decision (recitals 666 to 687).

189 Second, the Commission rejects Microsoft's claim that it has not prevented the emergence of any new product for which there was unsatisfied consumer demand.

190 It follows from paragraph 49 of the judgment in *IMSHealth*, paragraph 99 above, that a 'new product' is a product which is not limited 'essentially to duplicating' the products already offered on the market by the owner of the copyright. It is sufficient, therefore, that the product in question contains substantial elements contributed by the licensee's own efforts. Accordingly, it is not precluded that the products of the owner of the copyright should compete with the future products of the licensee, as shown by the facts of the cases determined by the Community judicature (Case T-69/89 *RTE* v *Commission* [1991] ECR II-485, paragraph 73; *Magill*, paragraph 53; and *IMSHealth*, paragraph 99 above). Furthermore, the 'new product' criterion does not imply an obligation to provide concrete proof that the licensee's product would attract customers who would not buy the products offered by the existing supplier. Any other interpretation would render the case-law largely meaningless, since owners of intellectual property rights normally have excellent reasons for granting licences to operators who intend to manufacture goods which do not compete with their own goods. A situation of that type therefore does not normally lead to a refusal to supply. In

IMSHealth, paragraph 99 above, the Court of Justice concentrated on product differentiation which could affect consumer choices, or, in other words, on whether there is 'potential demand' for the new product. The precise consequences which that differentiation will have for the choices made and, in the longer term, for the emergence of products attracting new customer categories, will be determined by the market.

191 In the present case, the implementation of the protocols can take very different forms (recitals 24, 25 and 698), which provides sufficient scope for product differentiation, and there are significant possibilities for product differentiation which could enhance competition but which at present are neutralised by Microsoft's conduct.

192 Third, as regards the elimination of competition on a secondary market, the Commission states that it thoroughly analysed in the Decision the developments on the relevant market and the importance of interoperability for those developments (recitals 590 to 692) and, in particular, the alleged 'steady growth of Linux' (recitals 598 to 610). In the application for interim relief, Microsoft does not claim that there has been any error in that regard. Microsoft incorrectly assumes that, where competition is eliminated gradually, a 'cease and desist order' on the basis of Article 82 EC could be made only when there would no longer be any point in making such an order, because the market had irreversibly turned into a monopoly, whereas in reality it is sufficient that the refusal to license be 'likely' to exclude competition (*Bronner*, paragraph 99 above, paragraph 40, and *IMSHealth*, paragraph 99 above, paragraphs 37 and 38).

193 Fourth, Microsoft does not mention any specific objective justification for its conduct, apart from making a general reference to 'its intellectual property rights', which has already been refuted in the Decision (recitals 709 to 763).

194 The Decision therefore shows, and Microsoft has not seriously disputed, that Microsoft's conduct satisfied the requirements laid down in the case-law.

195 Last, as regards the incompatibility of the Decision with the TRIPS Agreement, the Commission refers to the findings set out at recitals 1052 and 1053 to the Decision.

Urgency

196 The Commission submits that Microsoft has not shown that it would suffer serious and irreparable damage should implementation of the Decision not be suspended. The interveners SIIA and FSF-Europe support the Commission's argument.

The balance of interests

197 The Commission contends that the balance of interests tilts in favour of immediate implementation of Article 5(a) to (c) of the Decision and therefore claims that the application should be dismissed. The interveners SIIA and FSF-Europe support the Commission's arguments.

2. Findings of the President

a) A prima facie case

198 In support of its claim that the prima facie case requirement is satisfied, Microsoft essentially maintains, first, that the conditions on which a refusal to supply information protected by intellectual property rights constitutes an abuse of a dominant position prohibited by Article 82 EC are not satisfied in the present case; second, that Sun Microsystems has not requested the information which the Decision orders the applicant to supply and that its request did not relate to the development of software in the EEA; and, third, that the Commission has failed to fulfil the obligations imposed on the Community by the TRIPS Agreement.

199 In the light of the arguments developed by Microsoft in the context of the interim relief proceedings, the second and third sets of arguments cannot be regarded as sufficiently serious to constitute a prima facie case.

200 The arguments relating to Sun Microsystems' request were refuted in detail in the Decision (recitals 199 to 207, 564 and 565) and Microsoft has not shown prima facie that the Commission erred in

defining the scope of Sun Microsystems' request. Likewise, the argument that Sun Microsystems' request did not relate to software development 'in the EEA' cannot succeed, since that request was couched in general terms and since the EEA is necessarily a part of the relevant worldwide market, as clearly demonstrated at recitals 185 et seq. and 427 to the Decision.

201 The plea alleging failure to take account of the TRIPS Agreement has not been expanded in such a way that the President can make a proper ruling on it. Microsoft has merely claimed in its application for interim relief that, 'in imposing a mandatory licence on Microsoft, the Commission [did] not properly take into account the obligations imposed on the European Communities by [the TRIPS Agreement]'. Furthermore, the reference to the arguments expounded in annex T.9 has not been found to be consistent with the applicable procedural rules (see paragraph 88 above).

202 The President will therefore confine himself to examining the single plea alleging infringement of Article 82 EC, it being noted that in the context of the present application Microsoft does not deny that it holds a dominant position on the client PC operating system market and on the work group server operating system market. It is therefore contesting only the allegedly abusive nature of its refusal to disclose the interoperability information and to authorise its use by its competitors.

203 It should be recalled at the outset that recitals 546 to 791 to the Decision are devoted to an examination of the abusive nature of the refusal to supply the interoperability information. The Commission states there that it must analyse the whole of the circumstances particular to each case before being able to conclude that there are exceptional circumstances characterising an abusive refusal (recitals 546 to 559). In the present case, the Commission considered that the exceptional circumstances consisted in the fact that the refusal to supply the interoperability information was directed against Sun Microsystems, formed part of a general pattern of conduct and entailed a reduction in the level of disclosure of information (recitals 560 to 584), that it risked eliminating competition (recitals 585 to 692) and that it had a negative effect on technical development, to the prejudice of consumers (recitals 693 to 708). In the light of those 'exceptional circumstances', the Commission found that Microsoft's arguments did not amount to sufficient objective justification for the refusal to disclose the interoperability information, whether in terms of incentives for Microsoft to innovate (recitals 709 to 763) or of its having no interest in restricting competition (recitals 764 to 778).

204 In the present case, the prima facie case requirement must be considered to be satisfied, regard being had to the questions of principle raised by the case and to the fact that certain pleas and arguments require a thorough examination. In substance, it must be ascertained whether the circumstances taken into account by the Commission are correct in fact and capable in law of founding the conclusion that there are exceptional circumstances which justify ordering the applicant to disclose valuable information protected by intellectual property rights.

205 The questions of principle relate to the conditions on which the Commission is justified in concluding that a refusal to disclose information constitutes an abuse of a dominant position prohibited by Article 82 EC.

206 First, this case raises the question whether the conditions laid down by the Court in *IMSHealth*, paragraph 99 above, are necessary or merely sufficient. The Commission contends in the Decision that the existence of exceptional circumstances must be assessed on a case-by-case basis and that it cannot therefore be excluded, without a thorough examination of each case, that a refusal may be abusive, even though the conditions hitherto laid down by the Community judicature are not satisfied. Microsoft, on the contrary, maintains in its application that a refusal to supply can be found to be abusive only where the conditions laid down by the Community judicature are satisfied. Clearly, that question cannot be resolved at the interim relief stage. It should be pointed out, however, that the Court of Justice has held, in the words of paragraph 38 of the judgment in *IMSHealth*, that 'it is sufficient', in order for 'the refusal by an undertaking which owns a copyright to give access to a product or service indispensable for carrying on a particular business to be treated as abusive', 'that that refusal is preventing the emergence of a new product for which there is a potential consumer demand, that it is unjustified and [that it is] likely to exclude all competition on a secondary market'.

207 Second, this case raises the question whether, where the exercise of an intellectual property right is in issue, the nature of the protected information must be taken into account. Microsoft contends that the Decision compels it to supply competitors with technology that is secret and valuable and which, consequently, is intrinsically different from the information at issue in *Magill* and *IMSHealth*, paragraph 99 above. Thus, the requirements to be satisfied in order for a refusal to disclose

information to constitute an abuse of a dominant position are all the stricter because the information is valuable. The Commission, on the other hand, maintains that the Community judicature has never taken the 'value' of an intellectual property right into consideration. On that point, the President finds that the hitherto secret specifications for the communications protocols which the Decision requires Microsoft to draw up and disclose are clearly fundamentally different from the information at issue in *Magill* and *IMSHealth*, paragraph 99 above. In those cases the information at issue was widely known in the sector: the television programme listings were sent free of charge to newspapers every week and the map of Germany was in reality an industry standard for the presentation of sales figures. However, the question whether, and if so to what extent, a distinction must be drawn according to whether the information is known or secret is even less amenable to determination at this stage because account must be taken more generally of parameters such as the value of the underlying investment, the value of the information concerned for the organisation of the dominant undertaking and the value transferred to competitors in the event of disclosure.

208 This case also raises the question whether the requirements laid down by the Court of Justice in its judgment in *IMSHealth*, paragraph 99 above, are satisfied in the present case. The Commission does not dispute the relevance of that judgment, which, essentially, consolidates the position thus far expressed by the Community judicature as regards the circumstances in which a refusal to license intellectual property rights constitutes an abuse.

209 The dispute between the parties relates to the indispensability of the information in issue, the barrier to the emergence of a new product for which there is claimed to be an unsatisfied demand, the risk of eliminating competition on the secondary market and the objectively justified nature of the refusal. While it is for the Court dealing with the substance of the case to resolve the disputes in respect of each of those requirements, the President none the less considers it necessary to identify the sources of the dispute between the parties which he deems sufficiently serious to constitute a prima facie case. In that regard, the accent will be placed on two specific aspects.

210 As regards, first, the indispensability of the interoperability information, it should be observed that that question is dealt with at recitals 666 to 687 to the Decision.

211 On that point, Microsoft refers to a number of methods allowing sufficient interoperability between the operating systems of different suppliers.

212 That argument emphasises the disagreement between the parties as regards the level of interoperability required. As stated at recitals 743 to 763 to the Decision, the information which must be provided in accordance with the remedy is the 'information necessary to achieve … interoperability' within the meaning of Article 6 of Directive 91/250, on decompilation. Microsoft maintains that the decompilation provided for in Article 6 of Directive 91/250 is permitted only where the interfaces are indispensable to ensure the functionality of an independently-created software program and that in the present case the specifications for its communications protocols are not necessary to ensure the functionality of an independently-created work group server operating system. Microsoft concludes that the information which it has refused to communicate cannot be regarded as interoperability information.

213 The preamble to Directive 91/250 defines interoperability as 'the ability to exchange information and mutually to use the information which has been exchanged'. At the 27th recital, that directive states that its provisions are without prejudice to the application of the competition rules under Article 82 EC 'if a dominant supplier refuses to make information available which is necessary for interoperability as defined in this Directive'. However, the question whether, in the present case, the information requested from Microsoft is actually necessary for interoperability, as defined in Directive 91/250, requires a thorough examination of the elements of fact in the light of the applicable legislation, which only the Court dealing with the substance of the case can undertake.

214 As regards, second, the objectively justified nature of the refusal, Microsoft contends that it was permissible for it to rely on its intellectual property rights and to refuse to license its technology to third-party operating systems providers. In answer to a written question put by the President, Microsoft also claimed that the information requested by Sun Microsystems related to technology under development.

215 In order to understand the scope of Microsoft's argument, the President questioned Microsoft at the hearing. It emerged that it cannot be excluded, in Microsoft's submission, that the refusal may be objectively justified by the intellectual property rights which Microsoft holds in the information

requested by Sun Microsystems or, in other words, that the justification for the refusal lies in the need not to disclose information because it is legally protected and is valuable.

216 That argument may be understood as meaning that Microsoft was entitled to refuse to disclose legally-protected information irrespective of whether or not there were exceptional circumstances.

217 Thus, on the one hand, Microsoft's argument means that, in the absence of duly-established exceptional circumstances, the exercise of the prerogatives recognised to the holder of intellectual property rights cannot give rise to abusive conduct within the meaning of Article 82 EC. As that argument is very closely linked to the question whether the Commission has demonstrated that 'exceptional circumstances' existed in the present case, it cannot be examined separately from that question (see paragraph 206 above).

218 On the other hand, Microsoft's argument also means that, even if exceptional circumstances had been established by the Commission, its refusal to communicate the information in question was justified by the need to protect the valuable information covered by the intellectual property rights.

219 That argument, which was developed by Microsoft during the administrative procedure, as shown at recital 709 to the Decision, was rejected by the Commission in the Decision (recitals 710 to 712), which concluded on that point that, in regard to the exceptional circumstances, 'Microsoft's refusal cannot be objectively justified merely by the fact that it constitutes a refusal to license intellectual property' (recital 712). The Commission then examined the other arguments which Microsoft put forward in order to demonstrate that the refusal to disclose the information in issue could be justified by the need to protect its incentive to innovate. The Commission, after rejecting Microsoft's arguments relating to its concerns about the 'cloning' of its products (recitals 713 to 729), concluded that it could not, explaining that disclosure of interoperability information is a widespread practice in the industry concerned (recitals 730 to 735) and pointing out that the undertaking given to the Commission by IBM in 1984 was not substantially different from what Microsoft was ordered to do in the Decision (recitals 736 to 742), and that its approach is consistent with Directive 91/250.

220 The fact none the less remains that Microsoft's argument, understood as seeking to challenge the legality of the Commission's assessment in relation to the absence of objective justification for the refusal, cannot be rejected outright as unfounded, in the light of the specific circumstances of the case.

221 On that point, the intellectual property rights on which Microsoft relies have not been declared valid by a national court and for that reason the present situation may be distinguished from those in *Magill* and *IMSHealth*, paragraph 99 above. However, the Commission did not exclude the existence of intellectual property rights and in any event took them into account when considering whether the refusal was justified.

222 The central issue is therefore whether the Commission was entitled to conclude that the need to protect the purported value of the information alleged to be covered by intellectual property rights was not sufficient to support the conclusion that the refusal to communicate that information was objectively justified.

223 The Commission's approach consisted in ascertaining whether, in spite of the exceptional circumstances identified, the considerations put forward by Microsoft precluded the adoption of a remedy. That is apparent, in particular, from recital 783 to the Decision, which states:

'The major objective justification put forward by Microsoft relates to Microsoft's intellectual property [in] Windows. However, a detailed examination of the scope of the disclosure at stake leads to the conclusion that, on balance, the possible negative impact of an order to supply on Microsoft's incentives to innovate is outweighed by its positive impact on the level of innovation of the whole industry (including Microsoft). As such, the need to protect Microsoft's incentives to innovate cannot constitute an objective justification that would offset the exceptional circumstances identified …'.

224 However, it is for the Court dealing with the substance of the case to ascertain whether a manifest error was made in the evaluation of the interests involved, in particular in connection with the protection of the intellectual property rights relied on and the requirements of free competition enshrined in the EC Treaty.

225 Accordingly, the President considers that the arguments which Microsoft puts forward concerning the issues raised in the present case cannot, in the interim-relief proceedings, be regarded as prima facie unfounded. The prima facie case requirement is therefore satisfied.

b) Urgency

226 For the purposes of determining whether the implementation of Article 5(a) to (c) must be suspended as a matter of urgency, it is necessary to make a number of preliminary observations.

Preliminary observations

227 The preliminary observations concern, first, the subject-matter of the remedy and, second, the extent of the alleged damage.

228 As regards the subject-matter of the remedy, it should be recalled that, in the words of Article 5(a) of the Decision, Microsoft is to disclose the 'interoperability information' 'to any undertaking having an interest in developing and distributing work group server operating system products' and, on 'reasonable and non-discriminatory terms', allow it to be used by those undertakings for the purpose of 'developing and distributing work group server operating system products'. As thus formulated, the remedy seeks to require Microsoft to disclose what the Commission criticises it for having wrongfully refused to supply (see also Article 2(a) of the Decision and recital 998 thereto).

229 Furthermore, as is apparent from recitals 999 and 1004 to the Decision, Microsoft is not required by the remedy in question to disclose source codes, nor does Microsoft dispute that point in the present interim-relief proceedings.

230 According to Article 1(1) of the Decision, the information which Microsoft is ordered to disclose is 'the complete and accurate specifications for all the protocols implemented in Windows Work Group Server Operating Systems and … used by Windows Work Group Servers to deliver file and print services and group and user administration services, including the Windows Domain Controller services, Active Directory services and Group Policy services, to Windows Work Group Networks'. Recital 999 to the Decision states that '[t]his includes both direct interconnection and interaction between a Windows work group server and a Windows Client PC, as well as interconnection and interaction between a Windows work group server and a Windows Client PC that is indirect and passes through another Windows work group server'.

231 The objective pursued by the Commission is, according to the Decision, 'to ensure that Microsoft's competitors can develop products [compatible] with the Windows domain architecture [originally] supported in the dominant Windows Client PC operating system and hence viably compete with Microsoft's work group server operating system' (recital 1003; see also recitals 181 to 184).

232 Last, the parties agree that the authorisation to use the specifications, provided for in Article 5(a) of the Decision, means that the specifications, which describe in detail what is expected of a software product, can be implemented by Microsoft's competitors. However, the parties are not agreed as to the time necessary to implement the specifications, i.e. to write them in code.

233 As regards the extent of the alleged damage, it should be recalled that the Decision requires Microsoft to disclose the specifications for its client-to-server and server-to-server protocols.

234 In its application for interim relief, Microsoft emphasised the difference between the Decision and the United States Settlement, stating that the United States Settlement authorised a licensee to use Microsoft client-to-server communications protocols only in order to ensure interoperability with the Windows Client PC operating systems, whereas the Decision requires Microsoft to license those protocols for use in work group server operating systems which provide file and print services and user and group administration services to any Windows Client PC or server operating system. The difference between the United States Settlement and the Decision was described by the Commission at recitals 688 to 691.

235 In answer to a written question put by the President, Microsoft explained that, as regards client-to-server protocols, the United States Settlement and the Decision are similar in that both compel Microsoft to develop specifications describing certain of its protocols, to provide those specifications to competitors and to allow competitors to use the specifications in order to implement, in their products, protocols that Microsoft has created to be used in its Windows operating systems.

236 At the hearing, Microsoft claimed that the United States licence programme will last until November 2009 and that the licences granted cover the whole world. It concluded that the immediate implementation of the obligation to disclose the specifications for the client-to-server protocols is unnecessary, since the United States Settlement makes it possible to achieve the same result by the date on which the Court of First Instance adjudicates on the merits of the case.

237 In that regard, the President observes that a decision is immediately enforceable and that suspension of its operation can be ordered only in the circumstances prescribed in the EC Treaty, in the Statute of the Court of Justice and in the Rules of Procedure of the Court of First Instance. Accordingly, the immediately enforceable nature of a decision is not in any way dependent on the necessity for its implementation.

238 None the less, account will be taken of the foregoing elements in the context of the examination of the urgency in ordering suspension of the obligation to disclose the specifications for the client-to-server protocols.

239 That argument developed by Microsoft at the hearing makes it necessary to undertake a separate examination of the condition relating to urgency according to whether the Decision requires Microsoft to disclose the specifications for the server-to-server communications protocols and the specifications for the client-to-server communications protocols.

The serious and irreparable damage caused by the obligation to disclose the specifications for the server-to-server protocols

240 It is settled case-law that the urgency of an application for interim measures must be assessed in relation to the necessity for an interim order in order to prevent serious and irreparable damage to the party applying for those measures (order of the President of the Court of Justice in Case 310/85 R *Deufil* v *Commission* [1986] ECR 537, paragraph 15; order of the President of the Court of First Instance in Case T-13/99 R *PfizerAnimalHealth* v *Council* [1999] ECR II-1961, paragraph 134). It is for that party to prove that it cannot wait for the outcome of the main proceedings without suffering damage of that kind (order of the President of the Court of Justice in Case C-356/90 R *Belgium* v *Commission* [1991] ECR I-2423, paragraph 23; and orders of the President of the Court of First Instance in Case T–44/98 R II *EmesaSugar* v *Commission* [1999] ECR II-1427, paragraph 128, and Case T-151/01 R *DualesSystemDeutschland* v *Commission* [2001] ECR II-3295, paragraph 187).

241 The alleged damage must be certain or at least established with sufficient probability, while the applicant is required to prove the facts forming the basis of the supposed damage (order of the Court of Justice in Case C-280/93 R *Germany* v *Council* [1993] ECR I-3667; and order of the President of the Court of Justice in Case C-335/99 P(R) *HFBandOthers* v *Commission* [1999] ECR I-8705, paragraph 67).

242 In the present case, Microsoft claims that implementation of the Decision would harm its intellectual property rights and also its commercial freedom and capacity to develop its products. It also maintains that implementation of the Decision will irreversibly alter market conditions.

243 Each of those three heads of damage will be examined separately.

– The alleged infringement of intellectual property rights

244 Microsoft maintains that implementation of the Decision will require it to license to its competitors valuable information protected by intellectual property rights.

245 It is therefore necessary to examine whether Microsoft has established specifically how the effects of the Decision are serious and irreparable. To that end, it is appropriate to separate the question whether disclosure of the interoperability information constitutes in itself serious and irreparable damage for Microsoft and the question whether the use of that information by Microsoft's competitors will give rise to serious and irreparable consequences.

(vi) Disclosure of the interoperability information

246 The information that Microsoft is ordered to disclose is alleged to be protected by intellectual property rights and to be valuable. In the light of Microsoft's arguments, it is appropriate to assess

in turn whether, first, the infringement of the exclusive prerogatives of the holder of an intellectual property right and, second, the obligation to disclose information constitute serious and irreparable damage.

247 First, Microsoft claims that, by requiring it to grant licences to its competitors, the Decision breaches its intellectual property rights in the information that it is required to disclose.

248 Without its being necessary in the present case to adopt a position on the existence of intellectual property rights or, consequently, on the question whether implementation of the Decision would effectively compel Microsoft to grant licences affecting its copyright or its patents, it is clear that should such rights be at stake the fact of requiring an undertaking to issue licences affecting its intellectual property rights would constitute in itself a substantial breach of the exclusive prerogatives which the undertaking derives from those rights.

249 The fact remains that that breach is the necessary consequence of the principle established in *IMSHealth*, paragraph 99 above, since the examination carried out by the Community judicature consists specifically in weighing up, on the one hand, the protection conferred by an intellectual property right on its holder and, on the other, the requirements of free competition laid down in the EC Treaty. Thus, where the Commission considers, when faced with exceptional circumstances, that the requirements of free competition require it to order an undertaking in a dominant position to grant a licence affecting its intellectual property rights, there is necessarily a breach of the prerogatives of the owner of those rights. In the present case, on the assumption that the specifications for the communications protocols, once drawn up, are protected by copyright, the very fact of ordering Microsoft to make its specifications available to competing undertakings constitutes a breach of the exclusive rights conferred on the author. Likewise, on the assumption that some of the protocols are protected by patents and that their use proves to be indispensable for the undertakings referred to in Article 5 of the Decision, the very fact that Microsoft is unable to use its patents as it intends constitutes a breach of the prerogatives conferred on the inventor.

250 None the less, to take the view that a breach of the exclusive prerogatives of the holder of the right constitutes in itself, and irrespective of the circumstances particular to each case, serious and irreparable damage, would mean that the urgency requirement is always satisfied when the measure which the Court is requested to suspend is of the type envisaged in *IMSHealth*, paragraph 99 above.

251 It is therefore necessary, in such circumstances, to examine whether, in the light of the elements of the case, the fact that intellectual property rights will be affected until a decision has been given on the merits of the case is likely to cause, over and above the simple breach of the exclusive prerogatives of the holder of the rights in question, serious and irreparable damage (see, to that effect, order of the President of the Court of Justice in Joined Cases 76, 77 and 91/89 R *RTEandOthers* v *Commission* [1989] ECR 1141, paragraph 18; and order in *IMSHealth* v *Commission*, paragraph 133 above, paragraphs 126 to 131).

252 Second, Microsoft maintains that the cause of the damage lies in the fact that the subject-matter of the disclosure is secret and valuable information.

253 In that regard, it is an indisputable fact that, once acquired, knowledge of information previously kept secret – whether because it is the subject of an intellectual property right or because it constitutes a trade secret – may be retained. Should the Decision be annulled, its annulment would not delete the knowledge of that information from memories and compensation would be very difficult as the value of the transfer of knowledge would be difficult to quantify. However, Microsoft does not explain what irreparable damage might be caused to it by the simple fact that third parties had knowledge of data disclosed by it, as opposed to the developments resulting from the use of that knowledge.

254 Next, the disclosure of information previously kept secret does not necessarily mean that serious damage will occur.

255 In the present case, however, Microsoft claims essentially that the interoperability information has a specific value. That value relates, first of all, to the fact that the communications protocols are the fruit of substantial and costly efforts and also to the fact that their commercial applications are significant. Microsoft further claims that drawing up the specifications is also onerous.

256 The President considers that, in the light of the material in the case-file, proof of the serious nature

of that damage has not been adduced. In particular, the vague allegation that Microsoft's communications protocols have 'cost tens of millions of [United States] dollars', even if it were well founded, is not supported by any evidence. Account must also be taken of the fact that such costs will be offset in part by the royalties that Microsoft will be able to demand for the use of its protocols under the licences granted in implementation of the Decision.

257 In any event, the financial damage alleged in the preceding paragraph cannot be regarded as serious, owing to the financial power of Microsoft, whose turnover for the United States fiscal year July 2002 to July 2003 was, according to recital 1 to the Decision, EUR 30 701 million (see, to that effect, order of the President of the Court of Justice in Cases C-51/90 R and C-59/90 R *Comos-TankandOthers* v *Commission* [1990] ECR I-2167, paragraph 26).

258 Microsoft further maintains that the value of the information in issue consists in the fact that the specifications for the server-to-server communications protocols contain a significant amount of information on the functioning of the 'Active Directory' in the Windows operating systems. Its server-to-server communications protocols are not simple interfaces unconnected to the underlying implementation of the functionalities accessible via those interfaces. Consequently, communication of the protocols to competitors would amount to transferring to them a significant quantity of information on the way in which those functionalities are supplied (annex R.2; annex T.7; annex U.1, Madnick & Meyer, 'Response to CCIA annex by Ronald Alepin and to the submission by [FSF-Europe]'; and annex U.2).

259 The President notes, first, that Microsoft maintains in its written submissions that it would be required to disclose information on the internal structure or the innovative aspects of its products but notes further that the specific examples relate exclusively to the replication protocols in Active Directory and, second, that that assertion is based on the analyses by Dr Madnick and Dr Meyer, on the one hand, and by Mr Campbell Kelly, on the other.

260 In that regard, the President considers that Microsoft's allegations cannot be regarded as proven to the requisite legal standard.

261 Microsoft's assertion that the information that it would be required to disclose will reveal the mode of functioning of its products is illustrated by the sole example of Active Directory, defined in the Decision as the directory service included in Windows 2000 Server (recital 149). In its observations on the statements in intervention, Microsoft again emphasised that 'the specifications will teach competitors a great deal about how important components of Windows server operating systems, such as Active Directory, work'. At the hearing, the question put by the President as to whether the specifications would reveal elements relating to components of Windows server operating systems other than Active Directory did not meet with a clear and convincing answer either. On that point, one of Microsoft's expert witnesses stated that he 'believed' that the rules governing the management of the directory would also be revealed.

262 The claims made by Microsoft's experts and the examples relating to Active Directory on which they relied are based on analyses (see paragraph 116 above) which were strongly criticised by the Commission and the parties intervening in its support. Those parties challenged the assumptions made in those analyses and, in particular, the assumption that the protocols used to deliver communications between two copies of the same operating system and also the replication method are 'tightly coupled'. The objections raised by the Commission – based on documents submitted by experts (annex S.2 and annex U.1, 'Report by OTR', dated 10 September 2004) –, by FSF-Europe and, before they withdrew from the proceedings, by CCIA and Novell, relate essentially to the vague and conjectural nature of the demonstration in the Madnick & Meyer report and to the fact that that report contains theories which are contrary to Microsoft's practices. In annex 3 to CCIA's statement in intervention, Mr Alepin maintains that correctly-written protocol specifications reveal little or nothing about the internal structure, algorithms and other innovative aspects of the operating systems.

263 Faced with such objections and in the absence of other more precise material produced by Microsoft, it is not possible to take as established the allegations that the specifications will reveal more than is necessary to ensure the interoperability sought by the Commission.

264 Likewise, as the Commission stated in an answer to a written question, Microsoft's assertion that the single compression algorithm used by Active Directory would have to be disclosed under the remedy imposed by the Decision cannot be verified in the absence of sufficient objective evidence for that purpose.

265 In that regard, the President considers that Microsoft had the possibility and the right to submit a technical file to the Commission, and to the Commission alone, in which it would have been able to comment on the degree of precision of the specifications and the risks of revealing information necessarily covering more than just the interoperability sought by the Commission. However, Microsoft refrained from doing so during the administrative procedure. Likewise, after the adoption of the Decision, Microsoft could have explained the reasons why efficient security measures to overcome that difficulty could not be envisaged. In particular, the Commission stated at the hearing that it had requested Microsoft on 30 July 2004 to communicate its specifications for examination, but that they were never sent; and Microsoft does not dispute that assertion.

(vii) The use of the interoperability information

266 Microsoft claims that, once the interoperability information is disclosed, the use to which it will be put will be the cause of a number of types of serious and irreparable damage.

The alleged dilution of the information

267 Microsoft contends that the information disclosed will be able to be used by its competitors, that it may be placed in the public domain and that there will be no means of checking whether it is being used following annulment of the Decision.

268 That argument ignores the possibility of providing for contractual safeguards concerning the confidentiality and use of the information pending the decision of the Court in the main action, such clauses being standard practice in the sector. Confidentiality clauses, together where necessary with penalty clauses, can be inserted in the licence agreements concluded with the undertakings having an interest in developing and distributing products competing with Microsoft's products, within the meaning of Article 5(a) of the Decision.

269 On that point, the Commission has indicated that Microsoft could require reasonable contractual safeguards for the disclosure, so that the information disclosed to competitors will no longer be able to be used should the Decision be annulled. The licence agreements concluded within the framework of the MCPP and technology transfer agreements constitute reference elements.

270 In that context, it should be noted that Microsoft itself stated in its application for interim measures that the disclosure of trade secrets to its contractual partners was subject to compliance by them with an obligation to maintain confidentiality (see paragraph 125 above).

271 Furthermore, Microsoft undertook, under the agreement with Sun Microsystems, to communicate the specifications for its server-to-server communications protocols. However, it has offered no explanation of why contractual safeguards identical to the ones in that agreement would not ensure that the information disclosed in implementation of the Decision was not made public. As stated at recital 211 to the Decision, moreover, '[i]n the course of the 1990s, Microsoft entered into a licence with AT&T relating to the disclosure of portions of the Windows source code'. Microsoft has not explained why it would not be able to use the same contractual safeguards as those that must have been included in that agreement with AT&T when disclosing the specifications referred to in Article 5 of the Decision.

272 The possibility of appropriate safeguards also provides an answer to Microsoft's fear that the knowledge disclosed will spread to the point of entering the public domain. Apart from the fact that the conclusion of licences does not in any way mean that the data in question will, from a legal point of view, be in the public domain, at least as regards intellectual property rights, the damage alleged by Microsoft assumes that the other parties will fail to honour their contractual undertakings, which cannot be presumed (see, to that effect, order of the President of the Court of First Instance in Case T-73/98 R *Prayon-Rupel* v *Commission* [1998] ECR II–2769, paragraph 41).

273 As regards the allegation that it will be impossible to ascertain whether the information is being used after the Decision has been annulled, Microsoft asserts that it is simplistic to believe that the use of its specifications for the communications protocols will be immediately detectable should the Decision be annulled, owing to the maintenance of interoperability of third-party work group server operating systems and Windows server operating systems. However, in its observations on the statements in intervention, Microsoft stated that 'without having access to the source code of third-party products' it could not know to what extent those third parties were using the knowledge which they obtained through their access to the specifications for Microsoft's communications protocols. It

follows from that argument that Microsoft considers it possible to determine to what extent competitors are using the knowledge which they have obtained from the specifications for the communications protocols by having access, should the Decision be annulled, to the source code of their products. The possibility that an independent expert – appointed by common agreement between the contracting parties or, failing that, by the Commission – should access the source code of the products of Microsoft's competitors in order to check whether that knowledge was being used can perfectly well be provided for in the licensing agreements to be concluded with the undertakings referred to in Article 5 of the Decision. It is also open to Microsoft, moreover, to include in those licensing agreements penalty clauses which, in the event that the Decision is annulled, would prevent its competitors from marketing products containing the interoperability information. Such contractual stipulations in relation to the procedures for checking the products and the penalties incurred for breach of the undertaking given not to use the information following the annulment of the Decision must be considered to be sufficient to avoid irreparable damage.

274 For the sake of completeness, it should be observed that the appraisal in the preceding paragraph is supported by the fact that at the hearing Novell stated that it was prepared to allow access to the source code of its products, should the Decision be annulled, for the purpose of verifying that it was not using the interoperability information. Microsoft did not answer that point.

The argument that the products will remain in the distribution channels

275 Microsoft maintains that the Decision will cause permanent damage to its intellectual property rights – more specifically to its right to exploit its patents – since, if the Decision is annulled, products incorporating its technology will remain in the distribution channels and in the hands of its customers.

276 The President considers that Microsoft has not established that those circumstances constituted serious and irreparable damage.

277 First, it is not known when competing products implementing the specifications will be placed on the market. In that regard, it is common ground that the undertakings which receive the information will first have to implement the specifications and then have to place their products on the market. At the hearing, Microsoft's representative stated that the specifications for the communications protocols would be ready within three to four weeks.

278 The total period between the date of receiving the specifications and the date of placing the products on the market was put at several years by the Commission in the Decision (recitals 719 to 721 to the Decision). In its observations, the Commission referred to a 'letter from Sun [Microsystems] to the Commission dated 20 July 2004', paragraph 3 of which states, with reference to the specifications for server-to-server protocols:

'Employing a team of up to [a substantial number of] engineers it took [longer than one] years for Sun [Microsystems] to complete the development effort to deliver a market-ready version of AS/U based upon materials received from AT&T. For the reasons explained below, Sun [Microsystems] would expect that more time would be required to introduce a similarly complex from technical specifications supplied pursuant to the "Technical Collaboration Agreement" with Microsoft dated April 2004.'

279 Furthermore, in the pleadings which it submitted before withdrawing from the proceedings, CCIA maintains that 'even if the information were disclosed tomorrow (and assuming that it was complete and correct), it is clear that it would take several years (at least two) before one of Microsoft's competitors could place a product using that information on the market', that assertion being based on annex CCIA.R.3, in which Mr Alepin considers that it is entirely unrealistic to expect that any fully interoperable product would be commercially available in two years' time (paragraph 84). SIIA and, before withdrawing, Novell developed the same argument in their written submissions.

280 When invited to comment in writing on that information relating to the estimate of the time necessary to implement its own specifications, Microsoft stated essentially that the time necessary to implement a specification depends largely on the resources allocated to that effort. At the hearing, Microsoft stated that a product could be placed on the market in less than three months, but without providing sufficient detail or evidence to support that claim or making it possible to ascertain whether it is well founded. That claim cannot therefore be upheld.

281 It follows from the foregoing, without prejudice to the fact that it will take some time for Microsoft's

competitors to sell the versions of their products compatible with Windows work group server operating systems, that there is no reason to believe that those compatible products will be marketed in the short term. Consequently, the effect of which Microsoft complains would in any event take concrete form only for a limited period between the date on which the products concerned are placed on the market and the date on which judgment is delivered in the main proceedings.

282 Second, any damage arising from the fact that products implementing the specifications for Microsoft's protocols will remain in the distribution channels cannot be regarded as irreversible, since an effect of that nature is inevitably limited in time, either because the products will eventually be sold and installed within the undertakings which have acquired them (see paragraph 283 below) or because the unsold products will become technologically obsolete.

283 Third, Microsoft correctly maintains that, even if the Decision should be annulled, the competing products will remain installed within the undertakings which have acquired them. None the less, that fact cannot be regarded as the cause of serious and irreparable damage, since, first, Microsoft has not shown how the presence of those products in customers' networks would appreciably harm its future activities and, second, it is likely that the commercial value of those products, which will have satisfied customer demand before judgment is given on the merits of the case, will fall rapidly if the Decision is annulled by the Court of First Instance.

284 On that last point, should the Decision be annulled, Microsoft would be able to prevent competing operating systems from being compatible with the new versions of the Windows operating systems by altering its server-to-server communications protocols and thereby significantly and rapidly reducing the value of the competing products. The fact that it is technically possible to affect interoperability between the Windows environment and the competing work group server operating systems installed in undertakings – which is likely to enable Microsoft to derive an exclusive benefit from subsequent improvements – was confirmed at the hearing and Microsoft raised no objection on that point.

285 Even on the assumption that Microsoft were to decide not to alter its communications protocols should the Decision be annulled, the fact that competing work group server operating systems remain within networks will not be likely to cause it irreparable damage either. At the hearing, Microsoft stated that, should the Decision be annulled, it would be technically possible to sever interoperability with competing work group server operating systems, but that it would be inconceivable from a commercial point of view not to ensure backward compatibility between old and new systems. However, although the maintenance of that compatibility allows competing operating systems to interoperate in a network with the new version of the Windows operating systems, that does not alter the fact that the former systems are less technologically advanced than the latter systems and that, from a commercial viewpoint, they would rapidly become obsolete. In that regard, it must be borne in mind that, should the Decision be annulled by the Court of First Instance, Microsoft's competitors would no longer be able to use the interoperability information referred to in Article 5 of the Decision (see paragraph 273 above) and that, consequently, backward compatibility would be ensured only for the work group server operating systems marketed by those competitors before the date of annulment.

The alleged 'cloning' of the products

286 Microsoft maintains that the information in question will be able to be used to clone its products. Once its competitors have acquired detailed knowledge of the internal operating modes of its operating systems by studying the copyrighted specifications for its communications protocols, they will be able to use them for their own products. It would be difficult, indeed impossible, for Microsoft and for the judicial authorities to determine whether Microsoft's competitors were using that knowledge when designing their own server operating systems.

287 In that regard, it should be borne in mind that the premiss of that reasoning, namely that it will be possible to obtain information going far beyond just the interoperability information, has not been held to be established (see paragraphs 260 to 265 above).

288 Furthermore, Microsoft's allegation is based on a reading of Article 5 of the Decision that does not take account of the grounds on which it is based. The direction in Article 5 that Microsoft must allow the use of its specifications for its protocols 'for the purpose of developing and distributing work group server operating system products' must be read in the light of recitals 1003 and 1004 to the Decision. Recital 1003 states that '[t]he objective of this Decision is to ensure that Microsoft's

competitors can develop products that interoperate with the Windows domain architecture natively supported in the dominant Windows Client PC operating system and hence viably compete with Microsoft's work group server operating system'. Recital 1004 states that 'as regards the subsequent use of the specifications, the specifications should also not be reproduced, adapted, arranged or altered, but should be used by third parties to write their own specification-compliant interfaces'.

289 It follows that Article 5 of the Decision must be understood as meaning that the use of the protocols is permitted only for the purposes of interoperability and that, consequently, their use for other purposes is not allowed. The Commission expressly confirmed that interpretation at the hearing and emphasised that compliance with that limitation will be capable of being verified by Microsoft's 'monitoring trustee who shall be independent from [it]' referred to in Article 7 of the Decision.

– The alleged interference with commercial freedom

290 Microsoft maintains that its freedom to determine the essential elements of its business policy will be compromised owing to the implementation of the Decision: the Decision would require it to disclose information to its competitors, deprive it of its capacity to develop its products and force it to 'harden' its protocols.

291 In that regard, it should be pointed out that, in principle, any decision taken under Article 82 EC and requiring a dominant undertaking to bring an abuse to an end necessarily entails a change in its business policy. The obligation imposed on an undertaking to alter its conduct cannot therefore be regarded as constituting serious and irreparable damage in itself, short of considering that the urgency requirement is always satisfied when the decision whose suspension is sought orders the addressee to bring abusive conduct to an end.

292 Where an applicant invokes an interference with its business freedom to demonstrate that the interim measure applied for must be ordered as a matter of urgency, it must adduce evidence either that implementation of the contested measure will oblige it to alter certain essential elements of its business policy and that, even after judgment in its favour has been given in the main proceedings, the effects of the implementation of that measure will prevent it from resuming its initial business policy, or that those effects will cause it serious and irreparable damage of another kind, it being borne in mind that it is in the light of the circumstances of each case that the alleged damage must be assessed.

293 Thus, in the orders in *Bayer* v *Commission*, paragraph 138 above, and *IMSHealth* v *Commission*, paragraph 133 above, on which Microsoft relies, the judge dealing with the application assessed the consequences of the interference with the undertakings' freedom to define their business policies in the light of the effects of the implementation of the measure.

294 In the order in *Bayer* v *Commission*, paragraph 138 above, the judge dealing with the application actually emphasised that '[i]n this case, if the applicant's argument were to be accepted by the Court as well founded, immediate implementation of the provision in question would risk depriving the applicant of its independence in defining certain crucial elements in its business policy' (paragraph 54). He further held that '[a] situation of that kind is particularly likely to cause serious damage to the applicant in the context of the pharmaceutical industry, which is distinctive in that prices and methods of reimbursement are fixed or controlled by national health services, thereby giving rise to large disparities in the prices for a single medicine in the various Member States' (paragraph 55). As the sectoral regulation of prices had been regarded as a factor limiting the undertakings' scope for business freedom, the judge concluded that a further interference with an already-restricted business freedom constituted serious damage. The change in Bayer's business policy was therefore regarded as sufficient to characterise the urgency only in the light of the specific features of that case.

295 In the order in *IMSHealth* v *Commission*, paragraph 133 above, the judge dealing with the application for interim measures considered that the urgency requirement was satisfied because there were serious grounds for believing that many of the 'market developments' to which immediate execution of the decision was likely to give rise would be very difficult, if not impossible, to reverse should the application in the main action be upheld (paragraph 129). The 'real risk of serious and irreparable damage to the applicant's interests' (paragraph 127) identified in that case therefore relates to the serious and irreversible nature of the market developments. The considerations relating to the interference with the freedom which undertakings enjoy when defining their business policy (paragraphs 130 and 131) were taken into account solely for the purposes of

supporting the conclusion at which the judge dealing with the matter had already arrived in relation to urgency, as may be seen from the fact that there is no analysis of the serious and irreparable nature of the interference.

296 It is appropriate therefore to examine whether Microsoft has demonstrated that, regard being had to the circumstances of the case, the interference with its business freedom is the cause of serious and irreparable damage.

(viii) The alleged fundamental change in business policy

297 The fundamental change in business policy which the Decision would impose on Microsoft is contradicted by certain material in the file.

298 First of all, both the United States Settlement and the Decision require Microsoft to disclose the specifications for its communications protocols. Admittedly, the United States Settlement does not require Microsoft to disclose the specifications for its server-to-server communications protocols, but it does require it to license all the protocols implemented in a Windows Client PC operating system for the purposes of interoperability with a Windows server operating system. The President finds, in the light of the evidence before him and having regard to the fact that the Decision is in keeping with the disclosure policy already implemented by Microsoft under the United States Settlement, that the differences existing in terms of business policy between that settlement and the Decision cannot be regarded as being fundamental. It must be noted, in that context, that it is not disputed that one of the protocols licensed under the MCPP is a communications protocol used not only for client-to-server communications but also for server-to-server communications. On that last point, it follows, in particular, from recital 179 to the Decision that '[s]ervers in a network can sometimes use the same protocols as client PCs in order to communicate with other servers. For instance, in a Windows domain, Microsoft Kerberos is used for authentication both between a Windows client PC and a Windows group server and among Windows work group servers'. Furthermore, the alleged interference with Microsoft's business policy is not irremediable, since annulment of the Decision, like the end of the MCPP due to take place to take place in 2009, would allow Microsoft not to license its communications protocols any more, should that be its choice.

299 Next, it is apparent from the case-file that Microsoft's management declared that they wished to pursue a policy of actively promoting licences in respect of the protocols covered by the United States Settlement and of affirming the intention to offer usage rights on a wider basis than required by that settlement. The following is taken from a Microsoft press release dated 1 August 2003 (annex N.12):

'Microsoft also announced that it is generally willing to provide even broader usage rights for the company's protocol technology than is required by the final judgment in the antitrust case or is reflected in standard MCPP licence agreements. Microsoft has already voluntarily granted usage rights to a number of licensees under the MCPP that exceed the requirements of the final judgment, and Microsoft encourages other developers who may be interested in licensing the company's protocol technology to discuss their technical requirements with Microsoft's protocol licensing team.'

300 Last, the agreement concluded between Microsoft and Sun Microsystems provides for disclosure of the server-to-server communications protocols covered by the Decision. In so far as that agreement provides for communication of the protocols which the Decision specifically requires Microsoft to disclose, Microsoft cannot validly claim that the implementation of the Decision would oblige it fundamentally to modify its business policy.

301 In light of the foregoing considerations, the President cannot take it as established that the Decision will cause a sufficiently significant change to Microsoft's business policy.

302 That conclusion is supported by the fact that the Commission stated at the hearing, in answer to a question put by the President, that in the course of the negotiations with the Commission during the administrative procedure, Microsoft was prepared to disclose more interoperability information than that referred to in the Decision. While insisting on the specific nature of each negotiation, which was the result of mutual concessions, Microsoft did not contradict the Commission's argument on that point.

(ix) The alleged difficulty in improving the protocols

303 Microsoft states that implementation of the Decision will have the effect of restricting the flexibility which it needs to improve the protocols concerned on a regular basis, thus reducing its capacity to innovate (annexes R.2 and T.7).

304 In that regard, it should be recalled that Article 5(a) to (c) of the Decision requires Microsoft to communicate the specifications for its protocols to its competitors, but leaves Microsoft free to design its protocols as it sees fit. The improvement of the protocols therefore remains a decision which it is for Microsoft to take in accordance with the expected consequences of such a decision. Microsoft has failed to establish that a decision to improve the protocols during the interim period – until the Court has delivered judgment in the main action – would have practical consequences of such magnitude as to constitute a real obstacle to innovation.

305 Next, the argument that the flexibility with which it will be able to improve the protocols concerned will be affected by the constraint, imposed by commercial reality, of having to ensure backward compatibility with competitors' products based on its protocols cannot be accepted in view of certain evidence in the case-file.

306 First, it should be recalled that, historically, Microsoft did not consider itself bound by such an obligation when it decided to render Novell's NDS for NT inoperative (recitals 298 to 301 and 686 to the Decision).

307 Second, Microsoft in any event ensures backward compatibility with the previous versions of its own products. There is no evidence in the file on which to believe that, in ensuring such compatibility, it is not also capable of ensuring backward compatibility with all compatible implementations. Microsoft has stated that it ensured backward compatibility with a range of products, emphasising that '[i]t [was] already an engineering challenge for Microsoft, in the context of successive releases of new Windows server operating systems, to maintain backward compatibility with the thousands of published interfaces used by third-party software programs for Microsoft'.

308 Third, the increased complexity represented by the development of compatible work group server operating systems has not been evaluated. In any event, the extra effort must be regarded as limited during the interim period owing to what will probably be the small number of compatible products placed on the market and bought by customers before the merits of the case have been determined by the Court. On that point, it should be noted that a new Microsoft operating system, known as 'Longhorn', will, according to Microsoft, be ready for 2006 and that, as the parties intervening in support of the Commission stated, the effect of the announcement of its launch will be likely to influence customer purchases to the detriment of competing work group server operating systems.

309 Fourth, the United States Settlement, which operates to the advantage of not only manufacturers of work group server operating systems, within the meaning of the Decision, but also virtually all manufacturers of server operating systems, ought to have had a negative impact of the same kind as that on which Microsoft relies in these interim relief proceedings. However, there is nothing in the parties' written submissions to indicate that implementation of the Decision might affect Microsoft's flexibility to change its protocols to a greater extent than that resulting from the undertakings agreed by Microsoft in the context of the United States Settlement. On that point, it follows from one of Microsoft's answers to the written questions that, in certain circumstances, the United States Settlement allows Microsoft to choose to use innovations in client-to-server protocols to increase the appeal of the Windows operating systems, without making that technology available to its competitors. It adds:

'In particular, if Microsoft develops new client-to-server protocols that are not included in its Windows client operating system, but are installed separately, then Microsoft need not make such protocols available to competitors. For example, Microsoft could develop innovative protocols in connection with a new version of its Windows server operating system. When a network using that Windows server operating system was set up, customers would be asked to install the client software implementing these protocols on their personal computers. (This is the method traditionally followed by Novell.)'

310 That statement confirms that Microsoft intends to improve its products and that the constraints leading to a lack of flexibility as regards the possibility of improving them effectively are not such as to prevent that improvement. It matters little whether the improvements are made available by deliberate intention or under a legal constraint.

311 Fifth, the agreement with Sun Microsystems, which covers the protocols concerned by the Decision, tends to show that the impact on Microsoft's capacity to alter its protocols is not irreversible.

(x) The alleged need to 'harden' the protocols

312 Microsoft states that it would have to 'harden' the protocols in order to avoid 'possible malfunctions, crashes and security risks' as a result of 'inadvertent and malicious use'.

313 On the assumption that the 'possible malfunctions, crashes and security risks' were proven, the President finds that Microsoft is merely invoking the damage resulting from the efforts which it claims would be necessary to prevent such a possibility from becoming a reality, without stating how that damage would be serious and irreparable. In particular, it does not show that the 'hardening' of the protocols would have to be maintained should the Decision be annulled or that it would be the cause of another type of damage. Furthermore, as the Commission contends, the recipients of the interoperability information would have strong incentives to render their products secure and stable and to prevent their 'inadvertent use' and would have no interest in 'malicious' use. On the contrary, as the Commission further submits, the undertakings benefiting from the disclosure will have a manifest interest in avoiding random damage, by testing their implementations against Microsoft's and ensuring that their products do not cause data loss or corruption with their customers. Those tests will naturally extend to all Windows products with which the competitor concerned intends to establish interoperability. In all probability, therefore, there will be no need for Microsoft to adapt retroactively products previously installed.

314 Just as in relation to the alleged interference with its ability to design its products freely, Microsoft has not established that the risks referred to in the preceding paragraph materialised as a result of the implementation of the United States Settlement. Last, although Samba or AS/U implement a number of protocols which had initially been designed as 'private' protocols, to use Microsoft's terminology, Microsoft does not put forward any example of 'unexpected' data capable of causing data loss or data corruption being transmitted to Windows.

315 The alleged constraints on Microsoft's capacity to develop its products are already inherent in the settlement concluded with Sun Microsystems, which includes the protocols of relevance in the context of the Decision. Even on the assumption that it exists, the resulting damage therefore has no connection with the remedy and Microsoft has not established that the suspension of implementation which it seeks would appreciably alter its current position.

316 Last, precise technical conditions could also be agreed by contract, as provided for in the context of the United States Settlement. In answer to a question put by the President, Microsoft stated that the United States Settlement allows it to make disclosure of security-related protocols conditional upon certain terms designed to minimise the risk that those protocols would be used maliciously to compromise computer security. Thus, the fear connected with malicious use of the information in issue or inadequate implementation testing could be dispelled by the possibility of requesting the Commission to authorise Microsoft to refuse to supply the information in such a situation.

– The alleged irreversible development of market conditions

317 Microsoft maintains that mandatory licensing will irremediably alter to its detriment the conditions prevailing on the market, because examination of the detailed specifications for the communications protocols in issue will reveal to its competitors important aspects of the design of the Windows server operating systems. The large-scale disclosure of such information would allow competitors to reproduce in their server operating systems a series of functionalities that Microsoft has developed through its own research and development efforts.

318 The factual premiss on which Microsoft bases its analysis has not been regarded by the President as proven to the requisite legal standard (see paragraphs 260 to 265 above). Nor has Microsoft adduced evidence of the development of the market which it maintains would follow from the alleged problem, even though the Commission challenged that point in its observations in defence. Microsoft's argument cannot therefore be accepted.

319 In any event, even on the assumption that Microsoft's argument may be understood as meaning that disclosure of the interoperability information will alter market conditions in such a way that it would lose market share and, should the Decision be annulled, would no longer be able to regain the market share lost, the President finds that Microsoft has adduced no factual evidence to support that argument. In particular, it has not demonstrated that there would be obstacles preventing it

from regaining a significant part of the share which it could have lost as a result of the remedy (see, to that effect, order of the President of the Court of Justice in Case C-471/00 P(R) *Commission* v *CambridgeHealthcareSupplies* [2001] ECR I-2865, paragraph 111; and order of the President of the Court of First Instance of 16 January 2004 in Case T-369/03 R *ArizonaChemicalandOthers* v *Commission*, not yet reported, paragraphs 82 to 84).

The serious and irreparable damage caused by the obligation to disclose the specifications for the client-to-server protocols

320 It follows from all of the foregoing considerations that, as regards the obligation to disclose the specifications for the server-to-server communications protocols, the various heads of damage alleged by Microsoft were not held to satisfy the urgency requirement.

321 As Microsoft has put forward no additional argument on which a different conclusion might be reached as regards the effects of the disclosure of the client-to-server communications protocols, the President is necessarily led to conclude that Microsoft has not shown that the urgency requirement was satisfied in relation to the second part of the obligation to disclose. In that regard, is should be borne in mind that, as the Commission correctly explained in the Decision, client-server interoperability and server-server interoperability are two indissociable components of interoperability within a computer system consisting of a number of client PCs running Windows and a number of work group servers running Windows, all linked together in a network (recitals 144 to 184 and 689).

322 In any event, it must be taken into account that Microsoft insisted at the hearing that there was no need to require it to disclose the specifications for the client-to-server protocols, since those protocols can be obtained until 2009 under the MCPP. That argument can only be taken to mean that the disclosure of those specifications ordered by the Decision cannot be the cause of serious and irreparable damage to Microsoft.

323 The application for interim measures must therefore also be dismissed for lack of urgency in so far as it seeks suspension of implementation of the obligation to disclose the specifications for the client-to-server protocols and to authorise their use by Microsoft's competitors.

324 In the light of all of the foregoing, as the urgency requirement is not satisfied, the application for suspension of implementation of Article 5(a) to (c) must be dismissed without there being any need to balance the various interests involved.

325 It is important to make clear that, under Article 109 of the Rules of Procedure, rejection of an application for an interim measure does not bar the party who made it from making a further application on the basis of new facts. In the present case, it cannot be ruled out that a continuing disagreement as to details of the means of implementation of the Decision may be regarded as a 'new fact'. More specifically, in view of the references in the foregoing assessment to the contractual conditions that justify the conclusion that the urgency requirement is not satisfied (see paragraphs 268, 273, 285 and 316 above), the refusal to include such safeguard clauses in the licence agreements to be concluded with the undertakings referred to in Article 5 of the Decision might be regarded as a change in circumstances susceptible of calling in question certain of the grounds on which the present order is based.

B – *The tying issue*

1. Arguments of the parties

a) Arguments of Microsoft and the parties granted leave to intervene in support of the form of order which it is seeking

A prima facie case

326 Microsoft maintains that it presented arguments in its application for annulment which prima facie provide grounds for annulment of the provisions of the Decision as concerns the alleged tying abuse.

327 In the Decision, the Commission claims that the incorporation by Microsoft of an improved multimedia functionality in Windows constitutes an abuse within the meaning of Article 82 EC, 'in

particular' within the meaning of subparagraph (d) of the second paragraph of that article, and also in application of a new criterion in respect of tied sales derived from Article 82 EC. As stated at recital 841 to the Decision, in classical tying cases, the Commission and the Courts consider the foreclosure effects for competing vendors to be demonstrated by the bundling of a separate product. In Microsoft's submission, it follows from the same recital to the Decision, first, that the present case is not a 'classical tying case' and, second, that 'users can … obtain third party media players through the Internet, sometimes free [of charge]'. The Commission therefore accepts that '[t]here are … good reasons not to assume without further analysis that tying [Windows Media Player] constitutes conduct which by its very nature is liable to foreclose competition' (recital 841).

328 The Commission none the less concludes that there is a foreclosure effect in this case and bases that conclusion on a highly speculative theory, according to which the ubiquitous distribution of media functionality in Windows will compel content providers to encode their content almost exclusively in Windows Media formats, which will, in turn, eventually drive all competing media players out of the market and then, indirectly, oblige consumers to use only Windows multimedia functionality (recitals 836 and 842 to the Decision). Microsoft claims that there is, for the purposes of the case-law, 'a serious dispute regarding the correctness of the fundamental legal conclusion underpinning' the Commission's allegations concerning the design and integration of Windows Media Player (order in *IMS Health* v *Commission*, paragraph 133 above, paragraph 106). Microsoft also submits that it has satisfied the requirement that the finding of infringement on which Article 6(a) of the Decision is based be shown to be prima facie unlawful.

329 First, the Commission's speculative theory concerning foreclosure from the market has no basis. The Decision does not reflect market realities, particularly in so far as, first, users of Windows-based client PCs find it easy to use different media players with different formats and, second, content providers use multiple formats on a daily basis. The Commission's finding is also contrary to the very different theory applied in the AOL/Time Warner decision (Commission Decision 2001/718/EC of 11 October 2000 declaring a concentration to be compatible with the common market and the EEA Agreement (Case No COMP/M.1845 – AOL/Time Warner) OJ 2001 L 268, p. 28). Furthermore, the Commission concludes in the Decision that the foreclosure theory applies only where the media functionality of Windows is developed by Microsoft, although that theory was not found to apply between 1995 and 1998, when RealNetworks' media player was 'bundled' with Windows.

330 In its observations of 19 August 2004, Microsoft further states that the Commission wholly ignores the fact that the main Web sites continue to present media content in two or more formats, the fact that the number of formats on popular Web sites with media content has increased and is now approximately three and, last, the fact that in the spring of 2004 almost 80% of Web sites presented content in RealNetworks format.

331 The Commission also fails to take account of recent market developments, in particular the exponential growth in devices other than client PCs, such as Apple's iPod, which reads media content in formats different from Windows, or the future generation of mobile telephones, which will include media players. Microsoft maintains that content suppliers who wish to reach the widest possible audience will continue to use multiple formats, in order to reach, on the one hand, users of devices other than client PCs which are not capable of reading contents in Windows Media format and, on the other, consumers who use third-party media players on their client PCs rather than the Windows Media functionality.

332 Second, the benefits flowing from Microsoft's operating system 'design concept', which entails the creation of new versions of Windows with added functionality, are substantial and should have been given more weight by the Commission.

333 Third, the Commission fails to establish the existence of an infringement of Article 82 EC, in particular of subparagraph (d) of the second paragraph of that article. In particular, the Decision does not establish that Windows and its media functionality belong to two distinct product markets. The Commission incorrectly considers only whether the alleged tied product is available separately from the alleged 'dominant' product, whereas the appropriate question is whether the latter product is regularly offered without the alleged tied product. Nor does the question of a supplementary obligation arise in the present case, since consumers (i) are not required to pay extra for the media functionality in Windows, (ii) are not required to use the media functionality in Windows and (iii) are not prevented by Microsoft from using third-party media players instead of or in addition to the media functionality in Windows. Nor has the Commission demonstrated that the media functionality is not connected naturally or by commercial usage with client PC operating systems. Indeed, other operating systems include media functionality and Microsoft has been integrating constantly-

improving media functionality into Windows since 1992.

334 Fourth, the Commission failed in the present case to take sufficiently into account the obligations imposed on the European Community by the TRIPS Agreement.

335 Fifth, the remedy is disproportionate.

336 CompTIA and Exor support Microsoft's position as regards a prima facie case. They contend that Microsoft has demonstrated that Articles 4 and 6(a) of the Decision are prima facie unlawful.

Urgency

337 Microsoft maintains that the immediate implementation of Article 6(a) of the Decision will cause two types of serious and irreparable harm, resulting, first, from the abandonment of the fundamental design concept underlying its Windows operating system and, second, from injury effect to its reputation.

– The harm which Microsoft alleges will follow from the abandonment of the fundamental design concept underlying the Windows operating system

338 Microsoft maintains that the fundamental design concept underlying its Windows operating system constitutes the basis of the Windows business model. Microsoft's business model has the goal of designing a common platform for the development and running of applications, no matter what hardware is used by the consumer.

339 The immediate enforcement of Article 6(a) of the Decision would compel Microsoft to abandon that concept and thus cause it serious and irreparable harm. By requiring it to offer a version of Windows from which the software code corresponding to what the Commission identifies as 'Windows Media Player' has been removed, Article 6(a) of the Decision prohibits Microsoft from designing its operating system in such a way as to include new or improved media functionality on a uniform basis. It also deprives software developers, content providers, OEMs and consumers of the benefits they currently derive from the Windows platform.

340 Microsoft recalls that, according to the case-law, serious and irreparable damage is caused when a party is required to implement immediately a Commission decision which would entail structural changes or prevent it from determining essential aspects of its commercial policy (order in *RTE and Others* v *Commission*, paragraph 251 above; order of the President of the Court of Justice of 13 June 1989 in Case C-56/89 R *Publishers Association* v *Commission* [1989] ECR 1693; orders of the President of the Court of First Instance of 16 July 1992 in Case T–29/92 R *SPO and Others* v *Commission* [1992] ECR II-2161; in Joined Cases T-7/93 R and T-9/93 R *Langnese-Iglo and Schöller Lebensmittel* v *Commission* [1993] ECR II-131; of 10 March 1995 in Case T–395/94 R *Atlantic Container Line and Others* v *Commission* [1995] ECR II-595; in *Bayer* v *Commission*, paragraph 138 above; of 7 July 1998 in Case T-65/98 R *Van den Bergh Foods* v *Commission* [1998] ECR II-2641; and in *IMS Health* v *Commission*, paragraph 133 above). Should the Decision be implemented immediately, the benefits flowing from uniformity of the Windows platform would be irreversibly lost, resulting in serious and irreparable harm to Microsoft.

341 Nor, in Microsoft's submission, would that harm be repaired by the annulment of the Decision. Microsoft's engineers would have to assume that at least some copies of Windows distributed in the EEA will not have the media functionality. Since those downgraded versions of Windows could not be taken back from users should the Decision subsequently be annulled, Microsoft's engineers would have to take into account the fact that two versions would be in existence for many years, as would third parties who depend on the stability and consistency of the Windows platform, which would increase their costs and continuously reduce the appeal of Windows. Those planning difficulties would be compounded by the conditions laid down in Article 4 of the Decision.

– Harm to Microsoft's reputation

342 Microsoft contends that the distribution of the version of Windows required by Article 6(a) of the Decision ('the Article 6 version') would cause serious and irreparable harm to its reputation as a developer of quality software products.

343 First, the Article 6 version would not contain the media functionality normally made available to applications running on Windows. Consequently, many applications would not work with that version of the operating system, even though it would be called ‘Windows’. That malfunction would undermine the central value of Windows and would also have the effect that Microsoft and the OEMs and software developers would be required to resolve problems created by the Decision and to provide the necessary support to dissatisfied customers in the interim. Resolving the many foreseeable and potentially unforeseeable problems would be extremely difficult, costly and harmful to Microsoft’s reputation.

344 In its observations of 19 August 2004, Microsoft disputes the Commission’s assertion that Microsoft could maintain ‘basic media functionality’ in the Article 6 version. The Commission fails to explain what it means by ‘basic media functionality’ and its assertion could be correct only if it were referring to the ability to generate certain sounds or display static pictures on the screen. In any event, the Article 6 version would remove all ability to play audio or video files, in particular from compact discs or digital versatile discs (DVDs) or from documents in standard formats such as MP3 downloaded from the Internet on to the hard disk of a client PC. In Microsoft’s submission, a consumer will regard a client PC operating system which is incapable, in 2004, of performing such common tasks as seriously downgraded.

345 Nor does the Commission dispute the non-exhaustive list of all the Windows functionalities that would no longer work properly in the Article 6 version.

346 Second, the problems caused by the Article 6 version would not be resolved by the installation of third-party media players. Microsoft claims that such products are not substitutes for the media functionality in Windows, since they do not provide the same APIs, which leads to certain failures in third-party applications and Web sites that rely on Windows media functionality.

347 Third, Microsoft would suffer equivalent, or even greater, harm since other parts of Windows that rely on its media functionality would no longer work correctly in the Article 6 version, in particular as regards the ‘My Music’ folder and the transfer of MP3 files to a large range of portable digital music players.

348 It follows from the non-exhaustive list of defects caused by the Article 6 version, first, that only some of those defects could be remedied by installing a third-party media player and, second, that the defects resolved would vary depending on which media reader was installed.

349 In its observations of 19 August 2004, Microsoft disputes the Commission’s argument that third-party media players installed on new client PCs by OEMs can replace the Windows media functionalities. That assertion, which is apparently based on the supposition that the software code which supplies media functionality is perfectly substitutable, is technically incorrect. The Commission does not mention any third-party media player offering full media functionality which is not in the Article 6 version. Microsoft does not dispute that a part of Windows media functionality could be restored by installing certain media players. None the less, a part of the media functionality of the operating system would still be corrupted. Media player manufacturers are not in the business of curing Windows media functionality defects. Where appropriate, the extent to which the installation of a third-party media player will be capable of restoring a part of media functionality in the Article 6 version will in any event vary greatly depending on the media player installed.

350 Microsoft explains that, in so far as third-party media players make their functionality available by means of published interfaces, those interfaces are different from the interfaces used by the applications to call upon media functionality in Windows. Consequently, the different variations of platform software use different interfaces to present similar types of functionality. The other parts of Windows and the applications designed to call up media functionality in Windows cannot suddenly obtain that functionality of a media player of a third-party undertaking. At the very least, it would be necessary to alter Windows or a Windows application to enable third-party media players to use alternative interfaces. Those changes would probably be substantial and would have to be made for each of the media players. The advantages of a uniform platform would therefore be lost, even if third-party media players were capable of providing all the media functionality not in the Article 6 version.

351 Fourth, the immediate implementation of Article 6(a) of the Decision would cause serious and irreparable harm to the Microsoft and Windows trade marks, because Microsoft would be required to sell a downgraded product inconsistent with its basic design concept. Microsoft’s reputation as a

supplier of quality software would be damaged if it were forced to place its name on a downgraded product that did not provide the media functionality that consumers expect from a modern operating system.

352 Fifth, Microsoft states that it could not prevent damage to its reputation by issuing notices informing consumers about the nature of the Article 6 version, since it would be unable to carry out all the tests necessary to draw up a complete list of the applications which would not work properly with the Article 6 version. In practice, it is likely that many consumers will be unable to understand the consequences of the absence of media technology in the Article 6 version.

353 Sixth, the immediate implementation of Article 6(a) of the Decision would cause serious harm to Microsoft's copyright in Windows. Microsoft would be required to adapt its work by removing the parts of the software code which provide the media functionality that in Microsoft's judgment should be included in a modern operating system and the absence of which renders the product defective. That damage to Microsoft's copyright would be irreparable, since, once the adaptation was marketed, there would be no way of taking the downgraded versions of Windows out of circulation.

354 In its observations of 19 August 2004, Microsoft disputes a number of the Commission's arguments relating to its trade marks and its reputation. In particular, it disputes the Commission's claim that the 'impression' that Windows operating systems 'always guarantee the presence of [Microsoft's] basic design concept' is 'factually incorrect', the Commission noting in that regard that Microsoft already produces a number of different versions of Windows. Microsoft submits that the existence of the products mentioned by the Commission has no impact on the serious and irreparable damage which it has demonstrated. Windows CE and Windows XP Embedded are not client PC operating systems. The other versions of Windows XP identified by the Commission, namely Professional, Home, Media Center Edition and Tablet PC Edition, all expose the same common core of interfaces, the 'Win32 APIs'. These are the interfaces that software developers have used to write Windows applications since the release of Windows NT 3.5 and Windows 95, and thus all versions of Windows XP will run the existing stock of Windows applications. In its observations on the statements in intervention, Microsoft also uses the same argument to counter RealNetwork's assertion that the Windows platform is already fragmented.

355 The important thing for Microsoft and end users is that the latest version of Windows designed for use as a general-purpose operating system, Windows XP, in all its versions, will run any Windows application designed over the last 10 years. That would not be possible in the case of the Article 6 version, even though that version will be seen by consumers as a general-purpose client PC operating system.

356 Last, also in its observations of 19 August 2004, Microsoft further claims that the Commission appears to share its view that the harm invoked is irreparable, since, in the Commission's words, the 'unbundled versions of Windows cannot be taken back from users'. The Commission none the less contends that the residual damage would not be irreversible, because 'Microsoft would be able to use the Internet in order to distribute [Windows Media Player] to any customer that has acquired an [Article 6 version]'. That hypothetical possibility is factually incorrect. It ignores users of the Article 6 version who are not connected to the Internet. Furthermore, Microsoft does not download and install software code on users' client PCs without their prior consent. The Article 6 versions would remain in the hands of consumers for a long time, and perhaps even indefinitely. Microsoft adds that even if the Commission is correct to consider that some users would prefer the Article 6 version, it must also conclude that there are users who would not give permission for Microsoft to restore media functionality in their operating systems.

357 Microsoft's position on the existence of serious and irreparable damage is supported by Exor. Exor contends that the damage sustained would not depend on either the decisions of third parties, i.e. decisions by consumers to buy the Article 6 version, or a 'lack of diligence' on the part of Microsoft. The Article 6 version would inevitably be a downgraded product, since the removal of one of the components of the Windows operating system would cause malfunctions in other components which rely on the missing code in order to provide media functionalities. Even if it were technically possible to redesign Windows completely in order to eliminate those interdependencies, the efficiencies stemming from such interdependencies would be completely lost. The Decision requires Microsoft to develop a completely different version of Windows. Consequently, the mere ex post installation of media functionality would not be sufficient, since the components which had been modified in order not to call upon the media functionality would no longer be capable of doing so afterwards.

The balance of interests

358 Microsoft contends that the balance of the interests at stake tilts heavily in favour of suspending implementation of Article 6(a) of the Decision. It submits (i) that the immediate implementation of Article 6(a) of the Decision is unnecessary, (ii) that that implementation would cause serious harm to it and to others and (iii) that the balance of interests ought to take the Commission's obligations under international treaties into account.

– The lack of necessity for the immediate implementation of Article 6(a) of the Decision

359 First of all, Microsoft contends that the Commission's interest in imposing an effective remedy does not require immediate implementation of Article 6(a) of the Decision. The remedy imposed is expressly designed to deprive Microsoft of what the Commission alleges to be a decisive competitive advantage of the media functionality in Windows, namely the fact that it enjoys widespread distribution because it is integrated into the leading operating system for client PCs. In Microsoft's submission, a number of facts show that the Commission's concern about the widespread distribution of media functionality in Windows is unjustified.

360 First, the integration of media functionality in Windows does not prevent consumers from running one or more third-party media players on Windows, but actually facilitates the development of those media players since many of them rely to a certain extent on that functionality.

361 Second, vendors of third-party media players are free to distribute their products widely, in particular by means of agreements with OEMs or by downloading over the Internet.

362 Third, under the United States Settlement, vendors of third-party media players are free to reach exclusive agreements with OEMs whereby the media functionality in their product is the only one offered to the end user.

363 Fourth, third-party media players can design their products in such a way that they can read files in Windows Media formats.

364 Fifth, the Commission itself has emphasised the ease with which consumers can download media players on their PCs. Furthermore, the Commission attributed no significance to the widespread distribution of media functionality in Windows when assessing the probability that, as a result of the AOL/Time Warner concentration, AOL's media player would shortly become the most popular player in the world (see paragraph 329 above)

365 Next, Microsoft contends that the Commission's position and the remedy imposed are based on excessively speculative reasoning, according to which the widespread distribution of media functionality in Windows will in future compel content providers to use Windows formats exclusively, which will drive all third-party media players out of the market. There is no evidence to support the Commission's speculation that any delay in implementing Article 6(a) of the Decision would 'tip' the scales in favour of Windows Media Player, which would drive out all competition.

366 Thus, first, the integration of media functionality into Windows has not prevented the emergence of third-party media players, as demonstrated by the example of iTunes. Microsoft also produces data which show that, between April 2003 and April 2004, although the use of Windows Media Player increased, both RealPlayer and QuickTime maintained the numbers of users.

367 Nor, second, is there the slightest evidence that content providers are 'inclining' towards Windows Media formats.

368 Third, the facts contradict the theory that removal of the Windows Media Player code is necessary because OEMs are not prepared to pre-install third-party media players if they are not allowed to distribute Windows without media functionality (recital 851 to the Decision).

369 Fourth, in its observations of 21 July 2004, the Commission maintains for the first time that 'even a 5% exclusive share of PCs with a third-party media player will provide incentives to software developers to also write applications for this media player'. That theory is incorrect, it confirms that the Commission's objective is to fragment Windows and it is at odds with the Commission's objective of increasing consumer choice.

370 Fifth, in its observations of 19 August 2004, Microsoft disputes the Commission's assertion that immediate implementation of the remedy is necessary to 'make consumer choice possible'.

371 Sixth, also in its observations of 19 August 2004, Microsoft states that third-party media players continue to be distributed in huge numbers and that large amounts of content continue to be encoded in non-Microsoft formats.

372 Seventh, in its observations on the statements in intervention, Microsoft further states that the implementation of the remedy provided for in Article 6(a) of the Decision in the 'end user' segment and the 'OEM' channel will not resolve any of the concerns underlying the Decision. In the first place, it is difficult to see what benefits an 'end user' could derive from an Article 6 version rather then a complete version of Windows, since both would be offered at the same price. In the second place, the Commission has not investigated the extent to which OEMs would be prepared to enter into exclusivity agreements for the client PCs which they distribute in the EEA.

– The damage resulting from the immediate implementation of Article 6(a) of the Decision

373 Microsoft maintains that the damage that would result from the immediate implementation of Article 6(a) of the Decision is real and significant, since implementation would not allow Microsoft to continue its long-standing and successful business model, as it has shown, it submits, in its arguments in respect of urgency. Furthermore, Microsoft, supported more broadly on that point by CompTIA, ACT, Mamut and TeamSystem, DMDSecure.com and Others and Exor, claims that account should be taken of the interests of software developers and website creators whose activities depend on a uniform Windows platform.

374 First, applications conceived on the premiss of Windows media functionality would not function properly on the Article 6 version.

375 Second, immediate implementation of Article 6(a) of the Decision would affect applications and websites currently under development and those which will be developed in the future, and that serious and irreparable damage could not be avoided by the installation of third-party media players.

376 Third, in its observations of 19 August 2004, Microsoft disputes the Commission's arguments, first, that software developers who develop applications that rely on Windows functionality may 'avail themselves' of the 'possibility "to redistribute the player as part of their application and from their [Internet] site"' and, second, that '[i]t is commonplace in the software industry for software developers to write their applications to accommodate the eventuality of dealing in an intelligent way with the possible absence of a media player (update)', so that 'any costs related to such adaptations of applications … are likely to be insignificant, or at least not exceed those normally incurred whenever Microsoft provides a new version (or update) of Windows'. In practice, in Microsoft's submission, the process of restoring media functionality in the Article 6 version would be just as complicated and onerous for others as for Microsoft.

377 Fourth, Microsoft states that in considering the various interests at stake in the present case, it is important to bear in mind the significance attributed in the proceedings before the District Court which upheld the United States Settlement to the interests of software developers and to the disadvantages resulting from the fragmentation of Windows.

– The Community's obligations under the TRIPS Agreement

378 Last, Microsoft requests the Court to consider the obligations imposed on the Community by the TRIPS Agreement.

b) Arguments of the Commission and the parties granted leave to intervene in support of the form of order sought by it

A prima facie case

379 The Commission, supported on this point by CCIA before it withdrew from the proceedings, contends that Microsoft's case is prima facie unfounded and must be rejected.

380 The Commission maintains that its findings with regard to tying are based on well-established legal and economic theories and that the tying abuse is consistent with the case-law on tying (recital 794 et seq. to the Decision). Microsoft does not put forward any increase in technical efficiencies for which the ‘integration’ of Windows media player in Windows would be a precondition (recitals 962 to 969 to the Decision).

381 Thus, first, as regards the existence of a foreclosure effect, the Commission fails to see at the outset how a difference from certain earlier cases to which Microsoft refers supports its claim that a new theory was applied in the present case. The fact that foreclosure is demonstrated where it is normally presumed does not mean that a new legal theory is being applied. The Commission accepts that the Decision, unlike those adopted in certain earlier cases (Case T-30/89 *Hilti* v *Commission* [1991] ECR II-1439, upheld by the Court of Justice in Case C–53/92 P *Hilti* v *Commission* [1994] ECR I-667, and *Tetra Pak* v *Commission*, paragraph 126 above, upheld by the Court of Justice in Case C-333/94 P *Tetra Pak* v *Commission* [1996] ECR I-5951), does not conclude that there was foreclosure from the market per se (recital 841 et seq.), but takes into account the specific circumstances of the case, i.e. the fact that media players may be downloaded, sometimes free of charge, over the Internet.

382 However, the evidence in the present case shows, first of all, that no other media player manufacturer can equal the ubiquity of Windows Media Player which results from its being tied with Windows and, moreover, that that situation is liable to have a significant effect on developers of complementary software and content. The reduction, by tying, of the applications and content available for other manufacturers’ media players is ultimately harmful to consumers as it reduces innovation in those products, irrespective of their intrinsic merits. Microsoft has put forward no objective justification for that practice.

383 Furthermore, Microsoft’s claim that the Commission’s findings of foreclosure are based on speculation is wrong in fact and in law. Recitals 879 to 896 to the Decision provide a clear description of the impact of tying on content providers and independent software developers. It follows from the Decision that Windows Media Player usage is increasing while, according to Microsoft itself, other media players are rated higher in terms of quality by users (recitals 948 to 951). Nor does the case-law require that the Commission demonstrate that all third-party media players have been eliminated from the market (judgments of 30 September 2003 in Case T-203/01 *Michelin* v *Commission*, not yet reported, paragraph 239; of 23 October 2003 in Case T-65/95 *Van den Bergh Foods* v *Commission*, not yet reported, paragraphs 149 and 160; and of 17 December 2003 in Case T–219/99 *British Airways* v *Commission*, not yet reported, paragraph 293).

384 Second, as regards the existence of distinct products, the Commission claims that the Court of Justice and the Court of First Instance have held that the existence of independent manufacturers specialising in the manufacture of the tied product already indicates a separate consumer demand and therefore a separate market for the tied product. That approach is also consistent with United States case-law.

385 Third, the arguments whereby Microsoft seeks to demonstrate that no coercion was exercised on consumers have already been rejected in the Decision.

386 Last, the Commission rejects the arguments put forward by Microsoft in respect of its two other pleas. First, as regards Microsoft’s reference to the Community’s obligations under the TRIPS Agreement, the Commission refers to its arguments relating to the remedy provided for in Article 5 (a) of the Decision (see paragraph 195 above). Second, the Commission submits that the remedy provided for in Article 6(a) of the Decision is proportionate, since Microsoft retains the right to offer a bundled version of Windows with Windows Media Player and since, even if some customers should choose the Article 6 version, they would still have the opportunity to complement that product with Windows Media Player, should they so desire.

Urgency

387 The Commission, supported on this point by RealNetworks and SIIA, and also by CCIA before it withdrew from the proceedings, maintains that Microsoft has not demonstrated the existence of serious and irreparable damage that would be caused to it by the immediate implementation of the Decision.

The balance of interests

388 The Commission maintains that the balance of interests tilts towards rejecting Microsoft's request, in particular as regards the public interest in maintaining, at least, effective competition. The media player market is approaching the stage at which it may be starting to tip. The Commission is supported on this point by RealNetworks and SIIA. The Commission adds in that regard that immediate implementation of the remedy would be unlikely to make a drastic change to Microsoft's position on the media player market but would simply allow a levelling of competition on that market and thus enable the status quo to be maintained as regards the structure of that market. Only immediate implementation of the remedy could preserve consumer choice and allow consumers to reap the benefits of innovation in digital media services.

389 As regards the risk of damage to third parties, the Commission disputes the arguments based on possible claims from certain software developers, certain web site developers and certain content providers. The Commission also plays down the risk that damage might be caused indirectly to the computer sector in general.

2. Findings of the President

a) A prima facie case

390 In the words of Article 2(b) of the Decision, Microsoft is stated to have infringed Article 82 EC by 'making the availability of the Windows Client PC Operating System conditional on the simultaneous acquisition of Windows Media Player from May 1999 until the date of [the] Decision'. In order to provide a remedy for that situation, Article 4 of the Decision requires Microsoft to bring that infringement to an end in accordance with Article 6 of the Decision. Article 6(a) of the Decision orders Microsoft to market 'a full-functioning version of the Windows Client PC Operating System which does not incorporate Windows Media Player'. The Decision states, however, that 'Microsoft … retains the right to offer a bundle of the Windows Client PC Operating System and Windows Media Player'.

391 In support of its claim that the prima facie case requirement is satisfied, Microsoft relies on a series of arguments made up essentially of five parts. It maintains, first, that the Commission applied in the Decision a speculative theory without any basis; second, that the Commission should have given greater weight to the advantages flowing from the Windows operating system design concept; third, that the decision fails to establish an infringement of Article 82 EC; fourth, that the Decision does not take sufficiently into account the obligations imposed on the Community by the TRIPS Agreement; and, fifth, that the remedy imposed by the Decision is disproportionate.

392 In the light of the arguments submitted by Microsoft in the interim measures proceedings, the fourth and fifth parts of its arguments cannot be considered sufficiently serious to constitute a prima facie case.

393 The part relating to the disproportionate nature of the remedy was presented in an excessively succinct manner by Microsoft in its application. Microsoft merely stated in that regard that 'the remedy imposed by the Decision [was] disproportionate'. It fails to explain, in particular, how the allegedly disproportionate character of the measure imposed by Article 6(a) of the Decision should be established by the Court. As regards the part relating to failure to observe the TRIPS Agreement, it was not developed sufficiently to enable the President to arrive at an informed decision. First, Microsoft merely stated in its application for interim measures that 'the Decision [did] not take sufficiently into account the obligations imposed on the European Communities by [the TRIPS Agreement]'. Second, the reference to the argument developed in annex T.9 was not held to be consistent with the applicable procedural rules (see paragraph 88 above).

394 The President considers, however, that Microsoft's other arguments raise complex issues which it is for the Court of First Instance to resolve in the main action and that those arguments cannot be regarded in the interim measures proceedings as prima facie unfounded.

395 First, this case raises a complex issue concerning the first part of Microsoft's argument, whereby Microsoft alleges in substance that the Commission unlawfully applied a new theory on tying.

396 By that argument, Microsoft essentially criticises the Commission for having concluded that the media player market would 'tip' in Microsoft's favour without making any attempt to reconcile that theory with the realities of the market. Microsoft relies in particular, first, on the fact that it is easy for users of Windows-based client PCs to access different media players using different formats and, second, on the fact that content providers make use of different formats. In that regard, Microsoft

claims that the Decision relies on pure supposition.

397 In the Decision, in order to arrive at the conclusion that the bundling of Windows Media Player with Windows constituted tying prohibited by Article 82 EC, first, the Commission considered that Microsoft held a dominant position on the client PC operating systems market (recital 799), which Microsoft does not dispute. Second, the Commission considered that streaming media players and client PC operating systems were distinct products (recitals 800 to 825). Third, the Commission considered that Microsoft did not allow its customers to obtain Windows without Windows Media Player (recitals 826 to 834). Fourth, the Commission examined the existence of foreclosure effects on the market. In that regard, it follows from recital 841 to the Decision that the Commission gave the following answer to Microsoft's arguments that the practice condemned by the Commission had no such effects: '[t]here are indeed circumstances relating to the tying of [Windows Media Player] which warrant a closer examination of the effects that tying has on competition in this case. While in classical tying cases, the Commission and the Courts considered the foreclosure effect for competing vendors to be demonstrated by the bundling of a separate product with the dominant product, in the case at issue, users can and do to a certain extent obtain third party media players through the Internet, sometimes ... free [of charge]. There are therefore indeed good reasons not to assume without further analysis that tying [Windows Media Player] constitutes conduct which by its very nature is liable to foreclose competition'. Consequently, in the light of the characteristics of the market in question, the Commission recognised that the present case presented specific features from the viewpoint of its previous practice and of what it considered to reflect the principles established in the Community case-law on tying.

398 For that reason, Microsoft's argument is likely to raise one or more important questions of principle which may affect the legality of the Commission's analysis. In that regard, it has consistently been held that 'abuse' is an objective concept referring to the behaviour of an undertaking in a dominant position which is such as to influence the structure of a market where, as a result of the very presence of the undertaking in question, the degree of competition is already weakened and which, through recourse to methods different from those governing normal competition in products or services on the basis of the transactions of commercial operators, has the effect of hindering the maintenance of the degree of competition still existing in the market or the growth of that competition (Case 85/76 *Hoffmann-La Roche* v *Commission*, [1979] ECR 461, paragraph 91; and Case T–228/97 *Irish Sugar* v *Commission* [1999] ECR II-2969, paragraph 111).

399 In the present case, the Commission considered, essentially, that the anti-competitive effect of the tying was the result of 'indirect network effects'. Those effects related to the fact that the presence of Windows Media Player in all the operating systems distributed by Windows gives content providers and applications manufacturers an incentive to design their products on the basis of Windows Media Player (recital 842). For the purpose of demonstrating that fact, the Commission relied largely on present or past factual material relating to the incentives for content providers and software developers (recitals 879 to 896). None the less, as may be seen in particular from recitals 842 and 984 to the Decision, that material supports what is at least in part a prospective analysis of the risks for competition resulting from the impugned practice.

400 Admittedly, as the Commission has noted, for the purpose of establishing an infringement of Article 82 EC, it is sufficient to show that the abusive conduct of the undertaking in a dominant position tends to restrict competition or, in other words, that the conduct is capable of having or likely to have that effect (*Michelin* v *Commission*, paragraph 383 above, paragraph 239, and *British Airways* v *Commission*, paragraph 383 above, paragraph 293). The present case none the less raises the complex question whether, and if so on what conditions, the Commission may rely on the probability that the market will 'tip' as a ground for imposing a sanction in respect of tying practised by a dominant undertaking where that conduct is not by nature likely to restrict competition, should that be the case.

401 Second, an important question arises in connection with the examination of Microsoft's argument that the Commission should have given greater weight to the positive effects of the Windows operating system 'design concept'. That argument might lead the Court of First Instance, in the main action, to consider on what conditions the existence of objective justification may permit the conclusion that a tying practice having anti-competitive effects is not prohibited by Article 82 EC. Prima facie, the resolution of that intricate question requires an examination of whether any positive effects associated with the increasing standardisation of certain products may constitute objective justification or whether, as the Commission contends, the positive effects of standardisation may be accepted only when they result from the operation of the competitive process or from decisions taken by standardisation bodies.

402 Third, over and above the questions of principle raised by the examination of these two parts, Microsoft disputes the scope of the factual premisses on which the Commission's analysis is based. It maintains, in particular, in relation to the first part of its argument, that the Commission's analysis relating to the existence of 'indirect network effects' is contradicted by the fact that content providers continue to have recourse to different formats. In that regard, it must be stated that the Commission has not disputed that that was the case, at least to a certain extent. It is for the Court of First Instance to rule, in the main action, on those factual questions and on the consequences, if any, to be drawn from them in regard to the validity of the Commission's analysis.

403 Fourth, Microsoft's argument that 'Windows and its media functionality' do not constitute two distinct products for the purposes of the application of Article 82 EC in regard to tying cannot, in the interim measures proceedings, be considered prima facie unfounded, regard being had in particular to the fact that for many years Microsoft and other manufacturers have integrated certain media functionalities in their client PC operating systems.

404 The first three parts of Microsoft's arguments therefore raise important questions, particularly in regard to the complex economic assessments which they entail both in law and in fact. The President considers that Microsoft's arguments cannot be regarded in the interim measures proceedings as prima facie unfounded, so that the prima facie case requirement is satisfied.

b) Urgency

405 Microsoft maintains that implementation of Article 6(a) of the Decision will irreversibly affect the value of the Windows platform, which would cause it to sustain two kinds of serious and irreparable damage. Those two kinds of damage must be assessed separately.

The alleged damage to the Windows operating system 'basic design concept'

406 Article 6(a) of the Decision requires Microsoft to design and place on the market a product which it does not currently market and which it states to be incompatible with a fundamental element of its business policy. More particularly, Microsoft maintains that Article 6(a) of the Decision causes damage to the Windows operating system 'basic design concept'. In substance, Microsoft thus invokes an interference with its commercial freedom.

407 In that regard, it is apparent from the case-file that Microsoft has for many years marketed an operating system which it regards as offering users common functionalities, which have been gradually expanded and which since 1992 have included, inter alia, certain media functionalities. It is also sufficiently clear from the case-file that Microsoft endeavours to ensure, at least generally, that the most recent version of its general-purpose Windows operating system will run applications designed for its earlier versions.

408 In this context, it should be emphasised that implementation of the Decision would require Microsoft to market an operating system without certain media functionalities which in its view form an integral part of that operating system. The Decision therefore interferes with Microsoft's commercial freedom. Furthermore, certain applications designed to function on the whole package consisting of Windows and Windows Media Player might not function satisfactorily in the Article 6 version, at least if that version should remain without a media player.

409 In that regard, the President recalls that, with regard to the principle of freedom to exercise business activities, which, according to the consistent case-law of the Court of Justice (Case 44/79 *Hauer* [1979] ECR 3727, paragraphs 31 to 33, and judgment of 9 September 2004 in Joined Cases C-184/02 and C-223/02 *Spain and Finland* v *Parliament and Council*, not yet reported, paragraph 51), forms part of the general principles of Community law, the undertakings active on the territory of the Community are free, in principle, to choose the commercial policy which they deem appropriate. That means, in particular, that it is in principle for each undertaking to decide freely on the nature and properties of the products which it intends to place on the market. However, it cannot be considered that an interference with an undertaking's business policy always constitutes serious and irreparable damage to that undertaking for the purposes of an application for interim measures. It is thus in the light of the circumstances of each case that the serious and irreparable nature of an interference with an undertaking's commercial freedom must be assessed (see paragraph 292 above).

410 In the circumstances of the present case it must be accepted that the interference with Microsoft's commercial freedom, when considered as such and independently of its actual effects on the

market, cannot be regarded as irreparable. Putting aside any consequences that the Decision may have on the market during the period before the possible annulment of the Decision, if it is annulled, it is not apparent that, if Microsoft is successful in the main proceedings, it would be unable to apply its 'basic design concept' again to all the products which it markets following annulment of the Decision. Consequently, in that situation, even on the assumption that Microsoft did demonstrate that the interference with its commercial freedom in itself constitutes serious damage, that damage would not appear to be irreparable.

411 It is none the less appropriate to examine whether, in the light of its actual consequences on the market during the period up to the judgment in the main proceedings, the interference with Microsoft's commercial freedom is likely to cause serious and irreparable damage to that undertaking. In that regard, it is necessary to take into account the consequences which might result for Microsoft, first, from being required to design the Article 6 version, second, from placing that version on the market and, third, from the possibility that it may be bought by Microsoft's customers.

412 First, Microsoft maintained at the hearing that even if the Article 6 version should not be bought in significant quantities, there would be damage to its 'design', particularly in the light of the 'futile exercise' that the design of the Article 6 version would constitute.

413 In so far as Microsoft thereby refers to the need to design the Article 6 version, it has not provided sufficient details of the disadvantage which would result from that obligation. For the sake of completeness, there is also every reason to think that the damage thereby suffered by Microsoft would essentially consist of development costs. In the absence of proof to the contrary, such damage would constitute financial damage, which, otherwise than in exceptional circumstances which are not present in this case, does not constitute irreparable damage (order of the President of the Court of Justice in Case C-213/91 R *Abertal and Others* v *Commission* [1991] ECR I-5109, paragraph 24; and order of the President of the Court of First Instance in Case T–53/01 R *Italian Post* v *Commission* [2001] ECR II-1479, paragraph 119).

414 Second, in so far as Microsoft's argument must be understood as meaning that it would suffer damage from the mere fact that it would be required to place the Article 6 version on the market, and irrespective of whether that version would actually be purchased, it has not provided sufficient details of the nature, the seriousness and the irreparability nature of those alleged disadvantages. In so far as Microsoft's argument must be understood to mean that it would suffer damage to its reputation, it will be examined together with the second head of damage on which it relies (see paragraphs 442 to 475 below).

415 At the hearing, Microsoft none the less further submitted that, even if there should be no demand for the Article 6 version, there would be uncertainty for third parties, in particular content providers. Content providers would not know the number of Article 6 versions delivered. That, in Microsoft's submission, would reduce the appeal of Windows.

416 In that regard, it must be borne in mind that the urgency of an application for interim measures must be assessed in relation to the necessity for an interim order in order to prevent serious and irreparable damage to the party applying for those measures (see the case-law cited at paragraph 240 above). Consequently, in so far as the uncertainty on which Microsoft relies may cause damage to third parties, it cannot be taken into account under the head of urgency (see, to that effect, order of the President of the Court of Justice in Case 112/88 *Crete Citron Producers Association* v *Commission* [1988] ECR 2597, paragraph 20). However, it is appropriate to examine Microsoft's arguments that the uncertainty created among third parties would, conversely, reduce the appeal of its platform.

417 First of all, Microsoft provides neither details nor evidence on which it might be possible to assess the precise nature, the existence, the seriousness and the irreparable nature of the reduction in the appeal of Windows that would be caused by that alleged uncertainty. On the assumption in particular that the reduced appeal on which Microsoft relies means that certain third parties relying on 'the stability of Windows' might decide, on account of the marketing of the Article 6 version, that they would no longer design their products for that platform, Microsoft does not adduce sufficient evidence to demonstrate that such a choice might be made by those operators in significant proportions.

418 On that point, the President observes for the sake of completeness that none of the parties which have intervened in support of the form of order sought by Microsoft has maintained that, owing to

the implementation of Article 6(a) of the Decision, it might cease to design its products for the Windows platform. Those parties stated that the implementation of Article 6(a) of the Decision was likely to cause them damage, since, in particular, it would mean that they would have to choose whether or not to adapt to the uncertainty created on the market. On the other hand, first, the possibility that they may choose not to adapt their products to the Article 6 version remains very largely hypothetical at this stage. Second, even on the assumption that the probability that those operators will not adapt their products to the Article 6 version were proved to the requisite legal standard, that, as the Commission emphasises, would not prove that they would however cease to design their products for the version of Windows including Windows Media Player. In fact, none of the interveners in support of the form of order sought by Microsoft maintained that, on account of the Decision, it might be led to design its products for a different operating system. Accordingly, it has not been shown that the reduction in the appeal of Windows, even vis-à-vis those interveners alone, could be significant for Microsoft in practice.

419 Last, at no point has Microsoft specifically demonstrated that the uncertainty as to the uniformity of the Windows platform would reduce its appeal for final consumers or its customers.

420 Third, it is appropriate to examine the consequences for Microsoft of the possibility that the Article 6 version would be purchased in significant quantities.

421 In that regard, it should be stated, by way of preliminary observation, that the remedy referred to in Article 4 and Article 6(a) of the Decision is intended to put an end to the infringement found by the Commission and does not prejudge future developments on the market. As the Commission noted at the hearing, the remedy does not preclude the possibility that Windows Media Player, regard being had to its own merits and as a result of competition which, in the Commission's submission, would be restored, will continue in practice always to be bought with Microsoft's operating system.

422 In addition, Microsoft expresses serious doubts as to the probability that the Article 6 version will sell in significant quantities.

423 In that regard, it follows from recitals 69 and 70 to the Decision that client PC operating systems are marketed essentially through two distribution channels: first, distribution to final consumers and, second, distribution to OEMs, who assemble client PCs and generally install an operating system.

424 As regards distribution to end users, Microsoft indicated in its observations on the statements in intervention, that, '[i]t is difficult to see what benefit a customer in that channel could possibly derive from obtaining the Article 6 version of Windows rather than the full-featured version of Windows, as both would be offered at the same price'. In the same observations, Microsoft states that '[i]t is difficult to see how a rational end user could ever opt for such a version'.

425 As regards OEMs, moreover, Microsoft states that 'it is conceivable that a third party media player vendor might seek to induce an OEM, by payment of compensation, to license the Article 6 version of Windows and bundle it, on an exclusive basis, with its media player'. However, Microsoft then criticises the Commission for having failed to analyse the extent to which OEMs would be prepared to enter into such agreements. It states that '[t]he fact that OEMs currently install multiple media players and that no media player vendor appears to have paid OEMs to remove visible access to Windows Media Player … suggests that media player vendors are not sufficiently interested in exclusive arrangements to pay for the Article 6 version of Windows'. Furthermore, at the hearing, although it continued to envisage the possibility that some of its competitors might enter into exclusivity agreements with OEMs, Microsoft repeated its doubts as to the potentially significant nature of sales of the Article 6 version.

426 It is thus clear that Microsoft seriously doubts that the Article 6 version will sell in significant quantities.

427 It is settled case-law that it is for the party applying for the interim measure to prove that it cannot wait for the outcome of the main proceedings without suffering serious and irreparable damage (see the case-law cited at paragraph 240 above). In that context, it is sufficient, particularly where the occurrence of the damage depends on the occurrence of a series of factors, that damage be foreseeable with a sufficient degree of probability (order in *Germany* v *Council*, paragraph 241 above, paragraphs 22 and 34, and order in *HFB and Others* v *Commission*, paragraph 241 above, paragraph 67). However, the applicant is still required to prove the facts forming the basis of its

claim that serious and irreparable damage is likely (order in *HFB and Others* v *Commission*, paragraph 241 above, paragraph 67).

428 In the present case, as Microsoft has failed to adduce sufficient evidence on which to take the opposite course, it is not for the judge dealing with the application for interim measures to prejudge the effect which the remedy imposed by Article 6(a) of the Decision will have on the market. It must therefore be held that, as Microsoft itself seems to agree, the possibility that sales of the Article 6 version may reach significant levels remains, at this stage and on the basis of the evidence before the President, very largely hypothetical.

429 The premiss on which the damage alleged by Microsoft is based in such a situation cannot therefore be regarded as demonstrated.

430 In any event, even on the assumption that Microsoft has demonstrated to the requisite legal standard the probability that the Article 6 version will sell in significant quantities, it should be noted that, as the Commission maintains, Microsoft does not rely in the present case on an irreversible development of the market as a result of those sales. Should the Decision be annulled, Microsoft would be able to resume marketing the single version of Windows with Windows Media Player and therefore apply, again and exclusively, what it regards as the ‘basic design concept’ of the Windows operating system. It has not been shown that there would be any obstacles capable of preventing Microsoft from regaining the position which it held on the market before the implementation of the remedy.

431 Those factors notwithstanding, Microsoft maintains that it would suffer serious and irreparable damage, for two distinct reasons.

432 In the first place, it claims that ‘the benefits flowing from uniformity of the Windows platform would be irreversibly lost’. Furthermore, the damage caused would not be made good by the annulment of the Decision, since ‘Microsoft’s engineers would have to assume that at least some copies of Windows distributed in the EEA will not have the media functionality’, which would require that they ‘take into account that two versions would be in existence for many years’.

433 However, Microsoft does not state in sufficient detail how the obligation imposed on its engineers would affect or render impossible the resumption of its ‘basic architectural design’ should the Decision be annulled. Thus, Microsoft does not explain first of all how, following the annulment of the Decision, it would be prevented from again distributing solely the version of Windows with Windows Media Player.

434 Microsoft next appears to take the view that the damage which it invokes would not be unlimited in time, since it would be encountered ‘for many years’.

435 Furthermore, Microsoft does not adduce evidence on which it would be possible to evaluate to the requisite legal standard the damage resulting from the additional efforts that its designers would have to make in order to take account of the existence of two versions. In the absence of detailed information in that regard, there is every reason to believe that those efforts would take the form of additional costs and, consequently, of financial damage, which, otherwise than in exceptional circumstances which are not present in this case, does not constitute irreparable damage (orders in *Abertal and Others* v *Commission*, paragraph 413 above, paragraph 24, and *Italian Post* v *Commission*, paragraph 413 above, paragraph 119).

436 Nor does Microsoft demonstrate how it would be impossible, or at least irreparably and seriously damaging, for it, in the event that Article 4 and Article 6(a) of the Decision were annulled, to ignore the existence of copies of the Article 6 version that would already have been marketed.

437 The first head of damage invoked by Microsoft cannot therefore substantiate the prospect of serious and irreparable damage.

438 In the second place, Microsoft contends that ‘third parties that depend on the stability and consistency of the Windows platform’ would also have to take account of the fact that two versions would be in existence for many years, ‘which would increase their costs and reduce the appeal of Windows on an ongoing basis’.

439 In that regard, it is appropriate to reiterate, in this context, the observations set out at paragraphs

421 to 428 above. It has not been demonstrated that there is a sufficiently significant risk in practice, even if the Article 6 version should sell in significant quantities, that the operators who currently design their products for Windows would cease to do so or that consumers, customers or other operators who in Microsoft's view rely on the stability of Windows might reduce their purchases or their use of Windows.

440 Last, as regards the two heads of damage invoked by Microsoft, in addition to the conclusion already drawn at paragraph 430 above, the President considers in any event that the Commission has put forward convincing evidence to show that, following the annulment of the Decision, Microsoft would be able to use certain mechanisms, in particular an update of its operating system, in order to distribute Windows Media Player and, consequently, to restore at least to a very large extent the tying of Windows Media Player with its operating system. Microsoft and the parties intervening in its support have not contradicted those assertions in sufficient detail to exclude the strong probability that Microsoft may distribute Windows Media Player in proportions quite sufficient to avoid the serious damage which it invokes.

441 It must therefore be concluded that Microsoft has not demonstrated that implementation of Article 6 (a) of the Decision would cause it serious and irreparable damage owing to the interference with its 'basic design concept' or, more generally, owing to an interference with its commercial freedom.

The alleged damage to Microsoft's reputation

442 Microsoft maintains that implementation of Article 6(a) of the Decision will damage its reputation as a 'a developer of quality software products', owing essentially to the malfunctions which it claims will affect the Article 6 version.

443 In the present case, the damage alleged by Microsoft relies largely on the premiss that the Article 6 version of Windows will affect the functioning of applications and websites that call upon certain functionalities of Windows Media Player and also on certain parts of the Windows operating system itself.

444 It is therefore first of all necessary to assess the extent to which the problems to which Microsoft refers exist and, if so, whether they could easily be avoided.

445 In that regard, it should be noted at the outset that, in answer to the questions put by the President, the Commission stated that in its view a product having the characteristics referred to by Microsoft – i.e. a product which would not allow the operating system to call upon the functionalities mentioned by Microsoft as missing – would constitute a 'full-functioning' version of Windows, within the meaning of Article 6(a) of the Decision, provided that those functionalities are indeed the ones normally provided by Windows Media Player.

446 It is then appropriate to examine separately, first, the problems which, in Microsoft's submission, would affect the functioning of the Windows operating system and, second, those which it claims would affect the functioning of certain applications and certain websites.

447 As regards, first, the problems which, in Microsoft's submission, would affect the functioning of the Windows operating system, RealNetworks has designed and produced a series of tests to show that they can be resolved by installing a third-party media player. Microsoft does not dispute that that is the case for some of the problems referred to, but none the less maintains that unresolved problems would persist and that the extent to which they could be cured would depend on the media player installed.

448 In the light of the evidence adduced by the parties, the President considers that it has not been shown that third-party media players could guarantee in all circumstances full replacement of the functionalities identified by Microsoft. The replacement of those functionalities depends closely on the technical possibilities of the media player installed. On the other hand, the installation of such a media player could enable those various functionalities to be replaced to a reasonably large extent.

449 As regards, second, the problems concerning the use of certain applications and certain websites, in the light of the evidence adduced by the parties intervening in support of the form of order sought by the Commission, it should also be noted that the functionalities concerned may to a large extent be replaced by the installation of third-party media players. Furthermore, even if there were a cost involved for them, there would be a strong incentive for website and applications designers who

currently rely on Windows Media Player to encourage users to download the software or to distribute it themselves under the licences normally granted by Microsoft for that purpose.

450 The factors mentioned in the three preceding paragraphs substantially reduce the probability that the problems to which Microsoft refers may be detected by final consumers.

451 In its observations on the statements in intervention and at the hearing, Microsoft did admittedly maintain that the alleged problems could be resolved, in the tests carried out by RealNetworks, only if certain Windows Media Player codes are installed. That point was not formally contradicted by the Commission or by RealNetworks in the case of the problems relating to the functioning of certain applications and certain websites. RealNetworks none the less stated that the installation of the codes had been effected by the applications themselves, or, in the case of the websites, by means of a downloading device available on those sites. The parties therefore agree in part on Microsoft's argument. None the less, that argument still has no bearing on the assessment of the urgency in ordering the requested suspension of implementation. It is immaterial in the present case that certain of the problems alleged by Microsoft can be cured only if certain Windows Media Player codes, or even, where appropriate, all the Windows Media Player codes, are installed, by the actual application concerned or via the website itself, if installation of those codes can effectively resolve a sufficient part of the problems alleged by Microsoft.

452 Also irrelevant is Microsoft's argument that the differentiated reinstallation of certain Windows Media Player codes would cause security or stability problems to the Article 6 version. Microsoft has not adduced evidence to show that the possible installation of old Windows Media Player codes might cause instability in the operating system or that other problems of that type might be encountered. Last, in so far as Microsoft means that the addition of distinct codes on various copies of the Article 6 versions calls in question the uniformity of its platform, it adds nothing to the argument relating to the interference with its 'basic design concept', which has already been rejected above (see paragraphs 406 to 441 above).

453 It has therefore not been demonstrated that the problems invoked by Microsoft could not be avoided, at least to a large extent.

454 In the second place, and in any event, in so far as certain of the problems alleged by Microsoft remain, it must be held that Microsoft has not adduced before the President evidence demonstrating to the requisite legal standard that end consumers or, more generally, its customers would associate any absence or malfunction of those functionalities with an unforeseen malfunction of Microsoft's product rather than with the normal consequences of the absence of a media player and, more specifically, of Windows Media Player. Even on the assumption that all the problems mentioned by Microsoft exist and cannot be avoided, Microsoft has not proved that it would be unable to warn its customers of the objective characteristics of the Article 6 version and thus induce them to make choices in full knowledge of the facts, or that it would be prohibited by the Decision from doing so.

455 In that regard, Microsoft has indeed maintained that it would not be possible for it to carry out the tests which would enable it to identify all the defects in the Article 6 version and, in particular, all the applications that would not function on that version. However, it has not adduced any evidence permitting an assessment of the impossibility of carrying out those tests for the problems which it claims would be caused to its operating system. As regards, next, the tests necessary to evaluate the proper functioning of certain applications and certain websites, Microsoft has not shown how the mere fact that its customers are aware that Windows Media Player is not present in the Article 6 version is not sufficient to inform them of the possibility that certain applications and certain websites which rely on the functionalities of Windows Media Player may not function properly.

456 More generally, it should be emphasised that the Commission has expressly stated that in its view Microsoft is entitled to inform its customers that Windows Media Player is absent from the Article 6 version. Microsoft has not demonstrated that that knowledge alone would not be sufficient for its customers to understand the consequences which their choice may have for the availability of certain media functionalities.

457 As regards the direct distribution of its products to final consumers, although Microsoft maintains that few of them understand the way in which Windows applications call upon media functionality, it adduces no evidence to support its allegations and which would permit an assessment of the real extent of consumers' ignorance.

458 As regards the distribution to OEMs, there is every reason to think that they are particularly discriminating purchasers and that they are therefore able to make choices in a particularly informed way. If, consequently, the Article 6 version displays the incurable problems to which Microsoft refers, then, in the absence of proof to the contrary, there is every reason to think either that that version will quite simply not be bought by those OEMs or that they will buy it with full knowledge of the facts and therefore without any damage to Microsoft.

459 In those circumstances, it has not been shown that the fact that a customer of Microsoft, of whatever type, chooses the Article 6 version and encounters the problems to which Microsoft refers would be capable of injuring Microsoft's reputation.

460 In the third place, even on the assumption that it has been demonstrated to the requisite legal standard, first, that none of the problems alleged by Microsoft could be avoided and, second, that customers and consumers could not make an informed choice, Microsoft has not adduced evidence permitting an assessment of the real seriousness of those defects and, in particular, the extent to which they might have specific effects on its reputation with the various operators in the sector.

461 Microsoft does not adduce any evidence to demonstrate that the defects which it identifies would be likely to have a substantial effect on the perception of final consumers and OEMs. In particular, it adduces no evidence relating to the way in which those operators perceive the functionalities which it describes in its application as defective. In that regard, Microsoft on a number of occasions mentions the 'My Music' folder, which provides a detailed view of the files recorded on the hard disk of a client PC and, more particular, of certain digital media contents. Microsoft claims that the Article 6 version would not allow such a detailed view, with or without a third-party media player. None the less, it adduces no evidence which would permit the President to evaluate the probability that that problem is perceived sufficiently readily by final consumers. Nor does Microsoft demonstrate that that problem, on the assumption that it is readily perceived, would be likely to have a significant effect on its reputation. Accordingly, in the absence of sufficient evidence of the actual importance of the functionalities in question for final consumers and of their expectations, the President is unable to evaluate the real consequences of the problems for its reputation which Microsoft invokes.

462 Microsoft has also failed to prove that the implementation of Article 4 and Article 6(a) of the Decision would have significant effects on its reputation with economic operators other than its customers and, in particular, on its reputation with website designers and software developers. In that regard, it is significant that none of the parties intervening in support of Microsoft has indicated that its own perception of Microsoft might be altered or that it might no longer design its products with a view to their being used with Microsoft's products.

463 In the fourth place, it is not apparent that Windows Media Player would not be readily available and could not be easily installed in the Article 6 version. Consequently, even on the assumption that certain consumers or customers should not make an informed choice and therefore prove to be somewhat dissatisfied, Microsoft has not demonstrated how that situation could not readily be resolved if the persons concerned were informed that they could subsequently obtain Windows Media Player.

464 In the fifth place, and still on the assumption that the alleged defects should be proved to the requisite legal standard and be incurable, the seriousness of the adverse effect on Microsoft's reputation would to a large extent depend on the actual distribution of the Article 6 version. It is appropriate to repeat, in that context, the finding already made (see paragraphs 421 to 428 above) that, on the one hand, in the absence of sufficient evidence, it is not for the judge hearing the application for interim measures to prejudge the effects of the remedy on the market and, on the other hand, Microsoft itself expresses doubts as to the extent of sales of the Article 6 version and does not claim that there is a risk of an irreversible development on the market.

465 In the sixth place, even on the assumption that, in spite of all of the foregoing, Microsoft has demonstrated to the requisite legal standard that there is a risk of serious harm to its reputation, it has not demonstrated that there are any structural or legal obstacles preventing it from implementing the publicity measures which would allow it to restore its reputation.

466 Microsoft has therefore not succeeded in demonstrating that implementation of Article 4 and Article 6(a) of the Decision is likely to cause serious and irreparable damage to its reputation.

467 However, Microsoft invokes the existence of damage to its reputation from two further and more

specific aspects, namely damage to its trade marks and breach of its copyright.

– The alleged damage to Microsoft's trade marks

468 As regards, first, the damage to Microsoft's trade marks, in so far as it is supposed to cause damage to its reputation, or be the result of that damage, owing in particular to the poor quality of the Article 6 version, that argument must be rejected on the grounds already stated at paragraphs 454 to 459 above. Microsoft has not demonstrated, in particular, that the alleged defects, even on the assumption that they exist, would have a negative and significant effect on the perception of final consumers. The argument developed in the 'Trade Marks Opinion' (annex R.6) attached to Microsoft's application must therefore be rejected.

469 Furthermore, in so far as Microsoft's argument means that its Windows trade mark would no longer guarantee the presence of its 'basic concept', the President recalls that the essential function of the trade mark is to guarantee the identity of the origin of the marked goods or services to the consumer or end user by enabling him, without any possibility of confusion, to distinguish the goods or service from others which have another origin. For the trade mark to be able to fulfil its essential role in the system of undistorted competition which the EC Treaty seeks to establish, it must offer a guarantee that all the goods or services bearing it have been produced under the control of a single undertaking which is responsible for their quality (see, in particular, judgment of 29 April 2004 in Case C-371/02 *Björnekulla Fruktindustrier*, not yet reported, paragraph 20). In so far as the trade mark makes it possible to guarantee the presence of certain objective characteristics of a product, as Microsoft appears to contend, the President does not in any event have evidence allowing him to assess with sufficient precision, beyond the perception which Microsoft has of its 'basic concept' and its trade mark, the way in which that trade mark is actually perceived by customers on the relevant market. That is the case, in particular, of the evidence which permits an assessment, from the customers' point of view, of the objective characteristics which might be associated with it and, where appropriate, the real gravity of a variation in those characteristics.

470 In any event, since, first, should Article 6(a) of the Decision be annulled, Microsoft would again be able to market solely the version of Windows with Windows Media Player and, second, Microsoft has not demonstrated that it would be impossible for it to implement appropriate publicity measures, where necessary, it has not demonstrated that the alleged damage to its trade mark, on the assumption that it is established and serious, would be irreparable.

– The alleged breach of Microsoft's copyright

471 As regards, last, the alleged breach of Microsoft's copyright, it must be stated by way of preliminary observation that Microsoft has not indicated how breach of its copyright could be linked to the damage to its reputation which it alleges.

472 Furthermore, Microsoft's argument on that point is very succinct and particularly vague. In that context, it does not refer to any specific rules to the effect that the fact that it itself adapts its work – albeit under compulsion – would constitute a breach of its copyright.

473 Moreover, the mere fact that a Commission decision may to a certain extent affect intellectual property rights is, in the absence of further explanation, insufficient to support the conclusion that there is serious and irreparable damage, at least independently of the actual effects of that breach. In the present case, the only actual effects alleged by Microsoft are those which have been previously described and rejected as not sufficient to constitute serious and irreparable damage (paragraphs 411 to 466 above).

474 Last, in so far as Microsoft indicates that the circulation of copies of the Article 6 version, i.e. of a mandatory adaptation of its work, would cause it non-pecuniary damage, that damage, in the absence of proof to the contrary, would be neither serious nor irreparable. That is *a fortiori* the case when, as already found above (paragraphs 422 to 429 above), it is not demonstrated that the Article 6 version might be distributed in significant quantities or that the subsequent distribution of Windows Media Player would not to a very large extent provide a remedy for the distribution of the Article 6 version.

475 Microsoft has therefore failed to demonstrate that implementation of Article 6(a) of the Decision would be likely to cause it serious and irreparable damage by reason of damage to its reputation.

476 Consequently, Microsoft has not shown that the implementation of Article 6(a) of the Decision was likely to cause it serious and irreparable damage. Consequently, without there being any need to balance the interests at stake, the application for suspension of operation of Article 6(a) must be dismissed.

477 As regards the application for suspension of Article 4 of the Decision (paragraph 27 above), it cannot be upheld. First, the first subparagraph of that article refers to Articles 5 and 6 of the Decision. The lack of urgency in ordering suspension of operation of Articles 5 and 6 therefore necessarily entails dismissal of the application for suspension of operation of that reference provision. Second, in so far as the application for interim measures seeks suspension of operation of the second subparagraph of Article 4 of the Decision, it is sufficient to state that Microsoft has not developed sufficient argument to support that form of order and that, in any event, at this stage the effects of the prohibition referred to in that article remain purely hypothetical.

478 The application must therefore be dismissed in its entirety.

On those grounds,

THE PRESIDENT OF THE COURT OF FIRST INSTANCE

hereby orders:

1. **The request for confidential treatment submitted by Microsoft Corporation is granted at the interim measures stage;**

2. **Audiobanner.com, trading as VideoBanner, is granted leave to intervene in support of the form of order sought by the Commission in the interim measures proceedings;**

3. **The Computer & Communications Industry Association is removed from the case as intervener in support of the form of order sought by the Commission in the interim measures proceedings;**

4. **Novell Inc. is removed from the case as intervener in support of the form of order sought by the Commission in the interim measures proceedings;**

5. **The application for interim measures is dismissed;**

6. **Costs are reserved.**

Luxembourg, 22 December 2004.

Case T-201/04 R

Microsoft Corp.

v

Commission of the European Communities

(Proceedings for interim relief – Intervention)

Summary of the Order

1. *Procedure – Intervention – Conditions of admissibility – Direct and present interest*

   (Statute of the Court of Justice, Arts 40, second para., and 53, first para.)

2. *Procedure – Intervention – Applications for interim measures – Conditions of admissibility – Interest in the result of the interim proceedings – Appraisal in the light of the consequences on the economic or legal position of the parties seeking leave to intervene*

   (Statute of the Court of Justice, Arts 40, second para., and 53, first para.)

3. *Procedure – Intervention – Applications for interim measures – Conditions of admissibility – Direct and present interest – Appraisal having regard to the specific nature of the proceedings for interim relief – Broad interpretation*

   (Statute of the Court of Justice, Arts 40, second para., and 53, first para.)

4. *Procedure – Intervention – Interested persons – Representative association having as its object the protection of its members – Admissibility in cases raising questions of principle liable to affect those members – Conditions – Broad interpretation*

   (Statute of the Court of Justice, Arts 40, second para., and 53, first para.)

1. An interest in the result of a case within the meaning of the second paragraph of Article 40 of the Statute of the Court of Justice, which is applicable to the Court of First Instance by virtue of the first paragraph of Article 53 of that Statute, must be understood as being a direct and present interest in the granting of the form of order sought by the party whom the prospective intervener wishes to support. To that end, it is necessary, in order to grant leave to intervene, to determine that the prospective intervener is directly affected by the contested measure and that his interest in the result of the case is established.

   (see para. 32)

2. When the application for leave to intervene is made in proceedings for interim measures, the interest in the result of the case must be understood as being an interest in the result of the interim proceedings. In the same way as the result of the main proceedings, the result of the interim relief proceedings may adversely affect the interests of third parties or be favourable to them. It follows that, in interim relief proceedings, the interests of the parties seeking leave to intervene must be appraised in the light of the consequences which granting the interim relief sought or rejecting that request may have on those parties' economic or legal position.

   (see para. 33)

3. The direct and present nature of the interest in the result of interim relief proceedings must be appraised having regard to the specific nature of such proceedings. In interim relief proceedings, the

interest invoked by the intervener is, if appropriate, taken into account in the balancing of interests. It is even possible that the balancing of the interests involved will prove to be decisive once the judge with responsibility for granting interim relief has formed the view, in his analysis of the request before him, that the conditions relating to a prima facie case and urgency are satisfied. The notion of an interest in the result of a case should therefore be given a broad interpretation by the judge responsible for granting interim relief in order to ensure that the appraisal of the various interests in issue is not prejudiced.

(see para. 34)

4. Representative associations whose object is to protect their members may be granted leave to intervene in cases raising questions of principle that are liable to affect those members. More particularly, an association may be granted leave to intervene in a case if it represents an appreciable number of undertakings active in the sector concerned, if its objects include that of protecting its members' interests, if the case may raise questions of principle affecting the functioning of the sector concerned, and if the interests of its members may therefore be affected to an appreciable extent by the forthcoming judgment or order.

The adoption of a broad interpretation of the right of associations to intervene is intended to facilitate assessment of the context of such cases while avoiding multiple individual interventions which would compromise the effectiveness and proper course of the procedure.

(see paras 37-38)

ORDER OF THE PRESIDENT OF THE COURT OF FIRST INSTANCE
26 July 2004 (1)

(Proceedings for interim relief – Intervention)

In Case T-201/04 R,

Microsoft Corp., having its registered offices in Redmond, Washington (United States), represented by J.-F. Bellis, lawyer, and I.S. Forrester QC,

applicant,

v

Commission of the European Communities, represented by R. Wainwright, W. Mölls, F. Castillo de la Torre and P. Hellström, acting as Agents, with an address for service in Luxembourg,

defendant,

APPLICATION for suspension of the application of Articles 4, 5(a), 5(b), 5(c) and 6(a) of Commission Decision C(2004)900 final of 24 March 2004 relating to a proceeding under Article 82 of the EC Treaty (Case COMP/C–3/37.792 – Microsoft),

THE PRESIDENT OF THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES,

makes the following

Order

The contested decision

1 Microsoft Corp. ('Microsoft') develops and markets a variety of software products, including operating systems for personal computers and servers.

2 On 24 March 2004 the Commission adopted a decision relating to a proceeding under Article 82 EC in Case COMP/C-3/37.792 – Microsoft ('the Decision'). According to the Decision, Microsoft had infringed Article 82 EC and Article 54 of the Agreement on the European Economic Area ('EEA') by committing two abuses of a dominant position.

3 The first abuse established in the Decision consists in Microsoft's refusal to supply to its competitors, over the period from October 1998 to the date on which the Decision was adopted, 'interoperability information', as defined in Article 1 of the Decision, and to allow the use of such information for the development and distribution of products in competition with Microsoft's own products on the market for work group server operating systems (Article 2(a) of the Decision).

4 The second established abuse, according to the Decision, lay in the fact that Microsoft had, for the

period from May 1999 to the date on which the Decision was adopted, made availability of the Windows client personal computer operating system conditional on the simultaneous acquisition of the Windows Media Player software (Article 2(b) of the Decision).

5 Those two abuses were penalised by the Commission through the imposition of a fine amounting to EUR 497 196 304 (Article 3 of the Decision).

6 Under Article 4 of the Decision, Microsoft is required to bring to an end the infringements referred to in Article 2 in accordance with Articles 5 and 6 of the Decision. Microsoft is also required to refrain from repeating any act or conduct described in Article 2 and to refrain from any act or conduct having the same or equivalent object or effect.

7 By way of remedy for the first infringement, Article 5 of the Decision orders Microsoft to act as follows:

‘(a) Microsoft Corporation shall, within 120 days of the date of notification of this Decision, make the *Interoperability Information* available to any undertaking having an interest in developing and distributing work group server operating system products and shall, on reasonable and non-discriminatory terms, allow the use of the *Interoperability Information* by such undertakings for the purpose of developing and distributing work group server operating system products;

(b) Microsoft Corporation shall ensure that the *Interoperability Information* made available is kept updated on an ongoing basis and in a *Timely Manner*;

(c) Microsoft Corporation shall, within 120 days of the date of notification of this Decision, set up an evaluation mechanism that will give interested undertakings a workable possibility of informing themselves about the scope and terms of use of the *Interoperability Information*; as regards this evaluation mechanism, Microsoft Corporation may impose reasonable and non-discriminatory conditions to ensure that access to the *Interoperability Information* is granted for evaluation purposes only’.

8 The date on which the 120-day period referred to in Article 5 of the Decision expires is 27 July 2004.

9 By way of remedy for the second infringement, Article 6 of the Decision orders as follows:

‘(a) Microsoft Corporation shall, within 90 days of the date of notification of this Decision, offer a full-functioning version of the *Windows Client PC Operating System* which does not incorporate *Windows Media Player*; Microsoft Corporation retains the right to offer a bundle of the *Windows Client PC Operating System* and *Windows Media Player*;

…’.

10 The date on which the 90-day period referred to in Article 6 of the Decision expires is 28 June 2004.

Procedure and arguments of the parties

11 By application lodged with the Registry of the Court of First Instance on 7 June 2004, Microsoft brought an action under the fourth paragraph of Article 230 EC in which it seeks the annulment of the Decision or, in the alternative, the annulment of or substantial reduction in the fine imposed.

12 By separate document lodged with the Registry of the Court of First Instance on 25 June 2004, Microsoft also applied under Article 242 EC for suspension of the operation of Articles 4, 5(a), 5(b), 5(c) and 6(a) of the Decision. By that document Microsoft also seeks, on the basis of Article 105(2) of the Court’s Rules of Procedure, suspension of the operation of those provisions until such time as there has been a decision on the application for interim relief.

13 Also on 25 June 2004, the President of the Court of First Instance, acting in his capacity as the judge responsible for dealing with the application for interim relief, requested the Commission to specify whether it intended to proceed with enforcement of the Decision before a ruling has been made on the application for interim relief.

14 By letter received at the Court Registry on 25 June 2004, the Commission informed the President of its decision not to proceed with enforcement of Articles 5(a), 5(b), 5(c) and 6(a) of the Decision pending the outcome of the proceedings for interim relief.

15 By application lodged with the Court Registry on 25 June 2004, Novell Inc. ('Novell'), established in Waltham, Massachussets (United States), represented by C. Thomas, M. Levitt, V. Harris, Solicitors, and A. Müller-Rappard, lawyer, requested leave to intervene in the interim relief proceedings in support of the form of order sought by the Commission.

16 By application lodged with the Court Registry on 30 June 2004, RealNetworks Inc. ('RealNetworks'), established in Seattle, Washington (United States), represented by A. Winckler, M. Dolmans and T. Graf, lawyers, requested leave to intervene in the interim relief proceedings in support of the form of order sought by the Commission.

17 By application lodged with the Court Registry on 30 June 2004, Computer & Communications Industry Association ('CCIA'), established in Washington, DC (United States), represented by J. Flynn QC and D. Paemen and N. Dodoo, lawyers, requested leave to intervene in the interim relief proceedings in support of the form of order sought by the Commission.

18 By application lodged with the Court Registry on 1 July 2004, Software & Information Industry Association ('SIIA'), established in Washington, DC (United States), represented by C.A. Simpson, Solicitor, requested leave to intervene in the interim relief proceedings in support of the form of order sought by the Commission.

19 By application lodged with the Court Registry on 1 July 2004, The Computing Technology Industry Association Inc. ('CompTIA'), established in Oakbrook Terrace, Illinois (United States), represented by G. Van Gerven and T. Franchoo, lawyers, and B. Kilpatrick, Solicitor, requested leave to intervene in the interim relief proceedings in support of the form of order sought by Microsoft.

20 By application lodged with the Court Registry on 2 July 2004, The Association for Competitive Technology ('ACT'), established in Washington, DC (United States), represented by L. Ruessmann, lawyer, requested leave to intervene in the interim relief proceedings in support of the form of order sought by Microsoft.

21 By application lodged with the Court Registry on 5 July 2004, Digimpro Ltd, established in London (United Kingdom), TeamSystem SpA, established in Pesaro (Italy), Mamut ASA, established in Oslo (Norway), and CODA Group Holdings Ltd, established in Chippenham, Wiltshire (United Kingdom) (hereinafter referred to collectively as 'Digimpro and Others'), represented by G. Berrisch, lawyer, requested leave to intervene in the interim relief proceedings in support of the form of order sought by Microsoft.

22 By application lodged with the Court Registry on 5 July 2004, DMDsecure.com BV, established in Amsterdam (Netherlands), MPS Broadband AB, established in Stockholm (Sweden), Pace Micro Technology plc, established in Shipley, West Yorkshire (United Kingdom), Quantel Ltd, established in Newbury, Berkshire (United Kingdom), and Tandberg Television Ltd, established in Southampton, Hampshire (United Kingdom) (hereinafter referred to collectively as 'DMDsecure.com and Others'), represented by J. Bourgeois, lawyer, requested leave to intervene in the interim relief proceedings in support of the form of order sought by Microsoft.

23 By application lodged with the Court Registry on 8 July 2004, IDE Nätverkskonsulterna AB, established in Stockholm, Exor AB, established in Uppsala (Sweden), T. Rogerson, residing in Harpenden, Hertfordshire (United Kingdom), P. Setka, residing in Sobeslav (Czech Republic), D. Tomicic, residing in Nuremberg (Germany), M. Valasek, residing in Karlovy Vary (Czech Republic), R. Rialdi, residing in Genoa (Italy), and B. Nati, residing in Paris (France) (hereinafter referred to collectively as 'IDE Nätverkskonsulterna and Others'), represented by S. Martínez Lage and H. Brokelmann, lawyers, requested leave to intervene in the interim relief proceedings in support of the form of order sought by Microsoft.

24 In accordance with Article 116(1) of the Rules of Procedure, those applications for leave to intervene were served on the applicant and defendant.

25 By letter of 6 July 2004, received on the same date at the Court Registry, Microsoft informed the Court that it had no objections to the application by RealNetworks for leave to intervene. By letter

of 7 July 2004, received on the same date at the Court Registry, Microsoft submitted observations on the application by Novell for leave to intervene. Microsoft did not lodge observations within the prescribed period on the other applications for leave to intervene.

26 In regard to all of the parties which might be granted leave to intervene, Microsoft, by letters of 6 July and 8 July 2004, requested confidential treatment of the data contained in the Decision which the Commission had accepted would not be made public in the version available on its internet site.

27 By letters of 6 July 2004, received at the Court Registry on 7 July 2004, the Commission informed the Court that it had no objections in regard to the applications for leave to intervene lodged respectively by Novell, RealNetworks, CCIA and SIIA, and stated that it was not seeking any confidential treatment. By contrast, the Commission took the view that the application by CompTIA for leave to intervene ought to be rejected.

28 By letter of 13 July 2004, received at the Court Registry on the same date, the Commission informed the Court that it had no objections to the application by ACT for leave to intervene and that it was not seeking any confidential treatment.

29 By letter of 13 July 2004, and subsequently by letters of 14 July 2004, on the other hand, the Commission submitted observations on the applications for leave to intervene that had been submitted respectively by Digimpro and Others, DMDsecure.com and Others, and by IDE Nätverkskonsulterna and Others.

30 The Commission submitted its written observations on the application for interim relief on 21 July 2004. Those observations were notified to Microsoft on the same date.

The applications for leave to intervene

31 Under the second paragraph of Article 40 of the Statute of the Court of Justice, which is applicable to the Court of First Instance by virtue of the first paragraph of Article 53 of that Statute, the right of an individual to intervene is subject to the condition that that individual is in a position to establish an interest in the result of the case in question.

32 An interest in the result of a case must be understood as being a direct and present interest in the granting of the form of order sought by the party whom the prospective intervener wishes to support (order of the President of the Court of Justice in Case C-186/02 P *Ramondín and Ramondín Cápsulas* v *Commission* [2003] ECR I-2415, paragraph 7). To that end, it is necessary, in order to grant leave to intervene, to determine that the prospective intervener is directly affected by the contested measure and that his interest in the result of the case is established (order of the President of the Court of Justice in Joined Cases C-151/97 P(I) and C-157/97 P(I) *National Power and PowerGen* [1997] ECR I-3491, paragraph 53).

33 When the application for leave to intervene is made in proceedings for interim measures, the interest in the result of the case must be understood as being an interest in the result of the interim proceedings (see, to that effect, the order of the President in Case T-65/98 R *Van den Bergh Foods* v *Commission* [1998] ECR II-2641, paragraphs 26 and 27). In the same way as the result of the main proceedings, the result of the interim relief proceedings may adversely affect the interests of third parties or be favourable to them. It follows that, in interim relief proceedings, the interests of the parties seeking leave to intervene must be appraised in the light of the consequences which granting the interim relief sought or rejecting that request may have on those parties' economic or legal position.

34 It is necessary to point out that the direct and present nature of the interest in the result of interim relief proceedings must be appraised having regard to the specific nature of such proceedings. In interim relief proceedings, the interest invoked by the intervener is, if appropriate, taken into account in the balancing of interests (see, in that regard, the order of the President of the Court of Justice in Case C-329/99 P(R) *Pfizer Animal Health* v *Council* [1999] ECR I-8343). It is even possible that the balancing of the interests involved will prove to be decisive once the judge with responsibility for granting interim relief has formed the view, in his analysis of the request before him, that the conditions relating to a *prima facie* case and urgency are satisfied. The notion of an interest in the result of a case should therefore be given a broad interpretation by the judge responsible for granting interim relief in order to ensure that the appraisal of the various interests in issue is not prejudiced.

35 In any event, the appraisal by the judge responsible for granting interim relief of the interest in the result of the case before him cannot affect the appraisal by the Court when dealing with an application for leave to intervene in the main proceedings.

36 The applications for leave to intervene brought by associations of undertakings and those brought on an individual basis, including those brought by companies, shall now be examined in turn.

The applications brought by associations of undertakings

37 According to settled case-law, intervention is permissible by representative associations whose object is to protect their members in cases raising questions of principle that are liable to affect those members (orders in *National Power and PowerGen*, cited above in paragraph 32, paragraph 66, and in Case C-151/98 P *Pharos* v *Commission* [1998] ECR I-5441, paragraph 6; orders in Case T-13/99 R *Pfizer Animal Health* v *Council* [1999] ECR II-1961, paragraph 15, and in Case T-53/01 R *Poste Italiane* v *Commission* [2001] ECR II-1479, paragraph 51). More particularly, an association may be granted leave to intervene in a case if it represents an appreciable number of undertakings active in the sector concerned, if its objects include that of protecting its members' interests, if the case may raise questions of principle affecting the functioning of the sector concerned, and if the interests of its members may therefore be affected to an appreciable extent by the forthcoming judgment or order (see, to that effect, the order in Case T-87/92 *Kruidvat* v *Commission* [1993] ECR II-1375, paragraph 14).

38 Moreover, the adoption of a broad interpretation of the right of associations to intervene is intended to facilitate assessment of the context of such cases while avoiding multiple individual interventions which would compromise the effectiveness and proper course of the procedure (order in *National Power and PowerGen,* cited above in paragraph 32, paragraph 66).

39 It is in the light of the conditions and considerations thus set out that the question whether CCIA, SIIA, CompTIA and ACT should be granted leave to intervene falls to be examined.

The application submitted by CCIA

40 CCIA is an association which groups together undertakings operating within the information technology and telecommunications sectors. CCIA is seeking leave to intervene in support of the form of order sought by the Commission. It states in this regard that it has legal personality, that its objects and activities include representation of its members and defence of their interests, that it represents an appreciable number of undertakings active in the relevant sectors and that the present case raises questions of principle that are liable to affect its members.

41 CCIA states that its members are affected in numerous ways by the main action and by the present interim relief proceedings. It points out, in particular, that a number of its members manufacture operating systems for work group servers and that certain others produce software that is in competition with the Windows Media Player. More generally, some members of CCIA are active on markets on which Microsoft applies strategies of tied sales and refusal to sell that are similar to those in issue in the Decision. Finally, virtually all of the members of CCIA are significant users of work group server operating systems and are for that reason detrimentally affected by Microsoft's conduct. CCIA also submits that its members will be affected not only by the result of the main action but also by the timeframe in which the case will be settled, inasmuch as the abuses identified in the Decision have already had serious effects on the market.

42 CCIA adds, in conclusion, that it played an active role during the administrative procedure which resulted in the adoption of the Decision.

43 The Commission has stated that it does not have any objections to the application submitted by CCIA. Microsoft, for its part, did not lodge any observations.

44 The President of the Court finds that the application by CCIA for leave to intervene must be granted.

45 First, CCIA has stated, without being contradicted on this point by the applicant or the defendant institution, that it represents the interests of undertakings operating within the information technology sector, including major undertakings that are in direct competition with Microsoft on some of the markets concerned by the Decision. CCIA must for that reason be regarded as being

sufficiently representative of undertakings that are active within the sector concerned.

46 Second, according to Article 2A of CCIA's Articles of Incorporation, its purpose is, inter alia, to promote the interests of the computer and communications industries, and to promote the interests of its members. Article I, Section 2, of CCIA's Bylaws indicates, moreover, that one of its objectives is to educate government and the general public on the importance of 'full, fair and open competition' within those industries. Article I, Section 2, of CCIA's Bylaws also provides that CCIA may take 'such … action of … [a] legal nature as may be appropriate to carry out these objectives'. CCIA must therefore be regarded as having among its purposes that of safeguarding the interests of its members.

47 Third, the present case raises, among others, the question as to the circumstances in which a software producer in a dominant position may be required to provide third parties with information covered by intellectual property rights in order to allow interoperability of the products of those third parties with the products of that producer. The present case also raises the question as to the circumstances in which it may be contrary to Article 82 EC for a producer of software or computer hardware in a dominant position to incorporate new products or new functionalities within an existing product. The position which the President, acting as the judge responsible for granting interim relief, may take on those two questions of principle is liable to have a bearing on the conditions under which undertakings in the information technology sector operate.

48 Fourth, as the members of CCIA are active within the sector concerned, their interests are liable to be affected by the position taken by the judge dealing with the application for interim relief.

49 Furthermore, CCIA took part in the administrative procedure which resulted in the adoption of the Decision.

50 CCIA must therefore be granted leave to intervene in the present interim relief proceedings.

The application submitted by SIIA

51 SIIA is an association of software developers comprising more than 600 members. It requests leave to intervene in support of the form of order sought by the Commission.

52 SIIA submits that it was granted leave to intervene in its own name during the administrative procedure, in the same way as Time Warner Inc., Novell and RealNetworks, which are three of its members. SIIA points out further that the Court's decision in the main proceedings in the present case will impact on its members' prospects of competing with Microsoft and that, moreover, the commercial viability of some of those members will be jeopardised if the remedies provided for in the Decision are not enforced. SIIA points out, in conclusion, that maintaining the Decision will allow its members to allocate additional resources to research and development.

53 The Commission has declared that it has no objections to the application made by SIIA. Microsoft did not submit observations.

54 The President of the Court takes the view that the application by SIIA for leave to intervene must be granted.

55 First, SIIA states, without being contradicted by Microsoft or the Commission, that it is the principal association of software developers, with more than 600 members operating world-wide. SIIA may therefore be regarded as representing a significant number of undertakings within the information technology sector.

56 Second, Article II of SIIA's Bylaws states that it is a 'trade group formed to represent the common business and public policy interests of the computer software and digital content industries'. Article II also provides that SIIA has the capacity to engage in 'all lawful activities' in furtherance of those purposes. SIIA may therefore be regarded, at this stage, as having among its purposes that of protecting the interests of its members.

57 Third, for the reasons set out in paragraph 47 above, the position which the President, acting as the judge responsible for granting interim relief, may take on the questions of principle raised by the present case is liable to have a bearing on the conditions under which undertakings in the information technology sector operate.

58 Fourth, SIIA has submitted, without being contradicted by Microsoft or the Commission, that it represents undertakings, in particular software designers, that are in competition with Microsoft on the markets in issue in the Decision. In those circumstances, the interests of SIIA's members are liable to be affected by the position taken by the judge responsible for granting interim relief.

59 Furthermore, SIIA participated in the administrative procedure which resulted in the adoption of the Decision.

60 SIIA must therefore be granted leave to intervene in the present interim relief proceedings.

The application made by CompTIA

61 CompTIA is an association of undertakings active within the area of information and communications technology. CompTIA seeks leave to intervene in support of the form of order sought by Microsoft.

62 CompTIA submits that it satisfies the conditions governing leave to intervene that have been laid down in the case-law (order in *Kruidvat* v *Commission,* cited above in paragraph 37; order of the President of the Court of 30 October 2003 in Joined Cases T-125/03 R and T-253/03 R *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission* [2003] ECR II-0000, paragraph 4).

63 First, CompTIA claims to be the world's largest information and telecommunications technology trade association, with more than 16 000 members in 89 countries.

64 Second, CompTIA is, by reason of its Bylaws, charged with safeguarding the interests of its members and is authorised to intervene in the present proceedings inasmuch as the issues raised therein directly affect its members.

65 Third, the Decision raises fundamental questions that affect the entire information technology sector.

66 CompTIA does not, in the Commission's view, have a sufficient interest in the result of the case. The Commission notes in this regard that the Bylaws of CompTIA do not include the protection of its members' interests or their representation. Moreover, the antitrust policy statement which CompTIA has annexed to its application is no more than a draft common position which does not recommend or in any way authorise CompTIA to adopt measures designed to protect that position. In addition, the admission of CompTIA as an *amicus curiæ* before some American courts is irrelevant in the present context. Finally, the admission of CompTIA as an interested party during the administrative procedure is not, as such, determinant, since the applicable criterion for leave to submit observations during the administrative procedure is not necessarily identical to that defined in the second paragraph of Article 40 of the Statute of the Court of Justice.

67 Microsoft did not submit observations on the application by CompTIA.

68 On 13 July 2004 the President of the Court of First Instance called on CompTIA to specify, inter alia, the provisions of its Bylaws on which it was relying for its submission that its purpose was to protect the interests of its members.

69 By letter of 16 July 2004, CompTIA stated that it was relying, for that purpose, on Articles II and XI of its Bylaws, on the antitrust policy statement adopted by its board of directors, and on Section 2 of its Certificate of Incorporation. CompTIA also emphasised its past interventions with the American judicial authorities. On 21 July 2004 the Commission submitted observations in which it expressed the view that CompTIA could, at best, be described as having as its purpose the promotion of its members' interests, but not their representation and defence. The Community Courts, it claims, have already turned down applications for leave to intervene made by associations which are simply responsible for promoting the collective interests of their members (order of the President of the Third Chamber of the Court of 25 June 1999 in Case T-13/99 *Pfizer Animal Health* v *Commission*, not published in the ECR, paragraph 28).

70 The President of the Court takes the view that the application by CompTIA for leave to intervene must be granted.

71 First, CompTIA has stated, without being contradicted by Microsoft or the Commission, that it represents more than 16 000 members in more than 80 countries, 200 of whom, moreover, have their headquarters in Europe. Those members are involved at all levels of the information technology industry and include software designers, manufacturers of computer hardware, application service providers, distributors, retailers and resellers. CompTIA can thus be regarded as representing a significant number of undertakings active within the information technology sector.

72 Second, with regard to the purpose of CompTIA, Section 2 of its Certificate of Incorporation states that its purpose is to engage in ‘any lawful transaction or activity … for which corporations may be formed under the Revised Nonstock Corporation Act of the State of Connecticut, as amended’. Section 2 also provides that, ‘without limiting the foregoing’, CompTIA is formed ‘to promote and encourage the highest standards of professional and business competence and ethics among its members and within the information technology industry as a whole’. Article II of its Bylaws recapitulates those various purposes and further states that, in order to achieve those goals, CompTIA ‘shall endeavor to … establish a programme for conveying the collective views of its members to the information technology industry, governmental agencies and the public’. CompTIA also points out that it has intervened before the American judicial authorities and in the administrative procedure before the Commission with a view to complying with the antitrust policy statement adopted by its Board of Directors. In light of those facts, CompTIA can be regarded as having, among its purposes, that of protecting the interests of its members.

73 Third, for the reasons set out in paragraph 47 above, the position which the President, acting as the judge responsible for granting interim relief, may take on the questions of principle raised by this case is liable to have a bearing on the conditions under which undertakings in the information technology sector operate.

74 Fourth, CompTIA represents numerous undertakings active on the markets concerned, including software designers, whose interests are liable to be affected by the position taken by the judge dealing with the application for interim relief.

75 Furthermore, CompTIA participated in the administrative procedure leading to adoption of the Decision.

76 The application by CompTIA for leave to intervene in the present interim relief proceedings must for those reasons be granted.

The application submitted by ACT

77 ACT is a trade association representing just below 3 000 undertakings active in the development of software, system integration, information technology consultancy and training and e-commerce. ACT requests leave to intervene in support of the form of order sought by Microsoft.

78 ACT considers that it satisfies the conditions governing the granting to associations of leave to intervene, as set out in the case-law (order in *Kruidvat* v *Commission*, cited above in paragraph 37). ACT first points out that it was admitted to participate in the administrative procedure which led to the adoption of the Decision. It submits further that the action brought by Microsoft raises questions of principle which could have consequences for the entire information technology sector and, more particularly, for the activities of its members. ACT claims that it has a particular interest in convergence in and stability of the legal treatment of platform software in the United States and the European Union.

79 The members of ACT also have significant activities within the EEA and would be detrimentally affected in the event of the main action failing or of immediate implementation of the Decision. Such implementation would diminish the value of their intellectual property right portfolios and would precipitate a fall in investments in those companies which are active within the information technology sector. Disclosure of the communications protocols of the Windows system would also constitute a precedent liable to lead to increased instability within server operating systems and risks of malfunction. The remedy requiring the Windows system to be marketed without the Windows Media Player software would, for its part, deprive ACT’s members of the possibility of having recourse to certain application programming interfaces (API) and would, moreover, discourage production and maintenance of a secure platform.

80 The Commission has stated that it has no objections to the application submitted by ACT. Microsoft did not submit any observations within the prescribed period.

81 The President of the Court takes the view that the application by ACT for leave to intervene must be granted.

82 First, ACT has stated, without being contradicted by Microsoft or the Commission, that it is a trade association representing almost 3 000 undertakings active in the development of software, system integration, information technology consultancy and training and e-commerce. ACT also states that its members are established world-wide, including within the EEA, and that they include various sizes of undertakings. ACT can for those reasons be regarded as representing a significant number of undertakings within the information technology sector.

83 Second, according to Article II(D) of its Bylaws, one of ACT's purposes is to 'seek protection of [its members'] rights and privileges'. Article II(F) of ACT's Bylaws states that a further purpose is to 'enhance competition in and among the technology industries and to protect technology products, companies and industries from undue regulation or intervention that would undermine free and open competition by and among such products, companies and industries'. ACT's purposes thus include, in particular, that of protecting its members' interests.

84 Third, for the reasons set out in paragraph 47 above, the position which the President, acting as the judge responsible for granting interim relief, may take on the questions of principle raised by the present case is liable to have a bearing on the conditions under which undertakings in the information technology sector operate.

85 Fourth, ACT includes undertakings specialising in software design, whose interests are liable to be affected by the position taken by the judge dealing with the application for interim relief.

86 Furthermore, ACT participated in the administrative procedure that resulted in the adoption of the Decision.

87 ACT must for those reasons be granted leave to intervene in the present interim relief proceedings.

The applications brought on an individual basis

The application brought by Novell

88 Novell and its subsidiaries are active in a variety of software markets. Novell has been active in the area of computer networking ever since it developed and marketed the NetWare software in 1983. In support of its application for leave to intervene in support of the form of order sought by the Commission, Novell argues that its interest in the result of the interim relief proceedings follows on from several factors. First, its participation in the administrative procedure which led to the adoption of the Decision was very active from the outset and allowed it to influence the Commission's assessment of the relevant factual and legal issues. Second, as Microsoft's main competitor on the market in work group server operating systems, Novell has been affected by Microsoft's refusal to supply interoperability information. Novell's competitive position weakened rapidly in consequence, as the Commission has confirmed in the Decision (recitals 590, 593 and 594 of the Decision). Third, in concluding that Microsoft's refusal to provide interoperability information formed part of a general pattern of conduct on Microsoft's part, the Commission based itself on, inter alia, the treatment of requests for interoperability information submitted by Novell (recital 573 of the Decision). Fourth, Novell expects to benefit from the remedies ordered in Article 5 of the Decision, inasmuch as it is an 'undertaking having an interest in developing and distributing work group server operating system products' within the meaning of that article.

89 While the Commission has not raised any objections to the application for leave made by Novell, Microsoft has submitted several observations. It first submits that, according to recital 573 of the Decision, Novell did not request Microsoft to forward to it its communications protocols but simply asked to be able to replace a directory in the Windows operating system with a directory from the NetWare system. Next, Microsoft submits that Novell did not seek to obtain a licence relating to the client-to-server communications protocols, in accordance with the settlement concluded between the American authorities and Microsoft. Microsoft accordingly asks whether, as Novell argues, it can be fairly stated that Novell is a 'direct beneficiary' of the remedy imposed by the Commission. The urgency in having access to Microsoft's technology is belied by the interoperability of the NetWare server operating systems with the Windows client operating systems and by the fact that no application has been made for a licence in regard to Microsoft's communications protocols.

90 The President of the Court takes the view that Novell must be granted leave to intervene in support of the form of order sought by the Commission.

91 To the extent to which the Decision finds that Microsoft abused its dominant position by refusing to provide interoperability information and to authorise the use of such information for the development and distribution of products in competition with its own on the market in work group server operating systems, it must be held that Novell, as an undertaking in competition with Microsoft, does have an interest in the immediate cessation of the abuse which has been confirmed. It must be pointed out in this regard that the Decision states that Microsoft's share of the market in work group server operating systems 'has grown since it entered the market, and continues to grow to such an extent that its main competitor in the market, Novell, has gone from a leading position to being a relatively minor player in the space of just a few years' (recital 590) and that '[the] data collected by the Commission show that there is a risk of elimination of competition in the work group server operating system market' (recital 781).

92 Furthermore, Novell played a very active role in the administrative procedure before the Commission. As is clear from the Decision, the observations which Novell submitted in its capacity as an interested third party within the meaning of Article 19(2) of Regulation No 17 of the Council of 6 February 1962, First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-1962, p. 87), were taken into proper account by the Commission.

93 Finally, Novell has a direct interest in dismissal of the request for suspension of the application of Article 5 of the Decision inasmuch as it is an undertaking which comes within the scope of that provision.

The application submitted by RealNetworks

94 In its application for leave to intervene in support of the form of order sought by the Commission, RealNetworks points out that it operates on the markets affected by Microsoft's conduct in tying the sale of the Windows Media Player software to that of the Windows operating system for personal computers and that, as an interested third party, it played an active role in the administrative procedure before the Commission.

95 Neither Microsoft nor the Commission has raised any objections to RealNetworks' application for leave to intervene.

96 RealNetworks develops and supplies specialised software for network-delivered digital multimedia services and the technology that makes possible the creation, distribution and consumption of digital multimedia content. Having regard to the factors raised by RealNetworks in support of its application for leave to intervene, the established nature of which is evident from the Decision (in particular, recitals 112 to 118, 125 to 134, 812, 855 and 856), the President of the Court takes the view that RealNetworks has demonstrated a sufficient interest in dismissal of the application for interim relief.

The application submitted by Digimpro and Others

97 Digimpro and Others have requested leave to intervene in support of the form of order whereby Microsoft seeks suspension of application of the provisions of the Decision which require Microsoft to offer a version of its Windows operating system for personal computers which does not incorporate the Windows Media Player software or the code governing its functionality. Each of those applicants considers that it has a direct and present interest in the suspension of application of Articles 2, 4, first paragraph, and 6 of the Decision in so far as immediate implementation of those provisions would cause them serious and irreparable damage.

98 The applicants for leave to intervene manufacture or develop software and applications which function under the Windows operating system and, as such, they state that they are dependent, directly or indirectly, on the functionality of the Windows Media Player software tied to that operating system.

99 First, certain of the applicants have developed and marketed, or are developing at present, products which function with the Windows Media Player software of the Windows operating system for personal computers. The Decision would thus have the effect of forcing them to modify their products in such a way as to include in them a functionality designed to detect whether the

operating system installed in the computers of their customers contains the Windows Media Player software and, if not, to indicate to them the steps which must be followed in order to install the Windows Media Player software. In the alternative, they could modify their products by copying in them the code of the Windows Media Player software. Interventions of this kind would, however, be costly in terms of time and money.

100 Second, they submit that a number of them would have to provide update software to customers using present or previous versions of their products in so far as those customers may find themselves having to use their products on a computer equipped with a Windows operating system which lacks the Windows media player software. Providing a corrective measure of this kind would involve significant cost and give rise to many practical difficulties.

101 Third, the separation of the Windows Media Player software from the Windows operating system for personal computers could upset the operation of the applicants' products, even if a customer had himself installed the Windows Media Player software on his personal computer. The search for solutions to defective functionality of this kind would involve the applicants in additional expense.

102 Fourth, the applicants fear that the Decision represents the first step in the fragmentation of the Windows operating system for personal computers and for that reason it gives rise to great commercial uncertainty.

103 Fifth, the applicants contend that the improvements which Microsoft has introduced into its Windows operating system enable them to improve their own products or to offer new products. These derived improvements would no longer be possible if Microsoft were to be prevented from developing its own operating system.

104 Microsoft did not submit observations within the prescribed period.

105 The Commission, for its part, has expressed grave reservations as to the interest which Digimpro and Others may have in intervening. The Commission submits that the interest of the applicants, which appear to belong to the broad category of independent software sellers, is not direct, present or certain.

106 The Commission expresses the view, first, that the arguments relating to future disputes or to the future development of the Windows operating system cannot be regarded as establishing such an interest in the result of the case.

107 The Commission also takes the view that the arguments relied on in the application for leave to intervene demonstrate at most that the independent sellers are encouraged to develop applications which feature the Windows Media Player software because they know that this software is incorporated in the Windows operating system and that those purchasing that system therefore automatically have it at their disposal. However, the Commission argues, the Decision does not oblige the applicants to modify their products. The Decision has the effect of allowing consumers to choose the version of the operating system which incorporates, or does not incorporate, the Windows Media Player software, a choice linked to the merit of the product on offer and not to the mere fact that it is coupled to the Windows operating system. Sellers of software ought therefore to adapt themselves to consumer choice and organise their activities accordingly. It will always be possible for them to design products exclusively for the Windows Media Player software and subsequently persuade consumers, on the basis of the merits of their products and services, to opt for the version of the Windows operating system which incorporates the Windows Media Player software. There is therefore no reason to believe that the applicants will incur costs or suffer harm as a direct result of the Decision. As any costs which they may have to bear will depend on decisions to be taken in the future, the applicants' interest in the result of the case cannot be regarded as sufficient (order of the Court in Case T-18/97 *Atlantic Container Line and Others* v *Commission* [1998] ECR II-589, paragraph 14). So far as concerns the applicants' assertion that their products might no longer be able to function correctly, this, the Commission argues, reveals the hypothetical nature of an interest in the result of the case in this regard.

108 With more specific regard to the interests claimed by each of the applicants, the Commission submits that Digimpro Ltd is not, at present, active on any market, that the damage relied on by TeamSystem SpA is liable to materialise only in so far as consumers decide to use the version of the Windows operating system which does not feature the Windows Media Player software – a situation that may already possibly obtain – and that Mamut ASA invokes problems of compatibility between its products and those of Microsoft that are scarcely credible in view of the close relations existing

between those two companies. As for CODA Group Holdings Ltd's interest in the result of the case, this is neither certain nor direct as its products are not based directly on the Windows Media Player software of the Windows operating system.

109 The Commission adds that to accept the applicants' arguments would be tantamount to having to admit virtually all software designers world-wide.

110 The President of the Court finds that implementation of the Decision would have the effect of requiring Microsoft to offer for sale two versions of its operating system for personal computers, the first without the Windows Media Player software and the second incorporating that software. As a result of that new situation, software designers would no longer be entitled to assume that all computers fitted with the Windows operating system will contain multimedia application programming interfaces (API). The resulting adaptation of their products and assumption of responsibility for the additional technology which this might involve may give rise to significant extra costs for the designers concerned; conversely, failure to adapt their products to the new market situation resulting from implementation of the Decision might prevent them from winning over customers in line with expectations.

111 Regard being had to those factors, the view must be taken that marketing of the Windows operating system for personal computers which does not incorporate the Windows Media Player software risks having a significant effect on the activity of the software designers concerned and that their interest in having implementation of the Decision suspended is consequently established. The matters set out in their application justify the conclusion that TeamSystem SpA and Mamut ASA must be granted leave to intervene in support of the form of order which Microsoft is seeking in the proceedings for interim relief.

112 By contrast, in light of the argument developed in the application for leave to intervene, it cannot be concluded that Digimpro Ltd has established that it has a present interest in the result of the interim proceedings. As is clear from its application, the main product of that company is not yet on the market, and the company states, without indicating a precise timetable for its launch, that this product 'will be' software that permits users to interact with stored audio information and that it 'will operate' as an accessory to Windows Media Player.

113 In light of the information provided in the application for leave to intervene, the application must also be rejected in so far as it has been submitted by CODA Group Holdings Ltd. The risk that uncoupling the Windows Media Player software from the Windows operating system may affect the proper functioning of some of its applications cannot be regarded as being sufficient to establish that this company has an interest in intervening, as it is clear from the request for leave to intervene that those applications are already being delivered to its customers on several platforms other than the Windows platform, such as IBM AS/400 and Unix, and that the products which it designs do not rely directly on the Windows Media Player code in the Windows operating system.

114 The application for leave to intervene must accordingly be granted in so far as it has been submitted by TeamSystem SpA and Mamut ASA but must be rejected in so far as it has been submitted by Digimpro Ltd and CODA Group Holdings Ltd.

The application submitted by DMDsecure.com and Others

115 DMDsecure.com and Others, which are companies operating in the areas of media, entertainment and telecommunications, seek leave to intervene in support of the form of order sought by Microsoft. DMDsecure.com markets content protection and digital rights management server-side systems, components and solutions. MPS Broadband distributes Internet Protocol-based international broadband TV-contents. Pace Micro Technology is primarily active in the area of digital set-top television technology. Quantel provides computer hardware products within the television and cinema sectors. Finally, Tandberg TV markets video products and systems live and on demand across a variety of networks.

116 They claim that they have a direct and specific interest in having implementation of the Decision suspended inasmuch as their activities could be directly and substantially affected by the result of the interim relief proceedings and of the main proceedings (order in *Kruidvat* v *Commission*, cited above in paragraph 37, paragraph 10). The obligation imposed on Microsoft to develop and offer a version of its operating system which does not feature the Windows Media Player software concerns the applicants to the extent to which their products operate with that software. They would as a consequence be obliged to modify their products in such a way as to enable them to be used with

other software. A modification of this kind would be costly, technically complex and would have repercussions on the services provided in conjunction with the products in question.

117 While Microsoft did not lodge observations on the application for leave to intervene within the prescribed period, the Commission has expressed serious doubts as to the applicants' interest in intervening.

118 The Commission's view is that the applicants have failed to demonstrate a direct, present and certain interest in the result of the interim relief proceedings. The applicants' arguments, it submits, indicate their natural inclination to favour a single technology and make it clear that their decision to base themselves on the Windows Media Player software stems from the fact that they know that this software is tied to the Windows operating system and is thus automatically acquired by consumers.

119 Contrary to what the applicants contend, the Decision, in the Commission's view, does not in any case oblige them to modify their products. The Decision simply allows consumers to choose to acquire the version which does, or does not, incorporate the Windows Media Player, a choice which has to do with the merit of the product on offer and not with the fact that it is tied to the Windows operating system. The companies, in particular those which base themselves on the omnipresence of the Windows Media Player software, ought therefore to adapt to consumer choice and arrange their activities accordingly. It will always be possible for those companies to base themselves exclusively on the Windows Media Player software and subsequently persuade consumers, on the basis of the merits of their products and services, to opt for the version of the Windows operating system which does incorporate the Windows Media Player software. There is thus no reason to believe that the applicants will incur costs or suffer harm as a direct result of the Decision. As any costs which they may have to bear would depend on decisions which they, other companies and their customers might take in the future, the applicants' interest in the result of the case cannot be regarded as sufficient (order in *Atlantic Container Line and Others*, cited above in paragraph 107, paragraph 14).

120 The Commission adds that to grant the applicants leave to intervene would, given that they belong to a heterogenous group of companies, give rise to an obligation to admit virtually all software designers world-wide.

121 The President of the Court takes the view, in light of the matters which they have set out in their application for leave to intervene, that DMDsecure.com and Others have a direct and present interest in suspension of implementation of the Decision in so far as the technologies which they use are at present designed to operate to a large extent with the platform of the Windows operating system that incorporates the Windows Media Player software. If the Decision is implemented, there is a risk that their activities could be significantly affected, not only by making it necessary for them to adapt to such changed circumstances by modifying the technologies used but also obliging them initially to bear the costs of such modification.

122 DMDsecure.com and Others must for those reasons be granted leave to intervene in support of the form of order sought by Microsoft.

The application submitted by IDE Nätverkskonsulterna and Others

123 IDE Nätverkskonsulterna and Others request leave to intervene in support of the form of order sought by Microsoft. They provide, within the information technology sector, services such as the installation, integration and migration of data and systems, support and outsourcing, web design and software development. Their services are dependent on the technology developed by Microsoft. The applicants' in-depth knowledge of the products developed by Microsoft has been recognised by Microsoft, which has awarded them the title of 'Microsoft Most Valuable Professionals'. IDE Nätverkskonsulterna and Exor AB alone have not received that title.

124 Relying on the case-law of the Court of Justice (order in Joined Cases 16/62 and 17/62 *Confédération nationale des producteurs de fruits et légumes and Others* v *Council* [1962] ECR 471), IDE Nätverkskonsulterna and Others take the view that, as implementation of the Decision would impact significantly on their legal and/or economic situation, they have a direct and present interest in the suspension of Articles 4 and 6(a) of that Decision requested by Microsoft.

125 The applicants argue that the negative effects of the remedy of untying the Windows Media Player software from the Windows operating system will vary according to the activities in which they

engage.

126 First, some of the applicants are responsible for installation of the operating systems and application software in personal computers, integration services for, inter alia, various applications, and support services such as the provision of periodic software updates. So far as they are concerned, the existence of two versions of the Windows operating system would give rise to additional costs associated with the need to adapt services according to the customer's version of the Windows operating system and to ensure the proper functioning of the version which does not feature the Windows Media Player software.

127 Second, the applicants which provide web design services use the technology developed by Microsoft. In order for the audiovisual content of the internet sites which they install to be accessible to those using a computer which does not have the Windows Media Player software, the applicants will be obliged to incur development and support costs.

128 Third, the applicants which provide training services in regard to Microsoft products will have to adapt their training programmes to the users' profile.

129 Finally, a number of the applicants provide software development services, for which they use the media functionality of the Windows Media Player. By reason of the Decision, their activities will be limited to those customers who have opted for the Windows operating system equipped with the Windows Media Player software or, for customers who have not made such a choice, those activities will oblige them to modify the content of their products.

130 Microsoft did not submit observations on the application for leave to intervene within the prescribed period.

131 For its part, the Commission has expressed serious doubts as to the applicants' interest in intervening. As the Commission's arguments are similar to those which it set out in response to the application made by DMDsecure.com and Others, reference is made to paragraphs 118 to 120 above.

132 The President of the Court takes the view that the application by IDE Nätverkskonsulterna AB cannot be upheld.

133 So far as that company is concerned, immediate enforcement of the Decision might indeed force it to adapt the services which it offers to its customers, that is to say, consulting and outsourcing services. The uncoupling of the Windows Media Player software and the Windows operating system may thus lead it to take account of that development and to adapt its services accordingly. However, adaptation of the services in question could not be classified as a direct consequence of implementation of the Decision but would have to be regarded as being dependent primarily on the choice made by customers to opt for a Windows operating system not featuring the Windows Media Player software and to demand services resulting from that choice. On the basis of the information provided in the application for leave to intervene, that company's interest thus cannot be regarded as being direct and present within the meaning of the case-law cited above.

134 By contrast, the Exor company must be granted leave to intervene in support of the form of order sought by Microsoft. It is clear from the application for leave to intervene that Exor designs web sites and develops applications at a significant level, as its customers include the largest Swedish recruitment agency after the Swedish public employment agency, and that the technologies which it uses in developing such web sites are at present designed to function exclusively with the platform of the Windows operating system which incorporates the Windows Media Player software. If the Decision is implemented, there will therefore be a risk that its activities could be significantly affected, not only in making it necessary for it to adapt to this change in circumstances through modification of the technologies used but also in forcing the company initially to bear the costs of that modification. Its direct and present interest must consequently be regarded as having been sufficiently demonstrated at this stage.

135 With regard to the remaining applicants, their interest in the result of the interim relief proceedings cannot, on the basis of the information contained in the application, be regarded as having been sufficiently established.

136 As the claims made in the application for leave to intervene have not been proved, it is not possible

to conclude that the activities engaged in by those applicants would be affected in a sufficiently significant way if the application for interim relief were to be dismissed. With more particular regard to Mr Rogerson, Mr Tomicic, Mr Valasek and Mr Nati, the portion of their activities that involves software development is not at all specified in their application.

137 It must also be added that adaptation of the computer support services (Mr Rogerson, Mr Setka and Mr Tomicic), computer training services (Mr Setka) and consulting services (Mr Tomicic) cannot be considered a direct consequence of implementation of the Decision but must be regarded as being dependent primarily on the choice made by customers to opt for a Windows operating system that does not incorporate the Windows Media Player software and to demand services resulting from that choice (see paragraph 133 above).

138 With regard to the interest alleged by Mr Rialdi, this cannot be treated as being direct, as dismissal of the application for interim relief is likely to affect him only in so far as he participates in the results of the company in which he is a member of the board and vice-president of its advanced technology division.

139 In the light of the foregoing, the application for leave to intervene by IDE Nätverkskonsulterna and Others must be granted in so far as it was submitted by Exor AB but must be rejected in so far as it was submitted by the other applicants.

The application for confidential treatment

140 Microsoft has requested that the confidential version of the Decision should not be disclosed to the applicants for leave to intervene.

141 As the interventions are to be allowed under the conditions laid down in Article 116(2) of the Court's Rules of Procedure, transmission of the procedural documents served on the parties must, at this stage, be limited to the non-confidential version produced by Microsoft. A decision as to whether the application for confidential treatment is well founded shall, if necessary, be taken at a later stage in the light of any objections which may be submitted on that issue.

On those grounds,

THE PRESIDENT OF THE COURT OF FIRST INSTANCE

orders:

1. **Computer & Communications Industry Association is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the defendant.**

2. **Software & Information Industry Association is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the defendant.**

3. **The Computing Technology Industry Association Inc. is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the applicant.**

4. **The Association for Competitive Technology is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the applicant.**

5. **Novell Inc. is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the defendant.**

6. **RealNetworks Inc. is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the defendant.**

7. **TeamSystem SpA and Mamut ASA are granted leave to intervene in Case T-201/04 R in support of the form of order sought by the applicant.**

8. **The application submitted by Digimpro Ltd and by CODA Group Holdings Ltd in Case T-201/04 R in support of the form of order sought by the applicant is dismissed.**

9. **DMDsecure.com BV, MPS Broadband AB, Pace Micro Technology plc, Quantel Ltd and Tandberg Television Ltd are granted leave to intervene in Case T-201/04 R in support of the form of order sought by the applicant.**

10. **The application submitted by IDE Nätverkskonsulterna AB, by Mr T. Rogerson, by Mr P. Setka, by Mr D. Tomicic, by Mr M. Valasek, by Mr R. Rialdi and by Mr B. Nati in Case T-201/04 R in support of the form of order sought by the applicant is dismissed.**

11. **Exor AB is granted leave to intervene in Case T-201/04 R in support of the form of order sought by the applicant.**

12. **The Registrar shall transmit to the intervening parties the non-confidential version of the procedural documents.**

13. **A period shall be fixed for the intervening parties to submit observations on the application for confidential treatment. The decision on whether that application is well founded is reserved.**

14. **A period shall be fixed for the intervening parties to submit a statement in intervention, without prejudice to the possibility of supplementing it later, should the need arise, in the light of a decision as to whether the application for confidential treatment is well founded.**

Luxembourg, 26 July 2004.

JUDGMENT OF THE COURT OF FIRST INSTANCE (Fifth Chamber)

16 January 2008 (*)

(Competition – Abuse of dominant position – Allegation of excessive charges applied by the operator of Athens International Airport – Rejection of the complaint – No Community interest)

In Case T‑306/05,

Isabella Scippacercola, residing in Brussels (Belgium),

Ioannis Terezakis, residing in Brussels,

represented by A. Krystallidis and G. Stylianakis, lawyers,

applicants,

v

Commission of the European Communities, represented by P. Hellström, A. Nijenhuis and F. Amato, acting as Agents,

defendant,

APPLICATION for annulment in part of the Commission's decision of 2 May 2005 pursuant to Article 7(2) of Commission Regulation (EC) No 773/2004 of 7 April 2004 relating to the conduct of proceedings by the Commission pursuant to Articles 81 [EC] and 82 [EC] (OJ 2004 L 123, p. 18), rejecting complaint No COMP/D3/38469 concerning the levy of certain charges by the operator of Athens International Airport at Spata and by Olympic Fuel Company,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Fifth Chamber),

composed of M. Vilaras, President, M.E. Martins Ribeiro and K. Jürimäe, Judges,

Registrar: K. Pocheć, Administrator,

having regard to the written procedure and further to the hearing on 12 June 2007,

gives the following

Judgment

Legal framework

Community legal framework applicable to complaints relating to infringements of the competition rules of the EC Treaty

Legal framework applicable until 30 April 2004

1 Article 3 of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-1962, p. 87) provided:

'1. Where the Commission, upon application or upon its own initiative, finds that there is infringement of Article [81 EC] or Article [82 EC], it may by decision require the undertakings or associations of undertakings concerned to bring such infringement to an end.

2. Those entitled to make application are:

(a) Member States;

(b) natural or legal persons who claim a legitimate interest.

...'

2 That provision was repealed by Article 43(1) of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1), applicable, according to Article 45 of that regulation, from 1 May 2004.

3 Article 6 of Commission Regulation (EC) No 2842/98 of 22 December 1998 on the hearing of parties in certain proceedings under Articles [81 EC] and [82 EC] (OJ 1998 L 354, p. 18) provided:

'Where the Commission, having received an application made under Article 3(2) of Regulation No 17 ..., considers that on the basis of the information in its possession there are insufficient grounds for granting the application or acting on the complaint, it shall inform the applicant or complainant of its reasons and set a date by which the applicant or complainant may make known its views in writing.'

4 That provision was repealed by Article 18 of Commission Regulation (EC) No 773/2004 of 7 April 2004 relating to the conduct of proceedings by the Commission pursuant to Articles 81 [EC] and 82 [EC] (OJ 2004 L 123, p. 18), applicable, according to Article 20 of that regulation, from 1 May 2004.

Legal framework in force from 1 May 2004

5 Article 7 of Regulation No 1/2003 which, according to Article 45 of that regulation, applies from 1 May 2004, provides:

'1. Where the Commission, acting on a complaint or on its own initiative, finds that there is an infringement of Article 81 [EC] or 82 [EC], it may by decision require the undertakings and associations of undertakings concerned to bring such infringement to an end ...

2. Those entitled to lodge a complaint for the purposes of paragraph 1 are natural or legal persons who can show a legitimate interest and Member States.'

6 Regulation No 773/2004 entered into force on 1 May 2004, in accordance with Article 20.

7 According to Article 7 of Regulation No 773/2004:

'1. Where the Commission considers that on the basis of the information in its possession there are insufficient grounds for acting on a complaint, it shall inform the complainant of its reasons and set a time-limit within which the complainant may make known its views in writing. The Commission shall not be obliged to take into account any further written submission received after the expiry of that time-limit.

2. If the complainant makes known its views within the time-limit set by the Commission and the written submissions made by the complainant do not lead to a different assessment of the complaint, the Commission shall reject the complaint by decision.

3. If the complainant fails to make known its views within the time-limit set by the Commission, the complaint shall be deemed to have been withdrawn.'

8 Article 8 of Regulation No 773/2004 provides:

'1. Where the Commission has informed the complainant of its intention to reject a complaint pursuant to Article 7(1) the complainant may request access to the documents on which the Commission bases its provisional assessment. For this purpose, the complainant may however not have access to business secrets and other confidential information belonging to other parties involved in the proceedings.

2. The documents to which the complainant has had access in the context of proceedings conducted by the Commission under Articles 81 [EC] and 82 [EC] may only be used by the complainant for the purposes of judicial or administrative proceedings for the application of those Treaty provisions.'

Greek legal framework

9 Article 1 of Law No 2338/1995 (FEK A' 202/14.9.1995) ratified the agreement concluded on 31 July 1995 between the Greek State and a consortium of companies concerning the development of Athens International Airport at Spata ('the agreement'). Article 3 of Law No 2338/1995 created Athens International Airport SA ('AIA'). AIA's shareholders are the Greek State, with 55% of the capital, and the abovementioned consortium of companies holding 45% of the capital and having the right to appoint the Chief Executive Officer.

10 According to Article 2(2)(1) and Article 4(1) of the agreement, AIA was granted a 30-year exclusive right to carry out the design, financing, construction, completion, commissioning, maintenance, operation, management and development of Athens International Airport at Spata ('Athens airport').

11 According to Article 3(2)(1) of the agreement:

'The Greek State shall ensure that, during the contract period:

(a) no new or existing airport will be developed as, or improved or upgraded into, an international airport within a radius of 100 kilometres of Syntagma Square, Athens, with the benefit of Greek State support, before the 20th anniversary of the commencement date;

and furthermore

(b) no new airport will be developed as an international airport within a radius of 50 kilometres of Syntagma Square, Athens, with the benefit of Greek State support, until and unless more than 50 million passengers by air (arrivals including transits, and departures) use the airport in any continuous period of 12 months.'

12 Pursuant to Article 14 of the agreement, the various charges for the services provided by Athens Airport are set by AIA. According to that provision, the charges for air activities are set by reference to AIA's costs, allowing for a maximum return of 15%.

13 Law No 2065/1992 (FEK A' 113) imposed a passenger departure fee, known also as 'the Spatosimo', of EUR 20 for an international flight and EUR 10 for a domestic flight for passengers departing from Greek airports, the receipts from which had to be used for the modernisation or construction of airports in Greece.

14 Article 26(1) of the agreement extended the Spatosimo as a 'contribution to the construction of Athens airport' until at least 2014.

15 Law No 2892/2001 (FEK A' 46) amended Law No 2065/1992 by increasing the Spatosimo with effect from 1 March 2001 to EUR 22 for international flights (outside the European Economic Area (EEA)) and to EUR 12 for flights within the EEA.

Facts and administrative procedure

16 On 5 July 2002, Mr Koeune, acting on behalf of 'a number of [Athens] airport users', lodged a complaint with the Commission's Directorate General (DG) for Competition, which was registered as Case COMP/D3/38469. The complaint, based on Articles 82 EC and 86 EC, challenged, inter alia, the Spatosimo imposed by Law No 2065/1992 and claimed that certain charges imposed on air companies and passengers by AIA were excessive.

17 By letter of 28 August 2002, the Commission acknowledged receipt of the complaint and asked Mr Koeune, inter alia, to produce the power of attorney of the Athens airport users on whose behalf he had lodged the complaint.

18 By letter of 4 October 2002, Mr Koeune informed the Commission that the powers of attorney in question would be sent separately by registered courier. In addition, he claimed that the Spatosimo

was discriminatory.

19 By letter of 28 November 2002, the Commission informed Mr Koeune that the group of Athens airport users on whose behalf the complaint had been lodged had not yet been clearly identified, and that it had not yet received the powers of attorney requested. The letter also stated, by way of an initial position within the meaning of the judgment of the Court of First Instance in Case T‑64/89 *Automec* v *Commission* [1990] ECR II‑367, paragraphs 45 to 47, that Articles 81 EC and 82 EC did not apply to the charges complained of as the charges were akin to taxes imposed by a Member State and those Treaty provisions applied only to the conduct of undertakings.

20 By letter to the Commission of 24 December 2002, Mrs Scippacercola, an individual user of Athens airport, identified herself as one of the persons on whose behalf the complaint of 5 July 2002 had been lodged, and attached the power of attorney in favour of Mr Koeune. In the same letter, Mrs Scippacercola opposed the initial position taken by the Commission in its letter of 28 November 2002.

21 By letter of 29 January 2003, Mrs Scippacercola formally requested the Commission, pursuant to Article 232 EC, to adopt a decision regarding the infringement of Articles 86 EC and 82 EC consisting in the airport's exclusive rights and the excessive charges imposed by it; the infringement of Article 87 EC consisting in the State aid granted to Athens airport; and the opening of a procedure under Article 226 EC against the Greek Government in respect of the Spatosimo.

22 By letter of 10 February 2003, the Commission informed Mrs Scippacercola that only the first aspect of her formal request relating to the alleged infringements of Articles 86 EC and 82 EC fell within the competence of the DG for Competition and that the two other aspects had been communicated to the DG for Energy and Transport. The letter stated that the DG for Competition would respond to the aspect that fell within its competence by 29 March 2003.

23 By letter of 18 February 2003, Mrs Scippacercola provided the Commission with further information in relation in particular to the security charge and to the passenger terminal facilities charge. The letter stated also that 'all charges except [the Spatosimo] imposed on passengers and on air companies [were] fixed by the [Athens] airport administration'.

24 By letter of 26 February 2003, Mrs Scippacercola pointed out that the complaint of 5 July 2002 and the letters of 24 December 2002 and 18 February 2003 concerned not only the Spatosimo but also the other charges imposed on passengers and air companies by AIA.

25 By letter to Mrs Scippacercola of 28 February 2003, the Commission's DG for Energy and Transport stated that, following a modification to Law No 2065/92 by Law No 2892/2001, the Spatosimo was no longer discriminatory since it had been fixed at EUR 12 for all destinations within the European Union.

26 By letter to Mrs Scippacercola of 19 March 2003, the DG for Competition announced, after observing that the Spatosimo had been fixed at EUR 12 for all destinations within the EEA, that it intended to take no further action on the complaint in so far as it related in particular to the excessive nature of that tax, since it did not concern the conduct of an undertaking for the purposes of Articles 81 EC and 82 EC. So far as the other charges at issue in the complaint and, in particular, the security charge, were concerned, the Commission claimed that Mrs Scippacercola had not shown that she had a legitimate interest within the meaning of Article 3(2) of Regulation No 17.

27 By letter of 12 April 2003, Mrs Scippacercola asked the Commission to undertake an in-depth examination of the airport charges in the light of the definition of excessive prices adopted by the Court of Justice in Case 27/76 *United Brands* v *Commission* [1978] ECR 207.

28 By letter of 26 May 2003, the Commission informed Mrs Scippacercola of its decision of 22 May 2003 not to take further action on the complaint of 5 July 2002 in so far as it related to practices attributable to the Greek State, namely the Spatosimo.

29 By a further letter of 26 May 2003, the Commission informed Mrs Scippacercola that the practices criticised in the complaint of 5 July 2002 which had been attributed to AIA did not appear to fall within the scope of Article 82 EC or to justify the opening of an inquiry.

30 By letter of 12 June 2003, Mrs Scippacercola provided the Commission with further information concerning the charges levied by AIA and reiterated her view that those tariff practices fell within the scope of Article 82 EC.

31 By letter of 15 October 2003, the Commission informed Mrs Scippacercola that it maintained its assessment of AIA's tariff practices that had been set out in its letter of 26 May 2003, and announced that a letter would be sent pursuant to Article 6 of Regulation No 2842/98.

32 By letter of 27 November 2003, Mr Terezakis, also an individual user of Athens airport, lodged a complaint at the Commission's Secretariat-General concerning (1) the abusive use of subsidies granted by the Cohesion Fund for the construction of Athens airport; (2) the excessive charges applied by AIA in the light of the judgment in *United Brands* v *Commission*, cited in paragraph 27 above; and (3) the incompatibility of the Spatosimo with Community law.

33 By letter of 23 February 2004, the Commission informed Mr Terezakis that '[his] complaint [had] been registered under reference number 2004/4134, SG(2004) A/1724'.

34 By letter to Mrs Scippacercola of 25 March 2004 pursuant to Article 6 of Regulation No 2842/98, the Commission announced its intention to take no further action on the complaint of 5 July 2002.

35 By letters of 8 April and 5 May 2004, Mrs Scippacercola requested the Commission to reconsider its provisional position regarding the complaint, and in particular in relation to the security charge, the passenger terminal facilities charge and the charge for parking cars at the airport. The letter of 5 May 2004, which was also signed by Mr Christofidis, also formally requested the Commission, pursuant to Article 232 EC, to take a formal decision within one month from the date of receipt of the letter.

36 By letters of 8 May 2004, Mrs Scippacercola and Mr Christofidis informed the Commission that it was being requested to take a decision on the complaint of 5 July 2002 within two months.

37 By letter of 28 June 2004, Mrs Scippacercola sent the Commission further information on the construction and operation of Athens airport, concerning the costs and profits relating in particular to the security and car parking arrangements.

38 By letter of 2 July 2004, the Commission informed Mrs Scippacercola and Mr Christofidis that, in the light of the information provided in their letters of 5 and 8 May 2004, it had decided to carry out further investigation by addressing requests for information, in particular, to the Greek authorities and to AIA.

39 By letter of 15 July 2004, Mrs Scippacercola sent the Commission new information concerning the costs and profits in relation, in particular, to the security and car parking arrangements, to enable the Commission to assess the excessive nature of the charges imposed by AIA.

40 AIA replied to the Commission's request for information by letter of 27 August 2004 and provided further information by letters of 27 September and 11 October 2004.

41 The Commission informed Mrs Scippacercola by letter of 5 October 2004 that it had received the replies to the requests for information referred to in paragraph 38 above.

42 By letter of 22 October 2004, Mrs Scippacercola and Mr Christofidis referred to certain matters already included in their letters of 5 May and 15 July 2004. That letter, and also Mr Christofidis's letter of 26 October 2004, requested the Commission to make further enquiries about the costs incurred by AIA for the construction of Athens airport.

43 By letter of 12 January 2005, the Commission informed Mrs Scippacercola and Mr Christofidis, in accordance with Article 7(1) of Regulation No 773/2004, of its intention to reject the complaint of 5 July 2002. They were asked to submit any comments within one month from the date of receipt of the letter.

44 By letter of 13 January 2005, Mr Terezakis informed the Commission that he was joining in the complaint of 5 July 2002 made by Mr Christofidis and Mrs Scippacercola, and reminded the Commission that it had not responded to his own complaint No 2004/4134, SG(2004) A/1724 of 27

November 2003.

45 By letter of 26 January 2005 referring to the complaint of 5 July 2002 and to complaint No 2004/4134, SG(2004) A/1724 of 27 November 2003, Mr Christofidis, Mrs Scippacercola and Mr Terezakis submitted their comments to the Commission in response to the letter of 12 January 2005. They invited the Commission to reconsider its position and to carry out an in-depth investigation. They formally requested the Commission, pursuant to Article 232 EC, to take a final decision within two months.

46 By letter of 21 February 2005, the Commission informed Mr Terezakis that he could not ‘join’ in the complaint of 5 July 2002 made by Mrs Scippacercola and Mr Christofidis, as no such procedure was provided for in Regulations No 1/2003 and No 773/2004. The Commission also stated that the information about Athens airport which he had supplied on 27 November 2003 was not regarded as a formal complaint, because he had submitted it in his capacity as a Commission official using the Commission’s letterhead, by e-mail and internal mail.

47 By a further letter of 21 February 2005, the Commission informed Mrs Scippacercola and Mr Christofidis that it would not be in a position to adopt a final decision on the complaint of 5 July 2002 within the two months referred to in the letter of 26 January 2005. It announced that a final decision would be taken as soon as was reasonably possible.

48 By letter to the Commission of 4 March 2005, Mr Terezakis stated that he had never asked for authorisation to join in the complaint of 5 July 2002. He explained that, by his letter of 13 January 2005, he had wished to inform the Commission of its obligation to acknowledge receipt of the fax and letters that were mentioned in his letter. He maintained, furthermore, that he was one of the ‘users’ on whose behalf the complaint of 5 July 2002 had been launched by Mr Koeune, and that it was in his capacity as a European citizen and frequent flyer that he had supplied information on Athens airport. He noted that the Secretariat-General of the Commission had, moreover, registered his complaint of 27 November 2003.

49 By letter of 24 March 2005, Mrs Scippacercola, together with Mr Christofidis and Mr Terezakis, formally requested the Commission, pursuant to Article 232 EC, to take a final decision on the complaint of 5 July 2002 by 25 May 2005, stating that, in the absence of a decision by that date, they would bring actions based on Articles 232 EC and 288 EC.

The contested decision

50 On 2 May 2005, the Commission adopted a decision pursuant to Article 7(2) of Regulation No 773/2004 rejecting complaint No COMP/D3/38469 of 5 July 2002 (‘the contested decision’). The contested decision was notified to the persons to whom it was addressed, Mrs Scippacercola and Mr Christofidis. Mrs Scippacercola received notification of the contested decision on 31 May 2005.

51 In the contested decision, the Commission examined the various charges disputed by the complainants, namely the passenger security charge, the passenger terminal facilities charge, the charges for supplying aviation fuel and for aircraft parking, and the airport car parking charge. It set out the following conclusions in paragraph 141 of the contested decision:

‘… there are insufficient grounds for acting on [the] complaint. This is based on the [following] reasons … :

(a) With regard to the application to passengers of an allegedly excessive airport security charge:

– Article 82 [EC] is not applicable, because by carrying out security checks on the passengers departing from the Athens International Airport of Spata, AIA exercises essential functions of the State, and in any event

– it is not in the Community interest to open an in-depth investigation.

(b) With regard to the application to passengers of an allegedly excessive passenger terminal facilities charge, it is not in the Community interest to open an in-depth investigation.

(c) With regard to the application to airlines of allegedly excessive charges for aviation fuel:

– The complainants do not have a legitimate interest within the meaning of Article 3(2) of Regulation 17/62 or of [Article] 7(2) of Council Regulation 1/2003, and in any event

– it is not in the Community interest to open an in-depth investigation.

(d) With regard to the application to airlines of allegedly excessive charges for the parking of aeroplanes:

– The complainants do not have a legitimate interest within the meaning of Article 3(2) of Regulation 17/62 or of [Article] 7(2) of Council Regulation 1/2003, and in any event

– it is not in the Community interest to open an in-depth investigation.

(e) With regard to the application to passengers of allegedly excessive charges for parking cars at the airport, it is not in the Community interest to open an in-depth investigation.'

Procedure and forms of order sought by the parties

52 By application lodged at the Registry of the Court of First Instance on 10 August 2005, the applicants brought the present action.

53 By letter of 31 July 2006, received at the Registry of the Court of First Instance on 4 August 2006, the applicants requested a derogation from the rule on the use of the language of the case laid down in Article 35(2) of the Rules of Procedure of the Court of First Instance. The Commission submitted its observations on that request on 24 August 2006.

54 By decision of 7 September 2006 of the President of the Fifth Chamber of the Court of First Instance, the request for a derogation from the rule on the use of the language of the case was rejected.

55 Upon hearing the Judge-Rapporteur, the Court of First Instance (Fifth Chamber) decided to open the oral procedure and, by way of measures of organisation of procedure pursuant to Article 64 of its Rules of Procedure, invited the Commission to produce certain documents. The request concerned, inter alia, the non-confidential version of AIA's reply of 27 August 2004 to the Commission's request for information. The Commission complied with that request within the prescribed period.

56 By letter of 7 June 2007, sent to the Registry of the Court of First Instance by fax on the same date, the applicants made a further request for a derogation from the rule on the use of the language of the case for the purposes of the hearing. That request was rejected by decision of the President of the Fifth Chamber of the Court of First Instance on 7 June 2007.

57 The parties presented oral argument and their answers to the questions put by the Court at the hearing on 12 June 2007. At the hearing, the applicants were authorised to answer the questions of the Court in French.

58 The applicants claim that the Court should:

– annul the contested decision to the extent that it refuses to open an in-depth investigation into AIA's costs and revenues relating to the provision of passenger security services, passenger terminal facilities and car parking services in order to establish whether the charges levied by AIA constitute an abuse of a dominant position;

– order the Commission to pay the costs.

59 The Commission contends that the Court should:

– dismiss the application with regard to Mr Terezakis as inadmissible;

– dismiss the application for annulment as unfounded;

– order the applicants to pay the costs.

Admissibility

Arguments of the parties

60 The Commission claims that the action is inadmissible in so far as it was brought by Mr Terezakis. The addressees of the contested decision were only Mrs Scippacercola and Mr Christofidis.

61 It recalls that Mr Terezakis is not mentioned in the initial complaint lodged by Mr Koeune or in the subsequent exchanges between Mrs Scippacercola and the Commission. Mr Koeune never replied to the Commission's repeated requests to identify which clients he was representing. The Commission accepted Mrs Scippacercola as a complainant because she identified herself as such in her letter of 24 December 2002, in which she referred to the Commission's letter of 28 November 2002 and to which she attached the power of attorney which she had given to Mr Koeune to lodge the complaint of 5 July 2002.

62 The Commission observes that Mr Terezakis lodged a separate complaint at the Secretariat-General of the Commission on 27 November 2003, which was registered as No 2004/4134, SG (2004) A/1724. That complaint was not the subject of the contested decision. Further, the Commission's services acknowledged receipt of 'market information' provided by Mr Terezakis in so far as it was relevant to the present matter, but noted explicitly in a letter of 21 February 2005 that this was not regarded as a formal complaint, as the information had been provided by Mr Terezakis in his capacity as a Commission official and by using internal communication channels.

63 It was only in his letter dated 13 January 2005, that is to say, after the Commission's letter of 12 January 2005 to Mrs Scippacercola and Mr Christofidis pursuant to Article 7(1) of Regulation No 773/2004, that Mr Terezakis expressed his wish to join in the complaint which they had lodged. The use in that letter of the expressions 'je rejoins' (I join) and 'leur plainte' (their complaint) shows that Mr Terezakis did not consider himself to be a party to the complaint of 5 July 2002.

64 It follows that Mr Terezakis has no legal standing to challenge the contested decision, since he is not an addressee of that decision and did not establish in the application that he was directly and individually concerned by it.

65 The applicants claim that this action is entirely admissible.

Findings of the Court

66 It has been consistently held that it is in the interests of the proper administration of justice and of the correct application of Articles 81 EC and 82 EC that natural or legal persons who are entitled to make a request pursuant to Article 3(2)(b) of Regulation No 17 should be able to institute proceedings in order to protect their legitimate interests if their request is not complied with either wholly or in part (Case 26/76 *Metro* v *Commission* [1977] ECR 1875, paragraph 13; Case 210/81 *Schmidt* v *Commission* [1983] ECR 3045, paragraph 14; Case T-37/92 *BEUC and NCC* v *Commission* [1994] ECR II-285, paragraph 36; and Case T-193/02 *Piau* v *Commission* [2005] ECR II-209, paragraph 38). That case-law can be applied to natural or legal persons who are entitled to make a complaint on the basis of Article 7(2) Regulation No 1/2003, which replaced Article 3(2)(b) of Regulation No 17 from 1 May 2004.

67 In the present case, it must be noted first of all that, on 5 July 2002, Mr Koeune, acting on behalf of 'a number of [Athens] airport users', lodged complaint No COMP/D3/38469 with the Commission.

68 Next, it must be noted that, by letter to the Commission of 24 December 2002, Mrs Scippacercola identified herself as one of the persons on whose behalf the complaint of 5 July 2002 had been lodged, and attached the power of attorney granted to Mr Koeune.

69 Finally, the contested decision was addressed, inter alia, to Mrs Scippacercola.

70 In view of the case-law cited in paragraph 66 above, the action is therefore admissible in relation to Mrs Scippacercola.

71 Next, it must be observed that the applicants have brought one and the same action. It has consistently been held that, where one and the same application is involved, a finding of admissibility in relation to one applicant means that there is no need to consider whether the other applicants are entitled to bring proceedings, since it is sufficient that at least one of the applicants fulfils the conditions laid down in Article 230 EC (Case C‑313/90 *CIRFS and Others* v *Commission* [1993] ECR I‑1125, paragraph 31; Case T‑12/93 *CCE de Vittel and Others* v *Commission* [1995] ECR II‑1247, paragraph 44; Joined Cases T‑374/94, T‑375/94, T‑384/94 and T‑388/94 *European Night Services and Others* v *Commission* [1998] ECR II‑3141, paragraph 61; and Case T‑317/02 *FICF and Others* v *Commission* [2004] ECR II‑4325, paragraph 40).

72 It follows from all the foregoing that the action must be declared admissible without there being any need to consider whether Mr Terezakis is entitled to bring proceedings.

Substance

Preliminary observations

73 It must be noted, first, that the applicants dispute the lawfulness of the contested decision only so far as concerns the security charge, the passenger terminal facilities charge and the car parking charge. The applicants do not, therefore, dispute the contested decision in so far as it relates to charges for the provision of aviation fuel (paragraphs 93 to 108 of the contested decision) or the charge for the provision of aeroplane parking services (paragraphs 109 to 119 of the contested decision).

74 Next, it must be noted that the fundamental reason given in the contested decision for the Commission's rejection of the complaint of 5 July 2002 is the lack of Community interest in opening an in-depth investigation (paragraphs 39 to 43, 78 and 79, 92 and 136 to 141 of the contested decision). It is, moreover, the only reason given in the contested decision for rejecting the complaint as to the allegedly excessive passenger terminal facilities charge and charge for parking cars at the airport (paragraph 141 of the contested decision). As far as the alleged infringement related to the security charge is concerned, the Commission mentions another reason for rejecting the complaint, in addition to the lack of Community interest, namely the fact that the practices in question do not fall within the scope of Article 82 EC (paragraph 141 of the contested decision).

75 The applicants rely on four pleas in law in the application. The first plea in law alleges an error of law and a manifest error of assessment in that the Commission did not carry out a proper comparison of the costs and revenues related to the provision of security services, the provision of airport terminal facilities to passengers and the provision of airport car parking services, by failing to verify the reliability of the information supplied by AIA and by failing to examine one by one the economic and financial data submitted by the applicants. The second plea in law alleges an infringement of Article 82 EC in that, first, the Commission considered that the security checks did not constitute an economic activity for the purposes of that provision and, second, the car parking services did not constitute a relevant market for the purposes of that provision. The third plea in law alleges an error of law concerning the application to passengers of a higher terminal facility charge for those on intra-Community and international flights than for those on domestic flights, and the application to passengers on scheduled flights of a terminal facility charge and a security charge which are not applied to those travelling on charter flights. Finally, the fourth plea in law alleges an infringement of Article 253 EC and a departure from established rights and procedures.

First plea in law, alleging an error of law and a manifest error of assessment in that the Commission did not carry out a proper comparison of the costs and revenues related to the provision of security services, the provision of airport terminal facilities to passengers and the provision of car parking services, by failing to verify the reliability of the information supplied by AIA and by failing to examine one by one the economic and financial data submitted by the applicants

Arguments of the parties

76 The applicants claim that, contrary to the requirements laid down in *United Brands* v *Commission* (cited in paragraph 27 above), the Commission failed to carry out a proper comparison of the costs

and revenues related to the provision of passenger security services, the provision of terminal facilities to passengers and the provision of car parking services. In addition, by concluding that it was not in the Community interest to open an in-depth investigation, the Commission did not pay due attention to the content of the complaints, in particular complaint No 2004/4134, SG(2004) A/1724.

77 First, as regards the security charge, the applicants observe that an activity performed in the public interest should not produce excessive profits. According to the applicants' calculations, however (which take into account a construction cost in respect of the security installations of EUR 3 454 966, security staff salary costs in 2002 of EUR 2 164 433 and annual income from passenger security activities of EUR 14 429 559 in 2002), AIA realises a capital return equal to 7 236% on its security activities. The charges levied, which do not bear any reasonable relationship to the costs incurred by AIA, are thus excessive prices, contrary to Article 82 EC (*United Brands* v *Commission*, cited in paragraph 27 above, paragraphs 249 to 252).

78 The comparisons and explanations put forward by the Commission in paragraphs 65 to 68, 70 and 71 of the contested decision are inconclusive, as they concern other airports unconnected with the relevant market in the present case. The Commission itself stated, in paragraph 69 of the contested decision, that 'simple comparisons of levels of charges at different airports cannot be considered to be sufficient evidence to demonstrate excessive pricing'.

79 In addition, the applicants observe that the security charge was increased from EUR 1.29 when Athens airport opened in March 2001 to EUR 2.44 in October 2002 owing to the events of 11 September 2001. In view of this sharp increase of almost 90%, the applicants request the Court to order the Commission to explain on what economic grounds AIA raised the security charge to EUR 2.44.

80 In view of the foregoing, the applicants take the view that the Commission was not entitled to conclude in paragraph 77 of the contested decision that none of the elements submitted by the complainants appears sufficiently persuasive to justify the opening of an in-depth investigation.

81 The applicants also dispute the Commission's finding in paragraph 74 of the contested decision that 'a comparison between costs for and revenues from [the] security activities as supplied by AIA … in the confidential version of its reply [to the request for information], to which the complainants cannot be granted access, does not produce a surplus … [with the result that] there is no evidence of excessive prices that would justify any further investigation'. The applicants claim that the Commission did not state why information concerning the revenues from the passenger security services and the related fixed and variable costs constituted confidential information for the purposes of Article 8(1) of Regulation No 773/2004. They note that, in accordance with Regulation (EC) No 1049/2001 of the European Parliament and of the Council of 30 May 2001 regarding public access to European Parliament, Council and Commission documents (OJ 2001 L 145, p. 43), the Commission, by letter of 26 June 2003, had already granted Mrs Scippacercola access to the Cohesion Fund application made by the Greek authorities for assistance for the construction of Athens airport, which contains information concerning the cost of the airport's passenger security systems. The security charge is known and AIA publishes its staff costs on its website and also monthly and annual statistics on the numbers of passengers served at the airport. Such information is not, therefore, confidential.

82 The applicants therefore ask the Court to order the Commission to provide them with the figures supplied by AIA in respect of security costs and revenues for the years 2001 to 2004 so that they can be verified and assessed in the light of the applicants' arguments to demonstrate that AIA realises excessive profits. They observe that AIA acted as the authority responsible for implementation of an airport project financed by Community funds and carried out in the common interest. Accordingly, the information concerning the airport's construction costs cannot be within the scope of business secrets or constitute confidential information. In addition, as regards AIA's staff costs, as to which the global figure (EUR 27 147 458) can be found on the internet (www.aia.gr), the Commission has not explained how AIA's business secrets would be affected if the information concerning the breakdown by category of activity were to be given to the applicants.

83 The irregularities in connection with the construction of Athens airport referred to in complaint No 2004/4134, SG(2004) A/1724 are relevant not only from the viewpoint of the Cohesion Fund grant but also from that of the competition rules since AIA's pricing strategy is based on an airport construction cost of EUR 1 746 167 573. The applicants recall that Commission Decision C(96) 1356 of 23 May 1996 granting Cohesion Fund assistance mentions a construction cost of EUR 973 303 266, whereas the Commission refers in the defence (paragraphs 38 and 51) to a cost

of EUR 2 100 000 000. Furthermore, Mr Terezakis informed the Commission of the disappearance of VAT receivables from AIA's balance sheet for 2001 and the following years. The applicants therefore ask the Court of First Instance to order the Commission to submit documentary evidence establishing the true construction cost of Athens airport in order to determine the exact annual depreciations to be taken into account for the purpose of comparing the costs and revenues of the services concerned. In the reply, the applicants further request the Court to order the Commission to state the names of the undertakings to which AIA paid EUR 2 100 000 000.

84 As regards the exchange of correspondence between Mr Terezakis and the Commission following complaint No 2004/4134, SG(2004) A/1724, the applicants submit that, by ignoring information supplied by the complainant concerning the deletion of the VAT receivables from AIA's balance sheets, by deciding to suspend the correspondence with the complainant, and by adopting Decision C(2005) 3243 of 1 September 2005 slightly reducing the Cohesion Fund assistance rather than envisaging the recovery of the entire assistance, the Commission has not complied with its Communication COM(2002) 141 to the European Parliament and the European Ombudsman of 20 March 2002 on relations with the complainant in respect of infringements of Community law, or its Communication COM(2002) 725 of 16 May 2003 on better monitoring of the application of Community law.

85 Second, as regards the passenger terminal facilities charge, the applicants claim that the comparisons and explanations put forward by the Commission in paragraphs 83 to 86 of the contested decision are inconclusive, as the Commission itself stated in paragraph 85 of the contested decision that 'simple comparisons of levels of charges at different airports cannot be considered to be sufficient evidence to demonstrate excessive pricing'.

86 The applicants note that, according to their calculations (which take into account a fixed cost related to passenger terminal facilities of EUR 200 000 000, salary costs of EUR 25 529 845 in 2001 and EUR 27 147 498 in 2002, and revenue of EUR 60 911 666 in 2002 and EUR 63 099 829 in 2003), AIA realised a capital return on the written-down fixed costs of 329% in 2002, 451% in 2003 and 523% in 2004. The charges levied, which do not bear any reasonable relationship to the costs incurred by AIA, are thus excessive prices, contrary to Article 82 EC (*United Brands* v *Commission*, cited in paragraph 27 above, paragraphs 249 to 252).

87 The information on which the applicants based their calculations was brought to the Commission's attention during the administrative procedure. The figure of EUR 200 000 000 for the fixed costs relating to passenger terminal facilities is the result of the conversion of DEM 370 000 000, which corresponds to the total cost of the works relating to the passenger terminal facilities referred to in appendix 7 to the Greek authorities' application for assistance from the Cohesion Fund. The applicants request the Court of First Instance to order the Commission to provide them with the figures available to the Commission if the applicants' calculations are disputed, and also the names of the constructors and of the suppliers concerned.

88 The applicants observe also that the Commission never took into account the particulars provided in complaint No 2004/4134, SG(2004) A/1724 of 27 November 2003, whereby the Commission was informed inter alia that AIA had manifestly manipulated the operational expenses and interest payments and that it had dealings with non-existent 'affiliated undertakings'. Nor did the Commission take into account the letters containing information on AIA's abusive practices which were sent to the DG for Competition between June and October 2004 (letters of 28 June, 15 July, 22 October and 26 October 2004), and which were mentioned in the letter of 26 January 2005. The Commission was wrong also to take the view that the construction cost of the airport was EUR 2 100 000 000 (see paragraph 83 above).

89 Third, as regards the car parking charge, the applicants claim that, according to their calculations (which take into account a construction cost in respect of the car park of EUR 753 206, as mentioned in the Greek authorities' application for assistance from the Cohesion Fund, practically no salary costs and revenues of EUR 9 289 247 in 2002), AIA realises an annual capital return which is higher than the total cost invested. The charges levied, which do not bear any reasonable relationship to the costs incurred by AIA, are thus excessive prices, contrary to Article 82 EC (*United Brands* v *Commission*, cited in paragraph 27 above, paragraphs 249 to 252).

90 The Commission contends that this plea in law should be rejected.

Findings of the Court

– Preliminary observations

91 It has consistently been held that Article 3(2) of Regulation No 17 does not give a person making an application under that article the right to insist that the Commission take a final decision as to the existence or non-existence of the alleged infringement (Case 125/78 *GEMA* v *Commission* [1979] ECR 3173, paragraphs 17 and 18; Case C–119/97 P *Ufex and Others* v *Commission* [1999] ECR I–1341, paragraph 87; Case T–24/90 *Automec* v *Commission* [1992] ECR II–2223, paragraph 75; and Joined Cases T–185/96, T–189/96 and T–190/96 *Riviera Auto Service and Others* v *Commission* [1999] ECR II–93, paragraph 48). The same applies to a person making a complaint under Article 7(2) of Regulation No 1/2003, which replaced Article 3(2) of Regulation No 17 from 1 May 2004.

92 The Commission, to which Article 85(1) EC entrusts the task of ensuring application of the principles laid down in Articles 81 EC and 82 EC, is responsible for defining the orientation of Community competition policy and implementing it. In order to perform that task effectively, it is entitled to give differing degrees of priority to the complaints brought before it, and has a discretion for that purpose (*Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraph 88, and Case C–449/98 P *IECC* v *Commission* [2001] ECR I–3875, paragraph 36).

93 The Commission is entitled in particular to refer to the Community interest in order to determine the degree of priority to be applied to the various complaints brought to its notice (Case T–24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 85, and Joined Cases T–9/96 and T–211/96 *Européenne automobile* v *Commission* [1999] ECR II–3639, paragraph 28). The fact that the Commission may reject a complaint for lack of Community interest is, moreover, explicitly acknowledged in Regulation No 1/2003 (recital 18).

94 The discretion which the Commission has in that respect is not unlimited, however (*Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraph 89, and *Européenne automobile* v *Commission*, cited in paragraph 93 above, paragraph 29).

95 First, the Commission must consider attentively all the matters of fact and of law which the complainant brings to its attention (*Schmidt* v *Commission*, cited in paragraph 66 above, paragraph 19; Case 298/83 *CICCE* v *Commission* [1985] ECR 1105, paragraph 18; Joined Cases 142/84 and 156/84 *BATand Reynolds* [1987] ECR 4487, paragraph 20; *Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraph 86; and *IECC* v *Commission*, cited in paragraph 92 above, paragraph 45).

96 Second, the Commission is under an obligation to state reasons if it declines to continue with the examination of a complaint. Since the reasons stated must be sufficiently precise and detailed to enable the Court of First Instance effectively to review the Commission's use of its discretion to define priorities, the Commission must set out the facts justifying the decision and the legal considerations on the basis of which it was adopted (*Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraphs 90 and 91; Case T–24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 85; and *Européenne automobile* v *Commission*, cited in paragraph 93 above, paragraph 29).

97 Finally, it must be noted that the judicial review of decisions to reject complaints must not lead the Court to substitute its assessment of the Community interest for that of the Commission but focuses on whether or not the contested decision is based on materially incorrect facts, or is vitiated by an error of law, a manifest error of assessment or misuse of powers (Case T–24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 80; Case T–387/94 *Asia Motor France and Others* v *Commission* [1996] ECR II–961, paragraph 46; and *Européenne automobile* v *Commission*, cited in paragraph 93 above, paragraph 29).

98 In the present case, the Commission rejected the complaint of 5 July 2002 after concluding that the practices complained of did not represent a sufficient Community interest to justify an in-depth investigation (paragraphs 39 to 43, 78, 79, 92, 140 and 141 of the contested decision). In that regard, it found that there was insufficient likelihood of being able to establish the existence of the infringements complained of, taking into account the limited amount of evidence provided by the complainants and the unconvincing nature of that evidence, the results of the Commission's initial inquiry and the complex nature of the investigation that would still be needed in order to establish

whether or not there was an infringement (paragraphs 78, 92 and 140 of the contested decision). It therefore took the view that the efforts required to establish, with any certainty, the existence of an infringement would be disproportionate in the light of the small likelihood of the existence of an infringement and of its low significance as regards the functioning of the common market (paragraphs 79, 92 and 140 of the contested decision).

99 By the present plea, the applicants essentially make three submissions. The first calls in question the comparison made in the contested decision between the charges levied at Athens airport and those imposed by other airports (paragraphs 100 to 105 below). The second relates to the alleged failure to take sufficient account in the contested decision of the evidence submitted by the complainants during the administrative procedure (paragraphs 106 to 125 below). The third concerns the fact that the Commission did not verify the information provided by AIA (paragraphs 126 to 133 below).

– The comparison between the charges levied at Athens airport and those imposed by other airports

100 First, it must be borne in mind that in *United Brands* v *Commission*, cited in paragraph 27 above (paragraph 250), the Court of Justice held that 'a price which is excessive because it has no reasonable relation to the economic value of the product supplied' could constitute an abuse within the meaning of Article 82 EC. In that regard, 'the questions to be determined are whether the difference between the costs actually incurred and the price actually charged is excessive, and, if the answer to this question is in the affirmative, whether a price has been imposed which is either unfair in itself or when compared to competing products' (paragraph 252).

101 Second, it must be noted that, in their complaint of 5 July 2002, the complainants themselves based their allegation as to the excessive nature of the security charge, passenger terminal facility charge and car parking charge on a comparison of the charges imposed at Athens airport with those at other European airports.

102 In the present case, so far as the various charges at issue are concerned, the Commission examined the charges which apply at other established airports in the European Community in paragraphs 70, 86 and 135 of the contested decision, and compared the charges at Athens airport and those imposed at Amsterdam, Barcelona, Brussels, Frankfurt, Madrid, Paris (Roissy) and Rome (Fiumicino) airports.

103 By so doing, the Commission carefully considered the elements of the complaint and complied with the requirements set out in *United Brands* v *Commission*, cited in paragraph 27 above, of comparing the charges imposed and the price of competing services.

104 Furthermore, the applicants do not dispute the material accuracy of the information contained in paragraphs 70, 86 and 135 of the contested decision. Even though an infringement of Article 82 EC cannot be established on the basis of a simple comparison of levels of charges payable at different airports, as the Commission correctly maintains in paragraphs 65 to 69, 84 and 85 of the contested decision, it must nevertheless be noted that the security charge, the passenger terminal facilities charge and the car parking charge at Athens airport are not in the higher band of similar charges payable at the other airports examined.

105 Contrary to the complainants' submission in their complaint of 5 July 2002, the comparison with other European airports does not therefore provide any indication of the existence of excessive pricing in breach of Article 82 EC.

– The alleged failure to take sufficient account of the evidence submitted by the complainants during the administrative procedure

106 In the first place, the complainants put forward various items of evidence during the administrative procedure to show that the charges covered by the present proceedings bore no reasonable relation to the economic value of the service supplied (*United Brands* v *Commission*, cited in paragraph 27 above, paragraph 250).

107 Thus, in their letters of 28 June 2004**,** 15 July 2004 and 26 January 2005, the complainants provided the Commission with estimates of the costs incurred by AIA for the provision of security services and passenger terminal facilities, and compared those estimates with the revenues which

AIA is presumed to obtain from the security charge and from the passenger terminal facilities charge.

108 As regards security, the calculations submitted by the complainants are based on estimated costs of EUR 4 000 000. The letter of 26 January 2005 (p. 2) refers in that regard to staff costs (400 staff at EUR 900 per month) related to the services in question, and the letters of 28 June and 15 July 2004 refer to a security systems cost of DEM 6 281 757 or EUR 3 454 966. According to the letter of 26 January 2005 (p. 2), the security charge generates revenues of EUR 15 000 000.

109 As to airport terminal facilities, the costs calculation is based, in the letter of 26 January 2005 (pp. 2 and 3), on an estimate of the fixed costs of the facilities needed in order to provide the services in question (EUR 200 000 000), amortised over an investment period of 24 years (EUR 8 300 000) and increased to include estimated staff costs (EUR 16 000 000) and other unidentified costs (EUR 2 700 000) related to the services in question. According to the letter of 26 January 2005 (p. 2), the passenger terminal facilities charge generates revenues of EUR 67 000 000. By comparing the costs with the revenues generated by the charges, the complainants conclude that the charges are excessive, contrary to Article 82 EC. In their letter of 26 January 2005 (pp. 3 and 4), they claim that profits are in excess of 1000% for security and EUR 40 000 000 for providing passengers with terminal facilities.

110 As regards car parking, the complainants' claim as to the excessive nature of the charges is based, in their letters of 28 June 2004, 15 July 2004 and 26 January 2005, on an investment cost estimated at DEM 1 364 010 or EUR 753 206, and they conclude that the profits from those services are in excess of 1000%.

111 It must be noted that the Commission commented in the contested decision on the information brought to its attention by the letters referred to in paragraphs 107 to 110 above.

112 Thus, as regards security, the Commission states in paragraph 73 of the contested decision that the applicants' comparisons between revenues and expenses are based on erroneous and incomplete information. Furthermore, the applicants took only passenger and hand luggage screening services into consideration, whereas security activities encompass also guarding, access and patrol security services, general security supervision services, all security equipment, alarm systems, etc. Likewise, as regards passenger terminal facilities and car parking services, the Commission draws attention, in paragraphs 83 and 135 of the contested decision respectively, to the lack of reference to the complainants' sources and to the inaccurate and unfounded nature of the calculations made.

113 However, save for the fact that they take the view that the Commission was aware, during the administrative procedure, of the source of the information used to calculate the cost of the security systems, airport facilities and parking (namely the Greek authorities' Cohesion Fund application for assistance), the applicants do not deny the findings of the Commission set out in the previous paragraph.

114 In any event, the inaccurate and unfounded nature of the applicants' calculations is apparent from the very documents to which the applicants made reference during these proceedings.

115 Firstly, as regards the costs of the security systems, appendix 7 to the Greek authorities' Cohesion Fund application for assistance refers to a sum of DEM 6 281 757 for 'passenger security systems' in the Main Terminal Building East. The applicants do not, however, refer to the figure of DEM 1 073 633 provided for 'passenger security systems' in Satellite I. Their calculations on the basis of an installation cost of DEM 6 281 757 are therefore manifestly inaccurate. Furthermore, the applicants have not denied that the costs of providing security services cannot be reduced to the cost of installing a 'passenger security system'.

116 Secondly, as regards the passenger terminal facilities charge, the applicants refer to the figure of EUR 200 000 000 for the purposes of calculating AIA's fixed costs, having already relied on that figure during the administrative procedure (paragraph 83 of the contested decision). According to the applicants, that figure corresponds to the total cost of works related to the airport facilities referred to in appendix 7 to the Greek authorities' application for assistance from the Cohesion Fund.

117 However, it must be noted that the appendix to which the applicants refer mentions a total cost of DEM 2 440 536 638 or approximately EUR 1 250 000 000 for the works related to Athens airport. Furthermore, it must be pointed out that Commission Decision C(96) 1356 of 23 May 1996 granting Cohesion Fund assistance for the construction of Athens airport provides for total Community

assistance of EUR 250 000 000, which necessarily implies that the figure of EUR 200 000 000 put forward by the complainants during the administrative procedure cannot correspond to the total cost of construction of the airport.

118 Thirdly, as regards the car parking charge, appendix 7 to the Cohesion Fund application for assistance for the construction of the new Athens airport, to which the applicants refer, mentions an estimated investment cost of DEM 1 364 010 or approximately EUR 753 206 in respect of parking. However, the same appendix makes two further references to 'parking', at a cost of DEM 663 073 and DEM 256 733 respectively. The applicants' calculations are therefore incomplete in any event.

119 In addition, it must be pointed out that the Commission found, in paragraphs 137 to 139 of the contested decision, that it was not in the Community interest to investigate further the alleged infringement in relation to the car parking charge, taking the view, in essence, that that car parking market is unlikely to constitute a relevant market, that the alleged infringement would not have an effect on intra-Community trade and would not appreciably affect competition in the common market, and that its centre of gravity was in Greece, with the result that the complainants could lodge a complaint with the Greek authorities or bring an action before the Greek courts. However, aside from the definition of the market concerned, the applicants have not disputed in the application the other factors in the light of which the Commission found that it was not in the Community interest to investigate further the alleged infringement in relation to the car parking charge.

120 Finally, the non-confidential version of AIA's replies of 27 August 2004 to the Commission's request for information, which was produced to the Court of First Instance following a measure of organisation of procedure, confirms that the applicants' calculations in relation to the allegedly excessive nature of AIA's charges are incorrect. It is apparent from that reply (p. 4) that, as regards its air activities, AIA's charges, taken as a whole, do not even cover its costs although, according to Article 14 of the agreement, which was ratified by Article 1 of Law No 2338/1995, AIA is entitled to set its charges not only to reflect its costs but also to take into account a minimum profit margin of 15%.

121 In the second place, as regards the applicants' argument concerning the failure to take account of the letters of 28 June, 15 July, 22 and 26 October 2004, it must be pointed out that the information in those letters was repeated in the letter of 26 January 2005, the contents of which were carefully considered by the Commission, as paragraph 73 of the contested decision shows (see paragraphs 107 to 111 above).

122 In the third place, the applicants' arguments concerning the irregularities in the consideration of complaint No 2004/4134, SG(2004) A/1724 of 27 November 2003, and the failure to take into account the evidence submitted in connection with that complaint cannot be accepted either.

123 The Commission takes certain aspects of complaint No 2004/4134, SG(2004) A/1724 of 27 November 2003 into consideration in paragraph 73 and footnote 25 of the contested decision. They are, however, those aspects of the complaint that were reproduced verbatim in the complainants' letter of 26 January 2005 in relation to the administrative procedure concerning the complaint of 5 July 2002.

124 Since the contested decision relates only to the complaint of 5 July 2002 and not to complaint No 2004/4134, SG(2004) A/1724 of 27 November 2003, the Commission had to take into account in that decision only the evidence relied on in relation to the first complaint. Therefore, any irregularities in the handling of complaint No 2004/4134, SG(2004) A/1724 of 27 November 2003 cannot affect the lawfulness of the contested decision.

125 It follows from all the foregoing that the applicants have not established that the Commission failed to consider carefully the evidence brought to its attention or that it made a manifest error of assessment in considering that that evidence did not constitute sound evidence of the existence of an infringement of Article 82 EC and therefore that there was no Community interest in pursuing its investigation.

– The failure to verify the information supplied by AIA

126 It must be observed first of all that, as paragraph 22 of the contested decision shows, the Commission considered it necessary, in spite of the unconvincing evidence adduced by the complainants, to carry out an initial investigation of AIA's costs and revenues by sending a request

for information, inter alia, to AIA.

127 The information relating to costs and revenues provided in its reply of 27 August 2004 to that request for information is, according to the Commission, confidential with respect to the complainants (footnote 23 of the contested decision). In the contested decision, particularly in paragraphs 74, 76, 90, 91 and 135, the Commission merely draws conclusions from AIA's reply without mentioning the figures on which those conclusions are based.

128 Accordingly, the Commission maintains, in paragraph 74 and at the end of paragraph 76 of the contested decision, that it follows from AIA's reply to the request for information that security activities do not generate a surplus and that there is consequently no evidence of excessive pricing that would justify further investigation. The Commission maintains also, in paragraph 90 of the contested decision, that it follows from that reply that the charges levied by AIA do not generate a surplus and in fact do not even cover the cost of AIA's air activities. As to the car parking charge, the Commission states in paragraph 135 of the contested decision that the figure of EUR 700 000 mentioned by the complainants in respect of parking-related costs refers only to fixed costs – whereas a comparison of the costs and revenues should also include other costs – and is not, in any event, supported by the information given by AIA in its reply to the request for information.

129 Contrary to the applicants' claim, the fact that the Commission did not verify the reliability of the information supplied by AIA cannot affect the lawfulness of the contested decision.

130 It must be borne in mind in that regard that the Commission is not required to establish the existence or non-existence of an infringement (*GEMA* v *Commission*, cited in paragraph 91 above, paragraphs 17 and 18; *Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraph 87; Case T‑24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 75; and *Riviera Auto Service and Others* v *Commission*, cited in paragraph 91 above, paragraph 48).

131 In the present case, the Commission concluded that there was insufficient likelihood of an infringement for it to be in the Community interest to investigate the practices criticised in the complaint. In that regard, the Commission acted on the basis of, first, its finding that the information on AIA's costs and revenues submitted by the complainants did not support the conclusion that an infringement had occurred and, second, two factors which indeed suggest that no infringement occurred, namely (1) the comparison of AIA's charges and those imposed at other airports, and (2) the comparison of AIA's costs and revenues resulting from AIA's reply of 27 August 2004 to the Commission's request for information.

132 It must be noted that the non-confidential version of AIA's reply of 27 August 2004 (p. 4) shows that, as regards its air activities, AIA's charges, taken as a whole, do not even cover its costs although, according to Article 14 of the agreement, which was ratified by Article 1 of Law No 2338/1995, AIA is entitled to set its charges not only to reflect its costs but also to take into account a minimum profit margin of 15%.

133 Furthermore, the applicants have not denied that the verification of information in AIA's reply which would be needed in order to establish the existence of an infringement would involve disproportionate efforts on the Commission's part (paragraphs 78, 79, 92 and 140 of the contested decision). The complexity of the analysis which would have to be undertaken in order to establish an infringement in the present case relates in particular to the determination of the exact costs which would have to be taken into account in order to assess whether or not each charge imposed by AIA is excessive. It is the complexity of such an analysis for the purposes of determining whether there was an infringement and the small likelihood of the existence of such an infringement which caused the Commission not to verify the reliability of the confidential information on AIA's costs and revenues and to reject the complaint for lack of Community interest (see paragraphs 76, 78, 90 to 92, 135 and 140 of the contested decision).

134 Accordingly, since the assessment of the Community interest does not depend on the material accuracy of the information supplied by AIA, the failure to verify that information cannot affect the lawfulness of the contested decision. That last complaint cannot, therefore, be upheld either.

135 It follows from all the foregoing that the applicants have not demonstrated that the Commission failed to consider sufficiently all the matters of fact and of law which were brought to its attention or that it made a manifest error of assessment in finding that there was no Community interest in pursuing the investigation of the practices criticised in the complaint.

136 It follows that the first plea in law must be rejected in its entirety.

Second plea in law, alleging an infringement of Article 82 EC in that, first, the Commission considered that the security checks did not constitute an economic activity and, second, the car parking services did not constitute a relevant market for the purposes of that article

Arguments of the parties

137 First, the applicants submit that the Commission infringed Article 82 EC by concluding, in paragraphs 48 and 49 of the contested decision, that AIA was not exercising an economic activity for the purposes of that article when carrying out security checks on passengers departing from Athens airport. In that regard, the applicants note that, as they observed in their letters of 8 April and 5 May 2004, AIA is a private company which charges passengers for security services. They point out, moreover, that the security services are provided by private companies.

138 The applicants submit that paragraph 17.2 of the Greek Ministerial Decision of 29 December 2000 concerning the national regulation of civil aviation security provides that responsibility for the security systems in Greek airports lies with the national civil aviation authority. That decision does not preclude passenger security checks from being carried out by private companies, but this is only an option, as the rule in all Greek airports is that the national police are responsible for carrying out passenger security checks free of charge. The fact that passenger checks are carried out by private security companies in Athens airport is not, therefore, the consequence of a public service obligation imposed on AIA by the Greek State, but reflects a choice made by AIA itself. The applicants further submit that paragraph 13.6.3 of the Ministerial Decision of 29 December 2000 stipulates that compulsory body searches of passengers are the prerogative of the Greek police and that passengers have the right to refuse such searches by private security personnel.

139 The applicants emphasise that the Commission itself acknowledges in paragraph 55 of the contested decision that the security companies are selected by and on behalf of AIA and not by the police. The main selection criterion is the price asked by the candidate security company. They note also that AIA is free to charge whatever it deems appropriate for security services, thereby realising profit margins which are subject to no constraint whatsoever.

140 Second, the applicants claim that the Commission was in breach of Article 82 EC in taking the view in paragraphs 122 to 132 of the contested decision that the car parking services did not constitute a relevant market for the purpose of that article. They argue that, for passengers using Athens airport and travelling to the airport by their own car, alternative means of transport, such as travel by taxi or public transport, cannot be regarded as a substitute. The airport car park is used not only by those making a journey by air but also for a variety of other reasons, such as collecting passengers. In addition, the Commission, which claims that passengers would use other means of transport ‘if the prices of car parking at the airport were raised significantly above competitive levels’, has not explained to what level car parking charges would have to be raised to achieve that effect. Furthermore, the metro is not a quicker way for most Athenians to reach the airport, as most do not live in the city centre.

141 The applicants submit that the needs of passengers who use their private cars to reach Athens airport cannot be regarded as being similarly served if they are obliged to take a taxi or to use public transport while having to carry their luggage. There is, therefore, no interchangeability within the meaning of the Commission’s Notice on the definition of relevant market for the purposes of Community competition law (OJ 1997 C 372, p. 5).

142 Finally, the Commission’s argument that passengers residing outside Greece will never use the car parking facilities at Athens airport is unfounded, as a number of people who work in Brussels or London return to Athens for weekends and use the car parking facilities at Athens airport.

143 The Commission contends that this plea in law should be rejected.

Findings of the Court

144 First, as regards the security charge, it must be borne in mind that, in the contested decision, the Commission rejected the complaint after concluding that Article 82 EC did not apply to security checks, and that, ‘in any event … it [was] not in the Community interest to open an in-depth investigation’.

145 It must be noted that, as far as the security charge is concerned, the applicants' arguments concerning the assessment of the Community interest have all been rejected in relation to the first plea in law (paragraphs 100 to 135 above). In those circumstances, the arguments relied on in the present plea concerning the allegedly economic nature of the security activities must be regarded as being immaterial (see, to that effect, Case T–50/00 *Dalmine* v *Commission* [2004] ECR II–2395, paragraph 146, and the case-law cited, and also *Piau* v *Commission*, cited in paragraph 66 above, paragraph 119). They relate to a reason that was included in the contested decision for the sake of completeness.

146 Second, as regards the car parking charge, the Commission rejected the complaint of 5 July 2002 in so far as it relates to the allegedly excessive nature of that charge on the ground that 'it [was] not in the Community interest to open an in-depth investigation' (paragraph 141 of the contested decision). In its assessment of the Community interest in investigating the complaint, the Commission took into account the likelihood that the airport car parking market does not constitute a separate market for the purposes of Article 82 EC (paragraph 119 above).

147 However, it must be noted in relation to the present plea that the applicants do not challenge the assessment of the Community interest made in the contested decision, but only complain that the Commission infringed Article 82 EC in so far as it found that car parking services did not constitute a relevant market for the purposes of that article. That being said, it must be noted that the Commission explicitly stated in the contested decision (paragraph 130) that it did not propose to reach a conclusion on that point.

148 In any event, it is not apparent that the Commission made a manifest error of assessment in concluding that, in view of the alternative means of transport to Athens airport (metro, train, bus and taxi), 'it appears likely that a significant number of passengers who wished to travel to the airport using their own car would switch to other means of transport to and from the airport if the prices of car parking at the airport were raised significantly above competitive levels' (paragraph 127 of the contested decision). Moreover, the applicants do not dispute the Commission's assertions in the contested decision (paragraph 139) that the centre of gravity of the alleged abuse is in Greece and that an action against that alleged abuse could be brought before the Greek courts. However, it is apparent from the case-law that such points are in themselves sufficient reason for a complaint to be rejected for lack of Community interest (see, to that effect, Case T–5/93 *Tremblay and Others* v *Commission* [1995] ECR II–185, paragraph 74).

149 Furthermore, the Court cannot accept the applicants' argument at the hearing that the Commission was not entitled to refer in the contested decision to the metro as an alternative means of transport because the complaint was lodged in July 2002 and the metro did not become operational until 2004. A decision rejecting a complaint must be based on the Commission's consideration of all relevant matters of law and of fact which exist at the time the decision is adopted (see, to that effect, *Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraphs 92 to 96, and Case T–206/99 *Métropole télévision* v *Commission* [2001] ECR II–1057, paragraphs 64 and 65).

150 The second plea in law cannot therefore be accepted either.

Third plea in law, alleging an error of law concerning the application to passengers of a higher terminal facility charge for those on intra-Community and international flights than for those on domestic flights, and the application to passengers on scheduled flights of a terminal facility charge and a security charge which are not applied to those travelling on charter flights

Arguments of the parties

151 The applicants recall that they informed the Commission by letter of 18 February 2003 that, on domestic flights, passengers pay a terminal facility charge of EUR 7.79, whereas on intra-Community and international flights they pay EUR 10.30 (raised to EUR 11.20 on 1 November 2004). Further, the security charge and the passenger terminal facility charge are levied only in respect of passengers on scheduled flights, not of passengers on charter flights.

152 It follows from the judgment of the Court of Justice in Case C–92/01 *Stylianakis* [2003] ECR I–1291 that such practices are in breach of Community law.

153 The Commission contends that this plea should be rejected.

Findings of the Court

154 It must be noted, first of all, that, during the administrative procedure, the complainants challenged the discriminatory nature of the Spatosimo. Thus, by letter of 4 October 2002, Mr Koeune explicitly drew attention to the fact that the Spatosimo amounted to EUR 20 for international flights and EUR 10 for domestic flights.

155 By letter of 28 February 2003 to Mrs Scippacercola, the DG for Energy and Transport pointed out that, following the amendment of Law No 2065/1992 by Law No 2892/2001, the Spatosimo was no longer discriminatory since it had been set at EUR 12 for all destinations within the European Union.

156 By letter of 19 March 2003 to Mrs Scippacercola, the DG for Competition announced, after observing that the Spatosimo had been fixed at EUR 12 for all destinations within the EEA, that it intended to take no further action on the complaint in so far as it related in particular to the excessive nature of that tax, since it did not concern the conduct of an undertaking for the purposes of Articles 81 EC and 82 EC. The complaints relating to the Spatosimo were thus covered by a decision made by the Commission on 22 May 2003 to take no further action. By letter of 26 May 2003, the Commission informed Mrs Scippacercola of that decision, which is not being challenged in an action before the Court of First Instance.

157 Next, it must be noted that, so far as the charges considered in the contested decision are concerned, the complainants did not at any time during the administrative procedure complain that they were discriminatory, only that they were excessive.

158 While Mrs Scippacercola's letter of 18 February 2003 – the only letter referred to by the applicants in relation to this plea – refers separately to the levels of charges for domestic, intra-Community and international departures, it complains only that they are excessive, particularly by comparison with the previous situation and by comparison with charges at other airports. It must be observed in that respect that Mrs Scippacercola's letter of 26 February 2003, which contains a reference to the letter of 18 February 2003, describes the subject-matter of the complaint of 5 July 2002 as '[c] harges excessives pour les usagers' (excessive charges for passengers).

159 Since the complaints expressed in the third plea were not expressed during the administrative procedure prior to the adoption of the contested decision, the Commission cannot be criticised for failing to examine those complaints in its decision (see, to that effect, Case T‑319/99 *FENIN* v *Commission* [2003] ECR II‑357, paragraph 43).

160 In any event, where a complainant considers that the Commission, in its decision to take no action on a complaint on a competition matter, has failed to express a view on one of the aspects of that complaint, such a failure cannot be held unlawful in the context of a review of legality under Article 230 EC. In fact, in those circumstances, the onus is on the complainant to request the Commission to express a view and, if necessary, to bring an action under the second paragraph of Article 232 EC for a declaration by the Community judicature that the Commission has failed to act (Case T‑52/00 *Coe Clerici Logistics* v *Commission* [2003] ECR II‑2123, paragraphs 71 and 80).

161 It follows from the foregoing that the third plea also is unfounded.

Fourth plea in law, alleging an infringement of Article 253 EC and a departure from established rights and procedures

Arguments of the parties

162 First, the applicants claim that the Commission incorrectly assessed the information supplied by AIA in relation to the security charge, the passenger terminal facilities charge and the car parking charge. Referring to Case T‑92/98 *Interporc* v *Commission* [1999] ECR II‑3521, paragraph 77, they submit that, in so doing, the Commission infringed Article 253 EC.

163 In the present case, the Commission simply informed the applicants in a summary way that it found that AIA did not engage in excessive pricing, without allowing the applicants to know the figures used in its analysis or to identify the calculations behind the refusal to open an in-depth investigation.

164 Further, the applicants claim that the Commission failed in its duty of care and infringed the principle of sound administration. In accordance with settled case-law, it is for the Commission, when supplied with sufficient prima facie evidence of the existence of an abuse of a dominant position as a result of excessive pricing, to establish beyond doubt that the practices complained of are either non-existent or pure conjecture or speculation. However, there is no suggestion in the contested decision that the Commission examined the prima facie evidence put forward by the applicants during the administrative procedure. Further, the contested decision does not include any information about AIA's costs and revenues as supplied in AIA's response to the Commission's request for information.

165 Second, the applicants claim in the reply that the fundamental reason which the Commission put forward in the contested decision to justify the rejection of the complaint is the lack of Community interest. However, the Commission did not provide adequate reasoning in the contested decision as to precisely what that Community interest comprises.

166 The applicants accept that the Commission has a certain discretion in fixing its priorities according to the degree of Community interest, and accordingly that it may reject a complaint when it considers that there is insufficient Community interest to justify the initiation of an in-depth investigation (Case T‑24/90 *Automec* v *Commission*, cited in paragraph 91 above). However, although the lodgment of a complaint does not oblige the Commission to initiate an investigation, that institution is nevertheless required to examine with all due care the factual and legal aspects of the complaint in order to determine whether they disclose conduct that may distort competition in the common market (*Schmidt* v *Commission*, cited in paragraph 66 above, and *Riviera Auto Service and Others* v *Commission*, cited in paragraph 91 above).

167 It follows, according to the applicants, that the Commission cannot refer to a lack of Community interest in the abstract if it is rejecting the complaint on that ground (Case T‑24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 85). It is required to disclose in a clear and unequivocal fashion, and not in a summary way, the matters of fact and of law which led it to conclude that there was no Community interest, so as to enable the Community judicature to exercise its powers of review of the pleas in law invoked and the applicant to defend its rights (Case T‑575/93 *Koelman* v *Commission* [1996] ECR II‑1, paragraph 83, and *Asia Motor France and Others* v *Commission*, cited in paragraph 97 above, paragraph 103). Nor can the Commission simply invoke lack of priority as an excuse for not initiating an investigation. It is required to assess how serious the alleged infringements are and how persistent their effects (Commission Notice on the handling by the Commission of complaints lodged under Articles 81 EC and 82 EC (OJ 2004 C 101, p. 65, point 44)).

168 In the present case, the Commission did not examine the complaint with due care and failed to evaluate correctly the factual and legal particulars of the case before deciding to reject it for lack of Community interest. Consequently, contrary to Article 253 EC, the contested decision failed to set out properly and clearly the considerations of fact and of law on the basis of which the complaint was rejected, with the result that the applicants are not in a position to assert their rights before the Court and the Court is not able to carry out its review of legality.

169 Furthermore, the Commission did not ensure that the Treaty is properly applied, particularly the competition rules. In order to fulfil its functions conferred by Article 85 EC, and in view of the objectives of Article 3(g) EC, the Commission should have investigated the matter and established whether an infringement of Article 82 EC had in fact taken place.

170 The applicants maintain in that regard that case-law applies three strict criteria to the Commission's right to reject a complaint for lack of Community interest, namely the significance of the alleged infringement for the functioning of the common market, the probability of being able to establish the existence of the infringement, and the scope of the investigation required in order for the Commission to be able to fulfil under the best possible conditions the task of ensuring that Articles 81 EC and 82 EC are complied with (Case T‑24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 86, and *Européenne automobile* v *Commission*, cited in paragraph 93 above, paragraph 42). Given AIA's dominant position and the significance of the potential infringement of Article 82 EC, they take the view that the Commission was not entitled to reject the complaint of 5 July 2002 for lack of Community interest, since the difficulty and the need for more resources for further investigations are not an excuse that can relieve the Commission of its obligations and responsibilities under the Treaty and certainly cannot be regarded as constituting adequate grounds for rejecting the complaint for lack of Community interest.

171 Finally, the Commission's duty of care and diligence is more demanding in cases where it decides not to reject the complaint at an early stage for lack of Community interest. Although the Commission is not obliged to take up a complaint, it decided in the present case to take it up initially by undertaking a preliminary evaluation of the market power of the undertaking concerned and by accepting indirectly that there might be an infringement that could affect trade between Member States. It went on to reject the complaint because the likelihood of establishing an infringement was too small in the light of the findings of its initial limited investigation. According to the applicants, the Commission should have properly weighed up the probability of being able to establish the existence of the infringement through a full investigation against the significance of such an infringement for the functioning of the common market. However the Commission failed not only to carry out that balancing exercise, but also, as a result, to state clearly its conclusions on that balancing exercise. Thus, the applicants are unable to understand clearly on what basis the Commission considered that the infringement was not significant for the functioning of the common market.

172 The Commission contends that this plea should be rejected.

Findings of the Court

173 First, it must be borne in mind that the contested decision is essentially based on the lack of Community interest in pursuing an investigation of the practices criticised in the complaint. That is the only ground on which the complaint of 5 July 2002 was rejected so far as the allegedly excessive passenger terminal utilities and airport car parking charges are concerned. As regards the alleged infringement related to the security charge, the Commission additionally took the view that the practices in question did not fall within the scope of Article 82 EC.

174 Next, it must be borne in mind that the Commission is under an obligation to state reasons if, as in this case, it declines to continue with the examination of a complaint for lack of Community interest. Since the reasons stated must be sufficiently precise and detailed to enable the Court of First Instance effectively to review the Commission's use of its discretion to define priorities, the Commission must set out the facts justifying the decision and the legal considerations on the basis of which it was adopted (*Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraphs 90 and 91; Case T-24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 85; and *Européenne automobile* v *Commission*, cited in paragraph 93 above, paragraph 29).

175 In the present case, it is apparent from the contested decision that the Commission analysed the evidence adduced by the applicants during the administrative procedure, that it compared the charges to those imposed at other established airports in the European Community, and that it sent a request for information to, inter alia, AIA.

176 Its conclusion that there was no Community interest in pursuing the investigation of the practices complained of was based on the finding that the likelihood of an infringement was small in the light of the evidence in the complaint and the results of an initial investigation, that the efforts required to establish any infringement of Article 82 EC would be disproportionate, and that the significance of the infringement complained of was low as regards the functioning of the common market (paragraphs 43, 78, 79, 92, 136 to 138 and 140 of the contested decision). As regards the alleged infringement related to the car parking charge, the Commission refers further to the fact that the centre of gravity of the infringement lies in Greece, with the result that the complainants could bring an action before the Greek courts or lodge a complaint with the national competition authority (paragraph 139 of the contested decision).

177 As regards the alleged infringement related to the security charge, the Commission explains in paragraphs 47 to 57 of the contested decision why it considers further that the activities in question do not fall within the scope of Article 82 EC.

178 Moreover, it follows from the analysis of the first plea in law that more precise figures for any calculations carried out by the Commission during the administrative procedure or for AIA's costs and revenues were not necessary in order for the applicants to be aware of the reasons for the contested decision or to enable the Court of First Instance to undertake its review.

179 Accordingly, it must be held that the contested decision rejecting the complaint is sufficiently reasoned.

180 Finally, the applicants' argument that the Commission is obliged, in a decision rejecting a complaint, to establish beyond any doubt that the practices complained of do not infringe the competition rules is an argument that concerns the lawfulness of the substance of the contested decision and cannot be accepted either. It has consistently been held that the Commission is not obliged to take a final decision as regards the existence or otherwise of an infringement of the Treaty rules on competition (*GEMA* v *Commission*, cited in paragraph 91 above, paragraphs 17 and 18; *Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraph 87; Case T-24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 75; and *RivieraAuto ServiceandOthers* v *Commission*, cited in paragraph 91 above, paragraph 48).

181 Second, the applicants make various submissions in the reply concerning the allegedly inadequate reasoning for a lack of Community interest in pursuing the investigation of the practices criticised in the complaint.

182 However, as is apparent from paragraphs 175 and 176 above and from the substantive examination of the first plea in law, it must be held that sufficient reasons are given in the contested decision on that point. In fact, the contested decision sets out clearly the matters of law or of fact which, according to the Commission, justified rejecting the complaint for lack of Community interest.

183 Furthermore, it must be noted that a number of arguments which the applicants raised in the reply in relation to the first plea in law concern errors of law or of assessment by the Commission in rejecting the complaint for lack of Community interest. This applies to the applicants' argument that, by overlooking the significance of a possible infringement as regards the functioning of the common market, the Commission did not correctly weigh up the three criteria set out in Case T-24/90 *Automec* v *Commission*, cited in paragraph 91 above (paragraph 86), for the rejection of a complaint for lack of Community interest. The same applies to the arguments that the Commission should have undertaken an in-depth investigation because AIA has a dominant position and the alleged abuse could affect trade between the Member States, or because it had decided not to reject the complaint at an earlier stage.

184 The applicants also maintain in the reply that the Commission did not examine with all due care the factual and legal aspects of the complaint and that it should have investigated the matter and established whether Article 82 EC had indeed been infringed.

185 As to whether the arguments referred to in paragraphs 183 and 184 above are included in the application, it must be observed that, while the applicants did not set out a plea in law relating specifically to the Commission's alleged manifest error of assessment in considering that the practices criticised in the complaint did not represent a sufficient Community interest to justify an in-depth investigation, they nevertheless complained within the first plea in law of the fact that the Commission had not paid due attention to the content of the complaint before concluding that it was not in the Community interest to open an in-depth investigation. However, since the Commission must consider attentively the matters of fact and of law which a complainant brings to its attention in order to assess the Community interest in pursuing the investigation of a case (*Schmidt* v *Commission*, cited in paragraph 66 above, paragraph 19, and *Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraph 86), the arguments put forward in relation to the first plea in law relate implicitly but necessarily to the Commission's assessment of the Community interest in pursuing the investigation of the practices in question. It follows that the argument mentioned in paragraph 184 above is incorporated in the first plea raised in the application and that it has already been addressed in the Court's assessment of that plea.

186 By contrast, the arguments mentioned in paragraph 183 above do not concern the assessment of the matters of fact and of law which the complainants brought to the Commission's attention. They are, therefore, new submissions which are not included in the first plea in the application. Such submissions must be declared inadmissible under Article 48(2) of the Rules of Procedure (Case T-231/99 *Joynson* v *Commission* [2002] ECR II-2085, paragraph 156, and Case T-274/02 *Ritek and Prodisc Technology* v *Council* [2006] ECR II-4305, paragraph 75).

187 For the sake of completeness, as regards the criteria set out in Case T-24/90 *Automec* v *Commission*, cited in paragraph 91 above (paragraph 86), it must be borne in mind that, in order to reject a complaint for lack of Community interest, the Commission must weigh up the significance of the alleged infringement for the functioning of the common market, the probability of its being able to establish the existence of the infringement and the extent of the investigative measures required, so that it may perform, under the best possible conditions, its task of supervising compliance with

Articles 81 EC and 82 EC (Case T–24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 86; *Riviera AutoService and Others* v *Commission*, cited in paragraph 91 above, paragraph 46; and *Européenne automobile* v *Commission*, cited in paragraph 93 above, paragraph 42).

188 It must be held that, in the present case, the Commission gave priority to investigating two of the three criteria set out in the preceding paragraph, namely the probability of being able to establish the existence of an infringement and the extent of the investigative measures required. An in-depth investigation of the significance of the alleged infringement for the functioning of the common market was carried out by the Commission only in relation to the car parking charge (paragraphs 138 and 139 of the contested decision).

189 Nevertheless, the Court of Justice has also held that, since the assessment of the Community interest raised by a complaint depends on the circumstances of each case, the number of criteria to which the Commission may refer for its assessment should not be limited, nor conversely should it be required to have recourse exclusively to certain criteria (*Ufex and Others* v *Commission*, cited in paragraph 91 above, paragraphs 79 and 80, and Case C–450/98 P *IECC* v *Commission* [2001] ECR I–3947, paragraph 58).

190 It follows from this that the Commission did not err in law in giving priority to the investigation of two of the three criteria set out in the case-law referred to in paragraph 187 above (Case C–450/98 P *IECC* v *Commission*, cited in paragraph 189 above, paragraph 59).

191 As regards the other arguments advanced in the reply, it must be borne in mind that the Commission is not obliged to carry out an investigation when a complaint is lodged (Case T–24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 76). Furthermore, when carrying out an initial investigation, it is not precluded thereby from rejecting the complaint for lack of Community interest. The existence of the Commission’s discretion in that regard does not depend on the stage to which the investigation of a case has advanced (Case C–449/98 P *IECC* v *Commission*, cited in paragraph 92 above, paragraph 37).

192 Finally, the argument that the Commission is required to open an in-depth investigation where the undertaking to which the complaint relates holds a dominant position is unsupported by case-law and, on the contrary, is at odds with the Commission’s discretion in that area which has been recognised by the Community judicature (see, to that effect, Case C–449/98 P *IECC* v *Commission*, cited in paragraph 92 above, paragraph 37, and Case T–24/90 *Automec* v *Commission*, cited in paragraph 91 above, paragraph 76).

193 It follows from all the foregoing that this last plea in law must also be rejected.

The measures of organisation of procedure applied for

194 It must be noted that, as a result of the measures of organisation of procedure taken by the Court of First Instance, the Commission lodged a non-confidential version of AIA’s reply of 27 August 2004 to the Commission’s request for information.

195 However, the applicants are critical of the fact that neither the contested decision nor the non-confidential version of AIA’s reply of 27 August 2004 contains specific details of AIA’s costs and revenues. They request that the figures relating to security service costs and revenues supplied by AIA for 2001 to 2004 be submitted to the Court of First Instance, so that these can be verified and assessed in the light of their arguments to show that AIA is making excessive profits. They also seek the production of all documents proving the true cost of construction of the airport (and the names of the constructors and of the suppliers concerned), and an explanation of the economic reasons justifying the increase in the security charge in 2002.

196 In that regard, it must be held that it follows from the foregoing considerations in relation to the various pleas in law relied on by the applicants that the Court of First Instance has been able to rule on the present action in the light of the documents submitted by the parties during the written procedure and the documents supplied by the Commission in the context of the measure of organisation of procedure (Case T–281/01 *Huygens* v *Commission* [2004] ECR–SC I–A–203 and II–903, paragraph 145). As regards, in particular, the lawfulness of the assessment of the Community interest made in the contested decision, it should be borne in mind, first, that the non-

confidential version of AIA's reply (p. 4) confirms that, as far as its air activities are concerned, AIA's charges do not even cover its costs and, second, that the lawfulness of the Commission's assessment does not depend on the material accuracy of the information supplied by AIA. It is, in particular, the complexity of the analysis which would have had to be undertaken to establish an infringement of Article 82 EC and the small probability of the existence of such an infringement which caused the Commission not to verify the reliability of the confidential information on AIA's costs and revenues and to reject the complaint for lack of Community interest (see paragraphs 76, 78, 90 to 92, 135 and 140 of the contested decision).

197 Accordingly, the applicants' applications must be dismissed in so far as they relate to documents other than the non-confidential version of AIA's reply to the Commission's request for information.

198 In the light of all those considerations, the action must be dismissed.

Costs

199 Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the applicants have been unsuccessful, they must be ordered to pay the costs, in accordance with the form of order sought by the Commission.

On those grounds,

THE COURT OF FIRST INSTANCE (Fifth Chamber)

hereby:

1. Dismisses the action;

2. Orders Isabella Scippacercola and Ioannis Terezakis to pay the costs.

Case T-271/03

Deutsche Telekom AG

v

Commission of the European Communities

(Competition – Article 82 EC – Charges for access to the fixed-line telecommunications network in Germany – Margin squeeze – Charges approved by the national regulatory authority for telecommunications – Leeway of the dominant undertaking)

Summary of the Judgment

1. *Competition – Community rules – Substantive scope*

   (Arts 81 EC and 82 EC)

2. *Competition – Dominant position – Abuse – Margin squeeze – Meaning – Criteria for assessment*

   (Art. 82 EC)

3. *Competition – Dominant position – Abuse – Margin squeeze – Telecommunications network access services offered by the owner-operator of the only infrastructure available*

   (Art. 82 EC)

4. *Competition – Dominant position – Abuse – Margin squeeze – Telecommunications network access services offered by the owner-operator of the only infrastructure available*

   (Art. 82 EC)

5. *Competition – Community rules – Infringements – Committed intentionally or negligently – Meaning*

   (Arts 82 EC and 226 EC; Council Regulation No 17, Art. 15(2))

6. *Competition – Fines – Amount – Determination – Criteria – Gravity of the infringement*

   (Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, Sections 1A and 3)

7. *Competition – Dominant position – Abuse – Concept – Dominant undertaking's knowledge of the abusive nature of its conduct – No effect*

   (Art. 82 EC)

1. The fact that the charges of a telecommunications undertaking in a dominant position had to be approved by the national regulatory authority for telecommunications does not absolve that undertaking from responsibility under Article 82 EC, since the restrictive effects on competition caused by those charges do not originate solely in the applicable national legal framework, because the dominant undertaking, having been able to influence the level of those charges through applications to the regulatory authority for authorisation, had sufficient scope to fix its charges at a level that would have enabled it to end or reduce those restrictive effects. In the context of the special responsibility of an undertaking in a dominant position, that undertaking is obliged to submit applications for adjustment of its charges at a time when those charges have the effect of impairing

genuine undistorted competition on the common market.

That conclusion is not affected by the fact that the national regulatory authority for telecommunications checks the compatibility of its charges with Article 82 EC beforehand. Even though, like all organs of the State, that authority is obliged to respect the provisions of the Treaty, it is responsible for regulating the telecommunications sector, and is not the competition authority of the Member State concerned. However, the national regulatory authorities operate under national law which may, as regards telecommunications policy, have objectives which differ from those of Community competition policy. In any event, even on the assumption that the regulatory authority is obliged to consider whether charges proposed by a dominant undertaking are compatible with Article 82 EC, the Commission would not thereby be precluded from finding that the undertaking is responsible for an infringement; the Commission cannot be bound by a decision taken by a national body pursuant to Article 82 EC.

(see paras 107-108, 113, 120-122)

2. The abusive nature of a dominant undertaking's pricing practices, which take the form of a margin squeeze, is connected with the unfairness of the spread between its retail price for the derived product on the downstream market and its price for the raw material which it offers to its competitors on the upstream market if the difference between those prices is negative, or insufficient to cover the specific costs of its own derived product. It follows that, in order to find that there has been such abuse, the Commission is not required to demonstrate that the retail prices are, as such, abusive.

The Commission is entitled to analyse the abusive nature of the dominant undertaking's prices solely on the basis of that undertaking's particular situation and therefore on the basis of its own charges and costs rather than on the basis of the situation of actual or potential competitors. Any other approach could be contrary to the general principle of legal certainty since, if the lawfulness of the pricing practices of a dominant undertaking depended on the particular situation of competing undertakings, particularly their cost structure – information which is generally not known to the dominant undertaking – the latter would not be in a position to assess the lawfulness of its own activities.

In order to assess whether there is a margin squeeze, it is necessary to consider whether the dominant undertaking, or an undertaking that is equally efficient, would have been in a position to offer the derived product otherwise than at a loss if it had first been obliged to pay the charge for the raw material.

(see paras 166-167, 188, 191-194)

3. Where a telecommunications operator is the owner of the only infrastructure available, with the result that the network access services which it offers its competitors (wholesale services) are indispensable to enabling those competitors to enter into competition with that operator on the downstream market in retail access services, a margin squeeze between the operator's wholesale and retail charges will in principle hinder the growth of competition in the downstream markets. If the dominant operator's retail prices are lower than its wholesale charges, or if the spread between the dominant operator's wholesale and retail charges is insufficient to enable an equally efficient operator to cover its product-specific costs of supplying retail access services, a potential competitor who is just as efficient as the dominant operator would not be able to enter the retail access services market without suffering losses. Admittedly, the competitors of the dominant operator will normally resort to cross-subsidisation, in that they will offset the losses suffered on the retail access market with the profits made on other markets, such as the telephone calls markets. However, in view of the fact that, as the owner of the network, the dominant operator does not need to rely on wholesale services in order to be able to offer retail access services and therefore, unlike its competitors, does not have to try to offset losses suffered on the retail access market on account of the pricing practices of a dominant undertaking, the margin squeeze distorts competition not only on the retail access market but also on the telephone calls market.

As regards the calculation of the margin squeeze, the Commission is entitled to take account only of revenues from all access services and to exclude revenues from other services, including those deriving from call services.

Thus, in the first place, even though, from the point of view of the end-user, access services and call services constitute a whole, it is open to the Commission to take into account only revenues from the dominant operator's access services, and to exclude revenues from other services, such as call services, which may be supplied via access to a network. As far as the dominant operator's competitors are concerned, the provision of call services to end–users via that operator's network requires access to that network. Equality of opportunity as between the dominant operator, on the one hand, and its competitors, on the other, therefore means that prices for access services must be set at a level which places competitors on an equal footing with the dominant operator as regards the provision of call services. Equality of opportunity is secured only if the dominant operator sets its retail prices at a level which enables competitors – presumed to be just as efficient as the dominant operator – to reflect all the wholesale costs in their retail prices. However, if the dominant operator does not adhere to that principle, new entrants can only offer access services to their end-users at a loss. They would then be obliged to offset losses incurred in relation to network access by higher call charges, which would also distort competition in telecommunications markets.

In the second place, the Commission can compare the dominant operator's charges to its competitors for network access to the weighted average of retail prices for all the various access services offered directly to its end–users, even if the competing operators do not offer all those services. Since the abusive nature of the dominant operator's pricing practices must be assessed on the basis of its particular situation and therefore on the basis of its charges and costs, it cannot therefore be influenced by any preferences which its competitors may have for one or other access services market.

Finally, the Commission can include in the calculation of the total price of wholesale services the discontinuance charge payable to the dominant operator by the competing recipient of wholesale access when one of that recipient's end–users discontinues his subscription for access services, since that discontinuance charge forms part of the total cost of the wholesale service which must be reflected in the retail prices of the dominant operator's competitors.

(see paras 199-200, 203-204, 206, 210-211, 236-238)

4. A Commission decision finding that a telecommunications operator has abused its dominant position as a result of the margin squeeze resulting from the negative or insufficient spread between the charges for network access services provided to its competitors (wholesale services), and the charges for retail access services, is not contrary to the principles of proportionality and of legal certainty on account of the fact that it entails the double regulation of those charges. The Community legal framework for telecommunications does not affect the powers which the Commission derives directly from Article 3(1) of Regulation No 17 and, since 1 May 2004, from Article 7(1) of Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles [81 EC] and [82 EC] to find infringements of Articles 81 EC and 82 EC.

Nor is such a decision contrary to the principle of the protection of legitimate expectations, even though, after considering whether a margin squeeze existed and finding the negative or insufficient spread between the wholesale and retail prices, the national regulatory authority for telecommunications took the view that other operators should be able to offer their end-users competitive prices by resorting to cross-subsidisation of access services and call services. Such a finding, from which it follows implicitly but necessarily that those pricing practices have an anti-competitive effect, since the competitors have to resort to cross-subsidisation in order to be able to remain competitive on the market in access services, is not liable to create a legitimate expectation on the part of the dominant operator that its charges were compatible with Article 82 EC.

Finally, even if the national regulatory authority for telecommunications had infringed a Community rule and even if the Commission could have initiated proceedings against that Member State for failure to fulfil obligations, such possibilities cannot affect the lawfulness of the Commission's decision, which is not vitiated by any misuse of powers. By confining itself to finding an infringement of Article 82 EC, a provision which concerns only economic operators, not the Member States, that decision refers only to the dominant undertaking's pricing practices and not to the decisions of the authorities of the Member State.

(see paras 263, 267-269, 271)

5. The infringements of the competition rules which are liable to be punished by a fine in accordance with the first subparagraph of Article 15(2) of Regulation No 17 are those which are committed intentionally or negligently. That condition is satisfied where the undertaking concerned cannot be unaware of the anti–competitive nature of its conduct, whether or not it was aware that it was infringing the competition rules of the Treaty.

That is the case where a telecommunications operator has a monopoly on the market for the network access services which it offers to its competitors (wholesale services) and a virtual monopoly on the market in retail access services, the charges for which create a margin squeeze in respect of those services. That operator cannot be unaware that that margin squeeze, resulting from the negative or insufficient spread between its charges for those different services, entails serious restrictions on competition.

That conclusion is not affected by the initiation of proceedings against the Member State for failure to fulfil obligations on account of the fact that those charges had been approved by the national regulatory authority for telecommunications where the dominant operator nevertheless had scope to increase its retail prices and, therefore, to reduce the margin squeeze, since the initiation of proceedings for failure to fulfil obligations does not affect the conditions for punishing an infringement of competition rules laid down under the first subparagraph of Article 15(2) of Regulation No 17.

(see paras 295-296, 298)

6. The Commission is entitled to characterise as serious the infringement consisting in the application of a margin squeeze by a telecommunications undertaking in a dominant position. Those pricing practices strengthen the barriers to entry to the recently liberalised markets and thus jeopardise the proper functioning of the common market. The Guidelines adopted by the Commission on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty (Section 1A, second paragraph) thus describe the exclusionary behaviour of dominant firms as serious infringements, or even very serious infringements if committed by undertakings holding a virtual monopoly.

Having regard to the Commission's discretion when determining the amount of a fine, it duly takes into account as an attenuating circumstance the fact that the national regulatory authority for telecommunications intervened in setting the undertaking's prices and that that authority has, on several occasions, considered the question of the existence of a margin squeeze resulting from the tariff practices of the undertaking, when reducing the basic amount of the fine by 10%.

(see paras 310-313)

7. An 'abuse' within the meaning of Article 82 EC is an objective concept. The dominant undertaking's own knowledge of the abusive nature of its conduct is not, therefore, a prerequisite for the application of Article 82 EC.

(see para. 327)

Judgment of the Court of First Instance (Fifth Chamber, extended composition) of 10 April 2008
Deutsche Telekom AG v Commission of the European Communities. Competition - Article 82 EC - Charges for access to the fixed-line telecommunications network in Germany - Margin squeeze - Charges approved by the national regulatory authority for telecommunications - Leeway of the dominant undertaking. Case T-271/03.

In Case T271/03,

Deutsche Telekom AG, established in Bonn (Germany), represented initially by K. Quack, U. Quack and S. Ohlhoff, and subsequently by U. Quack and S. Ohlhoff, lawyers,

applicant,

v

Commission of the European Communities, represented initially by K. Mojzesowicz and S. Rating, then by K. Mojzesowicz and A. Whelan, and subsequently by K. Mojzesowicz, W. Mölls and O. Weber, acting as Agents,

defendant,

supported by

Arcor AG & Co. KG, established in Eschborn (Germany), represented initially by M. Klusmann, F. Wiemer and M. Rosenthal, then by M. Klusmann and F. Wiemer, and subsequently by M. Klusmann, lawyers,

and by

Versatel NRW GmbH, formerly Tropolys NRW GmbH, formerly CityKom Münster GmbH Telekommunikationsservice and TeleBeL Gesellschaft für Telekommunikation Bergisches Land mbH, established in Essen (Germany),

EWE TEL GmbH, established in Oldenburg (Germany),

HanseNet Telekommunikation GmbH, established in Hamburg (Germany),

Versatel Nord-Deutschland GmbH, formerly KomTel Gesellschaft für Kommunikations- und Informationsdienste mbH, established in Flensburg (Germany),

NetCologne Gesellschaft für Telekommunikation mbH , established in Cologne (Germany),

Versatel Süd-Deutschland GmbH, formerly tesion Telekommunikation GmbH, established in Stuttgart (Germany),

Versatel West-Deutschland GmbH, formerly Versatel Deutschland GmbH & Co. KG, established in Dortmund (Germany),

represented by N. Nolte, T. Wessely and J. Tiedemann, lawyers,

interveners,

APPLICATION for annulment of Commission Decision 2003/707/EC of 21 May 2003 relating to a proceeding under Article 82 EC (Case COMP/C1/37.451, 37.578, 37.579 - Deutsche Telekom AG) (OJ 2003 L 263, p. 9), and, in the alternative, reduction of the fine imposed on the applicant in Article 3 of that decision,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Fifth Chamber, Extended Composition),

composed of M. Vilaras, President, M.E. Martins Ribeiro, D. vaby, K. Jürimäe and N. Wahl, Judges, Registrar: K. Andova, Administrator,

having regard to the written procedure and further to the hearing on 3 May 2007,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Fifth Chamber, Extended Composition)

hereby:

1. Dismisses the action;

2. Orders Deutsche Telekom AG to bear its own costs and to pay those incurred by the Commission;

3. Orders (1) Arcor AG & Co. KG and (2) Versatel NRW GmbH, EWE TEL GmbH, HanseNet Telekommunikation GmbH, Versatel Nord-Deutschland GmbH, NetCologne Gesellschaft für Telekommunikation mbH, Versatel Süd-Deutschland GmbH and Versatel WestDeutschland GmbH to bear their own costs.

Delivered in open court in Luxembourg on 10 April 2008.

Facts

1. The applicant, Deutsche Telekom AG, is the incumbent telecommunications operator in Germany. The German State holds 30.92% of shares directly in the capital of the applicant and (through the Kreditanstalt für Wiederaufbau) 12.13% indirectly; the remaining 56.95% of the shares are held by institutional and private investors.

2. The applicant operates the German fixed telephone network. Before the full liberalisation of telecommunications markets, it enjoyed a legal monopoly in the retail provision of fixed-line telecommunications services. The German markets in the provision of infrastructure and in the provision of telephone services have been liberalised since 1 August 1996, when the Telekommunikationsgesetz (German Law on telecommunications; TKG') of 25 July 1996 (BGBl. 1996 I, p. 1120) came into force. Since then, the applicant has faced varying degrees of competition from alternative operators on the two markets.

3. The applicant's local networks each consist of a number of local loops for subscribers. The term local loop' signifies the physical circuit connecting the network termination point at a subscriber's premises to the main distribution frame or equivalent facility in the fixed public telephone network.

4. The applicant offers access to its local networks to other telecommunications operators and to subscribers. As regards the applicant's access services and charges, it is therefore necessary to distinguish between the local network access services which the applicant offers its competitors (wholesale access') and the local network access services which the applicant offers its subscribers (retail access').

I - Wholesale access

5. By Decision No 223a of the Federal Ministry of Post and Telecommunications (BMPT') of 28 May 1997, the applicant was required to offer its competitors fully unbundled access to the local loop with effect from June 1997.

6. The applicant's charges for wholesale access are made up of two components: a monthly subscription charge, and a one-off charge. When a competitor discontinues access to a local loop, the applicant charges him the cost of discontinuance.

7. Under Paragraph 25(1) of the TKG, the applicant's wholesale access charges must be approved in advance by the Regulierungsbehörde für Telekommunikation und Post (German regulatory authority for telecommunications and post; RegTP').

8. In that context, RegTP checks whether the wholesale access charges proposed by the applicant satisfy the requirements laid down by Paragraph 24 of the TKG. Thus, under Paragraph 24(1) of the TKG, [r]ates shall be based on the costs of efficient service provision'. Furthermore, under Paragraph 24(2) of the TKG, rates shall not:

1. contain surcharges which prevail solely as a result of the provider's dominant position... in the relevant telecommunications market;

2. contain discounts which prejudice the competitive opportunities of other companies in a telecommunications market; or

3. create any advantages for individual users in relation to other users of identical or similar telecommunications services in the relevant telecommunications market;

unless there is evidence of an objectively justifiable reason therefor'.

9. Under Paragraph 29(1) of the TKG, the applicant is required to apply the charges authorised by RegTP throughout the period of validity of RegTP's authorisation.

II - Retail access

10. As regards retail access, the applicant offers two basic variants: the traditional analogue connection (brand name: TNet') and the digital narrowband connection (integrated services digital network, or ISDN; brand name: TISDN'). Both these variants of end-user access can be provided over the applicant's existing copper pair network (narrowband connections). The applicant also offers end-users a broadband connection (asymmetrical digital subscriber line, or ADSL; brand name: TDSL'), for which it had to upgrade the existing TNet and TISDN networks so as to be able to offer broadband services such as faster Internet access.

11. The applicant's charges for retail access (also referred to as retail charges' or retail prices') for analogue and ISDN lines are regulated by a price cap system. By contrast, the applicant sets its retail prices for ADSL at its own discretion, but these may be reviewed subsequently.

12. The applicant's retail prices are made up of two components: a basic monthly charge, which depends on the quality of the line and services supplied, and a one-off charge for a new connection or takeover of a line, depending on the work needed at the two ends of the line. The applicant does not charge its end-users the cost of discontinuance.

A - Charges for retail analogue lines (TNet) and digital narrowband or ISDN lines (TISDN)

13. Retail prices for analogue and ISDN lines are regulated under a price cap system. Under point 2 of Paragraph 27(1) and Paragraph 25(1) of the TKG, and Paragraphs 4 and 5 of the Telecommunications Charges Order of 1 October 1996 (BGBl. 1996 I, p. 1492; the Charges Order'), retail prices for connection to the applicant's network and for telephone calls are not regulated separately for each service, according to the individual cost of that service; they are regulated for a block of services at a time, with different services being grouped together in baskets'.

14. The price cap system for access to the applicant's network was introduced by decision of the BMPT of 17 December 1997 (Communication 202/1997, Amtsblatt (BMPT) 34/97, p. 1891). The system was taken over by RegTP on 1 January 1998, whereupon RegTP established two baskets, one for services to residential customers and the other for services to business customers. Each basket contained both retail access (standard analogue and ISDN connections) and the full range of telephone products offered by the applicant, such as local, regional, long-distance and international calls.

15. In accordance with Paragraph 4(1) and (2) of the Charges Order, RegTP determines a starting charge level for all the services grouped in a basket, and targets for the movement of basket prices over a specified period.

16. The tariff system in question thus establishes a price ceiling for each basket but makes no provision for mandatory minimum basket prices.

17. Under the terms of the decision of the BMPT of 17 December 1997, the applicant was to reduce the aggregate price for each of the two baskets by 4.3% in the period from 1 January 1998 to 31 December 1999 (first price cap period). When that first period ended on 31 December 1999, RegTP - by decision of 23 December 1999 - essentially maintained the composition of the baskets and lowered the prices by a further 5.6% in the period from 1 January 2000 to 31 December 2001 (second price cap period).

18. Within this framework of binding price reductions, the applicant could modify the charges for individual components of each basket after obtaining prior authorisation from RegTP. Under Paragraph 27(2) of the TKG and Paragraph 5(3) of the Charges Order, adjustments to charges would be authorised if the average price of a basket did not exceed the price cap index imposed. The system thus enabled the charges for one or more components of a basket to be increased, provided that the price ceiling for the basket was not exceeded. However, under Paragraph 27(3) of the TKG, approval could be refused if it [was] obvious that [the charges did] not meet the requirements of points 2 or 3 of Paragraph 24(2) [of the TKG] or where they [were] not in conformity with [the TKG] or other legal provisions'.

19. In the first two price cap periods, the applicant reduced the retail prices in both baskets substantially, going far beyond the mandatory reductions. Those price reductions essentially applied to call charges. Retail prices for analogue lines (monthly and one-off access charges), on the other hand, remained unchanged throughout both price cap periods, that is, from 1998 until the end of 2001. As regards retail prices for ISDN lines, the applicant lowered basic monthly charges during the same period, but did not adjust its one-off charges to end-users.

20. A new price cap system was adopted by decision of RegTP of 21 December 2001 and has been in effect since 1 January 2002 (Amtsblatt (RegTP) 2/2002, of 6 February 2002, p. 75). In place of the two baskets for residential and business customers, the new system uses four baskets, for end-user lines (basket A), local calls (basket B), domestic long-distance calls (basket C), and international calls (basket D).

21. On 15 January 2002, the applicant informed RegTP that it proposed to increase its monthly charges for analogue and ISDN lines by EUR 0.56. That increase was authorised by RegTP by decision of 13 March 2002.

22. On 31 October 2002, the applicant made a further application to increase its retail charges. RegTP partly refused that application by decision of 19 December 2002 and authorised an increase of EUR 0.33 in the monthly charge for a TNet analogue line instead of the increase of EUR 0.99 sought by the applicant, and refused the increase of EUR 13.40 in the one-off takeover charge for TNet and TISDN lines.

B - Charges for ADSL lines (TDSL)

23. ADSL (T-DSL) charges are not subject to advance regulation under the price cap system. Under Paragraph 30 of the TKG, those charges may be reviewed subsequently.

24. On 2 February 2001, following a number of complaints from competitors of the applicant, RegTP initiated a retrospective investigation of the applicant's ADSL prices in order to determine whether there was any practice of below-cost selling, contrary to the German rules on competition. RegTP

closed the proceeding on 25 January 2002, having found that the price increase which the applicant had announced on 15 January 2002 did not give rise to a suspicion of price dumping.

Administrative procedure

25. Between 18 March and 20 July 1999, the Commission received complaints from 15 companies which were competitors of the applicant, challenging the applicant's pricing.

26. On 15 July 1999, the Commission sent the applicant a request for information pursuant to Article 11 of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-1962, p. 87). The applicant responded to that request by letters of 13 and 25 August 1999.

27. On 19 January 2000, the Commission sent a request for information to the applicant's competitors.

28. On 22 June 2001, the Commission sent a further request for information to the applicant.

29. On 2 May 2002, the Commission sent the applicant a statement of objections pursuant to Article 19(1) of Regulation No 17.

30. On 29 July 2002, the applicant filed observations on the statement of objections.

31. On 25 October 2002, the applicant filed observations on the complainants' responses to the statement of objections.

32. On 21 February 2003, the Commission sent the applicant a further statement of objections.

33. On 14 March 2003, the applicant filed observations on the further statement of objections.

The contested decision

34. On 21 May 2003, the Commission adopted Decision 2003/707/EC relating to a proceeding under Article 82 EC (Case COMP/C1/37.451, 37.578, 37.579 - Deutsche Telekom AG) (OJ 2003 L 263, p. 9; the con tested decision'). The decision was notified to the applicant on 30 May 2003.

35. According to the Commission, the relevant product or service markets are the upstream market in local network access for the applicant's competitors at the wholesale level and the downstream market in access to narrowband connections (analogue and ISDN lines) and broadband connections (ADSL lines) at the retail level (recital 91 to the contested decision). Geographically, those markets cover the territory of Germany (recital 92 to the contested decision).

36. The Commission finds that the applicant holds a dominant position on all the relevant product and service markets (recital 96 to the contested decision).

37. According to the Commission, the applicant has infringed Article 82 EC by operating abusive pricing in the form of a margin squeeze' by charging its competitors prices for wholesale access that are higher than its prices for retail access to the local network (recitals 1, 57, 102 and 103 to the contested decision).

38. As regards the margin squeeze, recitals 102 to 105 to the contested decision state:

102 A margin squeeze exists if the charges to be paid to [the applicant] for wholesale access, taking monthly charges and one-off charges together, are so expensive that competitors are forced to charge their end-users prices higher than the prices [the applicant] charges its own end-users for similar services. If wholesale charges are higher than retail charges, [the applicant's] competitors, even if they are at least as efficient as [the applicant], can never make a profit, because on top of the wholesale charges they pay to [the applicant] they also have other costs such as marketing, billing, debt collection, etc.

103 If [the applicant] charges its competitors prices for wholesale access to the local loop that are higher than its own prices for retail local network access, it prevents its competitors from offering access via the local loop in addition to call services. If a competitor might be interested in ordering unbundled local loops in order to offer access services to its customers, [the applicant] forces it to offset its losses on access services out of higher revenue on telephone calls, as [the applicant] itself does. But in recent years call charges have fallen substantially in Germany, so that competitors often have no realistic possibility of offsetting one price against another.

104 [The applicant] takes the view that there cannot be abusive pricing in the form of a margin squeeze in the present case, because wholesale charges are imposed by the regulatory authority. A margin squeeze, [the applicant] contends, must be the result of excessive wholesale prices or insufficient retail prices, or a combination of the two, and it must be legally possible to end the situation by varying either of them. But the wholesale price is fixed by the regulatory authority, so that [the applicant] controls only the retail charges, and those are subject to review only for compatibility with the principles of abusive below-cost selling or predation.

105 Contrary to [the applicant's] view, however, the margin squeeze is a form of abuse that is relevant to this case. On related markets on which competitors buy wholesale services from the established operator, and depend on the established operator in order to compete on a downstream product or service market, there can very well be a margin squeeze between regulated wholesale and retail prices. To show that there is a margin squeeze it is sufficient that there should be a disproportion between the two charges such that competition is restricted. Of course it has also to be shown that the undertaking subject to price regulation has the commercial discretion to avoid or end the margin squeeze on its own initiative. If it has that discretion, as it has in the present case..., the question which prices the undertaking can change without the intervention of the State is relevant only for purposes of the choice of remedies to bring the margin squeeze to an end.'

39. As regards the methodology of the margin squeeze test, the Commission finds that, through access to the applicant's local network, its competitors can offer their end-users a range of retail access services, namely analogue narrowband access, digital narrowband access (ISDN) and broadband access in the form of ADSL services. Since RegTP applies single charges for the applicant's wholesale services, irrespective of the nature of the downstream service provided over the line, the applicant's monthly and one-off charges (pro rata according to the average length of subscription) for wholesale access must therefore be compared with its monthly and one-off charges (pro rata according to the average length of subscription) for retail access. In order to calculate the applicant's average retail access prices, the Commission carries out a quantitative weighting exercise in respect of the applicant's various retail charges for analogue, ISDN and ADSL lines, and for the ISDN and ADSL line variants (recitals 113, 115, 116, 142 to 151 to the contested decision).

40. For the purpose of calculating the margin squeeze, the Commission takes account only of charges for local network access. Telephone call charges are not included in that calculation (recital 119 to the contested decision).

41. According to the Commission, there is an abusive margin squeeze if the difference between the retail prices charged by a dominant undertaking and the wholesale prices it charges its competitors for comparable services is negative, or insufficient to cover the product-specific costs to the dominant operator of providing its own retail services on the downstream market' (recital 107 to the contested decision).

42. The Commission reaches the conclusion in its margin squeeze calculations that there was a negative spread between the applicant's wholesale and retail prices between 1998 and 2001 (recital 153 to the contested decision). That spread was positive in 2002 (recital 154 to the contested decision). However, as the positive spread was insufficient to cover the applicant's product-specific costs

linked to the provision of retail services, there was a margin squeeze in 2002 (recitals 154 and 160 to the contested decision). That margin squeeze still existed at the time of the adoption of the contested decision (recital 161 to the contested decision).

43. The Commission goes on to find that the applicant's wholesale and retail charges are subject to sector-specific regulation. Nevertheless, the applicant has sufficient discretion to restructure its charges so as to reduce or indeed put an end to the margin squeeze (recitals 57, 105, and 163 to 175 to the contested decision). The Commission concedes that, from 1 January 2002, the applicant no longer had discretion to increase retail prices for analogue or ISDN lines. However, it could have reduced the margin squeeze by increasing its charges for ADSL lines (recitals 171 to 175 and 206 to the contested decision).

44. The Commission concludes in recital 199 to the contested decision:

[The applicant] is abusing its dominant position on the relevant markets for direct access to its fixed telephone network. Such abuse consists in charging unfair prices for wholesale access services to competitors and retail access services in the local network, and is thus caught by Article 82(a) of the EC Treaty. In the period from the beginning of 1998 to the end of 2001, [the applicant] was in a position to end the margin squeeze entirely by adjusting its retail charges. Since the beginning of 2002, [the applicant] could in any event have reduced the margin squeeze, by increasing the ADSL retail access charges not subject to the price cap system.'

45. Having assessed the infringement as a serious infringement for the period from the beginning of 1998 to the end of 2001, and a minor infringement for the period since the beginning of 2002, the Commission imposed a fine of EUR 12.6 million (recitals 207 and 212 to the contested decision).

46. The operative part of the contested decision reads as follows:

Article 1

[The applicant] has since 1998 infringed Article 82(a) of the EC Treaty by charging its competitors and end-users unfair monthly and one-off charges for access to the local network, thus significantly impeding competition on the market for access to the local network.

Article 2

[The applicant] shall immediately bring to an end the infringement referred to in Article 1 and shall refrain from repeating any act or conduct described in Article 1.

Article 3

For the infringement referred to in Article 1, a fine of EUR 12.6 million is hereby imposed on [the applicant].

...'

Procedure

47. By application lodged at the Registry of the Court of First Instance on 30 July 2003, the

applicant brought the present action.

48. By documents lodged at the Registry of the Court of First Instance on 12 December 2003, Arcor AG & Co. KG (the first intervener'), and CityKom Münster GmbH Telekommunikationsservice, subsequently known as Tropolys NRW GmbH, then Versatel NRW GmbH; EWE TEL GmbH; HanseNet Telekommunikation GmbH; ISIS Multimedia Net GmbH & Co. KG, subsequently known as Arcor AG & Co. KG; KomTel Gesellschaft für Kommunikations- und Informationsdienste mbH, subsequently known as Versatel Nord-Deutschland GmbH; NetCologne Gesellschaft für Telekommunikation mbH; TeleBeL Gesellschaft für Telekommunikation Bergisches Land mbH, subsequently known as Tropolys NRW GmbH, then Versatel NRW GmbH; tesion Telekommunikation GmbH, subsequently known as Versatel Süd-Deutschland GmbH; Versatel Deutschland GmbH & Co. KG, subsequently known as Versatel WestDeutschland GmbH (together: the second intervener'), applied for leave to intervene in support of the form of order sought by the Commission.

49. By letter of 30 January 2004, the applicant sent the Court a request for confidential treatment of certain passages in the application, the defence, the reply and certain annexes relating thereto.

50. By letter of 22 March 2004, the applicant sent the Court a request for confidential treatment of a passage in the rejoinder.

51. By order of the President of the First Chamber of the Court of First Instance of 6 May 2004, the companies mentioned in paragraph 48 above were granted leave to intervene in support of the form of order sought by the Commission. The decision on the validity of the request for confidential treatment was reserved.

52. Non-confidential versions of various procedural documents, prepared by the applicant, were sent to the first and second interveners.

53. By letters of 24 June 2004, the first and second interveners contested the confidentiality of various passages which were obscured in the non-confidential versions of the procedural documents.

54. On 14 July 2004, the second intervener lodged its statement in intervention; the first intervener did likewise on 2 August 2004. The main parties submitted their observations on the statements in intervention.

55. By letter of 20 December 2004, the applicant lodged observations on the objections of the first and second interveners concerning the request for confidentiality.

56. By order of 15 June 2006, the President of the Fifth Chamber partly granted the applicant's request for confidentiality.

57. By letter of 14 September 2006, the second intervener informed the Court that the first intervener had become the legal successor to ISIS Multimedia Net GmbH & Co. KG. By the same letter, it informed the Court, in accordance with Article 99 of the Rules of Procedure of the Court of First Instance, that, to avoid duplication of interveners, it was withdrawing the intervention of ISIS Multimedia Net GmbH & Co. KG, which had become Arcor AG & Co. KG.

58. By order of the President of the Fifth Chamber of the Court of First Instance of 30 November 2006, Arcor AG & Co. KG, formerly ISIS Multimedia Net GmbH & Co. KG, was removed from the case as second intervener.

59. On 11 December 2006, after hearing the parties, the Court decided to refer the present case to the Fifth Chamber, Extended Composition, of the Court of First Instance.

60. Upon hearing the Judge-Rapporteur, the Court of First Instance (Fifth Chamber) decided to open the oral procedure and, by way of measures of organisation of procedure under Article 64 of the Rules of Procedure, put written questions to the applicant and to the Commission and requested

them to produce certain documents. The main parties complied with those requests within the prescribed period.

61. By letter of 21 March 2007, the applicant sent the Court a request for confidential treatment of various matters in the Commission's statement of 5 March 2007 containing the replies to the Court's written questions. The first and second interveners did not raise any objections to that request for confidentiality, and a non-confidential version of the Commission's statement, which was prepared by the applicant, was sent to the first and second interveners.

62. As Judge Dehousse was unable to sit in the present case, the President of the Court of First Instance designated Judge Wahl to complete the Chamber pursuant to Article 32(3) of the Rules of Procedure on 29 March 2007.

63. The parties presented oral argument and their answers to the questions put by the Court at the hearing on 3 May 2007.

Forms of order sought by the parties

64. The applicant claims that the Court of First Instance should:

- annul the contested decision or, in the alternative, reduce the fine imposed by the Commission in Article 3 of the contested decision at the Court's discretion;

- order the Commission to pay the costs, including extra-judicial costs.

65. The Commission contends that the Court should:

- dismiss the action;

- order the applicant to pay the costs.

66. The first intervener contends that the Court should:

- dismiss the action;

- order the applicant to pay the costs, including those of the first intervener.

67. The second intervener contends that the Court should:

- dismiss the applicant's application;

- order the applicant to pay the costs, and to pay the extra-judicial costs of the second intervener.

Law

I - Principal form of order sought: annulment of the contested decision

68. The applicant raises three pleas in law alleging, first, an infringement of Article 82 EC; second, that the operative part of the contested decision is defective; and third, misuse of powers and infringement of the principles of proportionality, legal certainty and protection of legitimate expectations.

A - First plea in law: infringement of Article 82 EC

69. The first plea in law is in four parts. The first part alleges the absence of an abuse as the applicant did not have sufficient scope to avoid a margin squeeze. The second complains of the unlawfulness of the method used by the Commission to establish the margin squeeze. The third alleges an error by the Commission in calculating the margin squeeze, and the fourth alleges the lack of any effect on the market of the margin squeeze identified.

1. First part: absence of an abuse as the applicant did not have sufficient scope to avoid a margin squeeze

(a) Arguments of the parties

70. The applicant submits that it did not have sufficient scope to avoid the margin squeeze alleged in the contested decision. First, it notes that the Commission itself found that the applicant did not have scope to fix charges for wholesale access. Charges for wholesale access, which are fixed by RegTP, ought to correspond to the cost of efficient service provision. Therefore, they do not necessarily correspond to the applicant's costs.

71. Second, the applicant did not have scope to fix its charges for retail access either. As regards the period from 1998 to 2001, any abuse by the applicant is precluded by the fact that RegTP alone - and previously the BMPT - is responsible for the applicant's charges for narrowband connections (see paragraphs 73 to 79 below).

72. As to the period after January 2002, it is only the applicant's conduct in fixing charges for broadband connections that could be abusive, since the Commission itself acknowledged in the contested decision that the applicant has not had any scope to fix charges for narrowband connections since 2002. However, as regards the period after January 2002, any scope the applicant may have had to fix charges for broadband connections (assuming that was established), would in any event have no bearing on the margin squeeze alleged (see paragraphs 80 to 83 below).

73. First, as far as narrowband connections are concerned (analogue and ISDN lines), the applicant explains that, under German law, all its retail prices had to be examined and approved in advance by RegTP or, before 1998, by the BMPT. The applicant - who, under Paragraph 29(1) of the TKG, could not depart from the charges thus authorised without incurring a fine - cannot therefore be regarded as having infringed Article 82 EC by applying those charges.

74. As to the setting of charges, the applicant observes that, under the price cap system, RegTP initially defines the basket of services and the targets for the movement of prices which limit basket price adjustments (price indices' or price caps'). Next, RegTP examines the individual price adjustments proposed by the applicant. Accordingly, under Paragraphs 24 and 27 of the TKG, RegTP should ascertain - irrespective of compliance with the ceiling fixed for the basket in question - whether the charges requested have been set (without any justification) below the cost of efficient service provision or whether they contravene other legal provisions, particularly Article 82 EC. RegTP should therefore refuse a retail price adjustment sought by the applicant if the prices contravene Article 82 EC, particularly because of an anti-competitive margin squeeze.

75. The applicant maintains that, before 1 May 2002 - in accordance with Paragraph 97(3) of the TKG, under which authorisations for the applicant's charges granted before 1 January 1998... remain[ed] in force until 31 December 2002 at the latest' - it was bound by the mandatory tariffs for analogue lines which were based on an authorisation that was granted by the BMPT without any time-limit.

76. The applicant also notes that its application of 31 October 2002 for an increase in its retail access charges was only partly accepted by RegTP, within the limit of the price cap, by decision of 19 December 2002. Moreover, since 1 January 2002, charges for end-user lines are in a separate basket for which a specific reference value has been set. Telephone call charges have no bearing on compliance with those values. The Commission itself recognises that the applicant has not had any opportunity to increase its charges for narrowband access since 2002. The fact that the applicant did not make any further applications to increase authorised charges between 1998 and 2001 does not mean that the applicant can be held responsible for the level of charges set by RegTP and, therefore, for an alleged margin squeeze. The mere right to submit applications for price adjustment cannot be regarded as an autonomous price-fixing power. RegTP's procedure for examining and authorising charges on a case by case basis was put in place precisely to ensure through advance regulation that the incumbent operator does not apply abusive pricing, in accordance with the obligation imposed

on the Member States by Article 17 of Directive 98/10/EC of the European Parliament and of the Council of 26 February 1998 on the application of open network provision (ONP) to voice telephony and on universal service for telecommunications in a competitive environment (OJ 1998 L 101, p. 24). Where an application is examined and determined in accordance with that procedure and satisfies the procedural requirements of the Community legal framework for telecommunications law, an undertaking which applies charges set after such an examination cannot be accused of any abuse. Charges which are checked and authorised cannot be described as an abuse on the part of the undertaking which applies them.

77. Furthermore, the applicant explains that the advance regulation exercised by RegTP serves to establish the structure of the market through administrative intervention and - in the areas subject to advance regulation - transfers responsibility for maintaining the structure of the market from the regulated undertaking to the regulatory authority. Accordingly, the applicant is obliged to request price adjustments from RegTP only in the event of a change in the underlying circumstances.

78. In any event, even on the assumption that the applicant can be held responsible for a certain tariff level on the basis of its right to request a price adjustment, there was no change of circumstances such as to require the applicant to make further applications to increase its retail prices. On the contrary, since 1998, the costs of providing connections have remained almost unchanged, and wholesale access charges have even been considerably reduced. Furthermore, in the same period, RegTP concluded in its decisions of 8 February 1999, 23 December 1999, 30 March 2001, 21 December 2001, 11 April 2002 and 29 April 2003 that no margin squeeze existed to the detriment of competitors. In addition, by judgment of 16 January 2002, the Oberlandesgericht Düsseldorf (Higher Regional Court of Düsseldorf, Germany) held that the applicant's authorised charges did not contravene Article 82 EC.

79. As regards the judgment of the Bundesgerichtshof (Federal Court of Justice, Germany) of 10 February 2004, setting aside the judgment of the Oberlandesgericht Düsseldorf of 16 January 2002, the applicant submits that that judgment confirms that RegTP checks whether a charge to which a request for authorisation relates is compatible with Article 82 EC and that responsibility for any infringement of Article 82 EC can only exceptionally be ascribed to the undertaking which applied for the charge to be authorised. The applicant observes that RegTP itself has concluded on several occasions since 1998 that there is no margin squeeze to the detriment of the applicant's competitors. Furthermore, the Bundesgerichtshof expressly left open the question of the applicant's responsibility under competition law on account of the regulated charges.

80. Second, the applicant submits that any abuse in the period beginning in 2002 which is based solely on the alleged scope for increases in TDSL (ADSL) charges cannot be ascribed to the applicant. The Commission cannot consider that discretion in isolation, since the margin squeeze was not calculated on the basis of the TDSL (ADSL) charges alone, but on the basis of all the retail prices. Moreover, contrary to the Commission's contention, the applicant could not increase its charges indefinitely. Thus, the applicant claims that the basic component of the charge, namely the price of the basic subscription (analogue or ISDN connection), requires the prior authorisation of RegTP. In addition, the surcharge for switching from an analogue or ISDN connection to an ADSL connection is subject to subsequent review by RegTP. The applicant refers in that regard to the decisions of RegTP of 30 March 2001 and 25 January 2002. In those circumstances, the applicant - whose charges had to be fixed, in accordance with Paragraph 24 of the TKG, on the basis of the cost of efficient service provision - certainly did not have unlimited scope to increase its ADSL charges. In its decision of 25 January 2002, RegTP closed the proceeding initiated against the applicant concerning predatory pricing in relation to ADSL. The applicant observes further that the Commission refers only to the figures taken from RegTP's decision of 30 March 2001 in order to show that the applicant has had scope to increase its ADSL charges since 2002.

81. In addition, the applicant submits that, on the basis of the Commission's calculations, with the exception of the start-up phase, its retail prices for ADSL services (analogue lines since 2001 and ISDN lines since 2002) were higher than those of its wholesale access, having been increased by specific costs associated with retail access. There was therefore no margin squeeze on that market. Moreover, the real cause of the alleged margin squeeze was RegTP's setting of low charges for analogue lines. Therefore since, according to the Commission itself, there are separate markets for broadband connections (ADSL) and narrowband connections (analogue and ISDN lines), the applicant maintains that even if it had any scope on the broadband connections market to enable it to increase its charges for ADSL lines, neither an increase in or a reduction of ADSL charges would have any repercussions on the continued existence of an anti-competitive margin squeeze on the narrowband connections market. Correction of ADSL charges could not eliminate the alleged dysfunctioning of the narrowband connections market, any more than fixing ADSL charges would provoke that dysfunctioning. In its reply, the applicant submits further that, although a single wholesale service provides access to a number of downstream markets, each of those downstream markets must be investigated as to the existence of a margin squeeze.

82. The applicant also challenges the Commission's argument that the wholesale market for local network access is a unified market. Full access to the local network can provide end-users only with either broadband connections or narrowband connections. Moreover, broadband connections can be marketed separately from narrowband connections on the basis of line sharing. Full access to the local network is therefore not necessary for ADSL services. If the Commission had taken account of the charges for line sharing - which are significantly lower than the charges for wholesale access - in assessing the margin squeeze, the result would have been more favourable for the applicant.

83. Lastly, the applicant submits that the Commission failed to show in the contested decision how the applicant could have reduced the alleged margin squeeze by increasing ADSL charges. In view of the cross-price elasticity between ADSL and traditional connections and between the different ADSL variants (over analogue connections and ISDN), which the Commission accepts, a more thorough investigation would have been appropriate to determine whether an increase in ADSL charges would actually have resulted in an increase in weighted retail prices. The applicant notes in that regard that there is cross-price elasticity between ADSL and narrowband connections. If it had demanded higher ADSL charges in the past than those which it applies, the number of ADSL customers would have been lower. There is also considerable cross-price elasticity even within the ADSL sector. The applicant explains in that regard that ADSL connections are offered over both analogue and ISDN lines. An increase in ADSL charges on the basis of ISDN connections would shift demand towards the analogue variant.

84. The Commission and the first and second interveners contend that the first part of the first plea in law should be dismissed.

(b) Findings of the Court

(i) Preliminary observations

85. It follows from the case-law that Articles 81 EC and 82 EC apply only to anti-competitive conduct engaged in by undertakings on their own initiative. If anti-competitive conduct is required of undertakings by national legislation or if the latter creates a legal framework which itself eliminates any possibility of competitive activity on their part, Articles 81 EC and 82 EC do not apply. In such a situation, the restriction of competition is not attributable, as those provisions implicitly require, to the autonomous conduct of the undertakings (see Joined Cases C359/95 P and C379/95 P Commission and France v Ladbroke Racing [1997] ECR I6265, paragraph 33, and the case-law cited).

86. In that regard it must nevertheless be observed that the possibility of excluding particular anti-competitive conduct from the scope of Articles 81 EC and 82 EC, on the ground that it has been required of the undertakings in question by existing national legislation or that the legislation has eliminated any possibility of competitive conduct on their part, has been only partially accepted by the Court of Justice (Joined Cases 209/78 to 215/78 and 218/78 van Landewyck and Others v Commission [1980] ECR 3125, paragraphs 130 to 134; Case 41/83 Italy v Commission [1985] ECR 873, paragraph 19; Joined Cases 240/82 to 242/82, 261/82, 262/82, 268/82 and 269/82 Stichting Sigarettenindustrie and Others v Commission [1985] ECR 3831, paragraphs 27 to 29; and Case C198/01 CIF [2003] ECR I8055, paragraph 67).

87. For the national legal framework to have the effect of making Articles 81 EC and 82 EC inapplicable to the anti-competitive activities of undertakings, the restrictive effects on competition must originate solely in the national law (Case T513/93 Consiglio nazionale degli spedizionieri doganali v Commission [2000] ECR II1807, paragraph 61).

88. Articles 81 EC and 82 EC may apply, however, if it is found that the national legislation leaves open the possibility of competition which may be prevented, restricted or distorted by the autonomous conduct of undertakings (van Landewyck and Others v Commission , cited in paragraph 86 above, paragraphs 126 and 130 to 134; Stichting Sigarettenindustrie and Others v Commission , cited in paragraph 86 above, paragraphs 12 to 37; Case C219/95 P Ferriere Nord v Commission [1997] ECR I4411, paragraphs 23 to 25; and Commission and France v Ladbroke Racing , cited in paragraph 85 above, paragraph 34).

89. Thus, if a national law merely encourages or makes it easier for undertakings to engage in autonomous anti-competitive conduct, those undertakings remain subject to Articles 81 EC and 82 EC (Joined Cases 40/73 to 48/73, 50/73, 54/73 to 56/73, 111/73, 113/73 and 114/73 Suiker Unie and Others v Commission [1975] ECR 1663, paragraphs 36 to 73, and CIF , cited in paragraph 86 above, paragraph 56; see, to that effect, Case T387/94 Asia Motor France and Others v Commission [1996] ECR II961, paragraph 60).

90. It is in the light of the principles set out above that the Court must examine the German legal framework - in particular the TKG, the Charges Order and the decisions taken by RegTP during the period covered by the contested decision - in order to establish whether it eliminated any possibility of competitive activity by the applicant or whether it allowed the applicant sufficient scope to fix its charges at a level which would have enabled it to end or reduce the margin squeeze identified in the contested decision.

(ii) The contested decision

91. In the contested decision, the Commission examines the charges for wholesale access and the retail charges and finds an abuse by [the applicant] in the form of a margin squeeze generated by a disproportion between [those two charges]' (recital 57).

92. The Commission goes on to indicate in the contested decision that there is an abusive margin squeeze if the difference between the retail prices charged by a dominant undertaking and the wholesale prices it charges its competitors for comparable services is negative, or insufficient to cover the product-specific costs to the dominant operator of providing its own retail services on the downstream market' (recital 107).

93. Although the Commission does not, in the contested decision, exclude the possibility of the applicant reducing its charges for wholesale access (recitals 17, 163 and 206), it confines its analysis in that decision to the question whether the applicant had genuine scope to increase its retail prices (recitals 164 to 175). To that end it distinguishes between two periods.

94. The Commission takes the view first of all that, [i]n the period from the beginning of 1998 to the end of 2001, [the applicant] was in a position to end the margin squeeze entirely by adjusting its retail charges' (recital 199). The Commission explains that the applicant could have avoided the margin squeeze by increasing retail charges for analogue and ISDN connections' (recital 164).

95. Next, for the period from 1 January 2002 to the adoption of the contested decision, the Commission also finds that the applicant had scope to increase its retail charges. However, that scope applies only to retail prices for ADSL access. The Commission observes in the contested decision that, [s]ince the beginning of 2002, [the applicant] could in any event have reduced the margin squeeze, by increasing the ADSL retail access charges' (recital 199). It explains that, since 1 January 2002, [the applicant's] only legal means of reducing the margin squeeze has been limited to increases in the TDSL charges' (recital 206).

96. In those circumstances, it is necessary to consider whether the Commission was correct to find in the contested decision that the applicant had sufficient scope during the two periods identified in paragraphs 94 and 95 above to increase its retail prices, so as to end or reduce the margin squeeze identified in the contested decision.

(iii) Absence of an abuse because the applicant had insufficient scope to avoid a margin squeeze by increasing its retail prices in the period from 1 January 1998 to 31 December 2001

97. According to the contested decision (recitals 164 and 199), the applicant had sufficient scope to end the margin squeeze in the period from 1 January 1998 to 31 December 2001 by increasing its retail charges for access to analogue and ISDN lines.

98. In order to assess the merits of that finding it is necessary, in the first place, to consider the German legislative framework applicable.

99. In that respect, it must be observed that, under the second sentence of Paragraph 27(1) and Paragraph 25(1) of the TKG, and Paragraphs 4 and 5 of the Charges Order, the applicant's retail prices for access to analogue and ISDN lines had to be approved by RegTP in the context of a price cap system. The price cap applied to two baskets (residential services and business services) which, for the period from 1 January 1998 to 31 December 2001, consisted of both access services and telephone calls, in particular, local, regional, long-distance and international calls. In view of the cap imposed by the decision of the BMPT of 17 December 1997, the applicant had to reduce the aggregate price for each of the two baskets by 4.3% in the period from 1 January 1998 to 31 December 1999 and, following the decision of RegTP of 23 December 1999, by 5.6% in the period from 1 January 2000 to 31 December 2001.

100. However, it must be held that, within that framework, the applicant was able to adjust its prices after obtaining the prior authorisation of RegTP. The applicant does not dispute the statement in recitals 37 and 166 to the contested decision that, in the period from 1 January 1998 to 31 December 2001, it lowered its telephone call charges by much more than the 4.3% and 5.6% reductions required by RegTP for the baskets as a whole. RegTP's reply of 3 April 2002 to the request for information of 23 March 2002 referred to in recital 37 to the contested decision thus confirms that the charges for telephone services regulated under the price cap system were reduced by DEM [confidential] (1) [or approximately EUR [confidential]] over and above the price cap requirements'.

101. That tariff reduction gave the applicant scope to increase its retail prices for access to its analogue and ISDN lines.

102. As stated in recital 167 to the contested decision, the applicant also admitted in its reply to the statement of objections that there was scope for it to be able to increase the monthly charge per residential line by EUR [confidential] during the 1998 and 1999 price cap period.

103. The fact that the applicant did have scope to increase its retail charges is also apparent from remarks made by the German Government in its communication to the Commission of 8 June 2000, in which the German Government stated:

The ... complaint that, by its retail price cap decisions, RegTP limited the [applicant's] discretion to such an extent that an increase in the basic charge would not have been possible is unfounded. ... [In fact the applicant] had the scope to raise the basic charge for analogue connections (DEM 21.39) so as better to align the basic charge with the charge of DEM 25.40 authorised on 8 February 1999 for local network access.'

104. Furthermore, RegTP's decision of 8 February 1999 - to which the applicant refers in its application and in its reply to support its argument that it cannot be held responsible for an infringement of Article 82 EC - confirms that the applicant retains a discretion as regards the adjustment of the various retail prices, subject to the limits applicable to the basket established in the price cap procedure'.

105. The Commission was correct therefore to find in recitals 166 and 167 to the contested decision that, having regard to the six applications for reductions in call charges between 1 January 1998 and 31 December 2001, the applicant had scope during that period to apply for increases in the prices of its access services for analogue and ISDN lines, while respecting the overall ceilings for baskets of residential and business services. Moreover, the applicant admitted at the hearing that it had such scope.

106. In the second place, it is necessary to consider whether, notwithstanding the discretion noted in paragraph 105 above, the applicant is no longer subject to Article 82 EC as a result of RegTP's intervention in fixing the applicant's charges.

107. In that respect, it must be borne in mind at the outset that the fact that the applicant's charges had to be approved by RegTP does not absolve it from responsibility under Article 82 EC (see, to that effect, Case 123/83 BNIC [1985] ECR 391, paragraphs 21 to 23). Since the applicant (as it also admits in its reply) influences the level of its retail charges through applications to RegTP for authorisation pursuant to Paragraph 28(1) of the TKG, the restrictive effects on competition associated with the margin squeeze found in the contested decision did not originate solely in the applicable national legal framework (Consiglio nazionale degli spedizionieri doganali v Commission , cited in paragraph 87 above, paragraph 61).

108. The applicant nevertheless maintains that it did not have any responsibility under Article 82 EC, as RegTP had checked the compatibility of its charges with Article 82 EC beforehand.

109. In that respect, first, it must be noted that the retail charges for access to analogue lines which applied throughout the period from 1 January 1998 to 31 December 2001 had not been authorised by RegTP, but were based on decisions taken under the legislation in force before the adoption of the TKG. In response to a written question of the Court, the applicant thus confirmed that its retail charges for analogue lines in relation to the period from 1 January 1998 to 31 December 2001 were based on an open-ended authorisation granted by the Federal Ministry of Post and Telecommunications in 1990 on the basis of the Telecommunications Code (Telekommunikationsordnung).

110. However, neither in its application nor in its reply did the applicant claim that the charges fixed under the legislation in force in 1990 had been authorised after the competent authority had considered them as to their conformity with Article 82 EC.

111. Second, it must be noted that the provisions of the TKG in force since 1 August 1996 do not indicate that RegTP considers whether applications for the adjustment of retail charges for access to analogue or ISDN lines are compatible with Article 82 EC.

112. In support of its argument, the applicant refers however to Paragraph 27(3) of the TKG, under which RegTP is to examine the conformity of the requested adjustment of charges with... other legal provisions' (said by the applicant to include Article 82 EC) and to the various decisions of RegTP mentioned in paragraph 78 above in which the existence of a margin squeeze was investigated.

113. In that respect it must be stated, first, that even though RegTP is obliged, like all organs of the State, to respect the provisions of the EC Treaty (see, to that effect, CIF , cited in paragraph 86 above, paragraph 49), it was, at the material time, the German body responsible for regulating the telecommunications sector, rather than the competition authority of the Member State concerned. However, the national regulatory authorities operate under national law which may, as regards telecommunications policy, have objectives which differ from those of Community competition policy (see the Commission's Notice of 22 August 1998 on the application of the competition rules to access agreements in the telecommunications sector - framework, relevant markets and principles (OJ 1998 C 265, p. 2), paragraph 13).

114. Next, it must be noted that the various decisions of RegTP to which the applicant refers in support of its case do not include any reference to Article 82 EC.

115. It is true that RegTP examined the issue of the margin squeeze in a number of its decisions, particularly those of 8 February 1999, 30 March 2001, 21 December 2001, 11 April 2002 and 29 April 2003.

116. However, in those decisions, having found a negative spread between the applicant's wholesale and retail prices, RegTP took the view in each case that other operators should be able to offer their end-users competitive prices by resorting to cross-subsidised charges for access services and call charges.

117. Thus, RegTP finds in its decision of 29 April 2003 that:

[C]ompetitors are not so prejudiced with regard to their competitive opportunities in the local network by the slight difference between retail and wholesale prices as to make it economically impossible for them to enter the market successfully or even to remain in the market. ... [That difference] was not so significant as to deprive competitors of any opportunity themselves to cross-subsidise their retail prices in order to be able to offer their end-users connections at a price as attractive as that offered by the applicant, or even at a lower price. That applies particularly to the higher-value and costlier ISDN and ADSL connections, which have increased markedly in number on account of the significant expansion of internet penetration, as well as of the marketing of faster and better access to the internet.'

118. RegTP follows a similar reasoning in its decisions of 8 February 1999, 30 March 2001, 21 December 2001 and 11 April 2002.

119. However, the fact that RegTP does not object to the charges requested by the applicant, after finding that the applicant's competitors must resort to cross-subsidisation in order to be able to offer their end-users competitive prices for access, shows that RegTP did not consider the compatibility of the charges in question with Article 82 EC or, at any rate, that it applied Article 82 EC incorrectly (see paragraphs 198 to 202 and 238 below).

120. In any event, even on the assumption that RegTP is obliged to consider whether retail charges proposed by the applicant are compatible with Article 82 EC, the Commission would not thereby be precluded from finding that the applicant was responsible for an infringement. The Commission cannot be bound by a decision taken by a national body pursuant to Article 82 EC (see, to that effect, Case C344/98 Masterfoods and HB [2000] ECR I11369, paragraph 48).

121. Third, it must be noted that attribution of any infringement to the applicant in the present

case depends on whether the applicant had sufficient scope at the material time to fix its charges at a level that would have enabled it to end or reduce the margin squeeze at issue.

122. It has already been held that the applicant was able to influence the level of its retail charges through applications to RegTP for authorisation (see paragraphs 98 to 105 above). In the context of the applicant's special responsibility as an undertaking in a dominant position (Case 322/81 NBIM v Commission [1983] ECR 3461, paragraph 57; Case T228/97 Irish Sugar v Commission [1999] ECR II2969, paragraph 112; and Case T203/01 Michelin v Commission [2003] ECR II4071, paragraph 97), the applicant was therefore obliged to submit applications for adjustment of its charges at a time when those charges had the effect of impairing genuine undistorted competition on the common market.

123. Furthermore, in its judgment of 10 February 2004 (paragraph 79 above), the Bundesgerichtshof expressly confirmed the applicant's responsibility to make applications for the adjustment of its charges. In addition, it noted that the German legal framework did not preclude RegTP from authorising proposed charges which are contrary to Article 82 EC. The Bundesgerichtshof held, in fact, that, [u]nlike those cases in which the conduct of the undertaking in a dominant position is directly determined by national legal provisions, the authorisation of charges that is prescribed by telecommunications law is nevertheless based on the application for authorisation made by the provider', and that, [e]ven if the administrative examination procedure is intended not to authorise tariffs which prove to constitute an abuse of a dominant position..., that does not preclude the possibility in practice of an undertaking submitting a charge by which it abuses its dominant position and obtains authorisation for it because the abuse is not revealed during the examination procedure'.

124. It follows from all the foregoing that, notwithstanding RegTP's intervention in the setting of the applicant's charges, the applicant had sufficient discretion during the period from 1 January 1998 to 31 December 2001 for its pricing policy to fall within the scope of Article 82 EC.

125. In the third place, it is necessary to consider whether the applicant used the discretion which it had in relation to its retail prices in order to avoid the margin squeeze identified in the contested decision in the period from 1 January 1998 to 31 December 2001.

126. In the present case, first of all, as regards retail prices for analogue lines, the applicant does not deny that it made no application to RegTP for authorisation for an increase in one-off charges and/or monthly charges. Thus, it is common ground that the monthly and one-off access charges for standard analogue telephone connections remained unchanged throughout the entire time from 1998 to the end of 2001' (recital 38 to the contested decision).

127. The applicant nevertheless maintains that, before 1 May 2002, it was bound in accordance with Paragraph 97(3) of the TKG by the mandatory charges for analogue lines that had been set in 1990 by the Federal Minister for Post and Telecommunications.

128. However, Paragraph 97(3) of the TKG, containing a transitional provision, provided only that the applicant's charges approved before the entry into force of the TKG would remain in effect until 31 December 2002 at the latest. That provision in no way therefore prevented the applicant from intervening in retail prices by making applications for price changes to RegTP before that date or, in particular, during the entire period from 1 January 1998 to 31 December 2001.

129. Second, as regards retail prices for ISDN lines, it is undisputed that, following the applicant's application, RegTP authorised a reduction in the basic monthly charges by decision of 16 February 2000 (recital 40 to the contested decision).

130. Furthermore, throughout the period from 1 January 1998 to 31 December 2001, the applicant made no application for price adjustment in respect of its one-off charges for the provision of

ISDN lines. Those charges, which, according to the applicant, are based on a 1996 decision of the BMPT and which remained valid in accordance with Paragraph 97(3) of the TKG after the entry into force of the TKG, were not therefore adjusted during the period from 1 January 1998 to 31 December 2001 (recital 41 to the contested decision).

131. It follows that the applicant did not use the discretion available to it in order to secure an increase in its retail prices, which would have helped to reduce the margin squeeze in the period from 1 January 1998 to 31 December 2001. On the contrary, it even used that discretion to lower its retail prices in respect of ISDN lines during that period.

132. Finally, in the fourth place, it is necessary to consider whether the Commission has established to the requisite legal standard in the contested decision that the applicant had sufficient scope in the period from 1 January 1998 to 31 December 2001 to [avoid] the margin squeeze' (recital 164). In that respect, the Commission states in the contested decision that the applicant was in a position [during that period] to end the margin squeeze entirely by adjusting its retail charges' (recital 199).

133. It must be noted in that regard that the margin squeeze identified in the contested decision for that period amounted to EUR [confidential] up to 31 December 1998, EUR [confidential] up to 31 December 1999, EUR [confidential] up to 31 December 2000 and EUR [confidential] up to 31 December 2001 (recitals 152 and 153 to the contested decision, and Table 10).

134. However, as the Commission contends in its reply to a written question of the Court, it follows from the findings in recital 167 to the contested decision, which have not been challenged by the applicant, that the applicant actually lowered its call charges by a total of EUR [confidential] during the period 1998 and 1999. However, that amount - distributed over [confidential] lines (Table 7 of the contested decision) and 24 months - would have enabled the applicant to raise the average price of its retail charges to EUR [confidential] per month.

135. It follows that the reduction in call charges would have created sufficient scope to end entirely the margin squeeze identified in the contested decision. For if, by exercising its discretion, the applicant had ended the margin squeeze as from 1998, it would have sufficed for the applicant to maintain the balance between its charges for wholesale access and its retail charges in order to avoid the margin squeeze identified in the contested decision throughout the period from 1 January 1998 to 31 December 2001. In addition, as the Commission also points out in the contested decision (recital 167), it is common ground that the applicant reduced its call charges further during the 2000 and 2001 period to EUR [confidential], and that the effect of that reduction was to increase further the applicant's scope to raise its retail prices.

136. At the hearing the applicant pointed out that, during the period from 1 January 1998 to 31 December 2001, RegTP had to investigate compliance with the price ceilings separately in respect of business and private customers. The applicant maintains that it had little scope to increase retail prices for individuals, and that it could not use its greater discretion to increase retail access prices for its business customers because that would have resulted in discrimination against those customers, contrary to point 3 of Paragraph 24(2) of the TKG.

137. However, in its application, the applicant has not disputed the finding in recital 167 to the contested decision that the amount released by the reductions in call charges could have been redirected to connections for residential and business customers' and could have been used entirely to increase retail access charges. Nor, in its application, has the applicant disputed the Commission's statement in recital 132 to the contested decision that no distinction [should be made] between residential and business customers... because no sufficiently precise demarcation between them is possible'.

138. The line of argument referred to in paragraph 136, which was raised for the first time at the hearing, must therefore be declared inadmissible, in accordance with Article 48(2) of the Rules of Procedure.

139. Finally, it must be noted that the applicant does not dispute the finding in recital 168 to the contested decision that, during the period from 1 January 1998 to 31 December 2001, it could have [undertaken] further reductions in call charges... and thereby... [obtained additional] leeway for price increases in the monthly and one-off charges for analogue and ISDN connections'.

140. It follows from all the foregoing that the Commission was entitled to find in the contested decision (recitals 164 and 199) that the applicant had sufficient scope during the period from 1 January 1998 to 31 December 2001 to end entirely the margin squeeze complained of in that decision.

(iv) Absence of an abuse because the applicant had insufficient scope to reduce the margin squeeze by increasing its ADSL retail access charges from 1 January 2002

141. It must be borne in mind that a new price cap system in Germany, approved by RegTP by decision of 21 December 2001, has been in force since 1 January 2002. Under the terms of that decision, end-user lines' are in a separate basket. Within that basket, the increase in retail prices for analogue and ISDN connections was capped at 4.1% per annum.

142. It is not disputed that, following an application to RegTP on 15 January 2002, the applicant was authorised to increase its monthly charges for analogue and ISDN lines by EUR 0.56, which represented an increase in the average level of charges for all the services in the basket concerned of 4.04% (recital 44 to the contested decision). Nor is it disputed that the applicant's application of 31 October 2002 for an increase in its retail prices - in relation to the monthly rental charge for a TNet analogue telephone line and the one-off takeover charges for TNet and TISDN lines - was largely rejected by RegTP, because the increase would no longer have been consistent with the current price cap index figures (recital 45 to the contested decision).

143. Accordingly, the Commission finds in the contested decision (recital 206) that since 1 January 2002, [the applicant's] only legal means of reducing the margin squeeze has been limited to increases in the TDSL charges'. According to the Commission, from that date, the applicant's discretion covered only ADSL retail access charges (see also recitals 174 and 199 to the contested decision).

144. In the first place, it must be noted in that regard that the applicant does not deny that it could have increased its ADSL charges from 1 January 2002. It maintains, however, that it did not have unlimited leeway because its charges had to be set on the basis of the cost of efficient service provision and could be reviewed subsequently by RegTP.

145. However, since the applicant fixes its ADSL charges at its own discretion, within the limits imposed under German law, its pricing practices in that area are capable of being caught by Article 82 EC (see paragraphs 87 and 88 above).

146. The fact that the Commission referred in the contested decision only to charges deriving from a decision of RegTP of 30 March 2001 in order to assess the extent of the applicant's discretion from 1 January 2002 alters nothing in that respect. The applicant does not deny that it had a limited discretion to increase its charges for ADSL access services from 1 January 2002.

147. In the second place, it is necessary to consider whether, as the Commission contends in the contested decision (recital 199), the applicant could have reduced the margin squeeze' by increasing its charges for ADSL access services from 1 January 2002. The applicant submits in that respect that, for end-users, the markets for narrowband and ADSL access services are separate markets. In those circumstances, an increase by the applicant in ADSL retail charges would have had no effect on the alleged margin squeeze identified in the markets for analogue and ISDN access services.

148. It must be noted in that regard that since wholesale access services can provide end-users with the whole range of analogue, ISDN and ADSL access services, the applicant's scope to increase its ADSL charges is capable of reducing the margin squeeze between wholesale prices, on the one hand, and retail prices for the whole range of analogue, ISDN and ADSL access services, on the other. A combined analysis, at end-user level, of analogue, ISDN and ADSL access services is required not only because they amount to a single supply of services at wholesale level, but also because, as the Commission explained in the contested decision (recital 26) without having been challenged by the applicant on that point, ADSL cannot be offered to end-users on its own because, for technical reasons, it always involves an upgrading of analogue or ISDN narrowband connections.

149. The applicant's observations concerning the purported cross-price elasticity between ADSL and narrowband connections and between the different ADSL variants must be rejected. First, those observations do not preclude the existence of scope for the applicant to increase its ADSL charges. Second, a limited increase in ADSL charges would have led to a higher average retail price for narrowband and associated broadband access services, and would thus have reduced the margin squeeze identified. In view, in particular, of the advantages of broadband as regards data transmission, end-users of broadband access services would not automatically choose to revert to a narrowband connection when ADSL retail access charges are increased.

150. The applicant's argument that broadband connections can be marketed separately from narrowband connections on the basis of line sharing at the wholesale level cannot be accepted either. If, by that argument, the applicant seeks to distinguish two separate wholesale markets relating to narrowband services and broadband services respectively, that argument must be declared inadmissible in accordance with Article 48(2) of the Rules of Procedure because, in its application, the applicant has not challenged the definition of the relevant markets that was applied in the contested decision, which identifies a single wholesale market, namely the market for fully unbundled access to the local network (recitals 64 to 67 to the contested decision). If, by that argument, the applicant claims that the Commission should have taken account of the line sharing charges for the purpose of calculating charges for wholesale access, that argument cannot be accepted either. The applicant has failed to show that, if the Commission had taken the line sharing charges into account, that would have affected its findings as to the existence of a margin squeeze or of the applicant's scope to reduce the margin squeeze by increasing its ADSL retail access charges.

151. It follows from all the foregoing that the Commission was entitled to find in the contested decision that the applicant had sufficient scope from 1 January 2002 to reduce the margin squeeze identified in that decision by increasing its charges for ADSL access services.

152. Accordingly, the first part of the plea in law must be rejected.

2. Second part: unlawfulness of the method used by the Commission to establish a margin squeeze

(a) Arguments of the parties

153. The applicant submits that the abusive nature of a margin squeeze can arise only from the abusive nature of retail prices alone, since the Commission does not deny that the prices of wholesale access are mandatorily set by the official authorities. However, the Commission has not demonstrated that the applicant's retail prices would lead to price dumping and as such are abusive. The applicant refers in that regard to Lexecon's expert opinion. The contested decision is thus erroneous because the Commission applied a test which does not relate to the abusive nature of the retail prices as such, but to the relationship between those prices and the prices of wholesale access.

154. The applicant also claims that the finding of a margin squeeze is based on a number of errors relating to the method used.

155. In the first place, the applicant observes that, as far as retail prices are concerned, the Commission took account only of revenue from the provision of telephone lines to end-users. In order to be able to find a margin squeeze and in view of the narrow definition of the market used in the contested decision, the Commission should have taken account of additional revenue from the applicant's competitors for connection and higher-value services (see, to that effect, Case T342/99 Airtours v Commission [2002] ECR II2585, paragraph 276). The revenue in question is generated by local or long-distance calls, call termination and call sending, as well as other higher-value services. Although the Commission found that [t]he fixed-network connections are in reality a prerequisite for the provision of a variety of telecommunications services to end-users', and that those services enable considerable additional revenue to be generated (recital 205 to the contested decision), it nevertheless contradicted itself in refusing to take the charges for those telecommunications services into account in its analysis of the margin squeeze. From an economic standpoint, however, it would be necessary to take those charges into account in order to assess the actual opportunities for a competitor of the applicant to enter the market.

156. Thus, first, the applicant submits that its competitors are not obliged to offer their customers preselection and call-by-call services in respect of local, long-distance or international calls. Its competitors are therefore able to predict their revenue from telephone calls with far greater certainty than the applicant. As far as long-distance calls are concerned, the applicant maintains in its reply that it has been required to provide preselection and call-by-call (together: (pre)selection') services since 1998.

157. In addition the applicant submits in its reply that carrier (pre)selection is not automatically excluded for its competitors' customers. However, almost all of the applicant's competitors avail themselves of the possibility (which is not open to the applicant) of excluding (pre)selection where it is to their advantage to do so. The applicant's competitors are thus assured of receiving the revenue connected with telephone calls by virtue of the voluntary exclusion of carrier (pre)selection. None of the complainants in the administrative procedure took the view, moreover, that the exclusion of (pre)selection rendered its service provision less attractive or that a lower initial connection charge should have been offered by way of compensation. Furthermore, their call charges are almost all higher than the costs of establishing the call.

158. Second, the applicant submits that its competitors could offer innovative products on the basis of unbundled access to the local network, which are not offered by the applicant itself. In calculating the margin squeeze, the Commission should therefore also have taken into account the additional revenue generated by such products.

159. Third, the applicant maintains that its charges for retail access services (one-off and monthly charges) cannot be isolated from call charges. Competition for telecommunications services is for bundles of services. The applicant refers in that regard to a market study. Accordingly, the telecommunications companies offer a choice of connection variants and call options which are marketed as a combined product: mixed price packages in which rising monthly charges are set against falling call charges. In considering in its decision of 29 April 2003 whether the applicant's charges were leading to a margin squeeze that would distort competition, RegTP also regarded as decisive the fact that the applicant's competitors are in a position to obtain additional revenue from call services. The same or similar explanations are also given in the other decisions taken by RegTP between 1999 and 2003, cited in paragraph 78 above. The applicant refers moreover to the practice of the United States' Federal Communications Commission (FCC) and the British Office of Telecommunications (Oftel), and to the opinion expressed by the German Government in its observations of 8 June 2000 in proceedings for failure to fulfil obligations, which confirm that other revenue available to competitors must be taken into account in the analysis of a margin squeeze.

160. In its reply, the applicant submits further that an analysis of the margin squeeze must be undertaken from the point of view of different levels of aggregation where wholesale access serves as the basis for a variety of services to end-users. Thus, at each level, only those costs of wholesale access which are exclusively linked to the corresponding final product or group of final products concerned should be taken into account. Consequently, if wholesale products WP1 and WP2 are required for the production of final product FP1, but if, at the same time, final product FP2 is produced on the basis of WP2 and WP3, a margin squeeze occurs either where the price of FP1 or of FP2 is lower than the price of WP1 or of WP3, or where the aggregate price of FP1 and FP2 is lower than the aggregate price of WP1, WP2 and WP3. However, the price of WP2 should not be taken into account for the purpose of determining whether there is a margin squeeze at the first level of aggregation. The analysis should be conducted at a higher level of aggregation where products FP1 and FP2 constitute a whole from the customer's point of view, or where products FP1 and FP2 are bundled for technical or legal reasons (by wholesale product WP2), with the result that the dominant undertaking would necessarily lose the revenues from the two final products FP1 and FP2 when transferring wholesale product WP2. Unbundled access to the local network is a wholesale product in respect of at least two final products, namely calls and connections, which constitute a cluster' for customers. The costs of the wholesale product should not be attributed to just one of the two final products but to both of them. It follows that charges for retail line-rental and for calls and higher-value services should be compared with the charges relating to that combined offer of services when analysing the margin squeeze.

161. Furthermore, the applicant challenges the Commission's arguments concerning the principle of tariff rebalancing (recitals 120 to 123 to the contested decision). Thus, according to the applicant, tariff rebalancing - the purpose of which is to reduce the connection deficit which traditionally exists in the majority of the Member States, by means of an increase in connection charges and a parallel decrease in call charges - concerns incumbent operators only. By contrast, the analysis of the margin squeeze concerns the entry to the market of the applicant's competitors. In the context of Article 82 EC, it is important to establish only whether, taking into account the actual situation on the market, it is possible for competitors to provide retail services without impediment on the basis of the applicant's charges for wholesale access. In that respect, the applicant observes that its competitors are not obliged to offer (pre)selection. The legal framework thus allows the applicant's competitors to enjoy legally guaranteed revenues from call services, completely independently of any tariff rebalancing. The applicant submits further that it is subject to regulation by RegTP, which aims to achieve progressive tariff rebalancing.

162. In the second place, the applicant claims that the method used by the Commission to identify a margin squeeze is defective, because it relies on the proposition that it should be possible for the applicant's competitors to replicate its customer pattern entirely (recitals 120 to 127 to the contested decision). However, no competitor would have an interest in replicating a customer pattern which, owing to the obligation to provide universal services, is characterised by a disporportionately high and unprofitable share of low-income end-users with analogue lines, who generate only a small turnover and who are not prepared to switch to higher-value connections. The fall in the applicant's competitors' share of analogue connections from 21% to 10% between 1999 and 2002 (recital 182 to the contested decision) is explained by the fact that customers of the applicant's competitors have increasingly been switching to higher-value connections.

163. The applicant claims that, contrary to the Commission's contention (recital 133 to the contested decision), there is no margin squeeze in the highest-value market sectors which are of interest to the applicant's competitors (ISDN connections and ADSL connections over analogue or ISDN lines). Both the applicant's own charges and those of its competitors in respect of lines in the highest-value segments are sufficient to cover costs.

164. In the third place, the applicant is critical of the fact that the Commission takes the discontinuance charge into account when calculating the prices of wholesale services. The discontinuance of an end-user's connection by a competitor of the applicant involves both connection work to restore to the applicant the local loop rented, and administrative tasks, which are not necessary in the case of an end-user's discontinuance where the applicant uses the local loop itself. These costs are specific inefficiency costs which arise as a result of entry to the market, which the incumbent operator in a dominant position necessarily does not incur. Any such costs which are generated solely as a result of technical or administrative measures associated with entry to a market should be disregarded in the analysis of a margin squeeze. In fact, Article 82 EC does not require a dominant undertaking to remove all barriers to entry, but prohibits the creation of artificial barriers to entry.

165. The Commission and the first and second interveners contend that the second part of the first plea in law should be rejected.

(b) Findings of the Court

(i) Whether the Commission should have demonstrated in the contested decision that the applicant's retail prices were, as such, abusive

166. In the present case, according to the contested decision (recital 201), [t]he abuse committed by [the applicant] consists in the imposition of unfair prices in the form of a margin squeeze to the detriment of [the applicant's] competitors'. The Commission takes the view that there is an abusive margin squeeze if the difference between the retail prices charged by a dominant undertaking and the wholesale prices it charges its competitors for comparable services is negative, or insufficient to cover the product-specific costs to the dominant operator of providing its own retail services on the downstream market' (recital 107 to the contested decision).

167. It is true that, in the contested decision, the Commission establishes only that the applicant has scope to adjust its retail prices. However, the abusive nature of the applicant's conduct is connected with the unfairness of the spread between its prices for wholesale access and its retail prices, which takes the form of a margin squeeze. Therefore, in view of the abuse found in the contested decision, the Commission was not required to demonstrate in that decision that the applicant's retail prices were, as such, abusive.

168. The applicant's argument that the abusive nature of a margin squeeze can arise only from the abusive nature of its retail prices must therefore be rejected.

(ii) The method used by the Commission to calculate the margin squeeze

Contested decision

169. In recitals 106 to 139 to the contested decision, the Commission sets out the method which it used to calculate the margin squeeze.

170. It submits first of all that the basis for establishing an abusive margin squeeze is the comparison between the retail prices charged by a dominant undertaking and the wholesale prices it charges its competitors for comparable services' (recital 107 to the contested decision).

171. The Commission adds that [i]n order to establish the existence of a margin squeeze it is essential that the wholesale and retail access services be comparable' (recital 109 to the contested decision). According to the Commission, [the] established operator and its competitors as a rule provide retail services of all kinds. It has therefore to be considered whether the etablished operator's retail and wholesale services are comparable, in the sense that their technical features are the same or at least similar and that they allow the same or at least similar services to be provided' (recital 109 to the contested decision).

172. The Commission finds that the wholesale charges for unbundled access to local loops can indeed be compared with retail access charges, and that wholesale access enables the applicant's competitors to offer their end-users a range of different retail access services, namely analogue narrowband access, digital narrowband access (ISDN) and broadband access in the form of ADSL services (recitals 110 and 112 to the contested decision).

173. According to the Commission, there is an abusive margin squeeze if the difference between the retail prices charged by a dominant undertaking and the wholesale prices it charges its competitors for comparable services is negative, or insufficient to cover the product-specific costs to the dominant operator of providing its own retail services on the downstream market' (recital 107 to the contested decision). The Commission therefore relies on the applicant's charges and costs as a basis for assessing whether the applicant's pricing practices are abusive.

174. In order to determine whether the difference between the applicant's retail prices and the prices of its wholesale access leads to an abusive margin squeeze, the Commission compares the price of a single wholesale service (local loop access) with the price of a plurality of retail services (access to analogue, ISDN and ADSL connections) (recital 113 to the contested decision).

175. The Commission does not take revenues from telephone calls into account at the retail price level. It only examines the charges for access to the network, which it compares to the charges of wholesale access (recital 119 to the contested decision).

176. Since RegTP has applied single wholesale tariffs, irrespective of the downstream services which competitors provide over the line supplied to them by the applicant (recital 113 to the contested decision), it is necessary, according to the Commission, to compare charges for wholesale access with average prices for all retail access services, taking account of each variant of retail access service actually marketed by the applicant and the respective prices of those lines (recital 116 to the contested decision).

177. It must therefore be borne in mind that the retail prices (for each variant offered by the applicant) and the prices for wholesale access are composed of two items, namely an initial one-off charge and a monthly subscription charge (recitals 142 and 149 to the contested decision).

178. To calculate the monthly price' of the one-off charges, these were divided by [confidential], representing the average period (in months) for which end-users keep a telephone subscription (recitals 148 and 151 to the contested decision).

179. Thus, the average total monthly retail price is the sum of the price of the average monthly charge (taking into account all retail access services) and the average one-off charges (taking into account all retail access services and the average duration of a subscription) (recital 148 to the contested decision).

180. The average total monthly price of wholesale services is the sum of the price of the monthly charge and the price of the average one-off charges (taking into account the average duration of a subscription) (recital 151 to the contested decision). According to the Commission, the one-off charges for wholesale access also include discontinuance charges. The Commission notes that [t]he discontinuance charge is payable for re-connecting an unbundled line to [the applicant's] network and is imposed only on competitors at wholesale level', and adds that [t]he discontinuance charge and the charge for access provision are the only one-off wholesale charges which competitors must pay to [the applicant]' (recital 151 to the contested decision).

181. On the basis of that calculation of monthly prices, the Commission finds that the spread between the applicant's wholesale and retail prices was negative between 1998 and 2001 (recital 153 to the contested decision). In view of that finding, it is not necessary, according to the Commission,

to determine whether this spread was sufficient to cover [the applicant's] downstream costs for customer relations' (recital 153 to the contested decision). By contrast, since the spread was positive from 2002 onwards, the Commission calculated [the applicant's] product-specific costs [for providing retail services], in order to assess whether this positive spread [was] sufficient [for the applicant] to cover [those] product-specific costs' (recital 154 to the contested decision).

182. The Commission concludes that the margin squeeze in access to the local network still existed at the time of the adoption of the contested decision (recital 161 to the contested decision), since the applicant's product-specific costs for providing retail services still exceeded the positive spread between retail and wholesale prices (recital 160 to the contested decision).

Lawfulness of the method used by the Commission

- Preliminary observations

183. It must be noted that the applicant puts forward three complaints concerning the method used to calculate the margin squeeze. First of all, the applicant submits that, as far as retail prices are concerned, the Commission should not have taken into consideration only revenues from the provision of telephone lines to end-users, but also revenues from other services such as call services. Second, the applicant criticises the method used by the Commission to demonstrate the existence of a margin squeeze based on the proposition that the applicant's competitors would have an interest in entirely replicating its customer pattern. Third, the method used is defective because the Commission inflates the prices of wholesale access by taking discontinuance charges into account in the calculation of those prices.

184. The various arguments put forward in relation to the first two complaints all relate to one or other of the two essential features of the method used by the Commission. The first concerns the margin squeeze calculation based on the charges and costs of a vertically integrated dominant undertaking, disregarding the particular situation of competitors on the market. The second concerns the taking into account of revenues from all access services, excluding revenues from other services which may be supplied via access to a fixed network.

185. Before considering those various complaints and arguments, it must be borne in mind that, although as a general rule the Community judicature undertakes a comprehensive review of the question whether the conditions for applying the competition provisions of the EC Treaty are met, its review of complex economic appraisals made by the Commission is necessarily limited to verifying whether the relevant rules on procedure and on the statement of reasons have been complied with, whether the facts have been accurately stated and whether there has been any manifest error of appraisal or misuse of powers (Case 42/84 Remia and Others v Commission [1985] ECR 2545, paragraph 34; Joined Cases 142/84 and 156/84 BAT and Reynolds v Commission [1987] ECR 4487, paragraph 62; and Case C194/99 P Thyssen Stahl v Commission [2003] ECR I10821, paragraph 78).

- The alleged unlawfulness of the method of calculating the margin squeeze on the basis of the charges and costs of a vertically integrated dominant undertaking, disregarding the particular situation of competitors on the market

186. It must be observed first of all that the Commission considered in the contested decision whether the pricing practices of the dominant undertaking could have the effect of removing from the market an economic operator that was just as efficient as the dominant undertaking. The Commission therefore relied exclusively on the applicant's charges and costs, instead of on the particular situation of the applicant's actual or potential competitors, in order to assess whether the applicant's pricing practices were abusive.

187. According to the Commission, there is an abusive margin squeeze if the difference between

the retail prices charged by a dominant undertaking and the wholesale prices it charges its competitors for comparable services is negative, or insufficient to cover the product-specific costs to the dominant operator of providing its own retail services on the downstream market' (recital 107 to the contested decision). In the present case, the margin squeeze is said to be abusive because the applicant itself would have been unable to offer its own retail services without incurring a loss if... it had had to pay the wholesale access price as an internal transfer price for its own retail operations' (recital 140 to the contested decision). In those circumstances, competitors [who] are just as efficient' as the applicant cannot offer retail access services at a competitive price unless they find additional efficiency gains' (recital 141 to the contested decision; see also recital 108 to the contested decision).

188. Next, it must be noted that, although the Community judicature has not yet explicitly ruled on the method to be applied in determining the existence of a margin squeeze, it nevertheless follows clearly from the case-law that the abusive nature of a dominant undertaking's pricing practices is determined in principle on the basis of its own situation, and therefore on the basis of its own charges and costs, rather than on the basis of the situation of actual or potential competitors.

189. Thus, in its judgment in Case C62/86 AKZO v Commission [1991] ECR I3359, paragraph 74, the Court of Justice took into consideration only the charges and costs of the dominant undertaking, AKZO, in order to assess whether AKZO's pricing practices were abusive. The approach suggested by Advocate General Lenz, according to which it was necessary to analyse the cost structure of all three oligopolists [namely AKZO and its two competitors], so that a reliable picture [could] be obtained of the price level that was in fact economically justified' (point 34 of his Opinion), was not therefore followed by the Court.

190. Similarly, the Court of First Instance held in Case T5/97 Industrie des poudres sphériques v Commission [2000] ECR II3755 that the fact that the applicant, which had complained of an alleged practice of margin squeezing, cannot, seemingly because of its higher processing costs, remain competitive in the sale of the derived product cannot justify characterising [the dominant undertaking's] pricing policy as abusive' (paragraph 179).

191. Finally, in its Decision 88/518/EEC of 18 July 1988 relating to a proceeding under Article [82 EC] (Case No IV/30.178 Napier Brown - British Sugar) (OJ 1988 L 284, p. 41; the Napier Brown/British Sugar decision'), the Commission also took the view that a margin squeeze should be calculated on the basis of the charges and costs of the vertically integrated dominant operator (recital 66). It finds in that decision that [t]he maintaining, by a dominant company, which is dominant in the markets for both a raw material and a corresponding derived product, of a margin between the price which it charges for a raw material to the companies which compete with the dominant company in the production of the derived product [on the one hand] and the price which it charges for the derived product [on the other], which is insufficient to reflect that dominant company's own costs of transformation (in this case the margin maintained by British Sugar between its industrial and retail sugar prices compared to its own repackaging costs) with the result that competition in the derived product is restricted, is an abuse of dominant position' (recital 66).

192. It must be added that any other approach could be contrary to the general principle of legal certainty. If the lawfulness of the pricing practices of a dominant undertaking depended on the particular situation of competing undertakings, particularly their cost structure - information which is generally not known to the dominant undertaking - the latter would not be in a position to assess the lawfulness of its own activities.

193. The Commission was therefore correct to analyse the abusive nature of the applicant's pricing practices solely on the basis of the applicant's particular situation and therefore on the basis of the applicant's charges and costs.

194. Since it is necessary to consider whether the applicant itself, or an undertaking just as efficient as the applicant, would have been in a position to offer retail services otherwise than at a loss if it had first been obliged to pay wholesale access charges as an internal transfer price, the applicant's argument that its competitors are not seeking to replicate its own customer pattern and can acquire additional revenue from innovative products which they alone supply on the market (as to which the applicant provides no details however) is ineffective. For the same reasons, the argument that competitors can exclude the possibility of (pre)selection cannot succeed.

- Complaint that the Commission took into account only revenues from all access services and excluded revenues from other services, particularly those from call services

195. First, it is necessary to consider whether, for the purposes of calculating the margin squeeze, the Commission was entitled to take into account only revenues from the applicant's access services, and to exclude revenues from other services, such as call services.

196. It must be borne in mind first of all that the Community legal framework in place since 1990 aims to create the conditions for effective competition in telecommunications markets. Thus, Commission Directive 96/19/EC of 13 March 1996 amending Directive 90/388/EEC with regard to the implementation of full competition in telecommunications markets (OJ 1996 L 74, p. 13), which, as regards the tariff structure of incumbent operators, makes a distinction between the initial connection, the monthly rental, local calls, regional calls and long-distance calls, aims to effect tariff rebalancing between those different elements on the basis of actual costs, in order to ensure full competition in telecommunications markets. Specifically, that operation had to take the form of a reduction in the charges for regional and international calls and an increase in connection charges, the monthly rental and local call rates (Opinion of Advocate General Léger in Case C500/01 Commission v Spain [2004] ECR I583, point 7). The Member States were bound to phase out the restrictions on tariff rebalancing as soon as possible after the entry into force of Directive 96/19 and at the latest by 1 January 1998 (Commission v Spain , paragraph 32).

197. As the Commission correctly observes in recital 120 to the contested decision, [s]eparate consideration of access charges and call charges is in fact [therefore] required by the Community-law principle of tariff rebalancing'.

198. Next, it must be noted that, by decision No 223a of the BMPT, the applicant was obliged to offer its competitors fully unbundled access to the local loop with effect from June 1997. However, a system of undistorted competition between the applicant and its competitors can be guaranteed only if equality of opportunity is secured as between the various economic operators (Case C462/99 Connect Austria [2003] ECR I5197, paragraph 83, and Joined Cases C327/03 and C328/03 ISIS Multimedia and Firma O2 [2005] ECR I8877, paragraph 39).

199. While it is true that, from the point of view of the end-user, access services and call services constitute a whole, the fact remains that, as far as the applicant's competitors are concerned, the provision of call services to end-users via the applicant's fixed network requires access to the local loop. Equality of opportunity as between the incumbent operator and owner of the fixed network, such as the applicant, on the one hand, and its competitors, on the other, therefore means that prices for access services must be set at a level which places competitors on an equal footing with the incumbent operator as regards the provision of call services. Equality of opportunity is secured only if the incumbent operator sets its retail prices at a level which enables competitors - presumed to be just as efficient as the incumbent operator - to reflect all the wholesale costs in their retail prices. However, if the incumbent operator does not adhere to that principle, new entrants can only offer access services to their end-users at a loss. They would then be obliged to offset losses incurred in relation to local network access by higher call charges, which would also distort competition in telecommunications markets.

200. Therefore it follows that, even if, as the applicant claims, it were true that access services and telephone calls constitute a cluster' as far as the end-user is concerned, the Commission was entitled to conclude in recital 119 to the contested decision that, in order to assess whether the applicant's pricing practices distort competition, it was necessary to consider the existence of a margin squeeze in relation to access services alone, and thus without including telephone call charges in its calculation.

201. Furthermore, the calculation offsetting access charges and call charges to which the applicant refers itself confirms that the applicant and its competitors are not on an equal footing as regards local network access, which is, however, a prerequisite for undistorted competition in the telephone calls market.

202. In any event, since the applicant significantly lowered its telephone call charges in the period covered by the contested decision (see paragraph 19 above), it is conceivable that competitors did not even have the economic opportunity to offset charges suggested by the a pplicant. In fact, the competitors, already at a competitive disadvantage by comparison with the applicant in relation to local network access, had to apply even lower call charges than the applicant in order to encourage potential customers to discontinue their subscription to the applicant and to subscribe to them instead.

203. It follows from the foregoing that, for the purposes of calculating the margin squeeze, the Commission was entitled to take account only of revenues from access services and to exclude revenues from other services, such as call services.

204. Second, as regards the applicant's argument that its competitors are interested only in higher-value markets, namely (in the present case) the broadband market in which there is no margin squeeze and therefore no need to take account of analogue access services for end-users, it must be borne in mind for the purposes of calculating the margin squeeze that, for the applicant's competitors, broadband access necessarily involves access to analogue or ISDN lines (see paragraph 148 above). Moreover, the first intervener, a competitor of the applicant, claims that its absence from the analogue access services market is the result of the abuse of the applicant's dominant position and not of its own free choice. In any event, as has been noted in paragraphs 186 to 193 above, the abusive nature of the applicant's pricing practices must be assessed on the basis of the applicant's particular situation and therefore on the basis of its charges and costs. The assessment of the abusive nature of the applicant's pricing practices cannot therefore be influenced by any preferences which the applicant's competitors may have for one or other market.

205. The Court notes that, at the retail level, the applicant offers analogue, ISDN and ADSL access services, all of which constitute a single service at wholesale level.

206. In those circumstances, the Commission was entitled to take the view in the contested decision (recital 111) that, in order to calculate the margin squeeze, the price of wholesale access had to be compared to the weighted average of retail prices for all access services, namely analogue narrowband access, digital narrowband access (ISDN) and broadband access in the form of ADSL services.

207. This complaint cannot therefore be upheld.

- Complaint that the discontinuance charge for wholesale access was included in the margin squeeze calculation

208. As the contested decision shows (recitals 18, 149 and 151), the charge for discontinuing a connection was taken into account by the Commission in its calculation of the total cost of the applicant's wholesale access. The Commission explains in the contested decision (recital 151) that

[t]he discontinuance charge is payable for re-connecting an unbundled line to [the applicant's] network and is imposed only on competitors at wholesale level', and that [t]he discontinuance charge and the charge for access provision are the only one-off wholesale charges which competitors must pay to [the applicant]'.

209. As regards the applicant's argument that the discontinuance charge cannot be regarded as part of the one-off charge for wholesale access, it must be pointed out that, until 10 February 1999, the applicant itself included the discontinuance charge in the cost of taking over a connection which it charged its competitors. It follows from recitals 18 and 22 and Table 9 of the contested decision - which have not been challenged by the applicant - that a separate discontinuance charge was imposed only from 10 February 1999, giving rise to a concomitant reduction in the takeover charge.

210. It must also be noted that there is no dispute about the fact that the average end-user keeps his telephone subscription for a period of [confidential] months (recital 148 to the contested decision). Since the discontinuance charge is payable to the applicant by the competing recipient of wholesale access, when one of that recipient's end-users discontinues his subscription for access services, the discontinuance charge forms part of the total cost of the wholesale service which must be reflected in the retail prices of the applicant's competitors.

211. Accordingly, the Commission was correct to include the discontinuance charge in the calculation of the total cost of wholesale access for the purpose of calculating the margin squeeze.

212. Therefore, this complaint too is unfounded.

213. It follows from all the foregoing that the second part of the first plea in law must be rejected.

3. Third part: alleged calculation error in the finding of a margin squeeze

(a) Arguments of the parties

214. The applicant submits that the Commission made a mistake in calculating the margin squeeze in Table 11 of the contested decision. The table, which relates to the applicant's product-specific costs in 2001, includes in respect of ISDN narrowband connections (TISDN) - with the exception of data relating to TISDN multi-device mode, standard and comfort - data from Table 3 of the contested decision relating to 2002. In addition, the data relating to TISDN multi-device mode, standard and comfort in Table 11 of the contested decision do not correspond to any of the data in Tables 3 to 7 of the contested decision. In order for it to be correct, the weighting of product-specific costs for 2001 should have been based solely on the numbers of connections referred to in Table 4 of the contested decision for 2001. On the basis of those data, the weighted product-specific costs amount to only EUR [confidential], or EUR [confidential] less than the figure calculated by the Commission. The margin squeeze found by the Commission should be reduced by the same amount.

215. The Commission acknowledges the calculation error identified by the applicant but contends that the error does not affect the lawfulness of the contested decision.

(b) Findings of the Court

216. The calculation error, which has been admitted by the Commission in its defence, concerns the calculation of the applicant's product-specific costs in 2001.

217. That error does not, however, affect the lawfulness of the contested decision.

218. As regards the period from 1998 to 2001, the Commission did not take the applicant's product-specific costs into account in classifying the applicant's pricing policy as abusive. In the contested decision (recital 153), the Commission concluded from the existence of a negative spread between the applicant's wholesale and retail prices that the applicant's pricing policy constituted an infringement. The

finding as to the applicant's infringement during that period is therefore not at all affected by the error in calculating the applicant's product-specific costs in 2001.

219. By contrast, from 2002 onwards, the Commission classified the applicant's pricing practices as an infringement because the applicant's product-specific costs associated with retail access services exceeded the positive spread between the applicant's wholesale and retail prices. In order to make that calculation, the Commission relied in the contested decision on the applicant's product-specific costs in 2001 (recitals 159 and 160).

220. Thus, the Commission reached the following conclusions concerning the margin squeeze calculation in Table 12 of the contested decision:

Table 12

(in euros)

>lt>12

221. It must be observed that, so far as this part of the plea is concerned, the applicant does not object to the reference to its product-specific costs in 2001 (recital 159 to the contested decision) for the purposes of calculating the margin squeeze from 1 January 2002. It merely claims that its product-specific costs for 2001 were calculated incorrectly.

222. If the Commission had not made the calculation error complained of, the product-specific costs for 2001 should, as the applicant points out, have been fixed at EUR [confidential] (see paragraph 214 above). However, even if those product-specific costs were taken into account without the calculation error, there would still be a margin squeeze throughout the period of the infringement covered by the contested decision.

223. Owing to the fact that the unfair - within the meaning of Article 82 EC - nature of the applicant's pricing practices is linked in the contested decision (recitals 163 and 201) to the very existence of the margin squeeze rather than to its precise spread, the Commission's calculation error does not affect the lawfulness of the contested decision.

224. It therefore follows that the third part of this plea is ineffective.

4. Fourth part: the margin squeeze identified had no effect on the market

(a) Arguments of the parties

225. First, the applicant submits that the finding of a margin squeeze resulting from the pricing practice of a dominant undertaking does not constitute an abuse per se. The Commission should therefore have considered the actual effects of the conduct in question but failed to do so in the contested decision. In view of the fact that RegTP sets wholesale charges on the basis of the applicant's costs, the evidence of actual restriction of competition should be substantiated.

226. The applicant notes the two aspects of the concept of abuse, namely that the activities complained of (i) are characterised by the recourse to methods different from those which condition normal competition in products or services on the basis of the transactions of commercial operators and (ii) actually hinder competition (Case 85/76 Hoffmann-La Roche v Commission [1979] ECR 461, paragraph 91). The Community judicature thus requires evidence that the conduct complained of constitutes a barrier to the entry of other competitors or helps to remove competitors already in the market. In support of its case, the applicant refers to the case-law of the Court of Justice (AKZO v Commission , cited in paragraph 189 above, paragraph 72; Case C333/94 P Tetra Pak v Commission [1996] ECR I5951, paragraph 41; and Joined Cases C395/96 P and C396/96 P Compagnie maritime belge transports and Others v Commission [2000] ECR I1365, paragraphs 111 and 119), and also to the Commission's practice in taking decisions (recital 66 to the Napier Brown/British Sugar

decision), and to that of RegTP and of the FCC. It is only in the exceptional case of a sale at a price below the average variable costs that the Community judicature has deemed a pricing practice to be intrinsically abusive.

227. In its reply, the applicant explains that the principles developed by the Court in relation to predatory pricing should be applied to a margin squeeze in a case where wholesale prices are fixed by a regulatory authority. The Commission should therefore produce evidence that the margin squeeze in question actually impairs competition. Since wholesale charges are fixed by RegTP on the basis of costs, that evidence is available only where - after excluding competitors from the market - the dominant undertaking would be in a position, by increasing its retail prices, to offset the losses incurred during that exclusionary stage as a result of its low-price policy. However, in the present case, any such attempt by the applicant would immediately entail its competitors' return to the market.

228. Second, the applicant denies that its charges were a barrier to entry to the market or that they excluded its competitors from the market.

229. There are genuine opportunities for the applicant's competitors to enter the market. The applicant notes in that regard that its competitors can cross-subsidise call charges and connection charges, or variable and fixed charges, in order to make up any deficit in relation to connections. The option of excluding (pre)selection for all connections, which is available to the applicant's competitors but not to the applicant itself (see paragraph 156 above), enables competitors to calculate their revenues from call charges much more accurately than the applicant is able to. The applicant's competitors thus have a turnover on call charges by connection that is significantly higher than that of the applicant, and moreover highly predictable. The replies of the applicant's competitors to the request for information of 19 January 2000 and RegTP's decision of 29 April 2003 confirm that those competitors can cross-subsidise connection and call charges. The applicant refers also to its observations of 29 July 2002 on the statement of objections and to the documents cited in those observations. Finally, according to research carried out by the applicant, all its competitors have been able to achieve positive margins on direct costs by cross-subsidising their fixed and variable charges for each type of connection and therefore also for analogue lines.

230. In addition, since the liberalisation of the German telecommunications market, a number of competitors have been able to gain significant market shares in urban areas. The applicant refers in that regard to KomTel, a company which, according to its own statements in a press release of 31 May 2002, achieved a 43% market share of connections in Flensburg. According to the applicant's calculations based on lines rented to its competitors, in other local areas served, the market shares of other suppliers are, for example, [confidential]. Thus, since 1998, the applicant has lost [confidential] end-users to its competitors. Once a competitor has entered a local market, it becomes economically viable for that competitor to create its own infrastructure. Entry to the market should naturally begin with lucrative customers, so that new groups of customers can be acquired with the profits thus made (letter of 15 October 2002 from Colt, one of the applicant's competitors, to the applicant). The same applies in respect of highly-urbanised areas being taken as a springboard for competition at a regional level. In any event, competition in Germany has developed more favourably than in the other Member States. Thus, in the Community as a whole, the applicant is responsible for more than 81% of rentals of unbundled local network access.

231. In its reply, the applicant states that Colt and Arcor are now active on the national market, and EWE TEL in large areas of northern Germany, as suppliers of telephone lines. The Commission failed to produce evidence of the causal link between the alleged margin squeeze and the allegedly sluggish development of competition. The applicant's market position in the broadband sector cannot be attributed to the margin squeeze, as there was no margin squeeze in that sector of the market.

232. The Commission and the first and second interveners contend that this part of the plea should be rejected.

(b) Findings of the Court

233. It must be borne in mind that an abuse' is an objective concept referring to the behaviour of an undertaking in a dominant position which is such as to influence the structure of a market where, as a result of the very presence of the undertaking in question, the degree of competition is already weakened and which, through recourse to methods different from those which condition normal competition in products or services on the basis of the transactions of commercial operators, has the effect of hindering the maintenance of the degree of competition still existing in the market or the growth of that competition (Hoffmann-La Roche v Commission , cited in paragraph 226 above, paragraph 91; AKZO v Commission , cited in paragraph 189 above, paragraph 69; order of the Court of 23 February 2006 in Case C171/05 P Piau v Commission , not published in the ECR, paragraph 37; Irish Sugar v Commission , cited in paragraph 122 above, paragraph 111).

234. According to the Commission, the applicant's pricing practices restricted competition in the market for retail access services. It reaches that conclusion in the contested decision (recitals 179 and 180) on the basis of the very existence of the margin squeeze. It maintains that it is not necessary to demonstrate an anti-competitive effect, although, in the alternative, it examines that effect in recitals 181 to 183 to the contested decision.

235. Given that, until the entry of a first competitor on the market for retail access services, in 1998, the applicant had a monopoly on that retail market, the anti-competitive effect which the Commission is required to demonstrate relates to the possible barriers which the applicant's pricing practices could have created for the growth of competition in that market.

236. In that respect it must be borne in mind that the applicant owns the fixed telephone network in Germany and, moreover, that it is not disputed that, as the Commission notes in recitals 83 to 91 to the contested decision, there was no other infrastructure in Germany at the time of the adoption of the decision that would have enabled competitors of the applicant to make a viable entry onto the market in retail access services.

237. Having regard to the fact that the applicant's wholesale services are thus indispensible to enabling a competitor to enter into competition with the applicant on the downstream market in retail access services, a margin squeeze between the applicant's wholesale and retail charges will in principle hinder the growth of competition in the downstream markets. If the applicant's retail prices are lower than its wholesale charges, or if the spread between the applicant's wholesale and retail charges is insufficient to enable an equally efficient operator to cover its product-specific costs of supplying retail access services, a potential competitor who is just as efficient as the applicant would not be able to enter the retail access services market without suffering losses.

238. Admittedly, as the applicant maintains, its competitors will normally resort to cross-subsidisation, in that they will offset the losses suffered on the retail access market with the profits made on other markets, such as the telephone calls markets. However, in view of the fact that, as the owner of the fixed network, the applicant does not need to rely on wholesale services in order to be able to offer retail access services and therefore, unlike its competitors, does not have to try to offset losses suffered on the retail access market on account of the pricing practices of a dominant undertaking, the margin squeeze identified in the contested decision distorts competition not only on the retail access market but also on the telephone calls market (see paragraphs 197 to 202 above).

239. Furthermore, the small market shares acquired by the applicant's competitors in the retail access market since the market was liberalised by the entry into force of the TKG on 1 August 1996 are evidence of the restrictions which the applicant's pricing practices have imposed on the

growth of competition in those markets. Thus, the applicant explained at the hearing that it did not dispute the findings in the contested decision (recital 181) that, at the time of the adoption of the contested decision, all of its competitors in Germany held market shares of only 4.4% in narrowband access and 10% in [broadband] access' and that, at the end of 2002 all 64 competitors together held only 2.35 million of the total of 53.72 million telephone channels in Germany'.

240. In addition, it is not disputed that, taking only analogue connections into consideration - which, at the time of adoption of the contested decision, accounted for 75% of all connections in Germany - the applicant's competitors' share fell from 21% in 1999 to 10% in 2002 (recital 182 to the contested decision).

241. The applicant nevertheless maintained that numerous competitors have been able to gain significant market shares in urban areas.

242. In that respect, it must be noted that the applicant does not challenge the definition of the market contained in the contested decision (recitals 92 to 95), according to which the relevant geographic market is the German market. The progress made by some of the applicant's competitors in certain urban areas does not therefore affect the finding that the applicant's competitors have, overall, acquired only small market shares in the relevant geographic market in retail access services.

243. Moreover, the fact that competition has developed less favourably in the other Member States does not show that the applicant's pricing practices had no anti-competitive effect in Germany, which is the relevant geographic market. The purportedly less favourable situation in the other Member States could be linked to the fact that the markets in the services concerned were liberalised later, after 1 June 1997, the date on which the applicant was obliged under the relevant German law to offer its competitors fully unbundled access to the local loop (see paragraph 198 above). It must be noted in that regard that Article 3 of Regulation (EC) No 2887/2000 of the European Parliament and of the Council of 18 December 2000 on unbundled access to the local loop (OJ 2000 L 336, p. 4) imposes such an obligation on incumbent operators only from 31 December 2000. The purportedly less favourable situation in the other Member States could also be linked to the existence of other infringements of Community competition law. In any event, even on the assumption that the Commission failed to fulfil certain of its obligations under Article 211 EC by failing to ensure that Community law on competition in the telecommunications sector is applied in other Member States, that fact cannot justify the applicant's infringement of Article 82 EC in this case in the same sector (van Landewyck and Others v Commission , cited in paragraph 86 above, paragraph 84; Case T148/89 Tréfilunion v Commission [1995] ECR II1063, paragraph 127; and Joined Cases T25/95, T26/95, T30/95 to T32/95, T34/95 to T39/95, T42/95 to T46/95, T48/95, T50/95 to T65/95, T68/95 to T71/95, T87/95, T88/95, T103/95 and T104/95 Cimenteries CBR and Others v Commission [2000] ECR II491, paragraph 2559).

244. Finally, as regards the argument put forward in the reply that two of the applicant's competitors are now' active on the national market, it must be borne in mind that, in the context of an action for annulment under Article 230 EC, the legality of a Community measure must be assessed on the basis of the elements of fact and of law existing at the time when the measure was adopted (Joined Cases 15/76 and 16/76 France v Commission [1979] ECR 321, paragraph 7, and Case T395/94 Atlantic Container Line and Others v Commission [2002] ECR II875, paragraph 252). In any event, the applicant, which fails to quantify the extent to which competitors are present on the national market, does not produce any evidence to rebut the findings in recitals 180 to 183 to the contested decision that its pricing practices actually restrict competition on the German retail access market.

245. It follows that the final part of the first plea in law must be rejected.

B - Second plea in law: the defective nature of the operative part of the contested decision

1. Arguments of the parties

246. The applicant notes first of all that Article 1 of the contested decision concludes that the applicant has infringed Article 82(a) EC by charging its competitors and end-users unfair monthly and one-off charges for access to the local network'. According to the operative part, the applicant's wholesale charges and retail prices are therefore unfair. However, the applicant's charges as such have not been described as unfair in the grounds of the contested decision. It is only the relationship between wholesale charges and retail prices that has been deemed to be abusive as a result of the alleged margin squeeze. The operative part of the contested decision is therefore not supported by the grounds of the decision.

247. Next, the applicant notes that Article 2 of the operative part of the contested decision orders it to bring to an end the infringement referred to in Article 1 and to refrain from repeating any act or conduct described in that article. However, besides the fact that the order in Article 2 is at odds with the grounds of the contested decision, it cannot be complied with because the applicant is not in a position to influence the price of wholesale access.

248. Finally, in its reply, the applicant further submits that Article 1 of the operative part is also defective because the Commission finds there that the applicant has infringed Article 82 EC by charging unfair charges. However, the applicant has no leeway in the charging of those charges (see paragraph 73 above).

249. The Commission contends that this plea should be rejected.

2. Findings of the Court

250. Article 1 of the contested decision finds that the applicant has infringed Article 82(a) [EC] by charging its competitors and end-users unfair monthly and one-off charges for access to the local network, thus significantly impeding competition on the market for access to the local network'.

251. Contrary to the applicant's claim, Article 1 of the contested decision does not state that both the applicant's charges for wholesale services and its retail prices must be regarded as being unfair.

252. The operative part of the contested decision must be read in the light of the grounds of that decision (Joined Cases T5/00 and T6/00 Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie v Commission [2003] ECR II5761, paragraph 374). Thus it is clear that [t]he abuse committed by [the applicant] consists in the imposition of unfair prices in the form of a margin squeeze to the detriment of its competitors' (recital 201 to the contested decision). The abuse committed takes the form of a margin squeeze generated by a disproportion between wholesale charges and retail charges for access to the local network' (recital 57 to the contested decision) and is described as the unfair pricing' abuse (recital 163 to the contested decision).

253. It follows from the foregoing that Article 1 of the contested decision, read in the light of the grounds of that decision, must be interpreted as meaning that where the Commission describes the charges for opening a new connection and the monthly charge for access to the local network as being unfair, it is referring to the relationship between the applicant's wholesale charges and retail charges. There is no contradiction therefore between the grounds and the operative part of the contested decision.

254. In view of the foregoing, the order in Article 2 of the contested decision is not vitiated by illegality either. Although the applicant could not influence the charges for wholesale services, it did in any event have scope to increase its retail prices for ADSL access services (see paragraphs 141 to 151 above).

255. Finally, the distinction between charging and fixing charges, which the applicant made for the first time in its reply, must be rejected as being inadmissible under Article 48(2) of the Rules of Procedure of the Court of First Instance.

256. It follows from all the foregoing that the second plea in law must be rejected.

C - Third plea in law: misuse of powers and infringement of the principles of proportionality, legal certainty and protection of legitimate expectations

1. Arguments of the parties

257. The applicant submits that, by encroaching on the powers of RegTP, the Commission misused its powers and infringed the principles of proportionality, legal certainty and protection of legitimate expectations.

258. It recalls that, under Community law, principal responsibility for telecommunications price-control is vested in the national authorities, such as RegTP. It refers in that regard to the recitals of Commission Directive 90/388/EEC of 28 June 1990 on competition in the markets for telecommunications services (OJ 1990 L 192, p. 10), Article 17 of Directive 98/10, Article 4(1) of Regulation No 2887/2000, Article 13(1) of Directive 2002/19/EC of the European Parliament and of the Council of 7 March 2002 on access to, and interconnection of, electronic communications networks and associated facilities (OJ 2002 L 108, p. 7), paragraphs 19 and 22 of the Commission's Notice of 22 August 1998 on the application of the competition rules to access agreements in the telecommunications sector, entitled Framework, relevant markets and principles', and page 61 et seq. of the Communication from the Commission entitled Unbundled access to the local loop: enabling the competitive provision of a full range of electronic communication services, including broadband multimedia and high-speed internet communication' (OJ 2000 C 272, p. 55). In that context, the national regulatory authorities are required to take account of Community law objectives, including that underlying Article 82 EC. According to the applicant, it follows that if the Commission considered RegTP's pricing decisions to have infringed Community law, it should have initiated proceedings against Germany for failure to fulfil obligations.

259. The applicant submits furthermore that, both in the regulation of the indices of retail price ceilings and in the setting of wholesale access charges, RegTP analysed whether there was a margin squeeze between wholesale and retail prices that would actually restrict competition, and concluded that there was no such margin squeeze. The applicant refers in that regard to the decisions of RegTP of 8 February 1999, 23 December 1999, 30 March 2001, 21 December 2001, 11 April 2002, and in particular to that of 29 April 2003. The decisions of RegTP gave rise to a legitimate expectation on the part of the applicant which deserves protection (Joined Cases 205/82 to 215/82 Deutsche Milchkontor and Others [1983] ECR 2633, paragraphs 30 and 31).

260. RegTP has opted in its pricing policy for a slight rebalancing of connection charges and call charges (decisions of RegTP of 21 December 2001 and of 11 April 2002). The applicant explains that, for socio-political reasons, the connection charges applied by Deutsche Bundespost were low - and thus advantageous for end-users - and resulting losses were offset through cross-subsidisation with revenues from call charges, which were set high. As a result, by decisions of 9 December 1997 and 23 December 1999 in price cap proceedings, the BMPT and then RegTP initially combined connection and call charges for businesses and for individuals in one basket. The price indices thus fixed were valid until the end of 2001. Subsequently, by its price cap decision of 21 December 2001, RegTP itself directly organised the progressive price restructuring envisaged. It separated the baskets for connections and calls and set price indices in respect of four separate baskets of services (see paragraph 20 above). However, it is apparent from that same decision of RegTP of 21 December 2001 that RegTP deliberately declined to introduce a rule in which connection charges are fixed

in isolation on the basis of costs.

261. Accordingly, the applicant submits that RegTP alone is responsible for the margin squeeze alleged by the Commission. The alleged margin squeeze is the direct consequence of regulatory decisions of RegTP and previously of the BMPT, and of the regulatory approach underpinning them. The Commission is wrong to find that the applicant has infringed Article 82 EC, because the applicant was simply complying with the binding decisions of RegTP, which gave rise to a legitimate expectation by the applicant. Through the medium of the contested decision, the Commission is subjecting the applicant's pricing practices to double regulation, thereby infringing the principle of proportionality and the legal certainty guaranteed by the division of powers under Community law in relation to charges in the telecommunications sector. Furthermore, by adopting the contested decision, the Commission is trying to correct the German authorities' exercise of their own regulatory powers, whereas it should to that end have initiated proceedings for failure to fulfil obligations. By proceeding in this way, the Commission has misused its powers.

262. The Commission and the first and second interveners contend that this plea should be rejected.

2. Findings of the Court

263. In the first place, as regards the applicant's complaint that the Commission has subjected the applicant's pricing practices to double regulation and thereby infringed the principles of proportionality and of legal certainty, it must be held that the legal framework to which the applicant refers in paragraph 258 above does not affect the powers which the Commission derives directly from Article 3(1) of Regulation No 17 and, since 1 May 2004, from Article 7(1) of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles [81 EC] and [82 EC] (OJ 2003 L 1, p. 1) to find infringements of Articles 81 EC and 82 EC.

264. It has already been held that, between 1 January 1998 and 31 December 2001, the applicant had sufficient scope to end the margin squeeze identified in the contested decision and, from 1 January 2002, sufficient scope to reduce that margin squeeze (see paragraphs 97 to 151 above). Its conduct therefore falls within the scope of Article 82 EC.

265. While it is not inconceivable that the German authorities also infringed Community law - particularly the provisions of Directive 90/388, as amended by Directive 96/19 - by opting for a gradual rebalancing of connection and call charges, such a failure to act, if it were to be established, would not remove the scope which the applicant had to reduce the margin squeeze.

266. The first complaint cannot therefore be upheld.

267. In the second place, as regards the complaint relating to the protection of legitimate expectations, it must be borne in mind that, in a number of decisions taken in the period covered by the contested decision, RegTP did in fact consider whether a margin squeeze resulted from the applicant's charges. However, in its decisions, after finding the negative spread between the applicant's wholesale and retail prices, RegTP took the view in each case that other operators should be able to offer their end-users competitive prices by resorting to cross-subsidisation of access services and call services (see paragraphs 115 to 119 above).

268. The fact remains that RegTP's decisions do not include any reference to Article 82 EC (see paragraph 114 above). In addition, RegTP's statement that [c]ompetitors are not so prejudiced with regard to their competitive opportunities in the local network by the slight difference between retail and wholesale prices as to make it economically impossible for them to enter the market successfully or even to remain in the market' (decision of RegTP of 29 April 2003) does not imply that the applicant's pricing practices do not distort competition within the meaning of Article 82 EC. On the contrary, it follows implicitly but necessarily from RegTP's decisions that the applicant's

pricing practices have an anti-competitive effect, since the applicant's competitors have to resort to cross-subsidisation in order to be able to remain competitive on the market in access services (see paragraphs 119 and 238 above).

269. In those circumstances, RegTP's decisions could not have created for the applicant a legitimate expectation that its pricing practices were compatible with Article 82 EC. It must be observed furthermore that, in its judgment of 10 February 2004 setting aside the judgment of the Oberlandesgericht Düsseldorf of 16 January 2002, the Bundesgerichtshof confirmed that the administrative examination procedure [undertaken by RegTP] does not preclude the possibility in practice of an undertaking submitting a charge by which it abuses its dominant position and obtains authorisation for it because the abuse is not revealed during the examination procedure'.

270. In the third place, as regards the applicant's complaint that the Commission misused its powers, it must be observed that a measure is only vitiated by misuse of powers if it is evident, on the basis of objective, relevant and consistent evidence, that it was taken with the exclusive or main purpose of achieving an end other than that stated (see Joined Cases C186/02 P and C188/02 P Ramondín and Others v Commission [2004] ECR I10653, paragraph 44, and the case-law cited).

271. In the contested decision, the Commission refers only to the applicant's pricing practices and not to the decisions of the German authorities. Even if RegTP had infringed a Community rule and even if the Commission could have initiated proceedings against the Federal Republic of Germany for failure to fulfil obligations, such possibilities cannot affect the lawfulness of the contested decision. In that decision, the Commission merely found that the applicant had committed an infringement of Article 82 EC, a provision which concerns only economic operators, not the Member States. The Commission did not therefore misuse its powers by making that finding on the basis of Article 82 EC.

272. The final plea in law therefore cannot be upheld either.

II - The alternative form of order sought, seeking a reduction of the fine imposed

273. The applicant puts forward six pleas in law in support of the alternative form of order sought. The first relates to an infringement of the rights of defence and the second to an infringement of Article 253 EC. The third plea in law is based on the applicant's lack of negligence and intentional fault and the fourth on the insufficiency of the account taken of charges legislation in calculating the level of the fine. The fifth plea in law concerns the calculation of the duration of the infringement, and the sixth, the failure to take account of attenuating circumstances.

A - First plea in law: infringement of the rights of defence

1. Arguments of the parties

274. The applicant submits that the Commission infringed Article 19(1) of Regulation No 17 in relation to the rights of defence by failing in its statement of objections of 2 May 2002 and in its supplementary letter of 21 February 2003 to carry out a factual or legal analysis as to whether the alleged infringement had been committed intentionally or negligently' (Joined Cases 100/80 to 103/80 Musique diffusion française and Others v Commission [1983] ECR 1825, paragraph 21; order in Case C137/95 P SPO and Others v Commission [1996] ECR I1611, paragraph 53; Case T9/99 HFB and Others v Commission [2002] ECR II1487, paragraph 311). In order to be reasonably able to defend itself, the applicant should have been informed during the administrative procedure of the facts on the basis of which the Commission was accusing it of such fault or negligence.

275. The Commission contends that this plea should be rejected.

2. Findings of the Court

276. It must be observed at the outset that the conditions which must be fulfilled to enable the Commission to impose fines (initial conditions) are set out in the first subparagraph of Article 15(2) of Regulation No 17. These include the condition that the infringement was committed intentionally or negligently (order in SPO and Others v Commission , cited in paragraph 274 above, paragraph 53).

277. Next, it must be observed that the Commission is required to give a brief provisional assessment in the statement of objections as to the duration of the alleged infringement, its gravity and the question whether, in the circumstances of the case, the infringement was committed intentionally or negligently. However, the adequacy of that provisional assessment, the purpose of which is to give the addressees of the statement of objections an opportunity to defend themselves, must be evaluated in relation not only to the wording of the measure in question but also to its context and the entirety of the legal rules governing the matter concerned (Case T48/00 Corus UK v Commission [2004] ECR II2325, paragraph 146).

278. It must be held that the Commission informed the applicant in the statement of objections (paragraphs 95 to 140) that it considered the applicant's pricing practices, and in particular the margin squeeze resulting from the negative or insufficient spread between its wholesale and retail prices, to be in breach of Article 82 EC. Furthermore, in the statement of objections (paragraphs 141 to 152), the Commission examined the applicant's scope to set its charges and thus addressed the issue of the applicant's culpability with regard to the activities criticised.

279. In those circumstances, it must be concluded that the information supplied in the statement of objections concerning the initial conditions laid down by the first subparagraph of Article 15(2) of Regulation No 17 was sufficiently precise. Moreover, since infringements committed negligently are not, in competition terms, less serious than those committed intentionally (order in SPO and Others v Commission , cited in paragraph 274 above, paragraph 55), the applicant did not need to receive more detailed information about its culpability in order to be reasonably able to exercise its rights of defence.

280. In any event, it must be held that the applicant did in fact exercise its rights of defence on that point since it denied its culpability in its reply to the statement of objections, referring to the national regulation of its charges.

281. The first plea in law must therefore be rejected.

B - Second plea in law: infringement of Article 253 EC

1. Arguments of the parties

282. The applicant observes that the contested decision must set out the grounds on which the Commission considers that the conditions for the imposition of a fine are satisfied (Remia and Others v Commission , cited in paragraph 185 above, paragraph 26; Case T44/90 La Cinq v Commission [1992] ECR II1, paragraph 43; and Case T7/92 Asia Motor France and Others v Commission [1993] ECR II669, paragraph 30). The contested decision, which does not contain any grounds relating to the applicant's negligence or to its intention to commit the infringement, infringes Article 253 EC; the fine should therefore be annulled.

283. The Commission contends that this plea should be rejected.

2. Findings of the Court

284. It must be noted as a preliminary point that the obligation to state reasons laid down under Article 253 EC is an essential procedural requirement, unlike the question whether the reasons given are correct, which goes to the substantive legality of the contested measure. From that point of view, the statement of reasons required by Article 253 EC must be appropriate to the act at

issue and must disclose in a clear and unequivocal fashion the reasoning followed by the institution which adopted that measure in such a way as to enable the persons concerned to ascertain the reasons for it and to enable the competent court to exercise its power of review (C17/99 France v Commission [2001] ECR I2481, paragraph 35).

285. It is not necessary for the reasoning to go into all the relevant facts and points of law, since the question whether the statement of reasons meets the requirements of Article 253 EC must be assessed with regard not only to its wording but also to its context and to all the legal rules governing the matter in question (France v Commission , cited in paragraph 284 above, paragraph 36, and Case C113/00 Spain v Commission [2002] ECR I7601, paragraph 48).

286. First, it must be held that the contested decision (second citation) contains a reference to Article 15(2) of Regulation No 17. The first subparagraph of Article 15(2) lays down the conditions which must be fulfilled to enable the Commission to impose fines (initial conditions). These include the condition that the infringement was committed intentionally or negligently (order in SPO and Others v Commission , cited in paragraph 274 above, paragraph 53).

287. Second, the Commission sets out in detail in recitals 102 to 162 and 176 to 183 to the contested decision the grounds on which it considers the applicant's pricing practices to be abuses within the meaning of Article 82 EC and, in recitals 163 to 175, the grounds on which the applicant must be deemed responsible for the infringement found, in spite of the fact that the German authorities have to approve the applicant's charges.

288. In those circumstances, it must be concluded that the contested decision contains sufficient reasoning regarding the application to the present case of the initial conditions laid down under the first subparagraph of Article 15(2) of Regulation No 17.

289. This plea must therefore also be rejected.

C - Third plea in law: the applicant's lack of negligence or intentional fault

1. Arguments of the parties

290. The applicant maintains that it is guilty of neither negligence nor intentional fault.

291. First of all, it observes that its wholesale and retail charges were all authorised by decisions of the BMPT, then of RegTP. The applicant could thus legitimately assume that those charges were lawful. It submits that RegTP is a neutral and independent State body. It was for RegTP, rather than the applicant, to ascertain whether the wholesale and retail prices were compatible with Article 82 EC. In addition, in its judgment of 16 January 2002, the Oberlandesgericht Düsseldorf held that responsibility for the charges set by RegTP could not be attributed to the applicant.

292. Second, the applicant was informed by agents of the Commission in a meeting on 17 April 2000 that the proceeding relating to the applicant would not be pursued because the Commission had initiated proceedings against the Federal Republic of Germany for failure to fulfil obligations. It further submits that the Commission did not carry out any measures of inquiry between January 2000 and June 2001 - a period of approximately one and a half years. The applicant was entitled to infer from the Commission's conduct that the Commission did not have sufficient grounds to accuse the applicant of an abuse of dominant position, at least in respect of the period between January 2000 and June 2001. In its reply, the applicant further submits that it inferred from the initiation of the proceedings for failure to fulfil obligations, the suspension of the abuse proceeding and the explanations given by the Commission at the meeting on 17 April 2000, that the Commission had abandoned the objection relating to the infringement of Article 82 EC.

293. Third, the applicant observes that, in the absence of Community case-law and of previous Commission practice in taking decisions on margin squeezes in the telecommunications sector, it never doubted

that RegTP's assessment was correct. Furthermore, as a result of the administrative practice of RegTP, which has considered the margin squeeze issue on many occasions, the applicant could assume that the Commission would ultimately reach the same conclusion as RegTP.

294. The Commission and the second intervener contend that this plea should be rejected.

2. Findings of the Court

295. On the question as to whether the infringements were committed intentionally or negligently and are therefore liable to be punished by a fine in accordance with the first subparagraph of Article 15(2) of Regulation No 17, it has been held that that condition is satisfied where the undertaking concerned cannot be unaware of the anti-competitive nature of its conduct, whether or not it was aware that it was infringing the competition rules of the Treaty (Case T65/89 BPB Industries and British Gypsum v Commission [1993] ECR II389, paragraph 165, and Case T83/91 Tetra Pak v Commission [1994] ECR II755, paragraph 238).

296. In the present case, the applicant could not be unaware that, notwithstanding the authorisation decisions of RegTP, it had genuine scope to fix its retail prices and, consequently, to reduce the margin squeeze by increasing those prices. In addition, the applicant could not be unaware that that margin squeeze entailed serious restrictions on competition, particularly in view of its monopoly on the wholesale market and its virtual monopoly on the market in retail access services (recitals 97 to 100 to the contested decision).

297. It follows that the initial conditions enabling the Commission to impose fines are fulfilled (order in SPO and Others v Commission , cited in paragraph 274 above, paragraph 53).

298. Furthermore, it must be held that the initiation of a pre-litigation procedure against the Federal Republic of Germany does not affect the initial conditions in the first subparagraph of Article 15(2) of Regulation No 17. The applicant could not be unaware that it had genuine scope to increase its retail prices and that its pricing practices were hindering the growth of competition in the market in local network access services, a market in which the degree of competition was already weakened as a result, in particular, of its presence (see, to that effect, Hoffmann-La Roche v Commission , cited in paragraph 226 above, paragraph 91).

299. Finally, the argument relating to RegTP's examination of the margin squeeze must be rejected for the reasons set out in paragraphs 267 to 269 above.

300. The third plea must therefore also be rejected.

D - Fourth and sixth pleas: insufficient account taken of charges legislation in calculating the level of the fine, and insufficient account taken of attenuating circumstances

1. Arguments of the parties

301. The applicant submits that the Commission was wrong to characterise the alleged infringement as serious. The applicant's contribution to the infringement was slight because the charges at issue were set by RegTP. The infringement could therefore at best be described as minor, in accordance with the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty (OJ 1998 C 9, p. 3; the Guidelines'). The applicant maintains that, by decision of 19 December 2002, RegTP had even rejected an application by the applicant for an increase in its retail charges beyond the ceiling prescribed, even though, in support of the application, the applicant had referred to the procedure initiated by the Commission as justification for exceeding that ceiling.

302. The 10% reduction in the basic amount of the fine to take account of the regulation of charges by RegTP is therefore insufficient. A reasonable doubt' as to whether the applicant's conduct

does indeed constitute an infringement' within the meaning of the Guidelines can be justified on the basis of RegTP's decisions. The applicant refers moreover to Commission Decision 2001/892/EC of 25 July 2001 relating to a proceeding under Article 82 of the EC Treaty (COMP/C-1/36.915 - Deutsche Post AG - Interception of cross-border mail) (OJ 2001 L 331, p. 40; the Deutsche Post decision'), in which the Commission imposed only a symbolic fine, owing to the fact that the company in question had behaved in a manner which was in accordance with the case-law of the German courts, and no Community case-law existed concerning cross-border letter mail services.

303. The Commission should also have taken other attenuating circumstances into account when setting the fine, namely the lack of any serious restriction on competition and the fact that the applicant's low retail prices fulfil a social function.

304. In its reply, the applicant draws attention to the judgment of the Oberlandesgericht Düsseldorf of 16 January 2002. It observes that that court held that the levy of charges set by RegTP cannot constitute an abuse of the applicant's dominant position and that the mere lodging of a tariff application by the applicant is not sufficient to make the applicant responsible for an infringement of competition law. According to the Oberlandesgericht Düsseldorf, the applicant was under no obligation under competition law to make other applications. At most, a symbolic fine could have been imposed on the applicant, in view of the fact not only that the charges are partially in accordance with the case-law of the German courts (recital 193 to the Deutsche Post decision), but also that they have been mandatorily fixed by RegTP.

305. The Commission and the second intervener contend that this plea should be rejected.

2. Findings of the Court

306. In recitals 206 and 207 to the contested decision, the Commission characterised the infringement as serious, not as very serious, in respect of the period from 1 January 1998 to 31 December 2001 on the grounds, first, that the weighted method applied to determine the margin squeeze was new and had not previously been the subject of a formal decision and, second, that the applicant had steadily reduced the margin squeeze since 1999 at least.

307. As regards the period from 1 January 2002 to May 2003, the Commission held that there was a minor infringement (recital 207 to the contested decision), because [the applicant's] only legal means of reducing the margin squeeze [was] limited to increases in the TDSL charges' (recital 206 to the contested decision). Furthermore, in respect of the same period, the Commission made no increase in the fine to reflect the duration of the infringement in view of the regulatory restrictions on [the applicant's] scope for adjusting tariffs' (recital 211 to the contested decision).

308. In recital 212 to the contested decision, the Commission treated the fact that the [applicant's] retail and wholesale charges in question in the current proceeding were subject to sector specific regulation since [1998] on national level until today' as an attenuating circumstance.

309. On the basis of the foregoing considerations, the Commission imposed a fine of EUR 12.6 million on the applicant in Article 3 of the contested decision. It determined the amount of the fine using the method which it had laid down in the Guidelines. Thus, in accordance with the second paragraph of Section 1A of the Guidelines, the amount of the fine to take account of the gravity of the infringement was set at EUR 10 million (recital 207 to the contested decision). Applying the first paragraph of Section 1B of the Guidelines, that amount was increased by 40% to take account of the duration of the infringement for the period from 1 January 1998 to 31 December 2001, which results in a basic amount of EUR 14 million (recital 211 to the contested decision). That figure was then reduced by 10% to take account of attenuating circumstances in accordance with Section 3 of the Guidelines.

310. It must be held that, contrary to the applicant's claim, the Commission was entitled to characterise the infringement as serious for the period from 1 January 1998 to 31 December 2001 (recital 207 to the contested decision). The pricing practices complained of strengthen the barriers to entry to the recently liberalised markets and thus jeopardise the proper functioning of the common market. In that regard, it must be borne in mind that the Guidelines (second paragraph of Section 1A) describe the exclusionary behaviour of dominant firms as serious infringements, or even very serious infringements if committed by undertakings holding a virtual monopoly.

311. As regards the intervention of RegTP in setting the applicant's tariffs, it must be borne in mind that, when the level of the penalty is set, the conduct of the undertakings concerned may be assessed in the light of the national legal framework, which is a mitigating factor (see, to that effect, Suiker Unie and Others v Commission , cited in paragraph 89 above, paragraph 620, and CIF , cited in paragraph 86 above, paragraph 57).

312. At the hearing, the Commission explained that the 10% reduction of the fine to take account of the fact that the [applicant's] retail and wholesale charges... were subject to sector specific regulation since [1998] on national level' (recital 212 to the contested decision) relates to RegTP's intervention in setting the applicant's prices and to the fact that that national authority has, on several occasions during the period covered by the contested decision, considered the question of the existence of a margin squeeze resulting from the applicant's tariff practices.

313. Having regard to the Commission's discretion when determining the amount of a fine (Case T150/89 Martinelli v Commission [1995] ECR II1165, paragraph 59, and Joined Cases T109/02, T118/02, T122/02, T125/02, T126/02, T128/02, T129/02, T132/02 and T136/02 Bolloré and Others v Commission [2007] ECR II0000, paragraph 580), it must be held that the Commission duly took into account the matters referred to in the preceding paragraph when reducing the basic amount of the fine by 10%.

314. As regards the alleged social function fulfilled by the applicant, it must be observed that, according to Article 86(2) EC, undertakings entrusted with the operation of services of general economic interest are subject to the rules of the EC Treaty, in particular to the rules on competition, in so far as the application of such rules does not obstruct the performance, in law or in fact, of the particular tasks assigned to them. Even on the assumption that the applicant has been entrusted with a task of operating services of general economic interest within the meaning of that provision, the applicant fails to show why the pricing practices which have been criticised in the contested decision are necessary to the performance of that task. That argument cannot therefore be upheld.

315. The applicant refers again to the Deutsche Post decision and takes the view that the Commission should have imposed a symbolic fine on the applicant, as it did on the dominant undertaking in that decision.

316. In that regard, it must be observed first of all that, according to settled case-law, the fact that the Commission in the past imposed fines of a certain level for particular types of infringement does not mean that it is estopped from raising that level within the limits set by Regulation No 17, if that is necessary to ensure the implementation of Community competition policy. The proper application of the Community competition rules requires that the Commission be able at any time to adjust the level of fines to the needs of that policy (see Bolloré and Others v Commission , cited in paragraph 313 above, paragraph 376, and the case-law cited).

317. Next, it must be held that the applicant's situation is fundamentally different from that of the undertaking referred to in the Deutsche Post decision.

318. It follows from recitals 192 and 193 to the Deutsche Post decision, which concerned abuse in relation to the processing of cross-border letter mail, that the Commission deemed it appropriate

to impose only a symbolic fine on the undertaking referred to in that decision on three grounds: (1) the undertaking concerned had behaved in accordance with the case-law of German courts; (2) there was no Community case-law relating specifically to the cross-border letter mail services concerned; and (3) the undertaking concerned had undertaken to introduce a procedure for the processing of incoming cross-border letter mailings which would avoid practical difficulties and facilitate the detection of future interference with free competition, should it occur.

319. In the present case, first, it must be noted that the only judgment of the German courts to which the applicant refers is the judgment of the Oberlandesgericht Düsseldorf, which was delivered on 16 January 2002, thus in the period during which the infringement was characterised in the contested decision as minor (recital 207). In any event, that judgment was set aside by the judgment of the Bundesgerichtshof of 10 February 2004. Second, it follows from the contested decision (recitals 106 and 206) that the Commission applied the same principles as those underlying the 1988 Napier Brown/British Sugar decision. In its Notice of 22 August 1998 on the application of the competition rules to access agreements in the telecommunications sector - framework, relevant markets and principles (paragraphs 117 to 119), the Commission had already announced that it proposed to apply the principles of the Napier Brown/British Sugar decision in the telecommunications sector. The only new element of the contested decision is the weighted approach which had to be used [because of] the fact that in Germany, a single wholesale tariff for local loop unbundling has been fixed, while the tariffs for the corresponding retail services differentiate between analogue, ISDN and ADSL lines' (recital 206 to the contested decision). However, the Commission took account of the novelty of that approach in characterising the infringement as serious', instead of as very serious', for the period from 1 January 1998 to 31 December 2001 (recital 206 to the contested decision). Finally, third, the applicant in the present case has not given any undertaking to avoid any other future infringement.

320. The three criteria laid down by the Deutsche Post decision have not been fulfilled in this case; therefore, the argument based on the approach adopted in that decision cannot be upheld.

321. It follows from all the foregoing that this plea must be rejected.

E - Fifth plea: incorrect assessment of the duration of the infringement

1. Arguments of the parties

322. The applicant notes that the Commission increased the amount of the fine on account of the purported gravity of the infringement during the period from 1998 to 2001. However, the Commission itself acknowledges in the contested decision (recital 208) that the applicant was aware of the abuse in its charge structure only from 1999.

323. The applicant claims that it was informed by agents of the Commission at the meeting on 17 April 2000 that the Commission would bring proceedings against the Federal Republic of Germany for failure to fulfil obligations. As a result of that information and the length of the administrative procedure, the Commission itself reinforced the applicant's belief that its charges did not contravene Article 82 EC, and thus helped to extend the duration of the infringement. The whole of that duration should not therefore be taken into account for the purposes of fixing the amount of the fine (Joined Cases 6/73 and 7/73 Istituto chemioterapico italiano and Commercial Solvents v Commission [1974] ECR 223, paragraph 51).

324. The Commission contends that this plea should be rejected.

2. Findings of the Court

325. In so far as the applicant calls into question in the context of the present plea the calculation of the duration of the infringement, it must be noted that, in the form of order sought in the alternative, the applicant seeks not only a reduction in the fine but also the partial annulment of Article

1 of the contested decision (Case T38/02 Groupe Danone v Commission [2005] ECR II4407, paragraphs 210 to 214).

326. As regards the assessment as to whether the plea in law is well founded, it must be borne in mind that the Commission refers in the contested decision to the complaints lodged by competitors of the applicant in 1999. According to the Commission, the applicant has therefore been aware since that time of the accusation of possible abuse in the charge structure for access to the local network' (recital 208 to the contested decision).

327. The fact that the applicant knew only from 1999 that it was being accused of abuse of its dominant position is irrelevant to the fact that its conduct constituted an infringement from 1 January 1998. An abuse' within the meaning of Article 82 EC is an objective concept (Hoffmann-La Roche v Commission , cited in paragraph 226 above, paragraph 91; AKZO v Commission , cited in paragraph 189 above, paragraph 69; order in Piau v Commission , cited in paragraph 233 above, paragraph 37; Irish Sugar v Commission , cited in paragraph 122 above, paragraph 111). The dominant undertaking's own knowledge of the abusive nature of its conduct is not, therefore, a prerequisite for the application of Article 82 EC.

328. The first argument must therefore be rejected.

329. The applicant's argument that the fine would have been lower if the decision had been adopted earlier cannot be upheld either, for it is purely hypothetical. Moreover, it must be pointed out that it is apparent from the contested decision (recital 211) that the Commission did not make any increase in the fine in respect of the period from 1 January 2002 to May 2003.

330. The second argument cannot therefore be accepted and the final plea in law must consequently be rejected in its entirety. Accordingly, the action must be dismissed.

Costs

331. Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the applicant has been unsuccessful, it must be ordered to bear its own costs and to pay those of the Commission, in accordance with the form of order sought by the Commission.

332. In accordance with the third subparagraph of Article 87(4) of the Rules of Procedure, the interveners are to bear their own costs.

Case T-271/03

Deutsche Telekom AG

v

Commission of the European Communities

(Confidentiality – Challenge by the interveners)

Summary of the Order

1. *Procedure – Intervention – Communication of pleadings to interveners – Derogation*

(Rules of Procedure of the Court of First Instance, Art. 116(2))

2. *Procedure – Intervention – Communication of pleadings to interveners – Derogation*

3. *Procedure – Intervention – Communication of pleadings to interveners – Derogation*

1. Article 116(2) of the Rules of Procedure of the Court of First Instance provides that 'the intervener shall receive a copy of every document served on the parties', but that '[t]he President may, however, on application by one of the parties, omit secret or confidential documents'.

For the purpose of determining the conditions under which confidential treatment may be given to certain documents in the file, it is necessary to balance, in respect of each document or part of a document on the Court's file for which confidential treatment is claimed, the applicant's legitimate concern to prevent substantial damage to its business interests and the interveners' equally legitimate concern to have the necessary information for the purpose of being fully in a position to assert their rights and to state their case before the Community judicature.

When the applicant has set out, in respect of each item covered by the request for confidential treatment, the reasons why it considers that disclosure thereof would substantially damage its business interests, the interveners' challenge to the request for confidentiality must, so that the President can evaluate the balance of interests, relate to precise items of the procedural documents which have been obscured and indicate the reasons why confidentiality with regard to those items should be refused.

(see paras 9-12)

2. A request by one of the parties to withdraw from the file documents or parts of documents in respect of which the President is likely to reject the request for confidential treatment cannot be accepted, since it seeks to circumvent the President's decision on the request for confidential treatment.

(see para. 13)

3. Confidential treatment of information relating to facts dating from more than five years ago can only, exceptionally, be granted if it is shown that, notwithstanding their historical nature, they still constitute essential elements of the commercial position of the undertaking concerned.

(see para. 45)

ORDER OF THE PRESIDENT OF THE FIFTH CHAMBER OF THE COURT OF FIRST INSTANCE

15 June 2006 (*)

(Confidentiality – Challenge by the interveners)

In Case T–271/03,

Deutsche Telekom AG, established in Bonn (Germany), represented by K. Quack, U. Quack and S. Ohlhoff, lawyers,

interveners,

APPLICATION for annulment of Commission Decision 2003/707/EC of 21 May 2003 relating to a proceeding under Article 82 EC (Case COMP/C–1/37.451, 37.578, 37.579 – Deutsche Telekom AG) (OJ 2003 L 263, p. 9),

THE PRESIDENT OF THE FIFTH CHAMBEROF THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES

makes the following

Order

Procedure

1 By application lodged at the Registry of the Court of First Instance on 30 July 2003, Deutsche Telekom AG ('the applicant') brought an application for annulment of Commission Decision 2003/707/EC of 21 May 2003 relating to a proceeding under Article 82 EC (Case COMP/C-1/37.451, 37.578, 37.579 – Deutsche Telekom AG) (OJ 2003 L 263, p. 9, 'the contested decision').

2 By documents lodged at the Registry of the Court on 12 December 2003, Arcor AG & Co. KG ('the first intervener'), and CityKom Münster GmbH Telekommunikationsservice, EWE TEL GmbH, HanseNet Telekommunikation GmbH, ISIS Multimedia Net GmbH & Co. KG, NetCologne Gesellschaft für Telekommunikation mbH, TeleBel Gesellschaft für Telekommunikation Bergisches Land mbH, Versatel Nord-Deutschland GmbH, previously KomTel Gesellschaft für Kommunikations- und Informationsdienste mbH, Versatel Süd-Deutschland GmbH, previously tesion Telekommunikation GmbH, Versatel West-Deutschland GmbH & Co. KG, previously Versatel Deutschland GmbH & Co. KG (jointly referred to as 'the second intervener'), applied for leave to intervene in this action in support of the form of order sought by the Commission.

3 By letter of 30 January 2004, the applicant sent the Court of First Instance a request for confidential treatment of certain passages of the application, the defence, the reply and certain annexes relating thereto.

4 By letter of 22 March 2004, the applicant sent the Court a request for confidential treatment of a passage from the rejoinder.

5 By order of the President of the First Chamber of the Court of First Instance of 6 May 2004, the companies mentioned in paragraph 2 above were granted leave to intervene in support of the form of order sought by the Commission. The decision on the validity of the request for confidential treatment was reserved.

6 Non-confidential versions of procedural documents, prepared by the applicant, were sent to the first and second interveners.

7 By letters of 24 June 2004, the first and second interveners disputed the request for confidentiality made by the applicant.

8 By letter of 20 December 2004, the applicant lodged observations on the objections of the first and second interveners. In the same letter, the applicant also requested that it be given the opportunity – in the event of its request for confidential treatment being completely or partially rejected – to withdraw from the Court's file the documents or parts of documents affected by the refusal of confidential treatment.

The request for confidential treatment

1. Preliminary observations

9 The request for confidential treatment was made on the basis of Article 116(2) of the Rules of Procedure of the Court of First Instance, which provides that 'the intervener shall receive a copy of every document served on the parties', but that '[t]he President may, however, on application by one of the parties, omit secret or confidential documents'.

10 According to case-law, for the purpose of determining the conditions under which confidential treatment may be given to certain documents in the file, it is necessary to balance, in respect of each document or part of a document on the Court's file for which confidential treatment is claimed, the applicant's legitimate concern to prevent substantial damage to its business interests and the interveners' equally legitimate concern to have the necessary information for the purpose of being fully in a position to assert their rights and to state their case before the Community Court (orders of the Court of First Instance in Case T-30/89 *Hilti* v *Commission* [1990] ECR II–163, paragraph 11, and of the President of the First Chamber of the Court of First Instance in Case T–168/01 *Glaxo Wellcome* v *Commission* [2003], not published in the ECR, paragraph 35).

11 It must therefore be stated that sufficient grounds for the request for confidential treatment were given by the applicant in a document lodged at the Registry of the Court on 30 January 2004 and that those grounds were further supplemented by a document lodged on 20 December 2004. It stated, in respect of each item covered by the request for confidential treatment, the reasons for which it considers that the disclosure thereof would substantially damage its business interests.

12 Under those circumstances, so that the President can make the evaluation referred to in paragraph 10, the challenging of the request for confidentiality by the interveners must relate to precise items of the procedural documents which have been obscured and indicate the reasons for which confidentiality with regard to those items should be refused.

13 Finally, the applicant's request concerning the withdrawal of documents or of parts of documents in respect of which the President rejects the request for confidential treatment (see paragraph 8 above) cannot be accepted since, as presented, it seeks to circumvent the President's decision on the request for confidential treatment.

2. The items covered by the request for confidential treatment which were not disputed, expressly and precisely, by the interveners

14 The interveners have not disputed, expressly and precisely as referred to in paragraph 12 above, various items of the procedural documents in respect of which the applicant had requested confidential treatment. In accordance with the case-law referred to in paragraph 10 above, as regards those items, the President is unable to balance the applicant's legitimate concern to prevent substantial damage to its business interests and the interveners' equally legitimate concern to have the necessary information for the purpose of being fully able to assert their rights and to state their case before the Community Court.

15 Under those conditions, the applicant's request for confidential treatment must be upheld in so far as it concerns items which have not been disputed, expressly and precisely, by the interveners. Those items are:

– the contested decision (Annex A.1 to the application): the items obscured in recitals 99, 151, 152, 154, 160 to 162, 167 and 172;

– the statement of objections of 2 May 2002 (Annex A.2 to the application): the items obscured in paragraphs 26 to 28, 39, 45, 92, 124 to 126, 128, 131, 133, 137 to 140 and 143 to 147;

– the applicant's observations of 29 July 2002 on the statement of objections (Annex A.3 to the application): the items obscured on pages 4, 11 to 13, 37, 41, 65 to 67, 75, 76, 78 to 80, 88 to 91, 93, 94, 98, 100 to 106, 108, 109 and 122;

– the applicant's observations of 25 October 2002 on the complainants' responses (Annex A.4 to the application): the items obscured on pages 14 and 31;

– the supplementary statement of objections of 21 February 2003 (Annex A.5 to the application): the items obscured in paragraphs 1, 3, 4, 5 and 8 to 10;

– the applicant's observations of 14 March 2003 on the supplementary statement of objections (Annex A.6 to the application): the items obscured on pages 5, 7, 20 and 21;

– the decision of the Regulierungsbehörde für Telekommunikation und Post (German regulatory authority for telecommunications and post, 'RegTP') of 11 April 2002 (Annex A.8 to the application): the items obscured on pages 22 to 35 and 37;

– the decision of RegTP of 29 April 2003 (Annex A.9 to the application): the items obscured on pages 14, 15, 21, 22, 24, 25, 27, 30, 31 to 33 and 35;

– the decision of RegTP of 21 December 2003 (Annex A.10 to the application): the item obscured on page 13;

– the decision of RegTP of 30 March 2001 (Annex A.11 to the application): the items obscured on pages 31, 32 and 34 to 38;

– a document relating to the customer structure and consumption habits of the applicant's customers according to net household income (Annex A.15 to the application): the whole document;

– a document relating to mathematical models concerning the profitability of the applicant's competitors (Annex A.21 to the application): the items obscured on each page of this document;

– a document relating to the market shares of the applicant's competitors (Annex A.23 to the application): the entire document;

– a document concerning the development of the renting of subscriber lines (Annex A.27 to the application): the entire document;

– the defence: the figure obscured in paragraph 42;

– a letter from the German Government of 8 June 2000 (Annex B.3 to the defence): the figures obscured on page 3;

– a letter from RegTP of 3 April 2002 (Annex B.4 to the defence): the figures obscured on page 1;

– a decision of RegTP of 23 December 1999 (Annex C.2 to the reply): the items obscured on pages 12, 13 and 15;

– the rejoinder: the figure obscured in paragraph 31.

3. The items covered by the request for confidential treatment which have been disputed, expressly and precisely, by the interveners

16 The interveners dispute, expressly and precisely, the confidentiality of various items covered by the applicant's request for confidential treatment.

17 First, the first and second interveners dispute the confidentiality of the figure relating to the effect of the margin squeeze which has been obscured in paragraph 14 of the application.

18 Second, in addition to the item mentioned in the previous paragraph, the second intervener disputes the confidentiality of the following items of the application, which have also been obscured by the applicant:

– paragraph 76 and Annex A.14 to the application: the figures on the criteria used by people when choosing their telecommunications provider;

– paragraph 104: the information concerning the applicant's product-specific costs;

– paragraph 136: the applicant's assessment concerning the market shares of its competitors;

– paragraph 145: the figure indicating the applicant's loss of subscribers since 1998.

19 Third, the first and second interveners dispute the confidentiality of the following information, which has been obscured in the published version of the contested decision:

– recital 28: the applicant's ADSL (Asymmetric Digital Subscriber Line) turnover in the period from 1998 to 2002 (Table 2);

– recital 37: the decrease in the applicant's turnover due to price reductions from 1998 to 2001;

– recital 146: the relationship between the provision of new lines and the taking over of existing lines by the applicant;

– recital 147: the average one-off charge for all end-user lines of the applicant.

20 Fourth, in addition to the items mentioned in the preceding paragraph, the second intervener submits that the following figures contained in the contested decision cannot be considered as business secrets the disclosure of which would damage the applicant's business interests:

– recital 27: the number of the applicant's end-users from 1998 to 2002 (Table 1);

– recital 48: the percentage of the costs concerning ADSL services which are covered by the applicant's sale prices;

– recitals 143 to 145 (including Tables 3 to 7): the number of the applicant's end-users from 1998 to 2002;

– recital 148 (including Table 8): the average length of subscription of the applicant's clients, the proportionate weighted one-off charges and the average total retail price for access to the network;

– recitals 158 to 159 (including Table 11): the total monthly costs of the services offered by the applicant to end-users and the specific costs for 2001.

21 Fifth, the second intervener disputes the confidentiality of the passages obscured in pages 34 and 35 of the applicant's observations of 29 July 2002 on the statement of objections.

22 Sixth, the second intervener disputes the confidentiality of the passages obscured in the decision of RegTP of 8 February 1999 (Annex C.3 to the reply).

23 As regards the items mentioned in paragraphs 17 to 22 above, the confidentiality of which has been disputed, expressly and precisely, by the interveners, the President is able, in the light of the observations lodged by the applicant, to weigh up the interests of the parties in question (see paragraph 14 above).

4. The validity of the request for confidential treatment in so far as it covers, expressly and precisely, the items disputed by the interveners

Arguments of the parties

24 The applicant points out first of all that the contested decision concerns the prices which it charges to its competitors and to consumers for access to its local networks, which each consist of a number of local loops connecting end-users. According to the contested decision, the applicant has infringed Article 82 EC by implementing a pricing strategy in the form of a margin squeeze, consisting in charging prices to competitors for unbundled access to local loops ('wholesale charges') which were greater than or comparable to the prices paid by the applicant's end-users for access to its fixed network ('retail charges').

25 It further submits that all of the items obscured in the various documents lodged and the annexes thereto constitute business secrets. They include information on its costs, sale volumes, customer structure and other economic bases of its activity. In any event, the interveners do not need the information the disclosure of which they request for the purpose of being fully in a position to assert

their rights and to state their case before the Court.

26 The interveners reply that the obscured information relating to calculation of the applicant's costs or its turnover cannot all be considered as business secrets. The communication of this information is, in any case, necessary to allow them to verify the effect of the margin squeeze noted by the Commission and to support the latter's arguments on that point. Moreover, certain information is more than five years old and can no longer be considered as business secrets.

Findings of the Court

The request for confidential treatment of the figure obscured in paragraph 14 of the application and disputed by the first and second interveners

27 It must be noted that, at paragraph 14 of the application, the applicant summarises recitals 140 to 162 of the contested decision. The applicant has obscured the amount of the margin squeeze – that is the divergence between the applicant's wholesale charges and retail charges – existing, according to the Commission, at the time of the contested decision.

28 Since, according to the Commission, the gap between the wholesale charges and the retail charges is not sufficient to cover the applicant's product-specific costs for providing retail services (contested decision, recital 161), the interveners would indirectly but unavoidably obtain information on the applicant's cost structure if the exact amount of the margin squeeze was revealed to them.

29 As the aim of protecting the confidentiality of that information vis-à-vis the applicant's competitors is legitimate, application of the exception referred to in the second sentence of Article 116(2) of the Rules of Procedure is, accordingly, justified.

30 The request for confidential treatment should therefore be granted in so far as it concerns the figure obscured in paragraph 14 of the application.

The request for confidential treatment concerning various items of the application and disputed only by the second intervener

– Paragraph 76 of the application and Annex A.14 to the application

31 In paragraph 76 of the application, the applicant provides information concerning the criteria used by people when choosing their telecommunications provider. Those figures come from a document entitled 'Factors influencing the choice of supplier', which forms Annex A.14 to the application.

32 The information in question was obtained through a survey carried out at the applicant's request and to which third parties do not have access. Moreover, the results of that survey are such as to play an important role in the applicant's business strategy.

33 Under those circumstances, the applicant's request for confidential treatment should be granted in so far as it concerns paragraph 76 of the application and its Annex A.14.

– Paragraph 104 of the application

34 In paragraph 104 of the application, the applicant alleges that the Commission has made errors in its calculation of the weighted monthly product-specific costs per line (analogue, ISDN and ADSL lines considered together) in recital 159 of the contested decision. It has obscured, in that paragraph of the application, the figure given by the Commission in the contested decision and the allegedly correct figures relating to its product-specific costs.

35 Even if the figures in question concern 2001, they still constitute business secrets. In fact, the costs of the products which a company offers on the market directly influence its commercial behaviour. Moreover, in the present case, the applicant states that its product-specific costs have hardly changed since 2001.

36 Under those circumstances, the applicant's request for confidential treatment should be granted in so far as it concerns the items obscured in paragraph 104 of the application.

– Paragraph 136 of the application

37 In paragraph 136 of its application, the applicant has obscured its estimates relating to the market shares of its competitors in certain local areas served. Those estimates do not take account of its competitors' own networks, but are based purely on a comparison between the number of lines which the applicant uses itself and the number which it rents to its competitors. As it is, moreover, possible to deduce from this information the market shares held by the applicant itself, this information constitutes business secrets of the applicant (see, to that effect, the order of the President of the Third Chamber of the Court of First Instance of 15 October 2002 in Case T-203/01 *Michelin* v *Commission* [2002] not published in the ECR, paragraph 26).

38 The request for confidential treatment should therefore be granted in so far as it concerns the items obscured in paragraph 136 of the application.

– Paragraph 145 of the application

39 In paragraph 145 of the application, the applicant has obscured the figure representing an estimate of the number of clients it has lost since 1998 to its competitors. This is information relating to the applicant's business development, and constitutes a business secret.

40 The request for confidential treatment should also be granted in so far as it concerns the figure obscured in paragraph 145 of the application.

The request for confidential treatment concerning various items of the contested decision and disputed by the first and second interveners

– Recital 28 (Table 2) of the contested decision

41 The information in recital 28 (Table 2) of the contested decision specifies the number of the applicant's analogue and digital lines which are equipped with ADSL technology. This is a business secret. Even if, as the first intervener submits, the RegTP's 2003 annual report mentions the relationship between the applicant's analogue and digital connections, it does not specify the applicant's activity in the ADSL sector.

42 However, in so far as the information in recital 28 (Table 2) of the contested decision concerns the years 1998 to 2000, it no longer constitutes business secrets (see, to that effect, orders of the Court of First Instance of 19 June 1996 in Joined Cases T–134/94, T–136/94 to T–138/94, T–141/94, T–145/94, T–147/94, T–148/94, T–151/94, T–156/94 and T–157/94*NMH Stahlwerke and Others* v *Commission* [1996] ECR II–537, paragraph 27, and *Glaxo Wellcome* v *Commission*, paragraph 39). It must be underlined that the evolution of the ADSL sector has been such, from 2001, that the disclosure of information relating to the years 1998 to 2000 to the interveners would not allow them to draw precise conclusions concerning the evolution of the applicant's business as regards the different segments of that sector.

43 Concerning recital 28 of the contested decision, the applicant's request for confidential treatment should therefore be granted in so far as it concerns the figures contained in Table 2 concerning 2001 and 2002 and should be dismissed as to the remainder.

– Recital 37 of the contested decision

44 It must be pointed out, first, that in recital 35 of the contested decision it is stated that the German authorities required the applicant to reduce its retail charges by 4.3% during the period from January 1998 until December 1999 and by 5.6% during the period from January 2000 until December 2001. In recital 37, it is indicated that, during those periods, the applicant substantially lowered its prices, going beyond the mandatory reductions. The information obscured concerns the reduction in turnover resulting from the price reductions in respect of the 'residential' basket and the 'business' basket during the two abovementioned periods and the total voluntary price reductions.

45 It must therefore be stated that that information largely relates to facts dating from five or more years ago. Confidential treatment could, exceptionally, be granted to such information only if it were shown that, notwithstanding their historical nature, they still constitute, in this case, essential

elements of the commercial position of the undertaking concerned (*Glaxo Wellcome* v *Commission*, paragraph 39).

46 To that effect, the applicant submits that the business clients sector (the 'business' basket), which includes important clients, comes under a particularly confidential area of its activity. The relationship between the 'residential' and 'business' baskets does not significantly change with the passing of time. It would be easy to extrapolate, from the information in recital 37 of the contested decision, the relationship between the turnover relating to the 'residential' basket and that relating to the 'business' basket.

47 Under those circumstances, the request for confidential treatment should be granted in so far as it concerns the figures obscured relating to, respectively, the 'residential' basket and the 'business' basket. However, the request for confidential treatment is rejected in so far as it concerns the total voluntary, supplementary reductions for the two baskets together.

– Recitals 146 and 147 of the contested decision

48 The information obscured in recital 146 of the contested decision concerns the relationship between the provision of new connections (that is to say completely new installations) and the taking over of existing lines of the applicant. This is sensitive commercial information which should not, in principle, be disclosed to the interveners.

49 The information obscured in recital 147 of the contested decision concerns the percentage of TDSL (Turbo Digital Subscriber Line, broadband connections) connections provided in relation to all of the applicant's end-user lines. On the basis of this percentage, the Commission then calculates the average charge for all of the applicant's end-user lines. This information, which is, moreover, recent, must also be classified as business secrets (see, to that effect, *Glaxo Wellcome* v *Commission*, paragraph 10 above, paragraph 47).

50 The applicant's request for confidential treatment must therefore be granted in so far as it concerns the items obscured in recitals 146 and 147 of the contested decision.

The request for confidential treatment concerning various elements of the contested decision and disputed only by the second intervener

– Recitals 27 (Table 1) and 143 to 145 (including Tables 3 to 7) of the contested decision

51 The information obscured in those recitals concerns the detailed breakdown of the applicant's clients in the various segments of the telephone connections market, including all of the sub-segments in the ISDN and ADSL sectors. This information constitutes, in principle, business secrets.

52 However, certain items in respect of which confidential treatment has been requested relate to facts dating from five years ago and no longer constitute business secrets, in view in particular of the evolution of the different segments of the market since 2001 (see, to that effect, *NMH Stahlwerke and Others* v *Commission*, paragraph 42 above, paragraph 27, and *Glaxo Wellcome* v *Commission*, paragraph 10 above, paragraph 39).

53 The applicant's request for confidential treatment should therefore be granted in so far as it concerns figures relating to the years 2001 and 2002 and rejected as to the remainder. Consequently, the request for confidential treatment is rejected in so far as it concerns figures relating to the years 1998 to 2000, set out in Table 1 of recital 27 of the contested decision, and in Tables 5 to 7 of recital 145 of the contested decision.

– Recitals 48, 158 and 159 of the contested decision

54 Information relating to the applicant's costs concerning its ADSL services has been obscured in recital 48 of the contested decision.

55 The figures in recitals 158 and 159 (including Table 11) concern the applicant's total monthly costs of services to end-users, differentiating between analogue, RNIS and ADSL lines.

56 For the reasons mentioned in paragraph 35 above, the applicant's request for confidential

treatment should be granted in so far as it concerns the items obscured in recitals 48, 158 and 159 of the contested decision.

– Recital 148 of the contested decision

57 The applicant's customers pay, for taking over an existing telephone line, a one-off charge to which is added the monthly charge. To calculate the end-user's total average monthly charge, the one-off charge (taking account of the average length of a subscription) must be added to the monthly charge.

58 The items obscured in recital 148 of the contested decision give the average length of subscription of the applicant's customers. This is information concerning the applicant's customer structure, which constitutes business secrets.

59 The items obscured in Table 8 of recital 148 concerns the calculation of the average monthly price for the end-user for the years 1998 to 2003. This information, when recent, constitutes business secrets. Moreover, even if certain information relates to facts dating from five years ago or more, the applicant's request should nevertheless be granted in so far as it covers all of the information obscured in Table 8, as disclosure of the total average monthly price for end-users for the years 1998 to 2000 would allow the second intervener to deduce the average length of subscription of the applicant's customers.

60 The applicant's request for confidential treatment should therefore be granted in so far as it concerns the items obscured in recital 148 (including Table 8).

The request for confidential treatment concerning certain passages of pages 34 and 35 of the applicant's observations of 29 July 2002 on the statement of objections and disputed only by the second intervener

61 The passages obscured on pages 34 and 35 of the applicant's observations on the statement of objections contain a description of the contacts which have taken place between the Commission and the applicant, on the one hand, and the German authorities, on the other, during the period from 1999 to 2000.

62 There is nothing in those passages concerning the applicant's commercial policy. In any case, the disclosure of the items obscured in pages 34 and 35 of the applicant's observations on the statement of objections cannot prejudice the applicant's business interests. The passages in question do not in fact convey information liable to be used by third parties in the context of competitive relations to the applicant's detriment.

63 The request for confidential treatment must therefore be rejected in so far as it concerns the items obscured on pages 34 and 35 of the applicant's observations of 29 July 2002 on the statement of objections.

The request for confidential treatment concerning the obscured passages of RegTP's decision of 8 February 1999 and disputed only by the second intervener

64 It is common ground between the parties that some of the companies, which for the purposes of this order are jointly referred to as the second intervener, have had, following a judgment of the Bundesverwaltungsgericht (German Federal Administrative Court) of 15 August 2003 (BVerwG 20 F. 8.03), access to the full text of RegTP's decision of 8 February 1999.

65 As the information in respect of which confidential treatment has been requested constitutes information which is already available to some companies which are competitors of the applicant, the request for confidential treatment must be rejected in so far as it concerns RegTP's decision of 8 February 1999 (see, to that effect, orders of the Court of First Instance of 29 May 1997 in Case T-89/96 *British Steel* v *Commission* [1997] ECR II–835, paragraphs 26 and 37, and *Glaxo Wellcome* v *Commission*, paragraph 43).

On those grounds,

THE PRESIDENT OF THE FIFTH CHAMBER OF THE COURT OF FIRST INSTANCE hereby orders:

1. **The request for confidential treatment, made by the interveners, is granted in respect of the following items:**

- **the application, paragraph 14 (the figure obscured);**
- **the application, paragraph 76 (the whole paragraph);**
- **the application, paragraph 104 (the items obscured);**
- **the application, paragraph 136 (the items obscured);**
- **the application, paragraph 145 (the figure obscured);**
- **the application, Annex 14 (the whole Annex);**
- **Commission Decision 2003/707/EC of 21 May 2003 relating to a proceeding under Article 82 EC (Case COMP/C-1/37.451, 37.578, 37.579 – Deutsche Telekom AG), recital 27 (the figures obscured relating to the years 2001 and 2002 set out in Table 1);**
- **Decision 2003/707, recital 28 (the figures obscured relating to the years 2001 and 2002 set out in Table 2);**
- **Decision 2003/707, recital 37 (the figures obscured concerning respectively the 'residential' basket and the 'business' basket);**
- **Decision 2003/707, recital 48 (the figures obscured);**
- **Decision 2003/707, recital 99 (the figure obscured);**
- **Decision 2003/707, recital 143 (the figures obscured);**
- **Decision 2003/707, recital 144 (the figures obscured set out in Table 3);**
- **Decision 2003/707, recital 145 (the figures obscured set out in Table 4);**
- **Decision 2003/707, recitals 146 and 147 (the figures obscured);**
- **Decision 2003/707, recital 148 (the figures obscured including those set out in Table 8);**
- **Decision 2003/707, recitals 151, 152 and 154 (the figures obscured including those set out in Tables 9 and 10);**
- **Decision 2003/707, recitals 158 and 159 (the figures obscured including those set out in Table 11);**
- **Decision 2003/707, recitals 160 to 162, 167 and 172 (the figures obscured including those set out in Table 12);**
- **the statement of objections of 2 May 2002 (Annex A.2 to the application), paragraphs 26 to 28, 39, 45, 92, 124 to 126, 128, 131, 133, 137 to 140 and 143 to 147 (the items obscured);**
- **the applicant's observations of 29 July 2002 on the statement of objections (Annex A.3 to the application), pages 4, 11 to 13, 37, 41, 65 to 67, 75, 76, 78 to 80, 88 to 91, 93, 94, 98, 100 to 106, 108, 109 and 122 (the items obscured);**

– the applicant's observations of 25 October 2002 on the complainants' responses (Annex A.4 to the application), pages 14 and 31 (the items obscured);

– the supplementary statement of objections of 21 February 2003 (Annex A.5 to the application), paragraphs 1, 3, 4, 5 and 8 to 10 (the items obscured);

– the applicant's observations of 14 March 2003 on the supplementary statement of objections (Annex A.6 to the application), pages 5, 7, 20 and 21 (the items obscured);

– the decision of the Regulierungsbehörde für Telekommunikation und Post (RegTP) of 11 April 2002 (Annex A.8 to the application), pages 22 to 35 and 37 (the items obscured);

– the decision of RegTP of 29 April 2003 (Annex A.9 to the application), pages 14, 15, 21, 22, 24, 25, 27, 30, 31 to 33 and 35 (the items obscured);

– the decision of RegTP of 21 December 2003 (Annex A.10 to the application), page 13 (the item obscured);

– the decision of RegTP of 30 March 2001 (Annex A.11 to the application), pages 31, 32 and 34 to 38 (the items obscured);

– a document relating to the customer structure and consumption habits of the applicant's clients according to net household income (Annex A.15 to the application) (the whole document);

– a document relating to mathematical models concerning the profitability of the applicant's competitors (Annex A.21 to the application) (the information obscured on each page of this document);

– a document relating to the market shares of the applicant's competitors (Annex A.23 to the application) (the entire document);

– a document concerning the development of the renting of subscriber lines (Annex A.27 to the application) (the whole document);

– the defence, paragraph 42 (the figure obscured);

– a letter from the German Government of 8 June 2000 (Annex B.3 to the defence), page 3 (the figures obscured);

– a letter from RegTP of 3 April 2002 (Annex B.4 to the defence), page 1 (the figures obscured);

– a decision of RegTP of 23 December 1999 (Annex C.2 to the reply), pages 12, 13 and 15 (the items obscured);

– the rejoinder, paragraph 31 (the figure obscured).

2. The request for confidential treatment made by the first intervener is rejected in respect of the following elements:

– Decision 2003/707, recital 28 (the figures relating to the years 1998 to 2000 set out in Table 2);

– Decision 2003/707, recital 37 (the total amount of the supplementary voluntary reductions in respect of the 'residential' and 'business' baskets together).

3. The request for confidential treatment made by the second intervener is rejected in respect of the following elements:

- **Decision 2003/707, recital 27 (the figures relating to the years 1998 to 2000 set out in Table 1);**
- **Decision 2003/707, recital 28 (the figures relating to the years 1998 to 2000 set out in Table 2);**
- **Decision 2003/707, recital 37 (the total amount of the supplementary voluntary reductions in respect of the 'residential' and 'business' baskets together);**

Case T-282/06

Sun Chemical Group BV and Others

v

Commission of the European Communities

(Competition – Concentration – European rosin resin market for printing ink applications – Decision declaring a concentration compatible with the common market – Guidelines on the assessment of horizontal mergers – Market shares and concentration levels – Non-coordinated effects – Coordinated effects – Obligation to state reasons)

Summary of the Judgment

1. *Competition – Concentrations – Examination by the Commission – Assessment of compatibility with the common market – Compliance with the Guidelines adopted by the Commission*

   (Council Regulation No 139/2004, Art. 2; Commission Notice 2004/C 31/03)

2. *Competition – Concentrations – Assessment of compatibility with the common market – Risk of creating a collective dominant position – Criteria for assessment*

   (Council Regulation No 139/2004, Art. 2; Commission Notice 2004/C 31/03, paras 19 to 21)

3. *Competition – Concentrations – Assessment of compatibility with the common market*

   (Council Regulation No 139/2004, Art. 2)

4. *Competition – Concentrations – Assessment of compatibility with the common market*

1. The Commission is bound by the Guidelines which it issues in the area of supervision of concentrations, provided they do not depart from the rules in the Treaty and from the Merger Regulation.

   The Guidelines do not require an examination in every case of all the factors mentioned therein, since the Commission enjoys a discretion enabling it to take account or not to take account of certain factors, and is not bound to include specific reasons concerning the assessment of a number of aspects of the concentration which seem to it manifestly irrelevant or insignificant or plainly of secondary importance for the assessment of the concentration.

   Review by the Community judicature of complex economic assessments made by the Commission in the exercise of the power of assessment conferred on it by the Merger Regulation is limited to ascertaining compliance with the rules governing procedure and the statement of reasons, the substantive accuracy of the facts and the absence of manifest errors of assessment or misuse of powers. In that respect, the Community judicature must not only ascertain whether the evidence relied on is factually accurate, reliable and consistent but also whether that evidence contains all the information which must be taken into account in order to assess a complex situation and whether it is capable of substantiating the conclusions drawn from it. Thus, review by the Court of First Instance cannot be limited merely to establishing whether or not the Commission took into account elements mentioned in the Guidelines as relevant to the assessment of the impact of the concentration on competition. The Court must also, in the course of its review, consider whether any possible omissions on the part of the Commission are capable of calling its finding into question.

   (see paras 55, 57-58, 60-61)

2. Whilst it is necessary, for the purposes of showing that there is a risk of collective dominance, to establish the existence of a significant collective market share, the latter is not by itself sufficient to prove that such collective dominance exists, since market conditions must also be conducive to the creation of a collective dominant position. Thus the existence of a dominant position must be assessed on a case-by-case basis according to the circumstances of the case. Moreover, the second sentence of paragraph 21 of the Commission's Guidelines on the assessment of horizontal mergers states that exceeding the concentration thresholds laid down in paragraphs 19 to 21 of the Guidelines does not give rise to a presumption of the existence of competition concerns. However, the greater the margin by which those thresholds are exceeded, the more the values will be indicative of competition concerns.

(see paras 126, 136, 138)

3. It is not necessary, in order to discourage any anti-competitive conduct on the part of the merged entity, for all its customers to be able to transfer all their orders to other suppliers. The possibility of their transferring a substantial part of their requirements to other suppliers may be regarded as a threat liable to cause sufficient losses for the merged entity to deter it from pursuing such a strategy.

(see paras 171, 214)

4. Since general availability or unavailability of a raw material has the same effect on all the producers of the product concerned, including the merged entity, only preferential access for the merging parties as compared with their competitors could affect competition.

(see paras 182-183)

Judgment of the Court of First Instance (Second Chamber)
First Instance (Second Chamber)First Instance (Second Chamber)2007. Sun Chemical Group BV, Siegwerk Druckfarben AG and Flint Group Germany GmbH v Commission of the European Communities. Competition - Concentration - European rosin resin market for printing ink applications - Decision declaring a concentration compatible with the common market - Guidelines on the assessment of horizontal mergers - Market shares and concentration levels - Non-coordinated effects - Coordinated effects - Obligation to state reasons. Case T-282/06.

In Case T282/06,

Sun Chemical Group BV, established in Weesp (Netherlands),

Siegwerk Druckfarben AG, established in Siegburg (Germany),

Flint Group Germany GmbH, established in Stuttgart (Germany),

represented by N. Dodoo and K.H. Eichhorn, lawyers,

applicants,

v

Commission of the European Communities, represented by A. Whelan, S. Noe and V. Bottka, acting as Agents,

defendant,

supported by

The Apollo Group, established in New York, New York (United States),

Hexion Specialty Chemicals, Inc., established in Columbus, Ohio (United States),

represented by I.M. Sinan, Barrister, and J. Uphoff, Solicitor,

interveners,

APPLICATION for the annulment of the Commission Decision of 29 May 2006 declaring a concentration compatible with the common market and the EEA Agreement by which Hexion Speciality Chemicals (The Apollo Group) proposed to acquire full control of Akzo Nobel's Inks and Adhesive Resins business (Case COMP/M.4071 - Apollo/Akzo Nobel, IAR),

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Second Chamber),

composed of J. Pirrung, President, N.J. Forwood and S. Papasavvas, Judges,

Registrar: C. Kantza, Administrator,

having regard to the written procedure and further to the hearing on 27 February 2007,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Second Chamber)

hereby:

1. Dismisses the action;

2. Orders Sun Chemical Group BV, Siegwerk Druckfarben AG and Flint Group Germany GmbH to

bear their own costs and to pay those of the Commission and of the interveners.

Legal context

1. Article 2 of Council Regulation (EC) No 139/2004 of 20 January 2004 on the control of concentrations between undertakings (OJ 2004 L 24, p. 1; the Merger Regulation') provides inter alia:

2. A concentration which would not significantly impede effective competition in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position, shall be declared compatible with the common market.

3. A concentration which would significantly impede effective competition, in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position, shall be declared incompatible with the common market.'

2. Article 6(1) of the Merger Regulation provides that the Commission shall examine the notification as soon as it is received and states, at subparagraph (b):

Where it finds that the concentration notified, although falling within the scope of this Regulation, does not raise serious doubts as to its compatibility with the common market, it shall decide not to oppose it and shall declare that it is compatible with the common market.

...'

3. The Commission has set out the analytical approach of its appraisal of horizontal mergers in its Guidelines on the assessment of horizontal mergers under the Merger Regulation (OJ 2004 C 31, p. 5; the Guidelines').

Background to the dispute

A - Parties to the procedure and the concentration

4. Sun Chemical Group BV (Sun') manufactures printing inks used in packaging, publication, commercial and industrial, pigments, dispersions, and security and brand protection. It is an indirect wholly owned subsidiary of Dainippon Ink and Chemicals, Inc. Sun employs more than 12 000 people and its turnover in the last financial year was in excess of EUR 3 billion. In 2005, Sun sourced approximately [confidential] (1) of rosin resins in Europe.

5. Siegwerk Druckfarben AG (Siegwerk') is a global manufacturer of printing inks, with its focus on packaging ink, gravure ink and web offset. It is the parent company of the Siegwerk group of companies. Siegwerk employs approximately 4 000 people and its turnover in the last financial year was approximately EUR 830 million. In Europe, it purchases approximately [confidential] of rosin resins each year from independent third party suppliers.

6. Flint Group Germany GmbH (Flint') supplies the printing, converting, and colorant industries. It was formed by the merger of XSYS Print Solutions and Flint Ink Corp in 2005. Flint employs nearly 7 500 people and its turnover in the last financial year was approximately EUR 2.2 billion. In Europe, Flint sources approximately [confidential] of rosin resins each year from independent third party suppliers.

7. Hexion Speciality Chemicals, Inc (Hexion') produces and sells a range of thermosetting and specialty resins, in particular, rosin resins, hydrocarbon resins, rosin-hydrocarbon hybrid resins, alkyd resins, acrylic dispersions, acrylic resins and other resins such as amino resins, epoxy resins, phenolic resins and polyester resins. Hexion has more than 90 production and distribution facilities in 18 countries in the Americas, Europe and the Asia Pacific region, and employs approximately 7 000 employees.

8. The Apollo Group (Apollo') manages a number of investment funds with interests in a wide range of activities at global level. Apollo controls Hexion.

9. Akzo Nobel's Inks and Adhesive Resins business (Akzo') primarily manufactures products based on rosin, in particular rosin resins, hybrid resins and other rosin derivatives, for use mainly as printing inks and adhesives. It has production facilities in the Netherlands, Portugal, China, New Zealand, Argentina, Canada and the United States.

B - Product market

10. Rosin resin is a naturally occurring resin derived from pine trees. It is classified into three types: wood rosin, gum rosin and tall oil rosin. The raw material is upgraded through chemical processing that includes hydrogenation, esterification, polymerisation and purification. From a chemical or technical standpoint, such rosin resins can be classified as rosin soaps, resinates, rosin esters, maleic and fumaric modified resins. Rosin resin is an essential component in the manufacture of printing inks. Printing ink companies rely heavily on the supply of rosin resins and expend, according to the applicants, each year significant efforts to secure the supplies that they need for their production of printing inks. The applicants purchase, according to their own account, 90% of the rosin resins for ink applications available in Europe. Rosin resin is also used in other products such as varnishes, adhesives, medicines, chewing gum and soap.

C - Administrative procedure

11. The proposed concentration by which Hexion, owned by Apollo, was to acquire control within the meaning of Article 3(1)(b) of the Merger Regulation, either directly or through wholly owned subsidiaries, of the whole of Akzo by way of purchase of shares and assets did not have a Community dimension within the meaning of Article 1(2) or (3) of the Merger Regulation. Knowing that it was capable of being reviewed under the national merger control laws in four Member States, the parties to the concentration applied to the Commission, on 3 February 2006, for a referral pursuant to Article 4(5) of the Merger Regulation. As none of the Member States expressed its disagreement within the applicable period, the concentration was deemed to have a Community dimension and the Commission received notification of the proposed concentration on 18 April 2006.

12. On 25 April 2006, the Commission sent out detailed questionnaires to 21 competitors (the competitors' questionnaire') and to 13 customers (the customers' questionnaire') of the merging parties in the markets for rosin resins, hydrocarbon resins and hybrid resins. The questionnaires were to be answered by 2 May 2006. The Commission received replies from 13 competitors and 10 customers.

13. On 28 April 2006, Flint submitted its reply to the customers' questionnaire. On the same date, the Commission published a notice in the Official Journal of the European Union (OJ 2006 C 102, p. 9), inviting interested third parties to submit any observations they might have on the proposed operation to the Commission no later than 8 May 2006.

14. On 4 May 2006, having obtained an extension of two days, Sun submitted its reply to the customers' questionnaire. On 10 May 2006, Sun contacted the Commission's case team and left a voicemail message seeking a meeting to discuss both the concentration and Sun's reply to the customers' questionnaire. On 11 May 2006, Sun sent an email to a member of the Commission's case team, indicating that it would be prepared to meet with the Commission at short notice to discuss the case.

15. On 12 May 2006, Siegwerk submitted its reply to the customers' questionnaire. On the same date, Sun provided information and additional explanations as to why it had concerns about the concentration. The Commission asked the notifying party to give its views on the issues raised in Sun's submissions.

16. On 16 May 2006, the notifying party gave its views by letter. On 17 May 2006, Sun lodged

two separate submissions in which it set out why the Commission should declare the operation incompatible with the common market. The information provided concerned recent price increases, capacity constraints in the market and difficulties of switching suppliers that had been experienced by the customers of the merging parties. The Commission asked the notifying party for observations on Sun's final comments.

17. On 18 and 19 May 2006, the notifying party submitted its observations in three emails.

D - Contested decision

18. On 29 May 2006, the Commission adopted, pursuant to Article 6(1)(b) of the Merger Regulation, its decision in Case COMP/M.4071 - Apollo/Akzo Nobel IAR, declaring the notified concentration to be compatible with the common market (the contested decision').

19. In the contested decision, the Commission first considered, in recitals 10 to 45, the relevant product and geographic markets and then analysed, in recitals 51 to 80, the effects of the concentration on competition on these markets.

20. As to the relevant product markets, the Commission identified, in recitals 8 to 24 of the contested decision, an overlap of the merging parties' activities in the production of rosin resins, hydrocarbon resins, alkyd resins and acrylic dispersions. It observed that this overlap only occurred in resins used for the production of inks. Leaving open the precise delimitation of the relevant product market, because it considered that the transaction did not raise competitive concerns under any definition, the Commission examined each of the resins for printing ink applications and took the view that the rosin resins for printing ink applications all belonged to the same product market.

21. With respect to the relevant geographic market, the Commission considered, in recitals 35 to 38, that it covered at least the European Economic Area (EEA) and that it may be global. It left the precise definition open, observing that the final assessment did not change regardless of whether the market should be defined as being at least the EEA or worldwide.

22. As regards the assessment of the effects of the concentration on the EEA market for rosin resins for printing ink applications, in recitals 51 and 53 the Commission estimated the market shares of the merging parties and of their competitors on this market in 2005 as follows: Hexion [10-20]%, Akzo Nobel IAR [20-30]% (combined [30-50]%), Arizona [10-20]%, Cray Valley [10-20]%, Respol [0-10]%, DRT [0-10]%, Euro-Yser [0-10]%, Kraemer [< 5]%, Westvaco [< 5]%, Others [010]%. At the level of the worldwide market for rosin resins, the Commission estimated that the combined market shares of the merging parties would be [20-30]%, due to the presence of a significant number of new entrants.

23. As to anti-competitive effects on this market, the Commission began by stating in recital 59 that 11 out of 13 of the merging parties' competitors considered that the transaction would not have such effects, but that around half of the customers which had participated in the market survey had indicated that the reduction in the number of players and the relatively high market share of the merged entity could lead to price increases and to a reduction in product development.

24. Recital 60 then points out that the market investigation confirmed that most of the customers needed specific grades of rosin resins for their applications and that in some instances the resin was customised for the customer, a process which could take several months. According to the Commission, this indicated that the products sold on the market in question were not homogeneous and that there were many producers on the market, characterised by lack of symmetry in market shares. Recital 60 also notes concerns voiced by around 30% of producers about the growing impact of other producers from outside of the EEA, such as Arez (China). The Commission therefore considered that, in principle, coordinated anti-competitive behaviour was unlikely to result from this transaction.

However, given that two big players were to merge, the transaction could give rise to anti-competitive effects in this market, resulting from the unilateral behaviour of the merging undertakings.

25. In recitals 62 to 65, the Commission first examined production capacities and observed that, according to the results of the market investigation, the market was not subject to capacity constraints. Recital 64 states that, considering that production on the EEA market for rosin resins for ink applications is around 144 000 t, the producers who took part in the market investigation (Arizona, Cray Valley, Respol, Kraemer, Megara, Union Resinera and Eastman) accounted for 28 200 t of spare capacity, which represents 19.5% of total production on the market. According to the contested decision, if the parties' estimates for other producers (including DRT and Euro-Yser) were correct, spare capacity would amount to 41% of total production on the market. Recital 65 affirms that the market investigation confirmed, and the majority of the customers acknowledged, that there was overcapacity on the market.

26. Recitals 66 and 67 then address the concerns expressed by one customer relating to the price increases of rosin resins by Akzo and Hexion and to supply problems between September and December, when seasonal demand for rosin resins is at its peak, leading to supply constraints during these months. In that respect, recital 67 states that the evidence submitted by the parties to the merger indicates that the supply issues reported were not caused by an anti-competitive situation on the relevant market. First, they resulted rather from an increase in the prices of raw materials which are key inputs for the production of rosin resins, such as crude oil, gum rosin and tall oil resin, which were subject to significant price increases in recent years, with the price of gum rosin having risen from USD 500 per tonne in January 2004 to about USD 1 250 per tonne at the date of the contested decision. Secondly, it is noted that the available information regarding the supply problems mentioned above appears to indicate that they were due to technical problems experienced by a particular supplier or to shutdowns resulting from scheduled maintenance work and not to a general lack of production capacity in the overall market during the period considered. Furthermore, it appears that the customer in question was able to find alternative sources of supply which mitigated the impact of that unexpected shortage.

27. Recital 68 affirms that, in the light of the above, it appears to be likely that any attempt of the merged entity to raise prices unilaterally could be defeated by significant competitors currently on the market such as Arizona, Cray Valley, Respol and by other smaller producers, which have both the spare capacity and the technical knowledge to counteract any anti-competitive behaviour.

28. In recitals 69 to 71, the Commission examines possible countervailing buyer power exerted by ink manufacturers on the resin manufacturers. Recital 69 states that the parties to the merger indicated that their customers are in a position to influence the prices and that some, which have in-house rosin resin production, discipline their suppliers successfully. With respect to the influence of in-house production of rosin resins that some ink manufacturers have, recital 69 notes that the parties estimate that three major customers have significant in-house production: Flint and Siegwerk, which have an estimated production capacity of around 25 000 t and 12 000 t respectively, and Huber, which recently acquired Micro Inks and informed its suppliers that it would begin shifting purchases to its subsidiary. Recital 70 then states that the investigation has shown that, in general, rosin resin producers' sales are concentrated with two or three big customers, with the top five ink producers accounting for approximately [80-90]% of Hexion's sales of rosin, hybrid and hydrocarbon resins for ink applications and [90-100]% of Akzo's. In addition, the top two customers accounted for [50-60]% and [70-80]% of the two companies' respective sales of rosin, hybrid and hydrocarbon resins for ink applications. Therefore, the Commission considers in recital 71 that the strong dependence of the parties on a few big customers, and the ability that other producers have to serve these customers, constitute significant disincentives to potential unilateral anti-competitive behaviour.

29. Recital 72 concludes that, in the light of the above, the proposed transaction does not give rise to competition concerns with respect to rosin resins for printing ink applications.

Procedure

30. By an application lodged at the Registry of the Court of First Instance on 9 October 2006, the applicants brought the present action.

31. By a separate document lodged on the same day, the applicants also applied for an expedited procedure, pursuant to Article 76a of the Rules of Procedure of the Court of First Instance.

32. By a document lodged at the Registry of the Court of First Instance on 31 October 2006, Apollo and Hexion applied for leave to intervene in support of the Commission.

33. On the same day, the Commission lodged its observations on the application for an expedited procedure, in which it indicated that, in order to exercise its rights of defence, it would have to rely on confidential information and documents submitted by the merging parties and by third parties.

34. By a separate document lodged on the same day at the Registry of the Court of First Instance, the Commission lodged an application for measures of organisation of procedure pursuant to Article 64(4) of the Rules of Procedure.

35. By way of measures of organisation of procedure, the applicants, the Commission and the interveners attended an informal meeting on 8 November 2006 with three judges of the Second Chamber of the Court of First Instance, to whom the case was assigned, in order to examine the possibility of the application for an expedited procedure being granted. At that meeting, the applicants stated that, given the constraints of the expedited procedure, they did not intend to dispute the market definition set out in the contested decision.

36. On 14 November 2006, the Second Chamber of the Court of First Instance decided to grant the application for an expedited procedure.

37. On 16 November 2006, the Second Chamber of the Court of First Instance adopted measures of organisation of procedure governing the submission in evidence of confidential information or documents in the present case.

38. By order of the President of the Second Chamber of the Court of First Instance of 17 November 2006, after hearing the views of the main parties, Apollo and Hexion were granted leave to intervene in support of the Commission and to submit a statement in intervention, which they did on 8 December 2006.

39. Upon hearing the report of the Judge-Rapporteur, the Court of First Instance decided to open the oral procedure and, by way of measures of organisation of procedure, sent the parties a number of questions to be answered orally at the hearing.

40. The parties presented oral argument and answered the written and oral questions put by the Court at the hearing on 27 February 2007.

41. At the hearing, the Commission gave a non-confidential version of a new document to the members of the Court of First Instance and to the other parties. After hearing the parties' views, the decision on the admissibility of that document in evidence was reserved. The Court decided not to add it to the file.

Forms of order sought by the parties

42. The applicants claim that the Court should:

- annul the contested decision;

- order the Commission to pay the costs.

43. The Commission contends that the Court should:

- declare the action inadmissible with respect to Siegwerk and Flint;

- dismiss the remainder of the application;

- order the applicants to pay the costs.

44. The interveners claim that the Court should:

- dismiss the application;

- order the applicants to bear their own costs and to pay those incurred by the interveners.

Law

A - The admissibility of the application

1. Arguments of the parties

45. The Commission submits that the contested decision is not of individual concern to Siegwerk and Flint. Whether a third party is individually concerned by a decision finding a concentration to be compatible with the common market depends, first, on its active participation in the administrative procedure, and secondly, on the effect of the decision on its market position. Mere participation in the administrative procedure is not sufficient on its own, because merger control requires regular contact with numerous undertakings. Only active participation in the administrative procedure is a factor regularly taken into account to establish, in conjunction with other specific circumstances, the admissibility of an action, especially where such active participation had an effect on the course of the procedure and on the content of the contested decision.

46. In the present case, however, the participation of Siegwerk and Flint in the administrative procedure was limited to submitting a reply to the Commission's customers' questionnaire and their replies are terse and general. Their limited participation did not have any identifiable effect on the course of the procedure or on the content of the contested decision. Therefore, their participation in the administrative procedure cannot be described as active participation. The application does not detail any other circumstances that would differentiate those two undertakings from other customers of the merging parties. The concentration affects the market position of Siegwerk and Flint in the same way as it affects that of any other buyer of rosin resins.

47. According to the Commission, there are no good grounds in the present case for allowing Siegwerk and Flint to be parties to an action that they could not have brought on their own. The application relies to a considerable extent on statements that Siegwerk made in its reply to the Commission's customers' questionnaire with respect to the availability of raw materials and neither Sun nor Flint had raised this issue of availability during the administrative procedure. This lack of consistency in the applicants' respective replies is another reason for assessing the standing of each party separately.

48. The applicants consider that the contested decision is of direct and individual concern to them since it will affect their businesses and in particular their circumstances in respect of supply, because rosin resins form a vital input in their production, accounting for a significant part of the price of the end product. Furthermore, prior to the merger, the applicants were major customers of both Hexion and Akzo and they are the largest purchasers of rosin resins in the ink industry, accounting together for approximately 90% of rosin resins purchased in the EEA. The applicants also consider that each of them took an active part in the administrative procedure.

2. Findings of the Court

49. It must be pointed out at the outset that the Commission does not dispute Sun's locus standi. Since Sun participated actively in the administrative procedure, the admissibility of its application is not in any doubt.

50. According to case-law which is now well established, since one and the same application is involved, there is no need to consider whether the other applicants are entitled to bring proceedings (Case C313/90 CIRFS and Others v Commission [1993] ECR I-1125, paragraph 31, and Case T374/00 Verband der freien Rohrwerke and Others v Commission [2003] ECR II2275, paragraph 57; see also, to that effect, Joined Cases T-447/93 to T-449/93 AITEC and Others v Commission [1995] ECR II1971, paragraph 82).

51. None of the points put forward by the Commission in the present case provides justification for the Court to depart from this case-law. The Court has indeed distinguished, in some cases, between applicants as regards the purpose of admissibility of an action (Case T-131/99 Shaw and Falla v Commission [2005] ECR II2023, paragraph 12, and the order in Joined Cases T228/00, T229/00, T242/00, T243/00, T245/00 to T248/00, T250/00, T252/00, T256/00 to T259/00, T265/00, T267/00, T268/00, T271/00, T274/00 to T276/00, T281/00, T287/00 and T296/00 Gruppo ormeggiatori del porto di Venezia and Others v Commission [2005] ECR II787, paragraphs 38 and 45). However, the distinctions in those cases were based, as with the case-law referred to in the previous paragraph, on considerations of economy of procedure.

52. The examination which the Commission proposes in the present case would not be in line with those considerations, since, even if it transpires from separate consideration of the admissibility of Flint's and Siegwerk's action that neither has locus standi , the Court must nevertheless consider the action as a whole. In that case, the statements made by Flint and Siegwerk would not be excluded from the Court's assessment. Since those statements were submitted to the Commission for assessment during the administrative procedure, they should in any event be taken into account in the present proceedings and the Court's assessment should cover all the pleas and arguments raised in the course of the present action.

53. For reasons of economy of procedure, it is not therefore appropriate to consider the admissibility of the action brought by Flint and Siegwerk separately.

B - The substance of the application

54. In support of their application, the applicants raised two pleas in law. The first alleges that the Commission did not follow the Guidelines, and the second, that it made factual errors and errors in its assessment. As regards the second plea, the applicants also allege, in essence, inadequacy of reasoning.

1. Preliminary observations

55. It must be pointed out that the Commission is bound by notices which it issues in the area of supervision of concentrations, provided they do not depart from the rules in the Treaty and from the Merger Regulation (Case T-114/02 BaByliss v Commission [2003] ECR II1279, paragraph 143, and Case T-119/02 Royal Philips Electronics v Commission [2003] ECR II1433, paragraph 242).

56. It is clear from paragraph 5 of the Guidelines that they describe the analytical approach which the Commission aims to follow in its appraisal of horizontal mergers and which it applies to the particular facts and circumstances of each case. Paragraph 13 states that it is not a question of a checklist' to be mechanically applied in each and every case; rather, the competitive analysis in a particular case will be based on an overall assessment of the foreseeable impact of the merger

in the light of the relevant factors and conditions. According to the same paragraph [n]ot all the elements will always be relevant to each and every horizontal merger... and it may not be necessary to analyse all the elements of a case in the same detail'.

57. It follows that the Guidelines do not require an examination in every case of all the factors mentioned in the Guidelines, since the Commission enjoys a discretion enabling it to take account or not to take account of certain factors (see, by analogy, Joined Cases T67/00, T68/00, T71/00 and T78/00 JFE Engineering and Others v Commission [2004] ECR II2501, paragraph 553).

58. Furthermore, it cannot be inferred from the obligation to state reasons that the Commission must provide reasons for its assessment of all the matters of law and of fact which may be connected with the notified concentration and/or which were raised during the administrative procedure. The requirement to state reasons must be adapted to suit the measure at issue and depends on the circumstances of each case, in particular the content of the measure in question, the nature of the reasons given and the interest which the addressees of the measure, or other parties to whom it is of direct and individual concern, may have in obtaining explanations. Therefore, although the statement of reasons must disclose in a clear and unequivocal fashion the reasoning followed by the institution which adopted the measure in question in such a way as to enable the persons concerned to ascertain the reasons for the measure and to enable the competent court to exercise its power of review, the Commission does not fail in its duty to state reasons if, in its decision, it does not include specific reasons concerning the assessment of a number of aspects of the concentration which seem to it manifestly irrelevant or insignificant or plainly of secondary importance for the assessment of the concentration (Verband der freien Rohrwerke and Others v Commission , paragraph 50 above, paragraphs 184 to 186).

59. It should also be pointed out that acts of the Community institutions are presumed to be valid (Case C-137/92 P Commission v BASF and Others [1994] ECR I2555, paragraph 48, and Case T-310/00 MCI v Commission [2004] ECR II-3253, paragraph 55), and that the legality of the individual contested measure must be assessed on the basis of the elements of fact and of law existing at the time when the measure was adopted. Consequently, the legality of the contested decision must be assessed on the basis of the facts existing at the time when the measure was adopted and not in the light of subsequent events (see, to that effect, Case T177/04 easyJet v Commission [2006] ECR II-1931, paragraphs 203 and 204).

60. Lastly, according to settled case-law, review by the Community judicature of complex economic assessments made by the Commission in the exercise of the power of assessment conferred on it by the Merger Regulation is limited to ascertaining compliance with the rules governing procedure and the statement of reasons, the substantive accuracy of the facts and the absence of manifest errors of assessment or misuse of powers (see Case T-342/00 Petrolessence and SG2R v Commission [2003] ECR II-1161, paragraph 101; Case T-87/05 EDP v Commission [2005] ECR II-3745, paragraph 151 and easyJet v Commission , paragraph 59 above, paragraph 44). In that respect, it should be borne in mind that not only must the Community judicature ascertain whether the evidence relied on is factually accurate, reliable and consistent but also whether that evidence contains all the information which must be taken into account in order to assess a complex situation and whether it is capable of substantiating the conclusions drawn from it (Case C-12/03 P Commission v Tetra Laval [2005] ECR I987, paragraph 39).

61. It is clear from the foregoing that review by the Court of First Instance of the contested decision is not limited merely to establishing whether or not the Commission took into account elements mentioned in the Guidelines as relevant to the assessment of the impact of the concentration on competition. The Court must also, in the course of its review, consider whether any possible omissions on the part of the Commission are capable of calling into question its finding that the

present concentration does not raise serious doubts as to its compatibility with the common market (see, to that effect, Case T201/01 General Electric v Commission [2005] ECR II-5575, paragraphs 42 to 44 and 48).

2. The first plea in law, alleging that the Commission did not follow the Guidelines

62. The first plea is subdivided into three parts concerning, respectively, market shares and concentration levels, non-coordinated effects and coordinated effects of the merger. It is appropriate to examine the second and third parts of this plea before the first part.

a) The second part, alleging the Commission's failure to follow the Guidelines as regards non-coordinated effects of the merger

63. In the context of the second part of the first plea, concerning non-coordinated effects of the merger at issue, the applicants put forward five complaints relating to, first, classification of the merging parties as close competitors, secondly, the credibility of the alternative suppliers identified by the Commission, thirdly, the opportunities for the merging parties' customers to switch supplier, fourthly, available capacity in the market, and fifthly, the merged entity's ability to hinder expansion by competitors.

64. In that regard, it is appropriate to recall the key elements of the Commission's reasoning in the contested decision relating to non-coordinated effects. The Commission based its finding that the proposed transaction does not raise competition problems on four criteria. First, it found that the competitors Arizona, Cray Valley, Respol and other smaller producers had excess capacity. Secondly, it took the view that price increases and supply problems during the peak period which had been pointed out by a customer were the result, according to the evidence provided, of a price increase in raw materials and temporary technical problems suffered by one producer. Thirdly, the Commission took the view that Arizona, Cray Valley, Respol and other smaller producers had both the capacity and the knowledge enabling them to counter anti-competitive conduct by the merged entity. Fourthly, it stated that the merged entity's customers could exercise countervailing buyer power owing to their size, in-house production of certain rosin resins (including Flint and Siegwerk), vertical integration in the production of rosin resins of others (Huber) and the dependence of rosin resin producers for their sales on two or three large customers.

The first complaint, alleging that the Commission did not follow the Guidelines with regard to the closeness of the merging parties' competitive relationship

- Arguments of the parties

65. The applicants contend that the Commission should have examined whether the merging firms were close competitors, whether they had a history of past rivalry, and whether the merger would eliminate an important competitive force. The applicants observe that they replied to the customers' questionnaire, first, stating that Hexion and Akzo were their main suppliers. Secondly, they maintained that those two undertakings were indispensable first and second choice suppliers to large printing ink producers, as they were more capable of supplying larger volumes than their competitors. Thirdly, they stated, with regard to certain grades of rosin resins for printing ink applications, that the merging parties possessed highly confidential know-how and were the only ones to have access to raw materials and customers necessary to develop them.

66. The applicants assert that the Commission did not take their comments into account and did not examine whether the merging parties were close competitors within the meaning of the Guidelines and whether the reduction in competition following the merger would lead to price increases, even though the activities of the two merging parties overlapped. The applicants note that the higher the degree of substitutability between the products of merging firms, including their technical

skills and their factories' respective production capacities, the more likely it is that they will raise their prices significantly postmerger. Given its size and available production capacity, the combination of Hexion and Akzo has made the merged company an indispensable supply partner of the applicants, allowing it to behave wholly independently of all other market participants, including customers.

67. The Commission replies that the classification of the merging parties as major suppliers does not prove that they were close competitors within the meaning of the Guidelines. At least three other suppliers are also classified as major suppliers by the applicants (without any indication of a preference), by other customers and by competitors. Since Arizona and Cray Valley have [confidential] and seven of the eight producers have stated that they could easily produce the whole range of rosin resins, the applicants have not substantiated their argument that the competitors of the merged entity could not invest in the development of potentially profitable new grades of resins. The applicants also failed to produce evidence of the closeness of their product portfolios or competitive strategies.

68. The interveners add that the Commission's finding in recital 68 of the contested decision, which states that other producers would be likely to defeat any attempt of the merged entity to raise prices unilaterally, necessarily implies that the merging parties' products are not significantly closer substitutes for each other than for those of their competitors.

- Findings of the Court

69. As a preliminary point, it must be pointed out that the contested decision did not expressly examine whether the merging parties were close competitors. In that regard, according to paragraph 28 of the Guidelines, such proximity is assessed by reference to the degree of substitutability between the parties' products. That same paragraph explains that indications as to the degree of substitutability may result, inter alia, from the fact that a substantial number of customers regard the merging parties as their first and second choices of supplier, that rivalry between the parties has been an important source of competition and that their competitors produce substitutes which are not close to the products of the merging parties.

70. It must therefore be ascertained whether the Commission failed to follow the Guidelines by not examining whether the merging parties were close competitors.

71. As regards, first of all, the applicants' argument that they had informed the Commission that the merging parties were their main suppliers, it is apparent from the file that the applicants also described Arizona, Cray Valley and Respol as their main suppliers and that other customers added Arez, Westvaco, Resinall and DRT (replies to questions 35 and 36 of the customers' questionnaire) to that list. In addition, of the applicants only Siegwerk clearly stated that the merging parties were its number one suppliers, Flint and Sun not having made any classification of their main suppliers. Of the other customers, only two described the merging parties as their number one and number two suppliers (Ciba Specialty Chemicals mentions Hexion and Akzo, Van Son refers to Hexion), but none of them specified whether this was the case for rosin resins. The other customers did not make any classification. In addition, Huber points out that Hexion lost market share, Van Son states that Akzo lost market share and Epple Druckfarben states that both merging parties lost market share.

72. In the light of all those replies, it must be concluded that the assertions of the applicants and the other customers that the merging parties were their main suppliers pre-merger does not indicate that a substantial number of customers regarded the merging parties as their first and second choice suppliers within the meaning of paragraph 28 of the Guidelines (see paragraph 69 above). Therefore, contrary to what the applicants claim, those assertions do not substantiate their argument that

the merging parties are close competitors within the meaning of the Guidelines.

73. As regards, secondly, the argument that the merging parties are indispensable suppliers to large printing ink producers, as they are more capable than their competitors of supplying the larger volumes needed, it must be borne in mind that Flint and Sun referred, in their replies to questions 40 and 45 (Flint) and 42 (Sun) of the customers' questionnaire, to the size of rosin resin volumes which those producers can supply. It is apparent from the administrative file that three of the merging parties' competitors state that the volumes are large because of the limited number of customers which have major global requirements and which purchase 90% of printing ink resins (replies of Neville, Cray Valley and Respol to question 40 of the competitors' questionnaire).

74. However, it is also apparent from the administrative file that the applicants also obtain supplies from smaller producers such as Megara and Kraemer (replies of Megara and Kraemer to question 48 of the competitors' questionnaire). This fact indicates that, at least for certain categories of rosin resins, the smaller competitors of the merging parties can meet the applicants' requirements. In that regard, it is clear from the contested decision that the smaller undertakings together have a market share which is not insignificant (around 21% according to the Commission) and that they have excess capacity. In addition, the market shares of Arizona, Cray Valley and Respol show that they are able to supply all volumes required. Furthermore, it is clear from the file that they also have considerable excess capacity. In addition, Arez is described by two of the customers who replied to question 35 of the customers' questionnaire as one of their main suppliers and the Commission points, in recital 60 of the contested decision, to Arez's growing impact on the market. Finally, the fact that other customers mentioned Westvaco, Resinall and DRT (smaller suppliers) as their main suppliers shows that the need for large volumes as argued by the applicants does not relate to all the demand in the market.

75. In the light of all those replies, it must be held that the assertion made by the applicants and by certain competitors that the applicants require large volumes does not therefore show that the competitors' products are less close substitutes, from the customer point of view, than the merging parties' products. Consequently, contrary to what the applicants claim, that assertion does not substantiate their argument that the merging parties are close competitors within the meaning of the Guidelines.

76. Thirdly, as regards the argument that the merging parties are the only ones to possess highly confidential know-how and the raw materials and customers necessary to develop certain grades of resins, it must be pointed out that almost all the merging parties' competitors indicated that they could easily produce the whole range of rosin resins (replies to question 25 of the competitors' questionnaire). Even though the applicants dispute that fact, in particular in relation to Arizona, it must be observed, however, that the applicants have not provided any evidence to that effect and that Arizona had also asserted, in reply to question 25 of the competitors' questionnaire, that it could easily produce the whole range of rosin resins. In addition, the market shares of Arizona and Cray Valley show that they have a customer base which is comparable in quantitative terms to Hexion's pre-merger customer base. Furthermore, the applicants have not given details of the nature of the alleged difficulties in accessing the necessary raw materials in the present case. Accordingly, the applicants have not sufficiently proven their argument.

77. Finally, it must be held that the applicants have not provided any evidence other than that referred to in the previous paragraphs to support the specific argument that there was a history of particular rivalry between the merging parties. By the same token, they also have not substantiated their claim that the merger eliminated an important competitive force within the meaning of paragraphs 37 and 38 of the Guidelines.

78. For those reasons, it must be held that the applicants have not shown that the merging parties

were close competitors within the meaning of the Guidelines. Accordingly, and in the light of the evidence put forward by the parties and examined above, the Commission cannot be criticised for not dealing with the closeness of competitive relations between the merging parties in the contested decision. Therefore, since the absence of such analysis does not undermine the Commission's finding, this plea must be rejected.

The second complaint, alleging that the Commission did not follow the Guidelines with regard to the credibility of the alternative suppliers

- Arguments of the parties

79. The applicants maintain that the Commission did not correctly examine whether the competitors on the market could be regarded as credible suppliers to the printing ink industry. When stating in recital 68 of the contested decision that it appears to be likely that ... other smaller players... have both the capacity and the knowledge [to be credible suppliers], the Commission ignored the applicants' submissions which indicated that pre-merger only four or five (main) players in the market were worth considering. The Commission, however, estimated the number of credible suppliers at 13. Contrary to its previous practice, the Commission took the view that suppliers accounting for less than 5% of total supply could be considered to be credible competitors and therefore deemed to exercise a sufficient competitive constraint.

80. In the view of the applicants, it is apparent from previous decisions that the Commission should have taken into account factors such as the credibility of fringe' suppliers (Commission Decision 2002/174/EC of 3 May 2000 declaring a concentration to be compatible with the common market and the EEA Agreement (Case No COMP/M.1693 - Alcoa/Reynolds) (OJ 2000 L 58, p. 25; Alcoa/Reynolds'), their reliability as long-term suppliers of sufficient quantities where supply of small and fragmented quantities on an irregular basis does not make them an option for customers (Alcoa/Reynolds), whether large customers could shift purchases from larger suppliers to a greater number of smaller suppliers (Commission Decision 92/553/EEC of 22 July 1992 relating to a proceeding under the Merger Regulation (Case No IV/M.190 - Nestlé/Perrier) (OJ 1992 L 356, p. 1; Nestlé/Perrier'), and whether other smaller suppliers would be able to meet orders in the short term for a significant part of the market (Commission Decision 91/535/EEC of 19 July 1991 declaring the compatibility with the common market of a concentration (Case No IV/M068 - Tetra Pak/Alfa-Laval), Tetra Pak/Alfa-Laval').

81. For those reasons, the applicants question the Commission's market definition, as a number of smaller competitors may be able to supply smaller customers, but are unable to supply larger needs such as those of the applicants. Therefore, the Commission should have investigated whether the market for rosin resins for printing ink applications had to be sub-divided into, on the one hand, a market for large customers, and on the other, a market for small customers.

82. The Commission considers that, by virtue of their market shares, Arizona, Cray Valley and Respol are credible alternative suppliers which also have significant excess production capacity. As regards smaller suppliers, the relevant question is not whether each of the smaller suppliers can compete with the main suppliers, but whether, as a whole, they can put competitive pressure on the merged entity. In that regard, the Commission notes that the smaller suppliers account for 21 to 25% of the total production capacity of rosin resins, that the majority of producers of rosin resins have confirmed that they were able to produce easily the whole range of rosin resins and that the applicants also sourced their needs from smaller competitors, including Megara and Kraemer. The contested decision also states that producers from outside the EEA, in particular Arez, may be credible alternative suppliers. Finally, according to the Commission, the facts in Alcoa/Reynolds, Nestlé/Perrier and Tetra Pak/Alfa-Laval are different from those in the present case.

83. The interveners support the Commission's reasoning, in particular in relation to statements

made by the applicants at joint meetings which took place prior to adoption of the contested decision. Those statements indicate that, in fact, the applicants purchase large quantities of rosin resins from various competitors of the merging parties. The interveners also claim that the applicants have not provided proof that the suppliers referred to in the contested decision are not credible alternatives.

- Findings of the Court

84. At the outset, it should be recalled that the Commission examined, in recitals 62 to 67 of the contested decision, the production capacity, and in particular, the excess capacity of the suppliers on the market, including smaller competitors of the merging parties. According to paragraph 31 of the Guidelines, customers of merging parties may have difficulties switching to other suppliers where there are few alternative suppliers or where their switching costs are too high, and, therefore, the merger may affect these customers' ability to protect themselves against price increases.

85. It must therefore be established whether the Commission failed to follow the Guidelines by taking the view that the smaller producers were alternative credible suppliers.

86. First of all, the applicants stated, during the administrative procedure, that there were no alternative suppliers and that only a very few producers (Akzo, Hexion, Arizona, Respol and Cray Valley) were capable of producing resins able to be used to produce printing inks (Siegwerk's replies to questions 12 and 15 of the customers' questionnaire), that the same five undertakings were the main suppliers of rosin resins in Europe (Flint's reply to question 36 of the customers' questionnaire) and that there were very few suppliers (Akzo, Hexion, Arizona and Cray Valley) (Sun's replies to questions 36 and 40 of the customers' questionnaire).

87. However, it has already been pointed out that it is also clear from the file that other customers also described other, smaller producers as their main suppliers (see paragraph 71 above), that the applicants also obtain supplies from smaller competitors of the merging parties (see paragraph 74 above), that smaller undertakings together have a significant market share and have excess capacities (see paragraph 74 above), and, finally, that almost all competitors of the merging parties stated that they could easily produce the whole range of rosin resins (see paragraph 76 above). Therefore, it must be held that the applicants have not shown that the Commission failed to follow the Guidelines by including the smaller competitors of the merging parties in the group of credible alternative suppliers. In particular, in the light of their combined market share and their excess capacities, the evidence on the file does not exclude the possibility that the smaller competitors can, at least with regard to the customers which described them as their main suppliers, exert competitive pressure on the merged entity.

88. Secondly, as regards the Commission's previous decisions on which the applicants rely, it must be observed that the credibility of alternative suppliers must be assessed according to the circumstances of each case. Consequently, the Commission's assessments of the facts in earlier cases cannot be transposed to the present case. In the light of the findings in the previous paragraphs, the Commission can not be accused of failing to make the same assessment of the facts in the present case as of those in the cases to which it refers (see, to that effect, General Electric v Commission , paragraph 61 above, paragraphs 118 to 120).

89. Finally, although the applicants submit that a number of smaller competitors would be capable of supplying smaller customers but could not meet larger needs such as those of the applicants, they confirmed, however, at the informal meeting of 8 November 2006, that they were not disputing the market definition set out in the contested decision. Consequently, the credibility of the alternative suppliers should not be assessed according only to the alleged needs of the large customers such as the applicants, but such assessment must encompass the needs of all purchasers on the market.

For the rest, that argument is the same as that examined in paragraphs 86 and 87 above and, therefore, should be rejected on the same grounds.

90. In the light of the foregoing, the applicants have not shown that the Commission failed to follow the Guidelines by taking the view that the merging parties' smaller competitors were credible alternative suppliers. Accordingly, that complaint must be rejected.

The third complaint in law, alleging that the Commission failed to follow the Guidelines with regard to the possibility for the merging parties' customers to switch suppliers

- Arguments of the parties

91. The applicants submit that the Commission should have assessed the possibility for the merging entities' customers to switch suppliers. Switching to alternative suppliers of rosin resin is a complicated process for ink production companies and requires exceptionally long lead-in periods, as evidenced by the applicants' replies to the customers' questionnaire and additional data submitted. The applicants indicated that, because of laboratory scale and additional production trials needed to qualify a new supplier, it usually took [confidential] to introduce a new resin, but that [confidential] could be necessary for some types of ink. Thus, even if credible alternative suppliers were available, customers would be unable to credibly threaten to resort, within a reasonable time frame, to alternative sources of supply... should [the] supplier decide to increase prices', as stated in paragraph 65 of the Guidelines. However, the Commission ignored the applicants' submissions on the difficulties and feasibility of switching suppliers.

92. The Commission replies that the applicants have not sufficiently substantiated their argument since, even if certain resins appear to require a lengthy qualification period, others seem to allow suppliers to be switched within a short time frame. In particular, certain types of resins produced by various suppliers may be pre-qualified, enabling suppliers to be substituted quickly. Furthermore, where contracts are concluded for an average duration of one to three years, with renegotiations on an annual basis, and where the qualification periods, according to certain customers, last [confidential], a qualification period of, for instance, six months, enables suppliers to be switched without difficulty. Finally, the Commission contends that it took account of the applicants' statements in recitals 21 and 60 of the contested decision.

93. The interveners contend that the large resin purchasers, in particular the applicants, pursue multiple supply strategies and that therefore they approve a number of suppliers when qualifying the important resins. Therefore, they are able to change supplier of those resins without delay.

- Findings of the Court

94. As a preliminary point, it must be observed that it is clear from recitals 21 and 60 of the contested decision that, when defining the relevant product market and assessing the merger's possible anti-competitive coordinated effects, the Commission took into account the periods, tests and adaptations necessary for the substitution, from the customers' point of view, of grades of rosin resins by other grades as well as the customised production of certain grades of rosin resins.

95. It must therefore be established whether the Commission failed to follow the Guidelines by not undertaking an analysis, in the context of its assessment of the merger's non-coordinated effects, such as that requested by the applicants, of the difficulties experienced by the merging parties' customers in changing supplier due to the need to qualify rosin resins.

96. First of all, the applicants' replies to the customers' questionnaire indicate that it is not possible to change supplier within a short period (Sun's reply to question 7 of the customers' questionnaire), that it can take [confidential] (Flint's reply to question 13 of the customers' questionnaire), [confidential] (Sun's reply to question 13 of the customers' questionnaire) or

[confidential] (Siegwerk's replies to questions 7 and 13 of the customers' questionnaire). At the same time, the applicants and the Commission state that the duration of supply contracts generally varies from three months to three years, with annual renegotiations in the case of multiannual contracts. Therefore, since the qualification periods and duration of contracts vary to that extent, the alleged difficulties in transferring orders to other suppliers, even if such difficulties exist, can only concern a part of those orders, that is, generally, the rosin resins for which there are no substitutes available from competing suppliers (see the paragraph below) and for which longer qualification periods are necessary. Accordingly, the applicants' argument concerns, in any event, only one sector of the market in question.

97. Secondly, it is apparent from email correspondence, submitted by Sun during the administrative procedure, that, [confidential]. Therefore, even though Sun argued at the hearing that this was an emergency, it is clear that, when necessary, qualification of grades of several rosin resins equivalent to those used by the applicants may be undertaken within a short time frame, thereby enabling orders to be transferred rapidly to other suppliers. In this regard, it should also be pointed out that almost all producers stated in their answers to question 25 of the competitors' questionnaire that they were capable of producing the whole range of rosin resins.

98. Thirdly, in reply to question 42 of the customers' questionnaire, Sun explained that, for its most important products, it sought to have two or three pre-qualified suppliers. In that respect, it should be pointed out that pre-qualification of rosin resins of several suppliers for the same application allows supply by several suppliers of the same resin, or even equivalent grades of resin, and a quicker change of supplier when necessary. Consequently, it is clear from the administrative file that, by virtue of pre-qualification of several suppliers, the applicants are able to transfer their orders for important rosin resins to other suppliers within shorter time frames.

99. In the light of the foregoing, it must be held that the applicants have not established that there are, as they alleged, considerable difficulties in changing supplier, given the need to qualify rosin resins, which prevent customers from credibly threatening to resort, within a reasonable time frame, to alternative sources of supply should the merged entity decide to increase prices anti-competitively. Consequently, and in the light of the evidence put forward by the parties and examined above, the Commission cannot be criticised for not extending its analysis beyond taking into account, in recitals 21 and 60 of the contested decision, of the limitations to substitution of rosin resins. Therefore, since the lack of analysis claimed by the applicants does not invalidate the Commission's finding, this complaint must be rejected.

The fourth complaint, alleging errors concerning existing capacity in the market

100. The applicants submit that the Commission should have determined whether there is spare or excess capacity in the market. The applicants consider that the Commission conducted an analysis of capacity constraints and of the possibility for competitors to expand output, but that it reached an inaccurate conclusion.

101. In this regard, it suffices to point out that, by this complaint, the applicants are not accusing the Commission of disregarding the Guidelines by failing to conduct an analysis of spare capacity in the market, but rather of having made errors in conducting that analysis. That question falls within the first part of the second plea and will be examined in that context (paragraph 162 et seq. below).

The fifth complaint, alleging that the Commission failed to follow the Guidelines with regard to the merged entity's ability to hinder expansion by competitors

- Arguments of the parties

102. The applicants submit that the Commission should have analysed whether the merged entity could hinder expansion by competitors. They dispute the Commission's assertion that the majority of the competitors, 11 out of 13, consider that the transaction will have no anti-competitive effects. They submit that the Commission had to explain why it considered that the merged undertaking would be constrained to such a degree that it would neither increase prices nor take other action detrimental to competition.

103. The Commission replies that the applicants' argument is not at all reasoned and that the question they raised was discussed at length in recitals 62 to 74 of the contested decision.

- Findings of the Court

104. As a preliminary point, it must be observed that the contested decision does not contain any express examination of the merged entity's ability to hinder expansion by competitors.

105. It must therefore be ascertained whether the Commission failed to follow the Guidelines by not undertaking an analysis of the merged entity's ability to hinder expansion by competitors.

106. In that regard, it should be borne in mind, according to paragraph 36 of the Guidelines, that some proposed mergers could significantly impede effective competition by leaving the merged entity in a position where it would have the ability to hinder expansion by competitors, and in such a case, competitors may not be in a position to constrain the merged entity to such a degree that it would not take actions detrimental to competition. Such a position may result, for instance, from control over the supply of inputs, over distribution possibilities or over patents and from the financial strength of the entity in question.

107. In the present case, it must be held that the applicants do not advance any evidence for the purposes of paragraph 36 of the Guidelines to support their specific argument that the merged entity will enjoy a position enabling it to hinder expansion by competitors. Although they assert, in another context, that the merged entity may, on account of its size, infrastructure and experience, acquire a high degree of control or influence over the supply of gum rosin and will have a bargaining power significantly exceeding that of its competitors (see paragraph 148 below), the Commission submitted, without being contradicted by the applicants, that the merged entity will only purchase 5 to 10% of global gum rosin production, which is not indicative of significant purchasing power (see paragraph 154 below). Thus, the applicants have not established, in the present case, that the Commission was required to examine the question of whether the merged entity had the ability to hinder expansion by competitors.

108. Furthermore, the Commission is right in stating, in response to the claim that it was required to set out the reasons why it considered that the merging parties would not increase their prices, that the contested decision sets out, in recitals 62 to 74, the reasons why the Commission considered that competitive constraints would prevent the merged entity from taking action detrimental to competition.

109. In those circumstances, the Commission cannot be criticised for not conducting an analysis of the merged entity's ability to hinder expansion by competitors. Since the absence of analysis claimed by the applicants does not undermine the Commission's finding, that complaint must be rejected.

b) The third part, alleging that the Commission did not follow the Guidelines with regard to the coordinated effects of the merger in dispute

Arguments of the parties

110. The applicants assert that the Commission failed to analyse properly the coordinated effects which could result from the merger. In their view, the Commission's analysis, based in large measure on the same facts as those relied on by the Commission to find against the creation of a dominant position post-merger, is deficient. Had the Commission reviewed objectively and critically the

evidence at its disposal and followed the Guidelines on the appraisal of coordinated effects, it would have concluded that the high combined market share of the merged firm, the few credible alternative suppliers, the capacity constraints and the absence of buyer power pointed both to a position of collective dominance and to a market displaying certain characteristics likely to lead to coordinated effects.

111. An assessment of the case in accordance with the Guidelines would have led to an examination, first, of the ability of market players to monitor to a sufficient degree whether the terms of coordination were adhered to, second, of the existence of credible deterrent mechanisms, and third, of the reactions of third parties and whether they would be able to affect the results expected from the coordination. Even taking account of all the market players that the Commission described as viable competitors in the contested decision, the rosin resin market is highly concentrated, with the top four players accounting for 60 to 90% of the market. Previous Commission decisions indicate that where three or more leading suppliers account for 60% or more of sales, there may be a risk of collective dominance.

112. The Commission considers that it was entitled to limit its reasoning to some key elements because coordinated effects were unlikely to materialise in the present case. Recital 60 of the contested decision points out that the market is not homogenous - most customers buying specific grades of rosin resin that are sometimes customised for them - that there are many producers in the market, that there is a lack of symmetry in market shares, and that the increasing impact of producers outside the EEA, such as Arez (China), gives rise to some concerns among producers. The Commission stands by this analysis and takes the view that the lack of homogeneity and transparency suggests that it is not easy to agree terms of coordination and that it is difficult to monitor the behaviour of competitors. The mere fact that a limited number of players together account for a high share of the market is not a sufficient basis for a finding of collective dominance.

113. The interveners consider that the same facts are relevant to the analysis of coordinated effects as to that of non-coordinated effects of a concentration. They contend that the merger will increase asymmetry in market shares, which, according to the Guidelines and the case-law (Case T-102/96 Gencor v Commission [1999] ECR II-753, paragraph 134), would make it less likely that the undertakings would be able to coordinate. Furthermore, the applicants' claims as to the difficulties experienced by customers in switching suppliers and the inability of competitors to expand their production would, if true, indicate, according to the Guidelines, that producers lack both the incentive and the ability to punish deviation from the terms of the coordination. Therefore, the Commission cannot be expected to engage in a lengthy analysis of the coordinated effects.

Findings of the Court

114. First of all, it must be recalled that the Commission justified its finding that coordinated anti-competitive behaviour has little chance of being adopted post-merger on four criteria. It took the view, first, that the market in question was not characterised by the homogeneity of the products sold, which were sometimes customised, secondly, that the market had a large number of producers, thirdly, that the market shares were very different, and fourthly, that about 30% of the producers which participated in the market investigation had voiced their concerns about the increasing impact of producers outside the EEA, such as Arez (China).

115. It must therefore be ascertained whether the Commission failed to follow the Guidelines by not carrying out a more detailed analysis of any coordinated effects of the merger.

116. In relation, first, to the contention that the Guidelines provide for an examination of the ability of market players to monitor behaviour deviating from the terms of any coordination, of the existence of credible deterrent mechanisms and of the potential reactions of third parties, it must be pointed out that the Guidelines provide for the examination of those factors, respectively,

in paragraphs 49 to 51, 52 to 55 and 56 and 57. That section of the Guidelines also underlines, however, in paragraphs 44 to 48, the need for a common understanding on the terms of coordination.

117. First, paragraphs 45 and 48 of the Guidelines state that firms may find it easier to reach a common understanding on the terms of coordination if they are relatively symmetric, especially in terms of cost structures, market shares, capacity levels and levels of vertical integration. It is also clear that the less complex and the more stable the economic environment, the easier it is for firms to reach a common understanding on the terms of coordination. Therefore, it is easier, for instance to coordinate among a few players than among many. It is also easier to coordinate on a price for a single, homogeneous product, than on hundreds of prices in a market with many differentiated products.

118. It follows that the absence of homogeneity of the products sold, the high number of producers in the market and the asymmetry of market shares indicate that it is not easy for firms to reach a common understanding on the terms of any coordination. It that regard, it should be recalled that the Commission stated in recital 60 of the contested decision that the market in question was not characterised by the homogeneity of the product sold, that there were a number of producers and that their market shares were very different. It follows that the Commission focussed its analysis on whether the undertakings could reach a common understanding on the terms of coordination and that it considered, without however saying so explicitly, that for those reasons it was unlikely that the undertakings would reach a common understanding on the terms of coordination.

119. Secondly, the Guidelines state in paragraph 49 that only the credible threat of timely and sufficient retaliation keeps firms coordinating their conduct from deviating. Markets therefore need to be sufficiently transparent to allow the coordinating firms to monitor to a sufficient degree whether other firms are deviating from the terms of coordination, and thus to know when to retaliate. The Commission considers, in paragraph 50 of the Guidelines, that transparency in the market is often higher, the lower the number of active participants in the market, and that the degree of transparency often depends on how market transactions take place in a particular market.

120. It follows that a high number of producers in the market and an absence of homogeneity of product sold, particularly where it is customised for the customer, indicates a low level of transparency and that, therefore, monitoring of deviating conduct is difficult. In that regard, it should be recalled that, in recital 60 of the contested decision, the Commission stated that the market in question was not characterised by the homogeneity of the product sold, explaining that the product was sometimes customised for the customer, and that there were many producers in the market. Consequently, the Commission also assessed the market players' ability to monitor compliance with the terms of coordination and considered, without saying so explicitly, however, that for those reasons monitoring of non-compliance was difficult in the present case.

121. In addition, the Commission stated, in recital 60 of the contested decision, that around 30% of the producers which participated in the market investigation had expressed concerns about the increasing impact of producers from outside of the EEA, such as Arez. In that regard, their effect on the market can make both the achievement of the mutual understanding on the terms of coordination and the monitoring of non-compliance even more difficult.

122. In those circumstances, the Commission cannot be accused of failing to follow the Guidelines in considering, first, that coordinated anti-competitive behaviour had little chance of being adopted post-merger, and secondly, that an assessment of deterrent mechanisms and of reactions of third parties was not necessary.

123. As regards, secondly, the argument that the combined market shares of the merging parties, the shortage of credible alternative suppliers, the capacity constraints and the absence of buyer

power pointed to collective dominance, it must be observed at the outset that those elements are not among those set out in the Guidelines as being relevant to the assessment of a merger's possible coordinated effects.

124. In particular, according to the Guidelines, purchasing power is a factor to be taken into account when assessing whether the merging parties' customers have countervailing buyer power; the existence of capacity constraints plays a significant role only in the examination of non-coordinated effects. In any event, the Commission found, in recitals 62 to 67 of the contested decision, that there was excess capacity in the market and, in recital 69, that the customers had significant purchasing power. To the extent that the applicants accuse the Commission of having erred in its assessment in this regard, these aspects are examined in the context of the second plea (see paragraphs 162 et seq. and 206 et seq. below).

125. In addition, neither the merging parties' combined market share of [40-50]% nor the alleged shortage of credible alternative suppliers point to likely coordination between undertakings on the relevant market. Furthermore, it has already been held that the applicants have failed to establish that the smaller suppliers were not credible alternatives (see paragraphs 84 et seq. above). The inferences which may be drawn, with regard to paragraph 17 of the Guidelines, from the merged entity's market share will be examined in paragraph 135 et seq. below.

126. As regards, thirdly, the argument that the first four operators hold between 60% and 90% of the market indicates that there may be a risk of collective dominance, the confidential version of the contested decision shows that the merging parties, Cray Valley and Arizona together hold [confidential]% of the market, rising to [confidential]% with Respol. In that regard, it must be borne in mind that, while it is necessary, for the purposes of showing that there is a risk of collective dominance, to establish the existence of a significant collective market share, a significant collective market share is not by itself sufficient to prove that such collective dominance exists. As set out in the Guidelines, the market conditions must be conducive to the creation of a collective dominant position. However, it has already been held that, in the present case, the Commission cannot be accused of failing to follow the Guidelines by considering that, on account of the difficulties in agreeing the terms of coordination and the difficulty in monitoring such coordination, coordinated anti-competitive conduct had very little chance of being adopted post-merger (see paragraphs 115 to 122 above).

127. In relation, fourthly, to the argument that previous Commission decisions indicate that where three or more leading suppliers account for 60% or more of sales, there may be a risk of collective dominance, it must be pointed out, first of all, that the applicants do not refer to any specific previous decision, secondly, that it is clear from the foregoing that a significant collective market share is not by itself sufficient to prove the existence of such dominance, but that the market must be conducive to the creation of a collective dominant position, and thirdly, that in the present case the Commission cannot be accused of failing to follow the Guidelines by considering that coordinated anti-competitive conduct had very little chance of being adopted post-merger (see paragraphs 115 to 122 above).

128. In relation, finally, to the applicants' claim that the Commission's analysis of the merger's possible coordinated effects is based to a large extent on the same facts as those on which it relied to find against the creation of a dominant position post-merger, it must be observed that the same facts may be relevant to several distinct aspects of the Commission's assessment of the possible effects of a merger and that, therefore, consideration of those facts at several points in the analysis does not in any way limit their relevance in those respective contexts. In the present case, it suffices to point out in this regard that it is clear from the considerations set out in paragraphs 115 to 122 above that the Commission based its analysis of any coordinated effects of the merger

on matters of fact relevant to that analysis.

129. In those circumstances, the Court must hold that the applicants have not established that the Commission failed to follow the Guidelines by not carrying out a more thorough analysis of any coordinated effects of the merger. Consequently, that part of the plea must be rejected.

c) The first part, alleging that the Commission failed to follow the Guidelines with regard to market share and concentration levels

Arguments of the parties

130. The applicants claim that, while the Commission was correct to conclude that the transaction would result in a merged entity of the first and the second players in the rosin resin market with a very high combined market share of 40 to 50%, indicative of dominance (Babyliss v Commission , paragraph 55 above, paragraph 329), and with the third and the fourth players having a mere 10 to 20% each, it failed to draw the right conclusions in accordance with its own Guidelines (paragraphs 16 to 21). The Commission also failed to consider the concentration levels in the relevant market, despite their providing a valuable indicator of the competitive situation in the market. In the present case, appropriate consideration of that factor would have revealed that the change in concentration levels brought about by the merger raised real concern.

131. The Commission replies that paragraph 17 of the Guidelines declares that only very large market shares of 50% or more may in themselves be evidence of the existence of a dominant market position. Furthermore, paragraph 21 of the Guidelines does not contain a presumption that concentration levels above those indicative thresholds would give rise to competition concerns. Therefore, where other case-specific grounds exist for concluding that there are no serious doubts, it is not necessary to examine concentration levels.

132. The interveners submit that market shares and concentration levels are only the starting point for the Commission's analysis. Furthermore, the issue in BaByliss v Commission , paragraph 55 above, was not whether the Commission should have presumed that a market share in excess of 40% was likely to give rise to dominance. Furthermore, the Court of First Instance found in Case T-290/94 Kaysersberg v Commission [1997] ECR II-2137, paragraph 179, that a market share of 43.2% was not sufficient to give rise to dominance where the two next largest competitors had market shares of 24.5% and 13.4%.

Findings of the Court

133. As a preliminary point, it must be observed that the Commission set out the market shares of the various suppliers in the market in recitals 51 to 53 of the contested decision, but did not assess those market shares according to the criteria stated in paragraph 17 of the Guidelines nor did it make a Herfindahl-Hirschmann index (HHI') calculation for the purposes of comparison with the thresholds laid down in paragraphs 19 to 21 of the Guidelines.

134. It must therefore be established whether the Commission failed to follow the Guidelines by not carrying out, in the contested decision, an analysis, first, of the market shares in relation to the criteria set out in paragraph 17 of the Guidelines, and secondly, of the concentration levels.

135. As regards, first of all, the market shares, it must be borne in mind that, according to paragraph 17 of the Guidelines, only very large market shares of 50% or more may in themselves be evidence of the existence of a dominant market position. According to the same paragraph of the Guidelines, in the case of a smaller market share, the transaction may raise competition concerns in view of other factors such as the strength and number of competitors, the presence of capacity constraints or the extent to which the products of the merging parties are close substitutes. It follows that, in the present case, the analysis of market shares would not in itself have shown the existence

of dominance, since the merged entity only held [40-50]% of the market. Therefore, the analysis of the other factors set out in paragraph 17 of the Guidelines is necessary to establish whether, overall, there is evidence of a dominant position. It follows from examining the second and third parts of the plea, however, that the other factors stated in paragraph 17 of the Guidelines and alleged by the applicants to exist in the present case also fail to indicate that the merged entity was dominant.

136. In relation to the reference to BaByliss v Commission , paragraph 55 above (paragraph 329), it must be noted, as the interveners point out, that the issue in that case was not whether a market share in excess of 40% was likely to give rise to dominance, but whether, having established that threshold in that case, the Commission had made a proper assessment of other factors. Furthermore, the interveners correctly point out that it is apparent from another case that a market share of 43.2% is not sufficient to give rise to dominance (Kaysersberg v Commission , paragraph 132 above, paragraph 179). It follows that the existence of a dominant position must be assessed on a case-by-case basis according to the circumstances of the case and that the Commission's findings on the factual circumstances of the merger in BaByliss v Commission , paragraph 55 above (paragraph 329), cannot be transposed to the present case.

137. With regard, secondly, to concentration levels, it must be pointed out that paragraphs 19 to 21 of the Guidelines set out, essentially, the HHI thresholds below which a merger is unlikely to raise competition problems. Thus, the Commission considers, in particular, that a merger is unlikely to raise horizontal competition concerns in a market with a post-merger HHI between 1000 and 2000 and a delta below 250, or where a post-merger HHI is above 2000 and the delta below 150, save in exceptional circumstances. According to paragraph 16 of the Guidelines, the HHI is equal to the sum of the squares of the individual market shares of each of the firms in the market.

138. In the present case, it must be pointed out, first, that the applicants have not elaborated on their argument on HHI value brackets, even though they knew the exact market shares used in the contested decision as soon as the Commission's defence was lodged. However, the HHI calculated on the basis of those figures is shown to increase from around [confidential] pre-merger to about [confidential] post-merger, which represents a delta of approximately [confidential]. Those values indicate that the effects of the merger on the market exceed the HHI thresholds below which the merger does not, in principle, raise any competition concerns. However, the second sentence of paragraph 21 of the Guidelines states that exceeding those thresholds does not give rise to a presumption of the existence of competition concerns. It must be observed, however, that the greater the margin by which those thresholds are exceeded, the more the HHI values will be indicative of competition concerns.

139. It follows that the post-merger HHI value does not provide any clear indication of the existence of competition problems in the present case, since it does not significantly exceed the HHI threshold of 2000. In fact, only the delta significantly exceeds the corresponding HHI threshold. However, that value is the only one likely to indicate competition problems, while neither the market shares nor the factors examined in the context of the second and third parts of this plea are indicative of such problems. In those circumstances, the Commission cannot be accused of disregarding the Guidelines in considering that there was no need to assess the concentration levels in the contested decision.

140. Finally, it must be pointed out that paragraph 14 of the Guidelines states that market shares and concentration levels provide useful first indications of the market structure and of the importance of the merging parties, but it does not require the Commission to assess those factors in every decision.

141. It is clear from the foregoing that the Commission cannot be criticised for not analysing,

in the contested decision, the concentration levels and market shares in relation to the criteria set out in paragraph 17 of the Guidelines. Since the absence of such analysis does not undermine the Commission's findings, that part must be rejected.

142. It follows from the foregoing that the first plea in law must be rejected.

3. The second plea, alleging errors of fact and of assessment

143. The second plea in law is subdivided into four parts, by which the applicants assert that the Commission's analysis of the merger's non-coordinated effects is tainted by errors concerning, first, free capacity in the market for rosin resins for ink applications, secondly, the nature and extent of customers' vertical integration, thirdly, the impact of significant raw material price increases, and fourthly, the alleged countervailing buyer power wielded by customers. In the context of their arguments advanced in the first and fourth parts of the present plea, the applicants also criticise the inadequate reasoning of the Commission's findings, which will be examined in paragraph 218 et seq. below.

a) First part, alleging errors in the assessment of free capacity in the market

Arguments of the parties

144. The applicants consider that the Commission's assessment of the free capacity of the merging parties' competitors lacks sufficient reasoning and is vitiated by manifest errors of assessment, on the ground that the Commission failed to examine the availability of raw materials needed in the production of rosin resins. The importance of such availability is reflected in paragraph 71(b) of the Guidelines and in the Commission's previous decisions. Raw material shortages prevent competitors from increasing production and raise barriers to entry and expansion in the market.

145. In earlier decisions, the Commission concluded that serious competition concerns could be raised on account of a lack of available capacity or an insufficient number of suitable competitors and examined whether competitors had sufficient spare capacity to cover sales to a significant extent, whether they could make available such capacity and whether potential competitors could contribute to making available spare capacity (Commission Decision 2006/171/EC of 3 May 2005 declaring a concentration compatible with the common market and the functioning of the EEA Agreement (Case COMP/M.3178 - Bertelsmann/Springer/JV) (OJ 2006 L 61, p. 17; Bertelsmann/Springer/JV'). The Commission conducted detailed investigations into access to raw materials for alternative suppliers to be able to compete with the merged entity, emphasising and examining closely the need for access to necessary resources (Bertelsmann/Springer/JV), easy access to raw materials [Commission Decision of 29 March 2006 declaring a concentration compatible with the common market and the functioning of the EEA Agreement (Case COMP/M.3975 - Cargill/Degussa Food Ingredients); Cargill/DFI'], access to essential inputs [Commission Decision 96/177/EC of 19 July 1995 declaring a concentration to be incompatible with the common market and the functioning of the EEA Agreement (Case IV/M.490 - Nordic Satellite Distribution) (OJ 1995 L 53, p. 20; Nordic Satellite Distribution')], the availability of increased supplies (Commission Decision 2000/42/EC of 9 March 1999 relating to a proceeding under the Merger Regulation (Case IV/M.1313 - Danish Crown/Vestjyske Slagterier) (OJ 1999 L 20, p. 1; Danish Crown/Vestjyske Slagterier') and other aspects such as geographical location, available infrastructure, transport costs, operating costs, political stability, available land for plant expansion and the limited availability of supplies (Alcoa/Reynolds, paragraph 80 above).

146. In the contested decision, the Commission did not follow its previous decisions and ignored, misrepresented or dismissed evidence provided by the applicants without providing reasons for doing so. The applicants submitted to the Commission that capacity on the market for rosin resins was constrained, that they made great efforts each year to secure the supplies needed for their publication

inks and that it was difficult to obtain the necessary volume commitment from the suppliers, given the decline in their production capacity. They submitted further that capacity was the only relevant criterion for awarding a supply contract, that they would be forced to include the merged entity in their supplier portfolio, as the remaining suppliers could not provide the required volumes, that the lack of availability of raw materials was a major hurdle to market entry, that there had been severe procurement problems in the recent past due to a lack of availability of raw materials and that a competing supplier had had to stop production of some rosin resins due to a shortage of raw materials.

147. While the Commission took into account in the contested decision an additional submission of Sun that provided specific examples of supply shortages, it failed to draw the correct conclusions in that it attributed those shortages to technical maintenance and not to a general lack of production capacity in the overall market. The Commission neither re-examined this information after having discussed it with the merging parties nor explained how an isolated technical problem at a supplier could lead to a complete refusal of that supplier to supply a customer when, according to the Commission's own account, all suppliers h ad excess capacity. It is also unclear how the Commission could conclude that [i]t appears that the customer in question was able to find alternative sources of supply which mitigated the impact of the unexpected shortage'. No such information had been submitted to the Commission, nor had it contacted Sun to corroborate that statement.

148. The applicants also point to letters submitted during the administrative procedure which show that Hexion itself had to deal with production capacity issues, because it could not confirm the quantities requested and had to draw lots for its customers. They also submit that, given the shortage of raw materials, the merged entity may, on account of its size, infrastructure and experience acquire a high degree of control or influence over the supply of rosin resins and that this will further disadvantage the smaller suppliers that cannot match the size and strength of Hexion and Akzo. Inevitably, any hypothetical expansion by rival firms will be even more difficult if not impossible. However, the Commission did not investigate whether the combined bargaining power of Hexion and Akzo over providers of gum resin was likely to significantly exceed that of their competitors and what effect that would have on the market.

149. The applicants submit that three internet documents confirm the scarcity of raw materials in the past few months and the applicants' appraisal of the industry dynamics. In their view, in a recent report on resins, published by Ink World Magazine , a Product Manager for resins of Hexion stated that the single largest issue currently facing the resin industry was inconsistent availability of key materials and the corresponding cost increases and that, from Hexion's perspective, cost increases and shortages of tall oil rosin and gum rosin were critical issues. A joint statement on 2 August 2006 by Megara and Resinall similarly confirms, in the view of the applicants, that the supply situation was very difficult, as they state that this year the industry faced unprecedented challenges, including raw material shortages and increased costs, that, as the busiest time of the year was approaching, recent developments made further supply disruptions likely and that, therefore, Resinall was not accepting new customers or business until further notice and would make every effort to avoid the need for quotas. Finally, the website of DRT reveals, according to the applicants, that the latest news from China concerning raw materials shows that the situation remains very difficult.

150. The applicants further submit that, whilst the Resin Report' and the Megara and Resinall statement were not available by 29 May 2006, it is surprising that the Commission failed to perceive any signs of a raw material shortage before adopting the contested decision. While the contested decision notes that Megara and DRT have free capacity of 5 000 t (representing 50% of its production capacity) and 1 000 t (representing approximately 6% of its production capacity) respectively, Megara announced fears that it would not even be able to fulfil its existing commitments. According to

the applicants, moreover, DRT is also facing serious supply problems.

151. The applicants also question the Commission's methodology in measuring capacity. While it realises that demand is seasonal, entailing supply problems due to capacity constraints, it fails to appreciate that an industry characterised by excess capacity should be able to use that excess capacity to meet customers' orders in periods of high demand.

152. The applicants conclude that the data the Commission had at its disposal does not support its conclusions that the majority of customers have acknowledged that the market has overcapacity'. They consider the Commission's assertion that five out of seven customers indicated that the market [was] not capacity constrained and [had] overcapacity' and that two other customers did not take a position' is incorrect since the applicants all stated that the market was capacity constrained.

153. First of all, the Commission notes that the applicants do not dispute that the merging parties' competitors had overcapacity amounting to at least 19.5% of total production in the market, and 41% taking into account the estimates of the market share for the producers which did not reply to this question.

154. Second, the Commission submits that the applicants' argument is conceptually flawed because shortages of raw materials in a market are liable to affect all suppliers in the same way. Anti-competitive effects would only result if the merged entity had preferential access to raw materials, thereby allowing it to limit its competitors' access to those inputs. However, the applicants do not contend this and there is no indication to this effect. In fact, it is clear from a document taken off the Internet by the Commission that only 25% of rosin is used for the production of resins for printing ink applications. Consequently, the merged entity is only likely to purchase, by virtue of its [20-30]% global market share for rosin resins (recital 53 of the contested decision), 5 to 10% of global rosin production, which is not indicative of significant purchasing power.

155. Third, the market investigation did not suggest that shortages of raw materials were a barrier to increases in production. While it did not specifically ask the merging parties' competitors whether they were facing shortages of certain rosins, the Commission considers that that information would have been mentioned in their answers to questions 39 and 40 of the competitors' questionnaire if they had considered that those shortages were a major obstacle to resin production. However, that is not the case. The Commission also contends that the only customer who mentioned the problem of raw material shortages during the administrative procedure was Siegwerk. Both Flint and Sun remained silent during the administrative procedure on a problem which they now regard as a key element for the assessment of the concentration. Furthermore, the information submitted to the Commission concerning [confidential] points to, respectively, problems of a technical nature and maintenance measures for the reactors. The information does not contain any reference to raw material shortages.

156. As regards, fourth, the publications to which the applicants refer, the Commission recalls that the lawfulness of the contested measures must be assessed according to matters of fact and law which existed on the date the measure in question was adopted. It also takes the view that a close examination of those documents shows that none of them contains indications of shortages of raw materials that would have impeded increase in the production of rosin resins.

157. Fifth, in relation to its previous decisions, the Commission argues that those cases concerned very different facts from those in the present case and that they are therefore irrelevant to this case.

158. Finally, the Commission observes that, in reply to questions 35 and 39 of the customers' questionnaire, Siegwerk stated that there [was] some overcapacity in the market'.

159. The interveners state that resin prices had climbed sharply at the time of the merger owing to a temporary shortfall in supply relative to demand resulting from a combination of low starting inventories, bad weather that delayed the gum rosin harvest and speculation, but that rosin could be obtained at the market price and that prices had fallen subsequently. In reference to a meeting with Sun, which took place after the contested decision was adopted, the interveners submit that the applicants knew this when they lodged their application.

160. As regards two of the publications to which the applicants refer, the interveners maintain that the statements which they contain are irrelevant, given that they do not have any connection with rosin resin production in Europe. The third states that Arez began construction in China on a project to double its resin production capacity, which implies that that undertaking believed it had the necessary access to raw materials. Furthermore, those publications, together with a manufacturing and sales agreement between Megara and Resinall, are examples of new market entry which show that barriers to entry and expansion were low.

161. Finally, no facts support the assertion that the merged entity could obtain preferential access to raw materials. Rather, at a meeting on 7 April 2006, Sun expressed concerns that Hexion was not vertically integrated in the rosin sector, unlike some of its competitors.

Findings of the Court

162. By the first part of this plea, the applicants essentially put forward two complaints, the first alleging that the Commission erred in finding that there was excess capacity in the market, the second alleging that it erred in failing to analyse, in the contested decision, either the availability of raw materials needed to produce rosin resins or the impact of alleged raw material shortages on the utilisation of capacity.

- The first complaint, alleging errors concerning existing capacity in the market

163. It must be recalled, at the outset, that the Commission considered in recitals 63 to 67 of the contested decision that the market was characterised by excess capacity.

164. The Court must therefore examine whether the Commission made an a manifest error of assessment by considering that there was excess capacity in the market.

165. As regards, first, the alleged general and seasonal constraints, it is clear from the administrative file that the applicants stated that there were constraints on the market impeding production capacity, that the suppliers' capacity was potentially in decline and that Sun expended great effort each year to secure the supplies it needed, in particular for the period from September to December, when demand was seasonally high and that production capacity was insufficient (replies of Flint to question 40 and of Sun to question 39 of the customers' questionnaire). In addition, in its supplementary observations, Sun stated that [confidential].

166. In this regard, it should be recalled that the contested decision is based primarily, in recitals 62 to 65, on information provided by the merging parties' competitors, according to which there was spare production capacity of at least 19.5% of total production on the market and which could reach, according to estimates, as high as 41% (see paragraph 25 above). According to recital 65 of the contested decision, five of the seven customers who replied to the questionnaire acknowledged that the market had overcapacity. To the extent that the applicants dispute this, the Commission correctly refers to Siegwerk's replies to questions 35 and 39 of the customers' questionnaire, in which it recognises that there is excess capacity. Therefore, it is clear from the file that only Flint and Sun clearly stated, during the administrative procedure, that capacity was constrained. It is also clear from Sun's further observations and [confidential] reply that [confidential]. In fact, they show that [confidential].

167. Furthermore, it is also clear from email correspondence provided by Sun that it was [confidential]. Consequently, the Commission was under no obligation to provide further explanation of how [confidential] or to check its assertions in that regard with Sun. Furthermore, since the information provided [confidential], the Court considers that the Commission was not required to check this aspect with Sun.

168. In those circumstances, the Court considers that the Commission was not required to corroborate further the findings set out in recital 67 of the contested decision and that it made no manifest error of assessment in considering that there was excess capacity in the market.

169. As regards, secondly, the alleged capacity constraints experienced by the applicants' competitors, Flint indicated that other suppliers did not have sufficient free capacity, that it was very difficult to obtain the relevant volume commitments which they needed from the suppliers, that capacity was the main criterion to be taken into account when concluding a supply contract and that it was required to include the merged entity in its supply portfolio, as the other suppliers were unable to supply it with the volumes it needed (replies to questions 12, 40, 43 and 45 of the customers' questionnaire). Furthermore, Sun stated that all rosin resin producers currently supply the ink industry and that, as a result, there was no alternative supplier available to the industry, that the required volume was one of the criteria for concluding supply contracts, that no supplier today was capable of meeting its needs and that all the major rosin purchasers had multiple supply strategies (replies to questions 12, 42 and 44 of the customers' questionnaire). Finally, Siegwerk stated that there was no alternative to the suppliers established in Europe (reply to question 12 of the customers' questionnaire).

170. In that regard, it must be observed that, in the present case, the only relevant question is whether the available capacity permits the merging parties' customers to transfer orders, until now provided by the merging parties, to other existing suppliers or potential new entrants. It is clear from the answers to the customers' questionnaires set out in the previous paragraph that only Flint clearly stated, during the administrative procedure, that there were problems connected with the volumes available from competitors of the merging parties. Flint, however, also stated, as regards difficulties in obtaining commitments to supply for the relevant volumes' from suppliers, that such commitments could be obtained if the customer was prepared to pay the price (If we pay, we get!', reply to question 40 of the customers' questionnaire). Thus, the alleged difficulties identified appear to be linked more to the level of prices charged by the suppliers depending on demand than to capacity shortages.

171. Next, it is not necessary, in order to discourage any anti-competitive conduct on the part of the merged entity, for all its customers to be able to transfer all their orders to other suppliers. In fact, the possibility for the applicants to transfer a substantial part of their requirements to other suppliers may be regarded as a threat liable to cause sufficient losses for the merged entity to deter it from pursuing such a strategy. In the present case, it is clear from the multiple supply strategy which Sun referred to during the administrative procedure that customers seek to include a number of producers in their supply portfolio. It is clear from the market shares of Arizona, Cray Valley and Respol as well as from their production capacities and significant excess capacity, identified in recitals 51 and 62 to 64 of the contested decision and not disputed by the applicants, that those suppliers are capable of supplying the large volumes that the applicants may require. It must also be pointed out that the smaller suppliers together have a market share of around 21% and significant excess capacity. Therefore, the Court considers that the Commission did not make a manifest error of assessment in finding, in recitals 68 and 71 of the contested decision, that the other producers in the market had the capacity to be able to counter anti-competitive conduct and to supply the merging parties' major customers.

172. Finally, it must be remembered that only Flint and Sun submitted, during the administrative

procedure, that there were capacity constraints, while the other customers, including Siegwerk, and the merging parties' competitors all accepted that there was excess capacity. For those reasons, the Court considers that the Commission did not make a manifest error of assessment in considering that the applicants' competitors were not under capacity constraints capable of preventing those customers from transferring a sufficiently significant part of their orders to other suppliers.

173. In the light of the foregoing, the Court considers that the Commission was entitled to consider that there was excess capacity in the market. Consequently, this complaint must be rejected.

- The second complaint, alleging errors relating to the availability of raw materials

174. As a preliminary point, the Court observes that in recital 67 of the contested decision the Commission found that, in the years leading up to the merger, there was an increase in the prices of raw materials constituting essential inputs in the production of rosin resins, such as crude oil, gum rosin and tall oil resin, the price per tonne of rosin resin having increased from USD 500 in January 2004 to around USD 1 250 on the date of the contested decision.

175. It must therefore be established whether the Commission made a manifest error of assessment in failing to examine, in the contested decision, the availability of raw materials necessary for the production of rosin resins or the impact of an alleged shortage of such raw materials on the utilisation of capacity.

176. As regards, first of all, assertions as to the existence of raw material shortages, it must be pointed out that Siegwerk stated, in reply to questions 36 and 39 of the customers' questionnaire, that the high prices and availability of raw materials were a major hurdle to market entry at the current time, and that there had been severe procurement problems in the recent past due to the lack of raw materials. In reply to question 15 of the customers' questionnaire, Siegwerk also stated that in February 2006 Arizona had stopped supplying it with the majority of modified phenolic resins because it had interrupted production due to a persistent lack of two essential raw materials, crude tall oil resin and gum rosin. Further, it has already been recalled that recital 67 of the contested decision refers to a significant increase in the prices of raw materials over the years leading up to the adoption of the contested decision. Finally, the interveners acknowledge that there was a temporary shortfall in supply relative to demand due to a combination of different factors.

177. However, the Commission is right in pointing out that Siegwerk is the only one of the ten customers which replied to the customers' questionnaire to point to problems arising from the availability of raw materials. No other customer, not even Flint and Sun, maintained, during the administrative procedure, that there were such difficulties. By the same token, none of the 13 competitors of the merging parties which replied to the competitors' questionnaire mentioned such problems in relation to crude tall oil resin or rosin resin, even though the Commission asked questions as to the utilisation of capacity for the production of hybrid resins (which are made up of hydrocarbon resins and resins based on tall oil or gum rosin) and as to difficulties in entering, in particular, the market for rosin resins (questions 39 and 40 of the competitors' questionnaire). In fact, the only indication to this effect is from Cray Valley, which claimed that limited access to cheap raw materials (particularly hydrocarbons)' was an obstacle for new entrants. In particular, Arizona did not refer to any difficulty in this regard. However, rosin resin producers are the best placed to detect supply problems concerning their raw materials. In addition, the interveners also maintain that, despite the temporary shortfall observed in supply relative to demand, it was still possible to obtain gum rosin at the market price.

178. Having regard to the foregoing, the Court considers that, in view of the statements of Siegwerk alone, in a situation where all producers should encounter the same difficulties, the Commission did not make a manifest error of assessment by not examining the availability of raw materials in the contested decision.

179. As regards, secondly, the documents available on the internet to which the applicants refer, it must be observed, first, that those documents cannot be taken into account as evidence of the existence of alleged raw material shortages, since none of those documents was submitted to the Commission during the administrative procedure. In addition, the announcement of the agreement between Megara and Resinall and the resin report were published after adoption of the contested decision, while DRT's statement is not dated.

180. Second, to the extent that the applicants seek to rely on those documents in order to show that the shortages of crude tall oil resin and gum resin were, at the time the contested decision was adopted, supposedly common knowledge, it must be observed that Resinall's announcement fails to specify which raw materials were affected by the alleged shortage or the reasons for that shortage and that the interveners stated, without being contradicted by the applicants, that Resinall was not selling rosin resins in Europe at the time of the contested decision and of the announcement. In addition, DRT's statement refers to terpene derivatives and the interveners asserted, without being contradicted by the applicants, that what is true for terpene derivatives is not necessarily so for rosin resins. Furthermore, in so far as that statement refers to gum rosin, it must be observed that it is not apparent from that statement whether it is referring to an increase in production or in prices, and that even evidence of price increases does not necessarily prove that there is a shortage. Finally, it is clear from the resin report that it does not relate specifically to crude tall oil resin and gum rosin, but to all the raw materials and in particular hydrocarbons, that it refers generally to the existence of difficulties in 2005, but that supply stabilised in 2006 and that the difficulties in 2005 were linked to price increases and their volatility rather than to the lack of the two raw materials in question. In fact, the only reference specifically to a shortage of those two raw materials concerns 2005 and explains that shortage as well as their higher costs by reference to, in particular, higher energy costs. It must therefore be considered that those documents do not show that a shortage of crude tall oil resin and gum rosin was common knowledge at the time the contested decision was adopted nor that the Commission was therefore required to investigate that issue.

181. For those reasons, the Court considers that the documents available on the internet to which the applicants refer do not show that the Commission made a manifest error of assessment in not examining the availability of raw materials in the contested decision.

182. In relation, third, to the claim that the alleged raw material shortages prevent competitors from increasing their production and constitute a barrier to entry and expansion in the market, the Commission correctly observes that the applicants have failed to explain how anti-competitive effects could result from raw material shortages which would seem to affect all suppliers in the same way. In that regard, it must be pointed out that Siegwerk stated, in reply to question 12 of the customers' questionnaire, that the highest volume of rosin was produced in China and that if Chinese rosin became more costly, all suppliers across the globe would face the same problem. In fact, if gum rosin is not available, no producer, even the merged entity, is able to produce rosin resins from gum rosin. On the other hand, if it is available, any producer can obtain it to the extent that it is prepared to pay the price (see paragraph 170 above).

183. Thus, as the Commission contends, only preferential access for the merging parties as compared with their competitors could affect competition. However, the applicants do not claim that the merging parties have such access. They merely claim that the merged entity may, on account of its size, infrastructure and experience acquire a high degree of control or influence over the supply of gum rosin. However, the Commission pointed out, without being contradicted by the applicants, that the merged entity will only purchase 5 to 10% of global gum resin production (see paragraph 154 above).

184. For those reasons, the Court considers that the applicants' arguments that, first, raw material shortages would prevent competitors from increasing their production and constitute a barrier to entry and expansion in the market, and second, that the merged entity would have significant purchasing power, have not been sufficiently proven.

185. As regards, fourth, the references made to the Guidelines and the Commission's previous decisions, it suffices to point out that each case must be assessed according to its particular factual circumstances and that it is clear from the foregoing that the evidence advanced by the applicants has not shown that the Commission was under an obligation, in the contested decision, to look into the availability of raw materials and the impact of their alleged shortage on the utilisation of capacity.

186. In the light of the foregoing, the Court considers that the applicants have not established that the Commission made a manifest error of assessment by not dealing, in the contested decision, with the availability of raw materials or the impact of their alleged shortage on the utilisation of capacity. Consequently, that complaint must be rejected.

187. It follows that this part of the plea must be rejected.

b) The second part, alleging errors concerning the nature and extent of vertical integration of the merged entity's customers

Arguments of the parties

188. The applicants assert that the Commission failed to examine the nature and extent of customers' vertical integration. When noting in recital 69 of the contested decision that undertakings such as Siegwerk and Flint who possess in-house rosin resin production... discipline their suppliers successfully', the Commission used production capacity numbers as estimated by the merging parties without asking the applicants about the nature of their production. The in-house production in question only covers one particular type of rosin resin that can only be used in the production of a limited range of printing inks. In addition, instead of 25 000 t and 12 000 t, Flint and Siegwerk actually produce only [confidential]. A proper investigation, attempting to corroborate the data, would have revealed that this production lacks any potential to constrain the merging parties, because the applicants remain dependent on external supplies. The Commission failed to ascertain whether the information at its disposal was accurate, relevant or objective. Since both applicants had voiced serious concerns about the transaction in their submissions, pointing to competitive constraints that the merger would bring about, it is surprising that the Commission did not re-examine the data submitted by the merging parties.

189. The Commission observes that the applicants do not deny that Flint and Siegwerk have significant in-house production and that the difference between the estimates mentioned in the contested decision and the figures given by the applicants is small. The applicants' assertion that in-house production can only be used for a limited range of printing inks should be rejected as unsubstantiated, because producers of rosin resins for ink applications are generally capable of producing the full range. In any case, the applicants' arguments do not call into question the finding in recital 69 of the contested decision that the customers may threaten to integrate vertically.

190. The interveners indicate that Flint's and Siegwerk's combined capacity, according to their own figures, of [confidential] is significant compared with Hexion's pre-merger capacity of 35 000 t. Also, the Commission was aware from the form notifying the concentration that Flint and Sun Chemical only made resinates. Given the ease of supply substitution, Flint and Siegwerk could use their internal production capacity to discipline their suppliers, first, by threatening to stop ordering resins for publication gravure and offset inks and, second, by freeing up other suppliers' capacity to produce other types of resins for the printing ink market. Finally, the applicants are well aware of their ability to threaten vertical integration, Sun having threatened to do so

at a meeting with Hexion on 5 May 2006.

Findings of the Court

191. As a preliminary point, it must be borne in mind that, in the context of its examination of the countervailing buying power of the merging parties' customers, the Commission noted in recital 69 of the contested decision that, according to the parties' estimates, three major customers had significant in-house production capacity: Flint and Siegwerk, which had an estimated production capacity of around 25 000 t and 12 000 t respectively, and Huber, which recently acquired Micro Inks and informed its suppliers that it would start to transfer its purchases to its subsidiary.

192. It must therefore be examined whether the Commission made errors concerning Flint's and Siegwerk's vertical integration which could affect its finding that the merging parties' customers have countervailing buyer power.

193. As regards, first of all, the difference between the production quantities referred to in the contested decision and the figures produced by the applicants, it must be observed that this difference is minimal. Even on the basis of the figures produced by the applicants, Flint's and Siegwerk's combined production amounts to over [confidential]% of Hexion's pre-merger production capacity. For those reasons, it must be considered that the difference suggested by the applicants has no impact on the Commission's finding of countervailing buyer power contained in recital 69 of the contested decision.

194. As regards, second, the argument that Flint's and Siegwerk's production is limited to certain resins and that, therefore, they are reliant on market suppliers, the interveners state that in-house production, even if limited to certain rosin resins, enables them to exert pressure on suppliers. In any event, the Commission correctly asserts that the possible limitations to Flint's and Siegwerk's in-house production do not affect the substance of its reasoning set out in recital 69 of the contested decision. In fact, it uses the examples of Flint, Siegwerk and Huber to show that the countervailing buyer power of the merging parties' customers is strengthened by the reality of their threat to integrate vertically. For those reasons, it must be considered that the Commission's failure to mention, in recital 69 of the contested decision, the possible limitations to Flint's and Siegwerk's production has no effect on the Commission's finding of countervailing buyer power.

195. Finally, it is clear from the foregoing that the Commission did not make a manifest error of assessment in considering that, in the circumstances of this case, there was no need to check the data relating to Siegwerk's and Flint's production.

196. In the light of the foregoing, the applicants have not shown that the Commission made a manifest error of assessment by considering that the merging parties' customers have countervailing buyer power or, in relation to Flint's and Siegwerk's threat to integrate vertically, a factual error likely to undermine that finding.

197. Consequently, this part of the plea must be rejected.

b) The third part, alleging errors concerning the impact of significant raw material price increases

Arguments of the parties

198. The applicants take the view that the Commission failed to investigate properly the impact on competition of the price increase of gum resin from USD 500 to USD 1 250 per tonne during a period of 29 months leading up to the merger. Sun had informed the Commission about steep price increases of rosin resin, in particular price increases applied by the merging parties from February 2005 to 15 May 2006. However, the Commission did not examine the impact of these price increases, coupled with growing demand, on producers and purchasers of rosin resin, while in other cases the Commission concluded that the ability to increase prices... is strong proof that competition has

not been sufficient in the past and is not likely after the merger to significantly constrain the market power' of the merged entity (see Nestlé/Perrier) and that price increases run counter to the argument that prices are constrained by excess capacity' (Commission Decision 2002/244/EC of 14 March 2000 declaring a concentration to be compatible with the common market and the EEA Agreement (Case COMP/M.1663 - Alcan/Alusuisse) (OJ 2002 L 90, p. 1; Alcan/Alusuisse')).

199. The Commission observes that the applicants do not explain why a detailed investigation into raw material price increases that affect all producers of the relevant product is necessary. It contends that such price increases are not linked to this merger and the merger is not the cause of those increases. Since prices of the raw materials needed for producing rosin resins have increased significantly over the last few years, the prices of rosin resins have followed suit.

200. The interveners also contend that the application does not explain how raw material price increases can relate to the notified concentration. Also, the facts of Alcan/Alusuisse and Nestlé/Perrier are not comparable to those of the present case. Finally, they note that the evidence relating to the price increases provided by Sun was examined in recitals 66 and 67 of the contested decision.

Findings of the Court

201. First of all, it should be observed that the Commission noted, in recital 66 of the contested decision, that Akzo and Hexion have, in the past, increased the prices of rosin resins. It pointed out, in recital 67 of the contested decision, that those increases in the years preceding the merger were due to an increase in the prices of the raw materials, which constitute key inputs for rosin resin production, such as crude oil, rosin gum and tall oil resin, the price per tonne of rosin gum having increased from USD 500 in January 2004 to around USD 1 250 at the date of the contested decision.

202. It must therefore be ascertained whether the Commission made a manifest error of assessment by not carrying out an examination in the contested decision, as the applicants allege, of the impact of the price increases of, first, rosin resins, particularly those increases imposed by the merging parties, and, second, raw materials, on producers and purchasers of rosin resins.

203. As regards, first, the price increase of rosin resins, it has already been pointed out in paragraph 201 above that the contested decision explains in recital 67 that their increase is due to the price increase of raw materials. The applicants do not contest this explanation. It follows that, on the basis of those factors, it cannot be claimed that the Commission found in the present case that, contrary to its findings on the facts in Alcan/Alusuisse and Nestlé/Perrier, the price increases were not indicative of insufficient competition and market power. Since the applicants have not advanced any other explanation to support their view that those general price increases - which affect, a priori, all customers in the same way - are relevant to the assessment of the merger's anti-competitive effects, they have failed to show that the Commission made a manifest error of assessment by not examining the impact of those price increases on purchasers of rosin resins.

204. As regards, secondly, the prices of the raw materials, it is stated in recital 67 of the contested decision that, to some extent, their increase is due to the price increase of crude oil. Furthermore, it should be borne in mind that Siegwerk indicated, and it is not disputed, that those increases affected all producers of the relevant product in the same way (see paragraph 181 above). Therefore, there is no reason to find that those general price increases in raw materials raise competition problems (see paragraphs 181 to 183 above). Indeed, the applicants have not advanced any specific reasons why the Commission should have investigated the impact of the price increase of the raw materials on producers and purchasers of rosin resins.

205. It is clear from the foregoing that the applicants have not shown that the Commission made

a manifest error of assessment in not analysing the impact of the price increases on producers and purchasers of rosin resins. Therefore, this part of the plea must be rejected.

c) The fourth part, alleging errors concerning countervailing buyer power

Arguments of the parties

206. The applicants assert that the Commission failed to properly assess arguments relating to countervailing buyer power. It is not sufficient to show that demand in the market is concentrated or that customers source from a number of suppliers. The Commission should have focused on the ability of buyers to take action to undermine any attempt by suppliers to increase prices. In the light of the evidence in the case file, which contradicted the Commission's buyer power argument, it was incumbent upon the Commission to conduct a more sophisticated analysis, extending to the structure and other dynamics of the industry as well as to the precise strategies that buyers could undertake to curb price increases post-merger (Commission Decision 1999/641/EC of 25 November 1998 declaring a concentration to be compatible with the common market and the functioning of the EEA Agreement (Case IV/M.1225 - Enso/Stora) (OJ 1998 L 254, p. 9; Enso/Stora')). The contested decision remains silent on all these issues, since the Commission merely contends that the strong dependence of the merging parties on a few large customers will militate against any anti-competitive behaviour, even though the applicants pointed out that the market is not characterised by buyer power and stated that, because they source from both merging firms, they were particularly vulnerable to the dictates of the merged entity. The applicants had noted in their submissions to the Commission that it was a seller's market and that they could not exercise significant bargaining power over the suppliers in the industry because of the lack of alternative suppliers and technical constraints. In the light of those submissions, the Commission was under an obligation to set out the reasons for its conclusions, but failed to do so as it did not address the applicants' arguments in the contested decision.

207. The Commission states that the applicants do not dispute the finding that the demand side of the market is highly concentrated and observes that the top five ink producers account for approximately [80-90]% of Hexion's and [90-100]% of Akzo's revenues. It also observes that the supply side of the market is less concentrated, as the sales of the merged entity to the applicants represent [confidential]% of Hexion's and [confidential]% of Akzo's total sales, but only [confidential]% of Sun's total requirements. Consequently, the merging parties are much more dependent on the applicants than vice versa. The purchasers also have a significant number of credible alternative suppliers, their own production and the ability to integrate vertically. In those circumstances, the Commission takes the view that the finding in the contested decision that the strong dependence of the merging parties on a few big customers constitutes a constraint on possible anti-competitive behaviour by the merged entity is justified.

208. The interveners maintain that the Commission analysed the issue of buyer power in the contested decision closely. Enso/Stora does not set out a policy that the Commission is bound to follow, nor are the facts in that case sufficiently close to suggest that an equivalently detailed analysis would be appropriate in the present case. The replies to the questions to which the applicants refer are not entirely unambiguous, do not contradict the facts found and analysed by the Commission and are not sufficiently corroborated.

Findings of the Court

209. It must be examined whether the Commission made a manifest error of assessment in limiting its analysis of countervailing buyer power to the elements set out in the contested decision.

210. First of all, it must be borne in mind that paragraphs 64 and 65 of the Guidelines state that even firms with very high market shares may not be in a position, post-merger, to significantly

impede effective competition, if their customers possess countervailing buyer power. According to the Guidelines, countervailing buyer power must be understood as the bargaining strength that the buyer has vis-à-vis the seller in commercial negotiations due to its size, its commercial significance to the seller and its ability to credibly threaten to resort, within a reasonable timeframe, to alternative sources of supply should the supplier decide to increase prices, or to otherwise deteriorate quality or the conditions of delivery. This would also be the case if the buyer could credibly threaten to vertically integrate into the upstream market or to sponsor upstream expansion or entry. Finally, it is more likely that large and sophisticated customers will possess this kind of countervailing buyer power than smaller firms in a fragmented industry.

211. Next, as regards the applicants' own assertions, Flint stated that, to its knowledge, purchasers of rosin resins had no bargaining power (answer to question 40 of the customers' questionnaire). Siegwerk considered that it was a seller's and not a buyer's market (reply to question 40 of the customers' questionnaire). Sun stated that, in its view, purchasers could not exercise sustained bargaining power over suppliers in the industry because there were very few suppliers, combined with the difficulty for buyers to change supplier rapidly or use alternative chemical products (reply to question 40 of the customers' questionnaire).

212. Therefore, only Sun put forward reasons to show that there was no countervailing buyer power, that is, the very limited number of suppliers and the difficulties in transferring orders to other suppliers. However, it has already been pointed out that the applicants have not sufficiently proved those claims (see paragraphs 84 et seq. and 94 et seq. above). The same is true for the assertions concerning the lack of necessary volumes and the suppliers' declining capacity which, according to the applicants, were made by Flint in that context (see paragraph 73 et seq. above).

213. In relation to the argument that the Commission should have examined the ability of customers to take action against any attempt by suppliers to increase prices and that it was incumbent upon it to conduct a more sophisticated analysis, extending to the structure and other dynamics of the industry as well as to the precise strategies that buyers could undertake to curb price increases post-merger, it must be borne in mind, first, that the contested decision is based, in that regard, on the fact that certain customers operate their own in-house production which allows them to discipline their suppliers to a certain extent. Second, it refers to the possibility for customers to source their supplies from other large and small suppliers which have significant excess capacity and are able to produce the whole range of rosin resins. Third, the Commission observes that demand is concentrated on a very limited number of large customers, which confers on them, in particular in the light of the factors already mentioned, considerable negotiating power. Fourth, it points to the existence of the credible threat of vertical integration, which also allows those customers to discipline their suppliers (see paragraph 28 above).

214. In addition, those considerations set out in the contested decision correspond, in essence, to the relevant factors for assessing countervailing buyer power stated in paragraphs 64 and 65 of the Guidelines (see paragraph 210 above). In fact, the contested decision underlines the suppliers' high level of dependence on a few large customers. The Court considers, in that regard, that it is not necessary, in order to discourage anti-competitive conduct on the part of the merged entity, for such customers to withdraw entirely from the supplier in question. The possibility for the applicants to transfer a substantial part of their requirements to other suppliers may be regarded as a sufficient threat of losses for the merged entity to be capable of deterring it from pursuing such a strategy (see paragraph 171 above).

215. In the present case, it must be borne in mind that the applicants, in respect of resins for printing ink applications, are among the merging parties' largest customers. Consequently, a transfer even of only part of their orders to other suppliers would amount to a significant proportion of

the merged entity's production. It must also be recalled that the Court has already held that the Commission did not make a manifest error of assessment by considering, in recitals 68 and 71 of the contested decision, that the other producers in the market had the capacity to be able to counter anti-competitive conduct and to supply the merging parties' major customers (see paragraphs 170 to 172 above) and that the applicants have not established that there are, as they allege, considerable difficulties in changing supplier, given the need to qualify rosin resins, which prevent customers from credibly threatening to resort, within a reasonable timeframe, to alternative sources of supply should the merged entity decide to increase prices (see paragraphs 96 to 99 above).

216. Furthermore, whilst the facts in Enso/Stora may have required, due to an exceptional market structure, sophisticated analyses of the industry structure and strategies that buyers could undertake to curb price increases post-merger, it is clear from the foregoing that this does not apply to the present case. In the light of the above findings, the Court considers that the Commission could not be required, in the circumstances of this case, to carry out a more detailed examination of the countervailing buyer power of the merging parties' customers.

217. In the light of the foregoing, this part must be rejected.

e) The alleged lack of reasoning

218. To the extent that the applicants contend that the Commission's assessment of available excess capacity on the part of the merging parties' competitors is not sufficiently reasoned, in particular because the Commission did not examine, in the contested decision, either the availability of raw materials needed to produce rosin resins or the impact of an alleged shortage of those raw materials on the utilisation of capacity, and that it ignored or rejected the evidence provided by the applicants without stating reasons for doing so, it must be pointed out that it is clear from the findings in paragraphs 165 to 185 above that the Commission set out sufficient reasons for its finding that there was excess capacity in the market. Recitals 62 to 67 of the contested decision set out clearly and unequivocally the Commission's reasoning in that regard and have enabled the Court to exercise its power of review and the interested parties to defend their rights.

219. Finally, it is also clear from the findings in paragraphs 213 and 214 above that the Commission provided sufficient reasoning for its finding on countervailing buyer power of the merging parties' customers. Recitals 69 to 71 of the contested decision set out clearly and unequivocally the Commission's reasoning in that regard and have enabled the Court to exercise its power of review and the interested parties to defend their rights.

220. It follows that the arguments based on alleged insufficiency of reasoning must be rejected.

221. It follows from all the foregoing that the Court must reject the second plea.

222. In those circumstances, the action must be dismissed.

Costs

223. Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the applicants have been unsuccessful, they must be ordered to pay the costs, as applied for both by the Commission and the interveners.

Case T-351/03

Schneider Electric SA

v

Commission of the European Communities

(Non–contractual liability of the Community – Loss sustained by an undertaking owing to a sufficiently serious infringement of Community law vitiating the procedure for examining the compatibility of a concentration with the common market)

Summary of the Judgment

1. *Procedure – Application initiating proceedings – Formal requirements*

   (Statute of the Court of Justice, Arts 21, first para., and 53, first para.; Rules of Procedure of the Court of First Instance, Art. 44(1)(c))

2. *Non-contractual liability – Conditions – Sufficiently serious breach of Community law*

   (Art. 288, second para., EC)

3. *Non-contractual liability – Conditions – Sufficiently serious breach of Community law*

   (Art. 288, second para., EC)

4. *Non-contractual liability – Conditions – Sufficiently serious breach of Community law*

   (Art. 288, second para., EC)

5. *Non-contractual liability – Conditions – Decision declaring a concentration incompatible with the common market*

   (Art. 288, second para., EC)

6. *Competition – Concentrations – Administrative procedure – Statement of objections – Necessary content – Observance of the rights of the defence*

   (Council Regulation No 4064/89, Art. 18(1) and (3))

7. *Competition – Concentrations – The fact that teams of officials responsible for the various stages of the investigation of a concentration between undertakings, despite there being an annulment between those various stages, are composed of the same members*

   (Council Regulation No 4064/89, Art. 18(3) and (4))

8. *Competition – Concentrations – Sufficiently serious breach of Community law*

   (Council Regulation No 4064/89, Art. 8(4))

9. *Competition – Concentrations – Assessment of compatibility with the common market – Agreements which are lawful under national law and binding on the parties to the concentration taken into*

account by the Commission

(Council Regulation No 4064/89, Art. 2)

10. *Competition – Concentrations – Examination by the Commission – Decision to open the in-depth investigation phase – Conditions*

(Council Regulation No 4064/89, Arts 2(3), 6(1) and 8(3))

11. *Competition – Concentrations – Administrative procedure – Decision to open the in-depth investigation phase*

(Council Regulation No 4064/89, Art. 6(1)(c))

12. *Non-contractual liability – Conditions – Invalid – Damage – Causal link*

(Art. 288, second para., EC)

13. *Competition – Concentrations – Assessment of compatibility with the common market – No presumption*

(Council Regulation No 4064/89, Arts 2 and 10)

14. *Non-contractual liability – Conditions – Invalid – Damage – Causal link*

(Art. 288, second para., EC)

15. *Non-contractual liability – Conditions – Invalid – Damage – Causal link*

(Art. 288, second para., EC)

16. *Non-contractual liability – Conditions – Invalid – Damage – Causal link*

(Art. 288, second para., EC; Council Regulation No 4064/89, Art. 7(3))

17. *Non-contractual liability – Damage – Compensation*

(Art. 288, second para., EC)

1. Under the first paragraph of Article 21 of the Statute of the Court of Justice, which applies to the procedure before the Court of First Instance by virtue of the first paragraph of Article 53 of that statute, and under Article 44(1)(c) of the Rules of Procedure of the Court of First Instance, all applications must indicate the subject-matter of the dispute and contain a summary of the pleas in law on which the application is based. That statement must be sufficiently clear and precise to enable the defendant to prepare his defence and the Court to rule on the application, if necessary, without any further information. In order to guarantee legal certainty and the sound administration of justice, it is necessary that the basic legal and factual particulars relied on be indicated, at least in summary form, coherently and intelligibly in the application itself.

   In order to satisfy those requirements, an application seeking compensation for damage caused by a Community institution must state the evidence from which the conduct alleged against the institution can be identified, the reasons for which the applicant considers there to be a causal link between that conduct and the damage it claims to have suffered, and the nature and extent of that damage.

   (see paras 92-94)

2. In order for the Community to incur non-contractual liability under the second paragraph of Article 288 EC for unlawful conduct of its institutions, a number of conditions must be satisfied: the institution's conduct must be unlawful, actual damage must have been suffered and there must be a

causal link between the conduct and the damage pleaded.

Where the unlawfulness of a legal measure is relied on as a basis for an action for damages, that measure, in order to be capable of causing the Community to incur non-contractual liability, must constitute a sufficiently serious breach of a rule of law intended to confer rights on individuals. The decisive criterion in that regard is whether the Community institution concerned manifestly and gravely disregarded the limits on its discretion.

The system of rules in relation to the non-contractual liability of the Community takes into account, inter alia, the complexity of the situations to be regulated, difficulties in the application or interpretation of the legislation and, more particularly, the margin of discretion available to the author of the act in question.

Where the institution criticised has only considerably reduced, or even no, discretion, the mere infringement of Community law may be sufficient to establish the existence of a sufficiently serious breach of Community law.

The same applies where the defendant institution breaches a general obligation of diligence or misapplies relevant substantive or procedural rules.

(see paras 113-118)

3. If the concept of a serious breach of Community law, necessary to establish the Community's non-contractual liability, were construed as comprising all errors or mistakes which, even if of some gravity, are not by their nature or extent alien to the normal conduct of an institution entrusted with the task of overseeing the application of competition rules, which are complex, delicate and subject to a considerable degree of discretion, this could compromise its ability to function as a regulator of competition, contrary to the general Community interest.

Therefore, a sufficiently serious breach of Community law, for the purposes of establishing the non-contractual liability of the Community, cannot be constituted by failure to fulfil a legal obligation, which, regrettable though it may be, can be explained by the objective constraints to which the institution and its officials are subject as a result of the provisions governing the control of concentrations.

On the other hand, the right to compensation for damage resulting from the conduct of the institution becomes available where such conduct takes the form of action manifestly contrary to the rule of law and seriously detrimental to the interests of persons outside the institution and cannot be justified or accounted for by the particular constraints to which the staff of the institution, operating normally, is objectively subject.

Such a definition of the threshold for the establishment of non-contractual liability of the Community is conducive to protection of the room for manoeuvre and freedom of assessment which must, in the general interest, be enjoyed by the Community regulator of competition, both in its discretionary decisions and in its interpretation and application of the relevant provisions of primary and secondary Community law, without thereby leaving third parties to bear the consequences of flagrant and inexcusable misconduct.

(see paras 121-125)

4. In principle, the possibility cannot be ruled out that manifest and serious defects affecting the economic analysis underlying competition policy decisions may constitute sufficiently serious breaches of a rule of law to cause the Community to incur non-contractual liability.

However, for such a finding to be made it is first necessary to verify that the rule infringed by the incorrect analysis is intended to confer rights on individuals. Whilst certain principles and certain rules which must be observed in any competitive analysis are indeed rules intended to confer rights on individuals, not all norms, whether of primary or secondary law or deriving from case-law, which the Commission must observe in its economic assessments can be automatically held to be rules of that kind.

Next, the economic analyses necessary for the classification, under competition law, of a given situation or transaction are generally, as regards both the facts and the reasoning based on the account of the facts, complex and difficult intellectual formulas, which may inadvertently contain certain inadequacies, such as approximations, inconsistencies, or indeed certain omissions, in view of the time constraints to which the institution is subject. That is even more so where, as in the case of the control of concentrations, the analysis has a prospective element. The gravity of a documentary or logical inadequacy, in such circumstances, may not always constitute a sufficient circumstance to cause the Community to incur liability.

Last, the Commission enjoys discretion in maintaining control over Community competition policy, which means that rigorously consistent and invariable practice in implementing the relevant rules cannot be expected of it, and, as a corollary, that it enjoys a degree of latitude regarding the choice of the econometric instruments available to it and the choice of the appropriate approach to the study of any matter, provided that those choices are not manifestly contrary to the accepted rules of economic discipline and are applied ìconsistently.

(see paras 129-132)

5. The defects in a decision declaring a concentration incompatible with the common market, which have not had any repercussions on the subsequent stages of the procedure and, inter alia, have not deprived the parties to the concentration of an opportunity to secure a decision allowing it to proceed with the transaction are not in themselves capable of causing specific harm to the parties and thus of causing the Community to incur liability.

(see paras 134, 138-139)

6. As addressees of decisions of a public authority which affect their interests to an appreciable extent, the undertakings involved in a concentration having Community dimension must be placed in a position where they can make their views properly known and, to that end, be clearly informed, in due time, of the Commission's main objections to their notified concentration.

The statement of objections is of particular importance in that connection, given that it is specifically intended to enable the undertakings concerned to react to the concerns expressed by the regulatory institution, first by giving their views on the matter and, second, by considering whether to propose to the Commission measures intended to correct the negative impact of the notified concentration.

Respect for that right, which is one of the fundamental rights guaranteed by the Community legal order in administrative procedures, is of particular importance for the control of concentrations between undertakings.

A manifest and serious breach of Article 18(1) and (3) of Regulation No 4064/89 on the control of concentrations between undertakings stems from the fact of the Commission's drafting a statement of objections in such a way that the applicant cannot ascertain that, if it did not submit corrective measures, it would have no chance of securing a declaration that the transaction was compatible with the common market. That breach of the rights of the defence is neither justified nor accounted for by the particular constraints to which Commission staff are objectively subject.

(see paras 147-149, 152, 154, 170)

7. The fact that the teams of officials responsible for the various stages of investigation of a concentration between undertakings were composed wholly or partly of the same members does not constitute a sufficiently serious breach by the Commission of a rule of law intended to confer rights on individuals.

Even if observance of all persons' right to a hearing before an independent and impartial tribunal is guaranteed by Article 6(1) of the European Convention on Human Rights, to which reference is made by Article 6(2) of the Treaty on European Union and which was reaffirmed by the second paragraph of Article 47 of the Charter of Fundamental Rights of the European Union, and the right to a fair hearing is manifestly a rule intended to confer rights on individuals, provided that the right to an impartial tribunal is guaranteed, Article 6(1) of the Convention does not prohibit the prior intervention of administrative bodies that do not satisfy all the requirements that apply to procedure before the courts.

In the field of merger control, the action for annulment available under Article 230 EC against Commission decisions adopted under Article 8(3) and (4) of Regulation No 4064/89 is a remedy incorporating the safeguards required by Article 6(1) of the Convention.

Moreover, there is no rule of law or principle which prevents the Commission from entrusting to the same officials re–examination of a concentration in compliance with a judgment annulling a decision declaring that concentration to be incompatible with the common market.

Finally, it cannot be stated as a general rule resulting from the obligation to be impartial that an administrative or judicial authority, after annulling a first decision, is bound to send the case back to a different authority or to a differently composed branch of that authority.

(see paras 181-186, 188)

8. Where a concentration has already been implemented when the Commission declares it incompatible with the common market, Article 8(4) of Regulation No 4064/89 on the control of concentrations between undertakings enables the Commission to require any action to be taken to restore effective competition.

In order to decide whether, by requiring separation of the two parties to the transaction in such a way that the target's size could not be affected and by prohibiting any subsequent retransfer of business, the Commission manifestly and seriously infringed that provision, it is necessary to examine the manner in which the divestiture is carried out, by taking account in particular of the positions of the notifying undertakings in the markets at issue, the difference between their market shares and those of their immediate competitors, the reputation of their brands in those markets, and to ascertain whether the period for implementation of the divestiture decision was manifestly excessively short.

(see paras 199-203, 209)

9. In the exercise of its monitoring powers concerning compatibility with the common market of concentrations having a Community dimension, the Commission cannot disregard binding agreements between the notifying parties, provided that their stipulations are lawful under the applicable national law.

(see para. 221)

10. Serious doubts as to the compatibility of a concentration with the common market are a sufficient basis for taking a decision to initiate an in-depth investigation under Article 6(1)(c) of Regulation No 4064/89 on the control of concentrations between undertakings, whilst evidence of the creation or strengthening of a dominant position is required from the Commission by Article 2(3) of the regulation where it declares a concentration incompatible with the common market on the basis of Article 8(3).

(see paras 235, 249-250)

11. In the field of merger control, whilst observance of the rights of the defence is required before the adoption of any decision liable adversely to affect the undertakings concerned, the decision to initiate the in-depth investigatory phase does not constitute an act adversely affecting the undertakings, the legality of which would depend on observance of those rights.

(see para. 240)

12. In the context of the Community's non-contractual liability, in order to determine the harm attributable to a wrongful act of a Community institution, account must be taken of the effects of the failure which caused liability to be incurred and not of the effects of the measure of which it forms part, provided that the institution could or should have adopted a measure having the same effect without breaching any rule of law.

In other words, the analysis of the causal link cannot start from the incorrect premiss that, in the absence of an unlawful measure, the institution would have refrained from acting or would have adopted a contrary measure, which could also amount to unlawful conduct on its part, but must be based on a comparison between the situation arising, for the third party concerned, from the wrongful measure and the situation which would have arisen for that third party if the institution's conduct had been in conformity with the law.

Where the unlawful circumstance on which the claim for compensation is based is associated with a decision whose effect is to withhold from an applicant an authorisation or other favourable measure, it cannot be presumed, for the purpose of analysing the effects of the wrongful measure and the comparison between the real situation and the reconstructed legal situation, that, in the absence of the defect identified, the applicant would necessarily have been granted the authorisation or other favourable measure sought by it.

Similarly, it is necessary, where there has been a breach of the rights of the defence affecting a decision declaring a merger of undertakings incompatible with the common market, not to postulate that, in the absence of that breach, the notified concentration would have been declared compatible, explicitly or implicitly, but rather to assess the effects which the defect identified may have had on the decision that was reached.

Thus, the loss attributable to the Community cannot be assessed on the basis of a comparison between the situation brought about by an incompatibility decision and a situation characterised by express or tacit authorisation of the concentration, unless the Community judicature is in a position to find that the incompatibility was declared by the Commission as a direct and certain consequence of an established failure to fulfil its legal obligations.

In addition, even if it is accepted that, in the absence of a right to recognition of the concentration's compatibility, the parties might have been deprived of a real opportunity to secure a decision of compatibility, the materialisation of that opportunity may be linked to parameters that are too uncertain to be the subject of any convincing quantification and to give rise to compensation.

Therefore, there is no sufficiently close causal link between the breach of the rights of defence of an undertaking which is party to a concentration and the loss of any opportunity of obtaining a decision that the concentration was compatible for the Community to incur liability as a result of the obligation imposed on the undertaking to dispose of the assets which it owns in the target, or, consequently, for it to be held that damage equal to the total loss of value of those assets between the time of their acquisition and their subsequent disposal can be attributed to the Community.

(see paras 263-267, 278, 280, 282-283, 286, 292)

13. Regulation No 4064/89 on the control of concentrations between undertakings does not establish a presumption as to the compatibility with the common market of a concentration that has been notified and it is for the Commission in each case to form a clear opinion as to such compatibility and to rule accordingly.

A concentration is tacitly regarded as compatible with the common market where, in particular, the Commission has neither taken a decision to initiate the in-depth phase of investigation within the period of one month set by Article 10(1) of the regulation nor ruled as to the compatibility of a concentration with the common market within the period of four months set by Article 10(3).

(see paras 275-276)

14. The fees of legal, tax and banking consultants and other administrative costs incurred by an undertaking in carrying out a Commission decision requiring divestiture by two undertakings party to a concentration declared incompatible with the common market cannot be accepted as flowing from the unlawfulness of the Commission's incompatibility decision.

The unlawfulness of the incompatibility decision and, consequently, of the divestiture decision does not imply that the transaction should be recognised as compatible or that the undertakings were entitled to continue as a merged entity. It cannot therefore be presumed that the administrative costs normally incurred by an undertaking with a view to divesting itself of the assets would not have had to be borne if the Commission had adopted a lawful decision.

On the other hand, the consultancy fees and administrative expenses of various kinds incurred by an undertaking in participating in the resumed investigation of a concentration – the resumption made necessary by the annulment of the Commission decision declaring that decision incompatible with the common market – must be linked by a direct and certain causal link between them and the unlawful conduct of the institution in order for entitlement to compensation to arise.

Finally, the costs incurred in relation to judicial review proceedings before the Community judicature must be regarded as covered by the decisions given, where appropriate, on costs, under the specific procedural rules applicable to that type of expenditure, in the decisions bringing the proceedings to an end and on conclusion of the special proceedings provided for in cases where the amount of the costs is challenged. Those proceedings exclude any claim for the same sums, or sums expended for the same purposes, in connection with proceedings alleging non-contractual liability of the Community, including those incurred by litigants who, having been unsuccessful, have had to pay the costs.

(see paras 293-294, 297-302)

15. Where a serious infringement of Community law initiating a decision which declares a concentration incompatible with the common market displays a sufficiently direct causal link with the reduction in the transfer price of shares or assets held by the transferor in the undertaking transferred, it is for the Community to compensate the loss suffered. The loss may also be equal to the difference between the transfer price agreed and that which the transferor could have obtained from the transferee if, at the end of the first investigation of the transaction it had been given a lawful decision as to the compatibility of the transaction.

(see paras 316-317, 322)

16. Where an undertaking acquires control of another undertaking by means of a public bid in reliance on the derogation from the principle of the suspensory effect of concentrations provided for in Article 7(3) of Regulation No 4064/89 – in a manner that is entirely lawful under national and Community competition law – it nevertheless assumes the risk that the investigation of the transaction will, on expiry of the periods laid down by the regulation, result in a decision declaring the transaction to be incompatible with the common market and a corresponding obligation for the assets of undertakings already merged to be separated. In addition, if, having regard to the characteristics of the transaction, it could not have been unaware that the merger at the very least entailed the risk of creating or strengthening a dominant position in a substantia

Judgment of the Court of First Instance (Fourth Chamber, extended composition)
of 11 July 2007
Schneider Electric SA v Commission of the European Communities. Case T-351/03.

In Case T351/03,

Schneider Electric SA, established in RueilMalmaison (France), represented by A. Winckler and M. Pittie, lawyers,

applicant,

supported by

French Republic, represented by G. de Bergues, acting as Agent,

intervener,

v

Commission of the European Communities, represented initially by P. Oliver, E. Gippini Fournier and C. IngenHousz, subsequently by P. Oliver, O. Beyne and R. Lyal, and lastly by P. Oliver, R. Lyal and F. Arbault, acting as Agents,

defendant,

supported by

Federal Republic of Germany, represented by W.D. Plessing and M. Lumma, acting as Agents,

intervener,

APPLICATION for compensation for the damage allegedly suffered by the applicant by reason of the unlawfulness of the procedure for examination of the compatibility with the common market of the concentration between Schneider Electric SA and Legrand SA,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Fourth Chamber, Extended Composition),

composed of H. Legal, I. WiszniewskaBiaecka, V. Vadapalas, E. Moavero Milanesi and N. Wahl, Judges,

Registrar: K. Poche, Administrator,

having regard to the written procedure and further to the hearing on 25 April 2007,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Fourth Chamber, Extended Composition)

by way of interlocutory judgment,

hereby:

1. Orders the European Community to make good, first, the expenses incurred by Schneider Electric SA in respect of its participation in the resumed merger control procedure which followed delivery of the judgments of the Court of First Instance on 22 October 2002 in Cases T310/01 and T77/02 Schneider Electric v Commission and, second, twothirds of the loss sustained by Schneider Electric as a result of the reduction in the transfer price of Legrand SA which Schneider Electric had to concede to the transferee in exchange for the postponement of the effective date of sale of Legrand

until 10 December 2002;

2. Dismisses the action as to the remainder;

3. Orders the parties to communicate to the Court, within the period of three months from 11 July 2007, the amount representing the first head of loss, jointly agreed in accordance with the procedure set out in paragraph 320 of this judgment;

4. Failing such agreement, orders the parties to submit to the Court, within the same period, their proposed figures;

5. Orders that the amount of the second head of loss of Schneider Electric referred to in paragraph 1 above shall be assessed by an expert;

6. Invites Schneider Electric and the Commission to nominate the expert or to propose to the Court a list of experts so that one may be appointed by the Court from that list;

7. Instructs the Registrar of the Court to transmit to the expert for the purposes of his examination a certified copy of Annexes 8 and 29 to the application;

8. Declares that the expert shall be invited to submit his report within a period of time to be determined;

9. Instructs the Registrar of the Court to serve the report on the parties;

10. Declares that the compensation shall be reassessed and increased to take account of interest in accordance with the criteria defined in paragraphs 345 and 346 of this judgement;

11. Reserves the decision on costs.

Legal background

1. In the version applicable to these proceedings, Article 2(3) of Council Regulation (EEC) No 4064/89 of 21 December 1989 on the control of concentrations between undertakings (OJ 1999 L 395, p. 1 and corrigendum OJ 1990 L 257, p. 13), as amended by Council Regulation (EC) No 1310/97 of 30 June 1997 (OJ 1997 L 180, p. 1) (the regulation') provides that a notified concentration which creates or strengthens a dominant position as a result of which effective competition would be significantly impeded in the common market or in a substantial part of it is to be declared incompatible with the common market.

2. Article 3(1)(b) of the regulation provides that a concentration is to be deemed to arise where a company acquires direct or indirect control of another undertaking, in particular by the purchase of securities or assets.

3. Article 6(1)(b) of the regulation states that the Commission is to declare compatible with the common market concentrations notified to it under the Regulation which, although falling within its scope, do not raise serious doubts as to their compatibility.

4. If that is not the case, the Commission is to decide to initiate the indepth control procedure (a decision to initiate phase II'), in accordance with Article 6(1)(c).

5. Article 10(1) states that those decisions must be taken within one month of the day following the receipt of a notification of a concentration or the day following the receipt of the complete information.

6. Article 8(2) and (3) respectively enable the Commission to adopt, as part of the phase II control, either a decision of compatibility, where appropriate after modifications made by the undertakings concerned to their notified concentration plan, or a decision of incompatibility.

7. Article 10(3) states that decisions declaring a concentration incompatible with the common market must be taken within four months of the date on which phase II is initiated.

8. Under Article 8(4), where a concentration that is declared incompatible has already been implemented, the Commission may, in a decision pursuant to Article 8(3) or by a separate decision, require the undertakings to be separated or any other action that may be appropriate to restore conditions of effective competition.

9. Under Article 10(6), the notified transaction is to be deemed compatible with the common market where the Commission has not taken either a decision to initiate phase II by the end of one month following notification or receipt of complete information, or a decision on the compatibility of the transaction within four months following the initiation of phase II.

10. Under Article 10(5), where the Community judicature gives a judgment that annuls a Commission decision, the periods laid down by the regulation start again from the date of the judgment.

11. Article 7(1) states that a concentration is not to be put into effect either before its notification or within the first three weeks following its notification.

12. Article 7(3) states that Article 7(1) is not to impede the implementation of a public bid which has been notified to the Commission, provided that the acquirer does not exercise the voting rights attached to the securities in question or does so only to maintain the full value of those investments and on the basis of a derogation granted by the Commission pursuant to Article 7(4).

13. Under Article 7(4), the Commission may, on request, grant a derogation from the obligations imposed in Article 7(1) or (3) in order to prevent serious damage to one or more undertakings concerned by a concentration. That derogation may be made subject to conditions and obligations in order to ensure conditions of effective competition. A derogation may be applied for and granted at any time, even before notification or after the transaction.

14. Finally, Article 18(1) of the regulation provides that, before taking any decision provided for inter alia in Article 8(3), the Commission is required, at every stage of the procedure up to the consultation of the Advisory Committee, to give the persons, undertakings and associations of undertakings concerned the opportunity of making known their views on the objections against them.

15. Article 18(3) provides that the Commission is to base its decision only on objections on which the parties have been able to submit their observations and that the rights of the defence are to be fully respected in the proceedings.

Background to the dispute

16. Schneider Electric SA (Schneider'), and Legrand SA (Legrand') are French companies engaged in the production and sale of products and systems in the electrical distribution, industrial control and automation sectors (Schneider) and electrical equipment for lowvoltage installations (Legrand).

17. The electrical products distribution sector is divided into segments according to the following product markets:

>lt>1

18. The wholesalers, who are local distributors, buy from industrial manufacturing groups the range of materials which installation engineers and switchboard assemblers need. The latter assemble the various components of electric switchboards.

19. Schneider and Legrand informed the Commission of a plan, within the meaning of Article 3(1)(b) of the regulation, whereby Schneider would acquire control of Legrand in its entirety by means

of a public exchange offer (the offer').

20. A letter of 12 January 2001 exchanged by the chairmen of the two companies provided that the chairman of the board of directors of Legrand would be personally involved in the preparation of any solution proposed to the Commission and that no commitment concerning Legrand could be submitted or agreed to by either of the companies without the prior agreement of the chairmen of the boards of directors of Schneider and Legrand.

21. On 15 January 2001, the two companies announced their agreement concerning the proposed concentration (the transaction') and Schneider lodged a draft offer in respect of Legrand's shares with the French Financial Markets Council (Conseil français des marchés financiers), Paris.

22. The offer was open from 1 February to 7 March 2001 and was formally notified to the Commission on 16 February 2001.

23. In their Form CO relating to the notification of a concentration, the notifying parties stated among other things that, as regards the effects of the transaction on supplies between segments 4 and 5 of the sectoral markets in question, there was little reason to believe that there would be any conglomerate effects in consequence of the transaction.

24. Considering that the transaction raised serious doubts as to its compatibility with the common market, on 30 March 2001 the Commission initiated phase II of the investigation under Article 6(1)(c) of the regulation.

25. By letter of 6 April 2001, the Commission sent a request for information to Schneider and Legrand under Article 11(1) of the regulation.

26. That request was followed by a formal decision under Article 11(5) of the regulation, dated 27 April 2001, the effect of which, under Article 10(4), was to suspend the fourmonth period available to the Commission, reckoned from the initiation of phase II, to take a decision on the compatibility of the transaction

27. Following an annulment decision by the Cour d'appel de Paris (France), in proceedings by minority shareholders of Legrand contesting the admissibility of the offer, on 7 June 2001 Schneider lodged an amended offer, which was declared admissible and was launched on 21 June 2001 and closed on 25 July 2001.

28. On 3 August 2001, the Commission sent Schneider a statement of objections in which it concluded that the transaction would create or strengthen a dominant position on a number of national sectoral markets.

29. On 6 August 2001, the Commission des Opérations de Bourse (French Stock Exchange Commission) announced the final outcome of Schneider's offer, by virtue of which Schneider acquired 98.7% of the shares in Legrand.

30. In their response of 16 August 2001 to the statement of objections, the parties to the transaction contested the market definition adopted by the Commission and its analysis of the impact of the transaction on those markets.

31. On 29 August 2001, a meeting was held between the notifying undertakings and Commission staff for the purpose of defining any modifications to the transaction which might resolve the competition problems raised by the Commission.

32. To that end, Schneider proposed corrective measures to the Commission on several occasions.

33. In a note of 25 September 2001 to the Member of the Commission responsible for competition matters, Schneider and Legrand expressed their utter surprise at the Commission's negative reaction

to their latest proposals, since those proposals envisaged that Legrand would withdraw from the markets for panelboard components throughout the entire European Economic Area (the EEA').

34. On 10 October 2001, the Commission adopted, under Article 8(3) of the regulation, Decision 2004/275/EC declaring the transaction incompatible with the common market (Case COMP/M.2283 - SchneiderLegrand) (OJ 2004 L 101, p. 1, the incompatibility decision').

35. The Commission concluded, in recital 782 to the incompatibility decision, that the notified transaction would create a dominant position with the effect of significantly restricting effective competition on the following sectoral markets:

- the markets in moulded case circuit breakers, miniature circuit breakers and cabinets for distribution boards in Italy;

- the markets in miniature circuit breakers, earth leakage protection and enclosures for final panelboards in Denmark, Spain, Italy and Portugal;

- the markets in mains connection circuit breakers in France and Portugal;

- the market in cable trays in the United Kingdom;

- the market in sockets and switches in Greece;

- the market in weatherproof wiring accessories in Spain;

- the market in fixing and connecting equipment in France;

- the market in transformation equipment in France;

- the market in control and signalling units in France.

36. The Commission also considered, in recital 783 to the incompatibility decision, that the transaction would strengthen a dominant position, thereby significantly restricting effective competition on the following French markets:

- the markets in moulded case circuit breakers, miniature circuit breakers and cabinets for distribution boards;

- the markets in miniature circuit breakers, earth leakage protection and enclosures for final panelboards;

- the market in sockets and switches;

- the market in weatherproof wiring accessories;

- the market in emergency lighting systems or selfcontained emergency lighting units.

37. The Commission also considered that the corrective measures proposed by Schneider were not such as to resolve the competition problems identified in the incompatibility decision.

38. Since, as a result of holding 98.1% of Legrand's capital, Schneider had brought about a concentration subsequently declared incompatible with the common market, on 24 October 2001 the Commission adopted a second statement of objections for the purpose of separating Schneider and Legrand.

39. In that document, the Commission proposed making an order requiring Schneider, under Article 8(4) of the regulation, to dispose of assets in Legrand to the extent that it would no longer hold a significant position, in order to restore effective competition with sufficient certainty and within a sufficiently short period. The Commission also considered it necessary to take immediate steps to entrust the management of Schneider's holding in Legrand to an experienced and independent trustee.

40. In response to a request made by Schneider, the Commission adopted a decision on 4 December

2001, which authorised Schneider, on the basis of Article 7(4) of the regulation, to exercise the voting rights attaching to its shareholding in Legrand through a trustee appointed by Schneider and on the terms laid down in an agreement approved by the Commission.

41. On 10 December 2001, Schneider and Salustro Reydel Management, the trustee, signed the agreement appointing the latter as trustee.

42. On 13 December 2001, Schneider brought an action before the Court of First Instance for the annulment of the incompatibility decision (Case T310/01) and, by a separate document, asked the Court of First Instance to adjudicate under the expedited procedure in accordance with Article 76a of its Rules of Procedure.

43. On 23 January 2002, the Court dismissed that application, having taken account of the nature of the case and, in particular, the volume of the application and the documents annexed to it.

44. On 30 January 2002, the Commission adopted a decision (the divestiture decision') under Article 8(4) of the regulation ordering Schneider to separate from Legrand within a period of nine months, expiring on 5 November 2002.

45. The divestiture decision prohibited Schneider from entering into discrete transactions to divest itself of certain of Legrand's businesses, made any purchaser or purchasers of Legrand subject to the Commission's prior approval and prohibited any subsequent transfer of certain of Legrand's businesses back to Schneider.

46. By documents lodged on 18 March 2002, Schneider brought an action for the annulment of the divestiture decision (Case T77/02), requested the Court to adjudicate on that case under the expedited procedure, and made an application for suspension of the operation of the divestiture decision (Case T77/02 R).

47. The application for recourse to the expedited procedure was granted by decision of the Court, which was notified to the parties on 25 March 2002.

48. On 5 April 2002, an informal meeting was organised between the President of the First Chamber and the JudgeRapporteur and the parties' representatives in Case T310/01.

49. After the hearing for interim relief of 23 April 2002 in Case T77/02, the Commission, by letter of 8 May 2002, extended until 5 February 2003 the period within which Schneider was to separate from Legrand, without prejudice to the stages in the divestiture procedure being completed during the extended period.

50. On 3 May 2002, the Court of First Instance (First Chamber) decided, after hearing the Commission's views, to grant Schneider's application for Case T310/01 to be adjudicated under the expedited procedure, since Schneider had confirmed that it would adhere to the abridged version of its application, submitted on 12 April 2002.

51. In view of the extension of the divestiture period granted by the Commission in its letter of 8 May 2002, Schneider withdrew its application for suspension of operation in Case T77/02 R by letter received on 14 May 2002.

52. By order of the President of the Court of First Instance of 28 May 2002, Case T77/02 R was removed from the register and the costs of the proceedings for interim relief were reserved until judgment was given in the main proceedings in Case T77/02.

53. By orders of the President of the First Chamber of the Court of First Instance of 6 June 2002, Legrand, the Comité central d'entreprise de la SA Legrand and the Comité européen du groupe Legrand were granted leave to intervene in Cases T310/01 and T77/02 in support of the form of order sought by the Commission, by reason of Legrand's interest in the outcome of the disputes,

its situation being directly affected by the upholding or annulment of the contested decisions.

54. Schneider made preparations for the transfer of Legrand, to be carried out in the event of its two actions for annulment being rejected, and, for that purpose, on 26 July 2002 entered into a sale and purchase agreement with the WendelKKR consortium, to be implemented no later than 10 December 2002, containing a clause enabling Schneider, in the event of the annulment of the incompatibility decision, to cancel the contract no later than 5 December 2002, in consideration of payment of compensation for cancellation.

55. By judgment of 22 October 2002 in Case T310/01 Schneider v Commission [2002] ECR II4071 (the Schneider I judgment'), the Court of First Instance annulled the incompatibility decision on the grounds of errors of analysis and errors in the assessment of the impact of the transaction on the national sectoral markets outside France, and breach of the rights of the defence vitiating the analysis of the impact of the transaction on the French sectoral markets and of the corrective measures proposed by Schneider.

56. Regarding the first point, the Schneider I judgment states as follows:

256 ... the Commission has... overestimated the economic power of the new entity on the national sectoral markets referred to at recitals 782 and 783 by including in its analysis of the impact of the transaction on those markets the total effect of a product range which does not reflect the true competitive situation which will obtain in those markets following the concentration.

257 The same reasoning must apply as regards the merged entity's wide variety of brands, which is also deemed to be unrivalled because the brands owned by the notifying parties in the EEA as a whole have been taken together in the abstract.

...

296 ... in refusing to include in ABB's and Siemens' market shares their integrated sales of panelboard components, the Commission underestimated the economic power of the merged entity's two main competitors and correspondingly overestimated that entity's strength on the French and Italian markets for distribution panelboard components and on the Danish, Spanish, French, Italian and Portuguese markets for final panelboard components.

...

404 The Court considers the errors, omissions and inconsistencies which it has found in the Commission's analysis of the impact of the merger to be of undoubted gravity.

405 In taking as its basis the fact that the merged entity's activities extend throughout the EEA, the Commission has included indicators of economic power outside the scope of the national sectoral markets affected by the merger and having the effect of unduly magnifying the impact of the transaction on those markets.

406 In that regard, it is appropriate to bear in mind that none of the findings of fact in the Decision suggest that the proposed transaction could give rise to competition problems on markets other than the sectoral markets in France and in six other countries, which the Decision identifies, at recitals 782 and 783, as affected by the transaction.

407 In particular, the Decision does not contain any analysis of the structure of competition in the national sectoral markets not affected by the concentration at issue...

408 Owing to the incompleteness of, and inconsistencies in, the analysis of distribution structures, the Commission could not qualify as substantial competitive advantages for the merged entity either its alleged privileged access to distributors consequent upon its positions on all the markets for lowvoltage electrical equipment at distributor level or the inability of wholesalers to exert competitive

constraints on the new entity.

409 The abstract nature of the indicators of economic power based on the SchneiderLegrand group's unrivalled range of products and incomparable variety of brands and the fact that those indicators bore no relation to the relevant national sectoral markets, led the Commission to overestimate even further the merger's impact on the national sectoral markets affected.

410 The same is true, first, of the Commission's refusal to take account of the integrated sales made by ABB and Siemens on the national markets for panelboard components affected by the merger and, second, of the incomplete nature, in particular, of the analysis of the impact of the transaction on the Danish markets for final panelboard components and on the Italian markets for components for distribution panelboards and final panelboards.

411 The errors of analysis and assessment found above are thus such as to deprive of probative value the economic assessment of the impact of the concentration which forms the basis for the contested declaration of incompatibility.

412 None the less, however incomplete a Commission decision finding a concentration incompatible with the common market may be, that cannot entail annulment of the decision if, and to the extent to which, all the other elements of the decision permit the Court to conclude that in any event implementation of the transaction will create or strengthen a dominant position as a result of which effective competition will be significantly impeded for the purposes of Article 2(3) of [the regulation]...

413 In that regard, the errors found do not in themselves suffice to call in question the objections which the Commission raised in respect of each of the French sectoral markets listed at recitals 782 and 783.

414 The Court notes in that regard that Schneider did not fundamentally dispute the analysis of the impact of the transaction on those markets. On the contrary, it applied itself to criticising the Commission for having used the competitive situation obtaining on the French markets in the aftermath of the transaction to draw conclusions about the other national sectoral markets affected...

415 In the light of the factual findings in the Decision, it is impossible not to subscribe to the Commission's conclusion that the proposed transaction will create or strengthen on the French markets, where each of the notifying parties was already very strong, a dominant position as a result of which, for the purposes of Article 2(3) of [the regulation], effective competition will be significantly impeded in the common market or in a substantial part of it...

416 It is clear from the Decision that the SchneiderLegrand group has, on each of the French markets affected, market shares which are indicative of dominance or of a strengthened dominant position, given the weak market presence and thinly spread market shares of its main competitors ...

417 In addition, as the Commission found..., without challenge from Schneider, and as is also clear from [the Decision], the prices paid by wholesalers for lowvoltage electrical equipment prior to the merger were on average appreciably higher in France than on the other national markets affected.

418 ... there is no doubt that the rivalry between the notifying parties was extremely significant on the French sectoral markets to which the objections relate and that one effect of the merger will be to eliminate a key factor in competition there.

...

419 The economic analysis underpinning the Decision can therefore be held inadequate only as regards all the national sectoral markets affected apart from the French markets; and the latter markets indisputably constitute a substantial part of the common market within the meaning of Article 2(3)

of [the regulation]...

57. As regards breach of Schneider's rights of defence vitiating the analysis of the impact of the transaction on the French sectoral markets and the remedies proposed by the applicant, the Schneider I judgment states as follows:

444 The Commission was... required to explain all the more clearly the competition problems raised by the proposed merger, in order to allow the notifying parties to put forward, properly and in good time, proposals for divestiture capable, if need be, of rendering the concentration compatible with the common market.

445 It is not apparent on reading the statement of objections [of 3 August 2001] that it dealt with sufficient clarity or precision with the strengthening of Schneider's position visàvis French distributors of lowvoltage electrical equipm ent as a result not only of the addition of Legrand's sales on the markets for switchboard components and panelboard components but also of Legrand's leading position in the segments for ultraterminal electrical equipment. The Court observes in particular that the general conclusion in the statement of objections lists the various national sectoral markets affected by the concentration, without demonstrating that the position of one of the notifying parties on a given product market would in any way buttress the position of the other party on another sectoral market.

...

453 ... the statement of objections did not permit Schneider to assess the full extent of the competition problems to which the Commission claimed the concentration would give rise at distributor level on the French market for lowvoltage electrical equipment.

454 It follows that Schneider's rights of defence have been infringed in various respects.

455 Schneider, first, was not afforded the opportunity of properly challenging the substance of the Commission's argument that, at distributor level, Schneider's dominant position would be strengthened in France in the sector for distribution and final panelboard components by Legrand's leading position in ultraterminal equipment.

456 It follows that Schneider was not given a proper opportunity to submit its observations in that regard either in its response to the statement of objections or at the hearing on 21 August 2001.

457 If it had been given such an opportunity, the Commission could have reconsidered its position or, on the contrary, have provided further evidence in support of its proposition, so that the Decision might have been different in any event.

458 Schneider must therefore be regarded as not having been afforded the opportunity to submit, properly and in good time, proposals for divestiture sufficiently extensive to provide a solution to the competition problems identified by the Commission on the relevant French sectoral markets.

459 The Court notes, in that connection, that Schneider stated at the hearing that it had not in fact been able to propose in good time any remedies for the competition problems in respect of which it did not challenge the Decision.

460 Thus Schneider was indirectly deprived of the chance of obtaining the approval which the Commission might have given to the remedies proposed, had the notifying parties been put in a position to submit in good time proposals for divestiture sufficiently extensive to resolve all the competition problems identified by the Commission at distribution level in France.

461 The effect of those irregularities is all the more serious, because, as the Commission stated several times at the hearing, remedies are the only means of preventing a concentration falling

under Article 2(3) of Regulation No 4064/89 from being declared incompatible.

462 Consequently, the Decision is vitiated by an infringement of the rights of defence and the plea must be accepted.

463 In those circumstances the Decision must be annulled, without there being any need to adjudicate on the other pleas and arguments put forward by Schneider in support of its action and directed, in particular, against the Commission's assessment of the proposals for divestiture which Schneider submitted with a view to rendering the transaction compatible with the common market.

464 Under Article 233 EC, it is incumbent upon the Commission to take the necessary measures to comply with this judgment.

465 Such measures to comply with the judgment must have regard to the grounds constituting the essential basis for the operative part of the judgment (see Joined Cases 97/86, 99/86, 193/86 and 215/86 Asteris and Others v Commission [1988] ECR 2181, paragraph 27). The relevant grounds of this judgment require, in particular, that, if the Commission should resume its examination of the compatibility of the transaction, Schneider should be placed in a position, as regards the relevant national sectoral markets in respect of which the economic analysis in the Decision has not been rejected, i.e. the French sectoral markets, to put forward a proper defence and, where appropriate, to propose corrective measures addressing the objections made and previously indicated by the Commission.'

58. By judgment of 22 October 2002 in Case T77/02 Schneider Electric v Commission [2002] ECR II4201 (the Schneider II judgment'), the Court of First Instance consequently annulled the divestiture decision on the ground that it was a measure giving effect to the annulled incompatibility decision, without there being any need to examine the other pleas alleging unlawfulness raised independently against the divestiture decision.

59. The Commission did not appeal against the Schneider I and Schneider II judgments, which thus became final.

60. By note of 29 October 2002, Schneider drew attention to the extent and serious financial consequences of the periods prescribed for the various procedural steps and confirmed that its corrective measures for France of 24 September 2001 could serve as a provisional basis for reexamination of the compatibility of the transaction, pending the notification of any objections.

61. The Commission published in the Official Journal of the European Communities of 15 November 2002 (OJ 2002 C 279, p. 22) a notice concerning recommencement of the investigation procedure, stating that, under Article 10(5) of the regulation, the investigation period would run from 23 October 2002, the day following delivery of the Schneider I judgment. The Commission added that, on a preliminary analysis of phase I and without prejudice to a final decision, the transaction might fall within the scope of the regulation, and invited interested third parties to submit any observations to it.

62. By statement of objections of 13 November 2002, the Commission informed Schneider that the concentration was liable to undermine competition in the French sectoral markets, by reason of the significant overlapping of the market shares of Schneider and Legrand, the end of their long-standing rivalry, the importance of the brands owned by the Schneider- Legrand entity, its power over wholesalers and the inability of any competitor to replace the competitive pressure exerted by Legrand before the transaction was effected

63. The Commission observed in particular:

Thus the transaction results, in each of the affected markets on which one or other of the parties held a dominant position before the transaction, in the elimination of the only immediate competitor in a position to exercise any competitive restraint on the dominant undertaking owing to the support provided to it by the very strong positions held by the same group in other segments of the same sector, in particular as regards the reputation of its brands and its commercial relations with wholesalers.'

64. On 14 November 2002, Schneider proposed to the Commission a number of corrective measures intended to remove the overlap between the businesses of Schneider and Legrand in the affected French sectoral markets.

65. By letter of 25 November 2002, Schneider informed the Commission that the arguments put forward in the statement of objections of 13 November 2002 remained, in the absence of a market-by-market examination of the effects of the transaction, imprecise in nature and scope and failed to demonstrate the existence of any anti-competitive effect on the affected markets and that the general considerations put forward by the Commission were belied by the actual situation.

66. By note of 29 November 2002, the Commission informed Schneider that the corrective measures successively submitted by it were not sufficient to eliminate all the restrictions of competition deriving from the transaction, because of persistent doubts as to the viability and independence of the businesses transferred and the inability of the proposed measures to create a counterweight to the strength of the SchneiderLegrand entity.

67. By judgment of 29 November 2002, the Cour d'appel de Versailles (France), issued an interlocutory decision in which it held that Schneider's proposals for corrective measures had not been submitted for prior approval to the chairman of Legrand, in breach of the letter of 12 January 2001, and consequently ordered Schneider to withdraw divestiture proposals concerning the assets of Legrand which had not been approved by that company'.

68. By letter of 2 December 2002, Schneider criticised the Commission for contesting the viability and the capability of the corrective measures to ensure the maintenance of a competitive situation on the affected French markets and declared that, at that very advanced stage of the procedure, the Commission's position made further pursuit of the discussions unrealistic. To bring to an end uncertainty that had lasted more than a year, Schneider therefore informed the Commission that it had decided to sell Legrand to WendelKKR.

69. By fax of 3 December 2002, Schneider confirmed its decision to the Commission, stating that, under the sale and purchase agreement of 26 July 2002, the sale of Legrand to WendelKKR required no further action on its part and was to take place on 10 December 2002.

70. By decision of 4 December 2002, the Commission initiated phase II of the investigation of the transaction, concluding that the corrective measures proposed by Schneider did not make it possible, at the investigation stage, to eliminate the remaining serious doubts as to the compatibility of the transaction, having regard to its effects on the French sectoral markets identified in recitals 782 and 783 to the incompatibility decision.

71. The Commission concluded in particular that businesses proposed for transfer related to the assets of Legrand and appeared to conflict with the judgment of the Cour d'appel de Versailles, and, in the alternative, rejected the measures proposed on grounds concerning the viability and independence of the entities concerned.

72. On 10 December 2002, Schneider transferred its shareholding in Legrand to WendelKKR and on the following day it informed the Commission services that it had done so.

73. By letter of 13 December 2002, the Commission informed Schneider that the investigation procedure had been closed as being devoid of purpose, since Schneider no longer controlled Legrand.

74. On 10 February 2003, Schneider brought an action for annulment of the decision of 4 December

2002 to initiate phase II and of the closure decision of 13 December 2002 (Case T48/03).

75. By orders of 29 October 2004 in Cases T310/01 DEP and T77/02 DEP Schneider Electric v Commission , not published in the ECR, the Court of First Instance set the amount of costs that Schneider could recover from the Commission at EUR 419 595.32 in Case T310/01 and EUR 426 275.06 in Cases T77/02 and T77/02 R.

76. By order of 31 January 2006 in Case T48/03 Schneider Electric v Commission [2006] ECR II111, the Court of First Instance dismissed as inadmissible the application for annulment lodged in that case on the ground that the decisions complained of, namely the decision to initiate phase II and the decision to close the procedure, were not acts adversely affecting Schneider.

77. By application lodged at the Registry of the Court of Justice on 12 April 2006, Schneider appealed against that order.

78. That appeal was dismissed by order of the Court of Justice of 9 March 2007 (Case C188/06 P Schneider Electric v Commission [2007] ECR I35). In paragraph 48 of that order, the Court of Justice held that, by opting to resume the investigation of the concentration in phase I, the Commission's intention was to draw the appropriate inferences from the Schneider I judgment, thus taking all necessary precautions to ensure that there was no possible breach of Schneider's rights of defence.

Procedure and forms of order sought

79. By application lodged on 10 October 2003, Schneider brought the present action for damages.

80. By decision of 2 December 2003, the President of the Court of First Instance assigned the case to the Fourth Chamber.

81. On 11 December 2003, the Court of First Instance (Fourth Chamber) adopted a measure of organisation of procedure limiting the scope of the pleadings to the principle of the Community's noncontractual liability and the method for evaluation of the loss.

82. By orders of 20 April 2004 and 6 December 2004, the Federal Republic of Germany and the French Republic were granted leave to intervene, the first in support of the form of order sought by the Commission and the second in support of that sought by Schneider.

83. At the Commission's request, on 13 October 2004 the Court referred the case to the Fourth Chamber, Extended Composition.

84. Upon hearing the report of the Judge Rapporteur, the Court of First Instance (Fourth Chamber, Extended Composition) decided to open the oral procedure and to put written questions to the main parties, which answered them within the prescribed periods.

85. The parties presented oral argument and replied to the Court's questions at the hearing on 25 April 2007.

86. Schneider, supported by the French Republic, claims that the Court should:

- primarily:

- order the Community to pay it the sum of EUR 1 663 734 716.76, subject to a reduction of the recoverable costs determined by the taxation orders made in cases T310/01 DEP and T77/02 DEP, and to an increase by reason, first, of interest accruing from 4 December 2002 until full payment, at an annual rate of 4%, and, second, the amount of taxation for which Schneider will be liable when receiving the compensation awarded to it;

- in the alternative:

- declare the action admissible;

- find that the Community has incurred noncontractual liability;

- determine the procedure to be followed in order to establish the recoverable loss actually suffered by Schneider;

- in any event, order the Commission to pay all the costs.

87. The Commission, supported by the Federal Republic of Germany, contends that the Court should:

- dismiss the action as partially inadmissible and entirely unfounded;

- order Schneider to pay the costs.

Admissibility

Arguments of the parties

88. Without raising an objection of inadmissibility under Article 114 of the Rules of Procedure, the Commission contends in its defence that the details of certain of Schneider's claims involve general references to pleas put forward in support of its three applications for annulment in Cases T310/01, T77/02 and T48/03, which diverge, as regards either their subjectmatter or their description, from the arguments put forward in the present action for damages. General references of that kind do not meet the requirements of the first paragraph of Article 21 of the Statute of the Court of Justice or of Article 44(1)(c) of the Rules of Procedure of the Court of First Instance.

89. The Commission thus confines itself to contesting the merits only of the arguments put forward in the application and does not therefore consider that it is required to respond to the arguments put forward in support of the pleas for annulment contained in the three applications for annulment, since they are not repeated in the present application but are merely referred to.

90. The Commission also states that no effort has been made in the application to identify, justify and classify the nature of the alleged link between the conduct imputed to it and each of the heads of damage relied on.

91. Schneider replies, in essence, that the presentation of all the arguments put forward by it in the application fulfils the conditions of admissibility laid down by the applicable procedural provisions and expounded by the caselaw.

Findings of the Court

92. It should be borne in mind that, under the first paragraph of Article 21 of the Statute of the Court of Justice, which applies to the procedure before the Court of First Instance by virtue of the first paragraph of Article 53 of that Statute, and under Article 44(1)(c) of the Rules of Procedure of the Court of First Instance, all applications must indicate the subjectmatter of the dispute and contain a summary of the pleas in law on which the application is based.

93. That statement must be sufficiently clear and precise to enable the defendant to prepare his defence and the Court to rule on the application, if necessary, without any further information. In order to guarantee legal certainty and the sound administration of justice it is necessary that the basic legal and factual particulars relied on be indicated, at least in summary form, coherently and intelligibly in the application itself (order of the Court of First Instance of 11 July 2005 in Case T294/04 Internationaler Hilfsfonds v Commission [2005] ECR II2719, paragraph 23).

94. In order to satisfy those requirements, an application seeking compensation for damage caused by a Community institution must state the evidence from which the conduct alleged against the institution can be identified, the reasons for which the applicant considers there to be a causal link between

that conduct and the damage it claims to have suffered, and the nature and extent of that damage (Case T210/00 Biret et Cie v Council [2002] ECR II47, paragraph 34, upheld on appeal by judgment of the Court of Justice in Case C94/02 P Biret et Cie v Council [2003] ECR I10565).

95. In the present case, although lengthy and numerous, the references in the application to the arguments put forward in support of the pleas for annulment in Cases T310/01, T77/02 and T48/03 are to be regarded merely as expanding upon the account set out in the application of the unlawful acts which are alleged to vitiate the Commission's conduct, an account which the Commission does not contend is formally inadmissible.

96. In view of the identity of the parties and of the legal basis, namely the unlawful acts alleged to vitiate the Commission's action, between the three actions for annulment and the present action for damages, it is appropriate to declare admissible the references made in the arguments in the application, which are in themselves admissible, to the account of the pleas put forward in support of the three actions for annulment.

97. The Commission's argument as to the inadmissibility of the application, in that it does not properly describe the causal link between the loss suffered and the conduct imputed to the Commission, must also be rejected.

98. It appears to the Court that the account of the causal link contained in the application meets the minimum conditions for formal admissibility required of laid down for applications by the relevant rules and caselaw. Schneider is sufficiently clear and precise to enable the Commission to present its defence and the Court to give an appropriate ruling on the claims for damages when it maintains that the two unlawful acts vitiating the incompatibility decision directly caused it damage and that the Commission's general conduct throughout the investigation of the transaction prevented the applicant from reducing that damage to below the level of compensation claimed.

99. The Commission's observations in that regard must therefore be rejected and both the present action for compensation and all the arguments put forward in support of it should be declared admissible.

Substance

General arguments of the parties

100. Schneider relies on two sufficiently serious breaches of rules of law intended to confer rights on individuals, in the form of the two unlawful elements established in the incompatibility decision by the Schneider I judgment, namely, first, the deficiencies in the Commission's analysis of the impact of the transaction on the national sectoral markets outside France and, second, the breach of the applicant's rights of defence represented by the inadequate particularisation in the statement of objections of 3 August 2001 of the objection based on the support, in the wholesale French lowvoltage electric equipment markets, which Schneider's dominant position in the sector of components for distribution panelboards and final panelboards represented to Legrand's leading position in the ultraterminal equipment segments.

101. The transaction could not be implemented solely because of the unlawful conduct of the Commission. It follows that the two serious irregularities vitiating the incompatibility decision first of all directly resulted in the depreciation of the value of the applicant's assets, that depreciation consisting, first, of the book loss recorded in respect of the assets in Legrand, second, of a loss of profit attributable to the impossibility of achieving the synergies expected from the transaction and the subsequent destruction of the group's industrial strategy and, third and last, a very negative impact on the applicant's reputation.

102. Next, the incompatibility decision directly caused Schneider to incur, first, the costs associated with the special trustee's fees in connection with the administrative procedure for the separation

of Schneider and Legrand and the reexamination of the transaction undertaken the day after delivery of the Schneider I and Schneider II judgments and, second, the costs relating to the applications in Cases T310/01, T77/02 and T77/02 R to the Court of First Instance, after deduction of the recoverable costs already awarded to Schneider by the two orders for taxation of costs of 29 October 2004 in Cases T310/01 DEP and T77/02 DEP Schneider Electric v Commission.

103. The Commission's hostile conduct towards Schneider throughout the investigation of the transaction continued and worsened after the adoption of the incompatibility decision, and that conduct, without being the cause of the initial damage, nevertheless contributed to its final extent.

104. By its attitude, the Commission aggravated the damage initially suffered by reason of the incompatibility decision and, second, caused the applicant additional damage in the form of certain costs which it had to incur as from 10 October 2001.

105. First, from the start of the investigation procedure, the Commission treated Schneider unfairly, then, after the incompatibility decision, infringed the applicant's right to be heard by an impartial authority, and seriously misconstrued the exclusive investigatory authority which the regulation reserves to the institution. When reexamining the transaction, the Commission did not comply in good faith with the Schneider I judgment, it again infringed the applicant's rights of defence and, finally, it carried out an incorrect, unfair and discriminatory analysis of the applicant's corrective measures.

106. Second, the intransigence displayed by the Commission in determining the conditions and time-limit for the separation of Schneider and Legrand prompted Schneider to incur various fees of legal, banking and tax advisers in order to explore the various possible methods of separation. Finally, by playing on the tensions which had arisen between Schneider and Legrand following the incompatibility decision, the Commission prompted Legrand to start legal proceedings in France against Schneider in November 2002, then used the decision of the national court as a basis for hindering the applicant's attempts to secure a finding that the concentration was compatible with the common market. This resulted in further costs to which Schneider should never have been exposed.

107. The Commission replies, in essence, that neither of the two unlawful acts in the incompatibility decision found by the Schneider I judgment is of sufficient gravity to constitute a fault liable to cause the Community to incur noncontractual liability as against Schneider.

108. The other forms of alleged unlawful conduct have not in its view been established and, in any event, do not constitute sufficiently serious infringements of Community law to cause the Community to incur liability.

109. As regards the amount of its loss, Schneider claims that the loss of value of its assets amounted, as at the date of the unlawful incompatibility decision, namely 10 October 2001, to a sum between EUR 2 483 and 3 326 million. The amount of that damage subsequently changed, being ultimately limited to EUR 1 663 734 716.76, including the costs incurred by the applicant as a result of all the Commission's unlawful conduct.

110. The incompatibility decision caused Schneider a loss of asset value between the date of the announcement of the offer for the shares in Legrand, in January 2001, and the effective date of the sale and purchase agreement, in December 2002. That loss included the book loss recorded in respect of the assets in Legrand, a loss of profit caused by the impossibility of achieving the synergies expected from the transaction, the subsequent undermining of Schneider's industrial strategy and damage to its image.

111. The Commission replies that no loss has been established. It rejects both the reality and the certainty of the alleged depreciation of assets and the method proposed by Schneider to evaluate

that head of damage. It was also incumbent upon the applicant not to incur excessive fees following the incompatibility decision. The Commission reserves the right to analyse in detail the invoices submitted in support of those claims and the possibility of supplementing and adapting the methodology for assessment of the damage.

112. In any event, the Commission denies any causal link between the conduct imputed to it and the various heads of damage alleged. The Commission draws attention to the very hypothetical nature of Schneider's argument that, in the absence of the illegal acts attributed to the Commission, the transaction would have been authorised and carried out.

Preliminary views of the Court

113. It must first be borne in mind that it is settled caselaw that, in order for the Community to incur noncontractual liability under the second paragraph of Article 288 EC for unlawful conduct of its institutions, a number of conditions must be satisfied: the institution's conduct must be unlawful, actual damage must have been suffered and there must be a causal link between the conduct and the damage pleaded (Case 26/81 Oleifici Mediterranei v EEC [1982] ECR 3057, paragraph 16, and Case T383/00 Beamglow v Parliament and Others [2005] ECR II5459, paragraph 95).

114. Where, as in this case, a legal measure is relied on as a basis for an action for damages, that measure, in order to be capable of causing the Community to incur noncontractual liability, must constitute a sufficiently serious breach of a rule of law intended to confer rights on individuals.

115. The decisive criterion in that regard is whether the Community institution concerned manifestly and gravely disregarded the limits on its discretion (Case C282/05 P Holcim (Deutschland) v Commission [2007] ECR I2941, paragraph 47).

116. The system of rules which the Court of Justice has worked out in relation to the noncontractual liability of the Community takes into account, inter alia, the complexity of the situations to be regulated, difficulties in the application or interpretation of the legislation and, more particularly, the margin of discretion available to the author of the act in question (Holcim (Deutschland) v Commission, paragraph 50).

117. Where the institution criticised has only considerably reduced, or even no, discretion, the mere infringement of Community law may be sufficient to establish the existence of a sufficiently serious breach of Community law (Holcim (Deutschland) v Commission, paragraph 47).

118. The same applies where the defendant institution breaches a general obligation of diligence (see, to that effect, Case C308/87 Grifoni v EAEC [1990] ECR I1203, paragraphs 13 and 14) or misapplies relevant substantive or procedural rules (Joined Cases 5/66, 7/66 and 13/66 to 24/66 Kampffmeyer and Others v Commission [1967] ECR I245, 262 and 263).

119. Moreover, it is for the party seeking to establish the Community's liability to adduce conclusive proof as to the existence or extent of the damage he alleges and to establish a sufficiently direct causal link between that damage and the conduct complained of on the part of the Community institution (Joined Cases 64/76, 113/76, 167/78, 239/78, 27/79, 28/79 and 45/79 Dumortier Frères and Others v Council [1979] ECR 3091, paragraph 21, and Case T178/98 Fresh Marine v Commission [2000] ECR II3331, paragraph 118, upheld on appeal by the judgment in Case C472/00 P Commission v Fresh Marine [2003] ECR I7541).

120. Where one of the three conditions governing establishment of noncontractual liability on the part of the Community is not satisfied, the claims for damages must be rejected without there being any need to examine the other two conditions (Case C146/91 KYDEP v Council and Commission [1994] ECR I4199, paragraph 81, and Case T170/00 FördeReederei v Council and Commission [2002] ECR II515, paragraph 37), the Community judicature not being required, moreover, to examine the

conditions in a particular order (Case C257/98 P Lucaccioni v Commission [1999] ECR I5251, paragraph 13).

121. In that context, the Commission contends that, if it were to incur financial liability in circumstances such as those of this case, its capacity fully to function as a regulator of competition, a task entrusted to it by the EC Treaty, would be compromised as a result of the possible inhibiting effect that the risk of having to bear damages alleged by the undertakings concerned might have on the control of concentrations.

122. It must be conceded that such an effect, contrary to the general Community interest, might arise if the concept of a serious breach of Community law were construed as comprising all errors or mistakes which, even if of some gravity, are not by their nature or extent alien to the normal conduct of an institution entrusted with the task of overseeing the application of competition rules, which are complex, delicate and subject to a considerable degree of discretion.

123. Therefore, a sufficiently serious breach of Community law, for the purposes of establishing the noncontractual liability of the Community, cannot be constituted by failure to fulfil a legal obligation, which, regrettable though it may be, can be explained by the objective constraints to which the institution and its officials are subject as a result of the provisions governing the control of concentrations.

124. On the other hand, the right to compensation for damage resulting from the conduct of the institution becomes available where such conduct takes the form of action manifestly contrary to the rule of law and seriously detrimental to the interests of persons outside the institution and cannot be justified or accounted for by the particular constraints to which the staff of the institution, operating normally, is objectively subject.

125. Such a definition of the threshold for the establishment of noncontractual liability of the Community is conducive to protection of the room for manoeuvre and freedom of assessment which must, in the general interest, be enjoyed by the Community regulator of competition, both in its discretionary decisions and in its interpretation and application of the relevant provisions of primary and secondary Community law, without thereby leaving third parties to bear the consequences of flagrant and inexcusable misconduct.

126. It is in the light of those principles that it is appropriate to consider whether the Commission committed sufficiently serious breaches of rules of law intended to confer rights on individuals by adopting the incompatibility decision that was annulled by the Schneider I judgment, before considering the aspects of the institution's overall conduct in the course of the investigation of the transaction that might have exacerbated the loss.

The irregularities rendering the incompatibility decision unlawful

The defects found in the analysis of the impact of the transaction

- Arguments of the parties

127. Schneider maintains that the errors, omissions and contradictions in the incompatibility decision established by the Schneider I judgment regarding the assessment of the impact of the transaction on national sectoral markets outside France constitute sufficiently serious breaches which cannot be justified either by the complexity of the investigation of the transaction or by any time constraints, in view of the fact that the period of four months allowed to the Commission to adopt a decision on the compatibility of the transaction was extended.

128. The Commission replies that, in the absence of proof of manifest and serious failure to observe the limits imposed on its broad discretion, those irregularities are not sufficiently serious, in view of the complexity of the situations examined, the prospective nature of the market analyses

and the requirement for speed in the investigation procedure. In any event, the Court made clear in paragraph 412 of the Schneider I judgment that the errors committed were not such as to entail annulment of the incompatibility decision.

- Findings of the Court

129. In principle, the possibility cannot be ruled out that manifest and serious defects affecting the economic analysis underlying competition policy decisions may constitute sufficiently serious breaches of a rule of law to cause the Community to incur noncontractual liability.

130. However, for such a finding to be made it is first necessary to verify that the rule infringed by the incorrect analysis is intended to confer rights on individuals. Whilst certain principles and certain rules which must be observed in any competitive analysis are indeed rules intended to confer rights on individuals, not all norms, whether of primary or secondary law or deriving from caselaw, which the Commission must observe in its economic assessments can be automatically held to be rules of that kind.

131. Next, it must be noted that the economic analyses necessary for the classification, under competition law, of a given situation or transaction are generally, as regards both the facts and the reasoning based on the account of the facts, complex and difficult intellectual formulas, which may inadvertently contain certain inadequacies, such as approximations, inconsistencies, or indeed certain omissions, in view of the time constraints to which the institution is subject. That is even more so where, as in the case of the control of concentrations, the analysis has a prospective element. The gravity of a documentary or logical inadequacy, in such circumstances, may not always constitute a sufficient circumstance to cause the Community to incur liability.

132. Last, it must be borne in mind that the Commission enjoys discretion in maintaining control over Community competition policy, which means that rigorously consistent and invariable practice in implementing the relevant rules cannot be expected of it, and, as a corollary, that it enjoys a degree of latitude regarding the choice of the econometric instruments available to it and the choice of the appropriate approach to the study of any matter (see, for example, regarding the definition of the relevant market, Case T219/99 British Airways v Commission [2003] ECR II5917, paragraph 89 et seq., upheld on appeal in Case C95/04 P British Airways v Commission [2007] ECR I2331), provided that those choices are not manifestly contrary to the accepted rules of economic discipline and are applied iconsistently.

133. However, it is unnecessary in this case to decide whether the three foregoing considerations support the view that the defects in the economic analysis of the expected effects of the transaction on the relevant sectoral markets outside France go beyond the threshold at which the Community must be held to have incurred noncontractual liability.

134. The defects in the analysis of the impact of the transaction on national sectoral markets outside France found by the Schneider I judgment cannot have had any effect on the finding finally arrived at by the Commission in the incompatibility decision that the transaction was incompatible with the common market.

135. Even in the absence of that breach of Community law, the Commission would not have been in a position to authorise the transaction as proposed at that time, since, according to paragraph 413 of the Schneider I judgment, the errors found did not in themselves suffice to call in question the objections which the Commission had raised in respect of each of the French sectoral markets listed at recitals 782 and 783 of the incompatibility decision. In the light of the findings of fact contained in the incompatibility decision, it was impossible, according to paragraph 415 of the same judgment, not to subscribe to the Commission's conclusion that the transaction would create or strengthen on the French sectoral markets for lowvoltage electrical equipment, in which each

of the two parties was already very strong, a dominant position as a result of which effective competition would be significantly impeded in the common market or in a substantial part of it within the meaning of Article 2(3) of the regulation.

136. Whilst it has no effect on the characterisation of the concentration in relation to the French sectoral markets, the criticism of the economic analysis of the incompatibility decision is nevertheless not superfluous in the Schneider I judgment, since it has the effect of rendering invalid the assessment of compatibility made in relation to the other markets and, consequently, of restricting the examination of observance of the rights of the defence solely to the aspect of the incompatibility decision that remains valid, namely that which relates to the French sectoral markets.

137. For that result to be reached, it was sufficient that the economic analysis of the impact of the transaction should be declared devoid of probative value, as it was in paragraph 411 of the Schneider I judgment, the question whether that defect also constituted a sufficiently serious breach of Community law being of no importance in that regard.

138. Consequently, the complaint regarding the defective economic analysis in the incompatibility decision is not, as a matter of construction, capable, by itself, of having had any repercussions whatsoever on the subsequent stages of the procedure nor, consequently, can it have caused Schneider any damage distinct from that which might have derived from a breach of its rights of defence.

139. The only defect in the incompatibility decision which, according to the Schneider I judgment, is liable to have deprived the applicant of an opportunity to secure a decision allowing it to proceed with the transaction is therefore to be found in the discrepancy identified between the statement of objections of 3 August 2001 and the incompatibility decision itself, regarding the objection concerning the buttressing of the positions of the parties to the transaction. It is therefore the nature and gravity of that sole defect in the incompatibility decision that must be assessed in determining whether the threshold for Community liability was overstepped by that decision.

The breach of Schneider's rights of defence

- Arguments of the parties

140. Schneider states that the Commission did not articulate sufficiently clearly and precisely in its statement of objections of 3 August 2001 the objection to the compatibility of the transaction based on the support, on the French sectoral lowvoltage electrical equipment wholesale markets, which Schneider's dominant position in the sector of components for distribution boards and terminal boards provided for Legrand's leading position in the segment for ultraterminal equipment, thus depriving the applicant of any opportunity to contest the merits of that objection during the administrative investigation procedure and properly to propose corrective measures.

141. Schneider claims, however, that, when notifying the transaction, it provided the Commission with information on the links that were supposed to exist between market segments 4 and 5 and the respective positions of the parties to the transaction in those segments in France, emphasising at the outset that there were no portfolio effects. However, the Commission did not raise that objection until 24 September 2001, after expiry of the normal period for putting forward corrective measures and only a few days before the end of the procedure for the investigation of the transaction.

142. The Commission replies that the discrepancy between the statement of objections of 3 August 2001 and the incompatibility decision derives not from the total absence of, but merely a lack of clarity and precision in, the objection based on that support, since the statement of objections did indeed raise that problem in a number of its recitals.

143. The breach of Schneider's rights of defence is not in its opinion sufficiently serious, in view of the drafting of the statement of objections within a short period, the complex assessment

both of all the substantive arguments, in respect of which the objection based on the support provided was merely one of numerous relevant factors, and of the corrective measures proposed by Schneider.

144. The fact that the applicant provided the Commission with information showing that the transaction involved no support problem further reduces the seriousness of the procedural error committed.

- Findings of the Court

145. It must be borne in mind that, before adopting a decision finding that a concentration is incompatible with the common market, the Commission is required, under Article 18(1) of the regulation, to give the notifying undertakings an opportunity, at every stage of the procedure up to consultation of the Advisory Committee, of making known their views on the objections against them.

146. It is also apparent from Article 18(3) of the regulation that the Commission may base its incompatibility decisions only on objections on which the undertakings concerned have been able to submit their observations.

147. As addressees of decisions of a public authority which affect their interests to an appreciable extent, the undertakings involved in a concentration having Community dimension must be placed in a position where they can make their views properly known and, to that end, be clearly informed, in due time, of the Commission's main objections to their notified concentration (see, to that effect, Case 17/74 Transocean Marine Paint v Commission [1974] ECR I1063, paragraph 15, and Case T87/96 Assicurazioni Generali and Unicredito v Commission [1999] ECR II203, paragraph 88).

148. The statement of objections is of particular importance in that connection, given that it is specifically intended to enable the undertakings concerned to react to the concerns expressed by the regulatory institution, first by giving their views on the matter and, second, by considering whether to propose to the Commission measures intended to correct the negative impact of the notified concentration.

149. Respect for that right, which is one of the fundamental rights guaranteed by the Community legal order in administrative procedures, is of particular importance for the control of concentrations between undertakings (see, to that effect, Case C269/90 Technische Universität München [1991] ECR I5469, paragraph 14).

150. Account must be taken, in that regard, both of the importance of the financial interests involved and the industrial implications of a concentration having a Community dimension and of the considerable scope of the investigatory powers available to the Commission to regulate competition in the common market.

151. It follows that Schneider is alleging breach of a rule intended to confer rights on individuals.

152. In this case, a manifest and serious breach of Article 18(1) and (3) of the regulation stems from the fact of the Commission's drafting, as in this case, a statement of objections in such a way that, as is apparent from the Schneider I judgment, the applicant could not ascertain that, if it did not submit corrective measures conducive to reducing or eliminating the support between its positions and those of Legrand in the French sectoral markets, it had no chance of securing a declaration that the transaction was compatible with the common market.

153. Thus, the corrective measures submitted by Schneider in September 2001, which included Legrand's withdrawal from the market in components for panelboards throughout the EEA, were not objectively capable of resolving the specific problem of the support provided, on the French sectoral markets in lowvoltage electrical equipment perceived at wholesale level, by Schneider's dominant position in the sector of components for distribution and final panelboards to Legrand's leading position in the ultraterminal equipment segments.

154. That breach of the rights of the defence is neither justified nor accounted for by the particular constraints to which Commission staff are objectively subject. The fault at issue, the existence and extent of which are not contested by the Commission, therefore imposes upon the Community a duty to make good the harmful consequences.

155. The defendant's argument as to the difficulty inherent in undertaking a complex market analysis under a very rigid time constraint is irrelevant, since the fact giving rise to the damage under consideration here is not the analysis of the relevant markets contained in the statement of objections or the incompatibility decision but the omission from the statement of objections of a reference which was of the essence as regards its consequences and the operative part of the incompatibility decision, which did not involve any particular technical difficulty or call for any additional specific examination that could not be carried out for reasons of time and the absence of which cannot be attributed to a fortuitous or accidental drafting problem that could be compensated for by a reading of the statement of objections as a whole.

156. It follows that the breach of Schneider's rights of defence is to be regarded in this case as a manifest and serious disregard by the Commission of the limits to which it is subject and, as such, constitutes a sufficiently serious breach of a rule of law intended to confer rights on individuals.

157. The breach of Schneider's rights of defence therefore constitutes a fault on the part of the Commission such as to cause the Community to incur noncontractual liability, provided that it is established in addition that there was real and certain damage and a sufficiently direct causal link between that damage and the sufficiently serious breach of Community law constituting a fault.

158. Before examining whether those two conditions are satisfied, the Court must consider whether or not the Commission conducted itself in relation to the applicant during the investigation of the transaction in a manner that was generally unlawful, resulting, as contended by Schneider, either in aggravation of the loss caused by the unlawful incompatibility decision or in a separate loss represented by further costs incurred by the applicant.

159. Since the complaints made by the applicant against the Commission in addition to those established in the Schneider I judgment are presented as supplementing the latter complaints and may therefore constitute circumstances giving rise to damage, over and above the main faults committed, they must be analysed in the light of the general criteria for the establishment of noncontractual liability of the Community, which presuppose, as stated in paragraphs 113 to 126 above, a sufficiently serious breach of a rule of law by the Community institution.

The other instances of unlawful conduct on the part of the Commission which are claimed to have exacerbated the damage allegedly suffered as a result of the incompatibility decision or to have caused separate damage

Lack of fairness

- Arguments of the parties

160. Schneider considers that the Commission was unfair towards it by unlawfully giving it the impression that a decision declaring the transaction compatible might be contemplated, by not warning it early enough that it intended prohibiting the transaction and by not informing it of the existence of decisive obstacles to the authorisation of the concentration.

161. The Commission never informed Schneider of the mutual support objection before 24 September 2001, although it had information capable of settling that matter long before the drafting of its statement of objections of 3 August 2001. The leading positions of the parties to the transaction on the sectoral markets in question and the importance of the distribution vectors were dealt with

at length in the Form CO and were very quickly identified by the Commission.

162. As early as May 2001, the Commission possessed information which prompted it to say in October 2001 that the mutual support of the notifying parties' positions constituted an obstacle to the concentration.

163. That lack of fairness is confirmed by the statement of the Member of the Commission responsible for competition published in Le Monde on 8 November 2001 according to which...where the strength of undertakings even before their merger is such that no corrective measure can be found, the Commission has no alternative but to prohibit the merger...'

164. The Commission replies that in May 2001 it did not have all the information necessary to conclude a competition analysis and identify possible competition problems. It would have been, to say the least, premature for the Commission to express, at that stage, opposition to the transaction in principle without thereby failing in its duty to show reserve and to observe the principle of sound administration.

165. The statement by the Member of the Commission is irrelevant since it postdated the incompatibility decision and merely presented the Commission's conclusions after the event.

166. In any case, Schneider could, as a normally wellinformed trader, have assessed the various risks inherent in the transaction under French law and Community competition law, by reason of the considerable strength of the parties in France.

- Findings of the Court

167. It must be held that Schneider's arguments do not provide a sufficient basis for upholding the complaint of unfairness.

168. In particular, Schneider has not been able to put forward information of a reliable, precise and consistent nature such as to establish that, as the applicant had contended in Case T310/01, the Commission wished, long before discussion of the corrective measures proposed by Schneider, to prohibit the transaction from the outset for reasons of principle which excluded a priori any solution to the problem of the incompatibility of the transaction with the common market.

169. In view of the background to the dispute, the possibility cannot be ruled out that the Commission was not in a position to assess objectively and in full knowledge of the facts the impact of the transaction on the various national sectoral markets affected until the stage of the drafting of the statement of objections of 3 August 2001, after examining and using a considerable volume of information provided by Schneider and Legrand at the end of a response time of several weeks, the extent and complexity of which were commented on by the applicant itself in its application in Case T310/01.

170. It must be borne in mind in that connection that the specific purpose of a statement of objections is to provide all the information needed for the undertakings properly to express their views on the objections raised by the Commission, having regard to information previously supplied by the interested parties, concerning the compatibility of the notified concentration, so that the Commission can thereafter give a final decision in full knowledge of the facts.

171. Whilst the failure to mention the mutual support objection in the statement of objections of 3 August 2001 constitutes a serious breach of Schneider's rights of defence, it is not glaringly obvious from the file that that unlawful conduct must necessarily be seen as stemming from unfairness on the part of the Commission.

172. The statement of the Member of the Commission responsible for competition to which exception was taken, set out in paragraph 163 above, does not necessarily lend itself to the view taken by

Schneider. It is not impossible that the Member of the Commission intended, by using the present indicative, to state a general rule which did not apply solely to the transaction in this case, which, moreover, was not the only case referred to in the statement in question.

173. The statement in question cannot therefore in this case be interpreted with certainty as a manifestation ex post facto of the Commission's deliberate intention to oppose the transaction from the outset as a matter of principle.

174. In those circumstances, the criticism of unfair conduct on the Commission's part cannot be upheld.

175. Schneider's claims must therefore be rejected.

Breach of Schneider's right to be heard by an impartial authority

- Arguments of the parties

176. Schneider maintains that decisions of an administrative authority which, as in the case of Commission decisions relating to the control of concentrations, are not subject to a full review on the merits meeting the safeguards required by Article 6(1) of the European Convention for the Protection of Human Rights (the Convention'), which guarantees individuals the right to a fair trial, must conform to that provision as from the start of the administrative investigation procedure.

177. Use of the same team of officials to prepare incompatibility decisions and decisions requiring divestiture is, in Schneider's view, contrary to the principle of impartiality enshrined in that provision.

178. Moreover, there is reason to doubt the objectivity and neutrality of the reexamination of the transaction undertaken the day following delivery of the Schneider I and Schneider II judgments in view of the fact that the teams which successively examined the transaction throughout the investigation procedure were made up, at least in part, of the same people.

179. The Commission objects that no failure in its duty of impartiality has been established and that it is not a tribunal' within the meaning of Article 6(1) of the Convention. In any event, compliance with that provision is fully ensured by the right of undertakings to apply to the Community judicature for the annulment of decisions adopted under the regulation.

180. Moreover, no rule of law or of professional conduct opposes reexamination of the transaction being entrusted to the team of officials who carried out the initial investigation.

- Findings of the Court

181. Observance of all persons' right to a hearing before an independent and impartial tribunal is guaranteed by Article 6(1) of the Convention, to which reference is made by Article 6(2) of the Treaty on European Union and which was reaffirmed by the second paragraph of Article 47 of the Charter of Fundamental Rights of the European Union.

182. As an integral part of the fundamental rights protected in the Community legal order, compliance with which by the Commission in the conduct of its control procedures relating to concentrations is ensured by the Community judicature, the right to a fair hearing is manifestly a rule intended to confer rights on individuals (Case T309/03 Camos Grau v Commission [2006] ECR II1173, paragraphs 102 and 103).

183. However, provided that the right to an impartial tribunal is guaranteed, Article 6(1) of the Convention does not prohibit the prior intervention of administrative bodies that do not satisfy all the requirements that apply to procedure before the courts (see European Court of Human Rights, Le Compte v Belgium , judgment of 23 June 1981, Series A No 43, paragraph 51).

184. In this case, the action for annulment available under Article 230 EC against Commission decisions adopted under Article 8(3) and (4) of the regulation is a remedy incorporating the safeguards required by Article 6(1) of the Convention.

185. Moreover, there is no rule of law or principle which prevents the Commission from entrusting to the same officials reexamination of a concentration in compliance with a judgment annulling a decision declaring that concentration to be incompatible with the common market.

186. It cannot be stated as a general rule resulting from the obligation to be impartial that an administrative or judicial authority is bound to send the case back to a different authority or to a differently composed branch of that authority (see European Court of Human Rights, judgment in the case of Ringeisen v Austria, 16 July 1971, series A No. 13, paragraph 97).

187. As regards the disciplinary section of the governing board of a professional body, the European Court of Human Rights has accepted that no ground for legitimate suspicion can be discerned in the fact that three of the seven members of the disciplinary section had taken part in a decision in a case referred to it after the setting aside of an earlier decision in the drawing up of which they had been involved (see European Court of Human Rights, judgment in the case of Diennet v France, 26 September 1995, series A No. 325A, paragraph 38).

188. It follows that the fact that the teams of officials responsible for the various stages of investigation of the transaction were composed wholly or partly of the same members does not constitute a sufficiently serious breach by the Commission of a rule of law intended to confer rights on individuals.

189. In those circumstances, Schneider's arguments cannot be upheld.

The intransigence demonstrated by the Commission in determining the procedures for the separation of Schneider and Legrand

- Arguments of the parties

190. Schneider objects that the Commission was unnecessarily intransigent as regards the procedures for the separation of Legrand. The Commission's refusal to authorise Schneider to consider a transfer of its assets in Legrand rather than an outright separation discouraged all the industrial operators for whom the enhanced value of the assets in Legrand resulting from industrial and commercial synergies would undeniably have been higher than the value for financial investors who were the only parties able to participate in the sale procedure under the divestiture conditions imposed by the Commission.

191. The general prohibition imposed on Schneider from retaining or repurchasing certain assets in Legrand prevented the applicant from keeping holdings which would have enabled it to achieve some of the envisaged synergies, thereby undermining its negotiating position as regards potential purchasers.

192. The choice between demerger, transfer or quotation on the stock exchange and the possibility of retaining part of Legrand's capital and temporarily retaining a claim against Legrand or the purchaser thereof should have been examined in the light of all the other requirements imposed by the Commission.

193. Despite extension of the period for divestiture, the constant pressure and systematically negative attitude of the Commission forced Schneider not to interrupt or slow down the divestiture process. That extension was in fact merely apparent since it did not prejudge completion of the stages necessary for the separation process within the period as extended'.

194. The Commission considers, on the contrary, that it displayed great flexibility. Whilst the statement of objections of 24 October 2001 provided for divestiture through allocation of shares in Legrand to the holders of Schneider shares pro rata to their holdings, the divestiture decision

enabled the addressee, at its request, to choose between demerger, transfer or quotation on the stock exchange, retaining a holding in Legrand's capital, or indeed seeking from the Commission prior approval to retain a temporary claim against Legrand or the purchaser thereof.

195. Since the divestiture decision was merely one way of implementing the incompatibility decision, separation of Schneider and Legrand without affecting the latter's size cannot be regarded as an indication of intransigence.

196. The method of proceeding by way of purchase by financial institutions was preferred by Schneider itself. Moreover, the industrial purchasers would not have agreed to the price surcharge required of them by Schneider, as compared with financial institutions.

197. On a proposal from Schneider's investment bankers, the Commission agreed to extend the period for divestiture from six to nine months. The Commission granted an additional extension of three months, until 5 February 2003, and allowed for the possibility of a further extension. Moreover, the divestiture decision enabled that period to be extended, at Schneider's request, in the event of exceptional circumstances arising.

- Findings of the Court

198. In objecting to the procedures for divestiture, Schneider challenges the intrinsic lawfulness, under Article 8(4) of the regulation, of the divestiture decision that was annulled by the Court of First Instance as a result of the unlawfulness of the incompatibility decision of which it was an implementing measure (see paragraphs 44 and 58 above), and therefore without its actual merits having had to be examined.

199. Where a concentration has, as in this case, already been implemented when the Commission declares it incompatible with the common market, Article 8(4) of the regulation enables the Commission to require any action to be taken to restore effective competition.

200. Without its being necessary to decide whether that provision constitutes a rule of law intended to confer rights on individuals, it cannot be taken for granted that the Commission manifestly and seriously infringed it by requiring separation of the two parties to the transaction in such a way that Legrand's size could not be affected and no subsequent retransfer of Legrand's business to Schneider was permitted.

201. Account must be taken in particular of the leading positions of the notifying undertakings in the French sectoral markets in lowvoltage electric equipment affected by the transaction, the difference between their market shares and those of their immediate competitors, the reputation of their brands in France, and the elimination of long-standing rivalry between the two parties concerned.

202. Moreover, the choice of the legal conditions for the divestiture was, as is apparent from recital 105 to the divestiture decision, left to Schneider, provided that they excluded any significant holding by the applicant in Legrand's capital and guaranteed sale of the Legrand group without there being discrete transactions disposing of certain of Legrand's businesses.

203. Moreover, Schneider has not demonstrated that the period for implementation of the divestiture decision was manifestly excessively short. In the contested decision, the Commission extended by three months the initial period of six months set in the statement of objections of 21 October 2001.

204. In recital 122 to the decision, the Commission also declared that it was prepared, first, to grant an additional period of three months during which the trustee would be given irrevocable and exclusive selling authority in order to allow Schneider the requisite room for manoeuvre in its negotiations with potential purchasers or investors and, second, to extend those periods if

it was requested to do so, provided that Schneider or the trustee was in a position to prove that they had used their best endeavours to comply with the timelimit.

205. Following the hearing on 23 April 2002 of an application for interim relief in Case T77/02 R, on 26 April 2002 the Commission granted Schneider an extension of three months, thus deferring the end of the divestiture period until 5 February 2003, representing a period of one year following notification of the divestiture decision, without prejudice to Schneider's right to request, in the event of exceptional circumstances, an additional extension.

206. Even if it is conceded that the transfer of an undertaking of Legrand's size may generally require a period of more than one year, as the comments attributed to Schneider in paragraph 110 of the incompatibility decision suggest, it would then have been the responsibility of the applicant to seek a further extension. However, the file does not show that this was done.

207. Moreover, as is to be inferred from Schneider's response of 7 November 2001 to the Commission's statement of objections of 24 October 2001, Schneider had already contacted potential purchasers even before the divestiture decision.

208. Finally, as is apparent from point 5 of Annex II to the divestiture decision, the latter required only the adoption, in accordance with the arrangements chosen, of an irreversible legal measure which was to be fully implemented within three months following its adoption.

209. It cannot therefore be accepted that the Commission imposed on Schneider, for the purpose of divesting itself of Legrand, arrangements and a period for divestiture which amounted to a manifest and serious failure to observe the limits to which the Commission's discretion is subject.

210. Schneider's argument cannot therefore be upheld.

Exploitation of the tensions arising between the parties to the transaction

- Arguments of the parties

211. Schneider claims that the Commission fostered the tensions which arose between the parties to the transaction following the incompatibility decision, in particular by not allowing it access in due time to information provided by Legrand during the discussions that led to the adoption of the divestiture decision.

212. The Commission allegedly displayed the same attitude following the divestiture decision. The Commission encouraged Legrand to institute legal proceedings against Schneider in France in November 2002, and then made sure that its reasoning concerning the adequacy of Schneider's new corrective measures conformed with the judgment of the Cour d'appel de Versailles, referred to above.

213. The Commission replies that Legrand's change of attitude was in fact attributable to a possible conflict of interest between the parties to the transaction.

214. In particular, Schneider has produced nothing concrete to show that it was not granted access to information in the file provided by Legrand. After receiving the nonconfidential versions of the documents concerned in January 2002, Schneider did not even make a specific request for access to the confidential version of them.

- Findings of the Court

215. Schneider's allegations do not provide sufficient grounds for upholding the complaint that the Commission exploited tensions that arose between the parties to the transaction.

216. It must be observed in particular that the Commission stated in paragraph 88 of its defence, without being challenged by Schneider, that it disclosed to the applicant in January 2002 nonconfidential versions of documents concerning Legrand and a list containing a nonconfidential summary of information

declared inaccessible. There is nothing in the file to show that Schneider made any specific request for access to the confidential version of any of those documents.

217. Moreover, neither the Commission's concern in the divestiture decision to preserve Legrand's size, nor the taking into account of decisions of national courts in assessing the remedies proposed by Schneider, nor any other action taken by the Commission during the investigation of the transaction can be objectively characterised, beyond doubt, as being inspired by an intention to undermine relations between the parties to the transaction.

218. Schneider's claims must therefore be rejected.

The Commission's failure to observe the limits of its exclusive competence

- Arguments of the parties

219. Schneider considers that the Commission seriously and manifestly failed to respect the fact that it had exclusive competence under the regulation in that, when reexamining the transaction, it made its assessment of the validity of the corrective measures proposed by the applicant dependent upon the operative part of the judgment of the Cour d'appel de Versailles of 29 November 2002, which gave a provisional decision on a question confined to national contract law.

220. The Commission does not consider that it gave up its exclusive competence at any time or, a fortiori , committed any sufficiently serious unlawful act.

- Findings of the Court

221. In the exercise of its monitoring powers concerning compatibility with the common market of concentrations having a Community dimension, the Commission cannot disregard binding agreements between the notifying parties, provided that their stipulations are lawful under the applicable national law.

222. Schneider is wrong to maintain that the Commission made the exercise of its powers to assess the validity of Schneider's corrective measures dependent upon the operative part of the judgment of the Cour d'appel de Versailles. There is no issue here of the primacy of Community competition rules over those of national law: the issue is the determination of the effects attached to a private contract by the national law applicable to the contract in conformity with Community law.

223. It does not therefore seem that the Commission committed a sufficiently serious breach of Community law by reaching the conclusion that the proposals for the disposal of Legrand businesses put forward by Schneider were fraught with uncertainty and therefore unacceptable because they ran counter to a private agreement properly governed by national law which, according to the findings of the national court having jurisdiction in the matter, was binding on the parties to the transaction in accordance with the provisions of that law.

224. In those circumstances, Schneider's argument cannot be upheld.

The failure to give effect to the Schneider I judgment in good faith.

- Arguments of the parties

225. The applicant states that the Schneider I judgment set aside the Commission's analysis of all the markets other than the French sectoral markets. The Commission therefore had no reason to resume its reexamination of the transaction in phase I, particularly when it also knew that after 5 December 2002, the date marking the end of the period granted to Schneider by the sale and purchase agreement to invoke the provision allowing it to cancel the Legrand sale, the applicant would lose the benefit of the efforts which it had expended in order to reduce its loss.

226. Thus, Schneider logically insisted that the investigation procedure should be resumed immediately

following the Schneider I judgment on the basis of the six week period laid down under phase I. That period should have allowed the Commission to give effect to the Schneider I judgment in good faith by giving the applicant an opportunity to put forward, if appropriate, suitable corrective measures.

227. The decision of 4 December 2002 to initiate phase II was also vitiated by numerous manifest errors of assessment and departed from the analytical scheme outlined by the Schneider I judgment. The analysis of competition in the relevant markets finally adopted by the Commission was subject to the same kind of serious omissions, errors and contradictions as those which led to annulment of the incompatibility decision.

228. The Commission rejects the view that resumption of the investigation procedure at the phase I stage can be regarded as an indication of bad faith. The course followed, at Schneider's request, was the only one enabling a positive final decision to be adopted in respect of the transaction before 5 December 2002.

229. The economic analysis carried out by the Commission on the basis of updated information provided by Schneider is consistent in every respect with the analysis whose merits were upheld by the Schneider I judgment, after the Commission took steps to give clearer details of the mutual support objection.

- Findings of the Court

230. It is apparent from paragraph 48 of the Order of 9 March 2007 in Schneider Electric v Commission, that, contrary to Schneider's contention, the Commission was legally entitled to choose to resume the investigation of the concentration in phase I, in order to draw the proper inferences from the Schneider I judgment, by taking all necessary precautions to ensure that no breach of Schneider's rights of defence could arise.

231. Moreover, the applicant's assertions do not suffice to establish that the analysis of competition in the relevant French sectoral markets contained in the decision to initiate phase II displays the same defects as those present in the assessment of the impact of the concentration on national sectoral markets outside France contained in the incompatibility decision and condemned by the Schneider I judgment.

232. The errors of analysis condemned by the Schneider I judgment could not have had any influence on the assessment of the impact of the transaction on the French sectoral markets, by reason of the specificity of those markets.

233. A combined reading of paragraphs 413 and 415 of the Schneider I judgment discloses nothing to undermine the conclusion that the proposed transaction would create or strengthen on the French sectoral markets in lowvoltage electric equipment, in which each of the notifying parties was already very powerful, a dominant position which would have the effect, within the meaning of Article 2(3) of the regulation, of significantly impeding effective competition in the common market or, at the very least, in a substantial part of it.

234. Market shares indicative of dominance or a strengthened dominant position of the merged entity, the higher prices of lowvoltage electric equipment at wholesale level, the disappearance of traditional rivalry between the two long-standing main protagonists, and the reputation of the two partners' brands were considered relevant factors in that regard.

235. It is also important to note that serious doubts as to the compatibility of a concentration with the common market are a sufficient basis for taking a decision to initiate phase II under Article 6(1)(c) of the regulation, whilst evidence of the creation or strengthening of a dominant position is required from the Commission by Article 2(3) of the regulation where it declares a concentration incompatible with the common market on the basis of Article 8(3).

236. It does not therefore appear that, in examining, for the purposes of implementing the Schneider

I judgment, the residual problems of competition deriving from the transaction only in the French sectoral markets still regarded as relevant, the Commission manifestly and seriously overstepped the limits imposed on its discretion.

237. In those circumstances, the Court cannot uphold the applicant's arguments.

Breach of the rights of the defence

- Arguments of the parties

238. Schneider maintains that the Commission breached its rights of defence when reexamining the transaction in that it had no access to the results of the market tests carried out by the Commission and could not properly respond to the issues that they might have disclosed.

239. The Commission replies that access by the parties to a concentration to the results of market surveys such as those undertaken in November 2002 is not provided for in the phase of the investigation brought to an end by a decision to initiate phase II and that such access cannot be justified by the principle of respect for the rights of defence of the parties concerned.

- Findings of the Court

240. Whilst observance of the rights of the defence is required before the adoption of any decision liable adversely to affect the undertakings concerned, the decision to initiate phase II, adopted after the market tests in question, does not constitute an act adversely affecting Schneider (order of 31 January 2006 in Schneider Electric v Commission , paragraph 76, confirmed by the order of 9 March 2007 in Schneider Electric v Commission , paragraph 72), the legality of which would depend on observance of those rights.

241. The Commission cannot therefore have committed a sufficiently serious breach of a rule of law intended to confer rights on individuals by not disclosing the results of the market tests to Schneider in phase I of the investigation of the transaction which was resumed immediately following delivery of the Schneider I and Schneider II judgments.

242. Schneider's claims must therefore be rejected.

The incorrect, unfair and discriminatory analysis of the corrective measures proposed by Schneider in November 2002

- Arguments of the parties

243. Schneider criticises the Commission for deciding that serious doubts existed as to the compatibility of the transaction with the common market within the meaning of Article 6(1)(c) of the regulation instead of applying the criterion based on Article 2(3) of the creation or strengthening of a dominant position on which an incompatibility decision should be based by virtue of Article 8(3).

244. Schneider also criticises the Commission for deciding that the corrective measures of November 2002 were insufficient, even though they would have eliminated all overlapping of Schneider's and Legrand's business activities on the affected markets, through transfer to a single purchaser of autonomous and viable undertakings, offered a wide range of products and brands and easier access to distribution, as a result of Schneider's commitments concerning its conduct, eradicated any risk of buttressing on the part of Schneider and limited the list of potential purchasers to industrialists who were capable of developing the transferred entity.

245. Schneider's structural commitments were supplemented by commitments as to conduct, accepted by the Commission in other cases of concentrations, facilitating access to distribution and eliminating any risk of mutual support.

246. The Commission states, in essence, that it concluded that Schneider's corrective measures

would not lead to the elimination of all the competition problems identified in the French lowvoltage electric equipment market and that they raised, in addition to the legal uncertainty deriving from the judgment of the Cour d'appel de Versailles, numerous problems of viability, autonomy and capability of the transferable entities to reestablish effective competition. The Commission evaluated the impact of those corrective measures on the markets concerned in terms of market share, removal of overlapping, the strength of the brands to be assigned and the power of SchneiderLegrand to negotiate with wholesalers.

247. In addition to the fact that every case of concentration raises specific problems of competition, the proposed commitments as to conduct would have had only a very limited effect and monitoring of their application would have raised considerable difficulties, in view of the very large number of products and distributors to which those commitments could have applied.

- Findings of the Court

248. The Court points out that, as is apparent from paragraph 48 of the order of the Court of Justice of 9 March 2007 in Schneider Electric v Commission , the Commission was legally entitled to resume the examination of the transaction in phase I on the day following delivery of the Schneider I judgment.

249. Since it had decided to resume investigation of the transaction at that stage, the Commission had no alternative but to apply, with a view to initiating phase II of the investigation of the transaction by the decision of 4 December 2002, the criterion laid down in Article 6(1)(c) of the regulation of the existence of serious doubts as to the compatibility of the transaction with the common market.

250. Schneider is therefore wrong to object that the Commission did not apply the criterion of the creation or strengthening of a dominant position within the meaning of Article 2(3) of the regulation, on which the Commission must rely when adopting a decision declaring a concentration incompatible with the market under Article 8(3).

251. As regards the capability of Schneider's corrective measures to resolve the residual problems of competition identified by the Commission in the French lowvoltage electric equipment sectoral markets, it is common ground that the transfers of Legrand businesses proposed by Schneider were a core feature of the suggested corrective measures.

252. It follows that the withdrawal, required of Schneider by the Cour d'appel de Versailles, of its proposals for divestiture of Legrand businesses which had been put forward without Legrand's approval provided support for the doubts which the Commission states it continued to entertain as to the compatibility of the transaction with the common m arket.

253. Moreover, in view in particular of the strength in France of the SchneiderLegrand group, on account of its strong presence in all the various sectors of products relating to lowvoltage electricity distribution, the disappearance of the long-standing rivalry between the two parties to the transaction and the parties' ownership of wellknown brands, it does not appear that the Commission seriously and manifestly overstepped its discretion in taking the view that Schneider's corrective measures were not sufficient to remove every material doubt as to the compatibility of the concentration with the common market.

254. It has not therefore been established that the Commission's refusal to accept that those measures were capable of dispelling the serious doubts it continued to entertain as to the compatibility of the concentration with the common market derives, as claimed by Schneider, from an incorrect, unfair and discriminatory analysis of those measures.

255. Schneider's arguments in that regard must therefore be rejected.

256. It is clear from the foregoing that none of the complaints concerning the Commission's conduct as a whole in the investigation of the transaction discloses any sufficiently serious breach of a rule of law intended to confer rights on individuals.

257. In those circumstances, the Commission cannot be held, as a result of that general conduct, either to be guilty of exacerbating the damage Schneider claims to have suffered as a result of sufficiently serious breaches of Community law vitiating the incompatibility decision or to be liable for such costs as Schneider may have incurred in the divestiture procedure or before the French courts.

258. Consequently, only the fact that Schneider was deprived, because of the discrepancy between the statement of objections of 3 August 2001 and the incompatibility decision, of an opportunity to put forward corrective measures conducive to resolution of the problem of the mutual support between its positions and those of Legrand in the relevant French sectoral markets gives the applicant any right to secure reparation for the damage suffered by it as a result of that misconduct.

259. The Court must therefore consider whether the defect in the incompatibility decision, which constitutes a fault of such a kind as to cause the Community to incur noncontractual liability, may be regarded as displaying a sufficiently direct causal link to the heads of damage pleaded in that regard.

The alleged causal link between the sufficiently serious breach of Community law vitiating the incompatibility decision and the heads of damage relating thereto

The loss of value of the assets in Legrand held by Schneider

260. The main damage claimed by Schneider derives from the financial loss suffered by it through having to sell the assets in Legrand at a lower price than it paid to acquire them.

261. The divestiture decision, which was unlawful because it was a measure implementing an incompatibility decision that was itself unlawful, set a timelimit for Schneider to dispose of the assets in Legrand and prohibited it from disposing of certain of those assets separately.

262. Consequently, if, within the period set by the Commission in a decision lacking a legal basis, Schneider was unable to dispose of the assets of which it was required to divest itself without suffering loss, as a result of the drop in the value of those assets between the date of their purchase and the date of their forced disposal, it must be held that those losses derive directly from the obligation to implement an unlawful decision, regardless, moreover, of any other reasons for which the assets in question lost value during the period concerned.

263. However, in order to determine the harm attributable to a wrongful act of a Community institution, account must be taken of the effects of the failure which caused liability to be incurred and not of the effects of the measure of which it forms part, provided that the institution could or should have adopted a measure having the same effect without breaching any rule of law.

264. In other words, the analysis of the causal link cannot start from the incorrect premise that, in the absence of an unlawful measure, the institution would have refrained from acting or would have adopted a contrary measure, which could also amount to unlawful conduct on its part, but must be based on a comparison between the situation arising, for the third party concerned, from the wrongful measure and the situation which would have arisen for that third party if the institution's conduct had been in conformity with the law.

265. Where the unlawful circumstance on which the claim for compensation is based is associated with a decision whose effect is to withhold from an applicant an authorisation or other favourable measure, it cannot be presumed, for the purpose of analysing the effects of the wrongful measure and the comparison between the real situation and the reconstructed legal situation, that, in the

absence of the defect identified, the applicant would necessarily have been granted the authorisation or other favourable measure sought by it.

266. Similarly, it is necessary, where there has been a breach of the rights of the defence affecting a decision declaring a merger of undertakings incompatible with the common market, not to postulate that, in the absence of that breach, the notified concentration would have been declared compatible, explicitly or implicitly, but rather to assess the effects which the defect identified may have had on the decision that was reached.

267. Thus, in this case, the loss attributable to the Community cannot be assessed on the basis of a comparison between the situation brought about by the incompatibility decision and a situation characterised by express or tacit authorisation of the concentration, unless the Community judicature is in a position to find that the incompatibility was declared by the Commission as a direct and certain consequence of an established failure to fulfil its legal obligations.

268. It is therefore necessary, in order to adjudicate on the existence of a sufficient causal link between the failure found and the loss claimed, to assess the impact of the defect identified in the Schneider I judgment on the subsequent procedural stages of the investigation of the transaction.

269. In that regard, whilst it is clear from the Schneider I judgment that the sufficiently serious breach of Schneider's rights of defence had the effect of rendering the incompatibility decision unlawful, it does not thereby follow that in the absence of such a breach the transaction would necessarily have been declared compatible with the common market.

270. The Schneider I judgment found, in paragraph 465, that, so far as concerned the implementing measures made necessary, under Article 233 EC, by the annulment of the incompatibility decision by reason of that unlawfulness (see Schneider I, paragraphs 462 and 463), the Commission was required to place Schneider in such a position that it could put forward a proper defence to the objections made by the Commission in relation to each of the French lowvoltage electrical equipment sectoral markets affected by the transaction and, where appropriate, to propose corrective measures capable of answering those objections, in such a way as to secure, possibly on completion of reexamination of the transaction, a decision upholding its compatibility.

271. As Schneider itself has conceded in its reply, the economic analysis of the impact of the concentration on the French sectoral markets incorporated in the incompatibility decision was not rendered invalid by the Schneider I judgment.

272. By way of measures to implement Schneider I, the Commission was therefore required to resume investigation of the transaction without excluding the possibility of its being declared compatible with the common market and, to that end, to hear the applicant regarding the mutual support objection and to take account of any corrective measures that might be put forward by Schneider and Legrand to resolve the problems of compatibility raised by the mutual buttressing of their positions on the French sectoral markets concerned.

273. The Commission was not therefore, in implementing the Schneider I judgment, bound by any procedural obligation to declare the transaction compatible with the common market.

274. The argument put forward by the applicant at the hearing that there was a presumption that a notified concentration was compatible with the common market must also be rejected.

275. According to Community caselaw, the regulation does not establish a presumption as to the compatibility with the common market of a concentration that has been notified and it is for the Commission in each case to form a clear opinion as to such compatibility and to rule accordingly (Case T210/01 General Electric v Commission [2005] ECR I5575, paragraph 61).

276. It is true that a concentration is tacitly regarded as compatible with the common market where,

in particular, the Commission has neither taken a decision to initiate phase II within the period of one month set by Article 10(1) of the regulation nor ruled as to the compatibility of a concentration with the common market within the period of four months set by Article 10(3).

277. However, it is common ground that neither of those two situations exists in this case, the Commission having duly completed within the prescribed periods the two phases of the investigation of the transaction by adopting measures of the kind provided for by the relevant provisions of the regulation.

278. Accordingly, the defect identified in the incompatibility decision did not deprive Schneider of any right to a decision that the transaction is compatible, whether explicit or implicit, such as to justify treating all the financial consequences of the loss of that right and, in particular, those deriving from the obligation to dispose of the assets in Legrand, as damage attributable to the Community.

279. It follows that Schneider cannot validly claim that, as a result of the defect vitiating the incompatibility decision, it suffered harm equal to the entire loss of value of the assets in Legrand held by it as at 10 October 2001, namely a sum of between EUR 2 483 and 3 326 thousand million, in the absence of a sufficiently direct causal link between that harm and the infringement giving rise to liability on the part of the Community.

280. Although not having a vested right to recognition of the compatibility of the transaction, the applicant might admittedly have had a meaningful chance of securing a favourable decision, and the forfeiture of that chance would amount to certain and compensatable loss.

281. The possibility cannot be ruled out that, as a result of its comments on the mutual support objection and of its divestiture proposals conducive to the reduction or offsetting, in relation to that charge, of the anticompetitive impact of the planned transaction, the applicant might have been in a position to require the Commission to find, on penalty of committing an error of assessment by not doing so, that the transaction was compatible with the common market.

282. However, as moreover is noted in the expert's report produced by Schneider relating to the determination of the alleged loss, it is difficult to determine the nature and amount of the divestiture which would have been necessary to render the transaction compatible with the common market and obtain the Commission's agreement that it should proceed. It is even more difficult to determine the impact on the total value of the assets held by the applicant of the transfers and transactions which those corrective measures would have involved.

283. It follows that an assessment of the changes to the economic parameters which would necessarily have accompanied any decision of compatibility is too uncertain to be a basis for a useful comparison with the situation resulting from the incompatibility decision. Even if it is accepted that Schneider may have lost a real opportunity to secure a decision of compatibility, the materialisation of that opportunity is linked to parameters that are too uncertain to be the subject of any convincing quantification.

284. It must be noted in that connection, first, that disposal of the assets in Legrand might have proved unachievable for reasons of domestic law and, second, that it is impossible to decide whether or not disposal of assets by Schneider to an extent sufficient to offset the effect of the mutual support between its positions and those of Legrand might have rendered the transaction entirely devoid of interest for the applicant.

285. Consequently, compensation for the loss suffered by Schneider through forfeiture of a real opportunity to be able to retain the assets in Legrand cannot be envisaged.

286. It must therefore be concluded that there is no sufficiently close causal link between the unlawful act committed and the loss of any opportunity of obtaining a decision that the concentration

was compatible for the Community to incur liability as a result of the obligation imposed on Schneider to dispose of its assets in Legrand, or, consequently, for it to be held that damage equal to the total loss of value of those assets between the time of their acquisition by Schneider and their subsequent disposal can be attributed to the Community.

287. For the same reasons, Schneider also has no basis for claiming that the unlawful incompatibility decision denied it any opportunity of achieving the synergies expected from the transaction and consequently destroyed its industrial strategy, or that the decision adversely affected the applicant's image and, therefore, its reputation.

288. On the other hand, there is a sufficiently close causal link to create entitlement to compensation between the wrongful act committed and two types of damage suffered by the applicant. The first type represents the costs incurred by the undertaking in participating in the resumed investigation of the transaction after the annulments pronounced by the Court of First Instance on 22 October 2002. The second corresponds to the reduction of the transfer price which Schneider had to grant to the purchaser of the assets in Legrand in order to secure an agreement that the date on which the disposal was to take effect would be deferred for such time as might be necessary to ensure that the proceedings then pending before the Community judicature would not become devoid of purpose before reaching their conclusion.

The fees and administrative and judicial costs incurred by Schneider

289. As regards the costs incurred by Schneider for the special trustee's fees, it must be observed that the legal basis for the appointment of a trustee is to be found in Article 7 of the regulation, whereby an undertaking which, as in this case, has, before the Commission has given a decision on the compatibility of the notified concentration, acquired ownership of the assets of another company by means of a public bid, is under an obligation, by virtue of the proviso contained in Article 7(3), not to exercise the voting rights attached to the securities deriving from that public bid unless it receives an authorisation from the Commission on the basis of Article 7(4).

290. It was therefore on the basis of that provision that, on 4 December 2001, the Commission gave Schneider, at the latter's request, authorisation to exercise the voting rights attached to its holding in Legrand, through a trustee appointed by Schneider under the conditions laid down in a contract of appointment approved by the Commission.

291. Schneider therefore has no basis for claiming, as it does in paragraph 149 of its application, that the trustee's intervention was made necessary by the adoption of the incompatibility decision or, as claimed in paragraph 252 of the reply, that, if the transaction had not been wrongly prohibited on 10 October 2001, Schneider would never have needed to use a trustee to exercise its rights at the general meeting of Legrand in December 2001, since by that time it directly exercised sole control over Legrand.

292. As has already been held, the annulment of the incompatibility decision did not automatically entail a finding that the transaction was compatible with the common market, in view of the fact that residual problems of competition deriving from the transaction persisted in the French lowvoltage electric equipment sectoral markets.

293. As regards the fees of legal, tax and banking consultants and other administrative costs incurred in carrying out the divestiture in accordance with the conditions laid down by the Commission, they likewise cannot be accepted as flowing from the unlawfulness of the Commission's incompatibility decision.

294. First, the unlawfulness of the incompatibility decision and, consequently, of the divestiture decision does not, as already noted, imply that the transaction should be recognised as compatible

or that the undertakings were entitled to continue as a merged entity. It cannot therefore be presumed that the administrative costs normally incurred by Schneider with a view to divesting itself of the assets would not have had to be borne by the applicant if the Commission had adopted a lawful decision.

295. Second, although Schneider alleges that it had to incur exceptional costs on account of the improper divestiture arrangements imposed on it by the divestiture decision and by reason of the Commission's intransigence in that regard, that element of the alleged damage is linked not to the breach of the rights of the defence found in the Schneider I judgment but to entirely separate complaints which have not been held in the present judgment to constitute sufficiently serious breaches to give rise to entitlement to compensation.

296. As regards the costs incurred for the purpose of the domestic proceedings initiated by Legrand, it need merely be pointed out that the applicant itself considers that they were caused not by the unlawful incompatibility decision but b y the attitude imputed to the Commission whereby it exploited the tensions between the parties to the transaction, which has not been held in this judgment to constitute a claim on the basis of which Community liability might be incurred.

297. The costs incurred in relation to judicial review proceedings before the Community judicature must be regarded as covered by the decisions given on costs, under the specific procedural rules applicable to that type of expenditure, in the decisions bringing the proceedings to an end and on conclusion of the special proceedings provided for in cases where the amount of the costs is challenged (see, in this case, the orders of 29 October 2004 in Cases T310/01 DEP and T77/02 DEP Schneider Electric v Commission). Those proceedings exclude any claim for the same sums, or sums expended for the same purposes, in connection with proceedings alleging noncontractual liability of the Community, including those incurred by litigants who, having been unsuccessful, have had to pay the costs, as Schneider did in Cases T48/03 and C188/06 P.

298. As regards, finally, the consultancy fees and administrative expenses of various kinds incurred by Schneider in participating in the resumed investigation of the transaction made necessary by the Schneider I and Schneider II judgments, it must by contrast be accepted that there is a direct and certain causal link between them and the unlawful conduct of the institution.

299. It was because the Commission failed to give details, in the statement of objections of 3 August 2001, of a problem of competition underlying the incompatibility decision that the applicant was deprived of an opportunity to give its views on the subject and to put forward appropriate countermeasures, a circumstance which gave rise to annulment of the decision in question. That annulment made it necessary to resume the procedure specifically in order to enable the applicant to be heard regarding the objection at issue and, if appropriate, to submit proposals for measures to remedy the effects of the transaction in that regard, whereas it should have been put in a position to do so before the Commission gave a decision on the compatibility of the transaction with the common market.

300. The costs incurred by the applicant in participating in the administrative investigation procedure resumed following the Schneider I and Schneider II judgments would not have had to be incurred if the Commission had from the outset adopted a decision observing the rights of the defence, which would not have had to be annulled as being defective in that regard and could have definitively brought the investigation to an end by a declaration that the transaction was either compatible or incompatible.

301. Admittedly, if the mutual support objection had been set out in the statement of objections of 3 August 2001, Schneider would have had to give its views on that subject and, if appropriate, prepare adequate corrective measures before the Commission adopted its decision on the compatibility of the transaction, as it had to do after the annulment of that decision and subsequent resumption

of the investigation of the transaction. But it can hardly be denied that the fact of resuming, on new legal bases, an administrative procedure suspended 12 months earlier necessarily represented, for the party dealing with the regulatory institution, an incomparably greater burden than that which the undertaking and its advisers, who were already fully involved in meetings and contacts with the relevant Commission staff, would have had to bear in responding to the same objection during the initial investigation procedure.

302. It follows that there is a sufficient causal link between the costs incurred by Schneider in participating in the investigation of the transaction when it was resumed after the Schneider I and Schneider II judgments and the improper conduct of the institution for entitlement to compensation to arise.

The reduction of the Legrand sale price granted to WendelKKR to enable the date of the transfer to be deferred.

303. The Court must consider whether the illegality of the incompatibility decision resulted in a reduction of the figure at which Schneider's shareholding in Legrand was valued in the sale and purchase agreement entered into with WendelKKR.

304. It is common ground that the commencement of negotiations for the transfer of Legrand and conclusion of the sale and purchase agreement between Schneider and WendelKKR on 26 July 2002 both derived directly from the incompatibility decision of 10 October 2001, which, although unlawful, nevertheless produced full legal effects until its annulment by the Schneider I judgment on 22 October 2002.

305. As a result of that decision, Schneider was obliged to commence and conclude negotiations with WendelKKR for the transfer of its holding in Legrand, even before delivery of the judgment on its application for the annulment of that decision, in order to avoid exposing itself to the further obligation, in the event of an adverse judgment, to open and conclude transfer negotiations which at the outset were inimical to the defence of its interests, since they would then have had to have been brought to a conclusion in a very short time, in view of the fact that the divestiture period ended on 5 February 2003 and there was no certainty that the Commission would grant a further extension of that timelimit.

306. It follows that Schneider was compelled, because of the existence of the incompatibility decision, to fix a price for the transfer of Legrand in the sale and purchase agreement concluded on 26 July 2002 and, at the same time, to make certain that it would be able to suspend actual implementation of the transfer until 10 December 2002.

307. That date fell sufficiently beyond the foreseeable date of delivery of the Schneider I judgment, which was due to be given following an expedited procedure, to enable Schneider both to obtain confirmation, in the event of dismissal of its application for annulment, of the lawfulness of the contested decision or, in the contrary case of annulment, which subsequently came about, to ensure that it would still be possible to secure reexamination of the transaction by the Commission on the basis of a new proposal for corrective measures, with a view to the adoption of a final decision giving a lawful ruling as to the compatibility of the transaction with the common market.

308. It was therefore because the incompatibility decision was vitiated by two irregularities which could be perceived by Schneider as manifest irregularities and because it legitimately sought a lawful decision as to the compatibility of the transaction that Schneider found itself constrained both to negotiate and to conclude, on 26 July 2002, the agreement for the transfer of Legrand and to put back the effective date of that transfer to 10 December 2002.

309. Furthermore, it does not appear from the file that the sale and purchase agreement could have

been signed earlier than 26 July 2002, even if the contested decision had not appeared to Schneider to be vitiated by manifest irregularities which the applicant wished to have condemned by the Court of First Instance.

310. Account must be taken, as from 10 October 2001, of the irreducible period needed to devise and put into place complex financial mechanisms for a sale of assets on the scale of Legrand, as demonstrated by the efforts made by Schneider to persuade the Commission to extend the initial divestiture period by 6 months.

311. That obligation to defer effective completion of the sale of Legrand, stemming from Schneider's legitimate attempts to obtain a decision giving a lawful ruling on the compatibility of the transaction with the common market, necessarily prompted the applicant to offer to sell Legrand to WendelKKR at a lower price than the applicant would have obtained in the event of a firm sale accomplished in the absence of an incompatibility decision which, from the outset, appeared to be tainted by two manifest irregularities.

312. It must be accepted that deferral of the completion of the sale of the assets in Legrand until 10 December 2002 meant that WendelKKR had to be paid for accepting the risk of depreciation of the assets in Legrand to which it exposed itself by accepting that deferral, if only because of the possibility of an adverse variation in the prices of industrial stocks over the period between signature of the sale and purchase agreement and the final date agreed between the parties for the sale to take effect.

313. It must be observed in that regard that the expert's report produced as Annex 29 to the application specifically refers to an opportunity cost suffered by Schneider, in that it was unable to choose the date for the resale of Legrand.

314. That compensatory reduction of the transfer price appears to have no connection with the compensation provided for in the agreement in the event of the transfer not being proceeded with, which corresponded to what Schneider would have had to pay in the event of its declining to complete the transfer.

315. In those circumstances, the breach of the rights of the defence vitiating the incompatibility decision must be regarded as being sufficiently directly linked to the deferral to 10 December 2002, in the sale and purchase agreement, of the final date for completion of the Legrand sale, because that deferral was essential to enable Schneider properly to exercise the right available to all companies in its position to obtain a lawful decision as to the compatibility with the common market of a duly notified concentration and, possibly, to be heard in a procedure offering it the requisite safeguards.

316. Consequently, the serious infringement of Community law found by the Court of First Instance is to be regarded as displaying a sufficiently direct causal link with the damage suffered by Schneider as a result of the reduction in the Legrand transfer price associated with the deferral of completion of the transfer to WendelKKR.

317. It follows from all the foregoing considerations that the sufficiently serious breach of Community law vitiating the incompatibility decision must be regarded as displaying a sufficiently direct causal link with, first, the costs incurred by Schneider in participating in the administrative procedure for investigation of the transaction resumed on the day following the Schneider I and Schneider II judgments and, second, with the reduction of the Legrand transfer price granted to WendelKKR to secure a deferral of the final date for the transfer.

The two heads of damage and their quantification

318. It must be borne in mind that, by order of 11 December 2003, the Court adopted a measure of organisation of procedure limiting the pleadings to the principle of the establishment of noncontractual

liability of the Community and the methods for evaluating the damage.

319. With regard to the costs incurred by Schneider through its participation in the resumed investigation of the transaction, it must be observed that, in connection with the administrative divestiture procedure, with the applications in Cases T310/01, T77/02 and T77/02 R, and finally, with resumption of the investigation of the transaction, the applicant incurred costs of which it gives a total estimated amount in paragraph 150 of its application.

320. In order to determine the amount of compensation the Commission must pay to Schneider in respect of the costs relating to resumption of the investigation procedure, it will therefore be necessary to deduct from the sum of the costs referred to in the foregoing paragraph the total costs incurred by Schneider in Cases T310/01, T77/02 and T77/02 R, the costs referred to in paragraph 293 above, and, finally, the costs that Schneider would necessarily have incurred in respect of the corrective measures relating to mutual support which it would in any event have had to propose before the adoption of the incompatibility decision, if that decision had been adopted without any breach of its rights of defence.

321. It will be necessary for the parties either to communicate to the Court within a period of three months following the date of delivery of this judgment a figure for this head of damage agreed on in accordance with the calculation procedures indicated in the foregoing paragraph or, within the same period, to lodge their own calculations.

322. The loss corresponding to the reduction in the Legrand transfer price, granted to WendelKKR because of deferment of completion of the sale of Legrand to the transferee until 10 December 2002, is equal to the difference between the Legrand transfer price agreed in this case between the parties to the agreement and the price that Schneider could have obtained from the transferee if, at the end of the first investigation of the transaction, on 10 October 2001, it had been given a lawful decision as to the compatibility of the transaction.

323. The Community must therefore be ordered to make good the certain and assessable damage suffered in that regard by the applicant.

324. In order to assess the amount of damage suffered by the applicant on account of the reduction in the Legrand transfer price that the applicant had to grant to WendelKKR in consideration of the deferment to 10 December 2002 of the date for completion of the sale of Legrand to the transferee, it is appropriate to order that an expert's report be drawn up, in accordance with Articles 65(d), 66(1) and 70 of the Rules of Procedure, after the parties have submitted their observations and been invited to give their views on the choice of an expert.

325. To that end, the expert is to be given a certified copy of the sale and purchase agreement of 26 July 2002 and of the expert's report of 1 October 2003 on the determination of the loss alleged by Schneider, which are contained in Annexes 8 and 29 to the application respectively.

Schneider's own contribution to the damage suffered by it

Arguments of the parties

326. The Commission considers that Schneider resorted to a highrisk legal remedy in relation to the investigation of concentrations by the Community, whereas, under French law, approaches to Legrand were possible which, although notifiable to the Commission, would not trigger any obligation to launch a public bid.

327. Schneider replies that the legal remedy chosen was the only one available that would not undermine the economic effects and the security of the transaction and that nothing could have forewarned it of the fact that the Commission would oppose the transaction in principle or that its rights of defence would be infringed.

Findings of the Court

328. It is common ground that Schneider acquired Legrand's shares by means of a public bid in reliance on the derogation provided for in Article 7(3) of the regulation from the principle of the suspensive effect of concentrations deriving from the provisions of the regulation.

329. Although thus acquiring control of Legrand, within the meaning of Article 3(1)(b) of the regulation, in a manner that was entirely lawful under French and Community competition law, Schneider nevertheless assumed the risk that the investigation of the transaction would, on expiry of the periods laid down by the regulation, result in a decision declaring to be incompatible with the common market a transaction which had been legally perfected, and the imposition of a corresponding obligation for the assets of undertakings already merged to be separated.

330. In view of the extent of the merger carried out and the appreciable increase of economic strength accruing to the only two protagonists present on the French lowvoltage electric equipment sectoral markets, Schneider could not have been unaware that the merger at the very least entailed the risk of creating or strengthening a dominant position in a substantial part of the common market and that, accordingly, the transaction would be prohibited by the Commission on the basis of Article 2(3) of the regulation.

331. The strength of the parties to the transaction in the French sectoral markets and the strengthening of the positions of the two partners following the merger was apparent from Annexes 7 to 17 of the draft Form CO of 12 December 2000, which no longer enjoy confidential status (order of the President of the Fourth Chamber of the Court of First Instance of 21 February 2006 in this case, not published in the European Court Reports, paragraph 25) and in which the notifying parties reproduced as follows the percentage shares of the French sectoral markets held by the main operators in the sector during 1999:

>lt>2

332. It may thus be inferred that Schneider itself contributed to its own loss by assuming the real risk of a subsequent declaration of incompatibility of a concentration that had been brought about legally and, consequently, the possibility of a forced sale of the assets acquired (see to that effect Case 145/83 Adams v Commission [1985] ECR 3539, paragraph 54).

333. That consideration does not however apply to the loss caused to Schneider by its participation in the resumed administrative investigation of the transaction, such participation having no connection with the date on which the concentration came into being.

334. In those circumstances, on a fair assessment of the facts of the case, it is appropriate to hold the applicant responsible for onethird of the compensatable loss suffered by it as a result of the reduction of the transfer price granted to WendelKKR.

335. It follows from all the foregoing considerations that the Commission must be ordered to make good, in the terms set out above, first, the costs incurred by Schneider in participating in the resumed investigation of the transaction following the Schneider I and Schneider II judgments and, second, twothirds of the loss suffered by Schneider as a result of the reduction of the Legrand transfer price granted to WendelKKR.

Interest

Arguments of the parties

336. Schneider claims that it should be awarded interest at the annual rate of 4% to compensate for the interest which the amount of compensation granted will have generated since 4 December 2002, the date of the decision initiating phase II, until delivery of the judgment bringing the

present proceedings to an end.

337. The rate of 4% should in its view also be applied to the calculation of default interest on the amount of compensation awarded as from delivery of the forthcoming judgment.

338. The Commission contends that Schneider has not shown that it has been the victim of an exceptional situation giving rise to entitlement to compensatory interest. The compensation could at most bear default interest as from the date of delivery of the judgment.

339. The Commission also reserves the right to contest the excessive rate of 4% claimed by the applicant.

Findings of the Court

340. The Court finds that, as is apparent from the principles common to the laws of the Member States, referred to in the second paragraph of Article 288 EC, a claim for interest is generally admissible in proceedings for damages (Dumortier Frères and Others v Council, paragraph 25).

341. Reparation for damage suffered as a result of unlawful conduct on the part of the Community authorities is intended, so far as possible, to provide restitution for the victim.

342. Consequently, provided that the conditions for noncontractual liability of the Community are fulfilled, as they are in this case, the Community judicature cannot disregard the unfavourable consequences of the time lapse between the date of materialisation of the loss, namely 10 December 2002, the effective date of the transfer of Legrand to WendelKKR, and that of payment of the compensation, in so far as account must be taken of inflation recorded (judgment of 3 February 1994 in Case C308/87 Grifoni v EAEC [1994] ECR I341, paragraph 40, and Case T260/97 Camar v Council and Commission [2005] ECR II2741, paragraph 138).

343. The end of the period for which such monetary revaluation is available must, in principle, coincide with the date of delivery of the judgment establishing the obligation to make good the damage suffered by the applicant (Joined Cases C104/89 and C37/90 Mulder and Others v Council and Commission [1992] ECR I3061, paragraph 35, and Camar v Council and Commission, paragraphs 142 and 143).

344. Nevertheless, since the amount of the claim for compensation is, at the date of delivery of that judgment, neither certain nor determinable on the basis of objective findings, default interest cannot begin to run from that date but only, in the event of delay and until full payment, from the date of delivery of the judgment determining the amount of the damage suffered.

345. It follows that the amount of compensation due to the applicant as from 10 December 2002 will have to be adjusted for the period ending on the date of delivery of the judgment determining the amount of the damage, and then increased by default interest as from the latter date until full payment.

346. The rate of interest to be applied is to be calculated on the basis of the rates set by the European Central Bank for principal refinancing operations, successively applicable during each of the two periods concerned, plus two points, provided that it does not exceed the 4% claimed by the applicant in its pleadings (Mulder and Others v Council and Commission, cited in paragraph 342, paragraph 35).

The claim for increase of the compensation on account of national tax

Arguments of the parties

347. Schneider seeks an increase of the compensation awarded so as to cover the tax it will be liable to pay on that amount.

348. The Commission replies that, in the absence of a taxable amount, compensation for costs of a fiscal nature is inconceivable: such costs do not fall within the scope of the criteria for calculating damage but should be examined as a matter of substance.

Findings of the Court

349. The Court considers that the compensation awarded cannot be increased in respect of national taxation liable to be charged on it in the future.

350. It must be observed that, according to the expert's report produced by Schneider as Annex 29 to its application, it is not certain that the compensation awarded by the Court would give rise to taxation.

351. In any event, the claim for such an increase must be regarded as premature in the absence of any indication as to the amount awarded or to any tax rate that will be applied if tax is collected by the national tax authorities.

352. Therefore, the claim for increase of the compensation on account of national tax to which it might be subject must be rejected.

Case C-202/06 P

Cementbouw Handel & Industrie BV

v

Commission of the European Communities

(Appeals – Competition – Regulation (EEC) No 4064/89 – Competence of the Commission – Notification of a concentration having a Community dimension – Commitments proposed by the parties – Effect on the Commission's competence – Authorisation subject to certain commitments – Principle of proportionality)

Summary of the Judgment

1. *Competition – Concentrations – Competence of the Commission – Determination, for the whole duration of the proceedings, at a date closely related to the notification*

(Council Regulation No 4064/89, Arts 1(2) and 3, 5 and 8(2), second para.)

2. *Competition – Concentrations – Examination by the Commission – Proportionality of conditions and obligations imposed on undertakings for the purposes of making the notified operation compatible with the common market*

(Council Regulation No 4064/89, Arts 2 and 8(2))

3. *Competition – Concentrations – Examination by the Commission – Duty to take account of decisions of the national authorities – None)*

(Council Regulation No 4064/89)

1. The competence of the Commission to make findings in relation to a concentration in the context of Regulation No 4064/89 on the control of concentrations between undertakings must be established, as regards the whole of the proceedings, at a fixed time. Having regard to the importance of the obligation of notification in the system of control put in place by the Community legislature, that time must necessarily be closely related to the notification of the concentration. Both the concern for legal certainty, which implies that the authority having competence to examine a concentration must be able to be identified in a way which is foreseeable, and the need for speed, which characterises the general scheme of Regulation No 4064/89 and which requires the Commission to comply with strict time-limits for the adoption of the final decision, failing which the operation is deemed compatible with the common market, require that, where the Commission has established, in relation to a particular concentration, its competence in the light of the criteria laid down under Articles 1 (2) and (3) and 5 of Regulation No 4064/89, that competence cannot be challenged at any time or be in a state of constant flux.

Thus, whilst it goes without saying that the Commission loses its competence to examine a concentration where the undertakings concerned completely abandon the proposed concentration, the position is otherwise where the parties do no more than propose partial amendments to the draft. Proposals of that kind cannot have the effect of requiring the Commission to re-examine its competence without allowing the undertakings concerned significantly to disturb the course of the proceedings and the effectiveness of the control which the legislature sought to put in place by obliging the Commission to verify its competence on a regular basis to the detriment of the examination of the substance of the case. That interpretation is supported by the wording of the second subparagraph of Article 8 (2) of Regulation No 4064/89, which clearly shows that the commitments proposed or adopted by undertakings are not only matters which the Commission must take into account in its examination of the substantive question, that is to say, that of the compatibility or incompatibility of the concentration with the common market, but also, conversely, that those commitments cannot strip the Commission of its competence, since that is a matter which will have been determined in the first phase of the proceedings.

(see paras 38-43)

2. The substantive rules of Regulation No 4064/89 on the control of concentrations between undertakings, and in particular Article 2 thereof, confer on the Commission a certain discretion, especially with respect to assessments of an economic nature. Consequently, review by the Community judicature of the exercise of that discretion, which is essential for defining the rules on concentrations, must take account of the discretionary margin implicit in the provisions of an economic nature which form part of the rules on concentrations.

   In particular, it is necessary, when reviewing the proportionality of conditions or obligations which the Commission may, by virtue of Article 8(2) of Regulation No 4064/89, impose on the parties to a concentration, not to determine whether the concentration still has a Community dimension after those conditions or obligations have been complied with, but to be satisfied that those conditions and those obligations are proportionate to and would entirely eliminate the competition problem that has been identified.

(see paras 53-54)

3. Having regard to the clear division of powers on which Regulation No 4064/89 on the control of concentrations between undertakings is based, decisions taken by the national authorities cannot bind the Commission in proceedings for the control of concentrations.

(see para. 56)

Judgment of the Court (First Chamber)
of 18 December 2007
Cementbouw Handel & Industrie BV v Commission of the European Communities. Appeals - Competition - Regulation (EEC) No 4064/89 - Competence of the Commission - Notification of a concentration having a Community dimension - Commitments proposed by the parties - Effect on the Commission's competence - Authorisation subject to certain commitments - Principle of proportionality. Case C-202/06 P.

In Case C202/06 P,

APPEAL pursuant Article 56 of the Statue of the Court of Justice, brought on 3 May 2006,

Cementbouw Handel & Industrie BV , represented by W. Knibbeler, O. Brouwer and P. Kreijger, advocaten,

appellant,

the other party to the proceedings being:

Commission of the European Communities, represented by E. Gippini Fournier, A. Nijenhuis and A. Whelan, acting as Agents, with an address for service in Luxembourg,

defendant at first instance,

THE COURT (First Chamber),

composed of P. Jann (Rapporteur), President of the Chamber, A. Tizzano, A. Borg Barthet, M. Ilei and E. Levits, Judges,

Advocate General: J. Kokott,

Registrar: M. Ferreira, Principal Administrator,

having regard to the written procedure and further to the hearing on 22 March 2007,

after hearing the Opinion of the Advocate General at the sitting on 26 April 2007,

gives the following

Judgment

On those grounds, the Court (First Chamber) hereby:

1. Dismisses the appeal;

2. Orders Cementbouw Handel & Industrie BV to pay the costs.

1. By its appeal, Cementbouw Handel & Industrie BV asks the Court to set aside the judgment of the Court of First Instance of the European Communities of 23 February 2006 in Case T-282/02 Cementbouw Handel & Industrie v Commission [2006] ECR II-319 (the judgment under appeal'), dismissing its application for the annulment of Commission Decision 2003/756/EC of 26 June 2002 declaring a merger to be compatible with the common market and the EEA Agreement (Case COMP/M.2650 - Haniel/Cementbouw/JV (CVK)) (OJ 2003 L 282, p. 1, and corrigendum OJ 2003 L 285, p. 52) (the contested decision').

Legal context

2. Article 1(1) of Council Regulation (EEC) No 4064/89 of 21 December 1989 on the control of concentrations between undertakings (OJ 1989 L 395 p. 1, and corrigendum OJ 1990 L 257, p. 13), as amended by Council Regulation (EC) No 1310/97 of 30 June 1997 (OJ 1997 L 180, p. 1), (Regulation No 4064/89') defines its material scope as follows:

... this Regulation shall apply to all concentrations with a Community dimension as defined in paragraphs 2 and 3.'

3. Article 3(1)(b) of Regulation No 4064/89 defines concentration' so as to include a situation where one or more undertakings acquire, whether by purchase of securities or assets, by contract or by any other means, direct or indirect control of the whole or parts of one or more other undertakings.

4. In order for a concentration to have a Community dimension, the aggregate worldwide and Community-wide turnover of the undertakings concerned must exceed certain thresholds, expressed in terms of turnover, set out in Article 1(2) and (3) of Regulation No 4064/89. Article 5 of that regulation lays down the method for calculating those thresholds.

5. Concentrations with a Community dimension must be notified to the Commission of the European Communities. In that regard, Article 4(1) of Regulation No 4064/89 provides that that notification must be made not more than one week after the conclusion of the agreement, or the announcement of the public bid, or the acquisition of a controlling interest'.

6. Article 7 of that Regulation provides that such concentrations are not to be put into effect either before their notification or until they have been declared compatible with the common market pursuant to a decision.

7. The first sentence of Article 6(1) of Regulation No 4064/89 states that the Commission shall examine the notification as soon as it is received'. In accordance with Article 6(1)(c), where the Commission finds that the concentration notified has a Community dimension and raises serious doubts as to its compatibility with the common market, it must decide to initiate formal control proceedings.

8. In that regard, Article 8(1) to (4) of Regulation No 4064/89 confers the following decision-making powers on the Commission:

1. ...

2. Where the Commission finds that, following modification by the undertakings concerned if necessary, a notified concentration fulfils the criterion laid down in Article 2(2)... it shall issue a decision declaring the concentration compatible with the common market.

It may attach to its decision conditions and obligations intended to ensure that the undertakings concerned comply with the commitments they have entered into vis-à-vis the Commission with a view to rendering the concentration compatible with the common market....

3. ...

4. Where a concentration has already been implemented, the Commission may... require the undertakings or assets brought together to be separated or the cessation of joint control or any other action that may be appropriate in order to restore conditions of effective competition.'

9. Article 10(1) of Regulation No 4064/89 provides that the decision to institute formal control proceedings must, subject to an exception which does not apply in the present case, be taken within one month at most, beginning on the day following the receipt of a notification. Article 10(2) and (3) states that decisions making a finding as to the compatibility or incompatibility of a concentration with the common market must, save in exceptional cases, be taken within not more than four months of the date on which the proceedings are initiated. By virtue of Article 10(6), where the Commission has not taken a decision within those periods, the concentration is to be deemed to be declared compatible with the common market.

10. The division of powers in relation to the control of concentrations is provided for in Article 21(1) and (2) of Regulation No 4064/89, in the following manner:

1. Subject to review by the Court of Justice, the Commission shall have sole competence to take the decisions provided for in this Regulation.

2. No Member State shall apply its national legislation on competition to any concentration that has a Community dimension.'

11. Recital 29 in the preamble to Regulation No 4064/89 states that concentrations not referred to in this Regulation come, in principle, within the jurisdiction of the Member States'.

Background to the dispute

12. The findings of the Court of First Instance in paragraphs 1 to 15 and 295 to 298 of the judgment under appeal allow the background to the case to be summarised as set out below.

13. Before the putting into effect of the concentration which underlies the dispute, Coöperatieve Verkoop- en Produktievereniging van Kalkzandsteenproducenten (CVK'), a cooperative established under Netherlands law, comprised 11 Dutch producers of sand-lime bricks. Of those 11 members of the undertaking, five were subsidiaries of the German undertaking Franz Haniel & Cie GmbH (Haniel'), three were subsidiaries of the appellant and two were subsidiaries of the German undertaking RAG AG (RAG'). The 11th of those undertakings was owned jointly by Haniel, the appellant and RAG (paragraph 5 of the judgment under appeal).

14. In 1998, the Nederlandse Mededingingsautoriteit (Netherlands competition authority) (the NMa') was notified of a proposed concentration whereby CVK was to acquire control of its member undertakings. Control was to be transferred by way of a pooling agreement and by amending CVK's articles of association. By decision of 20 October 1998, the NMa authorised the proposed concentration (paragraph 6 of the judgment under appeal).

15. Before that transaction was put into effect, RAG decided to sell its shares in the member undertakings of CVK to Haniel and the appellant. In March 1999, the parties informed the NMa of their intentions. By letter of 26 March 1999, the NMa informed the parties that the proposed transfer would not constitute a concentration within the meaning of the Netherlands legislation, provided that the transaction authorised by the decision of 20 October 1998 was completed no later than the time of the transfer (paragraph 7 of the judgment under appeal).

16. On 9 August 1999, CVK and its member undertakings concluded a number of transactions. First, they concluded the pooling agreement referred to in paragraph 14 of this judgment and CVK's articles of association were amended to take account of the provisions of that agreement (the first group of transactions'). Secondly, RAG transferred its shares in three of the member undertakings of CVK to Haniel and the appellant, while Haniel and the appellant concluded a cooperation agreement governing their collaboration within CVK (the second group of transactions') (paragraph 8 of the judgment under appeal).

17. The Commission became aware of the transactions concluded on 9 August 1999 when it examined two other concentrations notified by Haniel and, by letter of 22 October 2001, it informed the appellant and the other participating undertakings that the concentration had to be notified to it. On 24 January 2002, Haniel and the appellant notified the concentration pursuant to Article 4 of Regulation No 4064/89 (paragraphs 9 and 10 of the judgment under appeal).

18. On 25 February 2002, the Commission initiated the formal control proceedings referred to in Article 6(1)(c) of Regulation No 4064/89 (paragraph 11 of the judgment under appeal).

19. Once the Commission had sent the statement of objections and had heard the parties concerned, Haniel and the appellant submitted a first set of draft commitments on 28 May 2002. These provided that Haniel and the appellant would end their cooperation agreement and would sell the shares they had acquired from RAG in 1999 to an independent third party. The Commission took the view that

that draft was insufficient to dispel the doubts about the competition on the market in question (paragraphs 12, 14 and 295 of the judgment under appeal).

20. Thereupon, on 5 June 2002 Haniel and the appellant offered final commitments, in which they also undertook to revoke the pooling agreement, to undo the amendment to CVK's articles of association and to dissolve CVK (paragraphs 14, 15 and 298 of the judgment under appeal).

21. On 26 June 2002, the Commission adopted the contested decision, whereby it considered that the notified concentration constituted by the first and second groups of transactions was compatible with the common market, subject to the condition that the commitments set out in that decision were complied with in full by Haniel and the appellant. Those commitments included, in particular, the dissolution of CVK (paragraph 15 of the judgment under appeal).

The proceedings before the Court of First Instance and the judgment under appeal

22. By application lodged at the Registry of the Court of First Instance on 11 September 2002, and registered under number T-282/02, the appellant brought an action seeking the annulment of the contested decision.

23. In support of its application, the appellant relied on three pleas in law.

24. The first plea alleged that the Commission was not competent to examine the transactions in question by virtue of Article 3 of Regulation No 4064/89. The Court of First Instance rejected that plea, holding in paragraph 109 of the judgment under appeal that a concentration within the meaning of Article 3(1) of Regulation No 4064/89 may be deemed to arise even in the case of a number of formally distinct legal transactions, provided that those transactions are interdependent in such a way that none of them would be carried out without the others and that the result consists in conferring on one or more undertakings direct or indirect economic control over the activities of one or more other undertakings'.

25. The second plea alleged errors of assessment by the Commission relating to the creation of a dominant position by the concentration, in breach of Article 2 of Regulation No 4064/89. The Court of First Instance rejected that plea as unfounded.

26. The third plea alleged breach of Articles 3 and 8(2) of Regulation No 4064/89 and of the principle of proportionality. As regards that plea, the Court of First Instance held:

301 ...the applicant's claims are once again based on an incorrect premiss, which was rejected by the Court.... In effect, there is only one concentration, concluded on 9 August 1999, comprising the first and second groups of transactions, which comes within the competence of the Commission under Regulation No 4064/89. Consequently, contrary to the applicant's contention, the first draft commitments do not alter the concentration in such a way that it no longer exists.

...

304 ... it must be noted that the applicant has not explained how the first draft proposals... could have allowed the Commission to conclude that the concentration was compatible with the common market, when it is common ground that, in the context of those draft proposals, CVK's dominant position as resulting from the concentration concluded on 9 August 1999 would have remained unaltered. In effect, in particular, in spite of the fact that joint control of CVK would have been abandoned, it would have continued, depending on the definition of the market, to hold at least [50 to 60]% of the relevant market, with no increase in the market shares of its main competitors.

305 Contrary to the applicant's contention, therefore, the Commission was not required to accept the first draft commitments, in application of Article 8(2) of Regulation No 4064/89, since they did not allow it to conclude that the concentration of 9 August 1999 would not create a dominant

position within the meaning of Article 2(2) of that regulation.

...

307 ... in order to be accepted by the Commission with a view to the adoption of a decision under Article 8(2) of Regulation No 4064/89, the parties' commitments must not only be proportionate to the competition problem identified by the Commission in its decision but must eliminate it entirely; and that objective was clearly not achieved in the present case by the first draft commitments proposed by the notifying parties.'

27. The Court of First Instance rejected the third plea, and, accordingly, dismissed the action in its entirety.

The appeal

28. The appellant claims that the Court should set aside the judgment under appeal and, if appropriate, refer the case back to the Court of First Instance and order the Commission to pay the costs.

29. The Commission contends that the Court should dismiss the appeal and order the appellant to pay the costs.

30. In support of its claims, the appellant relies on two grounds of appeal.

The first ground of appeal, alleging the incorrect interpretation and incorrect application of Articles 1, 2 and 3(1) of Regulation No 4064/89

Arguments of the parties

31. The appellant submits that the competence of the Commission under Regulation No 4064/89 is not determined exclusively by the concentration in the form in which it is notified, but by the concentration in the form in which it is actually put into effect. That approach applies where changes are made to the concentration by the parties after notification; those changes may arise from commitments that are proposed. The fact that the concentration was implemented prior to notification, in the form in which it was notified, is irrelevant.

32. According to the appellant, the concentration at issue in the present case acquired a Community dimension only on the conclusion of the second group of transactions, by which the appellant and Haniel acquired control of CVK. According to its reading of the judgment under appeal, the Court of First Instance acknowledged, in paragraph 304 of the judgment under appeal, that the first draft proposals would have resulted in the abandonment of joint control of CVK by the notifying parties. By contrast, the Court of First Instance failed to take into account the fact that that draft would also have had the result that the notified concentration ceased to exist, and only a concentration without a Community dimension would remain.

33. In reply to those arguments, the Commission argues that, by virtue of Regulation No 4064/89, its competence in relation to a concentration fell to be determined at the time at which that concentration should have been notified to it. Emphasising that it must accept or reject competence at the latest at the end of the first examination of the notified concentration, it adds that, in the interest of sound administration, it is not possible for the Community dimension of a concentration to be under constant review throughout the course of the proceedings.

34. According to the Commission, the appellant misconstrues the function and the nature of the commitments which the parties can adopt. Those commitments could not deprive the Commission of the competence conferred on it by Regulation No 4064/89, but are intended to enable it to exercise its power to authorise, subject to conditions, the implementation of the notified concentration.

Findings of the Court

35. As is clear from recital 29 in its preamble and Article 21(1), Regulation No 4064/89 is based on the principle of a clear division of powers between the national and Community supervisory authorities in relation to concentrations (Case C170/02 P Schlüsselverlag J.S. Moser and Others v Commission [2003] ECR I-9889, paragraph 32, and Case C-42/01 Portugal v Commission [2004] ECR I-6079, paragraph 50).

36. The regulation also contains provisions, including in particular Article 10(1) and (2), the purpose of which is to restrict, for reasons of legal certainty and in the interest of the undertakings concerned, the length of the proceedings for investigating transactions which are the responsibility of the Commission (Schlüsselverlag J.S. Moser and Others , paragraph 33, and Portugal v Commission , paragraph 51).

37. That demonstrates that the Community legislature intended to make a clear allocation between the interventions to be made by the national and by the Community authorities, and that it wished to ensure a control of mergers within deadlines compatible with both the requirements of sound administration and the requirements of the business world (Schlüsselverlag J.S. Moser and Others , paragraph 34, and Portugal v Commission , paragraph 53).

38. That concern for legal certainty implies that the authority having competence to examine a concentration must be able to be identified in a way which is foreseeable. That is the reason for which the Community legislature laid down, in Articles 1(2) and (3) and 5 of Regulation No 4064/89, precise and objective criteria which allow it to be determined whether a concentration has the economic size necessary for it to have a Community dimension' and, accordingly, to fall within the exclusive competence of the Commission.

39. The need for speed, which characterises the general scheme of Regulation No 4064/89 and which requires the Commission to comply with strict time-limits for the adoption of the final decision, failing which the operation is deemed compatible with the common market, also means that where the Commission has established, in relation to a particular concentration, its competence in the light of the criteria laid down under Articles 1(2) and (3) and 5 of the regulation, that competence cannot be challenged at any time or be in a state of constant flux.

40. As the Advocate General stated in point 48 of her Opinion, it goes without saying that the Commission loses its competence to examine a concentration where the undertakings concerned completely abandon the proposed concentration.

41. However, the position is otherwise where the parties do no more than propose partial amendments to the draft. Proposals of that kind could not have the effect of requiring the Commission to re-examine its competence, without allowing the undertakings concerned significantly to disturb the course of the proceedings and the effectiveness of the control which the legislature sought to put in place, by obliging the Commission to verify its competence on a regular basis to the detriment of the examination of the substance of the case.

42. That interpretation is supported by the wording of the second subparagraph of Article 8(2) of Regulation No 4064/89, which provides that [the Commission] may attach to its decision conditions and obligations intended to ensure that the undertakings concerned comply with the commitments they have entered into vis-à-vis the Commission with a view to rendering the concentration compatible with the common market'. As the Advocate General stated at point 52 of her Opinion, that wording clearly shows that the commitments proposed or adopted by undertakings are not only matters which the Commission must take into account in its examination of the substantive question, that is to say, that of the compatibility or incompatibility of the concentration with the common market, but also, conversely, that those commitments cannot strip the Commission of its competence, since that is a matter which will have been determined in the first phase of the proceedings.

43. It follows that the competence of the Commission to make findings in relation to a concentration must be established, as regards the whole of the proceedings, at a fixed time. Having regard to the importance of the obligation of notification in the system of control put in place by the Community legislature, that time must necessarily be closely related to the notification of the concentration.

44. In the present appeal, the appellant does not challenge the Commission's analysis, confirmed by the judgment under appeal, that there is only one concentration, comprising the first and second groups of transactions. Nor does it deny that, both on the date of conclusion of the two groups of transactions and on the date of the notification made at the Commission's request, that concentration had a Community dimension. Consequently, without it being necessary to give a ruling on the question whether the time to be taken for the purposes of determining the Commission's competence is the time at which the obligation to notify arose or the time at which the notification should have been made or even the time at which it was actually made, it is not a matter of dispute in the present case that the Commission had acquired competence to give a ruling on the concentration in question.

45. As regards the question whether, as the appellant claims, the first draft commitments which it submitted with Haniel could have an effect on the competence acquired in that manner, it must be pointed out first of all that the concentration had, in the present case, already been implemented. It should next be pointed out that, as is clear from the findings of the Court of First Instance at paragraph 295 of the contested judgment, which are unchallenged by the appellant, that draft provided that the cooperation agreement concluded between the appellant and Haniel was to be ended and that the shares they had acquired in three of the member undertakings of CVK were to be sold to an independent third party, that is to say, that the second group of transactions would not proceed. However, that draft provided that the pooling agreement and the amendment of CVK's articles of association, which formed the subject-matter of the first group of transactions, would be maintained. It follows that, for the purposes of the concentration which was the subject of the control proceedings initiated by the Commission, the draft in question comprised separate measures.

46. Accordingly, the Court of First Instance did not commit an error of law in holding, in paragraph 301 of the judgment under appeal, that the first draft commitments proposed by the appellant and Haniel did not change the concentration in such a way that it no longer existed.

47. Nor did the Court of First Instance commit an error of law in holding, in paragraphs 305 and 306 of that judgment, that in exercising the powers that were vested in it the Commission was entitled to take the view that the first draft commitments were not sufficient to resolve the competition problem which it had established.

48. The first ground of appeal must therefore be rejected as unfounded.

The second ground of appeal, alleging the incorrect interpretation and application of Article 8(2) of Regulation No 4064/89 and of the principle of proportionality

Arguments of the parties

49. The appellant argues that, in taking the view that the first draft commitments were insufficient, the Commission took no account of the fact that those commitments reduced the transaction to a concentration without a Community dimension which was no longer within its competence. It adds that, in holding that the Commission was not required to accept the first draft commitments, the Court of First Instance infringed the principle of proportionality. It also objects that the Court of First Instance failed to explain the reason for which the Commission could have come to a diametrically opposite conclusion from that of the Netherlands national competition authority, the NMa, as regards the anti-competitive effects of the first group of transactions.

50. The Commission states that these arguments are essentially no more than a reformulation of

those put forward in support of the first ground. It denies that it acted disproportionately and submits that, in the absence of further precision, the argument relating to the differing assessments made by it and the NMa is inadmissible.

Findings of the Court

51. As regards, in the first place, the argument alleging a lack of competence on the Commission's part, it must be held that it represents a repetition of the arguments put forward under the first ground of appeal. Like the latter, it must accordingly be rejected as unfounded.

52. As regards, in the second place, the alleged infringement of the principle of proportionality, it is necessary to acknowledge that decisions taken by the Commission in proceedings for the control of concentrations must satisfy the requirements of the principle of proportionality, which is one of the general principles of Community law (see, inter alia, Case C-380/03 Germany v Parliament and Council [2006] ECR I-11573, paragraph 144).

53. However, it must be pointed out that the substantive rules of Regulation No 4064/89, in particular Article 2, confer on the Commission a certain discretion, especially with respect to assessments of an economic nature, and that, consequently, review by the Community judicature of the exercise of that discretion, which is essential for defining the rules on concentrations, must take account of the discretionary margin implicit in the provisions of an economic nature which form part of the rules on concentrations (Joined Cases C-68/94 and C-30/95 France and Others v Commission [1998] ECR I-1375, paragraphs 223 and 224, and Case C-12/03 P Commission v Tetra Laval [2005] ECR I-987, paragraph 38).

54. In particular, as the Advocate General stated at point 73 of her Opinion, and contrary to what the appellant submits, it is necessary, when reviewing the proportionality of conditions or obligations which the Commission may, by virtue of Article 8(2) of Regulation No 4064/89, impose on the parties to a concentration, not to determine whether the concentration still has a Community dimension after those conditions or obligations have been complied with, but to be satisfied that those conditions and those obligations are proportionate to and would entirely eliminate the competition problem that has been identified.

55. Consequently, the Court of First Instance did not commit an error of law in holding, in paragraphs 304 and 305 of the judgment under appeal, that the Commission was not required to accept the first draft commitments since it considered that they were insufficient to resolve the competition problem it had identified.

56. As regards, in the third place, the differences between the assessment made by the NMa, on the one hand, and the Commission, on the other, of an allegedly identical situation, it must first of all be held that, having regard to the clear division of powers on which Regulation No 4064/89 is based, decisions taken by the national authorities cannot bind the Commission in proceedings for the control of concentrations.

57. It must also be pointed out that the NMa and the Commission gave their decisions, in their respective fields of competence, in the light of different criteria. While the NMa analysed the first group of transactions by having regard to the situation on the national market, the Commission assessed its compatibility with the common market. Accordingly, while the Court of First Instance had jurisdiction to review, within the limits noted in paragraph 53 of this judgment, the Commission's assessment, it was not under a duty to explain why the Commission reached a result that was different from that of the NMa.

58. It follows from the above considerations that the second ground of appeal must also be rejected as unfounded.

59. It follows that the appeal must be dismissed in its entirety.

Costs

60. Under Article 69(2) of the Rules of Procedure, which applies to appeal proceedings pursuant to Article 118 of those Rules, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the appellant has been unsuccessful, it must be ordered to pay the costs, in accordance with the form of order sought to that effect by the Commission.

ARRÊT DE LA COUR (troisième chambre)

6 mars 2008 (*)

«Manquement d'État – Politique de la concurrence – Concentrations – Non-exécution de certaines obligations imposées par la Commission – E.ON/Endesa»

Dans l'affaire C‑196/07,

ayant pour objet un recours en manquement au titre de l'article 226 CE, introduit le 11 avril 2007,

Commission des Communautés européennes, représentée par MM. V. Di Bucci et E. Gippini Fournier, en qualité d'agents, ayant élu domicile à Luxembourg,

partie requérante,

contre

Royaume d'Espagne, représenté par M^me^ N. Díaz Abad, en qualité d'agent, ayant élu domicile à Luxembourg,

partie défenderesse,

LA COUR (troisième chambre),

composée de M. A. Rosas, président de chambre, MM. J. N. Cunha Rodrigues, J. Klučka, M^me^ P. Lindh et M. A. Arabadjiev (rapporteur), juges,

avocat général: M^me^ J. Kokott,

greffier: M. R. Grass,

vu la procédure écrite,

vu la décision prise, l'avocat général entendu, de juger l'affaire sans conclusions,

rend le présent

Arrêt

1 Par sa requête, la Commission des Communautés européennes demande à la Cour de constater que, en n'ayant pas supprimé:

– sans délai un certain nombre de conditions posées par la décision de la Commission nationale de l'énergie (ci-après la «décision de la CNE») (conditions n^os^ 1 à 6, ainsi que 8 et 17), qui ont été déclarées incompatibles avec le droit communautaire par l'article 1^er^ de la décision de la Commission du 26 septembre 2006 [affaire n° COMP/M.4197 – E.ON/Endesa – C(2006) 4279 final, ci-après la «première décision de la Commission»], et

– au plus tard le 19 janvier 2007 un certain nombre de conditions posées par la décision du ministre de l'Industrie, du Tourisme et du Commerce (conditions modifiées n^os^ 1, 10, 11 et 15), qui ont été déclarées incompatibles avec le droit communautaire par l'article 1^er^ de la décision de la Commission du 20 décembre 2006 [affaire n° COMP/M.4197 – E.ON/Endesa – C

(2006) 7039 final, ci-après la «seconde décision de la Commission»],

le Royaume d'Espagne a manqué aux obligations qui lui incombent en vertu de l'article 2 de chacune de ces décisions.

Le cadre juridique

2 L'article 21 du règlement (CE) n° 139/2004 du Conseil, du 20 janvier 2004, relatif au contrôle des concentrations entre entreprises (JO L 24, p. 1, ci-après le «règlement sur les concentrations») prévoit:

«[...]

2. Sous réserve du contrôle de la Cour de justice, la Commission a compétence exclusive pour arrêter les décisions prévues au présent règlement.

3. Les États membres n'appliquent pas leur législation nationale sur la concurrence aux concentrations de dimension communautaire.

Le premier alinéa ne préjuge pas du pouvoir des États membres de procéder aux enquêtes nécessaires à l'application de l'article 4, paragraphe 4, de l'article 9, paragraphe 2, et de prendre, après renvoi, conformément à l'article 9, paragraphe 3, premier alinéa, [sous] b), ou paragraphe 5, les mesures strictement nécessaires en application de l'article 9, paragraphe 8.

4. Nonobstant les paragraphes 2 et 3, les États membres peuvent prendre les mesures appropriées pour assurer la protection d'intérêts légitimes autres que ceux qui sont pris en considération par le présent règlement et compatibles avec les principes généraux et les autres dispositions du droit communautaire.

Sont considérés comme intérêts légitimes, au sens du premier alinéa, la sécurité publique, la pluralité des médias et les règles prudentielles.

Tout autre intérêt public doit être communiqué par l'État membre concerné à la Commission et reconnu par celle-ci après examen de sa compatibilité avec les principes généraux et les autres dispositions du droit communautaire avant que les mesures visées ci-dessus puissent être prises. La Commission notifie sa décision à l'État membre concerné dans un délai de vingt-cinq jours ouvrables à dater de ladite communication.»

Les faits à l'origine du litige

3 Le 21 février 2006, E.ON AG (ci-après «E.ON»), entreprise exerçant son activité dans le secteur de l'énergie, dont le siège social se trouve à Düsseldorf (Allemagne) a présenté une offre publique d'achat portant sur la totalité des actions d'Endesa SA (ci-après «Endesa»), entreprise intervenant dans ce même secteur d'activité, dont le siège social est situé à Madrid (Espagne).

4 Le 24 février 2006, le Royaume d'Espagne a adopté le décret-loi royal 4/2006, du 24 février 2006, modifiant les compétences de la CNE. Conformément à ce décret-loi, l'offre d'E.ON était subordonnée à l'autorisation de l'autorité de régulation du secteur de l'énergie, à savoir la CNE.

5 Par une lettre du 27 mars 2006, la Commission a fait part au Royaume d'Espagne de ses doutes quant à la possibilité de soumettre l'opération de concentration envisagée à des conditions et lui a rappelé les obligations découlant des articles 21, paragraphe 4, dernier alinéa, du règlement sur les concentrations ainsi que 10 CE.

6 Dans sa réponse du 24 avril 2006, le Royaume d'Espagne a fait valoir que les mesures susceptibles d'être adoptées par la CNE n'étaient pas soumises à l'obligation de communication à la Commission et de contrôle préalable par cette dernière.

7 Le projet de concentration entre E.ON et Endesa constituant une opération de concentration de dimension communautaire, la Commission a adopté, le 25 avril 2006, en vertu de l'article 6, paragraphe 1, sous b), du règlement sur les concentrations, une décision (affaire n° COMP/M.4110 – E.ON/Endesa) autorisant sans conditions l'opération notifiée.

8 Le 27 juillet 2006, la décision de la CNE, subordonnant l'autorisation du projet de concentration entre E.ON et Endesa au respect de 19 conditions, a été adoptée.

9 Le 26 septembre 2006, la Commission a pris sa première décision. L'article 1er de celle-ci dispose que le Royaume d'Espagne a enfreint l'article 21 du règlement sur les concentrations en adoptant, sans communication préalable à la Commission ni autorisation de cette dernière, la décision de la CNE soumettant l'acquisition du contrôle d'Endesa par E.ON à une série de conditions (nos 1 à 17 et 19) incompatibles avec le droit communautaire. L'article 2 de la première décision de la Commission enjoint au Royaume d'Espagne de supprimer «sans délai» les conditions déclarées incompatibles avec le droit communautaire à l'article 1er de celle-ci.

10 N'ayant pas été informée de l'adoption d'une quelconque mesure concrète destinée à supprimer les conditions posées par la décision de la CNE, la Commission a adressé au Royaume d'Espagne, le 18 octobre 2006, une lettre de mise en demeure faisant état d'un manquement de cet État membre à l'article 2 de la première décision de la Commission.

11 Le 25 octobre 2006, en réponse à cette lettre de mise en demeure, le Royaume d'Espagne a fait valoir qu'il n'avait pas enfreint ledit article 2, qui ne fixait pas de délai précis pour le retrait des conditions déclarées incompatibles avec le droit communautaire dont était assortie la décision de la CNE. Cet État membre soulignait que les recours administratifs formés devant le ministre de l'Industrie, du Tourisme et du Commerce (ci-après le «ministre») contre la décision de la CNE constituaient l'instance adéquate pour que soit assurée la conformité de cette décision avec le droit communautaire. Le 7 novembre 2006, le Royaume d'Espagne a adressé à la Commission, en complément à sa réponse à ladite lettre de mise en demeure, une copie de la décision prise par le ministre à la suite du recours administratif formé par E.ON à l'encontre de la décision de la CNE.

12 La décision du ministre a modifié partiellement la décision de la CNE en:

– supprimant quelques-unes des conditions;

– réduisant la durée ou le champ d'application de certaines autres conditions;

– clarifiant le contenu et la portée de certaines conditions, et

– modifiant d'autres conditions ou en leur substituant des obligations différentes ou supplémentaires en vue de l'autorisation de l'opération (ci-après les «nouvelles obligations»).

La décision de la CNE demeurait ainsi soumise à seize conditions.

13 Le 20 décembre 2006, la Commission a pris sa seconde décision, relative aux nouvelles obligations imposées par la décision du ministre. L'article 1er de la seconde décision de la Commission énonce que le Royaume d'Espagne a enfreint l'article 21 du règlement sur les concentrations en adoptant, sans communication préalable à la Commission ni autorisation de cette dernière, la décision du ministre soumettant l'acquisition du contrôle d'Endesa par E.ON à une série de conditions incompatibles avec le droit communautaire (conditions modifiées nos 1, 10, 11 et 15). L'article 2 de la seconde décision de la Commission enjoint au Royaume d'Espagne de supprimer celles-ci avant le 19 janvier 2007.

14 Le 22 janvier 2007, le Royaume d'Espagne a adressé à la Commission ses observations, dans lesquelles il a fait valoir que les nouvelles obligations étaient, selon lui, compatibles avec le droit communautaire.

15 En l'absence d'information de la part du Royaume d'Espagne relatives aux démarches ou aux mesures adoptées ou prévues par celui-ci en vue de se conformer à la seconde décision de la Commission, cette dernière a adressé audit État membre, le 1er février 2007, une lettre de mise en demeure complémentaire. Dans cette lettre de mise en demeure, la Commission faisait valoir que la décision du ministre ne suffisait pas à assurer la pleine exécution de la première décision de la Commission en ce qui concerne les conditions n° 1 à 6 ainsi que 8 et 17 figurant dans la décision de la CNE et que le Royaume d'Espagne avait enfreint la seconde décision de la Commission, notamment en ne supprimant pas les conditions modifiées nos 1, 10, 11 et 15 de la décision du ministre.

16 Dans sa réponse du 22 février 2007, le Royaume d'Espagne a principalement fait valoir que les conditions posées par les décisions de la CNE et du ministre (ci-après les «mesures nationales en cause»), en particulier celles relatives aux obligations en matière d'investissement et aux exigences d'ordre financier, sont essentielles pour garantir la sécurité de l'approvisionnement en énergie.

17 Considérant que le Royaume d'Espagne avait enfreint l'article 2 de chacune de ses deux décisions, la Commission a adressé, le 7 mars 2007, un avis motivé au Royaume d'Espagne enjoignant à ce dernier de supprimer, dans un délai de sept jours ouvrables à compter de la réception dudit avis, les conditions mentionnées dans les mesures nationales en cause et déclarées incompatibles avec le droit communautaire.

18 Le 16 mars 2007, le Royaume d'Espagne a adressé à la Commission une lettre dans laquelle il a réitéré les arguments développés précédemment.

19 Le 10 avril 2007, la Commission nationale du marché des valeurs a indiqué dans une note officielle que l'offre publique d'achat d'E.ON portant sur Endesa n'avait été acceptée que pour un total de 63 638 451 actions, représentant 6,01 % du capital social d'Endesa. Par conséquent, cette offre est restée sans effet, faute d'avoir atteint une fraction minimale de 50,01 % de ce capital social fixée comme condition de sa validité. L'offrant n'ayant pas renoncé à cette condition, les acceptations présentées en réponse à l'offre sont devenues caduques avec effet immédiat.

Sur le recours

Argumentation des parties

20 Le Royaume d'Espagne fait valoir, en premier lieu, que le présent recours est sans objet, puisque l'offre publique d'achat d'E.ON portant sur Endesa est restée sans effet pour les raisons exposées au point 19 du présent arrêt. Les mesures nationales en cause seraient ainsi caduques, car dépourvues d'objet, dès lors qu'elles imposaient une série de conditions au regard d'une opération de concentration d'entreprises qui n'aurait plus lieu. Par conséquent, il ne lui serait plus possible de respecter les première et seconde décisions de la Commission (ci-après ensemble les «décisions de la Commission»).

21 La Commission rétorque que le fait que l'opération de concentration en cause ait été abandonnée postérieurement à la date d'expiration du délai fixé dans l'avis motivé ne fait pas disparaître le manquement reproché, lequel persistait à cette date. Même dans le cas où le manquement serait éliminé postérieurement au délai imparti dans l'avis motivé, la poursuite de l'action engagée conserverait un intérêt.

22 En second lieu, le Royaume d'Espagne estime avoir adopté les mesures nationales en cause en vue de garantir la sécurité de l'approvisionnement en énergie. Il se prévaut, à cet égard, des dispositions de l'article 21, paragraphe 4, du règlement sur les concentrations. La sécurité de cet approvisionnement constituerait une pièce maîtresse de la politique du gouvernement espagnol dans le domaine de l'énergie et devrait être considérée, compte tenu de l'importance prépondérante d'Endesa dans le secteur concerné, comme relevant du concept de sécurité publique.

23 Selon la Commission, cette argumentation revient à soutenir que les conditions posées par la CNE et le ministre n'étaient pas incompatibles avec le droit communautaire. Elle serait, par conséquent, irrecevable dans le cadre d'un recours en manquement, car elle implique une remise en cause de la légalité des décisions de la Commission devenues définitives à l'expiration du délai prévu pour introduire un recours tendant à l'annulation de celles-ci.

Appréciation de la Cour

24 Il y a lieu de constater, tout d'abord, que le Royaume d'Espagne ne conteste pas ne pas avoir supprimé les conditions n^{os} 1 à 6, 8 et 17 posées par la décision de la CNE, ainsi que les conditions modifiées n^{os} 1, 10, 11 et 15 fixées dans la décision du ministre. Toutefois, cet État membre fait valoir, en premier lieu, que le présent recours est sans objet dès lors que l'offre publique d'achat d'E.ON n'a pas produit d'effets et que, en conséquence, il ne lui est plus possible d'assurer le respect des décisions de la Commission.

25 À cet égard, il convient de rappeler que, selon une jurisprudence constante, l'existence d'un

manquement doit être appréciée en fonction de la situation de l'État membre telle qu'elle se présentait au terme du délai fixé dans l'avis motivé et que les changements intervenus par la suite ne sauraient être pris en compte par la Cour (voir, notamment, arrêts du 15 mars 2001, Commission/France, C-147/00, Rec. p. I-2387, point 26, et du 14 juin 2001, Commission/Italie, C-207/00, Rec. p. I-4571, point 27).

26 Or, il ressort du dossier que l'opération de concentration en cause a été abandonnée le 10 avril 2007, alors que le délai fixé dans l'avis motivé avait expiré le 16 mars 2007. Il s'ensuit que le fait que l'offre publique d'achat d'E.ON sur Endesa est restée sans effet ne prive pas d'objet le présent litige.

27 En outre, il convient de rappeler que même dans l'hypothèse où un manquement a été éliminé postérieurement au délai imparti dans l'avis motivé, la poursuite de l'action conserve un intérêt, en vue d'établir la base d'une responsabilité qu'un État membre peut encourir, en conséquence de son manquement, à l'égard, notamment, de ceux qui tirent des droits en conséquence dudit manquement (voir arrêts du 5 juin 1986, Commission/Italie, 103/84, Rec. p. 1759, point 9; du 24 mars 1988, Commission/Grèce, 240/86, Rec. p. 1835, point 14; du 14 juin 2001, Commission/Italie, précité, point 28, et du 20 juin 2002, Commission/Luxembourg, C–299/01, Rec. p. I–5899, point 11). Cette conclusion s'impose a fortiori dans le cas où l'Etat membre n'a pris aucune mesure pour se conformer à l'avis motivé dans le délai imparti, comme en l'espèce.

28 La procédure en manquement permet en effet de déterminer la portée exacte des obligations des États membres en cas de divergences d'interprétation (voir arrêt du 14 décembre 1971, Commission/France, 7/71, Rec. p. 1003, point 49) et repose sur la constatation objective du non-respect par un État membre des obligations que lui imposent le traité CE ou un acte de droit dérivé (voir arrêts du 18 janvier 2001, Commission/Espagne, C-83/99, Rec. p. I-445, point 23, et du 14 septembre 2004, Commission/Italie, C-385/02, Rec. p. I-8121, point 40). Elle constitue comme telle l'ultima ratio d'imposer le respect du droit communautaire en faisant prévaloir les intérêts communautaires consacrés par le traité en dépit de la résistance des États membres (voir, en ce sens, arrêt du 15 juillet 1960, Pays-Bas/Haute Autorité, 25/59, Rec. p. 723, 761). Pour cette raison, le présent recours conserve également un intérêt.

29 Il s'ensuit que le présent recours n'est dépourvu ni d'objet ni d'intérêt et que la fin de non recevoir soulevée par le Royaume d'Espagne doit être écartée.

30 En ce qui concerne la prétendue impossibilité d'appliquer les décisions de la Commission, le Royaume d'Espagne n'a pas démontré qu'il se trouve dans une impossibilité absolue d'exécuter ces décisions. En effet, le fait que l'offre publique d'achat d'E.ON n'a pas produit d'effets ne se traduit pas nécessairement par une telle impossibilité absolue d'exécution, l'élimination formelle, par exemple, des dispositions contraires aux décisions de la Commission restant possible. Il importe de rappeler à cet égard que les États membres sont tenus de prendre toutes dispositions pour faciliter la réalisation du plein effet du droit communautaire (voir, notamment, arrêt du 19 janvier 1993, C-101/91, Commission/Italie, Rec. p. I-191, point 24).

31 Par conséquant, cet argument ne saurait être accueilli.

32 Le Royaume d'Espagne soutient, en second lieu, que les mesures nationales en cause ont été prises en application de l'article 21, paragraphe 4, deuxième alinéa, du règlement sur les concentrations, soit en vue de la protection d'un intérêt légitime, à savoir la sécurité publique, dont la sécurité de l'approvisionnement en énergie ferait partie intégrante.

33 Cet argument consiste à soutenir, en substance, que les conditions posées par les mesures nationales en cause ne sont pas incompatibles avec le droit communautaire, contrairement à ce qu'énoncent les décisions de la Commission. Il revient ainsi à contester la validité de celles-ci.

34 Force est de souligner à cet égard que le système des voies de recours établi par le traité distingue les recours visés aux articles 226 CE et 227 CE, qui tendent à faire constater qu'un État membre a manqué aux obligations qui lui incombent, et les recours visés aux articles 230 CE et 232 CE, qui tendent à faire contrôler la légalité des actes ou des abstentions des institutions communautaires. Ces voies de recours poursuivent des objectifs distincts et sont soumises à des modalités différentes. Un État membre ne saurait donc utilement, en l'absence d'une disposition du traité l'y autorisant expressément, invoquer l'illégalité d'une décision dont il est destinataire comme moyen de défense à l'encontre d'un recours en manquement fondé sur l'inexécution de cette décision (voir, notamment, arrêts du 30 juin 1988, Commission/Grèce, 226/87, Rec. p. 3611, point 14; du 27

octobre 1992, Commission/Allemagne, C-74/91, Rec. p. I-5437, point 10, et du 27 juin 2000, Commission/Portugal, C-404/97, Rec. p. I-4897, point 34).

35 Il ne pourrait en être autrement que si l'acte en cause était affecté de vices particulièrement graves et évidents, au point de pouvoir être qualifié d'acte inexistant (arrêts du 30 juin 1988, Commission/Grèce, précité, point 16; Commission/Allemagne, précité, point 11; Commission/Portugal, précité, point 35, ainsi que du 5 octobre 2004, Commission/Grèce, C-475/01, Rec. p. I-8923, points 19 et 20).

36 Tel n'est cependant pas le cas en l'espèce. En effet, aucun élément ne permet de conclure que les décisions de la Commission seraient entachées d'un vice de nature à mettre en cause leur existence même.

37 En effet, dans une situation où l'État membre n'a pas communiqué les intérêts protégés par les mesures nationales qu'il a prises, il est inévitable que la Commission examine si lesdites mesures sont justifiées par l'un des intérêts prévus à l'article 21, paragraphe 4, deuxième alinéa, du règlement sur les concentrations (arrêt du 22 juin 2004, Portugal/Commission, C-42/01, Rec. p. I-6079, point 59).

38 Il y a lieu, dès lors, de constater, sans qu'il soit besoin d'examiner si les mesures nationales en cause ont été prises en vue de la protection d'un intérêt légitime, tel que la sécurité publique au sens de l'article 21, paragraphe 4, deuxième alinéa, du règlement sur les concentrations, que la validité des décisions de la Commission ne saurait être remise en cause dans le cadre du présent recours en manquement.

39 Eu égard à l'ensemble des considérations qui précèdent, il convient de constater que, en n'ayant pas supprimé:

– les conditions n^os 1 à 6, 8 et 17 posées par la décision de la CNE, qui ont été déclarées incompatibles avec le droit communautaire par l'article 1^er de la première décision de la Commission, et

– les conditions n^os 1, 10, 11 et 15 modifiées, posées par la décision du ministre, qui ont été déclarées incompatibles avec le droit communautaire par l'article 1^er de la seconde décision de la Commission, dans les délais impartis,

le Royaume d'Espagne a manqué aux obligations qui lui incombent en vertu de l'article 2 de chacune de ces décisions.

Sur les dépens

40 Aux termes de l'article 69, paragraphe 2, du règlement de procédure, toute partie qui succombe est condamnée aux dépens, s'il est conclu en ce sens. La Commission ayant conclu à la condamnation du Royaume d'Espagne et celui-ci ayant succombé en ses moyens, il y a lieu de le condamner aux dépens.

Par ces motifs, la Cour (troisième chambre) déclare et arrête:

1) En n'ayant pas supprimé:

– les conditions n^os 1 à 6, 8 et 17 posées par la décision de la Commission nationale de l'énergie, qui ont été déclarées incompatibles avec le droit communautaire par l'article 1^er de la décision de la Commission du 26 septembre 2006 [affaire n° COMP/M.4197 – E.ON/Endesa – C(2006) 4279 final], et

– les conditions n^os 1, 10, 11 et 15 modifiées, posées par la décision du ministre de l'Industrie, du Tourisme et du Commerce, qui ont été déclarées incompatibles avec le droit communautaire par l'article 1^er de la décision de la

Commission du 20 décembre 2006 [affaire n° COMP/M.4197 – E.ON/Endesa – C (2006) 7039 final], dans les délais impartis,

le Royaume d'Espagne a manqué aux obligations qui lui incombent en vertu de l'article 2 de chacune de ces décisions.

2) Le Royaume d'Espagne est condamné aux dépens.

Affaire C-413/06 P

Bertelsmann AG et Sony Corporation of America

contre

Independent Music Publishers and Labels Association (Impala)

«Pourvoi — Concurrence — Contrôle des opérations de concentration d'entreprises — Entreprise commune Sony BMG — Recours à l'encontre de l'annulation d'une décision de la Commission déclarant une opération de concentration compatible avec le marché commun — Contrôle juridictionnel — Portée — Exigences de preuve — Rôle de la communication des griefs — Renforcement ou création d'une position dominante collective — Motivation des décisions autorisant une opération de concentration — Utilisation d'informations confidentielles»

Sommaire de l'arrêt

1. *Concurrence — Concentrations — Appréciation de la compatibilité avec le marché commun — Exigences de preuve — Identité en cas d'autorisation ou d'interdiction*

   (Règlement du Conseil nº 4064/89, art. 2, § 2 et 3, 6, § 1, 8, § 1, et 10, § 6)

2. *Concurrence — Concentrations — Procédure administrative — Communication des griefs — Caractère provisoire*

   (Art. 81 CE et 82 CE; règlement du Conseil nº 4064/89, art. 18, § 3; règlement de la Commission nº 447/98, art. 13, § 2)

3. *Concurrence — Concentrations — Examen par la Commission — Adoption d'une décision constatant la compatibilité d'une opération de concentration avec le marché commun — Contrôle jurudictionnel*

   (Règlement du Conseil nº 4064/89, art. 18, § 3)

4. *Concurrence — Concentrations — Procédure administrative — Respect des droits de la défense — Présentation d'arguments en réponse à la communication des griefs — Droit des parties notifiantes*

   (Règlement du Conseil nº 4064/89, art. 11, 14, 15, 18, § 3, et 19; règlement de la Commission nº 447/98, art. 3, § 1, et 13, § 2)

5. *Concurrence — Concentrations — Appréciation de la compatibilité avec le marché commun — Création ou renforcement d'une position dominante collective entravant de manière significative la concurrence effective dans le marché commun — Critères*

   (Art. 81 CE; règlement du Conseil nº 4064/89, art. 2, § 3)

6. *Concurrence — Concentrations — Examen par la Commission — Appréciations d'ordre économique — Contrôle juridictionnel — Limites*

   (Règlement du Conseil nº 4064/89, art. 2)

7. *Actes des institutions — Motivation — Obligation — Portée — Décision d'application des règles en matière de concentrations entre entreprises*

(Art. 253 CE; règlement du Conseil nº 4064/89, art. 8, § 2)

8. *Recours en annulation — Moyens — Violation des formes substantielles — Violation de l'obligation de motivation s'agissant d'une décision autorisant une opération de concentration — Examen d'office par le juge*

(Art. 230 CE et 253 CE; règlement du Conseil nº 4064/89, art. 2, 6, § 1, 8, § 1, et 10, § 6)

1. Il ne ressort pas des termes des paragraphes 2 et 3 de l'article 2 du règlement nº 4064/89, relatif au contrôle des opérations de concentration entre entreprises, que celui-ci impose des exigences de preuve différentes en matière de décisions autorisant une opération de concentration, d'une part, et de décisions interdisant une telle opération, d'autre part. En effet, l'analyse prospective nécessaire en matière de contrôle des opérations de concentration, qui consiste à examiner en quoi une telle opération pourrait modifier les facteurs déterminant l'état de la concurrence sur un marché donné afin de vérifier s'il en résulterait une entrave significative à une concurrence effective, requiert d'imaginer les divers enchaînements de cause à effet, afin de retenir celui dont la probabilité est la plus forte. Il ne saurait donc être déduit du règlement une présomption générale de compatibilité ou d'incompatibilité avec le marché commun d'une opération de concentration notifiée.

Cette interprétation du règlement nº 4064/89 n'est pas infirmée par l'article 10, paragraphe 6, de celui-ci, en vertu duquel une opération de concentration notifiée est réputée compatible avec le marché commun lorsque la Commission n'a pas pris dans le délai pertinent une décision statuant sur la compatibilité de cette opération. En effet, cette disposition est une expression spécifique de l'impératif de célérité qui caractérise l'économie générale dudit règlement et qui impose à la Commission de respecter des délais stricts pour l'adoption de la décision finale. Ladite disposition constitue cependant une exception à l'économie générale du règlement, découlant notamment des articles 6, paragraphe 1, et 8, paragraphe 1, de celui-ci, suivant laquelle la Commission statue expressément sur les opérations de concentration qui lui sont notifiées.

Par ailleurs, il est vrai que les décisions de la Commission sur la compatibilité des opérations de concentration avec le marché commun doivent être étayées par des éléments suffisamment significatifs et concordants et, dans le contexte de l'analyse d'une opération de concentration de type «conglomérat», la qualité des éléments de preuve produits par la Commission pour établir la nécessité d'une décision déclarant cette opération incompatible avec le marché commun est particulièrement importante. Toutefois, il ne saurait en être déduit que la Commission doit se conformer, particulièrement lorsque cette dernière s'appuie sur une thèse d'une position dominante collective, à des exigences de preuve plus élevées en matière de décisions interdisant des opérations de concentration qu'en matière de décisions autorisant de telles opérations. En effet, la fonction essentielle de la preuve est de convaincre du bien-fondé d'une thèse ou, comme en matière de contrôle des opérations de concentration, de conforter les appréciations qui sous-tendent les décisions de la Commission. En outre, le fait qu'il s'agisse ou non d'une thèse d'une position dominante collective ne saurait avoir, en soi, d'incidence sur les exigences de preuve applicables. La complexité intrinsèque d'une thèse d'entrave à la concurrence postulée à l'égard d'une opération de concentration notifiée constitue un élément dont il convient de tenir compte lors de l'appréciation de la plausibilité des diverses conséquences de cette opération, en vue d'identifier celle dont la probabilité est la plus forte, mais une telle complexité n'a pas, en tant que telle, d'influence sur le niveau de preuve exigé.

Il découle de ce qui précède que, lorsqu'elle est saisie d'une opération de concentration en application du règlement nº 4064/89, la Commission est, en principe, tenue de prendre position soit dans le sens de l'autorisation de cette opération, soit dans celui de l'interdiction de celle-ci, selon son appréciation de l'évolution économique attribuable à l'opération en cause dont la probabilité est la plus forte.

(cf. points 46-52)

2. Dans le cadre de la procédure de contrôle des opérations de concentration, la communication des griefs est un document de caractère procédural et préparatoire qui, en vue d'assurer l'exercice efficace des droits de la défense, circonscrit l'objet de la procédure administrative engagée par la Commission, empêchant ainsi cette dernière de retenir d'autres griefs dans sa décision mettant fin à la procédure concernée. Il est donc inhérent à la nature de cette communication d'être provisoire et susceptible de modifications lors de

l'évaluation à laquelle la Commission procède ultérieurement sur la base des observations qui lui ont été présentées en réponse par les parties ainsi que d'autres constatations factuelles. En effet, la Commission doit tenir compte des éléments résultant de l'intégralité de la procédure administrative soit pour abandonner des griefs qui seraient mal fondés, soit pour aménager et compléter tant en fait qu'en droit son argumentation à l'appui des griefs qu'elle retient. Ainsi, la communication des griefs n'empêche nullement la Commission de modifier sa position en faveur des entreprises concernées.

Il s'ensuit que la Commission n'est pas tenue de maintenir les appréciations de fait ou de droit portées dans la communication des griefs. Au contraire, elle doit motiver sa décision finale par ses appréciations définitives basées sur les résultats de l'intégralité de son enquête tels qu'ils se présentent au moment de la clôture de la procédure formelle. Par ailleurs, la Commission n'est pas tenue d'expliquer les différences éventuelles par rapport à ses appréciations provisoires contenues dans ladite communication.

Le fait que la Commission soit soumise dans le cadre du contrôle des opérations de concentration, à la différence de ce qui est le cas dans le champ d'application des articles 81 CE et 82 CE, à des délais de procédure stricts ne change rien à la nature provisoire de la communication des griefs. En effet, l'exercice efficace des droits de la défense impose que l'argumentation des parties à une concentration proposée bénéficie, dans la procédure de contrôle des opérations de concentration, de la même prise en compte que celle de l'argumentation des parties concernées dans les procédures intentées en application des articles 81 CE ou 82 CE.

(cf. points 63-66)

3. Le Tribunal ne saurait nécessairement être empêché d'utiliser la communication des griefs pour procéder à l'interprétation d'une décision de la Commission en matière de contrôle des opérations de concentration, particulièrement en ce qui concerne l'examen de la base factuelle de celle-ci, et cela nonobstant le caractère préparatoire et provisoire de ce document et malgré le fait que la Commission n'est pas tenue d'expliquer les éventuelles divergences de la décision finale par rapport à celui-ci.

Cependant le Tribunal commet une erreur de droit lorsque, dans son examen des arguments tirés de l'existence d'erreurs manifestes d'appréciation, il ne se limite pas à l'utilisation de la communication des griefs comme instrument pour vérifier le caractère correct, complet et fiable des faits à la base de la décision litigieuse, mais qu'il attribue à certains éléments figurant dans la communication des griefs un caractère établi sans démontrer les raisons pour lesquelles, en dépit de la position finale adoptée par la Commission dans la décision litigieuse, ces éléments devraient être considérés comme incontestablement établis. Or, à part, éventuellement, des éléments non controversés qui, par exemple, en raison de leur nature empirique et vérifiable, sont à un tel point manifestes qu'ils sont incontestables, il ne saurait être présumé que des affirmations figurant dans une communication de griefs ne sont pas susceptibles d'être modifiées à l'aune des réponses à une telle communication. En effet, il se peut que les parties notifiantes, par leur réponse à la communication des griefs, complètent ou clarifient, à la lumière de cette communication, leur position sur le fonctionnement du ou des marchés en cause, de sorte que de nouveaux éléments peuvent être ajoutés ou que les faits déjà examinés par la Commission peuvent être placés dans une toute autre perspective.

(cf. points 69, 73, 75-76)

4. Il découle des droits de la défense des entreprises notifiant une opération de concentration que celles-ci ont le droit de présenter dans le cadre de leur audition écrite et orale, après la réception de la communication des griefs, tout ce qu'elles estiment être susceptible de réfuter les griefs de la Commission et d'amener celle-ci à autoriser leur opération de concentration proposée. Il ne saurait donc, en principe, leur être reproché de ne présenter certains arguments, faits ou éléments de preuve, éventuellement décisifs, que dans le cadre de leur argumentation en réponse à la communication des griefs. En effet, ce n'est qu'avec cette communication que les parties à l'opération de concentration peuvent obtenir des indications détaillées quant aux réserves émises par la Commission à l'égard de leur projet de concentration ainsi qu'aux arguments et aux éléments de preuve sur lesquels elle s'appuie à cet effet. Une argumentation produite en réponse à la communication des griefs fait partie de l'enquête à entreprendre dans le cadre de la procédure formelle et n'est pas tardive, mais intervient au moment prévu à cet effet dans la procédure de contrôle des opérations de concentration. Compte tenu des exigences des droits de la défense, une telle

argumentation ne saurait être soumise à des exigences plus élevées quant à sa force probante et à son caractère convaincant que celles posées à l'égard de l'argumentation des concurrents, des clients et d'autres tiers interrogés par la Commission au cours de la procédure administrative ou à l'égard des éléments fournis par les entreprises notifiantes à un stade antérieur de l'enquête de la Commission.

Par ailleurs, lorsque la Commission examine dans sa décision l'argumentation développée par les entreprises notifiantes en réponse à la communication des griefs et se saisit de l'occasion pour revoir ses conclusions provisoires figurant dans cette communication pour éventuellement s'en écarter, sans formuler de demande de renseignements ni effectuer d'études de marché supplémentaires, elle ne procède pas à une «délégation» de l'enquête aux entreprises notifiantes.

Certes, la Commission est tenue d'examiner soigneusement l'argumentation des parties à la concentration quant à son exactitude, son caractère complet et convaincant, et de l'ignorer en cas de doutes justifiés. Il est également vrai que, en vertu de l'article 3, paragraphe 1, du règlement nº 447/98, la notification de l'opération de concentration envisagée doit contenir des informations exactes et complètes, et que, conformément à l'article 11 du règlement nº 4064/89, les parties notifiantes sont tenues de répondre de manière complète, exacte et dans les délais prescrits à d'éventuelles demandes de renseignements de la Commission, faute de quoi, lorsque les renseignements en cause ont été demandés par voie de décision, la Commission peut, en vertu des articles 14 et 15 du règlement nº 4064/89, infliger des amendes et des astreintes. Il n'en demeure pas moins que celle-ci doit à l'occasion de la réponse à la communication des griefs, sous peine de dévaloriser les droits de la défense des parties notifiantes, appliquer les mêmes critères que ceux suivis aux fins de l'examen de l'argumentation de tiers ou que ceux retenus à un stade plus précoce de son enquête, tout en pouvant tirer des conséquences appropriées dans l'hypothèse où il s'avère, à un stade très avancé de la procédure, que la notification concernée ne respecte pas les exigences de l'article 3, paragraphe 1, du règlement nº 447/98.

Dans ces conditions, compte tenu en particulier des contraintes de temps qui découlent des délais de procédure prévus par le règlement nº 4064/89, la Commission ne saurait, en principe, être tenue, dans chaque cas individuel, d'envoyer, après la communication des griefs et après l'audition des entreprises concernées, à de nombreux opérateurs économiques des demandes de renseignements étendues peu de temps avant la transmission de son projet de décision au comité consultatif pour le contrôle des concentrations d'entreprises, en application de l'article 19 du règlement nº 4064/89.

(cf. points 89, 91-95)

5. Dans le cadre de son appréciation de la compatibilité avec le marché commun d'une opération de concentration, s'agissant d'une allégation de création ou de renforcement d'une position dominante collective, la Commission est tenue d'apprécier, selon une analyse prospective du marché de référence, si l'opération de concentration dont elle est saisie aboutit à une situation dans laquelle une concurrence effective dans le marché en cause est entravée de manière significative par les entreprises parties à la concentration et une ou plusieurs entreprises tierces qui ont, ensemble, notamment en raison des facteurs de corrélation existant entre elles, le pouvoir d'adopter une même ligne d'action sur le marché en vue de profiter d'une situation de puissance économique collective, et cela sans que les concurrents actuels ou potentiels, ou encore les clients et les consommateurs, puissent réagir de manière effective. De tels facteurs de corrélation incluent en particulier la relation d'interdépendance existant entre les membres d'un oligopole restreint à l'intérieur duquel, sur un marché ayant les caractéristiques appropriées, notamment en termes de concentration du marché, de transparence et d'homogénéité du produit, ils sont en mesure de prévoir leurs comportements réciproques et sont donc fortement incités à aligner leur comportement sur le marché, de façon à maximiser leur profit commun en augmentant des prix, en réduisant la production, le choix ou la qualité des biens et des services, en diminuant l'innovation ou en exerçant, d'une autre manière, une influence sur les facteurs de la concurrence. En effet, dans un tel contexte, chaque opérateur sait qu'une action fortement concurrentielle de sa part provoquerait une réaction de la part des autres, de sorte qu'il ne retirerait aucun avantage de son initiative.

Une situation de position dominante collective entravant de manière significative la concurrence effective dans le marché commun ou une partie substantielle de celui-ci peut donc intervenir à la suite d'une opération de concentration lorsque, compte tenu des caractéristiques mêmes du marché en cause et de la modification qu'apporterait à ces caractéristiques la réalisation de l'opération, celle-ci aurait comme résultat que, prenant conscience des intérêts communs, chaque membre de l'oligopole concerné considérerait possible, économiquement rationnel et donc préférable d'adopter durablement une même ligne d'action sur le marché dans le but de vendre au-dessus des prix concurrentiels, sans devoir procéder à la conclusion d'un accord ou recourir à une pratique concertée au sens de l'article 81 CE, et ce sans que les concurrents actuels ou potentiels, ou encore les clients et les consommateurs, puissent réagir de manière effective. La probabilité d'une telle coordination tacite est plus forte si les concurrents peuvent facilement parvenir à une perception commune de la manière dont doit fonctionner la coordination, notamment des paramètres susceptibles de faire l'objet de la coordination envisagée. En effet, sans pouvoir arriver tacitement à une compréhension partagée des modalités de la coordination, les concurrents devraient éventuellement recourir à des pratiques prohibées par l'article 81 CE pour pouvoir adopter une ligne commune d'action sur le marché. En outre, compte tenu notamment de l'éventuelle tentation qui peut exister pour chaque participant à une coordination tacite d'en dévier afin d'augmenter son profit à court terme, il convient d'apprécier si une telle coordination est susceptible d'être durable. À cet égard, les entreprises qui coordonnent leur comportement doivent être capables de surveiller dans une mesure suffisante si les modalités de la coordination sont respectées. La transparence sur le marché devrait, dès lors, être suffisante pour permettre,notamment, à chaque entreprise concernée de connaître, de manière suffisamment précise et immédiate, l'évolution du comportement sur le marché de chacun des autres participants à la coordination. De plus, la discipline impose qu'il existe une forme de mécanisme de dissuasion crédible qui puisse être mise en œuvre si un comportement déviant est détecté. En outre, les réactions d'entreprises qui ne participent pas à la coordination, telles que les concurrents actuels ou futurs, ainsi que les réactions des clients, ne devraient pas pouvoir remettre en cause les résultats attendus de la coordination.

Or, dans le cadre de l'application de ces critères, il y a lieu d'éviter une démarche mécanique consistant à vérifier séparément chacun desdits critères pris isolément, en ignorant le mécanisme économique global d'une hypothétique coordination tacite. À cet égard, l'appréciation, par exemple, de la transparence sur un marché donné devrait non pas se faire de façon isolée et abstraite, mais s'effectuer à l'aune d'un mécanisme d'une hypothétique coordination tacite. En effet, c'est uniquement en tenant compte d'une telle hypothèse qu'il est possible de vérifier si d'éventuels éléments de transparence existant sur un marché sont effectivement de nature à faciliter la définition tacite d'une ligne de conduite commune et/ou à permettre aux concurrents concernés de surveiller de manière suffisante si les modalités d'une telle ligne de conduite sont respectées. À cet égard, aux fins de l'analyse de la durabilité d'une coordination tacite postulée, il est nécessaire de prendre en compte les mécanismes de surveillance éventuellement accessibles aux participants à la coordination tacite alléguée, afin de vérifier si, en raison de tels mécanismes, il leur serait possible de connaître, de manière suffisamment précise et immédiate, l'évolution du comportement sur le marché de chacun des autres participants à une telle coordination.

Enfin, la recherche d'une position dominante collective préexistante qui se fonde sur une série d'éléments habituellement considérés comme indicatifs de la présence ou de la probabilité d'une coordination tacite entre concurrents ne peut pas, en tant que telle, être remise en cause. Toutefois, il est impératif que cette recherche soit menée avec précaution et, surtout, dans le cadre d'une approche fondée sur l'analyse des éventuelles stratégies plausibles de coordination.

(cf. points 120-123, 125-126, 129)

6. La Commission dispose d'une marge d'appréciation en matière économique aux fins de l'application des règles de fond du règlement nº 4064/89, relatif au contrôle des opérations de concentration entre entreprises, en particulier de son article 2. Il en résulte que le contrôle par le juge communautaire d'une décision de la Commission en matière d'opérations de concentration est limité à la vérification de l'exactitude matérielle des faits et à l'absence d'erreur manifeste d'appréciation. Cela étant, s'il n'appartient pas au juge communautaire de substituer son appréciation économique à celle de la Commission aux fins de l'application des règles de fond du règlement, cela n'implique pas qu'il doit s'abstenir de contrôler la qualification juridique, par la Commission, de données de nature économique. En effet, le juge communautaire doit notamment vérifier non seulement l'exactitude matérielle des éléments de preuve invoqués, leur fiabilité et leur cohérence, mais également contrôler si ces éléments constituent l'ensemble des données pertinentes devant être prises en considération pour apprécier une situation complexe et s'ils sont de nature à étayer les conclusions qui en sont tirées.

(cf. points 144-145)

7. La Commission ne viole pas son obligation de motivation si, lorsqu'elle exerce son pouvoir de contrôle des opérations de concentration, elle n'inclut pas dans sa décision de motivation précise quant à l'appréciation d'un certain nombre d'aspects de la concentration qui lui semblent manifestement hors de propos, dépourvus de signification ou clairement secondaires pour l'appréciation de cette dernière. Une telle exigence serait en effet difficilement compatible avec l'impératif de célérité et les brefs délais de procédure qui s'imposent à la Commission lorsqu'elle exerce son pouvoir de contrôle des opérations de concentration et qui font partie des circonstances particulières d'une procédure de contrôle de ces opérations. Il en résulte que, lorsque la Commission déclare une opération de concentration compatible avec le marché commun sur la base de l'article 8, paragraphe 2, du règlement nº 4064/89, l'exigence de motivation est satisfaite si cette décision expose clairement les raisons pour lesquelles la Commission considère que la concentration en question, le cas échéant après modifications apportées par les entreprises concernées, ne crée pas ou ne renforce pas une position dominante ayant comme conséquence qu'une concurrence effective serait entravée de manière significative dans le marché commun ou une partie substantielle de celui-ci. À cet égard, s'il est vrai que la Commission n'est pas obligée, dans la motivation des décisions adoptées en application du règlement, de prendre position sur tous les éléments et arguments invoqués devant elle, y compris ceux clairement secondaires pour l'appréciation à livrer, il n'en demeure pas moins qu'elle doit exposer les faits et les considérations juridiques revêtant une importance essentielle dans l'économie de la décision. En outre, la motivation doit être logique, ne présentant notamment pas de contradiction interne.

(cf. points 167-169)

8. L'article 10, paragraphe 6, du règlement nº 4064/89, relatif au contrôle des opérations de concentration entre entreprises, qui vise à assurer la sécurité juridique dans l'hypothèse où, exceptionnellement, la Commission n'aurait pas adopté une décision dans le délai prescrit, de sorte que les entreprises concernées seraient libres de mettre en œuvre leur concentration dès qu'une autorisation tacite est intervenue, ne saurait fonder une exception à la possibilité de contester la légalité d'une décision autorisant une telle opération en raison de la violation de l'obligation de motivation, pas plus qu'il ne saurait fonder une présomption générale en faveur de la compatibilité des opérations de concentration avec le marché commun. Cette disposition, qui constitue une exception à l'économie générale dudit règlement, découlant notamment des articles 6, paragraphe 1, et 8, paragraphe 1, de celui-ci, en vertu de laquelle la Commission se prononce expressément sur les opérations de concentration qui lui sont notifiées, et cela que la décision soit négative ou positive, doit être interprétée et appliquée, en effet, à la lumière des articles 230 CE et 253 CE. Or, une insuffisance de motivation de nature à méconnaître l'article 253 CE relève de la violation des formes substantielles au sens de l'article 230 CE, et constitue d'ailleurs un moyen pouvant, voire devant, être soulevé d'office par le juge communautaire.

(cf. points 172, 174-175)

JUDGMENT OF THE COURT (Grand Chamber)

10 July 2008 (*)

Table of contents

(Appeals – Competition – Control of concentrations between undertakings – Sony BMG joint venture – Appeal against the annulment of a Commission decision declaring a concentration compatible with the common market – Judicial review – Scope – Standard of proof – Role of the statement of objections – Strengthening or creation of a collective dominant position – Statement of reasons for a decision approving a concentration – Use of confidential information)

In Case C-413/06 P,

APPEAL under Article 56 of the Statute of the Court of Justice, brought on 3 October 2006,

Bertelsmann AG, established in Gütersloh (Germany), represented by P. Chappatte and J. Boyce, Solicitors,

Sony Corporation of America, established in New York (United States of America), represented by N. Levy, Barrister, R. Snelders, avocat, and T. Graf, Rechtsanwalt,

appellants,

the other parties to the proceedings being:

Independent Music Publishers and Labels Association (Impala), established in Brussels (Belgium), represented by S. Crosby and J. Golding, Solicitors, and by I. Wekstein, advocate,

applicant at first instance,

Commission of the European Communities, represented by A. Whelan and K. Mojzesowicz, acting as Agents, with an address for service in Luxembourg,

defendant at first instance,

Sony BMG Music Entertainment BV, established in Vianen (Netherlands), represented by N. Levy, Barrister, R. Snelders, avocat, and T. Graf, Rechtsanwalt,

intervener at first instance,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans, A. Rosas, K. Lenaerts, G. Arestis and U. Lõhmus, Presidents of Chambers, E. Juhász, A. Borg Barthet, M. Ilešič, J. Klučka, E. Levits and A. Ó Caoimh (Rapporteur), Judges,

Advocate General: J. Kokott,

Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 6 November 2007,

after hearing the Opinion of the Advocate General at the sitting on 13 December 2007,

gives the following

Judgment

1 By their appeal, Bertelsmann AG ('Bertelsmann') and Sony Corporation of America ('Sony') request the Court to set aside the judgment of the Court of First Instance of the European Communities in Case T-464/04 *Impala* v *Commission* [2006] ECR II-2289 ('the judgment under appeal'), in which the Court of First Instance annulled Commission Decision 2005/188/EC of 19 July 2004 declaring a concentration to be compatible with the common market and the functioning of the EEA Agreement (Case COMP/M.3333 – Sony/BMG) (OJ 2005 L 62, p. 30) ('the contested decision').

Legal context

2 Article 2(2) and (3) of Council Regulation (EEC) No 4064/89 of 21 December 1989 on the control of concentrations between undertakings (OJ 1989 L 395, p. 1, and Corrigendum (OJ 1990 L 257, p. 13)), as amended by Council Regulation (EC) No 1310/97 of 30 June 1997 (OJ 1997 L 180, p. 1, and Corrigendum (OJ 1998 L 40, p. 17)) ('the Regulation') states:

'2. A concentration which does not create or strengthen a dominant position as a result of which effective competition would be significantly impeded in the common market or in a substantial part of it shall be declared compatible with the common market.

3. A concentration which creates or strengthens a dominant position as a result of which effective competition would be significantly impeded in the common market or in a substantial part of it shall be declared incompatible with the common market.'

3 Article 6(1) of the Regulation provides as follows:

'The Commission shall examine the notification as soon as it is received.

...

(c) ... where the Commission finds that the concentration notified falls within the scope of this Regulation and raises serious doubts as to its compatibility with the common market, it shall decide to initiate proceedings.'

4 Article 8 of the Regulation empowers the Commission, in the formal proceedings for assessing the compatibility of the concentration with the common market initiated under Article 6(1)(c) of the Regulation ('the formal proceedings'), to adopt a decision pursuant to Article 8(2) declaring the concentration compatible, where appropriate following modification by the undertakings concerned to the proposed concentration as notified, or a decision pursuant to Article 8(3) declaring the concentration incompatible. Under Article 8(5)(a) of the Regulation, the Commission may revoke the decision it has taken pursuant to Article 8(2) where the declaration of compatibility is based on incorrect information for which one of the undertakings concerned is responsible or where it has been obtained by deceit.

5 Article 10(1) of the Regulation allows the Commission, except in certain circumstances which are not relevant to the present appeal, a period of one month in which to decide whether to initiate the formal proceedings. Article 10(3) provides that a decision declaring the notified concentration incompatible with the common market is to be taken within not more than four months of the date on which the formal proceedings are initiated. Under Article 10(6) of the Regulation, a notified concentration is to be deemed compatible with the common market where the Commission has not taken a decision either to initiate the formal proceedings or a decision on the compatibility of the concentration with the common market within the periods laid down in Article 10(1) and (3), respectively.

6 Article 11 of the Regulation concerns the requests for information which the Commission, in carrying out the duties assigned to it by the Regulation, may send to, among others, the notifying parties and to other undertakings or associations of undertakings, where appropriate by way of decision. Articles 14 and 15 of the Regulation provide for the imposition of fines or periodic penalty payments where incorrect or misleading information is supplied.

7 Article 18(3) of the Regulation provides:

'The Commission shall base its decision only on objections on which the parties have been able to submit their observations. The rights of the defence shall be fully respected in the proceedings. Access to the file shall be open at least to the parties directly involved, subject to the legitimate interest of undertakings in the protection of their business secrets.'

8 Article 19 of the Regulation concerns liaison between the Commission and the competent authorities of the Member States. Under Article 19(3), an Advisory Committee on concentrations is to be consulted before any decision is taken pursuant to Article 8(2) to (5) of the Regulation. Article 19(6) provides that the Advisory Committee is to deliver an opinion on the Commission's draft decision, if necessary by taking a vote.

9 Under Article 3(1) of Commission Regulation (EC) No 447/98 of 1 March 1998 on the notifications, time-limits and hearings provided for in Regulation No 4064/89 (OJ 1998 L 61, p. 1) ('the Implementing Regulation'), the notification of the proposed concentration must contain the information, including documents, requested by form CO annexed to that regulation.

10 Article 13(2) of the Implementing Regulation provides, among other things, that the Commission is to address its objections in writing to the notifying parties and to set a time-limit within which they may inform the Commission of their views in writing.

Facts

11 The facts of the dispute were set out as follows by the Court of First Instance in paragraphs 1 to 11 of the judgment under appeal:

'1 The Independent Music Publishers and Labels Association (Impala) is an international association, incorporated under Belgian law, whose members are 2 500 independent music production companies.

2 On 9 January 2004 the Commission received notification pursuant to [the Regulation] of a proposed concentration by which the undertakings Bertelsmann … and Sony … proposed to merge their global recorded music businesses.

3 Bertelsmann is an international media company … active in recorded music through its wholly-owned subsidiary Bertelsmann Music Group "BMG". …

4 … In the recorded music sector [Sony] acts through Sony Music Entertainment. ….

5 The proposed operation consisted in the integration of the global recorded music businesses of the parties to the concentration (with the exception of Sony's activities in Japan) into three or more newly-created companies pursuant to a Business Contribution Agreement dated 11 December 2003. In the aggregate, these joint venture companies were to be operated under the name Sony BMG.

6 Under the agreement, Sony BMG would be active in the discovery and development of artists (the so-called A & R ("Artist and Repertoire") activity) and the marketing and sale of the resulting discs. Sony BMG would not be involved in related activities such as music publishing, manufacturing and distribution.

7 On 20 January 2004, the Commission sent out questionnaires to a number of players on the market. [Impala] replied to that questionnaire and lodged a separate submission on 28 January 200[4] in which it set out the reasons why in its view the Commission should declare the operation incompatible with the common market. [Impala] set out its concerns about further concentration in the market and the impact that this would have on market access, including in the retail sector, the media, the internet and consumer choice.

8 By decision dated 12 February 2004, the Commission found that the notified operation raised serious doubts as to its compatibility with the common market and the functioning of the Agreement on the European Economic Area ("the EEA Agreement"). It therefore initiated [the formal proceedings].

9 On 24 May 2004 the Commission sent a statement of objections to the parties to the concentration, in which it provisionally concluded that the notified operation was incompatible with the common market and the functioning of the EEA Agreement, since it would strengthen a collective dominant position in the recorded music market and in the wholesale market for licences for online music and would coordinate the parent companies' behaviour in a way

incompatible with Article 81 EC.

10 The parties to the concentration replied to the statement of objections and a hearing took place before the Hearing Officer on 14 and 15 June 2004 in the presence of, among others, [Impala].

11 By [the contested decision], the Commission declared the concentration compatible with the common market pursuant to Article 8(2) of [the Regulation] …'

The proceedings before the Court of First Instance and the judgment under appeal

12 By application lodged at the Registry of the Court of First Instance on 3 December 2004, Impala brought an action for the annulment of the contested decision. In support of that action, Impala put forward five pleas in law, divided into a number of parts.

13 As regards the first plea, relating to the strengthening of a pre-existing collective dominant position, the Court of First Instance, after having first set out a number of observations regarding the concept of a 'collective dominant position', examined the argument according to which, in essence, the contested decision did not explain to the requisite legal standard the reasons for which discounts, in particular campaign discounts, undermine the transparency necessary to allow the development of such a position.

14 Having reached the conclusion set out in paragraph 325 of the judgment under appeal that, in essence, the contested decision should be annulled on the ground that it was inadequately reasoned, in paragraphs 327 to 458 of the judgment under appeal the Court of First Instance none the less examined, in the interest of completeness, Impala's arguments that the elements put forward by the Commission in order to demonstrate insufficient transparency in the recorded music markets at issue were vitiated by manifest errors of assessment.

15 In that regard, the Court of First Instance found in particular, in paragraph 373 of the judgment under appeal, that it followed both from the contested decision and from the arguments advanced by the Commission before it that the only alleged element of opacity of the market resulted from the lesser transparency of the campaign discounts. In paragraphs 377 and 378 of the judgment under appeal, it held, first, that the evidence, as mentioned in the contested decision, did not support the conclusions drawn from it by the Commission and, secondly, that those conclusions were also markedly different from the findings made in the statement of objections.

16 In paragraphs 475 and 476 of the judgment under appeal, the Court of First Instance set out its conclusions relating to the first plea as follows:

'475 … the assertion that the markets for recorded music are not sufficiently transparent to permit a collective dominant position is not supported by a statement of reasons of the requisite legal standard and is vitiated by a manifest error of assessment in that the elements on which it is based are incomplete and do not include all the relevant data that ought to have been taken into consideration by the Commission and are not capable of supporting the conclusions which are drawn from them. As that assertion constitutes … an essential ground on which the Commission concluded … that there was no collective dominant position, the [contested decision] must be annulled on that ground alone.

476 Likewise, as the analysis in respect of retaliation is vitiated by an error of law, or at the very least by a manifest error of assessment, and as that analysis constitutes the other essential ground on which the Commission concluded in the [contested decision] that there was no collective dominant position, that defect also provides a ground for annulment of the [contested decision].'

17 By its second plea raised before the Court of First Instance, Impala claimed that, by not taking the view that the proposed concentration would create a collective dominant position on the market for recorded music, the Commission had infringed Article 253 EC and made a manifest error of assessment and an error of law.

18 In paragraph 527 of the judgment under appeal, the Court of First Instance set out the terms of the analysis in the contested decision as regards the risk that a collective dominant position might be created and went on to hold as follows in paragraph 528 of the judgment:

'... these few observations, which are so superficial, indeed purely formal, cannot satisfy the Commission's obligation to carry out a prospective analysis ... particularly where, as in the present case, the concentration raises serious problems. Independently of the Court's findings in respect of the first plea in law, it follows both from the fact that the Commission had to engage in lengthy discussion in the [contested decision] in order to conclude that there was no collective dominant position before the concentration and from the fact that it had concluded in the statement of objections, after an investigation lasting five months, that such a position did exist before the concentration, that the question whether the fusion between two of the five [major record companies ('the majors')] might create a collective dominant position raises, for even stronger reasons, serious problems requiring a thorough examination. As that examination was not carried out, it follows, on that ground alone, that the second plea in law is well founded.'

19 In the interest of completeness, the Court of First Instance held in paragraph 539 of the judgment under appeal that the Commission could not, without making an error, rely on the fact that there was no evidence that retaliatory measures had been used in the past to conclude that the concentration in question was not likely to give rise to a collective dominant position.

20 In those circumstances, the Court of First Instance held that the first and second pleas in law were well founded and annulled the contested decision without examining the third to fifth pleas raised before it.

Forms of order sought and positions of the parties

21 By their appeal, the appellants request that the Court of Justice should:

– set aside the judgment under appeal;

– dismiss Impala's application for annulment of the contested decision or, alternatively, refer the case back to the Court of First Instance for reconsideration; and

– order Impala to pay the costs of the present proceedings.

22 By the seven grounds of appeal put forward by the appellants, some of which are divided into a number of parts, the appellants allege errors of law in that in the judgment under appeal the Court of First Instance:

– relied on the statement of objections as a benchmark for its review of the substance of the contested decision;

– required the Commission to undertake new market investigations following the response to the statement of objections;

– applied an excessive and incorrect standard of proof for decisions approving a concentration;

– exceeded the scope of its role in carrying out judicial review;

– misconstrued the relevant legal criteria applying to the creation or strengthening of a collective dominant position;

– applied an incorrect standard of reasoning as regards decisions approving a concentration; and

– relied on evidence that was not disclosed to the parties to the concentration.

23 Sony BMG Music Entertainment BV adopts in full both the appeal and the forms of order sought by the appellants.

24 The forms of order sought by the Commission are, in substance, the same as those of the appellants. The Commission supports the first, second and fourth grounds of appeal, together with the first part of the third ground.

25 Impala requests the Court to dismiss the appeal and to order the appellants to pay the costs. As a preliminary point, it pleads that the appeal is inadmissible in whole or in part. It also argues that the appeal could not in any event lead to the setting aside of the judgment under appeal, since the appellants have failed to challenge paragraph 528 of the judgment, which is itself sufficient justification for the annulment of the contested decision.

26 The appellants and the Commission claim that both the plea of inadmissibility and the line of argument relating to paragraph 528 of the judgment under appeal summarised in the preceding paragraph of this judgment should be rejected.

27 At the end of its response, the Commission made some 'additional observations on the "essential grounds" of the [contested] decision'. Those observations are challenged by Impala, relying on Article 117(2) of the Rules of Procedure of the Court of Justice. The appellants support those observations.

The appeal

Admissibility

The general plea of inadmissibility

28 As a preliminary point, Impala pleads that the appeal is inadmissible in that it constitutes an attempt to reopen questions of fact relating to the inadequacy of reasoning in the contested decision and to the manifest error of assessment vitiating the contested decision, which were settled by the Court of First Instance. The appeal seeks, to a very large extent, to re-examine questions of fact which are beyond the jurisdiction of the Court of Justice. Impala also submits in this respect that the question whether a decision is sufficiently reasoned is a question of fact. Lastly, it adds that its individual replies to the grounds of appeal raised by the appellants should be understood as being in the alternative.

29 In this regard, it is clear from Article 225 EC and the first paragraph of Article 58 of the Statute of the Court of Justice that an appeal lies on points of law only. The Court of First Instance accordingly has exclusive jurisdiction, first, to find the facts, except where the substantive inaccuracy of its findings is apparent from the documents submitted to it and, second, to assess those facts. When the Court of First Instance has found or assessed the facts, the Court of Justice has jurisdiction under Article 225 EC to review the legal characterisation of those facts by the Court of First Instance and the legal conclusions it has drawn from them. The Court of Justice thus has no jurisdiction to establish the facts or, in principle, to examine the evidence which the Court of First Instance accepted in support of those facts. Provided that the evidence has been properly obtained and the general principles of law and the rules of procedure in relation to the burden of proof and the taking of evidence have been observed, it is for the Court of First Instance alone to assess the value which should be attached to the evidence produced to it. Save where the clear sense of the evidence has been distorted, that appraisal does not therefore constitute a point of law which is subject as such to review by the Court of Justice (see, inter alia, Case C–185/95 P *Baustahlgewebe* v *Commission* [1998] ECR I–8417, paragraphs 23 and 24; Case C–551/03 P *General Motors* v *Commission* [2006] ECR I–3173, paragraphs 51 and 52; and Case C–328/05 P *SGL Carbon* v *Commission* [2007] ECR I–3921, paragraph 41).

30 On the other hand, according to the case-law of the Court, the extent of the obligation to state reasons is a question of law reviewable by the Court on appeal, since a review of the legality of a decision carried out in that context must necessarily take into consideration the facts on which the Court of First Instance based itself in reaching its conclusion as to the adequacy or inadequacy of the statement of reasons (see Case C-188/96 P *Commission* v *V* [1997] ECR I-6561, paragraph 24, and Joined Cases C–189/02 P, C–202/02 P, C–205/02 P to C–208/02 P and C–213/02 P *Dansk Rørindustri and Others* v *Commission* [2005] ECR I–5425, paragraph 453).

31 As regards the present case, as is apparent from, among other things, paragraph 22 of this judgment and contrary to what Impala contends, the appellants do not, by their appeal, seek generally to call into question the findings of fact made by the Court of First Instance, as such. By contrast, they raise for the most part questions of law which can form a valid basis for an appeal. Impala's general plea of inadmissibility should therefore be rejected. That being said, to the extent that Impala puts forward more detailed objections of inadmissibility in relation to a number of

specific parts of the appeal, those objections fall to be addressed in the context of the grounds of appeal concerned.

The plea of inadmissibility based on the appellants having omitted to challenge a critical passage of the judgment under appeal

32 Impala submits that, in any event, the Court of First Instance held in paragraph 528 of the judgment under appeal that the Commission did not carry out a prospective analysis of whether the concentration would create a collective dominant position, and held that for this reason alone that Impala's second plea in law at first instance was well founded. That, in itself, is sufficient to annul the contested decision. Accordingly, even if the appellants succeed on one or more of their grounds of appeal, the appeal must in any event be dismissed, since the appellants do not contest the finding that no prospective analysis was carried out.

33 In that regard, it is sufficient to hold that the appeal expressly refers, in a list of the passages in the judgment under appeal that are specifically subject to criticism, to paragraph 528 of that judgment, as well as to paragraphs 533, 539 and 541, which also address the question of the creation of a collective dominant position.

34 That being the case, it cannot validly be argued that the appeal is limited to the reasoning of the Court of First Instance regarding the question of the strengthening of a pre-existing collective dominant position with the result that it should be rejected as inadmissible in its entirety.

Substance

35 The seven grounds of appeal relied on by the appellants overlap in a number of respects. Essentially, the first to fourth grounds, together with the seventh ground, concern the manner in which the Court of First Instance carried out its review, particularly with respect to questions of proof. The fifth ground concerns the concept of a collective dominant position. The sixth ground relates to the findings of the Court of First Instance with respect to the failure of the contested decision to state adequate reasons.

36 It is appropriate to begin the examination of the substance of this appeal by considering the grounds of appeal concerning the manner in which the Court of First Instance approached issues of evidence and proof, and, in the first place, by considering the second part of the third ground.

The second part of the third ground of appeal, alleging an error of law in that the Court of First Instance applied an excessive burden and standard of proof as regards decisions approving a concentration

– The judgment under appeal

37 It is apparent from, among others, paragraphs 289, 366 and 459 of the judgment under appeal that the Court of First Instance considered whether the considerations on which the contested decision was based were capable of justifying the Commission's finding in that decision that the markets in question were not sufficiently transparent to allow a collective dominant position.

– Arguments of the parties

38 By their third ground of appeal, the appellants maintain that the Court of First Instance committed an error of law by applying an incorrect and excessive standard of proof as regards merger clearance decisions. In the second part of that ground, the appellants submit that the Court of First Instance misconstrued the burden and standard of proof which applies to those decisions.

39 According to the appellants, since it is for the Commission to substantiate a decision prohibiting a concentration, where it has not been able to collect evidence which meets the high standard set by the Community judicature to justify such a prohibition, particularly where the Commission is pursuing a theory of collective dominance, it must approve the proposed concentration. It is clear, in particular, from Article 10(6) of the Regulation that if the Commission is unable to substantiate its theory of competitive harm on the basis of convincing evidence, the scheme of the Regulation dictates that it must approve the concentration.

40 The appellants also maintain in that regard that the Court of First Instance committed an error of

law in failing to recognise that the Commission is obliged to satisfy a higher standard of proof when a concentration is prohibited than when such a concentration is approved, since a prohibition represents a serious limitation of the commercial freedom of the notifying parties and since concentrations should benefit from a presumption that they are compatible with the common market. It is clear from the case-law that the Commission must prove that a decision prohibiting a concentration is well founded in accordance with a standard which is stricter than one based on the mere balancing of probabilities and, consequently, that the Commission is not subject to the same burden and standard of proof in the case of an approval decision as it is in the case of a prohibition decision. Under a stricter standard than the mere balancing of probabilities, the Commission is, in reality, required only to prove that a decision prohibiting a concentration is well founded. According to the appellants, the failure to accept such an 'asymmetric' standard of proof permeates the assessment by the Court of First Instance of the contested decision and of the evidence on which the Commission relied.

41 The appellants go on to submit that, as a result, the Court of First Instance committed an error of law in requiring the Commission to prove the absence of transparency in the recorded music market, when it should have examined whether, at the date of the contested decision, there was sufficient evidence to prove to the requisite legal standard that that transparency existed. That error vitiates the whole of the judgment under appeal and, in particular, in various respects described in detail in the appeal, paragraphs 381 to 387, 389, 420, 428, 429 and 433.

42 According to Impala, to follow the appellants' line of argument in support of the second part of the third ground of appeal and to accept that there is a presumption in favour of the approval of concentrations could have grave repercussions for the merger control regime, such as the risk of abuse of the system. That line of argument ignores the delicate balance created by the Community legislation on merger control between private and public interests and the symmetrical double obligation imposed on the Commission to prohibit mergers which are incompatible with the common market and to approve those that are compatible with it. The standard of proof required in that regard is that of the balance of probabilities and it is for the Commission to demonstrate where the balance falls. Impala also submits that the Court of First Instance concluded that the Commission had found a large body of convincing evidence showing that there was transparency on the markets concerned, but that it had ultimately decided that there was not sufficient transparency on the basis of 'less transparent' campaign discounts. The Court of First Instance also found that the evidence that was supposed to establish that insufficiency of transparency did not support it.

43 Impala also considers that in putting forward the arguments referred to in paragraph 41 of this judgment the appellants appear to be inviting the Court to reopen the findings of fact made by the Court of First Instance.

– Findings of the Court

44 As a preliminary remark, it is clear from the Court's case-law that an alleged failure to have regard to the rules of evidence is a question of law, which is admissible in an appeal (see, to that effect, Case C-199/92 P *Hüls* v *Commission* [1999] ECR I-4287, paragraph 65, and Joined Cases C-403/04 P and C-405/04 P *Sumitomo Metal Industries and Nippon Steel* v *Commission* [2007] ECR I-729, paragraph 40). Thus, in so far as Impala, under its general plea of inadmissibility, specifically argues that the third ground of appeal is inadmissible in its entirety, that argument cannot be accepted.

45 As regards the substance, as Impala points out, at the heart of the second part of the third ground of appeal is the premiss that the standard of proof will differ according to whether a decision approving a concentration or a decision prohibiting a concentration is involved. In this connection, it is common ground between the parties that in the judgment under appeal the Court of First Instance applied the same standard of proof to the contested decision – an approval decision – as that which it would have applied to a prohibition decision.

46 In that regard, it should be noted at the outset that there is nothing in Article 2(2) or (3) of the Regulation which states that it imposes different standards of proof in relation to decisions approving a concentration, on the one hand, and decisions prohibiting a concentration, on the other.

47 Thus, as the Court has, in substance, already held, the prospective analysis called for in relation to the control of concentrations, which consists of an examination of how a concentration might alter the factors determining the state of competition on a given market in order to establish whether it

would give rise to a significant impediment to effective competition, makes it necessary to envisage various chains of cause and effect with a view to ascertaining which of them is the most likely (see, to that effect, Case C‑12/03 P *Commission* v *Tetra Laval* [2005] ECR I‑987, paragraph 43).

48 Contrary to what the appellants submit, it cannot therefore be inferred from the Regulation that there is a general presumption that a notified concentration is compatible with, or incompatible with, the common market.

49 That interpretation of the Regulation is not invalidated by Article 10(6), which provides that a notified concentration is to be deemed compatible with the common market where the Commission has not taken a decision on the compatibility of that concentration within the prescribed period. That provision is a specific expression of the need for speed, which characterises the general scheme of the Regulation and which requires the Commission to comply with strict time-limits for the adoption of the final decision (see, in that regard, Case C‑202/06 P *Cementbouw Handel & Industrie* v *Commission* [2007] ECR I‑0000, paragraph 39). It is, however, an exception to the general scheme of the Regulation, which is laid down in particular in Articles 6(1) and 8(1), according to which the Commission is to rule expressly on the concentrations which are notified to it.

50 Furthermore, it is true that, as is apparent from the Court's case-law, the decisions of the Commission as to the compatibility of concentrations with the common market must be supported by a sufficiently cogent and consistent body of evidence (see, to that effect, Joined Cases C‑68/94 and C‑30/95 *France and Others* v *Commission* [1998] ECR I‑1375, '*Kali & Salz*', paragraph 228) and that in the context of the analysis of a 'conglomerate-type' concentration the quality of the evidence produced by the Commission in order to establish that it is necessary to adopt a decision declaring the concentration incompatible with the common market is particularly important (see *Commission* v *Tetra Laval*, paragraph 44).

51 However, it cannot be deduced from that that the Commission must, particularly where it pursues a theory of collective dominance, comply with a higher standard of proof in relation to decisions prohibiting concentrations than in relation to decisions approving them. That case-law merely reflects the essential function of evidence, which is to establish convincingly the merits of an argument or, as in the case of the control of concentrations, to support the conclusions underpinning the Commission's decisions (see, to that effect, *Commission* v *Tetra Laval*, paragraphs 41 and 44). Furthermore, the fact that an issue of collective dominance does, or does not, arise, cannot of itself have an impact on the standard of proof which applies. In that regard, the inherent complexity of a theory of competitive harm put forward in relation to a notified concentration is a factor which must be taken into account when assessing the plausibility of the various consequences such a concentration may have, in order to identify those which are most likely to arise, but such complexity does not, of itself, have an impact on the standard of proof which is required.

52 It follows that, where it has been notified of a proposed concentration pursuant to the Regulation, the Commission is, in principle, required to adopt a position, either in the sense of approving or of prohibiting the concentration, in accordance with its assessment of the economic outcome attributable to the concentration which is most likely to ensue.

53 The appellants are accordingly incorrect in maintaining that, since it was a decision approving a concentration that was at issue, the Court of First Instance should have considered only whether the Commission could, by applying a particularly high standard of proof, have prohibited that concentration. Consequently, without it being necessary to adopt a position on the admissibility of the specific criticisms relating to the paragraphs of the judgment under appeal listed in paragraph 41 of this judgment, it must be held that since the premiss underlying those criticisms is groundless, they cannot, in any event, be accepted.

54 In the light of the above, the second part of the third ground of appeal must be rejected.

The first ground of appeal, alleging an error of law in that the Court of First Instance relied on the statement of objections as a benchmark for its review of the substance of the contested decision

– The judgment under appeal

55 In a number of passages in the judgment under appeal, among others, in paragraphs 379, 424 and 446, the Court of First Instance referred to the statement of objections in order to support its

reasoning, both as regards the plea alleging inadequate reasoning in the contested decision and as regards the argument alleging manifest errors of assessment which vitiated that decision.

56 In its examination of the plea alleging insufficient reasoning in the contested decision, the Court of First Instance observed in particular as follows:

'282 The Court must examine, first of all, the impact of the circumstance, emphasised by [Impala], that the Commission had concluded emphatically in the statement of objections that the concentration was incompatible with the common market on the ground, in particular, that a collective dominant position existed before the proposed concentration and that the market for recorded music was transparent and particularly conducive to coordination.

283 This fundamental U-turn in the Commission's position may indeed appear surprising, particularly in view of the late stage at which it was made. In effect, as may be seen from the case-file and from the oral argument before the Court, throughout the administrative procedure the Commission considered, on the basis of all the information which it had received, during an investigation lasting five months, both from the various operators on the market and from the parties to the concentration, that the market was sufficiently transparent to allow tacit collusion on prices, and that it was only in the wake of the arguments submitted by the parties to the concentration, assisted by their economic adviser, at the hearing on [14] and [15] June 2004 that, without carrying out any fresh market investigations, it adopted the opposite position and, on 1 July 2004, sent the draft decision to the Advisory Committee.

284 However, as the Commission correctly submits, it follows from the case-law ([Joined Cases 142/84 and 156/84] [*British American Tobacco*] *and Reynolds* [*Industries*] v *Commission*, [[1987] ECR 4487]) that, when the Commission rejects an application under Article 3 of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-62, p. 17), it is sufficient for it to set out the reasons why it did not consider it possible to show the existence of an infringement of the competition rules, but it is not obliged to explain any differences by comparison with the statement of objections, since that is a preparatory document containing assessments which are purely provisional in nature and are intended to define the scope of the administrative procedure vis-à-vis the undertakings forming the subject of that procedure, or to discuss all the points of fact and of law dealt with during the administrative procedure. In [Joined Cases C‑204/00 P, C‑205/00 P, C‑ 211/00 P, C‑213/00 P, C-217/00 P and C-219/00 P] *Aalborg Portland and Others* v *Commission* [[2004] ECR I-123], the Court of Justice referred to the provisional nature of a statement of objections and to the Commission's obligation to take into account the elements resulting from the administrative procedure, in order, in particular, to drop any objections which may have proved unfounded.

285 Admittedly, that case-law was developed in respect of proceedings for the application of Articles 81 EC and 82 EC and not in the specific field of the control of concentrations, where the need to observe the mandatory time-limits governing the adoption of decisions by the Commission does not allow it to extend its investigation, thus reducing the likelihood that the Commission will fundamentally alter its position as the administrative procedure advances. In its final observations, moreover, the Commission emphasised that the measures of investigation carried out after the hearing consisted essentially in consulting the operators on the market concerning the proposed commitments and did not deal with the objections raised against the notified concentration. However, the fact remains that the statement of objections is merely a preparatory document and that the final decision must be based solely on all the circumstances and evidence relevant for the purpose of the assessment of the effects which the proposed concentration will have on competition in the reference markets. It follows that the mere fact that the Commission did not explain in the body of the decision the change in its position by comparison with that set out in the statement of objections cannot as such constitute a lack of, or an insufficient, statement of reasons.'

– Arguments of the parties

57 The appellants claim that the Court of First Instance committed an error of law in using the statement of objections as a benchmark for evaluating the substance of the contested decision, in contravention of the rights of the defence.

58 In those circumstances, the appellants take the view that the comparison made by the Court of First Instance between the contested decision and the provisional findings of the Commission contained in the statement of objections cannot support the conclusions reached in the judgment

under appeal as regards the reasoning of the contested decision and the Commission's findings in it. They cite in that regard paragraphs 300, 302 and 308 of the judgment under appeal as regards the conclusions of the Court of First Instance in relation to the reasoning of the contested decision. In addition, as regards the examination by the Court of First Instance of the arguments based on manifest errors of assessment, the appellants criticise in their appeal paragraphs 338, 339, 341, 362, 378, 379, 398, 402, 409, 419, 424, 446, 447, 451, 456, 467, 491, 532 and 538 of the judgment.

59 In support of the appellants in relation to this ground of appeal, the Commission argues that in much of the judgment under appeal the Court of First Instance – contrary to the case-law cited by that court itself in paragraph 284 of the judgment, to which it paid only lip service – did not examine the contested decision on its own merits as regards the question whether it was adequately reasoned and, as regards the plea of substantive error, the question whether that decision contains errors of fact or manifest errors of assessment, but instead focused in its judgment on the question whether the statement of objections was shown to be unfounded. Thus, according to the Commission, since certain facts were not mentioned in the statement of objections, the Court of First Instance inferred from that that they could not be important for the assessment of the consequences of the concentration in general. Moreover, whereas the Commission set out certain findings in the contested decision that were expressed in a less unqualified manner in the statement of objections, the Court of First Instance took as a basis for its review the assessment made in the statement of objections.

60 Impala argues that the Court of First Instance merely mentioned extracts from the statement of objections in order to emphasise inherent inconsistencies in the contested decision itself and the lack of underlying support for the findings set out in it. The Court of First Instance expressly recognised that the statement of objections is a preparatory document, that its findings are purely provisional and that the Commission does not have to explain differences between that statement and the contested decision.

– Findings of the Court

61 It is apparent from the Court's case-law that the right to a fair hearing, which is a fundamental principle of Community law and forms, in particular, part of the rights of the defence, requires that the undertaking concerned must have been afforded the opportunity, during the administrative procedure, to make known its views on the truth and relevance of the facts and circumstances alleged and on the documents used by the Commission to support its claim that there has been an infringement of the EC Treaty (see inter alia, to that effect, Case 17/74 *Transocean Marine Paint Association* v *Commission* [1974] ECR 1063, paragraph 15; Joined Cases 100/80 to 103/80 *Musique diffusion française and Others* v *Commission* [1983] ECR 1825, paragraph 10; *Kali & Salz*, paragraph 174; and *Aalborg Portland and Others* v *Commission*, paragraph 66).

62 For procedures for the control of concentrations governed by the Regulation, that principle is laid down in the second sentence of Article 18(3) and, in more detail, in Article 13(2) of the Implementing Regulation. The latter in substance requires, among other things, that written notice be given to the notifying parties of the Commission's objections, with an indication to those parties of the period within which they may inform the Commission of their views in writing.

63 It follows, by analogy with the case-law on Articles 81 EC and 82 EC, that the statement of objections is a procedural and preparatory document which, in order to ensure that the rights of the defence may be exercised effectively, delimits the scope of the administrative procedure initiated by the Commission, thereby preventing the latter from relying on other objections in its decision terminating the procedure in question (see, in particular, the order in Joined Cases 142/84 and 156/84 *British American Tobacco and Reynolds Industries* v *Commission* [1986] ECR 1899, paragraphs 13 and 14). It is therefore inherent in the nature of the statement of objections that it is provisional and subject to amendments to be made by the Commission in its further assessment on the basis of the observations submitted to it by the parties and subsequent findings of fact (see, to that effect, *SGL Carbon* v *Commission*, paragraph 62). The Commission must take into account the factors emerging from the whole of the administrative procedure, in order either to abandon such objections as have been shown to be unfounded or to amend and supplement its arguments, both in fact and in law, in support of the objections which it maintains. Thus, the statement of objections does not prevent the Commission from altering its standpoint in favour of the undertakings concerned (see the order in *British American Tobacco and Reynolds Industries* v *Commission*, paragraph 13).

64 It follows that the Commission is not obliged to maintain the factual or legal assessments set forth in that document. On the contrary, it must give as reasons for its ultimate decision its final assessments based on the situation existing at the time the formal proceedings are closed (see, by way of analogy, the order in *British American Tobacco and Reynolds Industries* v *Commission*, paragraph 15).

65 Furthermore, the Commission is not obliged to explain any differences with respect to its provisional assessments set out in the statement of objections (see, to that effect, the order in *British American Tobacco and Reynolds Industries* v *Commission*, paragraph 15, and the judgment in *British American Tobacco and Reynolds Industries* v *Commission*, paragraph 70).

66 The fact that the Commission is, by contrast to the position under Articles 81 EC and 82 EC, subject to strict time-limits, has no effect on the provisional nature of the statement of objections. The effective exercise of the rights of the defence requires that the arguments of the parties to a proposed concentration be taken into account in proceedings for the control of concentrations in the same way as the arguments of the parties affected by proceedings initiated under Articles 81 EC or 82 EC.

67 It is true that the Court of First Instance expressly recognised, in particular in paragraphs 284 and 285 of the judgment under appeal, the preparatory nature of the statement of objections, including where proceedings for the control of concentrations are involved. It also acknowledged that the Commission is not, in accordance with the case-law relating to Articles 81 EC and 82 EC, obliged to explain any differences by comparison with the statement of objections.

68 However, having regard to the line of argument of the appellants and of the Commission set out in paragraphs 58 and 59 of this judgment, it is necessary to examine the criticisms made by them in relation to a series of specific references to the statement of objections made by the Court of First Instance in its examination of the validity of the contested decision.

69 In that regard, it is clear from the case-law that while, in the context of the control of concentrations, a field in which the Commission has a margin of assessment with regard to economic matters, review by the Court of First Instance is limited to establishing whether the evidence relied on is factually accurate and to establishing the absence of a manifest error of assessment, it none the less remains the case that the correctness, completeness and reliability of the facts on which a decision is based may be the subject of judicial review (see, to that effect, *Commission* v *Tetra Laval*, paragraph 39, and Case C-525/04 P *Spain* v *Lenzing* [2007] ECR I-0000, paragraphs 56 and 57). Indeed, that is one of the ways in which the Community judicature can verify whether the factual and legal elements upon which the exercise of the power of assessment depends were present (see, to that effect, Case C–269/90 *Technische Universität München* [1991] ECR I–5469, paragraph 14). It follows that notwithstanding the preparatory and provisional nature of the statement of objections and despite the fact that the Commission is not obliged to explain any differences by comparison with the statement of objections, the Court of First Instance is not necessarily precluded from using the statement of objections in order to interpret a decision of the Commission, particularly as regards the examination of its factual basis.

70 Thus, for example, the references to the statement of objections made by the Court of First Instance in paragraphs 300, 302 and 308 of the judgment under appeal when reaching its findings in relation to the reasoning of the contested decision were, as the Advocate General pointed out in substance in points 165 and 166 of her Opinion, made for purely illustrative purposes, or simply for the sake of completeness. The same applies to certain of the paragraphs of the judgment cited by the appellants which concern the evaluation by the Court of First Instance of the arguments alleging manifest errors of assessment, namely paragraphs 338, 339, 341, 362, 402, 456, 467, 532 and 538 of the judgment under appeal, which serve merely to illustrate and to supplement what the Court of First Instance had, in any event, already directly deduced from the contested decision.

71 However, some of the references in the judgment under appeal to the statement of objections show that, notwithstanding the position it itself adopted as to the provisional nature of that statement, the Court of First Instance treated what, in paragraph 410 of the judgment, it termed 'findings of fact made previously' in that statement as being more reliable and more conclusive than the findings set out in the contested decision itself.

72 The Court of First Instance, in effect, relied in that regard on a distinction between those 'findings of fact made previously', on the one hand, and 'assessments', on the other, which could, in its view, more legitimately be modified. In particular, in paragraph 379 of the judgment under appeal, the

Court of First Instance classified the statement in the statement of objections that ‘there is sufficient evidence that the majors are aware of each other’s commercial terms’ as not being ‘an assessment by the Commission that might be modified, but rather a finding of fact resulting from its investigation’. That statement by the Court of First Instance should be understood in the light of other statements made previously in the judgment under appeal. Thus, in paragraph 335 of the judgment, the Court of First Instance stated, among other things, that ‘the findings set out in the [contested decision] must be compatible with the findings of fact made in the statement of objections, in so far as it is not established that the latter findings were incorrect’. In addition, in paragraph 378 of the judgment, the Court of First Instance stated that ‘the conclusions drawn from [the evidence as mentioned in the contested decision] are also markedly different from the findings made in the statement of objections’.

73 Thus, the Court of First Instance did not merely use the statement of objections as a basis for verifying the correctness, completeness and reliability of the factual material which underpinned the contested decision. It treated a particular category of conclusions set out in that statement as established, whereas those conclusions could, however, only be considered as being provisional.

74 That conception of the statement of objections can also be seen in other paragraphs of the judgment under appeal. Thus, in paragraphs 409 and 410 of the judgment, the Court of First Instance criticised the fact that the Commission did not refute the ‘findings of fact made previously’ in the statement of objections. In addition, in paragraph 424 of the judgment, the appellants and the Commission were criticised for not having asserted, ‘still less demonstrated’, that a ‘finding’ in the statement of objections was incorrect. In paragraph 446 of the judgment under appeal, it was similarly indicated that ‘the observation that there was no evidence that discounts significantly affected prices constitutes a finding of fact rather than an assessment’. Moreover, in paragraphs 398, 419, 447 and 451 of the judgment, the Commission was, in essence, criticised for having relied to a considerable extent, for the purposes of the contested decision, on the impact of ‘campaign discounts’, whereas, as the Court of First Instance indicated in paragraph 447 of the judgment, the Commission ‘did not even consider it necessary to mention [those] discounts in the statement of objections’.

75 As the Commission points out, it can happen that, in their reply to the statement of objections, the notifying parties will supplement or clarify their ‘case’ regarding the functioning of the market or markets in question in the light of that statement, so that new elements may be added or facts previously examined by the Commission may be put in an entirely different light. In those circumstances, even if the lack of justification for certain of the individual findings of fact provisionally made by the Commission in the statement of objections is not established, the Commission’s evaluation of those findings in that new context may be radically different. In the judgment under appeal, it appears that the Court of First Instance, by focusing on the discrepancies between the contested decision, which was the subject of the action brought before it, and the ‘findings of fact previously made’ in the statement of objections, excluded that possibility. As the Commission argues, the approach adopted by the Court of First Instance in some paragraphs of the judgment under appeal appears to assume that the Commission’s provisional conclusions in the statement of objections are invariably based on unequivocal evidence. Apart, possibly, from non-controversial elements which, for example, by reason of their empirical and verifiable nature are obvious to such a degree that they cannot be contested, it should not be assumed that assessments made in a statement of objections cannot be modified in the light of the replies to such a statement. Furthermore, even if it were accepted that the Court of First Instance was entitled to make a distinction between the findings of fact and the assessments made in the statement of objections, it must be held that in paragraphs 379 and 446 of the judgment under appeal, it categorised as findings of fact certain complex assessments which could not in any event be considered as findings of fact that could not be modified.

76 In those circumstances, it must be held that the Court of First Instance committed an error of law in so far as, in its examination of the line of argument alleging the existence of manifest errors of assessment, it treated certain elements in the statement of objections as being established, without demonstrating the reasons for which, notwithstanding the final position adopted by the Commission in the contested decision, those elements should be considered as being established beyond dispute.

77 None the less, that error is not of itself capable of undermining the finding of the Court of First Instance in paragraph 377 of the judgment under appeal that ‘the evidence, as mentioned in the [contested decision], does not support the conclusions drawn from it’. Consequently, it is not of itself capable of leading to the setting aside of the judgment under appeal. Further grounds of appeal thus fall to be examined.

The second ground of appeal, together with the first part of the third ground, alleging errors of law in that the Court of First Instance required the Commission to undertake new market investigations following the response to the statement of objections and applied an unduly high standard of proof to the evidence submitted in response to the statement of objections

– The judgment under appeal

78 In its examination of the plea alleging manifest errors of assessment in relation to the issue of market transparency, the Court of First Instance stated in paragraph 414 of the judgment under appeal, in particular, that 'the parties to the concentration cannot wait until the last minute before submitting evidence to the Commission with a view to refuting objections raised at the proper time by the Commission, since the Commission would then no longer be in a position to carry out the necessary investigations. In such a hypothetical situation, that evidence must at the very least be particularly reliable, objective, relevant and cogent if it is to be capable of validly refuting the objections raised by the Commission'.

79 The Court of First Instance also held, in paragraph 415 of the judgment under appeal, that the Commission cannot 'go so far as to delegate, without supervision, responsibility for conducting certain parts of the investigation to the parties to the concentration, in particular where, as in the present case, those aspects constitute the crucial element on which the [contested decision] is based and where the data and assessments submitted by the parties to the concentration are diametrically opposite to the information gathered by the Commission during its investigation and also to the conclusions which it drew from that information'.

80 In addition, in a number of places in the judgment under appeal, among others in paragraphs 398, 428 and 451, the Court of First Instance stated that the Commission did not, following the response of the parties to the concentration to the statement of objections, carry out any new market investigations in order to test the validity of its altered assessment of the proposed concentration.

– Arguments of the parties

81 By the second ground of appeal, the appellants claim that the Court of First Instance committed an error of law in holding, in essence, that the Commission is required to undertake new market investigations following the response to the statement of objections. Its finding that the Commission committed errors of assessment and of reasoning because it did not undertake any new investigations is accordingly without foundation.

82 By the first part of the third ground, which should be considered together with the second ground, the appellants maintain that the Court of First Instance in effect suggested in paragraph 414 of the judgment under appeal that the exculpatory evidence submitted by the notifying parties in response to the statement of objections is subject to a higher standard of proof than that applied to the evidence cited by the Commission in the statement of objections.

83 In support of the appellants, the Commission argues, first, that in view of the tight deadlines that it faces under the Regulation it must be able to rely on the evidence submitted by the appellants in the reply to the statement of objections, since that reply forms part of the formal proceedings. Like the appellants, it observes that the Regulation provides for the imposition of fines or periodic penalty payments where incorrect or misleading information is submitted and gives the Commission the power to revoke a decision based on incorrect information for which one of the undertakings is responsible or which has been obtained by deceit.

84 Secondly, the Commission considers that paragraph 414 of the judgment under appeal, which sets out the approach followed by the Court of First Instance in paragraphs 415 to 457 of the judgment to a large body of evidence, reveals a number of related errors of law concerning, among other things, the probative value of the evidence submitted in response to the statement of objections.

85 Impala submits that the Court of First Instance took into account the strict timetables laid down by the Regulation. It merely found as a fact that the Commission had failed to carry out any market investigations whatsoever, without stating whether, after the hearing, market investigations should have been carried out. According to Impala, the Commission should have investigated the problem of transparency and discounts before issuing the statement of objections.

86 As regards the first part of the third ground of appeal, Impala submits that it is clear from

paragraph 414 of the judgment under appeal that the Court of First Instance referred to a hypothetical situation in which the parties to a concentration provide evidence at the very last minute, giving the Commission no opportunity to carry out the necessary investigations. It is also clear, according to Impala, from that paragraph of the judgment under appeal that it must be inferred that the Court of First Instance considered, not that the Commission should have investigated those matters after the hearing, but that it should have done so earlier in the formal proceedings.

– Findings of the Court

87 It is necessary at the outset to reject Impala's argument set out in paragraph 86 of this judgment that paragraph 414 of the judgment under appeal refers to a hypothetical situation. Such an interpretation of that paragraph is refuted by its very wording, which makes it clear that the observations of the Court of First Instance that are criticised in the first part of the third ground of appeal referred to the procedure leading to the adoption of the contested decision.

88 Next, as is clear from paragraphs 61 and 62 of this judgment, compliance with the rights of the defence prior to the adoption of any decision which may impact adversely on the undertakings concerned is imperative in procedures for the control of concentrations.

89 Accordingly, the notifying parties cannot, as a rule, be criticised for putting forward certain – potentially decisive – arguments, facts or evidence only in their arguments in reply to the statement of objections. It is only with that statement that the parties to the concentration can obtain detailed indications as to the reservations of the Commission in relation to their proposed concentration and as to the arguments and evidence on which it relies in that regard. As is apparent from paragraph 62 of this judgment, it flows from the notifying undertakings' rights of defence laid down in the second sentence of Article 18(3) of the Regulation and in Article 13(2) of the Implementing Regulation that those undertakings have the right to submit in their written and oral hearing following receipt of the statement of objections all material which they consider capable of refuting the Commission's objections and of leading it to approve their proposed concentration. Contrary to what the Court of First Instance suggests, in particular in paragraph 414 of the judgment under appeal, a line of argument put forward in reply to the statement of objections forms part of the investigation to be undertaken in the formal proceedings. Such a line of argument is not submitted out of time, but at the time laid down for that purpose in the procedure for the control of concentrations.

90 Furthermore, as is apparent from paragraph 49 of this judgment, the need for speed which characterises the general scheme of the Regulation requires the Commission to comply with strict time-limits for the adoption of the final decision.

91 In those circumstances, having regard in particular to the time constraints which arise by virtue of the procedural time-limits laid down by the Regulation, the Commission cannot, in principle, be required, in every individual case, to send, following communication of the objections and after hearing the undertakings concerned, requests for extensive information to numerous economic operators shortly before transmitting its draft decision to the Advisory Committee on concentrations, pursuant to Article 19 of the Regulation.

92 In addition, as the Commission observes, the reply to the statement of objections may concentrate on the elements which the notifying parties consider to be crucial to the outcome of the formal proceedings. Such elements may not have been regarded as crucial in the statement of objections. A failure to take those elements into account may be a component of the parties' criticisms of the Commission's preliminary assessment. Having regard to the requirements of the rights of the defence, the arguments of the notifying parties submitted in reply to the statement of objections cannot be subject to more demanding standards as to their probative value and their cogency than those imposed in relation to the arguments of competitors, customers and other third parties questioned by the Commission in the course of the administrative procedure or in the light of information provided by the notifying undertakings at a previous stage of the Commission's investigation.

93 Furthermore, when the Commission examines in its decision the arguments in defence submitted by the notifying undertakings and takes the opportunity to reconsider its provisional findings in the statement of objections, with a view to possibly departing from them, it does not 'delegate' the investigation to those undertakings. It should be pointed out in that regard that Articles 14 and 15 of the Regulation provide for the imposition of fines or periodic penalty payments where incorrect or misleading information is submitted and that Article 8(5)(a) of the Regulation gives the Commission

the power to revoke a decision which is based on incorrect information for which one of the undertakings concerned is responsible or which has been obtained by deceit.

94 It is true that the Commission is required to examine carefully the arguments of the parties to the concentration as regards their exactitude, completeness and cogency and to disregard them where justified doubts arise. It is also true that, under Article 3(1) of the Implementing Regulation, the notification of the proposed concentration must contain information that is correct and complete and that, in accordance with Article 11 of the Regulation, the notifying parties are bound to provide a response to any requests for information by the Commission which is complete, correct and submitted within the periods laid down, failing which, where the information in question was requested by decision, the Commission may, by virtue of Articles 14 and 15 of the Regulation, impose fines and periodic penalty payments. None the less, it remains the case that the Commission must, at the stage of the reply to the statement of objections, if it is not to undermine the rights of the defence of the notifying parties, apply the same criteria as those applied for the purposes of the examination of the arguments of third parties or those adopted at an earlier stage of its investigation, while being entitled to draw the appropriate consequences in the event that it should transpire at a very advanced stage of the procedure that the notification concerned does not comply with the requirements of Article 3(1) of the Implementing Regulation.

95 It follows that the Court of First Instance committed an error of law, first, in requiring, in essence, that the Commission apply particularly demanding requirements as regards the probative character of the evidence and arguments put forward by the notifying parties in reply to the statement of objections and, secondly, in finding that the lack of additional market investigations after communication of the statement of objections and the adoption by the Commission of the appellants' arguments in defence amounted to an unlawful delegation of the investigation to the parties to the concentration.

96 Nevertheless, that error of law does not vitiate the whole of the judgment under appeal, in particular that part of it which relates to the inadequacies of reasoning in the contested decision and the finding of the Court of First Instance in paragraph 377 of the judgment under appeal that 'the evidence, as mentioned in the [contested decision], does not support the conclusions drawn from it'. Further grounds of appeal thus fall to be examined.

The seventh ground of appeal, alleging an error of law in that the Court of First Instance relied on evidence that was not disclosed to the parties to the concentration

– The judgment under appeal

97 In paragraph 352 of the judgment under appeal, when examining price transparency and, in particular, the possibility that the retail market was monitored by the majors through weekly reports drawn up by their sales representatives, the Court of First Instance referred to a finding of the Commission in the contested decision that the appellants had set up a system of weekly reports which also included information on competitors. In paragraphs 356 to 360 of the judgment under appeal, the Court of First Instance referred additionally in that regard to a number of documents submitted by Impala, which were classified as confidential. Accordingly, paragraphs 356 to 360 of the version of the judgment under appeal published in the European Court Reports are simply marked '[*confidential*]'. Reference is also made to the weekly monitoring reports in paragraphs 389 and 451 of the judgment under appeal, with paragraph 389 containing a section marked '[*confidential*]' in the version published in the European Court Reports.

– Arguments of the parties

98 The appellants maintain that the Court of First Instance committed an error of law in relying, in paragraphs 356 to 360 of the judgment under appeal, on evidence that was not before the Commission when the contested decision was adopted and which had never been disclosed to them. According to the appellants, it is hard to imagine why the Court of First Instance would have discussed those documents over five paragraphs of its judgment and referred to them on two other occasions, in paragraphs 389 and 451 of the judgment under appeal, if it did not consider them relevant to the outcome of its review.

99 Impala submits that the information in question was mentioned during the hearing of 14 and 15 June 2004 in the presence of the parties and was provided to the Commission on a confidential basis after the hearing. According to Impala, the appellants were accordingly aware, as a result of the hearing, that that information concerned their own price monitoring practices in France and they

gave ample comments on that aspect of the pricing system during both the administrative procedure and the proceedings before the Court of First Instance. In any event, according to Impala, even if the appellants' complaint underlying this ground of appeal were correct, it cannot be taken into account since that evidence did not influence the outcome of the judgment under appeal.

– Findings of the Court

100 It is necessary, first of all, to reject Impala's argument set out in paragraph 99 of this judgment that the appellants were adequately informed of the content of the documents forming the subject-matter of paragraphs 356 to 360 of the judgment under appeal at the hearing before the Commission. Impala's written response to the appeal states that 'the information was mentioned during the … hearing … and was then provided to the Commission on a confidential basis post the hearing'. In those circumstances, it cannot be claimed that the content of those documents was disclosed in good time and in a manner which was sufficiently precise and clear to allow the appellants, if necessary, to reply effectively to the inferences which Impala drew from those documents before the Commission.

101 By virtue of Article 18(3) of the Regulation, the Commission may base its decisions taken under the Regulation only on objections on which the parties have been able to submit their observations. It follows that, since the appellants were unable to acquaint themselves in sufficient time with the tenor of the confidential documents in question, the Commission could not rely on those documents for the purposes of the contested decision.

102 The Court of First Instance therefore committed an error of law in relying, as a basis for the annulment of the contested decision, on documents submitted by Impala on a confidential basis, since the Commission itself could not have used them for the purposes of adopting that decision by reason of their confidential nature.

103 Without it being necessary to adjudicate on the question whether the taking into account of those documents could have had an impact on the outcome of the examination by the Court of First Instance of the arguments relating to manifest errors of assessment on the Commission's part, it need only be stated that the error of law identified in the seventh ground of appeal is not, in any event, capable of invalidating the finding of the Court of First Instance in paragraph 325 of the judgment under appeal that, in substance, the contested decision should be annulled on the ground of its inadequate reasoning. Further grounds of appeal thus fall to be examined.

The fifth ground of appeal, alleging an error of law in that the Court of First Instance misconstrued the relevant legal criteria applying to the creation or strengthening of a collective dominant position

– The judgment under appeal

104 In paragraphs 250 to 254 of the judgment under appeal, the Court of First Instance made the following observations as regards the concept of a collective dominant position:

'250 … The determination of the existence of a collective dominant position must be supported by a series of elements of established facts, past or present, which show that there is a significant impediment of competition on the market owing to the power acquired by certain undertakings to adopt together the same course of conduct on that market, to a significant extent, independently of their competitors, their customers and consumers.

251 It follows that, in the context of the assessment of the existence of a collective dominant position, although the three conditions defined by the Court of First Instance in [Case T-342/99] *Airtours* v *Commission* [[2002] ECR II-2585], which were inferred from a theoretical analysis of the concept of a collective dominant position, are indeed also necessary, they may, however, in the appropriate circumstances, be established indirectly on the basis of what may be a very mixed series of indicia and items of evidence relating to the signs, manifestations and phenomena inherent in the presence of a collective dominant position.

252 Thus, in particular, close alignment of prices over a long period, especially if they are above a competitive level, together with other factors typical of a collective dominant position, might, in the absence of an alternative reasonable explanation, suffice to demonstrate the existence of a collective dominant position, even where there is no firm direct evidence of strong market transparency, as such transparency may be presumed in such circumstances.

253 It follows that, in the present case, the alignment of prices, both gross and net, over the last six years, even though the products are not the same (each disc having a different content), and also the fact that they were maintained at such a stable level, and at a level seen as high in spite of a significant fall in demand, together with other factors (power of the undertakings in an oligopoly situation, stability of market shares, etc.), as established by the Commission in the [contested decision], might, in the absence of an alternative explanation, suggest, or constitute an indication, that the alignment of prices is not the result of the normal play of effective competition and that the market is sufficiently transparent in that it allowed tacit price coordination.

254 However, as [Impala] has based its line of argument on an incorrect application of the various conditions that must be satisfied in order for there to be a collective dominant position, as defined in *Airtours* v *Commission* … and, in particular, the condition relating to market transparency, rather than on the theory that a finding of a common policy over a long period, together with the presence of a series of other factors characteristic of a collective dominant position, might, in certain circumstances and in the absence of an alternative explanation, suffice to demonstrate the existence of a dominant position, as opposed to the creation of such a position, without its being necessary positively to establish market transparency, the Court will confine itself, in its examination of the pleas in law put forward, to ascertaining that the [contested decision] properly applied the conditions defined in *Airtours* v *Commission*. Without its even being necessary to consider whether the opposite approach would lead the Court to step outside the framework of the dispute as defined by the parties, or whether it would merely constitute an application of the law in the context of a plea raised by [Impala], the Court must follow the approach thus outlined, in view of the *inter partes* principle, since that issue has not been discussed before the Court.'

105 Paragraph 309 of the judgment under appeal reads as follows:

'Furthermore, it follows from the last sentence of recital 77 to the [contested decision] that discounts are not capable of really affecting the transparency of the market as regards prices resulting from, in particular, public list prices, since it is stated that "[i]f a significant deviation from pricing policies was being implemented by the majors through the grant of discounts, this deviation would have been reflected in their average net prices".'

106 As regards the question of the impact of variations in discounts on the transparency of the market, the Court of First Instance stated in particular in paragraph 420 of the judgment under appeal, that 'as [Impala] observed, the differences in the ranges of discounts over time could be the result of differences in performance and do not preclude the discounts being based on a known set of rules'.

107 In paragraph 427 of the judgment under appeal, the Court of First Instance stated that certain evidence on which the Commission relied 'do[es] not preclude the possibility that [variations of discount by customer] may, at least for an industry professional, be explained quite readily on the basis of a number of general or specific rules governing the grant of discounts'.

108 Paragraph 428 of the judgment under appeal reads as follows:

'Although, as the Commission emphasised, [Impala] admittedly did not explain precisely what those various rules governing the grant of campaign discounts are, or, according to the Commission, referred to too high a number of such rules, which would render their application complex and therefore not particularly transparent, the fact remains that, as already stated, the Commission did not carry out an investigation in the market in that regard or, at least, did not adduce any evidence of the opacity of campaign discounts, apart from the tables drawn up by the parties to the concentration, which, in addition to their imperfections, were in any event intended solely to establish the existence of certain variations in campaign discounts but do not demonstrate that the explanation for those variations might not be more or less readily apparent to an industry professional. …'

109 In paragraph 429 of the judgment under appeal, the Court of First Instance stated that, 'although the combination of variables necessarily has the effect of increasing the hypothetical situations, the Commission has not demonstrated that the exercise would be rendered excessively difficult for a market professional'.

– Arguments of the parties

110 The appellants maintain that, in holding that the Commission had committed manifest errors of assessment and had inadequately reasoned the contested decision as regards market transparency, the Court of First Instance misconstrued the position under Community law as regards the concept of a collective dominant position. According to the appellants, the test of market transparency as an indication of a collective dominant position, as laid down by the Court of First Instance in its judgment in *Airtours* v *Commission*, and which the Court of First Instance purported to follow in the judgment under appeal, required the Commission to establish, first, that the majors had a plausible mechanism for monitoring each other's net wholesale prices and, secondly, given that the contested decision was essentially based on the existence of tacit collusion, that the majors had actually applied such a monitoring mechanism.

111 According to the appellants, the Court of First Instance in practice applied a watered-down test for establishing market transparency, as is apparent in particular from paragraph 251 of the judgment under appeal, in that it inferred that transparency from a number of factors which, as a matter of law, are not sufficient to establish the required degree of transparency. In particular, by ignoring the relevance of discounts in assessing transparency at the level of net wholesale prices, the Court of First Instance committed an error of law in failing to identify a method by which significant changes to the net wholesale prices of the other majors could be observed in a sufficiently precise and timely manner to identify deviation from any tacitly agreed price levels with precision and in good time.

112 According to the appellants, a hypothesis of pre-existing tacit collusion would imply that the appellants and the other majors had actually monitored their net wholesale prices and had sufficiently precise and timely information regarding the changes in each other's net wholesale prices. Neither the Court of First Instance, nor Impala, nor the Commission could identify a mechanism by which the majors could actually monitor net wholesale prices or prove that such a mechanism had been used.

113 Instead, according to the appellants, the Court of First Instance applied an incorrect test in assessing the degree of transparency required for a finding of collective dominance on the recorded music market in question. It considered elements that are irrelevant to the criterion relating to market transparency, while disregarding elements that are clearly pertinent to that issue. In that last respect, the appellants submit that the Court of First Instance committed errors of law by, in particular:

– inferring, in paragraph 309 of the judgment under appeal, transparency of discounts from their impact on average net prices;

– dismissing, in paragraph 429 of the judgment under appeal, the relevance of complex pricing structures when assessing transparency; and

– dismissing, in paragraphs 298, 306, 310 and 395 of the judgment under appeal, the relevance of price variations for assessing transparency.

114 Impala suggests first of all that the fifth ground of appeal represents an attempt by the appellants to reopen the factual assessments made by the Court of First Instance, rather than alleging errors of law.

115 In the alternative, Impala submits that the Court of First Instance applied the correct test for establishing market transparency in the judgment under appeal, namely the test laid down in paragraph 62 of that court's judgment in *Airtours* v *Commission*. In that regard, Impala contends in particular that the only factor that the Commission had found to be 'less' transparent was that of campaign discounts. However, the Court of First Instance found that the underlying evidence on which the Commission based its finding did not support that finding, despite the Court of First Instance having undertaken an exhaustive examination of that evidence. The true position is that the fifth ground of appeal does not concern the legal test for market transparency, but rather the assessment by the Court of First Instance of the factual elements that may establish that transparency. According to Impala, the judgment under appeal does not misapply the test laid down in paragraph 62 of the judgment of the Court of First Instance in *Airtours* v *Commission*, since that court neither applied a watered-down test nor did it fail to consider transparency at the required level.

116 Impala also challenges the arguments summarised in paragraph 113 of this judgment.

– Findings of the Court

117 It is apparent from the Court's case-law that the question whether the Court of First Instance applied the correct legal standard when examining the evidence is a question of law, which is amenable, as such, to judicial review on appeal (see *Sumitomo Metal Industries and Nippon Steel* v *Commission*, paragraph 40). In the present case, the arguments of the appellants set out in paragraphs 110 to 112 of this judgment are accordingly admissible on appeal.

118 As regards the three specific criticisms summarised in paragraph 113 of this judgment, only the second and the third are admissible. The first of those criticisms does not relate to the relevance of a particular element relied on in order to establish that a collective dominant position existed, but seeks, in reality, a reappraisal of the facts which, under the settled case-law referred to in paragraph 29 of this judgment, falls, in principle, outside the jurisdiction of the Court of Justice on appeal (see also to that effect, by way of analogy, Case C-260/05 P *Sniace* v *Commission* [2007] ECR I-0000, paragraphs 34 and 35). By contrast, the second and third specific criticisms invoke errors of law.

119 As regards the merits of this ground of appeal, it should be noted at the outset that the Court has already held, in substance, that the concept of a collective dominant position is included in that of 'dominant position' within the meaning of Article 2 of the Regulation (see, to that effect, *Kali & Salz*, paragraphs 166 and 178). In that regard, the existence of an agreement or of other links in law between the undertakings concerned is not essential to a finding of a collective dominant position. Such a finding may be based on other connecting factors and would depend on an economic assessment and, in particular, on an assessment of the structure of the market in question (see Joined Cases C-395/96 P and C-396/96 P *Compagnie maritime belge transports and Others* v *Commission* [2000] ECR I–1365, paragraph 45).

120 In the case of an alleged creation or strengthening of a collective dominant position, the Commission is obliged to assess, using a prospective analysis of the reference market, whether the concentration which has been referred to it will lead to a situation in which effective competition in the relevant market is significantly impeded by the undertakings which are parties to the concentration and one or more other undertakings which together, in particular because of correlative factors which exist between them, are able to adopt a common policy on the market (see *Kali & Salz*, paragraph 221) in order to profit from a situation of collective economic strength, without actual or potential competitors, let alone customers or consumers, being able to react effectively.

121 Such correlative factors include, in particular, the relationship of interdependence existing between the parties to a tight oligopoly within which, on a market with the appropriate characteristics, in particular in terms of market concentration, transparency and product homogeneity, those parties are in a position to anticipate one another's behaviour and are therefore strongly encouraged to align their conduct on the market in such a way as to maximise their joint profits by increasing prices, reducing output, the choice or quality of goods and services, diminishing innovation or otherwise influencing parameters of competition. In such a context, each operator is aware that highly competitive action on its part would provoke a reaction on the part of the others, so that it would derive no benefit from its initiative.

122 A collective dominant position significantly impeding effective competition in the common market or a substantial part of it may thus arise as the result of a concentration where, in view of the actual characteristics of the relevant market and of the alteration to those characteristics that the concentration would entail, the latter would make each member of the oligopoly in question, as it becomes aware of common interests, consider it possible, economically rational, and hence preferable, to adopt on a lasting basis a common policy on the market with the aim of selling at above competitive prices, without having to enter into an agreement or resort to a concerted practice within the meaning of Article 81 EC and without any actual or potential competitors, let alone customers or consumers, being able to react effectively.

123 Such tacit coordination is more likely to emerge if competitors can easily arrive at a common perception as to how the coordination should work, and, in particular, of the parameters that lend themselves to being a focal point of the proposed coordination. Unless they can form a shared tacit understanding of the terms of the coordination, competitors might resort to practices that are prohibited by Article 81 EC in order to be able to adopt a common policy on the market. Moreover, having regard to the temptation which may exist for each participant in a tacit coordination to depart from it in order to increase its short-term profit, it is necessary to determine whether such coordination is sustainable. In that regard, the coordinating undertakings must be able to monitor to a sufficient degree whether the terms of the coordination are being adhered to. There must

therefore be sufficient market transparency for each undertaking concerned to be aware, sufficiently precisely and quickly, of the way in which the market conduct of each of the other participants in the coordination is evolving. Furthermore, discipline requires that there be some form of credible deterrent mechanism that can come into play if deviation is detected. In addition, the reactions of outsiders, such as current or future competitors, and also the reactions of customers, should not be such as to jeopardise the results expected from the coordination.

124 The conditions laid down by the Court of First Instance in paragraph 62 of its judgment in *Airtours* v *Commission*, which that court concluded, in paragraph 254 of the judgment under appeal, should be applied in the dispute before it, are not incompatible with the criteria set out in the preceding paragraph of this judgment.

125 In applying those criteria, it is necessary to avoid a mechanical approach involving the separate verification of each of those criteria taken in isolation, while taking no account of the overall economic mechanism of a hypothetical tacit coordination.

126 In that regard, the assessment of, for example, the transparency of a particular market should not be undertaken in an isolated and abstract manner, but should be carried out using the mechanism of a hypothetical tacit coordination as a basis. It is only if such a hypothesis is taken into account that it is possible to ascertain whether any elements of transparency that may exist on a market are, in fact, capable of facilitating the reaching of a common understanding on the terms of coordination and/or of allowing the competitors concerned to monitor sufficiently whether the terms of such a common policy are being adhered to. In that last respect, it is necessary, in order to analyse the sustainability of a purported tacit coordination, to take into account the monitoring mechanisms that may be available to the participants in the alleged tacit coordination in order to ascertain whether, as a result of those mechanisms, they are in a position to be aware, sufficiently precisely and quickly, of the way in which the market conduct of each of the other participants in that coordination is evolving.

127 As regards the present case, the appellants submit that, even though the Court of First Instance stated in paragraph 254 of the judgment under appeal that it was following the approach adopted in its judgment in *Airtours* v *Commission*, in practice, it committed an error of law in inferring the existence of a sufficient degree of transparency from a number of factors which were not, however, relevant to a finding of an existing collective dominant position. In that context, the appellants object in particular to the fact that the Court of First Instance indicated in paragraph 251 of the judgment under appeal that the conditions laid down in paragraph 62 of the judgment in *Airtours* v *Commission* could ‘in the appropriate circumstances, be established indirectly on the basis of what may be a very mixed series of indicia and items of evidence relating to the signs, manifestations and phenomena inherent in the presence of a collective dominant position’.

128 In this regard, as the Commission observed at the hearing, objection cannot be taken to paragraph 251 of itself, since it constitutes a general statement which reflects the Court of First Instance’s liberty of assessment of different items of evidence. It is settled case-law that it is, in principle, for the Court of First Instance alone to assess the value to be attached to the items of evidence adduced before it (see, inter alia, Case C-136/92 P *Commission* v *Brazzelli Lualdi and Others* [1994] ECR I–1981, paragraph 66, and Case C-237/98 P *Dorsch Consult* v *Council and Commission* [2000] ECR I–4549, paragraph 50).

129 Similarly, the investigation of a pre-existing collective dominant position based on a series of elements normally considered to be indicative of the presence or the likelihood of tacit coordination between competitors cannot therefore be considered to be objectionable of itself. However, as is apparent from paragraph 125 of this judgment, it is essential that such an investigation be carried out with care and, above all, that it should adopt an approach based on the analysis of such plausible coordination strategies as may exist in the circumstances.

130 In the present case, the Court of First Instance, before which Impala raised arguments relating, in particular, to the parts of the contested decision relating to market transparency, did not carry out its analysis of those parts by having regard to a postulated monitoring mechanism forming part of a plausible theory of tacit coordination.

131 It is true that the Court of First Instance referred in paragraph 420 of the judgment under appeal to the possibility of a ‘known set of rules’ governing the grant of discounts by the majors. However – as the appellants rightly submit in the context of the second specific criticism mentioned in paragraph 113 of this judgment, which relates to the question whether certain discount variations

established by the Commission in the contested decision were liable to call into question the possibility of adequate monitoring of mutual compliance with the terms of any tacit coordination there may have been – the Court of First Instance was content to rely, in paragraphs 427 to 429 of the judgment under appeal, on unsupported assertions relating to a hypothetical industry professional. In paragraph 428 of the judgment, the Court of First Instance itself acknowledged that Impala, the applicant before that court, 'admittedly did not explain precisely what those various rules governing the grant of campaign discounts are'.

132 It must be pointed out in that regard that Impala represents undertakings which, even if they are not members of the oligopoly formed by the majors, are active on the same markets. In those circumstances, it is clear that the Court of First Instance disregarded the fact that the burden of proof was on Impala in relation to the purported qualities of such a hypothetical 'industry professional'.

133 In the light of the above and without there being any need to adopt a position on the third specific criticism mentioned in paragraph 113 of this judgment, it must be held that, in misconstruing the principles which should have guided its analysis of the arguments raised before it concerning market transparency in the context of an allegation of a collective dominant position, the Court of First Instance committed an error of law.

134 That error vitiates the part of the judgment under appeal which concerns the examination by the Court of First Instance of the arguments relating to the manifest errors of assessment committed by the Commission, including the finding of that court in paragraph 377 of the judgment under appeal. However, it is not, of itself, capable of invalidating that court's finding in paragraph 325 of the judgment under appeal that, in substance, the contested decision had to be annulled because it was inadequately reasoned. Further grounds of appeal thus fall to be examined.

The fourth ground of appeal, alleging an error of law in that the Court of First Instance exceeded the scope of its role in carrying out judicial review

– The judgment under appeal

135 In a number of paragraphs in the judgment under appeal, for example, in paragraphs 347 and 361, the Court of First Instance used expressions such as 'a high level of transparency of prices' and 'a high degree of transparency on the market'. Moreover, in paragraph 299 of the judgment under appeal, the Court of First Instance described the finding in the contested decision that list prices were 'rather aligned' as being 'a prudent conclusion to say the least, as the alignment was in fact very marked'. In paragraph 307 of the judgment, the Court of First Instance held that 'the variation in the general levels of invoice discounts applied by the parties to the concentration, as referred to at recital 78 to the [contested decision], is very low'. In paragraph 317 of the judgment under appeal, the Court of First Instance inferred from the contested decision that 'campaign discounts have only a limited impact on prices'.

136 In paragraph 425 of the judgment under appeal, the Court of First Instance stated, as regards the contested decision, that 'the calculation of the differential between minimum and maximum discounts by customer … made for each of the parties to the concentration was carried out incorrectly'. In paragraph 427 of the judgment, the Court of First Instance stated that the data supplied by the parties to the concentration were 'of doubtful relevance'.

137 In paragraph 434 of the judgment under appeal, the Court of First Instance held, in particular, as follows:

'… the study drawn up by the economic advisers to the parties to the concentration does not present data that are sufficiently reliable, relevant and comparable … While it is indeed probable that the different types of retailer (supermarkets, independents, specialist chains, etc.) apply different mark-up policies, and that there are differences within each category of operators, and even differences for each individual operator, according to the types of album or their degree of success, it is very unlikely, on the other hand, and the study contains no data in that regard, that a retailer will apply a different sales policy for the same type of album. …'

– Arguments of the parties

138 The appellants, supported in that regard by the Commission, submit that the Court of First Instance exceeded the scope of its role in carrying out judicial review, in breach of Article 230 EC and settled

case-law, in substituting its own assessment for that of the Commission, without proving the existence of manifest errors of assessment vitiating the contested decision and without asking for a report from an economic expert to be obtained.

139 Moreover, in its examination of the contested decision, the Court of First Instance itself committed manifest errors of assessment and fundamentally misconstrued the evidence before it as regards essential parts of the case, including in particular the relevance, the complexity and the opacity of discounts.

140 Furthermore, the appellants consider that in paragraphs 425, 427 and 434 of the judgment under appeal the Court of First Instance also distorted some of the evidence.

141 Impala considers that this ground of appeal represents, at least to a significant extent, an attempt to reopen the assessment of the facts by the Court of First Instance, without any proof on the part of the appellants that that court misconstrued the evidence before it.

142 In the alternative, Impala submits that the Court of First Instance had the relevant case-law concerning the scope of its role in carrying out review in mind when it considered the contested decision, in view of its reference in paragraph 328 of the judgment under appeal to paragraph 39 of the judgment in *Commission* v *Tetra Laval*, and that it did not therefore exceed the scope of its role in carrying out judicial review.

– Findings of the Court

143 It is necessary at the outset to reject Impala's argument alleging the inadmissibility of the fourth ground of appeal. Contrary to what Impala contends, by this ground, the appellants do not merely challenge the assessment of the facts at first instance, but invoke questions of law which are admissible on appeal.

144 As regards the substance, it should first of all be noted that the Commission has a margin of assessment with regard to economic matters for the purposes of the application of the substantive rules of the Regulation, in particular Article 2. It follows that the review by the Community judicature of a Commission decision relating to concentrations is confined to ascertaining that the facts have been accurately stated and that there has been no manifest error of assessment (see *Kali & Salz*, paragraphs 223 and 224, and *Commission* v *Tetra Laval*, paragraph 38).

145 That being so, while the Court of First Instance must not substitute its own economic assessment for that of the Commission for the purposes of applying the substantive rules of the Regulation, that does not mean that the Community judicature must refrain from reviewing the Commission's interpretation of information of an economic nature. Not only must the Community judicature establish, among other things, whether the evidence relied on is factually accurate, reliable and consistent but also whether that evidence contains all the information which must be taken into account in order to assess a complex situation and whether it is capable of substantiating the conclusions drawn from it (see, to that effect, *Commission* v *Tetra Laval*, paragraph 39, and *Spain* v *Lenzing*, paragraphs 56 and 57).

146 Accordingly, as regards the present case, in so far as the Court of First Instance carried out an in-depth examination of the evidence underlying the contested decision when considering the arguments raised before it, it acted in conformity with the requirements of the case-law set out in paragraphs 144 and 145 of this judgment.

147 Nevertheless, that finding is not, of itself, sufficient to reject the fourth ground of appeal. As well as the question whether the Court of First Instance exceeded the scope of its role in carrying out judicial review as regards the intensity of its review of the factual basis of the contested decision, the appellants also maintain, as is mentioned in paragraph 139 of this judgment, that, in examining the factors underpinning the contested decision, the Court of First Instance itself committed manifest errors of assessment and fundamentally misconstrued the evidence before it.

148 The latter claims overlap partially with other grounds put forward in this appeal, namely, in the first place, the first, second and seventh grounds, together with the first part of the third ground, relating to the manner in which the Court of First Instance dealt with some of the evidence before it and, in the second place, the fifth ground, alleging that the Court of First Instance misconstrued the legal criteria applying to a collective dominant position.

149 It is sufficient to hold in that respect, as is apparent from paragraphs 95, 102 and 133 of this judgment, that, in its examination of the line of argument based on the existence of manifest errors of assessment, the Court of First Instance committed errors of law in relation to both the manner in which some of the evidence was dealt with and the legal criteria applying to a collective dominant position arising from tacit coordination.

150 Consequently, without it being necessary to adjudicate either on the appellants' claims alleging distortion of the evidence or on the question whether the Court of First Instance in fact substituted its own economic assessment in the judgment under appeal for that of the Commission, it must be held that at least that part of the judgment under appeal dealing with the examination of the arguments alleging the existence of manifest errors of assessment is vitiated by errors of law. As regards that part of the judgment under appeal which concerns the inadequate reasoning of the contested decision, it remains necessary to address the sixth ground of appeal.

The sixth ground of appeal, alleging an error of law in that the Court of First Instance applied an incorrect standard of reasoning as regards decisions approving a concentration

– The judgment under appeal

151 In paragraphs 255 to 276 of the judgment under appeal, the Court of First Instance summarised the relevant elements of the contested decision for the purpose of examining the first plea raised before it. Paragraph 275 of the judgment reads as follows:

'It follows from the foregoing that [it] was on the basis of product homogeneity, market transparency and also the use of retaliation that the Commission concluded that there was no collective dominant position.'

152 In the judgment under appeal, the Court of First Instance reviewed various sections of the contested decision in order to determine whether it contained reasoning which was adequate to make a finding of a lack of transparency of the market in question, and its reply in each case decided the issue in the negative.

153 The Court of First Instance first of all examined the section of the contested decision which dealt specifically with market transparency. In that regard, it stated in particular in paragraphs 289, 290 and 294 of the judgment under appeal as follows:

'289 As regards the section on transparency, it must be observed, by way of preliminary remark, that it contains only three recitals, although according to the [contested decision], and still more so according to the position defended by the Commission in its written submissions to the Court, in the present case transparency is the essential, and indeed the only, ground for the assertion that there is no collective dominant position on the markets for recorded music. It should also be noted that it is not concluded in that section that the market is not transparent, or even that it is not sufficiently transparent to allow tacit collusion. At the very most, it is stated, first, at recital 111 *in fine*, that the need to carry out monitoring at album level, in particular for campaign discounts, "could reduce transparency in the market and may make tacit collusion more difficult" and, second, at recital 113 *in fine*, that "[h]owever, the Commission has not found sufficient evidence that, by monitoring retail prices or by contacts with retailers, the majors have overcome in the past the deficits as regards the transparency of discounts, in particular campaign discounts as described for the five larger Member States". Clearly, such vague assertions, which fail to provide the slightest detail of, in particular, the nature of campaign discounts, the circumstances in which such discounts might be applied, their degree of opacity, their size or their impact on price transparency, cannot support to the requisite legal standard the finding that the market is not sufficiently transparent to allow a collective dominant position.

290 Next, it appears that, apart from the two extracts mentioned above, all the factors set out at recitals 111 to 113 to the [contested decision], far from demonstrating the opacity of the market, show, on the contrary, that the market was transparent.

...

294 It follows from the foregoing that, in the section of the [contested decision] dealing with the examination of transparency, the Commission not only did not conclude that the market was opaque or not sufficiently transparent to allow a collective dominant position, but, moreover,

mentioned only factors capable of giving rise to great transparency in the market and of facilitating the monitoring of compliance with collusion, with the sole exception of the rather limited and unsubstantiated assertion that campaign discounts could reduce transparency and make tacit collusion more difficult. It must therefore be stated that that section could clearly not, in itself, be considered to support to the requisite legal standard the assertion that the market was not sufficiently transparent.'

154 The Court of First Instance next examined the reasoning set out in the contested decision relating to the possibility of a 'common understanding on prices' between the majors and analysed that reasoning in paragraphs 295 to 324 of the judgment under appeal, by seeking evidence that would explain the alleged insufficiency of transparency on the markets in question. In that regard, the Court of First Instance made, among others, the following findings:

'315 It is thus apparent that the only element of opacity found in the contested decision consists in the assertion, at recital 80 (and at the corresponding recitals for the other large countries), that "[h]owever, it appears that campaign discounts are less transparent than file discounts and that their monitoring requires also a careful observation of promotional developments on the retail market".

...

318 It should also be observed that the [contested decision] does not state that the market is opaque, or even that it is not sufficiently transparent to allow coordination of prices, but at the most that campaign discounts are less transparent, although the [contested decision] does not provide the slightest information as regards their nature, the circumstances in which they are granted or their actual importance for net prices, or their impact on the transparency of prices.

319 It should further be borne in mind that, as stated above, the Commission described in the [contested decision] numerous elements and factors which favour the transparency of the market and facilitate the monitoring of compliance with a collusive arrangement.

320 It follows that the few assertions relating to campaign discounts contained in the section of the [contested decision] dealing with the examination of the coordination of prices in the large countries, in so far as they are imprecise, unsupported, and indeed contradicted by other observations in the [contested decision], cannot demonstrate the opacity of the market or even of campaign discounts. Those assertions are confined, moreover, to indicating that campaign discounts are less transparent than file discounts, but do not explain how they would be relevant for the transparency of the market and do not make it possible to understand how they in themselves might compensate for all the other factors of transparency of the market identified in the [contested decision] and thus eliminate the transparency necessary for the existence of a collective dominant position.

...

324 It follows that the section dealing with the smaller countries, too, contains no reasoning for the finding that the market is not transparent on account of the campaign discounts. In any event, the situation existing in the smaller countries cannot constitute a valid ground for the finding relating to the degree of transparency in the markets in the large countries.

325 It follows from all of the foregoing that the complaint alleging insufficient reasoning for the finding relating to the transparency of the market is well founded, which in itself is reason to annul the [contested decision].'

155 Paragraph 411 of the judgment under appeal reads as follows:

'In its defence, the Commission did, admittedly, claim that it examined the other majors' discounts, but that as those figures could not be disclosed to the parties to the concentration, they could not be included in the [contested decision]. However, that argument cannot be followed.'

156 Paragraph 530 of the judgment under appeal states as follows:

'It follows from recital 157 to the [contested decision], and in particular from the final sentence thereof, that the Commission's conclusion that the concentration does not represent a sufficiently significant change to entail the probable creation of a collective dominant position is expressly based on the conditions relating to the transparency of the market and to the retaliatory measures.'

– Arguments of the parties

157 The appellants submit, as their principal argument, that the Community system of control of concentrations, and more specifically Article 10(6) of the Regulation, precludes the Court of First Instance from annulling a decision approving such a concentration on the ground of inadequate reasoning.

158 In the alternative, the appellants submit that the Court of First Instance applied an excessively high standard of reasoning that is inconsistent with settled case-law and fails to take account of the particular context and nature of proceedings for the control of concentrations. In the first place, the Court of First Instance was wrong to require the Commission to explain its departure from the statement of objections.

159 In the second place, the Court of First Instance erred in its review of the reasoning of the contested decision in failing to take account of the particular context of a decision approving a concentration. In that regard, the appellants put forward a number of arguments. First, they consider that it is necessary to impose less stringent requirements as regards the reasoning of a decision approving a concentration than as regards a decision prohibiting a concentration. Secondly, the Court of First Instance wrongly failed to review the reasoning of the contested decision from the perspective of knowledgeable industry professionals. Thirdly, the short timescale separating the statement of objections from a decision approving a concentration calls for a measure of restraint in the review of the reasoning of such a decision. Fourthly, the fact that the appellants are entitled to implement the notified concentration pleads in favour of not annulling decisions approving a concentration lightly on the ground that they are inadequately reasoned. Fifthly, the Court of First Instance committed an error of law in paragraph 411 of the judgment under appeal in requiring the Commission to publish details on pricing and discounting, taking into account their confidential and sensitive nature.

160 In any event, contrary to the conclusions of the Court of First Instance, the appellants contend that settled case-law indicates that the contested decision is adequately reasoned since it permitted Impala to ascertain the reasons underlying the decision and the Court of First Instance to exercise its power of review. In that regard, the appellants argue, among other things, that the finding of the Court of First Instance that the contested decision was inadequately reasoned sits ill with its conclusion that the decision was vitiated by manifest errors of assessment.

161 Lastly, the appellants submit that the review by the Court of First Instance of the reasoning of the contested decision is vitiated by the application of an incorrect standard of proof, the failure to observe the proper scope of judicial review and the application of an incorrect test as regards transparency.

162 Without prejudice to its general plea of inadmissibility, Impala considers, first, that the appellants cannot make a general rule out of the exception clause that is Article 10(6) of the Regulation. Secondly, according to Impala, the appellants are incorrect in maintaining, in substance, that Article 253 EC may or may not be applied according to whether a decision relating to a proposed concentration is negative or positive. Thirdly, Impala submits that the degree of reasoning required depends on the context and legal framework within which a particular measure is adopted. It is entirely consistent with this principle that the type of reasoning required should be adapted to the type of case involved. The present case is one in which the formal proceedings were opened and which involved both substantial third-party opposition and a statement of objections.

163 As regards the appellants' line of argument put forward in the alternative concerning the standard of reasoning applied by the Court of First Instance, Impala contends that the Court merely mentioned extracts from the statement of reasons in order to emphasise the inadequacy of the reasoning of the contested decision and the inconsistencies in it and that that court's finding that the reasoning in the contested decision was inadequate was based on the reasoning set out in it and not on its inadequacy as compared with the reasoning of the statement of objections. Impala also submits that the Court of First Instance did not disregard the context of proceedings for the control of concentrations.

164 Moreover, it does not follow from the fact that the Court of First Instance was able to make an in-depth review of the contested decision that the reasoning of that decision was adequate. According to Impala, it is quite clear that the Court of First Instance was unable to understand in particular why the Commission, when the evidence consistently pointed to there being sufficient transparency

to support a finding of collective dominance, nevertheless concluded that there was insufficient evidence of transparency because campaign discounts were less transparent than other kinds of discounts. In Impala's view, the real reasons for the contested decision remain unknown.

165 As regards the appellants' line of argument summarised in paragraph 161 of this judgment, Impala contends that the observations of the Court of First Instance on certain aspects of the reasoning of the contested decision are based on a thorough examination of the Commission's analysis but, above all, on the internal inconsistencies within the contested decision itself.

– Findings of the Court

166 It is clear from settled case-law that the statement of reasons required by Article 253 EC must be appropriate to the measure at issue and must disclose in a clear and unequivocal fashion the reasoning followed by the institution which adopted the measure in question in such a way as to enable the persons concerned to ascertain the reasons for the measure and to enable the competent Community Court to exercise its power of review. The requirements to be satisfied by the statement of reasons depend on the circumstances of each case, in particular the content of the measure in question, the nature of the reasons given and the interest which the addressees of the measure, or other parties to whom it is of direct and individual concern, may have in obtaining explanations. It is not necessary for the reasoning to go into all the relevant facts and points of law, since the question whether the statement of reasons meets the requirements of Article 253 EC must be assessed with regard not only to its wording but also to its context and to all the legal rules governing the matter in question (see, inter alia, Case C-367/95 P *Commission* v *Sytraval and Brink's France* [1998] ECR I–1719, paragraph 63; Case C-42/01 *Portugal* v *Commission* [2004] ECR I–6079, paragraph 66; and Case C-390/06 *Nuova Agricast* [2008] ECR I-0000, paragraph 79).

167 The institution which adopted the measure is not required, however, to define its position on matters which are plainly of secondary importance or to anticipate potential objections (Joined Cases C-465/02 and C–466/02 *Germany and Denmark* v *Commission* [2005] ECR I–9115, *'Feta'*, paragraph 106). Moreover, the degree of precision of the statement of the reasons for a decision must be weighed against practical realities and the time and technical facilities available for making the decision (see Case 16/65 *Schwarze* [1965] ECR 877, 888, and Case C-350/88 *Delacre and Others* v *Commission* [1990] ECR I–395, paragraph 16). Thus, the Commission does not infringe its duty to state reasons if, when exercising its power to examine concentrations, it does not include precise reasoning in its decision as to the appraisal of a number of aspects of the concentration which appear to it to be manifestly irrelevant or insignificant or plainly of secondary importance to the appraisal of the concentration (see, to that effect, *Commission* v *Sytraval and Brink's France*, paragraph 64). Such a requirement would be difficult to reconcile with the need for speed and the short timescales which the Commission is bound to observe when exercising its power to examine concentrations and which form part of the particular circumstances of proceedings for control of those concentrations.

168 It follows that where the Commission declares a concentration to be compatible with the common market on the basis of Article 8(2) of the Regulation the requirement to state reasons is satisfied when that decision clearly sets out the reasons for which the Commission considers that the concentration in question, where appropriate following modification by the undertakings concerned, does not create or strengthen a dominant position as a result of which effective competition would be significantly impeded in the common market or in a substantial part of it.

169 In that regard, while it is true that the Commission is not obliged, in the statement of reasons for decisions adopted under the Regulation, to take a position on all the information and arguments relied on before it, including those which are plainly of secondary importance to the appraisal it is required to undertake, it none the less remains the case that it is required to set out the facts and the legal considerations having decisive importance in the context of the decision. The reasoning must in addition be logical and must not disclose any internal contradictions (see to that effect, by way of analogy, Case 13/60 *Geitling and Others* v *High Authority* [1962] ECR 83, 117; Case 41/69 *ACF Chemiefarma* v *Commission* [1970] ECR 661, paragraph 78; Case 158/80 *Rewe-Handelsgesellschaft Nord and Rewe-Markt Steffen* [1981] ECR 1805, paragraph 26; and Case 28/87 *Arendt* v *Parliament* [1988] ECR 2633, paragraphs 7 and 8).

170 It is in the light of these principles that the objections raised by the appellants under the sixth ground of appeal should be examined.

171 As their principal argument, the appellants submit that a Commission decision approving a concentration cannot be annulled on the ground of inadequate reasoning. They rely in particular in this regard on Article 10(6) of the Regulation.

172 It follows from paragraph 49 of this judgment that the purpose of that provision is to ensure legal certainty where, exceptionally, the Commission has not adopted a decision within the prescribed period. Thus, the undertakings concerned are free to implement their concentration as soon as approval is deemed to have been given.

173 As Impala observes, the line of argument of the appellants based on Article 10(6) of the Regulation has the result that decisions approving concentrations do not have to be reasoned at all, as they cannot be challenged on the ground of lack of a statement of reasons.

174 It should be noted that an inadequate statement of reasons in breach of Article 253 EC constitutes an infringement of essential procedural requirements for the purposes of Article 230 EC and is, moreover, a plea which may, and even must, be raised by the Community judicature of its own motion (see, to that effect, Case C-166/95 P *Commission* v *Daffix* [1997] ECR I–983, paragraph 24). Furthermore, according to settled case-law, where it is necessary to interpret a provision of secondary Community law, preference should as far as possible be given to the interpretation which renders the provision consistent with the Treaty and the general principles of Community law (Case C-457/05 *Schutzverband der Spirituosen-Industrie* [2007] ECR I-8075, paragraph 22 and the case-law cited). It follows that Article 10(6) of the Regulation must be interpreted and applied in the light of Articles 230 EC and 253 EC.

175 Thus, as is apparent from paragraph 49 of this judgment, Article 10(6) constitutes an exception to the general scheme of the Regulation, which is laid down in particular in Articles 6(1) and 8(1) thereof, according to which the Commission is to rule expressly on the concentrations which are notified to it, whether its decision be a negative or a positive one. It follows that, not only can Article 10(6) of the Regulation not form the basis of a general presumption that concentrations are compatible with the common market, it also cannot serve as a basis for an exception to the rule that a decision approving such a concentration may be challenged on the ground of infringement of the duty to state reasons. The legitimate need for legal certainty in exceptional situations, which that provision reflects, cannot go so far as to exclude decisions relating to concentrations in whole or in part from review by the Community judicature.

176 The appellants’ line of argument based on Article 10(6) of the Regulation must therefore be rejected.

177 In the alternative, the appellants submit, among other things, that since the contested decision allowed Impala to ascertain the reasons for the approval at issue and the Court of First Instance to exercise its power of judicial review, that court did not observe the settled case-law of the Community judicature on the requirement to state reasons.

178 In that regard, as is apparent from paragraph 166 of this judgment, it is settled case-law, first, that the purpose of the statement of reasons required by Article 253 EC is to enable the persons concerned to ascertain the reasons for the measure and to enable the competent Community Court to exercise its power of review and, secondly, that the requirements to be satisfied by the statement of reasons must be appraised by reference to the nature of the measure at issue and the context in which it was adopted (see also Case 32/86 *SISMA* v *Commission* [1987] ECR 1645, paragraph 8; Case C-181/90 *Consorgan* v *Commission* [1992] ECR I-3557, paragraph 14; Case C-22/94 *Irish Farmers Association and Others* [1997] ECR I–1809, paragraphs 39 to 41; Case C-114/00 *Spain* v *Commission* [2002] ECR I–7657, paragraphs 62 and 63; Case C-195/99 P *Krupp Hoesch* v *Commission* [2003] ECR I-10937, paragraph 110; and *Aalborg Portland and Others* v *Commission*, paragraph 372).

179 In the present case, it is true that a certain imbalance in the contested decision between the presentation of the elements tending to plead in favour of there being sufficient transparency and the presentation of the impact of the campaign discounts, which plead, according to the Commission, against such transparency, may appear unfortunate. Nevertheless, in the light, first, of the context in which the contested decision was adopted, marked in particular by the short space of time between the written reply to the statement of objections and the hearing before the Commission, on the one hand, and the end of the formal proceedings, on the other, and, secondly, the requirements laid down by the case-law referred to in paragraphs 166 to 169 of this judgment,

in particular paragraphs 166 and 167, the Court of First Instance could not, without committing an error of law, find that the Commission had failed to comply with the duty to provide an adequate statement of reasons for the contested decision (see, by way of analogy, Joined Cases 275/80 and 24/81 *Krupp Stahl* v *Commission* [1981] ECR 2489, paragraph 13, and Joined Cases 296/82 and 318/82 *Netherlands and Leeuwarder Papierwarenfabriek* v *Commission* [1985] ECR 809, paragraph 21).

180 In the first place, the contested decision showed the reasoning followed by the Commission in a way which subsequently allowed a party such as Impala to challenge its validity before the competent Court. It would be unreasonable in that regard to require, as did the Court of First Instance in paragraph 289 of the judgment under appeal, a detailed description of each of the factors underpinning the contested decision, such as the nature of campaign discounts, the circumstances in which they might be applied, their degree of opacity, their size or their specific impact on price transparency (see to that effect, by way of analogy, Case C–286/98 P *Stora Kopparbergs Bergslags* v *Commission* [2000] ECR I-9925, paragraphs 59 to 61, and Joined Cases C-341/06 P and C-342/06 P *Chronopost and La Poste* v *UFEX and Others* [2008] ECR I-0000, paragraph 108). That is all the more the case because Impala was, as is apparent in particular from paragraphs 7 and 10 of the judgment under appeal, closely associated with the formal proceedings (see, by way of analogy, Case C-120/99 *Italy* v *Council* [2001] ECR I-7997, paragraph 29, and Case C-304/01 *Spain* v *Commission* [2004] ECR I-7655, paragraph 50) and that it was, in addition, perfectly able to challenge the validity of the Commission's substantive appraisal in the contested decision before the Court of First Instance.

181 In the second place, as is apparent from, among others, paragraphs 275, 289 and 530 of the judgment under appeal, the Court of First Instance was aware of the reasons for which the Commission decided to approve the concentration at issue. It also devoted numerous paragraphs in its judgment to an analysis of whether those reasons were well founded. It must be pointed out in that regard that the duty to state adequate reasons in decisions is an essential procedural requirement which must be distinguished from the question whether the reasoning is well founded, which is concerned with the substantive legality of the measure at issue (see *Commission* v *Sytraval and Brink's France*, paragraph 67, and Case C–310/99 *Italy* v *Commission* [2002] ECR I-2289, paragraph 48). The reasoning of a decision consists in a formal statement of the grounds on which that decision is based. If those grounds are vitiated by errors, the latter will vitiate the substantive legality of the decision, but not the statement of reasons in it, which may be adequate even though it sets out reasons which are incorrect. It cannot therefore be claimed that it was impossible for the Court of First Instance to exercise its power of judicial review (see, by way of analogy, *Chronopost and La Poste* v *UFEX and Others*, paragraph 112).

182 The appellants' sixth ground of appeal should therefore be upheld, without it being necessary to adjudicate on the objections referred to in paragraphs 158, 159 and 161 of this judgment.

183 Having regard to the above considerations, the present appeal must be declared to be well founded.

The alleged cross-appeal

184 The Commission's response contains a separate section containing 'additional observations' on the 'essential grounds' of the contested decision. In that section, the Commission contends that the Court of First Instance was wrong to characterise the Commission's findings in relation to the retaliatory measures as essential grounds of the decision. In the Commission's view, were it to be held in this appeal that the findings made in the contested decision in relation to lack of market transparency were not incorrect in law, the decision should be declared to be lawful irrespective of whether it contains errors of law concerning the retaliatory measures.

185 Impala interpreted the arguments contained in the Commission's response as a cross-appeal and replied to them in a separate document of 23 March 2007, relying on Article 117(2) of the Rules of Procedure of the Court. Subsequently, the parties were allowed to lodge further documents on this matter, the last of which was lodged at the Court Registry on 16 July 2007, while at the same time the question was left open whether Impala was entitled to invoke Article 117(2).

186 Under Article 117(2) of the Rules of Procedure, for a submission to be regarded as a cross-appeal, the party which relies on it must seek to set aside, in whole or in part, the judgment under appeal on a plea in law which was not raised in the appeal. Whether that is the case here is to be

determined by reference to the wording, aim and context of the passage in question in the Commission's response.

187 It must be emphasised in that regard that nowhere in its response does the Commission use the expression 'cross-appeal'. Moreover, the Commission itself clearly stated during these proceedings, for instance at the hearing, that it had no intention of bringing a cross-appeal by its 'additional observations'.

188 In those circumstances, it must be held that those observations do not constitute a cross-appeal. Contrary to what Impala submits, there is accordingly no need to adopt a position with regard to them.

Referral of the case back to the Court of First Instance

189 Under the first paragraph of Article 61 of the Statute of the Court of Justice, if the appeal is well founded, the Court of Justice is to quash the decision of the Court of First Instance. It may itself give final judgment in the matter, where the state of the proceedings so permits, or refer the case back to the Court of First Instance for judgment.

190 Since the Court of First Instance examined only two of the five pleas relied on by Impala in support of its action, the Court of Justice considers that the present case is not in a state where judgment may be given. The case must therefore be referred back to the Court of First Instance.

191 Since the case is to be referred back to the Court of First Instance, the costs relating to the present appeal proceedings must be reserved.

On those grounds, the Court (Grand Chamber) hereby:

1. **Sets aside the judgment of the Court of First Instance of 13 July 2006 in Case T-464/04 *Impala* v *Commission*;**

2. **Refers the case back to the Court of First Instance of the European Communities;**

3. **Reserves the costs.**

Case T-170/06

Alrosa Company Ltd

v

Commission of the European Communities

(Competition – Abuse of a dominant position – World market for the production and supply of rough diamonds – Decision making binding the commitments proposed by the undertaking in a dominant position – Article 9 of Regulation (EC) No 1/2003 – Principle of proportionality – Contractual freedom – Right to be heard)

Summary of the Judgment

1. *Actions for annulment – Natural or legal persons – Measures of direct and individual concern to them*

   (Art. 230, fourth para., EC; Council Regulation No 1/2003, Art. 9)

2. *Competition – Dominant position – Abuse – Examination by the Commission – Commitments by the undertakings concerned to meet the Commission's competition concerns*

   (Arts 81 EC, 82 EC and 85 EC; Council Regulation No 1/2003, Arts 7(1) and 9)

3. *Competition – Administrative procedure – Bringing infringements to an end – Commission's powers*

   (Council Regulation No 1/2003, Arts 7(1) and 9(1))

4. *Competition – Administrative procedure – Bringing infringements to an end – Commission's powers*

   (Council Regulation No 1/2003, Arts 7(1) and 9(1))

5. *Competition – Dominant position – Abuse – Commission's powers*

   (Art. 82 EC)

6. *Competition – Administrative procedure – Observance of the rights of the defence*

   (Arts 81 EC and 82 EC; Council Regulation No 1/2003, Art. 9)

1. An undertaking is directly and individually concerned for the purpose of the fourth paragraph of Article 230 EC by a Commission decision which makes binding the individual commitments proposed by an undertaking in a dominant position and relating to the restriction and cessation of the dominant undertaking's contractual relations with the former undertaking, in so far as the decision in question produces direct and immediate effects as regards the former undertaking's legal situation, refers to it in its provisions, and was adopted at the conclusion of proceedings in which the undertaking participated to a decisive extent, is liable to have an appreciable effect on the undertaking's competitive position on the market, and is aimed at bringing to an end the trading relationship which had existed for a considerable time between the two undertakings.

   (see paras 38-40)

2. The effect of a Commission decision making binding the commitments proposed by undertakings under Article 9 of Regulation No 1/2003 is to bring to an end the proceedings to establish and

penalise an infringement of the competition rules. Thus, such a decision cannot be considered as being a mere acceptance on the Commission's part of a proposal that has been freely put forward by a negotiating partner, but constitutes a binding measure which puts an end to an infringement or a potential infringement, as regards which the Commission exercises all the prerogatives conferred on it by Articles 81 EC and 82 EC, with the only distinctive feature being that the submission of offers of commitments by the undertakings concerned means that the Commission is not required to pursue the regulatory procedure laid down under Article 85 EC and, in particular, to prove the infringement.

By making a particular type of conduct of an operator in relation to third parties binding, a decision adopted under Article 9 of Regulation No 1/2003 may indirectly have legal effects *erga omnes*, which the undertaking concerned would not have been in a position to create on its own; the Commission is thus their sole author from the time at which it makes binding the commitments offered by the undertaking concerned and accordingly assumes sole responsibility for them. It is not obliged in any way to take into account and, *a fortiori*, to take into account on a take-it-or-leave-it basis, the offers of commitment which the undertakings concerned submit to it. Moreover, Article 9 (1) of Regulation No 1/2003 does not preclude a decision from being adopted for an indefinite duration.

Furthermore, the principle of proportionality, although it is not referred to in Article 9 of Regulation No 1/2003, is a general principle of Community law, with which the Commission is obliged to comply when it adopts decisions making binding the commitments proposed by undertakings on the basis of that provision.

(see paras 87-88, 91-92)

3. Notwithstanding the Commission's margin of discretion as to the choice of adopting a procedure under Article 7(1) of Regulation No 1/2003 or Article 9(1) of that regulation, and the voluntary nature of the commitments offered under that provision by the undertakings, the Commission is required to comply with the principle of proportionality when it decides to make such commitments.

Since the review of the proportionality is an objective review, the appropriateness of and the need for the Commission decision must be assessed in relation to the aim pursued by the institution, which consists, according to Article 7(1) of Regulation No 1/2003, of putting an end to the infringement which has been established and, according to Article 9(1) thereof, addressing the concerns expressed by the Commission in its preliminary assessment. If, contrary to the decisions adopted under Article 7(1), the Commission is not required under Article 9(1) formally to establish the existence of an infringement, it must none the less establish the reality of the competition concerns which justified its envisaging the adoption of a decision under Articles 81 EC and 82 EC and which allow it to require the undertaking concerned to comply with certain commitments. This presupposes an analysis of the market and an identification of the infringement envisaged which, while less definitive than those under Article 7(1) of Regulation No 1/2003, must be sufficient to allow a review of the appropriateness of the commitment. Consequently, the Commission cannot, without going beyond the powers conferred on it both by the competition rules of the Treaty and by Regulation No 1/2003, adopt, whether on the basis of Article 7(1) or Article 9(1) of that regulation, a decision prohibiting absolutely any future trading relations between two undertakings unless such a decision is necessary to re-establish the situation which existed prior to the infringement.

Furthermore, the level of review carried out by the Court of the analyses carried out by the Commission on the basis of the competition rules of the Treaty must take into account the margin of discretion which underlies each decision under consideration and is justified by the complexity of the economic rules to be applied. In that regard, the fact that the analysis undertaken by the Commission, both under Article 7(1) and under Article 9(1) of Regulation No 1/2003, may require complex economic assessments cannot mean that, in the absence of such assessments, the review undertaken by the Court of the decisions of the Commission is, on any basis, to be limited to manifest errors of assessment.

(see paras 95-97, 99-100, 103-105, 107-110)

4. In assessing proportionality, the need for a Commission decision which makes binding the individual commitments proposed by an undertaking in a dominant position and which relate to the restriction and cessation of its contractual relations, must be assessed in relation to its aims, such as the cessation of practices which prevented the contracting partner from establishing itself as an effective competitor on the market in question and from providing third parties with an alternative source of supply.

In particular, compliance with the principle of proportionality requires that, when measures that are less onerous than those it proposes to make binding exist, and are known by it, the Commission should examine whether those measures are capable of addressing the concerns which justify its action before it adopts, in the event of their proving unsuitable, the more onerous approach. To that effect, although the Commission cannot substitute itself for the parties so as to amend the commitments they offer under Article 9 of Regulation No 1/2003 in order that those commitments may address the concerns set out in its preliminary assessment, it is able to make those commitments binding only in part or to a particular extent. However the Commission cannot propose to the parties that they should offer it commitments which go further than a decision which it could have adopted under Article 7(1) of Regulation No 1/2003.

Only exceptional circumstances, such as where the undertakings concerned have a collective dominant position, can justify a decision adopted under Article 9(1) of Regulation No 1/2003 prohibiting undertakings completely and indefinitely from contracting amongst each other. Therefore, in the absence of such circumstances, a Commission decision requiring, for an indefinite period, all direct or indirect trading relations between two undertakings to be brought to an end, infringes the principle of proportionality.

(see paras 112, 119-121, 131, 139-141)

5. Since the object of Article 82 EC is not to prohibit the holding of dominant positions but solely to put an end to their abuse, the Commission cannot require an undertaking in a dominant position to refrain from making purchases which allow it to maintain or to strengthen its position on the market, if that undertaking does not, in so doing, resort to methods which are incompatible with the competition rules. While special responsibilities are incumbent on an undertaking which occupies such a position, they cannot amount to a requirement that the very existence of the dominant position be called into question.

(see para. 146)

6. As regards a Commission decision requiring that long-standing trading relations between two undertakings that are party to an agreement capable of constituting an abuse of a dominant position, the close connection between the two sets of proceedings initiated by the Commission on the basis of Articles 81 EC and 82 EC, following notification of that agreement, and the fact that that decision expressly refers to the contracting partner but is not addressed to it, must lead to the applicant being accorded, as regards the proceedings taken as a whole, the rights given to an ‘undertaking concerned’ within the meaning of Regulation No 1/2003, although, strictly speaking, it does not fall to be so classified in proceedings relating to Article 82 EC. Consequently, that undertaking is entitled to be heard on individual commitments which the Commission intends to make binding by adopting a decision – in the context of proceedings initiated under Article 82 EC, and proposed by the undertaking with which it has maintained long-standing trading relations which the decision requires to be terminated – and must have the possibility to exercise that right fully. It is necessary, if the right to be heard is to be complied with, first, that the undertakings which proposed those commitments under Article 9 of Regulation No 1/2003 be informed of the essential factual elements on the basis of which the Commission required new commitments, including conclusions which the Commission drew from the third-party observations on the proposed commitments, and, secondly, that those undertakings can express their views on the matter.

(see paras 187, 196, 203)

Judgment of the Court of First Instance (Fourth Chamber, extended composition) of 11 July 2007
Alrosa Company Ltd v Commission of the European Communities. Competition - Abuse of a dominant position - World market for the production and supply of rough diamonds - Decision making binding the commitments proposed by the undertaking in a dominant position - Article 9 of Regulation (EC) No 1/2003 - Principle of proportionality - Contractual freedom - Right to be heard.
Case T-170/06.

In Case T170/06,

Alrosa Company Ltd , established in Mirny (Russia), represented by R. Subiotto, S. Mobley and K. Jones, lawyers,

applicant,

v

Commission of the European Communities , represented by F. Castillo de la Torre, A. Whelan and R. Sauer, acting as Agents,

defendant,

APPLICATION for the annulment of Commission Decision 2006/520/EC of 22 February 2006 relating to a proceeding pursuant to Article 82 [EC] and Article 54 of the EEA Agreement (Case COMP/B-2/38.381 - De Beers) (OJ 2006 L 205, p. 24) making binding the commitments given by De Beers to bring to an end its purchases of rough diamonds from Alrosa with effect from 2009, after a period of progressive reduction of the amounts purchased by it from 2006 to 2008, and bringing the proceedings to an end in accordance with Article 9 of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1)

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Fourth Chamber, Extended Composition),

composed of H. Legal, President, I. Wiszniewska-Biaecka, V. Vadapalas, E. Moavero Milanesi and N. Wahl, Judges,

Registrar: K. Poche, Administrator,

having regard to the written procedure and further to the hearing on 19 April 2007,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Fourth Chamber, Extended Composition)

hereby:

1. Annuls Commission Decision 2006/520/EC of 22 February 2006 relating to a proceeding pursuant to Article 82 [EC] and Article 54 of the EEA Agreement (Case COMP/B-2/38.381 - De Beers);

2. Orders the Commission to pay its own costs and those incurred by Alrosa Company Ltd.

Legal and factual background to the dispute

1. Legal background

Regulation No 1/2003

1. Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1) has been applicable since 1 May 2004.

2. Article 7(1) of Regulation No 1/2003 provides:

Where the Commission, acting on a complaint or on its own initiative, finds that there is an infringement of Article 81 or of Article 82 of the Treaty, it may by decision require the undertakings and associations of undertakings concerned to bring such infringement to an end. For this purpose, it may impose on them any behavioural or structural remedies which are proportionate to the infringement committed and necessary to bring the infringement effectively to an end. Structural remedies can only be imposed either where there is no equally effective behavioural remedy or where any equally effective behavioural remedy would be more burdensome for the undertaking concerned than the structural remedy. If the Commission has a legitimate interest in doing so, it may also find that an infringement has been committed in the past.'

3. Article 9 of Regulation No 1/2003 states:

1. Where the Commission intends to adopt a decision requiring that an infringement be brought to an end and the undertakings concerned offer commitments to meet the concerns expressed to them by the Commission in its preliminary assessment, the Commission may by decision make those commitments binding on the undertakings. Such a decision may be adopted for a specified period and shall conclude that there are no longer grounds for action by the Commission.

2. The Commission may, upon request or on its own initiative, reopen the proceedings:

(a) where there has been a material change in any of the facts on which the decision was based;

(b) where the undertakings concerned act contrary to their commitments; or

(c) where the decision was based on incomplete, incorrect or misleading information provided by the parties.'

4. Article 27 of Regulation No 1/2003 provides:

1. Before taking decisions as provided for in Articles 7, 8, 23 and Article 24(2), the Commission shall give the undertakings or associations of undertakings which are the subject of the proceedings conducted by the Commission the opportunity of being heard on the matters to which the Commission has taken objection. The Commission shall base its decisions only on objections on which the parties concerned have been able to comment....

2. The rights of defence of the parties concerned shall be fully respected in the proceedings. They shall be entitled to have access to the Commission's file, subject to the legitimate interest of undertakings in the protection of their business secrets....

3. If the Commission considers it necessary, it may also hear other natural or legal persons. Applications to be heard on the part of such persons shall, where they show a sufficient interest, be granted....

4. Where the Commission intends to adopt a decision pursuant to Article 9 or Article 10, it shall publish a concise summary of the case and the main content of the commitments or of the proposed course of action. Interested third parties may submit their observations within a time-limit which is fixed by the Commission in its publication and which may not be less than one month. Publication shall have regard to the legitimate interest of undertakings in the protection of their business secrets.'

Regulation No 773/2004

5. Commission Regulation (EC) No 773/2004 of 7 April 2004 relating to the conduct of proceedings

by the Commission pursuant to Articles 81 [EC] and 82 [EC] (OJ 2004 L 123, p. 18) was adopted under Article 33 of Regulation No 1/2003 and entered into force on 1 May 2004.

6. Article 10 of Regulation No 773/2004 provides inter alia:

1. The Commission shall inform the parties concerned in writing of the objections raised against them. The statement of objections shall be notified to each of them.

2. The Commission shall, when notifying the statement of objections to the parties concerned, set a time-limit within which these parties may inform it in writing of their views. The Commission shall not be obliged to take into account written submissions received after the expiry of that time-limit.

...'

7. Article 15(1) of Regulation No 773/2004 states:

If so requested, the Commission shall grant access to the file to the parties to whom it has addressed a statement of objections. Access shall be granted after the notification of the statement of objections.'

2. Facts

8. The applicant, Alrosa Company Ltd (Alrosa'), is an undertaking established in Mirny (Russia). It is active, inter alia, in the world market for the production and supply of rough diamonds, where it occupies the number two position. It is essentially active in Russia, where it is engaged in exploration, mining, valuation and trading activities, and also in the jewellery business.

9. De Beers SA is a company established in Luxembourg (Luxembourg). The De Beers group, of which it is the principal holding company, is also engaged in the world market for the production and supply of rough diamonds, where it occupies the number one position. It is essentially active in South Africa, Botswana, Namibia and Tanzania, and also in the United Kingdom. It is engaged in those areas in exploration, mining, valuation, trading and manufacturing, and also in the jewellery business, thus covering the entire diamond supply chain.

10. On 5 March 2002, Alrosa and De Beers notified to the Commission an agreement entered into on 17 December 2001 between Alrosa and two subsidiaries of the De Beers group, City and West East Ltd and De Beers Centenary AG (the notified agreement'), with a view to obtaining negative clearance or an exemption under Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-1962, p. 87).

11. The subject-matter of that agreement, which was concluded in the context of long-standing trading relations between Alrosa and De Beers, was essentially the supply of rough diamonds.

12. Clause 12 of the notified agreement provided that it was entered into for a period of five years from the date of confirmation by the Commission to the contracting parties that it [did] not infringe Article 81(1), or merit[ed] an exemption under Article 81(3) EC; and [did] not otherwise infringe Article 82 EC'.

13. During that period, Alrosa undertook to sell natural rough diamonds produced in Russia to De Beers to the value of USD 800 million a year, while De Beers undertook to buy those diamonds from Alrosa, as specified in clause 2.1.1 of the notified agreement. However, in respect of the fourth and fifth years during which the notified agreement was in force, Alrosa was entitled, under clause 2.1.2, to reduce that amount to USD 700 million. The amount of USD 800 million, established in accordance with the prices in force on the date on which the notified agreement was entered into, accounted for around one half of Alrosa's annual production and for the entire production exported outside the Community of Independent States (CIS).

14. On 14 January 2003, the Commission sent a statement of objections to the applicant and De Beers in Case COMP/E-3/38.381, in which it expressed the opinion that the notified agreement was capable of constituting an anticompetitive agreement prohibited by Article 81(1) EC and could not be exempted under Article 81(3) EC. On the same date, it sent a separate statement of objections to De Beers in Case COMP/E2/38.381, in which it expressed the opinion that the agreement was capable of constituting an abuse of a dominant position prohibited by Article 82 EC.

15. On 31 March 2003, the applicant and De Beers submitted joint written submissions to the Commission in response to the statement of objections issued in Case COMP/E-3/38.381.

16. On 1 July 2003, the Commission sent a supplementary statement of objections to the applicant and De Beers, expressing the opinion that the notified agreement was also capable of constituting an anti-competitive agreement prohibited by Article 53(1) of the Agreement on the European Economic Area (EEA) and could not be exempted under Article 53(3) of the EEA Agreement. On the same date, it sent a separate supplementary statement of objections to De Beers, expressing the opinion that the notified agreement was also capable of constituting an abuse of a dominant position prohibited under Article 54 of the EEA Agreement.

17. On 7 July 2003, the Commission heard oral submissions from the applicant and De Beers.

18. On 12 September 2003, the applicant proposed commitments which involved the progressive reduction of the quantity of rough diamonds sold to De Beers with effect from the sixth year in which the notified agreement was in force and, with effect from 2013, an undertaking no longer to sell rough diamonds to De Beers. The applicant subsequently withdrew those commitments.

19. On 14 December 2004, the applicant and De Beers jointly submitted commitments (the joint commitments') designed to meet the concerns which the Commission had communicated to them. These joint commitments provided for a progressive reduction in sales of rough diamonds by Alrosa to De Beers, the value of which was to go down from USD 700 million in 2005 to USD 275 million in 2010, and subsequently to be capped at that level.

20. On 3 June 2005, the Commission published a notice... in Case COMP/E-2/38.381 - De Beers-Alrosa' in the Official Journal of the European Union (OJ 2005 C 136, p. 32) (the summary notice'). In that notice, the Commission stated that it had received commitments from Alrosa and De Beers in the course of a Commission investigation pursuant to Articles 81 EC and 82 EC, and Articles 53 and 54 of the EEA Agreement (point 1), gave a summary of the case (points 3 to 10) and described the commitments which had been offered (points 11 to 15). It also invited interested third parties to submit their comments within one month (points 2 and 17) and stated that it intended to adopt a decision making the joint commitments binding, subject to the outcome of that market test (points 2 and 16).

21. Following that publication, 21 interested third parties submitted comments to the Commission, which informed Alrosa and De Beers of those comments on 27 October 2005. At that meeting, the Commission also invited the parties to submit to it, before the end of November 2005, fresh joint commitments intended to lead to a complete cessation of their trading relationship with effect from 2009.

22. On 25 January 2006, De Beers offered individual commitments (the individual commitments proposed by De Beers') designed to meet the concerns expressed by the Commission in the light of the outcome of the market test. The individual commitments proposed by De Beers provided for a progressive reduction in sales of rough diamonds by Alrosa to De Beers, the value of which was to go down from USD 600 million in 2006 to USD 400 million in 2008, and their subsequent discontinuance.

23. On 26 January 2006, the Commission sent the applicant a copy of the individual commitments

proposed by De Beers and invited it to submit its observations in that regard. It also provided it with a copy of the nonconfidential versions of the comments from third parties.

24. Subsequently, there was an exchange of views between the applicant and the Commission on certain aspects of the proceedings provided for in Article 9 of Regulation No 1/2003 and of their implications for the present case. The principal issues were the question of access to the file and the question of the rights of the defence and, in particular, of the right to be heard. In addition, in its letter of 6 February 2006, the applicant provided observations on the individual commitments proposed by De Beers and the third-party comments.

25. On 22 February 2006, the Commission adopted Decision 2006/520/EC relating to a proceeding pursuant to Article 82 [EC] and Article 54 of the EEA Agreement (Case COMP/B-2/38.381 - De Beers) (OJ 2006 L 205, p. 24) (the Decision').

26. Article 1 of the Decision provides that the commitments as listed in the Annex shall be binding on De Beers' and Article 2 provides that the proceedings in the present case shall be brought to an end'.

Procedure and forms of order sought

27. By application lodged at the Registry of the Court of First Instance on 29 June 2006, Alrosa brought the present action.

28. By a separate document lodged at the Registry on the same date, the applicant requested the Court of First Instance to deal with the case by means of the expedited procedure pursuant to Article 76a(1) of its Rules of Procedure.

29. On 16 August 2006, the Commission lodged its defence.

30. By decision of 14 September 2006, the Court of First Instance (Fourth Chamber) granted the applicant's application for the case to be dealt with by means of the expedited procedure, after hearing the views of the Commission and having regard to the particular urgency and the circumstances of the case.

31. By letter of 28 September 2006, the Court of First Instance (Fourth Chamber) requested the Commission, pursuant to Articles 49 and 64 of the Rules of Procedure, to produce the statements of objections sent on 14 January and 1 July 2003 to De Beers under Article 82 EC and Article 54 of the EEA Agreement. The Commission complied with that measure of organisation of procedure within the prescribed period.

32. By decision of 9 October 2006, the Court of First Insta nce, after hearing the parties, referred the case to the Fourth Chamber (Extended Composition), in accordance with Article 14(1) and Article 51(1) of the Rules of Procedure.

33. The parties presented oral argument and replied to questions put by the Court at the hearing on 19 April 2007.

34. Alrosa claims that the Court should:

- annul the Decision;

- order the Commission to pay the costs.

35. The Commission contends that the Court should:

- dismiss the action as unfounded;

- order Alrosa to pay the costs.

Law

1. Admissibility

36. While observing that Article 82 EC and Article 54 of the EEA Agreement can relate only to undertakings in a dominant position, which does not apply in Alrosa's case, and that Alrosa cannot therefore be considered as being a party concerned by the proceedings leading to the adoption of the Decision or as being an addressee thereof, the Commission does not challenge the admissibility of the action in so far as it is based on the fact that the applicant is individually and directly concerned by the Decision.

37. However, since the question whether the action is admissible involves considerations of public policy, the Court should examine it of its own motion under Article 113 of the Rules of Procedure (Case C-313/90 CIRFS and Others v Commission [1993] ECR I1125, paragraph 23).

38. Since the applicant is not the addressee of the Decision, it is necessary to determine whether the Decision is of direct and individual concern to it, within the meaning of the fourth paragraph of Article 230 EC.

39. In the present case, in accordance with Article 9(1) of Regulation No 1/2003, the Decision makes binding the individual commitments proposed by De Beers to limit its purchases from Alrosa to a particular amount of rough diamonds between 2006 and 2008 and not to purchase, directly or indirectly, any rough diamonds from Alrosa after 2009. In so far as it restricts the ability of De Beers to obtain supplies of rough diamonds from Alrosa, the Decision produces direct and immediate effects as regards Alrosa's legal situation. The applicant is accordingly directly concerned by the Decision.

40. The applicant is also individually concerned by the Decision inasmuch as the Decision: was adopted at the conclusion of proceedings in which Alrosa participated to a decisive extent; refers to Alrosa expressly; is aimed at bringing to an end the trading relationship which had existed for a considerable time between Alrosa and De Beers; and is liable to have an appreciable effect on Alrosa's competitive position on the market for the supply and production of rough diamonds (see, to that effect, Joined Cases C-68/94 and C-30/95 France and Others v Commission [1998] ECR I-1375, paragraphs 54 to 56).

41. Accordingly, the applicant is entitled to challenge the validity of the Decision on the basis of the fourth paragraph of Article 230 EC.

2. Substance

42. The arguments put forward by the applicant in support of its application can be divided into three pleas in law, alleging, first, infringement of the right to be heard, secondly, that the Decision infringes Article 9 of Regulation No 1/2003, which does not allow commitments to which an undertaking concerned has not voluntarily subscribed to be made binding on the undertaking, a fortiori for an indefinite period, and thirdly, the excessive nature of the commitments that were imposed, in breach of Article 9 of Regulation No 1/2003, Article 82 EC, contractual freedom and the principle of proportionality.

43. In the circumstances of the case, the second and the third pleas should first be considered together.

The pleas alleging infringement of Article 9 of Regulation No 1/2003, Article 82 EC, the principle of freedom of contract and the principle of proportionality

Arguments of the parties

44. The applicant maintains, in the first place, that the Decision infringes Article 9 of Regulation

No 1/2003, inasmuch as it makes binding commitments proposed by only one of the two undertakings concerned in the present case, namely the individual commitments proposed by De Beers, and does so for an indefinite period.

45. The first sentence of Article 9 of Regulation No 1/2003 affords to the Commission and to the undertaking or undertakings concerned by proceedings under the competition rules the opportunity of arriving at a mutually beneficial settlement of their dispute. According to the logic of that approach, when several undertakings are concerned and jointly offer commitments to the Commission, it is only those commitments that the latter may accept and make binding, and not commitments offered individually by one of them. In the present case, the applicant should have been considered as an undertaking concerned. Accordingly, the Commission was not entitled to make the individual commitments by De Beers binding.

46. Furthermore, the second sentence of Article 9 of Regulation No 1/2003 should be construed as requiring the Commission, when it opts to make commitments binding, to adopt decisions in that regard only for a specified period. The Decision, however, was adopted for an indefinite period.

47. The applicant also maintains that the Decision renders impossible, in absolute terms and for a potentially indefinite period, any supply of rough diamonds by Alrosa to De Beers. In doing so, the Decision infringes Article 9 of Regulation No 1/2003, Article 82 EC and contractual freedom.

48. In that connection, the applicant claims, first of all, that the Decision is essentially vitiated by an error of law, inasmuch as it is tantamount to prohibiting lawful conduct for an indefinite period.

49. The principle of a free market economy in which there is freedom of competition, enshrined in Article 4(1) EC, and contractual freedom, enshrined in the laws of the Member States and already recognised by Community law, are of fundamental importance in the Community legal order (Case T-41/96 Bayer v Commission [2000] ECR II-3383, paragraph 180; see also, to that effect, Opinion of Advocate General Rozès in Case 210/81 Schmidt v Commission [1983] ECR 3045, at p. 3072; and Opinion of Advocate General Jacobs in Case C7/97 Bronner [1998] ECR I-7791, I-7794, paragraph 56).

50. Consequently, the application of the Community competition rules must take account of these principles. In particular, Article 82 EC, which is aimed at specific abusive conduct, cannot be interpreted as making it illegal merely to enter into a contract for the sale or purchase of goods on the sole ground that one of the parties is in a dominant position.

51. In the present case, the Decision deprives Alrosa and De Beers of all freedom to enter into contracts, including those entered into on an ad hoc basis, on the sole ground that De Beers is in a dominant position on the markets downstream from the market for the supply of rough diamonds. The Decision amounts to a legal boycott of Alrosa by De Beers with effect from 2009. That unprecedented situation is all the more noteworthy, since the notified agreement originally covered only 50% of Alrosa's annual output of rough diamonds and 10% of annual worldwide sales, and then, in the version issued to reflect the joint commitments, 18% of Alrosa's annual production and 3.6% of annual worldwide sales.

52. The applicant goes on to maintain that the Decision is essentially vitiated by a manifest error of assessment, inasmuch as the concerns expressed in relation to the notified agreement did not justify in any way the removal of Alrosa's contractual freedom.

53. The principal concern expressed by the Commission in its preliminary assessment of the notified agreement under Article 82 EC and Article 54 of the EEA Agreement was that the exclusive supply

commitment laid down in the agreement would result in strengthening De Beers' market power by excluding Alrosa from the market for the supply of rough diamonds and, consequently, depriving other purchasers of access to the significant source of supply which it represented.

54. In such a case it would have been necessary, in accordance with the case-law (Case 85/76 Hoffmann-La Roche v Commission [1979] ECR 461, paragraph 89, and Case T-65/98 Van den Bergh Foods v Commission [2003] ECR II-4653, paragraphs 80, 81 and 160), to conduct a detailed assessment of the foreclosure effects which De Beers' conduct would result in. The need for that assessment was all the more pressing since the Commission and the Community Courts have not thus far had occasion to adjudicate on the lawfulness under Article 82 EC of an exclusive supply commitment involving a dominant purchaser.

55. In the present case, it would have, first, been appropriate to amend the notified agreement to the extent necessary in order to reduce the foreclosure effects found to exist, and, secondly, been unwarranted to rule out any possibility of Alrosa entering into an agreement with De Beers.

56. Finally, the applicant maintains that the Decision will itself have anticompetitive effects. First, the Decision deprives it of access to the largest buyer on the market, thereby running the risk of reducing its output in the absence of any assurance of finding alternative purchasers at equivalent prices. Secondly, it deprives De Beers of access to Alrosa's output, thereby enabling the other purchasers to exercise greater market power in their negotiations with Alrosa and to impose artificial prices.

57. The Decision also infringes Article 9 of Regulation No 1/2003, Article 82 EC and the principle of proportionality.

58. In that connection, the applicant points out, first of all, that under the principle of proportionality enshrined in the third paragraph of Article 5 EC, action by the Community must not go beyond what is necessary to achieve the objectives of the Treaty. Consequently, as the Court has held, the lawfulness of the prohibition of an economic activity is subject to the condition that the prohibitory measures are appropriate and necessary in order to achieve the objectives legitimately pursued by the rules in question; where there is a choice between several appropriate measures, recourse must be had to the least onerous, and the disadvantages caused must not be disproportionate to the aims pursued (Case C-331/88 Fedesa and Others [1990] ECR I-4023, paragraph 13, and Joined Cases C-241/91 P and C242/91 P RTE and ITP v Commission [1995] ECR I-743, paragraph 93).

59. Next, the applicant claims that this principle applies to decisions adopted by the Commission under Article 9 of Regulation No 1/2003. The powers conferred on the Commission by Regulation No 1/2003 are to be viewed together with its concomitant duty to ensure that the principles laid down in Articles 81 EC and 82 EC are applied. The use made by it of that power cannot therefore exceed what is necessary to ensure that competition is not distorted in the internal market.

60. In that connection, it is immaterial that the commitments made binding by the Commission are initially offered by the undertakings concerned and in what way their offer may go beyond what is necessary in order to comply with Articles 81 EC and 82 EC. It is only in order to meet the concerns which have been notified to them by the Commission that the undertakings concerned offer commitments. Consequently, it remains imperative that the commitments finally deemed necessary by the Commission should meet the concerns expressed in its preliminary assessment, without exceeding what is appropriate and necessary and should be the least onerous possible to ensure compliance with the Community competition rules. At the very least, observance of these requirements is imperative where, as in the present case, the fact of making commitments binding is likely to have an adverse effect on a party involved in the case.

61. The applicant maintains, finally, that the Decision infringes the principle of proportionality.

62. First, the Decision is not necessary in order to attain the objective of prohibiting abuses of dominant positions pursued by Article 82 EC. The joint commitments proposed to the Commission would have reduced the share of Alrosa's annual output reserved for De Beers from 50% in 2005 to 18% in 2010 and beyond, on the basis of prices prevailing on the date of conclusion of the notified agreement, and in reality to a still lower share thereafter, taking into account, first, the anticipated increase in Alrosa's output and, secondly, the expected increase in rough diamond prices. A 50% share has generally been deemed sufficient by the Commission in previous decisions involving a supplier in a dominant position, and in the present case a share well below that figure would have been sufficient.

63. Secondly, the Decision produces effects which are disproportionate in the light of the objective pursued by Article 82 EC of maintaining undistorted competition. It completely rules out the possibility previously open to Alrosa of entering into a contractual relationship with De Beers. Having regard to the concerns expressed by the Commission as to the risk of foreclosure of the market, it would have been sufficient, having regard to the extent of that risk in practice, to amend the notified agreement in the manner provided for by the joint commitments and, consequently, to limit the share of Alrosa's annual output and the share of worldwide output reserved to De Beers to 18% and 3.6%, respectively, of the market. However, the Commission failed entirely to state in the Decision why that less stringent option which had been proposed to it by the undertakings concerned could not be accepted.

64. Thirdly, the disproportionate nature of the Decision in turn gives rise to discrimination to Alrosa's detriment, since other sellers remain free to sell their rough diamonds to De Beers, in quantities which, as a percentage of annual worldwide production, are equal to or greater than the 3.6% under the notified agreement as amended by the joint commitments.

65. The Commission contends that the pleas put forward by the applicant are unfounded.

66. First of all, the concept of undertakings concerned' mentioned in the first sentence of Article 9 of Regulation No 1/2003 refers, in the same way as the concept of parties concerned' mentioned in other provisions of that regulation, to the person or, where relevant, the persons against whom the proceedings have been initiated, that is to say, persons who may be held liable for an agreement or concerted practice within the meaning of Article 81 EC and Article 53 of the EEA Agreement or for an abuse of a dominant position within the meaning of Article 82 EC and Article 54 of the EEA Agreement. In the present case, De Beers alone was an undertaking concerned by the proceedings initiated under the provisions relating to abuses of a dominant position. Consequently, only De Beers was entitled to offer in that connection commitments capable of being made binding by the Commission.

67. In addition, the second sentence of Article 9 of Regulation No 1/2003 can be construed only as conferring on the Commission the power, and not as imposing a duty, to adopt decisions for a specified period.

68. The Commission also contends, in the first place, that the Decision does not infringe contractual freedom. First of all, it is wrong to allege that the Decision can be equated to a prohibition of lawful conduct.

69. Contractual freedom is limited by the prohibition of anti-competitive practices referred to in Articles 81 EC and 82 EC. In the present case, the agreement, viewed in the context of the longstanding trading relationship between Alrosa and De Beers, appeared, following a preliminary assessment, to run counter to those provisions, in the same way as other types of trading relationship between the parties entered into during the Commission's investigation, such as ad hoc sales in the form of willing-buyer/willing-seller' arrangements. What is more, the Commission did not arrive

at that preliminary assessment on the sole basis of the dominant position held by De Beers on the downstream markets, as the applicant maintains, but in the light of its dominant position on the market for the production and supply of rough diamonds, as stated in recitals 23 and 24 in the preamble to the Decision.

70. Nor, moreover, does the Decision have the result of eliminating Alrosa's freedom of contract. On the contrary, it merely makes binding the individual commitments proposed by De Beers, within the scope of its own freedom of contract, to terminate its agreement with Alrosa. It might well be the case that it was in Alrosa's interest to substitute an agreement with its main competitor for the risks that competition gives rise to. However, neither the interest that the partner of a dominant undertaking might have in tying itself to that undertaking by an agreement nor the other circumstances peculiar to that partner, should, according to the case-law, be taken into account for the purposes of the application of Article 82 EC (Hoffmann-La Roche v Commission , paragraphs 89 and 91; Case 322/81 Michelin v Commission [1983] ECR 3461, paragraph 71; Case C-393/92 Almelo and Others [1994] ECR I1477, paragraph 44; and Case T-65/89 BPB Industries and British Gypsum v Commission [1993] ECR II-389, paragraph 68).

71. The Commission next contends that it is incorrect to claim that its concerns did not justify the adoption of the individual commitments proposed by De Beers.

72. Whilst agreeing that it is normally necessary to conduct a specific examination of the effects that foreclosure may have on competition, the Commission argues that in the present case it would have been a very complex exercise to carry out an analysis with a view to determining whether De Beers could purchase a specific quantity of rough diamonds from Alrosa without causing the effects identified in the Commission's preliminary assessment and, if so, what that quantity might have been. In any event, that analysis was of no value inasmuch as, having regard to the objective pursued by Article 9 of Regulation No 1/2003, the Commission was legitimately entitled to accept at face value the individual commitments proposed by De Beers. Furthermore, members of its staff had already informed the parties, during the administrative procedure, that it might be minded to require a complete cessation of trading relations between Alrosa and De Beers.

73. Moreover, contrary to the applicant's assertions, the Commission's concerns were not limited to issues of the exclusion of competitors or foreclosure of the market. On the contrary, they extended to all the dealings between Alrosa and De Beers which sought jointly to regulate, by methods different from those consistent with normal competition, the volume, price and range of rough diamonds on the world market, in such a way as to eliminate an independent supplier from the market, to consolidate the role of marketmaker played by De Beers and to undermine the maintenance and development of competition, as indicated in recitals 28, 30 and 32 in the preamble to the Decision.

74. Finally, the Commission submits that the applicant is not entitled to maintain that the implementation of the Decision will have anti-competitive effects. It contends that the arguments put forward in that regard are irrelevant inasmuch as they wrongly present Alrosa as being a supplier of De Beers whereas it is in fact a competitor of De Beers, and are neither persuasive from an economic point of view nor supported on any other basis.

75. In the second place, the Commission maintains that the Decision does not infringe the principle of proportionality.

76. In that regard, it first of all acknowledges that the principle of proportionality is applicable to decisions by which it applies Article 9 of Regulation No 1/2003.

77. However, the specific nature of that provision must be taken into account. Unlike Article 7 of Regulation No 1/2003, which allows the Commission to establish the existence of an infringement, to order the parties concerned to bring it to an end and to impose on them any structural or behavioural

remedy, including the cessation of trading relations which are contrary to the Community competition rules, Article 9 of that regulation provides that the Commission, without making a finding of infringement, may establish that there is no need for further action since the undertakings concerned have voluntarily offered commitments which meet its competition concerns.

78. In the light of these factors, a decision pursuant to Article 9 of Regulation No 1/2003 does not need to be based on a statement of reasons such as that required for a decision pursuant to Article 7 of Regulation No 1/2003, in particular where it proves difficult to determine the nature or extent of the commitment necessary to meet the concerns expressed by the Commission, for example because the conduct of concern to the Commission is novel or specific, as in the present case. Moreover, the achievement of the objective of Article 9 of Regulation No 1/2003 would be undermined if the outcome of the review of a decision pursuant to that provision were to depend on the appraisal of another, hypothetical, decision adopted under Article 7 of that regulation. That would imply that the Commission would none the less have to carry out an assessment, as for a decision taken pursuant to Article 7 of Regulation No 1/2003, and would thus forego a part of the efficiency gains which the legislature sought to obtain through Article 9 of that regulation.

79. Furthermore, before accepting commitments offered to it, the Commission has to ascertain whether they deal sufficiently with the competition concerns that have been identified. Article 9 is an enforcement tool in that context.

80. The Commission accepts that the application of the principle of proportionality obliges it to reject commitments that are manifestly excessive, but adds that in so far as commitments are offered voluntarily by the undertakings concerned, such a case is likely to remain exceptional. In any event, it could not be obliged to conduct a parallel assessment for the purposes of a hypothetical decision adopted under Article 7 of Regulation No 1/2003, since such a parallel assessment would undermine the very purpose of Article 9 of that regulation in terms of effectiveness of procedures.

81. The Commission concludes from the above that, in the light of the objective and structure of Article 9 of Regulation No 1/2003, and if the usefulness of this provision is to be preserved, judicial review of decisions applying that provision should be limited to verifying whether or not there has been a manifest breach of the principle of proportionality and, more generally, whether or not there has been a manifest error in the complex economic assessment carried out to determine whether the commitments offered by the undertakings concerned meet the concerns expressed in the preliminary assessment.

82. The Commission submits, next, that in the present case the Decision is not disproportionate and, in particular, does not unduly affect Alrosa's legitimate business interests.

83. First, the applicant is not entitled to maintain that the Decision went beyond what was necessary in making binding the individual commitments proposed by De Beers. It is misleading to claim that the notified agreement reserved only one half of Alrosa's annual output to De Beers, since the other half was in any event reserved for the Russian market and the notified agreement, as originally framed, thus covered the entire annual output intended for the world market, and then, had the joint commitments been made binding, 36% of that output. Moreover, these percentages should not be viewed in isolation but seen against the background of trading relations that had been in place for almost half a century with a view to jointly regulating output and prices. It was in the light of those factors that, first, the Commission expressed concerns as to control of the market by De Beers and the inability of Alrosa to compete with it fully; that, secondly, the interested third parties then confirmed that it was necessary to bring the trading relationship between those companies to an end; and, thirdly, that De Beers unilaterally offered such commitments and by doing so allayed any possible concerns. The Commission also contends that the prohibition on auctions open to all is justified in the light of the past practices of Alrosa and De Beers in the case of ad hoc sales

of a willingbuyer/willingseller' kind. On any basis, the applicant has not shown in any way how less onerous commitments, such as the joint commitments previously offered to the Commission, could have been sufficient.

84. Secondly, the applicant is not entitled to maintain that the Decision has caused it hardship which is disproportionate to the objective pursued. The Commission took due account of its interests by allowing it to submit observations on the individual commitments offered by De Beers and by providing for a transitional phase intended to enable Alrosa to put in place an alternative distribution system. Moreover, in September 2003, Alrosa itself submitted undertakings to the Commission which involved the complete and indefinite cessation of its trading relations with De Beers. Lastly, it is not the case that Alrosa will be unable to enter into contractual relations with De Beers for an indefinite period after that transitional phase, since the proceedings may always be reopened under Article 9(2) of Regulation No 1/2003.

85. Thirdly, the applicant has no basis for alleging that the Decision discriminates against it inasmuch as its situation vis-à-vis De Beers differs from that of other suppliers owing, first, to Alrosa's position as a principal competitor of that dominant undertaking and, secondly, to its longstanding trading relationship with that undertaking.

Findings of the Court

- The powers conferred on the Commission by Article 9 of Regulation No 1/2003

86. It is clear from the actual wording of Article 9 of Regulation No 1/2003 that the Commission may, by decision, make commitments offered by the undertakings concerned binding where those commitments satisfy the concerns expressed in its preliminary assessment. Since offers made by undertakings are themselves without binding legal effect, it is the decision of the Commission taken under Article 9 of Regulation No 1/2003, and that decision alone, which has legal consequences for the undertakings.

87. Because the effect of that decision is to bring to an end the proceedings to establish and penalise an infringement of the competition rules, it cannot be considered as being a mere acceptance on the Commission's part of a proposal that has been freely put forward by a negotiating partner, but constitutes a binding measure which puts an end to an infringement or a potential infringement, as regards which the Commission exercises all the prerogatives conferred on it by Articles 81 EC and 82 EC, with the only distinctive feature being that the submission of offers of commitments by the undertakings concerned means that the Commission is not required to pursue the regulatory procedure laid down under Article 85 EC and, in particular, to prove the infringement.

88. By making a particular type of conduct of an operator in relation to third parties binding, a decision adopted under Article 9 of Regulation No 1/2003 may indirectly have legal effects erga omnes , which the undertaking concerned would not have been in a position to create on its own; the Commission is thus their sole author from the time at which it makes binding the commitments offered by the undertaking concerned and accordingly assumes sole responsibility for them. It is not obliged in any way to take into account and, a fortiori , to take into account on a take-it-or-leave-it basis, the offers of commitment which the undertakings concerned submit to it.

89. Although Regulation No 1/2003 does not define the concept of undertaking concerned', it is clear from its wording that that expression relates to undertakings which are responsible for the conduct in question and which are liable to be penalised because of it.

90. Proceedings under Article 82 EC therefore involve, as a rule, the undertaking which is in a dominant position and the conduct of which is liable to constitute an abuse. If the correct interpretation were to be that all undertakings liable to be affected by behavioural commitments intended to put an end to an established or contemplated abuse must be associated with the offer of commitments

in their capacity as undertakings concerned, that would result in the use of Article 9 of Regulation No 1/2003 being impossible in practice in most of the situations to which Article 82 EC applies.

91. As regards the period in which the decision making commitments binding may remain in force, it should be noted that while Article 9(1) of Regulation No 1/2003 provides that such a decision may be adopted for a specified period, it does not, however, require this. The definitive wording of Article 9 of Regulation No 1/2003 falls to be distinguished in that regard, as the Commission rightly points out, from the wording which had been used at the stage of the Commission proposal for a Council Regulation on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (COM(2000) 582 final), which provided that such a decision was to be adopted for a specified period'. There is, accordingly, no reason of principle which prohibits the Commission from making commitments for an indefinite period binding.

92. Furthermore, although Article 9 of Regulation No 1/2003 does not, unlike Article 7(1), refer to the principle of proportionality, the Commission is obliged to comply with that principle when it adopts decisions on the basis of Article 9. The principle of proportionality is recognised by settled case-law as constituting a general principle of Community law (Fedesa and Others , paragraph 13).

93. Recital 34 in the preamble to Regulation No 1/2003 states, moreover, that in accordance with the principles of subsidiarity and proportionality as set out in Article 5 [EC], this Regulation does not go beyond what is necessary in order to achieve its objective, which is to allow the Community competition rules to be applied effectively'.

94. The Commission accepts in its observations that the principle of proportionality applies to decisions adopted under Article 9 of Regulation No 1/2003. It none the less considers that that principle should be applied differently under Article 7(1) and under Article 9(1) of that regulation.

95. In that regard, the Court finds, in the first place, that the objective of Article 7(1) of Regulation No 1/2003 is the same as that of Article 9(1) of that regulation and is indissociable from the main objective of Regulation No 1/2003, which is to ensure the effective application of the competition rules laid down under the Treaty.

96. In order to attain that objective, the Commission possesses a margin of discretion in the choice offered to it by Regulation No 1/2003: it may make the commitments proposed by the undertakings concerned binding through the adoption of a decision under Article 9 of that regulation, or it may follow the procedure laid down under Article 7(1), which requires that an infringement be established.

97. Nevertheless, the existence of that margin of discretion as to the choice of procedure to be followed does not relieve the Commission of the obligation to comply with the principle of proportionality when it decides to make commitments offered under Article 9(1) of Regulation No 1/2003 binding.

98. In the second place, according to settled case-law in the matter, the principle of proportionality requires that the measures adopted by Community institutions must not exceed what is appropriate and necessary for attaining the objective pursued (Case T-260/94 Air Inter v Commission [1997] ECR II-997, paragraph 144, and Van den Bergh Foods v Commission , paragraph 201); when there is a choice between several appropriate measures, recourse must be had to the least onerous, and the disadvantages caused must not be disproportionate to the aims pursued (Case 265/87 Schräder [1989] ECR 2237, paragraph 21, and Case C174/05 Zuid-Hollandse Milieufederatie and Natuur en Milieu [2006] ECR I2443, paragraph 28).

99. The review of the proportionality of a measure is thus an objective review, since the appropriateness of and the need for the contested decision must be assessed in relation to the aim pursued by the institution. For decisions adopted under Article 7 of Regulation No 1/2003, the aim is to put

an end to the infringement which has been established; for those adopted under Article 9 of that regulation, the aim is to address the concerns expressed by the Commission in its preliminary assessment, which justify it envisaging the adoption of a decision requiring an infringement to be brought to an end.

100. In cases to which Article 7(1) of Regulation No 1/2003 applies, the Commission has to establish the existence of an infringement, which implies a clear definition of the relevant market and, where relevant, of the abuse for which the undertaking in question is alleged to be responsible. It is true that, under Article 9(1) of that regulation, the Commission is not required formally to establish the existence of an infringement, as, moreover, recital 13 in the preamble to Regulation No 1/2003 indicates, but it must none the less establish the reality of the competition concerns which justified its envisaging the adoption of a decision under Articles 81 EC and 82 EC and which allow it to require the undertaking concerned to comply with certain commitments. This presupposes an analysis of the market and an identification of the infringement envisaged which are less definitive than those which are required for the application of Article 7(1) of Regulation No 1/2003, although they should be sufficient to allow a review of the appropriateness of the commitment.

101. Indeed, it would be contrary to the scheme of Regulation No 1/2003 for it to be possible to take a decision which would, under Article 7(1) of the regulation, fall to be regarded as disproportionate to the infringement that had been established, by having recourse to the procedure laid down under Article 9(1) and adopting a decision in the form of a commitment that is made binding, on the ground that the infringement does not have to be formally proved in such a case.

102. It has already been held, on the basis of Article 3 of Regulation No 17, that the burdens imposed on undertakings in order to bring an infringement of competition law to an end must not exceed what is appropriate and necessary to attain the objective sought, namely re-establishment of compliance with the rules infringed (RTE and ITP v Commission , paragraph 93). The same interpretation must be given to the first sentence of Article 7(1) of Regulation No 1/2003, the wording of which is very similar to that of Article 3(1) of Regulation No 17.

103. It follows that the Commission cannot, without going beyond the powers conferred on it both by the competition rules of the EC Treaty and by Regulation No 1/2003, adopt on the basis of Article 7(1) of that regulation a decision prohibiting absolutely any future trading relations between two undertakings unless such a decision is necessary to re-establish the situation which existed prior to the infringement (see, to that effect, Case T-24/90 Automec v Commission [1992] ECR II2223, paragraphs 51 and 52).

104. No objective consideration based on the difference between Article 7 and Article 9 of Regulation No 1/2003 allows any other conclusion to be reached as regards the limits which should be imposed on the capacity of the Commission to lay down binding measures under Article 9(1) of that regulation.

105. In the third place, the voluntary nature of the commitments also does not relieve the Commission of the need to comply with the principle of proportionality, because it is the Commission's decision which makes those commitments binding. The fact that an undertaking considers, for reasons of its own, that it is appropriate at a particular time to offer certain commitments does not of itself mean that those commitments are necessary.

106. Moreover, the Court of Justice has held, as regards the former Regulation No 17, that in some circumstances the obligations imposed by a commitment on the parties must be regarded in the same way as orders requiring an infringement to be brought to an end (Joined Cases C-89/85, C-104/85, C-114/85, C-116/85, C117/85 and C-125/85 to C129/85 Ahlström Osakeyhtiö and Others v Commission [1993] ECR I1307, paragraph 181). The Court of Justice held that, in giving that commitment, the undertakings concerned merely assented, for their own reasons, to a decision which the Commission was empowered to adopt unilaterally (Ahlström Osakeyhtiö and Others , paragraph 181).

107. The fact that the commitments are proposed by an undertaking does not therefore limit the review which the Court is to conduct of the well-foundedness of the Commission's decision to make those commitments binding.

108. Lastly, the level of review carried out by the Court of the analyses carried out by the Commission on the basis of the competition rules of the Treaty must take into account the margin of discretion which underlies each decision under consideration and is justified by the complexity of the economic rules to be applied. Having regard to the effect of decisions taken under Articles 81 EC and 82 EC on the fundamental economic freedoms guaranteed by the Treaty, cases involving a limited review must be restricted to those in which the contested decision is based on a complex economic assessment, save in fields, such as concentrations, where the existence of a discretionary power is essential to the exercise of the powers of the regulatory institution (Case C-12/03 P Commission v Tetra Laval [2005] ECR I-987, paragraphs 38 to 40).

109. It is true that, in the context of the review of concentrations, settled caselaw provides that the Commission enjoys a broad discretion in assessing the necessity of obtaining commitments in order to dispel the serious doubts raised by a notified concentration (Case T-158/00 ARD v Commission [2003] ECR II-3825, paragraphs 328 and 329). The review limited to manifest error which the Court undertakes in that field is justified by the prospective nature of the economic analysis carried out by the Commission in order to be able to find that the concentration in question will not create or strengthen a dominant position (Case T102/96 Gencor v Commission [1999] ECR II753, paragraph 163).

110. By contrast, the analysis which the Commission is required to carry out in proceedings initiated under Regulation No 1/2003 concerns, whether a decision adopted under Article 7(1) or Article 9(1) of Regulation No 1/2003 is involved, existing practices. Plainly, that fact does not mean that complex economic assessments may not be necessary, but it cannot mean that, in the absence of such assessments, the review undertaken by the Court of the decisions of the Commission is, on any basis, to be limited to manifest errors of assessment.

111. It follows that the Court must verify in the present case whether the measures made binding by the Decision were appropriate and necessary to bring to an end the abuse that had been identified in the Commission's preliminary assessment.

- Whether the Decision complied with the principle of proportionality

112. According to settled case-law, the principle of proportionality requires that measures adopted by Community institutions should not exceed the limits of what is appropriate and necessary in order to attain the aim pursued, and where there is a choice between several appropriate measures, recourse must be had to the least onerous, and the disadvantages caused must not be disproportionate to the aims pursued (Fedesa and Others , paragraph 13, and Case C-180/00 Netherlands v Commission [2005] ECR I6603, paragraph 103).

113. The aim pursued by the Commission in adopting the Decision must be sought in the preliminary assessment contained in the statement of objections addressed to De Beers under Article 82 EC. That assessment provided that the notified agreement prevented Alrosa from operating as an independent supplier on the rough diamond market and thereby eliminated a source of supply for potential customers. The Commission therefore takes the view that the notified agreement leads to exclusivity of distribution for the benefit of De Beers and is capable of constituting an abuse of a dominant position.

114. It follows that the abuse identified in the Commission's preliminary assessment is constituted by the notified agreement, the entering into of which by De Beers is presented as an abuse of its dominant position. In those circumstances, it could be said that the mere fact of not permitting the parties to implement that agreement would, in the context of the proceedings initiated under

Article 81 EC, have been sufficient to put an end to any possible abuse.

115. However, and even though the complaints set out in the statement of objections under Article 82 EC relate only to the notified agreement, it may be noted that the concerns expressed by the Commission in the Decision also relate to the situation disclosed by the notified agreement, that is to say, more precisely to the existence of long-standing relations between the parties, the continuation of which the notified agreement ensures.

116. Thus, point 28 of the Decision states:... the investigated practices raising concerns due to dominance and the marketmaker role of De Beers are those arising from the purchase relationship between De Beers and its most important competitor Alrosa in the light of its historic context. The Commission's investigation revealed that De Beers and Alrosa had established their long-lasting trading relationship in order jointly to regulate volume, assortment and prices for rough diamonds sold on the world market. The basis for today's purchases still appears to be the same and to constitute one of the main elements for De Beers' market-maker role'.

117. It can therefore be concluded that the notified agreement was envisaged in the preliminary assessment as being the source of the Commission's competition concerns not only as such, which would render any recourse to Article 82 EC inappropriate, but because it strengthened and perpetuated pre-existing trading relations, considered to be abusive in themselves.

118. Point 46 of the Decision states that the main reason for the Commission's concerns regarding the practice identified in the proceedings under Article 82 EC was De Beers' enhancing or maintaining its dominant position by reducing access to a viable source of alternative supply of rough diamonds for potential customers and by hindering the second biggest competitor [Alrosa] from competing fully with De Beers'.

119. Therefore, the aim pursued by the Commission in making the individual commitments proposed by De Beers binding was to bring to an end practices which prevented Alrosa from establishing itself as an effective competitor on the market in question and to provide third parties with an alternative source of supply.

120. Accordingly, the need for the Decision must be assessed in the light of those two objectives.

121. Point 47 of the Decision states that the individual commitments proposed by De Beers were sufficient to address the concerns expressed in the Commission's preliminary assessment, a matter which the applicant does not contest. However, it remains necessary to consider whether the individual commitments proposed by De Beers and made binding by the Decision also satisfy the criterion of necessity, even though the conclusion of the Decision does not address that aspect of the proportionality of the measure.

122. In that regard, as was stated above, judicial review of Commission measures involving complex economic assessments must be confined to verifying whether the rules on procedure and on the statement of reasons have been complied with, whether the facts have been accurately stated and whether there has been any manifest error of appraisal or misuse of powers (Joined Cases C-204/00 P, C-205/00 P, C-211/00 P, C-213/00 P, C-217/00 P and C219/00 P Aalborg Portland and Others v Commission [2004] ECR I123, paragraph 279).

123. In order for the Court to be able to undertake only a limited review of the proportionality of the Decision in the present case, it would require to be in a position to determine that the Commission had carried out its assessment on the basis of a complex economic analysis which allowed it to conclude that the commitments that were made binding were necessary in order to address the concerns set out in its preliminary assessment.

124. Both in its defence and at the hearing, the Commission indicated that there might have been

a grey zone between the joint commitments and the individual commitments proposed by De Beers, but that the identification of alternative solutions to the commitments that were made binding would have required a complex economic assessment which Article 9 of Regulation No 1/2003 is intended to avoid. The Commission also stated that, having regard to the difficulty in establishing alternative solutions, it had reached the conclusion that a complete prohibition represented the only appropriate solution in order to address its initial concerns.

125. It follows that in the present case the Commission did not carry out a complex economic assessment justifying a limitation of the review to be undertaken by the Court of the Decision and that its contention that a limited review should be undertaken is based on the particular characteristics of Article 9 of Regulation No 1/2003 alone. As is mentioned in paragraph 100 of this judgment, although Article 9 does not require the Commission to adduce evidence of the infringement targeted by the proceedings, that does not relieve it of the necessity of establishing an analytical framework which is sufficient to allow an effective judicial review of the proportionality of the measure adopted.

126. The Court holds that, on any basis, the Decision is vitiated by an error of assessment which, moreover, is manifest. It is clear from the circumstances of the case that other, less onerous, solutions than the permanent prohibition of transactions between De Beers and Alrosa were possible in order to achieve the aim pursued by the Decision, that their determination presented no particular difficulties of a technical nature and that the Commission could not relieve itself of the duty to consider such solutions.

127. In that regard, the Court notes in the first place that, according to settled case-law, an undertaking which is in a dominant position on a market and ties purchasers - even if it does so at their request - by an obligation or promise on their part to obtain all or most of their requirements exclusively from that undertaking abuses its dominant position within the meaning of Article 82 EC (Hoffmann-La Roche v Commission , paragraph 89). Applied to a purchaser in a dominant position, that case-law means that for De Beers to reserve to itself the whole of Alrosa's production exported outside the CIS could, even if the latter consented, constitute an abuse in the context of their relations.

128. Prima facie, the most appropriate way of bringing an abuse of this kind to an end would therefore have been to prohibit the parties from entering into any agreement allowing De Beers to reserve to itself the whole, or even a material part, of Alrosa's production exported outside the CIS, in order for Alrosa to re-establish its independence on the market and for third-party access to an alternative source of supply to be guaranteed, without it being necessary to prohibit all purchases by De Beers of diamonds produced by Alrosa.

129. In the second place, joint commitments had been proposed in December 2004 by De Beers and Alrosa, and the Commission has failed to explain in what way they did not address the concerns expressed in its preliminary assessment.

130. It is true that the Commission is never obliged under Article 9(1) of Regulation No 1/2003 to decide to make commitments binding instead of proceeding under Article 7 of that regulation. It is therefore not required to give the reasons for which commitments are not in its view suitable to be made binding, so as to bring the proceedings to an end.

131. However, compliance with the principle of proportionality requires that, when measures that are less onerous than those it proposes to make binding exist, and are known by it, the Commission should examine whether those measures are capable of addressing the concerns which justify its action before it adopts, in the event of their proving unsuitable, the more onerous approach.

132. The joint commitments proposed in December 2004 by De Beers and Alrosa, which the Commission

admittedly was under no procedural obligation to take into account, either in its decision or in its statement of reasons, none the less represented a less onerous measure than the measure which it decided to make binding and it follows that examination of those commitments is relevant in that regard to the review of proportionality.

133. In so far as, first, they progressively opened up access by third parties to Alrosa's production and, secondly, gave Alrosa the time necessary to develop its own distribution system for rough diamonds, and therefore to become an effective competitor to De Beers, the joint commitments were, prima facie, capable of addressing the concerns expressed by the Commission.

134. The Court finds that, for the period from 2005 to 2009, the joint commitments provided for a substantial reduction in the quantity of diamonds reserved by Alrosa for De Beers, with that quantity going down from USD 700 million in 2005 to USD 275 million with effect from 2009. Alrosa would therefore have sold, with effect from 2009, only 35% of the quantity of diamonds to De Beers that it had sold to that company in 2004. It would accordingly have been difficult for De Beers to influence the prices set by Alrosa, inasmuch as more than two thirds of the diamonds exported by Alrosa outside the CIS would have been sold at a price determined in negotiation with third parties. Even if it were to be accepted that De Beers and Alrosa wished to coordinate their pricing policies, it would thus be difficult to conceive how such coordination could have been put into practice, in so far as, faced with a refusal by third parties to buy at the price agreed between the two undertakings, Alrosa would not have been able to turn to De Beers in order to sell the unsold stock. The joint commitments would thus have given third parties effective access to an alternative and independent source of supply.

135. A progressive reduction over five years in the quantity sold to De Beers, coupled with a limit on sales to a maximum value of USD 275 million with effect from 2009, would also have allowed Alrosa to set up its distribution system outside the CIS, without which it could not establish itself as an effective competitor to De Beers. The Court notes, however, that at point 47 of the Decision the Commission stated that the transitional period from 2006 to 2008, that is to say, three years, was necessary for Alrosa to build a competitive distribution system for the quantities of diamonds previously sold by De Beers'. However, the Commission does not explain in what way such a period could have been sufficient for that purpose, when Alrosa had informed the Commission in September 2003 that it needed a period of eight years to put in place an effective distribution system and that it would only be with effect from 2012 that it took the view that it could stop all sales of rough diamonds to De Beers, as is clear from the documents annexed to the application.

136. It will also be noted that on 3 June 2005, the date on which the notice relating to the joint commitments was published in the Official Journal of the European Union , the Commission intended, subject to the results of the market test, to make those commitments binding. The Commission was therefore of the view that those commitments addressed, prima facie, the concerns it had expressed in its preliminary assessment.

137. In the third place, even if it were to be accepted that the joint commitments were unable to address the Commission's initial concerns, changes to them would also have been capable of resolving the competition problems arising from the notified agreement, without it being necessary to require the parties to put an end completely to all trading relations with effect from 2009.

138. In particular, it would have been possible to respond to the amendment proposed by the applicant in its letter to the Commission of 6 February 2006, which would have allowed it to sell, by way of sales to De Beers at auction, diamonds having a maximum annual value of USD 275 million. Such an amendment would, first, have given third parties full access to Alrosa's output and, secondly, have allowed Alrosa to continue to sell a limited quantity to the largest buyer on the market on an ad hoc basis.

139. It is true that the Commission cannot substitute itself for the parties so as to amend the commitments they offer under Article 9 of Regulation No 1/2003 in order that those commitments may address the concerns set out in its preliminary assessment. However, there is nothing to prevent it from making proposed commitments binding only in part or to a particular extent. Moreover, it appears that in the present case, at the meeting of 27 October 2005, the Commission had proposed to the parties that the joint commitments be amended. On that occasion, it announced its intention to take a decision, based on Article 7 of Regulation No 1/2003, which would prohibit them from having any trading relations with effect from 2009 if they did not offer commitments to that effect before the end of November 2005.

140. None the less, the Commission cannot lawfully propose to the parties that they should offer it commitments which go further than a decision which it could have adopted under Article 7(1) of Regulation No 1/2003. In the present case, a decision adopted under that provision which required De Beers to bring to an end with effect from 2009, for an indefinite period, all direct or indirect trading relations with Alrosa would manifestly go beyond what the Commission could have required if it were to comply with the principle of proportionality, having regard to the objective pursued.

141. Only exceptional circumstances, which have not been identified in the Decision and which are not apparent from the file, can justify a decision adopted under Article 9(1) prohibiting undertakings completely and indefinitely from contracting amongst each other. It is true that, where the undertakings concerned have a collective dominant position, it is possible that nothing less than a complete prohibition of any dealings between them may be the only way of preventing abuses. But, while the Commission gave it to be understood in the statement of objections notified to the parties under Article 81 EC that an oligopoly might have existed between Alrosa and De Beers, the analysis set out in the Decision is based solely on the dominant position of De Beers and not on a possible collective dominant position of the two undertakings. Both in its defence and at the hearing, the Commission confirmed that the Decision should indeed be understood in that way.

142. Furthermore, the comparison made by the Commission between the commitments offered by the applicant in September 2003, the joint commitments and the commitments that were made binding cannot suffice to show that the latter were necessary, since the necessity for the prohibition imposed in the present case, in the form of commitments that were made binding, must be assessed objectively, having regard to the aim pursued by the Commission.

143. As regards the commitments proposed by the applicant in September 2003, on which the Commission relies in order to justify the proportionality of the measure, it is true that these envisage a complete and indefinite cessation of trading relations with De Beers. However, the Court finds, first, that those commitments provided for such a cessation of trading relations with effect from 2013 and not from 2009, which gave Alrosa further four years in which to develop a distribution system outside the CIS allowing it to sell the volume of rough diamonds previously sold to De Beers. The putting in place of such a system was clearly necessary in order to allow third parties to have access to Alrosa's output and to allow Alrosa to compete fully with De Beers. Secondly, Alrosa withdrew those commitments on the ground that they were not economically viable. Lastly, the fact that an undertaking has offered commitments at a particular time, for reasons of its own, does not mean that those commitments can be assumed to be proportionate and does not relieve the Commission of the obligation to verify their adequacy and their necessity as regards the aim which it is sought to achieve. Consequently, the fact that Alrosa proposed a number of commitments in September 2003 has no effect on the lawfulness of the Decision.

144. As regards the joint commitments proposed by the parties in December 2004, the Commission describes these as inadequate, on the ground that if De Beers was allowed to continue to buy rough diamonds from Alrosa up to a value of USD 275 million a year, that could prevent Alrosa from

competing with it, since the remaining two thirds of its production intended for export would make it more difficult for Alrosa to offer regular supplies of a wide range of diamonds. In addition, the Commission considers that De Beers could continue to use Alrosa's diamonds in order to perform its market-maker role.

145. However, the Court finds that the only point put forward by the Commission in support of the assertion that Alrosa's capacity to supply a wide variety of diamonds would be reduced if a maximum annual quantity equivalent to USD 275 million continued to be sold to De Beers is a reference to point 70 of the statement of objections under Article 81 EC. That point states: De Beers... has a considerable advantage over its competitors, not only because of its size but also because it is able to guarantee the best consistency [in the] supply [of rough diamonds] to its customers. That is because it has access to the output of a larger number of different mines producing a larger variety of rough diamonds and it is the only producer keeping large stocks'. That point does not explain why Alrosa could not guarantee a regular supply of significant quantities of rough diamonds if it continued to supply a limited quantity to De Beers.

146. Furthermore, even if it were to be accepted that the sale to De Beers of a limited quantity of diamonds could have allowed the latter to maintain or to reinforce its market-maker role, and hence its dominant position, an infringement of the competition rules would not necessarily be established. Since the object of Article 82 EC is not to prohibit the holding of dominant positions but solely to put an end to their abuse, the Commission cannot require an undertaking in a dominant position to refrain from making purchases which allow it to maintain or to strengthen its position on the market, if that undertaking does not, in so doing, resort to methods which are incompatible with the competition rules. While special responsibilities are incumbent on an undertaking which occupies such a position (Michelin v Commission , paragraph 57), they cannot amount to a requirement that the very existence of the dominant position be called into question.

147. In the present case, the Commission has required the parties to put an end to all trading relations, with the clear intention of weakening De Beers' role as marketmaker.

148. The Decision also de facto obliges Alrosa, which is not subject to the procedure initiated under Article 82 EC, to make significant changes to its structure and activity in order to compete with De Beers outside the CIS, and to do so within a period of three years.

149. The Commission is thus forcing an operator which is not directly concerned by the proceedings initiated under Article 82 EC to work towards a change in the structure of the market for the production and supply of rough diamonds. Such a measure exceeds the powers of the Commission under Article 82 EC.

150. The Commission lastly contends that the prohibition on transactions by way of open auction is justified in the light of the past practices of Alrosa and De Beers in relation to ad hoc sales (of a willingbuyer/willing-seller' kind). It argues that it would be legitimate to be concerned that those sales could allow the parties to continue to implement the notified agreement, since the quantities sold in such a case could be the same as the quantities laid down under that agreement.

151. In that regard, even if it were to be accepted that De Beers and Alrosa might have wished, by another route, to maintain the value of the transactions laid down under the notified agreement, the Commission was not without the means to take such measures against them as were necessary to ensure compliance with the competition rules. In particular, Article 9(2) of Regulation No 1/2003 provides that the Commission may reopen the proceedings where the undertakings concerned act contrary to their commitments. Likewise, Article 23(2) of that regulation allows it to penalise undertakings which fail to comply with a commitment made binding under Article 9.

152. Furthermore, even if it were the case that ad hoc sales between De Beers and Alrosa allowed

De Beers to maintain or strengthen its role as market-maker, such a result would not, of itself, contravene the competition rules, in so far as such sales were made to the party making the highest offer.

153. The Court accordingly does not accept the argument that to allow Alrosa to sell a particular quantity of diamonds to De Beers at auction would necessarily have imperilled the achievement of the objectives targeted by the Commission. Such sales would have allowed, first, third parties to gain access to Alrosa's production under the same conditions as De Beers, and, secondly, Alrosa to sell to the largest buyer on the market. Since the Commission has not established that criteria other than the value of the offer to purchase were taken into account by Alrosa in the case of sales actually made at auction, the argument based on the preferential treatment which De Beers would have enjoyed at such sales cannot be accepted. Moreover, in its letter of 6 February 2006, which was admittedly sent to the Commission after the expiry of the period allowed for new commitments to be submitted, Alrosa proposed to limit the value of diamonds sold to De Beers at auction to USD 275 million. At the very least, such a limit would have reduced the risks of distortion of competition put forward by the Commission.

154. It follows that there were, in the present case, less onerous alternative solutions for the undertakings than the total prohibition of transactions and that the Commission could not refuse to take them into consideration on the basis of the alleged difficulty in determining them.

155. As regards, lastly, the Commission's argument that the Decision is not permanent in nature because it would be possible to reopen the proceedings in accordance with Article 9(2) of Regulation No 1/2003, the Court points out that that possibility arises in three cases: where there has been a material change in any of the facts on which the decision was based; where the undertakings concerned act contrary to their commitments; and where the decision was based on incomplete, incorrect or misleading information. Since the situations justifying a reopening are thus exhaustively listed, Alrosa could not request that the proceedings be reopened on grounds such as those set out in its application, in particular on the basis that the principle of proportionality had been infringed. Furthermore, the Commission would have a discretion to refuse to reopen. The Commission's argument based on Article 9(2) of Regulation No 1/2003 cannot therefore be accepted.

156. That being so, the applicant is right to argue, first, that the prohibition on all trading relations between De Beers and itself for an indefinite period manifestly goes beyond what was necessary in order to achieve the targeted objective and, secondly, that other solutions existed that were proportionate to that objective. In making use of the procedure allowing commitments offered by an undertaking concerned to be made binding, the Commission was not relieved of its duty to apply the principle of proportionality, which requires in this case that there be an appraisal in concreto of the viability of those intermediate solutions.

157. It follows from all of the above that the plea alleging infringement of Article 9(1) of Regulation No 1/2003 and of the principle of proportionality is well founded and that the Decision should be annulled on that ground alone.

158. However, having regard to the powers of the Commission in relation to the enforcement of judgments annulling decisions adopted on the basis of Articles 81 EC and 82 EC, it is appropriate, for the sake of completeness, to give a ruling in the present case on the applicant's first plea, alleging infringement of the right to be heard.

The plea alleging infringement of the right to be heard

Arguments of the parties

159. The applicant claims that the Decision was adopted in breach of its right to be heard in that

the Commission, first, did not inform it of the reasons for which it took the view, in the light of the observations submitted by the interested third parties, that the joint commitments did not address the Commission's concerns and, secondly, that the Commission did not afford it an opportunity to state its position in that regard.

160. In support of that plea, Alrosa argues first of all that the right to be heard, as guaranteed in the context of proceedings applying the competition rules, imposes two obligations on the Commission. That right, which is available to every person before any individual measure which would affect him or her adversely is taken, as is mentioned in the first indent of Article 41(2) of the Charter of Fundamental Rights of the European Union proclaimed in Nice on 7 December 2000 (OJ 2000 C 364, p. 1), implies that the parties concerned should be put in a position before the measure is adopted to submit their observations on the objections which the Commission considers must be upheld against them and that in that regard they must be informed of the facts on which those objections are based (Joined Cases 56/64 and 58/64 Consten and Grundig v Commission [1966] ECR 299) and of the conclusions drawn from those matters by the Commission (Case T-9/89 Hüls v Commission [1992] ECR II-499, paragraph 38).

161. The applicant next argues that the concerns expressed by the Commission in the Decision differ from those previously set out by it in its preliminary assessment, in the form in which it was brought to Alrosa's notice.

162. Initially, the Commission expressed concerns in relation to two points. As is apparent from the statement of objections concerning Article 81 EC and Article 53 of the EEA Agreement and the summary notice, it stated, first, that the agreement appeared to restrict competition on the ground that it reserved half of Alrosa's production to De Beers and thereby reduced Alrosa's capacity to conduct itself as an independent operator on the market. The Commission indicated, secondly, that the agreement appeared to constitute an abuse of a dominant position on the ground that it deprived De Beers' customers of access to an alternative source of supply and strengthened De Beers' market power at the expense of its main competitor. It was in the light of that preliminary assessment that the applicant and De Beers offered joint commitments which the Commission initially intended to make binding.

163. Subsequently, the Commission changed its view. Once it had been given notice of the comments submitted by the interested third parties in response to the summary notice, which mentioned six other concerns as regards the competition rules, the Commission stated, in recitals 41 and 42 in the preamble to the Decision, that, whilst they did not identify any new relevant concerns, those observations, and the Commission's own analysis, finally led it to form the view that the joint commitments did not meet its concerns.

164. Lastly, the applicant considers that, in those circumstances, it was for the Commission to afford it the possibility of making its views known not only as regards the observations submitted by the interested third parties but also as regards the analysis on the basis of which the Commission subsequently took the view that the joint commitments were no longer sufficient and that it was necessary to make the individual commitments proposed by De Beers binding. That, however, did not happen.

165. The Commission's objections in that regard are, it argues, unfounded. First, the Commission cannot reasonably maintain, as it did in recital 41 in the preamble to the Decision, that the individual commitments merely enhanced the joint commitments. The absolute and potentially indefinite prohibition on having any trading relationship whatever with De Beers is, from an economic point of view, quite different in nature from the possibility of pursuing such a relationship, albeit under restrictive conditions. Secondly, the Commission cannot legitimately argue that the applicant is not a party concerned by the proceedings initiated under Article 82 EC and Article 54 of the EEA Agreement.

Since the Commission has itself acknowledged that the circumstances of the case warranted hearing the applicant in relation to the observations submitted by the interested third parties, it was not justified in refusing to hear it in regard to its revised assessment.

166. The Commission takes the view that this plea is unfounded.

167. First of all, it states that it is necessary to distinguish the applicant's position in the context of the proceedings initiated under Article 81 EC and Article 53 of the EEA Agreement, on the one hand, and its position under the proceedings initiated under Article 82 EC and Article 54 of the EEA Agreement, on the other. The first of those sets of proceedings was initiated against De Beers and Alrosa, which were addressees of a statement of objections, offered joint commitments to the Commission and were heard by it, in particular with regard to the observations submitted by the interested third parties regarding those commitments. However, those proceedings became devoid of all purpose by reason of the individual commitments proposed by De Beers and were therefore closed without any decision being adopted. The second set of proceedings was, for its part, initiated against De Beers but not against the applicant and led to the adoption of the Decision.

168. The Commission goes on to contend that the legal situation of the party concerned by proceedings applying the competition rules, that is to say, the legal situation of the person against whom those proceedings are initiated and upon whom a penalty may be imposed, must be distinguished from that of parties interested by those proceedings, that is to say, persons who may have an interest in its outcome but against whom those proceedings have not been initiated and upon whom a penalty will not be imposed. The scope of the right to be heard, as enshrined in general principles of law and the provisions of secondary law, is not the same for those two categories of persons.

169. Finally, the Commission advances an argument as to the specific nature of the legal situation of parties who are involved in some capacity in proceedings under the competition rules where it is envisaged that recourse will be had to Article 9 of Regulation No 1/2003. That provision, which was enacted in order to enable the Commission to bring the proceedings to an end rapidly and efficiently when it is offered commitments meeting its concerns, does not require the Commission to hear the parties in the same way as when that is not the case. In particular, the Commission's first task is not to address a statement of objections to the parties concerned but to inform the undertakings concerned of its concerns by means of a preliminary assessment. When those undertakings offer to it commitments which appear to meet its concerns and it envisages making them binding, the Commission must then enable interested third parties to submit their comments in that connection by publishing a summary notice in the Official Journal of the European Union.

170. Such publication does not prejudge the Commission's assessment and does not require it to apply Article 9 of Regulation No 1/2003. Thus, the Commission may continue its examination of the commitments offered by the undertakings concerned and may decide, in the light of that examination, and on the basis of any observations submitted by interested third parties and the circumstances of the case, to make those commitments binding, or to take the view that they fail to meet its concerns and examine a new set of commitments offered by the undertakings concerned, or indeed have recourse to the procedure laid down under Article 7 of Regulation No 1/2003. The Commission is accordingly under no obligation whatever to adopt a decision which applies Article 9 of Regulation No 1/2003.

171. In the present case, since the applicant is not a party concerned by the proceedings which led the Commission to adopt the Decision, there was no basis on which it might be entitled to the benefit of the rights conferred on the parties concerned by Article 27 of Regulation No 1/2003 and by Articles 10 to 12 of Regulation No 773/2004.

172. None the less, the applicant was in fact accorded the right to be heard to which it could legally claim to be entitled in the context of those proceedings. The scope of that right was determined

by the applicant's particular position in the present case. In essence, that position had its origin in the parallel pursuit of two sets of proceedings concerning agreements and abuses of a dominant position, under the provisions of Regulation No 17 and then of Regulation No 1/2003. It may also be accounted for by the successive presentation of joint commitments by the applicant and De Beers and then, following the market test, of the individual commitments proposed by De Beers.

173. Accordingly, the applicant was informed, first, of the concerns expressed by the Commission in its preliminary assessment of the notified agreement under Article 82 EC and Article 54 of the EEA Agreement, by means of the summary notice; secondly, of the observations submitted in that connection by the interested third parties; and, thirdly, of the individual commitments offered by De Beers. Furthermore, Alrosa had the possibility of making known its views on the comments of the interested third parties and on the individual commitments offered by De Beers, and in fact expressed its views in that connection.

174. Moreover, it is wrong to claim that the Commission raised fresh concerns following publication of the summary notice and receipt of the observations of the interested third parties. The Commission merely analysed whether the joint commitments of Alrosa and De Beers met or did not meet its concerns in regard to the agreement. The observations submitted by the interested third parties in that connection did not raise fresh issues and confirmed the inadequacy of the joint commitments.

Findings of the Court

175. Regulation No 1/2003 distinguishes between a number of categories of participants in the proceedings before the Commission: undertakings concerned' (Article 7), complainants' (Articles 7 and 27), undertakings or parties concerned' (Articles 9, 17, 18, 21(1), 27(2)), undertakings which are the subject of the proceedings' (Article 27(1)) and interested third parties' (Article 27(4)).

176. It is clear immediately that the applicant is not a complainant'. In addition, for the reasons set out above, De Beers alone is the undertaking concerned' and the subject of the proceedings' conducted by the Commission under Article 82 EC.

177. However, the applicant is also not a mere interested third party' to the proceedings for the purposes of Article 27(4) of Regulation No 1/2003. Alrosa is the contracting partner of De Beers in the context of a long-lasting bilateral trading relationship, which the Decision brings to an end. The applicant was also involved in both sets of proceedings initiated by the Commission following the notification of its agreement with De Beers.

178. The manner in which the Commission initiated the two sets of proceedings relating to the agreement between De Beers and Alrosa supports that conclusion.

179. Thus, following intimation of the notified agreement on 14 January 2003, the Commission initiated two sets of proceedings, one based on Article 81 EC, and the other on Article 82 EC. The two sets of proceedings were registered under the same number (38.381), as the Commission stated at the hearing.

180. The Commission sent the statement of objections concerning the proceedings based on Article 81 EC to the applicant and the statements of objections concerning both sets of proceedings to De Beers. Each of the statements related to the agreement which De Beers and Alrosa intended to enter into, against the background of the relations which existed between the parties at the time.

181. Following on the statements of objections, the applicant and the Commission entered into discussions, to which De Beers subsequently became a party, with a view to reaching a negotiated settlement of the case. On 31 March 2003, the applicant and De Beers sent joint written observations to the Commission in reply to the statement of objections issued under Article 81 EC. Those observations

also addressed the compatibility of the agreement with Article 82 EC, although the applicant did not receive a copy of the statement of objections sent to De Beers under that article.

182. Moreover, on 7 July 2003, the applicant and De Beers made oral submissions to the Commission. On 14 December 2004, the applicant and De Beers jointly submitted commitments designed to address the concerns which the Commission had notified to them.

183. The statement in case COMP/E-2/38.381 - De Beers - Alrosa of 3 June 2005, in which the Commission referred to the joint commitments offered by the applicant and De Beers and invited the interested third parties to submit to it their observations, also makes no distinction between the two sets of proceedings.

184. To that, there falls to be added the fact that on 27 October 2005 the applicant and De Beers attended a joint meeting with the Commission, at which the Commission informed them of the observations of the 21 interested third parties submitted following the notice of 3 June 2005.

185. Lastly, in a letter of 22 February 2006, the Commission informed the applicant that the proceedings involving it had been brought to an end as a result of the individual commitments proposed by De Beers in the proceedings brought under Article 82 EC.

186. This summary of the facts shows that the proceedings taken by the Commission under Articles 81 EC and 82 EC were at all times treated de facto as being a single set of proceedings, not only by the Commission but also by the applicant and by De Beers.

187. In the circumstances of the present case, the close connection between the two sets of proceedings initiated by the Commission and the fact that the Decision expressly refers to Alrosa should have led to the applicant being accorded, as regards the proceedings taken as a whole, the rights given to an undertaking concerned' within the meaning of Regulation No 1/2003, although, strictly speaking, it did not fall to be so classified in the proceedings relating to Article 82 EC.

188. Recital 37 in the preamble to Regulation No 1/2003 states that it respects the fundamental rights and observes the principles recognised in particular by the Charter of Fundamental Rights of the European Union' and that it should be interpreted and applied with respect to those rights and principles'. Article 41(2) of the Charter of Fundamental Rights of the European Union provides that every person has the right to be heard before any individual measure which would affect him or her adversely is taken'.

189. Likewise, Article 27(2) of Regulation No 1/2003 provides that the rights of defence of the parties concerned shall be fully respected in the proceedings' and that the parties concerned are to be entitled to have access to the Commission's file'.

190. Lastly, recital 10 in the preamble to Regulation No 773/2004, which relates to the conduct of proceedings by the Commission pursuant to Articles 81 EC and 82 EC, states: in order to respect the rights of defence of undertakings, the Commission should give the parties concerned the right to be heard before it takes a decision'.

191. It should also be noted that observance of the right to be heard is, in all proceedings initiated against a person which are liable to culminate in a measure adversely affecting that person, a fundamental principle of Community law which must be guaranteed even in the absence of any rules governing the proceedings in question (Case C-32/95 P Commission v Lisrestal and Others [1996] ECR I-5373, paragraph 21).

192. The Court finds that on 3 June 2005, the date on which the notice in which the Commission referred to the joint commitments offered by De Beers and the applicant was published, the Commission intended to make those commitments binding, subject to the result of the consultation with third parties. It accordingly took the view that those commitments addressed, prima facie, the concerns

it had expressed in its preliminary assessment.

193. However, following receipt of the comments from third parties, the Commission took the view that the joint commitments did not address its initial concerns and that the only solution that could be envisaged was the cessation of all relations between Alrosa and De Beers with effect from 2009. The Commission none the less stated in point 41 of the Decision that a large majority of the observations confirmed [its] competition concerns, as expressed in its preliminary assessment, but indicated that the Commission's competition concerns would be insufficiently addressed with the proposed commitments' and that no relevant new concerns' were identified in those third-party observations. That means that the Commission did not accept any new objections raised by the third parties.

194. However, the Court is not convinced by the Commission's assertion that the comments from the third parties did no more than confirm its initial concerns. If the comments from the third parties added nothing to the Commission's preliminary assessment, the Commission could, in the circumstances, have made the joint commitments binding. If, on the contrary, the third parties took the view that the joint commitments were inadequate and if their comments led the Commission to conclude that only a definitive cessation of relations between the parties with effect from 2009 was capable of addressing its initial concerns, the Commission was under a duty to hear the parties on those observations, and on the other factual elements justifying its new conclusion. It is clear that the Commission can depart from the assessment made of the joint commitments only if the factual background has changed or if that assessment was undertaken on the basis of incorrect information.

195. It is true that the Commission was entitled to take the view, after receipt of the observations from the third parties, that the commitments proposed by the parties did not address the concerns set out in its preliminary assessment, since the purpose of the consultation with third parties provided for under Article 27(4) of Regulation No 1/2003 is precisely to allow the Commission to take a decision which will address the competition issues identified in its preliminary assessment.

196. However, it is necessary in a case of this kind, if the right to be heard is to be complied with, first, that the undertakings which proposed those commitments be informed of the essential factual elements on the basis of which the Commission required new commitments and, secondly, that those undertakings can express their views on the matter. In the present case, the applicant was provided only with a summary of the conclusions which the Commission drew from the third-party observations. At the meeting of 27 October 2005, the Commission merely informed it of the fact that the third-party comments had principally referred to the risk of partitioning of the market and the risk of a cartel between De Beers and Alrosa, and that the Commissioner for Competition had requested the team responsible for the case not to accept the joint commitments in the circumstances. At the same time, Alrosa received a summary of the third-party observations and was informed of the nature of the commitments which the Commission expected the parties to give following the negative result of the consultation with third parties: cessation of all relations with effect from 2009 and a new offer of commitments, on that basis, before the end of November 2005.

197. The undertakings concerned also have the right, under Article 27(2) of Regulation No 1/2003, of access to the Commission's file. According to settled case-law, that right is one of the procedural safeguards intended to protect the rights of the defence and to ensure, in particular, that the right to be heard can be exercised effectively (Joined Cases T-191/98 and T-212/98 to T-214/98 Atlantic Container Line and Others v Commission [2003] ECR II-3275, paragraph 334, and Case T-38/02 Groupe Danone v Commission [2005] ECR II-4407). In accordance with Article 15(1) of Regulation No 773/2004, the exercise of that right presupposes that the undertaking concerned has made a request to that effect to the Commission.

198. In that regard, the Court notes in the first place that the parties are in agreement that

the applicant requested a non-confidential version of the third-party observations. However, according to the applicant, that request was made orally at the meeting of 27 October 2005 and repeated in the letter of 6 December 2005, whereas, according to the Commission, it was not until 6 December 2005 that the applicant requested a non-confidential version of the third-party observations, that is to say, after the expiry of the period allowed for the submission of new commitments.

199. The file shows that at the meeting of 27 October 2005, in reply to a question from the applicant's lawyers regarding access to the non-confidential version of the thirdparty observations, the Commission indicated that, in accordance with the procedure laid down in Article 9(1) of Regulation No 1/2003, it was under no duty to provide Alrosa with that version. The fact that the possibility of access to those documents was discussed between the parties at that meeting is, moreover, not disputed by the Commission.

200. It must also be pointed out that the individual commitments made binding by the Decision were submitted by De Beers on 25 January 2006, that is to say, after the final date of 30 November 2005 given by the Commission at the meeting of 27 October 2005 for the submission of new commitments. That being the case, it cannot be maintained that new proposals for joint commitments could no longer be submitted by Alrosa and De Beers after 30 November 2005 or that, after that date, a request for access to the third-party observations would have been of no practical benefit to the applicant.

201. Following on the formal request made by the applicant in writing on 6 December 2005, the Commission did not supply a non-confidential version of those thirdparty observations until 26 January 2006, that is to say, more than six weeks after the date of the applicant's formal request in that regard and more than three months after the meeting of 27 October 2005, at which the question of access to the non-confidential version of the third-party observations had been discussed by the parties. The Court also notes that those documents were supplied to the applicant at the same time as the copy of the individual commitments proposed by De Beers, thus making it impossible for the applicant to provide an effective reply and to propose new joint commitments with De Beers.

202. The third-party observations were of particular importance in the proceedings, in so far as the Commission took them into account in concluding that the market testing was negative and that only the cessation of all trading relations with effect from 2009 constituted an acceptable solution. According to point 42 of the Decision, those observations, together with the Commission's own analysis, led the Commission to suggest amendments to the proposed commitments'.

203. It follows that the applicant had, in circumstances such as those of the present case, a right to be heard on the individual commitments proposed by De Beers which the Commission envisaged making binding in the proceedings initiated under Article 82 EC and that it was not given the opportunity to exercise that right fully, even though the extent to which such an irregularity might have affected the Commission's decision cannot be precisely determined in the present case.

204. Accordingly, the applicant's first plea in law, which has been considered for the sake of completeness, is also well founded.

205. It follows that the Decision must be annulled.

Costs

206. Under Article 87(2) of the Court's Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has been unsuccessful, it must, in accordance with the forms of order sought by the applicant, be ordered to pay, in addition to its own costs, the costs incurred by the applicant.

PROCEDU Action for annulment

DATES of document: 11/07/2007
of application: 29/06/2006

Joined Cases T-125/03 and T-253/03

Akzo Nobel Chemicals Ltd and Akcros Chemicals Ltd

v

Commission of the European Communities

(Competition – Administrative procedure – Commission's powers of investigation – Documents seized in the course of an investigation – Legal professional privilege protecting communications between lawyers and their clients – Admissibility)

Summary of the Judgment

1. *Actions for annulment – Actionable measures – Measures producing binding legal effects – Acts bringing about a change in the applicant's legal position*

   (Art. 230, fourth para., EC)

2. *Competition – Administrative procedure – Commission's powers of investigation – Refusal by the undertaking to produce a communication with a lawyer on grounds of confidentiality – Powers of the Commission*

   (Council Regulation No 17, Art. 14)

3. *Competition – Administrative procedure – Commission's powers of investigation – Power to require production of a communication between a lawyer and client – Limits – Legal professional privilege protecting such communications – Objectives*

   (Council Regulation No 17, Art. 14)

4. *Competition – Administrative procedure – Commission's powers of investigation – Power to require production of a communication between a lawyer and client – Limits – Legal professional privilege protecting such communications – Scope*

   (Council Regulation No 17, Art. 14)

5. *Competition – Administrative procedure – Commission's powers of investigation – Power to require production of a communication between a lawyer and client – Limits – Legal professional privilege protecting such communications – Scope*

   (Council Regulation No 17, Art. 14)

6. *Competition – Administrative procedure – Commission's powers of investigation – Power to require production of a communication between a lawyer and client – Limits – Legal professional privilege protecting such communications – Community concept of confidentiality*

   (Council Regulation No 17, Art. 14)

1. Where an undertaking relies on legal professional privilege for the purpose of opposing the seizure of a document in the course of an investigation pursuant to Article 14 of Regulation No 17, the decision whereby the Commission rejects that request produces legal effects for that undertaking, by bringing about a distinct change in its legal position. That decision, the possible illegality of which has no effect on the lawfulness of the decision ordering the inspection of which it forms a part, in effect withholds from the undertaking the protection provided by Community law and is definitive in

nature and independent of any final decision making a finding of an infringement of the competition rules.

In that regard, the opportunity which the undertaking has to bring an action against a final decision establishing that the competition rules have been infringed does not provide it with an adequate degree of protection of its rights. First, it is possible that the administrative procedure will not result in a decision finding that an infringement has been committed. Second, if an action is brought against that decision, it will not in any event provide the undertaking with the means of preventing the irreversible consequences which would result from improper disclosure of documents protected under legal professional privilege.

It follows that the Commission's decision rejecting a request for protection of a specific document under legal professional privilege – and ordering, where appropriate, the production of the document in question – brings to an end a special procedure distinct from that enabling the Commission to rule on the existence of an infringement of the competition rules and thus constitutes an act capable of being challenged by an action for annulment, coupled, if need be, with a request for interim relief, seeking, inter alia, to suspend its operation until the Court has ruled on the action in the main proceedings.

By the same token, where the Commission, during an investigation, seizes a document in respect of which legal professional privilege is claimed and places it on the investigation file without putting it in a sealed envelope and without having taken a formal rejection decision, that physical act necessarily entails a tacit decision by the Commission to reject the protection claimed by the undertaking, and allows the Commission to examine the document in question immediately. That tacit decision should therefore be open to challenge by an action for annulment.

(see paras 46-49, 55)

2. If an undertaking which is the subject of an investigation under Article 14 of Regulation No 17 refuses, by claiming protection under legal professional privilege, to produce, as part of the business records demanded by the Commission, written communications between itself and its lawyer, it must provide the Commission officials with relevant material which demonstrates that the communications fulfil the conditions for the grant of legal protection, while not being bound to disclose their contents. Where the Commission considers that such evidence has not been provided, it must, pursuant to Article 14(3) of Regulation No 17, order production of the communications in question and, if necessary, impose on the undertaking fines or periodic penalty payments under that regulation as a penalty for the undertaking's refusal either to supply such additional evidence as the Commission considers necessary or to produce the documents whose confidentiality, in the Commission's view, is not protected in law. The undertaking under investigation may subsequently bring an action for the annulment of such a Commission decision, where appropriate, coupled with a request for interim relief pursuant to Articles 242 EC and 243 EC.

Therefore, the mere fact that an undertaking claims that a document is protected by legal professional privilege is not sufficient to prevent the Commission from reading that document if the undertaking produces no relevant material of such a kind as to prove that it is actually protected by legal professional privilege. The undertaking concerned may, in particular, inform the Commission of the author of the document and for whom it was intended, explain the respective duties and responsibilities of each, and refer to the objective and the context in which the document was drawn up. Similarly, it may also mention the context in which the document was found, the way in which it was filed and any related documents.

In a significant number of cases, a mere cursory look by the Commission officials at the general layout, heading, title or other superficial features of the document will enable them to confirm the accuracy of the reasons invoked by the undertaking and to determine whether the document at issue was confidential, when deciding whether to put it aside. Nevertheless, on certain occasions, there would be a risk that, even with a cursory look at the document, in spite of the superficial nature of their examination, the Commission officials would gain access to information covered by legal professional privilege. That may be so, in particular, if the confidentiality of the document in question is not clear from external indications.

The undertaking is not bound to reveal the contents of the documents in question when presenting the Commission officials with relevant material of such a nature as to demonstrate that the documents fulfil the conditions for being granted legal protection. Accordingly, an undertaking subject to an investigation under Article 14(3) of Regulation No 17 is entitled to refuse to allow the Commission officials to take even a cursory look at one or more specific documents which it claims to be covered by legal professional privilege, provided that the undertaking considers that such a cursory look is impossible without revealing the content of those documents and that it gives the

Commission officials appropriate reasons for its view.

Where, in the course of an investigation under Article 14(3) of Regulation No 17, the Commission considers that the material presented by the undertaking is not of such a nature as to prove that the documents in question are confidential, in particular where that undertaking refuses to give the Commission officials a cursory look at a document, the Commission officials may place a copy of the document or documents in question in a sealed envelope and then remove it with a view to a subsequent resolution of the dispute. This procedure enables risks of a breach of legal professional privilege to be avoided while at the same time enabling the Commission to retain a certain control over the documents forming the subject-matter of the investigation and avoiding the risk that the documents will subsequently disappear or be manipulated.

In any event, where the Commission is not satisfied with the material and explanations provided by the representatives of the undertaking for the purposes of proving that the document concerned is covered by legal professional privilege, the Commission must not read the contents of the document before it has adopted a decision allowing the undertaking concerned to refer the matter to the Court of First Instance.

In that regard, the Commission is bound to wait until the time-limit for bringing an action against the rejection decision has expired before reading the contents of those documents. In any event, to the extent that such an action does not have suspensory effect, it is for the undertaking concerned to bring an application for interim relief seeking suspension of operation of the decision rejecting the request for legal professional privilege.

If an undertaking abuses the above procedure by making requests, merely as delaying tactics, for protection under legal professional privilege which are clearly unfounded, or by opposing, without objective justification, any cursory look at the documents during an investigation, the Commission has the means, where appropriate, to discourage and penalise such conduct. In fact, such conduct may be penalised under Article 23(1) of Regulation No 1/2003 (and previously under Article 15(1) of Regulation No 17) or be taken into account as aggravating circumstances when calculating any fine imposed in the context of a decision imposing a penalty for infringement of the competition rules.

(see paras 79-83, 85, 88-89)

3. Having regard to the particular nature of the principle of legal professional privilege, the purpose of which is both to guarantee the full exercise of individuals' rights of defence and to safeguard the requirement that any person must be able, without constraint, to consult his lawyer, the fact that the Commission reads the content of a confidential document is in itself a breach of this principle.

The protection of legal professional privilege therefore goes beyond the requirement that information provided by an undertaking to its lawyer or the content of the advice given by that lawyer cannot be used against it in a decision which penalises a breach of the competition rules. First, that protection seeks to safeguard the public interest in the proper administration of justice in ensuring that a client is free to consult his lawyer without fear that any confidences which he imparts may subsequently be disclosed. Secondly, its purpose is to avoid the harm which may be caused to the undertaking's rights of the defence as a result of the Commission reading the contents of a confidential document and improperly adding it to the investigation file.

Therefore, even if that document is not used as evidence in a decision imposing a penalty for infringement of the competition rules, the undertaking may suffer harm which cannot be made good or can only be made good with great difficulty. Information covered by legal professional privilege might be used by the Commission, directly or indirectly, in order to obtain new information or new evidence without the undertaking in question always being able to identify or prevent such information or evidence from being used against it. Moreover, harm which the undertaking concerned would suffer as a result of disclosure to third parties of information covered by legal professional privilege could not be made good, for example if that information were used in a statement of objections in the course of the Commission's administrative procedure. The mere fact that the Commission cannot use privileged documents as evidence in a decision imposing a penalty is thus not sufficient to make good or eliminate the harm which resulted from the Commission's reading the content of the documents.

(see paras 86-87)

4. Regulation No 17 falls to be interpreted as protecting the confidentiality of communications between lawyer and client provided that (i) such communications are made for the purposes of the exercise

of the client's rights of defence and (ii) they emanate from independent lawyers. As far as the first of those two conditions is concerned, such protection must, if it is to be effective, be recognised as covering as a matter of law all written communications exchanged after the initiation of the administrative procedure under the regulation which may lead to a decision on the application of Articles 81 EC and 82 EC or to a decision imposing a pecuniary sanction on the undertaking. That protection can also extend to earlier written communications which have a relationship to the subject-matter of that procedure. In view of its purpose, that protection must be regarded as extending also to the internal notes circulated within an undertaking which are confined to reporting the text or the content of communications with independent lawyers containing legal advice.

So that a person may be able effectively to consult a lawyer without constraint, and so that the latter may effectively perform his role as collaborating in the administration of justice by the courts and providing legal assistance for the purpose of the effective exercise of the rights of the defence, it may be necessary, in certain circumstances, for the client to prepare working documents or summaries, in particular as a means of gathering information which will be useful, or essential, to that lawyer for an understanding of the context, nature and scope of the facts for which his assistance is sought. Preparation of such documents may be particularly necessary in matters involving a large amount of complex information, as is often the case with procedures imposing penalties for breaches of Articles 81 EC and 82 EC. In those circumstances, the fact that the Commission reads such documents during an investigation may well prejudice the rights of the defence of the undertaking under investigation and the public interest in ensuring that every client is able to consult his lawyer without constraint.

Accordingly, such preparatory documents, even if they were not exchanged with a lawyer or were not created for the purpose of being sent physically to a lawyer, may none the less be covered by legal professional privilege, provided that they were drawn up exclusively for the purpose of seeking legal advice from a lawyer in exercise of the rights of the defence. On the other hand, the mere fact that a document has been discussed with a lawyer is not sufficient to give it such protection.

Protection under legal professional privilege is an exception to the Commission's powers of investigation, which are essential to enable it to discover, bring to an end and penalise infringements of the competition rules. Such infringements are often carefully concealed and usually very harmful to the proper functioning of the common market. For this reason, the possibility of treating a preparatory document as covered by legal professional privilege must be construed restrictively. It is for the undertaking relying on this protection to prove that the documents in question were drawn up with the sole aim of seeking legal advice from a lawyer. This should be unambiguously clear from the content of the documents themselves or the context in which those documents were prepared and found.

In relation to undertakings' competition law compliance programmes, the fact that a document was drawn up under such a programme is not sufficient in itself for that document to benefit from protection under legal professional privilege. Such programmes often encompass in scope duties and cover information which goes beyond the exercise of the rights of the defence. In particular, the fact that an outside lawyer has put together and/or coordinated a compliance programme cannot automatically confer protection under legal professional privilege on all the documents drawn up under that programme or in relation to it.

(see paras 117, 122-124, 127)

5. The protection accorded to legal professional privilege under Community law, in the application of Regulation No 17, only applies to the extent that the lawyer is independent, that is to say, not bound to his client by a relationship of employment. The requirement is based on a concept of the lawyer's role as collaborating in the administration of justice by the courts and as being required to provide, in full independence and in the overriding interests of the administration of justice, such legal assistance as the client needs.

The concept of independent lawyer is therefore defined in negative terms in that it stipulates that such a lawyer should not be bound to his client by a relationship of employment, rather than positively, on the basis of membership of a Bar or Law Society or being subject to professional discipline and ethics. The test thus laid down is one of legal advice provided 'in full independence', which it identifies as that provided by a lawyer who, structurally, hierarchically and functionally, is a third party in relation to the undertaking receiving that advice.

It follows that communications with in-house lawyers, that is, legal advisers bound to their clients by a relationship of employment, are expressly excluded from protection under legal professional privilege.

Since in-house lawyers and outside lawyers are clearly in very different situations, owing, in particular, to the functional, structural and hierarchical integration of in-house lawyers within the companies that employ them, no infringement of the principle of equal treatment arises from the fact of treating such professionals differently in respect of protection under legal professional privilege.

(see paras 166-168, 174)

6. The protection of legal professional privilege is an exception to the Commission's powers of investigation. Therefore, the protection directly affects the conditions under which the Commission may act in a field as vital to the functioning of the common market as that of compliance with the rules on competition. For those reasons, the Court of Justice and the Court of First Instance have been at pains to develop a Community concept of legal professional privilege, which does not allow for the personal scope of the Community concept of confidentiality to be governed by national law.

(see para. 176)

JUDGMENT OF THE COURT OF FIRST INSTANCE (First Chamber, Extended Composition)

17 September 2007 (*)

(Competition – Administrative procedure – Commission's powers of investigation – Documents seized in the course of an investigation – Legal professional privilege protecting communications between lawyers and their clients – Admissibility)

In Joined Cases T‑125/03 and T‑253/03,

Akzo Nobel Chemicals Ltd, established in Hersham, Walton on Thames, Surrey (United Kingdom),

Akcros Chemicals Ltd, established in Hersham, Walton on Thames, Surrey,

represented by C. Swaak, M. Mollica and M. van der Woude, lawyers,

applicants,

supported by

The Council of the Bars and Law Societies of the European Union (CCBE), established in Brussels (Belgium), represented by J. Flynn QC,

by

Algemene Raad van de Nederlandse Orde van Advocaten, established in The Hague (Netherlands), represented by O. Brouwer and C. Schillemans, lawyers,

by

European Company Lawyers Association (ECLA), established in Brussels, represented by M. Dolmans, K. Nordlander, lawyers, and J. Temple Lang, solicitor,

by

American Corporate Counsel Association (ACCA) – European Chapter, established in Paris (France), represented by G. Berrisch, lawyer, and D. Hull, solicitor,

and by

International Bar Association (IBA), established in London (United Kingdom), represented by J. Buhart, lawyer,

interveners,

v

Commission of the European Communities, represented initially by R. Wainwright and C. Ingen-Housz, and subsequently by F. Castillo de la Torre and X. Lewis, acting as Agents,

defendant,

APPLICATION, first, for the annulment of Commission decision C (2003) 559/4 of 10 February 2003 and, so far as necessary, of Commission decision C (2003) 85/4 of 30 January 2003 ordering Akzo Nobel Chemicals Ltd, Akcros Chemicals Ltd and Akcros Chemicals and their respective subsidiaries to submit to an investigation on the basis of Article 14(3) of Regulation No 17 of 6 February 1962, First Council Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-1962, p. 87) (Case COMP/E-1/38.589) and for an order requiring the Commission to return certain documents seized in the course of the investigation in question and not to use their contents (Case T–125/03) and, second, for the annulment of Commission decision C(2003) 1533 final of 8 May 2003 rejecting a request for the protection of those documents on grounds of legal professional privilege protecting communications between lawyers and their clients (Case T-253/03),

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (First Chamber, Extended Composition),

composed of J. D. Cooke, President, R. García-Valdecasas, I. Labucka, and M. Prek and V. Ciucă, Judges,

Registrar: C. Kantza, Administrator,

having regard to the written procedure and further to the hearing on 28 June 2007,

gives the following

Judgment

Facts and procedure

1 On 10 February 2003 the Commission adopted decision C (2003) 559/4, amending its decision C (2003) 85/4 of 30 January 2003, whereby the Commission ordered, inter alia, Akzo Nobel Chemicals Ltd and Akcros Chemicals Ltd and their respective subsidiaries to submit to an investigation on the basis of Article 14(3) of Regulation No 17 of 6 February 1962, First Council Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-1962, p. 87), aimed at seeking evidence of possible anti-competitive practices (together ‘the decision ordering the investigation’).

2 On 12 and 13 February 2003, Commission officials, assisted by representatives of the Office of Fair Trading (‘OFT’, the British competition authority), carried out an investigation on the basis of the decision ordering the investigation at the applicants’ premises in Eccles, Manchester (United Kingdom). During the investigation the Commission officials took copies of a considerable number of documents.

3 In the course of those operations the applicants’ representatives informed the Commission officials that certain documents were likely to be covered by the protection of confidentiality of communications between lawyers and their clients (‘legal professional privilege’ or ‘LPP’).

4 The Commission officials then informed the applicants’ representatives that it was necessary for them to examine briefly the documents in question so that they could form their own opinion as to whether the documents should be privileged. Following a long discussion, and after the Commission officials and the OFT officials had reminded the applicants’ representatives of the consequences of obstructing investigations, it was decided that the leader of the investigating team would briefly examine the documents in question, with a representative of the applicants at her side.

5 During the examination of the documents in question, a dispute arose in relation to five documents which were ultimately treated in two different ways by the Commission.

6 The first of those documents is a two-page typewritten memorandum dated 16 February 2000 from the general manager of Akcros Chemicals to one of his superiors. According to the applicants, this memorandum contains information gathered by the general manager in the course of internal discussions with other employees. The information was gathered for the purpose of obtaining outside legal advice in connection with the competition law compliance programme put in place by Akzo Nobel. The second document is a second copy of the memorandum, bearing manuscript notes referring to contacts with a lawyer of the applicants, including, in particular, mention of his name.

7 After obtaining the applicants’ observations concerning those first two documents, the Commission officials were not in a position to reach a final conclusion on the spot as to whether the documents should be privileged. They therefore took copies of them and placed them in a sealed envelope

which they took away on completion of the investigation. The applicants identified the two documents as 'Set A'.

8 The third document which gave rise to a dispute consists of a number of handwritten notes made by Akcros Chemicals' general manager, which are said by the applicants to have been written during discussions with employees and used for the purpose of preparing the typewritten memorandum of Set A. Finally, the last two documents in issue are two e-mails, exchanged between Akcros Chemicals' general manager and Mr S., Akzo Nobel's coordinator for competition law. The latter is enrolled as an Advocaat of the Netherlands Bar and, at the material time, was a member of Akzo Nobel's legal department and was therefore employed by that undertaking on a permanent basis.

9 After examining the last three documents and obtaining the applicants' observations, the head of the investigating team took the view that they were definitely not privileged. Consequently, she took copies of them and placed the copies with the rest of the file, without isolating them in a sealed envelope. The applicants identified the three documents as 'Set B'.

10 On 17 February 2003 the applicants sent the Commission a letter setting out the reasons why, in their view, the documents in Set A and Set B were protected by LPP.

11 By letter of 1 April 2003, the Commission informed the applicants that the arguments set forth in their letter of 17 February 2003 were insufficient to show that the documents in question were covered by LPP. However, the Commission pointed out that the applicants could submit observations on those provisional conclusions within two weeks, after which the Commission would adopt a final decision.

12 By application lodged at the Registry of the Court of First Instance on 11 April 2003, the applicants brought an action under the fourth paragraph of Article 230 EC seeking, first, the annulment of the decision of 10 February 2003 and, so far as necessary, the decision of 30 January 2003 and, second, the return of the disputed documents (Case T-125/03).

13 On 17 April 2003 the applicants informed the Commission that they had lodged their application in Case T-125/03. They also stated that the observations which they had been asked to submit on 1 April 2003 were contained in that application. On the same day the applicants lodged an application on the basis of Articles 242 EC and 243 EC for, in particular, suspension of the operation of the decision of 10 February 2003 (Case T-125/03 R).

14 On 8 May 2003 the Commission adopted decision C (2003) 1533 final concerning a claim of legal privilege in the context of an investigation pursuant to Article 14(3) of Regulation No 17 ('the rejection decision of 8 May 2003'). In Article 1 of that decision the Commission rejects the applicants' request for the return of the documents in Set A and Set B and for confirmation by the Commission that all copies of those documents in its possession had been destroyed. In Article 2 of the decision the Commission gives notice of its intention to open the sealed envelope containing the documents of Set A and to add them to the file. The Commission states, however, that it will not undertake this before expiry of the time-limit for bringing an action against the decision.

15 By application lodged at the Registry of the Court of First Instance on 4 July 2003, the applicants brought an action under the fourth paragraph of Article 230 EC for the annulment of the rejection decision of 8 May 2003 (Case T-253/03). By separate document received on 11 July 2003 the applicants lodged an application for interim relief seeking, in particular, suspension of the operation of that decision (Case T-253/03 R).

16 By applications lodged on 30 July, 7 August and 11 and 18 August 2003 respectively, the Council of the Bars and Law Societies of the European Union (CCBE), the Algemene Raad van de Nederlandse Orde van Advocaten ('General Council of the Netherlands Bar') and the European Company Lawyers Association (ECLA) applied to intervene in Cases T-125/03 and T-253/03 in support of the form of order sought by the applicants. These associations were granted leave to intervene by two orders of the President of the Fifth Chamber of 4 November 2003.

17 By separate document lodged at the Court Registry on 1 August 2003, the Commission raised an objection of inadmissibility pursuant to Article 114 of the Rules of Procedure of the Court of First Instance, against the application lodged in Case T-125/03.

18 On 8 September 2003, in connection with the applications for interim relief in Cases T-125/03 R

and T-253/03 R and at the request of the President of the Court of First Instance, the Commission sent the President, under confidential cover, a copy of the Set B documents and the sealed envelope containing the Set A documents.

19 The application for interim relief in Case T-125/03 R was dismissed by order of the President of 30 October 2003 (Cases T–125/03 R and T-253/03 R *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission* [2003] ECR II-4771), while the application for interim relief in Case T-253/03 R was granted in part. Accordingly, operation of the provisions of the rejection decision of 8 May 2003 whereby the Commission decided to open the sealed envelope containing the Set A documents was suspended. The President ordered those documents to be kept by the Court Registry pending the Court's decision in the main action. Similarly, the President took formal note of the Commission's statement that it would not permit third parties access to the Set B documents pending judgment in the main action in Case T-253/03.

20 By applications lodged on 17 October and 26 November 2003, and 25 November 2003, respectively, the European Council on Legal Affairs and the Section on Business Law of the International Bar Association applied to intervene in Cases T-125/03 and T-253/03 in support of the form of order sought by the applicants. The applications were dismissed by orders of the Court of 28 May 2004.

21 On 13 November 2003 the Commission lodged an application for priority treatment under Article 55 (2) of the Rules of Procedure of the Court of First Instance. It repeated this request on 8 October 2004.

22 By application lodged on 25 November 2003, the American Corporate Counsel Association – European Chapter (ACCA) applied to intervene in Case T-253/03 in support of the form of order sought by the applicants. The ACCA was granted leave to intervene by order of the President of the Fifth Chamber of 10 March 2004.

23 By order of the Court of First Instance of 5 March 2004 the objection of inadmissibility raised by the Commission in Case T-125/03 was joined with the substance of the case under Article 114(4) of the Rules of Procedure.

24 By order of 27 September 2004 in Case C-7/04 P(R) *Commission* v *Akzo and Akcros* [2004] ECR I-8739, the President of the Court of Justice, on appeal by the Commission, annulled the operative part of the order of the President of the Court of First Instance of 30 October 2003 in *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission* whereby the operation of the rejection decision of 8 May 2003 was suspended and it was decided that the Set A documents should be kept by the Registry of the Court of First Instance. However, formal note was taken of the Commission's statement that it would not allow third parties to have access to the Set A documents until judgment is given in the main action in Case T-253/03.

25 Following the order of the President of the Court of Justice in *Commission* v *Akzo and Akcros*, the Registry of the Court of First Instance returned the sealed envelope containing the Set A documents to the Commission by letter of 15 October 2004.

26 On 20 February 2006 the International Bar Association (IBA) lodged applications to intervene in Cases T-125/03 and T-253/03 in support of the form of order sought by the applicants. The IBA was given leave to intervene by two orders of the President of the First Chamber of 26 February 2007.

27 Pursuant to Article 14 of the Rules of Procedure, on the proposal of the First Chamber, the Court, after hearing the parties pursuant to Article 51 of the Rules, decided on 19 April 2007 to refer the cases to the First Chamber (Extended Composition).

28 By order of the President of the First Chamber (Extended Composition) of 20 April 2007, Cases T-125/03 and T-253/03 were joined for the purposes of the oral procedure and the judgment in accordance with Article 50 of the Rules of Procedure.

29 By order of the First Chamber (Extended Composition) of 25 April 2007 the Court, on the basis of the first paragraph of Article 24 of the Statute of the Court of Justice and Article 65(b), Article 66(1) and the second subparagraph of Article 67(3) of the Rules of Procedure of the Court of First Instance, requested the Commission to produce the documents constituting Sets A and B. The Commission complied with that request within the prescribed period.

30 Upon hearing the report of the Judge-Rapporteur, the First Chamber of the Court (Extended Composition) decided to open the oral procedure.

31 The parties presented oral argument and their answers to the oral questions put by the Court at the hearing on 28 June 2007.

Forms of order sought

32 In Case T-125/03 the applicants claim that the Court should:

– dismiss the objection of inadmissibility raised by the Commission;

– annul the decision of 10 February 2003 and, so far as necessary, the decision of 30 January 2003, in so far as they have been interpreted by the Commission as legitimising and/or constituting the basis of its action of seizing and/or reviewing and/or reading the disputed documents;

– order the Commission to return the disputed documents and not to use their contents in any way;

– order the Commission to pay the costs.

33 In Case T-125/03 the CCBE, the ECLA and the IBA submit that the Court should:

– annul the decision of 10 February 2003;

– order the Commission to pay the costs.

34 The Netherlands Bar Association also supports the form of order sought by the applicants in Case T-125/03.

35 The Commission, for its part, contends in Case T-125/03 that the Court should:

– dismiss the action as inadmissible;

– alternatively, dismiss the action as unfounded;

– order the applicants to pay the costs.

36 In Case T-253/03 the applicants claim that the Court should:

– annul the rejection decision of 8 May 2003;

– order the Commission to pay the costs.

37 In Case T-253/03 the CCBE, the ECLA, the ACCA and the IBA submit that the Court should:

– annul the rejection decision of 8 May 2003;

– order the Commission to pay the costs.

38 The Netherlands Bar Association also supports the form of order sought by the applicants in Case T-253/03.

39 The Commission, for its part, contends in Case T-253/03 that the Court should:

– dismiss the action;

– order the applicants to pay the costs.

Admissibility of the action in Case T-125/03

Arguments of the parties

40 The Commission contends that the application in Case T-125/03 is inadmissible, because the act challenged in that case, namely the decision ordering the investigation, is not the act which produced the legal effects constituting the subject-matter of the present proceedings. It observes that an action for annulment is admissible only if, first, the contested act produces binding legal effects such as to affect the interests of an applicant by bringing about a distinct change in his legal position (Case 60/81 *IBM* v *Commission* [1981] ECR 2639, paragraph 9) and, second, if the applicant has an interest in the annulment of that act (Case 92/78 *Simmenthal* v *Commission* [1979] ECR 777, paragraph 32). To determine whether an act or decision produces such legal effects, it is necessary to look to its substance (Case T-251/00 *Lagardère and Canal+* v *Commission* [2002] ECR II-4825, paragraphs 63 and 64). In the present case, however, the decision ordering the investigation has no direct connection with the subject-matter of the present proceedings. The seizure of the documents at issue is in fact clearly separable from the decision ordering the investigation, which is only the legal basis thereof.

41 The Commission observes that, in the circumstances of the case, the action which directly affected the applicants' legal position is the subject of a procedure which is separate from that ordering the investigation, that is, the specific procedure concerning LPP established in Case 155/79 *AM & S* v *Commission* [1982] ECR 1575. In the context of that procedure, seizure of the documents at issue was only a preparatory act to the rejection decision of 8 May 2003 in which the Commission finally addressed the specific issue of whether the documents were legally privileged. In itself, the action of seizure does not therefore constitute a challengeable act. In any case, even accepting that the decision ordering the investigation could have been challenged initially, the subsequent adoption of the rejection decision of 8 May 2003 made the application pointless. Furthermore, the Commission submits that, even without a specific procedure for reviewing the legality of procedural acts performed in the course of an investigation, their potential irregularity may be raised in an action against the final decision finding a breach of the competition rules.

42 The applicants reply that annulment of the decision ordering the investigation is likely to have legal consequences for them, including, in particular, that of rendering illegal the Commission's possession and use of the documents seized. They accept that the decision is not specifically directed at those documents and that, in fact, it is the Commission's subsequent seizure and review of the documents, and not the decision, which adversely affected their legal situation. They claim in any event that, where, before adopting an ad hoc act likely to be challengeable, concerning a request for LPP, the Commission ascertains their content, the legal position of the undertaking in question is immediately and irreversibly affected. Then the challengeable act cannot be anything but the decision ordering the investigation.

43 The applicants submit that, in the present case, they did not have to wait until the possible adoption of a subsequent ad hoc decision by the Commission rejecting protection of the disputed documents under LPP before bringing the matter before the Community Courts. That decision, whatever it may be, cannot be considered to be the act affecting their legal position, which already occurred when the Commission read the documents which are the subject of the dispute. Furthermore, contrary to what it claims, the Commission did not provide any guarantee to the applicants, on completion of the investigation, that a decision on the confidentiality of the documents would be taken within a reasonable timeframe. The applicants further maintain that they should not also have to wait until the adoption of a possible final decision by the Commission imposing a penalty before bringing the matter before the Community judicature. They must be able to protect their right to confidentiality even if the case is not closed by a decision finding an infringement or a decision to stop the investigation. Similarly, an action against a decision imposing a penalty is not sufficient to provide adequate protection of their legal position.

44 The applicants also submit that the Commission's seizure of the disputed documents and examination of their contents cannot by themselves be considered to have altered their legal position, since those acts of disclosure are only the implementation of the decision ordering the investigation and are not separable from it. The applicants also dispute the Commission's argument that the action of seizing the documents in question was only a preparatory act to the rejection decision of 8 May 2003. There is therefore no doubt that, at least in connection with the Set B documents, during the investigation the Commission decided unilaterally that they were not

protected by LPP, and ordered the applicants to produce them and ascertained their contents. The rejection decision of 8 May 2003 could have been the challengeable act in the present case only if the Commission had put the two sets of documents in a sealed envelope without examining them beforehand. In the present case, by contrast, the rejection decision merely confirmed the Commission's decision ordering the disclosure of the Set B documents.

Findings of the Court

45 According to settled case-law, only measures which produce binding legal effects such as to affect the interests of an applicant by bringing about a distinct change in his legal position may be the subject of an action for annulment under Article 230 EC (Case 60/81 *IBM* v *Commission*, paragraph 9, and Joined Cases T-10/92 to T-12/92 and T-15/92 *Cimenteries CBR and Others* v *Commission* [1992] ECR II-2667, paragraph 28). In principle, a provisional measure intended to pave the way for the final decision is not therefore a challengeable act. However, according to case-law, acts adopted in the course of the preparatory proceedings which were themselves the culmination of a special procedure distinct from that intended to permit the Commission to take a decision on the substance of the case and which produce binding legal effects such as to affect the interests of an applicant, by bringing about a distinct change in his legal position, also constitute challengeable acts (*IBM* v *Commission*, paragraphs 10 and 11, and Joined Cases T-213/01 and T-214/01 *Österreichische Postsparkasse and Bank für Arbeit und Wirtschaft* v *Commission* [2006] ECR II-1601, paragraph 65).

46 Where an undertaking relies on LPP for the purpose of opposing the seizure of a document in the course of an investigation pursuant to Article 14 of Regulation No 17, the decision whereby the Commission rejects that request produces legal effects for that undertaking, by bringing about a distinct change in its legal position. That decision in effect withholds from the undertaking the protection provided by Community law and is definitive in nature and independent of any final decision making a finding of an infringement of the competition rules (see, to that effect, *AM & S*, paragraphs 27 and 29 to 32; see also, by analogy, Case 53/85 *AKZO Chemie* v *Commission* [1986] ECR 1965, paragraphs 18 to 20).

47 In that regard, the Court would point out that the opportunity which the undertaking has to bring an action against a final decision establishing that the competition rules have been infringed does not provide it with an adequate degree of protection of its rights. First, it is possible that the administrative procedure will not result in a decision finding that an infringement has been committed. Second, if an action is brought against that decision, it will not in any event provide the undertaking with the means of preventing the irreversible consequences which would result from improper disclosure of documents protected under legal professional privilege (see, by analogy, *AKZO Chemie* v *Commission*, paragraph 20).

48 It follows that the Commission's decision rejecting a request for protection of a specific document under LPP – and ordering, where appropriate, the production of the document in question – brings to an end a special procedure distinct from that enabling the Commission to rule on the existence of an infringement of the competition rules and thus constitutes an act capable of being challenged by an action for annulment, coupled, if need be, with a request for interim relief, seeking, inter alia, to suspend its operation until the Court has ruled on the action in the main proceedings.

49 By the same token, where the Commission, during an investigation, seizes a document in respect of which LPP is claimed and places it on the investigation file without putting it in a sealed envelope and without having taken a formal rejection decision, that physical act necessarily entails a tacit decision by the Commission to reject the protection claimed by the undertaking (see, by analogy, *AKZO Chemie* v *Commission*, paragraph 17), and allows the Commission to examine the document in question immediately (see paragraph 86 below). That tacit decision should therefore be open to challenge by an action for annulment.

50 In the present case, as regards, first of all, the Set A documents, it must be pointed out that during the investigation at the applicants' premises the Commission officials were not in a position to reach a final conclusion as to whether the documents should be privileged and merely took copies of them and placed them in a sealed envelope which they took away with them (see paragraph 7 above). Only in the rejection decision of 8 May 2003 did the Commission finally refuse the applicants' request for protection of the documents under legal professional privilege. In that decision the Commission also gave notice of its intention to open the sealed envelope containing the documents in question and to add them to the file after expiry of the time-limit for bringing an action against that decision (see paragraph 14 above). It is not disputed, moreover, that the Commission took the rejection decision without opening the sealed envelope and, therefore, without examining the

contents of the Set A documents.

51 As regards, secondly, the Set B documents, unlike those in Set A, it must be pointed out that at the time of the investigation the Commission considered that they were clearly not protected by LPP, notwithstanding the claim made by the applicants to this end. Consequently, it made copies and added them to the file without placing them in a sealed envelope (see paragraph 9 above). Protection under LPP in respect of the Set B documents was therefore rejected at the time of the investigation. It was at that moment, moreover, that the Commission was able to examine the contents of those documents.

52 In the light of the above, the Court concludes that, for the purpose of the present cases, the measures which produced binding legal effects affecting the applicants' interests by bringing about a distinct change in their legal position were, as regards the Set B documents, the tacit rejection decision expressed through the physical act of seizing and placing those documents on the file without placing them in a sealed envelope, and, as regards the Set A documents, the formal decision of 8 May 2003 rejecting the claim for protection under legal professional privilege. Those two decisions are thus open to challenge by action for annulment.

53 Similarly, in its decision of 8 May 2003, the Commission finally rejected, also as regards the Set B documents, the applicants' claim to protection under legal professional privilege (see paragraph 14 above). By so doing, the Commission fulfilled its duty to adopt a formal decision rejecting the claim for protection of those documents under LPP and thereby finally brought to an end the distinct special procedure provided in that regard. That decision is thus not merely confirmatory in relation to the Set B documents. As a result, the Court concludes that the applicants were entitled to challenge that decision as regards the Set B documents as well. In addition, it should be noted that the Commission did not challenge the admissibility of the action brought by the applicants in Case T-253/03 against the rejection decision of 8 May 2003 in relation to those documents.

54 On the other hand, the Court holds that the decision ordering the investigation – the contested measure in Case T-125/03 – did not produce the legal effects claimed by the applicants in their action for annulment.

55 In that regard, the Court would point out that the lawfulness of an act must be determined in the light of the matters of law and fact existing at the time when the decision was adopted and that acts subsequent to a decision cannot therefore affect its validity (see Joined Cases 96/82 to 102/82, 104/82, 105/82, 108/82 and 110/82 *IAZ and Others* v *Commission* [1983] ECR 3369, paragraph 16, and Case 85/87 *Dow Benelux* v *Commission* [1989] ECR 3137, paragraph 49). Thus, it is settled case-law that, in the context of an investigation based on Article 14 of Regulation No 17, an undertaking cannot plead unlawfulness of the investigation procedures to support claims for annulment of the measure on the basis of which the Commission carries out that investigation (see, to that effect, *Dow Benelux* v *Commission*, paragraph 49, and Joined Cases T–305/94 to T–307/94, T–313/94 to T–316/94, T–318/94, T–325/94, T–328/94, T–329/94 and T–335/94 *Limburgse Vinyl Maatschappij and Others* v *Commission* [1999] ECR II–931, paragraph 413). Accordingly, the use made of a decision ordering an investigation has no effect on the lawfulness of the decision ordering the inspection (Case T–339/04 *France Télécom* v *Commission* [2007] ECR II-0000, paragraph 54, and Case T–340/04 *France Télécom* v *Commission* [2007] ECR II-0000, paragraph 126).

56 In the present case, it is clear that the acts and decisions disputed by the applicants occurred after adoption of the decision ordering the inspection. That decision merely authorises the Commission to enter the applicants' premises and to take copies of the relevant business records. It does not contain any reference to the documents in Sets A and B and does not refer to the issue of legal professional privilege. As the applicants accept, moreover, it was the subsequent seizure and inspection of those documents by the Commission which changed their legal position, and not that decision (see paragraph 42 above). However, as has been held, those measures constitute a distinct, special procedure aimed specifically at the issue of the application of legal professional privilege to specific documents (see paragraphs 45 to 48 above).

57 In the light of the foregoing, the Court holds that the action brought in Case T-125/03 against the decision ordering the investigation must be rejected as inadmissible. It is therefore appropriate to examine the substance of the action in Case T-253/03.

The substance in Case T–253/03

58 The applicants submit that the Commission breached the principle of legal professional privilege and, in doing so, violated the EC Treaty and Regulation No 17. They rely on three particular pleas in support of their action. The first plea is that the procedures relating to the application of LPP were infringed. The second is that LPP was unjustifiably refused in relation to the five documents in question. The third is that the fundamental rights which form the basis of LPP were violated.

The first plea, alleging breach of the procedures relating to the application of the principle of LPP

Arguments of the parties

59 The applicants maintain that the Commission breached the procedure relating to the application of the principle of LPP, violated Article 242 EC and the applicants' right of access to the Community Courts, and breached the principle of equal treatment.

60 They observe that, in the *AM & S* judgment, the Court of Justice set out the procedure to be followed by the Commission in cases where an undertaking subject to an investigation under Article 14 of Regulation No 17 refuses to produce certain business records by relying on LPP. The procedure consists of three steps. First, the undertaking must provide the Commission officials with relevant material of such a nature as to demonstrate that the documents fulfil the conditions for LPP, although it is not bound to reveal the contents of the documents in question. Second, if the Commission considers that such evidence has not been supplied, it must order, pursuant to Article 14(3) of Regulation No 17, production of the documents in question. The applicants concede that, alternatively, in accordance with the rationale behind the *AM & S* judgment, the Commission may, in the course of an investigation, take copies of the documents in question and place them in a sealed envelope. Third, and finally, if the undertaking concerned continues to plead the privilege of confidentiality, it is for the Community judicature to settle the dispute.

61 The applicants consider that two fundamental points must be noted. First, the Court of Justice did not intend to permit the Commission to examine the contents of a document to determine whether LPP applies. Second, it is for the Community judicature alone to determine disputes concerning the application of LPP. The applicants also observe that merely reading, at the time of the investigation procedure, the documents for which LPP is claimed is contrary to the very substance of the principle of LPP. That principle is immediately and irremediably violated as soon as there is disclosure of the contents of a privileged document (Opinions of Advocates General Warner and Sir Gordon Slynn in *AM & S*, respectively pp. 1619, 1638 and 1639, and pp. 1642 and 1662). Instead of a cursory examination, the Commission, in the case of doubt, ought to place copies of the documents concerned in a sealed envelope, without first looking at them, with a view to subsequent resolution of the dispute.

62 According to the applicants, however, the Commission did not follow any of the three procedural steps laid down in the *AM & S* judgment.

63 With regard to the first step, the applicants submit that the Commission forced them to reveal the contents of the documents in question although they had claimed that they were covered by LPP. Following disclosure of those documents, long discussions ensued between the applicants' in-house counsel and the Commission as to the procedure to be followed for examining those documents. The Commission informed the applicants that any further delay in the handing over and examination of the documents would amount to obstruction of the investigation and could constitute a criminal offence under section 65 of the UK Competition Act, which is punishable by a term of imprisonment and a fine. It was only under strong protest that the applicants handed the Set B documents to the Commission for examination. Furthermore, during the investigation the Commission inspectors read and described to each other the contents of the Set A and Set B documents for several minutes at a time.

64 With regard to the second step of the procedure, the applicants submit that, as the Commission considered that the information and arguments adduced were not sufficient to demonstrate that the disputed documents were covered by LPP, it ought to have adopted a decision ordering them to produce those documents, before actually removing them from the premises. However, it did not do so. So far as the Set A documents are concerned, the Commission placed them in a sealed envelope and took them to Brussels. According to the applicants, although the sealed envelope procedure does not in itself breach the substance of LPP, it does not accord with the procedure established by the Court of Justice in *AM & S*. With regard to the Set B documents, the Commission rejected the applicants' proposal that they could be placed in a sealed envelope and added them to the other documents seized, depriving the applicants of any opportunity to show that they should be protected under the principle of LPP.

65 With regard to the third step, the applicants maintain that the Commission manifestly breached the procedure set down in *AM & S* by deciding unilaterally, in the rejection decision of 8 May 2003, that the disputed documents were not protected by LPP. By conferring upon itself the right to decide at first instance, the Commission deprived the Community judicature of the opportunity to settle the dispute at a time when the protection of LPP was not yet compromised.

66 The CCBE submits that the procedure established by the Court in *AM & S* is designed to ensure that, if the Commission and the undertaking under investigation are unable to resolve a dispute as to the privileged status of a communication, the Court should rule and, before it does so, the Commission should not read the document. The Commission is not entitled to take a cursory look at the documents either, there being a risk that this may disclose their contents. The CCBE accepts that claims of LPP should not give the undertaking an opportunity to conceal or destroy documents, but does not, however, consider it satisfactory that the Commission inspectors should take copies and take them away with them, albeit in a sealed envelope. If the documents are to be retained by the Commission, they should at least be sent directly to one of the Commission's hearing officers, whose terms of reference should be widened to provide an assurance that those documents will not be accessible to anyone from the Directorate-General for Competition. The CCBE is inclined, in any event, to the view that documents should be lodged with the Registry of the Court of First Instance or entrusted to a neutral third party.

67 The Netherlands Bar Association submits that principle of LPP has the object of preventing not only the use of privileged documents, but also their disclosure. A mere cursory look at a document could entail a breach of that principle. The ECLA observes that, in the *AM & S* judgment, the Court of Justice developed a procedure based on the principle of confidentiality which prohibits disclosure of the privileged document. The proportionate approach consists in placing the documents under seals and having them examined by an independent third party, such as the hearing officer. It is for the Court in any case to decide the privilege issue. Finally, the ACCA submits that the task of settling disputes concerning the applicability of LPP should be entrusted to an independent arbitrator.

68 The Commission stresses that, although the Court of Justice set out in the *AM & S* case a specific procedure to resolve disputes concerning LPP, it did not attach an absolute value to that procedure. The judgment does not require the Commission to refrain from copying documents and subsequently requesting them from the undertaking whenever that principle is relied on. In *AM & S* the initial investigation was based on Article 14(2) of Regulation No 17 – allowing the undertaking to refuse to produce the documents – and not, as in the present case, on Article 14(3), which requires the undertaking to submit to the investigation. In reality, the only principle laid down by that judgment is that the Commission must adopt a reasoned decision on whether or not the documents at issue are covered by LPP in order to give the undertaking an opportunity to have the case decided by the Community judicature.

69 The Commission currently adopts the following procedure: when there can be no doubt that LPP applies to a document, based on a cursory look at the general layout of the document, heading, title and other characteristics and relevant explanations provided by the undertaking, it is set aside; when, on the basis of the cursory look, there can be no doubt that the document cannot be covered by LPP, it is copied and added to the investigation file; finally, when the cursory look gives rise to doubt as to the issue of LPP, no examination is carried out, the assessment is postponed and a copy of the document is placed in a sealed envelope to be taken away by the Commission.

70 According to the Commission, a cursory look on the spot at a document has no other purpose than to ascertain whether LPP cannot be ruled out, any doubt being construed in favour of the undertaking concerned by leading automatically to the sealed envelope procedure. The Commission's ability to form a preliminary opinion as to the existence of doubt regarding the applicability of LPP has the advantage of reducing the risk of unfounded claims of privilege and is in line with the *AM & S* judgment. The sealed envelope procedure also obviates the risk of documents being destroyed by the undertaking. The Commission observes further that, in the majority of Member States, the competition authorities deal with the issue of LPP in the context of on-the-spot inspections in the same way.

71 The Commission adds that the procedure described above cannot affect the procedural rights of the undertakings concerned. Even if it were shown that the undertaking's rights of defence were adversely affected as a result of reading potentially privileged documents, such harm could easily be remedied. In fact the Commission would be unable to use documents protected by LPP to prove an infringement.

72 In the present case, the Commission contends that it strictly followed a legitimate and proportionate procedure for determining, in accordance with the *AM & S* case-law, whether the disputed documents were protected, and that the applicants' procedural rights were fully respected. It states that it was agreed with the applicants that the Commission's case team leader would examine the file, with a representative of the applicants sitting next to her. If LPP were claimed for a particular document, the applicants had to make the claim, basing it on the document itself. The Commission considers furthermore that the applicants' production, at the reply stage, of minutes of the investigation drawn up by their lawyers, without explaining the delay, is a violation of Article 48 (1) of the Rules of Procedure.

73 With regard to the Set A documents, the Commission observes that a doubt arose from a cursory look at them, in particular because of the presence of a handwritten note referring to the name of an external lawyer on the first page of one of the documents. As none of the explanations given on the spot by the applicants was sufficient to remove the doubt, the Commission officials put the documents into a sealed envelope. So far as the Set B documents are concerned, the Commission inspector considered, on the basis of a cursory look at those documents and the information given by the undertaking and on the basis of uncontested case-law, that there was not the slightest doubt that they were not covered by LPP. Consequently the Commission officials made copies and added them to the investigation file.

74 The Commission also maintains that a cursory look is not the same as reading a document. Although the leader of the investigation team was able to take a cursory look at the Set A documents during the investigation, it is wrong to claim that the Commission officials read them before putting them in an envelope. With regard to the Set B documents, it was only after the investigation that the Commission read them and acquired knowledge of their contents. The Commission also denies the applicants' suggestion that their final consent to hand over the Set B documents was obtained by the threat of criminal sanctions. These allegations are manifestly untrue in so far as the alleged refusal related to the entire file. In any case, informing an undertaking that its failure to cooperate could entail the application of national law and, possibly, criminal sanctions is in accordance with Regulation No 17.

75 The Commission observes that the applicants were informed of their rights at the outset of the investigation and were thereafter at all times in a position to have access to the Court of First Instance. In the case of the Set A documents, the applicants knew from the beginning that the procedure would lead to the adoption of a challengeable decision. With regard to the Set B documents, the Commission left open the possibility for the applicants to challenge the assessment conducted on the spot by one of its officials.

Findings of the Court

76 It should be pointed out at the outset that Regulation No 17 confers on the Commission wide powers of investigation and of examination in order to uncover infringements of Articles 81 EC and 82 EC. According to, in particular, Articles 11 and 14 of that regulation, the Commission may obtain information and undertake the necessary examinations for the purpose of proceedings in respect of infringements of the rules governing competition (from 1 May 2004, the Commission's powers of investigation in this area are set out, in particular, in Articles 17 to 22 of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1)). Article 14(1) of Regulation No 17, in particular, empowers the Commission to require production of business records, that is to say, documents concerning the market activities of the undertaking. As the Court of Justice has pointed out, written communications between lawyer and client fall, in so far as they have a bearing on such activities, within the category of documents referred to in Articles 11 and 14 of Regulation No 17 (*AM & S*, paragraph 16). The Court also held that it is for the Commission itself, and not the undertaking concerned or a third party, whether an expert or an arbitrator, to decide whether or not a document must be produced to it (*AM & S*, paragraph 17).

77 However, the Court held that Regulation No 17 does not exclude the possible recognition, subject to certain conditions, of certain business records as confidential in character. It thus stated that Community law, which derives from not only the economic but also the legal interconnection between the Member States, must take into account the principles and concepts common to the laws of those States concerning the observance of confidentiality, in particular as regards certain communications between lawyer and client. That confidentiality serves the requirement, the importance of which is recognised in all of the Member States, that every person must be able, without constraint, to consult a lawyer whose profession entails the giving of independent legal advice to all those in need of it. Similarly, the Court considered that the protection of the

confidentiality of written communications between lawyer and client is an essential corollary to the full exercise of the rights of the defence (*AM & S*, paragraphs 18 and 23).

78 The Court therefore concludes that Regulation No 17 must be interpreted as protecting the confidentiality of written communications between lawyer and client, subject to certain conditions (*AM & S*, paragraph 22).

79 As regards the procedure to be followed when applying that protection, the Court held that if an undertaking which is the subject of an investigation under Article 14 of Regulation No 17 refuses, by claiming protection under LPP, to produce, as part of the business records demanded by the Commission, written communications between itself and its lawyer, it must nevertheless provide the Commission officials with relevant material which demonstrates that the communications fulfil the conditions for the grant of legal protection, while not being bound to disclose their contents. The Court went on to state that, where the Commission considers that such evidence has not been provided, it must, pursuant to Article 14(3) of Regulation No 17, order production of the communications in question and, if necessary, impose on the undertaking fines or periodic penalty payments under that regulation as a penalty for the undertaking's refusal either to supply such additional evidence as the Commission considers necessary or to produce the documents whose confidentiality, in the Commission's view, is not protected in law (*AM & S*, paragraphs 29 to 31). The undertaking under investigation may subsequently bring an action for the annulment of such a Commission decision, where appropriate, coupled with a request for interim relief pursuant to Articles 242 EC and 243 EC (see, to that effect, *AM & S*, paragraph 32).

80 It is apparent, therefore, that the mere fact that an undertaking claims that a document is protected by legal professional privilege is not sufficient to prevent the Commission from reading that document if the undertaking produces no relevant material of such a kind as to prove that it is actually protected by LPP. The undertaking concerned may, in particular, inform the Commission of the author of the document and for whom it was intended, explain the respective duties and responsibilities of each, and refer to the objective and the context in which the document was drawn up. Similarly, it may also mention the context in which the document was found, the way in which it was filed and any related documents.

81 In a significant number of cases, a mere cursory look by the Commission officials at the general layout, heading, title or other superficial features of the document will enable them to confirm the accuracy of the reasons invoked by the undertaking and to determine whether the document at issue was confidential, when deciding whether to put it aside. Nevertheless, on certain occasions, there would be a risk that, even with a cursory look at the document, in spite of the superficial nature of their examination, the Commission officials would gain access to information covered by legal professional privilege. That may be so, in particular, if the confidentiality of the document in question is not clear from external indications.

82 As stated in paragraph 79 above, it is clear from *AM & S* that the undertaking concerned is not bound to reveal their contents when presenting the Commission officials with relevant material of such a nature as to demonstrate that the documents fulfil the conditions for being granted legal protection (paragraph 29 of the judgment). Accordingly, the Court concludes that an undertaking subject to an investigation under Article 14(3) of Regulation No 17 is entitled to refuse to allow the Commission officials to take even a cursory look at one or more specific documents which it claims to be covered by LPP, provided that the undertaking considers that such a cursory look is impossible without revealing the content of those documents and that it gives the Commission officials appropriate reasons for its view.

83 Where, in the course of an investigation under Article 14(3) of Regulation No 17, the Commission considers that the material presented by the undertaking is not of such a nature as to prove that the documents in question are confidential, in particular where that undertaking refuses to give the Commission officials a cursory look at a document, the Commission officials may place a copy of the document or documents in question in a sealed envelope and then remove it with a view to a subsequent resolution of the dispute. This procedure enables risks of a breach of legal professional privilege to be avoided while at the same time enabling the Commission to retain a certain control over the documents forming the subject-matter of the investigation and avoiding the risk that the documents will subsequently disappear or be manipulated.

84 Use of the sealed envelope procedure cannot, moreover, be considered to be at odds with the requirement set out in paragraph 31 of *AM & S* that, in the case of a dispute with the undertaking concerned as to whether a particular document is confidential, the Commission must adopt a

decision ordering that document to be produced. The reason for such a requirement lies in the specific context of the judgment in *AM & S*, in particular the fact that the initial decision ordering an inspection at the premises of the undertaking in question was not a formal decision under Article 14 (3) of Regulation No 17 (Opinion of Advocate General Warner in *AM & S*, p. 1624) and the undertaking in question was therefore entitled, as it in fact did, to refuse to produce the documents requested by the Commission.

85 In any event, the Court would point out that where the Commission is not satisfied with the material and explanations provided by the representatives of the undertaking for the purposes of proving that the document concerned is covered by LPP, the Commission must not read the contents of the document before it has adopted a decision allowing the undertaking concerned to refer the matter to the Court of First Instance, and, if appropriate, to make an application for interim relief (see, to that effect, *AM & S*, paragraph 32).

86 Having regard to the particular nature of the principle of LPP, the purpose of which is both to guarantee the full exercise of individuals' rights of defence and to safeguard the requirement that any person must be able, without constraint, to consult his lawyer (see paragraph 77 above), the Court considers that the fact that the Commission reads the content of a confidential document is in itself a breach of this principle. Contrary to what the Commission seems to submit, the protection of LPP therefore goes beyond the requirement that information provided by an undertaking to its lawyer or the content of the advice given by that lawyer cannot be used against it in a decision which penalises a breach of the competition rules.

87 First, that protection seeks to safeguard the public interest in the proper administration of justice in ensuring that a client is free to consult his lawyer without fear that any confidences which he imparts may subsequently be disclosed. Secondly, its purpose is to avoid the harm which may be caused to the undertaking's rights of the defence as a result of the Commission reading the contents of a confidential document and improperly adding it to the investigation file. Therefore, even if that document is not used as evidence in a decision imposing a penalty under the competition rules, the undertaking may suffer harm which cannot be made good or can only be made good with great difficulty. Information covered by LPP might be used by the Commission, directly or indirectly, in order to obtain new information or new evidence without the undertaking in question always being able to identify or prevent such information or evidence from being used against it. Moreover, harm which the undertaking concerned would suffer as a result of disclosure to third parties of information covered by LPP could not be made good, for example if that information were used in a statement of objections in the course of the Commission's administrative procedure. The mere fact that the Commission cannot use privileged documents as evidence in a decision imposing a penalty is thus not sufficient to make good or eliminate the harm which resulted from the Commission's reading the content of the documents.

88 Protection under LPP also requires the Commission, once it has adopted its decision rejecting a request under that head, not to read the content of the documents in question until it has given the undertaking concerned the opportunity to refer the matter to the Court of First Instance. In that regard, the Commission is bound to wait until the time-limit for bringing an action against the rejection decision has expired before reading the contents of those documents. In any event, to the extent that such an action does not have suspensory effect, it is for the undertaking concerned to bring an application for interim relief seeking suspension of operation of the decision rejecting the request for LPP (see, to that effect, *AM & S*, paragraph 32).

89 Furthermore, as regards the Commission's claims regarding the possibility that undertakings may abuse the above procedure by making requests, merely as delaying tactics, for protection under LPP which are clearly unfounded, or by opposing, without objective justification, any cursory look at the documents during an investigation, the Court would point out that the Commission has the means, where appropriate, to discourage and penalise such conduct. In fact, such conduct may be penalised under Article 23(1) of Regulation No 1/2003 (and previously under Article 15(1) of Regulation No 17) or be taken into account as aggravating circumstances when calculating any fine imposed in the context of a decision imposing a penalty under the competition rules.

90 Finally, it must be observed, as the Court of Justice pointed out in *AM & S*, that the principle of LPP does not prevent a lawyer's client from disclosing the written communications between them if he considers that it is in his interests to do so (paragraph 28 of the judgment).

91 It is in the light of these considerations and principles that the applicants' complaints should be examined.

92 As a preliminary point, the Court must reject the Commission's claim that the fact that the applicants, at the stage of the reply, presented minutes of the investigation drawn up by their lawyers, infringes Article 48(1) of the Rules of Procedure (see paragraph 72 above). Contrary to the Commission's claims, the applicants explained why they had not produced those minutes beforehand, namely because they were confidential and because they needed to dispute the arguments advanced by the Commission in its defence (see, in particular, paragraphs 21 to 26 of the reply). Moreover, production of those minutes followed the Commission's presentation, in the defence, of the record of the inspection drawn up by its officials. Finally, where the parties disagree on the facts set out in the application and the defence, it is in the reply and the rejoinder that they must put forward evidence in support of their respective presentations of the facts.

93 As regards the complaints raised by the applicants, first of all, they submit that during the investigation the Commission forced them to divulge the contents of the documents at issue, even though they had claimed that they were covered by LPP. In particular, they complain that the Commission officials examined those documents on the spot, in spite of protests on the part of their representatives.

94 It is clear both from the Annex to the report of the inspection drawn up by the Commission officials and the non-confidential version of the minutes of the inspection drawn up by the applicants' lawyers that, during the investigation, the Commission officials and the applicants' representatives had long discussions on how to examine the documents at issue. During those discussions, the applicants strongly opposed a cursory look at the documents by the Commission officials, claiming inter alia that at least some of those documents might not appear on their face to be covered by LPP, as they did not necessarily refer to outside lawyers or to their confidential nature. The applicants submitted, however, that those documents had been prepared for the purposes of seeking legal advice or contained legal advice, and maintained that cursory examination would not enable a determination to be made as to their confidentiality without at the same time revealing their contents. It is also apparent from the report and the minutes mentioned above that the Commission insisted on taking a cursory look at those documents and that the applicants' representatives only agreed to this after the Commission and the OFT officials informed them that refusal to allow them to do so would be tantamount to obstructing the investigation, an action which would be punishable by administrative and criminal penalties.

95 In those circumstances, the Court considers that the Commission forced the applicants to accept the cursory look at the disputed documents, even though, as regards the two copies of the typewritten memorandum in Set A and the handwritten notes in Set B, the applicants' representatives claimed, and provided supporting justification, that such an examination would require the contents of those documents to be disclosed. The Court would point out that a cursory look at the documents was unlikely to allow the Commission officials to assess whether they were confidential without at the same time giving them the opportunity to read their content. Accordingly, the Court concludes that the Commission infringed the procedure for protection under LPP in this regard.

96 Secondly, the applicants maintain that the Commission, by making copies of the documents in Set A and putting them in a sealed envelope, did not follow the procedure laid down by the Court in *AM & S* to the letter, and claim that the Commission ought to have adopted a formal decision ordering those documents to be produced. This complaint cannot however be upheld. In fact, as the Court has already held, the use of the sealed envelope procedure in circumstances such as those in the present case does not infringe the procedure laid down in that judgment (see paragraph 84 above). Furthermore, it is apparent from the report and the minutes mentioned above that, during the investigation, the applicants' representatives repeatedly requested the Commission officials to use the sealed envelope procedure for the disputed documents.

97 Thirdly, the applicants complain that the Commission rejected their claim for protection of the documents in Set B under LPP at the time of the investigation. The Court would point out in this regard that, during the inspection, the applicants in fact claimed such protection and advanced a number of arguments in support of that claim, including, in particular, the fact that the documents in question had been drawn up for the purposes of seeking legal advice or that they contained such legal advice. In those circumstances, the Court concludes that, as the Commission was not satisfied with the explanations provided by the applicants, it should, before reading the contents of the documents in question, have adopted a formal decision rejecting the request for protection under LPP, allowing the applicants to bring the matter effectively before the Court of First Instance (see paragraph 85 above).

98 However, the Commission did not give the applicants an opportunity to bring the matter effectively

before the Court in order to prevent the Commission from reading the contents of the documents in Set B. It must be borne in mind that the Commission officials concluded during the investigation that the documents in Set B were clearly not covered by LPP and that they made copies of them and added them to the investigation file without placing them in a sealed envelope. At that same time, therefore, the Commission was able to read the contents of the documents in full (see paragraph 51 above). Accordingly, the Court concludes that the Commission infringed the procedure for protection under LPP in this regard.

99 Fourthly, the applicants maintain that, by the rejection decision of 8 May 2003, the Commission breached the procedure laid down in *AM & S* by deciding unilaterally that the disputed documents were not covered by LPP. It must be pointed out, however, that, contrary to what the applicants claim, the mere fact that the Commission adopts a decision rejecting a claim for confidentiality does not undermine the procedure applying to such protection, inasmuch as the Commission does not read the documents in question before giving the undertaking concerned the opportunity to bring the matter effectively before the Court of First Instance, and, if appropriate, to apply for interim relief to challenge the rejection decision (see paragraph 85 above).

100 However, in the present case, as regards the documents in Set B, even if they are covered by the rejection decision of 8 May 2003, it is not disputed that the Commission had read their contents well before adopting the decision. On the other hand, in relation to the documents in Set A, it must be borne in mind that the Commission made copies of them during the investigation and placed them in a sealed envelope. It then adopted a preliminary decision at the applicants' request, without opening the sealed envelope or examining its contents, a decision which it sent to them by letter of 1 April 2003. On 8 May 2003 the Commission finally adopted a decision rejecting the claim to protection, still without reading the contents of the documents in Set A. It was only after the annulment of the order of the President of the Court of First Instance in *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission* by the order of the President of the Court of Justice in *Commission* v *Akzo and Akcros* in the interim relief cases that the Commission finally read the documents in Set A. In those circumstances, the Court concludes that the adoption of the rejection decision of 8 May 2003 did not infringe the procedure applying to protection under LPP.

101 In the light of the foregoing, the Court holds that the Commission infringed the procedure for protection under LPP, first, by forcing the applicants to allow a cursory look at the documents in Set A and the manuscript notes in Set B, and, secondly, by reading the documents in Set B without having given the applicants the opportunity to contest the rejection of their claim to protection in respect of those documents before the Court of First Instance. However, the Court rejects the first plea as regards the applicants' complaints relating to the cursory look at the e-mails in Set B, the use of the sealed envelope procedure in respect of the documents in Set A, and the adoption of the rejection decision of 8 May 2003.

The second plea in law, alleging unjustified rejection of the claim to protection of LPP for the documents at issue

102 The applicants maintain that the five documents at issue are covered by LPP. The documents in Set A and the handwritten notes in Set B should in fact be viewed as the written basis of an oral communication between client and outside counsel, made for the purpose of obtaining legal advice, while the e-mails in Set B are communications between lawyer and client for the purposes and in the interest of the latter's rights of defence.

103 The Commission argues that, in the light of the criteria laid down in the case-law, the five documents at issue are clearly not covered by LPP.

The two copies of the typewritten memorandum in Set A

– Arguments of the parties

104 The applicants observe that Set A contains two separate copies of a typewritten two-page memorandum from the General Manager of Akcros Chemicals to his superior, the Sub-Business Unit Manager ('the SBU Manager'), dated 16 February 2000. The two copies are identical, apart from the fact that one copy has the following handwritten notes on the first page:

' – given to [SBU manager] 2/16/00

– returned by [SBU manager] 2/17/2000

– discussed with [X, outside counsel of the applicants] 2/22/00 by tel.'

105 The applicants submit that the document has to be examined in the context of the internal competition law compliance programme put in place by the Akzo Nobel group of companies on the advice of, and in coordination with, outside counsel. In the context of that programme, the applicants' employees and management identify potential questions relating to competition law in their respective fields of responsibility which they then put to outside counsel, who provides legal advice in reply.

106 Therefore, according to the applicants, that memorandum contains information gathered by the General Manager of Akcros Chemicals on the basis of internal discussions which he had with other employees, for the purpose of seeking legal advice regarding the compliance programme. That document is thus the direct result of – and inseparable from – the effort made by the applicants to identify potential competition law compliance issues and seek legal advice from outside counsel.

107 The sequence of events corroborates this version of the facts. After receiving the letter of 28 January 2000 from the Chairman of the Board of Management of Akzo Nobel concerning the draft compliance programme, the General Manager of Akcros Chemicals spoke with his employees about matters of competition law compliance. During these discussions, he took notes (the Set B handwritten notes). On Wednesday 16 February 2000, the copies of the Set A memorandum were given to the SBU Manager by the General Manager. On Thursday 17 February 2000, the SBU Manager returned them to the General Manager. On Tuesday 22 February 2000, the memorandum served as a basis for the discussion with Mr X, the applicants' outside counsel.

108 The applicants maintain that the two criteria identified by the Court of Justice in *AM & S* as being common to the laws of the various Member States in the context of protection under LPP, namely that the relevant communications are made for the purposes of and in the interests of the client's rights of defence and that those communications involve independent lawyers, are satisfied in the present case. The applicants explain that they do not claim that the mere fact that the document at issue was created in the context of the compliance programme is sufficient to guarantee the confidentiality of that document. However, by denying the possibility that such a programme can provide the context within which legally privileged communications are produced, the Commission overlooks fundamental aspects of its own competition law enforcement regime. Thus, first, in the light of the abolition of the notification scheme under Article 81(3) EC, if documents produced in the context of a self-assessment exercise could be divulged, the undertaking would be prevented from establishing freely and without fear, with the aid of external or internal counsel, whether its practices are in compliance with competition law. Secondly, due to the nature of a leniency application and to the requirement to undertake a fact-finding exercise and gather material evidence, documents produced in the context of a self-assessment exercise must be considered to be covered by LPP.

109 The applicants also dispute the Commission's view that there is no indication in the typewritten memorandum linking the observations of the General Manager to the seeking of legal advice from external counsel and that it has not been established that such legal advice was indeed sought and given. They thus assert that the handwritten notes on the first page of one of the two copies of the memorandum incontestably demonstrate that that document served as a vehicle for seeking legal advice from that lawyer. Similarly, an internal report from the lawyer of 22 February 2000 and the time sheet filled in by him on that day confirm that legal advice was sought and given. Later that day, the General Manager faxed additional information to the outside counsel, referring to their earlier telephone conversation. The applicants also contend that *AM & S* and the order in Case T-30/89 *Hilti* v *Commission* [1990] ECR II-163, published in extracts, at no point state that there must be an indication in the privileged communication establishing a connection with the seeking of legal advice or that the communications were prepared for the sole purpose of seeking such advice.

110 According to the applicants, the only particularity here, as compared with the classical situation contemplated in *AM & S*, is that the information was transmitted to the outside counsel orally on the basis of the memorandum drawn up by the General Manager. The applicants maintain that, had the General Manager reported the result of his fact-finding efforts in a memorandum to outside counsel with a copy to his superior, the Commission would certainly have acknowledged the application of the protection of LPP to that document. However, as the order in *Hilti* v *Commission* demonstrates, application of LPP does not depend on both the form and substance of the document.

111 The CCBE submits that the documents drawn up for the purpose of seeking legal advice are covered by the principle of LPP and that account must be taken of the 'dominant' purpose for which

a communication was made. In order for a document to be protected, however, it is not sufficient for an undertaking to declare that it has been prepared in the context of a competition law compliance programme, even if that programme was put together with help of outside counsel and carried out under his supervision. In this case, the fact that it is not possible to tell from the outward form of the Set A documents that they were prepared for the purposes of seeking legal advice cannot be a determinative test. The Netherlands Bar Association, the ECLA, the ACCA and the IBA each submit that preparatory documents drawn up for the purpose of seeking legal advice must be regarded as protected by LPP.

112 The Commission observes that, according to the judgment in *AM & S* (paragraphs 21 to 23) and the order in *Hilti* v *Commission* (paragraph 18), LPP covers only written communications between lawyer and client which are made for the purposes of and in the interests of the client's rights of defence, and internal notes which do no more than report the text or the content of those communications.

113 In the present case, according to the Commission, the documents at issue do not fall within the category of written communications between lawyer and client and do not report the contents of such communications. The observations contained in the memorandum at issue reflect internal discussions that the General Manager had with other employees in the context of the compliance programme, not discussions that he had with an external lawyer.

114 The Commission is opposed to extension of the material scope of LPP to include documents made for the purpose of seeking legal advice. Such extension finds no basis either in the European Convention on the Protection of Human Rights and Fundamental Freedoms (ECHR) or in the constitutional traditions common to the Member States. In actual fact, *AM & S* establishes a high level of protection in Community law, more extensive than that provided in a large number of Member States, since *AM & S* covers documents kept at the premises of the client and may also encompass documents exchanged with an external lawyer before any proceedings have been started against the client.

115 In any event, the Commission also disputes the applicants' view that the memorandum, the two typewritten copies of which constitute the Set A documents, was prepared for the purpose of seeking legal advice. There is no indication in the typed memorandum linking the observations of the General Manager of Akcros to the seeking of legal advice by an outside lawyer. The manuscript reference, in one of the copies of the memorandum, to the name of an outside lawyer, establishes at most that a conversation regarding the memorandum occurred. The fact that the handwritten name of the outside lawyer was added after completion of the memorandum, and to only one of the two copies, suggests that the memorandum was not prepared for the purpose of seeking legal advice. Similarly, apart from an abstract of the time sheets of Mr X and a reference to an alleged note drawn up by him of the contents of the conversation which he had with the General Manager, the applicants have not produced any documents proving that legal advice was actually sought and given.

116 As regards the applicants' reliance on Akzo Nobel's compliance programme, the Commission expresses doubts as to its probative value. The Set A documents make no mention of that programme. In any event, the fact that a document was drawn up in the context of a compliance programme is not sufficient evidence that that document is confidential. Such a programme is a process of internal assessment comprising contacts between members of staff and for the purposes of ascertaining whether the undertaking is complying with competition law and has a pedagogical, disciplinary and supervisory dimension, and thus is not limited to protection of the rights of the defence. To allow an undertaking to invoke protection of a document on the sole ground that, in the absence of the compliance programme and guidance from an outside lawyer that document would never have been drawn up, could lead to all manner of abuse.

– Findings of the Court

117 It must be pointed out at the outset that, according to the judgment in *AM & S*, Regulation No 17 falls to be interpreted as protecting the confidentiality of communications between lawyer and client provided that (i) such communications are made for the purposes of the exercise of the client's rights of defence and (ii) they emanate from independent lawyers (paragraphs 21, 22 and 27 of the judgment). As far as the first of those two conditions is concerned, such protection must, if it is to be effective, be recognised as covering as a matter of law all written communications exchanged after the initiation of the administrative procedure under the regulation which may lead to a decision on the application of Articles 81 EC and 82 EC or to a decision imposing a pecuniary sanction on the undertaking. That protection can also extend to earlier written communications which have a

relationship to the subject-matter of that procedure (*AM & S*, paragraph 23). In the order in *Hilti* v *Commission*, it was held that LPP must, in view of its purpose, be regarded as extending also to the internal notes circulated within an undertaking which are confined to reporting the text or the content of communications with independent lawyers containing legal advice (paragraphs 13 and 16 to 18 of the order).

118 In the present case, the Court finds that the Set A documents do not by themselves constitute written communications with an independent lawyer or an internal note reporting the content of a communication with such a lawyer. Nor do the applicants submit that those documents were prepared in order to be sent physically to an independent lawyer. Accordingly, it must be held that those documents do not formally come within the categories of documents expressly identified in the abovementioned case-law.

119 The applicants claim, nevertheless, that those documents must be recognised as being covered by LPP, since, in their view, they were prepared in order to seek legal advice. According to the applicants, those documents were drawn up, for the particular purpose of a conference call with a lawyer with the aim of obtaining legal advice.

120 In that regard, it must be pointed out that the principle of the protection of the confidentiality of written communications between lawyer and client is an essential corollary to the effective exercise of the rights of the defence (*AM & S*, paragraph 23) (see paragraph 77 above). According to settled case-law, observance of the right to be heard is, in all proceedings in which sanctions, in particular fines or penalty payments, may be imposed, a fundamental principle of Community law which must be respected even if the proceedings in question are administrative proceedings (Case 85/76 *Hoffman-La Roche* v *Commission* [1979] ECR 461, paragraph 9, and Case T-308/94 *Cascades* v *Commission* [1998] ECR II-925, paragraph 39). Therefore, it is necessary to prevent those rights from being irremediably impaired during preliminary inquiry procedures, including, in particular, investigations which may be decisive in providing evidence of the unlawful nature of conduct engaged in by undertakings for which they may be liable (Joined Cases 46/87 and 227/88 *Hoechst* v *Commission* [1989] ECR 2859, paragraph 15).

121 Similarly, it must be pointed out that LPP meets the need to ensure that every person must be able, without constraint, to consult a lawyer whose profession entails the giving of independent legal advice to all those in need of it (*AM & S*, paragraph 18). That principle is thus closely linked to the concept of the lawyer's role as collaborating in the administration of justice by the courts (*AM & S*, paragraph 24) (see paragraph 77 above).

122 However, so that a person may be able effectively to consult a lawyer without constraint, and so that the latter may effectively perform his role as collaborating in the administration of justice by the courts and providing legal assistance for the purpose of the effective exercise of the rights of the defence, it may be necessary, in certain circumstances, for the client to prepare working documents or summaries, in particular as a means of gathering information which will be useful, or essential, to that lawyer for an understanding of the context, nature and scope of the facts for which his assistance is sought. Preparation of such documents may be particularly necessary in matters involving a large amount of complex information, as is often the case with procedures imposing penalties for breaches of Articles 81 EC and 82 EC. In those circumstances, the Court holds that the fact that the Commission reads such documents during an investigation may well prejudice the rights of the defence of the undertaking under investigation and the public interest in ensuring that every client is able to consult his lawyer without constraint.

123 Accordingly, the Court concludes that such preparatory documents, even if they were not exchanged with a lawyer or were not created for the purpose of being sent physically to a lawyer, may none the less be covered by LPP, provided that they were drawn up exclusively for the purpose of seeking legal advice from a lawyer in exercise of the rights of the defence. On the other hand, the mere fact that a document has been discussed with a lawyer is not sufficient to give it such protection.

124 It must be borne in mind that protection under LPP is an exception to the Commission's powers of investigation, which are essential to enable it to discover, bring to an end and penalise infringements of the competition rules. Such infringements are often carefully concealed and usually very harmful to the proper functioning of the common market. For this reason, the possibility of treating a preparatory document as covered by LPP must be construed restrictively. It is for the undertaking relying on this protection to prove that the documents in question were drawn up with the sole aim of seeking legal advice from a lawyer. This should be unambiguously clear from the

content of the documents themselves or the context in which those documents were prepared and found.

125 It is therefore necessary, in the present case, to determine whether the applicants have proved that the memorandum of 16 February 2000 of the General Manager of Akcros Chemicals, the two copies of which make up the Set A documents, was prepared exclusively for the purposes of seeking legal advice from a lawyer in exercise of the rights of the defence.

126 The applicants maintain in this respect, first of all, that the memorandum was drawn up in connection with their competition law compliance programme, put in place and coordinated by a law firm, for the purposes of identifying potential problems of competition law and seeking legal advice. They go on to state that the memorandum contains information gathered by the General Manager of Akcros Chemicals on the basis of internal discussions with other employees in order to obtain legal advice on the programme. They contend, finally, that a number of factors prove that the purpose of the memorandum was to seek legal advice and that that advice was in fact requested and provided.

127 In relation, first of all, to the reference to the applicants' competition law compliance programme, it must be pointed out that the fact that a document was drawn up under such a programme is not sufficient in itself for that document to benefit from protection under LPP. Such programmes often encompass in scope duties and cover information which goes beyond the exercise of the rights of the defence. In particular, the fact that an outside lawyer has put together and/or coordinated a compliance programme cannot automatically confer protection under LPP on all the documents drawn up under that programme or in relation to it.

128 As regards, first, the handwritten notes on one of the two copies of the memorandum and referring to a telephone call with an outside lawyer, second, the time sheet filled in by the latter confirming that conversation, third, the fact that the lawyer allegedly prepared an internal note dealing with this, and fourth, the fact that the General Manager of Akcros Chemicals faxed further information to the lawyer, the Court considers that those various factors merely show that the content of the memorandum at issue was discussed on the telephone by the General Manager of Akcros Chemicals and the lawyer. These factors are not, however, in themselves proof that the memorandum was drawn up for the purpose – and, a fortiori, for the exclusive purpose – of seeking legal advice.

129 In that regard, it must be borne in mind that the memorandum was not addressed to the lawyer, but to one of the immediate superiors of the Akcros Chemicals' General Manager, namely the SBU Manager. It is in fact apparent from the first sentence of that document that it was prepared at the latter's request. In fact, the memorandum was in response to a question from the SBU Manager as to whether any activities in one of the applicants' divisions for which the General Manager of Akcros Chemicals was responsible were contrary to the competition rules. The memorandum describes a number of activities and practices which could attract the application of these rules. By way of conclusion, the General Manager of Akcros Chemicals makes two recommendations to his immediate superior and asks for his agreement.

130 It must be pointed out that the memorandum makes no mention of seeking legal advice or a legal consultation. Thus, no mention is made of the need to assess whether certain practices were in conformity with competition law or of the possibility of submitting an application for leniency. Finally, neither of the two recommendations put forward in the memorandum concerns the necessity or appropriateness of seeking legal advice on the conduct examined or on any follow-up action to be taken.

131 Furthermore, even if the gathering of the information in question might in fact be part of the implementation of the applicants' compliance programme, the preparation of the memorandum is clearly not in line with the methodology laid down in that programme. As is apparent from the letter of 28 January 2000 from the Chairman of the Board of Management of Akzo Nobel, sent to, amongst others, the SBU Manager, that compliance programme required that any information or question concerning conduct likely to infringe competition law had to be sent orally and directly to the applicants' outside counsel, except in cases concerning the United States or Canada.

132 In those circumstances, the Court considers that it is not apparent either from the content of the document or the factors and explanations put forward by the applicants, whether taken individually or as a whole, that the memorandum at issue was drawn up by the General Manager of Akcros Chemicals exclusively for the purposes of seeking legal advice. By contrast, the Court considers that the most plausible explanation is that the memorandum was drawn up by the General Manager of Akcros Chemicals with the primary purpose of seeking the agreement of his immediate superior on the recommendations he put forward regarding the conduct he identified. This interpretation is also

confirmed by the Set B handwritten notes. In fact, the General Manager of Akcros Chemicals expressly stated in those notes that his superior, the SBU Manager, could have a different view as to the strategy to be adopted regarding some of the situations identified in the memorandum. This explains why the Managing Director of Akcros Chemicals drew up a memorandum for the attention of his superior, presenting to him the conduct identified, putting forward recommendations as to the action to be taken and asking for his agreement.

133 By the same token, the sequence of events, as presented by the applicants, does not contradict this version of the facts. In fact, on 16 February 2000, the General Manager of Akcros Chemicals sent the SBU Manager the memorandum at issue. On 17 February 2000, the memorandum was returned to him by the SBU Manager. It was only subsequently, on 22 February 2000, that the General Manager of Akcros Chemicals discussed the content of the memorandum with the lawyer. However, as has been stated above, that subsequent consultation with the lawyer does not suffice to prove that the memorandum at issue was drawn up for the exclusive purpose of seeking legal advice (see paragraph 123 above).

134 In the light of the foregoing, the Court concludes that the applicants have not proved that the memorandum of 16 February 2000 from the General Manager of Akcros Chemicals was drawn up for the exclusive purpose of seeking legal advice from a lawyer in exercising rights of defence.

135 Consequently, the Court concludes that the Commission did not err in considering that the two copies of the memorandum constituting the Set A documents were not protected under LPP.

The handwritten notes in Set B

– Arguments of the parties

136 The applicants state that the first document in Set B consists of handwritten notes by the General Manager of Akcros Chemicals, taken during his discussions with lower-level employees and used for the purpose of preparing the typewritten memorandum constituting the Set A documents. The applicants, supported by the CCBE, submit that if the protection of LPP is accepted for the Set A documents, it should be extended to those preparatory notes.

137 The Commission contends that the handwritten notes cannot be protected under LPP, as they were made in preparation of documents which are not covered by that principle.

– Findings of the Court

138 It is clear from the analysis of the Set B handwritten notes that, as the applicants contend, they were made with the main aim of preparing the memorandum, the two copies of which make up the Set A documents. However, since the Court concluded that the memorandum is not protected under LPP, it must also conclude that those notes are not covered by such protection either.

139 Furthermore, it must be pointed out that the handwritten notes do not constitute a communication with a lawyer and do not report the text or the content of communications with a lawyer containing legal advice. The applicants have also not proved that the manuscript notes were made exclusively for the purpose of seeking legal advice from a lawyer in the exercise of rights of the defence.

140 Accordingly, the Court finds that the Commission did not err in refusing to accord the Set B manuscript notes the protection under LPP claimed by the applicants.

The e-mails exchanged with a member of the applicants' legal department, forming part of the Set B documents

– Arguments of the parties

141 The applicants point out that the two other documents constituting Set B concern e-mail correspondence exchanged between the General Manager of Akcros Chemicals and Mr S., a member of the legal department of Akzo Nobel. That e-mail correspondence should be considered to be protected from disclosure under LPP.

142 In that regard, the applicants put forward two arguments. They submit, principally, that

communications with in-house lawyers who are members of the Bar or Law Society of a Member State – and, in any event, communications with in-house lawyers who are members of the Netherlands Bar, such as Mr S. in the present case – must be protected under the principles laid down in *AM & S*. In the alternative, they claim that, if the *AM & S* judgment is to be interpreted as precluding such protection, it would then be necessary to widen the personal scope of the protection, such as stems from that judgment, and to accord the documents in question the protection claimed.

143 With regard, first of all, to their main argument, the applicants submit that, contrary to the Commission's narrow interpretation of the judgment in *AM & S*, communications emanating from in-house lawyers, in particular those who are members of a Bar or Law Society, are covered by LPP. They admit that in that judgment, the Court of Justice limited that protection to 'independent' lawyers, a group that did not, according to the Court of Justice, include lawyers 'employed' by their clients. However, the relevant element laid down in *AM & S* is that of the independence of the lawyer. The applicants consider that it is not appropriate to attribute the notion of independence only to outside lawyers. In-house lawyers do not appear to be any less under an obligation not to participate in illegal activities, withhold information or obstruct the administration of justice. That is even more true in jurisdictions where in-house lawyers can be admitted to the Bar or Law Society and where, as such, they have a position of independence vis-à-vis their employers.

144 The applicants submit that Mr S. is a member of the Netherlands Bar and is the reference point of the Akzo Nobel competition law compliance programme. While at Akzo Nobel, he has acted only as a legal adviser and has not held any management position. His membership of the Netherlands Bar makes him subject to the professional and ethical rules of that body and gives him a particular level of independence. Under Netherlands law, Mr S. is also covered by the agreement on employment conditions which he concluded with his employer, under which the management of the Akzo Nobel Group of companies has agreed that the obligation of independence and compliance with the Bar rules under Netherlands law prevails over loyalty to the group. Consequently, for the purpose of the principle of LPP, correspondence between Mr S. and the General Manager of Akcros Chemicals is identical to correspondence between that company and an outside lawyer. Mr S. should therefore not be seen solely as in-house counsel, but rather as a qualified independent lawyer, who is a member of the Netherlands Bar and practises as an in-house lawyer within an undertaking.

145 In addition, the applicants assert that, in the correspondence at issue, Mr S. was giving legal advice on how to deal with certain issues that had arisen in the context of Akzo Nobel's competition law compliance programme. That legal advice was based, in turn, on the advice of the applicants' outside lawyer.

146 The CCBE submits that, in the context of applying protection of LPP, a distinction should be made not between legal advisers who are employed and those who are not employed by the company to which they give advice, but between those who are and those who are not subject to professional obligations, compliance with which is supervised by the Bar or Law Society in the Member State concerned. This solution gives full effect to the principles underlying the judgment in *AM & S*, namely the criteria of independence and of being subject to official professional discipline. The CCBE takes the view that Mr S., notwithstanding his employed status, meets all the criteria of independence required by that judgment.

147 The ECLA argues that, in its judgment in *AM & S,* the Court did not specifically hold that an employed lawyer could never be considered 'independent'. A company must have the right to obtain legal advice from the lawyer of its choice without thereby creating evidence against itself, provided that the lawyer is properly qualified and subject to appropriate rules of ethics and discipline. Moreover, Member States' labour laws protect internal advisers against dismissal for failure to follow an order contrary to professional ethical rules.

148 The Netherlands Bar Association states that, in its judgment in *AM & S*, the Court of Justice did not categorically refuse to extend protection of LPP to communications emanating from all in-house counsel. According to that judgment, such protection is closely related to the lawyer's independent status. Lawyers admitted to the Netherlands Bar who are employed in a company are just as independent of their client/employer as other lawyers and have the same status, rights and obligations as the latter, including the privilege of LPP, and the same sanctions can be imposed upon them.

149 The Netherlands Bar Association observes that in 1996 a new regulation was adopted expressly allowing Advocaten to be employed by companies. The independence of lawyers in employment is guaranteed by the conclusion of an agreement on their conditions of employment, in combination

with the disciplinary and ethical rules stemming from their membership of the Netherlands Bar. That agreement governing their conditions of employment contains a number of strict requirements, which are such as to reinforce the independence of the lawyer vis-à-vis his employer. In addition, that agreement obliges the employer to allow the employed lawyer to comply with the disciplinary and ethical rules for practising his profession. The Netherlands Bar Association concludes that the principles that form the basis of the judgment in *AM & S* require the application of LPP to Mr S.

150 The Commission contends that the e-mails at issue neither contain any communication or any intention to communicate with an independent lawyer, nor are limited to reporting the text or the content of written communications with an independent lawyer for the purpose and in the interests of the applicants' rights of defence. The core issue which arises is therefore whether they should be protected precisely because they involve an internal communication with a member of the applicants' legal department. However, contrary to what the applicants seem to claim, the Court of Justice explicitly ruled in *AM & S* that communications between an undertaking and its in-house lawyer are not covered by the principle of LPP.

151 As regards their alternative argument, the applicants put forward, in essence, five reasons why they consider that, if the judgment in *AM & S* is to be interpreted as wholly excluding in-house lawyers from the protection of LPP, it would be appropriate to extend the personal scope of that protection beyond that laid down in the case-law.

152 First of all, the applicants submit that, since *AM & S*, certain Member States have expanded the scope of the protection of LPP and have developed new possibilities for in-house lawyers to be admitted to their national Bar or Law Societies. According to the applicants, the majority of Member States presently accept that in-house lawyers are covered by that protection.

153 The ECLA points out, on the basis of a comparative examination of legislation, that most Member States' laws now recognise the independence of in-house lawyers and legal privilege for their communications. The ACCA points out that, since 1982, there has been an increasing trend among Member States to recognise in-house lawyer privilege. The CCBE observes, however, that LPP is not recognised for in-house lawyers in France, Italy, Luxembourg, Finland, Austria and Sweden. However, for the CCBE, the key question is whether, in each Member State, salaried in-house lawyers are regulated or non-regulated professionals, since the obligation to protect professional privilege is generally linked to membership of a Bar or Law Society. In some countries, however, lawyers admitted to a Bar or Law Society are prohibited absolutely from employment – such as in Belgium and Greece – whereas in others, in particular Denmark, Germany, Ireland, the Netherlands, Portugal, Spain and the United Kingdom, it is permitted.

154 The Commission observes that, at the time of the judgment in *AM & S*, certain Member States already accorded a special status to in-house lawyers. The situation is not different today. Thus, it is not contested that the benefit of LPP is not granted to in-house lawyers in France, Italy, Luxembourg, Finland and Austria. It further contends that the conclusions drawn by the ECLA in its report do not have the unequivocal value which it claims they have.

155 As regards the question of in-house lawyers' membership of a Bar or Law Society, the Commission contends that, while in certain Member States it is possible to be employed and to be a member of a Bar or Law Society (notably in the United Kingdom and Spain) and in others it is possible for employed lawyers to be members of the Bar or Law Society subject to certain conditions (notably in Germany and the Netherlands), the fact remains that, in a considerable number of Member States, employment and membership of the Bar or Law Society are incompatible (for example, in Italy, France, Lithuania, Latvia, the Czech Republic, Hungary, Sweden and Austria). This latter group of States does not confer LPP on documents exchanged with employed lawyers. Finally, in Finland, practice of the profession of independent lawyer does not require membership of a Bar or Law Society. The Commission concludes that, in their great majority, the Member States do not grant LPP to in-house lawyers, even where they can be members of a Bar or Law Society. In any event, turning the developments observed in certain Member States into a principle of Community law would create a situation of legal uncertainty.

156 Secondly, the applicants submit that, since the judgment in *AM & S*, Community competition law has undergone a series of fundamental reforms, the effects of which warrant a re-evaluation of the applicability of the principle of LPP to in-house lawyers, particularly those who are members of their national Bars or Law Societies. Consequently, in the context of the modernisation of Community competition law, both Regulation No 1/2003 and the Commission's Notice on immunity from fines and the reduction of fines in cartel cases (OJ 2002 C 45, p. 3) impose increasing responsibilities on

undertakings to perform self-assessments of their compliance with those rules. Even if those self-assessments are usually performed under the guidance in principle of outside lawyers, in-house lawyers play a central role in them, which would be impeded by the non-recognition of the protection in question.

157 The Commission contends, however, that the replacement of Regulation No 17 by Regulation No 1/2003, which requires from undertakings a greater self-assessment as to whether their agreements are compatible with the conditions of Article 81(3) EC, does not appear relevant in the present case, since the issue of LPP would barely arise in that connection.

158 Thirdly, the applicants submit that the differential treatment, for the purpose of applying LPP, of external lawyers and in-house lawyers admitted to the national Bar or Law Society is arbitrary and thus contrary to the principle of equal treatment and raises issues of freedom of establishment and the freedom to provide services. The ACCA also supports this argument, adding that the *AM & S* ruling also discriminates against non-Community lawyers, since such protection is only accorded to lawyers who are entitled to practise in a Member State (paragraph 25 of the judgment).

159 The Commission takes the view that the fundamental principle whereby undertakings have a right to a fair trial and, in particular, to consult freely with a lawyer of their choice is not unduly restricted by the limitations defined in the judgment in *AM & S* with regard to in-house lawyers. The Commission further argues that the ACCA raises a new issue which was not raised by the applicants, which is therefore inadmissible and, in any event, not the subject-matter of the present proceedings.

160 Fourthly, the applicants refer to Case T-92/98 *Interporc* v *Commission* [1999] ECR II-3521, confirmed by the Court of Justice in Case C–41/00 P *Interporc* v *Commission* [2003] ECR I-2125, in which it was held that the correspondence between the lawyers in the legal service of the Commission and the latter was protected by LPP. However, there is no difference between the independence of the members of the Commission’s legal service from the institution and the independence of an in-house lawyer admitted to the Bar or Law Society from his employer.

161 The Commission rejects this analogy. The protection afforded in the *Interporc* judgments to communications emanating from members of its legal service stems from the public interest precluding disclosure of documents drawn up for the purposes of specific court proceedings.

162 Fifthly and finally, the applicants argue that the communication between Mr S. and the General Manager of Akcros Chemicals constitutes correspondence between two persons established, respectively, in the Netherlands and the United Kingdom. According to Netherlands law, Mr S.’s correspondence benefits from protection of LPP under Article 51 of the Netherlands Law on competition. Such protection is also afforded in the United Kingdom. Community law should therefore not be more stringent than these two national laws.

163 The CCBE submits that, since there is no Community harmonisation of the rules organising the legal profession, the personal scope of the Community concept of LPP should be governed by national law. The ECLA argues that since a lawyer’s status, rights and obligations are governed by national law, the Commission has no right to ignore the protection conferred by this law, pursuant to the principle of national procedural autonomy. Finally, the Netherlands Bar Association supports this argument and confirms that, under Netherlands competition law, in relation to inspections, the protection applies to all lawyers admitted to the Netherlands Bar, regardless of whether or not they are employed.

164 The Commission contests that it must be bound by national rules on LPP. This would be contrary to the primacy of Regulation No 1/2003 – and previously, Regulation No 17 – and the ruling in *AM & S*, which took pains to develop a Community concept of LPP. In addition, the Commission asserts that since its investigatory powers extend to the whole European Union, the scope of that protection cannot be determined on the basis of legislation and of rules of the Bars or Law Societies of the Member States. This would create huge legal and practical difficulties. The Commission maintains, in any event, that the right to protection of LPP in the Netherlands is far more limited than the applicants and interveners claim.

– Findings of the Court

165 The Set B documents contain, in addition to the manuscript notes already examined, e-mail

correspondance of May and June 2000 exchanged between the General Manager of Akcros Chemicals and Mr S., an Advocaat on the roll of the Netherlands Bar, who at the material time was a member of the legal department of Akzo Nobel, in which capacity he coordinated competition-law matters.

166 As regards, first of all, the applicants' principal argument, it must be pointed out that in its judgment in *AM & S*, the Court of Justice expressly held that the protection accorded to LPP under Community law, in the application of Regulation No 17, only applies to the extent that the lawyer is independent, that is to say, not bound to his client by a relationship of employment (paragraphs 21, 22 and 27 of the judgment). The requirement as to the position and status as an independent lawyer, which must be met by the legal adviser from whom the written communications which may be protected emanate, is based on a concept of the lawyer's role as collaborating in the administration of justice by the courts and as being required to provide, in full independence, and in the overriding interests of the administration of justice, such legal assistance as the client needs (*AM & S*, paragraph 24).

167 It follows that the Court expressly excluded communications with in-house lawyers, that is, legal advisers bound to their clients by a relationship of employment, from protection under LPP. It must also be pointed out that the Court reached a conscious decision on that exception, given that the issue had been debated at length during the proceeding and that Advocate General Sir Gordon Slynn had expressly proposed in his Opinion for that judgment that where a lawyer bound by an employment contract remains a member of the profession and subject to its discipline and ethics, he should be treated in the same way as independent lawyers (Opinion of Advocate General Sir Gordon Slynn in *AM & S*, p. 1655).

168 The Court therefore concludes that, contrary to what the applicants and certain interveners submit, the Court in its judgment in *AM & S* defined the concept of independent lawyer in negative terms in that it stipulated that such a lawyer should not be bound to his client by a relationship of employment (see paragraph 166 above), rather than positively, on the basis of membership of a Bar or Law Society or being subject to professional discipline and ethics. The Court thus laid down the test of legal advice provided 'in full independence' (*AM & S*, paragraph 24), which it identifies as that provided by a lawyer who, structurally, hierarchically and functionally, is a third party in relation to the undertaking receiving that advice.

169 Accordingly, this Court rejects the applicants' principal argument and holds that the correspondence exchanged between a lawyer bound to Akzo Nobel by a relationship of employment and a manager of a company belonging to that group is not covered by LPP, as defined in *AM & S*.

170 As regards, secondly, the argument advanced by the applicants in the alternative, to the effect that the Court of First Instance should extend the personal scope of LPP beyond the limits established by the Court of Justice in *AM & S*, the Court would point out, first, that an examination of the laws of the Member States shows that, even though it is the case, as the applicants and certain interveners submit, that specific recognition of the role of in-house lawyers and the protection of communications with such lawyers under LPP is relatively more common today than when the judgment in *AM & S* was handed down, it is not possible, nevertheless, to identify tendencies which are uniform or have clear majority support in that regard in the laws of the Member States.

171 In particular, first, a comparative examination of laws shows that a large number of Member States still exclude in-house lawyers from protection under LPP. In addition, in certain Member States, the issue seems not to have been decided unequivocally or definitively. Furthermore, various Member States have aligned their regimes with the Community system, following upon the judgment in *AM & S*. Secondly, such an examination shows that a considerable number of Member States do not allow in-house lawyers to be admitted to the Bar or Law Society and, accordingly, do not recognise them as lawyers established in private practice. In fact, in a number of countries, to be a lawyer employed by a person who is not a lawyer in private practice is incompatible with the status of 'avocat'. Moreover, even in countries which do permit this possibility, the fact that in-house lawyers are admitted to a Bar or Law Society and are subject to professional ethical rules does not always mean that communications with such persons are protected under LPP.

172 As regards, secondly, the applicants' argument that the evolution of Community competition law requires the solution adopted by the Court of Justice in *AM & S* to be reconsidered, it must be pointed out that protection under LPP represents a limitation on the Commission's investigatory powers and that those powers are exercised primarily for the purpose of combating the most serious infringements of Article 81(1) EC, including, in particular, price-fixing cartels and market-sharing, together with infringements of Article 82 EC. Accordingly, it must be considered that abolishing, in

the context of the modernisation of Community competition law, the notification system, and consequently conferring on undertakings under Regulation No 1/2003 greater responsibility in assessing whether their conduct is lawful in the light of Article 81(3) EC, are not directly relevant to this problem area.

173 Furthermore, even if the adoption of Regulation No 1/2003 and of the Commission Notice on Immunity from fines and reduction of fines in cartel cases may have increased the need for undertakings to examine their conduct and to define legal strategies in respect of competition law with the help of a lawyer who has in-depth knowledge of the particular undertaking and of the market in question, the fact remains that such exercises of self-assessment and strategy definition may be conducted by an outside lawyer in full cooperation with the relevant departments of the undertaking, including its internal legal department. In that context, communications between in-house lawyers and outside lawyers are in principle protected under LPP, provided that they are made for the purpose of the undertaking's exercise of the rights of defence. It is therefore clear that the personal scope of that protection, as laid down in *AM & S*, is not a real obstacle preventing undertakings from seeking the legal advice they need and does not prevent their in-house lawyers from taking part in self-assessment exercises or strategy definition. Finally, it must be pointed out that the modernisation of competition law does not necessarily mean that the respective roles of outside lawyers and in-house lawyers have changed substantially in this respect since the judgment in *AM & S*. In any event, since Community competition law is aimed at undertakings, it would not be permissible, in principle, for purely internal communications within a particular undertaking to fall outside the Commission's investigatory powers, with the exception, as has been stated above, of notes which do no more than report the text or the content of communications with outside lawyers containing legal advice, and of preparatory documents drawn up exclusively in order to seek legal advice from an outside lawyer in exercise of the rights of defence.

174 Thirdly, as regards the arguments of the applicants and of certain interveners that the differential treatment of in-house lawyers in *AM & S* is contrary to the principle of equal treatment and raises problems from the point of view of the free movement of services and the freedom of establishment, it is settled case-law that the principle of equal treatment is infringed only where comparable situations are treated differently or different situations are treated in the same way, unless such difference in treatment is objectively justified (Case C–174/89 *Hoche* [1990] ECR I-2681, paragraph 25; Case T–311/94 *BPB de Eendracht* v *Commission* [1998] ECR II–1129, paragraph 309, and Case T–304/02 *Hoek Loos* v *Commission* [2006] ECR II–1887, paragraph 96). It must be pointed out, however, that in-house lawyers and outside lawyers are clearly in very different situations, owing, in particular, to the functional, structural and hierarchical integration of in-house lawyers within the companies that employ them. Accordingly, no infringement of the principle of equal treatment arises from the fact of treating such professionals differently in respect of protection under LPP. Moreover, as regards the applicants' claim as to the harm which might be caused to the free movement of services and the freedom of establishment by restricting the personal scope of protection of confidentiality, it suffices to say that this claim has not been substantiated. Finally, as the Commission points out, the arguments advanced by ACCA regarding the protection afforded to lawyers who are not members of a Bar or Law Society in a Member State are not at all relevant to the present proceedings.

175 As regards, fourthly, the case of *Interporc* v *Commission*, it should be borne in mind that this case concerns individuals' access to Commission documents, and not limitations on the Commission's powers to investigate infringements of the competition rules. In any event, contrary to what the applicants submit, the Court, in Case T-92/98 *Interporc* v *Commission*, did not hold that correspondence between the members of the Commission's legal service and the Commission was covered by LPP. The Court in fact applied the exception to disclosure based on LPP only to exchanges between the Commission and its outside lawyers; on the other hand, the Commission's correspondence with members of its legal service was not disclosed on the basis of the exception relating to the protection of work done within the Commission (Case T-92/98 *Interporc* v *Commission*, paragraph 41).

176 Fifthly and finally, the applicants claim that, since the correspondence between Mr S. and the General Manager of Akcros Chemicals is protected under their respective national laws, Community law should also afford them such protection under LPP. More generally, the CCBE, and, less explicitly, the ECLA and the Netherlands Bar Association, maintain that the personal scope of the Community concept of confidentiality should be governed by national law. In that respect, it should be recalled that the protection of LPP is an exception to the Commission's powers of investigation. Therefore, the protection directly affects the conditions under which the Commission may act in a field as vital to the functioning of the common market as that of compliance with the rules on competition (*AM & S*, paragraph 30). For those reasons, the Court of Justice and the Court of First

Instance have been at pains to develop a Community concept of LPP. The argument of the applicants and the interveners is at odds both with the development of that Community concept and with the uniform application of the Commission's powers in the common market and must therefore be rejected.

177 In the light of the foregoing, the Court rejects the argument advanced by the applicants in the alternative, concerning extension of the personal scope of protection of LPP beyond the limits laid down by the Court of Justice in *AM & S*.

178 Moreover, it must be pointed out that the applicants also appear to indicate that the e-mails in dispute report, among other information, the advice provided by their external lawyer (see paragraph 145 above). However, on examination of the documents in question, this claim cannot be upheld.

179 Consequently, it must be concluded that the Commission did not err in taking the view that the correspondence exchanged between the General Manager of Akcros Chemicals and the member of Akzo Nobel's legal department, forming part of the Set B documents, should not be covered by LPP.

180 Accordingly, the Court must reject the second plea in law.

The third plea in law, alleging violation of the fundamental rights which form the basis of LPP

181 By their third plea, the applicants submit that, by violating the protection of LPP, the Commission also infringed the fundamental rights on which that principle is based. They consider that protection of LPP is based on a number of fundamental rights recognised in the laws of the various Member States and in Community law, including the rights of defence, respect for privacy and freedom of expression. However, they merely set out this third plea in a very succinct manner, without supporting their claim with specific arguments.

182 The Court considers that this third plea cannot be considered to be independent from the two pleas examined earlier. In fact, the applicants' claim that fundamental rights were infringed is not based on grounds of complaint different from those made to establish the alleged infringement of the principle of protection of LPP. However, those complaints have already been analysed in the context of the first and second pleas in this case.

183 Consequently, there is no further need to examine this third plea in law.

184 In the light of the foregoing, it must be concluded that the infringements on the part of the Commission found to have been committed during the procedure for examination of the documents for which the applicants claimed protection of LPP has not unlawfully deprived the applicants of that protection in respect of the disputed documents, since, as has been held, the Commission did not err in deciding that none of those documents fell within the scope of that protection.

185 The action in Case T–253/03 must therefore be dismissed.

Costs

186 Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. However, under Article 87(3), where each party succeeds on some and fails on other heads, or where the circumstances are exceptional, the Court may order that the costs be shared or that each party bear its own costs.

187 In the present case, although the applicants have been unsuccessful, the Court considers that the Commission had, in any event, committed various irregularities in the administrative procedure on which the present cases are based. Accordingly, the Court considers that it will make an equitable assessment of the case by holding that the applicants are to bear three fifths of their own costs and three fifths of those incurred by the Commission in relation to the main proceedings and to the proceedings for interim relief. As regards the Commission, it is to bear two fifths of its own costs and pay two fifths of those incurred by the applicants in relation to the main proceedings and to the proceedings for interim relief.

188 Under the third subparagraph of Article 87(4) of the Rules of Procedure, the Court may order an intervener to bear its own costs. In this case, the interveners intervening in support of the applicants are to bear their own costs in relation to the main proceedings and to the proceedings for interim relief.

On those grounds,

THE COURT OF FIRST INSTANCE (First Chamber, Extended Composition)

hereby:

1. Dismisses the action in Case T–125/03 as inadmissible;

2. Dismisses the action in Case T–253/03 as unfounded;

3. Orders Akzo Nobel Chemicals Ltd and Akcros Chemicals Ltd to bear three fifths of their own costs relating to the main proceedings and to the proceedings for interim relief, and to pay three fifths of the costs incurred by the Commission relating to the main proceedings and to the proceedings for interim relief;

4. Orders the Commission to bear two fifths of its own costs relating to the main proceedings and to the proceedings for interim relief, and to pay two fifths of the costs incurred by Akzo Nobel Chemicals and Akcros Chemicals relating to the main proceedings and to the proceedings for interim relief;

5. Orders the interveners to bear their own costs relating to the main proceedings and to the proceedings for interim relief.

ORDER OF THE PRESIDENT OF THE FIRST CHAMBER OF THE COURT OF FIRST INSTANCE

26 February 2007(*)

(Intervention – Admission – Representative association whose object is the protection of its members)

In Case T‑125/03,

Akzo Nobel Chemicals Ltd, established in Surrey (United Kingdom),

Akcros Chemicals Ltd, established in Surrey,

represented by C. Swaak and M. Mollica, lawyers,

applicants,

supported by

Council of Bars and Law Societies of the European Union (CCBE), established in Brussels (Belgium), represented by J. Flynn QC,

by

Algemene Raad van de Nederlandse Orde van Advocaten, established in The Hague (Netherlands), represented by O. Brouwer, lawyer,

and by

European Company Lawyers Association (ECLA), established in Brussels, represented by M. Dolmans and K. Nordlander, lawyers, and J. Temple Lang, Solicitor,

interveners,

v

Commission of the European Communities, represented initially by R. Wainwright and C. Ingen-Housz, and subsequently by R. Wainwright and F. Castillo de la Torre, acting as Agents,

defendant,

APPLICATION by the International Bar Association for leave to intervene in support of the forms of order sought by the applicants in this case, which, first, seeks annulment of Commission Decision C (2003) 559/4 of 10 February 2003 and, as far as necessary, of Commission Decision C(2003) 85/4 of 30 January 2003 requiring the applicants and their subsidiaries to submit to an investigation, in so far as those decisions were interpreted by the Commission as justifying and constituting the basis of its action of seizing, inspecting and/or reading documents supposedly covered by legal professional privilege, and, second, seeks an application for an order that the Commission return those documents and prohibiting it from using their contents,

THE PRESIDENT OF THE FIRST CHAMBER OF THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES,

makes the following

Order

Facts and procedure

1 On 30 January 2003, the Commission adopted Decision C(2003) 85/4 on the basis of Article 14(3) of Council Regulation No 17 of 6 February 1962: First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-1962, p. 87), ordering Akzo Nobel Chemicals Ltd and Akcros Chemicals Ltd ('the applicants') and their subsidiaries to submit to an investigation aimed at seeking evidence of possible anticompetitive practices ('the decision of 30 January 2003'). On 10 February 2003 the Commission adopted Decision C(2003) 559/4, also on the basis of Article 14(3) of Regulation No 17 ('the decision of 10 February 2003'), amending the decision of 30 January 2003.

2 On 12 and 13 February 2003, on-the-spot investigations were carried out on the basis of those decisions at the applicants' premises in Eccles, Manchester (United Kingdom). In the course of that investigation, the Commission officials took copies of a large number of documents. During those operations, the applicants' representatives indicated to the Commission officials that a number of documents were likely to be covered by legal professional privilege. While the documents concerned were being examined, a disagreement arose as regards five documents which were subject to two kinds of treatment. The Commission officials did not reach a definitive conclusion there and then as to the protection to be afforded to two documents. They, therefore, took copies of them and placed them in a sealed envelope which they took away with them at the end of their investigation. As regards the three other documents at issue, the Commission official responsible for the investigation took the view that they were not covered by legal professional privilege and therefore took copies and added them to the file without placing them in a separate sealed envelope.

3 By application lodged at the Court Registry on 11 April 2003, the applicants brought an action for annulment of the decision of 10 February 2003 and, so far as necessary, of the decision of 30 January 2003 requiring those companies and their respective subsidiaries to submit to the investigation in question. The applicants ask the Court, essentially, first, to annul the decisions in so far as they were interpreted by the Commission as justifying and constituting the basis of its action in seizing, inspecting and/or reading documents covered by legal professional privilege and, second, to order the Commission to return those documents and to prohibit it from using their contents.

4 On 8 May 2003, the Commission adopted Decision C(2003) 1533 final on the basis of Article 14(3) of Regulation No 17, refusing the applicants' request to preserve the confidentiality of the documents at issue. By application lodged at the Court Registry on 4 July 2003, the applicants brought an action for annulment of that decision (Case T-253/03 *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission*).

5 By applications lodged on 30 July and 7 and 11 August 2003 respectively, the Council of Bars and Law Societies of the European Union ('CCBE'), the Algemene Raad van de Nederlandse Orde van Advocaten ('Netherlands Bar') and the European Company Lawyers Association ('ECLA') applied for leave to intervene in support of the form of order sought by the applicants. By the same order of the President of the Fifth Chamber of 4 November 2003, the CCBE, the Netherlands Bar and the ECLA were granted leave to intervene.

6 By application lodged on 25 November 2003, the Section on Business Law of the International Bar Association applied for leave to intervene in support of the form of order sought by the applicants. By order of 28 May 2004, the Court rejected that application for leave to intervene.

7 On 20 February 2006, the International Bar Association ('IBA'), represented by J. Buhart, lawyer, lodged an application for leave to intervene in support of the forms of order sought by the applicants.

8 In its application for leave to intervene, the IBA submits that it has a direct and particular interest in this case and that it satisfies the conditions laid down in the case-law concerning applications for leave to intervene by associations. First, the IBA is an international association with legal personality representing a large number of practitioners active in the sector concerned. It is in fact the largest association in the world representing the legal profession. Second, its objectives include the protection, defence and representation of its members' interests – of which the principle of legal

professional privilege is one – if necessary before the courts, to ensure in particular that its members are able to exercise their profession freely and without interference. Third, this case raises fundamental issues regarding the principle of legal professional privilege and the IBA claims that the position adopted by the Court on those issues will undoubtedly affect its members at all levels – individual members, Bars and company lawyers' associations.

9 The application for leave to intervene was notified to the parties, pursuant to the first subparagraph of Article 116(1) of the Rules of Procedure of the Court of First Instance.

10 By document of 11 April 2006, the applicants submitted that the IBA had shown that it had an interest in the result of this case and asked the Court to declare its application for leave to intervene to be admissible. By separate document lodged on the same day, the applicants made an application for confidential treatment as against the IBA.

11 By document of 29 March 2006, the Commission asked the Court to reject the IBA's application for leave to intervene. It submits, inter alia, that the IBA's objects, as defined by Article 1 of its Constitution, do not include either the protection of its members' interests or their representation, as the purpose of that association involves simply 'assisting' its members and 'promoting' the rule of law and the administration of justice. The case-law attaches great importance to the fact that the object of an association is clearly stated in its statutes (order of the Court of First Instance in Case T-253/03 *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission* [2004] ECR II-1603, paragraph 20, rejecting the application for leave to intervene by the Section on Business Law of the International Bar Association). The Commission also observes that the Court appears to establish a clear distinction between 'promotion' and 'representation and protection' by an association of its members' interests. An association seeking to promote the general and collective interests of a profession does not have sufficient interest to be granted leave to intervene (order of the President of the Third Chamber of 25 June 1999 in Case T-13/99 *Pfizer Animal Health* v *Council*, not published in the ECR, paragraph 28).

12 By documents of 7 and 10 April 2006, the CCBE and the Netherlands Bar expressed support for the IBA's application for leave to intervene. The other intervener did not raise any objections to the application.

Findings of the Court

13 Pursuant to the second paragraph of Article 40 of the Statute of the Court of Justice, applicable to the Court of First Instance by virtue of the first paragraph of Article 53 thereof, the right to intervene in cases submitted to the Court of First Instance is open not only to the Member States and institutions of the Communities, but also to any other person establishing an interest in the result of the case.

14 According to settled case-law, representative associations whose object is to protect their members in cases raising questions of principle liable to affect those members are allowed to intervene (orders of the President of the Court in Joined Cases C-151/97 P(I) and C-157/97 P(I) *National Power and PowerGen* [1997] ECR I-3491, paragraph 66, and Case C-151/98 P *Pharos* v *Commission* [1998] ECR I-5441, paragraph 6). More particularly, an association may be granted leave to intervene in a case if it represents an appreciable number of operators active in the sector concerned, its objects include that of protecting its members' interests, the case may raise questions of principle affecting the functioning of the sector concerned and the interests of its members may therefore be affected to an appreciable extent by the judgment to be given (see, to that effect, order of the Court of First Instance in Case T-87/92 *Kruidvat* v *Commission* [1993] ECR II-1375, paragraph 14, refusing the application for leave to intervene by Yves Saint Laurent Parfums SA, and the order in *Akzo Nobel Chemicals and Akcros Chemicals* v *Commission*, cited above, paragraph 18).

15 In this case, the Court finds, first of all, that the IBA is an organisation which represents an appreciable number of practitioners active in the sector concerned in this case. Its members include more than 20 000 individual lawyers – including approximately 3 000 in-house counsel – and also 195 Bars and numerous company lawyers' associations – including the Institut des jurists d'entreprise.

16 Second, it is clear from the IBA's Constitution that its objects include the protection of its members' interests. Thus, according to Article 1(2) and (3) of the IBA's Constitution, its object is to assist bar

associations, law societies and their members to develop and improve the profession's organisation and status, to assist members of the legal profession throughout the world, whether in the field of legal education or otherwise, and to develop and improve their legal services to the public. Contrary to the Commission's submissions, the reference to the IBA's objects being, inter alia, to 'assist' its members must be understood as meaning that one of the aims of that association is to protect its members' interests. Therefore, the cases covered by the provisions in question go beyond the mere promotion of general and collective interests of a profession, within the meaning of the order in *Pfizer Animal Health* v *Council*. The IBA's Constitution covers issues likely to affect directly the particular interests of its members, such as the organisation and status of the legal profession and the provision of legal services.

17 Third and finally, in the light of the fact that the case concerned raises fundamental issues concerning confidentiality of communications between a lawyer and his client, the Court finds that the judgment to be given may significantly affect both the functioning of the sector concerned and the interests of the IBA's members.

18 It is clear from the foregoing that the IBA has established its interest in the result of the case and, therefore, it is appropriate to admit it as an intervener pursuant to the second paragraph of Article 40 of the Statute of the Court of Justice. As its application for leave to intervene was submitted after the expiry of the six-week period prescribed in Article 115(1) of the Rules of Procedure of the Court of First Instance, the IBA's intervention is to be limited to the submission of observations during the oral procedure, pursuant to Article 116(6) of those rules. Therefore, the IBA will, in due course, receive only the Report for the Hearing which will be drawn up in this case. There is no need, therefore, to rule upon the application for confidential treatment brought by the applicants as against the IBA.

On those grounds,

THE PRESIDENT OF THE FIRST CHAMBER OF THE COURT OF FIRST INSTANCE

hereby orders:

1. **The International Bar Association is granted leave to intervene in Case T-125/03 in support of the form of order sought by the applicants. Pursuant to Article 116(6) of the Rules of Procedure of the Court of First Instance, the Registrar shall communicate to it in due course the Report for the Hearing, on the basis of which it may submit any observations during the oral procedure.**

2. **Costs are reserved**

Luxembourg, 26 February 2007.

de la Commission - Protection de la confidentialité -

Correspondance entre avocats et clients - Limites»

Ordonnance du président du Tribunal du 30 octobre 2003

?II - 0000

Sommaire de l'ordonnance

1. *Procédure - Intervention - Référé - Personnes intéressées - Demande de sursis à l'exécution d'une décision de la Commission rejetant une demande de protection de la confidentialité de documents copiés lors d'une vérification fondée sur l'article 14 du règlement n° 17 - Litige relatif à la protection de la confidentialité de la correspondance avec des avocats et des juristes d'entreprise - Demande d'intervention d'associations d'avocats et de juristes d'entreprise - Recevabilité*

   (Statut de la Cour de justice, art. 40, alinéa 2)

2. *Référé - Conditions de recevabilité - Recevabilité du recours principal - Défaut de pertinence - Limites*

   (Art. 242 CE et 243 CE; règlement de procédure du Tribunal, art. 104, § 1)

3. *Actes des institutions - Décision - Validité - Décision de vérification fondée sur l'article 14 du règlement n° 17 - Circonstances de droit et de fait concernant le déroulement de la procédure de vérification - Circonstances n'affectant pas la validité de ladite décision*

   (Art. 230 CE; règlement du Conseil n° 17, art. 14, § 3)

4. *Référé - Sursis à exécution - Conditions d'octroi - Fumus boni juris - Atteinte prima facie aux droits de la défense lors d'une vérification effectuée en application du règlement n° 17 - Notes rédigées en vue de la consultation d'un avocat ou correspondance échangée avec un avocat salarié de l'entreprise*

   (Art. 242 CE et 243 CE; règlement du Conseil n° 17, art. 14)

5. *Concurrence - Procédure administrative - Pouvoirs de vérification de la Commission - Refus de l'entreprise de produire une correspondance avec son avocat en invoquant sa confidentialité - Pouvoirs de la Commission*

   (Règlement du Conseil n° 17, art. 14)

6. *Référé - Sursis à exécution - Conditions d'octroi - Préjudice grave et irréparable - Notion - Demande de sursis à l'exécution d'une décision de la Commission rejetant une demande de protection de la confidentialité de documents copiés lors d'une vérification fondée sur l'article 14 du règlement n° 17*

   (Art. 242 CE et 243 CE; règlement de procédure du Tribunal, art. 104, § 2)

7. *Référé - Sursis à exécution - Conditions d'octroi - Mise en balance de l'ensemble des intérêts en cause - Notion - Demande de sursis à l'exécution d'une décision de la Commission rejetant une demande de protection de la confidentialité de documents copiés lors d'une vérification fondée sur l'article 14 du règlement n° 17 - Mise en balance de l'intérêt des requérantes à la non-divulgation des informations y contenues et de l'intérêt général de la Commission au respect des règles de concurrence*

(Art. 242 CE et 243 CE)

1. En vertu de l'article 40, deuxième alinéa, du statut de la Cour de justice, applicable au Tribunal en vertu de l'article 53, premier alinéa, du même statut, le droit d'intervenir d'un particulier est soumis à la condition que ce dernier puisse justifier d'un intérêt à la solution du litige. Est admise l'intervention d'associations représentatives qui ont pour objet la protection de leurs membres dans des affaires soulevant des questions de principe de nature à affecter ces derniers.

   Dès lors, des associations d'avocats et de juristes d'entreprise représentant les intérêts de leurs membres et ayant pour objet la défense de ces intérêts ont le droit d'intervenir dans une procédure en référé posant directement des questions de principe relatives, d'une part, à la confidentialité de la correspondance échangée avec des avocats et des juristes d'entreprises et, d'autre part, aux conditions dans lesquelles le juge des référés peut ordonner des mesures provisoires concernant les documents dont la Commission entend prendre connaissance sur le fondement de l'article 14, paragraphe 3, du règlement n° 17, mais dont les entreprises soutiennent qu'ils sont protégés par le secret professionnel. En effet, la définition de ces conditions est de nature à affecter directement les intérêts desdits membres, en ce qu'elles peuvent limiter ou étendre la protection juridictionnelle provisoire applicable, notamment, aux documents émanant des avocats et des juristes d'entreprise et que lesdites associations considèrent comme couverts par le secret professionnel.

   (voir points 43, 45-46, 50, 52-53)

2. La recevabilité du recours au principal ne doit pas, en principe, être examinée dans le cadre d'une procédure en référé sous peine de préjuger le fond de l'affaire. Il peut, néanmoins, s'avérer nécessaire, lorsque l'irrecevabilité manifeste du recours au principal sur lequel se greffe la demande en référé est soulevée, d'établir l'existence de certains éléments permettant de conclure, à première vue, à la recevabilité d'un tel recours.

   (voir point 56)

3. Selon un principe général de droit communautaire, la légalité d'un acte doit être appréciée au regard des circonstances de droit et de fait existant au moment où cette décision a été adoptée, de telle sorte que des actes postérieurs à une décision ne peuvent pas en affecter la validité. Dès lors, dans le cadre d'une vérification fondée sur l'article 14 du règlement n° 17, une entreprise ne saurait se prévaloir de l'illégalité dont serait entaché le déroulement de procédures de vérification au soutien de conclusions en annulation dirigées contre l'acte sur le fondement duquel la Commission a procédé à cette vérification.

   (voir points 68-69)

4. Le règlement n° 17 doit être interprété comme protégeant la confidentialité de la correspondance entre avocats et clients pour autant, d'une part, qu'il s'agisse de correspondance échangée dans le cadre et aux fins du droit de la défense du client et, d'autre part, qu'elle émane d'avocats indépendants, c'est-à-dire d'avocats non liés au client par un rapport d'emploi.

   Ce principe de protection accordée aux communications entre l'avocat et son client doit être regardé comme s'étendant également aux notes internes qui se bornent à reprendre le texte ou le contenu de ces communications.

   Un moyen visant à démontrer que des documents rédigés en vue de la consultation d'un avocat et pour les fins des droits de la défense, d'une part, et des correspondances échangées avec un avocat employé de façon permanente par une entreprise, d'autre part, sont également couverts par le secret professionnel pose des questions de principe très importantes et complexes. Un tel moyen nécessite, par conséquent, un examen détaillé au principal. Au stade du référé, ce moyen n'apparaît donc pas comme étant manifestement infondé et satisfait la condition relative au «fumus boni juris».

(voir points 95-98, 114, 119-120, 130)

5. Lorsqu'une entreprise, soumise à vérification en vertu de l'article 14 du règlement n° 17, refuse, en invoquant un droit à la protection de la confidentialité, de produire, parmi les documents professionnels exigés par la Commission, la correspondance échangée avec son avocat, il lui incombe en tout cas de fournir aux agents mandatés de la Commission, sans pour autant devoir leur dévoiler le contenu de la correspondance en question, les éléments utiles de nature à prouver que celle-ci remplit les conditions justifiant sa protection légale. Si la Commission estime qu'une telle preuve n'est pas rapportée, il appartient à la Commission d'ordonner, en application de l'article 14, paragraphe 3, du règlement n° 17, la production de la correspondance en cause. Il est possible ensuite pour l'entreprise contrôlée de déposer un recours en annulation contre cette décision de la Commission, le cas échéant assorti d'une demande de mesures provisoires sur le fondement des articles 242 CE et 243 CE.

(voir point 132)

6. Le caractère urgent d'une demande en référé doit s'apprécier par rapport à la nécessité qu'il y a de statuer provisoirement, afin d'éviter qu'un préjudice grave et irréparable ne soit occasionné à la partie qui sollicite la mesure provisoire.

Doit être considérée comme urgente une demande en référé visant à ce qu'il soit sursis à l'exécution d'une décision de la Commission dans laquelle cette dernière indique qu'elle va prendre connaissance de documents qui ont été copiés lors d'une vérification fondée sur l'article 14, paragraphe 3, du règlement n° 17 et placés dans une enveloppe scellée, et dont par ailleurs une entreprise soutient qu'il sont protégés par le secret professionnel.

En effet, si la Commission prenait connaissance de ces documents et si, ultérieurement, le juge communautaire annulait cette décision, il serait impossible en pratique pour la Commission de tirer toutes les conséquences de cet arrêt, dès lors que les fonctionnaires de la Commission auraient d'ores et déjà pris connaissance du contenu des documents. En ce sens, la prise de connaissance par la Commission des informations contenues dans ces documents constituerait, en tant que telle, une atteinte substantielle et irréversible au droit des requérantes de faire respecter le secret protégeant ces documents.

De plus, même si, en cas d'annulation de la décision, les informations contenues dans ces documents ne pouvaient être utilisées contre l'entreprise, une telle impossibilité n'aurait aucune incidence sur le préjudice grave et irréparable qui résulterait de leur simple divulgation, dans la mesure où l'objet du secret professionnel ne consiste pas uniquement à protéger l'intérêt privé qu'ont les justiciables à ne pas voir leurs droits de la défense irrémédiablement affectés, mais, également, à protéger l'exigence que tout justiciable doit avoir la possibilité de s'adresser en toute liberté à son avocat. Cette exigence, qui est formulée dans l'intérêt public d'une bonne administration de la justice et du respect de la légalité, suppose nécessairement qu'un client ait la liberté de s'adresser à son avocat sans craindre que les confidences dont il ferait état puissent être ultérieurement divulguées à une tierce personne. Par conséquent, la réduction du secret professionnel à la seule garantie que les informations confiées par un justiciable ne seront pas utilisées contre lui édulcore l'essence de ce droit, dès lors que c'est la divulgation, même provisoire, de telles informations, qui pourrait être de nature à porter irrémédiablement atteinte à la confiance que ce justiciable plaçait, en faisant des confidences à son avocat, dans le fait que celles-ci ne seraient jamais divulguées.

(voir points 159, 163-164, 167)

7. Lorsque, dans le cadre d'une demande de mesures provisoires, le juge des référés devant lequel il est fait état du risque pour le demandeur de subir un préjudice grave et irréparable met en balance les différents intérêts en cause, il lui faut examiner si l'annulation éventuelle de la décision litigieuse par le juge du fond permettrait le renversement de la situation qui aurait été provoquée en l'absence de mesures provisoires et, inversement, si le sursis à l'exécution de cette décision serait de nature à faire obstacle à son plein effet au cas où le recours au principal serait rejeté.

Dès lors, dans le cadre de l'examen d'une demande en référé visant à ce qu'il soit sursis à l'exécution d'une décision de la Commission dans laquelle cette dernière indique qu'elle va prendre connaissance de documents copiés lors d'une vérification fondée sur l'article 14, paragraphe 3, du règlement n° 17 et placés dans une enveloppe scellée, et dont par ailleurs une entreprise soutient qu'il sont protégés par le secret professionnel, il convient de mettre en balance, d'une part, l'intérêt de cette entreprise à ce que les documents ne soient pas divulgués et, d'autre part, l'intérêt général et l'intérêt de la Commission tenant au respect des règles de concurrence du traité.

L'intérêt d'une entreprise à ce que des documents dont elle soutient qu'ils sont couverts par le secret professionnel ne soient pas divulgués doit faire l'objet d'une évaluation en fonction des circonstances de chaque affaire et, en particulier, de la nature et du contenu des documents concernés. Par ailleurs, dès lors qu'il est établi que le fait pour la Commission de prendre connaissance de documents risque de porter une atteinte grave et irréparable au secret professionnel et aux droits de la défense d'une entreprise, des considérations d'efficacité administrative et d'allocation des ressources, malgré leur importance, ne peuvent, en principe, prévaloir sur les droits de la défense qu'à la condition que la Commission fasse état de circonstances très spéciales justifiant une telle atteinte.

ORDER OF THE PRESIDENT OF THE COURT OF FIRST INSTANCE

30 October 2003 (1)

(Interim measures - Competition - Commission's powers of investigation - Protection of confidentiality - Communications between lawyers and clients - Limits)

In Joined Cases T-125/03 R and T-253/03 R,

Akzo Nobel Chemicals Ltd, established in London (United Kingdom),

Akcros Chemicals Ltd, established in Surrey (United Kingdom),

represented by C. Swaak and M. Mollica, lawyers,

applicants,

v

Commission of the European Communities, represented by R. Wainwright and C. Ingen-Housz, acting as Agents, with an address for service in Luxembourg,

defendant,

APPLICATION for, first, suspension of the operation of the Commission's decision of 10 February 2003 amending the decision of 30 January 2003 ordering Akzo Nobel Chemicals Ltd, Akcros Chemicals Ltd and Akcros Chemicals and their subsidiaries to submit to an investigation under Article 14(3) of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-1962, p. 87), and also other interim measures to protect the applicants' interests (Case T-125/03 R), and, second, suspension of the operation of the Commission's decision of 8 May 2003 rejecting a claim of legal privilege in respect of five documents copied during an investigation and also other interim measures to protect the applicants' interests (Case T-253/03 R),

THE PRESIDENT OF THE COURT OF FIRST INSTANCE

OF THE EUROPEAN COMMUNITIES

Registrar: J. Plingers, Administrator,

makes the following

Order

1. On 10 February 2003, the Commission adopted a decision under Article 14(3) of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-1962, p. 87) ('the decision of 10 February 2003'), amending the decision of 30 January 2003 whereby the Commission ordered, among other undertakings, Akzo Nobel Chemicals Ltd and Akcros Chemicals Ltd ('the applicants') and their respective subsidiaries to submit to an investigation aimed at seeking evidence of possible anti-competitive practices ('the decision of 30 January 2003').

2. On 12 and 13 February 2003, Commission officials accompanied by representatives of the Office of Fair Trading carried out an investigation on the basis of those decisions at the applicants' premises in Eccles, Manchester (United Kingdom). During the investigation, the Commission officials made copies of a large number of documents.

3. In the course of the investigation, the applicants' representatives informed the Commission officials that certain documents in a particular file might be covered by the legal professional privilege that protects communications with lawyers and that the Commission could not therefore have access to them.

4. The Commission officials then informed the applicants' representatives that they needed to look at the documents briefly, without examining them, so that they could form their own opinion as to whether the documents should be privileged. Following a long discussion, and after the Commission officials and those from the Office of Fair Trading had reminded the applicants of the criminal consequences of obstructing an investigation, it was decided that the leader of the investigating team would briefly review the documents in question, with a representative of the applicants at her side. It was also decided that, should the applicants' representative claim that a document was covered by professional privilege, he was to provide more detailed reasons for his request.

5. In the course of the examination of the documents in the file indicated by the applicants' representatives, a dispute arose in respect of five documents which were ultimately treated in two different ways.

6. The first of these documents is a two-page typewritten memorandum dated 16 February 2000 from the General Manager of Akcros Chemicals to one of his superiors. According to the applicants, this memorandum contains information gathered by the General Manager of Akcros Chemicals in the course of internal discussions with other employees. They state that the information was gathered for the purpose of obtaining outside legal advice in connection with the competition law compliance programme already put in place by Akzo Nobel.

7. The second of these documents is a second copy of the two-page memorandum described in the preceding paragraph, which also contains handwritten notes referring to contacts with one of the lawyers representing the applicants and mentioning him by name.

8. After receiving the applicants' explanations about these first two documents, the Commission officials were not in a position to reach a definitive conclusion on the spot about whether the documents should be privileged. They therefore made copies and placed them in a sealed envelope, which they removed at the close of the investigation. In their application, the applicants have designated these documents as belonging to ‘Set A’.

9. The third document at issue between the Commission officials and the applicants consists of a series of handwritten notes by the General Manager of Akcros Chemicals, which, the applicants maintain, were drafted during discussions with lower-level employees and used for the purpose of preparing the typewritten memorandum in Set A.

10. Finally, the last two documents in question represent an exchange of e-mails between the General Manager of Akcros Chemicals and Akzo Nobel's competition law coordinator, who is registered as an attorney at the Netherlands Bar and, at the material time, was also a member of Akzo Nobel's Legal Department and, consequently, employed by that undertaking on a permanent basis.

11. After reviewing the last three documents and receiving the applicants' explanations, the leader of the investigating team formed the view that they were definitely not protected by legal privilege. She therefore copied the documents and placed the copies with the rest of the file, but did not place them in a sealed envelope, unlike the documents in Set A. In their application, the applicants have designated these documents as belonging to ‘Set B’.

12. On 17 February 2003, the applicants wrote to the Commission explaining why in their view both the documents in Set A and those in Set B were protected by legal privilege.

13. By letter of 1 April 2003, the Commission informed the applicants that it was not convinced by the arguments, set out in their letter of 17 February 2003, that the documents referred to were covered by professional privilege. In that letter, however, the Commission informed the applicants that they could submit observations on those preliminary conclusions within two weeks, following which it would adopt a final decision.

14. By application lodged at the Registry of the Court of First Instance on 11 April 2003, the applicants brought an action under the fourth paragraph of Article 230 EC for, in particular, annulment of the decision of 10 February 2003 and, so far as necessary, the decision of 30 January 2003, ‘in as far as

it has been interpreted by the Commission as legitimating and/or constituting the basis of the Commission's action (which is not severable from the decision), of seizing and/or reviewing and/or reading documents covered by [legal professional privilege]'. That case is Case T-125/03.

15. On 17 April 2003, the applicants informed the Commission that they had lodged their application in Case T-125/03. They also informed the Commission that the observations which they had been invited to submit on 1 April 2003 were incorporated in the application.

16. On the same day, the applicants lodged an application under Articles 242 EC and 243 EC requesting the President of the Court of First Instance, inter alia, to suspend the operation of the decision of 10 February 2003 and, so far as necessary, the operation of the decision of 30 January 2003. That case was registered by the Registry as Case T-125/03 R.

17. On 8 May 2003, the Commission adopted a decision under Article 14(3) of Regulation No 17 ('the decision of 8 May 2003'). In Article 1 of that decision, the Commission rejects the applicants' request for the return of the documents in Set A and Set B and for confirmation that all the copies of those documents in the Commission's possession have been destroyed. In Article 2 of the decision of 8 May, moreover, the Commission states that it intends to open the sealed envelope containing the documents in Set A. The Commission states, however, that it will not do so before the expiry of the period prescribed for lodging an appeal against the decision of 8 May 2003.

18. On 14 May 2003, the Commission presented its written observations on the application for interim measures in Case T-125/03 R.

19. On 22 May 2003, the President of the Court of First Instance invited the applicants to submit their observations on the inferences which in their view should be drawn, in Case T-125/03 R, from the decision of 8 May 2003. The applicants submitted their observations on 9 June 2003 and the Commission replied on 3 July 2003.

20. By application under the fourth paragraph of Article 230 EC, lodged at the Registry of the Court of First Instance on 4 July 2003, the applicants brought an action for annulment of the decision of 8 May 2003 and for an order that the Commission should pay the costs of the action. By separate document registered on 11 July 2003, the applicants lodged an application for interim measures, requesting the President of the Court of First Instance, in particular, to suspend the operation of the decision of 8 May 2003. That case is Case T-253/03 R.

21. In their application, the applicants also request that Cases T-125/03 R and T-253/03 R be joined, in application of Article 50 of the Rules of Procedure of the Court of First Instance.

22. On 1 August 2003, the Commission submitted its observations in writing on the application for interim measures in Case T-253/03 R.

23. On 7 and 8 August 2003 respectively, the Algemene Raad van de Nederlandse Orde van Advocaten (General Council of the Netherlands Bar), represented by O. Brouwer, lawyer, and the Council of the Bars and Law Societies of the European Union ('the CCBE'), represented by J.E. Flynn QC, lodged applications for leave to intervene in Cases T-125/03 R and T-253/03 R in support of the forms of order sought by the applicants.

24. On 12 August 2003, the European Company Lawyers Association ('ECLA'), represented by M. Dolmans, lawyer, and J. Temple Lang, Solicitor, lodged an application for leave to intervene in Case T-125/03 R in support of the form of order sought by the applicants. On 18 August 2003, ECLA also lodged an application to intervene in Case T-253/03 R, again in support of the form of order sought by the applicants.

25. On 1 September 2003 and 2 September 2003 respectively, the Commission and the applicants lodged their observations on the applications for leave to intervene in Cases T-125/03 R and Case T-253/03 R. On 2 September 2003, the applicants also lodged an application for confidential treatment of certain items in the file, on the basis of Article 116(2) of the Rules of Procedure.

26. On 8 September 2003, at the request of the President of the Court of First Instance in application of Articles 64(3)(d) and 67(3) of the Rules of Procedure, the Commission sent the President, under confidential cover, a copy of the Set B documents and also the sealed envelope containing the Set A documents.

27. By letters of 4 and 5 September 2003, the Registry requested the applicants for leave to intervene to attend the hearing.

28. On 15 September 2003, in the presence of a representative of the Registry, the President of the Court of First Instance opened the sealed envelope containing the Set A documents and examined their contents. Following that operation, the documents were again placed in a sealed envelope and a report was drawn up and placed in the file in Cases T-125/03 R and T-253/03 R.

29. On the same day, both the CCBE and the Algemene Raad van de Nederlandse Orde van Advocaten submitted objections on a number of points in the application for confidential treatment lodged by the applicants under Article 116(2) of the Rules of Procedure. In application of that article, the President of the Court of First Instance on 16 September 2003 granted in part, and provisionally, the applicants' request for confidential treatment, at the stage of the application for interim measures.

30. On 19 September 2003, the Registry communicated to the applicants for leave to intervene a new non-confidential version of the procedural documents in Cases T-125/03 R and T-253/03 R.

31. On 23 September 2003, the applicants, the Commission, the Algemene Raad van de Nederlandse Orde van Advocaten, the CCBE and ECLA presented oral argument at a hearing.

Forms of order sought by the parties

32. In Case T-125/03 R, the applicants request the President to adopt the following measures:

- suspend the operation of the decision of 10 February 2003 and, so far as necessary, the operation of the decision of 30 January 2003, in so far as it has been interpreted by the Commission as legitimating and/or constituting the basis of the Commission's action of seizing and/or reviewing and/or reading documents covered by professional privilege;

- order the Commission to keep the Set A documents in the sealed envelope, which should be given to an independent third party (whose identity should be agreed between the parties within five days of the date of the decision in these interim proceedings) to keep pending the resolution of the dispute to which the main application relates;

- order the Commission to place the Set B documents in a sealed envelope to be given to an independent third party (whose identity is to be agreed between the parties within five days of the date of the decision in these interim proceedings) to keep pending the resolution of the dispute to which the main application relates;

- order the Commission to dispose of any additional copies it may have of the Set B documents and to confirm that they have been destroyed within five days of the decision to be taken;

- order the Commission not to take any steps in reviewing (further) or using the documents in either Set A or Set B pending the resolution of the main dispute;

- order the Commission to pay the costs.

33. The Commission contends, in Case T-125/03 R, that the President should:

- dismiss the application for interim measures;

- order the applicants to pay the costs;

- order the Algemene Raad van de Nederlandse Orde van Advocaten, the CCBE and ECLA to pay the costs incurred by the Commission in connection with their intervention.

34. In Case T-253/03 R, the applicants request the President to adopt the following measures:

- suspend the operation of the decision of 8 May 2003;

- order the Commission to keep the Set A documents in the sealed envelope pending the resolution of the dispute to which the main application relates;

- order the Commission to place the Set B documents in a sealed envelope pending the resolution of the dispute to which the main application relates;

- order the Commission to dispose of any additional copies it may have of the Set B documents and to confirm that they have been destroyed within five days of the decision in these proceedings;

- order the Commission not to take any steps in reviewing (further) or using the documents in either Set A or Set B pending the resolution of the main action;

- order the Commission to pay the costs.

35. The Commission contends in Case T-253/03 R that the President should:

- dismiss the application for interim measures;

- order the applicants to pay the costs;

- order the Algemene Raad van de Nederlandse Orde van Advocaten, the CCBE and ECLA to pay the costs incurred by the Commission in connection with their intervention.

Law

36. As a preliminary point, it should be borne in mind that Article 104(2) of the Rules of Procedure provides that an application for interim measures is to state the circumstances giving rise to urgency and the pleas of fact and law establishing a prima facie case (*fumus boni juris*) for the interim measures applied for. Those conditions are cumulative, so that an application for interim measures must be dismissed if any one of them is absent (order of the President of the Court of Justice of 14 October 1996 in Case C-268/96 P(R) *SCK and FNK* v *Commission* [1996] ECR I-4971, paragraph 30). Where appropriate, the judge hearing such an application must also weigh up the interests involved (order of the President of the Court of Justice of 23 February 2001 in Case C-445/00 R *Austria* v *Council* [2001] ECR I-1461, paragraph 73).

37. The measure requested must further be provisional inasmuch as it must not prejudge the points of law or fact in issue or neutralise in advance the effects of the decision subsequently to be given in the main action (order of the President of the Court of Justice of 19 July 1995 in Case C-149/95 P (R) *Commission* v *Atlantic Container Line and Others* [1995] ECR I-2165, paragraph 22).

38. Furthermore, in the context of that overall examination, the judge hearing the application enjoys a broad discretion and is free to determine, having regard to the specific circumstances of the case, the manner and order in which those various conditions are to be examined, there being no rule of Community law imposing a pre-established scheme of analysis within which the need to order interim measures must be analysed and assessed (order in *Commission* v *Atlantic Container Line and Others*, cited at paragraph 37 above, paragraph 23).

1. *The joinder of Cases T-125/03 R and T-253/03 R*

39. In their application for interim measures in Case T-253/03 R, the applicants requested that Cases T-125/03 R and T-253/03 R be joined. In its observations in Case T-253/03 R, the Commission opposes the application for joinder on the ground that the main application in Case T-125/03 R is manifestly inadmissible.

40. Since, however, Cases T-125/03 R and T-253/03 R concern the same facts, involve the same parties and have related subject-matter, it is appropriate to order, under Article 50 of the Rules of Procedure, that they be joined for the purposes of this order.

2. *The applications for leave to intervene*

41. As noted at paragraphs 23 and 24 above, the CCBE, the Algemene Raad van de Nederlandse Orde

van Advocaten and ECLA have lodged applications to intervene in Case T-125/03 R and in Case T-253/03 R in support of the forms of order sought by the applicants.

42. The Commission has stated that it had no comments to make on the three applications for leave to intervene. The applicants, moreover, have stated that they supported the applications.

43. Under the second paragraph of Article 40 of the Statute of the Court of Justice, which, pursuant to the first paragraph of Article 53 thereof, is applicable to the Court of First Instance, the right of an individual to intervene is subject to the condition that he is able to establish an interest in the result of the case. Representative associations whose object it is to protect their members in cases raising questions of principle liable to affect those members are allowed to intervene (orders of the President of the Court of Justice of 17 June 1997 in Joined Cases C-151/97 P(I) and C-157/97 P(I) *National Power and PowerGen* [1997] ECR I-3491, paragraph 66, and of 28 September 1998 in Case C-151/98 P *Pharos* v *Commission* [1998] ECR I-5441, paragraph 6; orders of the President of the Court of First Instance of 22 March 1999 in Case T-13/99 R *Pfizer* v *Council*, not published in the European Court Reports, paragraph 15, and of 28 May 2001 in Case T-53/01 R *Post Italiane* v *Commission* [2001] ECR II-1479, paragraph 51).

44. In the present case, the CCBE, an association governed by Belgian law, stated in its application for leave to intervene that it is authorised by its members to take all steps of whatever nature necessary to realise its objectives, namely, in particular, to act in matters involving the application of the Treaties of the European Union to the profession of lawyer.

45. It must therefore be held that the CCBE has demonstrated, first, that it represents the interests of the Bars of the European Union and, second, that its objective is to defend the interests of its members. Since, moreover, the present case directly raises questions of principle in relation to the confidentiality of written communications with lawyers, those questions are liable to affect the members of the CCBE, whose function is, inter alia, to define and approve the rules of professional conduct applicable to lawyers.

46. Furthermore, these proceedings directly raise questions of principle relating to the conditions in which the judge hearing an application for interim measures may order interim measures in respect of the documents which the Commission intends to peruse pursuant to Article 14(3) of Regulation No 17, but which according to the undertakings under investigation are protected by professional privilege. The definition of those conditions is liable to impinge directly on the interests of the members of the CCBE, in that those conditions limit or extend the provisional legal protection applicable, in particular, to documents originating from those members and regarded by the CCBE as covered by professional privilege.

47. The CCBE has therefore demonstrated, at this stage, that it has an interest in the applications for interim measures being granted. Consequently, the CCBE must be granted leave to intervene in Cases T-125/03 R and T-253/03 R.

48. The Algemene Raad van de Nederlandse Orde van Advocaten states that it is the body responsible under Netherlands law for ensuring compliance with the principles governing the profession of lawyer in the Netherlands, for defining the rules of the Netherlands Bar and also for protecting its rights and interests.

49. The Algemene Raad van de Nederlandse Orde van Advocaten has therefore adduced evidence of such a kind as to demonstrate that its object is the protection of the interests of its members. Since, moreover, the present case touches directly on the status of Netherlands lawyers employed by an undertaking on a permanent basis, it raises questions of principle liable to affect the interests of the members of the Netherlands Bar and those of the Bar itself.

50. Furthermore, as already held at paragraph 46 above, these proceedings directly raise questions of principle relating to the conditions in which the judge hearing an application for interim measures may order interim measures in respect of the documents which the Commission intends to peruse pursuant to Article 14(3) of Regulation No 17, but which according to the undertakings under investigation are protected by professional privilege. The definition of those conditions is liable to impinge directly on the interests of the members of the Algemene Raad van de Nederlandse Orde van Advocaten, in that those conditions limit or extend the provisional legal protection applicable, in particular, to documents originating from those members and regarded by the Algemene Raad van de Nederlandse Orde van Advocaten as covered by professional privilege.

51. The Algemene Raad van de Nederlandse Orde van Advocaten has therefore demonstrated, at this stage, that it has an interest in the applications for interim measures being granted. Consequently, the Algemene Raad van de Nederlandse Orde van Advocaten must be granted leave to intervene in Cases T-125/03 R and T-253/03 R.

52. Last, ECLA has adduced in its application for leave to intervene evidence establishing that it represents organisations which themselves represent the vast majority of in-house lawyers in Europe. ECLA has also stated that its principal activity is representing the interests of those in-house lawyers and, in particular, defending their position on the question of the confidentiality of written communications with them. ECLA has therefore demonstrated, at this stage, that it represents the interests of its members and that its objective is, in particular, the defence of their interests. Since, moreover, the present case directly concerns the question of the confidentiality of written communications with in-house lawyers, it raises questions of principle liable to have a direct effect on the interests of the members of ECLA.

53. Furthermore, as already held at paragraphs 46 and 50 above, these proceedings directly raise questions of principle relating to the conditions in which the judge hearing an application for interim measures may order interim measures in respect of the documents which the Commission intends to peruse pursuant to Article 14(3) of Regulation No 17, but which according to the undertakings under investigation are protected by professional privilege. The definition of those conditions is liable to impinge directly on the interests of the members of ECLA, in that those conditions limit or extend the provisional legal protection applicable, in particular, to documents originating from those members and regarded by ECLA as covered by professional privilege.

54. ECLA has therefore demonstrated, at this stage, that it has an interest in the applications for interim measures being granted. Consequently, ECLA must be granted leave to intervene in Cases T-125/03 R and T-253/03 R.

3. *The application for confidential treatment*

55. At the stage of the application for interim measures, confidential treatment should be granted in respect of the information referred to as such in the letter of 16 September 2003 from the Registry to the applicants, since such information may prima facie be regarded as secret or confidential within the meaning of Article 116(2) of the Rules of Procedure.

4. *The application in Case T-125/03 R*

Admissibility of the application for interim measures

56. It is settled case-law that the admissibility of an action before the court adjudicating on the substance should not, in principle, be examined in proceedings relating to an application for interim measures so as not to prejudge the case in the main proceedings. However, where it is contended that the main action from which the application for interim measures is derived is manifestly inadmissible, it may be necessary to establish certain grounds for the conclusion that such an action is prima facie admissible (order of the President of the Court of Justice of 12 October 2000 in Case C-300/00 P(R) *Federación de Cofradías de Pescadores de Guipúzcoa and Others* v *Council* [2000] ECR I-8797, paragraph 34; orders of the President of the Court of First Instance of 15 January 2001 in Case T-236/00 R *Stauner and Others* v *Parliament and Commission* [2001] ECR II-15, paragraph 42, and of 8 August 2002 in Case T-155/02 R *VVG International and Others* v *Commission* [2002] ECR II-3239, paragraph 18).

57. In this case, the Commission contends that the main action in Case T-125/03 is inadmissible. It must therefore be determined whether there are none the less grounds for the conclusion that the main action in this case is prima facie admissible.

Arguments of the parties concerning the admissibility of the main action

58. In Case T-125/03 R, the applicants claim that the Court should annul the decision of 10 February 2003 and, so far as necessary, the decision of 30 January 2003, 'in so far as it has been interpreted by the Commission as legitimating and/or constituting the basis of the Commission's action (which is not severable from the Decision), of seizing and/or reviewing and/or reading documents covered by [legal professional privilege]'.

59. The applicants contend that their action is admissible, in that the decision of 30 January 2003, the decision of 10 February 2003 and the subsequent treatment of both sets of documents in issue in reality constitute one and the same decision of the Commission, the legality of which may be challenged before the Court. Next, as regards *locus standi*, the applicants observe that the decision of 30 January 2003 and that of 10 February 2003 are directly addressed to them.

60. The Commission contends that the main action is manifestly inadmissible.

Findings of the President

61. The fourth paragraph of Article 230 EC provides that '[a]ny natural or legal person may ... institute proceedings against a decision addressed to that person ...'.

62. It is not disputed, in the present case, that the applicants are addressees of the decisions of 30 January 2003 and of 10 February 2003 and that each of those decisions produces mandatory legal effects liable to affect their interests.

63. The Commission submits, however, that the legal effects complained of in the main application are not the consequence of the decisions of 30 January 2003 and 10 February 2003, but of measures adopted subsequent to those decisions. The Commission's arguments none the less tend to show, in essence, that, on the substance, none of the pleas put forward by the applicants can be properly invoked in support of the claims for annulment of the decision of 10 February 2003 and, so far as necessary, of the decision of 30 January 2003. These arguments should therefore, at first sight, be taken into account in the context of assessing whether a prima facie case (*fumus boni juris*) can be made for the main application.

64. As regards, next, the Commission's arguments that certain of the applicants' pleas seek annulment of only part of the decision of 10 February 2003 amending the decision of 30 January 2003 and should therefore be rejected in so far as annulment of that decision would require the Court to adjudicate *ultra petita*, it is apparent from the file that in their observations of 3 July 2003 the applicants denied having sought annulment of only part of that decision.

65. There are therefore grounds on which it may be concluded that the admissibility of the claims for annulment in Case T-125/03 R cannot be precluded.

A prima facie case

66. The applicants raise three pleas in law against the decision of 10 February 2003 and, so far as necessary, against the decision of 30 January 2003. First, during the investigation, the Commission infringed the general procedural principles laid down in the case-law (Case 155/79 *AM & S* v *Commission* [1982] ECR 1575) and also the applicants' right to request interim measures under Article 242 EC, since, first, the Commission's officials read and discussed among themselves certain Set A and Set B documents and, second, they immediately placed the Set B documents in their file. Second, still during the investigation, the Commission substantially infringed the professional privilege protecting communications with lawyers, first by refusing on the spot to regard the Set B documents as covered by professional privilege and, second, by seizing the Set A documents. Third, those same facts also constitute a breach of the fundamental rights forming the very foundation of professional privilege.

67. It follows from the foregoing that all the pleas which the applicants direct against the decision of 10 February 2003 and, so far as necessary, the decision of 30 January 2003, in reality relate, as the Commission submits, to measures taken subsequent to and, moreover, distinct from those decisions. Contrary to the applicants' contention, the decision of 10 February 2003 and that of 30 January 2003 are clearly severable from the contested operations, especially since they contain no particular reference to the documents in Set A and Set B. Consequently, the individualisation of and the contested treatment given to those documents, by comparison with the other documents covered by the decisions of 10 February 2003 and 30 January 2003, are necessarily the consequence of distinct, subsequent measures.

68. It is sufficient to recall, in that regard, that, according to a consistent line of decisions, in connection with an investigation based on Article 14 of Regulation No 17, an undertaking cannot plead the illegality of the investigation procedures as a ground for annulment of the measure on the basis of which the Commission carried out that investigation (see, to that effect, Case 85/87 *Dow Benelux* v

Commission [1989] ECR 3137, paragraph 49, and Joined Cases T-305/94 to T-307/94, T-313/94 to T-316/94, T-318/94, T-325/94, T-328/94, T-329/94 and T-335/94 *Limburgse Vinyl Maatschappij and Others* v *Commission* [1999] ECR II-931, paragraph 413).

69. That impossibility merely reflects the general principle that the legality of a measure must be assessed in the light of the circumstances of law and of fact existing at the time when the decision was adopted, so that the validity of a decision cannot be affected by acts subsequent to its adoption (Joined Cases 96/82 to 102/82, 104/82, 105/82, 108/82 and 110/82 *IAZ and Others* v *Commission* [1983] ECR 3369, paragraph 16, and *Dow Benelux* v *Commission*, cited at paragraph 68 above, paragraph 49).

70. Without its being necessary to examine the applicants' submissions in greater detail, it must therefore be concluded that even on the assumption that they were well founded, they could not be properly invoked in support of the claims for annulment of the decision of 10 February 2003 and, so far as necessary, the decision of 30 January 2003.

71. Consequently, the applicants have failed to establish the existence of a prima facie case, which is sufficient ground to dismiss the application in Case T-125/03 R.

5. *The application in Case T-253/03 R*

72. It is appropriate, first, to consider whether the applicants have demonstrated the existence of a prima facie case, then, second, to consider whether they have demonstrated the urgency of the interim measures sought and, last, to balance the interests involved.

A prima facie case

Arguments of the parties

73. The applicants maintain that their action against the decision of 8 May 2003, which is based on three pleas in law, is not unfounded.

74. First, the applicants maintain that the Commission has infringed the procedural principles laid down in *AM & S* v *Commission*, cited at paragraph 66 above, concerning professional privilege. Where an undertaking subject to an investigation on the basis of Article 14(3) of Regulation No 17 relies on the protection of documents covered by professional privilege, the procedure that the Commission must follow consists of the following three stages. First of all, if the undertaking in question relies on professional privilege and on that ground refuses to produce documents, it must demonstrate that the substantive conditions required by the case-law are satisfied, although it is not obliged to reveal the contents of the documents concerned. Second, if the Commission is not satisfied by the explanations given by the undertaking subject to an investigation, it must order, by a decision adopted pursuant to Article 14(3) of Regulation No 17, production of the documents in question. Third, and last, if the undertaking continues to maintain that the documents are covered by professional privilege, it is for the Community Courts to resolve the dispute.

75. In the present case, the applicants submit that the Commission reversed the order of the stages of that procedure, since, during the investigation, the Commission's officials took possession of and discussed among themselves, for several minutes, certain Set A and Set B documents and, second, placed the Set B documents in the file without placing them in a sealed envelope. The applicants maintain, essentially, that instead of taking copies of the documents in question and adopting the decision of 8 May 2003, the Commission should have left them where they were and adopted a decision ordering the applicants to produce them. That decision could then have formed the subject-matter of an action before the Community Courts. The applicants also contend that the different treatment of the Set A and the Set B documents constitutes a breach of the principle of non-discrimination.

76. In their second plea, the applicants maintain, essentially, that at the investigation stage the Commission breached the principle of professional privilege, first, by denying all protection to the Set B documents and, second, by exhaustively examining the Set A documents. The decision of 8 May 2003 also breached the principle of professional privilege in so far as it reflects, in particular, the Commission's refusal to return and destroy the Set A and Set B documents and, moreover, manifests the Commission's intention to open the sealed envelope containing the Set A documents.

77. The applicants state in that regard that the two Set A documents and the Set B handwritten memoranda are covered by professional privilege, since they are the direct result of the competition law compliance programme which they put in place with the assistance of outside counsel.

78. The applicants then set out their arguments in respect of each of the documents in question, maintaining, first, that the memorandum forming the basis of the two Set A documents must be regarded as the written basis of a telephone conversation with an external counsel, as evidenced by the handwritten reference to that lawyer's name on one of the two copies of the memorandum.

79. Next, in the applicants' submission, the Set B handwritten memoranda are also covered by professional privilege, since they were used to prepare the Set A memoranda, which are themselves protected.

80. As regards, last, the Set B e-mails, the applicants maintain that they constitute written communications between the General Manager of Akcros Chemicals and a member of Akzo Nobel's Legal Department. The latter person is a member of the Netherlands Bar, subject to professional obligations as regards independence and respect for the rules of the Bar comparable to those of an external lawyer. Those rules prevail over his duty of loyalty towards his employer. In that regard, the applicants are agreed that the Community case-law does not at present recognise that the work of in-house lawyers is protected by professional privilege; none the less, they maintain, essentially, that numerous changes in the professional rules of the Member States have occurred since the judgment in *AM & S* v *Commission*, cited at paragraph 66 above, tending, in particular, to extend the cover of professional privilege to the activities of certain in-house lawyers. The applicants also rely, by analogy, on the judgment in Case T-92/98 *Interporc* v *Commission* [1999] ECR II-3521, paragraph 41, where the Court of First Instance considered that correspondence between the Commission's Legal Service and its various Directorates-General could not be disclosed. Furthermore, the limitation of professional privilege to written communications with outside counsel constitutes a breach of the principle of non-discrimination and, against the background of the modernisation of competition law, adversely affects an undertaking's assessment of the compliance of its activities with competition law. Last, the communications in question were between two persons in the United Kingdom and the Netherlands respectively, i.e. in two States which recognise that written communications from in-house lawyers are protected by professional privilege when the lawyers belong to a Bar.

81. Last, in their third plea the applicants submit that the decision of 8 May 2003 breaches the fundamental rights which are the very foundation of professional privilege, namely the rights of defence, respect for private life and freedom of expression, as defined in the case-law of the European Court of Human Rights.

82. The Commission rejects all of those arguments and contends that none of the pleas put forward by the applicants is able to satisfy the condition relating to a prima facie case.

83. The Commission thus disputes the applicants' first plea, alleging that it breached the procedural principles applicable when undertakings claim that certain documents are protected by professional privilege. As a preliminary point, the Commission observes that the procedure defined in *AM & S* v *Commission*, cited at paragraph 66 above, is not absolute and does not require that, when an undertaking relies on professional privilege, the Commission should be required to refrain from copying the documents in question and subsequently to request them from the undertaking. Still by way of preliminary point, the Commission disputes the applicants' assertion that its officials took possession of the documents in question during the investigation and discussed them among themselves for several minutes.

84. Next, the Commission contends that the adoption of preventive measures to ensure that the documents will not be destroyed is not inconsistent with the principles laid down in *AM & S* v *Commission*, cited at paragraph 66 above. By adopting such measures, the Commission is able to avoid having to request the assistance of the national authorities in making a formal order for production of the documents concerned.

85. Last, the Commission submits that it did not breach the principle of non-discrimination by treating the Set A and the Set B documents differently, since those documents were not identical.

86. The Commission also contends that the applicants' second plea is manifestly unfounded.

87. The Commission contends, first, that the two Set A documents are not covered by professional

privilege, since they consist of two copies of the same memorandum, with no indication that it was drafted in the context of or for the purpose of a legal opinion by an outside counsel. The only indication to that effect is a handwritten reference on one of the two copies to the name of a lawyer, which establishes at most that a conversation with that lawyer regarding the memorandum had taken place. The evidence adduced by the applicants is insufficient to demonstrate that the memorandum in question was drawn up with a view to seeking legal advice or that such advice was given.

88. In any event, the applicants themselves agree that the memorandum reflects internal discussions between the General Manager of Akcros Chemicals and other employees in connection with a competition law compliance programme set up by the applicants. It therefore does not reflect discussions with an outside counsel, contrary to the requirements of case-law (order of the Court of First Instance in Case T-30/89 *Hilti* v *Commission* [1990] ECR II-163, publication by way of extracts, paragraph 18). Furthermore, the fact that a document was drawn up in the context of a competition law compliance programme is not sufficient for that document to be covered by professional privilege, in so far as, by its scope, such a programme exceeds the exercise of the rights of the defence, at least in the absence of an investigation or actual proceedings against the undertaking. Nor does the fact that the document was drawn up on the instructions of an outside counsel in the context of such a programme suffice to bring it within the scope of professional privilege. The Commission concludes its observations on the competition law compliance programme set up by the applicants by stating, first, that the applicants do not claim that that programme is mentioned in the Set A documents; second, that the documents produced by the applicants demonstrate that they sought to divert professional privilege from its purpose; and, third, that the existence of the competition law compliance programme was never mentioned during the investigation of 12 and 13 February 2003.

89. The Commission also contends that the Set B handwritten memoranda are not protected by professional privilege, since they do not give the impression of being a communication with an external lawyer, do not indicate that the applicants had any intention of having such communication and do not report the text or the content of written communications with an independent lawyer for the purposes of the exercise of the rights of defence. There is no indication that the documents have any link with the competition law compliance programme set up by the applicants; in any event, such a link is not sufficient to protect the documents; and, last, according to the applicants themselves, the memoranda were drafted in preparation for the Set A notes, which are not covered by professional privilege.

90. As regards, last, the Set B e-mails, the Commission contends that they are clearly not covered by professional privilege, since they neither constitute a communication with an independent lawyer, nor reveal any intention to communicate with an independent lawyer nor, last, report the text or the content of written communications with an independent lawyer for the purpose of the exercise of the rights of defence. The Commission observes in that regard that in Community law correspondence with in-house lawyers is not covered by professional privilege (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 24). Furthermore, the contents of the e-mails in question show that the applicants' in-house lawyer was acting not as a lawyer but as an employee.

91. With more specific regard to the question of the protection of written communications with lawyers employed on a permanent basis, the Commission observes that to accept the applicants' arguments would be to create different systems within the European Union, depending on whether or not Member States allow in-house lawyers to be members of a Bar. The Commission also submits that the principles laid down in *AM & S* v *Commission*, cited at paragraph 66 above, must not be altered, since, first, in-house lawyers do not enjoy the same independence as outside lawyers, second, the principle established in *Interporc* v *Commission*, cited at paragraph 80 above, is not justified on grounds related to professional privilege and, third, to extend the scope of professional privilege would lead to abuse. Last, the Commission claims that the fact that undertakings are increasingly required to undertake self-assessment of the compatibility of their activities with competition law pursuant to Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the competition rules laid down in Articles 81 and 82 of the Treaty (OJ 2003 L 1, p. 1) is unrelated to questions of professional privilege. Self-assessment will be increasingly common in connection with the application of Article 81(3) EC, whereas questions associated with professional privilege arise essentially in connection with the application of Articles 81(1) EC and 82 EC.

92. Third, the Commission contends that the applicants' final plea, whereby they allege that the Commission breached the fundamental rights forming the basis of professional privilege, is unfounded. The applicants have failed to establish a link between the fundamental rights on which

they rely and the alleged breach and their rights of defence were not breached in any event, since the Commission followed a procedure consistent in every respect with the principles laid down in *AM & S* v *Commission*, cited at paragraph 66 above. Last, the Commission contends that, contrary to what the applicants maintain, the case-law of the European Court of Human Rights which they cite in their application makes no reference to the protection of private life.

Findings of the President

93. In the present case, the President considers it appropriate to examine the pleas in the following order: first, the second plea in so far as it relates to the Set A documents; then, that plea in so far as it relates to the Set B documents; and, finally, the first plea.

- Second plea, alleging breach of professional privilege, in so far as it relates to the Set A documents

94. In their second plea, the applicants maintain that the decision of 8 May 2003 breached the professional privilege which, in their submission, covers the Set A documents.

95. In that regard, Regulation No 17 must be interpreted as protecting the confidentiality of written communications between lawyers and clients provided, first, that such communications are made for the purposes and in the interests of the client's rights of defence and, second, that they emanate from independent lawyers, i.e. lawyers who are not bound to the client by a relationship of employment (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 21).

96. Furthermore, the principle of protection of written communications between lawyer and client must, in view of its purpose, be regarded as extending also to the internal notes which are confined to reporting the text or the content of those communications (order in *Hilti* v *Commission*, cited at paragraph 88 above, paragraph 18).

97. In the present case, the applicants do not claim that the Set A documents constitute in themselves a communication with an outside lawyer or a document reporting the text or the content of such a communication. They maintain, on the contrary, that both documents are memoranda drafted for the purpose of a telephone conversation with a lawyer.

98. The President considers that the applicants' plea raises very important and complex questions concerning the possible need to extend, to a certain degree, the scope of professional privilege as currently delimited by the case-law.

99. It should be observed, first of all, that according to settled case-law, in all proceedings in which sanctions, especially fines or periodic penalty payments, may be imposed, observance of the rights of the defence is a fundamental principle of Community law, which must be complied with even if the proceedings in question are administrative proceedings (see, in particular, Joined Cases C-238/99 P, C-244/99 P, C-245/99 P, C-247/99 P, C-250/99 P to C-252/99 P and C-254/99 P *Limburgse Vinyl Maatschappij and Others* v *Commission* [2002] ECR I-8375, paragraph 85, and Case T-348/94 *Enso Española* v *Commission* [1998] ECR II-1875, paragraph 80).

100. Second, the protection of the confidentiality of written communications between lawyer and client is an essential corollary to the full exercise of the rights of the defence, the protection of which Regulation No 17 itself, in particular in the 11th recital in its preamble and in the provisions contained in Article 19, takes care to ensure (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 23).

101. Third, professional privilege is intimately linked to the conception of the lawyer's role as collaborating in the administration of justice by the courts and as being required to provide, in full independence, and in the overriding interests of that cause, such legal assistance as the client needs (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 24).

102. In order that a lawyer may effectively and usefully exercise his role of collaborating in the administration of justice by the courts with a view to the full exercise of the rights of the defence, it may prove necessary, in certain circumstances, for the client to prepare working or summary documents, notably for the purpose of gathering the information which the lawyer may find useful, or indeed indispensable, in understanding the context, the nature and the scope of the facts in respect of which his assistance is sought. Furthermore, the preparation of such documents may

prove particularly necessary in matters involving considerable and complex information, which is the case, in particular, of proceedings initiated with a view to imposing sanctions for infringements of Articles 81 EC and 82 EC.

103. In that context, although Regulation No 17 has given the Commission wide powers of investigation and placed undertakings under an obligation to cooperate in the measures of investigation, it is settled case-law that it is none the less necessary to prevent the rights of the defence from being irremediably impaired during preliminary inquiry proceedings including, in particular, investigations which may be decisive in providing evidence of the unlawful nature of conduct engaged in by undertakings for which they may be liable (Joined Cases 46/87 and 227/88 *Hoechst* v *Commission* [1989] ECR 2859, paragraph 15, and Case 374/87 *Orkem* v *Commission* [1989] ECR 3283, paragraph 33).

104. If, in the context of investigations ordered under Article 14(3) of Regulation No 17, the Commission were able to copy working or summary documents prepared by an undertaking solely for the purpose of the exercise of the rights of defence by its lawyer, the consequence might prima facie be an irremediable impairment of the rights of defence of that undertaking, since the Commission would have evidence of such a kind as to provide it with immediate information on the defence options available to the undertaking. There is reason to conclude, therefore, that such documents are capable of being covered by professional privilege.

105. It is therefore necessary to determine whether, in the present case, the Set A documents may belong to such a category.

106. The applicants claim that the Set A typewritten memoranda were drafted in the context of a competition law compliance programme set up by outside lawyers. More specifically, the Set A memoranda were drawn up by the General Manager of Akcros Chemicals on the basis of discussions with lower-level employees, initially communicated to his superior and then, finally, discussed with the applicants' external counsel.

107. The President considers at this stage that, as the Commission has stated, the mere existence of a competition law compliance programme set up by outside lawyers is not prima facie sufficient to establish that a document prepared in the context of such a programme is covered by professional privilege. Owing to their extent, those programmes include tasks which frequently extend far beyond the exercise of the rights of the defence.

108. Having made that clear, the President none the less considers that, in the present case, it cannot be precluded prima facie that, because of other factors, the Set A typewritten memoranda were in fact drafted for the sole purpose of obtaining legal advice from the applicants' lawyer in the context of the exercise of the rights of the defence.

109. First, after examining the Set A memoranda, the President found that, in the light of their content, virtually the sole purpose of those documents was prima facie to compile information of the kind which would be communicated to a lawyer for the purpose of obtaining his assistance on questions involving the possible application of Articles 81 EC and 82 EC. The first sentence of the memoranda gives the clear impression that the General Manager of Akcros Chemicals intended to assemble, in the Set A documents, information relating to certain competition law matters. Owing to their content and their scope, moreover, there are serious doubts as to the possibility that the memoranda might have been drafted for a purpose other than the subsequent consultation of a lawyer. Furthermore, even if at this stage their content does not indicate beyond doubt that the documents were drafted for the sole purpose of obtaining the assistance of a lawyer, the President none the less considers that the absence of express reference in the memoranda to seeking legal assistance is not in the present case sufficient reason to reject outright the possibility that such assistance was in fact the reason why they were drafted.

110. Second, the applicants produced before the President the minute of a telephone conversation drafted by one of the applicants' lawyers on the day on which the conversation took place. As this minute might itself be protected by professional privilege, it could not be communicated to the Commission. It gives the impression, however, that certain points discussed did in fact relate prima facie to information contained in the Set A documents.

111. Third, one of the two copies of the Set A memorandum bears handwritten notes mentioning the name of the applicants' counsel and tends to indicate that a telephone conversation did indeed take place with him on the actual day on which he drafted the minute of his telephone conversation

referred to in the preceding paragraph.

112. Consequently, in the circumstances of the present case, the President considers that this evidence tends to confirm the possibility that the Set A memoranda were drafted for the sole purpose of obtaining the assistance of a lawyer.

113. As regards, last, the condition relating to the exercise of the rights of the defence, it is apparent upon examining the Set A documents that they relate to facts which are prima facie capable of justifying consultation of a lawyer and of being connected either with the investigation currently being carried out by the Commission or with other investigations which the applicants were reasonably able to fear or anticipate and in view whereof they intended to draw up a strategy and prepare in advance, if necessary, the exercise of their rights of defence. Prima facie, however, it remains necessary, for the purpose of examining the present plea, to determine the precise conditions in which such documents may, particularly from a temporal and material viewpoint, constitute a means of exercising the rights of the defence.

114. It follows from the foregoing, therefore, that, in so far as it concerns the Set A documents, the applicants' second plea raises numerous delicate questions of principle requiring a detailed examination in the main proceedings and that it does not therefore appear, at this stage, to be manifestly unfounded.

- Second plea, alleging breach of professional privilege, in so far as it concerns the Set B documents

115. As stated at paragraphs 9 and 10 above, the Set B documents consist, first, of handwritten memoranda which, according to the applicants, were taken with a view to drafting the Set A memoranda and, second, of e-mails. It is necessary to examine those three documents in the light of the second plea raised by the applicants, alleging breach of professional privilege by the Commission.

116. As regards, first, the Set B handwritten memoranda, it is apparent, on the basis of a comparison with the typewritten Set A memoranda, that both have the same overall structure. They also contain, in substance, numerous common points. It cannot be precluded prima facie, therefore, that, like the Set A memoranda, the Set B handwritten memoranda would never have been drafted had the author not envisaged consulting a lawyer about their contents. The applicants' second plea, as regards the Set B handwritten memoranda, is therefore not wholly unfounded.

117. It is necessary to examine, last, the two Set B e-mails between the General Manager of Akcros Chemicals and the Akzo Nobel's competition law coordinator.

118. In that regard, it should be pointed out that, in application of the principles laid down in *AM & S* v *Commission*, cited at paragraph 66 above, the protection afforded by Community law, especially in the context of Regulation No 17, to written communications between lawyer and client applies only in so far as those lawyers are independent, i.e. not bound to the client by a relationship of employment (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 21).

119. In the present case, it is common ground that the e-mails in question were exchanged between the General Manager of Akcros Chemicals and a lawyer employed on a permanent basis by Akzo Nobel. Following *AM & S* v *Commission*, cited at paragraph 66 above, those communications are therefore not in principle covered by professional privilege.

120. None the less, the President considers that the arguments put forward by the applicants and the interveners raise a question of principle which merits very special attention and which cannot be resolved in the present interim proceedings.

121. On the one hand, as the Commission emphasises, the Member States do not unanimously recognise the principle that written communications with in-house lawyers must be covered by professional privilege. Furthermore, as the Commission also points out, it is necessary to ensure that an extension of professional privilege cannot facilitate abuses which would enable evidence of an infringement of the Treaty competition rules to be concealed and thus prevent the Commission from carrying out its task of ensuring compliance with those rules.

122. On the other hand, however, the solution in *AM & S* v *Commission*, cited at paragraph 66 above, is based, inter alia, on an interpretation of the principles common to the Member States dating from

1982. It is therefore necessary to determine whether, in the present case, the applicants and the interveners have adduced serious evidence of such a kind as to demonstrate that, taking into account developments in Community law and in the legal orders of the Member States since the judgment in *AM & S* v *Commission*, cited at paragraph 66 above, it cannot be precluded that the protection of professional privilege should now also extend to written communications with a lawyer employed by an undertaking on a permanent basis.

123. The President considers that arguments to that effect have been submitted in the present case and that they are not wholly unfounded.

124. First, the applicants, the Algemene Raad van de Nederlandse Orde van Advocaten and ECLA have adduced evidence which indicates that, since 1982, a number of Member States have adopted rules designed to protect written communications with a lawyer employed by an undertaking on a permanent basis, provided that he is subject to certain rules of professional conduct. That appears to be the position, in particular, in Belgium and the Netherlands. At the hearing, ECLA further stated that in most Member States written communications with in-house lawyers subject to particular rules of professional conduct were protected by professional privilege. The Commission, on the other hand, contended in its observations that it was only in a minority of Member States that communications with in-house lawyers were covered by professional privilege.

125. Without its being possible at this stage to ascertain and to embark upon a thorough and detailed analysis of the evidence adduced by the applicants and the interveners, that evidence none the less appears prima facie to be capable of showing that the role assigned to independent lawyers of collaborating in the administration of justice by the courts, which proved decisive for the recognition of the protection of written communications to which they are parties (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 24), is now capable of being shared, to a certain degree, by certain categories of lawyers employed within undertakings on a permanent basis where they are subject to strict rules of professional conduct.

126. The evidence therefore tends to show that increasingly in the legal orders of the Member States and possibly, as a consequence, in the Community legal order, there is no presumption that the link of employment between a lawyer and an undertaking will always, and as a matter of principle, affect the independence necessary for the effective exercise of the role of collaborating in the administration of justice by the courts if, in addition, the lawyer is bound by strict rules of professional conduct, which where necessary require that he observe the particular duties commensurate with his status.

127. It must therefore be held that the applicants and the interveners have presented arguments which are not wholly unfounded and which are apt to justify raising again the complex question of the circumstances in which written communications with a lawyer employed by an undertaking on a permanent basis may possibly be protected by professional privilege, provided that the lawyer is subject to rules of professional conduct equivalent to those imposed on an independent lawyer. In the present case, the applicants maintained at the hearing, without being clearly contradicted on that point by the Commission, that the lawyer whom they employed on a permanent basis was in fact bound by professional rules equivalent to those governing independent lawyers of the Netherlands Bar.

128. Nor does that question of principle appear prima facie to have to be rejected at this stage as a result of the Commission's argument that recognition of professional privilege for written communications with lawyers employed on a permanent basis would give rise to different regimes within the European Union, depending on whether or not in-house lawyers are authorised by the Member States to be members of a Bar.

129. This complex question must be examined thoroughly, in particular as regards, first, the precise scope of the right which would then be recognised, second, the Community rules and national rules applicable to the professions of lawyer and in-house lawyer and, third, the legal and practical alternatives available to companies established in Member States which do not allow in-house lawyers to be members of a Bar.

130. It must therefore be concluded that, in the present case, the applicants have, by their second plea, raised a delicate question of principle, which requires a complex legal assessment and must be reserved for the Court when it adjudicates on the main application.

131. It is also necessary, in the present case, to examine the first plea put forward by the applicants.

- First plea, alleging breach of the procedural principles laid down in *AM & S* v *Commission* and of Article 242 EC

132. In principle, where the undertaking which is the subject of an investigation under Article 14 of Regulation No 17 refuses, on the ground that it is entitled to protection of the confidentiality of information, to produce, among the business records demanded by the Commission, written communications between itself and its lawyer, it must nevertheless provide the Commission's authorised agents with relevant material of such a nature as to demonstrate that the communications fulfil the conditions for being granted legal protection, although it is not bound to reveal the contents of the communications in question. Where the Commission is not satisfied that such evidence has been supplied, it is for the latter to order, pursuant to Article 14(3) of Regulation No 17, production of the communications in question and, if necessary, to impose on the undertaking fines or periodic penalty payments under that regulation as a penalty for the undertaking's refusal either to supply such additional evidence as the Commission considers necessary or to produce the communications in question whose confidentiality, in the Commission's view, is not protected by law (*AM & S* v *Commission*, cited at paragraph 66 above, paragraphs 29 to 31). It is then open to the undertaking subject to the investigation to lodge an application for annulment of the Commission's decision, together where appropriate with an application for interim measures, under Articles 242 EC and 243 EC.

133. The principles thus recited tend to demonstrate that, in principle, where the representatives of the undertaking under investigation have produced relevant material of such a nature as to demonstrate that a particular document is protected by professional privilege and where the Commission is not satisfied with those explanations, the Commission is not prima facie entitled to examine the document concerned before it has adopted a decision allowing the undertaking under investigation to bring the matter before the Court of First Instance and, where appropriate, the judge with jurisdiction to order interim measures.

134. It is apparent, on the contrary, that the mere fact that an undertaking claims that a document is protected by professional privilege is not prima facie sufficient to prevent the Commission from reading that document if, in addition, the undertaking produces no relevant material of such a kind as to prove that it is actually protected by professional privilege.

135. In the present case, paragraph 6 of the decision of 8 May 2003 states that, when examining the Set A documents, the applicants' representatives, first, had a ‘detailed discussion’ with the Commission's officials, second, mentioned a manuscript reference to the name of an external lawyer on one of the copies of those memoranda and, third, claimed that the memoranda had been prepared with a view to seeking legal advice. Those statements tend prima facie to indicate that the applicants produced relevant material of such a kind as to prove that the documents should be protected.

136. As regards, next, the Set B documents, it is apparent from paragraph 7 of the decision of 8 May 2003 and also from the Commission's observations that the applicants' representatives and the Commission's officials also had a ‘detailed discussion’ about the contents of the three documents, which, too, does not preclude prima facie that the applicants' representatives produced, during that discussion, material of such a kind as to justify the possible protection of the three Set B documents, as in the case of the Set A documents.

137. However, the applicants' present plea raises a further delicate question. It is necessary to consider, in addition, whether, in the light of the duty of an undertaking subject to an investigation to submit relevant material of such a kind as to prove that a document must in fact be protected, the Commission officials were prima facie entitled, as they did in the present case, to cast a cursory glance over that document in order to form their own view of its eligibility for protection.

138. It follows from *AM & S* v *Commission*, cited at paragraph 66 above, that the undertaking under investigation ‘is not bound to reveal the contents’ of the documents in question when it is required to present to the Commission's officials relevant material of such a kind as to prove that the documents merit protection (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 29). Furthermore, if the Commission's officials were able to cast even a cursory glance over the documents concerned, there would be a risk that, in spite of the superficial nature of their examination, they would read information covered by professional privilege. That may be so, in particular, if the confidentiality of the document in question is not clear from external indications such as a lawyer's letterhead or a clear reference by that lawyer to the confidentiality from which the document should benefit. In such a situation, it would frequently happen that the only way in

which the Commission's officials would be able to satisfy themselves that the protected information was confidential would be by looking at the information itself. On the other hand, if those officials, without first consulting the documents concerned, simply placed copies of them in a sealed envelope which they removed with a view to a subsequent resolution of the dispute, then prima facie the risks of a breach of professional privilege could be avoided and at the same time the Commission would be able to retain a certain control over the documents forming the subject-matter of the investigation.

139. The President therefore considers that it is not precluded at this stage that, in the context of an investigation under Article 14(3) of Regulation No 17, the Commission's officials must refrain from casting even a cursory glance over the documents which an undertaking claims to be protected by professional privilege, at least if the undertaking has not given its consent.

140. In the present case, it follows from the minute of the investigation prepared by the Commission that the applicants' representatives were firmly opposed to a cursory examination of the documents in the file in question and also that it was only when they were reminded of the possible criminal consequences of obstructing the investigation that they agreed to allow the leader of the investigating team to glance quickly at the documents. At this stage, the President is unable to determine whether the Commission's warnings were sufficient to vitiate the consent of the applicants' representatives. However, the circumstances in which the warnings were formulated do not make it possible to conclude, at this stage, that the applicants gave their unreserved consent to the brief review of the Set A and Set B documents subsequently carried out by the leader of the investigating team, as may be seen from points 14 and 15 of the minute of the investigation.

141. Furthermore, it is common ground between the parties that it was subsequently, at the stage of the investigation, that the Commission placed the Set B documents in its file, without first adopting a decision under Article 14(3) of Regulation No 17, which would have allowed the applicants to bring the matter before the Court of First Instance and, if appropriate, the judge with jurisdiction to make interim orders.

142. At this stage, therefore, it appears that the applicants' first plea raises a complex question of interpretation of the procedure defined in *AM & S* v *Commission*, cited at paragraph 66 above, and that it cannot be precluded that the Commission failed to observe the procedural principles laid down in that judgment.

143. The arguments put forward by the Commission do not call in question either the importance of that question of interpretation or the possibility that the Commission acted unlawfully in regard to the Set A and Set B documents.

144. The Commission contends, first, that in *AM & S* v *Commission*, cited at paragraph 66 above, its initial investigation was based on Article 14(2) of Regulation No 17 and that it therefore had no option other than subsequently to order production of the documents concerned on the basis of Article 14(3) of Regulation No 17. The situation is different in the present case, since its decision to carry out an investigation was based from the outset on Article 14(3) of Regulation No 17.

145. It should be observed, however, that at paragraph 29 of *AM & S* v *Commission*, cited at paragraph 66 above, the Court of Justice drew no distinction according to whether the decision to carry out an investigation, on the basis of which communication of documents is initially demanded, is based on Article 14(2) of Regulation No 17 or on Article 14(3) thereof. The Court of Justice merely referred generally to investigations decided under Article 14 of Regulation No 17. It cannot therefore be inferred prima facie that the outcome must necessarily be different where the initial decision to carry out an investigation is based on Article 14(3) of Regulation No 17 rather than on Article 14(2) thereof.

146. In any event, the Commission has not shown how the fact that it ordered an investigation on the basis of Article 14(3) of Regulation No 17 would prima facie be sufficient to allow it to read immediately documents potentially protected by professional privilege without having first adopted a second decision which would give the undertaking forming the subject of an investigation the proper opportunity to challenge the Commission's position before the Court of First Instance and, where appropriate, the judge with jurisdiction to make interim orders. Admittedly, the Commission stated at the hearing that the undertaking under investigation could challenge the first decision, adopted under Article 14(3) of Regulation No 17. However, as already held at paragraph 68 above, an undertaking cannot plead the illegality affecting the investigation procedures as a ground for annulment of the measure on the basis of which the Commission carried out that investigation (see,

in particular, *Dow Benelux* v *Commission*, cited at paragraph 68 above, paragraph 49, and *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited at paragraph 68 above, paragraph 413). Furthermore, it is apparent that where, during an investigation, the Commission intends to read immediately documents which the undertaking concerned claims to be covered by professional privilege, it is prima facie unrealistic to consider that that undertaking, which has just learnt of the decision to carry out an investigation, has the actual and effective possibility to challenge it before the Court of First Instance and, in particular, before the judge with jurisdiction to make interim orders, before the Commission reads the documents in question. In such a circumstance, the interests of the undertaking do not seem to be sufficiently protected by the possibility available under Articles 242 EC and 243 EC to obtain an order suspending the decision or any other interim measure (see, by analogy, *AM & S* v *Commission*, cited at paragraph 66 above, paragraph 32).

147. Second, the Commission maintained in its observations that it was entitled, where there can be no doubt that the document cannot be covered by professional privilege, to place it immediately with the rest of its file, as it did in the case of the Set B documents.

148. That solution cannot be accepted at this stage without a thorough analysis in the main action. First, as stated at paragraphs 137 to 140 above, it cannot be precluded that the Commission's officials must refrain from casting even a cursory glance over the documents in respect of which an undertaking produces relevant material of such a kind as to prove that they are covered by professional privilege. Second, even on the assumption that the Commission's officials were entitled to do so, the fact would remain that certain documents covered by professional privilege, in particular the documents reporting the contents of a communication with a lawyer, appear to be purely internal documents and do not necessarily give any external indication that they are confidential. Consequently, in such a circumstance, the only way in which the Commission's officials could have no doubt that a document did not have protection would ultimately be to read it in full on the spot and, consequently, to know what is in it before first giving the undertaking under investigation the opportunity to challenge the Commission's decision before the Court of First Instance and, where appropriate, the judge with jurisdiction to make interim orders.

149. The Commission's arguments therefore do not affect the reality of the question of principle raised by the applicants' first plea, namely the question of the circumstances in which, in procedural terms, the requirements of professional privilege and the material and practical constraints which bind the Commission in matters of investigation must be reconciled.

150. The condition relating to a prima facie case is therefore satisfied as regards the Set A and Set B documents. It is therefore appropriate to consider whether the applicants have shown an urgent need to order the interim measures requested for each of the documents concerned.

Urgency

Arguments of the parties

151. The applicants maintain that a distinction must be drawn between the Set A and Set B documents for the purpose of assessing the urgency of ordering the interim measures sought.

152. First, as regards the Set A documents, the applicants observe that, in the decision of 8 May 2003, the Commission stated that it would not open the sealed envelope before expiry of the period within which an appeal could be lodged against the decision. The applicants state that they are prepared to withdraw their application for interim measures in respect of the Set A documents if the Commission guarantees in writing that the envelope containing those documents will remain sealed until the end of the main proceedings.

153. Second, the applicants state that the Set B documents have been in the Commission's possession since February 2003 and that the Commission has already read them, so that it is necessary to adopt urgent measures in order to ensure that the Commission does not take irreversible steps on the basis of those documents.

154. Third, the applicants submit that they could suffer irreparable damage if the effects of the decision of 8 May 2003 were not suspended. In particular, the status of the documents may have an effect on the applicants' position in the current investigation, since the Set B documents have already been reviewed and since, on the basis of all the documents concerned, the Commission may adopt other measures of investigation or address a statement of objections to the applicants. The applicants acknowledge, in that regard, that procedural irregularities may be invoked in an action

against a decision adopted on the basis of Article 81(1) EC but maintain that it is not in the Commission's interest that that evaluation should be made at such a late stage. Furthermore, the applicants contend that the possibility that third parties may have access to the documents may cause them irreparable harm, in particular since authorities other than the Commission may order those third parties to communicate documents to them in the context of 'discovery' procedures. Last, the status of the documents is of the greatest importance in the light of the investigations taking place in Canada, the United States and Japan.

155. The Commission, on the other hand, contends that there is no urgency in ordering the interim measures sought.

156. On that point, the Commission states, first, that it will not open the envelope containing the Set A documents until the President has adjudicated on the application in this case. As regards, next, both the Set A and the Set B documents, the Commission states that if the Court should hold in the main proceedings that the decision of 8 May 2003 is unlawful, the Commission would be obliged to remove from its file the documents affected by that illegality and would be prevented from using the information as evidence. The Commission none the less contends that it may base its future strategy on the documents removed from the file, since it is not required to suffer 'acute amnesia' (Case C-67/91 *Dirección General de Defensa de la Competencia* v *Asociación Española de Banca Privada and Others* [1992] ECR I-4785, paragraph 39, referring to *Dow Benelux* v *Commission*, cited at paragraph 68 above, paragraphs 18 and 19).

157. The Commission also states that it will not give third parties access to the documents in question before the Court has adjudicated on the main application, thus preventing any risk of disclosure in the hands of third parties.

158. Last, the risk that contentious proceedings will be initiated outside the Community is purely hypothetical and as such cannot be taken into account in examining the urgency of ordering interim measures (order of the President of the Court of Justice of 14 December 1999 in Case C-335/99 P (R) *HFB and Others* v *Commission* [1999] ECR I-8705, paragraph 67).

Findings of the President

159. It is settled case-law that the urgency of an application for interim measures must be assessed in relation to the necessity to give interim judgment in order to prevent serious and irreparable harm being occasioned to the party seeking the interim measure. It is for the latter to adduce evidence that it cannot await the outcome of the main proceedings without being required to sustain harm of that nature (see, in particular, orders of the President of the Court of First Instance of 30 April 1999 in Case T-44/98 R II [1999] ECR II-1427, paragraph 128, and of 7 April 2000 in Case T-326/99 R *Fern Olivieri* v *Commission* [2000] ECR II-1985, paragraph 136).

160. It is sufficient, however, particularly where the occurrence of the harm depends on the occurrence of a number of factors, that the harm is foreseeable with a sufficient degree of probability (see, in particular, order of the Court of Justice of 29 June 1993 in Case C-280/93 R *Germany* v *Council* [1993] ECR I-3667, paragraphs 22 and 34, and order in *HFB and Others* v *Commission*, cited at paragraph 158 above, paragraph 67).

161. It is appropriate, in the present case, to consider separately, first, whether the condition relating to urgency is satisfied in the case of the Set A documents and, second, whether it is satisfied in the case of the Set B documents.

- Set A documents

162. As the Commission has not yet had access to the Set A documents, which are in a sealed envelope, it is appropriate to determine whether it is necessary, in order to prevent serious and irreparable harm being caused, to order the Commission not to read those documents and, consequently, to suspend the operation of Article 2 of the decision of 8 May 2003.

163. In that regard, if the Commission were to read the Set A documents and if the Court of First Instance should subsequently consider, in its judgment in the main proceedings, that the Commission was wrong to refuse to regard those documents as covered by professional privilege, it would be impossible in practice for the Commission to draw all the inferences from that judgment of annulment, since its officials would already have become aware of the contents of the Set A

documents.

164. In that sense, the fact that the Commission was aware of the information in the Set A documents would as such constitute a substantial and irreversible breach of the applicants' right to respect for the confidentiality protecting those documents.

165. The Commission none the less states that, if the decision of 8 May 2003 were subsequently held to be unlawful, it would be required to remove from its file the documents affected by that unlawfulness and would therefore be unable to use them as evidence.

166. The President considers that the fact that the Commission would be unable to use the documents as evidence effectively prevents the aggravation of part of the harm which the applicants might sustain, namely the harm associated with the subsequent use as evidence of the documents in question.

167. On the other hand, the fact that the Commission would be unable to use the Set A documents as evidence would have no impact on the serious and irreparable harm which would result from their mere disclosure. The Commission's argument fails to take account of the particular nature of professional privilege. The purpose of professional privilege is not only to protect a person's private interest in not having his rights of defence irremediably affected but also to protect the requirement that every person must be able, without constraint, to consult a lawyer (see, to that effect, *AM & S* v *Commission*, cited at paragraph 66 above, paragraph 18). That requirement, which is formulated in the public interest of the proper administration of justice and respect for lawfulness, necessarily presupposes that a client has been free to consult his lawyer without fear that any confidences which he may impart may subsequently be disclosed to a third party. Consequently, the reduction of professional privilege to a mere guarantee that the information entrusted by a litigant will not be used against him dilutes the essence of that right, since it is the disclosure, albeit provisional, of such information that might be capable of causing irremediable harm to the confidence which that litigant placed, in confiding in his lawyer, in the fact that it would never be disclosed.

168. Consequently, the prohibition on the Commission's using the information in the Set A documents could at the most only prevent the aggravation of harm which would already be caused by the disclosure of those documents.

169. It must therefore be held that the condition relating to urgency is satisfied in the case of the Set A documents.

- Set B documents

170. As a preliminary point, it should be borne in mind that, unlike in the case of the Set A documents, the Commission has already read the three Set B documents, which were not placed in a sealed envelope. It is therefore no longer possible to ensure that the Commission does not read those documents. However, if the decision of 8 May 2003 is annulled in the main proceedings, the Commission will not be able to use that information as evidence.

171. The applicants none the less contend that interim measures must be adopted as a matter of urgency in order to avoid three types of irreversible harm.

172. The first of these types of harm relates, first of all, to the fact that the Commission must be prevented from taking irreversible procedural steps on the basis of the Set B documents and, in particular, from carrying out other investigative operations or adopting a statement of objections.

173. However, in the event that the Commission, as it claims in its observations, should be lawfully entitled to use the information concerned as mere indicia, the harm sustained by the applicants would be already occasioned and irreversible, since the Commission has already read the documents in question. It is not for the judge hearing an application for interim measures to adopt measures designed to make up for harm which is already irreversible (order in *Austria* v *Council*, cited at paragraph 36 above, paragraph 113).

174. Furthermore, if, on the other hand, the Commission should not be authorised to use the documents in question as indicia, it would be required, should the decision be annulled in the main action, to take the necessary measures to comply with the judgment of the Court of First Instance (see, in particular, judgment in Case T-548/93 *Ladbroke Racing* v *Commission* [1995] ECR II-2565,

paragraph 54) and, consequently, to cancel the measures previously adopted, which would be likely to prevent the occurrence of the harm on which the applicants rely. Consequently, in practice, harm could be established only if the Commission adopted measures based on the information in the Set B documents and the applicants were subsequently unable to demonstrate with sufficient certainty an actual link between the information and the measures adopted. The President considers that the applicants have not demonstrated that it was necessary and possible to order an interim measure to prevent a risk which, in the absence of proof to the contrary, remains hypothetical and, consequently, must not be taken into account under the head of urgency by the judge hearing the application for interim measures (order in *HFB and Others* v *Commission*, cited at paragraph 158 above, paragraph 67).

175. The applicants rely on a second type of harm relating, in essence, to the fact that, since the Set B documents have been placed in the Commission's file, third parties may demand access to them. There is, they allege, a risk that these third parties will themselves be obliged to communicate the documents in question to other third parties. The Commission must therefore return or destroy all the copies of the Set B documents in its possession.

176. It must be emphasised, however, that in its observations the Commission stated that it would not allow third parties to have access to the Set A and Set B documents until judgment is given in the main action. The judge hearing the application for interim measures, as he is entitled to do (see order of the president of the Court of Justice of 21 August 1981 in Case 232/81 R *Agricola Commerciale Olio and Others* v *Commission* [1981] ECR 2193), takes note, by the present order, of that declaration by the Commission. In those circumstances, the second type of harm relied on by the applicants must be rejected.

177. As regards, last, the third type of harm on which the applicants rely, it must be stated that they rely only on what they allege to be the great importance of the documents in question as regards investigations under way in Canada, the United States and Japan. In the light of the particularly vague nature of those arguments, it must be concluded that the applicants have not shown the need to prevent irreparable harm. At the hearing, the applicants did indeed state that the real importance of the Set B documents could not be evaluated at that stage. However, even on the assumption that that is actually so, the fact none the less remains that, as the Commission has noted, the applicants have once again relied solely on hypothetical risks.

178. In the light of the foregoing, the condition relating to urgency is not satisfied in the case of the Set B documents. Since it is satisfied in the case of the Set A documents, it is necessary to proceed, for those documents alone, to balance the interests involved.

The balance of interests

179. As regards the balance of interests, the Commission observes that the documents in question may be useful to it after the proceedings, notably in order to enable it to make requests for information. The delay in the investigation should the measures sought be ordered would affect the general interest of the Community and, more generally, of society as a whole in competition investigations being carried out as speedily and efficiently as possible. Speed is also important for the undertakings which are subject to the same investigation as the applicants and which, in the Commission's submission, may well be affected by the uncertainty resulting from suspension of the decision of 8 May 2003. Last, the procedure proposed by the applicants, namely the procedure according to which an investigation should be suspended in respect of a document as soon as an undertaking claims professional privilege, constitutes an unrealistic procedure which would give rise to much abuse. Only the option which allows the Commission to place a document in a sealed envelope where there is doubt as to whether it is protected by professional privilege would allow it to retain a minimum of control over the procedure.

180. Where, on an application for interim measures, the judge before whom the applicant claims that it will sustain serious and irreparable harm weighs up the various interests involved, he must consider whether the annulment of the contested decision by the court dealing with the main application would make it possible to reverse the situation that would have been brought about in the absence of interim measures and, conversely, whether suspension of the operation of that decision would be such as to prevent its being fully effective in the event of the main application being dismissed (see, to that effect, orders of the President of the Court of Justice of 26 June 2003 in Joined Cases C-182/03 R and C-217/03 R *Belgium and Forum 187* v *Commission* [2003] ECR I-6887, paragraph 142, and in *Commission* v *Atlantic Container Line and Others*, cited at paragraph 37 above, paragraph 50).

181. In the present case, it is appropriate to take into account, first, the applicants' interest in the Set A documents not being disclosed and, second, the general interest and the Commission's interest in the Treaty competition rules being observed.

182. First of all, it must be emphasised that an undertaking's interest in the documents which it claims to be protected by professional privilege not being disclosed must be evaluated by reference to the circumstances of each case and, in particular, to the nature and content of the documents concerned. In the present case, after examining the Set A documents, the President considers that their disclosure would be susceptible of causing serious and irreparable harm to the applicants, by virtue not only of their mere disclosure but also of their contents.

183. However, that interest must be balanced against the Commission's interest and, more generally, that of the general public in competition investigations being carried out with the utmost speed, having regard to the importance of the competition rules for the attainment of the objectives of the EC Treaty.

184. If the main application is dismissed, the Commission will be able to have access to the Set A documents. Consequently, in principle, on that date, even in the event that the investigation has been delayed, the Commission will none the less be in a position to use the Set A documents for the purpose of completing the investigation.

185. At the hearing, however, the Commission stated that the uncertainty in which it was placed, as regards the content of the documents in question, caused major problems in allocating its resources and defining its priorities and, consequently, obliged it to suspend its investigation.

186. According to settled case-law, however, the rights of the defence, to which professional privilege is a necessary corollary (*AM & S* v *Commission*, cited at paragraph 66 above, paragraph 23), constitutes a fundamental right (see, in particular, judgment of the Court of Justice in *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited at paragraph 99 above, paragraph 85, and judgment in *Enso Española* v *Commission*, cited at paragraph 99 above, paragraph 80). That fundamental nature has the consequence that, in the context of the present balance of interests, given that it is established that the applicants' professional privilege and their rights of defence would be likely to sustain serious and irreparable harm should the Commission read the Set A documents, considerations of administrative efficiency and of resource allocation, in spite of their importance, can in principle prevail over the rights of the defence only if the Commission pleads very special circumstances justifying such harm. Otherwise, it would be possible in almost every case for the Commission to justify a serious interference with the rights of the defence by purely internal administrative considerations, which would be contrary to the fundamental nature of the rights of the defence.

187. The President considers that the Commission has not demonstrated in the present case the existence of such circumstances, since it has referred to disadvantages that might follow for it, by nature, from any suspension of the operation of a decision refusing to regard certain documents as covered by professional privilege.

188. Furthermore, in the context of the main application, the Commission has the possibility to lodge with the Court of First Instance, at the same time as its defence, an application pursuant to Article 76a of the Rules of Procedure for the main application to be dealt with under an expedited procedure. Admittedly, the judge dealing with the application for interim measures cannot guarantee that such an application will be granted in this case. None the less, account must be taken of the fact that if that application is granted, it will have the consequence of allowing judgment to be given speedily and, consequently, of rendering the Commission's present position less uncertain. In the particular circumstances of the present case, the President considers that the existence of that possibility does not give the Commission a greater interest in the application for interim measures being dismissed.

189. Nor has the Commission adduced precise and specific evidence capable of proving and evaluating the disadvantages which, in its submission, may affect the undertakings subject to the same investigation as the applicants should the operation of Article 2 of the decision of 8 May 2003 be suspended.

190. In the light of the foregoing, the balance of the interests in issue tilts in favour of suspending the operation of the provisions of the decision of 8 May 2003 whereby the Commission decides to open the sealed envelope containing the Set A documents, namely Article 2 of that decision.

191. Last, since the Set A documents will in all probability constitute an essential factor in the Court's assessment of the main application and since it has been established in the present order that the Commission must not read those documents before judgment is given in the main proceedings, it is appropriate to order that the Set A documents be kept at the Court Registry until the date of that judgment.

On those grounds,

THE PRESIDENT OF THE COURT OF FIRST INSTANCE

hereby orders:

1. Cases T-125/03 R and T-253/03 R are joined for the purposes of this order.

2. The Council of the Bars and Law Societies of the European Union, the Algemene Raad van de Nederlandse Orde van Advocaten and the European Company Lawyers Association are granted leave to intervene in Cases T-125/03 R and T-253/03 R.

3. At the stage of the application for interim measures, the requests for confidential treatment submitted by the applicants in respect of certain matters in the procedural documents in Cases T-125/03 R and T-253/03 R and referred to as such in the letter of 16 September 2003 from the Registry to the applicants are granted.

4. The application for interim measures in Case T-125/03 R is dismissed.

5. The Commission's statement that it will not allow third parties to have access to the Set B documents pending judgment in the main proceedings in Case T-253/03 is noted.

6. In Case T-253/03 R, the operation of Article 2 of the Commission's decision of 8 May 2003 concerning a claim of legal privilege (Case COMP/E-1/38.589) is suspended pending the judgment of the Court in the main proceedings.

7. The sealed envelope containing the Set A documents will be kept by the Registry of the Court of First Instance pending the decision of the Court in the main action.

8. The remainder of the application for interim measures in Case T-253/03 R is dismissed.

9. The costs in Cases T-125/03 R and T-253/03 R are reserved.

Luxembourg, 30 October 2003.

Case T-474/04

Pergan Hilfsstoffe für industrielle Prozesse GmbH

v

Commission of the European Communities

(Competition – Agreements, decisions and concerted practices – Organic peroxides – Decision refusing a request for removal of certain passages from the definitive published version of a decision finding an infringement of Article 81 EC – Disclosure of information concerning the applicant by publishing a decision not addressed to it – Article 21 of Regulation No 17 – Professional secrecy – Article 287 EC – Presumption of innocence – Annulment)

Summary of the Judgment

1. *Actions for annulment – Interest in bringing proceedings – Undertaking which contests the hearing officer's decision rejecting its request for confidential treatment of information about it contained in the version of a Commission decision intended for publication, in which a finding of an infringement of Article 81 EC by other undertakings is made and a sanction imposed*

   (Arts 81 EC, 230, fourth para., EC and 233 EC)

2. *Competition – Administrative procedure – Establishing whether information is covered by professional secrecy – Criteria*

   (Arts 81 EC, 286 EC and 287 EC; European Parliament and Council Regulations Nos 1049/2001, Art. 4, and 45/2001; Council Regulation No 17, Art. 21(2); Commission Regulation No 2842/98, Art. 13 (1); Commission Decision 2001/462, Art. 9; Commission Notice 2005/C 325/07)

3. *Competition – Administrative procedure – Compliance with the obligation of professional secrecy – Undertaking's interest in information relating to its conduct not being disclosed*

   (Arts 81 EC and 82 EC; Council Regulations Nos 17, Art. 21(2), and 2988/74, Art. 1)

4. *Community law – Principles – Fundamental rights – Presumption of innocence*

   (Charter of Fundamental Rights of the European Union, Art. 48; Council Regulation No 17, Art. 21 (2))

5. *Competition – Administrative procedure – Compliance with the obligation of professional secrecy – Substantive scope*

   (Art. 287 EC; Council Regulation No 17, Art. 21(2))

1. A legal interest in bringing proceedings presupposes that annulment of the measure is of itself capable of having legal consequences, that the appeal must therefore be likely, if successful, to procure an advantage for the applicant, and is justified by a vested and present interest in the annulment of that measure.

   Such an interest exists where an undertaking seeks annulment of the hearing officer's decision, in the context of proceedings applying the Community competition rules, to refuse to grant the undertaking's request to have removed from the version of a decision intended for publication, in which a finding of an infringement of the competition rules is made and a sanction imposed, but which is not addressed to it, those paragraphs which, in the statement of reasons, describe its involvement in the infringement during a time covered by the limitation period.

Should the decision be annulled on the ground that it disregarded the undertaking's legitimate interest in the protection of its business interests, the Commission would, under Article 233 EC, have to give due effect to it for the publication of the decision in question.

The mere fact that the disputed information has already been published and that certain third parties may already have read it cannot make that interest disappear, since continued disclosure of that information continues to harm the interests and, in particular, the reputation of the applicant undertaking, and as such constitutes a vested and present interest.

(see paras 38-40)

2. Whilst neither Article 287 EC nor Regulation No 17 states explicitly what information, apart from business secrets, is covered by the obligation of professional secrecy, it is apparent from the open wording of Article 287 EC, from Article 13(1) of Regulation No 2842/98 on the hearing of parties in certain proceedings under Articles [81 EC] and [82 EC] and from the case–law, that the concept of 'information covered by the obligation of professional secrecy' also includes confidential information other than business secrets. It follows from this wider understanding of the concept of 'information covered by the obligation of professional secrecy' that Article 21 of Regulation No 17 and Article 9 of Decision 2001/462 on the terms of reference of hearing officers in certain competition proceedings, must be interpreted as meaning that they apply, in the same way as Article 13(1) of Regulation No 2842/98, both to business secrets and to other confidential information. In addition, the confidentiality of information, for which professional secrecy requires that it be protected under Article 287 EC, may also stem from other provisions of primary or secondary Community law, such as Article 4 of Regulation No 1049/2001 regarding public access to European Parliament, Council and Commission documents or from Article 286 EC and Regulation No 45/2001 on the protection of individuals with regard to the processing of personal data by the Community institutions and bodies and on the free movement of such data.

As regards, generally, the nature of business secrets or other information covered by the obligation of professional secrecy, it is necessary, first of all, that such business secrets or confidential information be known only to a limited number of persons. Next, it must be information whose disclosure is liable to cause serious harm to the person who has provided it or to third parties. Finally, the interests liable to be harmed by disclosure must be worthy of protection. The assessment as to the confidentiality of a piece of information requires, in this regard, the individual legitimate interests opposing disclosure of the information to be weighed against the public interest that the activities of the Community institutions take place as openly as possible.

It follows, first, that when the hearing officer takes a decision under the third paragraph of Article 9 of Decision 2001/462, he must not merely examine whether the version of a decision taken under Regulation No 17 and intended for publication contains business secrets or other confidential information enjoying similar protection. He must also check whether that version contains other information which cannot be disclosed to the public either on the basis of rules of Community law affording such information specific protection or because it is information of the kind covered by the obligation of professional secrecy. Secondly, in the context of its review of legality, the Court must ensure that the hearing officer observes the limits of his terms of reference, as just defined, and must therefore determine whether the hearing officer correctly applied the protection of professional secrecy in the particular case. However, the Court cannot complain that the hearing officer did not correct any procedural irregularities committed by the Commission when adopting the decision which is to be published, since the review of such procedural irregularities does not fall within his powers. Therefore, the Court cannot call in question either the procedural legality or the merits of the decision intended for publication, even if that decision were to contain serious errors.

(see paras 63-66)

3. The interest of an undertaking which the Commission has fined for breach of competition law in the non-disclosure to the public of details of the offending conduct of which it is accused does not merit any particular protection, given, first, the public interest in knowing as fully as possible the reasons for any Commission action, the interest of economic operators in knowing the sort of behaviour for which they are liable to be penalised and the interest of persons harmed by the infringement in being informed of the details thereof so that they may, where appropriate, assert their rights against the undertakings punished, and, second, the fined undertaking's ability to seek judicial review of such a decision. This appraisal applies *mutatis mutandis* to a decision in which an undertaking is found to have committed an infringement, but proceedings against it are barred by limitation, the Commission being implicitly authorised to take that decision on the basis of the rules laid down by Regulation No 17, provided that it shows a legitimate interest for doing so. This applies, however, in so far as the infringement found at least appears in the operative part of the

decision and the decision is addressed to the undertaking concerned so that it may contest that infringement in court.

(see paras 72-73)

4. The scope of the Commission's power to adopt and publish decisions on the basis of Regulation No 17 and the scope of the protection of professional secrecy must be interpreted in the light of general principles and fundamental rights, which are an integral part of the Community legal order, and, in particular, of the principle of presumption of innocence – as reaffirmed in Article 48 of the Charter of Fundamental Rights of the European Union – which applies to the procedures relating to infringements of the competition rules applicable to undertakings that may result in the imposition of fines or periodic penalty payments.

In addition, the presumption of innocence implies that every person accused is presumed to be innocent until his guilt has been established according to law. It thus precludes any formal finding and even any allusion to the liability of an accused person for a particular infringement in a final decision unless that person has enjoyed all the usual guarantees accorded for the exercise of the rights of defence in the normal course of proceedings resulting in a decision on the merits of the case. Furthermore, the guilt of a person accused of an infringement is established definitively only where the decision finding that infringement has acquired the force of *res judicata*, which implies either the absence of an appeal against that decision by the person concerned within the time-limits provided for in the fifth paragraph of Article 230 EC, or, after such an appeal, the definitive closure of the contentious proceedings, in particular, by a judicial decision confirming the lawfulness of that decision.

As a consequence, findings which the person charged with an infringement, even though he contests their merits, has not had the opportunity to contest before the Community judicature cannot be regarded as established in law. The fact that such findings evade any review by the courts, and therefore, in the event that they are unlawful, any correction by the Community judicature, is manifestly contrary to the principle of the presumption of innocence. Any other interpretation would upset the system of division of functions and the institutional balance between the administration and the courts, on the ground that, where findings are contested, it is for the courts alone to make a definitive ruling on the existence of sufficient evidence that an undertaking is liable for an infringement of the rules on competition.

(see paras 75-77)

5. Since the Commission's findings relating to an infringement committed by an undertaking are capable of infringing the principle of the presumption of innocence, which stems, inter alia, from the need to respect the reputation and dignity of the person concerned as that person has not been finally found guilty of an infringement, those findings must, in principle, be regarded as confidential as regards the public, and therefore as being of the kind covered by the obligation of professional secrecy.

(see para. 78)

Judgment of the Court of First Instance (Third Chamber)
First Instance (Third Chamber)First Instance (Third Chamber)2007. Pergan Hilfsstoffe für industrielle Prozesse GmbH v Commission of the European Communities. Competition - Agreements, decisions and concerted practices - Organic peroxides - Decision refusing a request for removal of certain passages from the definitive published version of a decision finding an infringement of Article 81 EC - Disclosure of information concerning the applicant by publishing a decision not addressed to it - Article 21 of Regulation No 17 - Professional secrecy - Article 287 EC - Presumption of innocence - Annulment. Case T-474/04.

In Case T474/04,

Pergan Hilfsstoffe für industrielle Prozesse GmbH, established in Bocholt (Germany), represented by M. Klusmann and F. Wiemer, lawyers,

applicant,

v

Commission of the European Communities, represented by A. Bouquet, acting as Agent, assisted by A. Böhlke, lawyer,

defendant,

APPLICATION for the annulment of Commission Decision (2004) D/204343 of 1 October 2004 in so far as it rejects the applicant's request for removal of all references to it in the definitive published version of Commission Decision 2005/349/EC of 10 December 2003 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E2/37.857 - Organic peroxides) (OJ 2005 L 110, p. 44),

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Third Chamber),

composed of M. Jaeger, President, J. Azizi and E. Cremona, Judges,

Registrar: K. Andova, Administrator,

having regard to the written procedure and further to the hearing on 8 June 2006,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Third Chamber)

hereby:

1. Annuls Commission Decision (2004) D/204343 of 1 October 2004;

2. Orders the Commission to pay the costs.

Legal context

1. According to Article 287 EC [t]he members of the institutions of the Community... and the officials and other servants of the Community shall be required... not to disclose information of the kind covered by the obligation of professional secrecy, in particular information about undertakings, their business relations or their cost components'.

2. Article 20(2) of Council Regulation No 17: First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 19591962, p. 87), applicable in this case and headed

Professional secrecy', provides that [w]ithout prejudice to the provisions of Articles 19 and 21, the Commission... [its] officials and other servants shall not disclose information acquired by them as a result of the application of this regulation and of the kind covered by the obligation of professional secrecy.'

3. Article 21 of Regulation No 17, headed Publication of decisions', states as follows:

1. The Commission shall publish the decisions which it takes pursuant to Articles 2, 3, 6, 7 and 8.

2. The publication shall state the names of the parties and the main content of the decision; it shall have regard to the legitimate interest of undertakings in the protection of their business secrets.'

4. Article 13(1) of Commission Regulation (EC) No 2842/98 of 22 December 1998 on the hearing of parties in certain proceedings under Articles [81 EC] and [82 EC] (OJ 1998 L 354, p. 18), applicable to the present case, provides:

Information, including documents, shall not be communicated or made accessible in so far as it contains business secrets of any party, including the parties to which the Commission has addressed objections, applicants and complainants and other third parties, or other confidential information... The Commission shall make appropriate arrangements for allowing access to the file, taking due account of the need to protect business secrets... and other confidential information.'

5. Article 9 of Commission Decision 2001/462/EC, ECSC of 23 May 2001 on the terms of reference of hearing officers in certain competition proceedings (OJ 2001 L 162, p. 21) provides:

Where it is intended to disclose information which may constitute a business secret of an undertaking, it shall be informed in writing of this intention and the reasons for it. A time-limit shall be fixed within which the undertaking concerned may submit any written comments.

Where the undertaking concerned objects to the disclosure of the information but it is found that the information is not protected and may therefore be disclosed, that finding shall be stated in a reasoned decision which shall be notified to the undertaking concerned. The decision shall specify the date after which the information will be disclosed. This date shall not be less than one week from the date of notification.

The first and second paragraphs shall apply mutatis mutandis to the disclosure of information by publication in the Official Journal of the European Communities.'

6. Under Article 1(1)(b) of Regulation (EEC) No 2988/74 of the Council of 26 November 1974 concerning limitation periods in proceedings and the enforcement of sanctions under the rules of the European Economic Community relating to transport and competition (OJ L 319, p. 1), the power of the Commission to impose fines or penalties for infringements of the rules of the European Economic Community relating to transport or competition is to be subject to a limitation period of five years in the case of infringements of provisions other than those concerning applications or notifications of undertakings or associations of undertakings, requests for information, or the carrying out of investigations.

Facts, procedure and forms of order sought

7. In 2002, the Commission began an investigation, under Regulation No 17, of European producers of organic peroxides, including the AKZO group, Atofina SA, Atochem's successor (Atochem/Atofina'), and Peroxid Chemie GmbH & Co. KG, a company controlled by Laporte plc, now Degussa UK Holdings Ltd, Peroxidos Organicos SA, FMC Foret SA, AC Treuhand AG and the applicant, in respect of participation in cartels falling under Article 81 EC, including one main cartel and a number

of regional cartels, on certain markets for organic peroxides.

8. On 27 March 2003, the Commission began formal proceedings and adopted a statement of objections, which was subsequently notified, inter alia, to the applicant. In its comments of 13 June 2003, the applicant contested, in essence, both the scope and the duration of its participation in the main cartel, stating that it only had sporadic contact with Peroxid Chemie and Atochem/Atofina between 1994 and 1996. It stated, however, that it had not had contact with the other undertakings in question. Thus, the investigation of any infringement by the applicant would, in any event, be time barred.

9. By letter of 10 December 2003, the Commission informed the applicant of its decision to close the proceedings against it.

10. In addition, by Decision 2005/349/EC of 10 December 2003 relating to a proceeding under Article 81 EC and Article 53 of the EEA Agreement (Case COMP/E2/37.857 - Organic peroxides) (OJ 2005 L 110, p. 44; the peroxides decision'), the Commission imposed fines on Atochem/Atofina, Peroxid Chemie, AC Treuhand, Peroxidos Organicos and Degussa UK for breach of Article 81 EC. The decision was addressed to the abovementioned companies but not to the applicant.

11. In the operative part, the peroxides decision does not refer to the applicant's participation in the infringement found. However, it is stated, inter alia, in recital 78 of the decision, in relation to the applicant:

After having given the undertakings concerned the opportunity to make known their views on the objections raised by the Commission, the Commission decided to close the proceedings against [the applicant] and [FMC Forest]. For [the applicant], the Commission considered it did not have enough evidence of [its] participation in the single and continuous infringement after 31 January 1997, the point in time when prescription applies...'

12. Subsequently, inter alia in recitals 156 to 177, the peroxides decision contains a detailed description of the applicant's participation in the main cartel between, in particular, the AKZO group, Atochem/Atofina and Peroxid Chemie which lasted for a period from 1971 to 1999. In essence, the Commission found that the applicant did not participate directly and formally in the main cartel, but that its involvement was limited to a period from 1993 to 1996, by way of meetings and other anticompetitive contacts with Atochem/Atofina and Peroxid Chemie, and the exchange of commercially sensitive data with them.

13. Finally, the peroxides decision states, in recital 319:

[The applicant] was an addressee of the statements of objections. [The applicant] is not an addressee of this Decision (see recital (78)), as there is no evidence that [the applicant]'s involvement lasted beyond 31 January 1997.'

14. By letter of 18 February 2004, notified on 19 February 2004, the Commission sent the applicant a copy of the peroxides decision and a summary of that decision. In the letter, the Commission informed the applicant that it intended to publish a nonconfidential version of both the peroxides decision and the summary, pursuant to Article 21 of Regulation No 17, and invited it to identify any passages which it considered to contain business secrets or other confidential information.

15. By letter of 4 March 2004, the applicant asked the Commission to remove from the version of the peroxides decision intended for publication all references to the applicant and its alleged offending conduct, in particular, those in recitals 15, 81, 106 (Table 4), and in recitals 120 to 123, 156 to 177, 184, 185, 188, 189, 202, and 270, on the ground that the applicant was not the addressee of the decision and that the proceedings which were initiated against it had been closed (recital 78 of the peroxides decision). It stated that certain passages in the peroxides decision,

relating to the applicant's involvement in the infringement established, in particular recitals 169 and 176, which had been disputed by the applicant in the course of the administrative procedure, were inaccurate. In any event, the business secrets in recital 45 (the applicant's market share), in recital 106 (Table 4), recitals 168 and 175 (name of Mr S.), and recitals 173 to 177 and 510 (detailed assessment of the applicant in the context of acquisition negotiations with a thirdparty) should be removed.

16. By letter of 6 April 2004, the Commission informed the applicant that it would omit every reference to it in the provisional version of the peroxides decision intended for publication, and attached the corresponding nonconfidential version. The Commission reserved its position, however, on the applicant's request for confidential treatment concerning the definitive version of the peroxides decision intended for publication.

17. By letter of 13 April 2004, the applicant requested that the reference to its name in recital 15 and Table 4 of the peroxides decision also be removed, and subject to those amendments, it accepted the provisional publication of this decision.

18. By letter of 22 June 2004, the Commission sent the applicant the provisional nonconfidential version of the peroxides decision, in the form intended to be published shortly afterwards on the Commission's Internet site, which did not contain any reference to the applicant.

19. By letter of 28 June 2004, the Commission informed the applicant of its intention to reject the request for confidential treatment concerning the reference to the applicant in the definitive version of the peroxides decision intended for publication. It stated that in that decision, the Commission had concluded that the applicant had committed an infringement of Article 81 EC, but was unable to impose a fine on it on account of the time bar. The Commission agreed, however, to remove from the nonconfidential definitive version of the peroxides decision, the name of the applicant's manager, Mr S., and the references to the detailed assessment of the applicant in the context of acquisition negotiations with a third party, and to replace the applicant's exact market share figures with bands of market share. Finally, the Commission informed the applicant that it could apply to the hearing officer under Article 9 of Decision 2001/462, in the event that it wished to maintain its request for confidential treatment.

20. By letter of 12 July 2004, the applicant asked the hearing officer to remove all references to the applicant from the definitive version of the peroxides decision intended for publication, in line with the provisional version published on the Commission's Internet site. In that letter, the applicant repeated the arguments it had advanced in its letter of 4 March 2004 and stated that the incorrect reference to its alleged participation in the infringement established, in recitals 15, 45, 61, 66, 71, 78, 81, 106 (Table 4), 108, 120 to 123, 156 to 177, 184, 185, 188, 189, 202, 270, 271, 319, 328, 366, 399, 423 and 510, and point 1.3.1 of the index, had to be removed. In support of its request, the applicant submitted that this information could provide third parties with evidence for the purpose of actions for damages against the applicant and could harm its reputation on the market. In addition, once it has closed the investigation procedure in respect of the applicant, the Commission no longer has the power to accuse it of infringing Article 81 EC or to adopt a decision to this end which adversely affects its interests. Furthermore, the fact that the peroxides decision is not addressed to the applicant wrongly deprives the applicant of the possibility of bringing a direct action against that decision. Finally, the Commission's approach is incompatible with the objective of the rules on limitation and the principles of legal certainty and the presumption of innocence.

21. By letter of 13 September 2004, the hearing officer adopted a first decision under the third paragraph of Article 9 of Decision 2001/462. In that decision, he refused to remove from the definitive version of the peroxides decision intended for publication the references made to the applicant

- save for the name of Mr S., information relating to the detailed assessment of the applicant and the reference to the applicant's market share, which were to be replaced by a band of market shares - on the ground that there were no business secrets, as the concept of a business secret presupposes that disclosure of the information in question will cause serious harm to the interests of the person concerned. First, as regards the risk of actions for damages under national law, the hearing officer concluded that the risk does not in itself cause serious and unjust harm to the applicant's interests such as to justify protection of the disputed information. In the event that they are wellfounded, actions for damages before national courts are in fact the acceptable consequence of committing an infringement of Community and national competition law. The hearing officer stated that the applicant was not the addressee of the peroxides decision and that this decision, in the absence of a finding that the applicant had infringed Article 81 EC, was therefore not legally binding on national courts. Secondly, the hearing officer observed that any harm to the applicant's reputation was the reasonable result of publishing the peroxides decision if the applicant had participated in the cartels established. Finally, the hearing officer stated that even if the findings in the peroxides decision were not established as a matter of fact, an issue which the hearing officer was not empowered to determine, this would not cause any serious and lasting harm to the applicant such as to render the disputed information a business secret.

22. In the same letter, the hearing officer also stated under a separate heading, entitled Respect for the rights of defence', that, for the purpose of safeguarding the applicant's rights of defence, the information relating to its alleged participation in a regional cartel in Spain, set out in recitals 176, 262 and 328 of the peroxides decision, had to be omitted, because, as that that information had not been referred to in the statement of objections, the applicant had not been given the opportunity to make submissions on it.

23. By letter of 27 September 2004, the applicant stated its intention to begin proceedings before the Court of First Instance against the decision rejecting its request for confidential treatment, as set out in the hearing officer's letter of 13 September 2004, and requested that publication of the definitive version of the peroxides decision containing references concerning the applicant be postponed until termination of those proceedings.

24. By letter of 1 October 2004, containing decision SGGreffe (2004) D/204343 (the contested decision'), the hearing officer repeated the reasons set out in his letter of 13 September 2004. The hearing officer also stated that the Commission would postpone publication of the peroxides decision, in the form described in the contested decision, until the applicant had been given the opportunity to apply to the Court for interim relief under Article 242 EC.

25. By letter of 15 October 2004, the applicant informed the hearing officer that it would not bring an application for interim relief, given the strict conditions laid down in the caselaw for such applications.

26. By letter of 18 October 2004, the hearing officer replied that, since the applicant had decided against bringing proceedings for interim relief, there was no longer anything to prevent the envisaged publication of the definitive version of the peroxides decision.

27. Subsequently, the Commission published, on the Internet site of its DirectorateGeneral (DG) for competition, the nonconfidential version of the peroxides decision, which contains references to the applicant and other information disputed by it.

28. By application lodged at the Registry of the Court of First Instance on 10 December 2004, the applicant brought the present action.

29. Upon hearing the report of the JudgeRapporteur, the Court (Third Chamber) decided to open the oral procedure. The parties presented oral argument and replied to the Court's questions at

the hearing on 8 June 2006.

30. The applicant claims that the Court should:

- annul the contested decision in so far as it rejects the applicant's request for removal of all references to the applicant in the definitive published version of the peroxides decision;

- order the Commission to pay the costs.

31. The Commission contends that the Court should:

- dismiss the application;

- order the applicant to pay the costs.

Law

A - Admissibility of the application for annulment

1. Arguments of the parties

32. The Commission contests the applicant's legal interest in bringing proceedings, and therefore, the admissibility of the present action.

33. It takes the view that, since the applicant decided not to apply to the Court of First Instance for interim relief and the peroxides decision has in the meantime been published with the disputed information, the applicant no longer has a legal interest in bringing proceedings against this decision. The applicant itself recognised its lack of legal interest in its letter of 27 September 2004, in stating that publication would render its application inoperative.

34. According to the Commission, the applicant does not in any way specify how the published information in question constitutes business secrets. In any event, annulment of the contested decision could not undo the fact that third parties had read the information and the probability that a similar situation would arise in the future is minimal. It is therefore doubtful that the annulment could give rise to legal effects (Joined Cases T480/93 and T483/93 Antillean Rice Mills and Others v Commission [1995] ECR II2305, paragraphs 59 and 60).

35. The Commission submits that the action is based on the false premise that the disputed information is of a binding nature. On the contrary, the findings relating to the infringements, such as those concerning the applicant - since they are only contained in the recitals of the peroxides decision and not formally expressed in the operative part - are not binding (Joined Cases 40/73 to 48/73, 50/73, 54/73 to 56/73, 111/73, 113/73 and 114/73 Suiker Unie and Others v Commission [1975] ECR 1663, paragraph 315; Case T38/92 AWS Benelux v Commission [1994] ECR II211, paragraph 34; Case T145/89 Baustahlgewebe v Commission [1995] ECR II987, paragraphs 35, 55 et seq.; and Case T156/94 Aristrain v Commission [1999] ECR II645, publication by extracts, paragraph 699). The Commission considers that the applicant's argument that it has an interest in bringing proceedings because any annulment of the contested decision could form the basis of an action for damages against the Commission if it were ordered to pay damages in national proceedings, is purely hypothetical; it observes that the applicant is not the addressee of a decision finding an infringement of Article 81 EC which is binding on national courts.

36. The applicant submits, in essence, that its action against the contested decision is admissible.

2. Findings of the Court

37. As a preliminary point, the Court notes that the present action is directed against the contested decision, which was adopted on the basis of the third paragraph of Article 9 of Decision 2001/462, whereby the Commission rejected in part the applicant's request for confidential treatment, on

the ground that it related to certain passages of the nonconfidential peroxides decision intended for publication. The aim of the present action is not therefore to challenge the lawfulness of the peroxides decision as such. Furthermore, it is common ground that the timelimit for any action against the peroxides decision, a copy of which was sent to the applicant on 19 February 2004, has expired and that, therefore, that decision has become final as regards the applicant to the extent that it is capable of producing definitive binding legal effects in regard to it.

38. Even though the applicant had the opportunity to bring an action in due time against the peroxides decision, but did not, it does not follow that it has no legal interest in bringing proceedings against the contested decision. Such an interest presupposes that annulment of the measure is of itself capable of having legal consequences (see Antillean Rice Mills and Others v Commission , paragraph 34 above, paragraph 59, and the case law cited; see also, to that effect, Case 53/85 AKZO Chemie v Commission [1986] ECR 1965, paragraph 21), that the appeal must therefore be likely, if successful, to procure an advantage for that party (see, by analogy, C50/00 P Union de Pequeños Agricultores v Council [2002] ECR I6677, paragraph 21), and is justified by a vested and present interest in the annulment of that measure (order in Case T28/02 First Data and Others v Commission [2005] ECR II4119, paragraph 42).

39. In that regard, it must be borne in mind, first, that the question of whether annulment of the contested decision is capable of procuring an advantage for the applicant, and therefore giving rise to an interest in bringing proceedings, depends on an examination of an issue of substance, that is, the scope of business secret' within the meaning of the first paragraph of Article 9 of Decision 2001/462, read in conjunction with Article 21(2) of Regulation No 17. Assuming that the applicant's request for confidential treatment concerns, at least in part, business secrets covered by the abovementioned provisions - a question to be decided when appraising the substance of the present action - the contested decision rejecting that request would be unlawful since it is based on an incorrect application of that concept. Accordingly, annulment of the contested decision would be capable of procuring an advantage for the applicant in that the Commission, would, under Article 233 EC, have to give due effect to it for the publication of the peroxides decision, and, under Article 21(2) of Regulation No 17, have to have regard to the applicant's legitimate interest in the protection of its business secrets.

40. Secondly, contrary to the Commission's view, the mere fact that the disputed information has already been published and that certain third parties may already have read it cannot deprive the applicant of an interest in bringing proceedings against the contested decision. On the contrary, continued disclosure of that information continues to harm the interests and, in particular, the reputation of the applicant, and as such constitutes a vested and present interest within the meaning of the caselaw cited in paragraph 38 above. Furthermore, any other interpretation, which would make admissibility of the action dependent on whether or not the Commission had disclosed the disputed information - and therefore on whether the Commission had created a fait accompli - would allow the Commission to avoid scrutiny by the courts by making such disclosure even if it was unlawful.

41. More generally, the assessment made in paragraph 39 and 40 above is confirmed by caselaw to the effect that annulment of a decision may, per se, have legal consequences, in particular by obliging the Commission to take the measures needed to comply with the Court's judgment in accordance with Article 233 EC and by preventing the Commission from repeating such a practice (see, to that effect, Case T46/92 Scottish Football v Commission [1994] ECR II1039, paragraph 14, and the caselaw cited). However, in the present case, the precise effect of the contested decision is to post continuously on the Internet site of DG Competition the nonconfidential version of the peroxides decision, from which the passages relating to the applicant have not been removed. Therefore, annulment, at least in part, of the contested decision would require the Commission, under Article 233 EC, to cease to make public certain disputed passages.

42. In the light of the foregoing, the Court must reject the Commission's plea of inadmissibility and there is no need to examine the other arguments advanced by the parties in this context.

B - Substance

1. Preliminary observation

43. In support of its action, the applicant puts forward three pleas in law alleging, first, infringement of Article 21 of Regulation No 17, second, that the Commission lacks the power under Articles 3 and 15 of Regulation No 17 to adopt and publish a decision finding an infringement attributable to the applicant, and third, infringement of its right to effective judicial protection.

3 . The plea alleging infringement of Article 21 of Regulation No 17

(a) Arguments of the parties

44. The applicant maintains that the mere fact that it is not the addressee of the peroxides decision prevents the Commission from publishing the findings which relate to it.

45. According to the applicant, the publication provided for in Article 21(2) of Regulation No 17 relates only to the parties. However, the concept of parties' in that provision is only directed at the addressees of a decision imposing a fine and not the undertakings involved that are not the addressees of such a decision. In fact, publication of such a decision containing findings adversely affecting undertakings that are not addressees penalises them, owing to the negative repercussions on their reputation resulting from such publication and the increased risk that they would be exposed, on the basis of evidence that is apparent from the decision, to actions for damages brought by third parties before national courts. According to the applicant, unlike the addressees of a decision, such undertakings are also not in a position to contest the substance of those findings in court in order to avoid the negative effects and risks referred to above, which constitutes an unacceptable limitation on their right to effective judicial protection.

46. At the hearing, the applicant submitted, in essence, referring to the argument used in its second plea and to the judgment in Case T198/03 Bank Austria Creditanstalt v Commission [2006] ECR II1429, that the Commission's power to publish a decision under Article 21(2) of Regulation No 17 was limited, first, by the protection of professional secrecy within the meaning of Article 287 EC, which also covers the disclosure of matters such as those falling within Article 4 of Regulation (EC) No 1049/2001 of the European Parliament and of the Council of 30 May 2001 regarding public access to European Parliament, Council and Commission documents (OJ 2001 L 145, p. 43), and secondly, by the principle of the presumption of innocence as provided for in Article 48 of the Charter of Fundamental Rights of the European Union proclaimed in Nice on 7 December 2000 (OJ 2000 C 364, p. 1) and in the light of which the scope of the Commission's power of publication should be assessed. The principle of the presumption of innocence prevents the Commission from disclosing incriminating evidence which the undertaking in question has not had the opportunity to contest in court.

47. Consequently, the publication of the peroxides decision containing findings relating to alleged offending conduct of the applicant is a breach of Article 21(2) of Regulation No 17.

48. According to the Commission, the fact that the peroxides decision was not sent to the applicant as an addressee has no effect on its power to publish a version of the decision which contains references to the applicant. This is all the more so since the applicant was party to the administrative procedure concerning it until the moment it was closed.

49. The Commission takes the view that the only limitation on its power of publication, as provided for in the second part of Article 21(2) of Regulation No 17, is its obligation to have regard to the legitimate interest of undertakings in the protection of their business secrets. On the

other hand, the first part refers only to the minimum requirements which published information must satisfy, that is, to state the names of the parties and the main content of the decision.

50. The caselaw confirms this interpretation in recognising that published information which exceeds these minimum requirements is acceptable. Therefore, publication of the full text of a decision imposing fines is lawful, even if the decisions taken under Article 15 of Regulation No 17 are not included in those mentioned in Article 21(1) of the regulation (Case 41/69 Chemiefarma v Commission [1970] ECR 661, paragraphs 101 to 103, and Case 54/69 Francolor v Commission [1972] ECR 851, paragraphs 30 and 31). Consequently, the Commission was correct to find in the contested decision, on the basis of that caselaw, that it can also publish decisions, or parts of decisions, in respect of which secondary legislation has not provided for any publication obligation, provided that this does not lead to the disclosure of business secrets.

51. The Commission also argues that, even if the term parties' in the first part of Article 21(2) of Regulation No 17 specifies only the addressees of the decision, it nevertheless follows from the use of the wider concept of undertaking' - as opposed to party' - used in the second half of that sentence that persons other than the parties can be mentioned in the published decision.

52. The Commission also considers that the nonbinding information relating to the applicant in the peroxides decision, which is not formally expressed in the operative part of the decision, is not, for the purposes of the caselaw (Case C344/98 Masterfoods and HB [2000] ECR I11369, paragraph 52), the subject of a Commission decision which the national courts must take into account in any action for damages (Joined Cases T125/97 and T127/97 Coca Cola v Commission [2000] ECR II1733, paragraph 86). In the present case, the Commission's findings in the preamble to the peroxides decision are thus capable of being the subject of an action for annulment only to the extent to which, as grounds of an act adversely affecting a person's interests, they constitute the necessary support for its operative part (Case T138/89 NVB v Commission [1992] ECR II2181, paragraph 31, Joined Cases T24/93 to T26/93 and T28/93 Compagnie maritime belge transports and Others v Commission [1996] II1201, paragraph 150, and Case T228/97 Irish Sugar v Commission [1999] ECR II2969, paragraph 178). On the other hand, the information relating to infringements in the preamble, but which do not constitute such support, do not adversely affect the interests of either the parties or third parties. It follows that the Commission correctly stated, in the contested decision, that the peroxides decision is not a decision which finds that the applicant has infringed Article 81 EC and binds national courts in that respect.

53. In fact, the peroxides decision does not contain any binding finding concerning the applicant capable of prejudging the independent appraisal by a national court, but only a description of the applicant's conduct as an aid to understanding the origin and context of the infringement committed by the addressees of the decision. It is therefore not conceivable that the applicant would be exposed to any actions for damages before national courts without being able to defend itself. In particular, contrary to the applicant's claim, the published peroxides decision cannot be used as conclusive evidence against it, or to facilitate, in any significant way, the production of evidence by third parties in such a dispute.

54. In addition, the Commission takes the view that Article 30 of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1) - which has replaced Article 21 of Regulation No 17 and extended the publication requirements so that decisions imposing fines and periodic penalty payments are explicitly covered - confirms its approach and certainly does not contradict its past practice on publication. Publication serves, first, to ensure the transparency of administration, and secondly, as regards, in particular, decisions imposing fines, as a deterrent, in accordance with the objective of general deterrence recognised by the Court in Chemiefarma v Commission

, paragraph 50 above. According to the Commission, the applicant's alleged penalty constituted by the publication of the disputed information is capable neither of calling in question the objective of general deterrence nor of modifying the scope of the rules on limitation by extending their sphere so as to limit the Commission's power of publication. In that regard, the Commission submits that, with regard to the limitation periods for the imposition of penalties, Article 25 of Regulation No 1/2003 now expressly refers to the powers conferred on the Commission by Articles 23 and 24', and therefore, does not refer to publication of decisions under Article 30 of the regulation.

55. Finally, at the hearing, the Commission relied on the approach taken in Bank Austria Creditanstalt v Commission , paragraph 46 above (paragraph 89). According to that case, the inclusion, in a decision imposing fines, of findings of fact in respect of a cartel cannot be conditional on the Commission having the power to find an infringement relating thereto or on its actually having found such an infringement and it is legitimate for the Commission, in a decision finding an infringement and imposing a penalty, to describe the factual and historical context of the conduct in issue. The Commission also argued that, according to that judgment, the same is true for the publication of that description, given that publication may be of use in allowing interested persons to understand fully the reasoning behind such a decision and it is for the Commission to judge whether the inclusion of such matters is appropriate.

56. Cons equently, the plea alleging infringement of Article 21(2) of Regulation No 17 should be rejected.

(b) Findings of the Court

Preliminary observation

57. In its first plea, the applicant, in essence, contests the scope of the Commission's power under Article 21(2) of Regulation No 17 to publish a decision adopted on the basis of Regulation No 17 which was not addressed to it and in which the Commission found, in the grounds and not in the operative part, that the applicant had committed an infringement. In support of its plea, the applicant essentially argues, first, that it is not a party' within the meaning of the first part of Article 21(2) of Regulation No 17 in respect of which publication may be made in this way, and secondly, that publication of the peroxides decision adversely affects it since it discloses information covered by professional secrecy within the meaning of Article 287 EC.

58. The Court considers that it is appropriate to begin with an examination, in the light of Article 287 EC, of the merits of the second part of the first plea, relating to the scope of the Commission's power of publication.

The scope of the Commission's power of publication under Article 21 of Regulation No 17

59. First of all, it is appropriate to recall the content of Article 21 of Regulation No 17, which governs the scope of the Commission's power of publication.

60. Article 21(1) of Regulation No 17 lists the types of decisions which the Commission is authorised to publish, a list to which, according to caselaw, decisions imposing fines under Article 15 of the regulation must be added (see, to that effect, Chemiefarma v Commission , paragraph 50 above, paragraphs 101 to 104, and Francolor v Commission , paragraph 50 above, paragraphs 30 and 31). Article 21(2) of the regulation provides, in the first part of the sentence, that [t]he publication shall state the names of the parties and the main content of the decision', and in the second part, that the Commission must have regard to the legitimate interest of undertakings in the protection of their business secrets'.

61. More generally, the Court would point out that, even if publication of a measure is not explicitly prescribed by the Treaties or by another act of general application, it is apparent from the scheme

laid down by the Treaties, in particular Article 1 EU, Articles 254 EC and 255 EC, and the principle of openness and the requirement of transparency in acts of the Community institutions that are enshrined in those provisions, that, in the absence of provisions explicitly ordering or prohibiting publication, the rule is that the institutions have a power to publish acts which they adopt. However, there are exceptions to that rule in so far as Community law, in particular through provisions ensuring compliance with the obligation of professional secrecy, prevents disclosure of such acts or of certain information contained in them. Thus, the aim of Article 21(2) of Regulation No 17 is not to limit the Commission's freedom to publish, of its own volition, a version of its decision that is fuller than the minimum necessary and also to include information whose publication is not required, in so far as the disclosure of that information is not inconsistent with the protection of professional secrecy (Bank Austria Creditanstalt v Commission , paragraph 46 above, paragraphs 69 and 79).

62. In addition, the Court would point out that the second part of Article 21(2) of Regulation No 17, like Article 20 of the Regulation, is only the expression in secondary Community legislation of the protection of professional secrecy laid down in Article 287 EC and that the procedure provided for in Article 9 of Decision 2001/462 aims merely to implement the procedural requirements which the Court prescribed to that end in AKZO Chemie v Commission , paragraph 38 above (in particular paragraphs 29 and 30; see also, to that effect, Bank Austria Creditanstalt v Commission , paragraph 46 above, paragraph 28). Thus this procedure applies where the Commission, in the course of competition proceedings, intends to disclose information capable of undermining the protection of professional secrecy within the meaning of Article 287 EC (first and second paragraphs), and is applicable whatever form that disclosure may take, including publication of a decision in the Official Journal of the European Communities (third paragraph) or on the Internet.

63. The Court would point out, next, that neither Article 287 EC nor Regulation No 17 state explicitly what information, apart from business secrets, is covered by the obligation of professional secrecy. It is apparent, however, from the open wording of Article 287 EC (which prohibits disclosure of information of the kind covered by the obligation of professional secrecy, in particular information about undertakings, their business relations or their cost components'), from Article 13(1) of Regulation No 2842/98 and from the caselaw, that the concept of information covered by the obligation of professional secrecy' also includes confidential information other than business secrets (Case 145/83 Adams v Commission [1985] ECR 3539, paragraph 34, and Case T353/94 Postbank v Commission [1996] ECR II921, paragraph 86).

64. It follows from this wider understanding of the concept of information covered by the obligation of professional secrecy' that Article 21 of Regulation No 17 and Article 9 of Decision 2001/462 must be interpreted as meaning that they apply, in the same way as Article 13(1) of Regulation No 2842/98, both to business secrets and to other confidential information. In addition, the confidentiality of information, for which professional secrecy requires that it be protected under Article 287 EC, may also stem from other provisions of primary or secondary Community law, such as Article 4 of Regulation No 1049/2001 (cited in paragraph 46 above) or from Article 286 EC and Regulation (EC) No 45/2001 of the European Parliament and of the Council of 18 December 2000 on the protection of individuals with regard to the processing of personal data by the Community institutions and bodies and on the free movement of such data (OJ 2001 L 8, p. 1) (see also, to that effect, Bank Austria Creditanstalt v Commission , paragraph 46 above, paragraphs 34 and 35).

65. As regards, generally, the nature of business secrets or other information covered by the obligation of professional secrecy, it is necessary, first of all, that such business secrets or confidential information be known only to a limited number of persons. Next, it must be information whose disclosure is liable to cause serious harm to the person who has provided it or to third parties (Postbank v Commission , paragraph 63 above, paragraph 87, and see also Commission Notice 2005/C 325/07

on the rules for access to the Commission file in cases pursuant to Articles 81 [EC] and 82 [EC] (OJ 2005 C 325, p. 7), paragraphs 3.2.1 and 3.2.2). Finally, the interests liable to be harmed by disclosure must be worthy of protection. The assessment as to the confidentiality of a piece of information requires, in this regard, the individual legitimate interests opposing disclosure of the information to be weighed against the public interest that the activities of the Community institutions take place as openly as possible (Bank Austria Creditanstalt v Commission , paragraph 46 above, paragraph 71).

66. It follows, first, that when the hearing officer takes a decision under the third paragraph of Article 9 of Decision 2001/462, he must not merely examine whether the version of a decision taken under Regulation No 17 and intended for publication contains business secrets or other confidential information enjoying similar protection. He must also check whether that version contains other information which cannot be disclosed to the public either on the basis of rules of Community law affording such information specific protection or because it is information of the kind covered by the obligation of professional secrecy (Bank Austria Creditanstalt v Commission , paragraph 46 above, paragraph 34). Secondly, in the context of this review of legality, the Court must ensure that the hearing officer observes the limits of his terms of reference, as just defined, and must therefore determine whether the hearing officer correctly applied the protection of professional secrecy in the particular case. However, the Court cannot complain that the hearing officer did not correct any procedural irregularities committed by the Commission when adopting the decision which is to be published, since the review of such procedural irregularities does not fall within his powers. Therefore, the Court cannot call in question either the procedural legality or the merits of the decision intended for publication, even if that decision were to contain serious errors.

67. It is in the light of the principles set out in paragraphs 59 to 66 above that the Court must ascertain whether and to what extent the information disputed by the applicant is protected by the obligation of professional secrecy under Article 287 EC.

The protection of the disputed information through the obligation of professional secrecy

- General observation

68. In the light of the foregoing, the Court must examine whether the disputed information constitutes information covered by the obligation of professional secrecy under Article 287 EC, as that concept is interpreted in paragraphs 63 and 65 above, and, in particular, ascertain whether publication of that information is likely to cause serious harm to the applicant.

- The aspects of the protection of professional secrecy taken into account by the hearing officer

69. The Court would point out, first of all, that, after the applicant had disputed the publication of certain passages relating to it in the peroxides decision and had made its request for confidential treatment of those passages, the hearing officer, in the contested decision, merely ascertained whether the information contested by the applicant constituted business secrets, disclosure of which would be likely to harm its legitimate interests.

70. It must be borne in mind that, even if the hearing officer thereby formally restricted the subjectmatter of his examination, in the course of his assessment he nevertheless adopted a position on whether disclosure of the disputed information would be harmful, and therefore, whether it was confidential. Thus the hearing officer examined, first, whether publication of the disputed information was capable of providing to third parties evidence enabling them to bring actions for damages against the applicant before national courts and, secondly, whether such publication might cause serious harm to the applicant's reputation on the market.

71. It is apparent from the foregoing, as from paragraph 21 above, that, in essence, in reply to

the applicant's request for confidential treatment, the hearing officer also examined whether the disputed information constituted confidential information other than business secrets. In that regard, the hearing officer concluded that the applicant's interest in the removal of the disputed information from the definitive version of the peroxides decision intended for publication was not sufficient.

- The substance of the contested decision in relation to observance of the obligation of professional secrecy

72. The Court would point out that the interest of an undertaking which the Commission has fined for breach of competition law in the non-disclosure to the public of details of the offending conduct of which it is accused does not merit any particular protection, given, first, the public interest in knowing as fully as possible the reasons for any Commission action, the interest of economic operators in knowing the sort of behaviour for which they are liable to be penalised and the interest of persons harmed by the infringement in being informed of the details thereof so that they may, where appropriate, assert their rights against the undertakings punished, and, second, the fined undertaking's ability to seek judicial review of such a decision (Bank Austria Creditanstalt v Commission , paragraph 46 above, paragraph 78). The Court considers that this appraisal applies mutatis mutandis to a decision in which an undertaking is found to have committed an infringement, but proceedings against it are barred by limitation pursuant to Article 1 of Regulation No 2988/74, the Commission being implicitly authorised to take that decision on the basis of the rules laid down by Regulation No 17, provided that it shows a legitimate interest for doing so (Joined Cases T22/02 and T23/02 Sumitomo Chemical and Sumika Fine Chemical v Commission [2005] ECR II4065, paragraphs 60 to 63).

73. However, the application of the caselaw cited in paragraph 72 above presupposes that the infringement found at least appears in the operative part of the decision and that the decision is addressed to the undertaking concerned so that it may contest that infringement in court. As the Commission itself argues, regardless of the grounds on which such a decision is based, only the operative part thereof is capable of producing legal effects and, as a consequence, of adversely affecting an undertaking's interests. By contrast, the assessments made in the grounds of a decision are not in themselves capable of forming the subject of an application for annulment. They can be subject to judicial review by the Community judicature only to the extent that, as grounds of a measure adversely affecting a person's interests, they constitute the essential basis for the operative part of that measure (order in Case C164/02 Netherlands v Commission [2004] ECR I1177, paragraph 21; Case T213/00 CMA CGM and Others v Commission [2003] ECR II913, paragraph 186), and if, in particular, those grounds are likely to alter the substance of what was decided in the operative part of the measure in question (see, to that effect, Case T251/00 Lagardère and Canal+ v Commission [2002] ECR II4825, paragraphs 67 and 68).

74. In the present case, it follows from the foregoing that, regardless of whether or not the Commission was justified in finding, in the grounds of the peroxides decision, an infringement attributable to the applicant, in the absence of such a finding in the operative part, the applicant did not have standing to bring an action against that decision. Accordingly, an action brought by the applicant against the peroxides decision seeking review by the Court of First Instance of the substance of the disputed information would, in any event, have been inadmissible, even if brought within the timelimit provided for in the fifth paragraph of Article 230 EC (see, to that effect, Compagnie maritime belge transports and Others v Commission , paragraph 52 supra, paragraph 150).

75. In addition, as the applicant admits, the scope of the Commission's power to adopt and publish decisions on the basis of Regulation No 17 and the scope of the protection of professional secrecy must be interpreted in the light of general principles and fundamental rights, which are an integral

part of the Community legal order, and, in particular, of the principle of presumption of innocence - as reaffirmed in Article 48 of the Charter of Fundamental Rights of the European Union proclaimed in Nice on 7 December 2000 (OJ 2000 C 364, p. 1) - which applies to the procedures relating to infringements of the competition rules applicable to undertakings that may result in the imposition of fines or periodic penalty payments (Case C199/92 P Hüls v Commission [1999] ECR I4287, paragraph 150; Joined Cases T67/00, T68/00, T71/00 and T78/00 JFE Engineering and Others v Commission [2004] ECR II2501, paragraph 178; Sumitomo Chemical and Sumika Fine Chemicals v Commission , paragraph 72 above, paragraphs 104 and 105).

76. The Court also observes that the presumption of innocence implies that every person accused is presumed to be innocent until his guilt has been established according to law. It thus precludes any formal finding and even any allusion to the liability of an accused person for a particular infringement in a final decision unless that person has enjoyed all the usual guarantees accorded for the exercise of the rights of defence in the normal course of proceedings resulting in a decision on the merits of the case (Sumitomo Chemical and Sumika Fine Chemicals v Commission , paragraph 72 above, paragraph 106). Furthermore, the guilt of a person accused of an infringement is established definitively only where the decision finding that infringement has acquired the force of res judicata , which implies either the absence of an appeal against that decision by the person concerned within the timelimits provided for in the fifth paragraph of Article 230 EC, or, after such an appeal, the definitive closure of the contentious proceedings, in particular, by a judicial decision confirming the lawfulness of that decision.

77. As a consequence, findings which the person charged with an infringement, even though he contests their merits, has not had the opportunity to contest before the Community judicature cannot be regarded as established in law. The fact that such findings evade any review by the courts, and therefore, in the event that they are unlawful, any correction by the Community judicature, is manifestly contrary to the principle of the presumption of innocence. Any other interpretation would upset the system of division of functions and the institutional balance between the administration and the courts, on the ground that, where findings are contested, it is for the courts alone to make a definitive ruling on the existence of sufficient evidence that an undertaking is liable for an infringement of the rules on competition.

78. The Court considers, further, that, since the Commission's findings relating to an infringement committed by an undertaking are capable of infringing the principle of the presumption of innocence, those findings must, in principle, be regarded as confidential as regards the public, and therefore as being of the kind covered by the obligation of professional secrecy. This principle stems, inter alia, from the need to respect the reputation and dignity of the person concerned as that person has not been finally found guilty of an infringement (see, by analogy, Case T15/02 BASF v Commission [2006] ECR II497, paragraph 604). The confidentiality of such information is confirmed by Article 4(1)(b) of Regulation No 1049/2001, which provides that information, whose disclosure would harm the protection of privacy and the integrity of the individual, is to be protected. Finally, the confidentiality of that information cannot depend on whether, and to what extent, it is of probative value for the purpose of proceedings at national level.

79. In that regard, the defendant cannot rely on paragraph 89 of the ruling in Bank Austria Creditanstalt v Commission , paragraph 46 above, given that the Court's appraisal in that part of the ruling does not concern a similar situation to that in the present case, in which the applicant has no possibility of contesting the merits of the assertions relating to it in the peroxides decision (Bank Austria Creditanstalt v Commission , paragraph 46 above, last line of paragraph 78). It is clear from the caselaw cited in paragraphs 72 and 73 above that the Commission cannot adopt a decision finding an infringement after expiry of the limitation period, where such a finding is not justified by the existence of a legitimate interest and where the undertaking concerned has

no possibility of seeking review of that finding by the Community judicature (see also, to that effect, CocaCola v Commission , para graph 52 above, paragraph 86).

80. In the present case, as the Court has pointed out in paragraph 74 above, the applicant did not have standing to bring an action against the peroxides decision, given, in particular, that its participation in the infringement was not referred to in the operative part even though it contested the merits of the grounds of that decision in which its participation in the infringement was mentioned. Such a situation is contrary to the principle of the presumption of innocence and infringes the protection of professional secrecy, as interpreted in paragraphs 75 to 78 above, which require that respect for the reputation and dignity of the applicant be ensured. The disputed information must therefore be held to be covered by the obligation of professional secrecy within the meaning of Article 287 EC. In that regard, the Court would point out, finally, that the Commission itself accepted, during the hearing, that it could have published the peroxides decision by limiting itself to finding that the applicant had participated in the administrative procedure and to closing the investigation in its regard by reason of the limitation period. It must be held that, in those circumstances, there is therefore no public interest in publishing the disputed information that is capable of prevailing over the applicant's legitimate interest in having such information protected.

81. It follows from the foregoing that the hearing officer, in finding that the disputed information was not worthy of protection and that its publication would not cause serious and unjust harm to the applicant's interests, misapplied the protection of professional secrecy in the present case. As a consequence, the contested decision must be annulled in so far as it rejects the applicant's request for confidential treatment, and it is not necessary to rule on the applicant's other pleas in law and complaints.

Costs

82. Under Article 87(2) of the Rules of Procedure of the Court of First Instance, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the Commission has been unsuccessful, it must be ordered to pay the costs in accordance with the form of order sought by the applicant.

Case T-411/07 R

Aer Lingus Group plc

v

Commission of the European Communities

(Interim measures – Control of concentrations – Decision declaring a concentration to be incompatible with the common market – Article 8(4) and (5) of Regulation (EC) No 139/2004 – Application for suspension of operation and for interim relief – Measure incompatible with the distribution of powers between institutions – Powers of the Commission – Interim measures addressed to an intervener – Application for suspension of operation – Admissibility – No prima facie case – Lack of urgency – Absence of serious and irreparable damage – Damage dependent on future, uncertain events – Insufficient reasons – Weighing of all the interests involved)

Summary of the Order

1. *Applications for interim measures – Suspension of operation of a measure – Interim measures – Conditions for granting – Provisional nature of the measure*

   (Arts 242 EC and 243 EC; Rules of Procedure of the Court of First Instance, Art. 104(2))

2. *Applications for interim measures – Suspension of operation of a measure – Conditions for granting – Interest of the applicant in obtaining the suspension sought*

   (Art. 242 EC; Rules of Procedure of the Court of First Instance, Art. 104(2))

3. *Applications for interim measures – Interim measures – Measures incompatible with the distribution of powers between institutions*

   (Arts 233 EC and 243 EC; Council Regulation No 139/2004, Art. 8(4) and (5))

4. *Applications for interim measure – Conditions governing admissibility – Application – Formal requirements*

   (Art. 243 EC; Rules of Procedure of the Court of First Instance, Art. 104(2))

5. *Applications for interim measures – Jurisdiction of the judge hearing the application for interim relief – Imposition of orders addressed to third parties – Limits*

   (Art. 243 EC)

6. *Competition – Concentrations – Powers of the Commission – Adoption of measures against the parties to an unlawful concentration – Conditions – Implementation of the concentration*

   (Arts 81 EC and 82 EC; Council Regulations No 1/2003, Art. 7(1), and No 139/2004, Arts 3, 7 and 8 (4) and (5))

7. *Applications for interim measures – Suspension of operation of a measure – Interim measures – Conditions for granting – Urgency – Serious and irreparable damage*

   (Arts 242 EC and 243 EC; Rules of Procedure of the Court of First Instance, Art. 104(2))

1. According to Article 107(4) of the Rules of Procedure of the Court of First Instance, an order prescribing interim measures may have only an interim effect and is without prejudice to the decision on the substance of the case by the Court of First Instance. It follows that, in principle, the duration of the effects of such an order cannot extend beyond that of the main proceedings.

(see para. 45)

2. An application for suspension of operation of a negative administrative decision cannot be envisaged, since the grant of such suspension could not have the effect of changing the applicant's position. As it cannot be of any interest to the applicant, such an application must be rejected, except to the extent to which suspension might be necessary for the purposes of adopting other interim measures requested by the applicant, should the judge dealing with the application for interim measures consider them to be admissible and well founded.

(see paras 46-48)

3. In principle, the judge dealing with an application for interim measures cannot adopt an interim measure which, were it to be ordered, would constitute an interference with the exercise of the powers of another institution which would be incompatible with the distribution of powers between the various Community institutions as intended by the authors of the Treaty.

   Such is the case, with the consequent need for it to be rejected as being inadmissible, with an application for interim measures seeking to require the Commission to apply in a particular manner Article 8(4) and (5) of Regulation No 139/2004 on the control of concentrations between undertakings by adopting certain measures against the other party to a prohibited concentration. Were it to be decided in the judgment in the main application that the Commission has a power to order the measures set out in Article 8(4) and (5) of Regulation No 139/2004, it would be for the Commission, should it consider it necessary in the context of the powers of control accorded to it in the field of concentrations, to take the necessary measures to comply with the judgment, in accordance with Article 233 EC. Accordingly, should the judge dealing with the application for interim measures grant this request, this would amount to an injunction addressed to the Commission to draw precise inferences from the annulment decision, and consequently to ordering a measure which would exceed the Court's powers in the main action. Under the system for the division of powers established under the Treaty and by Regulation No 139/2004, however, it is for the Commission, if it considers it necessary in the context of the powers of control accorded to it in the field of concentrations, and in particular by Article 8(4) and (5) of Regulation No 139/2004, to adopt the restorative measures which it deems appropriate.

(see paras 49-51)

4. An application for interim measures pursuant to Article 243 EC cannot be vague and imprecise. However, in cases in which the content of the measures sought by the applicant is sufficiently clear from the rest of the application, the judge hearing the application may conclude that the request is not vague and imprecise in nature and may thus consider it admissible.

(see paras 52 and 53)

5. With regard to applications for interim measures, Article 243 EC states clearly that 'the Court of Justice may in any cases before it prescribe any necessary interim measures'. Such broad wording is obviously intended to grant sufficient powers to the judge hearing an application to prescribe any measure which he deems necessary to guarantee the full effectiveness of the definitive future decision, in order to ensure that there is no lacuna in the legal protection provided by the Court of Justice.

   In order to ensure the full effectiveness of Article 243 EC, therefore, it cannot be ruled out that the judge hearing the application may impose orders directly on third parties, if necessary, as the wide powers of the judge hearing such an application are limited only, in so far as an impact on the rights and interests of third parties is concerned, in cases where such rights and interests may be seriously affected. Such broad discretion should, in this respect, be exercised with due regard to the procedural rights, and in particular the right to be heard, of the addressees of the interim measures and of parties directly affected by those measures. When deciding whether to grant the interim measures applied for in this type of case, the judge hearing the application will also have due regard to both the strength of the *prima facie* case and the imminence of serious and irreparable harm in the specific case. Even where a third party has not had an opportunity to be heard in the context of proceedings for interim measures, it cannot be excluded that interim measures might be imposed on that party, in exceptional circumstances and bearing in mind the temporary nature of such measures, if it appears that, without such measures, the applicant would be exposed to a situation liable to endanger its very existence. The judge hearing the application carries out such assessments when balancing the various interests at stake.

(see paras 56, 59)

6. The Commission does not err in applying the provisions of Article 8(4) and(5) of Regulation No 139/2004 on the control of concentrations between undertakings, which authorise it to take measures against the parties to a prohibited concentration which has already been carried out where, after having declared incompatible with the common market a projected concentration providing for the acquisition of the entire capital of an undertaking, it considers that it lacks the power to prevent the acquiring undertaking from exercising voting rights arising from a minority shareholding which it has finally acquired in so far as it is not in a position to exercise *de jure* or *de facto* control over the undertaking concerned by means of that shareholding.

While it is true that the term ‘implemented’ in the English version may, in principle, leave room for confusion as to the precise scope of those provisions in view of the fact that the definition of the term ‘implementation’ may encompass both ‘the fact of having accomplished some aim’ and ‘the carrying into effect’, the manner in which that expression is rendered in the French, German and Italian versions, the comparison of the French version with other Community texts in which the term ‘implementation’ is clearly meant to indicate ‘carrying into effect’ rather than ‘the act of accomplishing some aim’, and the fact that the Commission may, under Article 8(4) of Regulation No 139/2004, require the undertakings concerned to ‘dissolve the concentration’, indicate, however, that, *prima facie*, the definition of ‘implementation’ envisaged by those provisions involves the full implementation of the concentration, as defined in Article 3 of Regulation No 139/2004, and thus the acquisition of control.

That conclusion cannot be brought into question by any alleged practice on the Commission’s part by which the latter treats partial implementation, even as regards steps falling short of transfer of control, as being precluded by Article 7(1) of Regulation No 139/2004, under which a concentration with a Community dimension may not be implemented until it has been declared compatible with the common market, and indicates to parties that they should refrain from taking such steps. First, as the interpretation of Community law is a prerogative of the Court of Justice and not of the Commission, the Commission’s practice, albeit influential and important in determining whether any legitimate expectations may be justified, is not conclusive in that regard. Second, even if Article 7 (1) of Regulation No 139/2004 were to be interpreted as prohibiting only a change of control pending the Commission’s review, and not steps falling short of change of control, such as the exercise of voting rights arising from minority shareholdings, taking into account the time-limit within which the Commission must review a notified concentration and the combinations of factors which might confer control in any given case, it would remain legitimate for the Commission to request the parties not to take any action which might lead to a change of control.

Finally, this interpretation of Article 8(4) and (5) of Regulation No 139/2004, in conjunction with the prohibition under Article 21(3) thereof of Member States applying their national competition legislation to any concentration having a Community dimension, does not *prima facie* give rise to a lacuna which is incompatible with the aim of Regulation No 139/2004. In so far as the remaining minority shareholding is no longer linked to an acquisition of control, ceases to be part of a ‘concentration’ and lies outside the scope of Regulation No 139/2004, Article 21 thereof does not *prima facie* in principle, under those circumstances, prevent the application by national competition authorities and national courts of their national legislation on competition. Furthermore, whilst a minority shareholding of the type in question cannot, *prima facie*, be regulated under Regulation No 139/2004, it might be envisaged that the Treaty provisions on competition, and in particular Articles 81 EC and 82 EC, may be applied by the Commission to the conduct of the undertakings involved.

(see paras 89-92, 94, 98, 100-101, 103)

7. The urgency of an application for interim relief must be assessed in the light of the need for an interlocutory order in order to avoid serious and irreparable damage to the party seeking the relief. It is for that party to prove that it cannot await the outcome of the main proceedings without suffering damage of that kind.

Where damage depends on the occurrence of a number of factors, it is enough for that damage to be foreseeable with a sufficient degree of probability. However, the party seeking the interim relief is still required to prove the facts which are deemed to show the probability of serious and irreparable damage. In order to be able to determine whether the damage feared is serious and irreparable and therefore provides grounds for ordering interim measures, the judge hearing the application must have hard evidence allowing him to determine the precise consequences which the absence of the measures applied for would in all probability entail for each of the parties concerned.

The claim by the party seeking interim relief that the judge hearing the application should apply the ‘precautionary principle’ and is entitled to apply ‘protective measures’ without having to await proof of the reality of the risk alleged cannot therefore be entertained.

(see paras 116-119)

Order of the President of the Court of First Instance
First InstanceFirst Instance2008. Aer Lingus Group plc v Commission of the European Communities. Interim measures - Control of concentrations - Prohibition of a notified operation - Article 8(4) and (5) of Regulation (EC) No 139/2004 - Application for an order requiring the Commission to take measures against the other party to the prohibited concentration - Measure incompatible with the distribution of powers between institutions - Powers of the Commission - Order addressed to an intervener - Application for suspension of operation - Admissibility - Prima facie case - Urgency - Serious and irreparable damage - Occurrence of damage dependent on future, uncertain events - Insufficient reasons - Weighing of all the interests involved. Case T-411/07 R.

In Case T-411/07 R,

Aer Lingus Group plc, established in Dublin (Ireland), represented by A. Burnside, Solicitor, and B. van de Walle de Ghelcke and T. Snels, lawyers,

applicant,

v

Commission of the European Communities, represented by X. Lewis, E. Gippini Fournier and S. Noe, acting as Agents,

defendant,

supported by

Ryanair Holdings plc, established in Dublin (Ireland), represented by J. Swift, QC, V. Power, A. McCarthy and D. W. Hull, Solicitors, and G. M. Berrisch, lawyer,

intervener,

APPLICATION for, first, an order requiring the Commission to adopt certain measures concerning Ryanair Holdings plc's shareholding in the applicant, second, alternatively, any order to similar effect against the Commission or Ryanair Holdings plc, and, third, suspension of the operation of the Commission Decision of 11 October 2007 C(2007)4600 final rejecting the applicant's request that proceedings be opened under Article 8(4) of Council Regulation (EC) No 139/2004 of 20 January 2004 on the control of concentrations between undertakings (OJ 2004 L 24, p. 1) and that interim measures be adopted under Article 8(5) of that regulation,

THE PRESIDENT OF THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES,

makes the following

Order

On those grounds,

THE PRESIDENT OF THE COURT OF FIRST INSTANCE

hereby orders:

1) The application for interim measures is dismissed.

2) Costs are reserved.

Luxembourg, 18 March 2008.

Legal context

1. Under Article 3 of Council Regulation (EC) No 139/2004 of 20 January 2004 on the control

of concentrations between undertakings (OJ 2004 L 24, p. 1) :

1. A concentration shall be deemed to arise where a change of control on a lasting basis results from:

(a) the merger of two or more previously independent undertakings or parts of undertakings, or

(b) the acquisition, by one or more persons already controlling at least one undertaking, or by one or more undertakings, whether by purchase of securities or assets, by contract or by any other means, of direct or indirect control of the whole or parts of one or more other undertakings.

2. Control shall be constituted by rights, contracts or any other means which, either separately or in combination and having regard to the considerations of fact or law involved, confer the possibility of exercising decisive influence on an undertaking, in particular by:

(a) ownership or the right to use all or part of the assets of an undertaking;

(b) rights or contracts which confer decisive influence on the composition, voting or decisions of the organs of an undertaking.

3. Control is acquired by persons or undertakings which:

(a) are holders of the rights or entitled to rights under the contracts concerned; or

(b) while not being holders of such rights or entitled to rights under such contracts, have the power to exercise the rights deriving therefrom.

...'

2. Article 8 of Regulation No 139/2004 provides:

...

4. Where the Commission finds that a concentration:

(a) has already been implemented and that concentration has been declared incompatible with the common market, or

(b) has been implemented in contravention of a condition attached to a decision taken under paragraph 2, which has found that, in the absence of the condition, the concentration would fulfil the criterion laid down in Article 2(3) or, in the cases referred to in Article 2(4), would not fulfil the criteria laid down in Article 81(3) of the Treaty,

the Commission may:

- require the undertakings concerned to dissolve the concentration, in particular through the dissolution of the merger or the disposal of all the shares or assets acquired, so as to restore the situation prevailing prior to the implementation of the concentration; in circumstances where restoration of the situation prevailing before the implementation of the concentration is not possible through dissolution of the concentration, the Commission may take any other measure appropriate to achieve such restoration as far as possible,

- order any other appropriate measure to ensure that the undertakings concerned dissolve the concentration or take other restorative measures as required in its decision.

In cases falling within point (a) of the first subparagraph, the measures referred to in that subparagraph may be imposed either in a decision pursuant to paragraph 3 or by separate decision.

5. The Commission may take interim measures appropriate to restore or maintain conditions of effective competition where a concentration:

(a) has been implemented in contravention of Article 7, and a decision as to the compatibility of the concentration with the common market has not yet been taken;

(b) has been implemented in contravention of a condition attached to a decision under Article 6(1)(b) or paragraph 2 of this Article;

(c) has already been implemented and is declared incompatible with the common market.'

Facts

3. The applicant, Aer Lingus Group plc (hereinafter the applicant' or Aer Lingus'), is a public limited company and the non-trading holding company of Aer Lingus Limited, a low-cost, low-fares international airline based in Ireland, providing scheduled air transportation services to and from Dublin, Cork and Shannon airports. Following its privatisation in 2006 by the Irish Government, which retained a shareholding of 25.35 %, Aer Lingus shares were admitted to trading on 2 October 2006.

4. On 23 October 2006, Ryanair Holdings plc (hereinafter Ryanair'), which had previously acquired, between 27 September and 5 October 2006, through its wholly-owned subsidiary Coinside Limited, a 19.21% stake in Aer Lingus, launched a public bid for the entire share capital of Aer Lingus.

5. On 30 October 2006, Ryanair lodged with the Commission a notification of a proposed concentration pursuant to Article 4 of Regulation No 139/2004 relating to its projected acquisition of Aer Lingus.

6. During the bid period, Ryanair acquired further shares in Aer Lingus and, by 28 November 2006, held 25.17 % of the share capital in Aer Lingus.

7. On 20 December 2006 the Commission adopted a decision under Article 6(1)(c) of Regulation No 139/2004 (hereinafter the Regulation') initiating phase II proceedings. In this decision the Commission considered that the separate acquisitions of shares referred to above and the public bid launched by Ryanair constituted a single concentration for the purposes of Article 3 of the Regulation.

8. On 27 June 2007, the Commission adopted Decision C(2007) 3104 declaring the notified concentration to be incompatible with the common market (hereinafter the Prohibition Decision'), pursuant to Article 8(3) of the Regulation. The Commission concluded that the notified concentration would significantly impede effective competition in the common market or a substantial part thereof within the meaning of Article 2(3) of the Regulation, in particular as a result of the creation of a dominant position of Ryanair and Aer Lingus on 35 routes from and to Dublin, Shannon and Cork, and the creation or strengthening of a dominant position on 15 other routes from and to Dublin and Cork.

9. By application lodged with the Registry of the Court of First Instance on 10 September 2007, registered under number T-342/07, Ryanair brought an action for annulment of the Prohibition Decision.

10. Following the Prohibition Decision, Ryanair acquired a further 4.3 % of the share capital of Aer Lingus, bringing its total shareholding to 29.4 %.

11. During the proceedings before the Commission prior to the Prohibition Decision, Aer Lingus submitted that the Commission should take a decision under Article 8(4) of the Regulation requiring Ryanair to divest itself of its minority stake in Aer Lingus should the Commission prohibit the concentration.

12. On 27 June 2007, the Deputy Director General of the Directorate-General for Competition addressed a letter to the applicant indicating that, in the opinion of the services in charge of Merger Control, the Commission did not have the power under Article 8(4) of the Regulation to order Ryanair to divest itself of its minority shareholding, insofar as there was no indication that, with 25.22 % of Aer Lingus shares, Ryanair would be in a position to exercise de jure or

de facto control over Aer Lingus within the terms of Article 3(2) of the Regulation. For the same reasons, the letter stated that the Commission would lack the power to adopt interim measures under Article 8(5) of the Regulation.

13. On 17 August 2007, Aer Lingus addressed to the Commission a request that it open proceedings against Ryanair under Article 8(4) of the Regulation and that it adopt interim measures under Article 8(5) thereof to prevent Ryanair from exercising its voting rights in Aer Lingus, or, alternatively, to state formally that the Commission does not have the power to adopt such measures. In addition, Aer Lingus requested that the Commission explicitly take a position on the interpretation of Article 21 of the Regulation.

14. On 11 October 2007, the Commission adopted Decision C(2007) 4600 final rejecting Aer Lingus' request (hereinafter the Contested Decision').

The Contested Decision

15. In the Contested Decision, the Commission took the view that, pursuant to Article 3 of the Regulation, a concentration arises only where an undertaking acquires control, control being defined as the possibility of exercising decisive influence. As to Article 8(4) of the Regulation, the Commission recalled that this provision allows it, where a concentration has already been implemented, to require the undertakings concerned to dissolve the concentration, in particular through the disposal of all the shares or assets acquired, so as to restore the situation prevailing prior to the implementation of the concentration.

16. However, the Commission found that the concentration assessed in the present case had not been implemented, insofar as Ryanair had not acquired control of Aer Lingus. The transactions that were carried out during the Commission's proceedings could therefore not be considered to constitute implementation of the notified concentration.

17. In particular, the Commission underlined that the minority stake held by Ryanair did not grant it, de jure or de facto , control of Aer Lingus within the meaning of Article 3(2) of the Regulation. The Commission added that, even though minority shareholdings may in certain circumstances lead to a finding of control, there were no indications that such circumstances were present in this case. In fact, according to the information available to the Commission, Ryanair's rights as a minority shareholder (in particular the right to block so-called special resolutions' under Irish company law) are associated exclusively with rights related to the protection of minority shareholders and do not confer control upon Aer Lingus. Furthermore, the Commission pointed out that Aer Lingus itself did not claim that the minority stake acquired would lead to control by Ryanair over Aer Lingus.

18. Finally, the Commission stated that the present case differed from the situation in past cases where Article 8(4) had been applied, such as in the Commission Decision of 30 January 2002 setting out measures to restore conditions of effective competition pursuant to Article 8(4) of Council Regulation (EEC) No 4064/89 (Case COMP/M.2416 - Tetra Laval/Sidel , OJ 2004 L 38, p. 1, hereinafter the Tetra Laval/Sidel Case') and in the Commission Decision of 30 January 2002 requiring undertakings to be separated pursuant to Article 8(4) of Council Regulation (EEC) No 4064/89 (Case COMP/M.2283 - Schneider/Legrand , OJ 2004 L 101, p. 134, hereinafter the Schneider/Legrand Case'). In fact, in those cases, by contrast to the present situation, an acquisition had already been successfully completed and the acquirer had acquired control of the target.

19. As concerns Aer Lingus' request that the Commission adopt interim measures pursuant to Article 8(5) of the Regulation, the Commission noted that the wording of this provision referred similarly to a situation where a concentration has already been implemented and is declared incompatible with the common market' and concluded therefore that it did not have the power to take interim measures

in that case.

20. In relation to Aer Lingus' request that the Commission adopt a position on the interpretation of Article 21 of the Regulation, the Commission noted that such a request amounted, in effect, to a request for a legally binding interpretation of a provision of Community law to be addressed to Member States, and that the Commission manifestly lacks the power to adopt such acts.

Procedure

21. By application lodged at the Court Registry on 19 November 2007, registered under number T-411/07, the applicant brought an action for annulment of the Contested Decision on the basis of the fourth paragraph of Article 230 EC.

22. By separate document lodged at the Registry on the same day, registered under number T-411/07 R, the applicant applied for the adoption of interim measures and for the suspension of the operation of the Contested Decision on the basis of Articles 242 EC and 243 EC, and of Article 104 of the Rules of Procedure of the Court of First Instance.

23. On 12 December 2007 the Commission submitted its written observations on this application for interim measures.

24. By a document lodged at the Registry on 27 November 2007, Ryanair applied for leave to intervene in support of the form of order sought by the Commission.

25. By a document lodged at the Registry on 4 December 2007, Aer Lingus raised no objections to Ryanair's application for leave to intervene and stated that it made no confidentiality claims in relation to any of the documents which it had lodged with the Court in Case T-411/07 R.

26. By a document lodged at the Registry on 5 December 2007, the Commission raised no objections to Ryanair's application for leave to intervene.

27. By order of the President of the Court of First Instance of 7 December 2007, Ryanair was granted leave to intervene in support of the form of order sought by the Commission and to submit a statement in intervention, which it did on 19 December 2007.

28. A hearing was held on 24 January 2008.

Forms of order sought

29. The applicant claims that the President of the Court of First Instance should:

- order the Commission to require Ryanair, until judgment in the main application or in Case T-342/07, whichever is the later:

- not to exercise the voting rights or any other rights attached or deriving from the shareholding held by Ryanair in Aer Lingus (including, without limitation, attendance or voting at meetings, or the requisition of general meetings) except in accordance with a derogation granted by the Commission;

- to vest the shares in question in a Trustee and not to dispose of any of them except to a buyer, and in accordance with a procedure, approved by the Commission;

- not to increase further its shareholding in Aer Lingus;

- alternatively, adopt any order to similar effect against the Commission and/or Ryanair as the President may think fit;

- suspend the Commission's decision of 11 October 2007 C(2007)4600 final rejecting the applicant's request that proceedings be opened under Article 8(4) of the Regulation, in so far as necessary;

- order the Commission to pay the costs.

30. The Commission contends that the President of the Court should:

- dismiss the application for suspension;

- dismiss the application for interim measures;

- order the applicant to pay the costs.

31. Ryanair contends that the President of the Court should:

- dismiss the application;

- order the applicant to pay the costs associated with the intervention.

Law

32. Under Articles 242 EC and 243 EC, in conjunction with Article 225(1) EC, the Court of First Instance may, if it considers that circumstances so require, order that application of the act contested before it be suspended or prescribe any necessary interim measures.

33. Article 104(2) of the Rules of Procedure of the Court of First Instance provides that an application for interim measures must state the subject-matter of the proceedings, the circumstances giving rise to urgency, and the pleas of fact and law establishing a prima facie case for the interim measures applied for. Thus, the judge hearing the application may order suspension of operation of an act and/or interim measures if it is established that such an order is justified, prima facie , in fact and in law and that it is urgent in so far as, in order to avoid serious and irreparable harm to the applicant's interests, it must be made and produce its effects before a decision is reached in the main action. Those conditions are cumulative, with the result that an application for interim measures must be dismissed if any one of them is not satisfied (order in Case C268/96 P(R) SCK and FNK v Commission [1996] ECR I-4971, paragraph 30). Where appropriate, the judge hearing the application must also weigh up the interests involved (see the order in Case C445/00 R Austria v Council [2001] ECR I1461, paragraph 73 and the case cited).

34. In addition, in the context of that overall examination, the judge hearing the application has a wide discretion and is free to determine, having regard to the specific circumstances of the case, the manner and order in which those various conditions are to be examined, there being no rule of Community law imposing a pre-established scheme of analysis within which the need to order interim measures must be analysed and assessed (order in Case C-149/95 P(R) Commission v Atlantic Container Line and Others [1995] ECR I2165, paragraph 23, and order of 3 April 2007 in Case C-459/06 P(R) Vischim v Commission , not published in the ECR, paragraph 25).

Admissibility

Arguments of the parties

35. The Commission submits that the application for interim measures should be dismissed on the ground that none of the relief sought is of the type that can be granted in the framework of interim proceedings.

36. First, the Commission argues that the interim measures requested go beyond the scope of what the applicant could obtain in the main proceedings, which cannot result in the automatic divestiture of Ryanair's minority shareholding. Should Aer Lingus prevail in the main proceedings, it would be for the Commission to take the necessary measures to comply with the Court's judgment, in accordance with Article 233 EC.

37. In addition, the Commission points out that the applicant requests the adoption of measures having effect until the judgment in the main application or in Case T342/07, whichever is the later. According to the Commission, extending the duration of the measures sought beyond the end of the

main proceedings would be to deny the provisional nature of the interim measures procedure. It also argues that the present application for interim measures cannot relate to different and separate proceedings to which the applicant is not a party.

38. Second, so far as concerns the request for suspension of the Contested Decision, the Commission submits that, according to consistent case-law, an application for suspension of operation cannot, in principle, be envisaged against a negative administrative decision.

39. Third, so far as concerns the request that the President of the Court enjoin the Commission to order Ryanair to abstain from exercising its minority voting rights or to take certain positive steps, the Commission points out that, by this means, the applicant is seeking to escape the application of the case-law according to which the judge hearing the application for interim measures cannot issue directions to individuals who are not parties to the dispute.

40. In the Commission's opinion, the fact that Ryanair has been granted leave to intervene does not confer upon it the status of a party.

41. Fourth, so far as concerns the request that the President of the Court adopt any order to similar effect against the Commission and/or Ryanair as the President may think fit, the Commission considers that such a claim is vague and imprecise and does not, therefore, meet the criteria laid down in the Rules of Procedure. Consequently, it should be rejected as inadmissible.

42. In its statement in intervention, Ryanair supports the Commission's submissions and considers that the application should be dismissed as inadmissible. It stresses, in particular, that the order sought goes beyond what could be obtained in the main proceedings and is inviting the judge hearing the application to disregard the constitutional balance between the Community institutions and to assume the role of the Commission. In addition, Ryanair submits that the interim measures are, in substance, requested not against the Commission, but against Ryanair itself, which is not a party to the proceedings. As such, Ryanair, as well as other affected parties, would be deprived of the procedural guarantees which they enjoy under the Regulation and under general principles of Community law, and would in particular be deprived of their rights of defence.

Findings of the President

43. Without contending clearly that the present application should be rejected as being inadmissible in its entirety, the Commission states that none of the forms of order which the applicant seeks can be granted in the context of proceedings for interim measures.

44. Each of these forms of order must be examined separately.

45. First, as regards the duration of the measures requested, it must be pointed out that, according to Article 107(4) of the Rules of Procedure, an order of the type requested by the applicant may have only an interim effect, and is to be without prejudice to the decision on the substance of the case by the Court of First Instance. It follows that, in principle, the duration of such an order cannot extend beyond that of the main proceedings to which it relates. Accordingly, in so far as the applicant's request for measures until the judgment in the main application or in Case T-342/07, whichever is the later' involves the application of interim measures beyond the date of the judgment in the main application, such request must be rejected. Should any interim measures be granted in the present proceedings, such measures may apply only until the judgment in the main application.

46. Second, as regards the request for suspension of operation of the Contested Decision, it should be noted that an application for suspension of operation cannot, in principle, be envisaged against a negative administrative decision, since the grant of suspension could not have the effect of changing the applicant's position (order of the President of the Second Chamber of the Court of Justice

in Case C-206/89 R S. v Commission [1989] ECR 2841, paragraph 14, orders of the President of the Court of Justice in Case C-89/97 P(R) Moccia Irme v Commission [1997] ECR I-2327, paragraph 45, and in Joined Cases C-486/01 P(R) and C488/01 P(R) Front national and Martinez v Parliament [2002] ECR I-1843, paragraph 73).

47. By the Contested Decision, the Commission has rejected the applicant's request that it open proceedings under Article 8(4) of the Regulation and adopt interim measures under Article 8(5) of that regulation to prevent Ryanair from exercising its voting rights in Aer Lingus, or to formally state that the Commission does not enjoy the power to do so. The suspension of operation of this negative administrative decision would not, in itself, have any effect on the conditions governing the exercise of Ryanair's minority shareholding in Aer Lingus and thus would not have any consequence of use to the applicant.

48. Since an order suspending the Contested Decision would be of no interest to the applicant, this request must be rejected, except to the extent to which suspension of the Contested Decision might be necessary for the purposes of adopting any other of the requests for interim measures applied for by Aer Lingus, should the President consider them to be admissible and well founded.

49. Third, as regards the applicant's request for an order that the Commission require Ryanair not to exercise any rights attached to or deriving from the shareholding held by Ryanair in Aer Lingus, to vest the shares in question in a Trustee and not to dispose of any of them except to a buyer, and not to increase further its shareholding in Aer Lingus, it should be noted that, in principle, the adoption of interim measures which would constitute an interference with the exercise of the Commission's powers, incompatible with the distribution of powers between the various Community institutions, as intended by the authors of the EC Treaty, cannot be entertained (see, to that effect, the orders of the President of the Court in Case T-213/97 R Eurocoton and Others v Council [1997] ECR II-1609, paragraph 40, and in Case T-107/01 R Sacilor Lormines v Commission [2002] ECR II-3193, paragraphs 52 and 53).

50. In the present case, if it were to be decided in the judgment in the main application that, as contended by the applicant, the Commission has a power to order the measures set out in Article 8(4) and (5) of the Regulation, it would be for the Commission, should it consider it necessary in the context of the powers of control accorded to it in the field of concentrations, to adopt the restorative measures it deems appropriate, and to take the necessary measures to comply with the Court's judgment, in accordance with Article 233 EC. Accordingly, should the judge hearing the application for interim measures grant this request, it would amount to an injunction to draw precise inferences from the annulment decision, and such an order would exceed the Court's powers in the main action (order of the President of the Court in Case T-369/03 R Arizona Chemical v Commission [2004] ECR II-205, paragraph 67).

51. Under the system for the division of powers established under the EC Treaty and by the Regulation, however, it is for the Commission, if it considers it necessary in the context of the powers of control accorded to it in the field of concentrations, and in particular by Article 8(4) and (5) of the Regulation, to adopt the restorative measures which it deems appropriate. It follows that, to the extent to which the applicant's first request seeks to obtain an order from the President requiring the Commission to apply Article 8(4) and (5) of the Regulation in a particular manner, such a request must be rejected as inadmissible.

52. In relation to the applicant's request that the President of the Court make any such order or orders to similar effect against the Commission and/or Ryanair as the President may think fit, the Commission submits that this type of request is too vague, and, accordingly, inadmissible. The Commission bases this argument on established case-law of the Court to the effect that requests for interim measures pursuant to Article 243 EC cannot be vague and imprecise (see, to that effect,

the orders of the President of the Court in Case T-228/95 R Lehrfreund v Council and Commission [1996] ECR II-111, paragraph 58, and in Case T-78/04 R Sumitomo Chemical v Commission [2004] ECR II-2049, upheld on this point on appeal in Case C-381/04 P, not published in the ECR).

53. However, in cases where the content of the measures sought by the applicant is sufficiently clear from the rest of the application, the judge hearing the application may conclude that the request is not vague and imprecise in nature and thus consider it admissible. In the present case, it is clear from the first request that the applicant is seeking to obtain interim measures to ensure, inter alia , that Ryanair's rights as shareholder are not exercised pending a final decision on the case. As the Commission points out at paragraph 25 of its observations, what the applicant really wants is to prevent Ryanair from exercising its minority voting rights'. The scope of the measures requested for these purposes is made clear in the applicant's first request. Accordingly, the request for any such order or orders to similar effect against the Commission and/or Ryanair as the President may think fit' is, in this case, sufficiently clear to meet the conditions laid down in the Rules of Procedure.

54. To the extent to which such a request, in practice, seeks to obtain an order from the President of the Court that the Commission exercise its discretion under Article 8(4) and (5) in a particular manner, however, based on the foregoing, this request is inadmissible.

55. To the extent to which, on the other hand, the request seeks to obtain an order from the President addressed to the intervener, the Commission states that the judge hearing the application for interim measures cannot issue directions to individuals who are not parties to the dispute, that Ryanair should not be considered a party to the dispute, and that, accordingly, no interim measures can be addressed to it. In addition, even if Ryanair were to be considered a party to the proceedings, by virtue of its status as intervener', the Commission states, relying on settled case-law of the Court, that where the interim measures applied for may seriously affect the rights and interests of third parties, which in this case includes other Aer Lingus' shareholders, which, not being parties to the proceedings, have not been able to make their views known, such measures can be justified only if it appears that, without them, the applicant would be exposed to a situation liable to endanger their very existence (order of the President of the Court in Case T12/93 R Comité Central d'Entreprise de la SA Vittel and Comité d'Etablissement de Pierval v Commission [1993] ECR II-785, paragraph 20).

56. It should be pointed out that Article 243 EC states clearly that The Court of Justice may in any cases before it prescribe any necessary interim measures'. Such broad wording is obviously intended to grant sufficient powers to the judge hearing an application for interim measures to prescribe any measure which he deems necessary to guarantee the full effectiveness of the definitive future decision, in order to ensure that there is no lacuna in the legal protection provided by the Community Courts (see order of the President of the Court of Justice in Case C-180/01 P(R) Commission v NALOO [2001] ECR I-5737, paragraph 52 and the case-law cited). In order to ensure the full effectiveness of Article 243 EC, therefore, it cannot be excluded that the judge hearing the application may impose orders directly on third parties, if necessary. Such broad discretion should, in this respect, be exer cised with due regard to the procedural rights, and in particular the right to be heard, of the addressees of interim measures and of parties directly affected by the interim measures. Of course, when deciding whether to grant the interim measures applied for in this type of cases, the judge hearing the application will, in addition, have due regard to both the strength of the prima facie case and the imminence of serious and irreparable harm in the specific case at stake. Even where a third party has not had an opportunity to be heard in the context of proceedings for interim measures, it cannot be excluded that interim measures might be imposed on it, in exceptional circumstances and bearing in mind the temporary nature of interim measures, if it appears that, without such measures, the applicant would be exposed to a situation liable to

endanger its very existence.

57. Ryanair has been admitted to intervene in the present proceedings by order of the President of 7 December 2007, and it submitted its observations on 19 December 2007. In addition, Ryanair, like all of the other parties to the present proceedings, has had the opportunity to put forward its views at length in the course of the oral hearing. Ryanair's views are, therefore, taken into account in the present proceedings.

58. It follows that the request for any such order or orders to similar effect against Ryanair as the President may think fit is admissible.

59. Such a conclusion cannot be reversed by the Commission's argument that interim measures having the effect of suspending Ryanair's rights attaching to its shareholding in Aer Lingus would have an impact on third parties, and in particular on the other shareholders of Aer Lingus, and that because such other parties have not been heard in the present proceedings, no order having an impact on them can be granted. In this respect, it should be pointed out that, based on the foregoing, the wide powers of the judge hearing an application for interim measures are limited only, in so far as an impact on the rights and interests of third parties is concerned, in cases where such rights and interests may be seriously affected (order of the President of the Court in Case T-12/93 R Comité Central d'Entreprise de la SA Vittel and Comité d'Etablissement de Pierval v Commission, cited in paragraph 54 above, paragraph 20). In addition, even where the rights and interests of third parties may be seriously affected by the interim measures requested, such interim measures may nonetheless be granted if it appears that, without them, the applicants would be exposed to a situation liable to endanger their very existence' (order of the President of the Court in Case T-12/93 R Comité Central d'Entreprise de la SA Vittel and Comité d'Etablissement de Pierval v Commission, cited in paragraph 54 above, paragraph 20, and case-law cited therein). The judge hearing an application for interim measures carries out such assessments when balancing the different interests at stake. Accordingly, it cannot be excluded that, if all the applicable conditions are satisfied, interim measures may be granted in the present proceedings, notwithstanding a possible impact on the rights and interests of other shareholders in Aer Lingus.

The Merits

Prima facie case

- Arguments of the parties

60. The applicant submits that the factual and legal elements set out below demonstrate that there is a serious dispute regarding the correctness of the Commission's interpretation of Article 8(4) and (5) in the Contested Decision.

61. First of all, the applicant contests the assertion in paragraph 12 of the Contested Decision, according to which negative effects cannot occur since Ryanair has not acquired, and may not acquire, control of Aer Lingus'. In the applicant's opinion this assertion is contrary to the facts, to sound economic theory and to previous Commission decisions.

62. With regard to the first argument, the applicant stresses that Ryanair has used its shareholding to seek access to Aer Lingus' confidential strategic plans, has blocked special resolutions that would have assisted Aer Lingus in raising capital and/or making acquisitions, has requisitioned two Extraordinary General Meetings with the object of reversing Aer Lingus' strategic decisions, and has threatened its directors with litigation for breach of statutory duty towards it as a shareholder.

63. These facts, according to the applicant, have had the result of distracting the management of Aer Lingus, embroiling the company in confrontation and legal disputes with Ryanair, and, inevitably, weakening Aer Lingus as an effective competitor of Ryanair.

64. With regard to the second argument, the applicant submits that sound economic principles indicate that minority shareholdings such as Ryanair's shareholding in Aer Lingus distort competition between the companies concerned. In particular, as a shareholder of Aer Lingus having the right to receive a proportion of Aer Lingus' profits, Ryanair does not have incentives to compete with Aer Lingus, because it has a conflicting interest in maximising the value of its shareholding and ensuring that Aer Lingus is profitable. Shareholdings such as that of Ryanair, according to Aer Lingus, contribute significantly to anti-competitive outcomes.

65. With regard to the third argument, in support of its claim, the applicant relies on the Commission's decisions in Tetra Laval/Sidel and Schneider/Legrand.

66. In those two decisions, the Commission established that in particular circumstances the retention of a minority shareholding would impede the restoration of conditions of effective competition and would have disproportionate effects on the target company.

67. Secondly, according to the applicant, the Commission's interpretation of Article 8 (4) and (5) is incorrect. The Commission, according to the applicant, has followed a purely textual approach, whereas a wider interpretation is more consistent with the purpose of the Regulation.

68. In the applicant's submissions, in the Kali und Salz case (joined Cases C-68/94 and C-30/95 France and others v Commission [1998] ECR I-1375) the Court of Justice, and in the Gencor case (Case T-102/96 Gencor v Commission [1999] ECR II-753) the Court of First Instance, faced with two possible interpretations of different provisions of the Regulation to those currently in issue, noted that the narrower interpretation would partially deprive the Regulation of its effectiveness, whereas the wider view was consistent with its text, even if not explicitly set out therein.

69. In the same vein, the applicant claims that the natural meaning of Article 8(4) and (5) is consistent with the use of the powers set out therein to address a minority shareholding such as that of Ryanair, whereas that adopted by the Commission leaves the Community helpless in the face of the distortion of competition created by Ryanair's minority stake, which was acquired as part of a prohibited concentration and is therefore inconsistent with the purpose of the Regulation.

70. In particular, the applicant submits that the Commission's interpretation fails to take account of the follow recitals in the preamble to the Regulation: 2, 5, 7, 8, 14, 20 and 23.

71. As far as Article 8(4) is concerned, instead of being guided by the recitals in the preamble to the Regulation, the Commission adopts a purely textual approach in paragraph 10 of the Contested Decision and takes the view that the concentration assessed in the present case has not been implemented' and that the transactions that have been carried out during the Commission's proceedings can therefore not be considered as part of an implemented concentration'.

72. The first error committed by the Commission, according to the applicant, was to regard the transactions' which it must consider as somehow distinct from the concentration assessed in the Prohibition Decision. According to the applicant, it is apparent from paragraph 12 of the Prohibition Decision that the various transactions' referred to therein form an integral part of the prohibited concentration. Therefore, according to the applicant, the Commission, having acknowledged already in its decision of 20 December 2006 that such transactions and the public bid formed part of a single concentration for the purposes of Article 3 of the Regulation, misidentified the concentration to which Article 8(4) is applicable. Two requirements must be satisfied for Article 8(4) to apply: there must be a concentration and it must be found to be incompatible with the common market.

73. The second condition being satisfied, according to the applicant, the main question is to establish whether the concentration so defined has been implemented. In this regard, the applicant claims

that the Commission wrongly equates the meaning of implemented' in Article 8(4)(a) with acquire control' in the sense of Article 3(2) of the Regulation. In the applicant's view, Article 8(4)(a) does not refer to the acquisition of control', and only adopts the word implemented'. In the opinion of the applicant, the fact that the concentration was never fully consummated, because the Commission prevented it, does not mean that the concentration has not been implemented, albeit partially, through the transactions referred to in paragraph 12 of the Prohibition Decision.

74. In support of this claim, at the oral hearing, the applicant sought to introduce as new evidence Commission press releases, which, according to the applicant, demonstrate that it is common practice for the Commission to consider steps short of control as implementation'. The applicant claims that the above documents, demonstrate that the Commission has in the past carried out surprise inspections to check whether the parties to a concentration had implemented an acquisition under review by the Commission, in breach of Article 7(1) of the Regulation.

75. Thirdly, the applicant advances a legal ground based on Article 7 of the Regulation. Under Article 7(1), a concentration with a Community dimension may not be implemented until it has been declared compatible with the common market. Article 7(2) establishes that Article 7(1) does not prevent the implementation of a public bid or a series of transactions in securities, provided that the concentration is notified to the Commission and that the acquirer does not exercise the voting rights attaching to the securities acquired, except on the basis of a derogation granted by the Commission under Article 7(3).

76. The applicant argues that paragraphs 1 and 2 of Article 7, read together, must prevent Ryanair from exercising its voting rights except in accordance with a derogation granted by the Commission under paragraph 3.

77. The Commission argues that the applicant has failed to establish a prima facie case that would justify granting the interim measures sought. Firstly, as a starting point, the Commission observes that the Regulation applies only to concentrations in the sense of Article 3, and not to the acquisition of a minority shareholding that does not confer control within the meaning of Article 3(2), that is to say, decisive influence, and that it is not disputed that Ryanair's shareholding in Aer Lingus does not give it control of that company.

78. Secondly, the Commission argues that defining several transactions as part of a single concentration ensures that all transactions are notified together to the Commission, and safeguards the one stop shop principle'. According to the Commission, however, this does not give the Commission jurisdiction to control minority shareholdings as such.

79. Thirdly, the Commission submits that once the single concentration defined during the administrative procedure is broken up, Article 21(3) of the Regulation no longer precludes the Member States from applying their national legislation on competition to such a minority shareholding.

80. Fourthly, as far as the teleological interpretation of the provisions in question is concerned, the Commission points out that Aer Lingus' interpretation of such provisions is contrary to the general purpose of the Regulation, which is to control concentrations in the sense of Article 3.

81. Finally, the Commission argues that its previous decisions under Article 8(4) of the Regulation do not support Aer Lingus' contention that a concentration can be said to have been implemented in the absence of acquisition of control, since, in all previous cases, control had been acquired.

- Findings of the President

82. The applicant submits, in essence, that the Commission wrongly refused to take action under Article 8(4) and (5) of the Regulation against Ryanair's minority shareholding in Aer Lingus. In that respect, Aer Lingus contends that the minority shareholding in question has substantial

negative effects on competition and submits that the Commission was wrong to conclude that it does not have the power in this case to take action under Article 8 (4) and (5).

83. With regard to the applicant's first claim, relating to the assertion in paragraph 12 of the Contested Decision that negative effects cannot occur since Ryanair has not acquired, and may not acquire, control of Aer Lingus', it is clear from a closer reading of the Contested Decision that such a statement is taken out of context, it did not form the basis for the Commission's decision not to adopt the measures requested by the applicant under Article 8(4) and (5), and is therefore irrelevant for the purposes of the present proceedings. Indeed, the rationale behind the Contested Decision is clearly that, according to the Commission, no concentration has been implemented in the circumstances at hand and that therefore the Commission has no powers to adopt measures under Article 8(4) and (5) in relation to the minority shareholding in question, irrespective of whether such minority shareholding might be deemed to give rise to competition concerns or not.

84. It follows that the arguments brought by the applicant in support of this claim, namely those aimed at demonstrating that this claim is consistent with the facts of the case, sound economic theory', and previous Commission decisions, do not require further consideration.

85. Based on the parties' arguments, as set out above and discussed during the oral hearing, the main question to be addressed by the President in the current proceedings for interim measures, as far as the requirement of a prima facie case is concerned, is whether the applicant has adequately demonstrated that, prima facie , the Commission wrongly interpreted the expression implemented' in Article 8 to imply an acquisition of control and that, on the other hand, the implementation' requirement should be construed to be satisfied by any actions or steps taken by the notifying party with a view to consummating the concentration. In other words, the issue is whether partial implementation' or implementation of any of the elements which together constitute the single concentration notified can constitute implementation' of that concentration and trigger the Commission's powers under Article 8(4) and (5).

86. In support of its interpretation of Article 8(4) and (5), Aer Lingus cites the case-law of the Community Courts (par. 68 supra) in which the Court of Justice and the Court of First Instance concluded that, faced with two possible interpretations of the Regulation, the interpretation that better reflects the purpose of that Regulation should be adopted.

87. In relation to the case-law relied upon by the applicant, it must be pointed out that in Kali und Salz the Court of Justice, and in Gencor the Court of First Instance, held that the provisions of the Regulation in question were to be interpreted by reference to the purpose of the Regulation because the precise scope of the provisions in question could not be conclusively assessed on the basis of their wording alone (Kali und Salz, at paragraph 168, and Gencor, at paragraph 148).

88. Accordingly, before carrying out an analysis of Article 8(4) and (5) by reference to the purpose of the Regulation, it is first necessary to determine whether the wording of the provisions in question is not sufficiently clear and allows for the two different interpretations put forward by the applicant.

89. In this regard it should first of all be noted that the definition of the English term implementation' may encompass both the having accomplished some aim' and the carrying into effect' and could therefore, in principle, leave room for confusion as to the precise scope of the provisions set out in Article 8(4) and (5). Whilst the use of the present perfect simple tense in the expression has already been implemented' in Article 8(4)(a) and (5)(c) of the Regulation might suggest that this expression refers to the having accomplished some aim', this consideration alone cannot be deemed to be sufficient to establish, even prima facie , the scope of the Commission's powers under Article 8 of the Regulation.

90. However, it is settled case-law that the need for a uniform interpretation of Community regulations

makes it impossible for a given piece of legislation to be considered in isolation and requires that, in case of doubt, it should be interpreted and applied in the light of the versions existing in the other official languages (see Case C-64/95 Lubella [1996] ECR I-5105, paragraph 17 and the case-law cited therein). Accordingly, it is necessary to ensure that the English version of Article 8(4) and (5) of the Regulation does not give the expression in question a different meaning from that of the other language versions, and such an expression must be interpreted and applied in the light of the versions which exist in the other official languages (see, to that effect, Case C-177/95 Ebony Maritime and Loten Navigation [1997] ECR I-1111, paragraphs 29 to 31). In this respect, it should be noted that in the French version of Article 8(4) the expression has already been implemented' is a déjà été réalisée', in the Italian version è già stata realizzata', and in the German version vollzogen wurde'. The way in which the expression implemented' is set out in the sample of other official languages analysed above indicates that, prima facie , the definition of implementation' envisaged under Articles 8(4) and 8(5) encompasses full consummation of the concentration.

91. Secondly, this conclusion can, prima facie , be confirmed through a comparison of the French version of Article 8(4) and (5) with the French version of other Community legislation in which the term implementation' is clearly meant to indicate carrying into effect' rather than the act of accomplishing some aim'. An example of such use of the term implementation' can be found in recital 3 of the preamble to Commission Regulation (EC) No 794/2004 of 21 April 2004 implementing Council Regulation (EC) No 659/1999 laying down detailed rules for the application of Article 93 of the EC Treaty, which states that ... Such simplified arrangements should only be accepted if the Commission has been regularly informed on the implementation of the existing aid concerned'. The term implementation' in this case appears in the French version of recital 3 as mise en oeuvre', and not as réalisation'.

92. Thirdly, it must be borne in mind that once the Commission's powers under Article 8(4) are triggered, the Commission may require the undertakings concerned to dissolve the concentration', an expression which, prima facie , implies the existence of a concentration as defined in Article 3 of the Regulation, and therefore an acquisition of control. In this context, it must be noted that, in the present case, it is not disputed that, through its minority shareholding in Aer Lingus, Ryanair is not in a position to exercise de jure or de facto control over the applicant.

93. It follows that, without its being necessary to discuss the applicant's arguments relating to the purpose of the Regulation in any detail, it may be concluded that the applicant has failed to demonstrate the existence of a prima facie case.

94. This conclusion cannot be brought into question by the applicant's claim that the Commission treats partial implementation as precluded by Article 7(1), even as regards steps falling short of transfer of control, and indicates to parties that they should refrain from such steps. At the hearing the Commission confirmed that, although it has never adopted a formal position in relation to the question whether Article 7 prevents the acquisition of minority shareholdings, in the context of discussions with the notifying parties the Commission has adopted the policy of asking the acquirer to refrain from exercising any voting rights, whether arising from a controlling shareholding or a minority shareholding, until the end of the proceedings. In this regard, it should first be pointed out that, based on the distributions of competence discussed at paragraph 42 above, the interpretation of Community law is a prerogative of the Court of Justice and not of the Commission, and that, accordingly, the Commission's practice, albeit generally influential and important in determining whether any legitimate expectations may be justified, is not conclusive for present purposes. Secondly, as was pointed out by the Commission in the course of the hearing, even if Article 7(1) of the Regulation were to be interpreted as prohibiting only a change of control pending the Commission's review, and not steps short of change of control such as the exercise of voting rights arising from

minority shareholdings, taking into account the strict time-limits within which the Commission must review a notified concentration and the combinations of factors which might give rise to control in any given case, it would remain legitimate for the Commission to ask the parties not to take any action which might lead to a change of control. In addition, although it is not, prima facie , a requirement arising from the Regulation, the notifying parties might consider it advantageous to facilitate the Commission's administrative process by complying with such a request and, thereby, to avoid the risk that the Commission might consider it necessary to carry out inspections at the parties' premises to verify whether any steps taken by the notifying parties do not in fact produce a change of control.

95. In relation to the press releases, which, according to the applicant, demonstrate that it is common practice for the Commission to consider steps short of control as implementation', it should be noted at the outset that no explanation has been provided by the applicant as to why the press releases in question, one of which dates back to 1997, were not available to it at the time at which it filed its application and why they had to be introduced in the proceedings at such a late stage. However, irrespective of whether this late evidence is admissible or not, suffice it to state that such evidence is inconclusive as to the meaning of the expression implementation'. In particular, the information contained in the press releases discussed does not appear to have an impact on the considerations set out above.

96. During the hearing, counsel for the intervener referred to the use of this Court's time by the applicant in submitting late evidence of this type as bordering on contempt of court. Without needing to rule on this serious allegation, the President finds that such evidence is in any event inconclusive, and that, also in this respect, it can be concluded that the applicant has failed to demonstrate the existence of a prima facie case.

97. Under the applicant's first claim, namely that Ryanair's shareholding in Aer Lingus gives rise to serious competition concerns, the applicant argued that the refusal of the Commission to adopt measures under Article 8(4) to request disposal of Ryanair's minority shareholding is contrary to previous Commission decisions, and referred in particular to the Commission's decisions in Tetra Laval/Sidel and Schneider/Legrand. In this respect, for the sake of completeness, it should be pointed out that this evidence also cannot reverse the conclusions reached above. In particular, the fact that in Tetra Laval/Sidel and Schneider/Legrand the Commission found that the retention of a minority shareholding in the target in the notified transaction which had been prohibited under the Regulation would impede the restoration of effective competition, and therefore ordered the disposal of all the shares acquired, is irrelevant for the purposes of the present proceedings. Indeed, it is consistent with the above conclusions that the Commission's powers in those cases had been triggered by the implementation' of the transaction, in other words, by a change of control. Once the powers of the Commission had been triggered, the Commission was entitled, as specifically provided for under Article 8(4), to require the undertakings concerned to dissolve the concentration, in particular through the dissolution of the merger or the disposal of all the shares or assets acquired, so as to restore the situation prevailing prior to the implementation of the concentration'.

98. As far as the applicant's submission based on Article 7 is concerned, namely that, since the proposed acquisition has not yet been declared compatible with the common market, Ryanair may acquire securities or implement a public bid in the context of the notified transaction only in so far as it does not exercise the voting rights attaching to the securities acquired, except under derogation from the Commission, suffice it to state that the same interpretation of the term implementation' set out above must apply mutatis mutandis to the applicant's arguments relating to Article 7.

99. Accordingly, in relation to this legal ground also, Aer Lingus has failed to demonstrate the existence of a prima facie case.

100. Finally, the applicant argues that the interpretation of Article 8(4) and (5) adopted by the Commission, in conjunction with the Article 21(3) prohibition of Member States applying their national legislation on competition to any concentration having a Community dimension, gives rise to a lacuna which is incompatible with the aim of the Regulation. In this respect it should first be noted that the same factual scenario, whereby an undertaking enjoys a minority shareholding in a competitor, not giving rise to control, and that such competitor might consider that the minority shareholding in question is harmful to competition, could very well occur in cases where such minority shareholding is not acquired in the context of a concentration. In this scenario, the Regulation would clearly not apply, and the impossibility for the Commission to scrutinise the minority shareholding in question under Article 8(4) and (5) of the Regulation would clearly not be deemed to constitute a lacuna in the ability of the Community to secure undistorted competition.

101. As far as the operation of Article 21 is concerned, it should be pointed out, first, that Article 21(3) must be read in conjunction with Article 21(1). Article 21(1) provides that the Regulation alone is to apply to concentrations having a Community dimension as defined in Article 3 of the Regulation. In this light, in circumstances such as those in the present case, where a concentration has been notified, declared incompatible with the common market by the Commission and on this basis the public bid was abandoned, no concentration with a Community dimension as defined in Article 3 is in existence. Nor can a concentration with a Community dimension be contemplated by the parties in these circumstances, since any such concentration would be in violation of an existing Commission decision. On this basis, as the Commission sets out in its written observations, Article 21(3) cannot be said, prima facie , to apply since there is no concentration in existence, or contemplated, to which the Regulation alone must apply. The remaining minority shareholding is, prima facie , no longer linked to an acquisition of control, ceases to be part of a concentration' and lies outside the scope of the Regulation. Accordingly, Article 21, which under recital 8 to the Regulation is aimed at ensuring that concentrations generating significant structural changes are reviewed exclusively by the Commission in application of the one-stop shop principle', does not in principle, under these circumstances, prevent the application by national competition authorities and national courts of national legislation on competition.

102. In this respect, the fact that the Commission's decision finding the concentration incompatible with the common market is being challenged before the Court of First Instance makes no material difference, since, on the basis of Article 242 EC, actions before the Court of Justice do not have suspensory effect. In addition, if the relevant national competition authorities were deterred from taking definitive measures by considerations relating to procedural economy, it would be open to such authorities to adopt interim measures to address any concern which they might identify pending judgment by this Court.

103. Furthermore, as far as the existence of a regulatory lacuna is concerned, it should be pointed out that, whilst a minority shareholding of the type in question cannot, prima facie , be regulated under the Regulation, it might be envisaged that the EC Treaty provisions on competition, and in particular Article 81 EC and Article 82 EC, can be applied by the Commission to the conduct of the undertakings involved following the acquisition of the minority shareholding. In this regard it should be recalled that under Article 7(1) of Council Regulation (EC) No 1/2003 of 16 December 2002, where it finds that an infringement of Article 81 EC or of Article 82 EC has taken place, the Commission has the power to impose any behavioural or structural remedies which are proportionate to the infringement committed and necessary to bring the infringement effectively to an end'.

104. Whilst Article 81 EC might, prima facie , be difficult to apply in cases, such as the present, in which the infringement in question arises from the acquisition of shares on the market and, therefore, the necessary meeting of minds might be difficult to establish, the applicant may ask the Commission to initiate a procedure under Article 82 EC if it believes that Ryanair enjoys a dominant position

on one or more markets and is abusing that dominant position by interfering with a direct competitor's business strategy and/or by exploiting its minority shareholding in a direct competitor to weaken its position.

105. It is also appropriate to point out that this scenario applies in cases, such as the present, in which all parties agree that no change of control has occurred for the purposes of the Regulation. However, should Ryanair, at a later stage, be found to enjoy or to have acquired control over Aer Lingus by virtue of its minority shareholding, then Article 8(4) and (5) might apply.

106. Accordingly, in relation also to this legal ground, relating to the existence of a lacuna which is incompatible with the aim of the Regulation, it can be concluded that the applicant has failed to demonstrate the existence of a prima facie case.

107. It follows that the applicant has failed to demonstrate the existence of a prima facie case.

Urgency

- Arguments of the parties

108. The applicant takes the view that the condition relating to urgency is satisfied in this case, in particular in so far as there is a risk that Ryanair could impose its wishes on Aer Lingus at any time.

109. The applicant submits, first, that under the current shareholding structure of Aer Lingus Ryanair already enjoys the power to block special resolutions requiring a 75% majority. The applicant, furthermore, submits that Ryanair has already used its minority shareholding in Aer Lingus to block a proposal for a special resolution under which Aer Lingus would have been authorised to issue additional shares equivalent to up to 5% of its issued share capital without having first to offer those shares to existing shareholders.

110. Secondly, Ryanair's weight when voting on ordinary resolutions is in practice more significant than the weight conferred on it by its shareholding for a number of reasons. In particular, on the assumption that only some 80% of Aer Lingus shares are going to be voted at a general meeting, which according to the applicant is the likely turnout based on the turnout at the first, and so far only, general meeting of Aer Lingus, Ryanair's actual voting weight tends towards 40%. Such weight is further increased by the fact that Ryanair is the largest shareholder in Aer Lingus and one with very significant aviation expertise and may, according to the applicant, have a potentially very significant influence on other shareholders.

111. Thirdly, the applicant claims that there is a possibility that the Irish Government, Aer Lingus' second largest shareholder, may abstain from shareholder resolutions affecting the strategic direction of the company. In addition, there may be circumstances in which the Irish Government may be required to abstain from voting, for example where it is a related party to a transaction. According to the applicant, this might be the case where Aer Lingus intends to enter into agreements with the state-owned Dublin Airport Authority, for example, to redevelop the Aer Lingus head office site. In such circumstances, Ryanair's shareholding might in fact represent more than 50% of the votes likely to be cast.

112. In addition, Aer Lingus puts forward a number of examples of circumstances in which Ryanair may interfere with Aer Lingus' business by taking advantage of the scenarios set out above. In particular, Ryanair may employ its shareholding in Aer Lingus to further its campaign against Dublin Airport's Terminal 2, which according to the applicant is crucial to Aer Lingus' expansion plans. Equally, Ryanair, based on its preference for Boeing aircraft, may interfere with Aer Lingus' plans to purchase Airbus aircraft. In its written pleadings, Aer Lingus reported Ryanair's intention to interfere with the decision of the Board of Aer Lingus to abandon a number of routes and to

open new ones. At the hearing, however, it was confirmed that such attempts had been unsuccessful. According to the applicant the damage which would arise from Ryanair's exercise of its voting rights as a minority shareholder, should this result in the Board being defeated on an issue of commercial policy, would be both serious and irreparable, and the resulting disruption to Aer Lingus' business could not be remedied by the Court's judgment in the main application, or at all.

113. At the oral hearing the applicant sought to introduce as new evidence information relating to, inter alia , a contract with Airbus for the delivery of Airbus wide-body aircraft which, according to the applicant, would need to be approved by the shareholders shortly after the hearing, and which constitutes a pivotal aspect of Aer Lingus' business strategy to exploit the opportunities arising from the Open Skies regime. Should the Board's initiatives relating to such opportunities not be approved by the shareholders of Aer Lingus in the short term, Aer Lingus would suffer serious and irreparable harm since such opportunities would not be available to Aer Lingus following a judgment in the main proceedings.

114. Finally, the applicant claims that the Court should, in the present case, apply the precautionary principle', because, according to the applicant, once it has been shown that there is a non-negligible risk that Ryanair might cause or contribute to Aer Lingus suffering serious and irreparable damage, the Court is entitled to take protective measures without having to await further proof of the reality of that risk.

115. The Commission, for its part, submits essentially that the urgency requirement is not satisfied.

- Findings of the President

116. According to settled case-law, the urgency of an application for interim relief must be assessed in the light of the need for an interlocutory order in order to avoid serious and irreparable damage to the party seeking the relief. It is for that party to prove that it cannot await the outcome of the main proceedings without suffering damage of that kind (see order of the President of the Court in Case T151/01 R Duales System Deutschland v Commission [2001] ECR II-3295, paragraph 187 and the case-law cited).

117. Where damage depends on the occurrence of a number of factors, it is enough for that damage to be foreseeable with a sufficient degree of probability (order of the President of the Court in Case T-369/03 R Arizona Chemical and Others v Commission, cited in paragraph 49 above, paragraph 71; see also, to that effect, the orders of the Court of Justice in Case C-280/93 R Germany v Council [1993] ECR I-3667, paragraphs 32 to 34, and of the President of the Court of Justice in Case C335/99 P(R) HFB and Others v Commission [1999] ECR I-8705, paragraph 67). However, the applicant is still required to prove the facts which are deemed to show the probability of serious and irreparable damage (Arizona Chemical and Others v Commission , cited above, paragraph 72; see also, to that effect, HFB and Others v Commission , cited above, paragraph 67).

118. In that regard, it must be pointed out that, in order to be able to determine whether the damage which applicants fear is serious and irreparable and therefore provides grounds for ordering interim measures, the judge hearing the application must have hard evidence allowing him to determine the precise consequences which the absence of the measures applied for would in all probability entail for each of the undertakings concerned.

119. As a preliminary point, therefore, it should be underlined that the applicant's claim that the President should apply the precautionary principle', and that the Court is entitled to apply protective measures' without having to await proof of the reality of the risk alleged by the applicant is manifestly inconsistent with the principles and the case-law applicable to interim measures applications, and cannot be entertained.

120. In the present case, the applicant submits that the interference in its business affairs by its shareholder and principal competitor Ryanair would place it in an extremely difficult position and that, as a consequence, it would suffer damage which would be serious and irreparable. The applicant, in particular, has put forward a number of scenarios in which Ryanair might be able to influence the outcome of voting in relation to a number of matters which are, according to the applicant, crucial to the growth plans that the Board of Aer Lingus has set for that company.

121. In this regard, as a preliminary point, it should be emphasised that it is not being claimed by the applicant that Ryanair is in a position to exercise control over Aer Lingus. On the basis of the definition of control under Article 3(2), it follows that Ryanair cannot be understood to be in a position to exercise decisive influence' over Aer Lingus.

122. Both in its written pleadings and in the course of the oral hearing, when it was given ample opportunity to present its case, moreover, the applicant has failed to provide sufficiently concrete evidence in relation to the type of harm that is at stake for Aer Lingus, the likelihood of such harm occurring, and whether such harm is indee d serious and irreparable. For example, the applicant has failed to provide sufficiently concrete evidence to establish, in relation to each example put forward, inter alia , whether and when a vote must be held, why a vote has to be held before a decision is issued in the main proceedings, why Ryanair alone would be able, in the specific circumstances, to oppose a proposal of the Board or to pass its own resolution. In addition, Aer Lingus has failed to provide sufficient evidence to support its claim that the resulting harm would be both serious and irreparable.

123. It follows that the assertions put forward by the applicant remain hypothetical and unsubstantiated statements which do not satisfy the condition of foreseeability of harm with the requisite degree of probability.

124. More specifically, in relation, first, to the claim that under the current shareholding structure of Aer Lingus, Ryanair already enjoys the power to block special resolutions requiring a 75% majority, and has on one occasion already done so, Aer Lingus has failed to provide concrete evidence demonstrating that the passing of any such special resolution is anticipated to be required before the decision in the main proceedings is issued by this Court. In addition, Aer Lingus has failed to provide concrete evidence indicating with the requisite degree of probability that Ryanair will oppose such a hypothetical special resolution, and has failed to provide any concrete evidence to support the statement that any such opposition is likely to cause both serious and irreparable harm to Aer Lingus. With reference to the example of the only special resolution which Ryanair has so far successfully opposed, no concrete evidence was provided by Aer Lingus to support its statement that the failure of the Board to obtain the abolition of shareholders' pre-emption rights is likely to cause serious and irreparable harm to Aer Lingus.

125. Secondly, in relation to Aer Lingus' claim that Ryanair's weight when voting on ordinary resolutions is in practice more significant than the weight conferred on it by its shareholding, it should be noted, again, that, by this argument, the applicant is not claiming that Ryanair is in a position of de jure or de facto control. Furthermore, Aer Lingus has failed to provide concrete evidence to demonstrate that the passing of any such ordinary resolution is anticipated to be required before the decision in the main proceedings is issued by this Court. In addition, Aer Lingus has failed to provide any concrete evidence to support the statement that any such opposition is likely to cause both serious and irreparable harm to Aer Lingus.

126. In this context Aer Lingus claimed that Ryanair's shareholding might give rise to serious harm to competition primarily in the context of two issues, namely the Aer Lingus Board's proposal to acquire Airbus aircraft, and the Board's plans regarding Dublin Airport's Terminal 2.

127. As far as the Board's proposal to acquire Airbus aircraft is concerned, it should first of all be pointed that Aer Lingus' conclusion that Ryanair would object to such acquisition is based on the general assumption that, since Ryanair owns a Boeing-only fleet, Ryanair would seek to impose the purchase of Boeing aircraft on Aer Lingus, and on a press statement in which Ryanair is reported to have declared that it would ensure that Aer Lingus' fleet be converted to a Boeing-only fleet. In that regard, it was pointed out by Ryanair at the hearing, and no objection was raised by Aer Lingus, that such intention was expressed at a time when the acquisition was being contemplated, and that the purpose of the idea of converting Aer Lingus' fleet to a Boeing-only fleet was to facilitate the integration of Aer Lingus into Ryanair. Whilst Ryanair has appealed the Commission decision declaring its acquisition of Aer Lingus incompatible with the common market, and on this basis, it might be said to be still contemplating, ultimately, the possibility of integrating Aer Lingus into Ryanair, it cannot be concluded on the basis of the evidence provided that there is a sufficient probability that Ryanair would object to the proposal of the Aer Lingus Board to acquire Airbus aircraft.

128. In addition, while at the hearing Aer Lingus submitted that a purchase of Airbus wide-body aircraft is anticipated, and would need to be approved by the shareholders shortly after the hearing, Aer Lingus failed to demonstrate to the requisite degree of probability that, if such approval is required, the turnout at the shareholder meeting would be so low as to provide Ryanair with enough voting weight to prevent the approval of such acquisition, and even less to impose the acquisition of Boeing aircraft. Finally, even supposing that Ryanair would be in a position to object to the purchase of Airbus aircraft, Aer Lingus has not alleged that should the contract not be ratified by a certain date, its option would necessarily expire.

129. Equally, in relation to Aer Lingus' claim that the Irish Government may decide, or may be required by Irish legislation, to abstain on some shareholder resolutions, no concrete evidence was provided to demonstrate that a specific issue in relation to which the Irish Government would not exercise its voting rights is anticipated to require shareholder approval before the decision in the main proceedings is issued by this Court. In addition, Aer Lingus has failed to provide any concrete evidence indicating to the requisite degree of probability that such abstention is likely to result in the rejection of the Board's proposal, and that this is in turn likely to cause both serious and irreparable harm to Aer Lingus. With reference to the specific example of Terminal 2, Aer Lingus provided no concrete evidence to support its statement that a shareholder resolution is required in order to approve the Board's plans in this context, and no concrete evidence was adduced to demonstrate that the Irish Government will be required by Irish legislation not to exercise its voting rights. Finally, no evidence was provided to support the statement that a failure of the Board to obtain shareholder approval in relation to its approach to the use of Terminal 2 is likely to cause harm to Aer Lingus which will be both serious and irreparable.

130. In addition, in its submissions relating to the issues above, the applicant has failed to demonstrate that the harm which Aer Lingus would allegedly suffer is of a type other than pecuniary.

131. In relation to pecuniary damage, it is appropriate at this stage to state that it is established case-law that damage of this nature cannot, save in exceptional circumstances, be regarded as irreparable, if it can ultimately be the subject of financial compensation. Pecuniary damage can justify the award of interim measures only if it appears that, without the measures sought, the applicant would be in a position that could jeopardise its existence before final decision in the main action or irremediably alter its position in the market (orders of the President of the Court in Case T-181/02 R Neue Erba Lautex v Commission [2002] ECR II-5081, paragraph 84, in Case T-169/00 R Esedra v Commission [2000] ECR II-2951, paragraph 45, in Case T-148/04 R TQ3 Travel Solutions Belgium v Commission [2004] ECR II-3027, paragraph 46, and in Case T-316/04 R Wam v Commission [2004] ECR II-3917, paragraph 29). In this regard, suffice it to state that at no point has the applicant

claimed that, without the interim measures sought, its very existence would be jeopardised or its market position irremediably altered before a final decision is issued in the main action.

132. At the oral hearing, the applicant did offer to provide, in camera , and in the absence of the intervener, new and more specific information relating to the examples of harm set out above. As an example of the type of information which it could provide in an in camera session, the applicant explained that a vote would soon be required at shareholder level to approve a contract for the purchase of Airbus aircraft, detailed information in relation to which is highly confidential. The applicant did not, however, explain how the additional information could fulfil the urgency requirement for the granting of interim measures. Moreover, the applicant failed to explain why such additional information could not be provided with its written application, under the claim of confidentiality, and had to be introduced at such a late stage in the proceedings. Finally, it follows from the considerations set out above in relation to the admissibility of a request for interim measures to be addressed to Ryanair or having an impact on Ryanair, that evidence provided in the absence of Ryanair cannot be used as the basis for interim measures, since that would give rise to a breach of Ryanair's rights of defence. The only exception to this principle, which is based on the temporary nature of interim measures, applies in cases where, in the absence of the interim measures sought, the very existence of the applicant would be jeopardised. As noted above, at no point in the proceedings has Aer Lingus claimed that its existence would be jeopardised in the absence of interim measures.

133. In any event, irrespective of whether such new evidence is admissible or not, there is no evidence that such additional information would have been of a nature capable of changing the outcome of the President's assessment set out above.

134. In the light of the foregoing, it must be held that the applicant has not established that without the interim measures sought it will suffer serious and irreparable harm.

135. It follows from all of the foregoing that the applicant has not demonstrated the requisite prima facie case and the need for interim measures to prevent an imminent risk of serious and irreparable harm. The application for interim measures must therefore be rejected. This is particularly so in light of the fact that, as results from the reasoning in paragraph 56 above, a particularly strong prima facie case and the existence of very serious and irreparable harm will have to be demonstrated before the required measures could be imposed on Ryanair, in view of the fact that those measures would have a serious impact on the rights and interests of Ryanair as a shareholder of Aer Lingus.
