Update seminar on EU Competition Law

Riga Graduate School of Law

Thursday 29 January 2009 from 9.00 to 13.00

Seminar outline

1 Legislation

1.1 Procedural issues

- Commission Regulation (EC) No 622/2008 of 30 June 2008 amending Regulation (EC) No 773/2004, as regards the conduct of settlement procedures in cartel cases
- Commission Notice on the conduct of settlement procedures in view of the adoption of Decisions pursuant to Article 7 and Article 23 of Council Regulation (EC) No 1/2003 in cartel cases

1.2 Merger control

- Commission Consolidated Jurisdictional Notice of 10 July 2007 under Council Regulation (EC) No 139/2004 on the control of concentrations between undertakings

2 Cases

2.1 Application of EU competition law

- ETI, case C-280/06
- Akzo Nobel, case T-112/05
- Doulamis, case C-446/05
- MOTOE, case C-49/07

2.2 Horisontal agreements

- SGL Carbon, case C-328/05
- Britannia Alloys & Chemicals, case C-76/06 P
- Coats Holdings, case T-36/05
- BASF & UCB, joint cases T-101/05 and T-111/05
- Hoechst, case T-410/03
- AC-Treuhand, case T-99/04

Skolas iela 4-11 LV-1010 Riga, Latvia VAT LV 40003655379	Phone: +371-2616-2303 Fax: +371-728-9021 Skype: +45-3695-7750	E-Mail: pgj@lexnet.dk Website: www.lexnet.dk Member: www.eurolex.com

- BPB, case T-53/03

2.3 Dominant positions

- Duales System Deutschland, case T-151/01 (and case T-289/01)
- Microsoft, case T- 201/04
- Scippacercola & Terezakis, case T-306/05
- Deutsche Telekom, case T-271/03

2.4 Merger control

- Sun Chemical Group, case T-282/06
- Schneider Electric, case T-351/03
- Cementbouw Handel & Industrie, case C-202/06 P
- Commission vs Spain, case C-196/07
- Bertelsmann & Sony Corporation of America, case C-413/06 P

2.5 Procedural issues

- Alrosa, case T-170/06
- Akzo Nobel Chemicals & Akcros Chemicals, joint cases T-125/03 and T-253/03
- Pergan Hilfsstoffe für industrielle Prozesse, case T-474/04
- Aer Lingus Group, case T-411/07 R

COMMISSION REGULATION (EC) No 622/2008

of 30 June 2008

amending Regulation (EC) No 773/2004, as regards the conduct of settlement procedures in cartel cases

(Text with EEA relevance)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Community,

Having regard to the Agreement on the European Economic Area,

Having regard to Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [1], and in particular Article 33 thereof,

Having published a draft of this Regulation [2],

After consulting the Advisory Committee on Restrictive Practices and Dominant Positions,

Whereas:

(1) Commission Regulation (EC) No 773/2004 of 7 April 2004 relating to the conduct of proceedings by the Commission pursuant to Articles 81 and 82 of the EC Treaty [3] lays down rules concerning the participation of the parties concerned in such proceedings.

(2) Parties to the proceedings may be prepared to acknowledge their participation in a cartel violating Article 81 of the Treaty and their liability in respect of such participation, if they can reasonably anticipate the Commission's envisaged findings as regards their participation in the infringement and the level of potential fines and agree with those findings. It should be possible for the Commission to disclose to those parties, where appropriate, the objections which it intends to raise against them on the basis of the evidence in the file and the fines that they are likely to incur. Such early disclosure should enable the parties concerned to put forward their views on the objections which the Commission intends to raise against them as well as on their potential liability.

(3) When the Commission reflects the parties' settlement submissions in the statement of objections and the parties' replies confirm that the statement of objections corresponds to the contents of their settlement submissions, the Commission should be able to proceed to the adoption of a Decision pursuant to Article 7 and Article 23 of Regulation (EC) No 1/2003 after consultation of the Advisory Committee on Restrictive Practices and Dominant Positions pursuant to Article 14 of Regulation (EC) No 1/2003.

(4) A settlement procedure should therefore be established in order to enable the Commission to handle faster and more efficiently cartel cases. The Commission retains a broad margin of discretion to determine which cases may be suitable to explore the parties' interest to engage in settlement discussions, as well as to decide to engage in them or discontinue them or to definitely settle. Therefore, the Commission may decide at any time during the procedure to discontinue settlement discussions altogether in a specific case or with respect to one or more of the parties. In this regard, account may be taken of the probability of reaching a common understanding regarding the scope of the potential objections with the parties involved within a reasonable timeframe, in view of factors such as number of parties involved, foreseeable conflicting positions on the attribution of liability, extent of contestation of the facts. The prospect of achieving procedural efficiencies in view of the progress made overall in the settlement procedure, including any unreasonable delays, such as delays associated with the resources required to provide access to non-confidential versions of documents from the file, will be considered. Other concerns such as the possibility of setting a precedent may also be considered.

(5) Complainants will be closely associated with settlement proceedings and be duly informed of the nature and subject matter of the procedure in writing to enable them to provide their views thereon and thereby cooperate with the Commission investigation. However, in the particular context of settlement proceedings, providing systematically a non-confidential version of the statement of objections to complainants would not always serve the purpose of enabling complainants to cooperate with the Commission's investigation and may occasionally discourage the parties to the proceedings from cooperating with the Commission. To this end, the Commission should not be obliged to provide a non-confidential version of the statement of objections to complainants.

[1] OJ L 1, 4.1.2003, p. 1. Regulation as last amended by Regulation (EC) No 1419/2006 (OJ L 269, 28.9.2006, p. 1).
[2] OJ C 50, 27.10.2007, p. 48.
[3] OJ L 123, 27.4.2004, p. 18. Regulation as amended by Regulation (EC) No 1792/2006 (OJ L 362, 20.12.2006, p. 1).

(6) Regulation (EC) No 773/2004 should therefore be amended accordingly,

HAS ADOPTED THIS REGULATION:

Article 1

Regulation (EC) No 773/2004 is amended as follows:

1. Article 2, paragraph 1 is replaced by the following:

‘1. The Commission may decide to initiate proceedings with a view to adopting a decision pursuant to Chapter III of Regulation (EC) No 1/2003 at any point in time, but no later than the date on which it issues a preliminary assessment as referred to in Article 9(1) of that Regulation, a statement of objections or a request for the parties to express their interest in engaging in settlement discussions, or the date on which a notice pursuant to Article 27(4) of that Regulation is published, whichever is the earlier.’

2. In Article 6, paragraph 1 is replaced by the following:

‘1. Where the Commission issues a statement of objections relating to a matter in respect of which it has received a complaint, it shall provide the complainant with a copy of the non-confidential version of the statement of objections, except in cases where the settlement procedure applies, where it shall inform the complainant in writing of the nature and subject matter of the procedure. The Commission shall also set a time limit within which the complainant may make known its views in writing.’

3. In Article 10, paragraph 1 is replaced by the following:

‘1. The Commission shall inform the parties concerned of the objections raised against them. The statement of objections shall be notified in writing to each of the parties against whom objections are raised.’

4. The following Article 10a is inserted:

‘*Article 10a*

Settlement procedure in cartel cases

1. After the initiation of proceedings pursuant to Article 11(6) of Regulation (EC) No 1/2003, the Commission may set a time limit within which the parties may indicate in writing that they are prepared to engage in settlement discussions with a view to possibly introducing settlement submissions. The Commission shall not be obliged to take into account replies received after the expiry of that time limit.

If two or more parties within the same undertaking indicate their willingness to engage in settlement discussions pursuant to the first subparagraph, they shall appoint a joint representation to engage in discussions with the Commission on their behalf. When setting the time limit referred to in the first subparagraph, the Commission shall indicate to the relevant parties that they are identified within the same undertaking, for the sole purpose of enabling them to comply with this provision.

2. Parties taking part in settlement discussions may be informed by the Commission of:

(a) the objections it envisages to raise against them;

(b) the evidence used to determine the envisaged objections;

(c) non-confidential versions of any specified accessible document listed in the case file at that point in time, in so far as a request by the party is justified for the purpose of enabling the party to ascertain its position regarding a time period or any other particular aspect of the cartel; and

(d) the range of potential fines.

This information shall be confidential vis-à-vis third parties, save where the Commission has given a prior explicit authorisation for disclosure.

Should settlement discussions progress, the Commission may set a time limit within which the parties may commit to follow the settlement procedure by introducing settlement submissions reflecting the results of the settlement discussions and acknowledging their participation in an infringement of Article 81 of the Treaty as well as their liability. Before the Commission sets a time limit to introduce their settlement submissions, the parties concerned shall be entitled to have the information specified in Article 10a(2), first subparagraph disclosed to them, upon request, in a timely manner. The Commission shall not be obliged to take into account settlement submissions received after the expiry of that time limit.

3. When the statement of objections notified to the parties reflects the contents of their settlement submissions, the written reply to the statement of objections by the parties concerned shall, within a time limit set by the Commission, confirm that the statement of objections addressed to them reflects the contents of their settlement submissions. The Commission may then proceed to the adoption of a Decision pursuant to Article 7 and Article 23 of Regulation (EC) No 1/2003 after consultation of the Advisory Committee on Restrictive Practices and Dominant Positions pursuant to Article 14 of Regulation (EC) No 1/2003.

4. The Commission may decide at any time during the procedure to discontinue settlement discussions altogether in a specific case or with respect to one or more of the parties involved, if it considers that procedural efficiencies are not likely to be achieved.'

5. Article 11(1) is replaced by the following:

'1. The Commission shall give the parties to whom it addresses a statement of objections the opportunity to be heard before consulting the Advisory Committee referred to in Article 14(1) of Regulation (EC) No 1/2003.'

6. Article 12 is replaced by the following:

'*Article 12*

1. The Commission shall give the parties to whom it addresses a statement of objections the opportunity to develop their arguments at an oral hearing, if they so request in their written submissions.

2. However, when introducing their settlement submissions the parties shall confirm to the Commission that they would only require having the opportunity to develop their arguments at an oral hearing, if the statement of objections does not reflect the contents of their settlement submissions.'

7. In Article 15, the following paragraph 1a is inserted:

'1a. After the initiation of proceedings pursuant to Article 11(6) of Regulation (EC) No 1/2003 and in order to enable the parties willing to introduce settlement submissions to do so, the Commission shall disclose to them the evidence and documents described in Article 10a(2) upon request and subject to the conditions established in the relevant subparagraphs. In view thereof, when introducing their settlement submissions, the parties shall confirm to the Commission that they will only require access to the file after the receipt of the statement of objections, if the statement of objections does not reflect the contents of their settlement submissions.'

8. Article 17 is amended as follows:

(a) paragraph 1 is replaced by the following:

'1. In setting the time limits provided for in Article 3(3), Article 4(3), Article 6(1), Article 7(1), Article 10(2), Article 10a(1), Article 10a(2), Article 10a(3) and Article 16(3), the Commission shall have regard both to the time required for preparation of the submission and to the urgency of the case.'

(b) paragraph 3 is replaced by the following:

'3. The time limits referred to in Article 4(3), Article 10a(1), Article 10a(2) and Article 16(3) shall be at least two weeks. The time limit referred to in Article 3(3) shall be at least two weeks, except for settlement submissions, for which corrections shall be made within one week. The time limit referred to in Article 10a(3) shall be at least two weeks.'

Article 2

This Regulation shall enter into force on 1 July 2008.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 30 June 2008.

COMMISSION

Commission Notice on the conduct of settlement procedures in view of the adoption of Decisions pursuant to Article 7 and Article 23 of Council Regulation (EC) No 1/2003 in cartel cases

(Text with EEA relevance)

(2008/C 167/01)

1. INTRODUCTION

1. This Notice sets out the framework for rewarding cooperation in the conduct of proceedings commenced in view of the application of Article 81 of the EC Treaty [1] to cartel cases [2]. The settlement procedure may allow the Commission to handle more cases with the same resources, thereby fostering the public interest in the Commission's delivery of effective and timely punishment, while increasing overall deterrence. The cooperation covered by this Notice is different from the voluntary production of evidence to trigger or advance the Commission's investigation, which is covered by the Commission Notice on Immunity from fines and reduction of fines in cartel cases [3] (the Leniency Notice). Provided that the cooperation offered by an undertaking qualifies under both Commission Notices, it can be cumulatively rewarded accordingly [4].

2. When parties to the proceedings are prepared to acknowledge their participation in a cartel violating Article 81 of the Treaty and their liability therefore, they may also contribute to expediting the proceedings leading to the adoption of the corresponding decision pursuant to Article 7 and Article 23 of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty [5] in the way and with the safeguards specified in this Notice. Whilst the Commission, as the investigative authority and the guardian of the Treaty empowered to adopt enforcement decisions subject to judicial control by the Community Courts, does not negotiate the question of the existence of an infringement of Community law and the appropriate sanction, it can reward the cooperation described in this Notice.

3. Commission Regulation (EC) No 773/2004 of 7 April 2004 relating to the conduct of proceedings by the Commission pursuant to Articles 81 and 82 of the EC Treaty [6] lays down the core practical rules concerning the conduct of proceedings in antitrust cases including those applicable in the variant for settlement. In this regard, Regulation (EC) No 773/2004 bestows on the Commission the discretion whether to explore the settlement procedure or not in cartel cases, while ensuring that the choice of the settlement procedure cannot be imposed on the parties.

4. Effective enforcement of Community competition law is compatible with full respect of the parties' rights of defence, which constitutes a fundamental principle of Community law to be respected in all circumstances, and in particular in antitrust procedures which may give rise to

(1) References in this text to Article 81 also cover Article 53 EEA when applied by the Commission in accordance with the rules laid down in Article 56 of the EEA Agreement.

(2) Cartels are agreements and/or concerted practices between two or more competitors aimed at coordinating their competitive behaviour on the market and/or influencing the relevant parameters of competition through practices such as the fixing of purchase or selling prices or other trading conditions, the allocation of production or sales quotas, the sharing of markets including bid-rigging, restrictions of imports or exports and/or anti-competitive actions against other competitors. Such practices are among the most serious violations of Article 81 EC.

(3) OJ C 298, 8.12.2006, p. 17.

(4) See point 33.

(5) OJ L 1, 4.1.2003, p. 1. Regulation as last amended by Regulation (EC) No 1419/2006 (OJ L 269, 28.9.2006, p. 1).

(6) OJ L 123, 27.4.2004, p. 18. Regulation as last amended by Regulation (EC) No 622/2008 (OJ L 171, 1.7.2008, p. 3).

penalties. It follows that the rules established to conduct the Commission proceedings to enforce Article 81 of the Treaty should ensure that the undertakings and associations of undertakings concerned are afforded the opportunity effectively to make known their views on the truth and relevance of the facts, objections and circumstances put forward by the Commission [1], throughout the administrative procedure.

2. PROCEDURE

5. The Commission retains a broad margin of discretion to determine which cases may be suitable to explore the parties' interest to engage in settlement discussions, as well as to decide to engage in them or discontinue them or to definitely settle. In this regard, account may be taken of the probability of reaching a common understanding regarding the scope of the potential objections with the parties involved within a reasonable timeframe, in view of factors such as number of parties involved, foreseeable conflicting positions on the attribution of liability, extent of contestation of the facts. The prospect of achieving procedural efficiencies in view of the progress made overall in the settlement procedure, including the scale of burden involved in providing access to non-confidential versions of documents from the file, will be considered. Other concerns such as the possibility of setting a precedent might apply. The Commission may also decide to discontinue settlement discussions if the parties to the proceedings coordinate to distort or destroy any evidence relevant to the establishment of the infringement or any part thereof or to the calculation of the applicable fine. Distortion or destruction of evidence relevant to the establishment of the infringement or any part thereof may also constitute an aggravating circumstance within the meaning of point 28 of the Commission Guidelines on the method of setting fines imposed pursuant to Article 23(2)(a) of Regulation (EC) No 1/2003 [2] (the Guidelines on fines), and may be regarded as lack of cooperation within the meaning of points 12 and 27 of the Leniency Notice. The Commission may only engage in settlement discussions upon the written request of the parties concerned.

6. While parties to the proceedings do not have a right to settle, should the Commission consider that a case may, in principle, be suitable for settlement, it will explore the interest in settlement of all parties to the same proceedings.

7. The parties to the proceedings may not disclose to any third party in any jurisdiction the contents of the discussions or of the documents which they have had access to in view of settlement, unless they have a prior explicit authorization by the Commission. Any breach in this regard may lead the Commission to disregard the undertaking's request to follow the settlement procedure. Such disclosure may also constitute an aggravating circumstance, within the meaning of point 28 of the Guidelines on fines and may be regarded as lack of cooperation within the meaning of points 12 and 27 of the Leniency Notice.

2.1. Initiation of proceedings and exploratory steps regarding settlement

8. Where the Commission contemplates the adoption of a decision pursuant to Article 7 and/or Article 23 of Regulation (EC) No 1/2003, it is required in advance to identify and recognize as parties to the proceedings the legal persons on whom a penalty may be imposed for an infringement of Article 81 of the Treaty.

9. To this end, the initiation of proceedings pursuant to Article 11(6) of Regulation (EC) No 1/2003 in view of adopting such a decision can take place at any point in time, but no later than the date on which the Commission issues a statement of objections against the parties concerned. Article 2(1) of Regulation (EC) No 773/2004 further specifies that, should the Commission consider it suitable to explore the parties' interest in engaging in settlement discussions, it will initiate proceedings no later than the date on which it either issues a statement of objections or requests the parties to express in writing their interest to engage in settlement discussions, whichever is the earlier.

10. After the initiation of proceedings pursuant to Article 11(6) of Regulation (EC) No 1/2003, the Commission becomes the only competition authority competent to apply Article 81 of the Treaty to the case in point.

11. Should the Commission consider it suitable to explore the parties' interest to engage in settlement discussions, it will set a time-limit of no less than two weeks pursuant to Articles 10a(1) and 17(3) of Regulation (EC) No 773/2004 within which parties to the same proceedings should declare in writing whether they envisage engaging in settlement discussions in view of possibly introducing settlement submissions at a later stage. This written declaration does not imply an admission by the parties of having participated in an infringement or of being liable for it.

12. Whenever the Commission initiates proceedings against two or more parties within the same undertaking, the Commission will inform each of them of the other legal entities which it identifies within the same undertaking and which are also concerned by the proceedings. In such a case, should the concerned parties wish to engage in settlement discussions, they must appoint joint representatives duly empowered to act on their behalf by the end of the time-limit referred to in point 11. The appointment of joint representatives aims solely to facilitate the settlement discussions and it does not prejudge in any way the attribution of liability for the infringement amongst the different parties.

(1) Case 85/76, *Hoffmann-La Roche* v *Commission* [1979] ECR 461, at paragraphs 9 and 11.
(2) OJ C 210, 1.9.2006, p. 2.

13. The Commission may disregard any application for immunity from fines or reduction of fines on the ground that it has been submitted after the expiry of the time-limit referred to in point 11.

2.2. **Commencing the settlement procedure: settlement discussions**

14. Should some of the parties to the proceedings request settlement discussions and comply with the requirements referred to in points 11 and 12, the Commission may decide to pursue the settlement procedure by means of bilateral contacts between the Commission Directorate-General for Competition and the settlement candidates.

15. The Commission retains discretion to determine the appropriateness and the pace of the bilateral settlement discussions with each undertaking. In line with Article 10a(2) of Regulation (EC) No 773/2004, this includes determining, in view of the progress made overall in the settlement procedure, the order and sequence of the bilateral settlement discussions as well as the timing of the disclosure of information, including the evidence in the Commission file used to establish the envisaged objections and the potential fine ([1]). Information will be disclosed in a timely manner as settlement discussions progress.

16. Such an early disclosure in the context of settlement discussions pursuant to Article 10a(2) and Article 15(1a) of Regulation (EC) No 773/2004 will allow the parties to be informed of the essential elements taken into consideration so far, such as the facts alleged, the classification of those facts, the gravity and duration of the alleged cartel, the attribution of liability, an estimation of the range of likely fines, as well as the evidence used to establish the potential objections. This will enable the parties effectively to assert their views on the potential objections against them and will allow them to make an informed decision on whether or not to settle. Upon request by a party, the Commission services will also grant it access to non-confidential versions of any specified accessible document listed in the case file at that point in time, in so far as this is justified for the purpose of enabling the party to ascertain its position regarding a time period or any other aspect of the cartel ([2]).

17. When the progress made during the settlement discussions leads to a common understanding regarding the scope of the potential objections and the estimation of the range of likely fines to be imposed by the Commission, and the Commission takes the preliminary view that procedural efficiencies are likely to be achieved in view of the progress made overall, the Commission may grant a final time-limit of at least 15 working days for an undertaking to introduce a final settlement submission pursuant to Articles 10a(2) and 17(3) of Regulation (EC) No 773/2004. The time-limit can be extended following a reasoned request. Before granting such time-limit, the parties will be entitled to have the information specified in point 16 disclosed to them upon request.

18. The parties may call upon the Hearing Officer at any time during the settlement procedure in relation to issues that might arise relating to due process. The Hearing Officer's duty is to ensure that the effective exercise of the rights of defence is respected.

19. Should the parties concerned fail to introduce a settlement submission, the procedure leading to the final decision in their regard will follow the general provisions, in particular Articles 10(2), 12(1) and 15(1) of Regulation (EC) No 773/2004, instead of those regulating the settlement procedure.

2.3. **Settlement submissions**

20. Parties opting for a settlement procedure must introduce a formal request to settle in the form of a settlement submission. The settlement submission provided for in Article 10a(2) of Regulation (EC) No 773/2004 should contain:

    (a) an acknowledgement in clear and unequivocal terms of the parties' liability for the infringement summarily described as regards its object, its possible implementation, the main facts, their legal qualification, including the party's role and the duration of their participation in the infringement in accordance with the results of the settlement discussions;

    (b) an indication ([3]) of the maximum amount of the fine the parties foresee to be imposed by the Commission and which the parties would accept in the framework of a settlement procedure;

    (c) the parties' confirmation that, they have been sufficiently informed of the objections the Commission envisages raising against them and that they have been given sufficient opportunity to make their views known to the Commission;

([1]) Reference to the 'potential fine' in Article 10a(2) of Regulation (EC) No 773/2004 affords the Commission services the possibility to inform the parties concerned by settlement discussions of an estimate of their potential fine in view of the guidance contained in the Guidelines on fines, the provisions of this Notice and the Leniency Notice, where applicable.

([2]) For that purpose, the parties will be provided with a list of all accessible documents in the case file at that point in time.

([3]) This would result from the discussions as set out in points 16 and 17.

(d) the parties' confirmation that, in view of the above, they do not envisage requesting access to the file or requesting to be heard again in an oral hearing, unless the Commission does not reflect their settlement submissions in the statement of objections and the decision;

(e) the parties' agreement to receive the statement of objections and the final decision pursuant to Articles 7 and 23 of Regulation (EC) No 1/2003 in an agreed official language of the European Community.

21. The acknowledgments and confirmations provided by the parties in view of settlement constitute the expression of their commitment to cooperate in the expeditious handling of the case following the settlement procedure. However, those acknowledgments and confirmations are conditional upon the Commission meeting their settlement request, including the anticipated maximum amount of the fine.

22. Settlement requests cannot be revoked unilaterally by the parties which have provided them unless the Commission does not meet the settlement requests by reflecting the settlement submissions first in a statement of objections and ultimately, in a final decision (see in this regard points 27 and 29). The statement of objections would be deemed to have endorsed the settlement submissions if it reflects their contents on the issues mentioned in point 20(a). Additionally, for a final decision to be deemed to have reflected the settlement submissions, it should also impose a fine which does not exceed the maximum amount indicated therein.

2.4. **Statement of objections and reply**

23. Pursuant to Article 10(1) of Regulation (EC) No 773/2004, the notification of a written statement of objections to each of the parties against whom objections are raised is a mandatory preparatory step before adopting any final decision. Therefore, the Commission will issue a statement of objections also in a settlement procedure ([1]).

24. For the parties' rights of defence to be exercised effectively, the Commission should hear their views on the objections against them and supporting evidence before adopting a final decision and take them into account by amending its preliminary analysis, where appropriate ([2]). The Commission must be able not only to accept or reject the parties' relevant arguments expressed during the administrative procedure, but also to make its own analysis of the matters put forward by them in order to either abandon such objections because they have been shown to be unfounded or to supplement and reassess its arguments both in fact and in law, in support of the objections which it maintains.

25. By introducing a formal settlement request in the form of a settlement submission prior to the notification of the statement of objections, the parties concerned enable the Commission to effectively take their views into account ([3]) already when drafting the statement of objections, rather than only before the consultation of the Advisory Committee on Restrictive Practices and Dominant Positions (hereinafter the 'Advisory Committee') or before the adoption of the final decision ([4]).

26. Should the statement of objections reflect the parties' settlement submissions, the parties concerned should within a time-limit of at least two weeks set by the Commission in accordance with Articles 10a(3) and 17(3) of Regulation (EC) No 773/2004, reply to it by simply confirming (in unequivocal terms) that the statement of objections corresponds to the contents of their settlement submissions and that they therefore remain committed to follow the settlement procedure. In the absence of such a reply, the Commission will take note of the party's breach of its commitment and may also disregard the party's request to follow the settlement procedure.

27. The Commission retains the right to adopt a statement of objections which does not reflect the parties' settlement submission. If so, the general provisions in Articles 10(2), 12(1) and 15(1) of Regulation (EC) No 773/2004 will apply. The acknowledgements provided by the parties in the settlement submission would be deemed to be withdrawn and could not be used in evidence against any of the parties to the proceedings. Hence, the parties concerned would no longer be bound by their settlement submissions and would be granted a time-limit allowing them, upon request, to present their defence anew, including the possibility to access the file and to request an oral hearing.

2.5. **Commission decision and settlement reward**

28. Upon the parties' replies to the statement of objections confirming their commitment to settle, Regulation (EC) No 773/2004 allows the Commission to proceed, without any other procedural step, to the adoption of the

([1]) In the context of settlement procedures, statements of objections should contain the information necessary to enable the parties to corroborate that it reflects their settlement submissions.

([2]) In line with settled case-law, the Commission shall base its decisions only on objections on which the parties concerned have been able to comment and, to this end, they shall be entitled to have access to the Commission's file, subject to the legitimate interest of undertakings in the protection of their business secrets.

([3]) In this regard, recital 2 of Regulation (EC) No 622/2008 states: '(…) *Such early disclosure should enable the parties concerned to put forward their views on the objections which the Commission intends to raise against them as well as on their potential liability*'.

([4]) As required by Article 11(1) of Regulation (EC) No 773/2004 and Article 27(1) of Regulation (EC) No 1/2003, respectively.

subsequent final decision pursuant to Articles 7 and/or 23 of Regulation (EC) No 1/2003, after consultation of the Advisory Committee pursuant to Article 14 of Regulation (EC) No 1/2003. In particular, this implies that no oral hearing or access to the file may be requested by those parties once their settlement submissions have been reflected by the statement of objections, in line with Articles 12(2) and 15(1a) of Regulation (EC) No 773/2004.

29. The Commission retains the right to adopt a final position which departs from its preliminary position expressed in a statement of objections endorsing the parties' settlement submissions, either in view of the opinion provided by the Advisory Committee or for other appropriate considerations in view of the ultimate decisional autonomy of the Commission to this effect. However, should the Commission opt to follow that course, it will inform the parties and notify to them a new statement of objections in order to allow for the exercise of their rights of defence in accordance with the applicable general rules of procedure. It follows that the parties would then be entitled to have access to the file, to request an oral hearing and to reply to the statement of objections. The acknowledgments provided by the parties in the settlement submissions would be deemed to have been withdrawn and could not be used in evidence against any of the parties to the proceedings.

30. The final amount of the fine in a particular case is determined in the decision finding an infringement pursuant to Article 7 and imposing a fine pursuant to Article 23 of Regulation (EC) No 1/2003.

31. In line with the Commission's practice, the fact that an undertaking cooperated with the Commission under this Notice during the administrative procedure will be indicated in the final decision, so as to explain the reason for the level of the fine.

32. Should the Commission decide to reward a party for settlement in the framework of this Notice, it will reduce by 10 % the amount of the fine to be imposed after the 10 % cap has been applied having regard to the Guidelines on the method of setting fines imposed pursuant to Article 23(2)(a) of Regulation (EC) No 1/2003 ([1]). Any specific increase for deterrence ([2]) used in their regard will not exceed a multiplication by two.

33. When settled cases involve also leniency applicants, the reduction of the fine granted to them for settlement will be added to their leniency reward.

3. GENERAL CONSIDERATIONS

34. This Notice applies to any case pending before the Commission at the time of or after its publication in the Official Journal of the European Union.

35. Access to settlement submissions is only granted to those addressees of a statement of objections who have not requested settlement, provided that they commit — together with the legal counsels getting access on their behalf — not to make any copy by mechanical or electronic means of any information in the settlement submissions to which access is being granted and to ensure that the information to be obtained from the settlement submission will solely be used for the purposes of judicial or administrative proceedings for the application of the Community competition rules at issue in the related proceedings. Other parties such as complainants will not be granted access to settlement submissions.

36. The use of such information for a different purpose during the proceeding may be regarded as lack of cooperation within the meaning of points 12 and 27 of the Leniency Notice. Moreover, if any such use is made after the Commission has already adopted a prohibition decision in the proceedings, the Commission may, in any legal proceedings before the Community Courts, ask the Court to increase the fine in respect of the responsible undertaking. Should the information be used for a different purpose, at any point in time, with the involvement of an outside counsel, the Commission may report the incident to the bar of that counsel, with a view to disciplinary action.

37. Settlement submissions made under this Notice will only be transmitted to the competition authorities of the Member States pursuant to Article 12 of Regulation (EC) No 1/2003, provided that the conditions set out in the Network Notice ([3]) are met and provided that the level of protection against disclosure awarded by the receiving competition authority is equivalent to the one conferred by the Commission.

38. Upon the applicant's request, the Commission may accept that settlement submissions be provided orally. Oral settlement submissions will be recorded and transcribed at the Commission's premises. In accordance with Article 19 of Regulation (EC) No 1/2003 and Articles 3(3) and 17(3) of Regulation (EC) No 773/2004 undertakings making oral settlement submissions will be granted the opportunity to check the technical accuracy of the recording, which will be available at the Commission's premises and to correct the substance of their oral settlement submissions and the accuracy of the transcript without delay.

39. The Commission will not transmit settlement submissions to national courts without the consent of the relevant applicants, in line with the provisions in the Commission Notice on the co-operation between the Commission and the courts of the EU Member States in the application of Articles 81 and 82 EC ([4]).

40. The Commission considers that normally public disclosure of documents and written or recorded statements (including settlement submissions) received in the context of this Notice would undermine certain public or private

([1]) OJ C 210, 1.9.2006, p. 2.
([2]) Point 30 of the Guidelines on fines.
([3]) Commission Notice on cooperation within the Network of Competition Authorities (OJ C 101, 27.4.2004, p. 43).

interests, for example the protection of the purpose of inspections and investigations, within the meaning of Article 4 of Regulation (EC) No 1049/2001 of the European Parliament and of the Council of 30 May 2001 regarding public access to European Parliament, Council and Commission documents [1], even after the decision has been taken.

41. Final decisions taken by the Commission under Regulation (EC) No 1/2003 are subject to judicial review in accordance with Article 230 of the Treaty. Moreover, as provided in Article 229 of the Treaty and Article 31 of Regulation (EC) No 1/2003, the Court of Justice has unlimited jurisdiction to review decisions on fines adopted pursuant to Article 23 of Regulation (EC) No 1/2003.

Overview of the procedure leading to the adoption of a (settlement) Decision pursuant to Articles 7 and 23 of Regulation No (EC) 1/2003

I. **Investigation as usual**

— Parties may express their interest in a hypothetical settlement.

II. **Exploratory steps regarding settlement**

— Letter to all companies (and MS) informing of the decision to initiate proceedings in view of settlement (Article 11(6)) and requesting them to express their interest in settlement.

III. **Bilateral rounds of settlement discussions**

— Disclosure and exchange of arguments on potential objections, liability, fines range.

— Disclosure of evidence used to establish potential objections, liability, fines.

— Disclosure of other non-confidential versions of documents in the file, when justified.

IV. **Settlement**

— Conditional settlement submissions by the companies, jointly represented where applicable.

— DG COMP sends acknowledgement of receipt.

V. **'Settled' statement of objections**

— Notification of streamlined SO endorsing company's settlement submissions, where appropriate.

— Company's reply to SO confirming clearly that it reflects its settlement submission.

VI. **'Settlement' Decision pursuant to Articles 7 and 23 of Regulation No (EC) 1/2003**

— Advisory Committee on a draft streamlined final decision.

If College of Commissioners agrees:

— Adoption of streamlined final decision.

IP/08/1056

Brussels, 30th June 2008

Antitrust: Commission introduces settlement procedure for cartels

The European Commission has introduced a settlement procedure for cartels which will allow the Commission to settle cartel cases through a simplified procedure. Under this procedure, parties, having seen the evidence in the Commission file, choose to acknowledge their involvement in the cartel and their liability for it. In return for this acknowledgement, the Commission can reduce the fine imposed on the parties by 10%. Settlements aim to simplify the administrative proceedings and could reduce litigation before the European Courts in cartel cases. This will in turn free Commission resources to pursue other cases. The Commission has analysed the 51 contributions received during the public consultation launched on 26th October 2007 (see IP/07/1608) and has revised the package in consultation with the Member States' competition authorities. The legislative package consists of a Commission Regulation together with a Commission Notice (the "settlement notice") explaining the new system in detail. The settlements package will enter into force on the day of its publication in the EU Official Journal.

Competition Commissioner Neelie Kroes commented: "This new settlements procedure will reinforce deterrence by helping the Commission deal more quickly with cartel cases, freeing up resources to open new investigations. Companies which are convinced that the Commission can prove their involvement in a cartel, will also benefit from quicker decisions and a fine reduction."

The Commission's ability to fight cartels hinges on the evidence gathered during its investigations. Parties found guilty of a cartel often do not go to court to contest the existence of a cartel or their involvement in it, but rather to reduce or avoid fines. This is particularly so in cases driven by leniency applications.

Under the new settlement procedure, the Commission neither negotiates nor bargains the use of evidence or the appropriate sanction, but can reward the parties' cooperation to attain procedural economies. Such cooperation is different from the voluntary production of evidence to trigger or advance the Commission's investigation, which is already covered by the Leniency Notice (see IP/06/1705). Where both the settlement reduction and the leniency reduction are applicable, they are applied cumulatively. A decision finding an infringement of the antitrust rules and imposing fines pursuant to Regulation (EC) Nº 1/2003 is adopted, irrespective of whether the standard or the settlement procedure applies.

Parties have neither the right nor the duty to settle, but in cases where companies are convinced that the Commission could prove their involvement in a cartel, a settlement can be reached with the Commission on the scope and duration of the cartel, and the individual liability of the companies involved. To this end, parties will be informed about the envisaged objections and the evidence supporting them, and will be given the occasion to state their views, before formal objections are sent. If the parties chose to introduce a settlement submission, acknowledging the objections, the Commission's statement of objections (SO) would endorse the contents of the parties' submission and so could be much shorter than an SO issued without prior cooperation. Since parties will have been heard in anticipation of the "settlement" SO, other procedural steps can be simplified so that, following confirmation by the parties, the Commission can proceed swiftly to adopt a final decision after consulting Member States in the framework of the Advisory Committee, comprised of representatives of all Member States' competition authorities.

The Commission retains the possibility, until the final decision, to revert to the standard procedure. In addition, if no settlement was explored or reached, the standard procedure would apply by default.

The amendments to Commission Regulation (EC) nº 773/2004 on procedures for applying Articles 81 and 82 of the EC Treaty accommodate the settlement option within the existing framework. Changes include:

- The introduction of "settlement" variants in provisions including the initiation of proceedings, access to file and oral hearings.
- Procedural flexibility through the possibility to choose a different sequence of procedural steps, moving some to before the adoption of the SO.

The Settlements Notice sets out the specifics of the new procedure and provides guidance for the legal and business community. Companies will be able to:

- anticipate the type and extent of cooperation expected from them in order to settle and
- estimate the individual benefits of settling.

The Commission will publish the documents in the Official Journal in all official languages. The documents are also already available at

http://ec.europa.eu/comm/competition/cartels/legislation/settlements.html

For more details, see MEMO/08/458.

Antitrust: Commission introduces settlement procedure for cartels – frequently asked questions

(see also IP/08/1056)

Why does the Commission introduce a settlement procedure?

Where the parties to a cartel case agree with the Commission findings, the Commission wants to be able to use an instrument to speed up the adoption of a Decision.

This should free resources to deal with other cases, increasing the detection rate and overall efficiency of the Commission's antitrust enforcement. This is also expected to have a positive impact on general deterrence.

When parties are convinced of the strength of the Commission's case in view of the evidence gathered during the investigation and of their internal audit, they may be ready to acknowledge their participation to an infringement and accept their liability for it, in order to shorten the procedure and obtain a reduction of the fine. A settlement procedure therefore provides scope for reducing the length of the administrative procedure given the acceptance by parties of the Commission's case.

Does the settlement procedure imply negotiations?

No. The procedure will not give companies the ability to negotiate with the Commission as to the existence of an infringement of Community law or the appropriate sanction. It can, however, reward the cooperation of companies by speeding the proceedings in cartel cases and reducing the fine.

The Commission will not bargain about evidence or its objections, however, parties will also be heard effectively in the framework of the settlement procedure and parties will therefore have the opportunity to influence the Commission's objections through argument.

Why is the settlement procedure limited to cartel cases?

In the anti-cartel field, the practical ability of the Commission to enforce the EC Treaty's rules on restrictive business practices (Article 81) hinges on the extent and probative value of the evidence gathered during the investigation. Experience shows that litigation mainly relates to circumstances having a bearing on the amount of the fine and liability of parent companies for actions undertaken by their subsidiaries.

Moreover, amongst antitrust cases, cartel investigations are comparatively more frequent and often entail a heavier procedure in view, among other things, of the multiplicity of parties and languages involved and the jurisdictional issues they raise (e.g. discovery).

Will the settlements procedure apply to all cartel cases?

Not every cartel case will be suitable for settlement. The Commission will have a broad margin of discretion to determine which cartel cases are suitable. Account will be taken of the likelihood that the Commission and all parties concerned will reach the same conclusions on the scope of the objections and the prospect of achieving procedural efficiencies. This issue is addressed in point 5 of the Notice.

On the other hand, companies are not obliged to enter settlement discussions or to ultimately settle and the Commission may only apply the settlement procedure upon parties' explicit request.

What are the main differences between the current Commission's leniency programme and the settlements procedure?

The Commission leniency programme is an investigation tool (see IP/06/1705). It aims at discovering cartel cases and collecting evidence to discharge the Commission's burden of proof. The "Leniency Notice" rewards companies who voluntarily disclose to the Commission the existence of a cartel and bring evidence to prove the infringement. The reduction of the fine varies widely depending on the timing and significant added value of the information and evidence provided.

In contrast, settlement aims at simplifying and expediting the procedure leading to the adoption of a formal decision, thereby allowing for procedural savings and the internal redeployment of enforcement resources. The "Settlements Notice" rewards concrete contributions to procedural efficiency. All parties settling in the same case will receive equivalent reductions of the fine (10%), because their contribution to procedural savings will be equivalent.

Will the settlement reduction have a negative impact on the leniency programme?

Even with a settlement procedure, the incentive for companies to ask for leniency will remain unchanged.

First of all, the expected reduction of fine under the leniency programme is considerably more significant than the 10% settlements reduction. Secondly, leniency will not be available once settlement discussions start, which will be after the purely investigative phase.

To the extent that companies have an interest to get the maximum reduction of fine, they will therefore have a strong interest to favour leniency. However, as the reductions of fine are cumulative, companies will always have an incentive to ask for both.

What are the main differences between "commitment" decisions and procedures on the one hand and "settlement" decisions and procedures on the other?

Commitment decisions are adopted on the basis of Article 9 of Regulation (EC) Nº 1/2003. They do not establish an infringement or impose a fine, but bring a suspect behaviour to an end by imposing on companies the commitments offered to meet the Commission concerns. Commitment decisions render the commitments legally binding and conclude that there are no longer grounds for action by the Commission. Therefore, they do not constitute precedents to establish recidivism for subsequent infringements. Commitment decisions are not appropriate in cartel cases.

Settlement decisions are only foreseen in cartel cases. They are adopted pursuant to Articles 7 and 23 of Regulation (EC) Nº 1/2003, which are the standard legal basis for Commission Decisions acting against violations of Articles 81 and 82 EC. Therefore, settlement decisions establish the existence of an infringement, describing and proving all the relevant parameters thereof, require the termination of the infringement and impose a fine. They constitute a precedent valid to establish recidivism for subsequent similar infringements and preclude the adoption of another decision for the same facts and pursuant to the same legal basis by the Commission or any EU National Competition Authority.

When can a company request the initiation of settlement discussions? When do settlement discussions start?

Any company which becomes aware of the existence of an investigation (e.g. a leniency applicant, the addressee of a measure of investigation in general or the addressee of a decision of inspection in particular) may already at that stage indicate to the Commission its interest in exploring settlements.

Settlement discussions start only once the Commission has gathered and analysed evidence and is prepared to raise objections. Should the Commission consider a case suitable for settlement, it will initiate proceedings once the investigation (leniency, inspections) takes it to the stage of drafting a statement of objections. It will then explore the interest in settlement discussions of all parties' to the proceedings by letter setting a final time-limit to express their interest in writing.

Why does the Commission require parties to the procedure belonging to the same group of undertakings to appoint a joint representative?

This is necessary to have fruitful and efficient discussions with each of the undertakings concerned. In this regard, joint representation will not prejudge the finding of joint and several liability amongst parties of the same undertaking or group.

When and how will settlements discussions take place?

Upon parties' written request, the Commission may decide to open discussions rounds to be held between the initiation of proceedings and the adoption of the statement of objections.

Settlement discussions will tackle in a timely manner the alleged facts, their classification, the gravity and the duration of the infringement and on the liability for the individual involvement in the cartel on the basis of the evidence in the file supporting the envisaged objections. This includes discussing the potential maximum fine net of any other reduction. Accessible versions of other documents (than evidence) listed in the case file may be disclosed upon reasoned request when it is justified to enable a company to ascertain its position on a given time period or issue, and where this disclosure does not jeopardise the overall efficiency sought with the settlement procedure. This issue is addressed in Articles 15 to 17 of the Notice.

If the parties are convinced of the case the Commission may set a time-limit for them to introduce a formal request ("settlement submission") to settle the case. The settlement submission would be formulated according to a specified template and drafted along with the results of the settlement discussions. The conditional settlements submission will contain in particular the acknowledgement of their participation to the infringement, their commitment to follow the settlement procedure and an estimate of the potential fine, in anticipation of the formal objections.

What are the main conditions to obtain a settlement decision for a company?

According to article 20 of the Notice, the parties who want to settle a case with the Commission have to declare their interest in settlement discussions, appoint a representative per undertaking and submit a settlement submission in the terms discussed with the Commission and containing:

- an acknowledgement of the parties' liability for the infringement
- an indication of the maximum amount of the fines the parties foresee to be imposed by the Commission
- the parties' confirmation that they have been informed of the Commission's objections in a satisfactory manner and that they have been given the opportunity to be heard
- the parties' confirmation that they will request neither access to the file nor a formal oral hearing
- the parties' agreement to receive the statement of objections and the final decision of the Commission in a given language of the European Community.

By introducing a settlement submission, the parties commit to follow the settlement procedure subject to the condition that the Commission Decision ultimately reflects the contents of the settlement submission and it does not impose a fine higher that the maximum fine indicated in it.

How are settlement submissions protected against discovery orders from other jurisdictions? Can the parties introduce settlement submissions orally?

In cases where all parties settle, settlement submissions will not be rendered accessible, because no access to the file will be provided once the "settled" statement of objections is issued. In hybrid cases, the parties who do not settle will only get access to other parties' settlement submissions at Commission premises, and they are not allowed to make any mechanical copy thereof. The information obtained from the settlement submission may solely be used for their defence in procedures where Community competition rules are at issue. Other parties such as complainants will not be granted access to settlement submissions.

Settlement submissions can be introduced both in writing and orally.

These provisions, together with other more detailed ones in paragraphs 35 to 40 of the Notice, provide settlement submissions with the same level of protection as submissions introduced under the Leniency Notice.

Can the parties to the proceedings disclose to any other third party the content of bilateral settlement discussions?

The parties to the proceedings and their legal representatives are not allowed to disclose to any third party the content of their discussions with the Commission's services or of the documents which they have had access to. A breach of this rule may constitute an aggravating circumstance to be taken into account in setting the fine.

What will happen if the statement of objections or the final decision does not reflect the contents of the conditional settlements submissions?

If the Commission does not reflect the contents of settlements submissions of the parties in a statement of objections or in a final decision, the acknowledgments provided by the relevant parties are deemed to have been withdrawn and they cannot be used against them. Moreover, the relevant parties would be able to challenge the Commission findings within the administrative proceedings and the ordinary procedure and all these steps would apply.

Are the companies' rights of defence restricted under the settlements procedure compared to those under the ordinary procedure?

The rights to have access to the file or to request an oral hearing are exercised upon parties' request also in the framework of the ordinary procedure and a party can choose self-incrimination as a line of defence in view of possible rewards also in the framework of the ordinary procedure. However, isolated parties' choices do not result in procedural efficiencies. The settlement procedure simply provides incentives and organizes the procedural steps to promote similar procedural choices by the parties to the same proceedings in order to obtain procedural efficiencies.

Parties' rights of defence under the settlement procedure remain the same as in the ordinary procedure. They are simply exercised in the framework of bilateral discussions both orally and by means of a submission, in anticipation of the formal notification of objections.

Parties choose between the settlement procedure and the ordinary procedure freely and in a fully informed manner.

By introducing a settlement phase, the Commission increases companies' options to be informed earlier of potential objections and of the evidence supporting them. In addition, companies would be informed of the likely range of fines prior to the adoption of the final decision. On the basis of these facts and documents, the parties have the opportunity to express their views to the Commission, in line with the case-law of the Court of Justice as mentioned in particular in article 16 of the Commission's notice. This enables companies to influence the contents of the statement of objections and, thereby, of the decision itself. Full access to file remains available after the SO for those who do not settle, as it is the case today, and the parties may decide at any moment to stop the settlements discussions or not to send a settlement submission. Finally, any settlement Decision is open to appeal.

May the parties call upon the Hearing Officer during the settlements procedure?

The parties may call upon the Hearing Officer at any time during the settlements procedure in relation to issues that might arise relating to due process. This constitutes an additional guarantee for the respect of the rights of defence, as is the case in the ordinary procedure.

How will the 10% reduction of fine be determined for settlement decisions?

Pursuant to article 32 of the Commission notice, the settlement reduction will be deducted from the fine that a company would normally have to pay according to the provisions of the current Commission's guidelines on fines. If the fine calculated before the settlements reduction is capped to 10% of the worldwide turnover according to Article 23 of Regulation (EC) Nº 1/2003, the settlement reduction will be applied to the resulting amount.

When applicable, the reduction of fine given under the settlements procedure will be cumulative with the reduction of fine under the leniency program.

Is the settlement reduction the same for all parties settling?

The reduction of the fine rewarding companies for having settled a case with the Commission is equivalent for each party having settled (10%).

Is the Commission bound by the settlement agreement that was previously concluded between companies and the Commission's services?

The respect of the principle of collegiality of Commission Decisions and the benefit of having Advisory Committee meetings mean that the College of Commissioners may legitimately depart from the parties' submissions or the results of their discussions with the Commission's services up until the final Decision. However, as the Notice specifies, the Commission may not adopt a decision departing from the "settled" objections without informing the parties concerned and adopting a new statement of objections subject to the ordinary rules of procedure and which cannot be based on acknowledgements provided by the parties in view of settlement. However, this should occur only exceptionally if the usefulness of the settlement instrument is to be preserved.

Does a settlement decision imply that a company who accepted to acknowledge its participation to an infringement of Community law will not make an appeal to the Court of first instance?

No. A company who is the subject of an antitrust decision after a settlement with the Commission can still appeal the Commission Decision to the Court of First Instance

Commission Notice on Immunity from fines and reduction of fines in cartel cases

(Text with EEA relevance)

(2006/C 298/11)

I. INTRODUCTION

(1) This notice sets out the framework for rewarding cooperation in the Commission investigation by undertakings which are or have been party to secret cartels affecting the Community. Cartels are agreements and/or concerted practices between two or more competitors aimed at coordinating their competitive behaviour on the market and/or influencing the relevant parameters of competition through practices such as the fixing of purchase or selling prices or other trading conditions, the allocation of production or sales quotas, the sharing of markets including bid-rigging, restrictions of imports or exports and/or anti-competitive actions against other competitors. Such practices are among the most serious violations of Article 81 EC ([1]).

(2) By artificially limiting the competition that would normally prevail between them, undertakings avoid exactly those pressures that lead them to innovate, both in terms of product development and the introduction of more efficient production methods. Such practices also lead to more expensive raw materials and components for the Community companies that purchase from such producers. They ultimately result in artificial prices and reduced choice for the consumer. In the long term, they lead to a loss of competitiveness and reduced employment opportunities.

(3) By their very nature, secret cartels are often difficult to detect and investigate without the cooperation of undertakings or individuals implicated in them. Therefore, the Commission considers that it is in the Community interest to reward undertakings involved in this type of illegal practices which are willing to put an end to their participation and co-operate in the Commission's investigation, independently of the rest of the undertakings involved in the cartel. The interests of consumers and citizens in ensuring that secret cartels are detected and punished outweigh the interest in fining those undertakings that enable the Commission to detect and prohibit such practices.

(4) The Commission considers that the collaboration of an undertaking in the detection of the existence of a cartel has an intrinsic value. A decisive contribution to the opening of an investigation or to the finding of an infringement may justify the granting of immunity from any fine to the undertaking in question, on condition that certain additional requirements are fulfilled.

(5) Moreover, co-operation by one or more undertakings may justify a reduction of a fine by the Commission. Any reduction of a fine must reflect an undertaking's actual contribution, in terms of quality and timing, to the Commission's establishment of the infringement. Reductions are to be limited to those undertakings that provide the Commission with evidence that adds significant value to that already in the Commission's possession.

(6) In addition to submitting pre-existing documents, undertakings may provide the Commission with voluntary presentations of their knowledge of a cartel and their role therein prepared specially to be submitted under this leniency programme. These initiatives have proved to be useful for the effective investigation and termination of cartel infringements and they should not be discouraged by discovery orders issued in civil litigation. Potential leniency applicants might be dissuaded from cooperating with the Commission under this Notice if this could impair their position in civil proceedings, as compared to companies who do not cooperate. Such undesirable effect would significantly harm the public interest in ensuring effective public enforcement of Article 81 EC in cartel cases and thus its subsequent or parallel effective private enforcement.

(7) The supervisory task conferred on the Commission by the Treaty in competition matters does not only include the duty to investigate and punish individual infringements, but also encompasses the duty to pursue a general policy. The protection of corporate statements in the public interest is not a bar to their disclosure to other addressees of the statement of objections in order to safeguard their rights of defence in the procedure before the Commission, to the extent that it is technically possible to combine both interests by rendering corporate statements accessible only at the Commission premises and normally on a single occasion following the formal notification of the objections. Moreover, the Commission will process personal data in the context of this notice in conformity with its obligations under Regulation (EC) No 45/2001. ([2])

II. IMMUNITY FROM FINES

A. Requirements to qualify for immunity from fines

(8) The Commission will grant immunity from any fine which would otherwise have been imposed to an undertaking disclosing its participation in an alleged cartel

([1]) Reference in this text to Article 81 EC also covers Article 53 EEA when applied by the Commission according to the rules laid down in Article 56 of the EEA Agreement.

([2]) OJ L 8, 12.1.2001, p. 1.

affecting the Community if that undertaking is the first to submit information and evidence which in the Commission's view will enable it to:

(a) carry out a targeted inspection in connection with the alleged cartel [1]; or

(b) find an infringement of Article 81 EC in connection with the alleged cartel.

(9) For the Commission to be able to carry out a targeted inspection within the meaning of point (8)(a), the undertaking must provide the Commission with the information and evidence listed below, to the extent that this, in the Commission's view, would not jeopardize the inspections:

(a) A corporate statement [2] which includes, in so far as it is known to the applicant at the time of the submission:

— A detailed description of the alleged cartel arrangement, including for instance its aims, activities and functioning; the product or service concerned, the geographic scope, the duration of and the estimated market volumes affected by the alleged cartel; the specific dates, locations, content of and participants in alleged cartel contacts, and all relevant explanations in connection with the pieces of evidence provided in support of the application.

— The name and address of the legal entity submitting the immunity application as well as the names and addresses of all the other undertakings that participate(d) in the alleged cartel;

— The names, positions, office locations and, where necessary, home addresses of all individuals who, to the applicant's knowledge, are or have been involved in the alleged cartel, including those individuals which have been involved on the applicant's behalf;

— Information on which other competition authorities, inside or outside the EU, have been approached or are intended to be approached in relation to the alleged cartel; and

(b) Other evidence relating to the alleged cartel in possession of the applicant or available to it at the time of the submission, including in particular any evidence contemporaneous to the infringement.

(10) Immunity pursuant to point (8)(a) will not be granted if, at the time of the submission, the Commission had already sufficient evidence to adopt a decision to carry out an inspection in connection with the alleged cartel or had already carried out such an inspection.

(11) Immunity pursuant to point (8)(b) will only be granted on the cumulative conditions that the Commission did not have, at the time of the submission, sufficient evidence to find an infringement of Article 81 EC in connection with the alleged cartel and that no undertaking had been granted conditional immunity from fines under point (8)(a) in connection with the alleged cartel. In order to qualify, an undertaking must be the first to provide contemporaneous, incriminating evidence of the alleged cartel as well as a corporate statement containing the kind of information specified in point (9)(a), which would enable the Commission to find an infringement of Article 81 EC,.

(12) In addition to the conditions set out in points (8)(a), (9) and (10) or in points (8)(b) and 11, all the following conditions must be met in any case to qualify for any immunity from a fine:

(a) The undertaking cooperates genuinely [3], fully, on a continuous basis and expeditiously from the time it submits its application throughout the Commission's administrative procedure. This includes:

— providing the Commission promptly with all relevant information and evidence relating to the alleged cartel that comes into its possession or is available to it;

— remaining at the Commission's disposal to answer promptly to any request that may contribute to the establishment of the facts;

— making current (and, if possible, former) employees and directors available for interviews with the Commission;

— not destroying, falsifying or concealing relevant information or evidence relating to the alleged cartel; and

— not disclosing the fact or any of the content of its application before the Commission has issued a statement of objections in the case, unless otherwise agreed;

(1) The assessment of the threshold will have to be carried out ex ante, i.e. without taking into account whether a given inspection has or has not been successful or whether or not an inspection has or has not been carried out. The assessment will be made exclusively on the basis of the type and the quality of the information submitted by the applicant.

(2) Corporate statements may take the form of written documents signed by or on behalf of the undertaking or be made orally.

(3) This requires in particular that the applicant provides accurate, not misleading, and complete information. Cfr judgement of the European Court of Justice of 29 June 2006 in case C-301/04 P, Commission v SGL Carbon AG a.o., at paragraphs 68-70, and judgement of the European Court of Justice of 28 June 2005 in cases C-189/02 P, C-202/02 P, C-205/02 P, C-208/02 P and C-213/02 P, Dansk Rørindustri A/S a.o. v. Commission, at paragraphs 395-399.

(b) The undertaking ended its involvement in the alleged cartel immediately following its application, except for what would, in the Commission's view, be reasonably necessary to preserve the integrity of the inspections;

(c) When contemplating making its application to the Commission, the undertaking must not have destroyed, falsified or concealed evidence of the alleged cartel nor disclosed the fact or any of the content of its contemplated application, except to other competition authorities.

(13) An undertaking which took steps to coerce other undertakings to join the cartel or to remain in it is not eligible for immunity from fines. It may still qualify for a reduction of fines if it fulfils the relevant requirements and meets all the conditions therefor.

B. **Procedure**

(14) An undertaking wishing to apply for immunity from fines should contact the Commission's Directorate General for Competition. The undertaking may either initially apply for a marker or immediately proceed to make a formal application to the Commission for immunity from fines in order to meet the conditions in points (8)(a) or (8)(b), as appropriate. The Commission may disregard any application for immunity from fines on the ground that it has been submitted after the statement of objections has been issued.

(15) The Commission services may grant a marker protecting an immunity applicant's place in the queue for a period to be specified on a case-by-case basis in order to allow for the gathering of the necessary information and evidence. To be eligible to secure a marker, the applicant must provide the Commission with information concerning its name and address, the parties to the alleged cartel, the affected product(s) and territory(-ies), the estimated duration of the alleged cartel and the nature of the alleged cartel conduct. The applicant should also inform the Commission on other past or possible future leniency applications to other authorities in relation to the alleged cartel and justify its request for a marker. Where a marker is granted, the Commission services determine the period within which the applicant has to perfect the marker by submitting the information and evidence required to meet the relevant threshold for immunity. Undertakings which have been granted a marker cannot perfect it by making a formal application in hypothetical terms. If the applicant perfects the marker within the period set by the Commission services, the information and evidence provided will be deemed to have been submitted on the date when the marker was granted.

(16) An undertaking making a formal immunity application to the Commission must:

(a) provide the Commission with all information and evidence relating to the alleged cartel available to it, as specified in points (8) and (9), including corporate statements; or

(b) initially present this information and evidence in hypothetical terms, in which case the undertaking must present a detailed descriptive list of the evidence it proposes to disclose at a later agreed date. This list should accurately reflect the nature and content of the evidence, whilst safeguarding the hypothetical nature of its disclosure. Copies of documents, from which sensitive parts have been removed, may be used to illustrate the nature and content of the evidence. The name of the applying undertaking and of other undertakings involved in the alleged cartel need not be disclosed until the evidence described in its application is submitted. However, the product or service concerned by the alleged cartel, the geographic scope of the alleged cartel and the estimated duration must be clearly identified.

(17) If requested, the Directorate General for Competition will provide an acknowledgement of receipt of the undertaking's application for immunity from fines, confirming the date and, where appropriate, time of the application.

(18) Once the Commission has received the information and evidence submitted by the undertaking under point (16)(a) and has verified that it meets the conditions set out in points (8)(a) or (8)(b), as appropriate, it will grant the undertaking conditional immunity from fines in writing.

(19) If the undertaking has presented information and evidence in hypothetical terms, the Commission will verify that the nature and content of the evidence described in the detailed list referred to in point (16)(b) will meet the conditions set out in points (8)(a) or (8)(b), as appropriate, and inform the undertaking accordingly. Following the disclosure of the evidence no later than on the date agreed and having verified that it corresponds to the description made in the list, the Commission will grant the undertaking conditional immunity from fines in writing.

(20) If it becomes apparent that immunity is not available or that the undertaking failed to meet the conditions set out in points (8)(a) or (8)(b), as appropriate, the Commission will inform the undertaking in writing. In such case, the undertaking may withdraw the evidence disclosed for the purposes of its immunity application or request the Commission to consider it under section III of this notice. This does not prevent the Commission from using its normal powers of investigation in order to obtain the information.

(21) The Commission will not consider other applications for immunity from fines before it has taken a position on an existing application in relation to the same alleged infringement, irrespective of whether the immunity application is presented formally or by requesting a marker.

(22) If at the end of the administrative procedure, the undertaking has met the conditions set out in point (12), the Commission will grant it immunity from fines in the relevant decision. If at the end of the administrative procedure, the undertaking has not met the conditions set out in point (12), the undertaking will not benefit from any favorable treatment under this Notice. If the Commission, after having granted conditional immunity ultimately finds that the immunity applicant has acted as a coercer, it will withhold immunity.

III. REDUCTION OF A FINE

A. Requirements to qualify for reduction of a fine

(23) Undertakings disclosing their participation in an alleged cartel affecting the Community that do not meet the conditions under section II above may be eligible to benefit from a reduction of any fine that would otherwise have been imposed.

(24) In order to qualify, an undertaking must provide the Commission with evidence of the alleged infringement which represents significant added value with respect to the evidence already in the Commission's possession and must meet the cumulative conditions set out in points (12)(a) to (12)(c) above.

(25) The concept of 'added value' refers to the extent to which the evidence provided strengthens, by its very nature and/or its level of detail, the Commission's ability to prove the alleged cartel. In this assessment, the Commission will generally consider written evidence originating from the period of time to which the facts pertain to have a greater value than evidence subsequently established. Incriminating evidence directly relevant to the facts in question will generally be considered to have a greater value than that with only indirect relevance. Similarly, the degree of corroboration from other sources required for the evidence submitted to be relied upon against other undertakings involved in the case will have an impact on the value of that evidence, so that compelling evidence will be attributed a greater value than evidence such as statements which require corroboration if contested.

(26) The Commission will determine in any final decision adopted at the end of the administrative procedure the level of reduction an undertaking will benefit from, relative to the fine which would otherwise be imposed. For the:

— first undertaking to provide significant added value: a reduction of 30-50 %,

— second undertaking to provide significant added value: a reduction of 20-30 %,

— subsequent undertakings that provide significant added value: a reduction of up to 20 %.

In order to determine the level of reduction within each of these bands, the Commission will take into account the time at which the evidence fulfilling the condition in point (24) was submitted and the extent to which it represents added value.

If the applicant for a reduction of a fine is the first to submit compelling evidence in the sense of point (25) which the Commission uses to establish additional facts increasing the gravity or the duration of the infringement, the Commission will not take such additional facts into account when setting any fine to be imposed on the undertaking which provided this evidence.

B. Procedure

(27) An undertaking wishing to benefit from a reduction of a fine must make a formal application to the Commission and it must present it with sufficient evidence of the alleged cartel to qualify for a reduction of a fine in accordance with point (24) of this Notice. Any voluntary submission of evidence to the Commission which the undertaking that submits it wishes to be considered for the beneficial treatment of section III of this Notice must be clearly identified at the time of its submission as being part of a formal application for a reduction of a fine.

(28) If requested, the Directorate General for Competition will provide an acknowledgement of receipt of the undertaking's application for a reduction of a fine and of any subsequent submissions of evidence, confirming the date and, where appropriate, time of each submission. The Commission will not take any position on an application for a reduction of a fine before it has taken a position on any existing applications for conditional immunity from fines in relation to the same alleged cartel.

(29) If the Commission comes to the preliminary conclusion that the evidence submitted by the undertaking constitutes significant added value within the meaning of points (24) and (25), and that the undertaking has met the conditions of points (12) and (27), it will inform the undertaking in writing, no later than the date on which a statement of objections is notified, of its intention to apply a reduction of a fine within a specified band as provided in point (26). The Commission will also, within the same time frame, inform the undertaking in writing if it comes to the preliminary conclusion that the undertaking does not qualify for a reduction of a fine. The Commission may disregard any application for a reduction of fines on the grounds that it has been submitted after the statement of objections has been issued.

(30) The Commission will evaluate the final position of each undertaking which filed an application for a reduction of a fine at the end of the administrative procedure in any decision adopted. The Commission will determine in any such final decision:

(a) whether the evidence provided by an undertaking represented significant added value with respect to the evidence in the Commission's possession at that same time;

(b) whether the conditions set out in points (12)(a) to (12)(c) above have been met;

(c) the exact level of reduction an undertaking will benefit from within the bands specified in point (26).

If the Commission finds that the undertaking has not met the conditions set out in point (12), the undertaking will not benefit from any favourable treatment under this Notice.

IV. CORPORATE STATEMENTS MADE TO QUALIFY UNDER THIS NOTICE

(31) A corporate statement is a voluntary presentation by or on behalf of an undertaking to the Commission of the undertaking's knowledge of a cartel and its role therein prepared specially to be submitted under this Notice. Any statement made vis-à-vis the Commission in relation to this notice, forms part of the Commission's file and can thus be used in evidence.

(32) Upon the applicant's request, the Commission may accept that corporate statements be provided orally unless the applicant has already disclosed the content of the corporate statement to third parties. Oral corporate statements will be recorded and transcribed at the Commission's premises. In accordance with Article 19 of Council Regulation (EC) No 1/2003 [1] and Articles 3 and 17 of Commission Regulation (EC) No 773/2004 [2], undertakings making oral corporate statements will be granted the opportunity to check the technical accuracy of the recording, which will be available at the Commission's premises and to correct the substance of their oral statements within a given time limit. Undertakings may waive these rights within the said time-limit, in which case the recording will from that moment on be deemed to have been approved. Following the explicit or implicit approval of the oral statement or the submission of any corrections to it, the undertaking shall listen to the recordings at the Commission's premises and check the accuracy of the transcript within a given time limit. Non-compliance with the last requirement may lead to the loss of any beneficial treatment under this Notice.

(33) Access to corporate statements is only granted to the addressees of a statement of objections, provided that they commit, — together with the legal counsels getting access on their behalf -, not to make any copy by mechanical or electronic means of any information in the corporate statement to which access is being granted and to ensure that the information to be obtained from the corporate statement will solely be used for the purposes mentioned below. Other parties such as complainants will not be granted access to corporate statements. The Commission considers that this specific protection of a corporate statement is not justified as from the moment when the applicant discloses to third parties the content thereof.

(34) In accordance with the Commission Notice on rules for access to the Commission file [3], access to the file is only granted to the addressees of a statement of objections on the condition that the information thereby obtained may only be used for the purposes of judicial or administrative proceedings for the application of the Community competition rules at issue in the related administrative proceedings. The use of such information for a different purpose during the proceeding may be regarded as lack of cooperation within the meaning of points (12) and (27) of this Notice. Moreover, if any such use is made after the Commission has already adopted a prohibition decision in the proceeding, the Commission may, in any legal proceedings before the Community Courts, ask the Court to increase the fine in respect of the responsible undertaking. Should the information be used for a different purpose, at any point in time, with the involvement of an outside counsel, the Commission may report the incident to the bar of that counsel, with a view to disciplinary action.

(35) Corporate statements made under the present Notice will only be transmitted to the competition authorities of the Member States pursuant to Article 12 of Regulation No 1/2003, provided that the conditions set out in the Network Notice [4] are met and provided that the level of protection against disclosure awarded by the receiving competition authority is equivalent to the one conferred by the Commission.

V. GENERAL CONSIDERATIONS

(36) The Commission will not take a position on whether or not to grant conditional immunity, or otherwise on whether or not to reward any application, if it becomes apparent that the application concerns infringements covered by the five years limitation period for the imposition of penalties stipulated in Article 25(1)(b) of Regulation 1/2003, as such applications would be devoid of purpose.

---

[1] OJ L 1, 4.1.2003, p. 1.

[2] OJ L 123, 27.4.2004, p. 18.

[3] OJ C 325, 22.12.2005, p. 7.

[4] Commission Notice on cooperation within the Network of Competition Authorities, OJ C 101, 27.4.2004, p. 43.

(37) From the date of its publication in the Official Journal, this notice replaces the 2002 Commission notice on immunity from fines and reduction of fines in cartel cases for all cases in which no undertaking has contacted the Commission in order to take advantage of the favourable treatment set out in that notice. However, points (31) to (35) of the current notice will be applied from the moment of its publication to all pending and new applications for immunity from fines or reduction of fines.

(38) The Commission is aware that this notice will create legitimate expectations on which undertakings may rely when disclosing the existence of a cartel to the Commission.

(39) In line with the Commission's practice, the fact that an undertaking cooperated with the Commission during its administrative procedure will be indicated in any decision, so as to explain the reason for the immunity or reduction of the fine. The fact that immunity or reduction in respect of fines is granted cannot protect an undertaking from the civil law consequences of its participation in an infringement of Article 81 EC.

(40) The Commission considers that normally public disclosure of documents and written or recorded statements received in the context of this notice would undermine certain public or private interests, for example the protection of the purpose of inspections and investigations, within the meaning of Article 4 of Regulation (EC) No 1049/2001 ([1]), even after the decision has been taken.

Brussels, 7th December 2006

Competition: Commission adopts revised Leniency Notice to reward companies that report cartels

The European Commission has taken another important step to uncover and put an end to hard-core cartels by adopting a revised Notice on Immunity from Fines and Reduction of Fines in Cartel Cases (the "Leniency Notice"). The revised Leniency Notice clarifies the information an applicant needs to provide to the Commission to benefit from immunity, and introduces a so-called marker system for immunity applicants. It also clarifies the conditions for immunity and reduction of fines and introduces a procedure to protect corporate statements made by companies under the Leniency Notice from being made available to claimants in civil damage proceedings. The revision takes account of public consultations in February and October 2006.

Competition Commissioner Neelie Kroes said "Secret cartels undermine healthy economic activity. To root out cartels we need heavy sanctions to deter cartels and an efficient leniency policy providing incentives to report them. These changes will further strengthen the effectiveness of the Commission's leniency programme in the detection of cartels and offer clearer guidance for business."

Leniency allows the Commission to offer full immunity or a reduction in the fines that would otherwise have been imposed on a cartel member in exchange for disclosure of information on the cartel and cooperation with the investigation.

Main aspects of the revision

Improvements have been made in several areas of the Leniency Notice to provide more guidance to applicants and to increase the transparency of the procedure. These improvements reflect more than four years of experience in applying the 2002 Leniency Notice (see IP/02/247 and MEMO/02/23) and are also fully in line with the European Competition Network's Model Leniency Programme (see IP/06/1288 and MEMO/06/356).

The **immunity thresholds** have been clarified to:

- set out explicitly and clearly what type of information and evidence the applicants should submit to qualify for immunity
- link the threshold for immunity to information needed by the Commission to carry out a "targeted" inspection in connection with the alleged cartel, which will allow for the inspections to be better focused
- clarify that applicants are not required to produce in their initial application for immunity information and evidence, the collection of which would jeopardise a Commission inspection, and which can be provided under the continuous cooperation obligation
- state explicitly that the applicants need to disclose their participation in the cartel.

Concerning the **threshold for reduction of fines** the Notice makes it clear that evidence that requires little or no corroboration will have greater value. Such evidence will also be rewarded outside the normal bands for reduction of fines, when it is used to establish any additional facts increasing the gravity or duration of the infringement.

The **conditions for immunity and reduction of fines** have been made more explicit by:

- introducing flexibility as to the point in time when applicants should terminate their participation in the alleged cartel activities
- clarifying that genuine cooperation requires in particular that the applicant provides accurate, and complete information that is not misleading
- extending the obligation not to destroy, falsify or conceal information to cover also the period when the applicant was contemplating making an application
- stating explicitly that the obligation on continuous cooperation concerns also applications for a reduction of fines.

Another innovation in the revision is the **introduction of a discretionary marker system**. Where justified, an application can be accepted on the basis of only limited information. The applicant is then granted time to perfect the information and evidence to qualify for immunity.

In order to ensure that applicants that cooperate with the Commission investigation are not impaired in their position in civil proceedings, as compared to companies who do not cooperate, the Commission has developed a **procedure to protect corporate statements** given under the Leniency Notice from discovery in civil damage procedures. This is essential to maintain effectiveness of the Leniency Notice.

For more information on changes to the Leniency Notice, see MEMO/06/469 and MEMO/06/470.

Entry into force

The revised Leniency Notice will come into force on 8th December 2006, when it is published in the EU Official Journal. From that date it will be applicable to companies which file for leniency in a cartel case, as long as no other company is already co-operating with the Commission under the Leniency Notice in the same cartel. The procedure to protect corporate statements will be applied from the moment of publication of the Notice to all pending and new applications for leniency.

The revised notice is available on the Commission's competition web-site: http://ec.europa.eu/comm/competition/cartels/legislation/leniency_legislation.html

Comments on the public consultation are available at:
http://ec.europa.eu/comm/competition/cartels/legislation/leniency_consultation.html

For general information on the Commission’s action against cartels, see MEMO/06/451.

MEMO/06/469

Brussels, 7th December 2006

Competition: revised Leniency Notice – frequently asked questions

(see also IP/06/1705)

The European Commission has taken another important step to uncover and put an end to hard-core cartels by adopting a revised Notice on Immunity from Fines and Reduction of Fines in Cartel Cases (the "Leniency Notice", see IP/06/1705). The revision takes account of public consultations in February and October 2006.

I. Threshold for immunity

Has the threshold been changed?

There is now more clarity. Experience shows that there was a need for further guidance for potential applicants on the threshold that applies in situations where the Commission does not yet have enough information to carry out an inspection (point 8(a) threshold of the Notice). To avoid uncertainties as to what type of information and evidence is required to meet this threshold for immunity, the Notice gives a list which helps applicants to anticipate what is required. In addition, the Commission will continue the current practice of discussing with an applicant the collection and submission of information and evidence. Any supplementary submissions by an applicant can be taken into account as a part of its application, until such time as the Commission receives another application for immunity in the same case or, if the applicant has been granted a marker (a new concept in the revised Notice, see point on Marker system below for details), until the marker period expires.

Why has the concept of a "targeted inspection" been added to the threshold? What is meant by a "targeted inspection"?

The Notice specifies that the applicants should provide sufficient evidence to enable the Commission to carry out the inspection in a "targeted" manner. An immunity applicant by definition has been a party to an alleged cartel that is subject to the application. It should therefore be in a position to provide to the Commission such "insider" information on the cartel that would allow he Commission to better target its inspection with more precise information as to, for instance, what to look for and where in terms of evidence. The information and evidence listed in point 9 of the Notice aims at meeting this need.

The Notice also specifies that the assessment of the "targeted inspection" threshold will have to be carried out ex ante, i.e. without taking into account whether a given inspection has been successful or whether an inspection has been carried out. The assessment will be made exclusively on the basis of the type and quality of the information submitted by the applicant.

Will the information and evidence listed in point 9 be enough to qualify for immunity under point 8(a)?

The purpose of the Notice is that by providing the information and evidence listed in point 9, the applicant can qualify for point 8(a) immunity. In line with the spirit of cooperation expected from the applicant, the latter should not, however, limit itself strictly to providing only the things specified in point 9, if it has at the time of the application more information or evidence available.

How exhaustive must the applicant be in providing information and evidence to qualify for conditional immunity? What is meant by "to the extent that this would not, in the Commission's view, jeopardise the inspections"?

To qualify for point 8(a) immunity, an applicant needs to provide the information and evidence listed in point 9. However, as specified in the Notice, the purpose is that an applicant should not take any measure in preparing its application "that would jeopardise the inspections". If an applicant learns that its internal inquiries, carried out for the purposes of completing or supplementing an application, raise a real concern of alerting other cartel members prior to an inspection, it should communicate its concerns to the Commission. It should also be pointed out that under the continuous cooperation obligation of point 12, the applicant should during the whole administrative proceedings provide the Commission promptly with all relevant information and evidence relating to the alleged cartel that comes into its possession or is available to it. Therefore, if the applicant comes across or can obtain information or evidence listed in point 9 after its initial submission, it should provide those for the Commission. This also means that if the applicant has not completed its internal inquiries due to risk of leaks prior to a conditional immunity decision and/or a Commission inspection, the applicant should complete such inquiries directly thereafter, unless the Commission otherwise requires.

Why does the applicant need to provide home addresses of individuals? How is this requirement reconciled with privacy laws?

The Commission has been given the power (under the Council Regulation (EC) N° 1/2003 on how the Commission should apply the EC Treaty's anti-trust rules – see IP/04/511) to carry out inspections of other premises, including the homes of directors, managers or other members of staff, of the companies concerned. This power can be exercised if a reasonable suspicion exists that relevant books or other records related to the business and to the subject-matter of the inspection, which may be relevant to prove a serious violation of Article 81 of the EC Treaty, are being kept in such other premises. The Notice also specifies that home addresses need to be provided only "where necessary" and in so far as known to the applicant. The Commission will process personal data in the context of the Leniency Notice in conformity with its obligations under Regulation (EC) No 45/2001 on the protection of individuals with regard to the processing of personal data by the Community institutions and bodies.

Why do applicants need to provide both "contemporaneous, incriminating" evidence and a corporate statement to meet the 8(b) threshold for immunity? What is meant by "contemporaneous, incriminating evidence"?I

f the Commission has carried out an inspection concerning an alleged cartel or has already sufficient evidence in its possession to carry out an inspection, immunity under point 8(a) is no longer available. However, in such a situation an applicant can still qualify for immunity under point 8(b) of the Notice. To meet the point 8(b) threshold for immunity an applicant needs to submit information and evidence which will enable the Commission to find evidence of a violation of Article 81 of the EC Treaty in connection with the alleged cartel. This threshold corresponds to the one required under Article 7 of Regulation 1/2003 for the Commission to be able to adopt an infringement decision. It is higher than the threshold for immunity in a situation where the Commission does not yet have any knowledge of the alleged cartel. In order to find an infringement against the suspected cartel participants, and not only the applicant that self-reports on the cartel, the applicant needs to submit incriminating evidence that originates from the time of the infringement. Experience shows that corporate statements are needed in addition to the evidence to explain the pieces of evidence and to give insight to the alleged cartel that only an ex-cartel member can provide. For example, in the Raw Tobacco Italy case (see IP/05/1315), the Commission granted conditional immunity under point 8(b), to reward the applicant for providing the Commission with decisive incriminating evidence for the establishment of objections which the Commission included in the Statement of Objections and in the final Decision.

Threshold for reduction of fines

Has the threshold been changed?

The threshold for reduction of fines remains the same: in order to qualify, an applicant for a reduction of fines needs to provide evidence which represents significant added value as compared to the evidence already in the file. For the sake of clarity and in the light of the latest case-law of the EC Courts dealing with the relative value of evidence, the revised Notice expressly recalls that evidence that requires little or no corroboration provides greater value for proving the case than evidence which requires corroboration if it is contested. This is one amongst a number of (non-exhaustive) criteria explicitly mentioned in the Notice.

What is meant by "compelling evidence" and what does this seek to add to the criteria of significant added value?

"Compelling evidence" means conclusive, stand-alone evidence as compared with, for instance, a corporate statement uncorroborated by other pieces of evidence which would not be used as evidence against other parties to the cartel if they all contradicted it in similar statements. This does not mean that corporate statements can never provide significant added value, but it signals that they are more likely to provide it in when they corroborate other statements or pieces of evidence.

Why does receiving an extra reduction outside the normal bands for reduction of fines require that the evidence provided is compelling?

Compelling evidence is the level of evidence enabling the Commission to prove additional facts liable to extend the gravity or the duration of the infringement. Therefore, a company providing this level of evidence should be sure that the effects of such an extension directly linked to its contribution will not increase its own fine. A company should have an incentive to provide all conclusive evidence as early as possible in the procedure in order to benefit from any extra reduction before others do.

When is an applicant for reduction of fines informed whether it meets the threshold set in the Notice?

The applicant will be informed on the preliminary conclusion that it meets the threshold as soon as the Commission has ascertained that the evidence submitted constitutes significant added value. This information will be communicated to the applicant no later than the date on which a statement of objections is notified.

Conditions for immunity and reduction of fines

What is meant by genuine cooperation and why has this requirement been added to the conditions?

Cooperation is an essential feature of the leniency programme that rewards those who assist the Commission in its investigation. Cooperation by an applicant has to be sincere and to make this clear, the Notice specifies that the applicant needs to cooperate "genuinely, fully, on a continuous basis and expeditiously from the time it submits its application". Genuine cooperation, as referred to in the case-law of the EC Courts, requires in particular that the applicant provides accurate and complete information that is not misleading. This addition to the Leniency Notice is therefore fully in line with judgements of the EC Courts.

How can the company meet this requirement if its personnel refuse to answer questions from Commission's investigators through fear of criminal sanctions by EU Member States?

It is already the established practice of the Commission under the 2002 Leniency Notice to interview directors and employees of the applicants. Natural persons interviewed can be subject to different types of sanctions in different EU Member States. There are therefore safeguards in place regarding transfer of information to Member States that apply criminal sanctions. Regulation 1/2003 EC ensures that information exchanged in the network of EU Member States' competition authorities can only be used by the receiving authority if it has been collected in a way which respects the same level of protection of the rights of defence of natural persons as in the receiving authority. Moreover, exchanged information can only be used by the receiving authority to impose custodial sanctions if the law of the transmitting authority foresees such sanctions for antitrust infringements, which is not the case for the Commission Moreover, making directors and employees available for interviews does not imply that they have to provide self-incriminating information.

Does the obligation not to disclose the fact or content of the application take into account other legal obligations of the applicant which may oblige it to make such a disclosure?

Leniency applicants may have legal obligations to acknowledge in public their cooperation under the Leniency Notice (e.g. listed companies). This is why the revised Leniency Notice provides that the restriction on disclosure to third parties applies "unless otherwise agreed" with the Commission. This point of the Notice also covers the practice of the Commission to discuss with the applicants the question of how to address discovery requests in third country jurisdictions, while protecting the EU leniency programme. Naturally, the applicants are free to approach other competition authorities, in which case the Commission may ask for a waiver to discuss the application and exchange information with such authorities.

Would any acts of destruction, falsification or concealment of evidence lead to a loss of leniency? How far back can this condition extend before actual filing of an application?

The Leniency Notice makes it clear that this obligation applies only from the moment when the applicant is "contemplating making its application", i.e. when the applicant is deciding on and preparing its application. This reference to the timing, as well as the reference to "the undertaking" and not to any employee, also makes it clear that the Commission wants to catch deliberate actions of destruction, falsification and concealment of evidence.

What happens if an immunity or reduction of fines applicant does not meet some of the conditions? Can they still get some reduction of fines?

The Leniency Notice makes clear that failure to comply with the conditions will disqualify the applicant from the leniency programme. This question has already been addressed in the Commission decision in the Raw Tobacco Italy case (see above) . That case showed that in such situations the Commission follows the normal enforcement procedure set out in Regulation No 1/2003, notably with a hearing and respecting full rights of defence of the party concerned. The same Raw Tobacco Italy case also demonstrated that, in exceptional circumstances, particularly when the company has contributed substantially to the Commission's investigation, the Commission can take the cooperation into account by granting a reduction of fines under the Fines Guidelines (recently revised – see IP/06/857 and MEMO/06/256) as cooperation outside leniency

The marker system

How will the marker system be operated in practice?

The Leniency Notice makes a marker available for immunity applicants at the discretion of the Commission. It is in the public interest to maintain the race between companies to provide the information and evidence required to meet the conditions for immunity and thereby to facilitate the detection and termination of infringements, and not in the race to simply get a place in the queue. Nevertheless, there can be various circumstances that would justify the granting of a marker. Therefore, the decision to grant a marker will need to be made on a case by case basis, taking into account the specificities of each situation and the justifications that the applicant presents for its request to get a marker.

The marker is one of the key new features in the revision of the Leniency Notice and therefore the practical modalities of this system need to be developed following discussions with applicants and according to experience. When the Commission is dealing with a case where applications for leniency have been made in several different jurisdictions, it may need to coordinate the marker system with the other jurisdictions, as it would coordinate also first investigation actions.

How long a time period can an applicant expect to have to perfect the marker?

The time period to be granted to perfect a marker (i.e. to complement the initial information to bring it up to the standard required to qualify for immunity) will need to be decided based on the circumstances of each case. But it is clear that the time period will necessarily be short so as not to disadvantage other potential applicants and to ensure that an investigation in the case can be launched swiftly. The longer the time period is, the higher the risk of leaks on the application become, which may ultimately jeopardise a Commission investigation into the case.

What information must an applicant provide to get a marker?

When applying for a marker, the applicant is only asked to provide the following information: the applicant's name and address, the parties to the alleged cartel, the affected products and territories, the estimated duration of the cartel and the nature of the cartel conduct. This information is necessary to ensure that this is a serious application and that there are no prior applications relating to the same alleged infringement. This information would also allow the Commission to see whether the case concerns one or more Member States. This list of information is the same as in the ECN Model Leniency Programme (see IP/06/1288 and MEMO/06/356).

Why would the Commission grant a marker only for immunity applicants and not for reduction of fines applicants?

It is necessary for the effectiveness of the leniency programme to maintain the race between the applicants for reduction of fines. Practical experience shows that following the Commission inspections, there may be several such applications in a short interval. It would also be in practice difficult for the Commission to effectively process and assess several simultaneous markers.

What is the difference between a hypothetical application for immunity and a marker request? Why can a marker not be combined with a hypothetical application?

A marker and a hypothetical application cannot be combined due to their different purposes and features. The hypothetical application is available to allow companies to ascertain whether the evidence in their possession would meet the immunity threshold before disclosing their identity or the infringement. In a hypothetical application, the company is supposed to actually show the evidence liable to meet the relevant immunity threshold, although it can be done by means of edited copies with the data that could identify the company and the cartel at that stage deleted.

In contrast, a marker is granted to protect the place in the queue of an applicant which has not yet gathered the evidence necessary to formalise an immunity application. In order to protect the place in the queue without obtaining the relevant evidence in exchange, the Commission must be in a position to ascertain whether it already has a previous immunity application for the same cartel and ensure that the company is seriously engaged to provide the evidence. Therefore, in order to obtain a marker, a company is expected to provide certain data listed in the Notice, which include the identity of the applicant and some details on the cartel, but not the rest of the evidence required to meet the immunity threshold. This can be submitted later within a specified timeframe.

The specific procedure to protect corporate statements

When does the specific procedure established for corporate statements apply?

The procedure to protect corporate statements applies to voluntary corporate statements supplied in the framework of the Leniency Notice, with a view to applying for immunity or for a reduction of fines. Those corporate statements (and the protection provided to them) will be covered by the relevant provisions in the Notice irrespective of whether the applicant finally obtains immunity from or reduction of fines. However, to avoid any misuses of this new system, if the applicant itself discloses the content of its statement to third parties in other jurisdictions, while at the same time asking the Commission to protect its statement, there is no justification for any protection of the statement

How does the production of oral statements and transcripts work?

Oral corporate statements will be recorded and verbatim written transcripts will be made of each statement. The recording and transcribing of the statements will take place at the Commission's premises. Applicants making oral statements will not retain or receive from the Commission any copies of these statements, but as soon as the oral statement has been given, it will become a Commission document.

Why does the accuracy of the written transcript produced at the Commission of an oral corporate statement need to be checked?

Oral corporate statements are considered as evidence on alleged cartels and both the tape and the transcript form part of the Commission file. In order to guarantee the value as evidence provided by a transcript, the applicant making the statement will need to check, at the Commission premises, the accuracy of the written transcript as compared to the recording.

Entry into force

If one or more companies have already applied for leniency under the 2002 Leniency Notice, which Notice applies for new applications for leniency made in the same case? Will the amended Leniency Notice apply for pending cartel cases too?

According to point 37 of the Notice, it will replace the 2002 Leniency Notice as from the date of its publication in the Official Journal, i.e. 8th December 2006, for all cases (including pending ones) in which no undertaking has contacted the Commission in order to take advantage of the favourable treatment set out in that Notice. In order to guarantee that all parties to a same procedure are subject to the same set of rules, it is reasonable that one and the same Leniency Notice will apply to all applications made in one single case. However, according to the same provision, the section of the 2006 Notice that reflects the current Commission practice regarding corporate statements will be applied from the moment of its publication to all pending and new applications for immunity from fines or reduction of fines.

MEMO/06/470

Brussels, 7th December 2006

Competition: Commission Leniency Notice – frequently asked questions

(see also IP/06/1705)

How many applications for immunity and for reduction of fines has the Commission received under the 2002 Leniency Notice?

In the period from 14 February 2002 until the end of 2005, the Commission received 167 applications under the 2002 Leniency Notice (see IP/02/247 and MEMO/02/23). Of these applications, 87 were requests for immunity and 80 were requests for reduction in fines.

Where several immunity applications have been received for the same alleged infringement, the first application is counted as an immunity application and the subsequent ones as applications for a reduction of fines unless the first application for immunity is rejected. In the latter situation the second application will be considered as an immunity application. In practice immunity applications are normally made for immunity from fines, or in the alternative, reduction of fines. Where immunity is no longer available, such applications are treated – and for statistics recorded – as applications for a reduction of fines.

What is the number of applications granted, withdrawn and not followed?

In the period from 14 February 2002 until the end of 2005, the Commission has granted 51 decisions for conditional immunity. Over the same period, the Commission rejected or decided not to deal any further with 23 applications and had under scrutiny 13 more recent applications.

From which sectors have leniency applications been made under the 2002 Leniency Notice?

The Commission has received leniency applications in a wide variety of sectors including agriculture, steel, construction, chemicals, transport, services, paper and forestry industry as well as graphite products and electrical appliances.

In how many cases has the Commission received a leniency application and subsequently transferred the case to a national competition authority?

In the period from 14 February 2002 to the end of 2005, 6 cases have been transferred to national competition authorities.

In how many cases has a national competition authority transferred a case to the Commission after having received a leniency application?

There are no cases where an application was only made to a national competition authority that then transferred this case to the Commission.

In how many cases has the Commission received a leniency application under the 2002 Leniency Notice where the applicant has made a leniency application also to the competition authorities of the United States?

In the period from 14 February 2002 to the end of 2005, this occurred, to the Commission knowledge, in relation to 10 different cartel investigations.

How many leniency applications resulted in a final decision unveiling and punishing a cartel?

Since the entry into force of the current Leniency Notice on 14 February 2002 until the present, the Commission has taken formal decisions in 6 cartel cases in which companies co-operated with the investigations under the 2002 Leniency Notice.

All 6 cases together represent a total amount of fines of € 1,650 million.

Have conditional immunity decisions been withdrawn?

In the period from 14 February 2002 until the end of 2005, there was 1 such case. This case concerns cartel investigation on the raw tobacco sector where conditional immunity was granted at the beginning of the procedure under the terms of the Leniency Notice. The prohibition decision taken on 20 October 2005 (see also press release IP/05/1315) withholds final immunity due to a serious breach by the immunity applicant of its co-operation obligation. Having received conditional immunity, the applicant revealed to its main competitors that it had applied for leniency with the Commission. This occurred before the Commission could carry out surprise inspections, so that when these took place, most companies concerned were already aware of the existence of the Commission investigation.

What has been the experience with the current immunity threshold in the 2002 Leniency Notice?

Until the end of 2005 the Commission had received 87 requests for immunity and granted a conditional immunity only on 51 applications. These figures reflect the fact that numerous immunity applications have not given the necessary insider information and evidence on the alleged cartel to meet the immunity threshold. In addition, there have been cases where immunity has been granted after an applicant has supplemented its application, but the process has taken a lot of time. The reason behind this is that the 2002 Leniency Notice does not give enough guidance to the applicants as to what to submit in order to qualify for the immunity threshold. This has been perceived as a major problem by the business and legal community and has often resulted into a lot of time being spent on supplementing the applications.

Is the Commission Leniency Notice in line with other leniency programmes?

The amendments to the Commission Leniency Notice are fully consistent with the ECN Model Leniency Programme. For further information on the ECN Model Leniency Programme, see MEMO/06/356.

The main features of the Commission Leniency Notice are also common to other major leniency programmes across the world (for instance the possibility to get immunity, reduction of fines, the possibility to grant a marker etc.).

Commission Regulation (EC) No 773/2004 of 7 April 2004 relating to the conduct of proceedings by the Commission pursuant to Articles 81 and 82 of the EC Treaty (Text with EEA relevance)

Commission Regulation (EC) No 773/2004

of 7 April 2004

relating to the conduct of proceedings by the Commission pursuant to Articles 81 and 82 of the EC Treaty

(Text with EEA relevance)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Community,

Having regard to the Agreement on the European Economic Area,

Having regard to Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty(1), and in particular Article 33 thereof,

After consulting the Advisory Committee on Restrictive Practices and Dominant Positions,

Whereas:

(1) Regulation (EC) No 1/2003 empowers the Commission to regulate certain aspects of proceedings for the application of Articles 81 and 82 of the Treaty. It is necessary to lay down rules concerning the initiation of proceedings by the Commission as well as the handling of complaints and the hearing of the parties concerned.

(2) According to Regulation (EC) No 1/2003, national courts are under an obligation to avoid taking decisions which could run counter to decisions envisaged by the Commission in the same case. According to Article 11(6) of that Regulation, national competition authorities are relieved from their competence once the Commission has initiated proceedings for the adoption of a decision under Chapter III of Regulation (EC) No 1/2003. In this context, it is important that courts and competition authorities of the Member States are aware of the initiation of proceedings by the Commission. The Commission should therefore be able to make public its decisions to initiate proceedings.

(3) Before taking oral statements from natural or legal persons who consent to be interviewed, the Commission should inform those persons of the legal basis of the interview and its voluntary nature. The persons interviewed should also be informed of the purpose of the interview and of any record which may be made. In order to enhance the accuracy of the statements, the persons interviewed should also be given an opportunity to correct the statements recorded. Where information gathered from oral statements is exchanged pursuant to Article 12 of Regulation (EC) No 1/2003, that information should only be used in evidence to impose sanctions on natural persons where the conditions set out in that Article are fulfilled.

(4) Pursuant to Article 23(1)(d) of Regulation (EC) No 1/2003 fines may be imposed on undertakings and associations of undertakings where they fail to rectify within the time limit fixed by the Commission an incorrect, incomplete or misleading answer given by a member of their staff to questions in the course of inspections. It is therefore necessary to provide the undertaking concerned with a record of any explanations given and to establish a procedure enabling it to add any rectification, amendment or supplement to the explanations given by the member of staff who is not or was not authorised to provide explanations on behalf of the undertaking. The explanations

given by a member of staff should remain in the Commission file as recorded during the inspection.

(5) Complaints are an essential source of information for detecting infringements of competition rules. It is important to define clear and efficient procedures for handling complaints lodged with the Commission.

(6) In order to be admissible for the purposes of Article 7 of Regulation (EC) No 1/2003, a complaint must contain certain specified information.

(7) In order to assist complainants in submitting the necessary facts to the Commission, a form should be drawn up. The submission of the information listed in that form should be a condition for a complaint to be treated as a complaint as referred to in Article 7 of Regulation (EC) No 1/2003.

(8) Natural or legal persons having chosen to lodge a complaint should be given the possibility to be associated closely with the proceedings initiated by the Commission with a view to finding an infringement. However, they should not have access to business secrets or other confidential information belonging to other parties involved in the proceedings.

(9) Complainants should be granted the opportunity of expressing their views if the Commission considers that there are insufficient grounds for acting on the complaint. Where the Commission rejects a complaint on the grounds that a competition authority of a Member State is dealing with it or has already done so, it should inform the complainant of the identity of that authority.

(10) In order to respect the rights of defence of undertakings, the Commission should give the parties concerned the right to be heard before it takes a decision.

(11) Provision should also be made for the hearing of persons who have not submitted a complaint as referred to in Article 7 of Regulation (EC) No 1/2003 and who are not parties to whom a statement of objections has been addressed but who can nevertheless show a sufficient interest. Consumer associations that apply to be heard should generally be regarded as having a sufficient interest, where the proceedings concern products or services used by the end-consumer or products or services that constitute a direct input into such products or services. Where it considers this to be useful for the proceedings, the Commission should also be able to invite other persons to express their views in writing and to attend the oral hearing of the parties to whom a statement of objections has been addressed. Where appropriate, it should also be able to invite such persons to express their views at that oral hearing.

(12) To improve the effectiveness of oral hearings, the Hearing Officer should have the power to allow the parties concerned, complainants, other persons invited to the hearing, the Commission services and the authorities of the Member States to ask questions during the hearing.

(13) When granting access to the file, the Commission should ensure the protection of business secrets and other confidential information. The category of "other confidential information" includes information other than business secrets, which may be considered as confidential, insofar as its disclosure would significantly harm an undertaking or person. The Commission should be able to request undertakings or associations of undertakings that submit or have submitted documents or statements to identify confidential information.

(14) Where business secrets or other confidential information are necessary to prove an infringement, the Commission should assess for each individual document whether the need to disclose is greater than the harm which might result from disclosure.

(15) In the interest of legal certainty, a minimum time-limit for the various submissions provided for in this Regulation should be laid down.

(16) This Regulation replaces Commission Regulation (EC) No 2842/98 of 22 December 1998 on the hearing of parties in certain proceedings under Articles 85 and 86 of the EC Treaty(2), which should therefore be repealed.

(17) This Regulation aligns the procedural rules in the transport sector with the general rules of procedure in all sectors. Commission Regulation (EC) No 2843/98 of 22 December 1998 on the form, content and other details of applications and notifications provided for in Council Regulations (EEC) No 1017/68, (EEC) No 4056/86 and (EEC) No 3975/87 applying the rules on competition to the transport sector(3) should therefore be repealed.

(18) Regulation (EC) No 1/2003 abolishes the notification and authorisation system. Commission Regulation (EC) No 3385/94 of 21 December 1994 on the form, content and other details of applications and notifications provided for in Council Regulation No 17(4) should therefore be repealed,

HAS ADOPTED THIS REGULATION:

CHAPTER I SCOPE

Article 1

Subject-matter and scope

This regulation applies to proceedings conducted by the Commission for the application of Articles 81 and 82 of the Treaty.

CHAPTER II INITIATION OF PROCEEDINGS

Article 2

Initiation of proceedings

1. The Commission may decide to initiate proceedings with a view to adopting a decision pursuant to Chapter III of Regulation (EC) No 1/2003 at any point in time, but no later than the date on which it issues a preliminary assessment as referred to in Article 9(1) of that Regulation or a statement of objections or the date on which a notice pursuant to Article 27(4) of that Regulation is published, whichever is the earlier.

2. The Commission may make public the initiation of proceedings, in any appropriate way. Before doing so, it shall inform the parties concerned.

3. The Commission may exercise its powers of investigation pursuant to Chapter V of Regulation (EC) No 1/2003 before initiating proceedings.

4. The Commission may reject a complaint pursuant to Article 7 of Regulation (EC) No 1/2003 without initiating proceedings.

CHAPTER III INVESTIGATIONS BY THE COMMISSION

Article 3

Power to take statements

1. Where the Commission interviews a person with his consent in accordance with Article 19 of Regulation (EC) No 1/2003, it shall, at the beginning of the interview, state the legal basis and the purpose of the interview, and recall its voluntary nature. It shall also inform the person interviewed of its intention to make a record of the interview.

2. The interview may be conducted by any means including by telephone or electronic means.

3. The Commission may record the statements made by the persons interviewed in any form. A copy of any recording shall be made available to the person interviewed for approval. Where necessary, the Commission shall set a time-limit within which the person interviewed may communicate to it any correction to be made to the statement.

Article 4

Oral questions during inspections

1. When, pursuant to Article 20(2)(e) of Regulation (EC) No 1/2003, officials or other accompanying persons authorised by the Commission ask representatives or members of staff of an undertaking or of an association of undertakings for explanations, the explanations given may be recorded in any form.

2. A copy of any recording made pursuant to paragraph 1 shall be made available to the undertaking or association of undertakings concerned after the inspection.

3. In cases where a member of staff of an undertaking or of an association of undertakings who is not or was not authorised by the undertaking or by the association of undertakings to provide explanations on behalf of the undertaking or association of undertakings has been asked for explanations, the Commission shall set a time-limit within which the undertaking or the association of undertakings may communicate to the Commission any rectification, amendment or supplement to the explanations given by such member of staff. The rectification, amendment or supplement shall be added to the explanations as recorded pursuant to paragraph 1.

CHAPTER IV HANDLING OF COMPLAINTS

Article 5

Admissibility of complaints

1. Natural and legal persons shall show a legitimate interest in order to be entitled to lodge a complaint for the purposes of Article 7 of Regulation (EC) No 1/2003.

Such complaints shall contain the information required by Form C, as set out in the Annex. The Commission may dispense with this obligation as regards part of the information, including documents, required by Form C.

2. Three paper copies as well as, if possible, an electronic copy of the complaint shall be submitted to the Commission. The complainant shall also submit a non-confidential version of the complaint, if confidentiality is claimed for any part of the complaint.

3. Complaints shall be submitted in one of the official languages of the Community.

Article 6

Participation of complainants in proceedings

1. Where the Commission issues a statement of objections relating to a matter in respect of which it has received a complaint, it shall provide the complainant with a copy of the non-confidential version of the statement of objections and set a time-limit within which the complainant may make known its views in writing.

2. The Commission may, where appropriate, afford complainants the opportunity of expressing their views at the oral hearing of the parties to which a statement of objections has been issued, if complainants so request in their written comments.

Article 7

Rejection of complaints

1. Where the Commission considers that on the basis of the information in its possession there are insufficient grounds for acting on a complaint, it shall inform the complainant of its reasons and set a time-limit within which the complainant may make known its views in writing. The Commission shall not be obliged to take into account any further written submission received after the expiry of that time-limit.

2. If the complainant makes known its views within the time-limit set by the Commission and the written submissions made by the complainant do not lead to a different assessment of the complaint, the Commission shall reject the complaint by decision.

3. If the complainant fails to make known its views within the time-limit set by the Commission, the complaint shall be deemed to have been withdrawn.

Article 8

Access to information

1. Where the Commission has informed the complainant of its intention to reject a complaint pursuant to Article 7(1) the complainant may request access to the documents on which the Commission bases its provisional assessment. For this purpose, the complainant may however not have access to business secrets and other confidential information belonging to other parties involved in the proceedings.

2. The documents to which the complainant has had access in the context of proceedings conducted by the Commission under Articles 81 and 82 of the Treaty may only be used by the complainant for the purposes of judicial or administrative proceedings for the application of those Treaty provisions.

Article 9

Rejections of complaints pursuant to Article 13 of Regulation (EC) No 1/2003

Where the Commission rejects a complaint pursuant to Article 13 of Regulation (EC) No 1/2003, it shall inform the complainant without delay of the national competition authority which is dealing or has already dealt with the case.

CHAPTER V EXERCISE OF THE RIGHT TO BE HEARD

Article 10

Statement of objections and reply

1. The Commission shall inform the parties concerned in writing of the objections raised against them. The statement of objections shall be notified to each of them.

2. The Commission shall, when notifying the statement of objections to the parties concerned, set a time-limit within which these parties may inform it in writing of their views. The Commission shall not be obliged to take into account written submissions received after the expiry of that time-limit.

3. The parties may, in their written submissions, set out all facts known to them which are relevant to their defence against the objections raised by the Commission. They shall attach any relevant documents as proof of the facts set out. They shall provide a paper original as well as an electronic copy or, where they do not provide an electronic copy, 28 paper copies of their submission and of the documents attached to it. They may propose that the Commission hear persons who may corroborate the facts set out in their submission.

Article 11

Right to be heard

1. The Commission shall give the parties to whom it has addressed a statement of objections the opportunity to be heard before consulting the Advisory Committee referred to in Article 14(1) of Regulation (EC) No 1/2003.

2. The Commission shall, in its decisions, deal only with objections in respect of which the parties referred to in paragraph 1 have been able to comment.

Article 12

Right to an oral hearing

The Commission shall give the parties to whom it has addressed a statement of objections the opportunity to develop their arguments at an oral hearing, if they so request in their written submissions.

Article 13

Hearing of other persons

1. If natural or legal persons other than those referred to in Articles 5 and 11 apply to be heard and show a sufficient interest, the Commission shall inform them in writing of the nature and subject

matter of the procedure and shall set a time-limit within which they may make known their views in writing.

2. The Commission may, where appropriate, invite persons referred to in paragraph 1 to develop their arguments at the oral hearing of the parties to whom a statement of objections has been addressed, if the persons referred to in paragraph 1 so request in their written comments.

3. The Commission may invite any other person to express its views in writing and to attend the oral hearing of the parties to whom a statement of objections has been addressed. The Commission may also invite such persons to express their views at that oral hearing.

Article 14

Conduct of oral hearings

1. Hearings shall be conducted by a Hearing Officer in full independence.

2. The Commission shall invite the persons to be heard to attend the oral hearing on such date as it shall determine.

3. The Commission shall invite the competition authorities of the Member States to take part in the oral hearing. It may likewise invite officials and civil servants of other authorities of the Member States.

4. Persons invited to attend shall either appear in person or be represented by legal representatives or by representatives authorised by their constitution as appropriate. Undertakings and associations of undertakings may also be represented by a duly authorised agent appointed from among their permanent staff.

5. Persons heard by the Commission may be assisted by their lawyers or other qualified persons admitted by the Hearing Officer.

6. Oral hearings shall not be public. Each person may be heard separately or in the presence of other persons invited to attend, having regard to the legitimate interest of the undertakings in the protection of their business secrets and other confidential information.

7. The Hearing Officer may allow the parties to whom a statement of objections has been addressed, the complainants, other persons invited to the hearing, the Commission services and the authorities of the Member States to ask questions during the hearing.

8. The statements made by each person heard shall be recorded. Upon request, the recording of the hearing shall be made available to the persons who attended the hearing. Regard shall be had to the legitimate interest of the parties in the protection of their business secrets and other confidential information.

CHAPTER VI ACCESS TO THE FILE AND TREATMENT OF CONFIDENTIAL INFORMATION

Article 15

Access to the file and use of documents

1. If so requested, the Commission shall grant access to the file to the parties to whom it has addressed a statement of objections. Access shall be granted after the notification of the statement

of objections.

2. The right of access to the file shall not extend to business secrets, other confidential information and internal documents of the Commission or of the competition authorities of the Member States. The right of access to the file shall also not extend to correspondence between the Commission and the competition authorities of the Member States or between the latter where such correspondence is contained in the file of the Commission.

3. Nothing in this Regulation prevents the Commission from disclosing and using information necessary to prove an infringement of Articles 81 or 82 of the Treaty.

4. Documents obtained through access to the file pursuant to this Article shall only be used for the purposes of judicial or administrative proceedings for the application of Articles 81 and 82 of the Treaty.

Article 16

Identification and protection of confidential information

1. Information, including documents, shall not be communicated or made accessible by the Commission in so far as it contains business secrets or other confidential information of any person.

2. Any person which makes known its views pursuant to Article 6(1), Article 7(1), Article 10(2) and Article 13(1) and (3) or subsequently submits further information to the Commission in the course of the same procedure, shall clearly identify any material which it considers to be confidential, giving reasons, and provide a separate non-confidential version by the date set by the Commission for making its views known.

3. Without prejudice to paragraph 2 of this Article, the Commission may require undertakings and associations of undertakings which produce documents or statements pursuant to Regulation (EC) No 1/2003 to identify the documents or parts of documents which they consider to contain business secrets or other confidential information belonging to them and to identify the undertakings with regard to which such documents are to be considered confidential. The Commission may likewise require undertakings or associations of undertakings to identify any part of a statement of objections, a case summary drawn up pursuant to Article 27(4) of Regulation (EC) No 1/2003 or a decision adopted by the Commission which in their view contains business secrets.

The Commission may set a time-limit within which the undertakings and associations of undertakings are to:

(a) substantiate their claim for confidentiality with regard to each individual document or part of document, statement or part of statement;

(b) provide the Commission with a non-confidential version of the documents or statements, in which the confidential passages are deleted;

(c) provide a concise description of each piece of deleted information.

4. If undertakings or associations of undertakings fail to comply with paragraphs 2 and 3, the Commission may assume that the documents or statements concerned do not contain confidential information.

CHAPTER VII GENERAL AND FINAL PROVISIONS

Article 17

Time-limits

1. In setting the time-limits provided for in Article 3(3), Article 4(3), Article 6(1), Article 7(1), Article 10(2) and Article 16(3), the Commission shall have regard both to the time required for preparation of the submission and to the urgency of the case.

2. The time-limits referred to in Article 6(1), Article 7(1) and Article 10(2) shall be at least four weeks. However, for proceedings initiated with a view to adopting interim measures pursuant to Article 8 of Regulation (EC) No 1/2003, the time-limit may be shortened to one week.

3. The time-limits referred to in Article 3(3), Article 4(3) and Article 16(3) shall be at least two weeks.

4. Where appropriate and upon reasoned request made before the expiry of the original time-limit, time-limits may be extended.

Article 18

Repeals

Regulations (EC) No 2842/98, (EC) No 2843/98 and (EC) No 3385/94 are repealed.

References to the repealed regulations shall be construed as references to this regulation.

Article 19

Transitional provisions

Procedural steps taken under Regulations (EC) No 2842/98 and (EC) No 2843/98 shall continue to have effect for the purpose of applying this Regulation.

Article 20

Entry into force

This Regulation shall enter into force on 1 May 2004.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 7 April 2004.

ANNEX

FORM C

COMPLAINT PURSUANT TO ARTICLE 7 OF REGULATION (EC) No 1/2003

I. Information regarding the complainant and the undertaking(s) or association of undertakings giving rise to the complaint

1. Give full details on the identity of the legal or natural person submitting the complaint. Where the complainant is an undertaking, identify the corporate group to which it belongs and provide a concise overview of the nature and scope of its business activities. Provide a contact person (with telephone number, postal and e-mail-address) from which supplementary explanations can be obtained.

2. Identify the undertaking(s) or association of undertakings whose conduct the complaint relates to, including, where applicable, all available information on the corporate group to which the undertaking(s) complained of belong and the nature and scope of the business activities pursued by them. Indicate the position of the complainant vis-à-vis the undertaking(s) or association of undertakings complained of (e.g. customer, competitor).

II. Details of the alleged infringement and evidence

3. Set out in detail the facts from which, in your opinion, it appears that there exists an infringement of Article 81 or 82 of the Treaty and/or Article 53 or 54 of the EEA agreement. Indicate in particular the nature of the products (goods or services) affected by the alleged infringements and explain, where necessary, the commercial relationships concerning these products. Provide all available details on the agreements or practices of the undertakings or associations of undertakings to which this complaint relates. Indicate, to the extent possible, the relative market positions of the undertakings concerned by the complaint.

4. Submit all documentation in your possession relating to or directly connected with the facts set out in the complaint (for example, texts of agreements, minutes of negotiations or meetings, terms of transactions, business documents, circulars, correspondence, notes of telephone conversations...). State the names and address of the persons able to testify to the facts set out in the complaint, and in particular of persons affected by the alleged infringement. Submit statistics or other data in your possession which relate to the facts set out, in particular where they show developments in the marketplace (for example information relating to prices and price trends, barriers to entry to the market for new suppliers etc.).

5. Set out your view about the geographical scope of the alleged infringement and explain, where that is not obvious, to what extent trade between Member States or between the Community and one or more EFTA States that are contracting parties of the EEA Agreement may be affected by the conduct complained of.

III. Finding sought from the Commission and legitimate interest

6. Explain what finding or action you are seeking as a result of proceedings brought by the Commission.

7. Set out the grounds on which you claim a legitimate interest as complainant pursuant to Article 7 of Regulation (EC) No 1/2003. State in particular how the conduct complained of affects you and explain how, in your view, intervention by the Commission would be liable to remedy the alleged grievance.

IV. Proceedings before national competition authorities or national courts

8. Provide full information about whether you have approached, concerning the same or closely related subject-matters, any other competition authority and/or whether a lawsuit has been brought before a national court. If so, provide full details about the administrative or judicial authority contacted and your submissions to such authority.

Declaration that the information given in this form and in the Annexes thereto is given entirely in good faith.

Date and signature.

Council Regulation (EC) No 1/2003
of 16 December 2002
on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty
(Text with EEA relevance)

Council Regulation (EC) No 1/2003

of 16 December 2002

on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty

(Text with EEA relevance)

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 83 thereof,

Having regard to the proposal from the Commission(1),

Having regard to the opinion of the European Parliament(2),

Having regard to the opinion of the European Economic and Social Committee(3),

Whereas:

(1) In order to establish a system which ensures that competition in the common market is not distorted, Articles 81 and 82 of the Treaty must be applied effectively and uniformly in the Community. Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles 81 and 82(4) of the Treaty(5), has allowed a Community competition policy to develop that has helped to disseminate a competition culture within the Community. In the light of experience, however, that Regulation should now be replaced by legislation designed to meet the challenges of an integrated market and a future enlargement of the Community.

(2) In particular, there is a need to rethink the arrangements for applying the exception from the prohibition on agreements, which restrict competition, laid down in Article 81(3) of the Treaty. Under Article 83(2)(b) of the Treaty, account must be taken in this regard of the need to ensure effective supervision, on the one hand, and to simplify administration to the greatest possible extent, on the other.

(3) The centralised scheme set up by Regulation No 17 no longer secures a balance between those two objectives. It hampers application of the Community competition rules by the courts and competition authorities of the Member States, and the system of notification it involves prevents the Commission from concentrating its resources on curbing the most serious infringements. It also imposes considerable costs on undertakings.

(4) The present system should therefore be replaced by a directly applicable exception system in which the competition authorities and courts of the Member States have the power to apply not only Article 81(1) and Article 82 of the Treaty, which have direct applicability by virtue of the case-law of the Court of Justice of the European Communities, but also Article 81(3) of the Treaty.

(5) In order to ensure an effective enforcement of the Community competition rules and at the same time the respect of fundamental rights of defence, this Regulation should regulate the burden of proof under Articles 81 and 82 of the Treaty. It should be for the party or the authority alleging an infringement of Article 81(1) and Article 82 of the Treaty to prove the existence thereof to the required legal standard. It should be for the undertaking or association of undertakings invoking the benefit of a defence against a finding of an infringement to demonstrate to the

required legal standard that the conditions for applying such defence are satisfied. This Regulation affects neither national rules on the standard of proof nor obligations of competition authorities and courts of the Member States to ascertain the relevant facts of a case, provided that such rules and obligations are compatible with general principles of Community law.

(6) In order to ensure that the Community competition rules are applied effectively, the competition authorities of the Member States should be associated more closely with their application. To this end, they should be empowered to apply Community law.

(7) National courts have an essential part to play in applying the Community competition rules. When deciding disputes between private individuals, they protect the subjective rights under Community law, for example by awarding damages to the victims of infringements. The role of the national courts here complements that of the competition authorities of the Member States. They should therefore be allowed to apply Articles 81 and 82 of the Treaty in full.

(8) In order to ensure the effective enforcement of the Community competition rules and the proper functioning of the cooperation mechanisms contained in this Regulation, it is necessary to oblige the competition authorities and courts of the Member States to also apply Articles 81 and 82 of the Treaty where they apply national competition law to agreements and practices which may affect trade between Member States. In order to create a level playing field for agreements, decisions by associations of undertakings and concerted practices within the internal market, it is also necessary to determine pursuant to Article 83(2)(e) of the Treaty the relationship between national laws and Community competition law. To that effect it is necessary to provide that the application of national competition laws to agreements, decisions or concerted practices within the meaning of Article 81(1) of the Treaty may not lead to the prohibition of such agreements, decisions and concerted practices if they are not also prohibited under Community competition law. The notions of agreements, decisions and concerted practices are autonomous concepts of Community competition law covering the coordination of behaviour of undertakings on the market as interpreted by the Community Courts. Member States should not under this Regulation be precluded from adopting and applying on their territory stricter national competition laws which prohibit or impose sanctions on unilateral conduct engaged in by undertakings. These stricter national laws may include provisions which prohibit or impose sanctions on abusive behaviour toward economically dependent undertakings. Furthermore, this Regulation does not apply to national laws which impose criminal sanctions on natural persons except to the extent that such sanctions are the means whereby competition rules applying to undertakings are enforced.

(9) Articles 81 and 82 of the Treaty have as their objective the protection of competition on the market. This Regulation, which is adopted for the implementation of these Treaty provisions, does not preclude Member States from implementing on their territory national legislation, which protects other legitimate interests provided that such legislation is compatible with general principles and other provisions of Community law. In so far as such national legislation pursues predominantly an objective different from that of protecting competition on the market, the competition authorities and courts of the Member States may apply such legislation on their territory. Accordingly, Member States may under this Regulation implement on their territory national legislation that prohibits or imposes sanctions on acts of unfair trading practice, be they unilateral or contractual. Such legislation pursues a specific objective, irrespective of the actual or presumed effects of such acts on competition on the market. This is particularly the case of legislation which prohibits undertakings from imposing on their trading partners, obtaining or attempting to obtain from them terms and conditions that are unjustified, disproportionate or without consideration.

(10) Regulations such as 19/65/EEC(6), (EEC) No 2821/71(7), (EEC) No 3976/87(8), (EEC) No 1534/91(9), or (EEC) No 479/92(10) empower the Commission to apply Article 81(3) of the Treaty

by Regulation to certain categories of agreements, decisions by associations of undertakings and concerted practices. In the areas defined by such Regulations, the Commission has adopted and may continue to adopt so called "block" exemption Regulations by which it declares Article 81(1) of the Treaty inapplicable to categories of agreements, decisions and concerted practices. Where agreements, decisions and concerted practices to which such Regulations apply nonetheless have effects that are incompatible with Article 81(3) of the Treaty, the Commission and the competition authorities of the Member States should have the power to withdraw in a particular case the benefit of the block exemption Regulation.

(11) For it to ensure that the provisions of the Treaty are applied, the Commission should be able to address decisions to undertakings or associations of undertakings for the purpose of bringing to an end infringements of Articles 81 and 82 of the Treaty. Provided there is a legitimate interest in doing so, the Commission should also be able to adopt decisions which find that an infringement has been committed in the past even if it does not impose a fine. This Regulation should also make explicit provision for the Commission's power to adopt decisions ordering interim measures, which has been acknowledged by the Court of Justice.

(12) This Regulation should make explicit provision for the Commission's power to impose any remedy, whether behavioural or structural, which is necessary to bring the infringement effectively to an end, having regard to the principle of proportionality. Structural remedies should only be imposed either where there is no equally effective behavioural remedy or where any equally effective behavioural remedy would be more burdensome for the undertaking concerned than the structural remedy. Changes to the structure of an undertaking as it existed before the infringement was committed would only be proportionate where there is a substantial risk of a lasting or repeated infringement that derives from the very structure of the undertaking.

(13) Where, in the course of proceedings which might lead to an agreement or practice being prohibited, undertakings offer the Commission commitments such as to meet its concerns, the Commission should be able to adopt decisions which make those commitments binding on the undertakings concerned. Commitment decisions should find that there are no longer grounds for action by the Commission without concluding whether or not there has been or still is an infringement. Commitment decisions are without prejudice to the powers of competition authorities and courts of the Member States to make such a finding and decide upon the case. Commitment decisions are not appropriate in cases where the Commission intends to impose a fine.

(14) In exceptional cases where the public interest of the Community so requires, it may also be expedient for the Commission to adopt a decision of a declaratory nature finding that the prohibition in Article 81 or Article 82 of the Treaty does not apply, with a view to clarifying the law and ensuring its consistent application throughout the Community, in particular with regard to new types of agreements or practices that have not been settled in the existing case-law and administrative practice.

(15) The Commission and the competition authorities of the Member States should form together a network of public authorities applying the Community competition rules in close cooperation. For that purpose it is necessary to set up arrangements for information and consultation. Further modalities for the cooperation within the network will be laid down and revised by the Commission, in close cooperation with the Member States.

(16) Notwithstanding any national provision to the contrary, the exchange of information and the use of such information in evidence should be allowed between the members of the network even where the information is confidential. This information may be used for the application of Articles 81 and 82 of the Treaty as well as for the parallel application of national competition law, provided that the latter application relates to the same case and does not lead to a different

outcome. When the information exchanged is used by the receiving authority to impose sanctions on undertakings, there should be no other limit to the use of the information than the obligation to use it for the purpose for which it was collected given the fact that the sanctions imposed on undertakings are of the same type in all systems. The rights of defence enjoyed by undertakings in the various systems can be considered as sufficiently equivalent. However, as regards natural persons, they may be subject to substantially different types of sanctions across the various systems. Where that is the case, it is necessary to ensure that information can only be used if it has been collected in a way which respects the same level of protection of the rights of defence of natural persons as provided for under the national rules of the receiving authority.

(17) If the competition rules are to be applied consistently and, at the same time, the network is to be managed in the best possible way, it is essential to retain the rule that the competition authorities of the Member States are automatically relieved of their competence if the Commission initiates its own proceedings. Where a competition authority of a Member State is already acting on a case and the Commission intends to initiate proceedings, it should endeavour to do so as soon as possible. Before initiating proceedings, the Commission should consult the national authority concerned.

(18) To ensure that cases are dealt with by the most appropriate authorities within the network, a general provision should be laid down allowing a competition authority to suspend or close a case on the ground that another authority is dealing with it or has already dealt with it, the objective being that each case should be handled by a single authority. This provision should not prevent the Commission from rejecting a complaint for lack of Community interest, as the case-law of the Court of Justice has acknowledged it may do, even if no other competition authority has indicated its intention of dealing with the case.

(19) The Advisory Committee on Restrictive Practices and Dominant Positions set up by Regulation No 17 has functioned in a very satisfactory manner. It will fit well into the new system of decentralised application. It is necessary, therefore, to build upon the rules laid down by Regulation No 17, while improving the effectiveness of the organisational arrangements. To this end, it would be expedient to allow opinions to be delivered by written procedure. The Advisory Committee should also be able to act as a forum for discussing cases that are being handled by the competition authorities of the Member States, so as to help safeguard the consistent application of the Community competition rules.

(20) The Advisory Committee should be composed of representatives of the competition authorities of the Member States. For meetings in which general issues are being discussed, Member States should be able to appoint an additional representative. This is without prejudice to members of the Committee being assisted by other experts from the Member States.

(21) Consistency in the application of the competition rules also requires that arrangements be established for cooperation between the courts of the Member States and the Commission. This is relevant for all courts of the Member States that apply Articles 81 and 82 of the Treaty, whether applying these rules in lawsuits between private parties, acting as public enforcers or as review courts. In particular, national courts should be able to ask the Commission for information or for its opinion on points concerning the application of Community competition law. The Commission and the competition authorities of the Member States should also be able to submit written or oral observations to courts called upon to apply Article 81 or Article 82 of the Treaty. These observations should be submitted within the framework of national procedural rules and practices including those safeguarding the rights of the parties. Steps should therefore be taken to ensure that the Commission and the competition authorities of the Member States are kept sufficiently well informed of proceedings before national courts.

(22) In order to ensure compliance with the principles of legal certainty and the uniform application of the Community competition rules in a system of parallel powers, conflicting decisions must be avoided. It is therefore necessary to clarify, in accordance with the case-law of the Court of Justice, the effects of Commission decisions and proceedings on courts and competition authorities of the Member States. Commitment decisions adopted by the Commission do not affect the power of the courts and the competition authorities of the Member States to apply Articles 81 and 82 of the Treaty.

(23) The Commission should be empowered throughout the Community to require such information to be supplied as is necessary to detect any agreement, decision or concerted practice prohibited by Article 81 of the Treaty or any abuse of a dominant position prohibited by Article 82 of the Treaty. When complying with a decision of the Commission, undertakings cannot be forced to admit that they have committed an infringement, but they are in any event obliged to answer factual questions and to provide documents, even if this information may be used to establish against them or against another undertaking the existence of an infringement.

(24) The Commission should also be empowered to undertake such inspections as are necessary to detect any agreement, decision or concerted practice prohibited by Article 81 of the Treaty or any abuse of a dominant position prohibited by Article 82 of the Treaty. The competition authorities of the Member States should cooperate actively in the exercise of these powers.

(25) The detection of infringements of the competition rules is growing ever more difficult, and, in order to protect competition effectively, the Commission's powers of investigation need to be supplemented. The Commission should in particular be empowered to interview any persons who may be in possession of useful information and to record the statements made. In the course of an inspection, officials authorised by the Commission should be empowered to affix seals for the period of time necessary for the inspection. Seals should normally not be affixed for more than 72 hours. Officials authorised by the Commission should also be empowered to ask for any information relevant to the subject matter and purpose of the inspection.

(26) Experience has shown that there are cases where business records are kept in the homes of directors or other people working for an undertaking. In order to safeguard the effectiveness of inspections, therefore, officials and other persons authorised by the Commission should be empowered to enter any premises where business records may be kept, including private homes. However, the exercise of this latter power should be subject to the authorisation of the judicial authority.

(27) Without prejudice to the case-law of the Court of Justice, it is useful to set out the scope of the control that the national judicial authority may carry out when it authorises, as foreseen by national law including as a precautionary measure, assistance from law enforcement authorities in order to overcome possible opposition on the part of the undertaking or the execution of the decision to carry out inspections in non-business premises. It results from the case-law that the national judicial authority may in particular ask the Commission for further information which it needs to carry out its control and in the absence of which it could refuse the authorisation. The case-law also confirms the competence of the national courts to control the application of national rules governing the implementation of coercive measures.

(28) In order to help the competition authorities of the Member States to apply Articles 81 and 82 of the Treaty effectively, it is expedient to enable them to assist one another by carrying out inspections and other fact-finding measures.

(29) Compliance with Articles 81 and 82 of the Treaty and the fulfilment of the obligations imposed on undertakings and associations of undertakings under this Regulation should be enforceable

by means of fines and periodic penalty payments. To that end, appropriate levels of fine should also be laid down for infringements of the procedural rules.

(30) In order to ensure effective recovery of fines imposed on associations of undertakings for infringements that they have committed, it is necessary to lay down the conditions on which the Commission may require payment of the fine from the members of the association where the association is not solvent. In doing so, the Commission should have regard to the relative size of the undertakings belonging to the association and in particular to the situation of small and medium-sized enterprises. Payment of the fine by one or several members of an association is without prejudice to rules of national law that provide for recovery of the amount paid from other members of the association.

(31) The rules on periods of limitation for the imposition of fines and periodic penalty payments were laid down in Council Regulation (EEC) No 2988/74(11), which also concerns penalties in the field of transport. In a system of parallel powers, the acts, which may interrupt a limitation period, should include procedural steps taken independently by the competition authority of a Member State. To clarify the legal framework, Regulation (EEC) No 2988/74 should therefore be amended to prevent it applying to matters covered by this Regulation, and this Regulation should include provisions on periods of limitation.

(32) The undertakings concerned should be accorded the right to be heard by the Commission, third parties whose interests may be affected by a decision should be given the opportunity of submitting their observations beforehand, and the decisions taken should be widely publicised. While ensuring the rights of defence of the undertakings concerned, in particular, the right of access to the file, it is essential that business secrets be protected. The confidentiality of information exchanged in the network should likewise be safeguarded.

(33) Since all decisions taken by the Commission under this Regulation are subject to review by the Court of Justice in accordance with the Treaty, the Court of Justice should, in accordance with Article 229 thereof be given unlimited jurisdiction in respect of decisions by which the Commission imposes fines or periodic penalty payments.

(34) The principles laid down in Articles 81 and 82 of the Treaty, as they have been applied by Regulation No 17, have given a central role to the Community bodies. This central role should be retained, whilst associating the Member States more closely with the application of the Community competition rules. In accordance with the principles of subsidiarity and proportionality as set out in Article 5 of the Treaty, this Regulation does not go beyond what is necessary in order to achieve its objective, which is to allow the Community competition rules to be applied effectively.

(35) In order to attain a proper enforcement of Community competition law, Member States should designate and empower authorities to apply Articles 81 and 82 of the Treaty as public enforcers. They should be able to designate administrative as well as judicial authorities to carry out the various functions conferred upon competition authorities in this Regulation. This Regulation recognises the wide variation which exists in the public enforcement systems of Member States. The effects of Article 11(6) of this Regulation should apply to all competition authorities. As an exception to this general rule, where a prosecuting authority brings a case before a separate judicial authority, Article 11(6) should apply to the prosecuting authority subject to the conditions in Article 35(4) of this Regulation. Where these conditions are not fulfilled, the general rule should apply. In any case, Article 11(6) should not apply to courts insofar as they are acting as review courts.

(36) As the case-law has made it clear that the competition rules apply to transport, that sector should be made subject to the procedural provisions of this Regulation. Council Regulation No 141 of 26 November 1962 exempting transport from the application of Regulation No 17(12) should

therefore be repealed and Regulations (EEC) No 1017/68(13), (EEC) No 4056/86(14) and (EEC) No 3975/87(15) should be amended in order to delete the specific procedural provisions they contain.

(37) This Regulation respects the fundamental rights and observes the principles recognised in particular by the Charter of Fundamental Rights of the European Union. Accordingly, this Regulation should be interpreted and applied with respect to those rights and principles.

(38) Legal certainty for undertakings operating under the Community competition rules contributes to the promotion of innovation and investment. Where cases give rise to genuine uncertainty because they present novel or unresolved questions for the application of these rules, individual undertakings may wish to seek informal guidance from the Commission. This Regulation is without prejudice to the ability of the Commission to issue such informal guidance,

HAS ADOPTED THIS REGULATION:

CHAPTER I

PRINCIPLES

Article 1

Application of Articles 81 and 82 of the Treaty

1. Agreements, decisions and concerted practices caught by Article 81(1) of the Treaty which do not satisfy the conditions of Article 81(3) of the Treaty shall be prohibited, no prior decision to that effect being required.

2. Agreements, decisions and concerted practices caught by Article 81(1) of the Treaty which satisfy the conditions of Article 81(3) of the Treaty shall not be prohibited, no prior decision to that effect being required.

3. The abuse of a dominant position referred to in Article 82 of the Treaty shall be prohibited, no prior decision to that effect being required.

Article 2

Burden of proof

In any national or Community proceedings for the application of Articles 81 and 82 of the Treaty, the burden of proving an infringement of Article 81(1) or of Article 82 of the Treaty shall rest on the party or the authority alleging the infringement. The undertaking or association of undertakings claiming the benefit of Article 81(3) of the Treaty shall bear the burden of proving that the conditions of that paragraph are fulfilled.

Article 3

Relationship between Articles 81 and 82 of the Treaty and national competition laws

1. Where the competition authorities of the Member States or national courts apply national competition law to agreements, decisions by associations of undertakings or concerted practices within the meaning

of Article 81(1) of the Treaty which may affect trade between Member States within the meaning of that provision, they shall also apply Article 81 of the Treaty to such agreements, decisions or concerted practices. Where the competition authorities of the Member States or national courts apply national competition law to any abuse prohibited by Article 82 of the Treaty, they shall also apply Article 82 of the Treaty.

2. The application of national competition law may not lead to the prohibition of agreements, decisions by associations of undertakings or concerted practices which may affect trade between Member States but which do not restrict competition within the meaning of Article 81(1) of the Treaty, or which fulfil the conditions of Article 81(3) of the Treaty or which are covered by a Regulation for the application of Article 81(3) of the Treaty. Member States shall not under this Regulation be precluded from adopting and applying on their territory stricter national laws which prohibit or sanction unilateral conduct engaged in by undertakings.

3. Without prejudice to general principles and other provisions of Community law, paragraphs 1 and 2 do not apply when the competition authorities and the courts of the Member States apply national merger control laws nor do they preclude the application of provisions of national law that predominantly pursue an objective different from that pursued by Articles 81 and 82 of the Treaty.

CHAPTER II

POWERS

Article 4

Powers of the Commission

For the purpose of applying Articles 81 and 82 of the Treaty, the Commission shall have the powers provided for by this Regulation.

Article 5

Powers of the competition authorities of the Member States

The competition authorities of the Member States shall have the power to apply Articles 81 and 82 of the Treaty in individual cases. For this purpose, acting on their own initiative or on a complaint, they may take the following decisions:

- requiring that an infringement be brought to an end,

- ordering interim measures,

- accepting commitments,

- imposing fines, periodic penalty payments or any other penalty provided for in their national law.

Where on the basis of the information in their possession the conditions for prohibition are not met they may likewise decide that there are no grounds for action on their part.

Article 6

Powers of the national courts

National courts shall have the power to apply Articles 81 and 82 of the Treaty.

CHAPTER III

COMMISSION DECISIONS

Article 7

Finding and termination of infringement

1. Where the Commission, acting on a complaint or on its own initiative, finds that there is an infringement of Article 81 or of Article 82 of the Treaty, it may by decision require the undertakings and associations of undertakings concerned to bring such infringement to an end. For this purpose, it may impose on them any behavioural or structural remedies which are proportionate to the infringement committed and necessary to bring the infringement effectively to an end. Structural remedies can only be imposed either where there is no equally effective behavioural remedy or where any equally effective behavioural remedy would be more burdensome for the undertaking concerned than the structural remedy. If the Commission has a legitimate interest in doing so, it may also find that an infringement has been committed in the past.

2. Those entitled to lodge a complaint for the purposes of paragraph 1 are natural or legal persons who can show a legitimate interest and Member States.

Article 8

Interim measures

1. In cases of urgency due to the risk of serious and irreparable damage to competition, the Commission, acting on its own initiative may by decision, on the basis of a prima facie finding of infringement, order interim measures.

2. A decision under paragraph 1 shall apply for a specified period of time and may be renewed in so far this is necessary and appropriate.

Article 9

Commitments

1. Where the Commission intends to adopt a decision requiring that an infringement be brought to an end and the undertakings concerned offer commitments to meet the concerns expressed to them by the Commission in its preliminary assessment, the Commission may by decision make those commitments binding on the undertakings. Such a decision may be adopted for a specified period and shall conclude that there are no longer grounds for action by the Commission.

2. The Commission may, upon request or on its own initiative, reopen the proceedings:

(a) where there has been a material change in any of the facts on which the decision was based;

(b) where the undertakings concerned act contrary to their commitments; or

(c) where the decision was based on incomplete, incorrect or misleading information provided by the parties.

Article 10

Finding of inapplicability

Where the Community public interest relating to the application of Articles 81 and 82 of the Treaty so requires, the Commission, acting on its own initiative, may by decision find that Article 81 of the Treaty is not applicable to an agreement, a decision by an association of undertakings or a concerted practice, either because the conditions of Article 81(1) of the Treaty are not fulfilled, or because the conditions of Article 81(3) of the Treaty are satisfied.

The Commission may likewise make such a finding with reference to Article 82 of the Treaty.

CHAPTER IV

COOPERATION

Article 11

Cooperation between the Commission and the competition authorities of the Member States

1. The Commission and the competition authorities of the Member States shall apply the Community competition rules in close cooperation.

2. The Commission shall transmit to the competition authorities of the Member States copies of the most important documents it has collected with a view to applying Articles 7, 8, 9, 10 and Article 29(1). At the request of the competition authority of a Member State, the Commission shall provide it with a copy of other existing documents necessary for the assessment of the case.

3. The competition authorities of the Member States shall, when acting under Article 81 or Article 82 of the Treaty, inform the Commission in writing before or without delay after commencing the first formal investigative measure. This information may also be made available to the competition authorities of the other Member States.

4. No later than 30 days before the adoption of a decision requiring that an infringement be brought to an end, accepting commitments or withdrawing the benefit of a block exemption Regulation, the competition authorities of the Member States shall inform the Commission. To that effect, they shall provide the Commission with a summary of the case, the envisaged decision or, in the absence thereof, any other document indicating the proposed course of action. This information may also be made available to the competition authorities of the other Member States. At the request of the Commission, the acting competition authority shall make available to the Commission other documents it holds which are necessary for the assessment of the case. The information supplied to the Commission may be made available to the competition authorities of the other Member States. National competition authorities may also exchange between themselves information necessary for the assessment of a case

that they are dealing with under Article 81 or Article 82 of the Treaty.

5. The competition authorities of the Member States may consult the Commission on any case involving the application of Community law.

6. The initiation by the Commission of proceedings for the adoption of a decision under Chapter III shall relieve the competition authorities of the Member States of their competence to apply Articles 81 and 82 of the Treaty. If a competition authority of a Member State is already acting on a case, the Commission shall only initiate proceedings after consulting with that national competition authority.

Article 12

Exchange of information

1. For the purpose of applying Articles 81 and 82 of the Treaty the Commission and the competition authorities of the Member States shall have the power to provide one another with and use in evidence any matter of fact or of law, including confidential information.

2. Information exchanged shall only be used in evidence for the purpose of applying Article 81 or Article 82 of the Treaty and in respect of the subject-matter for which it was collected by the transmitting authority. However, where national competition law is applied in the same case and in parallel to Community competition law and does not lead to a different outcome, information exchanged under this Article may also be used for the application of national competition law.

3. Information exchanged pursuant to paragraph 1 can only be used in evidence to impose sanctions on natural persons where:

- the law of the transmitting authority foresees sanctions of a similar kind in relation to an infringement of Article 81 or Article 82 of the Treaty or, in the absence thereof,

- the information has been collected in a way which respects the same level of protection of the rights of defence of natural persons as provided for under the national rules of the receiving authority. However, in this case, the information exchanged cannot be used by the receiving authority to impose custodial sanctions.

Article 13

Suspension or termination of proceedings

1. Where competition authorities of two or more Member States have received a complaint or are acting on their own initiative under Article 81 or Article 82 of the Treaty against the same agreement, decision of an association or practice, the fact that one authority is dealing with the case shall be sufficient grounds for the others to suspend the proceedings before them or to reject the complaint. The Commission may likewise reject a complaint on the ground that a competition authority of a Member State is dealing with the case.

2. Where a competition authority of a Member State or the Commission has received a complaint against an agreement, decision of an association or practice which has already been dealt with by another competition authority, it may reject it.

Article 14

Advisory Committee

1. The Commission shall consult an Advisory Committee on Restrictive Practices and Dominant Positions prior to the taking of any decision under Articles 7, 8, 9, 10, 23, Article 24(2) and Article 29(1).

2. For the discussion of individual cases, the Advisory Committee shall be composed of representatives of the competition authorities of the Member States. For meetings in which issues other than individual cases are being discussed, an additional Member State representative competent in competition matters may be appointed. Representatives may, if unable to attend, be replaced by other representatives.

3. The consultation may take place at a meeting convened and chaired by the Commission, held not earlier than 14 days after dispatch of the notice convening it, together with a summary of the case, an indication of the most important documents and a preliminary draft decision. In respect of decisions pursuant to Article 8, the meeting may be held seven days after the dispatch of the operative part of a draft decision. Where the Commission dispatches a notice convening the meeting which gives a shorter period of notice than those specified above, the meeting may take place on the proposed date in the absence of an objection by any Member State. The Advisory Committee shall deliver a written opinion on the Commission's preliminary draft decision. It may deliver an opinion even if some members are absent and are not represented. At the request of one or several members, the positions stated in the opinion shall be reasoned.

4. Consultation may also take place by written procedure. However, if any Member State so requests, the Commission shall convene a meeting. In case of written procedure, the Commission shall determine a time-limit of not less than 14 days within which the Member States are to put forward their observations for circulation to all other Member States. In case of decisions to be taken pursuant to Article 8, the time-limit of 14 days is replaced by seven days. Where the Commission determines a time-limit for the written procedure which is shorter than those specified above, the proposed time-limit shall be applicable in the absence of an objection by any Member State.

5. The Commission shall take the utmost account of the opinion delivered by the Advisory Committee. It shall inform the Committee of the manner in which its opinion has been taken into account.

6. Where the Advisory Committee delivers a written opinion, this opinion shall be appended to the draft decision. If the Advisory Committee recommends publication of the opinion, the Commission shall carry out such publication taking into account the legitimate interest of undertakings in the protection of their business secrets.

7. At the request of a competition authority of a Member State, the Commission shall include on the agenda of the Advisory Committee cases that are being dealt with by a competition authority of a Member State under Article 81 or Article 82 of the Treaty. The Commission may also do so on its own initiative. In either case, the Commission shall inform the competition authority concerned.

A request may in particular be made by a competition authority of a Member State in respect of a case where the Commission intends to initiate proceedings with the effect of Article 11(6).

The Advisory Committee shall not issue opinions on cases dealt with by competition authorities of the Member States. The Advisory Committee may also discuss general issues of Community competition law.

Article 15

Cooperation with national courts

1. In proceedings for the application of Article 81 or Article 82 of the Treaty, courts of the Member States may ask the Commission to transmit to them information in its possession or its opinion on questions concerning the application of the Community competition rules.

2. Member States shall forward to the Commission a copy of any written judgment of national courts deciding on the application of Article 81 or Article 82 of the Treaty. Such copy shall be forwarded without delay after the full written judgment is notified to the parties.

3. Competition authorities of the Member States, acting on their own initiative, may submit written observations to the national courts of their Member State on issues relating to the application of Article 81 or Article 82 of the Treaty. With the permission of the court in question, they may also submit oral observations to the national courts of their Member State. Where the coherent application of Article 81 or Article 82 of the Treaty so requires, the Commission, acting on its own initiative, may submit written observations to courts of the Member States. With the permission of the court in question, it may also make oral observations.

For the purpose of the preparation of their observations only, the competition authorities of the Member States and the Commission may request the relevant court of the Member State to transmit or ensure the transmission to them of any documents necessary for the assessment of the case.

4. This Article is without prejudice to wider powers to make observations before courts conferred on competition authorities of the Member States under the law of their Member State.

Article 16

Uniform application of Community competition law

1. When national courts rule on agreements, decisions or practices under Article 81 or Article 82 of the Treaty which are already the subject of a Commission decision, they cannot take decisions running counter to the decision adopted by the Commission. They must also avoid giving decisions which would conflict with a decision contemplated by the Commission in proceedings it has initiated. To that effect, the national court may assess whether it is necessary to stay its proceedings. This obligation is without prejudice to the rights and obligations under Article 234 of the Treaty.

2. When competition authorities of the Member States rule on agreements, decisions or practices under Article 81 or Article 82 of the Treaty which are already the subject of a Commission decision, they cannot take decisions which would run counter to the decision adopted by the Commission.

CHAPTER V

POWERS OF INVESTIGATION

Article 17

Investigations into sectors of the economy and into types of agreements

1. Where the trend of trade between Member States, the rigidity of prices or other circumstances suggest that competition may be restricted or distorted within the common market, the Commission may conduct its inquiry into a particular sector of the economy or into a particular type of agreements across various sectors. In the course of that inquiry, the Commission may request the undertakings or associations of undertakings concerned to supply the information necessary for giving effect to Articles 81 and 82 of the Treaty and may carry out any inspections necessary for that purpose.

The Commission may in particular request the undertakings or associations of undertakings concerned to communicate to it all agreements, decisions and concerted practices.

The Commission may publish a report on the results of its inquiry into particular sectors of the economy or particular types of agreements across various sectors and invite comments from interested parties.

2. Articles 14, 18, 19, 20, 22, 23 and 24 shall apply mutatis mutandis.

Article 18

Requests for information

1. In order to carry out the duties assigned to it by this Regulation, the Commission may, by simple request or by decision, require undertakings and associations of undertakings to provide all necessary information.

2. When sending a simple request for information to an undertaking or association of undertakings, the Commission shall state the legal basis and the purpose of the request, specify what information is required and fix the time-limit within which the information is to be provided, and the penalties provided for in Article 23 for supplying incorrect or misleading information.

3. Where the Commission requires undertakings and associations of undertakings to supply information by decision, it shall state the legal basis and the purpose of the request, specify what information is required and fix the time-limit within which it is to be provided. It shall also indicate the penalties provided for in Article 23 and indicate or impose the penalties provided for in Article 24. It shall further indicate the right to have the decision reviewed by the Court of Justice.

4. The owners of the undertakings or their representatives and, in the case of legal persons, companies or firms, or associations having no legal personality, the persons authorised to represent them by law or by their constitution shall supply the information requested on behalf of the undertaking or the association of undertakings concerned. Lawyers duly authorised to act may supply the information on behalf of their clients. The latter shall remain fully responsible if the information supplied is incomplete, incorrect or misleading.

5. The Commission shall without delay forward a copy of the simple request or of the decision to the competition authority of the Member State in whose territory the seat of the undertaking or association of undertakings is situated and the competition authority of the Member State whose territory is affected.

6. At the request of the Commission the governments and competition authorities of the Member States shall provide the Commission with all necessary information to carry out the duties assigned to it by this Regulation.

Article 19

Power to take statements

1. In order to carry out the duties assigned to it by this Regulation, the Commission may interview any natural or legal person who consents to be interviewed for the purpose of collecting information relating to the subject-matter of an investigation.

2. Where an interview pursuant to paragraph 1 is conducted in the premises of an undertaking, the Commission shall inform the competition authority of the Member State in whose territory the interview takes place. If so requested by the competition authority of that Member State, its officials may assist the officials and other accompanying persons authorised by the Commission to conduct the interview.

Article 20

The Commission's powers of inspection

1. In order to carry out the duties assigned to it by this Regulation, the Commission may conduct all necessary inspections of undertakings and associations of undertakings.

2. The officials and other accompanying persons authorised by the Commission to conduct an inspection are empowered:

(a) to enter any premises, land and means of transport of undertakings and associations of undertakings;

(b) to examine the books and other records related to the business, irrespective of the medium on which they are stored;

(c) to take or obtain in any form copies of or extracts from such books or records;

(d) to seal any business premises and books or records for the period and to the extent necessary for the inspection;

(e) to ask any representative or member of staff of the undertaking or association of undertakings for explanations on facts or documents relating to the subject-matter and purpose of the inspection and to record the answers.

3. The officials and other accompanying persons authorised by the Commission to conduct an inspection shall exercise their powers upon production of a written authorisation specifying the subject matter and purpose of the inspection and the penalties provided for in Article 23 in case the production of the required books or other records related to the business is incomplete or where the answers to questions asked under paragraph 2 of the present Article are incorrect or misleading. In good time before the inspection, the Commission shall give notice of the inspection to the competition authority of the Member State in whose territory it is to be conducted.

4. Undertakings and associations of undertakings are required to submit to inspections ordered by decision of the Commission. The decision shall specify the subject matter and purpose of the inspection, appoint the date on which it is to begin and indicate the penalties provided for in Articles 23 and 24 and the right to have the decision reviewed by the Court of Justice. The Commission shall take such decisions after consulting the competition authority of the Member State in whose territory the inspection is to be conducted.

5. Officials of as well as those authorised or appointed by the competition authority of the Member State in whose territory the inspection is to be conducted shall, at the request of that authority or of the Commission, actively assist the officials and other accompanying persons authorised by the Commission. To this end, they shall enjoy the powers specified in paragraph 2.

6. Where the officials and other accompanying persons authorised by the Commission find that an undertaking opposes an inspection ordered pursuant to this Article, the Member State concerned shall afford them the necessary assistance, requesting where appropriate the assistance of the police or of an equivalent enforcement authority, so as to enable them to conduct their inspection.

7. If the assistance provided for in paragraph 6 requires authorisation from a judicial authority according to national rules, such authorisation shall be applied for. Such authorisation may also be applied for as a precautionary measure.

8. Where authorisation as referred to in paragraph 7 is applied for, the national judicial authority shall control that the Commission decision is authentic and that the coercive measures envisaged are neither arbitrary nor excessive having regard to the subject matter of the inspection. In its control of the proportionality of the coercive measures, the national judicial authority may ask the Commission, directly or through the Member State competition authority, for detailed explanations in particular on the grounds the Commission has for suspecting infringement of Articles 81 and 82 of the Treaty, as well as on the seriousness of the suspected infringement and on the nature of the involvement of the undertaking concerned. However, the national judicial authority may not call into question the necessity for the inspection nor demand that it be provided with the information in the Commission's file. The lawfulness of the Commission decision shall be subject to review only by the Court of Justice.

Article 21

Inspection of other premises

1. If a reasonable suspicion exists that books or other records related to the business and to the subject-matter of the inspection, which may be relevant to prove a serious violation of Article 81 or Article 82 of the Treaty, are being kept in any other premises, land and means of transport, including the homes of directors, managers and other members of staff of the undertakings and associations of undertakings concerned, the Commission can by decision order an inspection to be conducted in such other premises, land and means of transport.

2. The decision shall specify the subject matter and purpose of the inspection, appoint the date on which it is to begin and indicate the right to have the decision reviewed by the Court of Justice. It shall in particular state the reasons that have led the Commission to conclude that a suspicion in the sense of paragraph 1 exists. The Commission shall take such decisions after consulting the competition authority of the Member State in whose territory the inspection is to be conducted.

3. A decision adopted pursuant to paragraph 1 cannot be executed without prior authorisation from the national judicial authority of the Member State concerned. The national judicial authority shall control that the Commission decision is authentic and that the coercive measures envisaged are neither arbitrary nor excessive having regard in particular to the seriousness of the suspected infringement, to the importance of the evidence sought, to the involvement of the undertaking concerned and to the reasonable likelihood that business books and records relating to the subject matter of the inspection are kept in the premises for which the authorisation is requested. The national judicial authority may ask the Commission, directly or through the Member State competition authority,

for detailed explanations on those elements which are necessary to allow its control of the proportionality of the coercive measures envisaged.

However, the national judicial authority may not call into question the necessity for the inspection nor demand that it be provided with information in the Commission's file. The lawfulness of the Commission decision shall be subject to review only by the Court of Justice.

4. The officials and other accompanying persons authorised by the Commission to conduct an inspection ordered in accordance with paragraph 1 of this Article shall have the powers set out in Article 20(2)(a), (b) and (c). Article 20(5) and (6) shall apply mutatis mutandis.

Article 22

Investigations by competition authorities of Member States

1. The competition authority of a Member State may in its own territory carry out any inspection or other fact-finding measure under its national law on behalf and for the account of the competition authority of another Member State in order to establish whether there has been an infringement of Article 81 or Article 82 of the Treaty. Any exchange and use of the information collected shall be carried out in accordance with Article 12.

2. At the request of the Commission, the competition authorities of the Member States shall undertake the inspections which the Commission considers to be necessary under Article 20(1) or which it has ordered by decision pursuant to Article 20(4). The officials of the competition authorities of the Member States who are responsible for conducting these inspections as well as those authorised or appointed by them shall exercise their powers in accordance with their national law.

If so requested by the Commission or by the competition authority of the Member State in whose territory the inspection is to be conducted, officials and other accompanying persons authorised by the Commission may assist the officials of the authority concerned.

CHAPTER VI

PENALTIES

Article 23

Fines

1. The Commission may by decision impose on undertakings and associations of undertakings fines not exceeding 1 % of the total turnover in the preceding business year where, intentionally or negligently:

(a) they supply incorrect or misleading information in response to a request made pursuant to Article 17 or Article 18(2);

(b) in response to a request made by decision adopted pursuant to Article 17 or Article 18(3), they supply incorrect, incomplete or misleading information or do not supply information within the required time-limit;

(c) they produce the required books or other records related to the business in incomplete form during inspections under Article 20 or refuse to submit to inspections ordered by a decision adopted pursuant to Article 20(4);

(d) in response to a question asked in accordance with Article 20(2)(e),

- they give an incorrect or misleading answer,

- they fail to rectify within a time-limit set by the Commission an incorrect, incomplete or misleading answer given by a member of staff, or

- they fail or refuse to provide a complete answer on facts relating to the subject-matter and purpose of an inspection ordered by a decision adopted pursuant to Article 20(4);

(e) seals affixed in accordance with Article 20(2)(d) by officials or other accompanying persons authorised by the Commission have been broken.

2. The Commission may by decision impose fines on undertakings and associations of undertakings where, either intentionally or negligently:

(a) they infringe Article 81 or Article 82 of the Treaty; or

(b) they contravene a decision ordering interim measures under Article 8; or

(c) they fail to comply with a commitment made binding by a decision pursuant to Article 9.

For each undertaking and association of undertakings participating in the infringement, the fine shall not exceed 10 % of its total turnover in the preceding business year.

Where the infringement of an association relates to the activities of its members, the fine shall not exceed 10 % of the sum of the total turnover of each member active on the market affected by the infringement of the association.

3. In fixing the amount of the fine, regard shall be had both to the gravity and to the duration of the infringement.

4. When a fine is imposed on an association of undertakings taking account of the turnover of its members and the association is not solvent, the association is obliged to call for contributions from its members to cover the amount of the fine.

Where such contributions have not been made to the association within a time-limit fixed by the Commission, the Commission may require payment of the fine directly by any of the undertakings whose representatives were members of the decision-making bodies concerned of the association.

After the Commission has required payment under the second subparagraph, where necessary to ensure full payment of the fine, the Commission may require payment of the balance by any of the members of the association which were active on the market on which the infringement occurred.

However, the Commission shall not require payment under the second or the third subparagraph from undertakings which show that they have not implemented the infringing decision of the association and either were not aware of its existence or have actively distanced themselves from it before the Commission started investigating the case.

The financial liability of each undertaking in respect of the payment of the fine shall not exceed 10 % of its total turnover in the preceding business year.

5. Decisions taken pursuant to paragraphs 1 and 2 shall not be of a criminal law nature.

Article 24

Periodic penalty payments

1. The Commission may, by decision, impose on undertakings or associations of undertakings periodic penalty payments not exceeding 5 % of the average daily turnover in the preceding business year per day and calculated from the date appointed by the decision, in order to compel them:

(a) to put an end to an infringement of Article 81 or Article 82 of the Treaty, in accordance with a decision taken pursuant to Article 7;

(b) to comply with a decision ordering interim measures taken pursuant to Article 8;

(c) to comply with a commitment made binding by a decision pursuant to Article 9;

(d) to supply complete and correct information which it has requested by decision taken pursuant to Article 17 or Article 18(3);

(e) to submit to an inspection which it has ordered by decision taken pursuant to Article 20(4).

2. Where the undertakings or associations of undertakings have satisfied the obligation which the periodic penalty payment was intended to enforce, the Commission may fix the definitive amount of the periodic penalty payment at a figure lower than that which would arise under the original decision. Article 23(4) shall apply correspondingly.

CHAPTER VII

LIMITATION PERIODS

Article 25

Limitation periods for the imposition of penalties

1. The powers conferred on the Commission by Articles 23 and 24 shall be subject to the following limitation periods:

(a) three years in the case of infringements of provisions concerning requests for information or the conduct of inspections;

(b) five years in the case of all other infringements.

2. Time shall begin to run on the day on which the infringement is committed. However, in the case of continuing or repeated infringements, time shall begin to run on the day on which the infringement ceases.

3. Any action taken by the Commission or by the competition authority of a Member State for the purpose of the investigation or proceedings in respect of an infringement shall interrupt the limitation period for the imposition of fines or periodic penalty payments. The limitation period shall be interrupted with effect from the date on which the action is notified to at least one undertaking or association of undertakings which has participated in the infringement. Actions which interrupt the running of the period shall include in particular the following:

(a) written requests for information by the Commission or by the competition authority of a Member State;

(b) written authorisations to conduct inspections issued to its officials by the Commission or by the competition authority of a Member State;

(c) the initiation of proceedings by the Commission or by the competition authority of a Member State;

(d) notification of the statement of objections of the Commission or of the competition authority of a Member State.

4. The interruption of the limitation period shall apply for all the undertakings or associations of undertakings which have participated in the infringement.

5. Each interruption shall start time running afresh. However, the limitation period shall expire at the latest on the day on which a period equal to twice the limitation period has elapsed without the Commission having imposed a fine or a periodic penalty payment. That period shall be extended by the time during which limitation is suspended pursuant to paragraph 6.

6. The limitation period for the imposition of fines or periodic penalty payments shall be suspended for as long as the decision of the Commission is the subject of proceedings pending before the Court of Justice.

Article 26

Limitation period for the enforcement of penalties

1. The power of the Commission to enforce decisions taken pursuant to Articles 23 and 24 shall be subject to a limitation period of five years.

2. Time shall begin to run on the day on which the decision becomes final.

3. The limitation period for the enforcement of penalties shall be interrupted:

(a) by notification of a decision varying the original amount of the fine or periodic penalty payment or refusing an application for variation;

(b) by any action of the Commission or of a Member State, acting at the request of the Commission, designed to enforce payment of the fine or periodic penalty payment.

4. Each interruption shall start time running afresh.

5. The limitation period for the enforcement of penalties shall be suspended for so long as:

(a) time to pay is allowed;

(b) enforcement of payment is suspended pursuant to a decision of the Court of Justice.

CHAPTER VIII

HEARINGS AND PROFESSIONAL SECRECY

Article 27

Hearing of the parties, complainants and others

1. Before taking decisions as provided for in Articles 7, 8, 23 and Article 24(2), the Commission shall give the undertakings or associations of undertakings which are the subject of the proceedings conducted by the Commission the opportunity of being heard on the matters to which the Commission has taken objection. The Commission shall base its decisions only on objections on which the parties concerned have been able to comment. Complainants shall be associated closely with the proceedings.

2. The rights of defence of the parties concerned shall be fully respected in the proceedings.

They shall be entitled to have access to the Commission's file, subject to the legitimate interest of undertakings in the protection of their business secrets. The right of access to the file shall not extend to confidential information and internal documents of the Commission or the competition authorities of the Member States. In particular, the right of access shall not extend to correspondence between the Commission and the competition authorities of the Member States, or between the latter, including documents drawn up pursuant to Articles 11 and 14. Nothing in this paragraph shall prevent the Commission from disclosing and using information necessary to prove an infringement.

3. If the Commission considers it necessary, it may also hear other natural or legal persons. Applications to be heard on the part of such persons shall, where they show a sufficient interest, be granted. The competition authorities of the Member States may also ask the Commission to hear other natural or legal persons.

4. Where the Commission intends to adopt a decision pursuant to Article 9 or Article 10, it shall publish a concise summary of the case and the main content of the commitments or of the proposed course of action. Interested third parties may submit their observations within a time limit which is fixed by the Commission in its publication and which may not be less than one month. Publication shall have regard to the legitimate interest of undertakings in the protection of their business secrets.

Article 28

Professional secrecy

1. Without prejudice to Articles 12 and 15, information collected pursuant to Articles 17 to 22 shall be used only for the purpose for which it was acquired.

2. Without prejudice to the exchange and to the use of information foreseen in Articles 11, 12, 14, 15 and 27, the Commission and the competition authorities of the Member States, their officials, servants and other persons working under the supervision of these authorities as well as officials and civil servants of other authorities of the Member States shall not disclose information acquired or exchanged by them pursuant to this Regulation and of the kind covered by the obligation of professional secrecy. This obligation also applies to all representatives and experts of Member States attending meetings of the Advisory Committee pursuant to Article 14.

CHAPTER IX

EXEMPTION REGULATIONS

Article 29

Withdrawal in individual cases

1. Where the Commission, empowered by a Council Regulation, such as Regulations 19/65/EEC, (EEC) No 2821/71, (EEC) No 3976/87, (EEC) No 1534/91 or (EEC) No 479/92, to apply Article 81(3) of the Treaty by regulation, has declared Article 81(1) of the Treaty inapplicable to certain categories of agreements, decisions by associations of undertakings or concerted practices, it may, acting on its own initiative or on a complaint, withdraw the benefit of such an exemption Regulation when it finds that in any particular case an agreement, decision or concerted practice to which the exemption Regulation applies has certain effects which are incompatible with Article 81(3)

of the Treaty.

2. Where, in any particular case, agreements, decisions by associations of undertakings or concerted practices to which a Commission Regulation referred to in paragraph 1 applies have effects which are incompatible with Article 81(3) of the Treaty in the territory of a Member State, or in a part thereof, which has all the characteristics of a distinct geographic market, the competition authority of that Member State may withdraw the benefit of the Regulation in question in respect of that territory.

CHAPTER X

GENERAL PROVISIONS

Article 30

Publication of decisions

1. The Commission shall publish the decisions, which it takes pursuant to Articles 7 to 10, 23 and 24.

2. The publication shall state the names of the parties and the main content of the decision, including any penalties imposed. It shall have regard to the legitimate interest of undertakings in the protection of their business secrets.

Article 31

Review by the Court of Justice

The Court of Justice shall have unlimited jurisdiction to review decisions whereby the Commission has fixed a fine or periodic penalty payment. It may cancel, reduce or increase the fine or periodic penalty payment imposed.

Article 32

Exclusions

This Regulation shall not apply to:

(a) international tramp vessel services as defined in Article 1(3)(a) of Regulation (EEC) No 4056/86;

(b) a maritime transport service that takes place exclusively between ports in one and the same Member State as foreseen in Article 1(2) of Regulation (EEC) No 4056/86;

(c) air transport between Community airports and third countries.

Article 33

Implementing provisions

1. The Commission shall be authorised to take such measures as may be appropriate in order to apply this Regulation. The measures may concern, inter alia:

(a) the form, content and other details of complaints lodged pursuant to Article 7 and the procedure for rejecting complaints;

(b) the practical arrangements for the exchange of information and consultations provided for in Article 11;

(c) the practical arrangements for the hearings provided for in Article 27.

2. Before the adoption of any measures pursuant to paragraph 1, the Commission shall publish a draft thereof and invite all interested parties to submit their comments within the time-limit it lays down, which may not be less than one month. Before publishing a draft measure and before adopting it, the Commission shall consult the Advisory Committee on Restrictive Practices and Dominant Positions.

CHAPTER XI

TRANSITIONAL, AMENDING AND FINAL PROVISIONS

Article 34

Transitional provisions

1. Applications made to the Commission under Article 2 of Regulation No 17, notifications made under Articles 4 and 5 of that Regulation and the corresponding applications and notifications made under Regulations (EEC) No 1017/68, (EEC) No 4056/86 and (EEC) No 3975/87 shall lapse as from the date of application of this Regulation.

2. Procedural steps taken under Regulation No 17 and Regulations (EEC) No 1017/68, (EEC) No 4056/86 and (EEC) No 3975/87 shall continue to have effect for the purposes of applying this Regulation.

Article 35

Designation of competition authorities of Member States

1. The Member States shall designate the competition authority or authorities responsible for the application of Articles 81 and 82 of the Treaty in such a way that the provisions of this regulation are effectively complied with. The measures necessary to empower those authorities to apply those Articles shall be taken before 1 May 2004. The authorities designated may include courts.

2. When enforcement of Community competition law is entrusted to national administrative and judicial authorities, the Member States may allocate different powers and functions to those different national authorities, whether administrative or judicial.

3. The effects of Article 11(6) apply to the authorities designated by the Member States including courts that exercise functions regarding the preparation and the adoption of the types of decisions foreseen in Article 5. The effects of Article 11(6) do not extend to courts insofar as they act as review courts in respect of the types of decisions foreseen in Article 5.

4. Notwithstanding paragraph 3, in the Member States where, for the adoption of certain types of decisions foreseen in Article 5, an authority brings an action before a judicial authority that

is separate and different from the prosecuting authority and provided that the terms of this paragraph are complied with, the effects of Article 11(6) shall be limited to the authority prosecuting the case which shall withdraw its claim before the judicial authority when the Commission opens proceedings and this withdrawal shall bring the national proceedings effectively to an end.

Article 36

Amendment of Regulation (EEC) No 1017/68

Regulation (EEC) No 1017/68 is amended as follows:

1. Article 2 is repealed;

2. in Article 3(1), the words "The prohibition laid down in Article 2" are replaced by the words "The prohibition in Article 81(1) of the Treaty";

3. Article 4 is amended as follows:

(a) In paragraph 1, the words "The agreements, decisions and concerted practices referred to in Article 2" are replaced by the words "Agreements, decisions and concerted practices pursuant to Article 81(1) of the Treaty";

(b) Paragraph 2 is replaced by the following:

"2. If the implementation of any agreement, decision or concerted practice covered by paragraph 1 has, in a given case, effects which are incompatible with the requirements of Article 81(3) of the Treaty, undertakings or associations of undertakings may be required to make such effects cease."

4. Articles 5 to 29 are repealed with the exception of Article 13(3) which continues to apply to decisions adopted pursuant to Article 5 of Regulation (EEC) No 1017/68 prior to the date of application of this Regulation until the date of expiration of those decisions;

5. in Article 30, paragraphs 2, 3 and 4 are deleted.

Article 37

Amendment of Regulation (EEC) No 2988/74

In Regulation (EEC) No 2988/74, the following Article is inserted:

"Article 7a

Exclusion

This Regulation shall not apply to measures taken under Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty(16)."

Article 38

Amendment of Regulation (EEC) No 4056/86

Regulation (EEC) No 4056/86 is amended as follows:

1. Article 7 is amended as follows:

(a) Paragraph 1 is replaced by the following:

"1. Breach of an obligation

Where the persons concerned are in breach of an obligation which, pursuant to Article 5, attaches to the exemption provided for in Article 3, the Commission may, in order to put an end to such breach and under the conditions laid down in Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty(17) adopt a decision that either prohibits them from carrying out or requires them to perform certain specific acts, or withdraws the benefit of the block exemption which they enjoyed."

(b) Paragraph 2 is amended as follows:

(i) In point (a), the words "under the conditions laid down in Section II" are replaced by the words "under the conditions laid down in Regulation (EC) No 1/2003";

(ii) The second sentence of the second subparagraph of point (c)(i) is replaced by the following:

"At the same time it shall decide, in accordance with Article 9 of Regulation (EC) No 1/2003, whether to accept commitments offered by the undertakings concerned with a view, inter alia, to obtaining access to the market for non-conference lines."

2. Article 8 is amended as follows:

(a) Paragraph 1 is deleted.

(b) In paragraph 2 the words "pursuant to Article 10" are replaced by the words "pursuant to Regulation (EC) No 1/2003".

(c) Paragraph 3 is deleted;

3. Article 9 is amended as follows:

(a) In paragraph 1, the words "Advisory Committee referred to in Article 15" are replaced by the words "Advisory Committee referred to in Article 14 of Regulation (EC) No 1/2003";

(b) In paragraph 2, the words "Advisory Committee as referred to in Article 15" are replaced by the words "Advisory Committee referred to in Article 14 of Regulation (EC) No 1/2003";

4. Articles 10 to 25 are repealed with the exception of Article 13(3) which continues to apply to decisions adopted pursuant to Article 81(3) of the Treaty prior to the date of application of this Regulation until the date of expiration of those decisions;

5. in Article 26, the words "the form, content and other details of complaints pursuant to Article 10, applications pursuant to Article 12 and the hearings provided for in Article 23(1) and (2)" are deleted.

Article 39

Amendment of Regulation (EEC) No 3975/87

Articles 3 to 19 of Regulation (EEC) No 3975/87 are repealed with the exception of Article 6(3) which continues to apply to decisions adopted pursuant to Article 81(3) of the Treaty prior to the date of application of this Regulation until the date of expiration of those decisions.

Article 40

Amendment of Regulations No 19/65/EEC, (EEC) No 2821/71 and (EEC) No 1534/91

Article 7 of Regulation No 19/65/EEC, Article 7 of Regulation (EEC) No 2821/71 and Article 7 of Regulation (EEC) No 1534/91 are repealed.

Article 41

Amendment of Regulation (EEC) No 3976/87

Regulation (EEC) No 3976/87 is amended as follows:

1. Article 6 is replaced by the following:

"Article 6

The Commission shall consult the Advisory Committee referred to in Article 14 of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty(18) before publishing a draft Regulation and before adopting a Regulation."

2. Article 7 is repealed.

Article 42

Amendment of Regulation (EEC) No 479/92

Regulation (EEC) No 479/92 is amended as follows:

1. Article 5 is replaced by the following:

"Article 5

Before publishing the draft Regulation and before adopting the Regulation, the Commission shall consult the Advisory Committee referred to in Article 14 of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty(19)."

2. Article 6 is repealed.

Article 43

Repeal of Regulations No 17 and No 141

1. Regulation No 17 is repealed with the exception of Article 8(3) which continues to apply to decisions adopted pursuant to Article 81(3) of the Treaty prior to the date of application of this Regulation until the date of expiration of those decisions.

2. Regulation No 141 is repealed.

3. References to the repealed Regulations shall be construed as references to this Regulation.

Article 44

Report on the application of the present Regulation

Five years from the date of application of this Regulation, the Commission shall report to the European Parliament and the Council on the functioning of this Regulation, in particular on the application of Article 11(6) and Article 17.

On the basis of this report, the Commission shall assess whether it is appropriate to propose to the Council a revision of this Regulation.

Article 45

Entry into force

This Regulation shall enter into force on the 20th day following that of its publication in the Official Journal of the European Communities.

It shall apply from 1 May 2004.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 16 December 2002.

For the Council

The President

M. Fischer Boel

COMMISSION

CONSOLIDATED JURISDICTIONAL NOTICE

under Council Regulation (EC) No 139/2004
on the control of concentrations between undertakings

COMMISSION CONSOLIDATED JURISDICTIONAL NOTICE

under Council Regulation (EC) No 139/2004
on the control of concentrations between undertakings

A. Introduction

1. The purpose of this Notice is to provide guidance as to jurisdictional issues under Council Regulation (EC) No 139/2004, OJ L 24, 29.1.2003, page 1 (the "Merger Regulation").[1] This formal guidance should enable firms to establish more quickly, in advance of any contact with the Commission, whether and to what extent their operations may be covered by Community control of concentrations.

2. This Notice replaces the Notice on the concept of concentration[2], the Notice on the concept of full-function joint ventures,[3] the Notice on the concept of undertakings concerned[4] and the Notice on calculation of turnover[5].

3. This Notice deals with the concepts of a concentration and of a full-function joint venture, undertakings concerned and the calculation of turnover as set out in Articles 1, 3 and 5 of the Merger Regulation. Issues concerning referrals are dealt with in the Notice on referrals.[6] The Commission's interpretation of Articles 1, 3 and 5 in the present Notice is without prejudice to the interpretation which may be given by the Court of Justice or by the Court of First Instance of the European Communities.

4. The guidance set out in this Notice reflects the Commission's experience in applying the recast Merger Regulation and the former Merger Regulation since the latter entered into force on 21 September 1990. The general principles governing the issues dealt with in this Notice have not been changed by the entry into force of Regulation (EC) No 139/2004, but where changes have occurred, the Notice deals

---

1 Where it is necessary in this Notice to distinguish between Regulation 139/2004 and Council Regulation (EEC) No 4064/89 (OJ L 395, 30.12.19989, corrected version in OJ L 257, 21.9.1990, p.13, Regulation last amended by Regulation (EC) No 1310/97, OJ L 180, 9.7.1997, p.1, corrigendum in OJ L 40, 13.2.1998, p.17), the former will be referred to as the "recast Merger Regulation" whereas the latter will be referred to as the "former Merger Regulation". Articles without reference refer to the recast Merger Regulation.

2 OJ C 66, 02.03.1998, p. 5.

3 OJ C 66, 02.03.1998, p.1.

4 OJ C 66, 02.03.1998, p.14.

5 OJ C 66, 02.03.1998, p.25.

6 OJ C 56, 05.03.2005, p. 2.

with them explicitly. The principles contained in the Notice will be applied and further developed by the Commission in individual cases.

5. According to Article 1, the Merger Regulation only applies to operations that satisfy two conditions. First, there must be a concentration of two or more undertakings within the meaning of Article 3 of the Merger Regulation. Secondly, the turnover of the undertakings concerned, calculated in accordance with Article 5, must satisfy the thresholds set out in Article 1 of the Regulation. The notion of a concentration (including the particular requirements for joint ventures), as the first condition, is dealt with under Part B; the identification of undertakings concerned and the calculation of their turnover as relevant for the second condition are dealt with under Part C.

6. The Commission addresses the question of its jurisdiction over a concentration in decisions according to Article 6 of the Merger Regulation.[7]

B. The concept of concentration

7. According to Article 3(1) of the Merger Regulation, a concentration only covers operations where a change of control in the undertakings concerned occurs on a lasting basis. Recital 20 in the preamble to the Merger Regulation further explains that the concept of concentration is intended to relate to operations which bring about a lasting change in the structure of the market. Because the test in Article 3 is centred on the concept of control, the existence of a concentration is to a great extent determined by qualitative rather than quantitative criteria.

8. Article 3(1) of the Merger Regulation defines two categories of concentrations:

- those arising from a merger between previously independent undertakings (point (a));
- those arising from an acquisition of control (point (b)).

These are treated respectively in Sections I and II below.

I. Mergers between previously independent undertakings

---

7 See also opinion of AG Kokott in Case C-202/06 Cementbouw v Commission of 26 April 2007, paragraph 56 (not yet reported).

9. A merger within the meaning of Article 3(1)(a) of the Merger Regulation occurs when two or more independent undertakings amalgamate into a new undertaking and cease to exist as separate legal entities. A merger may also occur when an undertaking is absorbed by another, the latter retaining its legal identity while the former ceases to exist as a legal entity.[8]

10. A merger within the meaning of Article 3(1)(a) may also occur where, in the absence of a legal merger, the combining of the activities of previously independent undertakings results in the creation of a single economic unit[9]. This may arise in particular where two or more undertakings, while retaining their individual legal personalities, establish contractually a common economic management[10] or the structure of a dual listed company.[11] If this leads to a *de facto* amalgamation of the undertakings concerned into a single economic unit, the operation is considered to be a merger. A prerequisite for the determination of such a *de facto* merger is the existence of a permanent, single economic management. Other relevant factors may include internal profit and loss compensation or a revenue distribution as between the various entities within the group, and their joint liability or external risk sharing. The *de facto* amalgamation may be solely based on contractual arrangements[12], but it can also be reinforced by cross-shareholdings between the undertakings forming the economic unit.

II. Acquisition of control

1. Concept of control

1.1 Person or undertaking acquiring control

8 See, for example, Case COMP/M. 1673 – Veba/VIAG of 13 June 2000; Case COMP/M.1806 – AstraZeneca/Novartis of 26 July 2000; Case COMP/M.2208 - Chevron/Texaco of 26 January 2001; and Case IV/M.1383 - Exxon/Mobil of 29 September 1999. A merger in the meaning of Article 3(1)(a) is not deemed to occur if a target company is merged with a subsidiary of the acquiring company to the effect that the parent company acquires control of the target undertaking under Article 3(1)(b), see Case COMP/M.2510 – Cendant/Galileo of 24 September 2001.

9 In determining the previous independence of undertakings, the issue of control may be relevant as the merger might otherwise only be an internal restructuring within the group. In this specific context, the assessment of control also follows the general concept set out below and includes *de jure* as well as *de facto* control.

10 This could apply for example in the case of a "Gleichordnungskonzern" in German law, certain "Groupements d'Intérêt Economique" in French law, and the amalgamation of partnerships, as in Case IV/M.1016 – Price Waterhouse/Coopers&Lybrand of 20 May 1998.

11 Case IV/M.660 - RTZ/CRA of 7 December 1995; Case COMP/M.3071 – Carnival Corporation/P&O Princess II of 24 July 2002.

12 See Case IV/M.1016 – Price Waterhouse/Coopers&Lybrand of 20 May 1998; Case COMP/M.2824 – Ernst & Young/Andersen Germany of 27 August 2002.

11. Article 3 (1)(b) provides that a concentration occurs in the case of an acquisition of control. Such control may be acquired by one undertaking acting alone or by several undertakings acting jointly.

Person controlling another undertaking

12. Control may also be acquired by a person in circumstances where that person already controls (whether solely or jointly) at least one other undertaking or, alternatively, by a combination of persons (which control another undertaking) and undertakings. The term "person" in this context extends to public bodies[13] and private entities, as well as natural persons. Acquisitions of control by natural persons are only considered to bring about a lasting change in the structure of the undertakings concerned if those natural persons carry out further economic activities on their own account or if they control at least one other undertaking.[14]

Acquirer of control

13. Control is normally acquired by persons or undertakings which are the holders of the rights or are entitled to rights conferring control under the contracts concerned (Article 3(3)(a)). However, there are also situations where the formal holder of a controlling interest differs from the person or undertaking having in fact the real power to exercise the rights resulting from this interest. This may be the case, for example, where an undertaking uses another person or undertaking for the acquisition of a controlling interest and has the power to exercise the rights conferring control through this person or undertaking, i.e. the latter is formally the holder of the rights, but acts only as a vehicle. In such a situation, control is acquired by the undertaking which in reality is behind the operation and in fact enjoys the power to control the target undertaking (Article 3(3)(b)). The Court of First Instance concluded from this provision that control held by commercial companies can be attributed to their exclusive shareholder, their majority shareholders or to those jointly controlling the companies since these companies comply in any event with the decisions of those shareholders.[15] A controlling shareholding which is held by different entities in a group

---

13 Including the State itself, e.g. Case IV/M.157 - Air France/Sabena, of 5 October 1992 in relation to the Belgian State, or other public bodies such as the Treuhandanstalt in Case IV/M.308 - Kali und Salz/MDK/Treuhand, of 14 December 1993. See, however, recital 22 of the Merger Regulation.

14 Case IV/M.82 – Asko/Jakobs/Adia of 16 May 1991 including a private individual as undertaking concerned.; Case COMP/M3762 - Apax/Travelex of 16 June 2005 in which a private individual acquiring joint control was not considered an undertaking concerned.

15 Judgment in Case T-282/02 Cementbouw v Commission, paragraph 72, [2006] ECR II-319.

is normally attributed to the undertaking exercising control over the different formal holders of the rights. In other cases, the evidence needed to establish this type of indirect control may include, either separately or in combination and to be assessed on a case-by-case basis, factors such as shareholdings, contractual relations, source of financing or family links.[16]

Acquisition of control by investment funds

14. Specific issues may arise in the case of acquisitions of control by investment funds. The Commission will analyse structures involving investment funds on a case-by-case basis, but some general features of such structures can be set out on the basis of the Commission's past experience.

15. Investment funds are often set up in the legal form of limited partnerships, in which the investors participate as limited partners and normally do not exercise control, either individually or collectively. The investment funds usually acquire the shares and voting rights which confer control over the portfolio companies. Depending on the circumstances, control is normally exercised by the investment company which has set up the fund as the fund itself is typically a mere investment vehicle; in more exceptional circumstances, control may be exercised by the fund itself. The investment company usually exercises control by means of the organisational structure, *e.g.* by controlling the general partner of fund partnerships, or by contractual arrangements, such as advisory agreements, or by a combination of both. This may be the case even if the investment company itself does not own the company acting as a general partner, but their shares are held by natural persons (who may be linked to the investment company) or by a trust. Contractual arrangements with the investment company, in particular advisory agreements, will become even more important if the general partner does not have any own resources and personnel for the management of the portfolio companies, but only constitutes a company structure whose acts are performed by persons linked to the investment company. In these circumstances, the investment company normally acquires indirect control within the meaning of Article 3(1)(b) and 3(3)(b) of the Merger Regulation, and has the power to exercise the rights which are directly held by the investment fund.[17]

1.2 Means of control

[16] See Case M.754 – Anglo American Corporation/Lonrho of 23 April 1997.

17 This structure also has an effect on how the turnover is calculated in situations involving investment funds, see paragraphs 189ff.

16. Control is defined by Article 3(2) of the Merger Regulation as the possibility of exercising decisive influence on an undertaking. It is therefore not necessary to show that the decisive influence is or will be actually exercised. However, the possibility of exercising that influence must be effective.[18] Article 3(2) further provides that the possibility of exercising decisive influence on an undertaking can exist on the basis of rights, contracts or any other means, either separately or in combination, and having regard to the considerations of fact and law involved. A concentration therefore may occur on a legal or a *de facto* basis, may take the form of sole or joint control, and extend to the whole or parts of one or more undertakings (cf. Article 3(1)(b)).

Control by the acquisition of shares or assets

17. Whether an operation gives rise to an acquisition of control therefore depends on a number of legal and/or factual elements. The most common means for the acquisition of control is the acquisition of shares, possibly combined with a shareholders' agreement in cases of joint control, or the acquisition of assets.

Control on a contractual basis

18. Control can also be acquired on a contractual basis. In order to confer control, the contract must lead to a similar control of the management and the resources of the other undertaking as in the case of acquisition of shares or assets. In addition to transferring control over the management and the resources, such contracts must be characterised by a very long duration (ordinarily without a possibility of early termination for the party granting the contractual rights). Only such contracts can result in a structural change in the market.[19] Examples of such contracts are organisational contracts under national company law[20] or other types of contracts, *e.g.* in the form of agreements for the lease of the business, giving the acquirer control over the management and the resources despite the fact that property rights or shares are not transferred. In this respect, Article 3(2)(a) specifies that control may also be constituted by a right to use the assets of an undertaking.[21] Such contracts may also lead to a situation of joint

---

18 Judgment in Case T-282/02 Cementbouw v Commission, paragraph 58, [2006] ECR II-319

19 In Case COMP/M.3858 – Lehman Brothers/SCG/Starwood/Le Meridien of 20 July 2005 the management agreements had a duration of 10-15 years; in Case COMP/M.2632 – Deutsche Bahn/ECT International/United Depots/JV of 11 February 2002 the contract had a duration of 8 years.

20 Examples of such specific contracts under national company law are the "Beherrschungsvertrag" in German law or the "*Contrato de subordinação*" in Portuguese law; such contracts do not exist in all Member States.

21 See Case COMP/M.2060 – Bosch/Rexroth of 12 January 2001 concerning a control contract (Beherrschungsvertrag) in combination with a business lease; Case COMP/M.3136 – GE/Agfa NDT of 5

control if both the owner of the assets as well as the undertaking controlling the management enjoy veto rights over strategic business decisions.[22]

Control by other means

19. In line with these considerations, franchising agreements as such do not normally confer control over the franchisee's business on the franchisor. The franchisee usually exploits the entrepreneurial resources on its own account even if essential parts of the assets may belong to the franchisor.[23] Furthermore, purely financial agreements, such as sale-and-lease-back transactions with arrangements for a buyback of the assets at the end of the term, do not normally constitute a concentration as they do not change control over the management and the resources.

20. Furthermore, control can also be established by any other means. Purely economic relationships may play a decisive role for the acquisition of control. In exceptional circumstances, a situation of economic dependence may lead to control on a *de facto* basis where, for example, very important long-term supply agreements or credits provided by suppliers or customers, coupled with structural links, confer decisive influence.[24] In such a situation, the Commission will carefully analyse whether such economic links, combined with other links, are sufficient to lead to a change of control on a lasting basis.[25]

21. There may be an acquisition of control even if it is not the declared intention of the parties or if the acquirer is only passive and the acquisition of control is triggered by action of third parties. Examples are situations where the change of control results from the inheritance of a shareholder or where the exit of a shareholder triggers a change of

---

December 2003 concerning a specific contract to transfer control over entrepreneurial resources, management and risks; Case COMP/M.2632 – Deutsche Bahn/ECT International/United Depots/JV of 11 February 2002 concerning a business lease.

22 Case COMP/M.3858 – Lehman Brothers/SCG/Starwood/Le Meridien of 20 July 2005; see also case IV/M.126 – Accor/Wagon-Lits of 28 April 1992 in the context of Article 5(4)(b) of the Merger Regulation.

23 Case M.940 – UBS/Mister Minit, in the context of Article 5(4)(b) of the Merger Regulation. For the treatment of franchising relationships in the competitive assessment, see Case COMP/M.4220 – Food Service Project/ Tele Pizza of 6 June 2006. The situation in Case IV/M.126 – Accor/Wagon-Lits of 28 April 1992 has to be distinguished from franchising agreements,. In this case, again in the context of Article 5(4)(b), the hotel company had a right to manage also hotels in which it only owned a minority stake as it had entered into long-term hotel management agreements giving it decisive influence over the day-to-day operations of these hotels, including decisions on budgetary matters.

24 See Case IV/M.794 – Coca-Cola/Amalgamated Beverages GB of 22 January 1997; Case IV/ESCS.1031 – US/Sollac/Bamesa of 28 July 1993; Case IV/M.625 – Nordic Capital/Transpool of 23 August 1995; for the criteria see also Case IV/M.697 - Lockheed Martin Corporation/Loral Corporation, of 27 March 1996.

25 See Case IV/M.258 - CCIE/GTE, of 25 September 1992 where the Commission did not find control due to the temporary nature of the commercial agreements involved.

control, in particular a change from joint to sole control.[26] Article 3(1)(b) covers such scenarios in specifying that control may also be acquired “by any other means”.

Control and national company law

22. National legislation within a Member State may provide specific rules on the structure of bodies representing the organization of decision-making within an undertaking. While such legislation may confer some power of control upon persons other than the shareholders, in particular on representatives of employees, the concept of control under the Merger Regulation is not related to such a means of influence as the Merger Regulation focuses on decisive influence enjoyed on the basis of rights, assets or contracts or equivalent de facto means. Restrictions in the articles of association or in general law concerning the persons eligible to sit on the board, such as a provisions requiring the appointment of independent members or excluding persons holding office or employment in the parent companies, do not exclude the existence of control as long as the shareholders decide the composition of the decision-making bodies.[27] Similarly, despite provisions of national law foreseeing that decisions of a company must be taken by its company organs in its interests, those persons holding the voting rights have the power to adopt those decisions and therefore have the possibility to exercise decisive influence on the company.[28]

Control in other areas of legislation

23. The concept of control under the Merger Regulation may be different from that applied in specific areas of Community and national legislation concerning, for example, prudential rules, taxation, air transport or the media. The interpretation of “control” in other areas is therefore not necessarily decisive for the concept of control under the Merger Regulation

1.3 Object of control

26 See Case COMP/M.3330 – RTL/M6 of 12 March 2004; Case COMP/M.452 - Avesta (II) of 9 June 1994.
27 Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 70, 73, 74 [2006] ECR II-319.
28 Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 79 [2006] ECR II-319.

24. The Merger Regulation provides in Article 3(1)(b), (2) that the object of control can be one or more, or also parts of, undertakings which constitute legal entities, or the assets of such entities, or only some of these assets. The acquisition of control over assets can only be considered a concentration if those assets constitute the whole or a part of an undertaking, *i.e.* a business with a market presence, to which a market turnover can be clearly attributed.[29] The transfer of the client base of a business can fulfil these criteria if this is sufficient to transfer a business with a market turnover.[30] A transaction confined to intangible assets such as brands, patents or copyrights may also be considered to be a concentration if those assets constitute a business with a market turnover. In any case, the transfer of licences for brands, patents or copyrights, without additional assets, can only fulfil these criteria if the licences are exclusive at least in a certain territory and the transfer of such licences will transfer the turnover-generating activity.[31] For non-exclusive licences it can be excluded that they may constitute on their own a business to which a market turnover is attached.

25. Specific issues arise in cases where an undertaking outsources in-house activities, such as the provision of services or the manufacturing of products, to a service provider. Typical cases are the outsourcing of IT services to specialised IT companies. Outsourcing contracts can take several forms; their common characteristic is that the outsourcing service supplier shall provide those services to the customer which the latter has performed in-house before. Cases of simple outsourcing do not involve any transfer of assets or employees to the outsourcing service suppliers, but it is usually the case that any assets or employees are retained by the customer. Such an outsourcing contract is akin to a normal service contract and even if the outsourcing service supplier acquires a right to direct those assets and employees of the customer, no concentration arises if the assets and employees will be used exclusively to service the customer.

[29] See, *e.g.*, Case COMP/M. 3867 – Vattenfall/Elsam and E2 Assets of 22 December 2005.

[30] Case COMP/M.2857 – ECS/IEH of 23 December 2002.

[31] In addition, the granting of licences and the transfer of patent licences will only constitute a concentration if this is done on a lasting basis. In this respect, similar considerations as set out above in paragraph 18 for the acquisition of control by (long-term) agreements apply.

26. The situation may be different if the outsourcing service supplier, in addition to taking over a certain activity which was previously provided internally, is transferred the associated assets and/or personnel. A concentration only arises in these circumstances if the assets constitute the whole or part of an undertaking, i.e. a business with access to the market. This requires that the assets previously dedicated to in-house activities of the seller will enable the outsourcing service supplier to provide services not only to the outsourcing customer but also to third parties, either immediately or within a short period after the transfer. This will be the case if the transfer relates to an internal business unit or a subsidiary already engaged in the provision of services to third parties. If third parties are not yet supplied, the assets transferred in the case of manufacturing should contain production facilities, the product know-how (it is sufficient if the assets transferred allow the build-up of such capabilities in the near future) and, if there is no existing market access, the means for the purchaser to develop a market access within a short period of time (e.g. including existing contracts or brands).[32] As regards the provision of services, the assets transferred should include the required know-how (e.g. the relevant personnel and intellectual property) and those facilities which allow market access (such as, *e.g.*, marketing facilities).[33] The assets transferred therefore have to include at least those core elements that would allow an acquirer to build up a market presence in a time-frame similar to the start-up period for joint ventures as set out below under paragraphs 97, 100. As in the case of joint ventures, the Commission will take account of substantiated business plans and general market features for assessing this.

27. If the assets transferred do not allow the purchaser to at least develop a market presence, it is likely that they will be used only for providing services to the outsourcing customer. In such circumstances, the transaction will not result in a lasting change in the market structure and the outsourcing contract is again similar to a service contract. The transaction will not constitute a concentration. The specific requirements under which a joint venture for the provision of outsourcing services is qualified as a concentration are assessed in the present Notice in the section on full-function joint ventures.

1.4 Change of control on a lasting basis

32 See Case COMP/M.1841 – Celestica/IBM of 25 February 2000; Case COMP/M.1849 – Solectron/Ericsson of 29 February 2000; Case COMP/M.2479 – Flextronics/Alcatel – of 29 June 2001; Case COMP/M.2629 – Flextronics/Xerox of 12 November 2001.

33 See, in the context of joint ventures, Case IV/M.560 – EDS/Lufthansa of 11 May 1995; Case COMP/M.2478 - IBM Italia/Business Solutions/JV of 29 June 2001.

28. Article 3(1) of the Merger Regulation defines the concept of a concentration in such a manner as to cover operations only if they bring about a lasting change in the control of the undertakings concerned and, as recital 20 adds, in the structure of the market. The Merger Regulation therefore does not deal with transactions resulting only in a temporary change of control. However, a change of control on a lasting basis is not excluded by the fact that the underlying agreements are entered into for a definite period of time, provided those agreements are renewable. A concentration may arise even in cases in which agreements envisage a definite end-date, if the period envisaged is sufficiently long to lead to a lasting change in the control of the undertakings concerned.[34]

29. The question whether an operation results in a lasting change in the market structure is also relevant for the assessment of several operations occurring in succession, where the first transaction is only transitory in nature. Several scenarios can be distinguished in this respect.

30. In one scenario, several undertakings come together solely for the purpose of acquiring another company on the basis of an agreement to divide up the acquired assets according to a pre-existing plan immediately upon completion of the transaction. In such circumstances, in a first step, the acquisition of the entire target company is carried out by one or several undertakings. In a second step, the acquired assets are divided among several undertakings. The question is then whether the first transaction is to be considered as a separate concentration, involving an acquisition of sole control (in the case of a single purchaser) or of joint control (in the case of a joint purchase) of the entire target undertaking, or whether only the acquisitions in the second step constitute concentrations, whereby each of the acquiring undertakings acquires its relevant part of the target undertaking.

[34] See, in cases of joint ventures, Case COMP/M.2903 – DaimlerChrysler/Deutsche Telekom/JV of 30 April 2003 where a period of 12 years was considered sufficient; Case COMP/M.2632 – Deutsche Bahn/ECT International/United Depots/JV of 11 February 2002 with a contract duration of 8 years. In Case COMP/M.3858 Lehman Brothers/Starwood/Le Meridien of 20 July 2005, the Commission considered a minimum period of 10-15 years sufficient, but not a period of three years. The acquisition of control by the acquisition of shares or assets is not normally confined to a definite period of time and is therefore assumed to lead to a change of control on a lasting basis. Only in the scenarios set out in paragraphs 29 ff., will an acquisition of control by shares or assets be exceptionally considered to be transitory in nature and thus not to lead to a lasting change in the control of the undertakings concerned.

31. The Commission considers that the first transaction does not constitute a concentration, and examines the acquisitions of control by the ultimate acquirers, provided a number of conditions are met: First, the subsequent break-up must be agreed between the different purchasers in a legally binding way. Second, there must not be any uncertainty that the second step, the division of the acquired assets, will take place within a short time period after the first acquisition. The Commission considers that normally the maximum time-frame for the division of the assets should be one year.[35]

32. If both conditions are met, the first acquisition does not result in a structural change on a lasting basis. There is no effective concentration of economic power between the acquirer(s) and the target company as a whole since the acquired assets are not held in an undivided way on a lasting basis, but only for the time necessary to carry out the immediate split-up of the acquired assets. In those circumstances, only the acquisitions of the different parts of the undertaking in the second step will constitute concentrations, whereby each of these acquisitions by different purchasers will constitute a separate concentration. This is irrespective of whether the first acquisition is carried out by only one undertaking[36] or jointly by the undertakings which are also involved in the second step.[37] In any case, it must be noted that the scope of a clearance decision will only allow for a takeover of the entire target if the break-up can proceed within a short time-frame afterwards and the different parts of the target undertaking are directly sold on to the respective ultimate buyer.

33. However, if these conditions are not fulfilled, in particular if it is not certain that the second step will proceed within a short time-frame after the first acquisition, the Commission will consider the first transaction as a separate concentration, involving the entire target undertaking. This, *e.g.*, is the case if the first transaction may also proceed independently of the second transaction[38] or if a longer transitory period is needed to divide up the target undertaking.[39]

---

35 See, e.g., Cases COMP/M. Case No COMP/M.3779 – Pernod Ricard/Allied Domecq of 24 June 2005 and COMP/M.3813 – Fortune Brands/Allied Domecq of 10 June 2005, where the split-up of the assets was foreseen to become effective within 6 months after the acquisition.

36 For a first acquisition by only one undertaking see Case COMP/M.3779 – Pernod Ricard/Allied Domecq of 24 June 2005 and Case COMP/M.3813 – Fortune Brands/Allied Domecq/Pernod Ricard of 10 June 2005; Case COMP/M.2060 – Bosch/Rexroth of 12 January 2001.

37 For a joint acquisition see Case COMP/M.1630 – Air Liquide/BOC of 18 January 2000; Case COMP/M.1922 – Siemens/Bosch/Atecs of 11 August 2000; Case COMP/M.2059 – Siemens/Dematic/VDO Sachs of 29 August 2000.

38 See Case COMP/M.2498 – UPM-Kymmene/Haindl of 21 November 2001 and Case COMP/M.2499 – Norske Skog/Parenco/Walsum of 21 November 2001.

39 Case COMP/M.3372 – Carlsberg/Holsten of 16 March 2004.

34. A second scenario is an operation leading to joint control for a starting-up period but, according to legally binding agreements, this joint control will be converted to sole control by one of the shareholders. As the joint control situation may not constitute a lasting change of control, the whole operation may be considered to be an acquisition of sole control. In the past, the Commission accepted that such a start-up period could last up to three years.[40] Such a period seems to be too long to exclude that the joint control scenario has an impact on the structure of the market. The period therefore should, in general, not exceed one year and the joint control period should be only transitory in nature.[41] Only such a relatively short period will make it unlikely that the joint control period will have a distinct impact on the market structure and can therefore be considered as not leading to a change in control on a lasting basis.

35. In a third scenario, an undertaking is "parked" with an interim buyer, often a bank, on the basis of an agreement on the future onward sale of the business to an ultimate acquirer. The interim buyer generally acquires shares "on behalf" of the ultimate acquirer, which often bears the major part of the economic risks and may also be granted specific rights. In such circumstances, the first transaction is only undertaken to facilitate the second transaction and the first buyer is directly linked to the ultimate acquirer. Contrary to the situation described in the first scenario in paragraphs 30-33, no other ultimate acquirer is involved, the target business remains unchanged, and the sequence of transactions is initiated alone by the sole ultimate acquirer. From the date of the adoption of this Notice, the Commission will examine the acquisition of control by the ultimate acquirer, as provided for in the agreements entered into by the parties. The Commission will consider the transaction by which the interim buyer acquires control in such circumstances as the first step of a single concentration comprising the lasting acquisition of control by the ultimate buyer.

1.5 Interrelated transactions

1.5.1 Relation between Article 3 and Article 5(2) second subparagraph

36. Several transactions can be treated as a single concentration under the Merger Regulation either according to the general rule of Article 3 – as the transactions are

---

40 Case IV/M.425 – British Telecom/Santander of 28 March 1994.

41 See Case M.2389 – Shell/DEA of 20 December 2001 where the ultimate acquirer of sole control had a strong influence in the operational management during the joint control period; Case M.2854 – RAG/Degussa of 18 November 2002 where the transitional period was designed to facilitate internal post-merger restructuring.

interdependent - or according to the specific provision of Article 5(2) second subparagraph.

37. Article 5(2) second subparagraph governs a different question from that referred to by Article 3 of the Merger Regulation. Article 3 defines the existence of a "concentration" in general and material terms, but does not directly determine the question of the Commission's competence in respect of concentrations. Article 5 intends to specify the scope of the Merger Regulation, in particular by defining the turnover to be taken into account for the purpose of determining whether a concentration has Community dimension, and Article 5(2) second subparagraph allows the Commission in this respect to consider two or more concentrative transactions to constitute a single concentration for the purposes of calculating the turnover of the undertakings concerned. The assessment whether, in application of Article 3, a number of transactions give rise to a single concentration or whether those transactions must be regarded as giving rise to a number of concentrations, is thereby logically precedent to the question addressed in Article 5(2) second subparagraph. [42]

1.5.2 Interdependent transactions under Article 3

38. The general and teleological definition of a concentration set out in Article 3(1) – the result being control of one or more undertakings – implies that it makes no difference whether control was acquired by one or several legal transactions, provided that the end result constitutes a single concentration. Two or more transactions constitute a single concentration for the purposes of Article 3 if they are unitary in nature. It should therefore be determined whether the result leads to conferring one or more undertakings direct or indirect economic control over the activities of one or more other undertakings. For the assessment, the economic reality underlying the transactions is to be identified and thus the economic aim pursued by the parties. In other words, in order to determine the unitary nature of the transactions in question, it is necessary, in each individual case, to ascertain whether those transactions are interdependent, in such a way that one transaction would not have been carried out without the other.[43]

39. Recital 20 to the Merger Regulation explains in this respect that it is appropriate to treat as a single concentration transactions that are closely connected in that they are linked by condition. The requirement that the transactions are interdependent as set out by the

---

[42] Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 113-119 [2006] ECR II-319.
[43] Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 104-109 [2006] ECR II-319:

Court of First Instance in the *Cementbouw* judgment[44] thereby corresponds to the explanation set out in recital 20 that the transactions are linked by condition.

40. This general approach reflects, on the one hand, that under the Merger Regulation transactions which stand or fall together according to the economic objectives pursued by the parties should also be analysed in one procedure. In these circumstances, the change of the market structure is brought about by these transactions together. On the other hand, if different transactions are not interdependent and if the parties would proceed with one of the transactions if the other ones would not succeed, it seems appropriate to assess these transactions individually under the Merger Regulation.

41. However, several transactions, even if linked by condition upon each other, can only be treated as a single concentration, if control is acquired ultimately by the same undertaking(s). Only in these circumstances two or more transactions can be considered to be unitary in nature and therefore to constitute a single concentration for the purposes of Article 3.[45] This excludes de-mergers of joint ventures by which different parts of an undertaking are split between its former parent companies. The Commission will consider those transactions as separate concentrations.[46] The same applies to transactions where two (or more) companies exchange assets in transactions involving de-mergers of joint ventures or assets swaps. Although the parties will normally consider those transactions as interdependent, the purpose of the Merger Regulation requires a separate assessment of the results of each of the transactions: Several undertakings acquire control of different assets; a separate combination of resources takes place for each of the acquiring undertakings; and the impact on the market of each of those acquisitions of control needs to be analysed separately under the Merger Regulation.

42. The acquisition of different degrees of control (for example joint control of one business and sole control of another business) raises specific questions. An operation involving the acquisition of joint control of one part of an undertaking and sole control of another part is in principle regarded as two separate concentrations under the Merger Regulation.[47] Those transactions constitute only one concentration if they are interdependent and if the undertaking acquiring sole control is also acquiring joint control. In any case, such a scenario is considered to constitute one concentration

---

44 Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 106-109 [2006] ECR II-319.

45 This also covers situations where an undertaking sells a business to a purchaser and then acquirers the seller including the business sold, see Case COMP/M.4521 – LGI/Telenet of 26 February 2007.

46 See parallel cases COMP/M.3293 – Shell/BEB and COMP/M.3294 – ExxonMobil/BEB of 20 November 2003; case IV/M.197 – Solvay/Laporte of 30 April 1992.

47 See Case IV/M.409 ABB/Renault Automation of 9 March 1994.

where a corporate entity is acquired to which both the solely controlled and the jointly controlled undertaking belong. On the basis of the interpretation in recital 20, the situation where the same undertaking acquires sole and joint control of other undertakings based on interdependent agreements is not to be treated differently. These transactions, if they are interdependent, therefore constitute a single concentration.

Requirement of conditionality of transactions

43. The required conditionality implies that none of the transactions would take place without the others and they therefore constitute a single operation.[48] Such conditionality is normally demonstrated if the transactions are linked *de jure, i.e.* the agreements themselves are linked by mutual conditionality. If *de facto* conditionality can be satisfactorily demonstrated, it may also suffice for treating the transactions as a single concentration. This requires an economic assessment of whether each of the transactions necessarily depends on the conclusion of the others.[49] Further indications of the interdependence of several transactions may be the statements of the parties themselves or the simultaneous conclusion of the relevant agreements. A conclusion of *de facto* interconditionality of several transactions will be difficult to reach in the absence of their simultaneity. A pronounced lack of simultaneity of legally inter-conditional transactions may likewise put into doubt their true interdependence.

44. The principle that several transactions can be treated as a single concentration under the mentioned conditions only applies if the result is that control of one or more undertakings is acquired by the same person(s) or undertaking(s). First, this may be the case if a single business or undertaking is acquired via several legal transactions. Second, also the acquisition of control of several undertakings – which could constitute concentrations in themselves - can be linked in such a way that it constitutes a single concentration. However, it is not possible under the Merger Regulation to link different legal transactions which only partly concern the acquisition of control of undertakings, but partly also the acquisition of other assets, such as non-controlling minority stakes in other companies. It would not be in line with the general framework and the purpose of the Merger Regulation if different transactions, linked by conditionality, were assessed as a whole under the Merger Regulations if only some of these transactions lead to a change in control of a given target.

48 Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 127 et seq. [2006] ECR II-319.

49 Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 131 et seq. [2006] ECR II-319. See Case COMP/M.4521 – LGI/Telenet of 26 February 2007, where the interdependence was based on the fact that two transactions were decided and carried out simultaneously and that, according to the economic aims of the parties, each of the transactions would not have been carried out without the other.

Acquisition of a single business

45. A single concentration may therefore exist if the same purchaser(s) acquire control of a single business, *i.e.* a single economic entity, via several legal transactions if those are inter-conditional. This is the case irrespective of whether the business is acquired in a corporate structure, consisting of one or several companies, or whether various assets are acquired which form a single business, *i.e.* a single economic entity managed for a common commercial purpose to which all the assets contribute. Such a business may comprise majority and minority stakes in companies as well as tangible and intangible assets. If several legal transactions which are interdependent are required to transfer such a business, these transactions constitute one concentration.[50]

Parallel and serial acquisitions of control

46. For the treatment of several acquisitions of control as a single concentration, several scenarios have arisen in the Commission's past decisional practice. One such scenario is a parallel acquisition of control, i.e. undertaking A acquires control of undertaking B and C in parallel from separate sellers on condition that A is not obliged to buy either and neither seller is obliged to sell, unless both transactions proceed.[51] Another scenario is a serial acquisition of control, i.e. undertaking A acquires control of undertaking B conditional on B's prior or simultaneous acquisition of undertaking C, as illustrated by the Kingfisher case.[52]

Serial acquisition of sole/joint control

---

[50] See Case IV/M.470 – Gencor/Shell of 29 August 1994; COMP/M.3410 – Total/Gaz de France of 8 October 2004; Case IV/M.957 – L'Oreal/Procasa/Cosmetique Iberica/Albesa of 19 September 1997; Case IV/M.861 – Textron/Kautex of 18 December 1996 where all the assets were also used in the same product market. The same considerations apply if a joint venture is created by several companies, forming a single business, see Case M.4048 - Sonae Industria/Tarkett of 12 June 2006 where the interdependence of transactions establishing, respectively, a production and a distribution joint venture was necessary in order to demonstrate that there was a single concentration that would create a full-function joint venture.

[51] Case COMP/M.2926 – EQT/H&R/Dragoco – of 16 September 2002; the same considerations apply to the question when several mergers constitute one concentration in the meaning of Article 3(1)(a), Case COMP/M. 2824 – Ernst & Young/Andersen Germany of 27 August 2002.

[52] Case IV/M.1188 - Kingfisher/Wegert/ProMarkt of 18 June 1998; case COMP/M.2650 – Haniel/Cementbouw/JV (CVK) of 26 June 2002;

47. In the same way as the Kingfisher scenario, the Commission approaches cases where, in a serial transaction, an undertaking agrees to acquire first sole control of a target undertaking, with a view to directly selling on parts of the acquired stake in the target to another undertaking, finally resulting in joint control of both acquirers over the target company. If both acquisitions are inter-conditional, the two transactions constitute a single concentration and only the acquisition of joint control, as the final result of the transactions, will be considered by the Commission.[53]

1.5.3 Series of transactions in securities

48. Recital 20 of the Merger Regulation further explains that a single concentration will also arise in cases where control over one undertaking is acquired by a series of transactions in securities from one or several sellers taking place within a reasonably short period of time. The concentration in these scenarios is not limited to the acquisition of the "one and decisive" share, but will cover all the acquisitions of securities which take place in the reasonably short period of time.

1.5.4 Article 5(2) subparagraph 2

49. Article 5(2) subparagraph 2 provides a specific rule which allows the Commission. to consider successive transactions occurring in a fixed period of time a single concentration for the purposes of calculating the turnover of the undertakings concerned. The purpose of this provision is to ensure that the same persons do not break a transaction down into series of sales of assets over a period of time, with the aim of avoiding the competence conferred on the Commission by the Merger Regulation.[54]

50. If two or more transactions (each of them bringing about an acquisition of control) take place within a two-year period between the same persons or undertakings, they shall be qualified as a single concentration[55], irrespective of whether or not those transactions relate to parts of the same business or concern the same sector. This does not apply where the same persons or undertakings are joined by other persons or undertakings for only some of the transactions involved. It is sufficient if the transactions, although not carried out between the same companies, are carried out between companies belonging

53 Case COMP/M.2420 – Mitsui/CVRD/Caemi of 30 October 2001.

54 Judgment in Case T-282/02 Cementbouw v Commission, paragraph 118 [2006] ECR II-319.

55 See Case COMP/M.3173 – E.ON/Fortum Burghausen/Smaland/Endenderry of 13 June 2003. This also applies to situations where sole control is acquired whereby only parts of the undertaking were previously jointly controlled by the acquiring undertaking, case COMP/M. 2679 – EdF/TXU/ Europe/24 Seven of 20 December 2001.

to the same respective groups. The provision also applies to two or more transactions between the same persons or undertakings if they are carried out simultaneously. Whenever they lead to acquisitions of control by the same undertaking, such simultaneous transactions between the same parties form a single concentration even if they are not conditional upon each other.[56] However, Article 5(2) subparagraph 2 would not appear to apply to different transactions at least one of which involves an undertaking concerned which is distinct from the common seller(s) and buyer(s). In situations involving two transactions where one transaction results in sole control and the other in joint control, Article 5(2) subparagraph 2 therefore does not apply unless the other jointly controlling parent(s) in the latter transaction are the seller(s) of the solely controlling stake in the former transaction.

1.6 Internal Restructuring

51. A concentration within the meaning of the Merger Regulation is limited to changes in control. An internal restructuring within a group of companies does not constitute a concentration. This applies, e.g., to increases in shareholdings not accompanied by changes of control or to restructuring operations such as a merger of a dual listed company into a single legal entity or a merger of subsidiaries. A concentration could only arise if the operation leads to a change in the quality of control of one undertaking and therefore is no longer purely internal.

1.7 Concentrations involving State-owned undertakings

52. An exceptional situation exists where both the acquiring and acquired undertakings are companies owned by the same State (or by the same public body or municipality). In this case, whether the operation is to be regarded as an internal restructuring depends in turn on the question whether both undertakings were formerly part of the same economic unit. Where the undertakings were formerly part of different economic units having an independent power of decision, the operation will be deemed to constitute a concentration and not an internal restructuring.[57] However, where the different economic units will continue to have an independent power of decision also after the operation, the operation is only to be regarded as an internal restructuring, even if the shares of the undertakings, constituting different economic units, should be held by a

[56] Case IV/M.1283 – Volkswagen/RollsRoyce/Cosworth of 24 August 1998.

[57] Case IV/M.097 - Péchiney/Usinor, of 24 June 1991; Case IV/M.216 - CEA Industrie/France Telecom/SGS-Thomson, of 22 February 1993; Case IV/M.931 – Neste/IVO of 2 June 1998. See also recital 22 of the Merger Regulation.

single entity, such as a pure holding company.[58]

53. However, the prerogatives exercised by a State acting as a public authority rather than as a shareholder, in so far as they are limited to the protection of the public interest, do not constitute control within the meaning of the Merger Regulation to the extent that they have neither the aim nor the effect of enabling the State to exercise a decisive influence over the activity of the undertaking.[59]

2. Sole control

54. Sole control is acquired if one undertaking alone can exercise decisive influence on an undertaking. Two general situations in which an undertaking has sole control can be distinguished. First, the solely controlling undertaking enjoys the power to determine the strategic commercial decisions of the other undertaking. This power is typically achieved by the acquisition of a majority of voting rights in a company. Second, a situation also conferring sole control exists where only one shareholder is able to veto strategic decisions in an undertaking, but this shareholder does not have the power, on his own, to impose such decisions (the so-called negative sole control). In these circumstances, a single shareholder possesses the same level of influence as that usually enjoyed by an individual shareholder which jointly-controls a company, *i.e.* the power to block the adoption of strategic decisions. In contrast to the situation in a jointly controlled company, there are no other shareholders enjoying the same level of influence and the shareholder enjoying negative sole control does not necessarily have to cooperate with specific other shareholders in determining the strategic behaviour of the controlled undertaking. Since this shareholder can produce a deadlock situation, the shareholder acquires decisive influence within the meaning of Article 3 (2) and therefore control within the meaning of the Merger Regulation.[60]

55. Sole control can be acquired on a *de jure* and/or *de facto* basis.

De jure sole control

56. Sole control is normally acquired on a legal basis where an undertaking acquires a majority of the voting rights of a company. In the absence of other elements, an

58 Specific issues concerning the calculation of turnover for state-owned companies are dealt with in paragraphs 192-194

59 Case IV/M.493 - Tractebel/Distrigaz II, of 1 September 1994.

60 Since this shareholder is the only undertaking acquiring a controlling influence, only this shareholder is obliged to submit a notification under the Merger Regulation.

acquisition which does not include a majority of the voting rights does not normally confer control even if it involves the acquisition of a majority of the share capital. Where the company statutes require a supermajority for strategic decisions, the acquisition of a simple majority of the voting rights may not confer the power to determine strategic decisions, but may be sufficient to confer a blocking right on the acquirer and therefore negative control.

57. Even in the case of a minority shareholding, sole control may occur on a legal basis in situations where specific rights are attached to this shareholding. These may be preferential shares to which special rights are attached enabling the minority shareholder to determine the strategic commercial behaviour of the target company, such as the power to appoint more than half of the members of the supervisory board or the administrative board. Sole control can also be exercised by a minority shareholder who has the right to manage the activities of the company and to determine its business policy on the basis of the organisational structure (e.g. as a general partner in a limited partnership which often does not even have a shareholding).

58. A typical situation of negative sole control occurs where one shareholder holds 50% in an undertaking whilst the remaining 50% is held by several other shareholders (assuming this does not lead to positive sole control on a *de facto* basis), or where there is a supermajority required for strategic decisions which in fact confers a veto right upon only one shareholder, irrespective of whether it is a majority or a minority shareholder.[61]

De facto sole control

59. A minority shareholder may also be deemed to have sole control on a *de facto* basis. This is in particular the case where the shareholder is highly likely to achieve a majority at the shareholders' meetings, given the level of its shareholding and the evidence resulting from the presence of shareholders in the shareholders' meetings in previous years.[62] Based on the past voting pattern, the Commission will carry out a prospective analysis and take into account foreseeable changes of the shareholders'

---

[61] See consecutive Cases COMP/M.3537 – BBVA/BNL of 20 August 2004 and M.3768 – BBVA/BNL of 27 April 2005; Case M.3198 – VW-Audi/VW-Audi Vertriebszentren of 29 July 2003; Case COMP/M.2777 – Cinven Limited/Angel Street Holdings of 8 May 2002; Case IV/M.258 - CCIE/GTE, of 25 September 1992. In Case COMP/M.3876 – Diester Industrie/Bunge/JV of 30 September 2005, there was the specific situation that a joint venture held a stake in a company by which it had negative sole control over this company.

[62] Case IV/M.343 - Société Générale de Belgique/Générale de Banque, of 3 August 1993; Case COMP/M.3330 – RTL/M6 of 12 March 2004 ; Case IV/M.159 – Mediobanca/Generali of 19 December 1991.

presence which might arise in future following the operation.[63] The Commission will further analyse the position of other shareholders and assess their role. Criteria for such an assessment are in particular whether the remaining shares are widely dispersed, whether other important shareholders have structural, economic or family links with the large minority shareholder or whether other shareholders have a strategic or a purely financial interest in the target company; these criteria will be assessed on a case-by-case basis.[64] Where, on the basis of its shareholding, the historic voting pattern at the shareholders' meeting and the position of other shareholders, a minority shareholder is likely to have a stable majority of the votes at the shareholders' meeting, then that large minority shareholder is taken to have sole control.[65]

60. An option to purchase or convert shares cannot in itself confer sole control unless the option will be exercised in the near future according to legally binding agreements[66]. However, in exceptional circumstances an option, together with other elements, may lead to the conclusion that there is *de facto* sole control.[67]

Sole control acquired by other means than voting rights

61. Apart from the acquisition of sole control on the basis of voting rights, the considerations outlined in section 1.2 concerning the acquisition of sole control by purchase of assets, by contract, or by any other means also apply.

3. Joint Control

62. Joint control exists where two or more undertakings or persons have the possibility of exercising decisive influence over another undertaking. Decisive influence in this sense normally means the power to block actions which determine the strategic commercial behaviour of an undertaking. Unlike sole control, which confers upon a specific shareholder the power to determine the strategic decisions in an undertaking, joint control is characterized by the possibility of a deadlock situation resulting from the

63 See Case COMP/M.4336 – MAN/Scania of 20 December 2007 as regards the question whether Volkswagen hat acquired control of MAN.

64 Case IV/M.754 – Anglo American/Lonrho of 23 April 1997; Case IV/M.025 - Arjomari/Wiggins Teape, of 10 February 1990.

65 See also Case COMP/M.2574 – Pirelli/Edizione/Olivetti/Telecom Italia of 20 September 2001; Case IV/M.1519 – Renault/Nissan of 12 May 1999.

66 Judgment in Case T 2/93, Air France v Commission [1994] ECR II-323. Even though an option does normally not in itself lead to a concentration, it can be taken into account for the substantive assessment in a related concentration, see Case COMP/M.3696 – E.ON/MOL of 21 December 2005, at paragraphs 12-14, 480, 762 et subseq.

67 Case IV/M.397 – Ford/Hertz of 7 March 1994.

power of two or more parent companies to reject proposed strategic decisions. It follows, therefore, that these shareholders must reach a common understanding in determining the commercial policy of the joint venture and that they are required to cooperate.[68]

63. As in the case of sole control, the acquisition of joint control can also be established on a *de jure* or *de facto* basis. There is joint control if the shareholders (the parent companies) must reach agreement on major decisions concerning the controlled undertaking (the joint venture).

3.1 Equality in voting rights or appointment to decision-making bodies

64. The clearest form of joint control exists where there are only two parent companies which share equally the voting rights in the joint venture. In this case, it is not necessary for a formal agreement to exist between them. However, where there is a formal agreement, it must be consistent with the principle of equality between the parent companies, by laying down, for example, that each is entitled to the same number of representatives in the management bodies and that none of the members has a casting vote[69]. Equality may also be achieved where both parent companies have the right to appoint an equal number of members to the decision-making bodies of the joint venture.

3.2 Veto rights

65. Joint control may exist even where there is no equality between the two parent companies in votes or in representation in decision-making bodies or where there are more than two parent companies. This is the case where minority shareholders have additional rights which allow them to veto decisions which are essential for the strategic commercial behaviour of the joint venture[70]. These veto rights may be set out in the statute of the joint venture or conferred by agreement between its parent companies. The veto rights themselves may operate by means of a specific quorum required for decisions taken at the shareholders' meeting or by the board of directors to the extent that the parent companies are represented on this board. It is also possible that strategic decisions are subject to approval by a body, e.g. supervisory

---

68 See also Judgment in Case T-282/02 Cementbouw v Commission, paragraphs 42, 52, 67 [2006] ECR II-319.

69 Case COMP/M.3097 – Maersk Data/Eurogate IT; Global Transport Solutions JV of 12 March 2003; Case IV/M.272 - Matra/CAP Gemini Sogeti, of 17 March 1993.

70 Case T 2/93, Air France v Commission [1994] ECR II-323; Case IV/M.010 - Conagra/Idea, of 3 May 1991.

board, where the minority shareholders are represented and form part of the quorum needed for such decisions.

66. These veto rights must be related to strategic decisions on the business policy of the joint venture. They must go beyond the veto rights normally accorded to minority shareholders in order to protect their financial interests as investors in the joint venture. This normal protection of the rights of minority shareholders is related to decisions on the essence of the joint venture, such as changes in the statute, an increase or decrease in the capital or liquidation. A veto right, for example, which prevents the sale or winding-up of the joint venture does not confer joint control on the minority shareholder concerned[71].

67. In contrast, veto rights which confer joint control typically include decisions on issues such as the budget, the business plan, major investments or the appointment of senior management. The acquisition of joint control, however, does not require that the acquirer has the power to exercise decisive influence on the day-to-day running of an undertaking. The crucial element is that the veto rights are sufficient to enable the parent companies to exercise such influence in relation to the strategic business behaviour of the joint venture. Moreover, it is not necessary to establish that an acquirer of joint control of the joint venture will actually make use of its decisive influence. The possibility of exercising such influence and, hence, the mere existence of the veto rights, is sufficient.

68. In order to acquire joint control, it is not necessary for a minority shareholder to have all the veto rights mentioned above. It may be sufficient that only some, or even one such right, exists. Whether or not this is the case depends upon the precise content of the veto right itself and also the importance of this right in the context of the specific business of the joint venture.

Appointment of senior management and determination of budget

69. Very important are the veto rights concerning decisions on the appointment and dismissal of the senior management and the approval of the budget. The power to co-determine the structure of the senior management, such as the members of the board, usually confers upon the holder the power to exercise decisive influence on the commercial policy of an undertaking. The same is true with respect to decisions on the budget since the budget determines the precise framework of the activities of the joint

[71] Case IV/M.062 - Eridania/ISI, of 30 July 1991.

venture and, in particular, the investments it may make.

Business plan

70. The business plan normally provides details of the aims of a company together with the measures to be taken in order to achieve those aims. A veto right over this type of business plan may be sufficient to confer joint control even in the absence of any other veto right. In contrast, where the business plan contains merely general declarations concerning the business aims of the joint venture, the existence of a veto right will be only one element in the general assessment of joint control but will not, on its own, be sufficient to confer joint control.

Investments

71. In the case of a veto right on investments, the importance of this right depends, first, on the level of investments which are subject to the approval of the parent companies and, secondly, on the extent to which investments constitute an essential feature of the market in which the joint venture is active. In relation to the first criterion, where the level of investments necessitating approval of the parent companies is extremely high, this veto right may be closer to the normal protection of the interests of a minority shareholder than to a right conferring a power of co-determination over the commercial policy of the joint venture. With regard to the second, the investment policy of an undertaking is normally an important element in assessing whether or not there is joint control. However, there may be some markets where investment does not play a significant role in the market behaviour of an undertaking.

Market-specific rights

72. Apart from the typical veto rights mentioned above, there exist a number of other possible veto rights related to specific decisions which are important in the context of the particular market of the joint venture. One example is the decision on the technology to be used by the joint venture where technology is a key feature of the joint venture's activities. Another example relates to markets characterized by product differentiation and a significant degree of innovation. In such markets, a veto right over decisions relating to new product lines to be developed by the joint venture may also be an important element in establishing the existence of joint control.

Overall context

73. In assessing the relative importance of veto rights, where there are a number of them, these rights should not be evaluated in isolation. On the contrary, the determination of whether or not joint control exists is based upon an assessment of these rights as a whole. However, a veto right which does not relate either to strategic commercial policy, to the appointment of senior management or to the budget or business plan cannot be regarded as giving joint control to its owner[72].

3.3 Joint exercise of voting rights

74. Even in the absence of specific veto rights, two or more undertakings acquiring minority shareholdings in another undertaking may obtain joint control. This may be the case where the minority shareholdings together provide the means for controlling the target undertaking. This means that the minority shareholders, together, will have a majority of the voting rights; and they will act together in exercising these voting rights. This can result from a legally binding agreement to this effect, or it may be established on a *de facto* basis.

75. The legal means to ensure the joint exercise of voting rights can be in the form of a (jointly controlled) holding company to which the minority shareholders transfer their rights, or an agreement by which they undertake to act in the same way (pooling agreement).

76. Very exceptionally, collective action can occur on a de facto basis where strong common interests exist between the minority shareholders to the effect that they would not act against each other in exercising their rights in relation to the joint venture. The greater the number of parent companies involved in such a joint venture, however, the more remote is the likelihood of this situation occurring.

77. Indicative for such a commonality of interests is a high degree of mutual dependency as between the parent companies to reach the strategic objectives of the joint venture. This is in particular the case when each parent company provides a contribution to the joint venture which is vital for its operation (e.g. specific technologies, local know-how or supply agreements).[73] In these circumstances, the parent companies may be able to block the strategic decisions of the joint venture and, thus, they can operate the joint

[72] Case IV/M.295 - SITA-RPC/SCORI, of 19 March 1993.

[73] Case COMP/JV.55 Hutchinson/RCPM/ECT of 3 July 2001; see also Case IV/M.553 – RTL/Veronica/Endemol of 20 September 1995.

venture successfully only with each other's agreement on the strategic decisions even if there is no express provision for any veto rights. The parent companies will therefore be required to cooperate.[74] Further factors are decision making procedures which are tailored in such a way as to allow the parent companies to exercise joint control even in the absence of explicit agreements granting veto rights or other links between the minority shareholders related to the joint venture.[75]

78. Such a scenario may not only occur in a situation where two or more minority shareholders jointly control an undertaking on a de facto basis, but also where there is high degree of dependency of a majority shareholder on a minority shareholder. This may be the case where the joint venture economically and financially depends on the minority shareholder or where only the minority shareholder has the required know-how for, and will play a major role in, the operation of the joint undertaking whereas the majority shareholder is a mere financial investor.[76] In such circumstances, the majority shareholder will not be able to enforce its position, but the joint venture partner may be able to block strategic decisions so that both parent undertakings will be required to cooperate permanently. This leads to a situation of *de facto* joint control which prevails over a pure *de jure* assessment according to which the majority shareholder could have been considered to have sole control.

79. These criteria apply to the formation of a new joint venture as well as to acquisitions of minority shareholdings, together conferring joint control. In case of acquisitions of shareholdings, there is a higher probability of a commonality of interests if the shareholdings are acquired by means of concerted action. However, an acquisition by way of a concerted action is not alone sufficient for the purposes of establishing *de facto* joint control. In general, a common interest as financial investors (or creditors) of a company in a return on investment does not constitute a commonality of interests leading to the exercise of *de facto* joint control.

80. In the absence of strong common interests such as those outlined above, the possibility of changing coalitions between minority shareholders will normally exclude the assumption of joint control. Where there is no stable majority in the decision-making procedure and the majority can on each occasion be any of the various combinations possible amongst the minority shareholders, it cannot be assumed that the minority

76 Case IV/M. 967 - KLM/Air UK of 22 September 1997; Case COMP/M.4085 – Arcelor/Oyak/Erdemir of 13 February 2006.

shareholders (or a certain group thereof) will jointly control the undertaking.[77] In this context, it is not sufficient that there are agreements between two or more parties having an equal shareholding in the capital of an undertaking which establish identical rights and powers between the parties, where these fall short of strategic veto rights. For example, in the case of an undertaking where three shareholders each own one-third of the share capital and each elect one-third of the members of the Board of Directors, the shareholders do not have joint control since decisions are required to be taken on the basis of a simple majority.

3.4 Other considerations related to joint control

Unequal role of the parent companies

81. Joint control is not incompatible with the fact that one of the parent companies enjoys specific knowledge of and experience in the business of the joint venture. In such a case, the other parent company can play a modest or even non-existent role in the daily management of the joint venture where its presence is motivated by considerations of a financial, long-term-strategy, brand image or general policy nature. Nevertheless, it must always retain the real possibility of contesting the decisions taken by the other parent company on the basis of equality in voting rights or rights of appointment to decision making bodies or of veto rights related to strategic issues. Without this, there would be sole control.

Casting Vote

82. For joint control to exist, there should not be a casting vote for one parent company only as this would lead to sole control of the company enjoying the casting vote. However, there can be joint control when this casting vote is in practice of limited relevance and effectiveness. This may be the case when the casting vote can be exercised only after a series of stages of arbitration and attempts at reconciliation or in a very limited field or if the exercise of the casting vote triggers a put option implying a serious financial burden or if the mutual interdependence of the parent companies would make the exercise of the casting vote unlikely.[78]

III. Changes in the quality of control

---

77 Case IV/JV.12 – Ericsson/Nokia/Psion/Motorola of 22 December 1998.

78 Case COMP/M.2574 – Pirelli/Edizione/Olivetti/Telecom Italia of 20 September 2001; Case IV/M.553 – RTL/Veronica/Endemol of 20 September 1995; Case IV/M.425 - British Telecom/Banco Santander, of 28 March 1994.

83. The Merger Regulation covers operations resulting in the acquisition of sole or joint control, including operations leading to changes in the quality of control. First, such a change in the quality of control, resulting in a concentration, occurs if there is a change between sole and joint control. Second, a change in the quality of control occurs between joint control scenarios before and after the transaction if there is an increase in the number or a change in the identity of controlling shareholders. However, there is no change in the quality of control if a change from negative to positive sole control occurs. Such a change affects neither the incentives of the negatively controlling shareholder nor the nature of the control structure, as the controlling shareholder did not necessarily have to cooperate with specific shareholders at the time when it enjoyed negative control. In any case, mere changes in the level of shareholdings of the same controlling shareholders, without changes of the powers they hold in a company and of the composition of the control structure of the company, do not constitute a change in the quality of control and therefore are not a notifiable concentration.

84. These changes in the quality of control will be discussed in two categories: first, an entrance of one or more new controlling shareholders irrespective of whether or not they replace existing controlling shareholders and, second, a reduction of the number of controlling shareholders.

1. Entry of controlling shareholders

85. An entry of new controlling shareholders leading to a joint control scenario can either result from a change from sole to joint control, or from the entry of an additional shareholder or a replacement of an existing shareholder in an already jointly controlled undertaking.

86. A move from sole control to joint control is considered a notifiable operation as this changes the quality of control of the joint venture. First, there is a new acquisition of control for the shareholder entering the controlled undertaking. Second, only the new acquisition of control makes the controlled undertaking to a joint venture which changes decisively also the situation for the remaining controlling undertaking under the Merger Regulation: In the future, it has to take into account the interests of one or more other controlling shareholder(s) and it is required to cooperate permanently with the new shareholder(s). Before, it could either determine the strategic behaviour of the controlled undertaking alone (in the case of sole control) or was not forced to take into

account the interests of specific other shareholders and was not forced to cooperate with those shareholders permanently.

87. The entry of a new shareholder in a jointly controlled undertaking – either in addition to the already controlling shareholders or in replacement of one of them – also constitutes a notifiable concentration, although the undertaking is jointly controlled before and after the operation.[79] First, also in this scenario there is a shareholder newly acquiring control of the joint venture. Second, the quality of control of the joint venture is determined by the identity of all controlling shareholders. It lies in the nature of joint control that, since each shareholder alone has a blocking right concerning strategic decisions, the jointly controlling shareholders have to take into account each others interests and are required to cooperate for the determination of the strategic behaviour of the joint venture.[80] The nature of joint control therefore does not exhaust itself in a pure mathematical addition of the blocking rights exercised by several shareholders, but is determined by the composition of the jointly controlling shareholders. One of the most obvious scenarios leading to a decisive change in the nature of the control structure of a jointly controlled undertaking is a situation where in a joint venture, jointly controlled by a competitor of the joint venture and a financial investor, the financial investor is replaced by another competitor. In these circumstances, the control structure and the incentives of the joint venture may entirely change, not only because of the entry of the new controlling shareholder, but also due to the change in the behaviour of the remaining shareholder. The replacement of a controlling shareholder or the entry of a new shareholder in a jointly controlled undertaking therefore constitutes a change in the quality of control.[81]

88. However, the entry of new shareholders only results in a notifiable concentration if one or several shareholders acquire sole or joint control by virtue of the operation. The entry of new shareholders may lead to a situation where joint control can neither be established on a *de jure* basis nor on a *de facto* basis as the entry of the new shareholder leads to the consequence that changing coalitions between minority shareholders are possible.[82]

---

79 See, *e.g.*, Case COMP/M.3440 – ENI/EDP/GdP of 9 December 2004.

80 Judgment in Case T-282/02 Cementbouw v Commission, paragraph 67 [2006] ECR II-319.

81 Generally, it should be noted that the Commission will not assess as a separate concentration the indirect replacement of a controlling shareholder in a joint control scenario which takes place via an acquisition of control of one of its parent undertakings. The Commission will assess any changes occurring in the competitive situation of the joint venture in the framework of the overall acquisition of control of its parent undertaking. In those circumstances, the other controlling shareholders in the joint venture will therefore not be undertakings concerned by the concentration which relates to its parent undertaking.

82 Case IV/JV.12 – Ericsson/Nokia/Psion/Motorola of 22 December 1998.

2. Reduction in the number of shareholders

89. A reduction in the number of controlling shareholders constitutes a change in the quality of control and is thus to be considered as a concentration if the exit of one or more controlling shareholders results in a change from joint to sole control. Decisive influence exercised alone is substantially different from decisive influence exercised jointly, since in the latter case the jointly controlling shareholders have to take into account the potentially different interests of the other party or parties involved.[83]

90. Where the operation involves a reduction in the number of jointly controlling shareholders, without leading to a change from joint to sole control, the transaction will normally not lead to a notifiable concentration.

IV. Joint Ventures – the concept of full-functionality

91. Article 3(1)(b) provides that a concentration shall be deemed to arise where control is acquired by *one or more* undertakings of the whole or parts of another undertaking. The new acquisition of another undertaking by several jointly controlling undertakings therefore constitutes a concentration under the Merger Regulation. As in the case of the acquisition of sole control of an undertaking, such an acquisition of joint control will lead to a structural change in the market even if, according to the plans of the acquiring undertakings, the acquired undertaking would no longer be considered full-function after the transaction (*e.g.* because it will sell exclusively to the parent undertakings in future). Thus, a transaction involving several undertakings acquiring joint control of another undertaking or parts of another undertaking, fulfilling the criteria set out in paragraph 24, from third parties will constitute a concentration according to Article 3(1) without it being necessary to consider the full-functionality criterion.[84]

92. Article 3(4) provides in addition that the creation of a joint venture performing on a lasting basis all the functions of an autonomous economic entity (so called full-

---

83 See Case IV/M023 – ICI/Tioxide, of 28 November 1990; see also paragraph 5 (d) of the Commission Notice on a simplified procedure for treatment of certain concentrations under Council Regulation (EC) No 139/2004.

84 These considerations do not apply to Article 2(4) in the same way. Whereas the interpretation of Article 3, paragraphs (1) and (4) relates to the applicability of the Merger Regulation to joint ventures, Article 2(4) relates to the substantive analysis of joint ventures. The "creation of a joint venture constituting a concentration pursuant to Article 3", as provided for in Article 2(4), comprises the acquisition of joint control according to Article 3, paragraphs (1) and (4).

function joint ventures) shall constitute a concentration within the meaning of the Merger Regulation. The full-functionality criterion therefore delineates the application of the Merger Regulation for the creation of joint ventures by the parties, irrespective of whether such a joint venture is created as a "greenfield operation" or whether the parties contribute assets to the joint venture which they previously owned individually. In these circumstances, the joint venture must fulfil the full-functionality criterion in order to constitute a concentration.

93. The fact that a joint venture may be a full-function undertaking and therefore economically autonomous from an operational viewpoint does not mean that it enjoys autonomy as regards the adoption of its strategic decisions. Otherwise, a jointly controlled undertaking could never be considered a full-function joint venture and therefore the condition laid down in Article 3(4) would never be complied with.[85] It is therefore sufficient for the criterion of full-functionality if the joint venture is autonomous in operational respect.

1. Sufficient resources to operate independently on a market

94. Full function character essentially means that a joint venture must operate on a market, performing the functions normally carried out by undertakings operating on the same market. In order to do so the joint venture must have a management dedicated to its day-to-day operations and access to sufficient resources including finance, staff, and assets (tangible and intangible) in order to conduct on a lasting basis its business activities within the area provided for in the joint-venture agreement.[86] The personnel do not necessarily need to be employed by the joint venture itself. If it is standard practice in the industry where the joint venture is operating, it may be sufficient if third parties envisage the staffing under an operational agreement or if staff is assigned by an interim employment agency. The secondment of personnel by the parent companies may also be sufficient if this is done either only for a start-up period or if the joint venture deals with the parent companies in the same way as with third parties. The latter case requires that the joint venture deals with the parents at arm's length on the basis of normal commercial conditions and that the joint venture is also free to recruit its own

85 Judgment in Case T-282/02 Cementbouw v Commission, paragraph 62 [2006] ECR II-319.

86 Case IV/M.527 - Thomson CSF/Deutsche Aerospace, of 2 December 1994 -intellectual rights, Case IV/M.560 EDS/Lufthansa of 11 May 1995 - outsourcing, Case IV/M.585 - Voest Alpine Industrieanlagenbau GmbH/Davy International Ltd, of 7 September 1995 - joint venture's right to demand additional expertise and staff from its parent companies, Case IV/M.686 - Nokia/Autoliv, of 5 February 1996 , joint venture able to terminate "service agreements" with parent company and to move from site retained by parent company, Case IV/M.791 - British Gas Trading Ltd/Group 4 Utility Services Ltd, of 7 October 1996, joint venture's intended assets will be transferred to leasing company and leased by joint venture.

employees or to obtain staff via third parties.

2. Activities beyond one specific function for the parents

95. A joint venture is not full-function if it only takes over one specific function within the parent companies' business activities without its own access to or presence on the market. This is the case, for example, for joint ventures limited to R&D or production. Such joint ventures are auxiliary to their parent companies' business activities. This is also the case where a joint venture is essentially limited to the distribution or sales of its parent companies' products and, therefore, acts principally as a sales agency. However, the fact that a joint venture makes use of the distribution network or outlet of one or more of its parent companies normally will not disqualify it as 'full-function' as long as the parent companies are acting only as agents of the joint venture.[87]

96. A frequent example where this question arises are joint ventures involved in the holding of real estate property, which are typically set up for tax and other financial reasons. As long as the purpose of the joint venture is limited to the acquisition and/or holding of certain real estate for the parents and based on financial resources provided by the parents, it will not usually be considered to be full-function, as it lacks an autonomous, long term business activity on the market and will typically also lack the necessary resources to operate independently. This has to be distinguished from joint ventures that are actively managing a real estate portfolio and who act on their own behalf on the market, which typically indicates full-functionality.[88]

3. Sale/purchase relations with the parents

97. The strong presence of the parent companies in upstream or downstream markets is a factor to be taken into consideration in assessing the full-function character of a joint venture where this presence results in substantial sales or purchases between the parent companies and the joint venture. The fact that, for an initial start-up period only, the joint venture relies almost entirely on sales to or purchases from its parent companies does not normally affect its full-function character. Such a start-up period may be necessary in order to establish the joint venture on a market. But the period will normally not exceed a period of three years, depending on the specific

conditions of the market in question[89].

Sales to the parents

98. Where sales from the joint venture to the parent companies are intended to be made on a lasting basis, the essential question is whether, regardless of these sales, the joint venture is geared to play an active role on the market and can be considered economically autonomous from an operational viewpoint. In this respect the relative proportion of sales made to its parents compared with the total production of the joint venture is an important factor. Due to the particularities of each individual case, it is impossible to define a specific turnover ratio which distinguishes full-function from other joint ventures. If the joint venture achieves more than 50% of its turnover with third parties, this will typically be an indication of full-functionality. Below this indicative threshold, a case-by-case analysis is required, whereby, for the finding of operational autonomy, the relationship between the joint venture and its parents must be truly commercial in character. For this purpose, it is to be demonstrated that the joint venture will supply its goods or services to the purchaser who values them most and will pay most and that the joint venture will also deal with its parents' companies at arm's length on the basis of normal commercial conditions.[90] Under these circumstances, *i.e.* if the joint venture will treat its parent companies in the same commercial way as third parties, it may be sufficient that at least 20% of the joint venture's predicted sales will go to third parties. However, the greater the proportion of sales likely to be made to the parents, the greater will be the need for clear evidence of the commercial character of the relationship.

99. For the determination of the proportion between sales to the parents and to third parties, the Commission will take past accounts and substantiated business plans into account. However, especially where substantial third–party sales cannot be readily foreseen, the Commission will base its finding also on the general market structure. This may be a relevant factor as well for the assessment whether the joint venture will deal with its parents on an arm's length basis.

100. These issues frequently arise with regard to outsourcing agreements, where an

---

89 Case IV/M.560 - EDS/Lufthansa of 11 May 1995 ; Case IV/M.686 Nokia/Autoliv of 5 February 1996 ; to be contrasted with Case IV/M.904 - RSB/Tenex/Fuel Logistics of 2 April 1997 and Case IV/M.979 - Preussag/Voest-Alpine of 1 October 1997. A special case exists where sales by the joint venture to its parent are caused by a legal monopoly downstream of the joint venture, see Case IV/M.468 - Siemens/Italtel of 17 February 1995, or where the sales to a parent company consist of by-products, which are of minor importance to the joint venture, see Case IV/M.550 - Union Carbide/Enichem of 13 March 1995.

90 Case IV/M.556 - Zeneca/Vanderhave of 9 April 1996; Case IV/M.751 - Bayer/Hüls of 3 July 1996.

undertaking creates a joint venture with a service provider[91] which will carry out functions that were previously dealt with by the undertaking in-house. The JV typically cannot be considered to be full-function in these scenarios: it provides its services exclusively to the client undertaking, and it is dependent for its services on input from the service provider. The fact that the joint venture's business plan often at least does not exclude that the joint venture can provide its services to third parties does not alter this assessment, as in the typical outsourcing setup any third party revenues are likely to remain ancillary to the joint venture's main activities for the client undertaking. However, this general rule does not exclude that there are outsourcing situations where the joint venture partners, for example for reasons of economies of scale, set up a joint venture with the perspective of significant market access. This could qualify the joint venture as full function if significant third-party sales are foreseen and if the relationship between the joint venture and its parent will be truly commercial in character and if the joint venture deals with its parents on the basis of normal commercial conditions.

Purchases from the parents

101. In relation to purchases made by the joint venture from its parent companies, the full-function character of the joint venture is questionable in particular where little value is added to the products or services concerned at the level of the joint venture itself. In such a situation, the joint venture may be closer to a joint sales agency.

Trade markets

102. However, in contrast to this situation where a joint venture is active in a trade market and performs the normal functions of a trading company in such a market, it normally will not be an auxiliary sales agency but a full-function joint venture. A trade market is characterised by the existence of companies which specialise in the selling and distribution of products without being vertically integrated in addition to those which are integrated, and where different sources of supply are available for the products in question. In addition, many trade markets may require operators to invest in specific facilities such as outlets, stockholding, warehouses, depots, transport fleets and sales and service personnel. In order to constitute a full-function joint venture in a trade market, an undertaking must have the necessary facilities and be likely to obtain a substantial proportion of its supplies not only from its parent

91 The question under which circumstances an outsourcing arrangement qualifies as a concentration is dealt with in paragraphs 25ff. of this Notice.

companies but also from other competing sources[92].

4. Operation on a lasting basis

103. Furthermore, the joint venture must be intended to operate on a lasting basis. The fact that the parent companies commit to the joint venture the resources described above normally demonstrates that this is the case. In addition, agreements setting up a joint venture often provide for certain contingencies, for example, the failure of the joint venture or fundamental disagreement as between the parent companies.[93] This may be achieved by the incorporation of provisions for the eventual dissolution of the joint venture itself or the possibility for one or more parent companies to withdraw from the joint venture. This kind of provision does not prevent the joint venture from being considered as operating on a lasting basis. The same is normally true where the agreement specifies a period for the duration of the joint venture where this period is sufficiently long in order to bring about a lasting change in the structure of the undertakings concerned[94], or where the agreement provides for the possible continuation of the joint venture beyond this period.

104. By contrast, the joint venture will not be considered to operate on a lasting basis where it is established for a short finite duration. This would be the case, for example, where a joint venture is established in order to construct a specific project such as a power plant, but it will not be involved in the operation of the plant once its construction has been completed.

105. A joint venture also lacks the sufficient operations on a lasting basis at a stage where there are decisions of third parties outstanding that are of an essential core importance for starting the joint venture's business activity. Only decisions that go beyond mere formalities and the award of which is typically uncertain qualify for these scenarios. Examples are the award of a contract (*e.g.,* in public tenders), licences (*e.g.,* in the telecoms sector) or access rights to property (*e.g.,* exploration rights for oil and gas). Pending the decision on such factors, it is unclear whether the joint venture will become operational at all. Thus, at that stage the joint venture cannot be considered to perform economic functions on a lasting basis and consequently does not qualify as full function. However, once a decision has been

92 Case IV/M.788 - AgrEVO/Marubeni of 3 September 1996.

93 Case IV/M.891 - Deutsche Bank/Commerzbank/J.M. Voith of 23 April 1997.

94 See Case COMP/M.2903 – DaimlerChrysler/Deutsche Telekom/JV of 30 April 2003 where a period of 12 years was considered sufficient; Case COMP/M.2632 – Deutsche Bahn/ECT International/United Depots/JV of 11 February 2002 with a contract duration of 8 years. In Case COMP/M.3858 Lehman Brothers/Starwood/Le Meridien of 20 July 2005, the Commission considered a minimum period of 10-15 years sufficient, but not a period of three years.

taken in favour of the joint venture in question, this criterion is fulfilled and a concentration arises.[95]

5. Changes in the activities of the joint venture

106. The parents may decide to enlarge the scope of the activities of the joint venture in the course of its lifetime. This will be considered as a new concentration that may trigger a notification requirement if this enlargement entails the acquisition of the whole or part of another undertaking from the parents that would, considered in isolation, qualify as a concentration as explained in paragraph 24 of this Notice.[96]

107. A concentration may also arise if the parent companies transfer significant additional assets, contracts, know-how or other rights to the joint venture and these assets and rights constitute the basis or nucleus of an extension of the activities of the joint venture into other product or geographic markets which were not the object of the original joint venture, and if the joint venture performs such activities on a full-function basis. As the transfer of the assets or rights shows that the parents are the real players behind the extension of the joint venture's scope, the enlargement of the activities of the joint venture can be considered in the same way as the creation of a new joint venture within the meaning of Article 3(4). [97]

108. If the scope of a joint venture is enlarged without additional assets, contracts, know-how or rights being transferred, no concentration will be deemed to arise.

109. A concentration arises if a change in the activity of an existing non-full-function joint venture occurs so that a full-function joint venture within the meaning of Article 3(4) is created. The following examples may be given: a change of the organisational structure of a joint venture so that it fulfils the full functionality criterion[98]; a joint venture that used to supply only the parent companies, which subsequently starts a significant activity on the market; or scenarios, as described in paragraph 105 above, where a joint venture can only start its activity on the market once it has essential input (such as a licence for a joint venture in the telecoms sector). Such a change in the activity of the joint venture will frequently require a decision by its shareholders or its management. Once the decision is taken that leads to the joint venture meeting the full functionality criterion, a concentration arises.

---

95 Subject to the other criteria mentioned in this chapter of the Notice.

96 See Case COMP/M.3039 – Soprol/Céréol/Lesieur of 30 January 2003.

97 The triggering event for the notification in such a case will be the agreement or other legal act underlying the transfer of the assets, contracts, know-how or other rights.

98 Case COMP/M.2276 – The Coca-Cola Company/Nestlé/JV of 27 September 2001.

V. Exceptions

110. Article 3(5) sets out three exceptional situations where the acquisition of a controlling interest does not constitute a concentration under the Merger Regulation.

111. First, the acquisition of securities by companies whose normal activities include transactions and dealing in securities for their own account or for the account of others is not deemed to constitute a concentration if such an acquisition is made in the framework of these businesses and if the securities are held on only a temporary basis (Article 3(5)(a)). In order to fall within this exception, the following requirements must be fulfilled:

- the acquiring undertaking must be a credit or other financial institution or insurance company the normal activities of which are described above;

- the securities must be acquired with a view to their resale;

- the acquiring undertaking must not exercise the voting rights with a view to determining the strategic commercial behaviour of the target company or must exercise these rights only with a view to preparing the total or partial disposal of the undertaking, its assets or the securities;

- the acquiring undertaking must dispose of its controlling interest within one year of the date of the acquisition, that is, it must reduce its shareholding within this one-year period at least to a level which no longer confers control. This period, however, may be extended by the Commission where the acquiring undertaking can show that the disposal was not reasonably possible within the one-year period.

112. Second, there is no change of control, and hence no concentration within the meaning of the Merger Regulation, where control is acquired by an office-holder according to the law of a Member State relating to liquidation, winding-up, insolvency, cessation of payments, compositions or analogous proceedings (Article 3(5)(b));

113. Third, a concentration does not arise where a financial holding company within the meaning of Article 5(3) of the Council Directive 78/660/EEC[99] acquires control. The

[99] Fourth Council Directive 78/660/EEC of 25 July 1978 based on Article 54 (3) (g) of the Treaty on the annual accounts of certain types of companies, OJ L 222, 14.8.1978, p. 11, as last amended by Directive 2003/51/EC of 18 June 2003, OJ L 178, 17.7.2003, p.16. Article 5(3) of this Directive defines financial holding companies as "those companies the sole objective of which is to acquire holdings in other

notion of “financial holding company” is thus limited to companies whose sole purpose it is to acquire holdings in other undertakings without involving themselves directly or indirectly in the management of those undertakings, the foregoing without prejudice to their rights as shareholders. Such investment companies must be further structured in a way that compliance with these limitations can be supervised by an administrative or judicial authority. The Merger Regulation provides for an additional condition for this exception to apply: such companies may exercise the voting rights in the other undertakings only to maintain the full value of those investments and not to determine directly or indirectly the strategic commercial conduct of the controlled undertaking.

114. The exceptions under Article 3(5) of the Merger Regulation only apply to a very limited field. First, these exceptions only apply if the operation would otherwise be a concentration in its own right, but not if the transaction is part of a broader, single concentration, in circumstances in which the ultimate acquirer of control would not fall within the terms of Article 3(5) (see e.g. paragraph 35 above). Second, the exceptions under Article 3(5)(a) and (c) only apply to acquisitions of control by way of purchase of securities, not to acquisitions of assets.

115. The exceptions do not apply to typical investment fund structures. According to their objectives, these funds usually do not limit themselves in the exercise of the voting rights, but adopt decisions to appoint the members of the management and the supervisory bodies of the undertakings or to even restructure those undertakings. This would not be compatible with the requirement under both Article 3(5)(a) and (c) that the acquiring companies do not exercise the voting rights with a view to determine the competitive conduct of the other undertaking.[100]

116. The question may arise whether an operation to rescue an undertaking before or from insolvency proceedings constitutes a concentration under the Merger Regulation. Such a rescue operation typically involves the conversion of existing debt into a new company, through which a syndicate of banks may acquire joint control of the company concerned. Where such an operation meets the criteria for joint control, as outlined above, it will normally be considered to be a concentration[101]. Although the primary intention of the banks is to restructure the financing of the undertaking concerned for its subsequent resale, the exception set out in Article 3(5)(a) is normally

undertakings, and to manage such holdings and turn them to profit, without involving themselves directly or indirectly in the management of those undertakings, the foregoing without prejudice to their rights as shareholders. The limitations imposed on the activities of these companies must be such that compliance with them can be supervised by an administrative or judicial authority".

100 Case IV/M.669 – Charterhouse/Porterbrook, of 11 December 1995.

101 Case IV/M.116 - Kelt/American Express, of 28 August 1991.

not applicable to such an operation. In a similar way as set out for investment funds, the restructuring programme normally requires the controlling banks to determine the strategic commercial behaviour of the rescued undertaking. Furthermore, it is not normally a realistic proposition to transform a rescued company into a commercially viable entity and to resell it within the permitted one-year period. Moreover, the length of time needed to achieve this aim may be so uncertain that it would be difficult to grant an extension of the disposal period.

VI. Abandonment of concentrations

117. A concentration ceases to exist and the Merger Regulation ceases to be applicable if the undertakings concerned abandon the concentration.

118. In this respect, the revised Merger Regulation 139/2004 introduced a new provision related to the closure of procedures concerning the control of concentrations without a final decision after the Commission has initiated proceedings under Article 6(1)(c) 1st sentence. That sentence reads as follows: “Without prejudice to Article 9, such proceedings shall be closed by means of a decision as provided for in Article 8(1) to (4), unless the undertakings concerned have demonstrated to the satisfaction of the Commission that they have abandoned the concentration”. Prior to the initiation of proceedings, such requirements do not apply.

119. As a general principle, the requirements for the proof of the abandonment must correspond in terms of legal form, intensity etc. to the initial act that was considered sufficient to make the concentration notifiable. In case the parties proceed from that initial act to a strengthening of their contractual links during the procedure, for example by concluding a binding agreement after the transaction was notified on the basis of a good faith intention, the requirements for the proof of the abandonment must correspond also to the nature of the latest act.

120. In line with this principle, in case of implementation of the concentration prior to a Commission decision, the re-establishment of the *status quo ante* has to be shown. The mere withdrawal of the notification is not considered as sufficient proof that the concentration has been abandoned in the sense of Article 6(1)(c). Likewise, minor modifications of a concentration which do not affect the change in control or the quality of that change, cannot be considered as an abandonment of the original

concentration.[102]

- Binding agreement: proof of the legally binding cancellation of the agreement in the form envisaged by the initial agreement (i.e. usually a document signed by all the parties) will be required. Expressions of intention to cancel the agreement or not to implement the notified concentration, as well as unilateral declarations by (one of) the parties will not be considered sufficient.[103]

- Good faith intention to conclude an agreement: In case of a letter of intent or memorandum of understanding reflecting such good faith intention, documents proving that this basis for the good faith intention has been cancelled will be required. As for possible other forms that indicated the good faith intention, the abandonment must reverse this good faith intention and correspond in terms of form and intensity to the initial expression of intent.

- Public announcement of a public bid or of the intention to make a public bid: a public announcement terminating the bidding procedure or renouncing to the intention to make a public bid will be required. The format and public reach of this announcement must be comparable to the initial announcement.

- Implemented concentrations: In case the concentration has been implemented prior to a Commission decision, the parties will be required to show that the situation prevailing before the implementation of the concentration has been re-established.

121. It is for the parties to submit the necessary documentation to meet these requirements in due time.

VII. Changes of transactions after a Commission authorisation decision

122. In some cases, parties may wish not to implement the concentration in the form foreseen after authorisation of the concentration by the Commission. The question arises whether the Commission's authorisation decision still covers the changed structure of the transaction.

102 This paragraph does not prejudge the assessment whether the modification requires submitting additional information to the Commission under Art. 5 (3) Reg. 802/2004.

103 See Case COMP/M.4381 – JCI/VB/FIAMM of 10 May 2007, paragraph 15, where only one party did no longer wished to implement an agreement, whereas the other party still considered the agreement to be binding and enforceable.

123. Broadly speaking, if, before implementation of the authorised concentration, the transactional structure is changed from an acquisition of control, falling under Article 3(1)(b), to a merger according to Article 3(1)(a), or *vice versa*, then the change in the transactional structure is considered a different concentration under the Merger Regulation and a new notification is required.[104] However, less significant modifications of the transaction, for example minor changes in the shareholding percentages which do not affect the change in control or the quality of that change, changes in the offer price in the case of public bids or changes in the corporate structure by which the transaction is implemented without effects on the relevant control situation under the Merger Regulation, are considered as being covered by the Commission's authorisation decision.

104 See cases COMP/M.2706 – Carnival Corporation/P&O Princess of 11 April 2002 and COMP/M.3071 - Carnival Corporation/P&O Princess of 10 February 2003. In such circumstances, the identity of the notifying parties changes, as both parties to a merger must notify, whereas only the party acquiring control must do so. However, if the parties implement an acquisition of control over a target company and only *subsequently* decide to merge with the newly acquired subsidiary, this would be regarded as an internal restructuring that does not give rise to a change in control and would thus not fall within the terms of Article 3 of the Merger Regulation.

C. Community Dimension

I. Thresholds

124. A two fold test defines the operations to which the Merger Regulation applies. The first test is that the operation must be a concentration within the meaning of Article 3. The second comprises the turnover thresholds contained in Article 1, designed to identify those operations which have an impact upon the Community and can be deemed to be of "Community dimension". Turnover is used as a proxy for the economic resources being combined in a concentration, and is allocated geographically in order to reflect the geographic distribution of those resources.

125. Two sets of thresholds are set out in Article 1 to establish whether the operation has a Community dimension. Article 1(2) establishes three different criteria: The worldwide turnover threshold is intended to measure the overall dimension of the undertakings concerned; the Community turnover threshold seek to determine whether the concentration involves a minimum level of activities in the Community; and the two-thirds rule aims to exclude purely domestic transactions from Community jurisdiction.

126. This second set of thresholds, contained in Article 1(3), is designed to tackle those concentrations which fall short of achieving Community dimension under Article 1(2), but would have a substantial impact in at least three Member States leading to multiple notifications under national competition rules of those Member States. For this purpose, Article 1(3) provides for lower turnover thresholds, both worldwide and Community-wide, and for a minimum level of activities of the undertakings concerned, jointly and individually, in at least three Member States. Similarly to Article 1(2), Article 1(3) also contains a two-thirds rule excluding predominantly domestic concentrations.[105]

127. The thresholds as such are designed to govern jurisdiction and not to assess the market position of the parties to the concentration nor the impact of the operation. In so doing they include turnover derived from, and thus the resources devoted to, all areas of activity of the parties, and not just those directly involved in the concentration. The thresholds are purely quantitative, since they are only based on turnover calculation instead of market share or other criteria. They pursue the objective to provide a simple

105 A concentration is further deemed to have a Community dimension if it is referred to the Commission under Article 4(5) of the Merger Regulation. These cases are dealt with in the Commission Notice on Case Referral in respect of concentrations, OJ C 56, 05.03.2005, p. 2.

and objective mechanism that can be easily handled by the companies involved in a merger in order to determine if their transaction has a Community dimension and is therefore notifiable.

128. Whereas Article 1 sets out the numerical thresholds to establish jurisdiction, the purpose of Article 5 is to explain how turnover should be calculated to ensure that the resulting figures are a true representation of economic reality.

II. Notion of undertaking concerned

1. General

129. From the point of view of determining jurisdiction, the undertakings concerned are those participating in a concentration, i.e. a merger or an acquisition of control as foreseen in Article 3(1). The individual and aggregate turnover of those undertakings will be decisive in determining whether the thresholds are met.

130. Once the undertakings concerned have been identified in a given transaction, their turnover for the purposes of determining jurisdiction is to be calculated according to the rules set out in Article 5. Article 5(4) sets out detailed criteria to identify undertakings whose turnover may be attributed to the undertaking concerned because of certain direct or indirect links with the latter. The legislator's intention was to lay down concrete rules which, seen together, can be taken to establish the notion of a "group" for the purposes of the turnover thresholds in the Merger Regulation. The term "group" will be used in the following sections exclusively to refer to the collection of undertakings whose relations with an undertaking concerned come within the terms of one or more of the sub-paragraphs of Article 5(4) of the Merger Regulation.

131. It is important, when referring to the various undertakings which may be involved in a procedure, not to confuse the concept of "undertakings concerned" under Articles 1 and 5 with the terminology used elsewhere in the Merger Regulation and in Commission Regulation (EC) No 802/2004 of 7 April 2004 implementing Council Regulation (EC) No 139/2004 on the control of concentrations between undertakings (hereinafter referred to as the "Implementing Regulation")[106] referring to the various undertakings which may be involved in a procedure. This terminology refers to the notifying parties, other involved parties, third parties and parties who may be subject to fines or periodic penalty payments, and they are defined in Chapter IV of the

[106] OJ L 133, 30 April 2004, p. 1.

Implementing Regulation, along with their respective rights and duties.

2. Mergers

132. In a merger the undertakings concerned are each of the merging entities.

3. Acquisition of control

133. In the remaining cases, it is the concept of "acquiring control" that will determine which are the undertakings concerned. On the acquiring side, there can be one or more undertakings acquiring sole or joint control. On the acquired side, there can be one or more undertakings as a whole or parts thereof. As a general rule, each of these undertakings will be an undertaking concerned within the meaning of the Merger Regulation.

Acquisition of sole control

134. Acquisition of sole control of the whole undertaking is the most straightforward case of acquisition of control. The undertakings concerned will be the acquiring undertaking and the target undertaking.

135. Where the target undertaking is acquired by a group through one of its subsidiaries, the undertakings concerned are the target undertaking and the acquiring subsidiary if this is not a mere acquisition vehicle. However, even though the subsidiary is normally the undertaking concerned for the purpose of calculating turnover, the turnover of all undertakings with which the undertaking concerned has the links as specified in Article 5(4) shall be included in the threshold calculations. In this respect, the group is considered to be a single economic unit and the different companies belonging to the same group cannot be considered as different undertakings concerned for jurisdictional purposes under the Merger Regulation. The actual notification can be made by the subsidiary concerned or by its parent company.

Acquisition of parts of an undertaking and staggered operations – Article 5(2)

136. The first subparagraph of Article 5(2) of the Merger Regulation provides that when the operation concerns the acquisition of parts of one or more undertakings, only those parts which are the subject of the transaction shall be taken into account with regard to the seller. The possible impact of the transaction on the market will depend only on the

combination of the economic and financial resources that are the subject of the transaction with those of the acquirer and not on the remaining business of the seller. In this case, the undertakings concerned will be the acquirer(s) and the acquired part(s) of the target undertaking, but the remaining businesses of the seller will be ignored.

137. The second subparagraph of Article 5(2) includes a special provision on staggered operations or follow-up deals. The previous concentrations (within two years) involving the same parties become (re)notifiable with the most recent transaction, provided this constitutes a concentration, if the thresholds are met whether for one or more of the transactions taken in isolation or cumulatively. In this case, the undertakings concerned are the acquirer(s) and the different acquired part(s) of the target company taken as a whole.

Change from joint to sole control

138. If the acquisition of control occurs by way of a change from joint control to sole control, one shareholder normally acquires the stake previously held by the other shareholder(s). In this situation, the undertakings concerned are the acquiring shareholder and the joint venture. As is the case for any other seller, the "exiting" shareholder is not an undertaking concerned.[107]

Acquisition of joint control

139. In the case of acquisition of joint control of a newly-created undertaking, the undertakings concerned are each of the companies acquiring control of the newly set-up joint venture (which, as it does not yet exist, cannot be considered to be an undertaking concerned and moreover, as yet, has no turnover of its own). The same rule applies where one undertaking contributes a pre-existing subsidiary or a business (over which it previously exercised sole control) to a newly created joint venture. In these circumstances, each of the jointly-controlling undertakings is considered an undertaking concerned whereas any company or business contributed to the joint venture is not an undertaking concerned, and its turnover is part of the turnover of the initial parent company.

140. The situation is different if undertakings newly acquire joint control of a pre-existing undertaking or business. The undertakings concerned are each of the undertakings acquiring joint control on the one hand, and the pre-existing acquired undertaking or

107 Case IV/M.023 - ICI/Tioxide, of 28 November 1990.

business on the other.

141. The acquisition of a company with a view to immediately split up the assets is, as explained above in paragraph 32, mostly not considered as an acquisition of joint control of the entire target company, but as the acquisition of sole control by each of the ultimate acquirers of the respective parts of the target company. In line with the considerations for the acquisition of sole control, undertakings concerned are the acquiring undertakings and the acquired parts in each of the transactions.

Changes of controlling shareholders in cases of joint control of an existing joint venture

142. A notifiable concentration may arise, as explained above, where a change in the quality of control occurs in a joint control structure due to the entrance of new controlling shareholders, irrespective of whether or not they replace existing controlling shareholders.

143. In the case where one or more shareholders acquire control, either by entry or by substitution of one or more shareholders, in a situation of joint control both before and after the operation, the undertakings concerned are the shareholders (both existing and new) who exercise joint control and the joint venture itself.[108] On the one hand, similar to the acquisition of joint control of an existing company, the joint venture itself can be considered as an undertaking concerned as it is an already pre-existing undertaking. On the other hand, as set out above, the entry of a new shareholder is not only in itself a new acquisition of control, but also leads to a change in the quality of control for the remaining controlling shareholders as the quality of control of the joint venture is determined by the identity and composition of the controlling shareholders and therefore also by the relationship between them. Furthermore, the Merger Regulation considers a joint venture as a combination of the economic resources of the parent companies, together with the joint venture if it already generates turnover on the market. For these reasons, the newly entering controlling shareholders are undertakings concerned alongside with the remaining controlling shareholders. Due to the change of the quality in control, all of them are considered to undertake an acquisition of control.

---

108 See Case IV/M.376 - Synthomer/Yule Catto, of 22 October 1993.

144. As Article 4(2) first sentence of the Merger Regulation foresees that all acquisitions of joint control shall be notified jointly by the undertakings acquiring joint control, existing and new shareholders in principle have to notify concentrations arising from such changes in joint control scenarios jointly.

Acquisition of control by a joint venture

145. In transactions where a joint venture acquires control of another company, the question arises whether or not the joint venture should be regarded as the undertaking concerned (the turnover of which would include the turnover of its parent companies), or whether each of its parent companies should individually be regarded as undertakings concerned. This question may be decisive for jurisdictional purposes.[109] Whereas, in principle, the undertaking concerned is the joint venture as the direct participant in the acquisition of control, there may be circumstances where companies set up "shell" companies and the parent companies will individually be considered as undertakings concerned. In this type of situation, the Commission will look at the economic reality of the operation to determine which are the undertakings concerned.

146. Where the acquisition is carried out by a full-function joint venture, with the features set out above, and already operates on the same market, the Commission will normally consider the joint venture itself and the target undertaking to be the undertakings concerned (and not the joint venture's parent companies).

147. Conversely, where the joint venture can be regarded as a mere vehicle for an acquisition by the parent companies, the Commission will consider each of the parent companies themselves to be the undertakings concerned, rather than the joint venture, together with the target company. This is the case in particular where the joint venture is set up especially for the purpose of acquiring the target company or has not yet started to operate, where an existing joint venture has no full-function character as referred to above or where the joint venture is an association of undertakings. The same applies where there are elements which demonstrate that the parent companies are in

109 Assume the following scenario: The target company has an aggregate Community turnover of less than EUR 250 million, and the acquiring parties are two (or more) undertakings, each with a Community turnover exceeding EUR 250 million. If the target is acquired by a "shell" company set up between the acquiring undertakings, there would only be one undertaking (the "shell" company) with a Community turnover exceeding EUR 250 million, and thus one of the cumulative threshold conditions for Community jurisdiction, namely, the existence of at least two undertakings with a Community turnover exceeding EUR 250 million, would not be fulfilled. Conversely, if instead of acting through a "shell" company, the acquiring undertakings acquire the target undertaking themselves, then the turnover threshold would be met and the Merger Regulation would apply to this transaction. The same considerations apply to the national turnover thresholds referred to in Article 1(3).

fact the real players behind the operation. These elements may include a significant involvement by the parent companies themselves in the initiation, organisation and financing of the operation. In those cases, the parent companies are regarded as undertakings concerned.

Break-up of joint ventures and exchange of assets

148. When two (or more) undertakings break up a joint venture and split the assets (constituting businesses) between them, this will normally be considered as more than one acquisition of control, as explained above in paragraph 41. For example, undertakings A and B form a joint venture and subsequently split it up, in particular with a new asset configuration. The break-up of the joint venture involves a change from joint control over the joint venture's entire assets to sole control over the divided assets by each of the acquiring undertakings.[110]

149. For each break-up operation, and in line with the consideration to the acquisition of sole control, the undertakings concerned will be, on the one hand, the acquiring party and, on the other, the assets that this undertaking will acquire.

150. Similar to the break-up scenario is the situation where two (or more) companies exchange assets constituting a business on each side. In this case, each acquisition of control is considered an independent acquisition of sole control. The undertakings concerned will be, for each transaction, the acquiring companies and the acquired undertaking or assets.

Acquisitions of control by natural persons

151. Control may also be acquired by natural persons, within the meaning of Article 3 of the Merger Regulation, if those persons themselves carry out further economic activities (and are therefore classified as economic undertakings in their own right) or if they control one or more other economic undertakings. In such a situation, the undertakings concerned are the target undertaking and the individual acquirer (with the turnover of the undertaking(s) controlled by that natural person being included in the calculation of the natural person’s turnover to the extent that the terms of Article 5(4) are satisfied).[111]

---

110 See parallel cases COMP/M.3293 – Shell/BEB and COMP/M.3294 – ExxonMobil/BEB of 20 November 2003; Case IV/M.197 – Solvay/Laporte of 30 April 1992.

111 See Case IV/M.082 - Asko/Jacobs/Adia, of 16 May 1991 where a private individual with other economic activities acquired joint control of an undertaking and was considered an undertaking concerned.

152. An acquisition of control of an undertaking by its managers is also an acquisition by natural persons, and paragraph 151 above is also relevant. However, the managers may pool their interests through a "vehicle company", so that it acts with a single voice and also to facilitate decision-making. Such a vehicle company may be, but is not necessarily, an undertaking concerned. The general guidance given above in paragraphs 145-147 on acquisitions of control by a joint venture also applies here.

Acquisition of control by a State-owned undertaking

153. As described above, a merger or an acquisition of control arising between two undertakings owned by the same State (or the same public body) may constitute a concentration if the undertakings were formerly part of different economic units having an independent power of decision. If this is the case, both of them will qualify as undertakings concerned although both are owned by the same State.[112]

III. Relevant date for establishing jurisdiction

154. The legal situation for establishing the Commission's jurisdiction has been changed under the recast Merger Regulation. Under the former Merger Regulation, the relevant date was the triggering event for a notification according to Article 4(1) of this Regulation – the conclusion of a final agreement or the announcement of a public bid or the acquisition of a controlling interest – or, at the latest, the time when the parties were obliged to notify (i.e. one week after a triggering event for a notification).[113]

155. Under the recast Merger Regulation, there is no longer an obligation for the parties to notify within a certain time-frame (provided the parties do not implement the planned concentration before notification). Moreover, according to Article 4(1) second subparagraph, the undertakings concerned can already notify the transaction on the basis of a good faith intention to conclude an agreement or, in the case of a public bid, where they have publicly announced an intention to make such a bid. At the time of the notification at the latest, the Commission – as well as national competition authorities – must be able to determine their jurisdiction. Article 4(1) subparagraph 1 of the Merger Regulation provides, generally, that concentrations shall be notified following the conclusion of the agreement, the announcement of the public bid, or the acquisition of a controlling interest. The dates of these events are therefore still decisive under the recast Merger Regulation in order to determine the relevant date for establishing

112 See recital 22 of the Merger Regulation, directly related to the calculation of turnover of a state-owned undertaking concerned in the context of Article 5(4).

113 See Case COMP/M.1741 – MCI Worldcom/Sprint of 28 June 2000.

jurisdiction, if a notification does not occur before such events on the basis of a good faith intention or an announced intention.[114]

156. The relevant date for establishing Community jurisdiction over a concentration is therefore the date of the conclusion of the binding legal agreement, the announcement of a public bid or the acquisition of a controlling interest or the date of the first notification, whichever date is earlier.[115] Regarding the date of notification, a notification to either the Commission or to a Member State authority is relevant. The relevant date needs in particular to be considered for the question whether acquisitions or divestitures which occur after the period covered by the relevant account, but before the relevant date, require adaptations to those accounts according to the principles set out in paragraphs 172, 173.

IV. Turnover

1. The concept of turnover

157. The concept of turnover as used in Article 5 of the Merger Regulation comprises "the amounts derived […] from the sale of products and the provision of services". Those amounts generally appear in company accounts under the heading "sales". In the case of products, turnover can be determined without difficulty, namely by identifying each commercial act involving a transfer of ownership.

158. In the case of services, the method of calculating turnover in general does not differ from that used in the case of products: the Commission takes into consideration the total amount of sales. However, the calculation of the amounts derived from the provision of services may be more complex as this depends on the exact service provided and the underlying legal and economic arrangements in the sector in question. Where one undertaking provides the entire service directly to the customer, the turnover of the undertaking concerned consists of the total amount of sales for the provision of services in the last financial year.

114 The alternative possibility that turnover should be defined on the latest date when the relevant parties are obliged to notify (seven days after the "triggering event" under the former Merger Regulation) cannot be retained under the recast merger Regulation, because there is no deadline for notification.

115 See also opinion of AG Kokott in Case C-202/06 Cementbouw v Commission of 26 April 2007, paragraph 46 (not yet reported). Only the recast merger Regulation has provided for the possibility to take into account the first notification if this is earlier than the date of the conclusion of the binding legal agreement, the announcement of a public bid or the acquisition of a controlling interest, see fn. 35 of the opinion.

159. In other areas, this general principle may have to be adapted to the specific conditions of the service provided. In certain sectors of activity (such as package holidays and advertising), the service may be sold through intermediaries.[116] Even if the intermediary invoices the entire amount to the final customer, the turnover of the undertaking acting as an intermediary consists solely of the amount of its commission. For package holidays, the entire amount paid by the final customer is then allocated to the tour operator which uses the travel agency as distribution network. In the case of advertising, only the amounts received (without the commission) are considered to constitute the turnover of the TV channel or the magazine since media agencies, as intermediaries, do not constitute the distribution channel for the sellers of advertising space, but are chosen by the customers, *i.e.* those undertakings wishing to place advertising.

160. The examples mentioned show that, due to the diversity of services, many different situations may arise and the underlying legal and economic relations have to be carefully analysed. Similarly, specific situations for the calculation of turnover may arise in the areas of credit, financial services and insurance. These issues will be dealt with in Section VI.

2. Ordinary activities

161. Article 5(1) provides that the amounts to be included in the calculation of turnover should correspond to the "ordinary activities" of the undertakings concerned. This is the turnover achieved from the sale of products or the provision of services in the normal course of its business. It generally excludes those items which are listed under the headers “financial income” or “extraordinary income” in the company’s accounts. Such extraordinary income may be derived from the sale of businesses or of fixed assets. However, company accounts do not necessarily delineate the revenues derived from ordinary activities in the way required for the purposes of turnover calculation under the Merger Regulation. In some cases, the qualification of the items in the accounts may have to be adapted to the requirements of the Merger Regulation.[117]

[116] An undertaking will normally not act as an intermediary if it sells products via a commercial act which involves a transfer of ownership, Judgment in Case T-417/05, Endesa v Commission, paragraph 213, [2006] ECR II-2533.

[117] In Case IV/M.126 - Accor/Wagons-Lits, of 28 April 1992, the Commission decided to consider certain income from car-hire activities as revenues from ordinary activities although they were included as "other operating proceeds" in Wagons-Lits’ profit and loss account.

.

162. The revenues do not necessarily have to be derived from the customer of the products or services. With regard to aid granted to undertakings by public bodies, any aid has to be included in the calculation of turnover if the undertaking is itself the recipient of the aid and if the aid is directly linked to the sale of products and the provision of services by the undertaking. The aid is therefore an income of the undertaking from the sale of products or provision of services in addition to the price paid by the consumer.[118]

163. Specific issues have arisen for the calculation of turnover of a business unit which only had internal revenues in the past. This may in particular apply for transactions involving the outsourcing of services by transfer of a business unit. If such a transaction constitutes a concentration on the basis of the considerations outlined in paragraphs 25 ff. of this Notice, the Commission's practice is that the turnover should normally be calculated on the basis of the previously internal turnover or of publicly quoted prices where such prices exist (e.g. in the oil industry). Where the previously internal turnover does not appear to correspond to a market valuation of the activities in question (and, thus, to the expected future turnover on the market), the forecast revenues to be received on the basis of an agreement with the former parent may be a suitable proxy.

3. "Net" turnover

164. The turnover to be taken into account is "net" turnover, after deduction of a number of components specified in the Regulation. The aim is to adjust turnover in such a way as to enable it to reflect the real economic strength of the undertaking.

3.1 Deduction of rebates and taxes

165. Article 5(1) provides for the "deduction of sales rebates and of value added tax and other taxes directly related to turnover". "Sales rebates" mean all rebates or discounts which are granted by the undertakings to their customers and which have a direct influence on the amounts of sales.

166. As regards the deduction of taxes, the Merger Regulation refers to VAT and "other taxes directly related to turnover". The concept of "taxes directly related to turnover" refers to indirect taxation linked to turnover, such as, for example, taxes on alcoholic beverages or cigarettes.

118 See Case IV/M.156 - Cereol/Continentale Italiana of 27 November 1991. In this case, the Commission excluded Community aid from the calculation of turnover because the aid was not intended to support the sale of products manufactured by one of the undertakings involved in the merger, but the producers of the raw materials (grain) used by the undertaking, which specialized in the crushing of grain.

3.2 The treatment of "internal" turnover

167. The first subparagraph of Article 5(1) states that "the aggregate turnover of an undertaking concerned shall not include the sale of products or the provision of services between any of the undertakings referred to in paragraph 4", *i.e.* the group to which the undertaking concerned belongs. The aim is to exclude the proceeds of business dealings within a group so as to take account of the real economic weight of each entity in the form of market turnover. Thus, the "amounts" taken into account by the Merger Regulation reflect only the transactions which take place between the group of undertakings on the one hand and third parties on the other.

168. Article 5(5)(a) of the Merger Regulation applies the principle that double counting is to be avoided specifically to the situation where two or more undertakings concerned in a concentration jointly have the rights or powers listed in Article 5(4)(b) in another company. According to this provision, the turnover resulting from the sale of products or the provision of services between the joint venture and each of the undertakings concerned (or any other undertaking connected with any one of them in the sense of Article 5(4)) should be excluded. As regards joint ventures between undertakings concerned and third parties, insofar as their turnover is taken into account according to Article 5(4)(b) as set out in paragraph 181 below, the turnover generated by sales between the joint venture and the undertaking concerned (as well as undertakings linked to the undertaking concerned in accordance with the criteria set out in Article 5(4)) is not taken into account according to Article 5(1).

4. Turnover calculation and financial accounts

4.1 The general rule

169. The Commission seeks to base itself upon the most accurate and reliable figures available. Generally, the Commission will refer to accounts which relate to the closest financial year to the date of the transaction and which are audited under the standard applicable to the undertaking in question and compulsory for the relevant financial year.[119] An adjustment of the audited figures should only take place if this is required by the provisions of the Merger Regulation, including the cases explained in more

[119] See Case COMP/M.3986 – Gas Natural/Endesa of 15 November 2005; confirmed by Judgment in Case T-417/05, Endesa v Commission, paragraphs 128, 131, [2006] ECR II-2533.

detail in paragraph 172.

170. The Commission is reluctant to rely on management or any other form of provisional accounts in any but exceptional circumstances.[120] Where a concentration takes place within the first months of the year and audited accounts are not yet available for the most recent financial year, the figures to be taken into account are those relating to the previous year. Where there is a major divergence between the two sets of accounts, due to significant and permanent changes in the undertaking concerned, and, in particular, when the final draft figures for the most recent year have been approved by the board of management, the Commission may decide to take those figures into account.

171. Despite the general rule, in cases where major differences between the Community's accounting standards and those of a non-member country are observed, the Commission may consider it necessary to restate these accounts in accordance with Community standards in respect of turnover.

4.2 Adjustments after the date of the last audited accounts

172. Notwithstanding the foregoing paragraphs, an adjustment must always be made to account for permanent changes in the economic reality of the undertakings concerned, such as acquisitions or divestments which are not or not fully reflected in the audited accounts. Such changes have to be taken into account in order to identify the true resources being concentrated and to better reflect the economic situation of the undertakings concerned. Those adjustments are only selective in nature and do not endanger the principle that there should be a simple and objective mechanism to determine the Commission’s jurisdiction as they do not require a complete revision of the audited accounts.[121] First, this applies to acquisitions, divestments or closure of part of its business subsequent to the date of the audited accounts. This is relevant if a company closes a transaction concerning the divestment and closure of part of its business at any time before the relevant date for establishing jurisdiction (see paragraph 154) or where such a divestment or closure of a business is a pre-condition for the operation.[122] In this case, the turnover to be attributed to that part of the business must be subtracted from the turnover of the notifying party as shown in its last audited accounts. If an agreement for the sale of part of its business is signed, but the closing of

---

120 See Case COMP/M.3986 – Gas Natural/Endesa of 15 November 2005; confirmed by Judgment in Case T-417/05, Endesa v Commission, paragraphs 176,179, [2006] ECR II-2533.

121 Judgment in Case T-417/05, Endesa v Commission, paragraph 209, [2006] ECR II-2533.

122 See Judgment in Case T-3/93, Air France v Commission, [1994] ECR II-121 paragraphs 100 et seq. in relation to Case IV/M.278 – British Airways/Dan Air; Case IV/M.588 – Ingersoll-Rand/Clark Equipment.

the sale (in other words, its legal implementation and the transfer of the legal title to the shares or assets acquired) has not yet occurred, such a change is not taken into account[123], unless the sale is a pre-condition for the notified operation. Conversely, the turnover of those businesses whose acquisition has been closed subsequent to the preparation of the most recent audited accounts, but before the relevant date for establishing jurisdiction, must be added to a company's turnover for notification purposes.

173. Second, an adjustment may also be necessary for acquisitions, divestments or closure of part of the business which have taken place during the financial year for which the audited accounts are drawn up. If acquisitions, divestments or closure of part of the business within this period are made, the changes in the economic resources may only partly be reflected in the audited accounts of the undertaking concerned. As the turnover of the businesses acquired may be included in the accounts only from the time of their acquisition, this may not reflect the full annual turnover of the acquired business. Conversely, the turnover of the businesses divested or closed may still be included in the audited accounts up to the point in time of their actual divestment or closure. In these cases, adjustments have to be made to remove the turnover generated by the divested or closed businesses from the audited accounts until the time of de-consolidation and to add the turnover which the acquired businesses have generated in the year until the time they have been consolidated in the accounts. As a result, the turnover of the businesses divested or closed must be excluded in full and the full annual turnover of the businesses acquired must be included.

174. Other factors that may affect turnover on a temporary basis such as a decrease in orders for the product or a slow-down in the production process within the period prior to the transaction will be ignored for the purposes of calculating turnover. No adjustment to the definitive accounts will be made to incorporate them.

5. Attribution of turnover under Article 5(4)

5.1 Identification of undertakings whose turnover is taken into account

175. When an undertaking concerned by a concentration belongs to a group, not only the turnover of the undertaking concerned is considered, but the Merger Regulation

---

[123] Case IV/M.632 – Rhône Poulenc Rorer/Fisons of 21 September 1995; Case COMP/M.1741 – MCI Worldcom/Sprint of 28 June 2000.

requires to also take into account the turnover of those undertakings with which the undertaking concerned has links consisting in the rights or powers listed in Article 5(4) in order to determine whether the thresholds contained in Article 1 of the Merger Regulation are met. The aim is again to capture the total volume of the economic resources that are being combined through the operation irrespective of whether the economic activities are carried out directly by the undertaking concerned or whether they are undertaken indirectly via undertakings with which the undertaking concerned possesses the links described in Article 5(4).

176. The Merger Regulation does not delineate the concept of a group in a single abstract definition, but sets out in Article 5(4)(b) certain rights or powers. If an undertaking concerned directly or indirectly has such links with other companies, those are to be regarded as part of its group for purposes of turnover calculation under the Merger Regulation.

177. Article 5(4) of the Merger Regulation provides the following:

"Without prejudice to paragraph 2 [acquisitions of parts], the aggregate turnover of an undertaking concerned within the meaning of Article 1(2) and (3) shall be calculated by adding together the respective turnovers of the following:

(a) the undertaking concerned;

(b) those undertakings in which the undertaking concerned directly or indirectly:

(i) owns more than half the capital or business assets, or

(ii) has the power to exercise more than half the voting rights, or

(iii) has the power to appoint more than half the members of the supervisory board, the administrative board or bodies legally representing the undertakings, or

(iv) has the right to manage the undertaking's affairs;

(c) those undertakings which have in an undertaking concerned the rights or powers listed in (b);

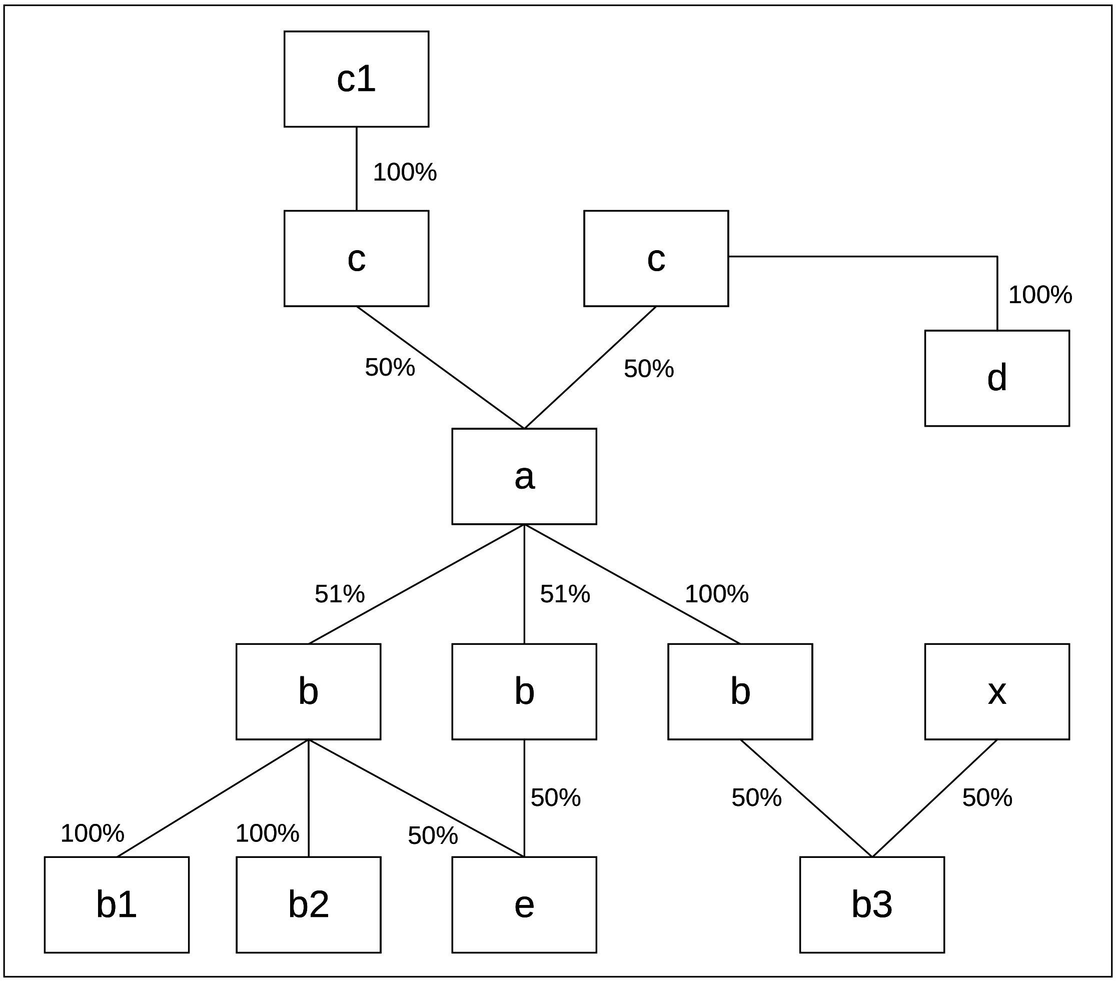
(d) those undertakings in which an undertaking as referred to in (c) has the rights or powers listed in (b);

(e) those undertakings in which two or more undertakings as referred to in (a) to (d) jointly have the rights or powers listed in (b)."

An undertaking which has in another undertaking the rights and powers mentioned in Article 5(4)(b) will be referred to as the “parent” of the latter in the present section of this Notice dealing with the calculation of turnover, whereas the latter is referred to as “subsidiary” of the former. In short, Article 5(4) therefore provides that the turnover of the undertaking concerned by the concentration (point (a)) should include its subsidiaries (point (b)), its parent companies (point (c)), the other subsidiaries of its parent undertakings (point (d)) and any other subsidiary jointly held by two or more of the undertakings identified under (a)-(d) (point (e)).

178. A graphic example is as follows:

The undertaking concerned and its group:



a: The undertaking concerned[124]

b: Its subsidiaries, jointly held companies together with third parties (b3) and their own subsidiaries (b1 and b2)

c: Its parent companies and their own parent companies (c1)

d: Other subsidiaries of the parent companies of the undertaking concerned

e: Companies jointly held by two (or more) companies of the group

x: Third party

Note: the letters a – e correspond to the relevant points of Article 5(4). Percentages set out in the graph relate to the percentage of voting rights held by the respective parent company.

179. The rights or powers listed in Article 5(4)(b)(i)-(iii) can be identified in a rather

[124] For the graph it is assumed that the joint venture itself is the undertaking concerned according to the criteria set out in paragraph 146 (acquisition by a full-function JV operating on the same market).

straightforward way as they refer to quantitative thresholds. These thresholds are fulfilled if the undertaking concerned owns more than half of the capital or business assets of other undertakings, has more than half of the voting rights or has legally the power to appoint more than half of the board members in other undertakings. However, the thresholds are also met if the undertaking concerned *de facto* has the power to exercise more than half of the voting rights in the shareholders' assembly or the power to appoint more than half of the board members in other undertakings.[125]

180. The provision contained in Article 5(4)(b)(iv) refers to the right to manage the undertaking's affairs. Such a right to manage exists under company law in particular on the basis of organisational contracts such as a "*Beherrschungsvertrag*" under German law, on the basis of business lease agreements or on the basis of the organisation structure for the general partner in a limited partnership.[126] However, the "right to manage" may also result from the holding of voting rights (alone or in combination with contractual arrangements, such as a shareholders' agreement) which enable, on a stable, *de jure* basis, to determine the strategic behaviour of an undertaking.

181. The right to manage also covers situations in which the undertaking concerned jointly has the right to manage an undertaking's affairs together with third parties.[127] The underlying consideration is that the undertakings exercising joint control have jointly the right to manage the controlled undertakings' affairs even if each of them individually may have those rights only in a negative sense, *i.e.* in the form of veto rights. In the example, the undertaking (b3) which is jointly controlled by the undertaking concerned (a) and a third party (x) is taken into account as both (a) and (x) have veto rights in (b3) on the basis of their equal shareholding in (b3).[128] Under Article 5(4)(b)(iv) the Commission only takes into account those joint ventures in which the undertaking concerned and third parties have *de jure* rights that give rise to a clear-cut right to manage. The inclusion of joint ventures is therefore limited to situations where the undertaking concerned and third parties have a joint *right* to manage on the basis of an agreement, *e.g.* a shareholders' agreement, or where the undertaking concerned and a third party have an equality of voting rights to the effect that they have the right to appoint an equal number of members to the decision-making bodies of the joint venture.

125 Case IV/M.187 – Ifint/Exor of 2 March 1992; Case IV/M.062 – Eridania/ISI of 30 July 1991.

126 Case IV/M.126 – Accor/WagonLits of 28 April 1992.

127 Case COMP/M.1741 – MCI Worldcom/Sprint; Case IV/ M. 187 – Ifint/Exor; Case IV/ M.1046 – Ameritech/Tele Danmark.

128 However, only half of the turnover generated by b3 is taken into account, see paragraph 187.

182. In the same way, where two or more companies jointly control the undertaking concerned in the sense that the agreement of each and all of them is needed in order to manage the undertaking affairs, the turnover of all of them is included. In the example, the two parent companies (c) of the undertaking concerned (a) would be taken into account as well as their own parent companies (c1 in the example). This interpretation results from the referral from Article 5(4)(c), dealing with this case, to Article 5(4)(b), which is applicable to jointly controlled companies as set out in the preceding paragraph.

183. When any of the companies identified on the basis of Article 5(4) also has links as defined in Article 5(4) with other undertakings, these should also be brought into the calculation. In the example, one of the subsidiaries of the undertaking concerned a (called b) has in turn its own subsidiaries b1 and b2 and one of the parent companies (called c) has its own subsidiary (d).

184. Article 5(4) sets out specific criteria for identifying undertakings whose turnover can be attributed to the undertaking concerned. These criteria, including the "right to manage the undertaking's affairs", are not coextensive with the notion of "control" under Article 3(2). There are significant differences between Articles 3 and 5, as those provisions fulfil different roles. The differences are most apparent in the field of *de facto* control. Whereas under Article 3(2) even a situation of economic dependence may lead to control on a *de facto* basis (see in detail above), a solely controlled subsidiary is only taken into account on a *de facto* basis under Article 5(4)(b) if it is clearly demonstrated that the undertaking concerned has the power to exercise more than half of the voting rights or to appoint more than half of the board members. Concerning joint control scenarios, Article 5(4)(b)(iv) covers those scenarios where the controlling undertakings jointly have a right to manage on the basis of individual veto rights. However, Article 5(4) would not cover situations where joint control occurs on a *de facto* basis due to strong common interests between different minority shareholders of the joint venture company on the basis of shareholders' attendance. The difference is reflected in the fact that Article 5(4)(b)(iv) refers to the *right* to manage, and not a *power* (as in subparagraph (b)(ii) and (iii)) and is explained by the need for precision and certainty in the criteria used for calculating turnover so that jurisdiction can be readily verified. Under Article 3(3), however, the question whether a concentration arises can be much more comprehensively investigated. In addition, situations of negative sole control are only exceptionally covered (if the conditions of Article 5(4)(b)(i)-(iii) are met in the specific case); the "right to manage" under Article 5(4)(b)(iv) does not cover negative control scenarios. Finally,

Article 5(4)(b)(i), for example, covers situations where "control" under Article 3(2) may not exist.

5.2 Allocation of turnover of the undertakings identified

185. In general, as long as the test under Article 5(4)(b) is fulfilled, the whole turnover of the subsidiary in question will be taken into account regardless of the actual shareholding which the undertaking concerned holds in the subsidiary. In the chart, the whole turnover of the subsidiaries called b of the undertaking concerned a will be taken into account.

186. However, the Merger Regulation includes specific rules for joint ventures. Article 5(5)(b) provides that for joint ventures between two or more undertakings concerned, the turnover of the joint venture (as far as the turnover is generated from activities with third parties as set out above in paragraph 168) should be apportioned equally amongst the undertakings concerned, irrespective of their share of the capital or the voting rights.

187. The principle contained in Article 5(5)(b) is followed by analogy for the allocation of turnover for joint ventures between undertakings concerned and third parties if their turnover is taken into account according to Article 5(4)(b) as set out above in paragraph 181. The Commission's practice has been to allocate to the undertaking concerned the turnover of the joint venture on a per capita basis according to the number of undertakings exercising joint control. In the example, half of the turnover of b3 is taken into account.

188. The rules of Article 5(4) also have to be adapted in situations involving a change from joint to sole control in order to avoid double counting of the turnover of the joint venture. Even if the acquiring undertaking has rights or powers in the joint venture which satisfy the requirements of Article 5(4), the turnover of the acquiring shareholder has to be calculated without the turnover of the joint venture, and the turnover of the joint venture has to be taken without the turnover of the acquiring shareholder.

5.3 Allocation of turnover in case of investment funds

189. The investment company, as set out above in paragraph 15, normally acquires indirect control over portfolio companies held by an investment fund. In the same way, the

investment company may be considered to indirectly have the powers and rights which are set out in Article 5(4)(b), in particular to indirectly have the power to exercise the voting rights held by the investment fund in the portfolio companies.

190. The same considerations, as set out above in the framework of Article 3 (paragraph 15), may also apply if an investment company sets up several investment funds with possibly different investors. Typically, on the basis of the organisational structure, in particular links between the investment company and the general partner(s) of the different funds organised as limited partnerships, or contractual arrangements, especially advisory agreements between the general partner or the investment fund and the investment company, the investment company will indirectly have the power to exercise the voting rights held by the investment fund in the portfolio companies or indirectly have one of the other powers or rights set out in Article 5(4)(b). In these circumstances, the investment company may exercise a common control structure over the different funds which it has set up and the common operation of the different funds by the investment company is often indicated by a common brand for the funds.

191. Consequently, such an organisation of the different funds by the investment company may lead to the result that the turnover of all portfolio companies held by different funds is taken into account for the purpose of assessing whether the turnover thresholds in Article 1 are met if the investment company acquires indirect control of a portfolio company via one of the funds.

5.4 Allocation of turnover for State-owned undertakings

192. As regards the calculation of turnover of State-owned undertakings, Article 5(4) should be read in conjunction with recital 22 of the Merger Regulation. This recital declares that, in order to avoid discrimination between the public and private sectors, "in the public sector, calculation of the turnover of an undertaking concerned in a concentration needs, therefore, to take account of undertakings making up an economic unit with an independent power of decision, irrespective of the way in which their capital is held or of the rules of administrative supervision applicable to them".[129]

129 See also Case IV/M.216 - CEA Industrie/France Telecom/Finmeccanica/SGS-Thomson, of 22 February 1993.

193. This recital clarifies that Member States (or other public bodies) are not considered as “undertakings” under Article 5(4) simply because they have interests in other undertakings which satisfy the conditions of Article 5(4). Therefore, for the purposes of calculating turnover of State-owned undertakings, account is only taken of those undertakings which belong to the same economic unit, having the same independent power of decision.

194. Thus, where a State-owned company is not subject to any coordination with other State-controlled holdings, it should be treated as independent for the purposes of Article 5, and the turnover of other companies owned by that State should not be taken into account. Where, however, several State-owned companies are under the same independent centre of commercial decision-making, then the turnover of those businesses should be considered part of the group of the undertaking concerned for the purposes of Article 5.

V. Geographic allocation of turnover

195. The thresholds concerning Community-wide and Member State turnover in Article 1(2) and (3) aim to identify cases which have sufficient turnover within the Community in order to be of Community interest and which are primarily cross-border in nature. They require turnover to be allocated geographically to the Community and to individual Member States. Since audited accounts often do not provide a geographical breakdown as required by the Merger Regulation, the Commission will rely on the best figures available provided by the undertakings. The second subparagraph of Article 5(1) provides that the location of turnover is determined by the location of the customer at the time of the transaction:

"Turnover, in the Community or in a Member State, shall comprise products sold and services provided to undertakings or consumers, in the Community or in that Member State as the case may be."

General rule

196. The Merger Regulation does not discriminate between "products sold" and "services provided" for the geographic allocation of turnover. In both cases, the general rule is that turnover should be attributed to the place where the customer is located. The underlying principle is that turnover should be allocated to the location where competition with alternative suppliers takes place. This location is normally also the

place where the characteristic action under the contract in question is to be performed, *i.e.* where the service is actually provided and the product is actually delivered. In the case of Internet transactions, it may be difficult for the undertakings to determine the location of the customer at the time when the contract is concluded via the Internet. If the product or the service itself is not supplied via the Internet, focusing on the place where the characteristic action under the contract is performed may avoid those difficulties. In the following, the sale of goods and the provision of services are dealt with separately as they exhibit certain different features in terms of allocation of turnover.

Sale of goods

197. For the sale of goods, particular situations may arise in situations in which the place where the customer was located at the time of concluding the purchase agreement is different from the billing address and/or the place of delivery. In these situations, the place where the purchase agreement was entered into and the place of delivery are more important than the billing address. As the delivery is in general the characteristic action for the sale of goods, the place of delivery may even be prevailing over the place where the customer was located at the time when the purchase agreement was concluded. This will depend on whether the place of delivery is to be considered the place where competition takes place for the sale of goods or whether competition rather takes place at the residence of the customer. In the case of a sale of mobile goods, such as a motor car, to a final consumer, the place where the car is delivered to the customer is decisive even if the agreement was concluded via the phone or the Internet before.

198. A specific situation arises in cases where a multinational corporation has a Community buying strategy and sources all its requirements for a good from one location. As a central purchasing organisation can take different forms, it is necessary to consider its concrete form since this may determine how to allocate the turnover. Where goods are purchased by and delivered to the central purchasing organisation and are subsequently re-distributed internally to different plants in a variety of Member States, turnover is allocated only to the Member State where the central purchasing organisation is located. In this case, competition takes place at the location of the central purchasing organisation and this is also the place where the characteristic action under the sales contract is performed. The situation is different in case of direct links between the seller and the different subsidiaries. This comprises the case where the central purchasing organisation concludes a mere framework agreement, but the individual orders are placed by and the products are directly delivered to the subsidiaries in different

Member States as well as the case where the individual orders are placed via the central purchasing organisation, but the products are directly delivered to the subsidiaries. In both cases, turnover is to be allocated to the different Member States in which the subsidiaries are located, irrespective of whether the central purchasing organisation or the subsidiaries receive the bills and effect the payment. The reason is that in both cases competition with alternative suppliers takes place for the delivery of products to the different subsidiaries even though the contract is concluded centrally. In the first case, in addition, the subsidiaries actually decide upon the quantities to be delivered and on an element essential for competition on their own.

Provision of services

199. For services, the Merger Regulation foresees that the place of their provision to the customer is relevant. Services containing cross-border elements can be considered to fall into three general categories. The first category comprises cases where the service provider travels, the second category cases where the customer travels. The third category comprises those cases where a service is provided without either the service provider or the customer having to travel. In the first two categories, the turnover generated is to be allocated to the place of destination of the traveller, *i.e.* the place where the service is actually provided to the customer. In the third category, the turnover is generally to be allocated to the location of the customer. For the central sourcing of services the above outlined principles for the central purchasing of goods apply in an analogous way.

200. An example of the first category would be a situation where a non-European company provides special airplane maintenance services to a carrier in a Member State. In this case, the service provider travels to the Community where the service is actually provided and where also competition for this service takes place. If a European tourist hires a car or books a hotel directly in the United States, this falls into the second category as the service is provided outside the Community and also competition takes place between hotels and rental car companies at the location chosen. However, the case is different for package holidays. For this kind of holiday, the service starts with the sale of the package through a travel agent at the customer's location and competition for the sale of holidays through travel agents takes place locally, as with retail shopping, even though parts of the service may be provided in a number of distant locations. The case therefore falls into the third category and the turnover generated is to be allocated to the customer's location. The third category also comprises cases like the supply of software or the distribution of films which are made

outside the Community, but are supplied to a customer in a Member State so that the service is actually provided to the customer within the Community.

201. Cases concerning the transport of goods are different as the customer, to whom those services are provided, does not travel, but the transport service is provided to the customer at its location. Those cases fall into the third category and the location of the customer is the relevant criterion for the allocation of the turnover.

202. In telecom cases, the qualification of call termination services may raise problems. Although call termination would appear to fall into the third category, there are reasons to treat it differently. Call termination services are provided, *e.g.*, in situations where a call, originating from a European operator, is being terminated in the United States. Although neither the European nor the US operator travels, the signal travels and the service is provided by the US network to the European operator in the United States. This is also the place where competition takes place (if any). The turnover is therefore to be considered as non-Community turnover.[130]

Specific sectors

203. Certain sectors do, however, pose very particular problems with regard to the geographical allocation of turnover. These will be dealt with in Section VI below.

VI. Conversion of turnover into EURO

204. When converting turnover figures into Euro great care should be taken with the exchange rate used. The annual turnover of a company should be converted at the average rate for the twelve months concerned. This average can be obtained via DG Competition's website.[131] The audited annual turnover figures should be converted as such and not be broken down into quarterly or monthly figures which would then be converted individually.

130 This does not affect the turnover which the European telephony operator generates vis-à-vis its own customer with this call.

131 See http://europa.eu.int/comm/competition/mergers/others/exchange_rates.html#footnote_1. The website makes reference to the European Central Bank's Monthly Bulletin.

205. When a company has sales in a range of currencies, the procedure is no different. The total turnover given in the consolidated audited accounts and in that company's reporting currency is converted into Euros at the yearly average rate. Local currency sales should not be converted directly into Euros since these figures are not from the consolidated audited accounts of the company.

VII. Provisions for credit and other financial institutions and insurance undertakings

1. Scope of application

206. Due to the specific nature of the sector, Article 5(3) contains specific rules for the calculation of turnover of credit and other financial institutions as well as insurance undertakings.

207. In order to define the terms "credit institutions and other financial institutions" under the Merger Regulation, the Commission in its practice has consistently adopted the definitions provided in the applicable European regulation in the banking sector. The Directive on the taking up and pursuit of the business of credit institutions foresees that[132]:

- "Credit institution shall mean an undertaking whose business is to receive deposits or other repayable funds from the public and to grant credits for its own account."

- "Financial institution shall mean an undertaking other than a credit institution, the principal activity of which is to acquire holdings or to carry on one or more of the activities listed in points 2 to 12 of Annex I."

208. Financial institutions within the meaning of Article 5(3) of the Merger Regulation are, accordingly, on the one hand holding companies and, on the other hand, undertakings which perform on a regular basis as a principal activity one or more activities expressly mentioned in points 2 to 12 of the Annex of the banking Directive. These activities include:

- lending (comprising activities such as consumer credit, mortgage credit, factoring);

132 The definitions are to be found in Article 1 (1) and (5) of Directive 2000/12/EC of the European Parliament and of the Council of 20 March 2000 relating to the taking up and pursuit of the business of credit institutions (OJ L 126, 26.5.2000, p. 1).

- financial leasing;
- money transmission services;
- issuing and administering means of payment (e.g. credit cards, travellers' cheques and bankers' drafts);
- guarantees and commitments;
- trading for own account or for account of customers in money market instruments, (cheques, bills, certificates of deposit, etc.), foreign exchange, financial futures and options, exchange and interest-rate instruments, transferable securities;
- participation in securities issues and the provision of services related to such issues;
- money broking;
- portfolio management and advice; and
- safekeeping and administration of securities.

2. Calculation of turnover

209. Article 5(3) of the Merger Regulation sets out the methods of calculation of turnover for credit and other financial institutions and for insurance undertakings. In the following Section, some supplementary questions related to turnover calculation for the abovementioned types of undertakings are addressed.

2.1 Calculation of turnover of credit and financial institutions (other than financial holding companies)

2.1.1 General

210. There are normally no particular difficulties in applying the banking income criterion for the definition of the worldwide turnover to credit institutions and other kinds of financial institutions.

For the geographic allocation of turnover to the Community and to individual Member States, the specific provision of Article 5 (3)(a) second subparagraph applies. It specifies that the turnover is to be allocated to the branch or division established in the Community or in the Member State which receives this income.

2.1.2 Turnover of leasing companies

211. There is a fundamental distinction to be made between financial leases and operating leases. Basically, financial leases are made for longer periods than operating leases and

ownership is generally transferred to the lessee at the end of the lease term by means of a purchase option included in the lease contract. Under an operating lease, on the contrary, ownership is not transferred to the lessee at the end of the lease term and the costs of maintenance, repair and insurance of the leased equipment are included in the lease payments. A financial lease therefore functions as a loan by the lessor to enable the lessee to purchase a given asset.

212. As already mentioned above, a company performing as its principal activity financial leasing is a financial institution within the meaning of Article 5(3)(a) and its turnover is to be calculated according to the specific rules set out in this provision. All payments on financial leasing contracts, except for the redemption part, are to be taken into account; a sale of future leasing payments at the beginning of the contract for re-financing purposes is not relevant.

213. Operational leasing activities are, however, not considered to be carried out by financial institutions, and therefore the general turnover calculation rules of Article 5(1) apply.[133]

2.2 Insurance undertakings

214. In order to measure the turnover of insurance undertakings, Article 5(3)(b) of the Merger Regulation provides that gross premiums written are taken into account. The gross premiums written are the sum of received premiums, including any received reinsurance premiums if the undertaking concerned has activities in the field of reinsurance. Outgoing or outward reinsurance premiums, *i.e.* all amounts paid and payable by the undertaking concerned to get reinsurance cover, are only costs related to the provision of insurance coverage and are not to be deducted from the gross premiums written.

215. The premiums to be taken into account are not only related to new insurance contracts made during the accounting year being considered but also to all premiums related to contracts made in previous years which remain in force during the period taken into consideration.

216. In order to constitute appropriate reserves allowing for the payment of claims, insurance undertakings, usually hold a portfolio of investments in shares, interest-bearing securities, land and property and other assets providing annual revenues.

[133] See Case IV/M.234 - GECC/Avis Lease, 15 July 1992.

The annual revenues coming from those sources are not considered as turnover for insurance undertakings under Article 5(3)(b). However, a distinction has to be made between pure financial investments, which do not confer the rights and powers specified in Article 5(4) to the insurance undertaking in the undertakings in which the investment has been made, and those investments leading to the acquisition of an interest which meets the criteria specified in Article 5(4)(b). In the latter case, Article 5(4) of the Merger Regulation applies, and the turnover of this undertaking has to be added to the turnover of the insurance undertaking, as calculated according to Article 5(3)(b), for the determination of the thresholds laid down in the Merger Regulation.[134]

2.3 Financial holding companies

217. As an "other financial institution" within the meaning of Article 5(3)(a) of the Merger Regulation, the turnover of a financial holding company has to be calculated according to the specific rules set out in this provision. However, in the same way as mentioned above for insurance undertakings, Article 5(4) applies to those participations which meet the criteria specified in Article 5(4)(b). Thus, the turnover of a financial holding is to be basically calculated according to Article 5(3), but it may be necessary to add turnover of undertakings falling within the categories set out in Article 5(4) ("Art. 5(4) companies").[135]

218. In practice, the turnover of the financial holding company (non-consolidated) must first be taken into account. Then the turnover of the Art. 5(4) companies must be added, whilst taking care to deduct dividends and other income distributed by those companies to the financial holdings. The following provides an example for this kind of calculation:

		EURO Million
1.	Turnover related to financial activities (from non-consolidated P&L)	3 000
2.	Turnover related to insurance Art. 5(4) companies (gross premiums written)	300
3.	Turnover of industrial Art. 5(4) companies	2 000
4.	Deduct dividends and other income derived from Art. 5(4) companies 2 and 3	<200>

[134] See Case IV/M.018 - AG/AMEV, of 21 November 1990.

[135] The principles for financial holding companies may to a certain extent be applied to fund management companies.

Total turnover financial holding and its group	5 100

219. In such calculations different accounting rules may need to be taken into consideration. Whilst this consideration applies to any type of undertaking concerned by the Merger Regulation, it is particularly important in the case of financial holding companies[136] where the number and the diversity of enterprises controlled and the degree of control the holding holds on its subsidiaries, affiliated companies and other companies in which it has shareholding requires careful examination.

220. Turnover calculation for financial holding companies as described above may in practice prove onerous. Therefore a strict and detailed application of this method will be necessary only in cases where it seems that the turnover of a financial holding company is likely to be close to the Merger Regulation thresholds; in other cases it may well be obvious that the turnover is far from the thresholds of the Merger Regulation, and therefore the published accounts are adequate for the establishment of jurisdiction.

[136] See for example Case IV/M.166 - Torras/Sarrió, of 24 February 1992.

Case C-280/06

Autorità Garante della Concorrenza e del Mercato and Others

v

Ente tabacchi italiani – ETI SpA and Others

(Reference for a preliminary ruling from the Consiglio di Stato)

(Competition – Imposition of fines where undertakings succeed each other – Principle of personal responsibility – Entities answering to the same public authority – National law referring to Community competition law as source of interpretation – Questions referred for a preliminary ruling – Jurisdiction of the Court of Justice)

Summary of the Judgment

1. *Preliminary rulings – Jurisdiction of the Court – Limits*

(Art. 234 EC)

2. *Competition – Community rules – Infringements – Attribution*

(Art. 81(1), EC)

1. Neither the wording of Article 234 EC nor the aim of the procedure established by that article indicates that the Treaty makers intended to exclude from the jurisdiction of the Court requests for a preliminary ruling on a Community provision in the specific case where the domestic law of a Member State refers to that Community provision in order to determine the rules applicable to a situation which is purely internal to that State.

Where, in regulating purely internal situations, domestic legislation provides the same solutions as those adopted in Community law, it is clearly in the Community interest that, in order to avoid future differences of interpretation, provisions or concepts taken from Community law should be interpreted uniformly, irrespective of the circumstances in which they are to apply.

(see paras 21-22)

2. Where, irrespective of its legal status and the way in which it is financed, any entity engaged in an economic activity infringes competition rules, it falls, according to the principle of personal responsibility, to that entity to answer for that infringement. An entity that is not the author of the infringement can nevertheless be penalised for it in certain circumstances. That situation arises if the entity that has committed the infringement has ceased to exist, either in law or economically. Moreover, bearing in mind the objective of suppressing conduct that infringes the competition rules and preventing its reoccurrence by means of deterrent penalties, when an entity that has committed an infringement of the competition rules is subject to a legal or organisational change, that change does not necessarily create a new undertaking free of liability for the conduct of its predecessor when, from an economic point of view, the two are identical. The legal forms of the entity that committed the infringement and the entity that succeeded it are irrelevant, as is the fact that the decision to transfer an activity is taken not by individuals, but by the legislature in view of a privatisation.

Where the economic activities of an entity on the market affected by an infringement of the competition rules have been continued by another entity, the latter may be regarded, in the context of the procedure regarding that infringement, as the economic successor of the first entity, even if the first entity continues to exist as an economic operator on other markets. In that event, the fact that the first entity does not have legal personality is not a factor that can justify imposing a penalty for the infringement which it committed on its successor, although such an imposition may be justified by the fact that the two entities answer to the same public authority. Where two entities constitute one economic entity, the fact that the entity that committed the infringement still exists does not as such preclude imposing a penalty on the entity to which its economic activities were transferred. In particular, applying penalties in this way is permissible where those entities have been subject to control by the same person within the group and have therefore, given the close economic and organisational links between them, carried out, in all material respects, the same commercial instructions.

It follows that, in the case of entities answering to the same public authority, where conduct amounting to one and the same infringement of the competition rules was adopted by one entity and subsequently continued until it ceased by another entity which succeeded the first, which has not ceased to exist, that second entity may be penalised for the infringement in its entirety if it is established that those two entities were subject to the control of the said authority.

(see paras 38-49, 52, operative part)

Council Regulation (EC) No 139/2004
of 20 January 2004
on the control of concentrations between undertakings (the EC Merger Regulation) (Text with EEA relevance)

Council Regulation (EC) No 139/2004

of 20 January 2004

on the control of concentrations between undertakings

(the EC Merger Regulation)

(Text with EEA relevance)

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Articles 83 and 308 thereof,

Having regard to the proposal from the Commission(1),

Having regard to the opinion of the European Parliament(2),

Having regard to the opinion of the European Economic and Social Committee(3),

Whereas:

(1) Council Regulation (EEC) No 4064/89 of 21 December 1989 on the control of concentrations between undertakings(4) has been substantially amended. Since further amendments are to be made, it should be recast in the interest of clarity.

(2) For the achievement of the aims of the Treaty, Article 3(1)(g) gives the Community the objective of instituting a system ensuring that competition in the internal market is not distorted. Article 4(1) of the Treaty provides that the activities of the Member States and the Community are to be conducted in accordance with the principle of an open market economy with free competition. These principles are essential for the further development of the internal market.

(3) The completion of the internal market and of economic and monetary union, the enlargement of the European Union and the lowering of international barriers to trade and investment will continue to result in major corporate reorganisations, particularly in the form of concentrations.

(4) Such reorganisations are to be welcomed to the extent that they are in line with the requirements of dynamic competition and capable of increasing the competitiveness of European industry, improving the conditions of growth and raising the standard of living in the Community.

(5) However, it should be ensured that the process of reorganisation does not result in lasting damage to competition; Community law must therefore include provisions governing those concentrations which may significantly impede effective competition in the common market or in a substantial part of it.

(6) A specific legal instrument is therefore necessary to permit effective control of all concentrations in terms of their effect on the structure of competition in the Community and to be the only instrument applicable to such concentrations. Regulation (EEC) No 4064/89 has allowed a Community policy to develop in this field. In the light of experience, however, that Regulation should now be recast into legislation designed to meet the challenges of a more integrated market and the future enlargement of the European Union. In accordance with the principles of subsidiarity and of proportionality as set out in Article 5 of the Treaty, this Regulation does not go beyond what is necessary in order to achieve the objective of ensuring that competition in the common

market is not distorted, in accordance with the principle of an open market economy with free competition.

(7) Articles 81 and 82, while applicable, according to the case-law of the Court of Justice, to certain concentrations, are not sufficient to control all operations which may prove to be incompatible with the system of undistorted competition envisaged in the Treaty. This Regulation should therefore be based not only on Article 83 but, principally, on Article 308 of the Treaty, under which the Community may give itself the additional powers of action necessary for the attainment of its objectives, and also powers of action with regard to concentrations on the markets for agricultural products listed in Annex I to the Treaty.

(8) The provisions to be adopted in this Regulation should apply to significant structural changes, the impact of which on the market goes beyond the national borders of any one Member State. Such concentrations should, as a general rule, be reviewed exclusively at Community level, in application of a "one-stop shop" system and in compliance with the principle of subsidiarity. Concentrations not covered by this Regulation come, in principle, within the jurisdiction of the Member States.

(9) The scope of application of this Regulation should be defined according to the geographical area of activity of the undertakings concerned and be limited by quantitative thresholds in order to cover those concentrations which have a Community dimension. The Commission should report to the Council on the implementation of the applicable thresholds and criteria so that the Council, acting in accordance with Article 202 of the Treaty, is in a position to review them regularly, as well as the rules regarding pre-notification referral, in the light of the experience gained; this requires statistical data to be provided by the Member States to the Commission to enable it to prepare such reports and possible proposals for amendments. The Commission's reports and proposals should be based on relevant information regularly provided by the Member States.

(10) A concentration with a Community dimension should be deemed to exist where the aggregate turnover of the undertakings concerned exceeds given thresholds; that is the case irrespective of whether or not the undertakings effecting the concentration have their seat or their principal fields of activity in the Community, provided they have substantial operations there.

(11) The rules governing the referral of concentrations from the Commission to Member States and from Member States to the Commission should operate as an effective corrective mechanism in the light of the principle of subsidiarity; these rules protect the competition interests of the Member States in an adequate manner and take due account of legal certainty and the "one-stop shop" principle.

(12) Concentrations may qualify for examination under a number of national merger control systems if they fall below the turnover thresholds referred to in this Regulation. Multiple notification of the same transaction increases legal uncertainty, effort and cost for undertakings and may lead to conflicting assessments. The system whereby concentrations may be referred to the Commission by the Member States concerned should therefore be further developed.

(13) The Commission should act in close and constant liaison with the competent authorities of the Member States from which it obtains comments and information.

(14) The Commission and the competent authorities of the Member States should together form a network of public authorities, applying their respective competences in close cooperation, using efficient arrangements for information-sharing and consultation, with a view to ensuring that a case is dealt with by the most appropriate authority, in the light of the principle of subsidiarity and with a view to ensuring that multiple notifications of a given concentration are avoided to the greatest extent possible. Referrals of concentrations from the Commission to Member States and from Member States to the Commission should be made in an efficient manner avoiding, to

the greatest extent possible, situations where a concentration is subject to a referral both before and after its notification.

(15) The Commission should be able to refer to a Member State notified concentrations with a Community dimension which threaten significantly to affect competition in a market within that Member State presenting all the characteristics of a distinct market. Where the concentration affects competition on such a market, which does not constitute a substantial part of the common market, the Commission should be obliged, upon request, to refer the whole or part of the case to the Member State concerned. A Member State should be able to refer to the Commission a concentration which does not have a Community dimension but which affects trade between Member States and threatens to significantly affect competition within its territory. Other Member States which are also competent to review the concentration should be able to join the request. In such a situation, in order to ensure the efficiency and predictability of the system, national time limits should be suspended until a decision has been reached as to the referral of the case. The Commission should have the power to examine and deal with a concentration on behalf of a requesting Member State or requesting Member States.

(16) The undertakings concerned should be granted the possibility of requesting referrals to or from the Commission before a concentration is notified so as to further improve the efficiency of the system for the control of concentrations within the Community. In such situations, the Commission and national competition authorities should decide within short, clearly defined time limits whether a referral to or from the Commission ought to be made, thereby ensuring the efficiency of the system. Upon request by the undertakings concerned, the Commission should be able to refer to a Member State a concentration with a Community dimension which may significantly affect competition in a market within that Member State presenting all the characteristics of a distinct market; the undertakings concerned should not, however, be required to demonstrate that the effects of the concentration would be detrimental to competition. A concentration should not be referred from the Commission to a Member State which has expressed its disagreement to such a referral. Before notification to national authorities, the undertakings concerned should also be able to request that a concentration without a Community dimension which is capable of being reviewed under the national competition laws of at least three Member States be referred to the Commission. Such requests for pre-notification referrals to the Commission would be particularly pertinent in situations where the concentration would affect competition beyond the territory of one Member State. Where a concentration capable of being reviewed under the competition laws of three or more Member States is referred to the Commission prior to any national notification, and no Member State competent to review the case expresses its disagreement, the Commission should acquire exclusive competence to review the concentration and such a concentration should be deemed to have a Community dimension. Such pre-notification referrals from Member States to the Commission should not, however, be made where at least one Member State competent to review the case has expressed its disagreement with such a referral.

(17) The Commission should be given exclusive competence to apply this Regulation, subject to review by the Court of Justice.

(18) The Member States should not be permitted to apply their national legislation on competition to concentrations with a Community dimension, unless this Regulation makes provision therefor. The relevant powers of national authorities should be limited to cases where, failing intervention by the Commission, effective competition is likely to be significantly impeded within the territory of a Member State and where the competition interests of that Member State cannot be sufficiently protected otherwise by this Regulation. The Member States concerned must act promptly in such cases; this Regulation cannot, because of the diversity of national law, fix a single time limit for the adoption of final decisions under national law.

(19) Furthermore, the exclusive application of this Regulation to concentrations with a Community dimension is without prejudice to Article 296 of the Treaty, and does not prevent the Member States from taking appropriate measures to protect legitimate interests other than those pursued by this Regulation, provided that such measures are compatible with the general principles and other provisions of Community law.

(20) It is expedient to define the concept of concentration in such a manner as to cover operations bringing about a lasting change in the control of the undertakings concerned and therefore in the structure of the market. It is therefore appropriate to include, within the scope of this Regulation, all joint ventures performing on a lasting basis all the functions of an autonomous economic entity. It is moreover appropriate to treat as a single concentration transactions that are closely connected in that they are linked by condition or take the form of a series of transactions in securities taking place within a reasonably short period of time.

(21) This Regulation should also apply where the undertakings concerned accept restrictions directly related to, and necessary for, the implementation of the concentration. Commission decisions declaring concentrations compatible with the common market in application of this Regulation should automatically cover such restrictions, without the Commission having to assess such restrictions in individual cases. At the request of the undertakings concerned, however, the Commission should, in cases presenting novel or unresolved questions giving rise to genuine uncertainty, expressly assess whether or not any restriction is directly related to, and necessary for, the implementation of the concentration. A case presents a novel or unresolved question giving rise to genuine uncertainty if the question is not covered by the relevant Commission notice in force or a published Commission decision.

(22) The arrangements to be introduced for the control of concentrations should, without prejudice to Article 86(2) of the Treaty, respect the principle of non-discrimination between the public and the private sectors. In the public sector, calculation of the turnover of an undertaking concerned in a concentration needs, therefore, to take account of undertakings making up an economic unit with an independent power of decision, irrespective of the way in which their capital is held or of the rules of administrative supervision applicable to them.

(23) It is necessary to establish whether or not concentrations with a Community dimension are compatible with the common market in terms of the need to maintain and develop effective competition in the common market. In so doing, the Commission must place its appraisal within the general framework of the achievement of the fundamental objectives referred to in Article 2 of the Treaty establishing the European Community and Article 2 of the Treaty on European Union.

(24) In order to ensure a system of undistorted competition in the common market, in furtherance of a policy conducted in accordance with the principle of an open market economy with free competition, this Regulation must permit effective control of all concentrations from the point of view of their effect on competition in the Community. Accordingly, Regulation (EEC) No 4064/89 established the principle that a concentration with a Community dimension which creates or strengthens a dominant position as a result of which effective competition in the common market or in a substantial part of it would be significantly impeded should be declared incompatible with the common market.

(25) In view of the consequences that concentrations in oligopolistic market structures may have, it is all the more necessary to maintain effective competition in such markets. Many oligopolistic markets exhibit a healthy degree of competition. However, under certain circumstances, concentrations involving the elimination of important competitive constraints that the merging parties had exerted upon each other, as well as a reduction of competitive pressure on the remaining competitors, may, even in the absence of a likelihood of coordination between the members of the oligopoly, result in a significant impediment to effective competition. The Community courts have, however,

not to date expressly interpreted Regulation (EEC) No 4064/89 as requiring concentrations giving rise to such non-coordinated effects to be declared incompatible with the common market. Therefore, in the interests of legal certainty, it should be made clear that this Regulation permits effective control of all such concentrations by providing that any concentration which would significantly impede effective competition, in the common market or in a substantial part of it, should be declared incompatible with the common market. The notion of "significant impediment to effective competition" in Article 2(2) and (3) should be interpreted as extending, beyond the concept of dominance, only to the anti-competitive effects of a concentration resulting from the non-coordinated behaviour of undertakings which would not have a dominant position on the market concerned.

(26) A significant impediment to effective competition generally results from the creation or strengthening of a dominant position. With a view to preserving the guidance that may be drawn from past judgments of the European courts and Commission decisions pursuant to Regulation (EEC) No 4064/89, while at the same time maintaining consistency with the standards of competitive harm which have been applied by the Commission and the Community courts regarding the compatibility of a concentration with the common market, this Regulation should accordingly establish the principle that a concentration with a Community dimension which would significantly impede effective competition, in the common market or in a substantial part thereof, in particular as a result of the creation or strengthening of a dominant position, is to be declared incompatible with the common market.

(27) In addition, the criteria of Article 81(1) and (3) of the Treaty should be applied to joint ventures performing, on a lasting basis, all the functions of autonomous economic entities, to the extent that their creation has as its consequence an appreciable restriction of competition between undertakings that remain independent.

(28) In order to clarify and explain the Commission's appraisal of concentrations under this Regulation, it is appropriate for the Commission to publish guidance which should provide a sound economic framework for the assessment of concentrations with a view to determining whether or not they may be declared compatible with the common market.

(29) In order to determine the impact of a concentration on competition in the common market, it is appropriate to take account of any substantiated and likely efficiencies put forward by the undertakings concerned. It is possible that the efficiencies brought about by the concentration counteract the effects on competition, and in particular the potential harm to consumers, that it might otherwise have and that, as a consequence, the concentration would not significantly impede effective competition, in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position. The Commission should publish guidance on the conditions under which it may take efficiencies into account in the assessment of a concentration.

(30) Where the undertakings concerned modify a notified concentration, in particular by offering commitments with a view to rendering the concentration compatible with the common market, the Commission should be able to declare the concentration, as modified, compatible with the common market. Such commitments should be proportionate to the competition problem and entirely eliminate it. It is also appropriate to accept commitments before the initiation of proceedings where the competition problem is readily identifiable and can easily be remedied. It should be expressly provided that the Commission may attach to its decision conditions and obligations in order to ensure that the undertakings concerned comply with their commitments in a timely and effective manner so as to render the concentration compatible with the common market. Transparency and effective consultation of Member States as well as of interested third parties should be ensured throughout the procedure.

(31) The Commission should have at its disposal appropriate instruments to ensure the enforcement

of commitments and to deal with situations where they are not fulfilled. In cases of failure to fulfil a condition attached to the decision declaring a concentration compatible with the common market, the situation rendering the concentration compatible with the common market does not materialise and the concentration, as implemented, is therefore not authorised by the Commission. As a consequence, if the concentration is implemented, it should be treated in the same way as a non-notified concentration implemented without authorisation. Furthermore, where the Commission has already found that, in the absence of the condition, the concentration would be incompatible with the common market, it should have the power to directly order the dissolution of the concentration, so as to restore the situation prevailing prior to the implementation of the concentration. Where an obligation attached to a decision declaring the concentration compatible with the common market is not fulfilled, the Commission should be able to revoke its decision. Moreover, the Commission should be able to impose appropriate financial sanctions where conditions or obligations are not fulfilled.

(32) Concentrations which, by reason of the limited market share of the undertakings concerned, are not liable to impede effective competition may be presumed to be compatible with the common market. Without prejudice to Articles 81 and 82 of the Treaty, an indication to this effect exists, in particular, where the market share of the undertakings concerned does not exceed 25 % either in the common market or in a substantial part of it.

(33) The Commission should have the task of taking all the decisions necessary to establish whether or not concentrations with a Community dimension are compatible with the common market, as well as decisions designed to restore the situation prevailing prior to the implementation of a concentration which has been declared incompatible with the common market.

(34) To ensure effective control, undertakings should be obliged to give prior notification of concentrations with a Community dimension following the conclusion of the agreement, the announcement of the public bid or the acquisition of a controlling interest. Notification should also be possible where the undertakings concerned satisfy the Commission of their intention to enter into an agreement for a proposed concentration and demonstrate to the Commission that their plan for that proposed concentration is sufficiently concrete, for example on the basis of an agreement in principle, a memorandum of understanding, or a letter of intent signed by all undertakings concerned, or, in the case of a public bid, where they have publicly announced an intention to make such a bid, provided that the intended agreement or bid would result in a concentration with a Community dimension. The implementation of concentrations should be suspended until a final decision of the Commission has been taken. However, it should be possible to derogate from this suspension at the request of the undertakings concerned, where appropriate. In deciding whether or not to grant a derogation, the Commission should take account of all pertinent factors, such as the nature and gravity of damage to the undertakings concerned or to third parties, and the threat to competition posed by the concentration. In the interest of legal certainty, the validity of transactions must nevertheless be protected as much as necessary.

(35) A period within which the Commission must initiate proceedings in respect of a notified concentration and a period within which it must take a final decision on the compatibility or incompatibility with the common market of that concentration should be laid down. These periods should be extended whenever the undertakings concerned offer commitments with a view to rendering the concentration compatible with the common market, in order to allow for sufficient time for the analysis and market testing of such commitment offers and for the consultation of Member States as well as interested third parties. A limited extension of the period within which the Commission must take a final decision should also be possible in order to allow sufficient time for the investigation of the case and the verification of the facts and arguments submitted to the Commission.

(36) The Community respects the fundamental rights and observes the principles recognised in particular

by the Charter of Fundamental Rights of the European Union(5). Accordingly, this Regulation should be interpreted and applied with respect to those rights and principles.

(37) The undertakings concerned must be afforded the right to be heard by the Commission when proceedings have been initiated; the members of the management and supervisory bodies and the recognised representatives of the employees of the undertakings concerned, and interested third parties, must also be given the opportunity to be heard.

(38) In order properly to appraise concentrations, the Commission should have the right to request all necessary information and to conduct all necessary inspections throughout the Community. To that end, and with a view to protecting competition effectively, the Commission's powers of investigation need to be expanded. The Commission should, in particular, have the right to interview any persons who may be in possession of useful information and to record the statements made.

(39) In the course of an inspection, officials authorised by the Commission should have the right to ask for any information relevant to the subject matter and purpose of the inspection; they should also have the right to affix seals during inspections, particularly in circumstances where there are reasonable grounds to suspect that a concentration has been implemented without being notified; that incorrect, incomplete or misleading information has been supplied to the Commission; or that the undertakings or persons concerned have failed to comply with a condition or obligation imposed by decision of the Commission. In any event, seals should only be used in exceptional circumstances, for the period of time strictly necessary for the inspection, normally not for more than 48 hours.

(40) Without prejudice to the case-law of the Court of Justice, it is also useful to set out the scope of the control that the national judicial authority may exercise when it authorises, as provided by national law and as a precautionary measure, assistance from law enforcement authorities in order to overcome possible opposition on the part of the undertaking against an inspection, including the affixing of seals, ordered by Commission decision. It results from the case-law that the national judicial authority may in particular ask of the Commission further information which it needs to carry out its control and in the absence of which it could refuse the authorisation. The case-law also confirms the competence of the national courts to control the application of national rules governing the implementation of coercive measures. The competent authorities of the Member States should cooperate actively in the exercise of the Commission's investigative powers.

(41) When complying with decisions of the Commission, the undertakings and persons concerned cannot be forced to admit that they have committed infringements, but they are in any event obliged to answer factual questions and to provide documents, even if this information may be used to establish against themselves or against others the existence of such infringements.

(42) For the sake of transparency, all decisions of the Commission which are not of a merely procedural nature should be widely publicised. While ensuring preservation of the rights of defence of the undertakings concerned, in particular the right of access to the file, it is essential that business secrets be protected. The confidentiality of information exchanged in the network and with the competent authorities of third countries should likewise be safeguarded.

(43) Compliance with this Regulation should be enforceable, as appropriate, by means of fines and periodic penalty payments. The Court of Justice should be given unlimited jurisdiction in that regard pursuant to Article 229 of the Treaty.

(44) The conditions in which concentrations, involving undertakings having their seat or their principal fields of activity in the Community, are carried out in third countries should be observed,

and provision should be made for the possibility of the Council giving the Commission an appropriate mandate for negotiation with a view to obtaining non-discriminatory treatment for such undertakings.

(45) This Regulation in no way detracts from the collective rights of employees, as recognised in the undertakings concerned, notably with regard to any obligation to inform or consult their recognised representatives under Community and national law.

(46) The Commission should be able to lay down detailed rules concerning the implementation of this Regulation in accordance with the procedures for the exercise of implementing powers conferred on the Commission. For the adoption of such implementing provisions, the Commission should be assisted by an Advisory Committee composed of the representatives of the Member States as specified in Article 23,

HAS ADOPTED THIS REGULATION:

Article 1

Scope

1. Without prejudice to Article 4(5) and Article 22, this Regulation shall apply to all concentrations with a Community dimension as defined in this Article.

2. A concentration has a Community dimension where:

(a) the combined aggregate worldwide turnover of all the undertakings concerned is more than EUR 5000 million; and

(b) the aggregate Community-wide turnover of each of at least two of the undertakings concerned is more than EUR 250 million,

unless each of the undertakings concerned achieves more than two-thirds of its aggregate Community-wide turnover within one and the same Member State.

3. A concentration that does not meet the thresholds laid down in paragraph 2 has a Community dimension where:

(a) the combined aggregate worldwide turnover of all the undertakings concerned is more than EUR 2500 million;

(b) in each of at least three Member States, the combined aggregate turnover of all the undertakings concerned is more than EUR 100 million;

(c) in each of at least three Member States included for the purpose of point (b), the aggregate turnover of each of at least two of the undertakings concerned is more than EUR 25 million; and

(d) the aggregate Community-wide turnover of each of at least two of the undertakings concerned is more than EUR 100 million,

unless each of the undertakings concerned achieves more than two-thirds of its aggregate Community-wide turnover within one and the same Member State.

4. On the basis of statistical data that may be regularly provided by the Member States, the Commission shall report to the Council on the operation of the thresholds and criteria set out in paragraphs 2 and 3 by 1 July 2009 and may present proposals pursuant to paragraph 5.

5. Following the report referred to in paragraph 4 and on a proposal from the Commission, the Council,

acting by a qualified majority, may revise the thresholds and criteria mentioned in paragraph 3.

Article 2

Appraisal of concentrations

1. Concentrations within the scope of this Regulation shall be appraised in accordance with the objectives of this Regulation and the following provisions with a view to establishing whether or not they are compatible with the common market.

In making this appraisal, the Commission shall take into account:

(a) the need to maintain and develop effective competition within the common market in view of, among other things, the structure of all the markets concerned and the actual or potential competition from undertakings located either within or outwith the Community;

(b) the market position of the undertakings concerned and their economic and financial power, the alternatives available to suppliers and users, their access to supplies or markets, any legal or other barriers to entry, supply and demand trends for the relevant goods and services, the interests of the intermediate and ultimate consumers, and the development of technical and economic progress provided that it is to consumers' advantage and does not form an obstacle to competition.

2. A concentration which would not significantly impede effective competition in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position, shall be declared compatible with the common market.

3. A concentration which would significantly impede effective competition, in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position, shall be declared incompatible with the common market.

4. To the extent that the creation of a joint venture constituting a concentration pursuant to Article 3 has as its object or effect the coordination of the competitive behaviour of undertakings that remain independent, such coordination shall be appraised in accordance with the criteria of Article 81(1) and (3) of the Treaty, with a view to establishing whether or not the operation is compatible with the common market.

5. In making this appraisal, the Commission shall take into account in particular:

- whether two or more parent companies retain, to a significant extent, activities in the same market as the joint venture or in a market which is downstream or upstream from that of the joint venture or in a neighbouring market closely related to this market,

- whether the coordination which is the direct consequence of the creation of the joint venture affords the undertakings concerned the possibility of eliminating competition in respect of a substantial part of the products or services in question.

Article 3

Definition of concentration

1. A concentration shall be deemed to arise where a change of control on a lasting basis results from:

(a) the merger of two or more previously independent undertakings or parts of undertakings, or

(b) the acquisition, by one or more persons already controlling at least one undertaking, or by one or more undertakings, whether by purchase of securities or assets, by contract or by any other means, of direct or indirect control of the whole or parts of one or more other undertakings.

2. Control shall be constituted by rights, contracts or any other means which, either separately or in combination and having regard to the considerations of fact or law involved, confer the possibility of exercising decisive influence on an undertaking, in particular by:

(a) ownership or the right to use all or part of the assets of an undertaking;

(b) rights or contracts which confer decisive influence on the composition, voting or decisions of the organs of an undertaking.

3. Control is acquired by persons or undertakings which:

(a) are holders of the rights or entitled to rights under the contracts concerned; or

(b) while not being holders of such rights or entitled to rights under such contracts, have the power to exercise the rights deriving therefrom.

4. The creation of a joint venture performing on a lasting basis all the functions of an autonomous economic entity shall constitute a concentration within the meaning of paragraph 1(b).

5. A concentration shall not be deemed to arise where:

(a) credit institutions or other financial institutions or insurance companies, the normal activities of which include transactions and dealing in securities for their own account or for the account of others, hold on a temporary basis securities which they have acquired in an undertaking with a view to reselling them, provided that they do not exercise voting rights in respect of those securities with a view to determining the competitive behaviour of that undertaking or provided that they exercise such voting rights only with a view to preparing the disposal of all or part of that undertaking or of its assets or the disposal of those securities and that any such disposal takes place within one year of the date of acquisition; that period may be extended by the Commission on request where such institutions or companies can show that the disposal was not reasonably possible within the period set;

(b) control is acquired by an office-holder according to the law of a Member State relating to liquidation, winding up, insolvency, cessation of payments, compositions or analogous proceedings;

(c) the operations referred to in paragraph 1(b) are carried out by the financial holding companies referred to in Article 5(3) of Fourth Council Directive 78/660/EEC of 25 July 1978 based on Article 54(3)(g) of the Treaty on the annual accounts of certain types of companies(6) provided however that the voting rights in respect of the holding are exercised, in particular in relation to the appointment of members of the management and supervisory bodies of the undertakings in which they have holdings, only to maintain the full value of those investments and not to determine directly or indirectly the competitive conduct of those undertakings.

Article 4

Prior notification of concentrations and pre-notification referral at the request of the notifying parties

1. Concentrations with a Community dimension defined in this Regulation shall be notified to the

Commission prior to their implementation and following the conclusion of the agreement, the announcement of the public bid, or the acquisition of a controlling interest.

Notification may also be made where the undertakings concerned demonstrate to the Commission a good faith intention to conclude an agreement or, in the case of a public bid, where they have publicly announced an intention to make such a bid, provided that the intended agreement or bid would result in a concentration with a Community dimension.

For the purposes of this Regulation, the term "notified concentration" shall also cover intended concentrations notified pursuant to the second subparagraph. For the purposes of paragraphs 4 and 5 of this Article, the term "concentration" includes intended concentrations within the meaning of the second subparagraph.

2. A concentration which consists of a merger within the meaning of Article 3(1)(a) or in the acquisition of joint control within the meaning of Article 3(1)(b) shall be notified jointly by the parties to the merger or by those acquiring joint control as the case may be. In all other cases, the notification shall be effected by the person or undertaking acquiring control of the whole or parts of one or more undertakings.

3. Where the Commission finds that a notified concentration falls within the scope of this Regulation, it shall publish the fact of the notification, at the same time indicating the names of the undertakings concerned, their country of origin, the nature of the concentration and the economic sectors involved. The Commission shall take account of the legitimate interest of undertakings in the protection of their business secrets.

4. Prior to the notification of a concentration within the meaning of paragraph 1, the persons or undertakings referred to in paragraph 2 may inform the Commission, by means of a reasoned submission, that the concentration may significantly affect competition in a market within a Member State which presents all the characteristics of a distinct market and should therefore be examined, in whole or in part, by that Member State.

The Commission shall transmit this submission to all Member States without delay. The Member State referred to in the reasoned submission shall, within 15 working days of receiving the submission, express its agreement or disagreement as regards the request to refer the case. Where that Member State takes no such decision within this period, it shall be deemed to have agreed.

Unless that Member State disagrees, the Commission, where it considers that such a distinct market exists, and that competition in that market may be significantly affected by the concentration, may decide to refer the whole or part of the case to the competent authorities of that Member State with a view to the application of that State's national competition law.

The decision whether or not to refer the case in accordance with the third subparagraph shall be taken within 25 working days starting from the receipt of the reasoned submission by the Commission. The Commission shall inform the other Member States and the persons or undertakings concerned of its decision. If the Commission does not take a decision within this period, it shall be deemed to have adopted a decision to refer the case in accordance with the submission made by the persons or undertakings concerned.

If the Commission decides, or is deemed to have decided, pursuant to the third and fourth subparagraphs, to refer the whole of the case, no notification shall be made pursuant to paragraph 1 and national competition law shall apply. Article 9(6) to (9) shall apply mutatis mutandis.

5. With regard to a concentration as defined in Article 3 which does not have a Community dimension within the meaning of Article 1 and which is capable of being reviewed under the national competition laws of at least three Member States, the persons or undertakings referred to in paragraph 2 may,

before any notification to the competent authorities, inform the Commission by means of a reasoned submission that the concentration should be examined by the Commission.

The Commission shall transmit this submission to all Member States without delay.

Any Member State competent to examine the concentration under its national competition law may, within 15 working days of receiving the reasoned submission, express its disagreement as regards the request to refer the case.

Where at least one such Member State has expressed its disagreement in accordance with the third subparagraph within the period of 15 working days, the case shall not be referred. The Commission shall, without delay, inform all Member States and the persons or undertakings concerned of any such expression of disagreement.

Where no Member State has expressed its disagreement in accordance with the third subparagraph within the period of 15 working days, the concentration shall be deemed to have a Community dimension and shall be notified to the Commission in accordance with paragraphs 1 and 2. In such situations, no Member State shall apply its national competition law to the concentration.

6. The Commission shall report to the Council on the operation of paragraphs 4 and 5 by 1 July 2009. Following this report and on a proposal from the Commission, the Council, acting by a qualified majority, may revise paragraphs 4 and 5.

Article 5

Calculation of turnover

1. Aggregate turnover within the meaning of this Regulation shall comprise the amounts derived by the undertakings concerned in the preceding financial year from the sale of products and the provision of services falling within the undertakings' ordinary activities after deduction of sales rebates and of value added tax and other taxes directly related to turnover. The aggregate turnover of an undertaking concerned shall not include the sale of products or the provision of services between any of the undertakings referred to in paragraph 4.

Turnover, in the Community or in a Member State, shall comprise products sold and services provided to undertakings or consumers, in the Community or in that Member State as the case may be.

2. By way of derogation from paragraph 1, where the concentration consists of the acquisition of parts, whether or not constituted as legal entities, of one or more undertakings, only the turnover relating to the parts which are the subject of the concentration shall be taken into account with regard to the seller or sellers.

However, two or more transactions within the meaning of the first subparagraph which take place within a two-year period between the same persons or undertakings shall be treated as one and the same concentration arising on the date of the last transaction.

3. In place of turnover the following shall be used:

(a) for credit institutions and other financial institutions, the sum of the following income items as defined in Council Directive 86/635/EEC(7), after deduction of value added tax and other taxes directly related to those items, where appropriate:

(i) interest income and similar income;

(ii) income from securities:

- income from shares and other variable yield securities,
- income from participating interests,
- income from shares in affiliated undertakings;

(iii) commissions receivable;

(iv) net profit on financial operations;

(v) other operating income.

The turnover of a credit or financial institution in the Community or in a Member State shall comprise the income items, as defined above, which are received by the branch or division of that institution established in the Community or in the Member State in question, as the case may be;

(b) for insurance undertakings, the value of gross premiums written which shall comprise all amounts received and receivable in respect of insurance contracts issued by or on behalf of the insurance undertakings, including also outgoing reinsurance premiums, and after deduction of taxes and parafiscal contributions or levies charged by reference to the amounts of individual premiums or the total volume of premiums; as regards Article 1(2)(b) and (3)(b), (c) and (d) and the final part of Article 1(2) and (3), gross premiums received from Community residents and from residents of one Member State respectively shall be taken into account.

4. Without prejudice to paragraph 2, the aggregate turnover of an undertaking concerned within the meaning of this Regulation shall be calculated by adding together the respective turnovers of the following:

(a) the undertaking concerned;

(b) those undertakings in which the undertaking concerned, directly or indirectly:

(i) owns more than half the capital or business assets, or

(ii) has the power to exercise more than half the voting rights, or

(iii) has the power to appoint more than half the members of the supervisory board, the administrative board or bodies legally representing the undertakings, or

(iv) has the right to manage the undertakings' affairs;

(c) those undertakings which have in the undertaking concerned the rights or powers listed in (b);

(d) those undertakings in which an undertaking as referred to in (c) has the rights or powers listed in (b);

(e) those undertakings in which two or more undertakings as referred to in (a) to (d) jointly have the rights or powers listed in (b).

5. Where undertakings concerned by the concentration jointly have the rights or powers listed in paragraph 4(b), in calculating the aggregate turnover of the undertakings concerned for the purposes of this Regulation:

(a) no account shall be taken of the turnover resulting from the sale of products or the provision of services between the joint undertaking and each of the undertakings concerned or any other undertaking connected with any one of them, as set out in paragraph 4(b) to (e);

(b) account shall be taken of the turnover resulting from the sale of products and the provision of services between the joint undertaking and any third undertakings. This turnover shall be apportioned equally amongst the undertakings concerned.

Article 6

Examination of the notification and initiation of proceedings

1. The Commission shall examine the notification as soon as it is received.

(a) Where it concludes that the concentration notified does not fall within the scope of this Regulation, it shall record that finding by means of a decision.

(b) Where it finds that the concentration notified, although falling within the scope of this Regulation, does not raise serious doubts as to its compatibility with the common market, it shall decide not to oppose it and shall declare that it is compatible with the common market.

A decision declaring a concentration compatible shall be deemed to cover restrictions directly related and necessary to the implementation of the concentration.

(c) Without prejudice to paragraph 2, where the Commission finds that the concentration notified falls within the scope of this Regulation and raises serious doubts as to its compatibility with the common market, it shall decide to initiate proceedings. Without prejudice to Article 9, such proceedings shall be closed by means of a decision as provided for in Article 8(1) to (4), unless the undertakings concerned have demonstrated to the satisfaction of the Commission that they have abandoned the concentration.

2. Where the Commission finds that, following modification by the undertakings concerned, a notified concentration no longer raises serious doubts within the meaning of paragraph 1(c), it shall declare the concentration compatible with the common market pursuant to paragraph 1(b).

The Commission may attach to its decision under paragraph 1(b) conditions and obligations intended to ensure that the undertakings concerned comply with the commitments they have entered into vis-à-vis the Commission with a view to rendering the concentration compatible with the common market.

3. The Commission may revoke the decision it took pursuant to paragraph 1(a) or (b) where:

(a) the decision is based on incorrect information for which one of the undertakings is responsible or where it has been obtained by deceit,

or

(b) the undertakings concerned commit a breach of an obligation attached to the decision.

4. In the cases referred to in paragraph 3, the Commission may take a decision under paragraph 1, without being bound by the time limits referred to in Article 10(1).

5. The Commission shall notify its decision to the undertakings concerned and the competent authorities of the Member States without delay.

Article 7

Suspension of concentrations

1. A concentration with a Community dimension as defined in Article 1, or which is to be examined by the Commission pursuant to Article 4(5), shall not be implemented either before its notification or until it has been declared compatible with the common market pursuant to a decision under Articles 6(1)(b), 8(1) or 8(2), or on the basis of a presumption according to Article 10(6).

2. Paragraph 1 shall not prevent the implementation of a public bid or of a series of transactions in securities including those convertible into other securities admitted to trading on a market such as a stock exchange, by which control within the meaning of Article 3 is acquired from various sellers, provided that:

(a) the concentration is notified to the Commission pursuant to Article 4 without delay; and

(b) the acquirer does not exercise the voting rights attached to the securities in question or does so only to maintain the full value of its investments based on a derogation granted by the Commission under paragraph 3.

3. The Commission may, on request, grant a derogation from the obligations imposed in paragraphs 1 or 2. The request to grant a derogation must be reasoned. In deciding on the request, the Commission shall take into account inter alia the effects of the suspension on one or more undertakings concerned by the concentration or on a third party and the threat to competition posed by the concentration. Such a derogation may be made subject to conditions and obligations in order to ensure conditions of effective competition. A derogation may be applied for and granted at any time, be it before notification or after the transaction.

4. The validity of any transaction carried out in contravention of paragraph 1 shall be dependent on a decision pursuant to Article 6(1)(b) or Article 8(1), (2) or (3) or on a presumption pursuant to Article 10(6).

This Article shall, however, have no effect on the validity of transactions in securities including those convertible into other securities admitted to trading on a market such as a stock exchange, unless the buyer and seller knew or ought to have known that the transaction was carried out in contravention of paragraph 1.

Article 8

Powers of decision of the Commission

1. Where the Commission finds that a notified concentration fulfils the criterion laid down in Article 2(2) and, in the cases referred to in Article 2(4), the criteria laid down in Article 81(3) of the Treaty, it shall issue a decision declaring the concentration compatible with the common market.

A decision declaring a concentration compatible shall be deemed to cover restrictions directly related and necessary to the implementation of the concentration.

2. Where the Commission finds that, following modification by the undertakings concerned, a notified concentration fulfils the criterion laid down in Article 2(2) and, in the cases referred to in Article 2(4), the criteria laid down in Article 81(3) of the Treaty, it shall issue a decision declaring the concentration compatible with the common market.

The Commission may attach to its decision conditions and obligations intended to ensure that the undertakings concerned comply with the commitments they have entered into vis-à-vis the Commission with a view to rendering the concentration compatible with the common market.

A decision declaring a concentration compatible shall be deemed to cover restrictions directly related and necessary to the implementation of the concentration.

3. Where the Commission finds that a concentration fulfils the criterion defined in Article 2(3) or, in the cases referred to in Article 2(4), does not fulfil the criteria laid down in Article

81(3) of the Treaty, it shall issue a decision declaring that the concentration is incompatible with the common market.

4. Where the Commission finds that a concentration:

(a) has already been implemented and that concentration has been declared incompatible with the common market, or

(b) has been implemented in contravention of a condition attached to a decision taken under paragraph 2, which has found that, in the absence of the condition, the concentration would fulfil the criterion laid down in Article 2(3) or, in the cases referred to in Article 2(4), would not fulfil the criteria laid down in Article 81(3) of the Treaty,

the Commission may:

- require the undertakings concerned to dissolve the concentration, in particular through the dissolution of the merger or the disposal of all the shares or assets acquired, so as to restore the situation prevailing prior to the implementation of the concentration; in circumstances where restoration of the situation prevailing before the implementation of the concentration is not possible through dissolution of the concentration, the Commission may take any other measure appropriate to achieve such restoration as far as possible,

- order any other appropriate measure to ensure that the undertakings concerned dissolve the concentration or take other restorative measures as required in its decision.

In cases falling within point (a) of the first subparagraph, the measures referred to in that subparagraph may be imposed either in a decision pursuant to paragraph 3 or by separate decision.

5. The Commission may take interim measures appropriate to restore or maintain conditions of effective competition where a concentration:

(a) has been implemented in contravention of Article 7, and a decision as to the compatibility of the concentration with the common market has not yet been taken;

(b) has been implemented in contravention of a condition attached to a decision under Article 6(1)(b) or paragraph 2 of this Article;

(c) has already been implemented and is declared incompatible with the common market.

6. The Commission may revoke the decision it has taken pursuant to paragraphs 1 or 2 where:

(a) the declaration of compatibility is based on incorrect information for which one of the undertakings is responsible or where it has been obtained by deceit; or

(b) the undertakings concerned commit a breach of an obligation attached to the decision.

7. The Commission may take a decision pursuant to paragraphs 1 to 3 without being bound by the time limits referred to in Article 10(3), in cases where:

(a) it finds that a concentration has been implemented

(i) in contravention of a condition attached to a decision under Article 6(1)(b), or

(ii) in contravention of a condition attached to a decision taken under paragraph 2 and in accordance with Article 10(2), which has found that, in the absence of the condition, the concentration would raise serious doubts as to its compatibility with the common market; or

(b) a decision has been revoked pursuant to paragraph 6.

8. The Commission shall notify its decision to the undertakings concerned and the competent authorities

of the Member States without delay.

Article 9

Referral to the competent authorities of the Member States

1. The Commission may, by means of a decision notified without delay to the undertakings concerned and the competent authorities of the other Member States, refer a notified concentration to the competent authorities of the Member State concerned in the following circumstances.

2. Within 15 working days of the date of receipt of the copy of the notification, a Member State, on its own initiative or upon the invitation of the Commission, may inform the Commission, which shall inform the undertakings concerned, that:

(a) a concentration threatens to affect significantly competition in a market within that Member State, which presents all the characteristics of a distinct market, or

(b) a concentration affects competition in a market within that Member State, which presents all the characteristics of a distinct market and which does not constitute a substantial part of the common market.

3. If the Commission considers that, having regard to the market for the products or services in question and the geographical reference market within the meaning of paragraph 7, there is such a distinct market and that such a threat exists, either:

(a) it shall itself deal with the case in accordance with this Regulation; or

(b) it shall refer the whole or part of the case to the competent authorities of the Member State concerned with a view to the application of that State's national competition law.

If, however, the Commission considers that such a distinct market or threat does not exist, it shall adopt a decision to that effect which it shall address to the Member State concerned, and shall itself deal with the case in accordance with this Regulation.

In cases where a Member State informs the Commission pursuant to paragraph 2(b) that a concentration affects competition in a distinct market within its territory that does not form a substantial part of the common market, the Commission shall refer the whole or part of the case relating to the distinct market concerned, if it considers that such a distinct market is affected.

4. A decision to refer or not to refer pursuant to paragraph 3 shall be taken:

(a) as a general rule within the period provided for in Article 10(1), second subparagraph, where the Commission, pursuant to Article 6(1)(b), has not initiated proceedings; or

(b) within 65 working days at most of the notification of the concentration concerned where the Commission has initiated proceedings under Article 6(1)(c), without taking the preparatory steps in order to adopt the necessary measures under Article 8(2), (3) or (4) to maintain or restore effective competition on the market concerned.

5. If within the 65 working days referred to in paragraph 4(b) the Commission, despite a reminder from the Member State concerned, has not taken a decision on referral in accordance with paragraph 3 nor has taken the preparatory steps referred to in paragraph 4(b), it shall be deemed to have taken a decision to refer the case to the Member State concerned in accordance with paragraph 3(b).

6. The competent authority of the Member State concerned shall decide upon the case without undue delay.

Within 45 working days after the Commission's referral, the competent authority of the Member State concerned shall inform the undertakings concerned of the result of the preliminary competition assessment and what further action, if any, it proposes to take. The Member State concerned may exceptionally suspend this time limit where necessary information has not been provided to it by the undertakings concerned as provided for by its national competition law.

Where a notification is requested under national law, the period of 45 working days shall begin on the working day following that of the receipt of a complete notification by the competent authority of that Member State.

7. The geographical reference market shall consist of the area in which the undertakings concerned are involved in the supply and demand of products or services, in which the conditions of competition are sufficiently homogeneous and which can be distinguished from neighbouring areas because, in particular, conditions of competition are appreciably different in those areas. This assessment should take account in particular of the nature and characteristics of the products or services concerned, of the existence of entry barriers or of consumer preferences, of appreciable differences of the undertakings' market shares between the area concerned and neighbouring areas or of substantial price differences.

8. In applying the provisions of this Article, the Member State concerned may take only the measures strictly necessary to safeguard or restore effective competition on the market concerned.

9. In accordance with the relevant provisions of the Treaty, any Member State may appeal to the Court of Justice, and in particular request the application of Article 243 of the Treaty, for the purpose of applying its national competition law.

Article 10

Time limits for initiating proceedings and for decisions

1. Without prejudice to Article 6(4), the decisions referred to in Article 6(1) shall be taken within 25 working days at most. That period shall begin on the working day following that of the receipt of a notification or, if the information to be supplied with the notification is incomplete, on the working day following that of the receipt of the complete information.

That period shall be increased to 35 working days where the Commission receives a request from a Member State in accordance with Article 9(2)or where, the undertakings concerned offer commitments pursuant to Article 6(2) with a view to rendering the concentration compatible with the common market.

2. Decisions pursuant to Article 8(1) or (2) concerning notified concentrations shall be taken as soon as it appears that the serious doubts referred to in Article 6(1)(c) have been removed, particularly as a result of modifications made by the undertakings concerned, and at the latest by the time limit laid down in paragraph 3.

3. Without prejudice to Article 8(7), decisions pursuant to Article 8(1) to (3) concerning notified concentrations shall be taken within not more than 90 working days of the date on which the proceedings are initiated. That period shall be increased to 105 working days where the undertakings concerned offer commitments pursuant to Article 8(2), second subparagraph, with a view to rendering the concentration compatible with the common market, unless these commitments have been offered less than 55 working days after the initiation of proceedings.

The periods set by the first subparagraph shall likewise be extended if the notifying parties make a request to that effect not later than 15 working days after the initiation of proceedings pursuant to Article 6(1)(c). The notifying parties may make only one such request. Likewise, at any time following the initiation of proceedings, the periods set by the first subparagraph may be extended by the Commission with the agreement of the notifying parties. The total duration of any extension or extensions effected pursuant to this subparagraph shall not exceed 20 working days.

4. The periods set by paragraphs 1 and 3 shall exceptionally be suspended where, owing to circumstances for which one of the undertakings involved in the concentration is responsible, the Commission has had to request information by decision pursuant to Article 11 or to order an inspection by decision pursuant to Article 13.

The first subparagraph shall also apply to the period referred to in Article 9(4)(b).

5. Where the Court of Justice gives a judgment which annuls the whole or part of a Commission decision which is subject to a time limit set by this Article, the concentration shall be re-examined by the Commission with a view to adopting a decision pursuant to Article 6(1).

The concentration shall be re-examined in the light of current market conditions.

The notifying parties shall submit a new notification or supplement the original notification, without delay, where the original notification becomes incomplete by reason of intervening changes in market conditions or in the information provided. Where there are no such changes, the parties shall certify this fact without delay.

The periods laid down in paragraph 1 shall start on the working day following that of the receipt of complete information in a new notification, a supplemented notification, or a certification within the meaning of the third subparagraph.

The second and third subparagraphs shall also apply in the cases referred to in Article 6(4) and Article 8(7).

6. Where the Commission has not taken a decision in accordance with Article 6(1)(b), (c), 8(1), (2) or (3) within the time limits set in paragraphs 1 and 3 respectively, the concentration shall be deemed to have been declared compatible with the common market, without prejudice to Article 9.

Article 11

Requests for information

1. In order to carry out the duties assigned to it by this Regulation, the Commission may, by simple request or by decision, require the persons referred to in Article 3(1)(b), as well as undertakings and associations of undertakings, to provide all necessary information.

2. When sending a simple request for information to a person, an undertaking or an association of undertakings, the Commission shall state the legal basis and the purpose of the request, specify what information is required and fix the time limit within which the information is to be provided, as well as the penalties provided for in Article 14 for supplying incorrect or misleading information.

3. Where the Commission requires a person, an undertaking or an association of undertakings to supply information by decision, it shall state the legal basis and the purpose of the request, specify what information is required and fix the time limit within which it is to be provided. It shall also indicate the penalties provided for in Article 14 and indicate or impose the penalties provided for in Article 15. It shall further indicate the right to have the decision reviewed by the Court

of Justice.

4. The owners of the undertakings or their representatives and, in the case of legal persons, companies or firms, or associations having no legal personality, the persons authorised to represent them by law or by their constitution, shall supply the information requested on behalf of the undertaking concerned. Persons duly authorised to act may supply the information on behalf of their clients. The latter shall remain fully responsible if the information supplied is incomplete, incorrect or misleading.

5. The Commission shall without delay forward a copy of any decision taken pursuant to paragraph 3 to the competent authorities of the Member State in whose territory the residence of the person or the seat of the undertaking or association of undertakings is situated, and to the competent authority of the Member State whose territory is affected. At the specific request of the competent authority of a Member State, the Commission shall also forward to that authority copies of simple requests for information relating to a notified concentration.

6. At the request of the Commission, the governments and competent authorities of the Member States shall provide the Commission with all necessary information to carry out the duties assigned to it by this Regulation.

7. In order to carry out the duties assigned to it by this Regulation, the Commission may interview any natural or legal person who consents to be interviewed for the purpose of collecting information relating to the subject matter of an investigation. At the beginning of the interview, which may be conducted by telephone or other electronic means, the Commission shall state the legal basis and the purpose of the interview.

Where an interview is not conducted on the premises of the Commission or by telephone or other electronic means, the Commission shall inform in advance the competent authority of the Member State in whose territory the interview takes place. If the competent authority of that Member State so requests, officials of that authority may assist the officials and other persons authorised by the Commission to conduct the interview.

Article 12

Inspections by the authorities of the Member States

1. At the request of the Commission, the competent authorities of the Member States shall undertake the inspections which the Commission considers to be necessary under Article 13(1), or which it has ordered by decision pursuant to Article 13(4). The officials of the competent authorities of the Member States who are responsible for conducting these inspections as well as those authorised or appointed by them shall exercise their powers in accordance with their national law.

2. If so requested by the Commission or by the competent authority of the Member State within whose territory the inspection is to be conducted, officials and other accompanying persons authorised by the Commission may assist the officials of the authority concerned.

Article 13

The Commission's powers of inspection

1. In order to carry out the duties assigned to it by this Regulation, the Commission may conduct

all necessary inspections of undertakings and associations of undertakings.

2. The officials and other accompanying persons authorised by the Commission to conduct an inspection shall have the power:

(a) to enter any premises, land and means of transport of undertakings and associations of undertakings;

(b) to examine the books and other records related to the business, irrespective of the medium on which they are stored;

(c) to take or obtain in any form copies of or extracts from such books or records;

(d) to seal any business premises and books or records for the period and to the extent necessary for the inspection;

(e) to ask any representative or member of staff of the undertaking or association of undertakings for explanations on facts or documents relating to the subject matter and purpose of the inspection and to record the answers.

3. Officials and other accompanying persons authorised by the Commission to conduct an inspection shall exercise their powers upon production of a written authorisation specifying the subject matter and purpose of the inspection and the penalties provided for in Article 14, in the production of the required books or other records related to the business which is incomplete or where answers to questions asked under paragraph 2 of this Article are incorrect or misleading. In good time before the inspection, the Commission shall give notice of the inspection to the competent authority of the Member State in whose territory the inspection is to be conducted.

4. Undertakings and associations of undertakings are required to submit to inspections ordered by decision of the Commission. The decision shall specify the subject matter and purpose of the inspection, appoint the date on which it is to begin and indicate the penalties provided for in Articles 14 and 15 and the right to have the decision reviewed by the Court of Justice. The Commission shall take such decisions after consulting the competent authority of the Member State in whose territory the inspection is to be conducted.

5. Officials of, and those authorised or appointed by, the competent authority of the Member State in whose territory the inspection is to be conducted shall, at the request of that authority or of the Commission, actively assist the officials and other accompanying persons authorised by the Commission. To this end, they shall enjoy the powers specified in paragraph 2.

6. Where the officials and other accompanying persons authorised by the Commission find that an undertaking opposes an inspection, including the sealing of business premises, books or records, ordered pursuant to this Article, the Member State concerned shall afford them the necessary assistance, requesting where appropriate the assistance of the police or of an equivalent enforcement authority, so as to enable them to conduct their inspection.

7. If the assistance provided for in paragraph 6 requires authorisation from a judicial authority according to national rules, such authorisation shall be applied for. Such authorisation may also be applied for as a precautionary measure.

8. Where authorisation as referred to in paragraph 7 is applied for, the national judicial authority shall ensure that the Commission decision is authentic and that the coercive measures envisaged are neither arbitrary nor excessive having regard to the subject matter of the inspection. In its control of proportionality of the coercive measures, the national judicial authority may ask the Commission, directly or through the competent authority of that Member State, for detailed explanations relating to the subject matter of the inspection. However, the national judicial authority may not call into question the necessity for the inspection nor demand that it be provided with the

information in the Commission's file. The lawfulness of the Commission's decision shall be subject to review only by the Court of Justice.

Article 14

Fines

1. The Commission may by decision impose on the persons referred to in Article 3(1)b, undertakings or associations of undertakings, fines not exceeding 1 % of the aggregate turnover of the undertaking or association of undertakings concerned within the meaning of Article 5 where, intentionally or negligently:

(a) they supply incorrect or misleading information in a submission, certification, notification or supplement thereto, pursuant to Article 4, Article 10(5) or Article 22(3);

(b) they supply incorrect or misleading information in response to a request made pursuant to Article 11(2);

(c) in response to a request made by decision adopted pursuant to Article 11(3), they supply incorrect, incomplete or misleading information or do not supply information within the required time limit;

(d) they produce the required books or other records related to the business in incomplete form during inspections under Article 13, or refuse to submit to an inspection ordered by decision taken pursuant to Article 13(4);

(e) in response to a question asked in accordance with Article 13(2)(e),

- they give an incorrect or misleading answer,

- they fail to rectify within a time limit set by the Commission an incorrect, incomplete or misleading answer given by a member of staff, or

- they fail or refuse to provide a complete answer on facts relating to the subject matter and purpose of an inspection ordered by a decision adopted pursuant to Article 13(4);

(f) seals affixed by officials or other accompanying persons authorised by the Commission in accordance with Article 13(2)(d) have been broken.

2. The Commission may by decision impose fines not exceeding 10 % of the aggregate turnover of the undertaking concerned within the meaning of Article 5 on the persons referred to in Article 3(1)b or the undertakings concerned where, either intentionally or negligently, they:

(a) fail to notify a concentration in accordance with Articles 4 or 22(3) prior to its implementation, unless they are expressly authorised to do so by Article 7(2) or by a decision taken pursuant to Article 7(3);

(b) implement a concentration in breach of Article 7;

(c) implement a concentration declared incompatible with the common market by decision pursuant to Article 8(3) or do not comply with any measure ordered by decision pursuant to Article 8(4) or (5);

(d) fail to comply with a condition or an obligation imposed by decision pursuant to Articles 6(1)(b), Article 7(3) or Article 8(2), second subparagraph.

3. In fixing the amount of the fine, regard shall be had to the nature, gravity and duration of the infringement.

4. Decisions taken pursuant to paragraphs 1, 2 and 3 shall not be of a criminal law nature.

Article 15

Periodic penalty payments

1. The Commission may by decision impose on the persons referred to in Article 3(1)b, undertakings or associations of undertakings, periodic penalty payments not exceeding 5 % of the average daily aggregate turnover of the undertaking or association of undertakings concerned within the meaning of Article 5 for each working day of delay, calculated from the date set in the decision, in order to compel them:

(a) to supply complete and correct information which it has requested by decision taken pursuant to Article 11(3);

(b) to submit to an inspection which it has ordered by decision taken pursuant to Article 13(4);

(c) to comply with an obligation imposed by decision pursuant to Article 6(1)(b), Article 7(3) or Article 8(2), second subparagraph; or;

(d) to comply with any measures ordered by decision pursuant to Article 8(4) or (5).

2. Where the persons referred to in Article 3(1)(b), undertakings or associations of undertakings have satisfied the obligation which the periodic penalty payment was intended to enforce, the Commission may fix the definitive amount of the periodic penalty payments at a figure lower than that which would arise under the original decision.

Article 16

Review by the Court of Justice

The Court of Justice shall have unlimited jurisdiction within the meaning of Article 229 of the Treaty to review decisions whereby the Commission has fixed a fine or periodic penalty payments; it may cancel, reduce or increase the fine or periodic penalty payment imposed.

Article 17

Professional secrecy

1. Information acquired as a result of the application of this Regulation shall be used only for the purposes of the relevant request, investigation or hearing.

2. Without prejudice to Article 4(3), Articles 18 and 20, the Commission and the competent authorities of the Member States, their officials and other servants and other persons working under the supervision of these authorities as well as officials and civil servants of other authorities of the Member States shall not disclose information they have acquired through the application of this Regulation of the kind covered by the obligation of professional secrecy.

3. Paragraphs 1 and 2 shall not prevent publication of general information or of surveys which do not contain information relating to particular undertakings or associations of undertakings.

Article 18

Hearing of the parties and of third persons

1. Before taking any decision provided for in Article 6(3), Article 7(3), Article 8(2) to (6), and Articles 14 and 15, the Commission shall give the persons, undertakings and associations of undertakings concerned the opportunity, at every stage of the procedure up to the consultation of the Advisory Committee, of making known their views on the objections against them.

2. By way of derogation from paragraph 1, a decision pursuant to Articles 7(3) and 8(5) may be taken provisionally, without the persons, undertakings or associations of undertakings concerned being given the opportunity to make known their views beforehand, provided that the Commission gives them that opportunity as soon as possible after having taken its decision.

3. The Commission shall base its decision only on objections on which the parties have been able to submit their observations. The rights of the defence shall be fully respected in the proceedings. Access to the file shall be open at least to the parties directly involved, subject to the legitimate interest of undertakings in the protection of their business secrets.

4. In so far as the Commission or the competent authorities of the Member States deem it necessary, they may also hear other natural or legal persons. Natural or legal persons showing a sufficient interest and especially members of the administrative or management bodies of the undertakings concerned or the recognised representatives of their employees shall be entitled, upon application, to be heard.

Article 19

Liaison with the authorities of the Member States

1. The Commission shall transmit to the competent authorities of the Member States copies of notifications within three working days and, as soon as possible, copies of the most important documents lodged with or issued by the Commission pursuant to this Regulation. Such documents shall include commitments offered by the undertakings concerned vis-à-vis the Commission with a view to rendering the concentration compatible with the common market pursuant to Article 6(2) or Article 8(2), second subparagraph.

2. The Commission shall carry out the procedures set out in this Regulation in close and constant liaison with the competent authorities of the Member States, which may express their views upon those procedures. For the purposes of Article 9 it shall obtain information from the competent authority of the Member State as referred to in paragraph 2 of that Article and give it the opportunity to make known its views at every stage of the procedure up to the adoption of a decision pursuant to paragraph 3 of that Article; to that end it shall give it access to the file.

3. An Advisory Committee on concentrations shall be consulted before any decision is taken pursuant to Article 8(1) to (6), Articles 14 or 15 with the exception of provisional decisions taken in accordance with Article 18(2).

4. The Advisory Committee shall consist of representatives of the competent authorities of the Member States. Each Member State shall appoint one or two representatives; if unable to attend, they may be replaced by other representatives. At least one of the representatives of a Member State shall be competent in matters of restrictive practices and dominant positions.

5. Consultation shall take place at a joint meeting convened at the invitation of and chaired by the Commission. A summary of the case, together with an indication of the most important documents and a preliminary draft of the decision to be taken for each case considered, shall be sent with the invitation. The meeting shall take place not less than 10 working days after the invitation has been sent. The Commission may in exceptional cases shorten that period as appropriate in order to avoid serious harm to one or more of the undertakings concerned by a concentration.

6. The Advisory Committee shall deliver an opinion on the Commission's draft decision, if necessary by taking a vote. The Advisory Committee may deliver an opinion even if some members are absent and unrepresented. The opinion shall be delivered in writing and appended to the draft decision. The Commission shall take the utmost account of the opinion delivered by the Committee. It shall inform the Committee of the manner in which its opinion has been taken into account.

7. The Commission shall communicate the opinion of the Advisory Committee, together with the decision, to the addressees of the decision. It shall make the opinion public together with the decision, having regard to the legitimate interest of undertakings in the protection of their business secrets.

Article 20

Publication of decisions

1. The Commission shall publish the decisions which it takes pursuant to Article 8(1) to (6), Articles 14 and 15 with the exception of provisional decisions taken in accordance with Article 18(2) together with the opinion of the Advisory Committee in the Official Journal of the European Union.

2. The publication shall state the names of the parties and the main content of the decision; it shall have regard to the legitimate interest of undertakings in the protection of their business secrets.

Article 21

Application of the Regulation and jurisdiction

1. This Regulation alone shall apply to concentrations as defined in Article 3, and Council Regulations (EC) No 1/2003(8), (EEC) No 1017/68(9), (EEC) No 4056/86(10) and (EEC) No 3975/87(11) shall not apply, except in relation to joint ventures that do not have a Community dimension and which have as their object or effect the coordination of the competitive behaviour of undertakings that remain independent.

2. Subject to review by the Court of Justice, the Commission shall have sole jurisdiction to take the decisions provided for in this Regulation.

3. No Member State shall apply its national legislation on competition to any concentration that has a Community dimension.

The first subparagraph shall be without prejudice to any Member State's power to carry out any enquiries necessary for the application of Articles 4(4), 9(2) or after referral, pursuant to Article 9(3), first subparagraph, indent (b), or Article 9(5), to take the measures strictly necessary for the application of Article 9(8).

4. Notwithstanding paragraphs 2 and 3, Member States may take appropriate measures to protect legitimate interests other than those taken into consideration by this Regulation and compatible with the general principles and other provisions of Community law.

Public security, plurality of the media and prudential rules shall be regarded as legitimate interests within the meaning of the first subparagraph.

Any other public interest must be communicated to the Commission by the Member State concerned and shall be recognised by the Commission after an assessment of its compatibility with the general principles and other provisions of Community law before the measures referred to above may be taken. The Commission shall inform the Member State concerned of its decision within 25 working days of that communication.

Article 22

Referral to the Commission

1. One or more Member States may request the Commission to examine any concentration as defined in Article 3 that does not have a Community dimension within the meaning of Article 1 but affects trade between Member States and threatens to significantly affect competition within the territory of the Member State or States making the request.

Such a request shall be made at most within 15 working days of the date on which the concentration was notified, or if no notification is required, otherwise made known to the Member State concerned.

2. The Commission shall inform the competent authorities of the Member States and the undertakings concerned of any request received pursuant to paragraph 1 without delay.

Any other Member State shall have the right to join the initial request within a period of 15 working days of being informed by the Commission of the initial request.

All national time limits relating to the concentration shall be suspended until, in accordance with the procedure set out in this Article, it has been decided where the concentration shall be examined. As soon as a Member State has informed the Commission and the undertakings concerned that it does not wish to join the request, the suspension of its national time limits shall end.

3. The Commission may, at the latest 10 working days after the expiry of the period set in paragraph 2, decide to examine, the concentration where it considers that it affects trade between Member States and threatens to significantly affect competition within the territory of the Member State or States making the request. If the Commission does not take a decision within this period, it shall be deemed to have adopted a decision to examine the concentration in accordance with the request.

The Commission shall inform all Member States and the undertakings concerned of its decision. It may request the submission of a notification pursuant to Article 4.

The Member State or States having made the request shall no longer apply their national legislation on competition to the concentration.

4. Article 2, Article 4(2) to (3), Articles 5, 6, and 8 to 21 shall apply where the Commission examines a concentration pursuant to paragraph 3. Article 7 shall apply to the extent that the concentration has not been implemented on the date on which the Commission informs the undertakings concerned that a request has been made.

Where a notification pursuant to Article 4 is not required, the period set in Article 10(1) within which proceedings may be initiated shall begin on the working day following that on which the Commission informs the undertakings concerned that it has decided to examine the concentration pursuant to paragraph 3.

5. The Commission may inform one or several Member States that it considers a concentration fulfils the criteria in paragraph 1. In such cases, the Commission may invite that Member State or those Member States to make a request pursuant to paragraph 1.

Article 23

Implementing provisions

1. The Commission shall have the power to lay down in accordance with the procedure referred to in paragraph 2:

(a) implementing provisions concerning the form, content and other details of notifications and submissions pursuant to Article 4;

(b) implementing provisions concerning time limits pursuant to Article 4(4), (5) Articles 7, 9, 10 and 22;

(c) the procedure and time limits for the submission and implementation of commitments pursuant to Article 6(2) and Article 8(2);

(d) implementing provisions concerning hearings pursuant to Article 18.

2. The Commission shall be assisted by an Advisory Committee, composed of representatives of the Member States.

(a) Before publishing draft implementing provisions and before adopting such provisions, the Commission shall consult the Advisory Committee.

(b) Consultation shall take place at a meeting convened at the invitation of and chaired by the Commission. A draft of the implementing provisions to be taken shall be sent with the invitation. The meeting shall take place not less than 10 working days after the invitation has been sent.

(c) The Advisory Committee shall deliver an opinion on the draft implementing provisions, if necessary by taking a vote. The Commission shall take the utmost account of the opinion delivered by the Committee.

Article 24

Relations with third countries

1. The Member States shall inform the Commission of any general difficulties encountered by their undertakings with concentrations as defined in Article 3 in a third country.

2. Initially not more than one year after the entry into force of this Regulation and, thereafter periodically, the Commission shall draw up a report examining the treatment accorded to undertakings having their seat or their principal fields of activity in the Community, in the terms referred to in paragraphs 3 and 4, as regards concentrations in third countries. The Commission shall submit those reports to the Council, together with any recommendations.

3. Whenever it appears to the Commission, either on the basis of the reports referred to in paragraph 2 or on the basis of other information, that a third country does not grant undertakings having

their seat or their principal fields of activity in the Community, treatment comparable to that granted by the Community to undertakings from that country, the Commission may submit proposals to the Council for an appropriate mandate for negotiation with a view to obtaining comparable treatment for undertakings having their seat or their principal fields of activity in the Community.

4. Measures taken under this Article shall comply with the obligations of the Community or of the Member States, without prejudice to Article 307 of the Treaty, under international agreements, whether bilateral or multilateral.

Article 25

Repeal

1. Without prejudice to Article 26(2), Regulations (EEC) No 4064/89 and (EC) No 1310/97 shall be repealed with effect from 1 May 2004.

2. References to the repealed Regulations shall be construed as references to this Regulation and shall be read in accordance with the correlation table in the Annex.

Article 26

Entry into force and transitional provisions

1. This Regulation shall enter into force on the 20th day following that of its publication in the Official Journal of the European Union.

It shall apply from 1 May 2004.

2. Regulation (EEC) No 4064/89 shall continue to apply to any concentration which was the subject of an agreement or announcement or where control was acquired within the meaning of Article 4(1) of that Regulation before the date of application of this Regulation, subject, in particular, to the provisions governing applicability set out in Article 25(2) and (3) of Regulation (EEC) No 4064/89 and Article 2 of Regulation (EEC) No 1310/97.

3. As regards concentrations to which this Regulation applies by virtue of accession, the date of accession shall be substituted for the date of application of this Regulation.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 20 January 2004.

Autorità Garante della Concorrenza e del Mercato, Amministrazione autonoma dei monopoli di Stato,

Ente tabacchi italiani - ETI SpA,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C.W.A. Timmermans, A. Rosas, K. Lenaerts, G. Arestis and U. Lohmus, Presidents of Chambers, E. Juhasz, A. Borg Barthet, M. Ilei (Rapporteur), J. Kluka, E. Levits and A. O Caoimh, Judges,

Advocate General: J. Kokott,

Registrar: B. Fülöp, Administrator,

having regard to the written procedure and further to the hearing on 15 May 2007,

after considering the observations submitted on behalf of:

- Ente tabacchi italiani - ETI SpA, by S. D'Alberti, A. Clarizia and L. D'Amario, avvocati,

- Philip Morris Products SA, Philip Morris Holland BV, Philip Morris GmbH, Philip Morris Products Inc. and Philip Morris International Management SA, by L. Di Via, C. Tesauro and P. Leone, avvocati,

- the Italian Government, by I. M. Bragulia and F. Arena, acting as Agents, assisted by D. Del Gaizo, avvocato dello Stato,

- the Commission of the European Communities, by F. Castillo de la Torre and V. Di Bucci, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 3 July 2007,

gives the following

Judgment

On those grounds, the Court (Grand Chamber) hereby rules:

Article 81 EC et seq. must be interpreted as meaning that, in the case of entities answering to the same public authority, where conduct amounting to one and the same infringement of the competition rules was adopted by one entity and subsequently continued until it ceased by another entity which succeeded the first, which has not ceased to exist, that second entity may be penalised for that infringement in its entirety if it is established that those two entities were subject to the control of the said authority.

1. This reference for a preliminary ruling relates to the interpretation of Article 81 et seq. EC and the general principles of Community law.

2. The reference has been made in the course of proceedings between Autorità Garante della Concorrenza e del Mercato (national competition authority, the Authority'), Ente tabacchi italiani - ETI SpA, Philip Morris Products SA, Philip Morris Holland BV, Philip Morris GmbH, Philip Morris Products Inc. and Philip Morris International Management SA (the last five companies together, the companies in the Philip Morris group') and the Amministrazione autonoma dei monopoli di Stato (the autonomous body administering State monopolies, the AAMS'), relating to a cartel on the sale price of cigarettes.

Legal context

3. In Italian law, Law No 287 of 10 October 1990 adopting provisions for the protection of competition and the market (norme per la tutela della concorrenza e del mercato) (GURI No 240 of 13 October

1990, p. 3; Law No 287/90'), contains in its Title I the following provisions in particular:

Article 1

...

1. The provisions of this Law, which is enacted under Article 41 of the Constitution for the purposes of protecting and guaranteeing the right to economic initiative, shall apply to cartels, abuses of a dominant position and concentrations of undertakings which do not come within the scope of application of Article 65 and/or Article 66 of the Treaty establishing the European Coal and Steel Community, Article 85 and/or Article 86 of the Treaty establishing the European Economic Community (EEC), Regulations of the EEC, or Community acts having the same legal effect.

...

4. The provisions in this Title shall be interpreted in accordance with the principles laid down in the competition law of the European Communities.

Article 2

...

1. Cartels' means agreements and/or concerted practices of undertakings as well as decisions of consortia, associations of undertakings and similar organisations, even where made on the basis of their statutes or administrative rules.

2. Cartels between undertakings which have as their object or effect the material prevention, restriction or distortion of competition within the national market or a substantial part of that market are prohibited, and in particular those which:

(a) directly or indirectly fix purchase or selling prices or any other trading conditions;

(b) limit or control production, markets, access to the market, investment, technical development, or technological advancement;

(c) share markets or sources of supply;

(d) apply objectively dissimilar conditions to equivalent transactions with other trading parties, thereby unjustifiably placing them at a competitive disadvantage;

(e) make the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.

3. Prohibited cartels shall be void for all purposes.'

4. Title II of Law No 287/90 deals entirely with the Authority, created on the basis of Article 10(1). Article 15(1) of the Law, which appears in that Title II, provides:

If ... the Authority establishes the existence of infringements of Article 2 or 3, it shall lay down a time-limit for the undertakings and operations concerned to cease the infringements. In case of serious breaches, it may also impose, having regard to their gravity and duration, an administrative fine of up to 10% of the turnover which the undertaking or establishment in question achieved in the last accounting year prior to the issue of the notice, and shall fix the time-limits within which the undertaking must pay the fine.'

5. Article 31, which appears in Title VI of Law No 287/90, provides:

So far as applicable, the provisions of Chapter I, Sections I and II, of Law No 689 of 24 November 1981 apply in relation to administrative fines for breaches of this Law.'

6. On 8 December 1927, Royal Legislative Decree No 2258 was promulgated, which provides for the creation of AAMS (istitutivo dell'Amministrazione autonoma dei monopoli di Stato, GURI No 288 of 14 December 1927). This organ of the State administration, which answered to the Ministry of the Economy and Finance, was entrusted, until February 1999, with managing the tobacco monopoly. Subsequently, AAMS continued to carry out public functions in the tobacco sector. In addition, AAMS pursues a commercial activity in the gambling sector, in particular lotteries. As regards both its administration and its finance and accounting functions, it is autonomous, although it does not have its own legal personality.

7. As from 1 March 1999, all manufacturing and sales activities in the tobacco sector that had been assigned, until then, to AAMS were transferred to another public body created by Decree-Law No 283 of 9 July 1998 setting up the Italian tobacco office (istituzione dell'Ente tabacchi italiani) (GURI No 190 of 17 August 1998, p. 3; Decree-Law No 283/98'). That body received the assets and liabilities of AAMS relating to the branches of activity which had been assigned to it. By decision of its administrative board of 23 June 2000, it was transformed into a public limited company, becoming Ente tabacchi italiani - ETI SpA (ETI'). Initially, 100% of its shares were owned by the Ministry of the Economy and Finance. Following a call for tenders which that Ministry launched in 2003, ETI was privatised and came under the sole control of British American Tobacco plc (BAT'), a holding company established under English law, which belongs to the BAT-British American Tobacco group.

The disputes in the main proceedings and the questions referred for a preliminary ruling

8. Following an investigation commenced in June 2001, the Authority found by decision of 13 March 2003 that the companies in the Philip Morris group had - with AAMS, then with Ente tabacchi italiani and finally with ETI - formed and implemented a cartel which had as its object and effect the distortion of competition as regards the sale price of cigarettes on the national market between 1993 and 2001, in breach of Article 2(2)(a) and (b) of Law No 287/90. The Authority imposed administrative fines totalling EUR 50 million on the companies in the Philip Morris group and EUR 20 million on ETI.

9. In its decision, the Authority attributed the conduct adopted by AAMS prior to 1 March 1999 to ETI, on the ground that AAMS ceased its manufacturing and sales activities in the tobacco sector once Ente tabacchi italiani - which became ETI - became operational. In those circumstances, even though AAMS did not cease to exist, ETI was AAMS' successor in accordance with the principle of economic continuity.

10. All the companies concerned challenged that decision before the Tribunale amministrativo regionale del Lazio (Regional Administrative Court for Lazio). It dismissed the action brought by the companies in the Philip Morris group and in part upheld the action brought by ETI, annulling the decision in so far as it attributed responsibility to ETI for acts committed by AAMS. The Tribunale amministrativo regionale del Lazio based its assessment on the criterion of personal responsibility.

11. Appeals against the judgments of the Tribunale amministrativo regionale del Lazio were brought before the Consiglio di Stato (Council of State), which, by a first decision of 8 November 2005, dismissed the appeals brought by ETI and the companies in the Philip Morris group in so far as they contested the existence of a breach of the rules in the sphere of competition. As regards

the question of attributing AAMS' conduct to ETI, the Consiglio di Stato points out, in the order for reference, that the transfer of AAMS' activities to Ente tabacchi italiani marked a clear break of continuity with the previous model of organisational management. That model - before the relevant activities were transferred to Ente tabacchi italiani, which became ETI - was characterised by the attribution to AAMS, in its role as an autonomous State administration, of a mass of economic tasks and administrative duties of a public nature such as to create a dependence on the political powers. That connection can no longer be found in relation to the new entity, whose functions are purely commercial. In addition, the Consiglio di Stato states that, even though AAMS no longer carries out any commercial activities in the tobacco sector, it still carries on an economic activity that is subject to competition law. According to the Consiglio di Stato, those particular circumstances argue against application of the criterion of economic continuity.

12. The Consiglio di Stato nevertheless considered it appropriate to ask the Court about the criteria to be applied under Community competition law, to which Article 1(4) of Law No 287/90 refers. It thus decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

1. What, in accordance with Article 81 et seq. [EC] and with the general principles of Community law, is the criterion to be adopted in determining the undertaking on which a penalty is to be imposed for contravention of the rules in the sphere of competition when, in connection with conduct penalised as a whole, the last part of those actions was carried out by an undertaking having succeeded the original undertaking in the economic sphere concerned[, and when] the original body, while still in existence, no longer operates as a commercial undertaking, or at least not in the economic sector affected by the penalty?

2. Does it fall to the national authority responsible for the application of antitrust rules, when determining the person to be penalised, to assess at its own discretion whether circumstances exist which warrant the attribution to the economic successor of responsibility for contraventions of the competition rules committed by the legal person which it has succeeded, even when that latter has not ceased to exist at the date of the decision, so that the effectiveness of the competition rules is not compromised by alterations made to the legal form of the undertakings?'

The jurisdiction of the Court

13. Given that the Commission of the European Communities has expressed doubts as to the jurisdiction of the Court, that must be examined first.

Observations submitted to the Court

14. The Commission submits that the main proceedings concern the validity of a decision of a national competition authority which, prior to the entry into force of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty (OJ 2003, L 1, p. 1), exclusively applied national provisions prohibiting cartels, and not Article 81 EC.

15. The Commission submits that Article 1(4) of Law No 287/90, according to which the provisions of Title I of that Law are to be interpreted on the basis of the principles of Community competition law, is irrelevant in this respect. The issue in the main proceedings is to identify the undertakings and operations concerned' within the meaning of Articles 15 and 31 of Law No 287/90, which fall under Titles II and VI thereof, respectively. Article 1(4) could be taken into consideration if it were a question of interpreting the concept of an undertaking, which appears both in Article 81 EC and in Article 2 of Law No 287/90, but not in order to determine which undertakings are to be penalised.

16. The Commission adds that, even if it were accepted that the reference, in Law No 287/90, to the principles of Community law is applicable in the main proceedings, the case-law of the Court would nevertheless lead to the conclusion that the questions referred for a preliminary ruling are inadmissible. In this respect, the Commission cites the judgment in Case C346/93 Kleinwort Benson [1995] ECR I615 and points out that Law No 287/90 does not specify that national courts must apply interpretations provided by the Court absolutely and unconditionally.

17. On this last point, the Commission notes that the Tribunale amministrativo regionale del Lazio based its judgment on Italian provisions concerning administrative fines, to which Article 31 of Law No 287/90 refers. Likewise, the Consiglio di Stato relied on arguments which the Authority has taken from the Italian law on responsibility. This shows that, for Italian courts and lawyers, Community law constitutes merely one of a number of elements for the purposes of interpreting the relevant provisions of national law.

18. ETI and the companies in the Philip Morris group submit on the contrary that the Court has jurisdiction to adjudicate on the reference for a preliminary ruling. Without taking a position on the jurisdiction of the Court, the Italian Government points out that an answer from the Court would be useful for the Consiglio di Stato, taking into consideration the reference to Community law in Article 1(4) of Law No 287/90.

The Court's assessment

19. Article 234 EC is an instrument of judicial cooperation, by means of which the Court provides national courts with the points of interpretation of Community law which may be helpful to them in assessing the effects of a provision of national law at issue in the disputes before them (Case C300/01 Salzmann [2003] ECR I4899, paragraph 28 and the case-law cited, and Case C448/01 EVN and Wienstrom [2003] I14527, paragraph 77).

20. When the reference for a preliminary ruling concerns the interpretation of Community law, the Court is as a rule bound to give a ruling (Salzmann , paragraph 29, and Case C-119/05 Lucchini [2007] ECR I-0000, paragraph 43).

21. In adjudicating on references for a preliminary ruling in which the rules of Community law whose interpretation was requested were applicable only because of a reference made to them by national law, the Court has held consistently that, where, in regulating purely internal situations, domestic legislation provides the same solutions as those adopted in Community law, it is clearly in the Community interest that, in order to avoid future differences of interpretation, provisions or concepts taken from Community law should be interpreted uniformly, irrespective of the circumstances in which they are to apply (see, in particular, Joined Cases C297/88 and C197/89 Dzodzi [1990] ECR I3763, paragraph 37; Case C28/95 Leur-Bloem [1997] ECR I4161, paragraph 32; Case C1/99 Kofisa Italia [2001] ECR I207, paragraph 32; Case C222/01 British American Tobacco [2004] ECR I4683, paragraph 40; and Case C3/04 Poseidon Chartering [2006] ECR I2505, paragraph 16).

22. Neither the wording of Article 234 EC nor the aim of the procedure established by that article indicates that the EC Treaty makers intended to exclude from the jurisdiction of the Court requests for a preliminary ruling on a Community provision in the specific case where the domestic law of a Member State refers to that Community provision in order to determine the rules applicable to a situation which is purely internal to that State (Dzodzi , paragraph 36; Leur-Bloem , paragraph 25, and Case C217/05 Confederacion Española de Empresarios de Estaciones de Servicio [2006] ECR I11987, paragraph 19).

23. As regards the application of the abovementioned case-law to the present reference for a preliminary ruling, the fact remains that, in regulating purely internal situations, the provisions of Title I of Law No 287/90 provide the same solutions as those adopted in Community law.

24. Article 1(4) of Law No 287/90 provides that the provisions in Title I of that Law are to be interpreted in accordance with the principles laid down in Community competition law. Articles 2 and 3 of Law No 287/90, which fall under the same Title, reproduce mutatis mutandis the wording of Articles 81 EC and 82 EC.

25. Furthermore, there is no suggestion in the wording of Article 1(4) of Law No 287/90, the order for reference, or the other documents before the Court that the reference to Community law in that provision is subject to any condition whatsoever.

26. Therefore, pursuant to the abovementioned case-law, it is clearly in the Community interest that the rules of Community law can - where doubts arise in the context of applying the reference made to them by national law - be interpreted uniformly by means of Court judgments given on references for a preliminary ruling.

27. As regards the Commission's argument that the disputes in the main proceedings are governed exclusively by Titles II and VI of Law No 287/90, so that Article 1(4) of the same Law, which falls under Title I thereof, is not relevant, the fact remains that that assessment is not shared by the Consiglio di Stato, which expressly referred to Article 1(4) as a ground for its reference for a preliminary ruling. In this respect, it should be recalled that it is not for the Court to determine the accuracy of the legislative context which the national court is responsible for defining (Salzmann , paragraph 31; Case C213/04 Burtscher [2005] ECR I10309, paragraph 35; and Joined Cases C222/05 to C225/05 van der Weerd and Others [2007] ECR I-0000, paragraph 22).

28. Lastly, as to the Commission's argument that Community law is merely one of a number of factors for the purposes of interpreting the provisions of Title I of Law No 287/90, and that Italian courts are not required to apply interpretations provided by the Court absolutely and unconditionally, it suffices to note that the Authority and the Tribunale amministrativo regionale del Lazio based their decision and judgment on Community rules and case-law, and that the Consiglio di Stato made its reference for a preliminary ruling on the ground that it considered it necessary for the purposes of knowing the criterion to be taken into consideration in accordance with the principles of Community competition law, to which Article 1(4) of Law No 287/90 refers.

29. In the light of all the foregoing, the Court has jurisdiction to adjudicate on the reference for a preliminary ruling.

The questions referred for a preliminary ruling

30. By the two questions, which should be examined together, the Consiglio di Stato asks, essentially, what, in accordance with Article 81 et seq. EC and, where appropriate, with any other relevant rule of Community law, are the criteria to be adopted in determining the undertaking to be penalised for breach of the competition rules where undertakings have succeeded each other, more specifically where the last part of an infringement of the competition rules was carried out by the economic successor of the entity that commenced the infringement and the latter entity, while no longer operating in the economic sector concerned by the penalty, is still in existence.

Observations submitted to the Court

31. According to ETI, the relevant criterion is that of personal responsibility. It is not possible to derogate from that criterion other than in exceptional cases, in order to protect the effectiveness of the rules in the sphere of competition. In such exceptional cases, responsibility for the infringement can be attributed to a person other than the one that controlled the undertaking at the time of the infringement, even where the latter undertaking is still in existence.

32. However, such exceptional circumstances do not exist where, as in the main proceedings, it is possible to attribute responsibility for the infringement to the person who operated the undertaking

at the time when the infringement was committed.

33. The companies in the Philip Morris group submit that the criterion of personal responsibility applies in all cases in which the person that factually committed the infringing act is still in existence, carries out commercial activities and is in a position to comply with the decision of the competition authority that imposes the penalty.

34. Those companies submit that, apart from a situation in which the legal entity has disappeared, making it impossible for it to be the subject of penalties, the Community legal order does not allow derogation from the criterion of personal responsibility. Reliance on the criterion of economic continuity is only justified where it is necessary to ensure effective application of the competition rules.

35. According to the Italian Government, the criterion of economic continuity means that - whenever the undertaking concerned by the infringement and transferred from one person to another is identical from an economic, structural and functional point of view -, responsibility lies with the person who continued and brought to completion the conduct that is contrary to the competition rules and was commenced by another person. In this respect, it is irrelevant whether the person who has sold the undertaking is still formally in existence and whether or not that person carries on other activities.

36. In the present case, it follows from Decree-Law No 283/98 that the undertaking managed by AAMS and the undertaking managed by Ente tabacchi italiani, which became ETI, are effectively the same. In addition, AAMS and ETI have structural links, given that both are emanations of the Ministry of the Economy and Finance.

37. According to the Commission, where the infringement was committed by an undertaking managed by a body of a Member State endowed with its own decision-making powers, and the relevant economic activity was transferred to another legal entity, penalties relating to that conduct must be imposed on the State body if, following the transfer, that body continues to carry on commercial activity, even if it is in sectors other than the one affected by the said conduct. By contrast, the penalties ought to be imposed on the legal entity that has acquired the economic activity in question if, following the transfer, the State body ceases commercial activity.

The Court's response

38. It is apparent from the case-law that Community competition law refers to the activities of undertakings (Joined Cases C-204/00 P, C-205/00 P, C-211/00 P, C-213/00 P, C-217/00 P and C-219/00 P Aalborg Portland and Others v Commission [2004] ECR I-123, paragraph 59) and that the concept of an undertaking covers any entity engaged in an economic activity, irrespective of its legal status and the way in which it is financed (see, in particular, Joined Cases C189/02 P, C-202/02 P, C-205/02 P to C-208/02 P and C-213/02 P Dansk Rørindustri and Others v Commission [2005] ECR I-5425, paragraph 112; Case C-222/04 Cassa di Risparmio di Firenze and Others [2006] ECR I-289, paragraph 107; and Case C-205/03 P FENIN v Commission [2006] ECR I-6295, paragraph 25).

39. When such an entity infringes competition rules, it falls, according to the principle of personal responsibility, to that entity to answer for that infringement (see, to that effect, Case C49/92 P Commission v Anic Partecipazioni [1999] ECR I4125, paragraph 145, and Case C279/98 P Cascades v Commission [2000] ECR I9693, paragraph 78).

40. As to the circumstances in which an entity that is not responsible for the infringement can nevertheless be penalised for that infringement, it must be held first that this situation arises if the entity that has committed the infringement has ceased to exist, either in law (see, to that effect, Commission v Anic Partecipazioni , paragraph 145) or economically. With regard to the

latter, it is worth noting that a penalty imposed on an undertaking that continues to exist in law, but has ceased economic activity, is likely to have no deterrent effect.

41. Next, it must be noted that if no possibility of imposing a penalty on an entity other than the one which committed the infringement were foreseen, undertakings could escape penalties by simply changing their identity through restructurings, sales or other legal or organisational changes. This would jeopardise the objective of suppressing conduct that infringes the competition rules and preventing its reoccurrence by means of deterrent penalties (Case 41/69 ACF Chemiefarma v Commission [1970] ECR 661, paragraph 173; Case C289/04 P Showa Denko v Commission [2006] ECR I5859, paragraph 61; and Case C76/06 P Britannia Alloys & Chemicals v Commission [2007] ECR I-0000, paragraph 22).

42. Consequently, as the Court has already held, when an entity that has committed an infringement of the competition rules is subject to a legal or organisational change, this change does not necessarily create a new undertaking free of liability for the conduct of its predecessor that infringed the competition rules, when, from an economic point of view, the two are identical (see, to that effect, Joined Cases 29/83 and 30/83 CRAM and Rheinzink v Commission [1984] ECR 1679, paragraph 9, and Aalborg Portland and Others v Commission , paragraph 59).

43. In accordance with that case-law, the legal forms of the entity that committed the infringement and the entity that succeeded it are irrelevant. Imposing a penalty for the infringement on the successor can therefore not be excluded simply because, as in the main proceedings, the successor has a different legal status and is operated differently from the entity that it succeeded.

44. The fact that the decision to transfer an activity is taken not by individuals, but by the legislature in view of a privatisation, is equally irrelevant. Measures to restructure or reorganise undertakings adopted by the authorities of a Member State cannot have the effect, lawfully, of compromising the effectiveness of Community competition law (see, to that effect, Case C415/03 Commission v Greece [2005] ECR I3875, paragraphs 33 and 34).

45. In the main proceedings, it is apparent from the order for reference and the documents before the Court that ETI continued AAMS' economic activities on the market affected by the cartel. In those circumstances, even though AAMS continued to exist as an economic operator on other markets, ETI could be regarded - for the purposes of the procedure relating to the cartel on the sale price of cigarettes - as the economic successor of AAMS.

46. As to whether a case such as that in the main proceedings corresponds to circumstances in which an economic entity can be penalised for an infringement committed by another entity, it must be held, first, that the fact that AAMS does not have legal personality (see paragraph 6 of this judgment) is not a factor that can justify imposing on its successor a penalty for the infringement committed by AAMS.

47. By contrast, imposing on ETI the penalty for the infringement committed by AAMS could be justified by the fact that ETI and AAMS answer to the same public authority.

48. In this respect, it must be recalled that, where two entities constitute one economic entity, the fact that the entity that committed the infringement still exists does not as such preclude imposing a penalty on the entity to which its economic activities were transferred (see, to that effect, Aalborg Portland and Others v Commission , paragraphs 355 to 358).

49. In particular, applying penalties in this way is permissible where those entities have been subject to control by the same person within the group and have therefore, given the close economic and organisational links between them, carried out, in all material respects, the same commercial instructions (see, by analogy, Case C-294/98 P Metsä-Serla and Others v Commission [2000]

ECR I-10065, paragraphs 26 and 27, and Dansk Rørindustri and Others v Commission , paragraph 117).

50. In the main proceedings, it is not disputed that at the time of their infringing conduct, AAMS and ETI were owned by the same public entity, namely the Ministry of the Economy and Finance.

51. It is for the Consiglio di Stato to determine whether, by participating in the cartel on the sale price of cigarettes, AAMS and ETI were subject to the control of that public entity. If that were the case, it would have to be concluded that the principle of personal responsibility does not preclude the penalty for the infringement commenced by AAMS and continued by ETI from being imposed in its entirety on ETI.

52. In the light of all the preceding considerations, the answer to the questions referred must be that Article 81 EC et seq. must be interpreted as meaning that, in the case of entities answering to the same public authority, where conduct amounting to one and the same infringement of the competition rules was adopted by one entity and subsequently continued until it ceased by another entity which succeeded the first, which has not ceased to exist, that second entity may be penalised for the infringement in its entirety if it is established that those two entities were subject to the control of the said authority.

Costs

53. Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

Akzo Nobel NV and Others

v

Commission of the European Communities

(Competition – Cartels in the vitamin products sector – Choline chloride (Vitamin B4) – Decision finding an infringement of Article 81 EC and Article 53 of the Agreement on the European Economic Area – Attributability of the infringement)

Summary of the Judgment

1. *Actions for annulment – Conditions of admissibility – Action brought by several companies in a group againt a Commission decision fining them jointly and severally*

   (Art. 230 EC)

2. *Competition – Community rules – Infringements – Attribution – Parent company and subsidiaries*

   (Arts 81 EC and 82 EC)

3. *Competition – Fines – Amount – Determination – Maximum amount – Calculation*

   (Council Regulation No 1/2003, Art. 23(2))

1. In one and the same action for annulment brought by several companies in a group against a Commission decision fining them jointly and severally, reasons of procedural economy justify not examining a plea of inadmissibility raised against some of those companies where the action is nevertheless admissible in relation to others, with the result that the court must examine the action as a whole, and that, having regard to the pleas submitted in the application, possible annulment might not benefit the companies whose action is claimed to be inadmissible.

   (see paras 31-32)

2. The Commission is able to address a decision imposing a fine for breach of the competition rules by a subsidiary to the parent company of a group of companies not because of a relationship between the parent and its subsidiary in instigating the infringement or, *a fortiori*, because the parent company is involved in the infringement, but because those companies constitute an economic entity and therefore a single undertaking within the meaning of Articles 81 EC and 82 EC if they do not independently determine their own conduct on the market.

   In the specific case of a parent company holding 100% of the capital of a subsidiary which has committed an infringement, there is a simple presumption that the parent company exercises decisive influence over the conduct of its subsidiary, and that they therefore constitute a single undertaking within the sense above. It is thus for a parent company which disputes before the Community judicature a Commission decision fining it for the conduct of its subsidiary to rebut that presumption by adducing evidence to establish that its subsidiary was independent. It is therefore sufficient for the Commission to show that the entire capital of a subsidiary is held by the parent company in order to conclude that the parent company exercises decisive influence over its commercial policy. The Commission will then be able to hold the parent company jointly and severally liable for payment of the fine imposed on the subsidiary, unless the parent company proves that the subsidiary does not, in essence, comply with the instructions which it issues and, as a consequence, acts autonomously on the market.

Whilst it is true that, when analysing the existence of a single economic entity among a number of companies forming part of a group, the Community judicature has examined whether the parent company was able to influence pricing policy, production and distribution activities, sales objectives, gross margins, sales costs, cash flow, stocks and marketing, it cannot be inferred that it is only those aspects that are covered by the concept of the business policy of a subsidiary for the purposes of the application of Articles 81 EC and 82 EC with respect to the parent company. On the contrary, it is for the parent company to put before the Court any evidence relating to the economic and legal organisational links between its subsidiary and itself which in its view are apt to demonstrate that they do not constitute a single economic entity. When making its assessment the Court must take into account all the evidence adduced by the parties, the nature and importance of which may vary according to the specific features of each case.

Thus, in the case of a company which holds 100% of the capital of its subsidiaries and plays a significant role in several essential aspects of their strategy by reserving the power of final decision with respect to a range of matters that define their course of conduct on the market, the presumption that the parent company exercises decisive influence over its subsidiaries' policies cannot be rebutted by the fact that decisions concerning the specific area in which the infringement occurred are, in principle, taken by the subsidiaries, or by the fact that the group is structured at two levels with the aim of removing commercial policy in the strict sense from the control of the parent company. Attribution of an infringement by a subsidiary to the parent company does not require proof that the parent company influences its subsidiary's policy in the specific area in which the infringement occurred. On the other hand, the economic and legal organisational links between the parent company and its subsidiary may establish that the parent exercises influence over the subsidiary's strategy and therefore that they can be viewed as a single economic entity, without there being any need to ascertain whether the parent company exercised influence over the anti-competitive conduct at issue.

(see paras 58, 60, 62, 64-65, 82-83, 85)

3. The fact that several companies are held jointly and severally liable for a fine on the ground that they form an undertaking for the purposes of Article 81 EC does not mean, as regards the application of the maximum amount laid down by Article 23(2) of Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty, that the obligation of each of them is limited to 10% of the turnover which it achieved during the last business year. The maximum amount of 10% of turnover within the meaning of that provision must be calculated on the basis of the total turnover of all the companies constituting the single economic entity acting as an undertaking for the purposes of Article 81 EC, since only the total turnover of the component companies can constitute an indication of the size and economic power of the undertaking in question.

(see paras 90-91)

Judgment of the Court of First Instance (Second Chamber)
First Instance (Second Chamber)First Instance (Second Chamber)December 2007. Akzo Nobel NV and Others v Commission of the European Communities. Competition - Cartels in the vitamin products sector - Choline chloride (Vitamin B4) - Decision finding an infringement of Article 81 EC and Article 53 of the Agreement on the European Economic Area - Attributability of the infringement. Case T-112/05.

In Case T112/05,

Akzo Nobel NV, established in Arnhem (Netherlands),

Akzo Nobel Nederland BV, established in Arnhem,

Akzo Nobel Chemicals International BV, established in Amersfoort (Netherlands),

Akzo Nobel Chemicals BV, established in Amersfoort,

Akzo Nobel Functional Chemicals BV, established in Amersfoort, represented initially by C. Swaak and J. de Gou, and subsequently by C. Swaak, M. van der Woude and M. Mollica, lawyers,

applicants,

v

Commission of the European Communities, represented by A. Whelan and F. Amato, acting as Agents,

defendant,

APPLICATION for annulment of Commission Decision 2005/566/EC of 9 December 2004 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E2/37.533 - Choline chloride) (summary published in OJ 2005 L 190, p. 22),

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Second Chamber),

composed of A.W.H. Meij, acting as President, N.J. Forwood and S. Papasavvas, Judges,

Registrar: C. Kantza, Administrator,

having regard to the written procedure and further to the hearing on 13 February 2007,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (Second Chamber)

hereby:

1. Dismisses the application;

2. Orders Akzo Nobel NV, Akzo Nobel Nederland BV, Akzo Nobel Chemicals International BV, Akzo Nobel Chemicals BV and Akzo Nobel Functional Chemicals BV to pay the costs.

Background and contested decision

1. By Decision 2005/566/EC of 9 December 2004 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E2/37.533 - Choline chloride) (summary published in OJ 2005 L 190, p. 22; the Decision'), the Commission found that a number of undertakings had infringed Article 81(1) EC and Article 53 of the Agreement on the European Economic Area (EEA) by participating in a complex of agreements and concerted practices consisting of price fixing,

market sharing and agreed actions against competitors in the choline chloride sector in the EEA (Article 1 of the Decision).

2. The Commission states that the product concerned, choline chloride, is a member of the B-complex group of water-soluble vitamins (vitamin B4). It is mainly used in the animal feed industry (poultry and swine) as a feed additive and is marketed in two forms: it may take the form of an aqueous solution of 70% choline chloride or be sprayed on a dry cereal or silica carrier to give a choline chloride potency of 50 to 60%. Choline chloride which is not used as an animal feedingstuff additive is refined to provide a higher purity food grade (pharmaceutical grade). In addition to producers, the choline chloride market is made up of converters, who buy the product from producers in liquid form and convert it into choline chloride on a carrier, either on behalf of the producer or on their own behalf, and distributors.

3. Recital 3 to the Decision states that the Commission initiated an investigation into the global choline chloride industry after it received a leniency application in April 1999 from the United States producer Bioproducts. The investigation covered the period from 1992 to the end of 1998. At recital 45 to the Decision, the Commission states that the Canadian producer Chinook had already approached it about the cartel in question on 25 November and 16 December 1998 but that it had not opened an investigation at that time.

4. So far as the EEA is concerned, according to recital 64 to the Decision the choline chloride cartel operated at two different but closely-related levels: the global level and the European level. At the global level, the producers Bioproducts (United States), Chinook (Canada), Chinook Group Limited (Canada), DuCoa (United States), BASF AG (Germany), UCB SA (Belgium) and the applicants, five companies in the Akzo Nobel group (Netherlands), participated (directly or indirectly) in anti-competitive activities between June 1992 and April 1994. Those activities were designed, essentially, to increase prices worldwide, including in the EEA, and to control converters, including in the EEA, in order to ensure that converters would not undermine the agreed increases, and to allocate markets worldwide: the North American producers would withdraw from the European markets and, in return, the European producers would withdrawing from the North American markets. The Commission identifies nine meetings of the cartel at global level between June 1992 (in Mexico City, Mexico) and April 1994 (in Johor Bahru, Malaysia). The most important meeting was the one held in Ludwigshafen (Germany) in November 1992.

5. Only the European producers (BASF, UCB and the applicants) are stated to have participated in the meetings implementing the cartel at European level, which continued from March 1994 to October 1998. The Commission identifies 15 meetings in that regard, between March 1994 (in Schoten, Belgium) and October 1998 (in Brussels, Belgium, or Aachen, Germany). According to recital 65 to the Decision, those meetings served to continue the agreement reached at the global level. The purpose of the meetings was to ensure regular price increases across the EEA and to share markets and allocate individual customers, and also to control converters in Europe in order to protect the higher price levels.

6. The Commission found that the worldwide arrangements and the European arrangements all formed part, so far as the EEA was concerned, of a global plan which determined the conduct of the members of the cartel and restricted their individual commercial conduct in order to pursue a single anti-competitive economic objective, namely to distort the normal conditions of competition in the EEA. Accordingly, in the Commission's view, the arrangements concluded at worldwide level and at European level must be considered to constitute a single complex and continuous infringement concerning the EEA, in which the North American producers participated for a certain time and the European producers participated throughout the whole of the period in question.

7. As regards the identification of the addressees of the Decision, the Commission stated at recital

166 that the applicants, BASF, Bioproducts, Chinook, DuCoa and UCB must bear responsibility for the infringement. Ertisa, a Spanish company with 50% of the Spanish market, on the other hand, was not an addressee of the Decision, as the Commission concluded at recital 178 that the evidence was, on the whole, insufficient to hold that undertaking liable for the alleged facts.

8. In Article 3 of the Decision the Commission ordered the undertakings to which the Decision was addressed to bring immediately to an end the infringements referred to in Article 1 of the Decision, in so far as they had not already done so, and to refrain from repeating any of the anti-competitive acts or conduct established and from any act or conduct having the same or similar object or effect.

9. For the purpose of imposing fines, the Commission considered that the North American producers (Bioproducts, Chinook and DuCoa) had ceased to participate in the infringement no later than 20 April 1994, following the Johor Bahru meeting (see paragraph 4 above). According to recital 165 to the Decision, the Commission had no evidence of further meetings or contacts involving North American producers whereby they fixed prices for the EEA or confirmed their original commitment not to export to Europe. Since the first measure taken by the Commission with respect to that infringement was taken on 26 May 1999, or more than five years after the North American producers ceased to participate in the infringement, the Commission did not impose fines on those producers, in accordance with Article 1 of Council Regulation (EEC) No 2988/74 of 26 November 1974 concerning limitation periods in proceedings and the enforcement of sanctions under the rules of the European Economic Community relating to transport and competition (OJ 1974 L 319, p. 1) and Article 25 of Council Regulation 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1).

10. Since the European producers' participation had lasted until 30 September 1998, on the other hand, the Commission imposed on them fines totalling EUR 66.34 million.

11. With regard more particularly to the Akzo Nobel group, the Commission decided to address the Decision to Akzo Nobel NV, Akzo Nobel Functional Chemicals BV, Akzo Nobel Chemicals BV, Akzo Nobel Chemicals International BV and Akzo Nobel Nederland BV jointly and severally. The last three undertakings (or their legal predecessors) all participated directly in the infringement. Akzo Nobel Functional Chemicals was created in June 1999 as a subsidiary of Akzo Nobel Chemicals, at which time the latter became a holding company. Therefore, the Commission considered that Akzo Nobel Functional Chemicals is the legal successor to most of the choline chloride activities previously carried on by its parent company and should, accordingly, also be an addressee of the Decision.

12. Akzo Nobel forms an economic unit with the other legal entities in the Akzo Nobel group to which the Decision is addressed. It was this economic unit that was responsible for the production of chlorine chloride in the EEA and which participated in the cartel. The conclusion could be different only if the operational subsidiaries of Akzo Nobel were able to operate an autonomous commercial policy in the period concerned and actually did so. Akzo Nobel, far from being simply an investment vehicle, serves as the corporate centre of the Akzo Nobel group of companies which coordinates its main activities with regard to general group strategy, finances, legal affairs, and human resources. The Commission assumed that, through these functions, Akzo Nobel exerted a decisive influence over the commercial policy of its subsidiaries, all of which were directly or indirectly wholly owned by it. The Commission therefore found that the subsidiaries of Akzo Nobel lacked commercial autonomy, which entitled the Commission to address the Decision to Akzo Nobel, notwithstanding that it had not participated individually in the cartel (recital 172 to the Decision).

13. The lack of commercial autonomy of the Akzo Nobel group's operating companies or business units is also clear from the documents entitled Authority Schedules' which Akzo Nobel submitted during the administrative procedure. Those documents show that the corporate objectives for the

Akzo Nobel group as a whole and guidelines for the strategic plans of business units are set by the Board of Management of Akzo Nobel. The strategic plan of an individual business unit can be endorsed only if it fits within the corporate strategic plan. Portfolio positioning within that strategic plan is also decided by the Board of Management of Akzo Nobel, whereas the operational plan of each business unit must comply with the guidelines and group targets set by the Board of Management. Last, any investments of more than EUR 2.5 million need the approval of the Board Committee, the Full Board of Management or the Supervisory Board of Akzo Nobel, depending on their financial impact. The Board of Management also decides on the allocation of profits and on dividends, and also on appointments, remuneration and dismissals (recital 173 to the Decision).

14. Akzo Nobel Chemicals SpA, which was an addressee of the statement of objections because it was suspected of having participated in certain activities regarding choline chloride in Spain, was not an addressee of the Decision because the Commission considered that the evidence gathered was insufficient to hold it liable (recital 176 to the Decision).

15. The amount of the fines was determined by the Commission on the basis of its Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty (OJ 1998 C 9, p. 3) and the Notice on the non-imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4) (the Leniency Notice').

16. For the purpose of determining the starting amount of the fines, the Commission stated that it would apply differential treatment to the companies involved in order to take account of differences in their effective economic capacity to cause significant damage to competition. Thus, in view of the fact that the infringement had begun at the global level, with the participation of North American companies which agreed, inter alia, to withdraw from the European market, the Commission considered that it should take as a basis the global market shares of the participants in the infringement in order to determine their individual importance (recitals 200 and 201 to the contested decision).

17. Thus, on the basis of the global market shares in 1997, the Commission placed the applicants in the third category, with a market share of 12%. In order to ensure sufficient deterrence, the Commission, by reference to Akzo Nobel's turnover in 2003 (EUR 13 000 million), multiplied the starting amount by a factor of 1.5.

18. Next, the Commission increased the starting amount by 10% for each full year of the infringement and by 5% for each additional period of six months or more but less than one year. As the infringement had lasted for 5 years and 11 months (from 13 October 1992 until 30 September 1998), the Commission increased the starting amount by 55%. Thus, the basic amount of the fine imposed jointly and severally on the applicants was fixed at EUR 29.99 million.

19. As regards the application of the Leniency Notice to the applicants, the Commission emphasised the importance of a voluntary submission of 8 January 2002, concerning five further meetings at European level. That, according to recital 233 to the Decision, was what enabled the Commission to prove the full scope and duration of the infringement at European level. Furthermore, the applicants did not substantially contest the facts relied on by the Commission. The Commission therefore considered that the applicants were entitled to a 30% reduction in the amount of the fine that would otherwise have been imposed on them (recitals 233 to 236 to the Decision).

20. At the end of that procedure, the fine imposed on the applicants was fixed at EUR 20.99 million.

Procedure and forms of order sought by the parties

21. By application lodged at the Registry of the Court of First Instance on 2 March 2005, the applicants brought the present action.

22. By applications lodged at the Court Registry on 25 February (registered as Case T111/05)

and 1 March 2005 (registered as Case T101/05), UCB and BASF, which were also addressees of the Decision, each brought an action against it.

23. By order of 7 September 2006, the President of the Second Chamber of the Court decided, after hearing the parties, to join Cases T101/05, T111/05 and the present case for the purposes of the oral procedure and the judgment, in accordance with Article 50 of the Rules of Procedure of the Court of First Instance.

24. Upon hearing the report of the Judge-Rapporteur, the Court decided to open the oral procedure, and, in the context of the measures of organisation of procedure, put a question in writing to the parties.

25. After hearing the parties' views on the matter at the hearing, the Court decided, by its judgment in Cases T101/05 and T111/05, to disjoin the present case from Cases T101/05 and T111/05 for the purposes of the judgment, in accordance with Article 50 of the Rules of Procedure.

26. The applicants claim that the Court should:

- annul the Decision;

- order the Commission to pay the costs.

27. The Commission contends that the Court should:

- dismiss the action as inadmissible or as manifestly unfounded with respect to Akzo Nobel Nederland, Akzo Nobel Chemicals International and Akzo Nobel Chemicals;

- dismiss the remainder of the action;

- order the applicants to pay the costs.

Law

28. The applicants raise three pleas in law, alleging, first, that the Commission wrongly attributed joint and several liability for the infringement to Akzo Nobel; second, breach of Article 23(2) of Regulation No 1/2003 in that the amount of the fine exceeds 10% of Akzo Nobel Functional Chemicals' turnover for 2003; and, third, breach of the obligation to state reasons for attributing joint and several liability for the infringement to Akzo Nobel.

1. Admissibility of the action as regards Akzo Nobel Nederland, Akzo Nobel Chemicals Internati onal and Akzo Nobel Chemicals

Arguments of the parties

29. The Commission submits that the action, which must be analysed as five individual actions, contains no pleas capable of justifying annulment of the Decision or a reduction in the amount of the fine as regards Akzo Nobel Nederland, Akzo Chemicals International and Akzo Nobel Chemicals. It is therefore consistent with neither Article 21 of the Statute of the Court of Justice nor Article 44 of the Rules of Procedure so far as those three applicants are concerned. In any event, the action should be dismissed with respect to those applicants as manifestly unfounded in law.

30. The applicants contend that the action is admissible with respect to Akzo Nobel Nederland, Akzo Nobel Chemicals International and Akzo Nobel Chemicals. They maintain that the action fulfils the conditions of Article 21 of the Statute of the Court of Justice and Article 44 of the Rules of Procedure of the Court of First Instance and claim that the possibility that the Decision will be annulled shows that they have an interest in bringing the action.

Findings of the Court

31. It should be noted at the outset that, since the present case concerns one and the same action which is admissible so far as Akzo Nobel and Akzo Nobel Functional Chemicals are concerned, there is no need to examine the plea of inadmissibility raised by the Commission (see, to that effect and by analogy, Case C313/90 CIRFS and Others v Commission [1993] ECR I1125, paragraphs 30 and 31).

32. In that regard, the argument put forward by the Commission at the hearing, that the assessment in the preceding paragraph applies only where annulment benefits every person irrespective of whether that person brought an action, is not sufficient to make it necessary to examine the plea of inadmissibility. While it is true that the annulment of a decision imposing fines on a number of entities under Article 81 EC must not operate to the advantage of those who did not bring an action (see, to that effect, Case C310/97 P Commission v AssiDomän Kraft Products and Others [1999] ECR I5363, paragraph 63), or whose action is inadmissible, the fact remains that the Commission did not explain in what way annulment of the Decision on the basis of the pleas set out at paragraph 30 above might operate to the advantage of Akzo Nobel Nederland, Akzo Nobel Chemicals International and Akzo Nobel Chemicals. The Commission itself, moreover, maintains in the rejoinder that in light of the pleas raised in the application, any annulment could affect only the liability of the top holding company in the group or the amount of the fine imposed on Akzo Nobel Functional Chemicals. Furthermore, even on the assumption that Akzo Nobel Nederland, Akzo Nobel Chemicals International and Akzo Nobel Chemicals are not admissible, the Court must none the less examine the action in its entirety. In those circumstances, for reasons of procedural economy the Court should not examine the plea of inadmissibility raised by the Commission.

2. Substance

First plea: incorrect attribution of joint and several liability to Akzo Nobel

Arguments of the parties

33. The applicants submit that the Commission erred in law in imposing the fine jointly and severally on Akzo Nobel, the parent company of the group, holding, directly or indirectly, 100% of the capital of its subsidiaries. They explain the organisational and legal structures of the Akzo Nobel group as follows. The organisational structure is composed of a corporate centre (Akzo Nobel NV), business units and sub-units. The group's activities are in fact organised in such a way that a business unit (or sub-unit) undertakes activities carried on by various Akzo Nobel subsidiaries (for example the methylamines and choline chloride sub-unit encompasses activities by various Akzo Nobel subsidiaries). The legal structure includes Akzo Nobel as top holding' company in the group and more than 1 000 different legal entities wholly owned directly or indirectly by Akzo Nobel. Those legal entities must be regarded as portfolio holders, carrying on commercial activities managed by the business units (and sub-units). In this case, Akzo Nobel Chemicals International, Akzo Nobel Chemicals and Akzo Nobel Functional Chemicals are the owners of, inter alia, the activity carried out by the methylamines and choline chloride sub-unit. It follows that the organisational and legal structures of the Akzo Nobel group are parallel.

34. The Akzo Nobel group is therefore a two-tier organisational structure: a corporate centre that deals with strategic issues (major investments, finance, legal affairs, human resources) and 20 business units directly below. Each unit has a general manager, a management team and supporting services, responsible for the entire operational management. Provided that the management of the business unit stays within the financial and strategic targets set and approved by Akzo Nobel, the management of that unit is entirely independent and bound solely by the business principles' (the core values of the business world, such as entrepreneurial spirit, personal integrity, social responsibility, etc.) and corporate directives' (the directives of the undertaking, on legal and tax matters, human resources, health and safety and environmental matters, etc.) applicable to the

entire Akzo Nobel group. Each unit is divided into sub-units with their own management. In this case, the business activities relating to choline chloride were conducted by Akzo Nobel Chemicals, Akzo Nobel Functional Chemicals and Akzo Nobel Chemicals SpA.

35. It is the business units (and sub-units) responsible for the relevant product area that determine, autonomously from Akzo Nobel, policy, strategy and business operations. However, that does not mean that the units (or sub-units) have the same decision-taking power with regard to the subsidiaries. The business policy of each business unit and sub-unit cannot be said to determine the business policy of the various subsidiaries.

36. According to Akzo Nobel's analysis of the case-law, the decisive influence which a parent company must exercise in order to be considered liable for the activities of its subsidiary must relate to the subsidiary's commercial policy in the strict sense. The Commission must therefore show, first, that the parent company has the power to direct the conduct of the subsidiary to the point of depriving it of any independence in determining its commercial course of action and, second, that it exerted that power.

37. However, the applicants claim that the case-law has created a presumption that a wholly-owned subsidiary has carried out the instructions of its parent company. In those circumstances, in order for the Commission to be required to find the subsidiary alone liable in such a case, the subsidiary must determine its commercial policy largely on its own. Where that is shown to be the case, the Commission must again show that the parent company did in fact exert a decisive influence in a specific case. It follows that organisation into units of the kind seen in the Akzo Nobel group does not in itself suffice to make proof of the actual involvement of the parent company unnecessary. Furthermore, Akzo Nobel claims that the Commission, in exercising its power to take decisions, and the Community judicature always employ facts in order to support the presumption in question.

38. Akzo Nobel's subsidiaries determine their commercial policy largely on their own, each having its own decision-taking body. Since Akzo Nobel does not carry on any commercial activity or produce or distribute any product, it does not have the power to direct its subsidiaries' conduct to the point of depriving them of any real independence in determining their own course of action in the market. Akzo Nobel merely determines the group's general macroeconomic strategy and claims no role in relation to purely commercial decisions. Decisions on pricing and price increases are in principle taken within each subsidiary by the marketing directors for the relevant products. Akzo Nobel therefore deals exclusively with major strategic questions (finance, legal affairs, health and safety and environmental rules and policy, etc.), which excludes matters of commercial policy. Thus, responsibility for commercial policy matters lies with the business units and sub-units, which include all the operational subsidiaries of the group.

39. The international in-house magazine published by Akzo Nobel evidences a very detailed structure within the subsidiaries. That structure would serve no purpose if commercial policy had to be decided by the Board of Akzo Nobel. However, no parent company owning all the shares in its subsidiary would allow it to operate without any supervision. Thus, Akzo Nobel determines policies and rules on health and safety, the environment, corporate identity and collective labour agreements with which the subsidiaries must comply. That type of control cannot be assimilated to control stricto sensu of the subsidiaries' commercial strategy.

40. Furthermore, each of the subsidiaries involved in these proceedings has its own management board, while commercial policy (pricing, distribution) is determined at the level of the business units and subunits responsible for the relevant products. Turnover in the choline chloride sector appears in the accounts of Akzo Nobel Chemicals, Akzo Nobel Functional Chemicals and Akzo Nobel Chemicals SpA.

41. The marketing director for choline chloride is, as his job title suggests, mainly responsible for preparing the draft sales plan with regard to quantities, prices, product range and marketing strategy. The fact that there is no documentary evidence to support all the factual claims does not diminish the value of the evidence produced by Akzo Nobel, especially since it produced copious evidence during the administrative procedure.

42. Since, on the basis of the foregoing, the presumption in question has been rebutted, the applicants contend that the Commission's arguments would have been correct if Akzo Nobel had given instructions with regard to price-fixing and sharing the choline chloride market. However, a parent company of more than 1 000 legal entities cannot materially instruct even just one of its subsidiaries with regard to pricing policy or commercial behaviour. The Commission has failed to prove that Akzo Nobel was aware of or directly involved in the infringement or that it had instructed its subsidiaries to commit it. The evidence on which the Decision relies in order to attribute joint and several liability for the infringement to Akzo Nobel does not relate to its subsidiaries' commercial policy in the strict sense. As the applicants have shown that the methylamines and choline chloride sub-unit was, at the very least, largely commercially autonomous, the Commission ought to have proved that Akzo Nobel had exercised decisive influence on the commercial policy of the other applicants or on the methylamines and choline chloride business sub-unit. However, the Commission has failed to satisfy that obligation, since Akzo Nobel had no reason to exercise such influence.

43. In that context, it is scarcely relevant to seek out the natural or legal person who appoints the vice-presidents of the group, the managers and other players in the methylamines and choline chloride business subunit and to whom those persons are accountable. The crucial question is whether Akzo Nobel exercised decisive influence on the commercial policy of its subsidiaries or the methylamines and choline chloride business sub-unit. It is therefore even arguable that the methylamines and choline chloride sub-unit should be the addressee of the Decision.

44. The applicants observe that if all the legal entities in the choline chloride sector were to be regarded as a single economic unit, there would be no reason to exclude Akzo Nobel Chemicals from the addressees of the Decision on the sole ground that the Commission did not have sufficient evidence to hold it liable. Its exclusion also contradicts the Commission's assertion that Akzo Nobel is the only link between choline chloride production in Italy and in the Netherlands.

45. The applicants emphasise that Akzo Nobel never held itself out as the Commission's only interlocutor during the administrative procedure. In addition, each of the applicants gave a separate authority to the lawyers representing them.

46. In light of the foregoing considerations, and since the evidence, other than the 100% shareholding, on which the Commission relied is either irrelevant or wrong, Akzo Nobel maintains that it has rebutted the presumption of the liability of the group's holding company. As the Commission has adduced no evidence showing that Akzo Nobel had exercised decisive influence on its subsidiaries' commercial policy, the present plea must be upheld.

47. The Commission contends that, according to the case-law, a parent company may be presumed to exercise decisive influence over a subsidiary where the conduct of the subsidiary is essentially subject to instructions issued to it, that is to say, where the parent company decides the commercial strategy and operations of its subsidiary. The case-law imposes no requirement that the parent company instruct its subsidiary to commit an infringement in order for the Commission to address to it a decision imposing a fine. It is therefore sufficient that the parent company exercised decisive influence over the general commercial strategy of its subsidiaries in order for it to be held jointly and severally liable and the Commission does not have to show that the parent company was aware of or directly involved in the infringement.

48. It follows from the case-law that in order to rebut that presumption it must be proved that the parent company was not in a position to have decisive influence over the commercial policy of its subsidiary or that the subsidiary was autonomous. It must therefore be demonstrated by sufficiently persuasive evidence that the parent company was not in a position to exercise, or did not effectively exercise, decisive influence over its subsidiary's commercial strategy and operations, notwithstanding its 100% shareholding. It cannot, on the other hand, be sufficient for the parent company to show that the subsidiary conducted its business largely on its own and that it had its own board of directors, which was not in any event proved in this case.

49. The applicants are wrong to claim that they rebutted the presumption against Akzo Nobel by the evidence produced in response to the statement of objections, nor can they challenge the legality of the Decision on the basis of documents which were not produced during the administrative procedure.

50. The evidence adduced by the applicants is not in any event sufficient to rebut the presumption against Akzo Nobel. The applicants did not identify the legal entities which appoint the group vice-presidents, the managers of the business units or the persons or bodies to whom the vice-presidents are accountable. The Commission therefore contends that it may reasonably suppose that the group vice-presidents are appointed by Akzo Nobel, to which they are accountable for their management.

51. According to the Commission, the applicant's state in the application that the subsidiaries' commercial policy is not determined by them but by the business units and sub-units, while the management of Akzo Nobel is responsible for coordination and for establishing general guidelines. The fact that the applicant subsidiaries have their own boards of directors does not necessarily mean that they take all basic commercial decisions on the production and marketing of choline chloride in complete autonomy. The fact that they belong to the methylamines and choline chloride business sub-unit, which has its own management bodies, suggests the opposite. On the basis of the applicants' assertion that the management of each business sub-unit is accountable to the management of a business unit, the Commission presumes that the management of each business unit is in turn accountable to the management of Akzo Nobel. It is precisely that obligation that justifies the characterisation of the Akzo Nobel group as an economic unit. Even on the assumption that the marketing manager of the choline chloride business sub-unit acts in complete autonomy when determining the prices of the product, that confirms that the subsidiaries are not autonomous and does not preclude decisive influence on the part of Akzo Nobel.

52. The Commission further submits that the applicants' argument that it ought to have addressed the Decision to the methylamines and choline chloride business sub-unit cannot be accepted because that sub-unit is not a legal entity, the only legal entities being the subsidiaries of the group coordinated by Akzo Nobel. Those legal entities cannot avoid liability simply because they are structured as units without legal personality. In addition, the fact that Akzo Nobel is the sole shareholder in its subsidiaries by definition gives it the power to control their course of action in all essential respects.

53. The documents produced by the applicants, moreover, simply show that day-to-day commercial decisions on choline chloride are taken by members of the management of the methylamines and choline chloride business sub-unit and do not identify the persons who appoint and employ those members. The applicants have therefore failed to rebut the presumption that Akzo Nobel is liable.

54. In any event, Akzo Nobel may properly be held liable on the basis of factors other than the presumption created by its 100% shareholding in its subsidiaries. It is proved on the basis of the authority schedules that any project of a business unit involving investment requires the approval of the board committee, board of management or supervisory board of Akzo Nobel, depending on the size of the investment. The role played by Akzo Nobel in appointing the directors of each business unit and its administrative functions show that it operates as a single economic unit with those

business units. Commercial independence relates not only to decisions of secondary importance (such as daytoday sales) but also to more important decisions, such as the appointment of managers, the determination of business objectives and investment decisions. Akzo Nobel is the entity responsible for settling those questions.

55. The fact that Akzo Nobel, Akzo Nobel Nederland, Akzo Nobel Chemicals International and Akzo Nobel Chemicals do not carry on any commercial activity also confirms the conclusion that none of those legal entities can be considered to constitute an autonomous economic player on its own.

56. Akzo Nobel also represents the only ownership link between the activities of the choline chloride sector in Italy and those in the Netherlands. That finding is not inconsistent with the fact that the Decision was not addressed to Akzo Nobel Chemicals SpA. The Commission does not have sufficient evidence to show that that undertaking participated in the infringement. Furthermore, Akzo Nobel Chemicals SpA is not a managing company liable for the behaviour of the entities that are directly involved. In any event, the Commission is not required to attribute liability to all the legal entities which together form an undertaking. The fact that the applicants are represented by the same lawyers also militates in favour of the Commission's analysis.

Findings of the Court

- Preliminary observations on the attributability to a parent company of the unlawful conduct of a subsidiary

57. It must be borne in mind, first of all, that the concept of undertaking within the meaning of Article 81 EC includes economic entities which consist of a unitary organisation of personal, tangible and intangible elements, which pursue a specific economic aim on a long-term basis and can contribute to the commission of an infringement of the kind referred to in that provision (see Case T9/99 HFB and Others v Commission [2002] ECR II1487, paragraph 54 and the case-law cited).

58. It is therefore not because of a relationship between the parent company and its subsidiary in instigating the infringement or, a fortiori , because the parent company is involved in the infringement, but because they constitute a single undertaking in the sense described above that the Commission is able to address the decision imposing fines to the parent company of a group of companies. It must be borne in mind that Community competition law recognises that different companies belonging to the same group form an economic entity and therefore an undertaking within the meaning of Articles 81 EC and 82 EC if the companies concerned do not determine independently their own conduct on the market (Case T203/01 Michelin v Commission [2003] ECR II4071, paragraph 290).

59. It should also be noted that, for the purpose of applying and enforcing Commission competition law decisions, it is necessary to identify, as addressee, an entity having legal personality (see, to that effect, Joined Cases T305/94 to T307/94, T313/94 to T316/94, T318/94, T325/94, T328/94, T329/94 and T335/94 Limburgse Maatschappij and Others v Commission (PVC II ') [1999] ECR II931, paragraph 978).

60. In the specific case of a parent company holding 100% of the capital of a subsidiary which has committed an infringement, there is a simple presumption that the parent company exercises decisive influence over the conduct of its subsidiary (see, to that effect, Case 107/82 AEG v Commission [1983] ECR 3151, paragraph 50, and PVC II , paragraph 59 above, paragraphs 961 and 984), and that they therefore constitute a single undertaking within the meaning of Article 81 EC (Joined Cases T71/03, T74/03, T87/03 and T91/03 Tokai Carbon and Others v Commission , not published in the ECR, paragraph 59). It is thus for a parent company which disputes before the Community judicature a Commission decision fining it for the conduct of its subsidiary to rebut that presumption

by adducing evidence to establish that its subsidiary was independent (Case T314/01 Avebe v Commission [2006] ECR II0000, paragraph 136; see also, to that effect, Case C286/98 P Stora Kopparbergs Bergslags v Commission [2000] ECR I9925 (Stora '), paragraph 29).

61. In that regard, it must be made clear that, while it is true that at paragraphs 28 and 29 of Stora , paragraph 60 above, the Court of Justice referred, as well as to the fact that the parent company owned 100% of the capital of the subsidiary, to other circumstances, such as the fact that it was not disputed that the parent company exercised influence over the commercial policy of its subsidiary or that both companies were jointly represented during the administrative procedure, the fact remains that those circumstances were mentioned by the Court of Justice for the sole purpose of identifying all the elements on which the Court of First Instance had based its reasoning before concluding that that reasoning was not based solely on the fact that the parent company held the entire capital of its subsidiary. Accordingly, the fact that the Court of Justice upheld the findings of the Court of First Instance in that case cannot have the consequence that the principle laid down in paragraph 50 of AEG v Commission , paragraph 60 above, is amended.

62. That being so, it is sufficient for the Commission to show that the entire capital of a subsidiary is held by the parent company in order to conclude that the parent company exercises decisive influence over its commercial policy. The Commission will then be able to hold the parent company jointly and severally liable for payment of the fine imposed on the subsidiary, unless the parent company proves that the subsidiary does not, in essence, comply with the instructions which it issues and, as a consequence, acts autonomously on the market.

63. The Court must also examine, in the context of these preliminary observations, the argument central to the applicants' pleadings that the influence which the parent company is presumed to exercise because it holds the entire capital of its subsidiary relates to the latter's commercial policy in the strict sense (see paragraph 36 above). That policy, in the applicants' submission, includes, for example, distribution and pricing strategy. Accordingly, so the argument goes, the parent company could rebut the presumption by showing that it is the subsidiary that manages those specific aspects of its business policy, without receiving instructions.

64. On that point, it should be noted that, when analysing the existence of a single economic entity among a number of companies forming part of a group, the Community judicature has examined whether the parent company was able to influence pricing policy (see, to that effect, Case 48/69 ICI v Commission [1972] ECR 619, paragraph 137, and Case 52/69 Geigy v Commission [1972] ECR 787, paragraph 45), production and distribution activities (see, to that effect, Joined Cases 6/73 and 7/73 Commercial Solvents v Commission [1974] ECR 223, paragraphs 37 and 39 to 41), sales objectives, gross margins, sales costs, cash flow, stocks and marketing (Case T102/92 Viho v Commission [1995] ECR II17, paragraph 48). However, it cannot be inferred that it is only those aspects that are covered by the concept of the business policy of a subsidiary for the purposes of the application of Articles 81 EC and 82 EC with respect to the parent company.

65. On the contrary, it follows from that case-law, read together with the considerations set out at paragraphs 57 and 58 above, that it is for the parent company to put before the Court any evidence relating to the economic and legal organisational links between its subsidiary and itself which in its view are apt to demonstrate that they do not constitute a single economic entity. It also follows that when making its assessment the Court must take into account all the evidence adduced by the parties, the nature and importance of which may vary according to the specific features of each case.

66. It is by reference to those considerations that the Court must ascertain whether Akzo Nobel and its subsidiaries to which the Decision was addressed constitute a single economic entity.

- The existence of a single economic entity between Akzo Nobel and its subsidiaries to which the Decision was addressed

67. In the present case, the parties are agreed that Akzo Nobel directly or indirectly holds 100% of the capital of its subsidiaries to which the Decision was addressed. It is therefore for Akzo Nobel, on the basis of the foregoing considerations, to show that those subsidiaries determine their business policy autonomously in such a way that they and their parent company do not constitute a single economic entity and therefore a single undertaking for the purposes of Article 81 EC (see paragraph 57 above).

68. In that regard, the authority schedules produced by Akzo Nobel during the administrative procedure (see paragraph 13 above) and briefly analysed at recital 173 to the Decision contain, in the introduction, a description of the allocation of powers relating to the decision-taking procedure within the Akzo Nobel group on 14 topics.

69. Those schedules cover, more particularly, Strategy, Operational Plan, Investments, Acquisition/divestment, Restructuring plans, General policies on functional issues, Finance, Control/Accounting, Human Resources, Legal Affairs, Risk and Insurance Management, Technology & Environment, Informational Technology and a subject headed Miscellaneous'.

70. The introduction to the authority schedules states:

Detailed authorities and instructions (possibly also for items not mentioned in the Akzo Nobel Authority Schedules) are laid down in separate directives and/or charters or are agreed upon between the [business unit/sub-unit] manager and the responsible Board Member.

As to subsidiaries not wholly owned by Akzo Nobel, either directly or indirectly, this allocation of authorities shall be integrally enforced as much as possible.'

71. The Court must also examine a number of aspects of the authority schedules, namely strategy, investment, general policies on functional issues, control and accounting, human resources and legal affairs.

72. As regards strategy, it follows from the authority schedules that each business unit or sub-unit prepares and submits its strategic plan for an opinion to [confidential] (1) of Akzo Nobel, which subsequently submits it to [confidential] for review within guidelines set by Akzo Nobel's Board of Management, which, within the context of [confidential], decides on major strategic moves.

73. When drawing up its operational plan, each business unit must obtain advice from [confidential] of Akzo Nobel, which, in turn, submits each question to the management of Akzo Nobel for a decision within the guidelines and group targets.

74. With respect to investments (including rentals, leases, disposal or acquisition of intangible assets), each business unit or sub-unit has the power to take decisions, but within limits previously agreed upon with [confidential] of Akzo Nobel. The latter decides on projects up to EUR [confidential], while decisions are taken by [confidential], [confidential] or [confidential], depending on whether the value is between EUR 2.5 million and EUR 10 million, between EUR 10 million and EUR 20 million or above EUR 20 million.

75. For general policies on functional issues, [confidential] of Akzo Nobel submits a proposal for a functional area and the decision is taken by [confidential], within [confidential].

76. For the purposes of control and auditing, each business unit or sub-unit reports its results periodically, while [confidential] of Akzo Nobel, [confidential] and [confidential] periodically review corporate performance at unit (or sub-unit) and group level.

77. In connection with human resources, the business units or sub-units are required to submit

their proposals on main organisational changes to the [confidential] of Akzo Nobel for approval of conformity with organisational concepts, while the final decision is taken by [confidential] of Akzo Nobel. It is important to note that where the proposal does not conform to the organisational concept, it is for [confidential] of Akzo Nobel to adopt a definitive decision.

78. As regards legal affairs, in the case of important contracts concerning know-how, patents, trade marks, research cooperation and strategic alliances, each unit or sub-unit submits proposals to [confidential] of Akzo Nobel, which, in turn, depending on the value of the operation, advises [confidential], [confidential] or [confidential], which decides the matter. Powers are allocated in a similar fashion for the purpose of important long-term supply and purchasing contracts, depending on their duration and the financial commitment involved.

79. It is apparent from the authority schedules, moreover, that Akzo Nobel is involved, through [confidential], [confidential], [confidential] or [confidential], in the decision-taking procedure for all of the matters concerned (see paragraph 69 above).

80. Questioned on that point at the hearing, the applicants maintained that the authority schedules illustrated the allocation of powers within the Akzo Nobel group but did not demonstrate that those powers were actually used in connection with the infringement in question. However, it must be held that that last assertion is inoperative at this stage of the examination, which seeks to establish whether Akzo Nobel exercised influence over the business policy of its subsidiaries and not whether Akzo Nobel played a specific role in connection with the infringement in question (see paragraph 58 above).

81. As regards the organisational relationship between the subsidiaries of the Akzo Nobel group to which the Decision was addressed and the methylamines and choline chloride business sub-unit, it is sufficient to observe that, as the applicants stated (see paragraph 33 above), Akzo Nobel Chemicals International, Akzo Nobel Chemicals and Akzo Nobel Functional Chemicals are the owners' of, inter alia, the activity carried out by that sub-unit. Since the Decision could be addressed only to entities having legal personality (see paragraph 59 above), which, moreover, participated directly in the infringement or are the successors in law to the entities which participated therein (see paragraph 11 above), the applicants cannot claim that the Commission ought to have distinguished the determination of the policy of the business units or sub-units of the group from the determination of the policy of the subsidiaries of Akzo Nobel. In any event, the applicants stated at paragraphs 16, 17 and 54 of their reply that the crucial question was whether they had been able to rebut the presumption that Akzo Nobel had exercised decisive influence either over the business sub-unit concerned or over the subsidiaries to which the Decision was addressed.

82. In those circumstances, it must be concluded that, as stated at recital 173 to the Decision, the competent personnel, and in particular the management of Akzo Nobel, play a significant role in several essential aspects of the strategy of the subsidiaries in question and reserve the power of final decision with respect to a range of matters that define their course of conduct on the market.

83. The argument that decisions relating to pricing and price increases are in principle taken by the marketing managers for the products concerned, who act within their respective subsidiaries, and in particular by the choline chloride marketing manager (see paragraphs 38 and 41 above), cannot refute that conclusion. The same applies to the arguments based on the two-level structure of the Akzo Nobel group, which is claimed to have the objective of removing commercial policy in the strict sense from the control of Akzo Nobel (see paragraph 38 above). As stated at paragraph 58 above, attribution of an infringement by a subsidiary to the parent company does not require proof that the parent company influences its subsidiary's policy in the specific area in which the infringement occurred, in the present case distribution and pricing. On the other hand, the economic and legal

organisational links between the parent company and its subsidiary may establish that the parent exercises influence over the subsidiary's strategy and therefore that they can be viewed as a single economic entity.

84. The argument based on the fact that each subsidiary has its own management board (see paragraph 40 above) lacks conviction. Every incorporated company has a management board appointed by its shareholders, in this case by Akzo Nobel. Furthermore, the applicants stated in that regard at paragraph 45 of their reply that the group vice-presidents (who manage the business units) are appointed by the division presidents of the chemical divisions of the group, after approval of the responsible member of the Board of Management of Akzo Nobel. They report to the President of Akzo Nobel Chemicals, who in turn reports to the responsible member of the Board of Management of Akzo Nobel. Furthermore, Akzo Nobel's in-house magazine (see paragraph 39 above) states that the group vice-president at the head of a business unit maintains hierarchical control within that unit.

85. Therefore, even on the assumption that the applicants' reasoning in respect of the burden of proof, illustrated at paragraph 37 above, is correct, the fact remains that they have not succeeded in rebutting the presumption that Akzo Nobel, the parent company owning 100% of the capital of the subsidiaries to which the Decision was addressed, exercised decisive influence over its subsidiaries' policies. It must therefore be concluded that Akzo Nobel, together with those subsidiaries, constitutes an undertaking for the purposes of Article 81 EC, without there being any need to ascertain whether Akzo Nobel exercised influence over the conduct at issue. Consequently, the first plea must be rejected.

Second plea: breach of Article 23(2) of Regulation No 1/2003

Arguments of the parties

86. The applicants claim that by imposing the fine jointly and severally on Akzo Nobel Functional Chemicals, the Commission exceeded the ceiling of 10% of turnover laid down in Article 23(2) of Regulation No 1/2003. As Akzo Nobel Functional Chemicals' turnover in 2003 was EUR 124.5 million, the amount of the fine (EUR 20.99 million) was in excess of that ceiling.

87. Consequently, since liability was wrongly attributed to Akzo Nobel, there is no single economic entity capable of justifying the 10% ceiling being calculated on the basis of its consolidated turnover. According to the Decision, Akzo Nobel Chemicals, Akzo Nobel Chemicals International and Akzo Nobel Nederland also participated directly in the infringement, yet the Commission failed to establish that one of them exercised decisive influence over another.

88. The Commission states that it calculated the 10% ceiling on the basis of Akzo Nobel's consolidated turnover. The word undertaking' has the same meaning in Regulation No 1/2003 and in Articles 81 EC and 82 EC. Akzo Nobel was held liable on the ground that, together with the subsidiaries to which the Decision was addressed, it formed an undertaking within the meaning of Article 23(2) of Regulation No 1/2003. The Commission therefore did not err in calculating the ceiling.

89. Even on the assumption that the Commission was wrong to attribute joint and several liability to Akzo Nobel, first, the fact remains that the applicants did not base their second plea on such an error. The fact that they developed their second plea in that way for the first time in the reply constitutes, in reality, a new plea which is inadmissible under Article 48(2) of the Rules of Procedure. Second, the applicants did not seek a reduction in the amount of the fine, in the exercise of the Court's unlimited jurisdiction, in the event that the Court should consider that the Commission ought not to have addressed the Decision to Akzo Nobel. Third, the applicants did not claim that Akzo Nobel's subsidiaries did not form an undertaking for the purposes of Regulation No 1/2003.

Findings of the Court

90. The fact that several companies are held jointly and severally liable for a fine on the ground that they form an undertaking for the purposes of Article 81 EC does not mean, as regards the application of the maximum amount of 10% of turnover laid down by Article 23(2) of Regulation No 1/2003, that the obligation of each of them is limited to 10% of the turnover which it achieved during the last business year. The maximum amount of 10% of turnover within the meaning of that provision must be calculated on the basis of the total turnover of all the companies constituting the single economic entity acting as an undertaking for the purposes of Article 81 EC, since only the total turnover of the component companies can constitute an indication of the size and economic power of the undertaking in question (HFB and Others v Commission , paragraph 57 above, paragraphs 528 and 529).

91. Accordingly, regard being had to the considerations which gave rise to the rejection of the first plea, the Commission did not err by taking Akzo Nobel's consolidated turnover as a reference for the calculation of the ceiling in question. The second plea must therefore be rejected, without there being any need to adjudicate on the plea of inadmissibility raised by the Commission.

Third plea: breach of the obligation to state reasons

Arguments of the parties

92. The applicants contend that the reasoning which the Commission employed in order to establish Akzo Nobel's liability was based on incorrect grounds, in that the facts on which it relied are inadequate and inappropriate to justify that conclusion. Nor did the Commission explain why it ordered Akzo Nobel Functional Chemicals to pay a fine greater than 10% of its turnover. Those flaws render the reasoning in the Decision insufficient if not absent, which in itself constitutes sufficient ground for annulment of the Decision.

93. The Commission disputes the correctness of those arguments. The Decision contains clear grounds with regard to the liability of Akzo Nobel at recitals 172 to 175. So far as the fine imposed on Akzo Nobel Functional Chemicals is concerned, the Commission submits that it was not bound to state reasons for its calculation, since the 10% ceiling was not exceeded. In any event, the Decision provided the applicants with all the information necessary to bring their action and to submit their arguments. In the Commission's submission, the third plea must therefore also be rejected in its entirety.

Findings of the Court

94. As regards the reasons for Akzo Nobel's liability, it must be borne in mind that the obligation to provide a statement of reasons is an essential procedural requirement, as distinct from the question whether the reasons given are correct, which goes to the substantive legality of the contested measure (see Case C17/99 France v Commission [2001] ECR I2481, paragraph 35 and the case-law cited).

95. In the present case, it must be held that the part of the present plea relating to the liability of Akzo Nobel goes to the correctness of the reasons for the decision, which have been examined in the context of the first plea (see paragraphs 67 to 85 above). In so far as that part of the present plea does not claim or substantiate a breach of essential procedural requirements, moreover, it is wholly unfounded in fact.

96. Furthermore, in so far as the present plea concerns the turnover of Akzo Nobel Functional Chemicals, it must be rejected on the ground that, as the turnover that could be lawfully taken into account was not exceeded (see paragraphs 90 and 91 above), the Commission was under no obligation to state reasons for the amount of the fine with particular regard to that company. The third plea must therefore be rejected.

97. It follows from the foregoing considerations that the application must be dismissed in its entirety.

Costs

98. Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. As the applicants have been unsuccessful, they must be ordered to pay the costs, in accordance with the form of order sought by the Commission.

Case C-446/05

Criminal proceedings

against

Ioannis Doulamis

(Reference for a preliminary ruling from the Tribunal de Première Instance de Bruxelles)

(Article 81 EC, read in conjunction with Article 10 EC – National legislation prohibiting advertising of dental care services)

Summary of the Judgment

Competition – Community rules – Obligations of the Member States
(Arts 3(1)(g) EC, 10 EC and 81 EC)

Article 81 EC, read in conjunction with Article 3(1)(g) EC and the second paragraph of Article 10 EC, does not preclude a national law which prohibits any person or dental care providers, in the context of professional services or a dental surgery, from engaging in advertising of any kind in the dental care sector. Articles 10 EC and 81 EC are infringed where a Member State requires or encourages the adoption of agreements, decisions or concerted practices contrary to Article 81 EC or reinforces their effects, or where it divests its own rules of the character of legislation by delegating to private economic operators responsibility for taking decisions affecting the economic sphere. Such a law does not fall within any of the situations for the combined application of Articles 10 EC and 81 EC.

(see paras 20-21, 24, operative part)

Judgment of the Court (Second Chamber)
of 13 March 2008
Criminal proceedings against Ioannis Doulamis. Reference for a preliminary ruling: Tribunal de première instance de Bruxelles - Belgium. Article 81 EC, read in conjunction with Article 10 EC - National legislation prohibiting advertising of dental care services. Case C-446/05.

In Case C446/05,

REFERENCE for a preliminary ruling under Article 234 EC from the Tribunal de Première Instance de Bruxelles (Belgium), adjudicating on a criminal matter, made by decision of 7 December 2005, received at the Court on 14 December 2005, in the criminal proceedings against

Ioannis Doulamis,

intervening parties:

Union des Dentistes et Stomatologistes de Belgique (UPR),

Jean Totolidis,

THE COURT (Second Chamber),

composed of C.W.A. Timmermans, President of the Chamber, K. Schiemann, J. Makarczyk (Rapporteur), J.-C. Bonichot and C. Toader, Judges,

Advocate General: Y. Bot,

Registrar: R. Grass,

having regard to the written procedure,

after considering the observations submitted on behalf of:

- Mr. Doulamis, by E. Koeune, avocat,

- the Belgian Government, by A. Hubert, acting as Agent,

- the Italian Government, by I.M. Braguglia, acting as Agent, and P. Gentili, avvocato dello Stato,

- the Commission of the European Communities, by F. Arbault, O. Beynet and K. Mojzesowicz, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 22 November 2007,

gives the following

Judgment

1. The reference for a preliminary ruling concerns the interpretation of Article 81 EC, read in conjunction with Article 3(1)(g) EC and the second paragraph of Article 10 EC.

2. This reference was made in criminal proceedings brought against Mr Doulamis, a dental technician, for infringement of, first, legislation governing the exercise of the dental profession and the medical profession and, secondly, legislation governing advertising in dental care matters.

Legal context

3. Article 3 of the Law of 15 April 1958 on advertising in dental care matters (Moniteur belge of 5 May 1958, p. 3542) (the Law of 15 April 1958') imposes penalties on those who infringe Article 1 of that law, which is worded as follows:

No person may, whether directly or indirectly, engage in advertising of any kind with a view to treating or providing treatment, whether or not by a qualified person, in Belgium or abroad, for dental or oral ailments, lesions or abnormalities, by means, inter alia, of displays or signs, inscriptions or plaques liable to be misleading as to the lawful nature of the activity advertised, leaflets, circulars, handouts and brochures, via the media of the press, radio or the cinema, by conferring or promising to confer benefits of any kind such as discounts or the provision of free transport for patients, or through the intermediary of canvassers or other such intermediaries.

The act on the part of mutual clinics and hospitals of informing their members of the dates and times of consultations, the names of those holding consultations and any changes to these shall not constitute advertising for the purposes of this article.'

The dispute in the main proceedings and the question referred for a preliminary ruling

4. It is apparent from the order for reference that Mr Doulamis is charged, inter alia, with having placed advertisements in a telephone directory for the John Doulamis Dental Laboratory' and the John Doulamis Dental Clinic', which is prohibited under the Law of 15 April 1958. The first advertising insert was published in the dental laboratories section and the second in the dental clinics section. Those inserts contained factual information, such as the services provided, the address, telephone number and opening hours of the two establishments.

5. Before the national court, Mr Doulamis submitted that advertising is an indispensable instrument for free economic competition. Thus, having invoked the combined provisions of Articles 10 EC and 81 EC, he relied on the judgment in Case 267/86 Van Eycke [1988] ECR 4769 to assert that, in view of the obligation upon the Member States not to introduce or maintain in force measures which may render ineffective the competition rules applicable to undertakings, that part of the criminal proceedings brought against him which relate to advertising in health care matters are unfounded.

6. Mr Doulamis maintained that, in view of the activities in which he is engaged, the dental clinic of which he is the proprietor meets the criteria for constituting an undertaking' for the purpose of Article 81 EC, which applies to members of the liberal professions. The national court is inclined to the view that the defendant was engaged in the supply of professional services and in the capacity of operator and proprietor of a dental clinic.

7. The Tribunal de Première Instance de Bruxelles states that Article 3(1)(g), the second paragraph of Article 10 EC and Article 81 EC, read in conjunction, would appear to suggest that a Member State cannot introduce or maintain in force measures likely to undermine the effectiveness of competition rules applicable to undertakings.

8. In that connection, it states that the possibility that the provisions in the Law of 15 April 1958 are liable to undermine free trade between the Member States, in so far as they may jeopardise the attainment of the objectives of a single market between those States, cannot be excluded.

9. According to the national court, which refers in that regard to point 89 of the Opinion of Advocate General Jacobs in the case which gave rise to the judgment in Joined Cases C-180/98 to C-184/98 Pavlov and Others [2000] ECR I6451, owing to the heterogeneity of the professions and the specificities of the market in which they operate, it is necessary to assess, on a case by case basis, whether a restriction of conduct leads in fact on the market in issue to a restriction on competition within the meaning of Article 81 EC, when considered in the light of other Treaty provisions, such as Article 152 EC and Article 153 EC on the protection of public health and consumer protection, respectively.

10. Lastly, the national court observes that it is apparent from the Report of the Commission of the European Communities of 9 February 2004 on Competition in Professional Services [COM(2004)

83 final] that restrictions on advertising in that sector constitute interference with free competition.

11. In those circumstances, the Tribunal de Première Instance de Bruxelles decided to stay the proceedings and to refer the following question to the Court for a preliminary ruling:

Must Article 81 EC, read in conjunction with Article 3(1)(g) EC and the second paragraph of Article 10 EC, be interpreted as precluding a national law - in the present case the Law of 15 April 1958 - which prohibits (any person or) dental care providers, in the context of professional services or a dental surgery, from engaging in advertising of any kind, whether directly or indirectly, in the dental care sector?'

The question referred for a preliminary ruling

Admissibility

12. The Belgian and Italian Governments express doubts as to the admissibility of the present request for a preliminary ruling.

13. In that regard, it must be borne in mind that, in accordance with settled case-law, in the context of the cooperation between the Court of Justice and the national courts under Article 234 EC, it is solely for the national court, before which the dispute has been brought and which must assume responsibility for the subsequent judicial decision, to determine in the light of the particular circumstances of the case both the need for a preliminary ruling in order to enable it to deliver judgment and the relevance of the questions which it submits to the Court. Consequently, where the questions submitted for a preliminary ruling concern the interpretation of Community law, the Court is, in principle, bound to give a ruling (see Case C-379/98 PreussenElektra [2001] ECR I2099, paragraph 38, and Case C-35/99 Arduino [2002] ECR I-1529, paragraph 24).

14. Nevertheless, in exceptional circumstances, the Court can examine the conditions in which the case was referred to it by the national court, in order to assess whether it has jurisdiction. The Court may refuse to rule on a question referred for a preliminary ruling by a national court only where it is quite obvious that the interpretation of Community law that is sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, Arduino , paragraph 25, and Case C-425/06 Part Service [2008] ECR I0000, paragraph 34).

15. However, none of those conditions is satisfied in this case.

16. It must be noted that the order for reference defines the national factual and legislative context in which the question referred arises. Moreover, the referring court has set out the precise reasons why it was unsure as to the interpretation of Community law and why it considered it necessary to refer questions to the Court for a preliminary ruling.

17. The reference for a preliminary ruling from the Tribunal de Première Instance de Bruxelles is therefore admissible.

Substance

18. By its question, the national court asks, in essence, whether Article 81 EC, read in conjunction with Article 3(1)(g) EC and the second paragraph of Article 10 EC, preclude a national law, such as the Law of 15 April 1958, which prohibits any person or dental care providers, in the context of professional services or a dental surgery, from engaging in advertising of any kind in the dental care sector, in so far as such a prohibition is liable to constitute interference with free competition.

19. According to settled case-law, although it is true that Articles 81 EC and 82 EC are, in themselves, concerned solely with the conduct of undertakings and not with laws or regulations emanating

from Member States, those articles, read in conjunction with Article 10 EC, which lays down a duty to cooperate, none the less require Member States not to introduce or maintain in force measures, even of a legislative or regulatory nature, which may render ineffective the competition rules applicable to undertakings (see Joined Cases C94/04 and C202/04 Cipolla and Others [2006] ECR I11421, paragraph 46).

20. The Court has held that Articles 10 EC and 81 EC are infringed where a Member State requires or encourages the adoption of agreements, decisions or concerted practices contrary to Article 81 EC or reinforces their effects, or where it divests its own rules of the character of legislation by delegating to private economic operators responsibility for taking decisions affecting the economic sphere (Cipolla and Others , paragraph 47).

21. It must be noted that a law such as the Law of 15 April 1958, in so far as it prohibits dental care providers from advertising, does not fall within any of the situations for the combined application of Articles 10 EC and 81 EC.

22. As the Advocate General stated at point 71 of his Opinion, there is no evidence in the case in the main proceedings to show that the Law of 15 April 1958 encourages, reinforces or codifies concerted practices or decisions by undertakings. Nor is there anything in the order for reference to suggest that the law at issue has been divested of the character of legislation in that the Member State in question has delegated to private economic operators responsibility for taking decisions affecting the economic sphere.

23. Lastly, even if it were possible to classify Mr Doulamis, in his capacity as proprietor of a dental clinic, as an undertaking' for the purpose of Article 81 EC, as interpreted by the Court (see, to that effect, Case C41/90 Höfner and Elser [1991] ECR I1979, paragraph 21), it does not follow from the order for reference that what is at issue here is any kind of agreement between undertakings, decision by associations of undertakings or concerted practice which may affect trade between the Member States, the object or effect of which is to prevent, restrict or distort competition within the common market.

24. The answer to the question referred must therefore be that Article 81 EC, read in conjunction with Article 3(1)(g) EC and the second paragraph of Article 10 EC, does not preclude a national law, such as the Law of 15 April 1958, which prohibits any person or dental care providers, in the context of professional services or a dental surgery, from engaging in advertising of any kind in the dental care sector.

Costs

25. Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the national court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Second Chamber) hereby rules:

Article 81 EC, read in conjunction with Article 3(1)(g) EC and the second paragraph of Article 10 EC, does not preclude a national law, such as the Law of 15 April 1958, which prohibits any person or dental care providers, in the context of professional services or a dental surgery, from engaging in advertising of any kind in the dental care sector.

2. Competition - Community rules - Obligations of the Member States

(Arts 10 EC, 81 EC and 82 EC)

3. Freedom to provide services - Treaty provisions - Field of application

(Art. 49 EC)

4. Freedom to provide services - Restrictions

(Art. 49 EC)

1. Where, in a reference for a preliminary ruling, all aspects of the main proceedings before the national court are confined within a single Member State, a reply might none the less be useful to the national court, in particular if its national law were to require that a national of that Member State must be allowed to enjoy the same rights as those which a national of another Member State would derive from Community law in the same situation.

(see para. 30)

2. Although it is true that Articles 81 EC and 82 EC are, in themselves, concerned solely with the conduct of undertakings and not with laws or regulations emanating from Member States, those articles, read in conjunction with Article 10 EC, which lays down a duty to cooperate, none the less require Member States not to introduce or maintain in force measures, even of a legislative or regulatory nature, which may render ineffective the competition rules applicable to undertakings. Articles 10 EC and 81 EC are infringed where a Member State requires or encourages the adoption of agreements, decisions or concerted practices contrary to Article 81 EC or reinforces their effects, or where it divests its own rules of the character of legislation by delegating to private economic operators responsibility for taking decisions affecting the economic sphere.

In that connection, the view cannot be taken that a Member State has delegated to private economic operators responsibility for taking decisions affecting the economic sphere, which would have the effect of depriving the provisions of the character of legislation where, first, the trade organisation concerned is responsible only for producing a draft scale which, as such, is not binding since the Minister has the power to have the draft amended by that organisation and, secondly, the national legislation provides that fees are to be settled by the courts on the basis of the criteria referred to by that same legislation and, moreover, in certain exceptional circumstances and by duly reasoned decision, the court may depart from the maximum and minimum limits fixed. In those circumstances, the Member State is not open to the criticism that it requires or encourages the adoption of agreements, decisions or concerted practices contrary to Article 81 EC of the Treaty or reinforces their effects, or requires or encourages abuses of a dominant position contrary to Article 82 EC or reinforces the effects of such abuses.

It follows that Articles 10 EC , 81 EC and 82 EC do not preclude a Member State from adopting a legislative measure which approves, on the basis of a draft produced by a professional body of members of the Bar, a scale fixing a minimum fee for members of the legal profession from which there can generally be no derogation in respect of either services reserved to those members or those, such as out-of-court services, which may also be provided by any other economic operator not subject to that scale.

(see paras 46-47, 50-54, operative part 1)

3. Article 49 EC requires not only the elimination of all discrimination on grounds of nationality against providers of services who are established in another Member State but also the abolition of any restriction, even if it applies without distinction to national providers of services and to those of other Member States, which is liable to prohibit or further impede the activities of a provider of services established in another Member State where he lawfully provides similar services.

Furthermore, Article 49 EC precludes the application of any national rules which have the effect of making the provision of services between Member States more difficult than the provision of services purely within one Member State.

(see paras 56-57)

4. A Member State's prohibition of derogation, by agreement, from the minimum fees set by a scale of lawyers' fees for services which are (a) court services and (b) reserved to lawyers is liable to render access to the legal services market in that Member State more difficult for lawyers established in another Member State and therefore is likely to restrict the exercise of their activities providing services in that Member State. That prohibition therefore amounts to a restriction within the meaning of Article 49 EC.

That prohibition deprives lawyers established in another Member State of the possibility, by requesting fees lower than those set by the scale, of competing more effectively with lawyers established on a stable basis in the Member State concerned and who therefore have greater opportunities for winning clients than lawyers established abroad.

Likewise, the prohibition thus laid down limits the choice of service recipients in that Member State, because they cannot resort to the services of lawyers established in other Member States who would offer their services in that Member State at a lower rate than the minimum fees set by the scale.

However, such a prohibition may be justified where it serves overriding requirements relating to the public interest, is suitable for securing the attainment of the objective which it pursues and does not go beyond what is necessary in order to attain it.

In that respect, first, the protection of consumers, in particular recipients of the legal services provided by persons concerned in the administration of justice and, secondly, the safeguarding of the proper administration of justice, are objectives to be included among those which may be regarded as overriding requirements relating to the public interest capable of justifying a restriction on freedom to provide services, on condition, first, that the national measure at issue in the main proceedings is suitable for securing the attainment of the objective pursued and, secondly, it does not go beyond what is necessary in order to attain that objective.

It is a matter for the national court to decide whether the restriction on freedom to provide services introduced by that national legislation fulfils those conditions. For that purpose, it is for that court to take account of the factors set out in the following paragraphs.

Thus, it must be determined, in particular, whether there is a correlation between the level of fees and the quality of the services provided by lawyers and whether, in particular, the setting of such minimum fees constitutes an appropriate measure for attaining the objectives pursued, namely the protection of consumers and the proper administration of justice.

Although it is true that a scale imposing minimum fees cannot prevent members of the profession from offering services of mediocre quality, it is conceivable that such a scale does serve to prevent lawyers, in the context of a market which is characterised by an extremely large number of lawyers who are enrolled and practising, from being encouraged to compete against each other by possibly offering services at a discount, with the risk of deterioration in the quality of the services provided.

Account must also be taken of the specific features both of the market in question and the services in question and, in particular, of the fact that, in the field of lawyers' services, there is usually an asymmetry of information between client-consumers' and lawyers. Lawyers display a high level of technical knowledge which consumers may not have and the latter therefore find it difficult to judge the quality of the services provided to them.

However, the national court will have to determine whether professional rules in respect of lawyers, in particular rules relating to organisation, qualifications, professional ethics, supervision and liability, suffice in themselves to attain the objectives of the protection of consumers and the proper administration of justice.

It follows that legislation containing an absolute prohibition of derogation, by agreement, from the minimum fees set by a scale of lawyers' fees, for services which are (a) court services and (b) reserved to lawyers constitutes a restriction on freedom to provide services laid down in Article 49 EC. It is for the national court to determine whether such legislation, in the light of the detailed rules for its application, actually serves the objectives of protection of consumers and the proper administration of justice which might justify it and whether the restrictions it imposes do not appear disproportionate having regard to those objectives.

(see paras 58-61, 64-70, operative part 2)

Roberto Meloni,

THE COURT (Grand Chamber),

composed of V. Skouris, President, P. Jann, C. W. A. Timmermans, A. Rosas, R. Schintgen, J. Kluka, Presidents of Chambers, J. Malenovsku, U. Lhmus (Rapporteur) and E. Levits, Judges,

Advocate General: M. Poiares Maduro,

Registrar: L. Hewlett, Principal Administrator, having regard to the written procedure and further to the hearing on 25 October 2005,

after considering the observations submitted on behalf of:

- Mr Cipolla, by G. Cipolla, avvocatessa,

- Mr Meloni, by S. Sabbatini, D. Condello, G. Scassellati Sforzolini and G. Rizza, avvocati,

- the Italian Government, by I.M. Braguglia, acting as Agent, and by P. Gentili, avvocato dello Stato,

- the German Government, by A. Dittrich, C.D. Quassowski and M. Lumma, acting as Agents,

- the Austrian Government, by E. Riedl, acting as Agent,

- the Commission of the European Communities, by E. Traversa, R. Wainwright, F. Amato and K. Mojzesowicz, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 1 February 2006,

gives the following

Judgment

On those grounds, the Court (Grand Chamber) hereby rules:

1. Articles 10 EC , 81 EC and 82 EC do not preclude a Member State from adopting a legislative measure which approves, on the basis of a draft produced by a professional body of lawyers such as the Consiglio nazionale forense (National Lawyers' Council), a scale fixing a minimum fee for members of the legal profession from which there can generally be no derogation in respect of either services reserved to those members or those, such as out-of-court services, which may also be provided by any other economic operator not subject to that scale.

2. Legislation containing an absolute prohibition of derogation, by agreement, from the minimum fees set by a scale of lawyers' fees, such as that at issue in the main proceedings, for services which are (a) court services and (b) reserved to lawyers constitutes a restriction on freedom to provide services laid down in Article 49 EC. It is for the national court to determine whether such legislation, in the light of the detailed rules for its application, actually serves the objectives of protection of consumers and the proper administration of justice which might justify it and whether the restrictions it imposes do not appear disproportionate having regard to those objectives.

1. These references for a preliminary ruling concern the interpretation of Articles 10 EC, 49 EC, 81 EC and 82 EC.

2. The references were made in the course of proceedings between two lawyers and their respective clients in respect of the payment of fees.

Relevant provisions

3. Royal Decree-Law No 1578 of 27 November 1933 (GURI No 281 of 5 December 1933), converted into Law No 36 of 22 January 1934 (GURI No 24 of 30 January 1934), as subsequently amended (the Royal Decree-Law'), provides that the Consiglio Nazionale Forense (National Lawyers' Council, the CNF') established under the auspices of the Minister of Justice, is to be composed of lawyers elected by their fellow members, with one representative for each appeal court district.

4. Article 57 of the Royal Decree-Law provides that the criteria for determining fees and emoluments payable to lawyers and procuratori' in respect of civil and criminal proceedings and out-of-court work are to be set every two years by decision of the CNF. When the CNF has decided upon the

scale of lawyers' fees (the scale'), it must be approved under Italian legislation by the Minister of Justice after he has obtained the opinion of the Comitato Interministeriale dei Prezzi (Interministerial Committee on Prices, the CIP) and consulted the Consiglio di Stato (Council of State).

5. Article 58 of the Royal Decree-Law provides that those criteria are to be based on the monetary value of disputes, the level of the court seised and, in criminal matters, the duration of the proceedings. For each procedural step, or series of steps, the scale sets maximum and minimum fees.

6. Article 60 of the Royal Decree-Law provides that fees are to be settled by the court on the basis of those criteria, having regard to the seriousness and number of the issues dealt with. That settlement must remain within the maximum and minimum limits set beforehand. However, in cases of exceptional importance, taking account of the special nature of the disputes and where the inherent value of the service justifies it, the court may exceed the maximum limit set by the scale. Conversely, where the case is easy to deal with, the court may fix fees below the minimum limit. In both cases, the court must give reasons for its decision.

7. Article 2233 of the Italian Civil Code provides, generally, that remuneration under a contract for provision of services which has not been agreed between the parties and cannot be determined by reference to the applicable scales or custom and practice is to be determined by the court after it has heard the opinion of the professional association to which the provider of services belongs. However, as regards the profession of lawyer, Article 24 of Law No 794 of 13 June 1942 (GURI No 172 of 23 July 1942) provides that derogation may not be made from the minimum fees set by the scale for lawyers' court services and that any agreement to the contrary is void. According to the case-law of the Corte suprema di cassazione (Court of Cassation), that rule also applies to lawyers' out-of-court services.

8. The scale at issue in Case C-202/04 was set by decision of the CNF of 12 June 1993, as amended on 29 September 1994, and was approved by Ministerial Decree No 585 of 5 October 1994 (GURI No 247 of 21 October 1994). Article 2 of that decree provides that the increases set out in the tables in the annex shall apply with effect from 1 October 1994 as to 50%, and as to the remaining 50% with effect from 1 April 1995'. That staggered increase originated in the comments made by the CIP, which had taken particular account of the rise in inflation. Before approving the scale, the Minister of Justice had consulted the CNF a second time, which had accepted the proposal to postpone the application of the scale at its meeting of 29 September 1994.

9. The scale comprises three categories of remuneration: (a) fees, disbursements and emoluments in respect of lawyers' court services in civil and administrative proceedings; (b) fees in respect of legal services in criminal proceedings; (c) fees and emoluments in respect of out-of-court work.

The disputes in the main proceedings and the questions referred for a preliminary ruling

Case C94/04

10. Mrs Fazari (née Portolese) and two other owners of adjoining land located in the municipality of Moncalieri appointed a lawyer, Federico Cipolla, to bring proceedings against that municipality for compensation for the emergency occupation of that land which was ordered solely by decision of the mayor of Moncalieri and was not followed by an expropriation order. Mr Cipolla drew up three separate summonses and registered three actions against that municipality with the Tribunale di Torino (Turin District Court).

11. The dispute was subsequently resolved by means of a settlement made on the initiative of one of the owners in question but without Mr Cipolla's involvement.

12. Mr Cipolla, who before drawing up and notifying the three summonses had received LIT 1 850 000 from each of the three applicants in the main proceedings, apparently as advance payment for

his professional services, issued Mrs Fazari with an invoice totalling LIT 4 125 000 covering his fees and various disbursements. Mrs Fazari refused to pay that sum. The ensuing dispute was brought before the Tribunale di Torino which, by judgment of 12 June 2003, took judicial notice of the payment of the sum of LIT 1 850 000 and rejected Mr Cipolla's demand for payment of LIT 4 125 000. Mr Cipolla appealed against that judgment before the Corte d'appello di Torino (Turin Court of Appeal) seeking, inter alia, application of the scale.

13. According to the decision of the national court, in the proceedings brought before that court the question arises whether, if the existence an agreement between the parties relating to the flat-rate remuneration of the lawyer is proved, that alleged agreement relating to the flat-rate sum of LIT 1 850 000, such an agreement ought, despite the Italian legislation, to be deemed valid on the ground that it would be contrary to the Community competition rules for it to be automatically replaced by a calculation of the lawyer's remuneration on the basis of the scale.

14. In addition, the national court notes that, if a professional who did not live in Italy supplied legal services to a recipient living in that Member State and the contract concerning those services was subject to Italian law, that provision of legal services would be subject to the absolute prohibition of derogation from the remuneration set by the scale. Therefore in that case the binding minimum amount would have to be applied. That prohibition would therefore have the consequence of hindering other lawyers' access to the Italian services market.

15. In those circumstances, the Corte d'appello di Torino decided to stay proceedings and refer the following questions to the Court for a preliminary ruling:

(1) Does the principle of competition under Community law, as set out in Articles 10 EC, 81 EC and 82 EC, also apply to the provision of legal services?

(2) Does that principle permit a lawyer's remuneration to be agreed between the parties, with binding effect?

(3) Does that principle preclude an absolute prohibition of derogation from the lawyers' fees?

(4) Does the principle of free movement of services, as laid down in Articles 10 EC and 49 EC, also apply to the provision of legal services?

(5) If so, is that principle compatible with the absolute prohibition of derogation from lawyers' fees?'

Case C-202/04

16. On the basis of an opinion from the lawyers' association and in accordance with the scale, Mr Meloni, a lawyer, sought and obtained an order that Ms Capodarte and Mr Macrino pay fees relating to certain out-of-court services he had provided to them concerning copyright, comprising inter alia oral opinions and letters to the opposing party's lawyer.

17. Ms Capodarte and Mr Macrini contested that order before the Tribunale di Roma (District Court of Rome), pleading inter alia that the fees demanded by Mr Meloni were disproportionate having regard to the importance of the case dealt with and the services actually performed by the latter.

18. In order to determine the amount of the fees payable to Mr Meloni for those services, the Tribunale di Roma considers that it must assess whether that scale, in so far as it applies to lawyers in respect of outofcourt work, is compatible with the rules of the EC Treaty, having regard in particular to the fact that the persons concerned did not have to appoint a lawyer in order to obtain the out-of-court services in question.

19. Accordingly, the Tribunale di Roma decided to stay the proceedings and refer the following

question to the Court for a preliminary ruling:

Do Articles 5 and 85 of the EC Treaty (now Articles 10 EC and 81 EC) preclude a Member State from adopting a law or regulation which approves, on the basis of a draft produced by a professional body of lawyers, a scale fixing minimum and maximum fees for members of the profession in respect of services rendered in connection with activities (so-called out-of-court work) that are not reserved to lawyers but may be performed by anyone?'

20. On account of the connection between the two main proceedings, they should be joined for the purposes of the judgment under Article 43 of the Rules of Procedure, read in conjunction with Article 103 of those Rules.

The questions referred to the Court

Admissibility

Case C-94/04

- Observations submitted to the Court

21. According to Mr Cipolla, the questions referred by the national court are inadmissible on the grounds that they are not relevant to the resolution of the dispute in the main proceedings and are hypothetical.

22. As regards the first plea of inadmissibility, Mr Cipolla maintains that the applicable national law does not require the national court to decide on the existence and lawfulness of an agreement between a lawyer and his client, contrary to what is stated in the decision making the reference. The absence of agreement between those parties and the description of the sum paid by the client as an advance payment' for professional services have become res judicata since they were not challenged on appeal.

23. As for the second plea of inadmissibility, Mr Cipolla claims that the validity of an agreement made between a lawyer and his client must be assessed only if it is shown that such an agreement exists. However, that is not the case here. Accordingly, the questions referred by the Corte d'appello di Torino should be treated in the same way as a request for an advisory opinion.

24. The German Government considers that since the facts at issue in the main proceedings do not include any transborder element, Article 49 EC does not apply. The Commission of the European Communities, for its part, relying on recent case-law of the Court, and takes the view that the reference for a preliminary ruling is admissible as it concerns the interpretation of Article 49 EC.

- The Court's answer

25. As regards Mr Cipolla's pleas of inadmissibility, it should be recalled that questions on the interpretation of Community law referred by a national court in the factual and legislative context which that court is responsible for defining and the accuracy of which is not a matter for the Court to determine, enjoy a presumption of relevance (see Case C300/01 Salzmann [2003] ECR I-4899, paragraphs 29 and 31). The Court may refuse to rule on a question referred by a national court only where it is quite obvious that the interpretation of Community law that is sought bears no relation to the actual facts of the main action or its purpose, where the problem is hypothetical, or where the Court does not have before it the factual or legal material necessary to give a useful answer to the questions submitted to it (see, inter alia, Case C-379/98 PreussenElektra [2001] ECR I-2099, paragraph 39, and Case C-466/04 Acereda Herrera [2006] ECR I-0000, paragraph 48).

26. That presumption of relevance cannot be rebutted by the simple fact that one of the parties

to the main proceedings contests certain facts, such as those set out in paragraph 22 of this judgment, the accuracy of which is not a matter for the Court to determine and on which the delimitation of the subject-matter of those proceedings depend.

27. Accordingly, it must be considered that, as is clear from the decision making the reference, the main proceedings concern whether there was an agreement concluded between a lawyer and his clients relating to the lawyer's flat-rate remuneration and whether it should be deemed valid on the ground that it would be contrary to the Community competition rules for it to be automatically replaced by a calculation of the lawyer's remuneration on the basis of the scale in force in the Member State concerned.

28. In that regard, it must be stated that it is not manifest that the interpretation of Community law sought by the national court bears no relation to the actual facts of the main action or its purpose or that the questions on the interpretation of those rules are hypothetical.

29. Accordingly, even if the existence of the agreement at issue in the main proceedings is not established, it is conceivable that the interpretation of Community law sought by the national court, which may make it possible for the latter to assess the compatibility of the scale with the competition rules introduced by the Treaty, will be of use to that court for the purpose of deciding the dispute before it. That dispute relates principally to the settlement of lawyer's fees which, as stated in paragraph 6 of this judgment, is to be decided by the court and, subject to certain exceptions, within the maximum and minimum limits set beforehand by the Minister of Justice.

30. Finally, as regards particularly the questions concerning the interpretation of Article 49 EC, although it is common ground that all aspects of the main proceedings before the national court are confined within a single Member State, a reply might none the less be useful to the national court, in particular if its national law were to require, in proceedings such as those in this case, that an Italian national must be allowed to enjoy the same rights as those which a national of another Member State would derive from Community law in the same situation (see, in particular, Case C-451/03 Servizi Ausiliari Dottori Commercialisti [2006] ECR I-2941, paragraph 29).

31. It must therefore be considered whether the provisions of the Treaty on freedom to provide services, of which the interpretation is sought by that court, preclude the application of national legislation law such as that at issue in the main proceedings in so far as it applies to persons who live in Member States other than the Italian Republic.

32. Having regard to the foregoing, it must be held that the reference for a preliminary ruling is admissible.

Case C-202/04

- Observations submitted to the Court

33. Mr Meloni pleads the inadmissibility of the question referred by the Tribunale di Roma on the ground that there is no link between that question and the outcome of the proceedings before that court, which concerns the application of the scale to the provision of out-of-court services by a lawyer enrolled at the Bar.

34. In addition, the national court did not indicate the precise reasons for its uncertainty as to the interpretation of Community law.

35. The Italian Government submits that, when the parties have not fixed the fees by contract and the client unilaterally challenges the fees invoiced by the professional, as in the dispute in the main proceedings, under Italian law it is for the court before which the dispute has been brought to set those fees as it sees fit. Accordingly, the question of the compatibility of the scale in respect of out-of-court services provided by lawyers with Article 10 EC and 81 EC is

irrelevant for the purposes of the outcome of the main proceedings.

36. That government also challenges the relevance of the question referred by the national court in the light of the fact that there is no anti-competitive practice in the case in the main proceedings, either in establishing the scale or on account of the conduct of operators.

- The Court's answer

37. In respect of the first plea of inadmissibility relied on by Mr Meloni, it should be noted that the dispute relates to the application of the scale to out-of-court services provided by a lawyer enrolled at the Bar. By its question, the national court asks whether the competition rules preclude such application where that same scale does not apply to out-of-court services provided by a person not enrolled at the Bar. In those circumstances, the presumption of relevance attaching to the questions on the interpretation of Community law referred by the national court cannot be rebutted.

38. The plea of inadmissibility alleging that the national court did not indicate the precise reasons for its uncertainty as to the interpretation of Community law cannot succeed either. According to the case-law of the Court, it is essential that the national court should give at the very least some explanation of the reasons for the choice of the Community provisions which it requires to be interpreted and on the link it establishes between those provisions and the national legislation applicable to the dispute (see, inter alia, order in Case C-116/00 Laguillaumie [2000] ECR I-4979, paragraph 16). The decision making the reference fully satisfies such a requirement, as moreover the Advocate General pointed out in paragraph 24 of his Opinion.

39. As regards the first plea of inadmissibility put forward by the Italian Government, the national court takes as its premise that, in the context of the dispute before it, under Italian law it must set the fee payable to the lawyer by reference to the scale applicable to lawyers in respect of out-of-court work.

40. As is recalled at paragraph 25 of this judgment, it is not a matter for the Court to determine the accuracy of the factual and legislative context defined by the national court and in which the questions on the interpretation of Community law which it submits to the Court arise.

41. In those circumstances, the presumption of relevance attaching to the question referred to the Court has not been rebutted.

42. As regards the second plea of inadmissibility raised by the Italian Government, it should be recalled that, as was stated in paragraph 37 of this judgment, by its question the national court asks whether the competition rules established by the Treaty preclude application of the scale in the dispute before it. Accordingly, whether there is an anti-competitive practice in the case in the main proceedings is part of the very subject-matter of the question of interpretation referred by the national court and cannot be regarded as irrelevant in this case.

43. It follows that the reference for a preliminary ruling from the Tribunale di Roma is admissible.

Substance

The first three questions referred in Case C-94/04 and the question referred in Case C-202/04

44. By those questions, which can conveniently be dealt with together by way of a reformulation which takes account of the relevant aspects of the two cases and in particular of the fact that, in the disputes in the main proceedings, minimum fees are at issue, the national courts ask, essentially, whether Articles 10 EC, 81 EC and 82 EC preclude a Member State from adopting a legislative measure which approves, on the basis of a draft produced by a professional body of lawyers such as the CNF, a scale fixing a minimum fee for members of the legal profession from which there

can generally be no derogation in respect of either services reserved to those members or those such as out-of-court services which may also be provided by any other economic operator not subject to that scale.

45. As a preliminary point, it should be noted that, since the scale extends to the whole of the territory of a Member State, it may affect trade between Member States within the meaning of Articles 81(1) EC and 82 EC (see, to that effect, Case 8/72 Vereeniging van Cementhandelaren v Commission [1972] ECR 977, paragraph 29; Case C-179/90 Merci convenzionali porto di Genova [1991] ECR I-5889, paragraphs 14 and 15; and Case C-35/99 Arduino [2002] ECR I-1529, paragraph 33).

46. According to settled case-law, although it is true that Articles 81 EC and 82 EC are, in themselves, concerned solely with the conduct of undertakings and not with laws or regulations emanating from Member States, those articles, read in conjunction with Article 10 EC, which lays down a duty to cooperate, none the less require Member States not to introduce or maintain in force measures, even of a legislative or regulatory nature, which may render ineffective the competition rules applicable to undertakings (see, in particular, the order in Case C250/03 Mauri [2005] ECR I-1267, paragraph 29, and the case-law cited).

47. The Court has held, in particular, that Articles 10 EC and 81 EC are infringed where a Member State requires or encourages the adoption of agreements, decisions or concerted practices contrary to Article 81 EC or reinforces their effects, or where it divests its own rules of the character of legislation by delegating to private economic operators responsibility for taking decisions affecting the economic sphere (order in Mauri , paragraph 30, and the case-law cited).

48. In that respect, the fact that a Member State requires a professional organisation composed of lawyers, such as the CNF, to produce a draft scale of fees does not, in the circumstances specific to the cases in the main proceedings, appear to establish that that State has divested the scale finally adopted of its character of legislation by delegating to lawyers responsibility for taking decisions concerning them.

49. Although the national legislation at issue in the main proceedings does not contain either procedural arrangements or substantive requirements capable of ensuring with reasonable probability that, when producing the draft scale, the CNF conducts itself like an arm of the State working in the public interest, it does not appear that the Italian State has waived its power to make decisions of last resort or to review implementation of that scale (see Arduino , paragraphs 39 and 40).

50. First, the CNF is responsible only for producing a draft scale which, as such, is not binding. Without the Minister of Justice's approval, the draft scale does not enter into force and the earlier approved scale remains applicable. Accordingly, that Minister has the power to have the draft amended by the CNF. Furthermore, the Minister is assisted by two public bodies, the Consiglio di Stato and the CIP, whose opinions he must obtain before the scale can be approved (see Arduino, paragraph 41).

51. Secondly, Article 60 of the Royal Decree-Law provides that fees are to be settled by the courts on the basis of the criteria referred to in Article 57 of that decree-law, having regard to the seriousness and number of the issues dealt with. Moreover, in certain exceptional circumstances and by duly reasoned decision, the court may depart from the maximum and minimum limits fixed pursuant to Article 58 of the Royal Decree-Law (see, to that effect, Arduino , paragraph 42).

52. In those circumstances, the view cannot be taken that the Italian State has waived its power by delegating to private economic operators responsibility for taking decisions affecting the economic sphere, which would have the effect of depriving the provisions at issue in the main proceedings of the character of legislation (see Arduino , paragraph 43, and the order in Mauri , paragraph

36.)

53. Nor, for the reasons set out in paragraphs 50 and 51 of this judgment, is the Italian State open to the criticism that it requires or encourages the adoption by the CNF of agreements, decisions or concerted practices contrary to Article 81 EC of the Treaty or reinforces their effects, or requires or encourages abuses of a dominant position contrary to Article 82 EC or reinforces the effects of such abuses (see, to that effect, Arduino , paragraph 43, and the order in Mauri , paragraph 37).

54. The answer to the first three questions referred to the Court in Case C94/04 and to the question referred in Case C-202/04 must be that Articles 10 EC, 81 EC and 82 EC do not preclude a Member State from adopting a legislative measure which approves, on the basis of a draft produced by a professional body of lawyers such as the CNF, a scale fixing a minimum fee for members of the legal profession from which there can generally be no derogation in respect of either services reserved to those members or those such as out-of-court services which may also be provided by any other economic operator not subject to that scale.

The fourth and fifth questions referred in Case C-94/04

55. By those two questions, the Corte d'appello di Torino asks, essentially, whether Article 49 EC precludes legislation containing an absolute prohibition of derogation, by agreement, from the minimum fees set by a scale, such as that at issue in the main proceedings, for services which are (a) court services and (b) reserved to lawyers.

56. Article 49 EC requires not only the elimination of all discrimination on grounds of nationality against providers of services who are established in another Member State but also the abolition of any restriction, even if it applies without distinction to national providers of services and to those of other Member States, which is liable to prohibit or further impede the activities of a provider of services established in another Member State where he lawfully provides similar services (see, in particular, Case C17/00 De Coster [2001] ECR I-9445, paragraph 29, and Joined Cases C544/03 and C545/03 Mobistar and Belgacom Mobile [2005] ECR I7723, paragraph 29).

57. Furthermore, the Court has already held that Article 49 EC precludes the application of any national rules which have the effect of making the provision of services between Member States more difficult than the provision of services purely within one Member State (see De Coster , paragraph 30, and the case-law cited, and Mobistar and Belgacom Mobile , paragraph 30).

58. The prohibition of derogation, by agreement, from the minimum fees set by a scale such as that laid down by the Italian legislation is liable to render access to the Italian legal services market more difficult for lawyers established in a Member State other than the Italian Republic and therefore is likely to restrict the exercise of their activities providing services in that Member State. That prohibition therefore amounts to a restriction within the meaning of Article 49 EC.

59. That prohibition deprives lawyers established in a Member State other than the Italian Republic of the possibility, by requesting fees lower than those set by the scale, of competing more effectively with lawyers established on a stable basis in the Member State concerned and who therefore have greater opportunities for winning clients than lawyers established abroad (see, by analogy, Case C-442/02 CaixaBank France [2004] ECR I-8961, paragraph 13).

60. Likewise, the prohibition thus laid down limits the choice of service recipients in Italy, because they cannot resort to the services of lawyers established in other Member States who would offer their services in Italy at a lower rate than the minimum fees set by the scale.

61. However, such a prohibition may be justified where it serves overriding requirements relating to the public interest, is suitable for securing the attainment of the objective which it pursues

and does not go beyond what is necessary in order to attain it (see, inter alia, Case C-398/95 SETTG [1997] ECR I-3091, paragraph 21, and Servizi Ausiliari Dottoro Commercialisti , paragraph 37).

62. In order to justify the restriction on freedom to provide services which stems from the prohibition at issue, the Italian Government submits that excessive competition between lawyers might lead to price competition which would result in a deterioration in the quality of the services provided to the detriment of consumers, in particular as individuals in need of quality advice in court proceedings.

63. According to the Commission, no causal link has been established between the setting of minimum levels of fees and a high qualitative standard of professional services provided by lawyers. In actual fact, quasi-legislative measures such as, inter alia, rules on access to the legal profession, disciplinary rules serving to ensure compliance with professional ethics and rules on civil liability have, by maintaining a high qualitative standard for the services provided by such professionals which those measures guarantee, a direct relationship of cause and effect with the protection of lawyers' clients and the proper working of the administration of justice.

64. In that respect, it must be pointed out that, first, the protection of consumers, in particular recipients of the legal services provided by persons concerned in the administration of justice and, secondly, the safeguarding of the proper administration of justice, are objectives to be included among those which may be regarded as overriding requirements relating to the public interest capable of justifying a restriction on freedom to provide services (see, to that effect, Case C3/95 Reisebüro Broede [1996] ECR I-6511, paragraph 31, and the case-law cited, and Case C-124/97 Läärä and Others [1999] ECR I-6067, paragraph 33), on condition, first, that the national measure at issue in the main proceedings is suitable for securing the attainment of the objective pursued and, secondly, it does not go beyond what is necessary in order to attain that objective.

65. It is a matter for the national court to decide whether, in the main proceedings, the restriction on freedom to provide services introduced by that national legislation fulfils those conditions. For that purpose, it is for that court to take account of the factors set out in the following paragraphs.

66. Thus, it must be determined, in particular, whether there is a correlation between the level of fees and the quality of the services provided by lawyers and whether, in particular, the setting of such minimum fees constitutes an appropriate measure for attaining the objectives pursued, namely the protection of consumers and the proper administration of justice.

67. Although it is true that a scale imposing minimum fees cannot prevent members of the profession from offering services of mediocre quality, it is conceivable that such a scale does serve to prevent lawyers, in a context such as that of the Italian market which, as indicated in the decision making the reference, is characterised by an extremely large number of lawyers who are enrolled and practising, from being encouraged to compete against each other by possibly offering services at a discount, with the risk of deterioration in the quality of the services provided.

68. Account must also be taken of the specific features both of the market in question, as noted in the preceding paragraph, and the services in question and, in particular, of the fact that, in the field of lawyers' services, there is usually an asymmetry of information between client-consumers' and lawyers. Lawyers display a high level of technical knowledge which consumers may not have and the latter therefore find it difficult to judge the quality of the services provided to them (see, in particular, the Report on Competition in Professional Services in Communication from the Commission of 9 February 2004 (COM(2004)83 final, p. 10)).

69. However, the national court will have to determine whether professional rules in respect of lawyers, in particular rules relating to organisation, qualifications, professional ethics, supervision and liability, suffice in themselves to attain the objectives of the protection of consumers and

the proper administration of justice.

70. Having regard to the foregoing, the answer to the fourth and fifth questions referred in Case C-94/04 must be that legislation containing an absolute prohibition of derogation, by agreement, from the minimum fees set by a scale of lawyer's fees such as that at issue in the main proceedings for services which are (a) court services and (b) reserved to lawyers constitutes a restriction on freedom to provide services laid down in Article 49 EC. It is for the national court to determine whether such legislation, in the light of the detailed rules for its application, actually serves the objectives of protection of consumers and the proper administration of justice which might justify it and whether the restrictions it imposes do not appear disproportionate in the light of those objectives.

Costs

71. Since these proceedings are, for the parties to the main proceedings, a step in the actions before the national courts, the decisions on costs are a matter for those courts. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

Affaire C-49/07

Motosykletistiki Omospondia Ellados NPID (MOTOE)

contre

Elliniko Dimosio

(demande de décision préjudicielle, introduite par le Dioikitiko Efeteio Athinon)

«Articles 82 CE et 86 CE — Notion d'‘entreprise’ — Association à but non lucratif représentant, en Grèce, la Fédération internationale de motocyclisme — Notion d'‘activité économique’ — Droit spécial en vertu de la loi de donner un avis conforme sur les demandes d'autorisation présentées en vue de l'organisation de courses de motocycles — Exercice en parallèle d'activités telles que l'organisation de courses de motocycles ainsi que la passation de contrats de parrainage, de publicité et d'assurance»

Sommaire de l'arrêt

1. *Concurrence — Règles communautaires — Entreprise — Notion*

(Art. 81 CE et 82 CE)

2. *Concurrence — Entreprises publiques et entreprises auxquelles les États membres accordent des droits spéciaux ou exclusifs*

(Art. 82 CE et 86 CE)

1. Une personne morale dont les activités consistent à organiser des compétitions sportives et à conclure dans ce cadre des contrats de parrainage, de publicité et d'assurance, destinés à exploiter commercialement ces compétitions, et constituent pour cette entité une source de revenus, doit être qualifiée d'entreprise au sens du droit communautaire de la concurrence. La circonstance qu'une activité économique a un rapport avec le sport ne fait pas obstacle à l'application des règles du traité, dont celles qui régissent le droit de la concurrence.

Cette conclusion n'est pas remise en cause par le fait que l'entité dispose du pouvoir de donner son avis conforme sur les demandes d'autorisation présentées aux autorités publiques en vue de l'organisation des compétitions, car il y a lieu de distinguer la participation de cette entité au processus décisionnel de ces autorités et les activités économiques qu'elle exerce, telles l'organisation et l'exploitation commerciale des compétitions. La circonstance qu'elle ne poursuit pas de but lucratif, dès lors que son offre de biens et de services se trouve en concurrence avec celle d'autres opérateurs, ne fait pas obstacle non plus à cette conclusion. À cet égard, des associations sans but lucratif, qui offrent des biens ou des services sur un marché donné, peuvent se trouver mutuellement en position de concurrence. En effet, le succès ou la survie économique de telles associations dépend, à long terme, de la capacité de ces dernières à imposer, sur le marché concerné, les prestations qu'elles offrent, au détriment de celles qui sont proposées par les autres opérateurs.

(cf. points 22-23, 26-28)

2. Les articles 82 CE et 86 CE s'opposent à une réglementation nationale qui confère à une personne morale, qui organise des compétitions sportives et conclut dans ce cadre des contrats de parrainage, de publicité et d'assurance, le pouvoir de donner un avis conforme sur les demandes d'autorisation présentées en vue de l'organisation de telles compétitions, sans que ce pouvoir soit assorti de limites, d'obligations et d'un contrôle.

En effet, un système de concurrence non faussée, tel que celui prévu par le traité, ne peut être garanti que si l'égalité des chances entre les différents opérateurs économiques est assurée. Confier à une personne morale, qui, elle-même, organise et exploite commercialement des compétitions sportives, la tâche de donner à l'administration compétente un avis conforme sur les demandes d'autorisation présentées en vue de l'organisation de telles compétitions, revient de facto à lui conférer le pouvoir de désigner les personnes autorisées à organiser lesdites compétitions ainsi que de fixer les conditions dans lesquelles ces dernières sont organisées, et à octroyer, ainsi, à cette entité, un avantage évident sur ses concurrents. Un tel droit peut donc amener l'entreprise qui en dispose à empêcher l'accès des autres opérateurs au marché concerné ou à fausser la concurrence en favorisant les compétitions qu'elle organise ou celles à l'organisation desquelles elle participe.

(cf. points 51-53 et disp.)

JUDGMENT OF THE COURT (Grand Chamber)

1 July 2008 (*)

(Articles 82 EC and 86 EC – Concept of 'undertaking' – Non-profit-making association representing, in Greece, the International Motorcycling Federation – Concept of 'economic activity' – Special legal right to give consent to applications for authorisation to organise motorcycling events – Exercise in parallel of activities such as the organisation of motorcycling events and the conclusion of sponsorship, advertising and insurance contracts)

In Case C-49/07,

REFERENCE for a preliminary ruling under Article 234 EC, from the Diikitiko Efetio Athinon (Greece), made by decision of 21 November 2006, received at the Court on 5 February 2007, in the proceedings

Motosykletistiki Omospondia Ellados NPID (MOTOE)

v

Elliniko Dimosio,

THE COURT (Grand Chamber),

composed of V. Skouris, President, C.W.A. Timmermans, A. Rosas, K. Lenaerts and A. Tizzano, Presidents of Chambers, J.N. Cunha Rodrigues, A. Borg Barthet, M. Ilešič, J. Malenovský, J. Klučka (Rapporteur), T. von Danwitz, A. Arabadjiev and C. Toader, Judges,

Advocate General: J. Kokott,

Registrar: L. Hewlett, Principal Administrator,

having regard to the written procedure and further to the hearing on 23 January 2008,

after considering the observations submitted on behalf of:

– the Motosykletistiki Omospondia Ellados NPID (MOTOE), by A. Pliakos, dikigoros,

– the Greek Government, by S. Spyropoulos, K. Boskovits, S. Trekli and Z. Chatzipavlou, acting as Agents,

– the Commission of the European Communities, by T. Christoforou and F. Amato, acting as Agents,

after hearing the Opinion of the Advocate General at the sitting on 6 March 2008,

gives the following

Judgment

1 This reference for a preliminary ruling relates to the interpretation of Articles 82 EC and 86 EC.

2 The reference has been made in the course of proceedings between the Motosykletistiki

Omospondia Ellados NPID (MOTOE) (Greek Motorcycling Federation; 'MOTOE') and the Elliniko Dimosio (Greek State) regarding financial compensation for the non-material harm which MOTOE claims to have suffered as a result of the implicit refusal by the Greek State to grant it authorisation to organise motorcycling competitions.

Legal context

3 Under Article 49 of the Greek Road Traffic Code, in the version resulting from Law No 2696/1999 (FEK A' 57):

'1. Competitions involving … motorcycles or mopeds on public or private roads or spaces are allowed to take place only after authorisation has been granted.

2. Authorisation under the previous paragraph shall be given:

…

(c) for all competitions involving … motorcycles or mopeds, by the Minister for Public Order or the authorities empowered by him, following the consent of the legal person which officially represents in Greece the … Fédération Internationale de Motocyclisme (International Motorcycling Federation) [("the FIM")]'.

The dispute in the main proceedings and the questions referred for a preliminary ruling

4 MOTOE is a non–profit–making association governed by private law whose object is the organisation of motorcycling competitions in Greece. Its members include various regional motorcycling clubs.

5 On 13 February 2000, that association submitted to the competent minister an application for authorisation to organise competitions within the framework of the MOTOE Panhellenic Cup in accordance with a programme appended to that application.

6 In accordance with Article 49(2) of the Greek Road Traffic Code, that programme was sent to Elliniki Leskhi Aftokinitou kai Periigiseon (Automobile and Touring Club of Greece; 'ELPA'), a legal person and a non–profit–making association which represents the FIM in Greece, for it to consent for the purposes of granting the authorisation applied for.

7 By letter of 16 March 2000 ELPA requested MOTOE, first, to communicate to it specific rules for each of the planned events two months before the date upon which it would take place, so as to allow scrutiny of the list of participants, the route or track for the race, the safety measures adopted and, more generally, all the conditions for the safe running of the event. Second, it asked the clubs organising the events to lodge a copy of their statutes with Ethniki Epitropi Agonon Motosykletas (the National Motorcycle-Racing Committee; 'ETHEAM'), created by ELPA and entrusted with organising and supervising motorcycling events.

8 By application No 28/5.5.2000 sent to the competent ministry, MOTOE restated its request, in respect of six clubs, for authorisation to hold six races on dates from 9 July 2000 to 26 November 2000. It appended to that application the specific rules for the holding of those events as well as copies of those clubs' statutes. That application was also forwarded to ELPA with a view to its giving a declaration of consent for the holding of those events.

9 ELPA and ETHEAM sent MOTOE a document reminding it of certain rules relating to the organisation of motorcycling events in Greece. In particular, it is stated in that document that championships, cups and prizes organised in the framework of motorcycling events are announced by ETHEAM following authorisation from ELPA, which is the only legal representative of the FIM in Greece. If an entity or club which satisfies the necessary requirements for the organising and holding of events wishes a specific cup or prize to be announced, it must, according to that document, submit the announcement to ETHEAM. ETHEAM, after assessing the terms of that announcement, makes a decision in which it also defines the conditions for holding the event, in accordance with the international and national rules. For consent for organisation of an event to be granted, including within the framework of a cup or prize, each organiser who has taken on one of those events must

satisfy the requirements laid down in the National Motorcycle Competition Code and ETHEAM's circulars. ELPA and ETHEAM also reminded MOTOE that if, in the course of the year, an organiser requests that additional events be announced, the dates of those events must not affect the dates already scheduled, and this must be in the interests of both the racers and the organisers. For that reason, the programme of events to be organised during 2001 had to be lodged with ELPA and ETHEAM no later than 15 September 2000.

10 In reply to MOTOE's request seeking information on the outcome of its applications for authorisation, the competent ministry indicated to MOTOE, in August 2000, that it had not received a document from ELPA with its consent under Article 49 of the Greek Road Traffic Code.

11 Pleading the unlawfulness of that implicit rejection, MOTOE brought an action before the Diikitiko Protodikio Athinon (Administrative Court of First Instance, Athens), seeking compensation of GRD 5 000 000 for the non-material damage that it claims to have suffered on account of its being unable to hold the events in question.

12 MOTOE claimed that Article 49 of the Greek Road Traffic Code is contrary, first, to the constitutional principle that administrative organs must be impartial and, second, to Articles 82 EC and 86(1) EC, on the ground that the national provision at issue enables ELPA, which itself organises motorcycling competitions, to impose a monopoly in that field and to abuse that position.

13 ELPA intervened before the Diikitiko Protodikio Athinon in support of the Greek State. ELPA annexed to its statement in intervention, amongst other documents, its statutes of association of 1924, and its yearbook for 2000 regarding motorcycling events which was published by ETHEAM. That yearbook includes ETHEAM's circulars for 2000, which relate, inter alia, to the supporting documents that competitors had to provide in order to be entitled to a licence, to the rules for events which had to be lodged, to the determination of fees and to other issues of a financial nature. The yearbook also contains the Ethnikos Athlitikos Kanonismos Motosikletas (National Sporting Rules for Motorcycling; 'the EAKM').

14 As regards EAKM, the following must be mentioned:

– Article 10.7 thereof states that every sports meeting which includes events in respect of ELPA and ETHEAM championships, cups or prizes may be combined with the commercial promotion of a sponsor referred to in the events' title or secondary title, but only after ELPA and ETHEAM have given their consent;

– Article 60.6 of the EAKM states that, during sports meetings, advertising on riders' clothes, helmets (on condition that the advertising does not affect helmets' technical characteristics) and motorcycles is permitted. In speed events and motocross within the framework of ELPA and ETHEAM championships, cups and prizes, the organisers may not require a racer, passenger or motorcycle to advertise any product, unless the competitor has given his consent. However, when a sponsorship agreement concluded by ETHEAM and ELPA is applicable, riders, passengers and motorcycles are obliged to observe the terms of that agreement;

– according to Article 110.1 of the EAKM, '[t]he organiser [of a motorcycling event], either directly or through the supervisory authority [namely ELPA and ETHEAM], must ensure that the sports meeting is covered by insurance which should include his own liability and that of manufacturers, riders, passengers ... in the event of accidents and of loss or injury to third parties during the event and during practice.'

15 The Diikitiko Protodikio Athinon dismissed MOTOE's action on the ground, inter alia, first, that Article 49 of the Greek Road Traffic Code ensures that international rules for the safe running of motorcycling events are observed and, second, that MOTOE did not assert that that provision resulted in a dominant position within the common market, or that that provision might affect trade between Member States, or that ELPA abused such a position.

16 MOTOE lodged an appeal against that judgment with the Diikitiko Efetio Athinon, which states, first of all, that ELPA's activities are not limited to purely sporting matters, namely to the power conferred on ELPA in Article 49 of the Greek Road Traffic Code, given that it also engages in activities classified as 'economic' by the referring court, which consist in entering into sponsorship, advertising and insurance contracts. The Diikitiko Efetio Athinon, therefore, wonders whether ELPA can be classified as an undertaking for the purposes of Community competition law, in particular, for

the purposes of Articles 82 EC and 86 EC, so that it would be subject to the prohibition on the abuse of a dominant position. The referring court interprets Article 49 of the Greek Road Traffic Code as meaning that ELPA is the only legal person entitled to give consent to any application for authorisation to organise a motorcycling event. It draws attention to the fact that that association itself takes on, in parallel, the organising of events and the determination of prizes as well as the economic activities referred to above.

17 The Diikitiko Efetio Athinon next observes that the applicants, who have been refused authorisation to hold a motorcycling event since they have failed to obtain ELPA's consent, have no effective remedy under national law against such a decision. First, it is not provided that refusals by ELPA to give consent must contain a statement of reasons and, second, where a refusal of authorisation by the competent ministry is the subject of a legal action alleging failure to state reasons and that action is upheld, Greek law does not provide for authorisation to be granted to the applicant. Further, ELPA is not subject to control or to appraisal of any kind as regards the use that it makes of the power which is conferred on it by Article 49 of the Greek Road Traffic Code. Those circumstances present any person from another Member State of the European Union who wishes to organise motorcycling events in Greece with a *fait accompli*.

18 In these circumstances the Diikitiko Efetio Athinon decided to stay the proceedings and to refer the following questions to the Court for a preliminary ruling:

'(1) Can Articles 82 EC and 86 EC be interpreted so as also to include within their scope the activity of a legal person which has the status of national representative of the [FIM] and engages in economic activity as described above by entering into sponsorship, advertising and insurance contracts, in the context of the organisation of motor sport events by it?

(2) Should the answer [to the first question] be in the affirmative, is Article 49 of [the Greek Road Traffic Code], which, in relation to issue by the competent national public authority (in the present case, the Ministry for Public Order) of permission to organise a motor-vehicle competition, gives the foregoing legal person the power to provide a concurring opinion as to the holding of the competition without that power being made subject to restrictions, obligations and review, compatible with those provisions of the Treaty?'

Examination of the questions referred for a preliminary ruling

19 By its questions, which should be considered together, the referring court essentially asks, first, whether a legal person, which is a non-profit-making association such as ELPA, falls within the scope of Articles 82 EC and 86 EC, given that its activities consist not only in taking part in administrative decisions authorising the organisation of motorcycling events, but also in organising such events itself and in entering, in that connection, into sponsorship, advertising and insurance contracts and, second, whether those Treaty provisions preclude a rule, such as that laid down in Article 49 of the Greek Road Traffic Code, in so far as it confers on such an association the power to give its consent to applications for authorisation to organise those events, without that power being made subject to restrictions, obligations or review.

20 In this respect, it must be borne in mind, first, that Community competition law refers to the activities of undertakings (Case 13/77 *GB-Inno-BM* [1977] ECR 2115, paragraph 31, and Case C-280/06 *ETI and Others* [2007] ECR I-0000, paragraph 38 and the case-law cited). More specifically, Article 82 EC applies to undertakings holding a dominant position.

21 Although the Treaty does not define the concept of an undertaking, the Court has consistently held that any entity engaged in an economic activity, irrespective of its legal form and the way in which it is financed, must be categorised as an undertaking (Case C-41/90 *Höfner and Elser* [1991] ECR I-1979, paragraph 21, and Joined Cases C-264/01, C-306/01, C-354/01 and C-355/01 *AOK Bundesverband and Others* [2004] ECR I-2493, paragraph 46).

22 It should be borne in mind in this regard that any activity consisting in offering goods or services on a given market is an economic activity (see, in particular, Case C-35/96 *Commission* v *Italy* [1998] ECR I-3851, paragraph 36, and Joined Cases C-180/98 to C-184/98 *Pavlov and Others* [2000] ECR I-6451, paragraph 75). Provided that that condition is satisfied, the fact that an activity has a connection with sport does not hinder the application of the rules of the Treaty (Case 36/74 *Walrave*

and Koch [1974] ECR 1405, paragraph 4, and Case C‑415/93 *Bosman* [1995] ECR I‑4921, paragraph 73) including those governing competition law (see, to that effect, Case C‑519/04 P *Meca‑Medina and Majcen* v *Commission* [2006] ECR I‑6991, paragraphs 22 and 28).

23 As stated in the order for reference, and as also confirmed at the hearing before the Court, ELPA organises, in cooperation with ETHEAM, motorcycling events in Greece and, enters, in that connection, into sponsorship, advertising and insurance contracts designed to exploit those events commercially. Those activities constitute a source of income for ELPA.

24 According to the case‑law of the Court of Justice, activities which fall within the exercise of public powers are not of an economic nature justifying the application of the Treaty rules of competition (see, to that effect, Case C‑364/92 *SAT Fluggesellschaft* [1994] ECR I‑43, paragraphs 30 and 31).

25 As regards the possible effect of the exercise of public powers on the classification of a legal person such as ELPA as an undertaking for the purposes of Community competition law, it must be noted, as the Advocate General did at point 49 of her Opinion, that the fact that, for the exercise of part of its activities, an entity is vested with public powers does not, in itself, prevent it from being classified as an undertaking for the purposes of Community competition law in respect of the remainder of its economic activities (Case C‑82/01 P *Aéroports de Paris* v *Commission* [2002] ECR I‑9297, paragraph 74). The classification as an activity falling within the exercise of public powers or as an economic activity must be carried out separately for each activity exercised by a given entity.

26 In the present case, it is necessary to distinguish the participation of a legal person such as ELPA in the decision‑making process of the public authorities from the economic activities engaged in by that same legal person, such as the organisation and commercial exploitation of motorcycling events. It follows that the power of such a legal person to give its consent to applications for authorisation to organise those events does not prevent its being considered an undertaking for the purposes of Community competition law so far as concerns its economic activities referred to above.

27 As regards the effect that the fact that ELPA does not seek to make a profit may have on that classification, it should be noted that, in Case C‑222/04 *Cassa di Risparmio di Firenze and Others* [2006] ECR I‑289, paragraphs 122 and 123), the Court stated that the fact that the offer of goods or services is made without profit motive does not prevent the entity which carries out those operations on the market from being considered an undertaking, since that offer exists in competition with that of other operators which do seek to make a profit.

28 That is the case of activities engaged in by a legal person such as ELPA. The fact that MOTOE, the applicant in the main proceedings, is itself a non‑profit‑making association has, from that point of view, no effect on the classification as an undertaking of a legal person such as ELPA. First, it is not inconceivable that, in Greece, there exist, in addition to the associations whose activities consist in organising and commercially exploiting motorcycling events without seeking to make a profit, associations which are engaged in that activity and do seek to make a profit and which are thus in competition with ELPA. Second, non‑profit‑making associations which offer goods or services on a given market may find themselves in competition with one another. The success or economic survival of such associations depends ultimately on their being able to impose, on the relevant market, their services to the detriment of those offered by the other operators.

29 Consequently, a legal person such as ELPA must be considered an undertaking for the purposes of Community competition law. However, in order for it to fall within the scope of Article 82 EC, it must also occupy a dominant position within the common market or in a substantial part of it.

30 In that regard, it must be observed that, in proceedings under Article 234 EC, which is based on a clear separation of functions between the national courts and the Court of Justice, any assessment of the facts in the case is a matter for the national court (Case C‑450/06 *Varec* [2008] ECR I‑0000, paragraph 23). However, in order to give the national court a useful answer, the Court may, in a spirit of cooperation with national courts, provide it with all the guidance that it deems necessary.

31 Before it is possible to assess whether a legal person such as ELPA has a dominant position within the meaning of Article 82 EC, it is necessary to define the relevant market, both from the point of

view of the goods or services concerned and from the geographic point of view (Case 27/76 *United Brands and United Brands Continentaal* v *Commission* [1978] ECR 207, paragraph 10).

32 According to settled case-law, for the purposes of applying Article 82 EC, the relevant product or service market includes products or services which are substitutable or sufficiently interchangeable with the product or service in question, not only in terms of their objective characteristics, by virtue of which they are particularly suitable for satisfying the constant needs of consumers, but also in terms of the conditions of competition and the structure of supply and demand on the market in question (see, to that effect, Case 31/80 *L'Oréal* [1980] ECR 3775, paragraph 25; Case 322/81 *Nederlandsche Banden Industrie Michelin* v *Commission* [1983] ECR 3461, paragraph 37; and Case C–62/86 *AKZO* v *Commission* [1991] ECR I–3359, paragraph 51).

33 In that regard, it is clear from the order for reference that the activities in which ELPA is engaged consist, first, in the organisation of motorcycling events and, second, in their commercial exploitation by means of sponsorship, advertising and insurance contracts. Those two types of activities are not interchangeable but are rather functionally complementary.

34 The definition of the relevant geographical market calls, just like the definition of the product or service market, for an economic assessment. The geographical market can thus be defined as the territory in which all traders operate under the same conditions of competition in so far as concerns specifically the relevant products or services. From that point of view, it is not necessary for the objective conditions of competition between traders to be perfectly homogeneous. It is sufficient if they are similar or sufficiently homogeneous (see, to that effect, *United Brands and United Brands Continentaal* v *Commission*, cited above, paragraphs 44 and 53). Furthermore, the market may be confined to a single Member State (see, to that effect, *Nederlandsche Banden Industrie Michelin* v *Commission*, cited above, paragraph 28).

35 As stated in the order for reference, and as was also confirmed at the hearing before the Court, the activities in which ELPA engages are confined to the territory of Greece. However, the territory of a Member State may constitute a substantial part of the common market (see, to that effect, Case C–260/89 *ERT* [1991] ECR I-2925, paragraph 31). It is for the referring court, however, to determine whether the criterion relating to similar or sufficiently homogeneous conditions of competition is satisfied in the main proceedings.

36 It is with reference to the market thus defined that that court will have to assess whether ELPA has a dominant position.

37 It should be recalled in this respect that it is clear from the case–law that the concept of a 'dominant position' under Article 82 EC concerns a position of economic strength held by an undertaking, which enables it to prevent effective competition from being maintained on the relevant market by giving it the power to behave to an appreciable extent independently of its competitors, its customers and, ultimately, consumers (*United Brands and United Brands Continentaal* v *Commission*, cited above, paragraph 65; Case 85/76 *Hoffmann-La Roche* v *Commission* [1979] ECR 461, paragraph 38; and *Nederlandsche Banden-Industrie-Michelin* v *Commission*, cited above, paragraph 30).

38 It should be added that an undertaking can be put in such a position when it is granted special or exclusive rights enabling it to determine whether and, as the case may be, in what conditions, other undertakings may have access to the relevant market and engage in their activities on that market.

39 It should further be observed that Article 82 EC cannot be infringed by a rule such as that laid down in Article 49 of the Greek Road Traffic Code unless trade between Member States is affected by it. As the Advocate General pointed out in points 63 and 64 of her Opinion, such an effect on trade between Member States can be assumed only if it is possible to foresee with a sufficient degree of probability, on the basis of a set of objective legal and factual elements, that the behaviour in question may have an influence, direct or indirect, actual or potential, on trade between Member States in such a way as might hinder the attainment of a single market between Member States (Case C–475/99 *Ambulanz Glöckner* [2001] ECR I–8089, paragraph 48). Purely hypothetical or speculative effects that the conduct of an undertaking in a dominant position may have do not satisfy that criterion. Similarly, the impact on intra-community trade must not be insignificant (Joined Cases C–215/96 and C–216/96 *Bagnasco and Others* [1999] ECR I-135, paragraph 60, and *Ambulanz Glöckner*, cited above, paragraph 48).

40 Accordingly, the effect on intra-Community trade is normally the result of a combination of several factors which, taken separately, are not necessarily decisive (Case C‑250/92 *DLG* [1994] ECR I-5641, paragraph 54).

41 Furthermore, the assessment of whether the effect on trade between Member States is appreciable must take account of the conduct of the dominant undertaking in question, in so far as Article 82 EC precludes all conduct which is capable of affecting freedom of trade in a manner which might harm the attainment of the objectives of a single market between the Member States, in particular by sealing off domestic markets or by affecting the structure of competition within the single market (Case 22/78 *Hugin Kassaregister and Hugin Cash Registers* v *Commission* [1979] ECR 1869, paragraph 17).

42 The fact that the conduct of an undertaking in a dominant position relates only to the marketing of products in a single Member State is not sufficient to preclude the possibility that trade between Member States might be affected (see, to that effect, Joined Cases C‑94/04 and C‑202/04 *Cipolla and Others* [2006] ECR I-11421, paragraph 45). Such conduct may have the effect of reinforcing the partitioning of markets on a national basis, thereby holding up the economic interpenetration which the Treaty is designed to bring about (see, by analogy, Joined Cases C‑295/04 to C‑298/04 *Manfredi and Others* [2006] ECR I‑6619, paragraphs 45 and 46).

43 So far as concerns, second, the scope of Article 86 EC, paragraph 1 thereof provides that, in the case of undertakings to which Member States grant special or exclusive rights, Member States are neither to enact nor maintain in force any measure contrary, in particular, to the rules contained in the Treaty with regard to competition. In this respect, it should be noted that a legal person such as ELPA, to which the power to give consent to applications for authorisation to organise motorcycling events has been granted, must be considered an undertaking which has been granted by the Member State concerned special rights within the meaning of Article 86(1) EC.

44 Article 86(2) EC allows Member States to confer, on undertakings to which they entrust the operation of services of general economic interest, exclusive rights which may hinder the application of the rules of the Treaty on competition in so far as restrictions on competition, or even the exclusion of all competition, by other economic operators are necessary to ensure the performance of the particular tasks assigned to the undertakings holding the exclusive rights (Case C‑320/91 *Corbeau* [1993] ECR I-2533, paragraph 14).

45 As regards the organisation and commercial exploitation of motorcycling events by a legal person such as ELPA, the Greek Government has not claimed that ELPA has been entrusted with the exercise of those activities through an act of public authority. It is not therefore necessary to examine further whether those activities may constitute a service of general economic interest (see, to that effect, Case 127/73 *BRT and Société belge des auteurs, compositeurs et éditeurs* [1974] ECR 313, paragraph 20, and Case 66/86 *Saeed Flugreisen and Silver Line Reisebüro* [1989] ECR 803, paragraph 55).

46 As regards the power to give consent to applications for authorisation to organise motorcycling events, that does indeed stem from an act of public authority, namely Article 49 of the Greek Road Traffic Code, but it cannot be classified as an economic activity, as the Advocate General observed at point 110 of her Opinion.

47 A legal person such as ELPA cannot therefore be considered an undertaking entrusted with a service of general economic interest within the meaning of Article 86(2) EC.

48 As regards, third, the question whether Articles 82 EC and 86(1) EC preclude a national rule, such as Article 49 of the Greek Road Traffic Code, which confers on a legal person like ELPA, which can itself take on the organisation of motorcycling events and their commercial exploitation, the power to give consent to applications for authorisation to organise those events, without that power being made subject to restrictions, obligations and review, it should be recalled that the mere creation or reinforcement of a dominant position through the grant of special or exclusive rights within the meaning of Article 86(1) EC is not in itself incompatible with Article 82 EC.

49 On the other hand, a Member State will be in breach of the prohibitions laid down by those two provisions if the undertaking in question, merely by exercising the special or exclusive rights conferred upon it, is led to abuse its dominant position or where such rights are liable to create a situation in which that undertaking is led to commit such abuses (*Höfner and Elser*, cited above,

paragraph 29; *ERT*, cited above, paragraph 37; Case C–179/90 *Merci convenzionali porto di Genova* [1991] ECR I-5889, paragraphs 16 and 17; and Case C–323/93 *Centre d'insémination de la Crespelle* [1994] ECR I-5077, paragraph 18). In this respect, it is not necessary that any abuse should actually occur (see, to that effect, Case C–55/96 *Job Centre* [1997] ECR I–7119, paragraph 36).

50 In any event, Articles 82 EC and 86(1) EC are infringed where a measure imputable to a Member State, and in particular a measure by which a Member State confers special or exclusive rights within the meaning of Article 86(1) EC, gives rise to a risk of an abuse of a dominant position (see, to that effect, *ERT*, cited above, paragraph 37; *Merci convenzionali porto di Genova*, cited above, paragraph 17; and Case C–380/05 *Centro Europa 7* [2008] ECR I–0000, paragraph 60).

51 A system of undistorted competition, such as that provided for by the Treaty, can be guaranteed only if equality of opportunity is secured as between the various economic operators. To entrust a legal person such as ELPA, which itself organises and commercially exploits motorcycling events, the task of giving the competent administration its consent to applications for authorisation to organise such events, is tantamount *de facto* to conferring upon it the power to designate the persons authorised to organise those events and to set the conditions in which those events are organised, thereby placing that entity at an obvious advantage over its competitors (see, by analogy, Case C–202/88 *France* v *Commission* [1991] ECR I-1223, paragraph 51, and Case C–18/88 *GB Inno BM* [1991] ECR I–5941, paragraph 25). Such a right may therefore lead the undertaking which possesses it to deny other operators access to the relevant market. That situation of unequal conditions of competition is also highlighted by the fact, confirmed at the hearing before the Court, that, when ELPA organises or participates in the organisation of motorcycling events, it is not required to obtain any consent in order that the competent administration grant it the required authorisation.

52 Furthermore, such a rule, which gives a legal person such as ELPA the power to give consent to applications for authorisation to organise motorcycling events without that power being made subject by that rule to restrictions, obligations and review, could lead the legal person entrusted with giving that consent to distort competition by favouring events which it organises or those in whose organisation it participates.

53 In the light of the foregoing, the answer to the questions referred must be that a legal person whose activities consist not only in taking part in administrative decisions authorising the organisation of motorcycling events, but also in organising such events itself and in entering, in that connection, into sponsorship, advertising and insurance contracts, falls within the scope of Articles 82 EC and 86 EC. Those articles preclude a national rule which confers on a legal person, which organises motorcycling events and enters, in that connection, into sponsorship, advertising and insurance contracts, the power to give consent to applications for authorisation to organise such competitions, without that power being made subject to restrictions, obligations and review.

Costs

54 Since these proceedings are, for the parties to the main proceedings, a step in the action pending before the referring court, the decision on costs is a matter for that court. Costs incurred in submitting observations to the Court, other than the costs of those parties, are not recoverable.

On those grounds, the Court (Grand Chamber) hereby rules:

A legal person whose activities consist not only in taking part in administrative decisions authorising the organisation of motorcycling events, but also in organising such events itself and in entering, in that connection, into sponsorship, advertising and insurance contracts, falls within the scope of Articles 82 EC and 86 EC. Those articles preclude a national rule which confers on a legal person, which organises motorcycling competitions and enters, in that connection, into sponsorship, advertising and insurance contracts, the power to give consent to applications for authorisation to organise such competitions, without that power being made subject to restrictions, obligations and review.

Judgment of the Court (Fourth Chamber)
of 10 May 2007
SGL Carbon AG v Commission of the European Communities. Appeals - Competition - Agreements, decisions and concerted practices - Guidelines on the method of setting fines - Leniency Notice - Principle non bis in idem. Case C-328/05 P.

1. Competition - Fines - Community sanctions and sanctions imposed in a non-Member State for breach of national competition law

(Art. 3(1)(g) EC; Council Regulation No 17, Art. 15)

2. Appeals - Pleas in law - Mistaken assessment of the facts - Inadmissibility - Review by the Court of Justice of the assessment of the evidence - Possible only where the clear sense of the evidence has been distorted

(Art. 225(1) EC; Statute of the Court of Justice, Art. 58, first para.)

3. Competition - Administrative procedure - Statement of objections - Necessary content - Observance of the rights of the defence

(Council Regulation No 17, Art. 19(1))

4. Competition - Administrative procedure - Observance of the rights of the defence

5. Competition - Fines - Amount - Determination - Criteria

(Council Regulation No 17; Commission Notice 96/C 207/04)

6. Appeals - Jurisdiction of the Court

(Council Regulation No 17, Art. 15)

7. Competition - Fines - Amount - Determination - Criteria - Financial situation of the undertaking concerned

(Council Regulation No 17, Art. 15)

8. Competition - Fines - Discretion of the Commission

(Council Regulation No 17, Art. 15(2))

1. In the case of a cartel operating in an international context which is characterised, in particular, by the action of legal systems of non-member States on their respective territories, the exercise of powers by the authorities of those non-member States responsible for protecting free competition under their territorial jurisdiction meets requirements specific to those States. The elements forming the basis of other States' legal systems in the sphere of competition not only include specific aims and objectives but also result in the adoption of specific substantive rules and a wide variety of legal consequences, whether administrative, criminal or civil, when the authorities of those States have established that there have been infringements of the applicable competition rules.

It follows that, when the Commission imposes sanctions on the unlawful conduct of an undertaking, even conduct originating in an international cartel, it seeks to safeguard the free competition within the common market which constitutes a fundamental objective of the Community under Article 3(1)(g) EC. On account of the specific nature of the legal interests protected at Community level, the Commission's assessments pursuant to its relevant powers may diverge considerably from those by authorities of non-member States.

Accordingly, the principle non bis in idem laid down in Article 4 of Protocol No 7 to the European Convention on Human Rights does not apply to situations in which the legal systems and competition authorities of non-member States intervene within their own jurisdiction.

(see paras 24-30)

2. The Court of First Instance has exclusive jurisdiction, first, to find the facts, except where the substantive inaccuracy of its findings is apparent from the documents submitted to it and, second, to assess those facts. It follows that, save where the clear sense of the evidence has been distorted, the appraisal of the evidence submitted to the Court of First Instance does not constitute a point of law which is subject as such to review by the Court of Justice.

It follows that a plea, raised in the context of an appeal, which seeks to have the Court of Justice review the substance of the finding by the Court of First Instance, after a detailed examination of the factual circumstances and according to which an undertaking acted as the ringleader of the cartel, a role which constituted an aggravating circumstance, is inadmissible.

(see paras 41-42, 48)

3. Provided that the Commission sets out in the statement of objections the main elements of fact and of law capable of leading to the imposition of a fine, such as the gravity and the duration of the alleged infringement and also the circumstance that the infringement was committed deliberately or negligently, the Commission satisfies its obligation to observe the undertakings' right to be heard.

The rights of the defence are observed because the undertaking concerned was given the opportunity to comment on the duration, the gravity and the nature of the infringement. The Commission is not required to explain in the statement of objections the way in which it might make use of each of those elements in determining the amount of the fine.

Since the statement of objections indicates that the undertaking concerned has played the role of leader and instigator of the infringement, it is made aware that that fact may be taken into account when the fine is set. The fact that in the decision imposing a penalty the undertaking concerned is considered to be the sole ringleader of the cartel does not alter, vis-à-vis the Commission, that undertaking's position to the point of breaching the rights of the defence, since it is inherent in the nature of the statement of objections that it is provisional and subject to amendments to be made by the Commission in its subsequent assessment on the basis of the observations submitted to it by the parties and other findings of fact.

(see paras 56-58, 60, 62)

4. Observance of the rights of the defence requires, in particular, that the undertaking under investigation is put in a position during the administrative procedure to put forward its point of view on the reality and the relevance of the alleged facts and also on the documents used by the Commission. The language knowledge of a member of the team responsible for investigating a cartel cannot in itself be decisive for the purpose of determining whether there was any breach of the rights of the defence by the Commission.

(see paras 71, 73)

5. The Commission has a wide discretion as regards the method of calculating fines and it may, in that regard, take account of numerous factors, including the cooperation provided by the undertakings concerned during the investigation conducted by its departments. The cooperation which an undertaking provides to the Commission may justify a reduction in the fine under the Notice on the non-imposition or reduction of fines in cartel cases only if it actually allows the Commission to achieve its task of establishing the existence of an infringement and putting an end to it. The Commission enjoys a wide discretion in assessing the quality and usefulness of the cooperation provided by an undertaking, in particular by reference to the contributions made by other undertakings.

(see paras 81, 83, 88)

6. It is not open to the Court of Justice, when ruling on points of law in an appeal, to substitute, on grounds of fairness, its own assessment for that of the Court of First Instance exercising its unlimited jurisdiction to rule on the amount of fines imposed on undertakings for infringements of Community law. A plea seeking to dispute the proportionality of the fine imposed must be declared inadmissible, since it attempts to secure a reconsideration of findings of fact for which the Court of Justice does not have jurisdiction in an appeal.

(see paras 98-99)

7. The Commission is not required, when determining the amount of the fine, to take into account the financial situation of an undertaking, since recognition of such an obligation would be tantamount to giving unjustified competitive advantages to undertakings least well adapted to the market conditions.

(see para. 100)

8. The Commission's powers under Article 15(2) of Regulation No 17 include the power to set the date by which the fines are payable and on which interest begins to accrue, and also the rate of that interest and the detailed arrangements for implementing its decision. Accordingly, the Commission is entitled to adopt a point of reference higher than the applicable market rate offered to the average borrower, to an extent necessary to discourage dilatory behaviour in relation to payment of the fine.

(see paras 109-111)

In Case C-328/05 P,

APPEAL under Article 56 of the Statute of the Court of Justice, lodged on 30 August 2005,

SGL Carbon AG, established in Wiesbaden (Germany), represented by M. Klusmann and F. Wiemer, Rechtsanwälte,

appellant,

the other parties to the proceedings being:

Commission of the European Communities, represented by F. Castillo de la Torre, M. Schneider and W. Mölls, and also by H. Gading, acting as Agents,

defendant at first instance,

THE COURT (Fourth Chamber),

composed of K. Lenaerts, President of the Chamber, E. Juhasz, R. Silva de Lapuerta (Rapporteur), G. Arestis and T. von Danwitz, Judges,

Advocate General: J. Mazak,

Registrar: B. Fülöp, Administrator,

having regard to the written procedure and further to the hearing on 26 October 2006,

after hearing the Opinion of the Advocate General at the sitting on 18 January 2007

gives the following

Judgment

On those grounds, the Court (Fourth Chamber) hereby

1. Dismisses the appeal;

2. Orders SGL Carbon AG to pay the costs.

1. By its appeal, SGL Carbon AG (SGL Carbon') seeks, primarily, to have set aside in part the judgment of the Court of First Instance of the European Communities of 15 June 2005 in Joined Cases T71/03, T74/03, T87/03 and T91/03 Tokai Carbon and Others v Commission , not published in the ECR (the judgment under appeal'), whereby the Court of First Instance dismissed its action against Commission Decision C(2002) 5083 final relating to a proceeding under Article 81 of the EC Treaty and Article 53 of the EEA Agreement (Case COMP/E2/37.667 - Specialty Graphites (the decision in issue') and, in the alternative, a reduction in the fine imposed on it by that decision.

Legal framework

Regulation No 17

2. Article 15 of Council Regulation No 17 of 6 February 1962: First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-62, p. 87) provides:

1. The Commission may by decision impose on undertakings or associations of undertakings fines of from 100 to 5 000 units of account where, intentionally or negligently:

...

(b) they supply incorrect information in response to a request made pursuant to Article 11(3) or (5)...

2. The Commission may by decision impose on undertakings or associations of undertakings fines of from 1 000 to 1 000 000 units of account, or a sum in excess thereof but not exceeding 10% of the turnover in the preceding business year of each of the undertakings participating in the infringement where, either intentionally or negligently:

(a) they infringe Article [81](1) or Article [82] of the Treaty...

...

In fixing the amount of the fine, regard shall be had both to the gravity and to the duration of the infringement.'

The Guidelines

3. The Commission Notice entitled Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty' (OJ 1998 C 9, p. 3) (the Guidelines') states in its introductory paragraphs:

The principles outlined... should ensure the transparency and impartiality of the Commission's decisions, in the eyes of the undertakings and of the Court of Justice alike, whilst upholding the discretion which the Commission is granted under the relevant legislation to set fines within the limit of 10% of overall turnover. This discretion must, however, follow a coherent and non-discriminatory policy which is consistent with the objectives pursued in penalising infringements of the competition rules.

The new method of determining the amount of a fine will adhere to the following rules, which start from a basic amount that will be increased to take account of aggravating circumstances or reduced to take account of attenuating circumstances.'

4. According to Section 1 of the Guidelines, [that] basic amount of the fine will be determined

according to the gravity and duration of the infringement, which are the only criteria referred to in Article 15(2) of Regulation No 17'. Under Section 2 of the Guidelines, the basic amount will be increased where there are aggravating circumstances such as, for example, repeated infringement of the same type by the same undertaking or undertakings. According to Section 3 of the Guidelines, the basic amount will be reduced where there are specific attenuating circumstances.

The Leniency Notice

5. In its Notice on the non-imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4) (the Leniency Notice'), the Commission sets out the conditions under which undertakings cooperating with it during its investigation into a cartel may be exempted from fines, or may be granted a reduction in the fine which would otherwise have been imposed upon them.

6. According to Section A, point 5, of the Leniency Notice:

Cooperation by an [undertaking] is only one of several factors which the Commission takes into account when fixing the amount of a fine. ...'

7. Section C of the Leniency Notice, entitled Substantial reduction in a fine', provides:

[Undertakings] which both satisfy the conditions set out in Section B, points (b) to (e) and disclose the secret cartel after the Commission has undertaken an investigation ordered by decision on the premises of the parties to the cartel which has failed to provide sufficient grounds for initiating the procedure leading to a decision, will benefit from a reduction of 50% to 75% of the fine.'

8. The conditions set out in Section B of the Leniency Notice, to which Section C refers, are that the undertaking in question:

(a) informs the Commission about a secret cartel before the Commission has undertaken an investigation, ordered by decision, of the [undertakings] involved, provided that it does not already have sufficient information to establish the existence of the alleged cartel;

(b) is the first to adduce decisive evidence of the cartel's existence;

(c) puts an end to its involvement in the illegal activity no later than the time at which it discloses the cartel;

(d) provides the Commission with all the relevant information and all the documents and evidence available to it regarding the cartel and maintains continuous and complete cooperation throughout the investigation;

(e) has not compelled another [undertaking] to take part in the cartel and has not acted as an instigator or played a determining role in the illegal activity'.

9. Section D of the Leniency Notice, entitled Significant reduction in a fine', is worded as follows:

1. Where an [undertaking] cooperates without having met all the conditions set out in Sections B or C, it will benefit from a reduction of 10% to 50% of the fine that would have been imposed if it had not cooperated.

2. Such cases may include the following:

- before a statement of objections is sent, an [undertaking] provides the Commission with information, documents or other evidence which contribute to establishing the infringement;

- after receiving a statement of objections, an enterprise informs the Commission that it does not substantially contest the facts on which the Commission bases its allegations.'

Protocol No 7 to the European Convention for the Protection of Human Rights and Fundamental Freedoms

10. Article 4 of Protocol No 7 to the European Convention for the Protection of Human Rights and Fundamental Freedoms, signed in Rome on 4 November 1950, provides as follows:

Right not to be tried or punished twice

No one shall be liable to be tried or punished again in criminal proceedings under the jurisdiction of the same State for an offence for which he has already been finally acquitted or convicted in accordance with the law and penal procedure of that State.

The provisions of the preceding paragraph shall not prevent the reopening of the case in accordance with the law and penal procedure of the State concerned, if there is evidence of new or newly discovered facts, or if there has been a fundamental defect in the previous proceedings, which could affect the outcome of the case.

...'

The facts of the dispute and the decision in issue

11. In the judgment under appeal, the Court of First Instance summarised the facts of the action before it as follows:

1 By [the decision in issue] the Commission found that various undertakings had participated in a series of agreements and concerted practices within the meaning of Article 81(1) EC and Article 53(1) of the Agreement on the European Economic Area (EEA) in the specialty graphite sector in the period from July 1993 to February 1998.

2 For the purposes of [the decision in issue], specialty graphite describes a group of graphite products, namely isostatic graphite, extruded graphite and moulded graphite used in diverse applications. It does not include steel-making graphite electrodes.

3 The mechanical characteristics of isostatic graphite are superior to those of extruded and moulded graphite and the price of each graphite category varies according to its mechanical characteristics. Isostatic graphite is used, inter alia, in the manufacture, by electrical-discharge machining, of metal moulds for the automobile and electronics industries. It is also used to make dies for the continuous casting of non-ferrous metals such as copper and copper alloys.

4 The production cost differential between isostatic graphite and extruded or moulded graphite is at least 20%. In general, extruded graphite is the cheapest and is therefore chosen if it meets the user's requirements. Extruded products are used in a wide range of industrial applications, mainly in the iron and steel, aluminium and chemical industries and in metallurgy.

5 Moulded graphite is generally used only in large-scale applications, because it is typically inferior to extruded graphite.

6 In general, speciality graphite products are supplied to customers either directly from the manufacturing plants as finished machined products or through intermediary machine shops. These machine shops buy unmachined graphite (in blocks or rods), machine it (i.e. customise the product according to the customer's needs) and sell the machined products to the end-user.

7 The [decision in issue] concerns two separate cartels, one relating to the market for isostatic specialty graphite and the other to that for extruded specialty graphite. There was no evidence of an infringement in respect of moulded graphite. Those cartels covered very specific products, namely graphite in the form of standard and cut blocks, but not machined products, that are made to order for the customer.

8 The major producers of specialty graphite in the western world are multinational corporations.

Worldwide speciality graphite sales in 2000 were about EUR 900 million. Of this figure, isostatic graphite accounted for around EUR 500 million and extruded graphite for EUR 300 million. At Community/EEA level, sales in 2000 were EUR 100 to 120 million for isostatic graphite and EUR 60 to 70 million for extruded graphite. Unmachined products accounted for about EUR 35 to 50 million in the isostatic market and about EUR 30 million in the extruded market.

9 When the [decision in issue] was adopted, the largest producers of isostatic specialty graphite in the Community/EEA were [inter alia] the German company SGL Carbon...

...

12 In June 1997 the Commission commenced an investigation into the graphite electrodes market. The investigation led to the decision of 18 July 2001 relating to a proceeding under Article 81 of the EC Treaty and Article 53 of the EEA Agreement - Case COMP/E-1/36.490 - Graphite electrodes (OJ 2002 L 100, p. 1)....

...

14 In the US, criminal proceedings were brought in March 2000 and in February 2001 against a subsidiary of [Le Carbone-Lorraine SA] and a subsidiary of [the Japanese company Toyo Tanso Co. Ltd]. The companies pleaded guilty and agreed to pay fines....

15 On 17 May 2002 the Commission sent a statement of objections to the addressees of [the decision in issue].... None of them substantially contested the facts.

...

17 The administrative procedure concluded on 17 December 2002 with the adoption of [the decision in issue]....

...

19 [The decision in issue] states that collusive agreements were implemented on the isostatic graphite market by regular multilateral meetings at four levels:

- top level meetings, attended by the top executives of the companies, at which the main principles of cooperation were established;

- international working level meetings concerning the classification of graphite blocks into different categories and the fixing of minimum prices for each category;

- regional (European) meetings;

- local (national) meetings concerning the Italian, German, French, British and Spanish markets.

...

22 On the basis of the findings of fact and legal assessment in [the decision in issue], the Commission imposed on the companies in question fines calculated in accordance with the method set out in the Guidelines ... and the Leniency Notice.

23 Under the first paragraph of Article 1 of the operative part of [the decision in issue], the following undertakings infringed Article 81(1) EC and Article 53(1) of the EEA Agreement by participating, for the periods indicated, in a complex of agreements and concerted practices affecting the Community and EEA markets for isostatic specialty graphite:

...

(b) SGL [Carbon], from July 1993 to February 1998;

...

24 Under the second paragraph of the same provision, the following undertakings infringed Article 81(1) EC and Article 53(1) of the EEA Agreement by participating for the periods indicated in a complex of agreements and concerted practices affecting the Community and EEA markets for extruded specialty graphite:

- SGL [Carbon], from February 1993 to November 1996;

...

25 Article 3 of the operative part imposes the following fines:

...

(b) SGL [Carbon]:

- Isostatic specialty graphite: EUR 18 940 000,

- Extruded specialty graphite: EUR 8 810 000;

...

26 Article 3 further orders that the fines are to be paid within three months of the date of notification of [the decision in issue] with default interest at the rate of 6.75%.

27 [The decision in issue] was sent to the applicants with a covering letter of 20 December 2002. It stated that after expiry of the period for payment specified in [that decision] the Commission would take steps to recover the sums in question; however, if proceedings were commenced before the Court of First Instance the Commission would not take steps to enforce the judgment provided that interest at the rate of 4.75% was paid and a bank guarantee given.'

The procedure before the Court of First Instance and the judgment under appeal

12. By separate applications lodged at the Registry of the Court of First Instance in March 2003, SGL Carbon and the other addressees of the decision in issue brought actions for annulment of that decision.

13. In the operative part of the judgment under appeal, the Court of First Instance, in particular:

...

4. In Case T91/03 SGL Carbon v Commission :

- [set] the fine imposed on [SGL Carbon] by Article 3 of Decision COMP/E-2/37.667 at EUR 9 641 970 in respect of the infringement committed in the isostatic graphite sector;

- dismisse[d] the remainder of the application;

- order[ed] [SGL Carbon] to bear two thirds of its own costs and to pay two thirds of the costs incurred by the Commission, and the Commission to bear one third of its own costs and to pay one third of the costs incurred by [SGL Carbon].'

Forms of order sought by the parties to the appeal

14. In its appeal, SGL Carbon claims that the Court should:

- primarily, set aside the judgment under appeal in so far as it dismisses its application;

- in the alternative, reduce the fine imposed on SGL Carbon and also the interest payable pending judgment and the default interest as fixed in the operative part of the judgment under appeal;

- order the Commission to pay the costs.

15. In its response, the Commission claims that the Court should dismiss the appeal and order the appellant to pay the costs.

The appeal

16. In support of its appeal, SGL Carbon puts forward six pleas in law.

17. By its first plea, SGL Carbon maintains that the Court of First Instance infringed the principle non bis in idem by failing to take into account the fines previously imposed on it in the United States. The second plea is directed against the increase of 35% in the amount of the fine imposed on SGL Carbon for its role as the sole ringleader. By its third plea, the appellant claims that the Court of First Instance did not examine the plea alleging that the rights of the defence, in so far as they include a right to be heard, were infringed because the members of the Commission's team responsible for the investigation had insufficient knowledge of German. The fourth plea concerns the evaluation by the Court of First Instance of SGL Carbon's cooperation with the Commission. By its fifth plea, the appellant claims that the Court of First Instance failed to take into account its economic performance when assessing its financial capacity to pay the fine and that the amount of the fine is disproportionate. Last, by its sixth plea, the appellant claims that the Court of First Instance miscalculated the rate of interest.

First plea, alleging breach of the obligation to take into consideration the penalties imposed in a non-member State

Arguments of the parties

18. By its first plea, SGL Carbon claims that the Court of First Instance was wrong to question the applicability of the principle non bis in idem in the present case, since the penalties imposed on it in the United States ought to have been taken into consideration in determining the amount of the fine, at least for the purpose of reducing it.

19. At the hearing, SGL Carbon observed that although in Case C-289/04 P Showa Denko v Commission [2006] ECR I5859, paragraphs 50 to 63, and Case C308/04 P SGL Carbon v Commission [2006] ECR I5977, paragraphs 26 to 39, the Court rejected the argument that sanctions imposed in a non-member State in the sphere of competition law must be taken into consideration when setting the fine, the Commission erred in wholly ignoring such circumstances.

20. SGL Carbon maintains that, in view of the need to ensure that the penalties imposed are proportionate, the Commission may be under an obligation, in the exercise of its discretion, to take account of penalties imposed by the authorities of a non-member State.

21. The Commission contends that the appellant is wrong to rely on the principle non bis in idem in the present case. The administrative and judicial proceedings in the sphere of competition law in the United States and in the Community do not pursue the same objectives.

22. The Commission claims that it follows from Showa Denko v Commission and SGL Carbon v Commission that the obligation to take into consideration penalties imposed on a company in a non-member State has no legal basis in Community law.

23. The Commission further submits that the non-existence of any obligation to take such penalties into consideration is consistent with the general principles of law. Where a cartel operating throughout the world fixes prices on a global scale, the undertakings participating in the cartel do not commit a single infringement but a number of infringements corresponding to the number of sovereign legal orders which prohibit price-fixing having actual or potential effects on their respective territories.

Findings of the Court

24. It must be borne in mind, as a preliminary issue, that in Showa Denko v Commission and SGL

Carbon v Commission the Court has already considered whether the principle non bis in idem , which is enshrined in Article 4 of Protocol No 7 to the Convention on the Protection of Human Rights and Fundamental Freedoms, may be applied to situations in which the authorities of a non-member State have taken action under their power to impose penalties in the sphere of competition law applicable on the territory of that State.

25. On that question, the Court observed at paragraphs 28 and 52, respectively, of SGL Carbon v Commission and Showa Denko v Commission that a cartel operating in an international context is characterised, in particular, by the action of legal systems of non-member States on their respective territories.

26. In that regard, the Court held, at paragraphs 29 and 53 respectively of SGL Carbon v Commission and Showa Denko v Commission , that the exercise of powers by the authorities of those non-member States responsible for protecting free competition under their territorial jurisdiction meets requirements specific to those States. The elements forming the basis of other States' legal systems in the sphere of competition not only include specific aims and objectives but also result in the adoption of specific substantive rules and a wide variety of legal consequences, whether administrative, criminal or civil, when the authorities of those States have established that there have been infringements of the applicable competition rules.

27. The Court further held that it follows that, when the Commission imposes sanctions on the unlawful conduct of an undertaking, even conduct originating in an international cartel, it seeks to safeguard the free competition within the common market which constitutes a fundamental objective of the Community under Article 3(1)(g) EC. On account of the specific nature of the legal interests protected at Community level, the Commission's assessments pursuant to its relevant powers may diverge considerably from those by authorities of non-member States (see SGL Carbon v Commission , paragraph 312, and Showa Denko v Commission , paragraph 55).

28. Accordingly, the Court concluded that the principle non bis in idem does not apply to situations in which the legal systems and competition authorities of non-member States intervene within their own jurisdiction (see SGL Carbon v Commission , paragraph 32, and Showa Denko v Commission , paragraph 56).

29. As regards the present appeal, it must be observed that the Court of First Instance, essentially following the same reasoning, held at paragraphs 112 to 116 of the judgment under appeal that the principle non bis in idem does not apply where the Commission is called upon to exercise its powers under Community law, even though penalties have already been imposed on the undertaking concerned by the authorities of a non-member State for infringement of the competition rules applicable in that State.

30. In those circumstances, the argument put forward in its appeal alleging breach of the principle non bis in idem cannot be accepted.

31. As regards the argument put forward by the appellant at the hearing that the judgments in SGL Carbon v Commission and Showa Denko v Commission should be taken to mean that the Commission's discretion as to whether or not it is required to take into account the penalties imposed on the undertaking concerned by the authorities of a non-member State for infringement of the competition rules applicable in that State might in appropriate cases be reduced' in the sense that the Commission might none the less be required to take such penalties into consideration, it is sufficient to observe that such an interpretation of those judgments rests on a misreading of them and, in particular, paragraphs 36 and 60 respectively thereof.

32. In effect, at paragraphs 36 and 60 of those judgments, the Court did not make a determination as to the applicability of the principle non bis in idem but answered a subsidiary argument whereby

the appellants sought to establish that the Court of First Instance had failed to have regard to the principles of proportionality and fairness.

33. In that regard, the Court of Justice merely recalled that the determination of the fines imposed for infringements of Community competition law falls within the discretion which the Commission enjoys in such matters.

34. It follows that, in holding at paragraph 128 of the judgment under appeal that the Commission was not required to take the penalties which had been imposed on SGL Carbon by the authorities in the United States into consideration, the Court of First Instance did not err in law.

35. Accordingly, the first plea put forward by SGL Carbon in support of its appeal must be rejected.

Second plea, alleging that the increase in the amount of the fine imposed on the appellant because of its role as ringleader of the cartel is unlawful

36. This plea consists of two parts. In the first place, SGL Carbon claims that the increase in the basic amount of the fine is unlawful on the ground that the findings of fact made by the Court of First Instance do not establish any basis for such an increase. In the second place, in the appellant's submission, the Court of First Instance failed to have regard to the rights of the defence on that point, since before the decision in issue was adopted the appellant could not acquaint itself with a circumstance essential for its defence, namely that it would be considered by the Commission as the sole ringleader of the cartel.

First part of the second plea

- Arguments of the parties

37. SGL Carbon claims that the position of ringleader of the cartel attributed to it by the Court of First Instance does not correspond to the factual context of the case as set out in the judgment under appeal.

38. It also contends that neither the factual circumstances nor the findings of the Court of First Instance, which, moreover, are contradictory, can constitute factors capable of justifying an increase in the fine imposed on it.

39. The Commission asserts that, in so far as the appellant disputes the assessments of fact made by the Court of First Instance in respect of the appellant's role as ringleader of the cartel, this part of the plea is inadmissible.

40. It further submits that the appellant's argument that its characterisation as ringleader was reflected in the amount of the fine is also inadmissible, since it amounts to a repetition of arguments already raised before the Court of First Instance.

- Findings of the Court

41. It must be borne in mind, as a preliminary point, that it is clear from Article 225 EC and the first paragraph of Article 58 of the Statute of the Court of Justice that the Court of First Instance has exclusive jurisdiction, first, to find the facts, except where the substantive inaccuracy of its findings is apparent from the documents submitted to it and, second, to assess those facts. When the Court of First Instance has found or assessed the facts, the Court of Justice has jurisdiction under Article 225 EC to review the legal characterisation of those facts by the Court of First Instance and the legal conclusions it has drawn from them. The Court of Justice thus has no jurisdiction to establish the facts or, in principle, to examine the evidence which the Court of First Instance accepted in support of those facts. Provided that the evidence has been properly obtained and the general principles of law and the rules of procedure in relation to the burden of proof and the taking of evidence have been observed, it is for the Court of First Instance alone to assess the

value which should be attached to the evidence produced to it. Save where the clear sense of the evidence has been distorted, that appraisal does not therefore constitute a point of law which is subject as such to review by the Court of Justice (see Case C551/03 P General Motors v Commission [2006] ECR I3173, paragraphs 51 and 52 and the case-law there cited).

42. As to the first part of the second plea, it must be observed that at paragraphs 316 to 331 of the judgment under appeal the Court of First Instance examined in detail the factual circumstances which led the Commission to regard SGL Carbon as the ringleader of the cartel and to take the view that such a role constituted an aggravating circumstance.

43. As regards such a circumstance, it must be observed that, in accordance with a consistent line of cases (see, in particular, Case C189/02 P Dansk Rørindustri and Others v Commission [2005] ECR I5425, paragraphs 240 to 242), the gravity of an infringement is assessed in the light of numerous factors, in respect of which the Commission has a margin of discretion. In taking into consideration, in accordance with the Guidelines referred to above, when determining the amount of the fine, the fact that there are aggravating circumstances, the Commission is merely carrying out its task of ensuring compliance with the Community competition rules.

44. For the purpose of determining the gravity of the infringement, it is necessary to take into consideration, in particular, the conduct of each of the undertakings, the role played by each of them in the establishment of the cartel and the profit which they were able to derive from it (see, to that effect, Joined Cases 100/80 to 103/80 Musique Diffusion française and Others v Commission [1983] ECR 1825, paragraph 129).

45. In those circumstances, SGL Carbon's argument relating to the aggravating circumstance associated with its role as ringleader of the cartel seeks to have the Court re-examine all the factual evidence by reference to which the Court of First Instance has reached its decision.

46. In that regard, SGL Carbon refers to no other document or to any other factor of such a kind as to demonstrate that the Court of First Instance erred in law in its assessment relating to the appellant's role in both establishing and developing the cartel.

47. Nor is that assessment vitiated by contradictions in respect of the evaluation of SGL Carbon's conduct and that of the other undertakings that participated in the cartel.

48. It follows that the first part of the second plea must be rejected as inadmissible.

Second part of the second plea

- Arguments of the parties

49. SGL Carbon maintains that it was not given a proper hearing as regards the assessment of its infringement by the Commission and that the Court of First Instance misconstrued the legal import of such a circumstance. In the statement of objections, the Commission attributed to it and another undertaking the role of ringleaders of the cartel. At recitals 485 to 488 to the decision in issue, on the other hand, the Commission considered that the appellant alone was the leader and instigator of the infringement in the isostatic specialty market' and imposed on it the highest increase in the basic amount, namely 50%.

50. SGL Carbon therefore maintains that the Court of First Instance failed to observe its rights of defence. The statement of objections cannot merely mention that a fine will take account of the gravity and duration of the infringement but, in order to permit an effective defence, must set out the circumstances that may be taken into consideration when the Commission adopts its decision.

51. SGL Carbon emphasises that its alleged capacity as ringleader is an essential element for the purpose of fixing the amount of the fine. If the statement of objections had stated that the

Commission envisaged making such an assessment of the gravity of the infringement, SGL Carbon would have opposed it.

52. The Commission submits that the Court of First Instance was correct to hold that the rights of the defence, in particular the right to be heard, had been observed, since, in the statement of objections, the main elements of fact and of law concerning the infringements, such as their gravity and duration, had been stated. The right to be heard has no bearing on the way in which the Commission proposes to make use of the criteria of the gravity and the duration of the infringement for the purpose of determining the amount of the fines.

53. The Commission contends that the importance of the appellant's activity as leader of the cartel or the way in which the Court of First Instance assessed the circumstances relating to the appellant are questions of fact which can be reviewed at the appeal stage only where the evidence has been distorted.

54. It observes in that regard that the appellant has not questioned the lawfulness of the findings of fact made by the Court of First Instance. Nor has it put forward any arguments capable of showing that the evidence may have been distorted by the Court of First Instance.

- Findings of the Court

55. It must be borne in mind that it is the statement of objections, on the one hand, and access to the file, on the other, that allow the undertakings under investigation to acquaint themselves with the evidence which the Commission has at its disposal and to render the rights of the defence fully effective (see Joined Cases C 238/99 P, C244/99 P, C245/99 P, C247/99 P, C250/99 P to C252/99 P and C254/99 P Limburgse Vinyl Maatschappij and Others v Commission [2002] ECR I8375, paragraphs 315 and 316, and also Joined Cases C204/00 P, C205/00 P, C211/00 P, C213/00 P, C217/00 P and C219/00 P Aalborg Portland and Others v Commission [2004] ECR I123, paragraphs 66 and 67).

56. It also follows from a consistent line of decisions that, provided that the Commission sets out in the statement of objections the main elements of fact and of law capable of leading to the imposition of a fine, such as the gravity and the duration of the alleged infringement and also the circumstance that the infringement was committed deliberately or negligently, the Commission satisfies its obligation to observe the undertakings' right to be heard (see, to that effect, Case 322/81 Michelin v Commission [1983] ECR 3461, paragraphs 19 and 20, and Dansk Rørindustri and Others v Commission , paragraph 428).

57. As regards the present appeal, it must be held that at paragraphs 138 to 142 of the judgment under appeal the Court of First Instance correctly determined the legal framework governing the statement of objections and the right of the undertakings to be heard.

58. Subsequently, the Court of First Instance correctly considered, at paragraphs 144 and 145 of the judgment under appeal, that the rights of the defence had been observed because SGL Carbon had been given the opportunity to comment on the duration, the gravity and the nature of the infringement. The Court of First Instance was also correct to state, at paragraph 146 of the judgment, that the Commission was not required to explain in the statement of objections the way in which it might make use of each of those elements in determining the amount of the fine (see, to that effect, Dansk Rørindustri and Others v Commission , paragraphs 434, 435 and 439).

59. It follows that the Court of First Instance did not err in law when it held that the statement of objections contained sufficiently precise indications of the way in which the Commission proposed to determine the amount of the fine, in particular as regards the gravity of the infringement.

60. It should be observed, in particular, that the Court of First Instance held, at paragraph

148 of the judgment under appeal, that the statement of objections indicated that SGL Carbon had played the role of leader and instigator of the infringement. The appellant was therefore made aware that that fact might be taken into account when the fine was set.

61. The Court of First Instance was also correct to hold, at paragraph 149 of the judgment under appeal, that there was nothing to suggest that SGL Carbon's liability as ringleader of the cartel was increased by the fact that the Commission, in the decision in issue, no longer attributed the same role to another undertaking which had participated in the cartel.

62. In those circumstances, as the Advocate General observed at point 59 of his Opinion, the fact that in the contested decision SGL Carbon was considered by the Commission to be the sole ringleader of the cartel did not alter, vis-à-vis the Commission, that undertaking's position to the point of breaching the rights of the defence, since it is inherent in the nature of the statement of objections that it is provisional and subject to amendments to be made by the Commission in its subsequent assessment on the basis of the observations submitted to it by the parties and other findings of fact.

63. The second part of the second plea is therefore unfounded.

64. It follows from the foregoing that the second plea put forward by SGL Carbon in support of its appeal must be rejected in its entirety.

Third plea, alleging breach of the rights of the defence in so far as they include the right to be heard

Arguments of the parties

65. SGL Carbon claims that the Court of First Instance was wrong to hold, at paragraph 154 of the judgment under appeal, that the allegation that the Commission officials responsible for the investigation had insufficient knowledge of German was not supported by any reliable evidence. The appellant submits that it demonstrated the extent to which and the factors on the basis of which it could only assume that none of those officials had sufficient command of that language.

66. According to SGL Carbon, the Commission's officials must be capable of understanding all the data relied on by the undertakings concerned, whether directly or by means of translations.

67. The Commission observes that the Court of First Instance considered that the appellant had adduced no reliable evidence capable of supporting that allegation.

68. The Commission emphasises that the individual language knowledge of a particular official cannot play the slightest role as regards respect for the rights of the defence. The administrative procedure is conducted by the Directorate-General for competition and is concluded by a decision adopted by the Commission acting in its capacity as an institution.

69. The Commission further submits that all the correspondence exchanged during the procedure was in German, with only one exception. Only the third request for information sent to the appellant was in English, but the appellant did not request a translation and merely replied in German.

Findings of the Court

70. It should be recalled by way of preliminary point that in all proceedings in which sanctions, especially fines or penalty payments, may be imposed, observance of the rights of the defence is a fundamental principle of Community law which must be complied with even if the proceedings in question are administrative proceedings (see, in particular, Case C194/99 P Thyssen Stahl v Commission [2003] ECR I10821, paragraph 30).

71. Observance of the rights of the defence requires, in particular, that the undertaking under

investigation is put in a position during the administrative procedure to put forward its point of view on the reality and the relevance of the alleged facts and also on the documents used by the Commission (see Case C310/93 P BPB Industries and British Gypsum v Commission [1995] ECR I865, paragraph 21).

72. As regards the third plea invoked in support of the appeal, it must be observed that, in so far as SGL Carbon challenges the rejection by the Court of First Instance, at paragraph 154 of the judgment under appeal, of its argument that the Commission had entrusted the case-file to officials who did not have sufficient knowledge of German, that conclusion is based on an assessment of fact and an evaluation of the evidence submitted to the Court of First Instance, which, as recalled at paragraph 41 of the present judgment, cannot be challenged in an appeal.

73. However, even on the assumption that certain officials of the Commission responsible for the case did not have the necessary language knowledge, it is sufficient to observe, in so far as SGL Carbon claims that the Commission breached its rights of defence, that the language knowledge of a member of the team responsible for investigating a cartel cannot in itself be decisive for the purpose of determining whether there was any breach of the rights of the defence by the Commission.

74. Consequently, the Court of First Instance did not err in law in considering that the rights of the defence had not been breached by the Commission.

75. The third plea in law put forward by SGL Carbon in support of its appeal cannot therefore be upheld.

Fourth plea in law, alleging failure to take SGL Carbon's cooperation with the Commission into account

Arguments of the parties

76. SGL Carbon claims that the Court of First Instance did not take into consideration the arguments that its cooperation with the Commission was undervalued by comparison with that of the other undertakings concerned. The Commission reduced the fine imposed on the appellant by only 35%, whereas a reduction of 50 to 75% would have been appropriate.

77. The appellant maintains that it cooperated at least to the same extent as the other undertakings and that it was the only one to provide information about the participation of other undertakings in the cartel.

78. SGL Carbon also claims that the question whether or not the Commission takes into account in its decision the infringements revealed by undertakings which cooperated is not the only relevant issue. Otherwise, undertakings wishing to cooperate would at any time have to fear that their cooperation, like the appellant's, would not be taken into consideration, or not be fully taken into consideration.

79. The Commission contends that the Court of First Instance did not err in law as regards its assessments relating to SGL Carbon's cooperation during the investigation. The Court of First Instance properly assessed the appellant's contributions and those of the other undertakings concerned. Since the appellant's cooperation did not contribute to the establishment of the infringement, there was no need to take it into consideration and to reduce the fine accordingly.

80. The Commission contends that the Court of First Instance properly examined the evidence concerning the respective contributions of the undertakings concerned during the investigation. The appellant has not explained to what extent that examination may have distorted the evidence, which is the only matter amenable to review in an appeal.

Findings of the Court

81. As observed at paragraph 43 of this judgment, the Commission has a wide discretion as regards

the method of calculating fines and it may, in that regard, take account of numerous factors, including the cooperation provided by the undertakings concerned during the investigation conducted by its departments. In that context, the Commission is required to make complex assessments of fact, such as those relating to the cooperation provided by the individual undertakings concerned.

82. As regards the present case, it must be observed that, at paragraphs 358 to 362 of the judgment under appeal, the Court of First Instance based its assessments in that regard, in reliance on the Leniency Notice, on the consideration that a single undertaking, namely the first one to provide evidence concerning the existence of a cartel, may receive a substantial reduction in the fine, to the exclusion of other undertakings which, at a subsequent stage in the administrative procedure, produce particular evidence relating to the same cartel.

83. With respect to the cooperation which an undertaking provides to the Commission, it is settled case-law that such a contribution may justify a reduction in the fine under the Leniency Notice only if it actually allows the Commission to achieve its task of establishing the existence of an infringement and putting an end to it (see, to that effect, Case C297/98 P SCA Holding v Commission [2000] ECR I10101, paragraph 36, and Dansk Rørindustri and Others v Commission , paragraph 399).

84. More specifically, while the Leniency Notice already provides, in Sections C and B, for a reduction in the fine for the first undertaking to adduce evidence of the existence of a cartel, the objective of promoting cooperation by undertakings in detecting secret cartels affecting the Community, in particular the undertakings which are the first to adduce evidence, was confirmed and reinforced by the Commission Notice on Immunity from fines and reduction of fines in cartel cases (OJ 2006 C 298, p. 17).

85. In the present case, the Court of First Instance pointed out, at paragraph 360 of the judgment under appeal, that only a single undertaking, which was not SGL Carbon, had been the first to adduce such evidence.

86. Consequently, the Court of First Instance held, at paragraph 367 of the judgment under appeal, that SGL Carbon, as ringleader of the cartel, did not satisfy the conditions set out in the Leniency Notice and could not claim a significant reduction in the fine imposed on it. Such an assessment, based on fact, cannot be challenged in an appeal.

87. As regards SGL Carbon's argument concerning the taking into consideration of its cooperation with the Commission, independently of the fact that the appellant was characterised as ringleader of the cartel, it must be noted that the Court of First Instance was correct to hold, at paragraph 368 of the judgment under appeal, that the Commission was not required to reward such cooperation by a substantial reduction in the fine, since that cooperation had not effectively facilitated the establishment of the existence of that cartel and enabled the Commission to put an end to it.

88. As regards, finally, SGL Carbon's claim that the cooperation provided by it was undervalued by comparison with that of the other members of the cartel, it should be noted, as the Court of First Instance rightly pointed out at paragraph 371 of the judgment under appeal, that the Commission enjoys a wide discretion in assessing the quality and usefulness of the cooperation provided by an undertaking, in particular by reference to the contributions made by other undertakings.

89. In fact, SGL Carbon has adduced no evidence capable of showing how the Court of First Instance erred in law in its analysis of the Commission's exercise of its discretion with respect to the way in which the undertakings cooperated with it during the investigation.

90. It follows from the foregoing that SGL Carbon is not correct to maintain that the findings of the Court of First Instance relating to its cooperation with the Commission during the investigation

are vitiated by an error of law.

91. The fourth plea in law put forward by SGL Carbon in support of its appeal must therefore be rejected.

Fifth plea in law, alleging that the fine is disproportionate

Arguments of the parties

92. SGL Carbon claims that the Court of First Instance was wrong to consider that the Commission is not required to evaluate the economic position of the undertaking concerned when setting the amount of the fine.

93. The appellant maintains that it is unacceptable that the Court of First Instance should approve an undertaking's becoming insolvent as a result of the imposition of a fine without taking the financial consequences of the fine into consideration. It submits that the principle of proportionality means that the impact of penalties by reference to the economic situation of the undertaking concerned must be taken into account.

94. The Commission contends that the fifth plea is inadmissible. In effect, SGL Carbon seeks to secure a reconsideration of the appropriateness of the determination of the amount of the fine by submitting a series of allegations which fall outside the findings made by the Court of First Instance in the judgment under appeal. However, such findings of fact cannot be reviewed by the Court of Justice in an appeal.

95. The Commission maintains that the fifth plea is unfounded in any event. In the exercise of its unlimited jurisdiction, the Court of First Instance approved the consistent case-law that the Commission is not required to take an undertaking's economic situation into account when determining the amount of a fine.

96. The Commission further submits that the Court of First Instance considerably reduced the amount of the fine imposed on the appellant, in excess of the reduction granted by the Commission.

Findings of the Court

97. It must be borne in mind at the outset that, as already stated at paragraph 41 of this judgment, review by the Court of Justice, in an appeal, does not extend to the findings of fact made by the Court of First Instance, save where the substantive inaccuracy of those findings is apparent from the documents in the file, where the evidence has been distorted by the Court of First Instance, where the legal characterisation of the facts by that Court is incorrect and where it is necessary to ascertain whether the rules relating to the burden of proof and the taking of evidence have been observed.

98. Nor is it open to the Court of Justice, when determining an appeal, to substitute, on grounds of fairness, its own assessment for that of the Court of First Instance exercising its unlimited jurisdiction to rule on the amount of fines imposed on undertakings for infringements of Community law (see Case C219/95 P Ferriere Nord v Commission [1997] ECR I4411, paragraph 31, and Case C407/04 P Dalmine v Commission [2007] ECR I0000, paragraph 152).

99. In so far as SGL Carbon disputes the proportionality of the fine imposed on it, the plea must be declared inadmissible, since it attempts to secure a reconsideration of findings of fact for which the Court of Justice does not have jurisdiction in an appeal (see also Case C359/01 P British Sugar v Commission [2004] ECR I4933, paragraphs 47 and 48, and Dansk Rørindustri and Others v Commission , paragraphs 245 and 246).

100. As regards the argument that the Court of First Instance failed to take account of SGL Carbon's financial capacity, it must be observed that, according to settled caselaw which rightly

provides inspiration for paragraph 333 of the judgment under appeal, the Commission is not required, when determining the amount of the fine, to take into account the financial situation of an undertaking, since recognition of such an obligation would be tantamount to giving unjustified competitive advantages to undertakings least well adapted to the market conditions (see Joined Cases 96/82 to 102/82, 104/82, 105/82, 108/82 and 110/82 IAZ International Belgium and Others v Commission [1983] ECR 3369, paragraphs 54 and 55, and SGL Carbon v Commission , paragraphs 105 and 106).

101. In those circumstances, the Court of First Instance did not err in law in rejecting, at paragraph 333 of the judgment under appeal, the plea based on the fact that the Commission failed to take the appellant's financial capacity into account.

102. The fifth plea put forward by SGL Carbon in support of its appeal cannot therefore be upheld.

Sixth plea, alleging that the interest rates fixed by the Commission are illegal

Arguments of the parties

103. SGL Carbon maintains that the Court of First Instance did not examine its arguments concerning the fixing of the interest rates and that the judgment under appeal is therefore vitiated by an error of law on that point.

104. It contends that the interest charged is too high. In the absence of a legal basis, the Commission cannot set interest at a rate considerably higher than the market rate. By fixing high interest rates, the Commission imposed a further penalty on the appellant.

105. SGL Carbon submits that the Court of First Instance cannot in any event properly reject the reference to the interest rate applied to the provisional payments made by undertakings in order to pay the fines imposed on them by asserting that the sole purpose of that rate is to prevent the unjust enrichment of the Communities. Even the rate of interest applicable to unpaid fines must have as its sole purpose to prevent the undertaking concerned from deriving a benefit from providing a guarantee.

106. The Commission contends that the sixth plea is inadmissible in so far as it seeks to have the setting of the interest reconsidered by the Court of Justice in the context of the appeal.

107. The Commission maintains that, in any event, the plea is unfounded. If undertakings were able to obtain economic advantages by delaying payment of the fines imposed on them, the penalty would be weakened and the undertakings delaying payment of the fines would have financial advantages by comparison with those paying promptly.

108. The Commission further submits that the Court of First Instance justified to the requisite legal standard the reasons why the Commission had not abused its discretion when fixing the interest and that the appellant has put forward no argument capable of showing that the default interest was fixed disproportionately.

Findings of the Court

109. It must be borne in mind that the Court of First Instance, in response to the plea raised before it, referred at paragraph 411 of the judgment under appeal to the consistent case-law according to which the Commission's powers under Article 15(2) of Regulation No 17 include the power to set the date by which the fines are payable and on which interest begins to accrue, and also the rate of that interest and the detailed arrangements for implementing its decision.

110. If the Commission did not have such a power, undertakings might be able to take advantage of late payments, thereby weakening the effect of penalties (SGL Carbon v Commission , paragraph 114).

111. Accordingly, the Court of First Instance was right to hold that the Commission was entitled to adopt a point of reference higher than the applicable market rate offered to the average borrower, to an extent necessary to discourage dilatory behaviour in relation to payment of the fine (SGL Carbon v Commission , paragraph 115).

112. It is appropriate to add that SGL Carbon has not shown how the Court of First Instance erred in law in holding, at paragraph 412 of the judgment under appeal, that the Commission did not exceed its discretion in setting the rate of the default interest. The appellant has merely requested a re-examination of the findings of fact made by the Court of First Instance in that regard.

113. Such a line of argument falls outside the scope of the Court's power of review in an appeal (see Case C113/04 P Technische Unie v Commission [2006] ECR I8831, paragraphs 81 to 83). On that point, the plea must therefore be declared inadmissible.

114. As regards SGL Carbon's allegation that its argument that the Commission grants interest rates of 2% on provisional payments was wrongly rejected as being out of time, it must be observed that the Court of First Instance properly regarded that argument, which had not been raised in the originating application, as constituting a fresh plea, within the meaning of Article 48(2) of its Rules of Procedure. The Court of First Instance was therefore correct to reject it, as it did at paragraph 413 of the judgment under appeal, as inadmissible.

115. The sixth plea put forward by SGL Carbon in support of its appeal is therefore unfounded in part and inadmissible in part.

116. It follows from all of the foregoing considerations that none of the pleas on which SGL Carbon relies in support of its appeal can succeed and that the appeal must therefore be dismissed.

Costs

117. Under Article 69(2) of the Rules of Procedure, which applies to appeal proceedings pursuant to Article 118 of those Rules, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. As the Commission has applied for costs against SGL Carbon and SGL Carbon has been unsuccessful, it must be ordered to pay the costs.

Judgment of the Court (Fourth Chamber)
of 7 June 2007
Britannia Alloys & Chemicals Ltd v Commission of the European Communities. Appeals - Competition - Agreements, decisions and concerted practices - Fines - Preceding business year' for determining the turnover on which the calculation of the fine is based. Case C-76/06 P.

1. Competition - Fines - Amount - Determination - Maximum amount

(Council Regulation No 17, Art. 15(2), first para.)

2. Competition - Fines - Amount - Determination - Maximum amount

(Council Regulation No 17, Art. 15(2), first para.)

3. Competition - Fines - Amount - Determination - Maximum amount

(Council Regulation No 17; Commission Notice 98/C 9/03)

1. The limit relating to turnover laid down in the first subparagraph of Article 15(2) of Regulation No 17 seeks to prevent fines imposed by the Commission from being disproportionate in relation to the size of the undertaking concerned. It follows that, in determining the preceding business year', the Commission must assess, in each specific case and having regard both to the context and the objectives pursued by the scheme of penalties created by Regulation No 17, the intended impact on the undertaking in question, taking into account in particular a turnover which reflects the undertaking's real economic situation during the period in which the infringement was committed. Therefore, where the undertaking concerned has not achieved any turnover for the business year preceding the adoption of the Commission decision, the Commission is entitled to refer to another business year in order to be able to make a correct assessment of the financial resources of that undertaking and to ensure that the fine has a sufficient deterrent effect. Moreover, the determination of the upper limit of the fine is not a mere question of choosing between the two possibilities provided for in the first subparagraph of Article 15(2) of Regulation No 17, that is, between a maximum fine of EUR 1 million and an upper limit set by reference to the turnover of the undertaking concerned.

(see paras 24-25, 30-31)

2. When establishing the business year to be taken into account in order to ensure compliance with the upper limit of 10% of turnover applicable to fines imposed for breach of Community competition rules, the Commission does not infringe the principle of equal treatment by applying to one of the undertakings which participated in a cartel, but which had no turnover in the business year preceding the adoption of the penalising decision, different treatment from that applied to the other participants in the cartel which were still active when that decision was taken and had turnover for the previous business year giving a strong indication of their economic situation.

Moreover, in the context of calculating fines imposed under Article 15(2) of Regulation No 17, differentiated treatment of the undertakings concerned is inherent in the exercise of the Commission's powers under that provision. In exercising its discretion, the Commission is required to fit the penalty to the individual conduct and specific characteristics of the undertakings concerned in order to ensure that, in each case, the Community competition rules are fully effective.

Even if the Commission's previous practice had been different concerning an undertaking in breach which withdrew from the market concerned by the infringement before the penalising decision was taken, that change of practice cannot constitute an infringement of the principle of the protection of legitimate expectations, since a decision-making practice of the Commission cannot serve as a legal framework for the imposition of fines in competition matters.

(see paras 41-44, 60-62)

3. The provisions governing the implementation of the Community competition rules, and in particular Regulation No 17 and the Guidelines, enable undertakings to foresee with certainty the financial consequences likely to result from an infringement of those rules. Consequently, the principle of legal certainty can give an undertaking no guarantee that its cessation of commercial activities in the sector concerned will result in its escaping the imposition of a fine for the infringement committed in that sector.

Moreover, in the light of the Commission's discretion in this field, an undertaking participating in a cartel cannot acquire any certainty as to the amount of the fine likely to be imposed on it by the Commission under the provisions of Regulation No 17. In those circumstances, the fact that it was not able to ascertain in advance the relevant reference year for the purposes of determining the upper limit of the fine does not, by itself, constitute an infringement of the principle of legal certainty.

(see paras 80-81, 83-84)

In Case C-76/06 P,

APPEAL pursuant to Article 56 of the Statute of the Court of Justice, brought on 7 February 2006,

Britannia Alloys & Chemicals Ltd, established in Gravesend (United Kingdom), represented by S. Mobley and M. Commons, solicitors,

applicant,

the other party to the proceedings being:

Commission of the European Communities, represented by F. Castillo de la Torre, acting as Agent, with an address for service in Luxembourg

defendant at first instance,

THE COURT (Fourth Chamber),

composed of K. Lenaerts, President of the Chamber, E. Juhasz, R. Silva de Lapuerta (Rapporteur), G. Arestis and T. von Danwitz, Judges,

Advocate General: Y. Bot,

Registrar: R. Grass,

having regard to the written procedure,

after hearing the Opinion of the Advocate General at the sitting on 1 March 2007,

gives the following

Judgment

On those grounds, the Court (Fourth Chamber) hereby:

1. Dismisses the appeal;

2. Orders Britannia Alloys & Chemicals Ltd to pay the costs.

1. By its appeal, Britannia Alloys & Chemicals Ltd (Britannia') asks the Court to set aside the judgment of the Court of First Instance of the European Communities of 29 November 2005 in

Case T-33/02 Britannia Alloys & Chemicals v Commission [2005] ECR II4973 (the judgment under appeal'), by which the Court dismissed its appeal against Commission Decision 2003/437/EC of 11 December 2001 relating to a proceeding under Article 81 of the EC Treaty and Article 53 of the EEA Agreement (Case COMP/E-1/37.027 - Zinc phosphate) (OJ 2003 L 153, p. 1; the contested decision'), and to annul Article 3 of that decision in so far as it concerns the applicant.

Legal context

Regulation No 17

2. Article 15 of Council Regulation No 17: First Regulation implementing Articles [81] and [82] of the Treaty (OJ, English Special Edition 1959-1962, p. 87), provides:

1. The Commission may by decision impose on undertakings or associations of undertakings fines of from 100 to 5 000 units of account where, intentionally or negligently:

...

(b) they supply incorrect information in response to a request made pursuant to Article 11(3) or (5)...

...

2. The Commission may by decision impose on undertakings or associations of undertakings fines of from 1 000 to 1 000 000 units of account, or a sum in excess thereof but not exceeding 10% of the turnover in the preceding business year of each of the undertakings participating in the infringement where, either intentionally or negligently:

(a) they infringe Article [81](1) or Article [82] of the Treaty...

...

In fixing the amount of the fine, regard shall be had both to the gravity and to the duration of the infringement.'

The Guidelines

3. The Commission Notice entitled Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty' (OJ 1998 C 9, p. 3) (the Guidelines') states in its introduction:

The principles outlined... by the Guidelines should ensure the transparency and impartiality of the Commission's decisions, in the eyes of the undertakings and of the Court of Justice alike, whilst upholding the discretion which the Commission is granted under the relevant legislation to set fines within the limit of 10% of overall turnover. This discretion must, however, follow a coherent and non-discriminatory policy which is consistent with the objectives pursued in penalising infringements of the competition rules.

The new method of determining the amount of a fine will adhere to the following rules, which start from a basic amount that will be increased to take account of aggravating circumstances or reduced to take account of attenuating circumstances.'

Background to the dispute

4. In paragraphs 1 to 10 of the judgment under appeal, the Court summarised the factual background to the dispute brought before it as follows:

1 Britannia..., a company incorporated under English law, is a subsidiary of M.I.M. Holdings Limited (MIM), an Australian company. In October 1993, Pasminco Europe (ISC Alloys) Limited

sold its zinc business to MIM, which transferred it to Britannia. That undertaking produced and sold zinc products, including zinc phosphate. In March 1997, Trident Alloys Limited (Trident), an independent company formed by Britannia's management, acquired Britannia's zinc business for GBP 14 359 072. Britannia is still in existence as a subsidiary of MIM, but is a non-trading company and therefore has no turnover.

2 Although they may have slightly differing chemical formulae, zinc orthophosphates form a homogeneous chemical product, generically referred to as zinc phosphate. Zinc phosphate, which is derived from zinc oxide and phosphoric acid, is widely used as an anti-corrosion mineral pigment in the paint industry. It is marketed either as standard zinc phosphate or as modified (or activated) zinc phosphate.

3 In 2001, virtually all of the world zinc production was controlled by the following five European producers: Dr Hans Heubach GmbH & Co. KG (Heubach), James M. Brown Limited (James Brown), Société Nouvelle des Couleurs Zinciques SA (SNCZ), Trident (formerly Britannia) and Union Pigments AS (formerly Waardals AS) (Union Pigments).

4 On 13 and 14 May 1998, the Commission carried out simultaneous and unannounced investigations under Article 14(2) of Regulation No 17 at the premises of Heubach, SNCZ and Trident....

5 On 11 December 2001, the Commission adopted the contested decision. The decision which is the subject of the present judgment is the one notified to the undertakings concerned, and which is annexed to the application....

6 In the contested decision, the Commission states that a cartel, consisting of Britannia (Trident as from 15 March 1997), Heubach, James Brown, SNCZ and Union Pigments, existed between 24 March 1994 and 13 May 1998. The cartel was limited to standard zinc phosphate. The members of the cartel first adopted a market sharing agreement with sales quotas for the producers. Subsequently, they agreed on bottom or recommended prices at each meeting, which they generally followed. There was also a certain amount of customer allocation.

7 The operative part of the contested decision reads as follows:

Article 1

Britannia ... , Heubach... , James Brown, [SNCZ], Trident... and [Union Pigments] have infringed the provisions of Article 81(1) of the Treaty and Article 53(1) of the EEA Agreement by participating in continuing agreement and/or concerted practice in the zinc phosphate sector.

The duration of the infringement was as follows:

...

(b) in the case of Britannia...: from 24 March 1994 until 15 March 1997

...

Article 3

For the infringement referred to in Article 1, the following fines are imposed:

(a) Britannia...: EUR 3.37 million;

(b) ... Heubach...: EUR 3.78 million;

(c) James ... Brown...: EUR 940 000;

(d) [SNCZ]: EUR 1.53 million;

(e) Trident...: EUR 1.98 million;

(f) [Union Pigments]...: EUR 350 000.

...

8 In calculating the fines, the Commission applied the method set out in the Guidelines... and the Commission Notice of 18 July 1996 on the non-imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4, the Leniency Notice).

9 The Commission found first that the appropriate basic amount of fine for the applicant was EUR 3.75 million ([paragraph] 313 [of the grounds of] the contested decision). Next, it referred to the limit which, under Article 15(2) of Regulation No 17, the fine to be imposed on each of the undertakings concerned may not exceed. In fixing the upper limit of 10% of turnover achieved in the previous financial year laid down by that provision, the Commission, in the case of the applicant, took into account its global turnover for the business year ending 30 June 1996, which is the last available figure reflecting an entire year of normal economic activity ([paragraph] 345...). As that turnover was EUR 55.7 million ([paragraph] 50), the upper limit of the fine was set at about EUR 5.5 million. As the amount of the fine before application of the Leniency Notice was below that upper limit, the Commission did not reduce it on that basis.

10 Finally, the Commission granted the applicant a reduction of 10% under the Leniency Notice ([paragraph] 366). The final amount of the fine imposed on the applicant was thus EUR 3.37 million ([paragraph] 370).'

The procedure before the Court of First Instance and the judgment under appeal

5. By application lodged at the Registry of the Court of First Instance on 21 February 2002, Britannia brought an action for the partial annulment of the contested decision and, in the alternative, for reduction in the amount of the fine imposed by that decision.

6. By the judgment under appeal, the Court of First Instance dismissed the action.

Forms of order sought by the parties to the appeal

7. By its appeal, Britannia claims that the Court should:

- set aside the judgment under appeal in so far as it dismissed its action;

- annul Article 3 of the contested decision in so far as it concerns the applicant;

- in the alternative, amend Article 3 in so far as it concerns the applicant, so as to annul or substantially reduce the fine imposed on the applicant therein;

- further, in the alternative, refer the case back to the Court of First Instance for judgment in accordance with the judgment of the Court of Justice as to the law;

- in any event, order that the Commission bear its own costs and pay Britannia's costs relating to the proceedings before the Court of First Instance and the Court of Justice.

8. The Commission contends that the Court should:

- dismiss the appeal in part as inadmissible, or, in the alternative, dismiss it as unfounded;

- order the applicant to pay the costs.

The appeal

9. In support of its claims, Britannia relies, in essence, on three pleas alleging, respectively, breach of Article 15(2) of Regulation No 17, infringement of the principle of equal treatment and infringement of the principle of legal certainty.

The first plea, alleging breach of Article 15(2) of Regulation No 17

Arguments of the parties

10. By its first plea, Britannia submits that the Court of First Instance erred in law by holding that, in fixing the fine, the Commission had correctly applied the upper limit of 10% of turnover to Britannia's turnover for the business year ending 30 June 1996, rather than to the turnover for the business year preceding the adoption of the contested decision.

11. Britannia argues that, since it had not achieved any turnover for the business year immediately before the adoption of the contested decision, the Commission could only impose on it a fine of between EUR 1 000 and 1 000 000. Accordingly, the Court erred in law by holding that the Commission did not have to refer to the turnover for the business year ending on 30 June 2001.

12. Britannia submits that the adjective preceding', in the first subparagraph of Article 15(2) of Regulation No 17, refers to the last full 12-month financial year as at the date of adoption of the decision imposing the fine.

13. It maintains that the purpose of the upper limit on turnover, provided for in that provision of Regulation No 17, requires that that limit be applied to a business year which reflects the economic importance of the undertaking concerned on the date of the Commission decision. However, the Court of First Instance considered that, if an undertaking has not carried on any economic activity in the business year preceding such a decision, the turnover for that period will give no indication of its standing, and therefore cannot serve as a basis for setting the fine.

14. Britannia states that the figures, which appear in its audited accounts for the business year preceding the adoption of the contested decision, reflect its financial situation at the date on which the fine was imposed on it, that is, a turnover of zero. In order to determine the amount of that fine, the Commission could therefore not use a business year in which that company's economic activity was greater.

15. The Commission contends that, in accordance with the objective pursued by Article 15(2) of Regulation No 17, the premiss of the Court's reasoning is that the upper limit relating to turnover only applies if the undertaking has achieved that turnover in the business year preceding the decision closing the administrative procedure.

16. According to the Commission, the Court of First Instance correctly held that the upper limit was not applicable since there was no turnover for the last business year and, since the 10% upper limit seeks to reflect the financial capacity of the undertaking concerned, it applies where there is a turnover to which it can be linked.

17. The Commission states that the pre-condition for applying the 10% upper limit is the existence of a turnover. Where there is no turnover for the business year preceding the adoption of the final decision, other indicators have to be found in order to assess the amount of the fine to be imposed.

18. The Commission goes on to state that the Court's findings as to whether a zero turnover is a valid indication of Britannia's economic situation is a matter of fact which cannot be reviewed in the course of an appeal.

Findings of the Court

19. By its first plea, the applicant submits that the Court erred in law as regards the interpretation of the concept of preceding business year' contained in the first subparagraph of Article 15(2)

of Regulation No 17.

20. Thus, at issue between the parties before the Court of Justice is the question of how the Commission has to determine the concept of preceding business year' in those cases where substantial changes in the economic situation of the undertaking concerned have taken place between the period in which the infringement was committed and the date of adoption of the Commission decision imposing the fine.

21. As regards that concept, it should be pointed out that, according to settled case-law, in interpreting a provision of Community law it is necessary to consider not only its wording, but also its context and the objectives pursued by the rules of which it is part (see Case C17/03 VEMW and Others [2005] ECR I4983, paragraph 41, and Case C391/05 Jan De Nul [2007] ECR I0000, paragraph 20).

22. In that regard, it should be recalled that the purpose of Article 15(2) of Regulation No 17 is to empower the Commission to impose fines with a view to enabling it to carry out the task of supervision conferred on it by Community law (see Joined Cases 100/80 to 103/80 Musique Diffusion française and Others v Commission [1983] ECR 1825, paragraph 105). That task includes in particular suppressing illegal activities and preventing their reoccurrence (see Case 41/69 ACF Chemiefarma v Commission [1970] ECR 661, paragraph 173).

23. It should be added that, pursuant to the second subparagraph of Article 15(2) of Regulation No 17, the Commission is required to take into account the gravity and the duration of the infringement in question.

24. In the light of those factors, the Court has stated that the limit relating to turnover laid down in the first subparagraph of Article 15(2) of Regulation No 17 seeks to prevent fines imposed by the Commission from being disproportionate in relation to the size of the undertaking concerned (Musique Diffusion française and Others v Commission , paragraph 119).

25. It is clear from the above considerations that, in determining the preceding business year', the Commission must assess, in each specific case and having regard both to the context and the objectives pursued by the scheme of penalties created by Regulation No 17, the intended impact on the undertaking in question, taking into account in particular a turnover which reflects the undertaking's real economic situation during the period in which the infringement was committed.

26. Having regard to that legal framework, the Court of First Instance held, in paragraphs 38 and 48 of the judgment under appeal, that the calculation of the upper limit of the fine presupposes not only that the Commission has at its disposal the turnover figures for the last business year preceding the date of adoption of its decision, but also that those figures represent a full year of normal economic activity over a period of 12 months.

27. Furthermore, in paragraphs 39 and 49 of the judgment under appeal, the Court referred to a number of specific situations in order to illustrate the fact that the Commission must be able to use turnover achieved in a complete year of normal business activity for the purposes of applying Article 15(2) of Regulation No 17.

28. Thus, if it had been accepted, the applicant's argument would have led to an interpretation of the first subparagraph of Article 15(2) of Regulation No 17 to the effect that, in cases in which no turnover has been achieved in the business year preceding the adoption of the Commission decision, the Commission would be required to apply only the first part of that subparagraph, since there is no turnover to which the upper limit set out in the second part of that subparagraph can be linked.

29. However, such an interpretation disregards not only the scope of the Commission's powers under

Article 15(2), but also the fact that, in certain situations, the turnover for the business year preceding the adoption of the Commission decision does not provide any useful indication as to the actual economic situation of the undertaking concerned and the appropriate level of fine to impose on that undertaking.

30. Accordingly, where, as in the present case, the undertaking concerned has not achieved any turnover for the business year preceding the adoption of the Commission decision, the Commission is entitled to refer to another business year in order to be able to make a correct assessment of the financial resources of that undertaking and to ensure that the fine has a sufficient deterrent effect.

31. It must be added that, as the Advocate General noted in point 74 of his Opinion and as the Court of First Instance correctly held in paragraph 40 of the judgment under appeal, the determination of the upper limit of the fine is not a mere question of choosing between the two possibilities provided for in the first subparagraph of Article 15(2) of Regulation No 17, that is, between a maximum fine of EUR 1 million and an upper limit set by reference to the turnover of the undertaking concerned.

32. The Court of First Instance therefore did not err in law by holding that the Commission could refer, pursuant to the first subparagraph of Article 15(2) of Regulation No 17, to the last complete business year preceding the adoption of the contested decision, namely the year ending 30 June 1996.

33. Accordingly, the first plea in law relied on by Britannia in support of its appeal must be rejected.

The second plea, alleging infringement of the principle of equal treatment

34. This plea is in two parts.

The first part of the second plea

- Arguments of the parties

35. By the first part of its second plea, Britannia submits that the Court of First Instance infringed the principle of equal treatment by dismissing the action, when, in the contested decision, the upper limit of 10% was applied to the last business year in which that company was considered by the Commission to have pursued normal economic activity', and, in the case of other undertakings participating in the cartel, the Commission took into account the business year preceding the adoption of that decision.

36. Britannia asserts that the application of the upper limit relating to turnover to a business year other than that preceding the contested decision fails to have regard to its financial situation on the date of adoption of that decision. In order to ensure compliance with the principle of equal treatment, the Commission should have applied the upper limit laid down in the first subparagraph of Article 15(2) of Regulation No 17 to the business year preceding the adoption of that decision in respect of all the undertakings concerned.

37. Britannia takes the view that, contrary to the Court's findings, its zero turnover for that business year accurately reflects its economic situation for the period in which the infringement was committed.

38. The Commission observes that the Court considered that the applicant was in a different situation from that of the other two undertakings which participated in the cartel, since the 10% upper limit laid down in the first subparagraph of Article 15(2) of Regulation No 17 was applicable to those undertakings. Those undertakings achieved a turnover for the business year preceding the adoption

of the contested decision, which was a reliable indication of their economic situation.

39. The Commission submits that the applicant claims not that it was in the same situation as those undertakings, but merely that its zero turnover for that business year precisely reflected its economic situation at the time. However, such an argument calls into question a finding of fact by the Court of First Instance.

- Findings of the Court

40. It is settled case-law that the principle of equal treatment is infringed only where comparable situations are treated differently or different situations are treated in the same way, unless such difference in treatment is objectively justified (see Case C344/04 IATA and ELFAA [2006] ECR I-403, paragraph 95).

41. In relation to the present case, it should be recalled that the two undertakings which are the subject of Britannia's argument still carried on a commercial activity on the market which was the subject of the cartel when the Commission adopted the contested decision. Their turnover for the business year preceding the adoption of that decision thus enabled the Commission to assess the financial resources of those undertakings and to determine their economic situation.

42. In contrast, such an assessment was not possible in the case of Britannia. It is common ground that Britannia, on the date the contested decision was adopted, was in an entirely different situation from that of the other two undertakings which participated in the cartel.

43. In those circumstances, the Court of First Instance was correct to hold, in paragraphs 61 to 63 of the judgment under appeal, that the Commission was justified in treating the applicant differently from those undertakings, given that those undertakings were still active and that their turnover for the business year preceding the adoption of the contested decision was a strong indication of their economic situation.

44. It should be added that, in the context of calculating fines imposed under Article 15(2) of Regulation No 17, differentiated treatment of the undertakings concerned is inherent in the exercise of the Commission's powers under that provision. In exercising its discretion, the Commission is required to fit the penalty to the individual conduct and specific characteristics of the undertakings concerned in order to ensure that, in each case, the Community competition rules are fully effective (see, to that effect, Case C-308/04 P SGL Carbon v Commission [2006] ECR I5977, paragraph 46 and the case-law cited).

45. The first part of the second plea cannot therefore be upheld.

The second part of the second plea

- Arguments of the parties

46. By the second part of its second plea, Britannia submits that the Court of First Instance infringed the principle of equal treatment by dismissing the action, when the contested decision, in so far as it fixes the business year to which the 10% upper limit applies, does not accord with previous administrative practice in comparable cases.

47. Britannia states that, according to the Court, the Commission was entitled to depart from its previous practice in this area given that Britannia's situation was not comparable to that in other cases in which fines were imposed on the undertakings concerned.

48. In support of that second part of the second plea, Britannia refers to three types of situation.

49. First, it considers that its situation was comparable to cases in which an undertaking involved in a cartel had transferred its activities to another commercial entity while continuing to exist.

50. Secondly, Britannia takes the view that it was the subject of discrimination as compared with other undertakings whose turnover had decreased.

51. Thirdly, Britannia submits that it was not treated in the same way as an undertaking which was the subject of Commission Decision 1999/271/EC of 9 December 1998 relating to a proceeding pursuant to Article [81] of the EC Treaty (IV/34.466 - Greek Ferries) (OJ 1999 L 109, p. 24).

52. On that latter point, Britannia observes that that undertaking had withdrawn from the market before adoption of the Commission decision. As the turnover of that undertaking for the preceding business year was not available, the Commission relied on the first part of the first subparagraph of Article 15(2) of Regulation No 17 in order to impose on it a fine of EUR 1 million. Accordingly, Britannia should not be in a less favourable situation than that of the undertaking in that case.

53. The Commission takes the view that the question as to whether or not the applicant's situation was comparable to that of other undertakings which were the subject of previous decisions is a matter of fact which was ruled on by the Court of First Instance in the judgment under appeal and, therefore, cannot be reviewed by the Court of Justice in the context of the appeal.

54. As regards the first argument based on a transfer of activities, the Commission states that the Court held that the applicant was not in a comparable situation to that of other undertakings concerned by previous decisions, since, unlike those undertakings, Britannia had not achieved any turnover in the business year preceding the adoption of the contested decision.

55. In relation to the second argument, namely that Britannia was not treated in the same way as other undertakings whose turnover had decreased, the Commission submits that this argument was never raised by the applicant during the procedure before the Court of First Instance.

56. Finally, as regards the third argument, based on Decision 1999/271, the Commission observes that this was rejected by the Court. The Commission's previous practice cannot serve as a legal framework for setting fines in the field of competition, since the legal framework is laid down solely in Article 15(2) of Regulation No 17. Consequently, the interpretation of that provision in an earlier case that benefits a specific undertaking is not a matter of law such as to give rise to an obligation to treat another undertaking in a later case in the same way.

- Findings of the Court

57. It should be recalled that, as stated in paragraph 44 above, when calculating fines imposed on undertakings which participated in a cartel, differentiated treatment of those undertakings is inherent in the Commission's discretion in this area.

58. As regards the first two arguments relied on by Britannia, namely that the Commission departed from previous administrative practice, it should be borne in mind that the Court of First Instance, in paragraph 61 of the judgment under appeal, held that the applicant was not in a comparable situation to that of the undertakings referred to in previous Commission decisions since it had not achieved any turnover in the business year preceding the adoption of the contested decision.

59. In those circumstances, the Court correctly concluded, in paragraph 61, that the Commission was justified in treating Britannia differently from those undertakings.

60. In relation to the applicant's argument based on Decision 1999/271, it must also be pointed out that, while the situation of the undertaking referred to in that decision was similar to that of Britannia, it is clear from established case-law of the Court of Justice, set out in paragraphs 201 and 205 of Case C-167/04 P JCB Service v Commission [2006] ECR I8935, that the Commission's practice in previous decisions cannot itself serve as a legal framework for the imposition of fines in competition matters and that decisions in other cases can give only an indication for the purpose of determining whether there might be discrimination, since the facts of those cases, such as markets,

products, the undertakings and periods concerned, are not likely to be the same.

61. It must be added that undertakings involved in an administrative procedure in which fines may be imposed for infringement of the Community competition rules cannot acquire a legitimate expectation that the Commission will not exceed the level of fines previously imposed or of a particular method of calculating the fines. The Court has stated in particular that the undertakings in question must take account of the possibility that the Commission may decide at any time to raise the level of the fines by reference to that applied in the past (see, to that effect, Joined Cases C-189/02 P, C-202/02 P, C-205/02 P to C-208/02 P and C213/02 P Dansk Rørindustri and Others v Commission [2005] ECR I-5425, paragraphs 228 and 229).

62. In the light of all the foregoing, the Court of First Instance did not err in law by holding that the Commission did not infringe the principle of equal treatment when establishing the business year to which the upper limit of 10% was applicable.

63. Accordingly, the second part of the second plea cannot succeed.

64. Consequently, the second plea relied on by Britannia in support of its appeal must be rejected in its entirety.

The third plea, alleging infringement of the principle of legal certainty

65. The third plea relied on by Britannia in support of its appeal is also in two parts.

The first part of the third plea

- Arguments of the parties

66. By the first part of its third plea, Britannia submits that the Court of First Instance infringed the principle of legal certainty by dismissing the appeal, when, in the contested decision, the Commission had taken into account a business year other than the one preceding the adoption of that decision when fixing the upper limit relating to turnover provided for in the first subparagraph of Article 15(2) of Regulation No 17.

67. More precisely, Britannia asserts that the Court erred in law by holding that the fact that the Commission departed from the wording of the first subparagraph of Article 15(2) of Regulation No 17 and used a business year other than the one preceding the adoption of the contested decision did not constitute an infringement of the principle of legal certainty.

68. Britannia submits that it could not be foreseen that the Commission intended to refer to a year other than that business year. In that regard, the Court's approach led to a significant lack of legal certainty given that it is impossible for undertakings concerned by a Commission investigation to determine the relevant reference year used for setting the upper limit of the fine.

69. Britannia adds that the only way to ensure that administrative practice is coherent and predictable is to apply the upper limit laid down in the first subparagraph of Article 15(2) of Regulation No 17 to the business year preceding the adoption of the Commission decision in all circumstances, even if such an interpretation would mean applying the upper limit laid down in that provision to a turnover which is zero.

70. The Commission takes the view that its interpretation of the first subparagraph of Article 15(2) of Regulation No 17 was predictable, since the upper limit set by that provision applies to turnover achieved in the business year preceding the decision closing the administrative phase and the applicant had no turnover during that year.

71. The Commission asserts that the concept of predictability of fines means that undertakings must be in a position to assess the consequences of their actions before carrying them out. In

the present case, when the applicant decided to commit the infringement, its turnover was not very different from that used in calculating the upper limit of 10%, that is, EUR 55.7 million for the year ending at the end of June 1996.

72. The Commission concludes that, when the infringement of which it is accused was committed, Britannia could assume that, if the infringement was discovered and penalised immediately, it would have to pay a fine of around EUR 5.5 million.

- Findings of the Court

73. It must be held that by its argument Britannia, in essence, seeks to reformulate all the arguments already set out in support of the first plea relied on to support this appeal, alleging infringement of Article 15(2) of Regulation No 17.

74. Accordingly, since it is clear from paragraph 32 of the present judgment that the first plea is unfounded, the arguments put forward by the applicant in support of the first part of its third plea are also unfounded.

75. The first part of the third plea cannot therefore be upheld.

The second part of the third plea

- Arguments of the parties

76. By the second part of its third plea, Britannia submits that the Court of First Instance erred in law in dismissing the action, even though the contested decision infringes fundamental rights. In fact, in the field of criminal penalties, legal certainty is a fundamental right enshrined in Article 7(1) of the European Convention on Human Rights and Fundamental Freedoms, signed in Rome on 4 November 1950, and in Article 49(1) of the Charter of fundamental rights of the European Union, proclaimed in Nice on 7 December 2000 (OJ 2000 C 364, p. 1).

77. The Commission contends that that part of the third plea is new since it was not raised before the Court of First Instance.

78. The Commission goes on to state that, as Britannia's turnover during the period in which the infringement was committed, that is, from 1994 to 1997, was approximately EUR 55 million, that undertaking could have expected a maximum fine of EUR 5.5 million if the cartel had been discovered. As Britannia was not in a position to ascertain its turnover for the business year preceding the adoption of the contested decision, it cannot claim that it expected a fine of a precise amount.

- Findings of the Court

79. It must be borne in mind that the principle of legal certainty requires that rules of Community law be clear and precise, so that interested parties can ascertain their position in situations and legal relationships governed by Community law (see Case C-63/93 Duff and Others [1996] ECR I-569, paragraph 20).

80. As regards the Community competition rules, the Court of First Instance pointed out in paragraph 70 of the judgment under appeal that the provisions governing the implementation of those rules, and in particular Regulation No 17 and the Guidelines, enable undertakings to foresee with certainty the financial consequences likely to result from an infringement of those rules.

81. The Court of First Instance was correct to hold in paragraph 73 of the judgment under appeal that the principle of legal certainty could give the applicant no guarantee that its cessation of commercial activities in the zinc sector would result in its escaping the imposition of a fine for the infringement committed. In fact, Britannia was perfectly able to foresee that a fine would be imposed on it, since it was clearly in breach of the competition rules and the fine would be

determined by reference not only to the gravity and duration of that infringement, but also to the circumstances specific to that undertaking.

82. Britannia does not put forward any argument or other evidence such as to show that the Court's finding in paragraph 73 of the judgment under appeal is vitiated by error of law.

83. Furthermore, in the light of the Commission's discretion in this field, an undertaking participating in a cartel cannot acquire any certainty as to the amount of the fine likely to be imposed on it by the Commission under the provisions of Regulation No 17.

84. In those circumstances, the fact that Britannia was not able to ascertain in advance the relevant reference year for the purposes of determining the upper limit of the fine does not, by itself, constitute an infringement of the principle of legal certainty.

85. The second part of the third plea cannot therefore be upheld.

86. Accordingly, the third plea relied on by Britannia in support of its appeal must be rejected.

87. It follows from the foregoing considerations that the appeal must be dismissed in its entirety.

Costs

88. Under Article 69(2) of the Rules of Procedure, which applies to appeal proceedings pursuant to Article 118 of those Rules, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. As the Commission has applied for costs against Britannia and Britannia has been unsuccessful, it must be ordered to pay the costs.

JUDGMENT OF THE COURT OF FIRST INSTANCE (Second Chamber)

12 September 2007 (*)

(Competition – Cartels – European haberdashery market (needles) – Product market sharing – Geographic market sharing – Assessment of evidence – Participation in meetings – Tripartite agreement – Fine – Gravity and duration of the infringement – Attenuating circumstances)

In Case T‑36/05,

Coats Holdings Ltd, established in Uxbridge, Middlesex (United Kingdom),

J & P Coats Ltd, established in Uxbridge,

represented by W. Sibree and C. Jeffs, Solicitors,

applicants,

v

Commission of the European Communities, represented by F. Castillo de la Torre and K. Mojzesowicz, acting as Agents,

defendant,

APPLICATION, principally, for annulment of Commission Decision C (2004) 4221 final of 26 October 2004 relating to a proceeding under Article 81 [EC] (Case COMP/F‑1/38.338 – PO/Needles) and, in the alternative, for annulment or reduction of the fine imposed on the applicants,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Second Chamber),

composed of J. Pirrung, President, N.J. Forwood and S. Papasavvas, Judges,

Registrar: C. Kristensen, Administrator,

having regard to the written procedure and further to the hearing on 22 November 2006,

gives the following

Judgment

Subject-matter and facts

I – Subject-matter

1 By Decision C (2004) 4221 final of 26 October 2004 relating to a proceeding under Article 81 [EC] (Case COMP/F‑1/38.338 – PO/Needles; ‘the Decision’) the Commission found that, during the period from 10 September 1994 to 31 December 1999, Coats Holdings Ltd and J & P Coats Ltd (together ‘the applicants’ or ‘Coats’) participated in a series of agreements – within the meaning of Article 81 (1) EC – in the needles sector in conjunction with two other undertakings and their respective subsidiaries, namely, first, William Prym GmbH & Co. KG (‘Prym’) and Prym Consumer GmbH & Co. KG and, second, Entaco Group Ltd and Entaco Ltd.

2 On the basis of the findings of fact and legal assessments in the Decision, the Commission imposed

a fine of EUR 30 million on the applicants.

II – Applicants and other undertakings concerned

A – Coats Holdings and J & P Coats

3 Until February 1991, Coats Viyella plc (currently known as 'Coats Holdings') was a needle manufacturer through its wholly-owned subsidiary, Needles Industries Ltd ('NIL'). In April 1991, Coats Viyella sold NIL in a buy-out by former employees of NIL (first management buy-out) to a new company, Entaco. Entaco acquired NIL's manufacturing assets and packaging materials, while Coats Viyella retained NIL's needle finishing and packaging business. Coats Viyella remained active in that sector until its finishing and packaging business was also acquired by Entaco, on 10 September 1994, in a second management buy-out.

4 Coats Holdings has been a distributor of needles in the wholesale and retail business sectors since 1994. In 2002, the last year of published accounts available to the Commission, Coats Holdings' turnover amounted to GBP 1 156 million.

5 J & P Coats is a wholly-owned subsidiary of Coats Holdings, which operates in the United Kingdom market and handles all of Coats Holdings' activities in the metal and plastic haberdashery products market ('hard haberdashery products') in the European Economic Area (EEA).

B – Prym and Prym Consumer

6 Prym is a German company which claims to be one of Europe's leading brands of hard haberdashery and sewing products. It has three main divisions, namely Prym Tec GmbH & Co. KG, Prym Fashion GmbH & Co. KG and Prym Consumer. In 2003, Prym had a turnover of EUR 337 million. In 2002, Prym Consumer's share of the turnover amounted to approximately EUR 126 million.

7 In January 1977, Coats Patons Ltd (Coats Holdings' predecessor in title) acquired a 24.9% holding in William Prym-Werke KG (Prym's predecessor in title). Coats Holdings retained that stake until 1994.

8 Prym Consumer markets a range of hand sewing needles, knitting pins, safety pins and consumer haberdashery. Prym Consumer is the parent company of Newey Group plc, its wholly-owned English subsidiary. Between September 1994 and March 1997, Prym Consumer held 10.1% of the share capital of Entaco via that subsidiary.

C – Entaco and Entaco Group

9 Entaco's main business activities are the manufacture of hand sewing needles, medical devices, commercial fishing systems and associated wire products.

10 Entaco Group became the parent company of Entaco as of March 1997 and owns 100% of the share capital of Entaco.

III – Administrative procedure

11 On 7 and 8 November 2001, the Commission carried out investigations pursuant to Article 14(3) of Council Regulation No 17: First Regulation implementing Articles [81] and [82] of the Treaty of 6 February 1962 (OJ, English Special Edition (I) (1959-1962), p. 87) at the premises of several Community producers and distributors of haberdashery products (including Entaco, Coats and Prym). Those investigations followed the provision of information by Mr E, Entaco's Director of Marketing and Sales at the material time, between 23 August 2000 and 6 August 2001. The Commission regarded the provision of that information as a leniency application by Entaco.

12 On 14 April and 15 May 2003, the Commission sent requests for information under Article 11 of Regulation No 17 to the undertakings concerned. On 15 March 2004, the Commission sent a statement of objections to Prym, Entaco and Coats, whose replies to that statement of objections were lodged within the prescribed time-limit. The Commission gave them access to the file in electronic form. A hearing took place on 18 June 2004.

13 On 26 October 2004, the Commission adopted the Decision.

IV – The Decision

14 According to the Decision, between 10 September 1994 and 31 December 1999, the three undertakings in question and their respective subsidiaries entered into a series of written agreements that were formally bilateral but amounted in practice to tripartite agreements, under which those undertakings shared or contributed to sharing product markets (by segmenting the European market for hard haberdashery products) and geographic markets (by segmenting the European market for needles).

A – Relevant markets

15 The industry concerned is the manufacturing and packaging of needles and other hard haberdashery products.

16 According to the Decision, Prym, Entaco and Coats are the main suppliers of needles in Europe. Prym Consumer and Entaco dominate the needle manufacturing sector in the European Union and in the world-wide market. Furthermore, the distribution of needles and pins in Europe is dominated by Coats, and comprehensive agreements exist between Coats and Prym concerning the distribution of hard haberdashery products throughout the European Union.

1. Relevant product markets

17 The Commission takes the view that hand sewing needles and craft needles form part of the same market, and that machine needles can be distinguished. In conclusion, for the purposes of the Decision, the Commission identified three relevant product markets:

– the European market for hand sewing needles and craft needles (including, in particular, special needles);

– the European market for 'other sewing and knitting products, including pins and knitting pins/knitting needles';

– the European market for other hard haberdashery products, including zips and other fasteners.

In the first of those markets, the Commission found that the product and geographic market sharing took place between 10 September 1994 and 31 December 1999, whereas the last two were the subject of product market sharing between 10 September 1994 and 13 March 1997.

2. Relevant geographic market

18 The Commission explains that, unlike fasteners, needles and pins have very low transport costs. However, needles and pins sold in Europe are mainly produced in the European Union by European manufacturers. The Commission concludes that the market for needles is at least Europe-wide.

3. Size of the relevant markets in economic terms

19 According to the Commission's findings, in 2002 the turnover of the market for needles in the European Union amounted to approximately EUR 30 million. It takes the view that, as far as the wholesale business is concerned, the market for needles must be regarded as being worth close to EUR 30 million. As for the retail business, the value of the market for hand sewing needles alone must also be estimated as approximately EUR 30 million. However, in the present case, according to the Commission, it is necessary to take into consideration a larger market than the hand sewing needle market. It therefore took into consideration the markets for accessories, fasteners other than zips, and for other sewing and knitting products, including pins and knitting pins/knitting needles. The European Union turnover in the latter market amounts also to EUR 30 million. In the Commission's opinion, a conservative estimate of the total market for other fasteners in the European Union must be between EUR 1 billion and EUR 1.5 billion.

B – Description of events

20 The Commission notes that, as early as 1975, the predecessors of Prym and of Coats Holdings had entered into Principles of Agreement which contained market-sharing clauses. Those Principles are not, however, the subject-matter of the Decision.

1. Meetings and agreements between 1993 and 1994

21 The events at issue in the present action occurred mainly in 1993 and 1994.

(a) Meetings and correspondence

22 In the Decision, the Commission identifies five tripartite meetings between Prym, Coats (or NIL) and Entaco, four of which took place in 1993 and one in 1995. The minutes of the first meeting, held on 11 February 1993, which Prym sent to Entaco by fax of 18 February 1993, state:

'background of the Coats/Prym relationship – Prym seem to be responsible for hard haberdashery. [Prym] believed that there was a moral obligation on Coats to tidy up the present [NIL] situation, so that the original intention of Coats controlling the manufacture of soft haberdashery and Prym being the supplier of hard haberdashery could finally be achieved'.

23 In a letter of 10 May 1993 addressed to Prym, Entaco explained why the three undertakings had an interest in sharing the European market and set out the following initial proposals:

'The main objective of Prym really is to remove or neutralise Entaco's entry into the haberdashery market. We would propose the following which we consider takes this objective into account: …'

24 In a letter of 30 June 1993 addressed to Coats, Prym stated why Entaco, Prym and Coats had an interest in a common involvement:

'A further competitor in the hard haberdashery market in Europe is the last thing we need! It would seem sensible therefore for the three parties involved – Coats/NIL, Entaco and Prym – to cooperate to ensure that the European needle market does not suffer from further self-inflicted wounds!'

25 At a meeting between Coats, Prym and Entaco on 6 October 1993, concerning the possible acquisition of the NIL packaging business, Prym informed Coats that the initial plan for a Prym/Entaco joint venture had been abandoned and that Entaco would prefer Prym to make a direct investment in Entaco, as it was of the view that it would be more acceptable to the market if Entaco could present a 'face of independence'. Coats' representative then stated that 'he had no problem with the new approach, subject to two points: (i) That Entaco did not sell competitive products to competition at lower prices than they gave Coats. (ii) That Mr F [Coats' Chief Executive] was in agreement'.

(b) Overview of agreements concluded in 1994

26 On 10 September 1994, the agreements listed below, which, according to the Commission, are unlawful, were entered into by the following undertakings.

27 The agreements concluded between Prym (or Prym Consumer) and Entaco are as follows:

– Heads of Agreement (signed on 15 or 16 June 1994 but entering into force on 10 September 1994);

– Agreement for the sale and purchase of 10.1% of the entire issued share capital of Entaco and on certain future shareholder relationships ('the 10.1% Agreement');

– Purchasing agreement;

– Distribution agreement.

28 The agreements concluded between Coats and Entaco are as follows:

– Agreement for the sale and purchase of a business;

– Supply and purchase agreement.

(c) Agreements between Prym (or Prym Consumer) and Entaco

Heads of Agreement

29 In June 1994, Entaco and Prym signed Heads of Agreement which entered into force on 10 September 1994. That agreement was drawn up by the parties for the purchase of the packaging and finishing activities of NIL (formerly owned by Coats Holdings) and took effect from the date of such purchase. The agreement, as stated in its preamble, was to remain in effect as long as Prym held at least 10.1% of the ordinary shares of Entaco.

30 According to that agreement, Prym committed itself to assisting in developing Entaco as a specialist needle producer. It therefore instructed its US subsidiary, Prym-Dritz Inc., to purchase all the sewing needles it required from Entaco. In return, Entaco agreed 'during the period of [the] Agreement to restrict its manufacturing and distribution activities in the haberdashery sector to needles only, and not to widen its activities to embrace pins, safety pins, four-piece fasteners, knitting pins, or any other haberdashery product without the prior agreement of Prym', and 'to appoint Prym as its exclusive distributor for all packaged hand sewing needles, other than Coats brands in Europe with the exception of the UK and Republic of Ireland'.

10.1% Agreement

31 This agreement provided for Prym Consumer to buy 10.1% of the issued share capital of Entaco from the 3i Group plc, a shareholding which was held by Prym Consumer's subsidiary, Newey Group, between September 1994 and March 1997.

Purchasing and distribution agreements

32 According to the purchasing agreement, Prym Consumer was not to compete with Entaco and agreed to purchase all of its requirements for products specified in schedule 1 to the agreement exclusively from Entaco (clauses 2.2 and 2.3 of the purchasing agreement).

33 Under the distribution agreement, Entaco committed itself to selling products in 'the Territory' (Europe, excluding the United Kingdom and the Republic of Ireland) only to clients known as 'Label Accounts', to 'the Distributor' (Prym Consumer) and to Coats (clause 2.2 of that agreement). The relevant products were supposed to be specified in schedule 1 to the agreement, which is, however, a blank document.

(d) Agreements between Coats and Entaco

Agreement for the sale and purchase of a business

34 By an agreement entitled 'Agreement for the sale and purchase of a business' (business sale agreement), Coats sold the remainder of its needle manufacturing and packaging business to Entaco on 10 September 1994 (second management buy-out). Under clause 17.1 of that agreement, the sale was 'conditional upon the execution of the Prym agreements' (the distribution and purchasing agreements and the 10.1% Agreement entered into by Entaco and Prym Consumer described above). Clause 17.2 provided that if that obligation was not fulfilled, the agreement would lapse.

Supply and purchase agreement

35 On the same date, J & P Coats and Entaco entered into a three-year agreement entitled 'Supply and Purchase Agreement' for the exclusive purchase by Coats of Milward branded needles and accessories from Entaco. Clause 2.2 provides that Entaco 'shall … not supply Products to a customer of [Coats UK] other than those customers to whom [Entaco] [supplied] Products prior to the date hereof at existing business levels' (subparagraph (a)) and 'shall fulfil its obligations of cognate nature pursuant to an agreement between [Entaco] and Prym dated 8 September 1994' (subparagraph (b)). Clause 2.2.4 provides that 'in continental Europe [Coats] shall purchase all of its requirements for Products from [Entaco] and Prym [Consumer]'.

36 According to the Decision, Entaco was obliged, by virtue of that supply and purchase agreement, on

the one hand to enter into the purchasing agreement with Prym in order to buy the remaining packaging and finishing needles business from Coats (which was a prerequisite to becoming a competitor to Prym at the wholesale level and to Coats and Prym at the retail level) and, on the other hand, to respect the obligations contained in the agreements signed with Prym (which were effectively keeping Entaco from competing with Prym at the wholesale level and with Prym and Coats at the retail level). Finally, Entaco had to confine itself to being a supplier of Prym and Coats, but with the security of an outlet for its production.

(e) Inter-conditional clauses contained in the agreements

37 In the Decision, the Commission takes the view that all the agreements listed in the above section were inextricably linked through a series of reference or inter-conditional clauses.

38 The Commission regards the complex system of inter-conditional clauses as having had a twofold effect. First, it made those formally bilateral agreements an overarching tripartite agreement. Second, the system compelled Entaco (i) to sign the distribution and purchasing agreements with Prym Consumer, thereby giving effect to the principles set out in the Heads of Agreement, since the sale of NIL and the exclusive supply contract with Coats were conditional upon those signatures, and (ii) to respect the geographic and product market sharing with Prym Consumer even after its acquisition of NIL (which would have enabled Entaco to become an effective competitor to Prym at the wholesale and retail levels and to Coats at the retail level). That effect was produced by clause 2.2 of the supply and purchase agreement with Coats.

39 The Commission relies in that regard upon a written statement by Mr E dated 7 October 2003 in which he provides the following information on the objectives of the market sharing agreements:

‘In 1994 Entaco’s then Managing Director, Victor [B], signed up to Agreements with ... Coats and Prym, in return for which Coats at the same time sold the assets of [NIL] to [Entaco]. The Distribution Agreements which were signed up to in 1994 with both Coats and Prym, although separate Agreements, were in reality effectively one Tripartite Agreement. In return for the secure supply of needles to Coats and Prym, Entaco agreed not to enter into the market for other haberdashery items such as pins and fasteners.’

2. Events after 1994

40 On 13 March 1997, Prym sold its 10.1% shareholding in the capital of Entaco to Entaco Group by an agreement relating to the sale of 11 222 ordinary shares in the capital of Entaco. The agreement was conditional upon the purchasing and distribution agreements between Entaco and Prym Consumer being extended for five years commencing 1 April 1997.

41 A second distribution agreement between Prym Consumer and Entaco was signed on 1 April 1997, thereby extending the previous distribution agreement relating to hand sewing needles. The market concerned was Europe, excluding the United Kingdom and the Republic of Ireland. The purchasing agreement too was extended by another agreement signed on 1 April 1997, which provided that Prym should not manufacture or distribute hand sewing needles or craft needles. The clauses cited above thus maintained the principle of a market sharing agreement between Entaco and Prym, although its scope was limited only to needles.

42 The supply and purchase agreement between Entaco Group and J & P Coats was renewed on 10 September 1997 for a three-year period, expiring in September 2000.

3. Termination of the various agreements and concerted practices

43 Prym’s sale in March 1997 of the 10.1% stake in Entaco terminated the Heads of Agreement. The Commission believes that that did not, however, mean the end of the product market sharing agreement, since clause 7 of the agreement of 13 March 1997 (relating to the sale of 11 222 shares) maintained the principle of the same kind of collusion between Prym and Entaco as that contained in the 1994 Heads of Agreement.

44 Prym Consumer terminated the purchasing agreement by letter of 14 December 1998, giving 12 months’ notice. That agreement was thus terminated on 31 December 1999. The Commission says it is unaware as to whether the distribution agreement was also terminated on 31 December 1999 but, according to the Commission, the fact that Prym referred to the purchasing and distribution

agreements as being 'one' agreement suggests that the distribution agreement would have terminated as a result of the termination of the purchasing agreement.

45 Prym states that the parties to the agreements ceased to abide by the two agreements at the latest by the end of April 1999. However, in the Commission's view, in reality, the purchasing agreement remained legally in force until 31 December 1999, and the distribution agreement remained in force at least until that date. The Commission concludes that those two agreements ended on 31 December 1999. By contrast, the 1997 supply and purchase agreement remained in force until September 2000.

C – Legal assessment

1. Application of Article 81 EC

46 According to the Decision, Entaco, Coats and Prym participated in numerous meetings, either together or in a bipartite manner, and also signed a series of, formally bilateral, agreements aimed at restricting competition and which amounted to a tripartite agreement.

47 According to the Commission, that conduct led to a change in the conditions of competition, which ceased to be as they should have been, and prevented the participating competitors from determining their policy on the market independently as required by Article 81(1) EC. The Commission concludes that, in the present case, the tripartite agreement and the preliminary meetings between Prym, Entaco and Coats, and also the bilateral meetings between Prym and Entaco, may be characterised as agreements and/or concerted practices.

48 The Commission finds that the anti-competitive behaviour in question had the object and effect of restricting competition in the Community. It notes that in all of the agreements and concerted practices considered in this case, the following elements can be regarded as relevant for the purposes of establishing an infringement of Article 81(1) EC:

– product and geographic market sharing;

– participating in preliminary and/or regular meetings and having other contacts in order to agree on those restrictions and to implement and/or modify them as required.

49 The Commission takes the view that the continuing agreement between the manufacturers had an appreciable effect on trade between the Member States of the European Union, as the agreements entered into by the members of the cartel extended to virtually all trade throughout the European Union in the needle industrial sector, and also affected trade in the more important industrial sectors of other hard haberdashery products by preventing Entaco from entering those markets.

2. Fines

50 In the Decision, the Commission set the fine to take into account the gravity and duration of the infringement, which are the two criteria expressly referred to in Article 23(3) of Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1).

51 In assessing the gravity of the infringement, the Commission notes that it must take account of its nature, its actual impact on the market (where this can be measured) and the size of the relevant geographic market. In the present case, the Commission is of the opinion that the undertakings concerned by the Decision committed a 'very serious' infringement, leading it to fix the starting amount of the fine imposed on Coats at EUR 20 million.

52 As regards the duration of the cartel, the Commission takes the view that the product and geographic market sharing agreements between Prym, Entaco and Coats lasted from the entry into force of the Heads of Agreement and the signature on 10 September 1994 of the bilateral agreements, which in practice amounted to a tripartite agreement, until at least 31 December 1999, the date of termination of the distribution and purchasing agreements between Prym Consumer and Entaco. The duration of the infringement is therefore at least five years and three months. As a result, it increased the starting amount by 50% to take account of the duration of the infringement. It thus set the basic amount of the fine imposed on Coats at EUR 30 million.

53 As to the attenuating circumstances, the Commission takes the view that the fact that another undertaking may have acted as ringleader – which was not the position in the present case – has no bearing on the assessment of Coats' involvement. Furthermore, Coats gained, in particular, an economic advantage from the infringing practices concerned: the protection of its Milward brand and a certain stability in the needles and pins markets and other hard haberdashery markets. The Commission explains that, for the purposes of assessing the gravity of the present case, it is required to take account of the size of the relevant markets and the effective economic capacity of the offenders to cause significant damage to other operators.

54 As regards the application of the Commission Notice of 18 July 1996 on the non-imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4), the Commission takes the view that Entaco was the only undertaking to have informed it of the existence of the market sharing agreements and to have supplied decisive evidence without which those agreements might not have been disclosed. As a result, the Commission considers that Entaco alone satisfies the conditions set out in Section B of that Notice.

D – Operative part

55 In conclusion, the Commission adopted the operative part of the Decision, Article 2 of which, applying the criteria referred to above, imposes the following fines:

– EUR 30 million on Prym and Prym Consumer, which are jointly and severally liable;

– EUR 30 million on Coats Holdings and J & P Coats, which are jointly and severally liable.

56 The applicants were notified of the operative part of the Decision on 26 October 2004, whereas the full text of the Decision, including the summary of grounds, was not communicated to the applicants until 22 November 2004.

Procedure and forms of order sought by the parties

57 By application lodged at the Registry of the Court of First Instance on 31 January 2005, the applicants brought the present action.

58 Upon hearing the report of the Judge-Rapporteur, the Court of First Instance (Second Chamber) decided to open the oral procedure and to put certain questions to the parties. The parties replied within the time-limit allowed.

59 The parties presented their arguments and their replies to the Court's questions at the hearing on 22 November 2006.

60 The applicants claim that the Court should:

– annul the Decision in its entirety;

– in the alternative, annul such parts of the Decision as the Court finds that the Commission has failed to prove or are vitiated by manifest error or inadequate reasoning;

– annul or reduce the fine imposed on Coats;

– order the Commission to pay the costs.

61 The Commission contends that the Court should:

– dismiss the application;

– order the applicants to pay the costs.

Law

62 In the light of the pleas in law put forward, the form of order sought by the applicants must be regarded as seeking, principally, the annulment of the Decision and, in the alternative, the annulment or reduction of the associated fine. In fact, if an addressee of a decision decides to bring an action for annulment, the matter to be tried by the Community judicature relates only to those aspects of the decision which concern that addressee (Case C‑310/97 P *Commission* v *AssiDomän Kraft Products and Others* [1999] ECR I‑5363, paragraph 53).

63 As to the merits, Coats advances two pleas in law, one of which, concerning the erroneous assessment of the evidence, is advanced in support of the application for annulment of the Decision, while the other supports the claim for annulment or reduction of the fine.

I – Plea in law seeking annulment of the Decision

64 By the first plea, comprising several parts, the applicants submit that the Commission's assessment of the evidence as a whole is vitiated by manifest errors such that it has failed to demonstrate to the requisite legal standard that Coats was a party to an unlawful agreement between 1994 and 1999. It is appropriate first of all, therefore, to establish the relevant rules relating to the burden of proof and the assessment of the evidence.

A – Burden of proof and assessment of the evidence

1. Applicants' arguments

65 According to the applicants, the Court of Justice and the Court of First Instance have repeatedly confirmed that the Commission must produce 'sufficiently precise and consistent evidence' to support the 'firm conviction' that the alleged infringement took place. That standard of proof is not satisfied if a 'plausible explanation' could be given which rules out an infringement. The applicants rely in that respect on Joined Cases 29/83 and 30/83 *Compagnie Royale Asturienne des Mines and Rheinzink* v *Commission* [1984] ECR 1679 ('*CRAM and Rheinzink*'), paragraph 20; Joined Cases T‑185/96, T‑189/96 and T‑190/96 *Riviera auto service établissements Dalmasso and Others* v *Commission* [1999] ECR II‑93 ('*Riviera auto service*'), paragraph 47; and Case T‑62/98 *Volkswagen* v *Commission* [2000] ECR II‑2707, paragraphs 43 and 72.

66 The Commission disputes the applicants' assertion that it must produce evidence to support the 'firm conviction' that the alleged infringement was committed. Contrary to the applicants' contention, *CRAM and Rheinzink* (cited in paragraph 65 above) does not refer to the concept of 'firm conviction'.

67 Furthermore, the existence of an alternative plausible explanation of the facts is relevant only if the Commission has failed to establish the existence of the infringement on the basis of the documentary evidence adduced by it.

2. Findings of the Court

68 The Court recalls that, as regards establishing an infringement of Article 81(1) EC, the Commission must prove the infringements which it has found and adduce evidence capable of demonstrating to the requisite legal standard the existence of the facts constituting an infringement (Case C‑185/95 P *Baustahlgewebe* v *Commission* [1998] ECR I‑8417, paragraph 58, and Case C‑49/92 P *Commission* v *Anic Partecipazioni* [1999] ECR I‑4125, paragraph 86).

69 Any doubt in the mind of the Court must operate to the advantage of the addressee of the decision finding an infringement. The Court cannot therefore conclude that the Commission has established the infringement at issue to the requisite legal standard if it still entertains any doubts on that point, particularly in proceedings for annulment of a decision imposing a fine.

70 In the latter situation, it is necessary to take account of the principle of the presumption of innocence resulting in particular from Article 6(2) of the European Convention for the Protection of Human Rights and Fundamental Freedoms, one of the fundamental rights which, according to the case-law of the Court of Justice and as reaffirmed in Article 6(2) EU, are general principles of Community law. Given the nature of the infringements in question and the nature and severity of the ensuing penalties, the principle of the presumption of innocence applies in particular to the

procedures relating to infringements of the competition rules applicable to undertakings that may result in the imposition of fines or periodic penalty payments (Case C–199/92 P *Hüls* v *Commission* [1999] ECR I–4287, paragraphs 149 and 150, and Case C–235/92 P *Montecatini* v *Commission* [1999] ECR I–4539, paragraphs 175 and 176).

71 Thus, the Commission must show precise and consistent evidence in order to establish the existence of the infringement (Joined Cases T–44/02 OP, T-54/02 OP, T-56/02 OP, T-60/02 OP and T-61/02 OP *Dresdner Bank and Others* v *Commission* [2006] ECR II–0000, paragraph 62) and to support the firm conviction that the alleged infringements constitute appreciable restrictions of competition within the meaning of Article 81(1) EC (*Riviera auto service*, cited in paragraph 65 above, paragraph 47). That requirement is not satisfied, in particular, where a plausible explanation can be given for those alleged infringements which rules out an infringement of Community rules on competition (*CRAM and Rheinzink*, cited in paragraph 65 above, paragraph 16 et seq., and *Riviera auto service*, cited in paragraph 65 above, paragraph 47).

72 However, the Commission rightly observes that the case-law, according to which it is sufficient for the applicants to prove circumstances which cast the facts established by the Commission in a different light and thus allow another ‘plausible explanation’ of the facts to be substituted for the one adopted by the Commission, is applicable only where the Commission’s reasoning is based on the supposition that the facts established cannot be explained other than by concerted action between undertakings. It is not, therefore, applicable where the Commission’s findings are based on documentary evidence (see, to that effect, Joined Cases T–305/94 to T–307/94, T–313/94 to T–316/94, T–318/94, T–325/94, T–328/94, T–329/94 and T–335/94 *Limburgse Vinyl Maatschappij and Others* v *Commission* [1999] ECR II–931 (‘*PVC II*’), paragraphs 725 to 727, and Joined Cases T–67/00, T–68/00, T–71/00 and T–78/00 *JFE Engineering and Others* v *Commission* [2004] ECR II–2501 (‘*JFE Engineering*’), paragraphs 186 and 187).

73 The question in the present case is therefore whether there is documentary evidence to support the Commission’s complaints. In that regard, the Commission claims that the Decision is based on an ample case-file of direct evidence disclosing the inter-conditional clauses and the nature of the negotiations that resulted in them being agreed.

74 However, as regards the inter-conditional obligations contained in the agreements, the direct evidence adduced implicates only Prym and Entaco. As to Coats, that evidence is ambiguous. Since the evidence calls for interpretation, the Commission’s argument is unconvincing. According to the Commission, as there is documentary evidence, it is not sufficient for the applicants to provide a plausible explanation. However, that evidence is ‘documentary evidence’ only if the Commission’s, rather than the applicants’, explanation is accepted. It follows that, in the present case, there is no documentary evidence within the meaning of the case-law. As far as the inter-conditional obligations are concerned, the applicants are thus free to put forward a ‘plausible explanation’ of the facts as an alternative to the one adopted by the Commission.

B – Areas of dispute

75 Most of the facts set out in the Decision are not at issue in the present dispute between the Commission and Coats. The following are the key areas of dispute:

– the Commission relies on Coats’ participation in two trilateral meetings held on 11 February and 11 August 1993 involving Coats, Prym and Entaco, at which a cartel was allegedly discussed;

– the Commission claims that Coats influenced the terms of the Heads of Agreement and enabled anti-competitive agreements to come into force;

– according to the Commission, the combination of, first, the inter-conditional obligations contained in the 1994 Entaco/Prym agreements and the 1994 Coats/Entaco agreements and, second, Coats’ alleged ability to require Entaco to comply with certain obligations owed to Prym, made Coats the ‘cornerstone’ of a tripartite cartel arrangement;

– the Commission maintains that, by deciding in April 1997 to renew the 1994 Coats/Entaco supply and purchase agreement on virtually the same terms, Coats continued the alleged tripartite cartel agreement;

– the Commission claims that a payment made by Coats to Entaco in October 2000 in settlement of a dispute relating to a breach of the 1997 Coats/Entaco supply and purchase agreement in reality compensated Entaco for Prym's non-compliance with their cartel and demonstrated that Coats was enforcing a tripartite arrangement.

76 In the Decision, the Commission relied on the above points to demonstrate that Coats had committed an infringement of Article 81 EC. It is appropriate, therefore, for the assessment of the first plea in law to be structured by reference to those points. In addition, since the 1994 agreements ended in March 1997, a distinction will need to be made between the period from 10 September 1994 to 13 March 1997 and the period from 1 April 1997 to 31 December 1999.

C – Coats' liability for the period from September 1994 to March 1997

1. Coats' participation in the trilateral meetings

(a) Arguments of the parties

77 The applicants claim that the trilateral meetings in which Coats took part, namely the meetings held on 11 February and 11 August 1993, did not involve an infringement by Coats of Article 81 (1) EC. Next, they challenge the Commission's assertion that the mechanism of inter-conditional clauses did not require Coats to attend, after 10 September 1994, meetings concerning the day-to-day business of the market sharing agreements concluded by Prym and Entaco. Thus, the fact that Coats did not participate in any of the meetings held after 1994 demonstrates that it was not a party to the cartel formed by Entaco and Prym.

78 As regards the first trilateral meeting, which was held on 11 February 1993, the applicants dispute its characterisation, in recital 78 of the Decision, as a '[meeting] where infringements were very clearly expressed and detailed'. According to the applicants, a proper examination of the minutes of the meeting permits no such conclusion and demonstrates that it was an entirely legitimate meeting in the context of the sale of a business, as a result of which Coats believes that it created a new competitor in the needles sector.

79 Coats claims that it did not concur with Prym's view (see paragraph 22 above) that 'there was a moral obligation on Coats to tidy up' the NIL situation; that the letter from Entaco to Prym dated 10 May 1993 (see paragraph 23 above) was not sent to it, and thus that it did not at any point agree with the views expressed in that letter; and that the Commission drew a similar, unjustified conclusion in relying on the letter from Prym to Coats of 30 June 1993 (see paragraph 24 above), in which Prym suggests 'cooperat[ing] to ensure that the European needle market does not suffer from further self-inflicted wounds'.

80 Finally, as regards the trilateral meeting on 11 August 1993, Coats claims that it was obviously not an anti-competitive meeting.

81 According to the Commission, the minutes of the meeting held on 11 February 1993 and the letter of 10 May 1993 must be assessed in the context of the longstanding cooperation between Prym and Coats. Those documents illustrate the direct development of events leading to the letter of 30 June 1993, which was sent directly to Coats, and finally to the signing of the agreements in September 1994. The letters and faxes are interconnected and, taken together, give a very coherent picture of events and of the nature of those events.

82 The Commission states that, according to settled case-law, where the participation of an undertaking in cartel meetings has been established, it is for that undertaking to put forward evidence to establish that its participation was without any anti-competitive intention by demonstrating that it had indicated to its competitors that it was participating in those meetings in a spirit that was different from theirs. In that regard, there is no evidence that Coats expressed the slightest opposition or objection to what was being discussed at those meetings, although Coats was fully informed of the anti-competitive nature of the negotiations and meetings and did not distance itself from what was being discussed.

(b) Findings of the Court

83 According to case-law, participation in meetings between undertakings of a manifestly anti-competitive nature (*Hüls* v *Commission*, cited in paragraph 70 above, paragraph 155), or with an anti-competitive object (*JFE Engineering*, cited in paragraph 72 above, paragraph 327), or at which anti-competitive agreements were concluded (Joined Cases C‑204/00 P, C‑205/00 P, C‑211/00 P, C‑213/00 P, C‑217/00 P and C‑219/00 P *Aalborg Portland and Others* v *Commission* [2004] ECR I‑123, paragraph 81) may establish the existence of a cartel.

84 It should be noted that the Commission counted five trilateral meetings, four of which took place between February and October 1993, that is, one year before the agreements at issue were concluded. Two meetings (those of 11 February and 11 August 1993) were categorised by the Commission as anti-competitive meetings.

85 As regards the trilateral meeting held on 11 August 1993, Coats correctly observes that, in the text of the Decision, the Commission omits any reference to that meeting, although it categorises it as a market sharing meeting in Table 2.

86 In fact, a reading of the agreed note of that meeting (annexed to the reply to the statement of objections) demonstrates that the only subject of discussion was the sale of NIL, in particular the assets to be sold. That meeting cannot, therefore, be categorised as a market sharing meeting.

87 As regards the meeting held between Coats, Entaco and Prym on 11 February 1993, in categorising it as a market sharing meeting, the Commission relies on a fax of 18 February 1993 from Prym to Entaco containing minutes of the meeting drawn up by Prym. Paragraph 11 of the minutes records that Mr G of Prym believed that 'there was a moral obligation on Coats to tidy up the present [NIL] situation' (see paragraph 22 above).

88 First of all, it should be noted that that is only the opinion of Mr G of Prym. Similarly, the two letters of 10 May and 30 June 1993 which, according to the Commission, show why the three undertakings have an interest in sharing the European market, are not from Coats. There is, therefore, no evidence that Coats concurred with those statements.

89 Coats nevertheless concedes that its representatives did not contest those statements. In those circumstances, it remains to be considered whether Coats could simply not endorse those statements or whether it was under an obligation publicly to distance itself from such a step if it is to be regarded as not having participated in the cartel in question.

90 It is settled case-law that where participation in cartel meetings has been established, it is for that undertaking to put forward evidence to establish that its participation in those meetings was without any anti-competitive intention, by demonstrating that it had indicated to its competitors that it was participating in those meetings in a spirit that was different from theirs (*Aalborg Portland* v *Commission*, cited in paragraph 83 above, paragraph 81, and *Hüls* v *Commission*, cited in paragraph 70 above, paragraph 155). As the Court of Justice explained in paragraph 82 of *Aalborg Portland* v *Commission*, the reason underlying that principle of law is that, having participated in the meeting without publicly distancing itself from what was discussed, the undertaking has given the other participants to believe that it subscribed to what was decided there and would comply with it. The Court of First Instance has applied that case-law also to meetings in which not only competing manufacturers took part but also customers, which is what Coats was in the present case (Joined Cases T‑202/98, T‑204/98 and T‑207/98 *Tate & Lyle and Others* v *Commission* [2001] ECR II‑2035, paragraphs 62 to 66).

91 However, the case-law concerning tacit approval is based on the premiss that the undertaking concerned participated in meetings at which anti-competitive agreements were concluded (*Aalborg Portland* v *Commission*, cited in paragraph 83 above, paragraph 81) or which were of a manifestly anti-competitive nature (*Hüls* v *Commission*, cited in paragraph 70 above, paragraph 155). However, the anti-competitive nature of the meeting on 11 February 1993 has not been established beyond doubt. The words 'there was a moral obligation on Coats to tidy up the present [NIL] situation' are relatively ambiguous in the context of the sale of a business and are not necessarily a reference to market sharing. They could equally mean that Coats should accept Prym's earlier offer instead of selling NIL to Entaco. The rest of the minutes have no relevance. Furthermore, the Commission cannot rely on the letter of 30 June 1993 – which makes no reference to the meeting of 11 February 1993 and which was not from Coats – to assess the nature of a meeting held more than four months earlier.

92 As regards the letter of 10 May 1993 from Entaco to Prym, it is clear from its wording (for example, '[u]nder an agreement between Prym Consumer and Entaco both companies would be anxious to maintain the status quo') that the discussions between Entaco and Prym were bilateral in nature. The letter was written neither by nor to Coats. Thus, the letter is not capable of proving that Coats was implicated in the cartel.

93 Furthermore, even if the Commission's assertion were correct, Coats took part in only one anti-competitive meeting, since, contrary to the Commission's claim, the meeting of 11 August 1993 cannot be regarded as a cartel meeting (see paragraph 86 above). The only meeting which could possibly be characterised as a cartel meeting took place on 11 February 1993, 19 months before the conclusion on 10 September 1994 of the agreements to which the Decision relates.

94 Moreover, the only trilateral meeting after 1993, which took place on 6 October 1995, was not characterised by the Commission as an anti-competitive meeting. It follows that Coats did not attend any of the meetings concerning the day-to-day implementation of the market sharing agreements between Prym and Entaco. According to the Commission, the mechanism of inter-conditional clauses did not require Coats to attend meetings after 10 September 1994, but that is not a convincing argument. Clearly, Entaco's obligation to sell only to existing customers in continental Europe was not self-enforcing. The existence of an obligation, whether inter-conditional or not, cannot guarantee its observance. If Coats had intended to require Entaco to comply with its obligation to sell only to existing customers in continental Europe, it would, in any event, have needed to attend those meetings in order to check Entaco's compliance with its obligation.

95 Finally, the Commission submits in its rejoinder that, in the present case, the case-law relating to participation in cartel meetings is important not for the purpose of establishing the existence of an agreement, but because the meetings help to explain the objectives of the written agreements, the Commission proceeding on the premiss that, in the present case, 'the agreements were written agreements and there is no need to deduce Coats' consent from its presence in the meetings'. In other words, the Commission itself is not seeking to establish Coats' liability on the basis of its participation in the meetings, but refers to those meetings simply in order to interpret the written agreements, as Coats' presence in those meetings demonstrates its underlying intentions.

96 In those circumstances, mere participation in the meeting on 11 February 1993 – the anti-competitive nature of which has not been established to the requisite legal standard – cannot render Coats liable for a cartel which was formed by Prym and Entaco more than a year and a half later and which lasted until the end of 1999. Nevertheless, it remains to be considered whether the Commission's other objections are sufficient to justify the operative part of the Decision. In examining that point, the correspondence analysed above will be taken into account in order to interpret Coats' conduct.

2. Coats' influence on the drafting and entry into force of the Heads of Agreement

(a) Arguments of the parties

97 It is common ground that Coats was never formally involved in the Heads of Agreement or in the other anti-competitive written agreements between Prym and Entaco. Although the Commission claims that a complex system of inter-conditional clauses made those formally bilateral agreements an overarching tripartite agreement (see paragraph 37 et seq. above), it acknowledges that there is no agreement signed by all three parties, since the tripartite signing which Coats suggested in its letter of 11 August 1994 did not take place.

98 By contrast, Coats and the Commission disagree as to whether Coats was actively involved in the drafting and entry into force of the Heads of Agreement. The applicants dispute the Commission's assertion that they were in a position to influence the drafting of the Heads of Agreement. They say that the final form of the Heads of Agreement was signed on 15 June 1994, without Coats having any involvement either in its negotiation or drafting. Moreover, Coats claims that it did nothing with the intention of 'enabling' the Heads of Agreement to come into force, as it would have sold its business in any event. Furthermore, Entaco and Prym explicitly discussed the continuation of their cartel agreement even if the transaction with Coats did not proceed.

99 To substantiate its claims, Coats cites the testimony of Mr G of Prym at the hearing before the Commission, according to which 'there was never at any time any Coats input regarding the Heads of Agreement which were signed in June 1994'. Furthermore, the applicants observe that the two faxes, dated 11 and 30 August 1994, relied upon by the Commission as evidence that Coats

intervened in the drafting of the Heads of Agreement, were sent two months after the Heads of Agreement were finalised and signed.

100 As regards the tripartite signing which had been suggested in its letter of 11 August 1994, Coats emphasises that the only reason for such a signing was to ensure that the sale took place within a reasonable period of time, following earlier delays as a result of ongoing discussions between Entaco and Prym. Furthermore, no tripartite signing took place.

101 The Commission explains that since Coats did not directly sign the Heads of Agreement and the distribution and purchasing agreements, it was not a party to the bilateral agreements between Entaco and Prym, but that it adhered to the common plan, the implementation of which was ensured by a network of interconnected bilateral agreements.

102 In the Decision, the Commission found that Coats was informed about the existence of that agreement and its precise content, and therefore about the fact that the entry into force of an agreement containing collusive clauses by two of its suppliers depended on Coats' own actions. By deciding to sign the sale agreement, Coats, according to the Commission, helped to enforce the anti-competitive agreements reached in the Heads of Agreement.

103 The Commission states in that regard that Coats was informed about the content of the Heads of Agreement at the latest on 16 June 1994 and that, knowing of the content of the agreement, it could, and indeed did, try to influence the final shape of the agreement reached. Furthermore, the two faxes of 11 and 30 August 1994 show that Coats tried to change the text of the Heads of Agreement which had already been signed but which had not yet entered into force.

104 The Commission takes the view that the fact that the entry into force of the Heads of Agreement was conditional upon the execution of the sale agreement, which was conditional upon Entaco meeting its obligations under the 1994 distribution and purchasing agreements, supports the Commission's interpretation of the word 'tripartite'.

(b) Findings of the Court

105 It should be noted that Coats was informed at least of the existence of the Heads of Agreement at the latest on 16 June 1994. A letter of 16 June 1994 from Mr G (Prym) to Mr B (Entaco) stated that he had 'spoken to Martin Flower [Coats' CEO] and advised him of the situation'. That letter, together with the faxes of 11 and 30 August 1994 (see paragraphs 106 and 116 above), prove that Coats knew of the cartel before it came into force. Nevertheless, the mere fact of being informed about an anti-competitive agreement cannot give rise to liability for the infringement. The Commission acknowledges that implicitly when it states, in recital 137 of the Decision, that '[b]eing informed about a market sharing agreement may not constitute an approval, however, actively participating in its drafting and enabling it to come into force certainly constitutes such an approval'.

Coats' involvement in drafting the Heads of Agreement

106 As regards Coats' involvement in drafting the Heads of Agreement, it must be noted that the Commission has not produced any evidence that Coats was informed of that agreement before it was signed. According to the case-file, the final form of that agreement was signed on 15 June 1994 without Coats' prior intervention. Admittedly, after it had been signed, Coats tried to persuade Prym and Entaco to change the terms of the Heads of Agreement. In a fax of 11 August 1994, Coats said:

'Thank you for sending me a copy of the Heads of Agreement between Prym and Entaco under cover of your fax dated 25 July 1994. Overall we have no objection, excepting … . I do not believe we can accept such a clause and ask that it be removed as a condition of the sale proceeding as planned.'

107 Nevertheless, that fax indicates that Coats was not involved in drafting the agreement and that a signed copy was sent to it subsequently. Furthermore, the provision which Coats was contesting was not in fact amended, even though Coats signed the 1994 agreements with Entaco. Moreover, Mr G of Prym confirmed at the hearing before the Commission that '[t]he discussions between Entaco and Prym [had taken] place exclusively between Entaco and Prym and to the best of [his] recollection there [had] never at any time [been] any input from the Coats side regarding those discussions or about the detailed content of the two agreements which were signed and … there [had] never at any time [been] any Coats input regarding the Heads of Agreement which were signed in June 1994'. Although he contradicts the statement by Mr E referred to in paragraph 39 above, the Commission

made no reference to that testimony in its Decision.

108 Furthermore, in the defence the Commission does not repeat its assertion in the Decision that 'Coats could influence the drafting of the Heads of Agreement'. Rather, it claims that '[t]he Decision simply [found] that Coats was informed … about the existence of this agreement and its precise content'. In those circumstances, the Commission has not established that Coats did in fact influence the drafting of the Heads of Agreement.

Entry into force of the Heads of Agreement

109 As regards the complaint that Coats enabled the Heads of Agreement to come into force, the Commission's reasoning seems to imply that, since Coats knew of the Heads of Agreement, it could no longer sell its business without becoming liable for the cartel, since its entry into force was conditional upon the sale. Coats' decision to proceed with the sale of its business is not, however, capable by itself of proving that its purpose was to contribute to the objectives of the Prym/Entaco cartel. The fact that Prym and Entaco decided to make that event the date on which their cartel would come into force cannot therefore, at first sight, be attributed to Coats.

110 However, in the circumstances of the present case, the fact that Coats triggered the mechanism of the Prym/Entaco cartel could implicate Coats in that cartel, if that act was part of a common plan.

111 In that respect, it must be recalled that the various points at issue in the present case cannot be examined in isolation. As the Court has acknowledged, the evidence must be assessed in its entirety, taking into account all relevant factual circumstances (Case T–141/94 *Thyssen Stahl* v *Commission* [1999] ECR II–347, paragraph 175).

112 In the present case, Coats' conduct must therefore be examined in the light of the ongoing collaboration between Coats and Prym, which started in the 1970s. That collaboration intensified in the meetings and exchanges of correspondence referred to in paragraph 87 et seq. above. As a result of them, Coats was fully informed of Prym's and Entaco's intentions. In particular, the statement about 'cooperat[ing]' in the letter of 30 June 1993 clearly demonstrates that Entaco and Prym regarded Coats as a partner.

113 As for Coats' anti-competitive intentions, these are demonstrated first of all by the fact that the Heads of Agreement were disclosed to it. In that regard, the Commission rightly observes that suppliers do not generally inform their customers about the cartels of which they are members. In fact, such conduct is highly unusual and shows that, contrary to Coats' claim, it was not the 'victim' of a cartel. The very fact that Entaco and Prym discussed confidential issues (such as the creation of a cartel) shows that Coats' intentions must have been of an anti-competitive nature. According to the settled case-law of the Court, the fact that an exchange of information involves information which an independent operator scrupulously preserves as business secrets is sufficient to demonstrate the existence of an anti-competitive intention (*Tate & Lyle* v *Commission*, cited in paragraph 90 above, paragraph 66).

114 The Heads of Agreement clearly state that Entaco and Prym would share product markets and the geographic market. It is clear from the first sentence that the Heads of Agreement were to take effect from the date of Entaco's purchase of NIL's finishing and packaging business. Coats was thus informed of the existence of that agreement and of its content, just as it was informed of the fact that the entry into force of an agreement containing collusive clauses between two of its suppliers was dependent on its own actions. By deciding to sign the sale agreement, Coats knowingly contributed by its own conduct to the achievement of an objective that was common to Prym and to Entaco, namely the entry into force of the anti-competitive measures agreed in the Heads of Agreement.

115 Furthermore, Entaco would not have entered into any agreement with Prym without being able to enter into agreements with Coats. Entaco expressed that view in a fax of 24 November 1993 addressed to Prym ('we [Entaco] would not seek to have "handcuffs on our wrists" in Europe if we were not cushioned by a supply agreement with Coats'). Coats was aware of that, since, under clauses 7.1.4 and 17.1, the 1994 business sale agreement between Coats and Entaco was conditional upon agreements between Entaco and Prym and the supply and purchase agreement. It follows that the cartel would not have been established if Coats had not participated in it.

116 Moreover, evidence of Coats' intention is contained in a fax addressed to Entaco of 30 August 1994

and copied to Prym, in which Coats mentions a meeting organised with Prym in order to 'clarify some issues regarding the sale of NIL', and emphasises that 'Coats is, at the end of the day, a shareholder of Prym and must therefore ensure that Prym is happy about what we [Entaco and Coats] are about to conclude'. In that fax, Coats summarises its discussion with Prym concerning the draft supply and purchase agreement. It also makes precise comments as to how, according to Coats and Prym, the distribution and purchasing agreements interact with the supply and purchase agreement, and the improvements required.

117 Finally, it should be noted that Coats itself suggested a tripartite signing. Furthermore, although the agreements were not signed at a trilateral meeting, they were all signed bilaterally on the same day. In those circumstances, knowingly contributing to the entry into force of the Heads of Agreement cannot be regarded as a purely factual and innocuous act, but shows at the very least a concerted practice.

118 The fact remains that Coats' contribution was limited to facilitating the entry into force of the Heads of Agreement. The question of the extent of Coats' liability therefore arises.

The extent of Coats' liability

119 As the Court stated in paragraph 370 of *JFE Engineering* (cited in paragraph 72 above), an undertaking may be held responsible for an overall cartel, even though it is shown to have participated directly only in one or some of its constituent elements, if it is shown that it knew, or must have known, that the collusion in which it participated was part of an overall plan intended to distort competition and that the overall plan included all the constituent elements of the cartel. Similarly, the fact that different undertakings have played different roles in the pursuit of a common objective does not mean that there was no identity of anti-competitive object and, therefore, of infringement, provided that each undertaking has contributed, at its own level, to the pursuit of the common objective.

120 In the present case, Coats was aware of the market sharing provided for in the Heads of Agreement and of the fact that the entry into force of the cartel depended on its conduct. It therefore shares responsibility for the overall Prym/Entaco cartel.

121 In terms of the time-frame, however, the effects of Coats' conduct in enabling the Heads of Agreement to come into force were limited to the period during which that agreement remained in force. Liability for participation in a cartel cannot extend beyond its existence. Upon the sale of its 10.1% share in Entaco (on 13 March 1997), Prym brought the Heads of Agreement (see paragraph 43 above), and thus the cartel, to an end. Admittedly, some aspects of the cartel were maintained by Prym and Entaco in the 1997 agreements. However, the entry into force of the 1997 agreements did not depend on Coats' collaboration. The 1997 agreements between Prym and Entaco were not conditional upon the conclusion of the 1997 supply and purchase agreement. In fact, that agreement was signed more than five months later and contained different provisions concerning its duration and termination. In those circumstances, the termination of the Heads of Agreement represents a break which brought Coats' liability to an end. For Coats to be liable beyond that date, it would have had to perform a new anti-competitive act (see paragraph 175 et seq. below) or been in a position to require Entaco to comply with certain obligations towards Prym pursuant to the inter-conditional clauses contained in the 1997 agreements as well as in the 1994 agreements (see paragraph 123 et seq. below).

122 It follows from all of the foregoing that by facilitating the entry into force of the Heads of Agreement between Prym and Entaco, Coats became liable until that agreement came to an end on 13 March 1997.

3. The inter-conditional clauses and implementation of the various agreements concerned

123 It should be noted that, according to the Decision, the 1994 agreements between Coats and Entaco and between Entaco and Prym were interlinked through a series of reference or inter-conditional clauses which created a chain of interconnections from which it can be seen that those formally bilateral contracts amounted, in practice, to a tripartite agreement (see paragraph 37 et seq. above). Under clause 2.2(b) of the 1994 supply and purchase agreements, in particular, Coats obliged Entaco to comply with the 1994 distribution and purchasing agreements. Coats thus participated in the implementation of the various cartels established by Prym and Entaco and, consequently, is itself implicated in those agreements and/or concerted practices.

(a) Arguments of the parties

124 The applicants dispute those assertions by the Commission. First of all, they say that the Commission failed to take account of the extensive evidence in the Commission's file suggesting that the Entaco/Prym cartel was freestanding and would have proceeded regardless of the sale of the Coats needle finishing and packaging business to Entaco. The freestanding nature of the cartel is reflected in the Heads of Agreement, since the latter provides for its own continuation in the event of the supply and purchase agreement coming to an end.

125 Second, according to the applicants, the Commission demonstrates an ignorance of the commercial realities in its analysis of the inter-conditional obligations of the 1994 agreements, as the various conditions precedent were obviously all commercially logical and necessary.

126 In that regard, Coats claims that clause 2.2 of the 1994 supply and purchase agreement between Coats and Entaco (see paragraph 35 above) was intended purely to give Coats legitimate protection in its principal sales areas from competition from Entaco in return for Coats agreeing to an exclusive purchasing obligation. Such wording is standard in exclusive purchasing agreements and permitted by Commission Regulation (EEC) No 1984/83 of 22 June 1983 on the application of Article [81](3) [EC] to categories of exclusive purchasing agreements (OJ 1983 L 173, p. 5), as amended.

127 In Coats' view, the interpretation of its insertion of the 'cognate nature' wording as showing an intention to enable the Entaco/Prym geographic market sharing agreement to be implemented is implausible, given that the wording was introduced at the last minute and that, at that point, the 1994 agreements between Entaco and Prym had already been signed. Furthermore, the existing evidence clearly shows that the 'cognate nature' wording was suggested by Entaco rather than by Coats. It is a manuscript amendment to the agreement, which replaces an earlier longer and more complex draft.

128 Coats states that there was also a commercial rationale from Entaco's point of view as to why, according to clause 17.1 of the 1994 Coats/Entaco business sale agreement, that agreement was conditional upon the 1994 Entaco/Prym purchasing agreement: Entaco could not risk buying the packaging business, which included a large stock of unfinished Chinese needles (around 300 million), without secure outlets for packaged needles.

129 As regards the implementation of the agreements, the applicants claim that it was impossible for Coats to influence Entaco's and Prym's respective market shares by varying the amounts, without being in clear breach of contract.

130 The Commission claims that the reference to 'obligations of cognate nature' in clause 2.2(b) of the supply and purchase agreement forced Entaco to comply with a geographic market sharing agreement concluded with Prym. As a result, that clause enabled Coats to implement the market sharing and made Coats a party to the tripartite agreement.

131 In the Commission's view, it is irrelevant whether the anti-competitive clauses were introduced by Entaco or by Coats, by hand and at the last minute, or by other means and well in advance. Moreover, it claims that Regulation No 1984/83 cannot be applied to the supply and purchase agreements.

132 In conclusion, the Commission claims that the supply and purchase agreement was the 'cornerstone' of a tripartite agreement.

(b) Findings of the Court

133 In order to assess the Commission's findings concerning the inter-conditional obligations and the tripartite nature of the cartel, it is necessary, first, to analyse the clauses upon which the Commission relied in reaching its conclusions. The agreements to which Coats was a party include only two clauses that refer to other agreements: clause 2.2 of the supply and purchase agreement and clause 17.1 of the business sale agreement.

Enforcement of the various agreements as a result of clause 2.2 of the supply and purchase agreement

134 Clause 2.2 of the 1994 supply and purchase agreement provides that Entaco shall:

‘(a) not supply Products to a customer of [Coats, established in the United Kingdom] other than those customers to whom [Entaco] supplies Products prior to the date hereof at existing business levels; …

(b) fulfil its obligations of cognate nature pursuant to an agreement between [Entaco] and Prym dated 8 September 1994.’

135 Essentially, the Commission claims that the reference in clause 2.2(b) to ‘obligations of cognate nature’ forced Entaco to comply with a geographic market sharing agreement concluded with Prym. Therefore, that clause enabled Coats to enforce the market sharing and thus made it a party to the tripartite agreement. That interpretation is unconvincing, however, for a number of reasons.

– Wording of the clause

136 First, that interpretation contradicts the wording of clause 2.2(b). That clause refers to ‘an agreement between [Entaco] and Prym dated 8 September 1994’. However, it must be noted that there is no agreement dated 8 September 1994. It is nevertheless apparent from Coats’ response to the statement of objections that the final version of the Entaco/Prym agreements was drawn up on 8 September 1994 and left in abeyance until the agreements with Coats were signed on 10 September 1994.

137 It is necessary therefore to identify the agreement to which the above wording refers, given that three agreements between Entaco and Prym were drawn up on that date (namely, the 10.1% Agreement and the purchasing and distribution agreements). According to the Commission, the reference is to the 1994 distribution agreement and the 1994 purchasing agreement. Therefore, Entaco was obliged to fulfil its obligations under those agreements and thus to comply with the geographic market sharing agreement with Prym.

138 However, clause 2.2(b) mentions only ‘an agreement’ in the singular. If the Commission’s interpretation of clause 2.2(b) were correct and that clause was to force Entaco to comply with its obligations under the contracts concluded with Prym, ‘agreement’ would be in the plural.

– Structure and context of the clause

139 Second, the Commission’s interpretation does not take account of the structure or context of the clause. Clause 2.2(a) contains an obligation on Entaco not to compete, which covers the territory of the United Kingdom. Therefore, given that the manuscript amendments to clause 2.2(a) and (b) replaced a much longer and more complex draft which included not only the United Kingdom but also other territories, clause 2.2(b) can readily be interpreted as covering the other territories in which Entaco was prohibited by Coats from competing. Thus, ‘obligations of cognate nature’ refers, in fact, to clause 2.2 of the 1994 Entaco/Prym distribution agreement, which provides that ‘[Entaco] will not sell Products to any person in the Territory [Europe, excluding the United Kingdom and the Republic of Ireland] other than the Label Accounts [Entaco’s existing clients] and/or the Distributor [Prym] and/or the Coats Group’.

140 Indeed, if it were the case that clause 2.2(b) did not contain a non-compete obligation in favour of Coats, but required Entaco to fulfil its obligations towards Prym, the protection from competition from Entaco sought by Coats in its principal sales areas would be guaranteed only in the territory of the United Kingdom.

141 That interpretation is unconvincing, since it conflicts with Coats’ intentions. In the context of the non-compete obligation specified in clause 2.2(a), it appears more probable that the phrase ‘obligations of cognate nature’ also refers to a non-compete obligation. If clause 2.2(b) had been intended to apply to the cartel comprised in the agreements between Entaco and Prym, the words ‘of cognate nature’ would have no relevance and the clause should instead read ‘[Entaco shall] fulfil its obligations pursuant to the agreements …’.

142 Furthermore, it should be noted that the clause which was replaced by clause 2.2(b) did not include a reference to the Entaco/Prym agreements. If that reference had effectively been the ‘cornerstone’ of the cartel, it is unlikely that it would have been inserted at the last minute and that it would not have been contained in the initial draft of the agreement.

143 Therefore, the structure and the context of the clause support Coats’ interpretation that clause 2.2

(a) related to the United Kingdom, whereas clause 2.2(b), in referring to another agreement, was intended to achieve the same aim in continental Europe where Coats also carried on its business.

– Intended objective of the clause

144 Third, on the Commission's interpretation, clause 2.2(b) could not, in practice, have achieved its aim. According to the Commission, 'to enforce the market sharing agreements, all Coats (as the overwhelming buyer in UK) had to do was to buy from Entaco rather than Prym'. That argument is based on the premiss that Coats was in a position to discipline the two undertakings by means of its product orders. However, according to the 1994 supply and purchase agreement between Entaco and Coats, the latter was under a contractual obligation to purchase exclusively from Entaco in the United Kingdom. Therefore, Coats did not have the flexibility to be able to discipline Entaco or Prym by varying the amounts, without being in breach of contract.

145 A dispute between Entaco and Coats arose precisely because Coats was not entitled to substitute orders from Prym for those from Entaco. In Italy, Coats was required to purchase exclusively from Entaco (except for purchases from third parties at the levels existing when their 1994 supply and purchase agreement was signed). When Coats started to purchase larger quantities of needles from Prym than the quantity it bought at the date of signature of the 1994 supply and purchase agreement, Entaco claimed damages.

– History of the clause

146 Finally, account should be taken of the circumstances in which the manuscript amendment was inserted. Coats states that Prym never intervened in the negotiations between Coats and Entaco. That assertion was confirmed by Prym at the hearing before the Commission. However, if, as the Commission claims, Prym had needed the support of Coats to prevent Entaco from entering the continental European market, it would have taken steps to intervene in those negotiations.

147 In addition, Coats submits that the wording of clause 2.2(b) was introduced at the last minute, and that, at that point, the 1994 Entaco/Prym agreements had already been signed (on 8 September 1994). Furthermore, during the hearing before the Commission, Coats produced the testimony of its in-house lawyer, who attended the signing meeting on Coats' behalf, according to which that wording was introduced at the request of Entaco's lawyers in order to simplify the text and to make it dovetail with the 1994 distribution agreement between Entaco and Prym, which had been signed shortly before.

148 The Commission took the view that it was extremely unlikely that Entaco's lawyers would have insisted on imposing an obligation on their own client at the last minute, thus obliging Entaco to comply with another contract. Nevertheless, that objection would be relevant only if the Commission's interpretation of the meaning of 'obligations of cognate nature' were accepted. If it is accepted that that wording was intended to have the same effect as the original provision (which was more complex and which was deleted), it follows that it did not impose any additional obligation on Entaco.

149 On the contrary, in response to a written question from the Court, the applicants confirmed that the geographic coverage of the non-compete obligation in the Entaco/Prym distribution agreement did not include the United States or the 'World Territory' beyond continental Europe. It was therefore in Entaco's own interest to refer to that non-compete clause in the supply and purchase agreement with Coats in order to restrict its obligations to the United Kingdom and continental Europe, and in order to have only one commitment to honour.

150 In those circumstances, Coats' explanation – that the words of the manuscript amendment are intended to have the same effect as the non-compete obligation which they replaced – is plausible and convincing. It follows that clause 2.2(b) was not intended to implement the market sharing agreed between Entaco and Prym, but to give Coats protection from competition from Entaco in its principal sales areas in return for Coats agreeing to an exclusive purchasing obligation.

The role of the supply and purchase agreement as the 'cornerstone' of a tripartite agreement

151 According to the Commission, the Coats/Entaco supply and purchase agreement was the 'cornerstone' of a tripartite agreement. However, it must be noted that the Heads of Agreement provide that, '[s]hould the supply arrangement between Coats and Entaco be discontinued for any

reason then Prym and Entaco will discuss sales policy in order to restrict the loss of production volume at Entaco'. Thus, the Heads of Agreement envisaged that the supply and purchase agreement might end, notwithstanding the continuation of the Heads of Agreement themselves.

152 Clause 2.4 of the Entaco/Prym distribution agreement similarly specifies that '[i]f the Coats Viyella Supply Agreement terminates or expires for any reason whatsoever, the Distributor [Prym] agrees to liase with the Company [Entaco] with a view to restricting the loss of sales by Entaco which may result therefrom'.

153 Thus, if the cartel could have subsisted without any involvement by Coats, no credence can be given to the Commission's interpretation that the supply and purchase agreement was the 'cornerstone' of a tripartite agreement: if a 'cornerstone' is removed, the whole building collapses. However, in the present case, the Heads of Agreement and the distribution agreement specifically provided that the termination of the supply and purchase agreement would not preclude their continuation.

Clause 17.1 of the business sale agreement

154 Under clause 17.1 of the business sale agreement, the sale of the business to Entaco was 'conditional upon the execution of the Prym Agreements'. Those were defined as follows in the 'Interpretation' section of the agreement: 'the agreement for the sale and purchase of 10.1%', 'the purchasing agreement' and 'the distribution agreement to be entered into between … [Entaco] and … Prym Consumer'.

155 According to Coats, there is an obvious commercial rationale as to why the business sale agreement between Coats and Entaco was conditional upon the 'Prym Agreements' (see paragraph 128 above). Thus, the condition was not for the benefit of Coats, but commercially essential for Entaco. The Commission does not dispute the commercial logic of clause 17.1, but simply claims that Coats was the 'cornerstone' of the market sharing agreements.

156 While it is true that Coats' participation was important for Prym and Entaco, that does not conflict with Coats' assertion that the reason for the inter-conditional obligation was Entaco's commercial interest. Since it is the Commission's interpretation that Coats sought to impose such conditions in order to be in a position to implement the Entaco/Prym cartel, it should be noted, first, that, when the business sale agreement was signed, the 'Prym Agreements' had already been signed (on 8 September 1994). Thus, the cartel had already been established. Second, since the business sale agreement achieved its objective with the sale of NIL, it could not ensure future compliance with the cartel.

157 It follows from all of the foregoing that the Commission has not demonstrated to the requisite legal standard that clause 2.2(b) of the supply and purchase agreement was intended to implement the market sharing agreed between Entaco and Prym. Nor has the Commission produced evidence that the formally bilateral 1994 agreements between Coats and Entaco, and between Entaco and Prym, amounted in practice to a tripartite agreement. By contrast, Coats has proved – within the meaning of *JFE Engineering*, cited in paragraph 72 above – circumstances which cast the facts established by the Commission in a different light and thus allow another plausible explanation of the facts to be substituted for the one adopted by the Commission in the Decision.

158 Accordingly, the Commission cannot rely on the purportedly tripartite nature of the agreements in order to prove Coats' liability in relation to the Prym/Entaco cartel.

4. Other parts of the plea in law

(a) The economic size of the markets concerned

Arguments of the parties

159 Coats disputes the assertion in recital 19 of the Decision that 'the distribution of needles and pins in Europe is dominated by Coats'. On that point, the applicants observe that, in recital 45 of the Decision, the Commission estimated the size of the wholesale market in question (hand sewing needles) as approximately EUR 30 million and considerably larger at the retail level. Sales of Coats' needles to retailers and wholesalers in the European Union amounted to EUR 2.98 million in 2002. Its share of the market in the European Union is therefore less than 10% at wholesale level and

even less at retail level.

160 The Commission submits that that plea is ineffective, since it is not capable (in the event that it is well founded) of leading to the annulment of the Decision.

Findings of the Court

161 It is settled case-law that, for the purpose of applying Article 81(1) EC, there is no need to demonstrate the actual anti-competitive effects of an agreement once it appears that it has as its object the prevention, restriction or distortion of competition (Joined Cases 56/64 and 58/64 *Consten and Grundig* v *Commission* [1966] ECR 299, p. 342, and Case T–143/89 *Ferriere Nord* v *Commission* [1995] ECR II–917, paragraph 30). The cartel's aim was to share the geographic and also the product markets, and was, therefore, an obvious restriction of competition.

162 It follows that, for the purpose of establishing an infringement of Article 81(1) EC, the economic size of the markets in question is irrelevant in the present case.

(b) Mr E's testimony

Arguments of the parties

163 According to the applicants, the Commission seeks to interpret the objectives of the agreements almost exclusively in the light of the statements made by Mr E, the former managing director of Entaco, and, in particular, the statement concerning the tripartite nature of the agreements (see paragraph 39 above). However, in the applicants' view, a number of points need to be made about the quality and credibility of Mr E as a witness.

164 The Commission claims that the interpretation of the objectives of the agreements was made on the basis of the evidence gathered during the administrative procedure, and only corroborated by Mr E's statements.

Findings of the Court

165 The applicants correctly point out that Mr E was not involved in the negotiation of the 1994 agreements and that the judge rejected his evidence as unreliable in the litigation between Entaco and Prym in the High Court of Justice in September 1999. In addition, the Commission itself concedes that it treated Mr E's statements with caution and that it did not use them where it did not find sufficient evidence, for example concerning the allegations on price-fixing.

166 As regards the compensation scheme, Mr E's statements are contradictory (see paragraph 188 et seq. below). Thus, it cannot be ruled out that the complaint initially filed at the Commission by Mr E in August 2000 was motivated by resentment for the fact that Prym had terminated the 1997 purchasing agreement and that Coats had refused to renew the 1997 supply and purchase agreement.

167 In those circumstances, Mr E's testimony is unreliable and incapable of corroborating the Commission's case. However, since the Commission has relied on other evidence which is sufficient to establish Coats' liability, the complaint relating to the credibility of Mr E's testimony is not capable of leading to the annulment of the Decision.

5. Conclusion

168 It follows from the foregoing that, although the Commission made some errors in its assessment of the evidence, the fact that Coats facilitated the entry into force of the Heads of Agreement between Prym and Entaco rendered it liable until the termination of that agreement on 13 March 1997 (see paragraphs 109 to 122 above). Accordingly, the applicants' plea in relation to the annulment of the Decision must be dismissed in so far as it concerns the period from 10 September 1994 to 13 March 1997.

D – Coats' liability between April 1997 and December 1999

1. The 1997 agreements

(a) Arguments of the parties

169 As regards the 1997 agreements, the applicants observe that neither the 1997 Entaco/Prym distribution agreement nor the 1997 Entaco/Prym purchasing agreement was conditional in any way upon the 1994 Coats/Entaco supply and purchase agreement or upon its renewal in 1997.

170 The Commission claims, first, that the 1997 agreements perpetuated a tripartite cartel, since the effects of the agreements (apart from the reduction in scope of the product market sharing agreement) were the same as they were before that date. In particular, Coats obliged Entaco to comply with the 1997 distribution and purchasing agreements by means of clause 2.2(b) of the 1997 supply and purchase agreement. Nevertheless, unlike the situation in September 1994, the parties were merely continuing the cartel which they had already established. Consequently, the different dates on which various contracts were extended had no bearing on the cartel's existence and functioning.

171 Next, according to the Commission, the fact that the 1997 distribution and purchasing agreements were not conditional upon the 1994 supply and purchase agreement or its renewal is irrelevant, since the 1994 and 1997 supply and purchase agreements were conditional upon the 1994 and 1997 distribution and purchasing agreements. Further, clause 2.4 of the 1997 distribution agreement refers to the 1997 supply and purchase agreement.

(b) Findings of the Court

172 The applicants correctly assert that neither the 1997 Entaco/Prym distribution agreement nor the 1997 Entaco/Prym purchasing agreement was conditional upon the 1994 Coats/Entaco supply and purchase agreement or upon its renewal. Nor was the agreement relating to the sale of 11 222 ordinary shares in the capital of Entaco conditional upon the extension of the Coats/Entaco supply and purchase agreement.

173 The only reference in the 1997 Entaco/Prym agreements to the Coats/Entaco supply and purchase agreement is in clause 2.4 of the 1997 distribution agreement. It reproduces the provision under which the 1997 Entaco/Prym distribution agreement would continue to apply even if the Coats/Entaco supply and purchase agreement were terminated, which demonstrates the independence of each of the two sets of agreements from the other. In addition, Coats' explanation that that wording was reproduced merely for ease and simplicity is convincing, since that paragraph corresponds word for word with that of the 1994 agreement.

174 Conversely, contrary to the Commission's assertion, the 1997 supply and purchase agreement was not conditional upon the 1997 Entaco/Prym distribution and purchasing agreements. It was signed more than five months later and contained different provisions concerning its duration and termination.

175 Furthermore, it has already been found that the Commission has not demonstrated to the requisite legal standard that clause 2.2(b) of the 1994 supply and purchase agreement – which is identical to that contained in the 1997 agreement – was intended to implement the market sharing agreed between Entaco and Prym (see paragraph 134 et seq. above).

176 Accordingly, the Commission has not proved that the 1997 agreements were a continuation of a tripartite agreement.

2. Attendance at meetings

(a) Arguments of the parties

177 Coats claims that, after April 1997, it did not take part in any trilateral meeting and that it took no steps to implement the Entaco/Prym cartel or to have it implemented.

178 The Commission submits that, according to case-law, the fact that an undertaking did not attend meetings is of minor significance where it contributed by its own conduct to the common objectives pursued by all the participants. In addition, the Commission takes the view that, after the

agreements entered into force, the mechanism of inter-conditional clauses did not require Coats to participate in the meetings, as it knew that both Entaco and Prym depended on the Entaco/Coats supply and purchase agreement.

(b) Findings of the Court

179 It is common ground that Coats did not participate in any trilateral meeting, and thus in any meeting to implement the Entaco/Prym cartel, after April 1997. On the contrary, the dispute between Entaco and Coats indicates that Coats ignored its obligations towards Entaco (see paragraph 145 above and paragraph 182 et seq. below).

180 The Commission's argument – that the mechanism of inter-conditional clauses obviated the need for Coats to attend meetings after 10 September 1994 concerning the implementation of the cartel – is unconvincing. Entaco's obligation to sell only to existing customers in continental Europe was not self-enforcing (see paragraph 94 above). Thus, the fact that Coats did not participate in any of the meetings after 1994 is, instead, evidence that it ceased to be a party to the Entaco/Prym cartel after the termination of the Heads of Agreement in 1997.

181 In any event, it is clear that, as regards the period between April 1997 and December 1999, Coats cannot incur liability as a result of presence at an anti-competitive meeting.

3. The compensation scheme

182 In the Decision, the Commission claims that, as regards the dispute mentioned in paragraph 145 above (arising from the fact that Coats was not entitled to substitute orders from Prym for those from Entaco), Coats did not settle its own dispute with Entaco but effectively settled a dispute between Entaco and Prym concerning Prym's non-compliance with their cartel.

(a) Arguments of the parties

183 Coats disputes that assertion, which the Commission made in order to prove that Coats was implementing the cartel in question. According to the applicants, the correspondence as a whole shows that Entaco's action related to Coats' non-compliance with their 1997 supply and purchasing agreement, rather than to the breach of the 1997 Entaco/Prym agreements.

184 The Commission states that, for Coats, the compensation scheme represented another means of implementing the tripartite agreement, and recalls that the evidence must be assessed in its entirety, taking into account all relevant factual circumstances. It takes the view that its interpretation is corroborated by Mr E's remarks.

(b) Findings of the Court

185 According to recital 214 of the Decision:

'Coats was perfectly aware of the content and the implication of the Entaco/Prym agreements as the Supply and Purchase agreement was conditional upon these agreements and since it had communication of these agreements. Therefore it knew that all orders placed by Coats to Prym have to be supplied by Entaco. As a consequence, compensating Entaco for a switch of business from Entaco to Prym by Coats makes sense only if Coats accepts that Prym does not respect its agreement with Entaco and ultimately could be interpreted as compensation on behalf of Prym made by Coats.'

186 That line of argument suggests that the Commission meant that Entaco would suffer no loss if Coats changed supplier, because if Prym replaced Entaco as supplier, Prym would still have to procure needles from Entaco pursuant to the 1997 Prym/Entaco purchasing agreement, so that a claim would make sense only if Prym was not purchasing all of its supplies from Entaco and was breaching the 1997 purchasing agreement between those two undertakings.

187 However, it should be noted that, depending on the prices agreed under the 1997 Entaco/Prym purchasing agreement and the 1997 Coats/Entaco supply agreement respectively, it could have been much more profitable for Entaco to supply Coats direct rather than via Prym. In any event, the breach by Coats of its exclusive purchasing obligation can still be invoked. The argument would simply be about the quantum of damages. It seems pointless, therefore, to resort to as complex a

construction as that of the Commission in order to make sense of Entaco's damages claim.

188 The Commission takes the view that its interpretation is corroborated by Mr E's statement:

'Since the reference to maintaining the status quo was actually in the Entaco/Coats Agreement and since Prym had not compensated Entaco for its loss of business, Entaco chose to go after Coats for the loss of profit and the matter was settled between the two companies, on a confidential basis, by the payment of a [GBP] 60 000 cash settlement from Coats to Entaco.'

189 However, the Commission's version is not corroborated by the correspondence annexed to the reply to the statement of objections. Indeed, as far as that dispute is concerned, Mr B of Entaco stated in a letter of 9 June 1999 adressed to Coats that he 'enclose[s] faxes … in which Coats admits breaching the Agreement'. In fact, Mr E himself said in a letter of 25 September 2000 to Coats:

'I am writing to you … to confirm Entaco's understanding of the current position with regard to our request for compensation following alleged breaches of the September 1997 Agreement between our two companies.'

190 Finally, the Commission concedes in the Decision itself that compensation 'could be interpreted', rather than 'must be interpreted', in that way. Accordingly, the Commission has failed to establish that the compensation scheme was intended to settle a dispute between Entaco and Prym about the latter's non-compliance with their cartel, rather than a dispute between Coats and Entaco.

E – Conclusion

191 In so far as the Commission seeks to establish Coats' liability in respect of the period after the termination of the Heads of Agreement, the Decision is vitiated by a manifest error of assessment. It follows that the plea relating to the annulment of the Decision must be upheld as regards the period after 13 March 1997. The remainder of the plea must be dismissed. The legal consequences for the calculation of the fine will be addressed in paragraph 204 et seq. below.

II – Plea in law seeking annulment or reduction of the fine

192 The plea for annulment or reduction of the fine consists of several complaints relating, inter alia, to erroneous assessment of the gravity of the infringement, lack of differential treatment and breach of the principle of proportionality.

A – Arguments of the parties

193 The applicants observe that, in assessing the appropriate amount of the fine, the Commission reached the conclusion that '[t]he three parties were equally active since the infringing agreements could only succeed as a result of the tripartite agreement between the three undertakings and their subsidiaries'. According to Coats, that assessment is manifestly erroneous. On the Commission's own case, Coats participated in only two preliminary meetings at which intended infringements were allegedly discussed. That cannot be described as being 'equally active'.

194 As regards the statements in recital 325 of the Decision that Coats was a leading distributor of haberdashery products in Europe and that Coats and Prym were the main competitors at the retail level with their respective brands of hand sewing needles, namely Milward and Newey, Coats claims that the Commission produces no evidence of Coats' share of the distribution of haberdashery products, yet Coats supplied evidence showing that its share was between 8% and 25%. Furthermore, the claim that Coats was one of the main hand sewing needles distributors is contradicted by the figures put forward in the Decision itself. Coats' share at retail level by value was, according to the figures in recital 45 of the Decision, much less than 10%.

195 Furthermore, the applicants complain that the Commission does not distinguish between the legitimate protection sought by Coats and unlawful protection from competition. Coats concludes that the Commission has made serious errors of assessment concerning the gravity of the alleged infringement. Furthermore, the fine imposed on Coats is grossly disproportionate to its turnover in the relevant market.

196 According to the Commission, the fact that Coats did not participate in the meetings between Entaco and Prym after 1993 is irrelevant for the purpose of assessing the gravity of its own

participation in the cartel. As far as Coats' arguments regarding its 'weight' are concerned, the Commission notes that the relative weight, that is to say, the effective economic capacity to cause significant damage, is not determined only by the market share for the products which are the subject-matter of the infringement concerned.

197 The Commission submits that Coats' market share at retail level was higher than it now claims. The fact that Entaco and Prym, who are practically the only manufacturers of needles and, more particularly, of hand sewing needles, supplied their needles to Coats should be sufficient evidence of Coats' size and strength at the distribution level.

198 In the Commission's view, Coats was the leading distributor, in the same way as Prym was the leading manufacturer. Taking into account the different weight at each economic level, it saw no reason to impose fines with different starting amounts for the two major undertakings. Furthermore, Coats' conduct cannot, according to the Commission, be described as passive. Coats participated in the crucial meetings which led to the infringement and concluded the agreements which constitute the subject-matter of the infringements. The bilateral meetings between Entaco and Prym were of ancillary importance.

B – Findings of the Court

199 It is settled case-law that, in fixing the amount of a fine, the Commission must have regard to all relevant circumstances (Joined Cases 100/80 to 103/80 *Musique diffusion française and Others* v *Commission* [1983] ECR 1825, paragraph 106; Joined Cases C‑189/02 P, C‑202/02 P, C‑205/02 P to C‑208/02 P and C‑213/02 P *Dansk Rørindustri and Others* v *Commission* [2005] ECR I‑5425, paragraph 241; Joined Cases T‑236/01, T‑239/01, T‑244/01 to T‑246/01, T‑251/01 and T‑252/01 *Tokai Carbon and Others* v *Commission* [2004] ECR II‑1181, paragraph 331) and particularly to the gravity and duration of the infringement, which are the two criteria explicitly referred to in Article 23 (3) of Regulation No 1/2003. That basic amount will be increased to take account of aggravating circumstances or reduced to take account of attenuating circumstances.

1. Assessment of the gravity of the infringement

200 According to the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty (OJ 1998 C 9, p. 3; 'the Guidelines'), the gravity of the infringement is calculated by reference to a large number of factors, some of which the Commission must take into account (Case T‑224/00 *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission* [2003] ECR II‑2597, paragraph 183, upheld on appeal in Case C‑397/03 P *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission* [2006] ECR I‑4429, paragraph 91).

201 It should be noted in that regard that the Guidelines are not explicitly referred to in the Decision. However, the methodology used in calculating the fine shows unequivocally that the fine was calculated on the basis of the Guidelines. Furthermore, in its pleadings, the Commission explains and justifies the imposition of the fine on the basis of the Guidelines.

202 As to the assessment of the gravity of the infringement, the applicants complain that the Commission considered only the nature of the infringement and failed to take the circumstances of the present case into account. The Commission, in particular, overestimated Coats' size and strength in the relevant market and also its role in the operation of the cartel.

203 However, in the circumstances of the present case, the Court finds that in any event it is not necessary to alter that amount, since the description of the infringement as 'very serious' is well founded and the Commission chose the minimum starting amount laid down by the Guidelines in respect of such an infringement, namely EUR 20 million.

2. Assessment of the duration of the infringement

204 As regards the increase in the fine to take account of the duration of the infringement, the second indent of Section 1 B of the Guidelines provides that, for 'infringements of medium duration (in general, one to five years)', there may be an 'increase of up to 50% in the amount determined for gravity'. The third indent of Section 1 B provides that, for 'infringements of long duration (in

general, more than five years)', there may be an increase 'of up to 10% per year in the amount determined for gravity'. As stated in paragraph 52 above, the Commission took the view that the infringement lasted for five years and three months. Consequently, the Commission applied the third indent of that provision and increased the starting amount by 50% (EUR 10 million) to take account of the duration of the infringement.

205 In view of the fact that the Decision is to be annulled in so far as the applicants were found to have infringed Article 81(1) EC after 13 March 1997 (see paragraph 191 above), the Commission's findings on the duration of the infringement cannot be taken into account in the present case. In light of the Commission's evidence in the Decision, Coats' liability has been established for the period from 10 September 1994 to 13 March 1997, that is, for a period of two years and six months. Therefore, it is appropriate for the second indent of Section 1 B of the Guidelines to be applied, and it is for the Court to fix an appropriate rate of increase pursuant to Article 31 of Regulation No 1/2003.

206 In application of its unlimited jurisdiction and in order to take account of the proven duration of the infringement, which is equivalent to approximately half of the period determined by the Commission, the rate of increase is reduced to 25%, resulting in an additional amount of EUR 5 million and a total fine of EUR 25 million.

3. Consideration of attenuating circumstances

207 It has already been noted that, in fixing the amount of a fine, the Commission must have regard to all relevant circumstances. According to Section 3 of the Guidelines, that may lead to a reduction in the basic amount of the fine, depending on the attenuating circumstances. In the present case, there are a number of unusual circumstances. However, clearly the Commission did not assess all those circumstances correctly.

208 First of all, Coats attended only two of the allegedly unlawful meetings, neither of which can be described as determinative (see paragraph 96 above). In fact, in recital 77 of the Decision, the Commission itself describes them as 'preliminary' meetings. The Commission dismisses the fact that Coats did not participate in 13 other unlawful meetings on the unsubstantiated grounds that those bilateral meetings between Prym and Entaco were of 'ancillary importance'. That assessment is incorrect, particularly in the light of recital 258 of the Decision, where the Commission claims that '[t]he regularity of those meetings ensured the continuing implementation of the signed agreements'.

209 The Commission is mistaken in taking the view that the fact that Coats did not participate in the meetings between Entaco and Prym after 1993 is irrelevant to the assessment of the gravity of Coats' own participation in the cartel. According to the Court of Justice, the fact that an undertaking has not taken part in all aspects of an anti-competitive scheme or that it played only a minor role in the aspects in which it did participate must be taken into consideration when the gravity of the infringement is assessed and when determining any fine (*Commission* v *Anic Partecipazioni*, cited in paragraph 68 above, paragraph 90).

210 Equally, the Court of First Instance has held in *Cheil Jedang* v *Commission* that it is clear from case-law that one circumstance that may indicate the adoption by an undertaking of a passive role within a cartel is where the undertaking's participation in cartel meetings is significantly more sporadic than that of the ordinary members of the cartel (Case T‑220/00 *Cheil Jedang* v *Commission* [2003] ECR II‑2473, paragraph 168).

211 Accordingly, in fixing the fine, the Commission cannot disregard Coats' absence from all of the meetings held after 1993, since that absence can be indicative of a 'passive … role' within the meaning of the first indent of Section 3 of the Guidelines.

212 Furthermore, it is apparent from the case-law that such a role can be inferred where the undertaking does not actively participate in the creation of any anti-competitive agreements (see, to that effect, *Cheil Jedang* v *Commission*, cited in paragraph 210 above, paragraph 167). It is clear in the present case that, contrary to the Commission's assertion, Coats did not play any role in drawing up the Heads of Agreement, the crucial part of the cartel (see paragraph 106 et seq. above), or in drawing up the other anti-competitive agreements concluded by Prym and Entaco.

213 Finally, it should be acknowledged that, as regards protection from competition, the Commission

cannot base its assessment of the fine on protection which does not infringe the competition rules. As far as Entaco is concerned, Coats was entitled, under Regulation No 1984/83, to protect itself from competition from that company in its principal sales areas by entering into an exclusive purchasing agreement with it. That is what the 1994 and 1997 supply and purchasing agreements between the two companies were intended to achieve. As regards competition from Prym, Coats did not obtain any protection from that company, which continued to compete with Coats through its Whitecroft and Newey brands.

214 It follows that Coats' role was essentially limited to facilitating the entry into force of the Heads of Agreement. Its role is therefore more akin to that of a mediator than that of a full member of the cartel.

215 Therefore, in the exercise of its unlimited jurisdiction, the Court considers it appropriate to reduce the amount of the fine by 20% to take account of those attenuating circumstances. Since the amount of the fine has already been reduced to EUR 25 million (see paragraph 206 above), that further reduction results in a total fine of EUR 20 million.

4. The other parts of the plea

216 Finally, the applicants rely on two complaints relating to the alleged disproportionality of the fine and the lack of differential treatment.

217 As regards differential treatment, the sixth paragraph of Section 1 A of the Guidelines provides for the possibility in some cases to apply weightings to the amounts determined within each of the categories of gravity in order to take account of the specific weight and, therefore, the real impact of the offending conduct of each undertaking on competition, particularly where there is considerable disparity between the sizes of the undertakings committing infringements of the same type.

218 However, it is apparent from the use of the expression 'in some cases' and the word 'particularly' in the Guidelines that weighting according to the individual size of the individual undertakings is not a systematic step in the calculation which the Commission has imposed on itself, but an opportunity for flexibility which it has conferred on itself in cases where that is required (Case T–44/00 *Mannesmannröhren-Werke* v *Commission* [2004] ECR II–2223, paragraph 246).

219 Furthermore, Coats' minor and passive role in the operation of the cartel has already been assessed above (see paragraph 207 et seq. above) and has resulted in a reduction of the fine. In those circumstances, a further reduction would mean that that attenuating circumstance would be taken into account twice.

220 The same line of argument applies to the proportionality of the fine. In any event, Coats' argument that the fine is disproportionate is not adequately substantiated in its application. In fact, Coats has simply mentioned the word 'disproportionate' in the application. However, under Article 44(1)(c) and (d) of the Rules of Procedure of the Court of First Instance, the application must state, inter alia, the subject-matter of the proceedings, the form of order sought by the applicant and a summary of the pleas in law on which the application is based. Those elements must be sufficiently clear and precise to enable the defendant to prepare its defence and the Court of First Instance to rule on the application, should this be necessary, without further supporting information. That requirement is not satisfied here.

C – Conclusion

221 It follows from the aforementioned considerations that the applicants' plea in relation to a reduction of the fine is partly justified. Accordingly, the amount of the fine is set at EUR 20 million (see paragraph 215 above).

Costs

222 Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Under the first subparagraph of Article 87(3), the Court may, where each party succeeds on some and fails on other heads, order costs to be shared.

223 As the applicants have been successful in part of their pleadings, the Court will make an equitable assessment of the case in holding that they are to bear two thirds of their own costs and pay two thirds of the costs incurred by the Commission, and that the Commission is to bear one third of its own costs and pay one third of the costs incurred by the applicants.

On those grounds,

THE COURT OF FIRST INSTANCE (Second Chamber)

hereby

1. Annuls Commission Decision C (2004) 4221 final of 26 October 2004 relating to a proceeding under Article 81 [EC] (Case COMP/F–1/38.338 – PO/Needles) in so far as the Decision finds that the applicants infringed Article 81(1) EC after 13 March 1997;

2. Sets the amount of the fine imposed on the applicants under Article 2 of the Decision at EUR 20 million;

3. Dismisses the remainder of the application;

4. Orders the applicants to bear two thirds of their own costs and to pay two thirds of the costs incurred by the Commission, and the Commission to bear one third of its own costs and to pay one third of the costs incurred by the applicants.

BASF AG and UCB SA

v

Commission of the European Communities

(Competition – Agreements, decisions and concerted practices in the vitamin products sector – Choline chloride (vitamin B4) – Decision finding an infringement of Article 81 EC and Article 53 of the Agreement on the European Economic Area – Fines – Deterrence – Repeated infringement – Cooperation during the administrative procedure – Single and continuous infringement)

Summary of the Judgment

1. *Competition – Fines – Amount – Determination – Deterrent effect – Account taken of the size of the fined undertaking – Relevance – Obligation to take account of the likelihood of repeat infringement by the fined undertaking and fines already imposed for other anti-competitive activities or in a non-member State – None*

   (Council Regulations Nos 17, Art. 15, and 1/2003, Art. 23; Commission Notice 98/C 9/03, point 1 A)

2. *Competition – Fines – Amount – Determination – Criteria – Gravity of the infringement – Aggravating circumstances – Repeated infringement – Meaning – No time-limit – Infringement of the principle of legal certainty – None – Judicial review – Unlimited jurisdiction*

   (Council Regulations Nos 17, Art. 15(2), and 1/2003, Art. 23(2); Commission Notice 98/C 9/03)

3. *Competition – Fines – Amount – Determination – Method of calculation laid down by the guidelines drawn up by the Commission*

   (Council Regulations Nos 17, Art. 15(2), and 1/2003, Art. 23(2); Commission Notice 98/C 9/03)

4. *Competition – Fines – Amount – Determination – Commission notice on the non-imposition or reduction of fines in cartel cases in return for the cooperation of the fined undertakings – Binding upon the Commission*

   (Council Regulations Nos 17, Art. 15(2), and 1/2003, Art. 23(2); Commission Notice 96/C 207/04)

5. *Competition – Fines – Amount – Determination – Criteria – Reduction of the fine for cooperation of the fined undertaking – Conditions*

   (Council Regulations Nos 17, Arts. 11 and 15(2), and 1/2003, Art. 23(2); Commission Notice 96/C 207/04, title D)

6. *Competition – Administrative procedure – Hearings – No minutes or audio recording of a meeting held with an undertaking in the context of the notice on cooperation – Formalities not requested by the undertaking – Infringement of the priniciple of sound administration – None*

   (Rules of Procedure of the Court of First Instance, Art. 65(c); Council Regulations Nos 17, Arts 11 and 15(2), and 1/2003, Art. 23(2); Commission Notice 96/C 207/04)

7. *Competition – Fines – Amount – Determination – Criteria – Mitigating circumstances – Termination of the infringement before the Commission's intervention*

(Council Regulations Nos 17, Arts 11 and 15(2), and 1/2003, Art. 23(2); Commission Notice 98/C 9/03)

8. *Competition – Agreements, decisions and concerted practices – Not allowed – Infringements – Agreements and concerted practices capable of being treated as constituting a single infringement – Meaning*

   (Art. 81(1) EC; Council Regulations Nos 17, Art. 15(2), and 1/2003, Art. 23(2))

9. *Competition – Fines – Amount – Discretion of the Commission – Judicial review – Unlimited jurisdiction*

   (Art. 229 EC; Council Regulation No 1/2003, Art. 31; Commission Notice 98/C 9/03)

10. *Competition – Fines – Amount – Determination – Guidelines on the method of setting fines for infringements of the competition rules – Duty to apply the 'lex mitior' – None*

    (Council Regulation No 1/2003, Art. 23(2))

1. The Commission does not infringe Regulation No 17 and Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty where, for the purpose of increasing the starting amount the fine in order to give it sufficient deterrent effect, it does not evaluate the likelihood of any repeat infringement by the fined undertaking, but merely takes account of its size, that latter factor being capable of being used as an indication of the influence that it was able to exert on the market.

   Thus, the reality of the infringement committed cannot be affected by measures adopted by the undertaking concerned in order to prevent recurrence, since adoption of a compliance programme does not oblige the Commission to grant a reduction in the fine. That being so, the assertion that, following fines imposed on the undertaking concerned in another market by another Commission decision, that undertaking has no further need of deterrence must be rejected. Nor does the imposition of a fine for other anti-competitive activities affect the reality of the infringement committed or, therefore, require the Commission to grant a reduction under that head.

   The same applies to adverse findings against the undertaking in non-member countries. The objective of deterrence, which the Commission is entitled to pursue when setting fines, is to ensure that undertakings comply with the competition rules laid down in the Treaty when conducting their business within the Community or the European Economic Area. It follows that the deterrent effect of a fine imposed for infringement of the Community competition rules cannot be determined solely by reference to the individual situation of the undertaking sanctioned or by reference to the question whether it has complied with the competition rules in non-member countries outside the European Economic Area.

   (see paras 46-47, 50, 52-53)

2. Article 15(2) of Regulation No 17 and Article 23(2) of Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty are the relevant legal bases on which the Commission may impose fines on undertakings and associations of undertakings for infringements of Articles 81 EC and 82 EC. Under those provisions, in order to determine the amount of the fine, the duration and gravity of the infringement must be taken into consideration. The gravity of the infringement is determined by reference to numerous factors, for which the Commission has a margin of discretion. The fact that aggravating circumstances are taken into account in setting the fine is consistent with the Commission's task of ensuring compliance with the competition rules. Furthermore, the analysis of the gravity of the infringement must take any repeated infringement into account, and such repeated infringement may justify a significant increase in the basic amount of the fine.

   For a case of repeated infringement to be recognised, it is sufficient that the Commission is dealing with infringements falling under the same provision of the EC Treaty, without it being necessary for them to concern the same product market.

   The fact that Regulation No 17, Regulation No 1/2003 and the Commission's Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty lay down no maximum period for making a finding of repeated infringement does not breach the principle of legal certainty. The finding and the appraisal of the specific features of a repeated infringement come within the Commission's discretion in relation to the choice of factors to be taken into consideration for the purpose of determining the amount of fines. In that connection, the Commission cannot be bound by any limitation period for such a finding. In that regard, repeated infringement is an important factor which the Commission is required to appraise, since taking repeated infringement into account is intended to provide undertakings which have shown a propensity to breach the competition rules with an incentive to change their conduct. The Commission may therefore, in each case, take into consideration the indicia which tend to confirm such a propensity, including, for example, the time which has elapsed between the infringements at issue.

Where the Community judicature has to rule on the Commission's assessment of repeated infringement, the exercise of its unlimited jurisdiction may justify the production and taking into consideration of additional information which did not have to be referred to as such under the obligation to state reasons laid down in Article 253 EC. It may, therefore, take account of the fact that the undertaking concerned took part in an infringement even if the fact was omitted in the Commission's decision.

(see paras 64-67, 70-71)

3. Under the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty, the percentages corresponding to the increases or reductions applied for aggravating or attenuating circumstances must be applied to the basic amount of the fine, which is determined by reference to the gravity and duration of the infringement.

(see para. 73)

4. In view of the legitimate expectation which undertakings intending to cooperate with the Commission have been able to derive from its notice on the non-imposition or reduction of fines in cartel cases, the Commission must adhere to it when, for the purposes of determining the fine to be imposed on the undertaking concerned, it assesses its cooperation.

(see para. 89)

5. In order for an undertaking to be able to benefit from a reduction in its fine on account of its cooperation during the administrative procedure, its conduct must facilitate the Commission's task of establishing and punishing infringements of the competition rules. It does not therefore constitute cooperation falling within the scope of Section D of the notice on the non-imposition or reduction of fines in cartel cases, which concerns for example the sending of information, documents or other evidence which contribute to establishing the existence of the infringement, for an undertaking to supply the Commission, in the context of its investigation of a cartel, with information concerning a proceeding for the infringement of competition rules brought in a non-member State which is not part of the European Economic Area and which was not used by the Commission either directly or indirectly in order to establish the existence of an infringement in that area.

Furthermore, a reduction based on that notice can be justified only where the information provided and, more generally, the conduct of the undertaking concerned might be considered to demonstrate genuine cooperation on its part. It is clear from the very concept of cooperation, as described in the wording of the notice, and in particular in the introduction and at Section D, point 1, that it is only where the conduct of the undertaking concerned shows such a spirit of cooperation that a reduction may be granted on the basis of that notice. The conduct of an undertaking which, even though it was not required to respond to a question put by the Commission, responded in an incomplete and misleading way cannot therefore be considered to reflect such a spirit of cooperation. Nor is that spirit reflected in the conduct of an undertaking which supplies the Commission with documents in response to a request for information pursuant to Article 11 of Regulation No 17, since in that case the undertaking acts by virtue of a legal obligation, even if that information serves to establish, as against the undertaking which supplies it or as against a different undertaking, the existence of anti-competitive conduct.

(see paras 90-92, 108, 111)

6. The Commission cannot be accused of infringing the principle of sound administration through omitting to take minutes or make an audio recording of a meeting held with an undertaking with a view to cooperation capable of being rewarded in accordance with the notice on the non-imposition

or reduction of fines in cartel cases, where that undertaking did not in fact ask the institution to carry out those formalities.

As regards the appraisal as evidence of what was discussed at a meeting of a written statement by a person who took part in it, the Rules of Procedure of the Court of First Instance do not preclude the parties from producing such statements; however, their appraisal is a matter for the Court, which, if the facts described therein are crucial to the outcome of the case, may order, by way of a measure of inquiry, that the author of such a document be heard as a witness.

(see paras 96-97)

7. Termination of the infringements of the competition rules as soon as the Commission intervened, referred to in the third indent of point 3 of the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty, can logically constitute an attenuating circumstance only if there are reasons to suppose that the undertakings concerned were encouraged to cease their anti-competitive activities by the interventions in question, whereas a case where the infringement has already come to an end before the date on which the Commission first intervenes is not covered by that provision. That latter hypothesis is sufficiently taken into account by the calculation of the duration of the infringement period found.

Nor can the dismissal of the employees who played a decisive role in the infringement constitute action that justifies a reduction in the fine. It represents a measure designed to ensure that the undertaking's employees comply with the competition rules, which in any event is an obligation borne by the latter and cannot therefore be regarded as an attenuating circumstance.

(see paras 128-129)

8. The characterisation of certain unlawful actions as constituting one and the same infringement affects the penalty that may be imposed, since a finding that a number of infringements exist may entail the imposition of several distinct fines, each time within the limits defined in Article 15(2) of Regulation No 17 and Article 23(2) of Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty. However, a finding of a number of infringements may be advantageous to those responsible when some of the infringements are time-barred.

In that regard, the concept of single infringement can be applied to the legal characterisation of anti-competitive conduct consisting of agreements, of concerted practices and of decisions of associations of undertakings. The concept of single infringement can also be applied to the personal nature of liability for the infringements of the competition rules. An undertaking which has participated in an infringement by virtue of its own conduct, which met the definition of an agreement or a concerted practice within the meaning of Article 81(1) EC and which was intended to help to bring about the infringement as a whole, may also be responsible for the conduct of other undertakings followed in the context of the same infringement throughout the period of its participation in the infringement. That is the case where it is proved that the undertaking in question was aware of the unlawful conduct of the other participants, or that it could reasonably have foreseen that conduct, and that it was prepared to accept the risk. That conclusion has its origin in a widespread conception in the legal orders of the Member States concerning the attribution of responsibility for infringements committed by several perpetrators according to their participation in the infringement as a whole. It is not therefore contrary to the principle that responsibility for such infringements is personal in nature, it does not ignore the individual analysis of the incriminating evidence and it does not breach the rights of defence of the undertakings involved. Thus, a case of infringement of Article 81(1) EC may result from a series of acts or from continuous conduct which forms part of an 'overall plan' because they have the same object of distorting competition within the common market. In such a case, the Commission is entitled to attribute liability for those actions on the basis of participation in the infringement considered as a whole, even if it is established that the undertaking concerned directly participated in only one or some of the constituent elements of the infringement. Likewise, the fact that different undertakings played different roles in the pursuit of a common objective does not mean that there was no identity of anti-competitive object and, accordingly, of infringement, provided that each undertaking contributed, at its own level, to the pursuit of the common objective.

The concept of single objective cannot be determined by a general reference to the distortion of competition in the market concerned by the infringement, since an impact on competition, whether it is the object or the effect of the conduct in question, constitutes a consubstantial element of any conduct covered by Article 81(1) EC. Such a definition of the concept of a single objective is likely to deprive the concept of a single and continuous infringement of a part of its meaning, since it would have the consequence that different types of conduct which relate to a particular economic sector and are prohibited by Article 81(1) EC would have to be systematically characterised as constituent elements of a single infringement. Thus, for the purposes of characterising various instances of conduct as a single and continuous infringement, it is necessary to establish whether they display a link of complementarity inasmuch as each of them is intended to deal with one or more consequences of the normal pattern of competition and, by interacting, contributes to the realisation of the set of anti-competitive effects intended by those responsible, within the framework of a global plan having a single objective, the various instances of anti-competitive conduct thus being 'closely linked'. In that regard, it will be necessary to take into account any circumstance capable of establishing or casting doubt on that link, such as the period of application, the content (including the methods used) and, correlatively, the objective of the various agreements and concerted practices in question.

Therefore, a worldwide agreement to allocate world markets by the withdrawal of North American producers from the European market in return for the withdrawal of European producers from North American markets, on the one hand, and, on the other hand, a cartel established by European producers after the definitive cessation of the worldwide agreement, concerning the sharing of the market and customers and the fixing of prices throughout the European Economic Area, must be regarded as two separate infringements of Article 81(1) EC and not a single and continuous infringement, given the absence of any temporal overlap in their implementation, the fact that they pursue different objectives and were implemented by dissimilar methods, and in the absence of evidence that the European producers intended to adhere to the global arrangements in order subsequently to divide the EEA market.

(see paras 157-161, 179-181, 199-201, 209)

9. As regards determination of the amount of fines imposed for breach of the competition rules, by virtue of the unlimited jurisdiction conferred on it by Article 31 of Regulation No 1/2003 on the implementation of the rules on competition laid down in Articles 81 and 82 of the Treaty, the Community judicature is empowered, in addition to carrying out a mere review of the lawfulness of the penalty, to substitute its own appraisal for the Commission's and, consequently, to cancel, reduce or increase the fine or penalty payment imposed where the question of the amount of the fine is before it. In that context, the Commission's Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty are without prejudice to the assessment of the fine by the Community judicature when it exercises that unlimited jurisdiction.

(see para. 213)

10. The principle of non-retroactivity does not preclude the application of guidelines which, *ex hypothesi*, have the effect of increasing the level of the fines imposed for infringements committed before they were adopted, on condition that the policy which they implement was reasonably foreseeable at the time when the infringements concerned were committed. Consequently, the fact that the Commission is entitled, albeit conditionally, to apply retroactively, to the detriment of those concerned, rules of conduct designed to produce external effects, such as the Guidelines, means that it is under no obligation to apply the *lex mitior*.

(see paras 233-234)

JUDGMENT OF THE COURT OF FIRST INSTANCE (Second Chamber)

12 June 2007 (*)

(Community trade mark – Opposition proceedings – Application for the figurative Community mark WATERFORD STELLENBOSCH – Earlier Community word mark WATERFORD – Relative ground for refusal – No likelihood of confusion – Absence of similarity between the goods – Absence of complementarity – Article 8(1)(b) of Regulation (EC) No 40/94)

In Case T-105/05,

Assembled Investments (Proprietary) Ltd, established in Stellenbosch (South Africa), represented by P. Hagman and S. Ziegler, lawyers,

applicant,

v

Office for Harmonisation in the Internal Market (Trade Marks and Designs) (OHIM), represented by A. Folliard-Monguiral, acting as Agent,

defendant,

the other party to the proceedings before the Board of Appeal of OHIM, intervener before the Court of First Instance, being

Waterford Wedgwood plc, established in Waterford (Ireland), represented by K. Manhaeve, lawyer,

ACTION brought against the decision of the First Board of Appeal of OHIM of 15 December 2004 (Case R 240/2004-1), relating to opposition proceedings between Waterford Wedgwood plc and Assembled Investments (Proprietary) Ltd,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Second Chamber),

composed of J. Pirrung, President, A.W.H. Meij and I. Pelikánová, Judges,

Registrar: B. Pastor, Deputy Registrar,

having regard to the application lodged at the Registry of the Court of First Instance on 28 February 2005,

having regard to the response of the intervener lodged at the Registry of the Court on 11 August 2005,

having regard to the response of OHIM lodged at the Registry on 18 August 2005,

further to the hearing on 5 December 2006,

gives the following

Judgment

Background to the dispute

1 On 23 December 1999, the applicant filed an application for a Community trade mark with the Office for Harmonisation in the Internal Market (Trade Marks and Designs) (OHIM) under Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark (OJ 1994 L 11, p. 1), as amended.

2 The mark sought to be registered is the figurative sign represented below:

3 The goods for which registration of the mark was sought are within Class 33 of the Nice Agreement concerning the international classification of goods and services for the purposes of the registration of marks of 15 June 1957, as revised and amended and, following a restriction made by the applicant before OHIM, correspond to the following description: ‘Alcoholic beverages, namely wines produced in the Stellenbosch district, South Africa.’

4 That application was published in the *Community Trade Marks Bulletin* No 55/2000 of 10 July 2000.

5 On 6 October 2000, Waterford Wedgwood plc (‘the intervener’) filed a notice of opposition against the Community trade mark application based on, inter alia, the existence of the Community word mark Registration No 397 521, WATERFORD, registered in respect of, among other things, products falling within Class 21 of the Nice Agreement and corresponding to the following description: ‘Articles of glassware, earthenware, chinaware and porcelain’.

6 In support of its opposition, the intervener relied on the relative grounds for refusal set out in Article 8(1)(a) and (b) and Article 8(5) of Regulation No 40/94.

7 By decision of 2 February 2004, OHIM’s Opposition Division rejected the opposition in its entirety on the grounds, first, that the trade marks were not identical, since the trade mark applied for included elements other than the term ‘waterford’, secondly, that there was no likelihood of confusion in so far as the goods concerned were not similar, the fact that wine is generally drunk in a glass being insufficient in this respect and, thirdly, that the evidence provided by the intervener was insufficient to establish the repute of the trade marks on which the opposition was based.

8 On 1 April 2004, the intervener appealed against the Opposition Division’s decision.

9 By decision of 15 December 2004 (‘the contested decision’), the First Board of Appeal annulled the Opposition Division’s decision and dismissed the Community trade mark application. It found, first, that the trade mark applied for and the earlier mark were highly similar on the visual, phonetic and conceptual levels for the relevant consumers in the United Kingdom and Ireland and, secondly, that the goods covered by the trade mark applied for and the ‘articles of glassware’ covered by the earlier mark were similar on account of the high degree to which wine and wine glasses complement each other. The Board of Appeal also found that the evidence submitted by the intervener on 12 April 2002 could be taken into account. The examination of that evidence led it to hold that one of the documents, namely a study based on a survey carried out among consumers in the United Kingdom, established the strong distinctive character of the earlier mark in the United Kingdom and in Ireland. Basing its decision on that information, the Board of Appeal concluded that there was a likelihood of confusion within the meaning of Article 8(1)(b) of Regulation No 40/94. As a result, it held that there was no need to rule on the ground for refusal laid down in Article 8(5) of Regulation No 40/94, relied upon in the alternative by the intervener.

Forms of order sought

10 The applicant claims that the Court should:

– annul the contested decision;

– determine that there is no similarity giving rise to confusion between the trade mark applied for and the earlier mark;

– remit the case to OHIM for purposes of registration of the trade mark applied for;

– order OHIM and the intervener to pay the costs.

11 OHIM contends that the Court should:

– dismiss the action if it finds the application not to be well founded;

– annul the contested decision if it finds that the goods are not similar;

– annul the contested decision if it finds that the goods are similar but that the intervener has not substantiated that the earlier mark has acquired a high degree of distinctiveness as a result of the use made of it in the European Community or at least in the United Kingdom;

– order the applicant to pay the costs if the action is dismissed;

– order each party to the proceedings before the Court to bear its own costs if the contested decision is annulled.

12 The intervener contends that the Court should:

– dismiss the action;

– order the applicant to pay the costs.

Law

Admissibility of the applicant's second and third heads of claim

13 It should be observed that, by its second head of claim, the applicant is seeking a declaratory judgment on the existence of a similarity giving rise to confusion between the trade mark sought and the earlier mark. However, the Court of First Instance has jurisdiction, under Article 63(3) of Regulation No 40/94, only to annul or to alter decisions of the Boards of Appeal. As a result, it is not competent to deliver declaratory judgments and such a head of claim is therefore inadmissible.

14 As regards the applicant's third head of claim, it seeks essentially that the Court of First Instance order OHIM to register the trade mark applied for. However, under Article 63(6) of Regulation No 40/94, OHIM is required to take the necessary measures to comply with the judgment of the Court of Justice. Accordingly, the Court of First Instance is not entitled to issue directions to OHIM and such a head of claim is therefore inadmissible (Case T‑163/98 *Procter & Gamble* v *OHIM(BABY-DRY)* [1999] ECR II‑2383, paragraph 53).

15 It follows that the applicant's second and third heads of claim are inadmissible.

Merits

16 The applicant advances three pleas in law in support of the forms of order which it seeks: these concern, first, infringement of Article 74(2), secondly, infringement of Article 8(1)(b) and, thirdly, infringement of Article 8(5) of Regulation No 40/94.

17 The Court is of the opinion that it is first necessary to consider the second plea.

18 Under the second plea, the applicant claims that no likelihood of confusion exists in the present case inasmuch as, on the one hand, neither the goods nor the trade marks are similar and, on the

other hand, the intervener has not established that the earlier mark had acquired a high degree of distinctiveness.

19 The Court considers that it is first of all necessary to examine the arguments of the parties on the similarity between the goods.

Arguments of the parties

20 The applicant submits that the Board of Appeal erred, firstly, by taking into account the distinctive character of the earlier mark for the purpose of assessing the similarity of the goods and, secondly, by holding that the goods are similar on the ground that articles of glassware and wine are complementary goods.

21 In this respect, the applicant states that the fact that wine is drunk from a wine glass does not create any complementary connection between those two products, since consumers do not view them as produced by the same operators. It claims that, first, wine producers do not produce or distribute any goods other than wine, in particular articles of glassware, and that producers of glassware are not involved in wine production. Secondly, wine and wine glasses are not normally sold together. Lastly, wine is a particular and unique product constituting a market which is completely distinct from other markets.

22 The applicant maintains that the other factors generally taken into account for the purpose of establishing the similarity of goods are not present in this instance. It is of the view that wine and articles of glassware are distinct in their nature and intended purpose, that they are not substitutable, that they do not have the same distribution channels and that they are not produced in the same areas. The applicant infers that the goods are not similar and that any likelihood of confusion between the trade mark applied for and the earlier mark is therefore precluded.

23 OHIM shares the analysis of the Board of Appeal, which limited the examination of the similarity of the goods, so far as the earlier mark is concerned, to ‘articles of glassware’ since the other goods covered by the earlier mark clearly did not bear any similarity to those covered by the trade mark applied for. It also accepts that wine glasses, as a sub–category of articles of glassware, are to a certain extent complementary to wine, in so far as wine is generally drunk out of wine glasses. However, since wine can be drunk from other glasses and wine glasses can be used to drink beverages other than wine, OHIM considers that that complementary connection is tenuous. It is therefore inclined to concur with the applicant’s view in observing that complementarity is not sufficient for a finding that the goods at issue are similar, since, in the present case, apart from that complementarity, none of the criteria required by case-law to establish similarity between the goods is met.

24 However, OHIM states that it is prepared to accept the reasoning of the Board of Appeal on the basis that the public may actually believe, because of that complementarity, that the wine glasses and wine marketed under the same trade mark are sold under the responsibility of the same undertaking or of economically-linked undertakings.

25 The intervener maintains that the Board of Appeal was right to find that the goods in question are similar. It considers that wine and wine glasses are complementary in so far as wine is consistently drunk from wine glasses and those glasses are consistently used for the drinking of wine, so that there is an indispensable or, at least, very significant connection between those products. It adds that, on special occasions or celebrations, wine is served in crystal glasses of a high quality. Likewise, for the consumption of a fine wine the type of glass used is of primordial importance.

26 As regards means of distribution, the intervener submits that both types of goods are sometimes distributed by the same commercial channels such as restaurants or specialised wine shops. Likewise, certain wine producers, including the applicant, sometimes sell their wine with a glass, whereby the wine and the glass bear the same trade mark.

Findings of the Court

27 Article 8(1)(b) of Regulation No 40/94 states clearly that, in order for there to be a likelihood of confusion within the meaning of that provision, the goods or services designated must be identical or similar. Thus, even where the mark applied for is identical to a mark which is distinctive to a particularly high level, it must be established that the goods or services designated by the opposing

marks are similar (see, by way of analogy, Case C‑39/97 *Canon* [1998] ECR I‑5507, paragraph 22, and Case T‑169/03 *Sergio Rossi* v *OHIM – Sissi Rossi (SISSI ROSSI)* [2005] ECR II‑685, paragraph 53).

28 It should also be borne in mind that, in order to assess the similarity of the goods in question, account must be taken of all the relevant factors which characterise the relationship between those goods, those factors including, in particular, their nature, their intended purpose and their method of use and whether they are in competition with each other or are complementary (see *Canon*, paragraph 23, and *SISSI ROSSI*, paragraph 54).

29 Before assessing the facts of the present case in the light of what has just been stated, it is necessary to dismiss the applicant's contention that OHIM took into account the distinctive character of the earlier mark in order to assess the similarity of the goods. In paragraph 42 of the contested decision, the Board of Appeal states that 'the distinctive character of the earlier trade mark must be taken into account when determining whether the similarity between the goods or services covered by the two trade marks is sufficient to give rise to the likelihood of confusion'. Therefore, contrary to the applicant's contention, the Board of Appeal took into account the distinctive character of the earlier mark not in order to assess the similarity of the goods but, at a later stage of its examination, in order to assess whether there was a likelihood of confusion.

30 Next, the assessment of the similarity of the goods should be restricted, as regards the earlier mark, to 'articles of glassware', since the other goods covered by the earlier mark have no connection with wine. As is apparent from the contested decision, that category includes carafes, decanters and stemware or wine glasses, articles which are specifically intended to be used for the consumption of wine.

31 The parties do not dispute that the goods at issue, namely the articles of glassware, on the one hand, and, on the other hand, the wine, are distinct by nature and by their use, that they are neither in competition with one another nor substitutable and that they are not produced in the same areas.

32 As regards distribution channels, it is true that wine and certain articles of glassware are sometimes sold in the same places, such as specialist wine retailers, as the intervener has pointed out. However, in the absence of information proving the contrary, it appears that such sales represent no more than a negligible proportion of the overall sales of the articles of glassware concerned.

33 Likewise, wine glasses and wine, although normally marketed separately, are occasionally distributed together for promotional purposes. Thus, the intervener produced before both the Board of Appeal and the Court a copy of a photograph representing a gift package marketed by the applicant and consisting of a bottle of wine and two wine glasses which bear the trade mark sought without the word 'stellenbosch'. However, it has not been shown that that practice by wine producers is of any significant commercial importance. In addition, as the applicant and OHIM submitted at the hearing, the distribution of wine glasses with wine is normally perceived by the consumers concerned as a promotional attempt to increase sales of the wine rather than as an indication that the producer concerned devotes part of his activity to the distribution of articles of glassware.

34 Lastly, it should be stated that there is a degree of complementarity between some articles of glassware, in particular wine glasses, carafes and decanters, on the one hand, and wine, on the other, in so far as the first group of products is intended to be used for drinking wine. However, in so far as wine may be drunk from other vessels and the articles of glassware mentioned above can be used for other purposes, that complementarity is not sufficiently pronounced for it to be accepted that, from the consumer's point of view, the goods in question are similar within the terms of Article 8(1)(b) of Regulation No 40/94.

35 Having regard to all of the foregoing, it must be held that articles of glassware and wine are not similar goods. Consequently, there can be no likelihood of confusion between the conflicting marks and the applicant's second plea must therefore be accepted.

36 Accordingly, the contested decision falls to be annulled, without it being necessary to examine the other grounds put forward by the applicant in connection with the second plea, the first plea on the alleged infringement of Article 74(2) of Regulation No 40/94 or the third plea on the application of the ground for refusal laid down in Article 8(5) of that regulation.

37 In any event, it is clear from paragraph 53 of the contested decision that the latter ground was not considered by the Board of Appeal. It must therefore be considered in the re-examination of the intervener's opposition.

Costs

38 Under Article 87(2) of the Rules of Procedure of the Court of First Instance, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the other party's pleadings. Since OHIM and the intervener have been unsuccessful, they must be ordered to pay the costs, in accordance with the form of order sought by the applicant.

On those grounds,

THE COURT OF FIRST INSTANCE (Second Chamber)

hereby:

1. Annuls the decision of the First Board of Appeal of OHIM of 15 December 2004 (Case R 240/2004-1);

2. Orders the Office for Harmonisation in the Internal Market (Trade Marks and Designs) (OHIM) and Waterford Wedgwood plc to pay, in addition to their own costs, the costs incurred by the applicant.

Case T-410/03

Hoechst GmbH

v

Commission of the European Communities

(Competition – Agreements, decisions and concerted practices – Market in sorbates – Decision finding an infringement of Article 81 EC – Calculation of the amount of the fines – Obligation to state the reasons on which the decision is based – Gravity and duration of the infringement – Aggravating circumstances – Principle non bis in idem – Cooperation during the administrative procedure – Access to the file – Duration of the procedure)

Summary of the Judgment

1. *Competition – Administrative procedure – Breach resulting from the obligation placed on the Commission – Respect for the principles of sound administration and equal treatment*

(Council Regulation No 17, Arts 15(2) and 17; Commission Notice 96/C 207/04)

2. *Competition – Administrative procedure – Respect for the rights of the defence – Access to the file*

(Art. 81(1) EC; Council Regulation No 17, Arts 19(1) and 20)

3. *Competition – Administrative procedure – Bringing infringements to an end – Commission's powers – Injunctions addressed to undertakings*

(Council Regulation No 17, Art. 3(1))

4. *Competition – Administrative procedure – Limitation period for fines – Exclusive application of Regulation No 2988/74*

(Council Regulation No 2988/74, Art. 2(1) and (3))

5. *Competition – Fines – Decision imposing fines – Obligation to state the reasons on which the decision is based – Scope*

(Art. 253 EC; Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03)

6. *Competition – Fines – Amount – Determination – Criteria – Discretion of the Commission*

(Council Regulation No 17, Art. 15(2))

7. *Competition – Fines – Amount – Determination – Criteria – Gravity of the infringement*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, point 1A)

8. *Competition – Fines – Amount – Determination – Criteria – Division of undertakings concerned into categories having the same starting point*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, point 1A)

9. *Competition – Fines – Amount – Determination – Criteria – Deterrent effect of the fine*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, point 1A, fourth and fifth paras)

10. *Competition – Fines – Amount – Determination – Criteria – Duration of the infringement*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, point 1B, first and third paras)

11. *Competition – Fines – Amount – Determination – Criteria – Gravity and duration of the infringement*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, point 1A and B)

12. *Competition – Administrative procedure – Statement of objections – Necessary content – Respect for the rights of the defence*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03, point 2)

13. *Competition – Fines – Amount – Determination – Criteria – Gravity of the infringement – Aggravating circumstances – Repeated infringement*

(Council Regulation No 17, Art. 15(2); Commission Notice 98/C 9/03)

14. *Competition – Fines – Amount – Determination – Non-imposition or reduction of the fine for cooperation of the undertaking concerned with the Commission*

(Council Regulation No 17, Art. 15(2); Commission Notices 96/C 207/04 and 2002/C 45/03)

15. *Competition – Fines – Amount – Determination – Criteria – Taking into account of the cooperation of the undertaking concerned with the Commission*

(Council Regulation No 17, Art. 15(2); Commission Notice 96/C 207/04, title B)

16. *Competition – Fines – Community sanctions and sanctions imposed in a non-member State for breach of national competition law*

(Art. 3(1)(g) EC; Council Regulation No 17, Art. 15)

1. Within the framework of the application of the Notice on the non-imposition or reduction of fines in cartel cases, the Commission fails to have regard to the principles of sound administration and equal treatment when it provides one of the cooperating undertakings with an assurance that it will be warned if other undertakings attempt to overtake it in relation to cooperation, even if that assurance is not in fact subsequently implemented.

Where that procedural irregularity cannot lead to the annulment of the Commission's final decision, the importance of the observance of those principles by the Commission may justify, in favour of an undertaking which has been the victim of that irregularity, a reduction in the fine by the Community judicature, in the exercise of its unlimited jurisdiction.

(see paras 136-137, 581-582)

2. The right of access to the file, which is a corollary of the principle of respect for the rights of the defence, means in competition cases that the Commission provides the undertaking concerned with the opportunity to examine all the documents in the investigation file that might be relevant for its defence. Those documents comprise both inculpatory and exculpatory evidence, with the exception of business secrets of other undertakings, internal documents of the Commission and other confidential information.

The Commission cannot, however, make a general reference to confidentiality to justify a total refusal to disclose documents in its file. The right of undertakings and associations of undertakings to protect their business secrets must be balanced against the safeguarding of the right to have access to the whole of the file.

In that regard, the fact that access is given to the non-confidential version of a document forming part of the Commission's file, virtually all of the pages of which are blank and marked 'Business secrets', without a more comprehensible non-confidential version, or even a summary of the content of those documents, being provided, may bear a close relationship to failure to disclose that document.

(see paras 145, 152-153)

3. The application of Article 3(1) of Regulation No 17 may include a prohibition on pursuing certain activities or practices or on allowing situations which have been found to be unlawful to continue, but also a prohibition on adopting similar future conduct. Such obligations on undertakings must not however exceed the limits of what is appropriate and necessary to achieve the aim pursued. Furthermore, the Commission's power to issue injunctions is to be applied according to the nature of the infringement found.

The fact that an undertaking which took part in anti-competitive practices is no longer involved in the market concerned on the date of adoption of the Commission decision imposing sanctions in regard to those practices, or that those practices ceased before the adoption of the decision, does not mean that the Commission exceeds the powers conferred on it by Article 3(1) of Regulation No 17 by enjoining that undertaking to refrain from any anti-competitive act or conduct, as such an injunction is by nature preventive and does not depend on the situation of the undertaking concerned at the time of adoption of the decision.

(see paras 198-200)

4. While the fact that a reasonable period is exceeded may, in certain circumstances, justify annulment of a decision finding an infringement of the competition rules, that does not apply where what is being disputed is the amount of the fines imposed by that decision, since the Commission's power to impose fines is governed by Regulation No 2988/74 concerning limitation periods in proceedings and the enforcement of sanctions under the rules relating to competition, which established a limitation period for that purpose. That regulation established a complete system of rules covering in detail the periods within which the Commission is entitled, without undermining the fundamental requirement of legal certainty, to impose fines on undertakings which are the subject of procedures under the Community competition rules. Article 2(3) of that regulation provides that, subject to any suspension, the limitation period expires in any event after 10 years where it is interrupted pursuant to Article 2(1) of that regulation, so that the Commission cannot put off a decision about fines indefinitely without incurring the risk of the limitation period expiring. In the light of those rules, there is no room for consideration of the Commission's duty to exercise its power to impose fines within a reasonable period.

(see paras 220, 223-224)

5. A Commission decision imposing fines on a number of undertakings for an infringement of the Community competition rules contains, with respect to the classification of the undertakings concerned in different categories for the purposes of determining the starting amount of the fine, a sufficient statement of reasons when the Commission states that it took as a basis the worldwide market shares obtained on the basis of the worldwide turnover for the relevant product, even if, on grounds of confidentiality, it does not specify those turnovers but merely indicates brackets of market shares, as those factors are sufficiently comprehensible.

(see paras 258-259, 261, 263-265)

6. When determining the amount of a fine imposed for infringement of the Community competition rules, the Commission has a discretion. Under Article 15(2) of Regulation No 17, the amount of the fine is to be determined on the basis of the gravity of the infringement and its duration. In addition, that amount is the result of a series of arithmetical calculations performed by the Commission in accordance with the Guidelines. That amount is set, inter alia, on the basis of various factors linked to the individual conduct of the undertaking in question, such as the existence of aggravating or attenuating circumstances.

It cannot be inferred from that legal framework that the Commission must ensure a proportion between the amount of the fine, as thus calculated, and the overall volume of the relevant product market in the European Economic Area, for a given year of the infringement.

(see para. 342)

7. The three aspects to be taken into consideration in the assessment of the gravity of the infringement, which, according to the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty, are the very nature of the infringement, its actual impact on the market, where this can be measured, and the size of the relevant geographic market, do not have the same weight in the context of the global examination. The nature of the infringement plays a preponderant role, in particular, in characterising 'very serious' infringements. In that regard, it follows from the description of very serious infringements in those guidelines that agreements or concerted practices aimed, in particular, at setting prices or the allocation of sales quotas may entail, solely on the basis of their very nature, the characterisation as 'very serious', without there being any need to characterise such conduct by a particular impact.

(see paras 343, 345)

8. Although a Commission decision imposing sanctions which is addressed to different undertakings which have participated in an unlawful cartel is drafted in the form of a single decision, it must be analysed as a bundle of individual decisions finding in respect of each of the undertakings to which it is addressed the infringement or infringements alleged and imposing fines on them. The Commission may therefore examine separately the situation of the different undertakings concerned and divide them into categories in order to determine the individual contribution of each undertaking to the success of the cartel even where, within the cartel, a set of undertakings has always engaged in concerted conduct.

(see paras 308, 360, 365)

9. When determining the amount of a fine to be imposed for infringement of the competition rules in accordance with the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty, the Commission may apply an increase to the starting amount to take account of the undertaking's size and global resources.

First, the need to ensure that the fine has a sufficient deterrent effect requires that the amount of the fine be adjusted in order to take account of the desired impact on the undertaking on which it is imposed, so that the fine is not rendered negligible, or on the other hand excessive, notably by reference to the financial capacity of the undertaking in question, in accordance with the requirements resulting from, first, the need to ensure that the fine is effective and, second, respect for the principle of proportionality. The Commission may take account of the fact that, owing to its worldwide turnover by comparison with that of the other members of the cartel, the undertaking concerned would find it easier to find the funds necessary to pay its fine, which, in order to ensure that the fine is sufficiently deterrent, justifies the application of a multiplier. In that context, the financial resources of the undertaking must be assessed, in order to achieve properly the objective of deterrence, while observing the principle of proportionality, on the date on which the fine is imposed. In that regard, for the same reasons, it must be noted that, in the context of Article 15(2) of Regulation No 17, the upper limit of the fine, fixed at 10% of the turnover of the undertaking concerned, is determined by reference to the turnover achieved during the business year preceding the decision.

Second, the Commission may take into account the legal and economic infrastructures which place undertakings in a better position to recognise that their conduct constitutes an infringement. That factor is intended to impose a more severe penalty on large undertakings, which are presumed to have knowledge and sufficient structural means to be aware that their conduct constitutes an infringement and to evaluate the advantages to be gained from it. In that hypothesis, the turnover on the basis of which the Commission determines the size of the undertakings concerned, and therefore their ability to determine the nature and the consequences of their conduct, must relate to their situation at the time of the infringement.

An increase of 100% of the starting amount of the fine to take account of the size and overall resources of the undertakings concerned does not exceed the limits laid down in Article 15(2) of Regulation No 17 and in the Guidelines.

(see paras 374, 379, 382, 387)

10. Whilst it is true that the third paragraph of Section 1 B of the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty speaks, with respect to long-term infringements of the competition rules, of a 'significant increase'

in the starting amount of the fine, the use of those words does not, however, permit the conclusion that an increase in excess of 100% for an infringement lasting more than 10 years would be contrary to the calculation method provided for in those guidelines or would exceed the limits fixed by those guidelines or by Article 15(2) of Regulation No 17. Even though the third indent of the first paragraph of Section 1 B of the Guidelines does not provide for an automatic increase of 10% per year for long-term infringements, it leaves a margin of discretion in that regard to the Commission, which may fix such an increase without breaching the principle of proportionality.

(see paras 395-396)

11. Even on the assumption that certain kinds of cartels, such as cartels on prices and sales volumes, are intrinsically conceived in order to last, a distinction must always be drawn, in application of Article 15(2) of Regulation No 17, between the duration of their actual functioning and their gravity as resulting from their actual nature. The increase for the duration of the infringement therefore does not take account of the gravity of the infringement for a second time.

(see paras 397-398)

12. In the context of an administrative procedure in competition matters, the Commission fails to respect an undertaking's rights of defence when it establishes an aggravating circumstance as against that undertaking on the basis of elements of fact which, although mentioned at various points in its statement of objections, were, taken as a whole, insufficiently precise as to their scope and characterisation, so that it is only at the decision stage that those elements were brought together into a single part and the objection became clearly apparent.

(see paras 424, 431, 433)

13. The Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty refer to an 'infringement of the same type' by the same undertaking. In those circumstances, once an undertaking commits an infringement of the same type, even though the economic sector concerned is a different one, the Commission may find that there is an aggravating circumstance.

In that regard, the Commission cannot find that an undertaking has committed a repeated infringement by referring to a previous decision imposing a penalty on that undertaking for an infringement of the same type where that decision was annulled by the Community judicature before the decision making a finding of repeated infringement was adopted. Article 231 EC provides that where an action for annulment is well founded, the Court is to declare the contested act void.

On the other hand, the Commission may rely on a previous decision imposing a penalty on that undertaking for an infringement of the same type but which was the subject of an action for annulment pending before the Community judicature when a stay of execution was not even sought. Such a decision, in accordance with the first paragraph of Article 256 EC, is enforceable, provided that it imposes a pecuniary burden on persons other than the States, notwithstanding the initiation of an action for annulment, since under Article 242 EC an action before the Community judicature does not have suspensory effect.

If, in order to make a finding of repeated infringement, the Commission relied on a number of previous decisions imposing sanctions on the undertaking concerned, one of which was annulled before the adoption of the decision finding a repeated infringement, the error on the Commission's part does not call in question either the characterisation of repeated infringement, which is sufficiently supported by the other previous decisions, or the rate of increase applied, at least where there is nothing to indicate that the Commission's finding that the repeated infringement followed a number of previous infringements gave rise to a greater increase in the fine for an aggravating circumstance than would have been determined if only a single previous infringement had been identified.

(see paras 465-466, 468-470, 474)

14. Where the undertakings concerned by a cartel procedure began to cooperate with the Commission before the adoption of the 2002 Notice on immunity from fines and reduction of fines in cartel cases and where those undertakings relied on the previous 1996 Notice on the non-imposition or reduction of fines in cartel cases, the latter provision is the only one applicable, even though the Commission definitively ruled only after the adoption of the 2002 Leniency Notice and, in particular, on the question of which undertaking, if any, could benefit from immunity from a fine. While it is true that,

in such a hypothesis, the effects of the acts of cooperation were produced after the adoption of the 2002 Leniency Notice, the future rule applies immediately to the future effects of the situation which arose under the former rule only in the absence of transitional provisions. However, Section 28 of the 2002 Leniency Notice clearly provides that that notice is to apply from 14 February 2002 for all cases for which no undertaking has relied on the 1996 Leniency Notice.

Nor can that conclusion be called in question by reliance on the 'most favourable provision' principle. Without there being any need to determine whether such a principle might apply to the Commission's Lenience Notices, it is not possible to characterise the 2002 Leniency Notice as being more favourable overall than the 1996 Leniency Notice, which is amended on several points, as regards both the substantial rules and the procedural rules, some amendments being more favourable to the undertakings concerned, while others are not.

Last, any application by analogy of the 2002 Leniency Notice must be rejected, since this situation may be distinguished from cases in which the 1996 Leniency Notice was applied by analogy to procedures which had commenced before the adoption of that notice but which were not subject to any other legal rule.

(see paras 507-511)

15. The grant of total immunity or a reduction in the amount of the fine under Section B of the 1996 Notice on the non-imposition or reduction of fines in cartel cases requires, in particular, that the undertaking concerned has been the first to adduce decisive evidence of the cartel's existence. In that regard, while such evidence need not necessarily be sufficient in itself to establish the existence of the cartel, it must none the less be decisive for that purpose. It must therefore not be simply an indication as to the direction which the Commission's investigation should take but must be material which may be used directly as the principal evidence supporting a decision finding an infringement. That evidence may also be adduced orally.

The Commission has a certain discretion in determining whether, for the performance of its task of finding the existence of an infringement and putting an end to it, the cooperation in question was decisive and it is only where it manifestly exceeds that discretion that it may be criticised by the Community judicature.

The Commission does not make a manifest error of assessment where it considers that an undertaking which provided it at a meeting with a detailed oral description of the activities and functioning of a cartel, supported by relevant documentary evidence to prove its existence, was the first to cooperate within the meaning of Section B of the 1996 Leniency Notice, when another undertaking had, at an earlier meeting, provided a less detailed account of the cartel which did not accurately reflect the object and the functioning of the cartel and which was not supported by any documentary evidence.

(see paras 552-555, 568-569)

16. The application of the principle *non bis in idem* is subject to a threefold condition of identity of the facts, unity of the offender and unity of the protected legal interest. That principle therefore precludes a penalty being imposed on the same person more than once for the same unlawful conduct for the purpose of protecting the same legal asset.

With respect to penalties for infringement of the competition rules, that principle does not apply to situations in which the legal orders and the competition authorities of non-member States intervened in the exercise of their own powers.

In the case of a worldwide cartel, for which penalties are imposed both by the competition authorities of a non-member State and by the Commission, that principle cannot therefore apply, even though the facts at issue before the former and the latter have their origin in the same set of agreements, because the legal interests protected are different. The Commission's action seeks to protect free competition within the common market, which, under Article 3(1)(g) EC, constitutes a fundamental objective of the Community, whereas, if the procedure initiated by the authorities of a non-member State relates to the application of the cartel or its effects other than on the territory of that State, and in particular in the European Economic Area, that would manifestly encroach on the territorial jurisdiction of the Commission.

For the same reasons, considerations relating to fairness, and aimed at securing the deduction from the fine imposed of the penalty imposed by the authorities of the non-member State, cannot be upheld.

(see paras 600-605)

JUDGMENT OF THE COURT OF FIRST INSTANCE (Fifth Chamber)

18 June 2008(*)

(Competition – Agreements, decisions and concerted practices – Market in sorbates – Decision finding an infringement of Article 81 EC – Calculation of the amount of the fines – Obligation to state the reasons on which the decision is based – Gravity and duration of the infringement – Aggravating circumstances – Principle non bis in idem – Cooperation during the administrative procedure – Access to the file – Duration of the procedure)

In Case T‑410/03,

Hoechst GmbH, formerly Hoechst AG, established in Frankfurt am Main (Germany), represented initially by M. Klusmann and V. Turner, then by M. Klusmann, V. Turner and M. Rüba, and finally by M. Klusmann and V. Turner, lawyers,

applicant,

v

Commission of the European Communities, represented initially by W. Mölls, O. Beynet and K. Mojzesowicz, and subsequently by W. Mölls and K. Mojzesowicz, acting as Agents, assisted by A. Böhlke, lawyer,

defendant,

APPLICATION for annulment, so far as the applicant is concerned, of Commission Decision 2005/493/EC of 1 October 2003 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement against Chisso Corporation, Daicel Chemical Industries Ltd, Hoechst AG, The Nippon Synthetic Chemical Industry Co. Ltd and Ueno Fine Chemicals Industry Ltd (Case No COMP/E‑1/37.370 – Sorbates) (Summary in OJ 2005 L 182, p. 20), or, in the alternative, a reduction to an appropriate level of the amount of the fine imposed on the applicant,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Fifth Chamber),

composed of M. Vilaras, President, F. Dehousse and D. Šváby, Judges,

Registrar: K. Andová, Administrator,

having regard to the written procedure and further to the hearing on 8 February 2007,

gives the following

Judgment

Facts

1 By Decision 2005/493/EC of 1 October 2003 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement against Chisso Corporation, Daicel Chemical Industries Ltd, Hoechst AG, The Nippon Synthetic Chemical Industry Co. Ltd and Ueno Fine Chemicals Industry Ltd (Case No COMP/E‑1/37.370 – Sorbates) ('the Decision'), the Commission found that a number of undertakings had infringed Article 81 EC and Article 53 of the Agreement on the European Economic Area (EEA) by participating in a cartel on the sorbates market.

2 The undertakings to which the Decision was addressed are Chisso Corporation, Daicel Chemical Industries Ltd ('Daicel'), The Nippon Synthetic Chemical Industry Co. Ltd ('Nippon Synthetic'), Ueno Fine Chemicals Industry Ltd ('Ueno'), all established in Japan, and the applicant, Hoechst AG, subsequently Hoechst GmbH, established in Germany.

3 The period during which the infringement was found to have been committed lasted from 31 December 1978 until 31 October 1996 (for Chisso, Daicel, Ueno and Hoechst) and from 31 December 1978 until 30 November 1995 (for Nippon Synthetic).

4 'Sorbates', as defined in the Decision, are chemical preservatives (anti-microbial agents) capable of retarding or preventing growth of micro-organisms, such as yeast, bacteria, moulds or fungi. They are used essentially in food and beverages. Sorbates sometimes also preserve other food characteristics such as flavour, colour, texture and nutritional value. In addition, sorbates are also used to stabilise other types of products such as pharmaceutical products, cosmetics, pet food and animal feed (recital 56 to the Decision).

5 According to the Decision, there are three types of sorbates. First, sorbic acid is the main product, from which other sorbates derive. It is a technically complex substance to produce and of limited application owing to its low solubility in water. Second, potassium sorbate is used where high water solubility is desired. Third, calcium sorbate is used for the coating of cheese wrapping paper in France and Italy. Sorbic acid represents almost 30% of sorbates sales in Western Europe, potassium sorbate represents 70% and calcium sorbate represents a residual part (recitals 57 to 61 to the Decision).

6 At the material time there were seven large suppliers of sorbates at worldwide level: two undertakings were European (Hoechst and Cheminova A/S); one was in the United States (Monsanto, later Eastman Chemical Company); and the remaining four undertakings were Japanese (Chisso, Daicel, Nippon Synthetic and Ueno) (recital 64 to the Decision).

7 Until September 1997, when it transferred its sorbates business to one of its wholly-owned subsidiaries (Nutrinova Nutrition Specialities & Food Ingredients GmbH, 'Nutrinova'), Hoechst was the main operator on the worldwide market (more than 20% in 1995) and on the European market (more than 45% in 1995). Hoechst was followed by Chisso, Daicel, Nippon Synthetic and Ueno (each of which had between 9.5 and 15% of the European market for the same year (recitals 65 and 70 (Table I of the Decision)).

8 According to recitals 4 and 5 to the Decision, lawyers acting for Chisso met the representatives of the Commission's services on 29 September 1998 in order to inform the Commission that Chisso was willing to cooperate within the framework of the Commission Notice of 18 July 1996 on the non-imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4, 'the 1996 Leniency Notice) concerning a worldwide cartel on the sorbic acid market.

9 On 27 October 1998 Nutrinova's lawyer also contacted the Commission's services and informed them that Nutrinova was willing to cooperate within the framework of the 1996 Leniency Notice.

10 On 29 October 1998, at a meeting between lawyers acting for Hoechst and Nutrinova and the Commission's services, an oral description of the relevant market, the producers, market shares, the proceedings in the United States and the cartel's activities was provided.

11 On 13 November 1998, Chisso provided an oral description of the cartel's activities to the Commission's services and supplied documentary evidence.

12 On 9 December 1998 the Commission's services received oral testimony from Chisso's representative in the cartel, who supplied explanations and clarifications about the documents submitted on 13 November 1998.

13 On 21 December 1998 Nutrinova submitted a memorandum on the sorbates market.

14 On 19 March and 28 April 1999 Nutrinova submitted a memorandum setting out the anti-competitive activities affecting the sorbates market and documentary evidence.

15 On 20 April 1999 Chisso submitted a declaration confirming and expanding upon the oral statement made at the meeting of 13 November 1998.

16 On that basis, the Commission on 26 May and 17 June 1999 issued requests for information to Daicel, Nippon Synthetic and Ueno under Article 11 of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and Article [82 EC] (OJ, English Special Edition 1959-62, p. 87) (recital 6 to the Decision).

17 On 15 July 1999, 24 October 2001 and 21 February 2002 respectively, Nippon Synthetic, Ueno and Daicel expressed their willingness to cooperate under the 1996 Leniency Notice. They responded to the Commission's requests for information (recitals 7, 10 and 11 to the Decision).

18 The Commission subsequently sent further requests for information under Article 11 of Regulation No 17, the last such request being sent on 13 December 2002 (recital 21 to the Decision).

19 Between 1998 and 2001 proceedings were initiated in the United States and in Canada concerning price-fixing in the sorbates sector. Fines were imposed on Daicel, Hoechst, Nippon Synthetic and Ueno (in the proceedings in the United States) and Daicel, Hoechst and Ueno (in the proceedings in Canada) (recitals 30 to 32 to the Decision).

20 On 20 December 2002 the Commission initiated a proceeding under Article 81 EC and Article 53 of the EEA Agreement and issued a statement of objections to the undertakings to which the Decision is addressed (recital 22 to the Decision).

21 On 24 April 2003 the undertakings to which the Decision is addressed took part in the hearing before the Commission (recital 29 to the Decision).

22 On 1 October 2003 the administrative procedure was closed when the Commission adopted the Decision.

23 According to Article 1 of the operative part of the Decision, the following undertakings had infringed Article 81(1) EC and, from 1 January 1994, Article 53(1) of the EEA Agreement, by participating, for the periods indicated below, in a complex, single and continuous agreement and concerted practice in the sorbates sector, by which they had agreed to fix target prices and to allocate volume quotas, to define a reporting and monitoring system and not to supply technology to potential entrants:

a) Chisso, from 31 December 1978 to 31 October 1996;

b) Daicel, from 31 December 1978 to 31 October 1996;

c) Hoechst, from 31 December 1978 to 31 October 1996;

d) Nippon Synthetic, from 31 December 1978 to 30 November 1995;

e) Ueno, from 31 December 1978 to 31 October 1996.

24 In Article 2 of the operative part of the Decision, the Commission ordered the undertakings listed in Article 1 to bring to an end immediately the infringements referred to in that article, in so far as they have not already done so, and to refrain from repeating any act or conduct described in Article 1 and from adopting any measure having equivalent object or effect.

25 On the basis of the findings of fact and the legal assessments made in the Decision, the Commission imposed on the undertakings concerned fines calculated in application of the method set out in the Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty (OJ 1998 C 9, p. 3, 'the Guidelines') and in the 1996 Leniency Notice.

26 In Article 3 of the operative part of the Decision, the Commission imposed the following fines:

a) Daicel: EUR 16 600 000;

b) Hoechst: EUR 99 000 000;

c) Nippon Synthetic: EUR 10 500 000;

d) Ueno: EUR 12 300 000.

27 The amount of the fine imposed on Hoechst takes into account, in particular, the role as leader of the cartel which it played jointly with Daicel, and also of the fact that its conduct constituted a repeated infringement (recitals 363 to 373 to the Decision). However, Hoechst received a reduction of 50% of the amount of the fine for its cooperation during the administrative procedure (recitals 455 to 466 to the Decision).

28 Chisso was considered by the Commission to have been the first to provide decisive evidence in the context of the investigation. On that basis, it was given complete immunity and was not fined (recitals 439 to 447 to the Decision).

29 The Decision was served on Hoechst on 9 October 2003, by letter dated 8 October 2003.

Procedure and forms of order sought by the parties

30 By application registered at the Registry of the Court of First Instance on 18 December 2003, Hoechst brought the present action.

31 On 16 December 2004 the Court rejected an application to intervene by Chisso (order of 16 December 2004 in Case T‑410/03 *Hoechst* v *Commission* [2004] ECR II‑4451).

32 On 2 March 2006 the Commission was requested to answer a question put by the Court and to supply, first, a number of documents in the investigation file, in the form made accessible to Hoechst, and, second, a usable non-confidential version or non-confidential summary of Chisso's letter of 17 December 2002, with the annexes thereto. The Commission responded to that request within the prescribed period. As regards Chisso's letter of 17 December 2002, together with the annexes, the Commission stated that Chisso agreed that the original versions of those documents should be used for the sole purposes of the proceedings before the Court.

33 On 5 April 2006 the Commission's response and the documents supplied by it were notified to Hoechst.

34 On 18 May 2006 Hoechst was invited to submit its observations on the Commission's response. In particular, it was invited to state how the non‑disclosure of Chisso's letter of 17 December 2002, with the annexes thereto, in the form submitted to the Court by the Commission, had prevented it from having knowledge of documents that might be useful to its defence and had thus breached its rights of defence. By letter of 16 June 2006 Hoechst responded to that question within the prescribed period.

35 On 12 July 2006 the Commission was invited to submit its observations on certain points in Hoechst's response. By letter of 5 September 2006 the Commission submitted its observations within the prescribed period.

36 Upon hearing the report of the Judge-Rapporteur, the Court (Fifth Chamber) decided to open the oral procedure.

37 The parties submitted oral argument and their answers to the questions put by the Court at the hearing held on 8 February 2007.

38 At the hearing the Court ordered the Commission, on the basis of Article 65(b) and the second subparagraph of Article 67(3) of the Rules of Procedure of the Court, to produce, within three weeks from the date of the hearing, the internal notes relating to the telephone conversations which had taken place between its services and Chisso between September 1998 and April 1999.

39 The order of the Court, which was recorded in the minutes of the hearing, was served on the parties on 13 February 2007.

40 The Commission complied with the Court's request within the prescribed period.

41 In accordance with the second subparagraph of Article 67(3) of the Rules of Procedure, the documents submitted by the Commission were not communicated to the applicant while the Court ascertained their confidential nature and their relevance to the result of the case.

42 On 30 April 2007 the oral procedure was closed.

43 On 11 May 2007 the parties were informed that the Court had decided to remove the internal notes referred to in paragraph 38 above from the file and to return them to the Commission.

44 Hoechst claims that the Court should:

– annul the Decision in so far as it concerns the applicant;

– in the alternative, reduce the amount of the fine imposed on it to an appropriate amount;

– order the Commission to pay the costs.

45 The Commission contends that the Court should:

– dismiss the action as unfounded;

– order Hoechst to pay the costs.

Law

46 Hoechst's action is supported by 13 pleas in law.

47 Contrary to the Commission's contention, it is possible upon reading the arguments put forward to determine the scope of the pleas on which Hoechst relies in support of the form of order which it seeks.

48 Thus, the first and fourth pleas seek annulment of the Decision, in its entirety, in so far as it concerns Hoechst.

49 The 13^{th} plea seeks annulment in part of the operative part of the Decision, namely Article 2, in so far as it concerns Hoechst.

50 The remaining pleas seek a reduction in the fine.

I – The pleas seeking annulment of the Decision in its entirety in so far as it concerns Hoechst

51 By its first plea, Hoechst challenges the Commission's refusal to grant it access to a number of exculpatory documents. In the context of its fourth plea, Hoechst emphasises the fact that the hearing officer's file is incomplete.

A – The first plea, alleging refusal to grant access to certain exculpatory documents

1. Summary of the administrative procedure and of the Decision.

52 At a meeting held on 13 November 1998 between Chisso and the Commission, one of the Commission's officials responsible for the case assured Chisso that 'fair warning would be given if another company would look like overtaking Chisso under the requirements of [the Leniency Notice]'.

53 On 9 December 1998 the Commission's services received the oral testimony of Chisso's representative in the cartel.

54 On 5 March 1999, during a telephone interview with the Commission's services, Nutrinova requested that a meeting be arranged. That request went unanswered.

55 On 20 December 2002 the Commission initiated a proceeding under Article 81 EC and Article 53 of the EEA Agreement and sent a statement of objections to the undertakings to which the Decision is addressed. On the same date those undertakings were granted access to the file, in the form of two

CD-ROMs containing a full copy of the documents, apart from business secrets and other confidential information (recitals 22 and 23 to the Decision).

56 The Commission's note on the meeting of 13 November 1998 was in the file.

57 By letter to the hearing officer dated 22 January 2003, Hoechst requested that it and Nutrinova should, through their counsel, have access to the internal documents relating to the telephone conversations between Commission officials and Chisso between September 1998 and the end of April 1999. They also requested access to a letter from Chisso dated 17 December 2002 which appeared in the file in a non-confidential version.

58 As regards the internal documents relating to the telephone conversations between the Commission and Chisso, counsel for Hoechst and Nutrinova referred to the terms of the minute of the meeting of 13 November 1998 and stated:

'It is a crucial point for our clients to know whether and to what extent submissions have been prompted by Commission officials while our clients were cooperating with the Commission.'

59 As regards Chisso's letter of 17 December 2002, counsel for Hoechst and Nutrinova observed in particular that an annex to that letter, namely a letter of 26 March 1999, was entitled '[T]o the Commission concerning Chisso's cooperation with the Directorate-General for Competition'. They added:

'Any arguments made with regard to Chisso's cooperation or – more importantly – any hints that would refer to contacts Chisso has had at the time with Commission officials could on the other hand be very relevant for our clients' defences.'

60 By letter of 24 February 2003 the hearing officer refused the requests set out in the letter of 22 January 2003.

61 The hearing officer stated, in that regard, that the notes relating to the telephone conversations between Chisso and the Commission were internal documents and therefore non-accessible. In the absence of any strong evidence to the contrary, it had to be presumed that the Commission had made an objective assessment of the information that would be useful to Hoechst. Furthermore, as regards Chisso's letter of 17 December 2002 (and the letter of 26 March 1999 annexed to that letter), the hearing officer informed Hoechst that Chisso had requested confidential treatment for those documents.

62 On 7 March 2003 Hoechst, together with Nutrinova, reiterated, through their counsel, the requests set out in the letter of 22 January 2003, in the context of their response to the statement of objections. More particularly, Hoechst insisted, with Nutrinova, on obtaining access to the file, and submitted arguments relating to the unequal treatment which had been in evidence during the proceedings.

63 On 23 September 2003 the hearing officer submitted her final report in the case (OJ 2005 C 173, p. 5). In that report, she observed, in particular:

'… I informed the parties by letter of 24 February 2003 that further access to the file would not be granted at that stage of the procedure. I explained that notes of telephone conversations between parties and Commission officials are internal documents of the Commission and thus, in principle, non-accessible. In this particular case, the Commission had, exceptionally, made accessible some of the internal file notes and had referred to them in the [s]tatement of [o]bjections, in order to explain the facts and dates of the meetings that the Commission held with the different addressees. With regard to the letters from Chisso, the latter had requested confidential treatment for these letters and the parties had been given access to non-confidential summaries of those letters.'

64 A footnote accompanying that paragraph stated:

'Chisso's legal representative subsequently after the [o]ral [h]earing and in response to a request from me to reconsider the confidentiality nature of the letter sent to the Commission on 26 March 1999, confirmed its view that this document contained business secrets and thus as such was confidential.'

65 The hearing officer then observed in her final report:

‘As a result of these claims made by Hoechst and Nutrinova, I have paid special attention to the conclusions of the Commission on the issue of leniency in the present draft decision. I have also examined internal notes of the Commission services in so far as these exist. In the event, the concerns expressed by Hoechst and Nutrinova are largely rendered moot by the conclusions set out in the draft decision on the issue of leniency. In addition, I am satisfied that the actions of the Commission services vis-à-vis the parties have had no impact on the outcome of the case on this issue. I also confirm that no additional access to file is required in order to satisfy Hoechst’s rights of defence. Neither the Commission’s internal documents nor the documents provided by Chisso provide … additional inculpatory or exculpatory evidence which would be required to be made available to Hoechst.’

66 On 1 October 2003 the Commission adopted the Decision and, at recitals 26 and 27, answered Hoechst’s claims as follows:

‘(26) As regards the documents or parts of documents provided by Chisso for which it claimed protection as “business secrets”, their non-transmission to the other parties protects the legitimate commercial interests of this company. It prevents the other parties from obtaining strategic information on Chisso’s commercial interests and on the operation and development of its business, pursuant to Article 20 of Regulation No 17 and the Commission Notice on the internal rules of procedure for processing requests for access to the file in cases pursuant to Articles 85 [EC] and 86 [EC], Articles 65 and 66 of the ECSC Treaty and Council Regulation (EEC) No 4064/89.

(27) Secondly, as to the access to the Commission’s internal documents, according to well established case-law, the Commission is under no obligation with regard to the rights of the defence to grant access to its internal documents during the procedure. Moreover, as far as contacts with undertakings in the context of their cooperation are concerned, the Commission considers that Hoechst’s reasoning is based on a fundamentally wrong premis. Additional access to the Commission’s internal documents in no way would facilitate the companies’ rights of defence and contribute to determine who was the first undertaking to provide the Commission with decisive evidence. In fact, this appraisal will be made exclusively on the basis of the documents provided by the undertakings, to which the parties had access.’

2. Arguments of the parties

a) Arguments of Hoechst

67 Hoechst states that it was only on reading the statement of objections that it observed that at the beginning of the proceedings, more or less in parallel with Hoechst, Chisso had cooperated with the Commission in reliance on the 1996 Leniency Notice. At the same time, the document to which Hoechst had access enabled it to discover irregularities in the administrative procedure. Hoechst makes clear in that regard that it is challenging, in the eighth plea, the fact that the first decisive evidence of the existence of the cartel was supplied by Chisso on 13 November 1998.

68 In its first plea, first, Hoechst disputes the refusal of access to internal documents relating to the conversations between the Commission and Chisso. Second, Hoechst disputes the refusal of access to a letter from Chisso dated 17 December 2002, together with the annexes to that letter. Third, Hoechst draws attention to the fact that the Commission did not agree to its request to carry out fresh investigations. In addition, Hoechst requests that measures of organisation of procedure be taken.

The refusal of access to documents relating to the conversations between the Commission and Chisso

69 The applicant submits that the Commission refused to grant it access to certain documents submitted by Chisso and also to notes drawn up by the Commission concerning the meetings and telephone conversations with Chisso. If the applicant had been able to consult them, it would have been able to obtain a complete picture of the contacts between the Commission and Chisso and it would therefore have been easier for the applicant to prove that it was it, and not Chisso, that had been the first, in time and with respect to content, to adduce decisive evidence of the existence of the cartel and that therefore ought to have obtained a reduction in its fine. It would therefore also have been easier for Hoechst to demonstrate that Chisso’s acts of cooperation had been influenced by information from the Commission.

70 The applicant refers to Case T‑36/91 *ICI* v *Commission* [1995] ECR II‑1847, paragraph 69; Case T‑221/95 *Endemol* v *Commission* [1999] ECR II‑1299, paragraph 65; and Joined Cases T‑191/98 and T‑212/98 to T‑214/98 *Atlantic Container Line and Others* v *Commission* [2003] ECR II‑3275, paragraph 334, and emphasises that the right to consult the file is one of the fundamental guarantees of Community law in procedural matters, intended to protect the rights of defence of the addressees of a statement of objections. The right of access to the file must, in particular, ensure the effective exercise of the right to be heard, since it provides the opportunity to be aware of and to assess the evidence used by the Commission in the statement of objections and, where possible, to refute that evidence in the response. The Commission's duty is to give access, in principle, to the whole file. The situation is otherwise only with respect to the Commission's internal documents and evidence containing business secrets of third parties.

71 Hoechst also submits that the principle of equality of arms means that the Commission cannot decide alone whether, and to what extent, it will grant access to the documents which a party might use as exculpatory evidence. There would be a breach of the rights of the defence if it were possible to demonstrate that the administrative procedure might have had a different outcome if Hoechst had obtained access to the exculpatory documents concerned. For the documents not in the file, Hoechst ought to have expressly requested to consult the documents in question.

72 In this case, Hoechst made quite clear that all the notes relating to the telephone conversations which took place between September 1998 and April 1999 between the Commission's representatives and Chisso were important for its defence, as they might have been exculpatory documents, showing the lack of impartiality in the conduct of the proceedings at that time.

73 The parts of the file that Hoechst was able to consult show that the applicant was treated unequally by comparison with Chisso.

74 First, the Commission granted Chisso, in autumn 1998, something that it refused to grant at the same time to Hoechst, namely recognition of oral depositions as acts of cooperation. At the same time, the Commission actively invited Chisso to meetings with it, whereas it refused the same meetings to Hoechst. In particular, an internal Commission note dated 9 November 1998 states that '[Chisso's] lawyers [had] at last agreed to hold the promised meetings, following calls initiated from [the Directorate-General for Competition]'. Those repeated telephone calls from the Commission show the partisan way in which it conducted the proceedings.

75 Second, it is also established that during that decisive period of the proceedings, that is to say, at the end of 1998, Chisso unlawfully obtained a promise from the Commission that it would receive a 'warning' if it appeared that other undertakings would overtake it in relation to cooperation. Such partial warnings are not only unlawful in themselves but also relevant for Hoechst's defence. In effect, that defence depends essentially on whether, and to what extent, the Commission gave Chisso such 'warnings' or indications concerning the state of the cooperation supplied by Hoechst. Furthermore, according to settled case-law the principle of sound administration includes the obligation for the competent institution to examine carefully and impartiality all the relevant aspects of the individual case (Case T‑31/99 *ABB Asea Brown Boveri* v *Commission* [2002] ECR II‑1881, paragraph 99). Even on the assumption that Chisso received no warning from the Commission, that has no impact on the complaint that the Commission in any event declared that it was prepared to give such a warning. That breach of the principle of sound administration is in itself sufficient to justify granting Hoechst greater access to the file in order to preserve its rights of defence.

76 In those circumstances, all the documents dealing with the contacts between Chisso's lawyers and the Commission officials responsible for the case are important for Hoechst's defence, as exculpatory documents. Hoechst explained that point of view on several occasions, both in writing (for the attention of the hearing officer and the head of division of the Commission responsible for the case) and at the hearing on 24 April 2003.

77 However, the hearing officer rejected those requests by letter of 24 February 2003 to counsel for Hoechst and Nutrinova, stating, in particular, the following:

'In the absence of strong evidence to the contrary, it has to be presumed that the Commission made an objective assessment of the information which is useful to [your clients] in this regard. No strong evidence to the contrary is conveyed in your letter. Moreover, the reason given (quoted above), for requesting additional access is not an appropriate basis upon which to consider granting access and, more specifically, it is not relevant to the issue of the application of the Leniency Notice in this case.'

78 Those arguments show that the hearing officer, whose actions are attributable to the Commission, misunderstood her powers and her duties to ensure respect for the rights of the defence. In accordance with the case-law, all that can be expected of a party which seeks wider access to the file is that it should establish by relevant arguments what documents may be of interest for its defence, and for what reason (*Atlantic Container Line and Others* v *Commission*, paragraph 70 above, paragraph 335). Whether a particular document is of interest for the defence must be assessed from the viewpoint of the party defending itself and neither the Commission's agent responsible for the case nor the hearing officer is competent to decide what documents may serve for the defence as exculpatory documents.

79 The applicant also refers to Case T–30/91 *Solvay* v *Commission* [1995] ECR II–1775, paragraphs 81 and 83, and submits that where a case calls for difficult and complex economic assessments, the Commission must ensure that the addressees of a decision have the same knowledge of the facts as the Commission itself and the other parties concerned do. That principle also applies for the Commission's internal documents relating to the contacts with Chisso, to which Hoechst requested access in order to protect its rights. Referring to Case T–9/99 *HFB and Others* v *Commission* [2002] ECR II–1487, paragraph 40, the applicant states that the Commission's internal documents must be communicated where circumstances of the case are exceptional and the applicant makes out a plausible case for the need to communicate them. Access to the Commission's internal documents must be authorised where they serve to prove a breach of the principle of lawfulness by the Commission (order of 18 June 1986 in Case 156/84 *BAT and Reynolds* v *Commission* [1986] ECR 1899, paragraph 11).

80 As regards the hearing officer's reference to the application of the 1996 Leniency Notice in the present case, Hoechst observes that it cannot be for the hearing officer to predict the future reasoning in the Commission's decision and to base her procedural decisions on that reasoning. The hearing officer can neither know nor decide what grounds will be adopted by the College of Members of the Commission and has neither the power nor the right to decide alone on the interest which potentially exculpatory documents might have for the defence (*Atlantic Container Line and Others* v *Commission*, paragraph 70 above, paragraph 339).

81 In that context, Hoechst requests the Court to adopt measures of organisation of procedure consisting in ordering the Commission to put it and the Court in a position to consult, in their integral version, all the documents in the file, or otherwise in the Commission's possession, showing the content of the contacts between Chisso's lawyers and the Commission's representatives between September 1998 and April 1999. Furthermore, by way of measure of inquiry, Hoechst requests that the two Commission officials then responsible for the case be called as witnesses.

The refusal of access to a letter of 17 December 2002 from Chisso, together with the annexes thereto

82 Hoechst states that it has already claimed, before the adoption of the Decision, that a letter of 17 December 2002 from Chisso's lawyers which was in the file but the content of which was almost entirely concealed ought to have been in an unconcealed form in the file. Hoechst emphasised that the annexes to that letter, including a letter of 26 March 1999, which, according to the summary of its content, dealt with Chisso's cooperation with the Commission, was of great interest for its defence.

83 In so far as that document, as may be inferred from the file to which access was granted, related only to contents or to legal points relating to Chisso's cooperation and to its assessment, Hoechst contends that there is no valid reason for precluding consultation of it.

84 Hoechst adds that Chisso's letter might contain inculpatory evidence (for example, if Chisso accused the applicant of having been a leader of the cartel) and the Commission ought therefore to have given the applicant immediate access without any prompting. Conversely, should there be any sign of discrimination such as the procedural irregularities on the part of the Commission noted above, Chisso's letter might have an exculpatory effect. In that case, the letter ought to have been transmitted when Hoechst requested it, at the latest.

85 In that context, it is immaterial whether or not one of the parties to the procedure requested confidential treatment for the documents in question. The Commission ought to examine of its own

motion, and objectively, the confidential nature of the documents in its file. Hoechst submits in that regard that Article 21(2) of Regulation No 17 provides that the Commission can grant only valid requests for confidential treatment for business secrets.

86 Hoechst contends that only business data such as turnover or market shares in non-historical periods could have constituted a ground for concealing – and only in part – Chisso's letter.

87 Referring to *Endemol* v *Commission*, paragraph 70 above (paragraph 65), Hoechst submits that the protection of confidential information must be weighed up against the rights of defence of the addressees of the statement of objections. The addressees of the statement of objections should be in a position to determine, in full knowledge of the facts, whether the documents described are relevant for their defence (*ICI* v *Commission*, paragraph 70 above, paragraph 104). In the present case, Hoechst maintains that its opportunity to defend itself was restricted in so far as it was unable to clarify certain decisive procedural and factual points.

88 In particular, in so far as Hoechst disputes the fact that Chisso was the first to supply decisive evidence, Chisso's letter of 26 March 1999, which, as the summary shows, concerned the latter's cooperation with the Commission, might have enabled conclusions to be drawn as to the content and date of the acts of such cooperation, in particular before 29 October 1998.

89 In that context, Hoechst requests the Court to adopt measures of organisation of procedure consisting in ordering the Commission to make available to the Court and to Hoechst Chisso's lawyers' letter of 17 December 2002 to the Commission, in the full version, together with the annexes. Furthermore, by way of measure of inquiry, Hoechst requests that the two Commission officials then responsible for the case be called as witnesses.

90 In its letter of 16 June 2006, in answer to a written question from the Court inviting it to submit further observations on the documents previously transmitted by the Commission, including, in particular, Chisso's letter of 17 December 2002, together with the annexes thereto (see paragraph 34 above), Hoechst claims that certain evidence has been rejected and that a number of irregularities vitiated the administrative procedure.

91 As regards the evidence which it claims to have been rejected, first, Hoechst contends that the letter of 11 January 1999 from Chisso's counsel to the Commission, which is now available for consultation for the first time, constitutes an exculpatory document.

92 That letter shows that on 3 November 1998, or several days after Hoechst requested immunity, Chisso sought confirmation that no other undertaking had offered to cooperate with the Commission.

93 That proves that on that date Chisso had not requested immunity from the Commission. Chisso requested immunity only after 11 January 1999, as shown in the very terms of the letter. It is not possible to make good a failure to request immunity. That element was not mentioned in the Decision and is of such a kind as to confirm that Hoechst had been the first undertaking to cooperate with the Commission.

94 Second, Hoechst maintains that Chisso's letter to the Commission of 26 March 1999 is also an exculpatory document.

95 According to Hoechst, that letter shows that, at the time when it was sent, the written statements which the Commission had requested from Chisso had still not been submitted.

96 First of all, Hoechst observes, in that regard, that Chisso was informally granted extra time, for which there is no provision in the 1996 Leniency Notice.

97 Next, if certain documents were still missing on 26 March 1999, it is impossible to consider, contrary to what is stated at recital 458 to the Decision, that the Commission had proof of the existence of the cartel on the basis of the cooperation provided by Chisso. The Commission therefore gave unlawful commitments to Chisso and also adhered to them by subsequently granting Chisso immunity from a fine.

98 Hoechst also observes that it provided the Commission with documentary evidence on 19 March 1999, even though its personnel still faced the risk of criminal proceedings in the United States and

though the 1996 Leniency Notice required only evidence of the existence of the cartel, which Hoechst provided as early as 29 October 1998.

99 As regards the irregularities which are alleged to vitiate the administrative procedure, Hoechst emphasises that the Commission, at recital 461 to the Decision, refused to accept that the applicant had been the first to cooperate, on the ground that it had documents without producing them, when it was agreed that, in view of the proceedings pending in the United States, Hoechst could provide those documents at a later stage.

100 At the same time, as shown by the letter of 26 March 1999, the Commission clearly allowed Chisso 'extra time' to submit documents. Furthermore, the documents produced by Chisso in April 1999 could have been provided earlier. Accordingly, Chisso's cooperation should have been rejected on the same grounds as those used against Hoechst.

101 In fact, no lack of cooperation was alleged on Chisso's part in spite of a strictly comparable situation. That constitutes unequal treatment to the detriment of Hoechst.

The request to carry out further investigations

102 Hoechst states that, in its letter of 22 January 2003 to the hearing officer, it had requested that further investigations be carried out at the Commission's premises in the form of questioning of witnesses. Although that request was not refused by either the hearing officer or the Commission, no action was taken, since the requested investigation was clearly not carried out. In so far as that investigation was decisive for the content of the Decision, for the reasons set out in the present plea, the Commission has breached the principle of sound administration.

b) Arguments of the Commission

The refusal to grant access to certain documents

103 The Commission emphasises that Hoechst does not deny that access to certain documents may in principle be refused when they are internal documents or contain business secrets.

104 In that context, first, the Commission states that the hearing officer paid 'particular attention' to her findings in the draft decision, concerning the question of the benefit of favourable treatment with respect to the fine. The hearing officer 'moreover' examined the Commission's internal notes before stating that she was convinced that 'the acts of the Commission's services vis-à-vis the parties [had] not had any influence on the outcome of the procedure from that point of view'.

105 Second, the Commission asserts that the first decisive evidence of the existence of the cartel was provided by Chisso at the meeting of 13 November 1998. The decision as to which undertaking was the first to supply decisive evidence to the Commission was taken solely on the basis of the documents produced by the undertakings, to which the parties had access. Accordingly, the warning promised to Chisso at the meeting of 13 November 1998 cannot logically have influenced the decision as to which undertaking was the first to cooperate. It follows at the same time that the criticisms concerning the conduct of the procedure after that date could not be of the slightest importance in that regard. That also applies to the complaints relating to the refusal to grant access to Chisso's letter of 17 December 2002 and the annexes thereto.

106 Nor, third, has Hoechst succeeded in casting serious doubts on the objectivity of the Commission's conduct of the procedure that might justify wider access to its internal documents.

107 The Commission submits, in that regard, that the opportunity given to Chisso on 9 December 1998 to submit oral observations served only to explain the written evidence submitted on 13 November 1998. On the other hand, the meeting proposed by Hoechst by telephone on 5 March 1999 was intended to substitute oral testimony for existing written evidence.

108 As regards the 'refusal' to agree to the meeting proposed by Hoechst, the Commission suggests that what it did was more in the nature of a general reference to the conditions of the application of the 1996 Leniency Notice than a definitive refusal of any new contact with Hoechst. The Commission also states that its position was based on a provisional assessment, first, of Hoechst's willingness to cooperate, in view of the fact that of Hoechst was not prepared to cooperate fully before the outcome of the criminal and civil proceedings in the United States, and, second, of the probative

value of the information thus far sent to the Commission by Hoechst. As Hoechst did not state that it was prepared, at the time of the requested meeting, to cooperate fully with the Commission and to give information of a different nature from that which it had already supplied, it would have made no sense, either for the Commission or for Hoechst, to arrange a new meeting.

109 As regards the fact that the Commission actively invited Chisso to meetings and arranged such meetings, the Commission states that by its telephone call it was merely reacting to an initiative by Chisso. It was agreed at the meeting of 29 September 1998 that the lawyers would take the initiative for a new meeting with the Commission within two weeks. As they did not do so within the agreed period, the Commission resumed contact in order to ascertain whether the lawyers still desired a meeting.

110 Furthermore, the proper functioning of the Commission in the field of competition depends, in particular, on the effectiveness of the Leniency Notice and therefore on the confidence which cooperating undertakings are able to have in the confidentiality of the contacts which they make in that regard. It is therefore necessary to reject Hoechst's assertion that its interest in establishing the existence of any procedural defects prevails over the proper functioning of the institution. In that context, *Solvay* v *Commission*, paragraph 79 above, does not assist Hoechst to overcome the absence of exceptional circumstances in the present case. That case did not concern internal notes of the Commission but only the confidential documents of one of the parties. Furthermore, the facts of that case were very different from those of the present case, which do not involve difficult and complex economic assessments.

111 Last, the Commission, referring to *Atlantic Container Line and Others* v *Commission*, paragraph 70 above (paragraph 340), submits that where the documents that might have contained exculpatory evidence were not communicated to a party, a breach of the rights of the defence can be found only if it is established that the administrative procedure might have led to a different outcome if that party had had access to the documents in question during that procedure. That is precluded in this case, however, as regards the fact that Chisso was the first undertaking to cooperate by its contribution of 13 November 1998.

112 In its response of 5 September 2006 to a written question put by the Court, the Commission made the following comments on the supplementary observations communicated by Hoechst on 16 June 2006 (see paragraphs 34 and 90 to 101 above).

113 As regards, first, Chisso's letter of 11 January 1999, the Commission states that that document was already accessible during the administrative procedure and therefore cannot in any event be characterised as evidence to which the Commission did not provide access.

114 In any event, the Commission states that Section E, paragraph 1, of the 1996 Leniency Notice requires that undertakings 'contact' the Commission's Directorate-General for Competition. Although in the German version of that provision the word 'applicant' (Antragsteller) is used in that context, there is no need to submit a formal application. Nor, moreover, did Hoechst formulate an 'application' in its letter of 27 October 1998.

115 As to which undertaking was the first to cooperate within the meaning of Section B of the 1996 Leniency Notice, the Commission contends that it is not the date of the 'application' that is decisive; what matters is which undertaking 'is the first to adduce decisive evidence of the cartel's existence'. Furthermore, the wording used in the letter of 11 January 1999 shows that Chisso clearly presumed that in had already begun to cooperate.

116 As regards, second, Chisso's letter of 26 March 1999, the Commission emphasises that that document concerns only questions relating to the time-limits which had been imposed on Chisso, and not on Hoechst, to produce further documents, at a time when Chisso had already satisfied the conditions for the application of Section B(b) of the 1996 Leniency Notice by virtue of its contribution of 13 November 1998. Hoechst is therefore wrong to claim that that letter is an exculpatory document. It cannot be an exculpatory document, since it does not relate to any of the reasons why Hoechst is unable to benefit from Section B of the 1996 Leniency Notice, which are set out at recitals 455 to 464 to the Decision, and to which the Commission refers.

117 The fact that Chisso is considered to be the first undertaking to have cooperated is based not on the observations which it submitted on 20 April 1999 but on the documents produced on 13 November 1998. The extensions of the time-limits therefore did not have the effect of retroactively recognising that Chisso was the first to cooperate.

118 If it is Hoechst's intention to assert that it follows from that document that Chisso no longer satisfied the conditions for the application of Section B(d) of the 1996 Leniency Notice, the Commission contends that its argument cannot be upheld, since a person cannot rely on an unlawful act committed in favour of a third party (judgment of 15 June 2005 in Joined Cases T-71/03, T-74/03, T–87/03 and T–91/03 *Tokai Carbon and Others* v *Commission*, not published in ECR, paragraph 373). What is more, even if Chisso should actually lose the benefit of Section B of the 1996 Leniency Notice, that would have no impact on Hoechst.

119 The Commission adds that the evidence necessary for the purposes of the application of Section B (b) of the 1996 Leniency Notice is decisive evidence of the existence of the cartel. Contrary to Hoechst's opinion, evidence which merely put the Commission in a position to carry out an investigation is not sufficient.

120 It is true that information provided orally is not excluded a priori. However, such evidence is not relevant in itself in the context of the application of Section B(b) of the 1996 Leniency Notice and becomes relevant only from the time when it is recorded on the appropriate medium (Case T–15/02 *BASF* v *Commission* [2006] ECR II–497, paragraph 505).

121 The applicant ought to have expressly requested that the Commission draw up a minute to that effect (*BASF* v *Commission*, paragraph 120 above, paragraph 502), in any event so long as the Commission did not propose to do so in the context of its administrative practice. Furthermore, the minute could help to prove the existence of the cartel only if the Commission were able to establish the authenticity of the statement.

122 As regards, third, the irregularities which are alleged to have vitiated the administrative procedure, Hoechst infers from the letter of 26 March 1999 that Chisso no longer satisfied the conditions for the application of Section B(d) of the 1996 Leniency Notice. That argument must be rejected, on the ground that no one can rely to his advantage on an unlawful act committed in favour of a third party.

123 Furthermore, the question as to whether the conditions for the application of Section B(d) of the 1996 Leniency Notice are satisfied must, in the Commission's submission, be determined on a case-by-case basis. One of the significant elements in that context is whether the conduct of the undertakings concerned gave rise to an appreciable delay in the procedure. If the procedure is considered as a whole, it is clear that that was not so in the present case. The Commission also emphasises that Hoechst did not transmit the second part of its observations until April 1999, some days after Chisso had lodged its own declarations (which Hoechst describes as being late).

124 Last, the Commission disputes certain factual assertions in Hoechst's observations.

The request for the new investigations

125 The Commission asserts that an investigation was indeed carried out, but that it produced no results favourable to Hoechst. The official responsible for the case at the time was questioned and confirmed that Chisso had received no warning concerning the possibility that it might be overtaken in relation to cooperation. Chisso was not put on notice in that regard. The Commission refers on that point to recital 458, *in fine*, to the Decision.

3. Findings of the Court

126 The Court notes, by way of preliminary observation, that Hoechst claims on a number of occasions in the context of the first plea that there has been a breach of the principles of sound administration and equal treatment, in support of its assertion that there has been a breach of the right of access to the file. Those arguments, moreover, are again developed in the context of the eighth and ninth pleas, whereby the applicant seeks a reduction in the fine.

127 In those circumstances, the Court considers it appropriate to examine those arguments first, before analysing, more specifically, the breach of the right of access to the file alleged by Hoechst.

a) Breach of the principles of sound administration and equal treatment

128 It must be borne in mind that during an administrative procedure before the Commission, the

Commission is required to observe the procedural guarantees provided for by Community law (Case T–348/94 *Enso Española* v *Commission* [1998] ECR II–1875, paragraph 56).

129 Among the guarantees conferred by the Community judicial order in administrative procedures is, in particular, the principle of sound administration, which entails the obligation for the competent institution to examine carefully and impartially all the relevant elements of the case (Case T–44/90 *La Cinq* v *Commission* [1992] ECR II–1, paragraph 86, and *ABB Asea Brown Boveri* v *Commission*, paragraph 75 above, paragraph 99).

130 As regards the principle of equal treatment, the Commission cannot, when assessing the cooperation provided by undertakings, ignore that general principle of Community law, which, according to consistent case-law, is breached when comparable situations are treated differently or when different situations are treated in the same way, unless such treatment is objectively justified (Joined Cases T–45/98 and T–47/98 *Krupp Thyssen Stainless and Acciai speciali Terni* v *Commission* [2001] ECR II–3757, paragraph 237, and Case T–38/02 *Groupe Danone* v *Commission* [2005] ECR II–4407, paragraph 453).

131 In the present case, first, so far as it concerns Hoechst's assertion that the Commission granted Chisso, in autumn 1998, what it at the same time refused the applicant, namely recognition of its oral contributions as acts of cooperation, and for the reasons set out at paragraphs 572 to 578 below, the Court considers, on the one hand, that in the Decision the Commission finally accepts Hoechst's oral contributions as acts of cooperation and, on the other, in any event, that the fact that it was the Commission's intention not to take certain oral contributions into consideration was the consequence of uncertainty as to the actual cooperation provided by Hoechst at the beginning of the procedure. Hoechst's arguments in that regard must therefore be rejected.

132 Second, as regards the Commission's internal note of 9 November 1998, relating in particular to the meeting of 29 October 1998, which states that '[t]he lawyers … have at last agreed to hold the promised meetings, following calls initiated from [the Directorate-General for Competition]', the Court considers that the telephone conversations initiated by the Commission's services were a consequence of the fact that those services had already met Chisso's lawyers on 29 September 1998, without there being any need to determine whether or not Chisso's identity had been officially revealed. As the Commission observes in its internal note of 1 October 1998, it had been agreed that the lawyers would contact the Commission services within two weeks. The fact that, in that context, the Commission services resumed contact is not of such a kind as to cast doubt on the lawfulness of the proceedings in that regard.

133 Third, as regards the fact that Hoechst's requests for further investigations met with no response, it must be noted that Hoechst's request, contained in a letter of 22 January 2003 to the hearing officer, formed part of a request for access to the internal documents relating to the telephone contacts between the Commission and Chisso between September 1998 and April 1999. More specifically, Hoechst requested the hearing officer to investigate those telephone contacts. In fact, it follows from the hearing officer's final report that, '[a]s a result of these claims made by Hoechst and Nutrinova', the hearing officer had 'examined internal notes of the Commission services in so far as these exist[ed]'. Hoechst's assertion that its request met with no response is therefore factually incorrect.

134 Fourth, as regards what the applicant claims to have been a biased approach or unequal treatment in the application of the 1996 Leniency Notice, the Court observes that in an internal note of 9 November 1998 referring to the first meetings held with Chisso and Hoechst, the Commission stated:

'We have obviously not informed them [that is to say, Chisso's lawyers] that other companies are also providing information, nor have these others been informed that … Chisso [had] applied for leniency.'

135 In fact, it follows from the minute of the meeting of 13 November 1998 between Chisso and the Commission that one of the officials responsible for the present case stated that 'fair warning would be given if another company would look like overtaking Chisso under the requirements of [the Leniency Notice]'.

136 It follows, first, that on 9 November 1998 the Commission clearly displayed its intention not to

disclose to the cooperating undertakings, in particular to Hoechst, the fact that other undertakings had approached its services in order to obtain immunity from a fine when, on 13 November 1998, that is to say, some days later, it assured Chisso that it would be warned if other undertakings attempted to overtake it in relation to cooperation.

137 Those elements lead the Court to conclude that, in this case, the Commission failed to have regard to the principles of sound administration and equal treatment. The Court would emphasise in that regard that even if the assertion of the official concerned at the meeting of 13 November 1998 does not show that the promise made to Chisso was in fact subsequently kept, it none the less constitutes a breach of those two principles.

138 It must be observed, at this stage, that Hoechst does not claim that the Decision should be annulled in so far as the Commission breached the principles of sound administration and equal treatment. However, since it relied on a breach of those principles in support of the breach of the right of access to the file, which will be examined below, and in so far as Hoechst's arguments are developed again in the context of the eighth and ninth pleas concerning the application of the 1996 Leniency Notice, it is appropriate to ascertain the impact on the content of the Decision of the breach found at paragraph 137 above.

139 In that regard, in the first place, it must be observed that the unlawful act found at paragraph 137 above is not of such a kind as to call in question the infringement found in the Decision, which, moreover, is supported by documentary evidence. Nor has Hoechst put forward any argument to that effect.

140 In the second place, as regard cooperation by undertakings, it follows from recital 440 to the Decision that:

'At a meeting held on 13 November 12998, Chisso submitted an oral description of the cartel's activities and provided documentary evidence … The Commission considers that on that occasion Chisso was the first undertaking to adduce decisive evidence [of] the existence of the cartel which is found in this Decision.'

141 It follows that the Commission relied solely on the oral description of the cartel's activities and on the written evidence submitted at the meeting of 13 November 1998, and not later, as the basis for its conclusion that Chisso had been the first undertaking to adduce evidence of the existence of the cartel.

142 In those circumstances, even on the assumption that Chisso was induced to cooperate further with the Commission after 13 November 1998, the Commission could not have arrived at a different result in the Decision as concerns the application of the 1996 Leniency Notice, subject to examination of the eighth and ninth pleas, whereby Hoechst seeks to demonstrate that, on the substance, the evidence submitted by Chisso on 13 November 1998 was not decisive. The same would apply if Hoechst had been induced further, after 13 November 1998, after becoming aware of Chisso's cooperation.

143 The Court therefore considers that the unlawful act found at paragraph 137 above is not of such a kind as to affect the validity of the Decision in so far as it concerns the finding of the infringement and the fact that Chisso was the first to cooperate.

144 Independently of the question of the impact of the unlawful act found at paragraph 137 above on the right of access to the file, which will be examined below, and therefore the question of the impact of that illegality on the validity of the Decision as a whole, and in so far as Hoechst's arguments are developed again in the context of the eighth and ninth plea, whereby it seeks a reduction in the fine, the Court, at this stage, reserves its position as to whether the fine should be varied.

b) Breach of the right of access to the file

145 It must be borne in mind at the outset that the right of access to the file, which is a corollary of the principle of respect for the rights of the defence, means that the Commission provides the undertaking concerned with the opportunity to examine all the documents in the investigation file that might be relevant for its defence. Those documents comprise both inculpatory and exculpatory evidence, with the exception of business secrets of other undertakings, internal documents of the

Commission and other confidential information (see Joined Cases C–204/00 P, C–205/00 P, C–211/00 P, C–213/00 P, C–217/00 P and C–219/00 P *Aalborg Portland and Others* v *Commission* [2004] ECR I–123, paragraph 68 and the case–law cited).

146 As regards the inculpatory evidence, the undertaking concerned must demonstrate that the result which the Commission reached in its decision would have been different if a document that was not disclosed on which the Commission relied to make a finding of infringement against that undertaking ought to have been excluded as inculpatory evidence. As regards the exculpatory evidence, the undertaking concerned must establish that its non-disclosure was able to influence, to its detriment, the course of the procedure and the content of the Commission's decision. It is sufficient for the undertaking to show that it would have been able to use the exculpatory documents for its defence, in the sense that, if it had been able to rely on them during the administrative procedure, it would have been able to invoke evidence which was not consistent with the inferences made at that stage by the Commission and therefore could have had an influence, in any way at all, on the assessments made by the Commission in any decision, at least as regards the gravity and duration of the conduct in which the undertakings was found to have engaged and, accordingly, the level of the fine. The possibility that a document that had not been disclosed might have had an influence on the conduct of the procedure and the content of the Commission's decision can be established only after a provisional examination of certain evidence showing that the undisclosed documents might have had – from the aspect of that evidence – a significance which ought not to have been overlooked (see *Aalborg Portland and Others*, paragraph 145 above, paragraphs 73 to 76 and the case-law cited).

147 Furthermore, it should be emphasised that it is not solely for the Commission, which notifies the objections and adopts the decision imposing a penalty, to determine the documents which are of use to the defence of the undertakings concerned. However, the Commission may exclude from the administrative procedure the evidence which has no relation to the allegations of fact and of law in the statement of objections and which therefore has no relevance to the investigation. An applicant cannot properly put forward as a ground of annulment the fact that irrelevant documents were not communicated to it (see *Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 126 and the case-law cited).

148 Last, it must be borne in mind that a breach of the right of access to a file can entail annulment of a Commission decision in whole or in part only where the lack of proper access to the investigation file during the administrative procedure had prevented the undertaking or undertakings concerned from perusing documents which were likely to be of use in their defence and had thus infringed their rights of defence. That is the case if disclosure of a document would have had even a slight chance of altering the outcome of the administrative procedure if the undertaking concerned had been able to rely on it during that procedure (see, to that effect, *Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraphs 101 and 131).

149 It is in the light of those considerations that the Court must assess whether Hoechst's right of access to the file was breached in this case as regards, first, Chisso's letter of 17 December 2002 together with the annexes thereto and, second, the internal documents relating to the telephone conversations between the Commission and Chisso between September 1998 and April 1999.

Chisso's letter of 17 December 2002 and the annexes thereto

150 First, it should be observed that the Commission decided to incorporate Chisso's letter of 17 December 2002, together with the annexes thereto, in a non–confidential version, in the investigation file that was made available to the undertakings which were parties to the proceedings. The Commission therefore of necessity considered that those documents were of relevance to the investigation.

151 Second, Chisso's letter of 17 December 2002, together with the annexes thereto, was not used by the Commission in the Decision in order to establish that the undertakings concerned had committed an infringement. Those documents therefore do not constitute inculpatory evidence.

152 Third, it must be noted that Hoechst did in fact have access to the non-confidential version of Chisso's letter of 17 December 2002, together with the annexes. However, in the form made available to Hoechst during the administrative procedure, those documents consisted of 101 pages, virtually all of which were blank and marked 'Business secrets'. No more comprehensible non-confidential version, or even a summary of the content of those documents, was provided during the

administrative procedure. Only a list setting out the date, sender and addressee of the documents and, where appropriate, the subject-matter, were mentioned in Chisso's letter of 17 December 2002. In those circumstances, the non-confidential version of Chisso's letter of 17 December 2002, with the annexes, in the form make available to Hoechst during the administrative procedure, bears a close relationship to failure to disclose the documents in question, which, in so far as they formed part of the file, were of relevance to the investigation.

153 Fourth, it must be emphasised that more appropriate access to Chisso's letter of 17 December 2002, together with the annexes, was requested by Hoechst on a number of occasions during the administrative procedure. That access was refused, according to the terms of recital 26 to the Decision, on the ground that Chisso had requested confidential treatment for them. The Commission cannot make a general reference to confidentiality to justify a total refusal to disclose documents in its file (Joined Cases T–305/94 to T–307/94, T–313/94 to T–316/94, T–318/94, T–325/94, T–328/94, T–329/94 and T–335/94 *Limburgse Vinyl Maatschappij and Others* v *Commission* [1999] ECR II–931, paragraph 1017). The right of undertakings and associations of undertakings to protect their business secrets must be balanced against the safeguarding of the right to have access to the whole of the file (Joined Cases T–25/95, T–26/95, T–30/95 to T–32/95, T–34/95 to T–39/95, T–42/95 to T–46/95, T–48/95, T–50/95 to T–65/95, T–68/95 to T–71/95, T–87/95, T–88/95, T–103/95 and T–104/95 *Cimenteries CBR and Others* v *Commission* [2000] ECR II–491, (Cement), paragraph 147).

154 In the circumstances of the present case, taking account of Hoechst's express request to that effect, the Commission ought to have drawn up, or to have had drawn up, a non-confidential version of the documents in issue or, where appropriate, if that proved difficult, to have prepared a list of the documents concerned and a sufficiently precise non-confidential summary of their content.

155 For all of those reasons, the Court considers that Hoechst's access to Chisso's letter 17 December 2002, together with the annexes thereto, was not properly organised by the Commission.

156 However, it must be borne in mind that a breach of the right of access to a file can lead to annulment in whole or in part of a Commission decision only where the lack of proper access to the investigation file during the administrative procedure prevented the undertaking or undertakings concerned from perusing the documents that were likely to be of use in their defence and thus infringed their rights of defence.

157 It was in those circumstances that the Court adopted the measures of organisation of procedure set out at paragraphs 32 to 35 above and that Hoechst was able to submit further observations on the complete documents which had thus been made available to it.

158 It must be noted in that regard, by way of preliminary observation, that certain documents in the investigation file, in particular a letter from Chisso dated 11 January 1999, were produced at the request of the Court since the Decision referred to them in order to find that Chisso had supplied an oral description of the cartel's activities and also certain evidence at the meeting of 13 November 1998. It is common ground, moreover, that those documents formed part of the investigation file made available to the parties to the proceedings, which the Commission confirmed in its observations without that point being disputed by Hoechst. In those circumstances, Hoechst cannot validly maintain that there has been a breach of the right of access to the file in that regard.

159 As regards Chisso's letter of 17 December 2002, together with the annexes, Hoechst's further observations specifically concern one of those annexes, namely a letter from Chisso dated 26 March 1999.

160 It must be emphasised, in that regard, that the Commission's final position on which undertaking had been first to adduce decisive evidence was taken, in the present case, at the time when it adopted the Decision. At no point during the procedure did the Commission inform the undertakings whether or not they would be immune from a fine. In those circumstances, the non-disclosure of Chisso's letter of 26 March 1999 could not affect Hoechst's rights of defence during the administrative procedure.

161 In any event, it must be made clear that Chisso's letter of 26 March 1999 cannot alter the Commission's conclusion that Chisso was the first undertaking to adduce decisive evidence of the

cartel's existence, independently of whether or not that conclusion was well founded. The purpose of Chisso's letter of 26 March 1999 was to explain why Chisso was late in supplying an 'account of the facts'. That cannot attenuate the fact that, at the meeting of 13 November 1998, and according to the Commission, Chisso provided an oral description of the cartel's activities and also certain written evidence. Likewise, the fact that the Commission was able to grant Chisso further time to provide supplementary factual evidence following the meeting of 13 November 1998 cannot have any effect on the fact that Chisso was the first to cooperate, once that conclusion is based solely on the evidence adduced at that meeting.

162 In light of the foregoing, Hoechst's plea, so far as Chisso's letter of 17 December 2002, together with the annexes, is concerned, must be rejected.

The internal documents relating to the telephone contacts between the Commission and Chisso between September 1998 and April 1999

163 As a preliminary point, it must be noted that during the administrative procedure Hoechst requested access only to the internal documents relating to the telephone conversations between the Commission and Chisso between September 1998 and April 1999. That is clear, in particular, from a letter which Hoechst sent to the hearing officer on 22 January 2003, and was confirmed at the hearing.

164 It must be borne in mind, next, that the right of access to the file implies that the Commission provides the undertaking concerned with the opportunity to examine all the documents in the investigation file that might be relevant for its defence, with the exception, in particular, of the Commission's internal documents (see, to that effect, *Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 68).

165 The restriction on access to such documents is justified by the need to ensure the proper functioning of the Commission when it deals with infringements of the Treaty competition rules. The Commission's internal documents can be made available only if the exceptional circumstances of the case so require, on the basis of serious indicia which it is for the party concerned to supply (see *Cement*, paragraph 153 above, paragraph 420 and the case-law cited, and Joined Cases T–236/01, T–239/01, T–244/01 to T–246/01, T–251/01 and T–252/01 *Tokai Carbon and Others* v *Commission* [2004] ECR II–1181, paragraph 40).

166 In the present case, for the reasons set out at paragraphs 128 to 144 above, the arguments put forward by Hoechst concerning a breach of the principles of sound administration and equal treatment were rejected, save as regards the assurance given to Chisso at the meeting of 13 November 1998 that it would be warned if another undertaking attempted to overtake it in the context of the 1996 Leniency Notice.

167 As stated at paragraph 143 above, however, the illegality found in that regard is not of such a kind as to affect the validity of the Decision as regards, first, the finding of the infringement and, second, the determination of the undertaking which was the first to cooperate and therefore the granting of immunity from a fine.

168 Accordingly, the Court considers that no serious indicia exist, for the purposes of the case-law cited above, that would justify access by Hoechst to the internal documents in question. For that reason, Hoechst's plea, in so far as it concerns the breach of the right of access to the internal documents relating to the telephone conversations between the Commission and Chisso between September 1998 and April 1999, must be rejected.

169 In the interest of completeness, and in the desire to demonstrate the truth in light of the breach of the principles of sound administration and equal treatment referred to above, the Commission was ordered, on the basis of Article 65(b) and the second subparagraph of Article 67(3) of the Rules of Procedure, to produce the internal documents in question to enable the Court to verify them. In accordance with the second subparagraph of Article 67(3) of the Rules of Procedure, the documents transmitted by the Commission were not communicated to the applicant while the Court verified their confidentiality and their relevance to the outcome of the case.

170 In the context of that verification, the Court considered that the internal documents in question did not apparently contain evidence relevant for the result of the case. Consequently, in view of the confidentiality normally attaching to documents of that type, the Court decided to remove them

from the file and return them to the Commission (see, to that effect, Case T‑5/02 *Tetra Laval* v *Commission* [2002] ECR II‑4381, paragraph 78, and, by analogy, order in Joined Cases T‑134/94, T‑136/94 to T‑138/94, T‑141/94, T‑145/94, T‑147/94, T‑148/94, T‑151/94, T‑156/94 and T‑157/94 *NMH Stahlwerke and Others* v *Commission* [1997] ECR II‑2293, paragraphs 40, 44 and 45).

171 For all of those reasons, and without there being any need to have recourse to the further measures of organisation or inquiry requested by Hoechst once the Court considers that it is sufficiently enlightened by the documents in the file, the first plea must be rejected.

B – The fourth plea, alleging that the hearing officer's final report is incomplete

1. Arguments of the parties

a) Arguments of Hoechst

172 Hoechst observes that it raised a number of criticisms with the hearing officer concerning the conduct of the administrative procedure and in particular the fact that, first, it was not allowed to cooperate by means of oral testimony whereas that form of cooperation had been permitted in Chisso's case; second, the applicant was refused new meetings with the Commission's agents although such meetings had been proposed to Chisso; and, third, Chisso was unlawfully promised that it would be warned if other parties attempted to 'overtake' it in the context of cooperation.

173 In so far as those criticisms were ignored in the hearing officer's final report, the College of Members of the Commission that adopted the Decision was not correctly informed about the breach of Hoechst's rights of defence.

174 In Hoechst's submission, the hearing officer considered, wrongly – and without stating particular reasons – that whether or not the criticisms set out above were well founded was irrelevant. The applicant refers to *ABB Asea Brown Boveri* v *Commission*, paragraph 75 above (paragraph 104), and submits that it is possible that the lack of objectivity in the conduct of the procedure does not affect the lawfulness of a decision markedly and contrary to the rights of the defence, if that lack of objectivity is not the result of 'biased thinking' on the part of the Commission's agent. On the other hand, Hoechst contends that a different legal assessment must be made where, as in the present case, there are repercussions in procedural acts that unilaterally favour one party.

175 Hoechst concludes that the hearing officer ought to have verified those elements and to have set them out in her final report, in order to provide the Members of the Commission responsible for adopting the Decision with a true picture of the conduct of the proceedings.

b) Arguments of the Commission

176 The purpose of the hearing officer's final report is to supplement the draft decision submitted to the Members of the Commission.

177 The Commission refers to the first paragraph of Article 15 of Commission Decision 2001/462/EC, ECSC of 23 May 2001 on the terms of reference of hearing officers in certain competition proceedings (OJ 2001 L 162, p. 21; 'the terms of reference') and submits that in the present case the hearing officer's final report fully complied with its function. The report shows that the parties' right to be heard was not infringed from any aspect whatsoever. Referring, moreover, to the judgment of 29 April in *Tokai Carbon and Others* v *Commission*, paragraph 165 above (paragraph 53), the Commission contends that in the final report the hearing officer was not required to address the details of the complaints of a procedural order.

178 In the final report, the hearing officer even went further than was strictly necessary by referring to those complaints and stating why they were not decisive. Thus, the report states that 'procedural defects' were alleged, in particular 'discrimination by comparison with Chisso on a whole series of points linked with cooperation'. In addition, the hearing officer states that she took advantage of those criticisms to pay 'particular attention' to the findings of the Commission in that regard in the draft decision. It would have been pointless to provide further detail in the final report, particularly since the Decision itself also deals with the criticisms in question (recitals 453 and 458).

2. Findings of the Court

179 Under Article 1 of the terms of reference, the Commission is to appoint one or more hearing officers 'who shall ensure that the effective exercise of the right to be heard is respected in competition proceedings before the Commission'.

180 Article 13(1) of the terms of reference provides:

'The hearing officer shall report to the competent member of the Commission on the hearing and the conclusions he draws from it, with regard to the respect of the right to be heard. The observations in this report shall concern procedural issues, including disclosure of documents and access to the file, time-limits for replying to the statement of objections and the proper conduct of the oral hearing.'

181 According to the first paragraph of Article 15 of the terms of reference:

'The hearing officer shall, on the basis of the draft decision to be submitted to the Advisory Committee in the case in question, prepare a final report in writing on the respect of the right to be heard, as referred to in Article 13(1). This report will also consider whether the draft decision deals only with objections in respect of which the parties have been afforded the opportunity of making known their views, and, where appropriate, the objectivity of any enquiry within the meaning of Article 14.'

182 Under Article 16(1) of the terms of reference, '[t]he hearing officer's final report shall be attached to the draft decision submitted to the Commission, in order to ensure that, when it reaches a decision on an individual case, the Commission is fully apprised of all relevant information, as regards the course of the procedure and respect of the right to be heard'.

183 In the present case, it is sufficient to note that the arguments put forward by Hoechst in support of its plea, which reiterate those already invoked in the context of the first plea on the right of access to the file, do not support the view that Hoechst's right to be heard was not respected in the administrative procedure conducted by the Commission.

184 As regards the breach of the principles of sound administration and equal treatment found at paragraph 137 above, it must be emphasised that that breach did not relate to Hoechst's right to be heard within the meaning of the terms of reference.

185 The hearing officer stated, moreover, in her final report that 'the actions of the Commission services vis-à-vis the parties have had no impact on the outcome of the case on [leniency]'. That is consistent with the finding of the Court, in the context of the examination of the first plea, that the illegality found at paragraph 137 above is not of such a kind as to affect the validity of the Decision so far as concerns, in particular, the determination of the undertaking that was the first to cooperate.

186 It should further be noted that in the Decision the Commission sets out, at recital 453, the procedural objections put forward by Hoechst and that it responds to them, in particular, at recital 458. In those circumstances, it cannot be maintained, as Hoechst contends, that the College of Members of the Commission was not sufficiently informed.

187 For all of those reasons, the fourth plea must be rejected.

II – The 13th plea, seeking annulment of Article 2 of the Decision in so far as it concerns Hoechst

A – Arguments of the parties

1. Arguments of Hoechst

188 Hoechst maintains that the findings of the Commission set out at recital 298 to the Decision, namely that the cartel came to an end in November 1996 at the latest, deprive the order set out in Article 2 of the Decision of its factual basis.

189 If, seven years after the end of the cartel, the Commission still wished to make an order that the

infringement should cease, there must be sufficient indicia that the infringement is continuing. Otherwise, the measure in question would be based on mere suspicion, which would be contrary to Article 3 of Regulation No 17. Apart from the adverse effect that that would have on the reputation of the addressee of the Decision, it might cause problems linked with civil actions that third parties might bring against it.

190 Furthermore, the illegality of Article 2 of the Decision is clear, since Hoechst gave up its sorbates business in 1996, when it transferred that business in its entirety to a third company wholly unconnected with its group, Celanese AG.

191 Hoechst concludes that Article 2 of the Decision must be annulled in so far as it relates to it.

2. Arguments of the Commission

192 The Commission submits that, as in *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 153 above, Article 2 of the Decision contains an express reservation, namely 'in so far as they have not already done so'. The Court held in that case that, '[as regards the plea raised] by Hoechst ... it [was] sufficient to note that Article 2 of the decision [was] expressly addressed to undertakings "which [were] still involved in the PVC sector"' and that '[t]he argument in support of [that] claim [was] manifestly devoid of all foundation, (paragraph 1247).

193 In the present case, the Commission maintains that it was not required to establish definitively whether the infringement which had taken place at a certain time was still continuing at the time when the Decision was adopted or whether it had already come to an end. The Commission emphasises, moreover, that the parties had managed to act in the greatest secrecy for almost two decades (recital 306 to the Decision) and that Article 2 of the Decision was a preventive 'cease and desist' order (recital 307 to the Decision). The fact that Hoechst had transferred its sorbates business did not prevent the Commission from addressing an injunction in terms such that the obligation to bring the infringements to an end affected the undertaking only 'in so far as [it had] not already done so'.

B – Findings of the Court

194 By way of preliminary observation, the Court notes that it is clear from the application that, by its 13th plea, Hoechst seeks annulment of Article 2 of the operative part of the Decision in so far as it concerns the applicant.

195 On the substance, it must be held that Article 2 of the operative part of the Decision actually contains two orders.

196 First, that provision requires that the undertakings concerned immediately bring to an end the infringements referred to in Article 1 of the operative part of the Decision, in so far as they have not already done so. On that point, in so far as Hoechst was no longer involved in the sorbates sector at the time of adoption of the Decision, the argument raised against that provision is manifestly devoid of all foundation, since although Hoechst was among the undertakings named in Article 1 of the operative part of the Decision, it was not concerned by the injunction in question (see, to that effect, *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 153 above, paragraph 1247). That circumstance also renders inoperative Hoechst's arguments as to the slur on its reputation or the possibility that third parties might bring civil actions against it.

197 Second, Article 2 of the operative part of the Decision requires that the named undertakings refrain from repeating any act or conduct described in Article 1 and from adopting any measure having equivalent object or effect.

198 It must be borne in mind, in that regard, that the application of Article 3(1) of Regulation No 17 may include a prohibition on continuing certain activities, practices or situations which have been found to be unlawful, but also a prohibition on adopting similar future conduct. Such obligations on undertakings must not however exceed the limits of what is appropriate and necessary to achieve the aim pursued (see *Cement*, paragraph 153 above, paragraphs 4704 and 4705 and the case-law cited). Furthermore, the Commission's power to issue injunctions is to be applied according to the nature of the infringement found (Joined Cases 6/73 and 7/73 *Commercial Solvents* v *Commission* [1974] ECR 223, paragraph 45; Case T-228/97 *Irish Sugar* v *Commission* [1999] ECR II-2969,

paragraph 298; and Case T‑128/98 *Aéroports de Paris* v *Commission* [2000] ECR II‑3929, paragraph 82).

199 In the present case, the Commission found, at Article 1 of the operative part of the Decision, that Hoechst, with other undertakings, had infringed Article 81(1) EC and, from 1 January 1994, Article 53(1) of the EEA Agreement, by participating, during what, moreover, was a very long period, in a complex, single and continuous agreement and concerted practice in the sorbates sector, in which they had agreed to fix target prices and to allocate volume quotas, to define a reporting and monitoring system and not to supply technology to potential market entrants. Hoechst does not challenge the Decision in that regard. In those circumstances, by enjoining the undertakings concerned to refrain in future, in the sorbates market, from any measure capable of having equivalent object or effect, the Commission did not exceed the powers conferred on it by Article 3 (1) of Regulation No 17.

200 The fact that Hoechst was no longer involved in the sorbates sector on the date of adoption of the Decision, or that the Commission states at recital 298 to the Decision that the cartel had ended in November 1996 at the latest, cannot call that conclusion in question. An injunction such as that issued in the present case is by nature preventive and does not depend on the situation of the undertakings concerned at the time of adoption of the Decision.

201 For all of those reasons, the 13th plea must be rejected.

III – The pleas aimed at securing a reduction in Hoechst's fine

202 The Court considers that the pleas whereby Hoechst seeks a reduction in its fine should be examined in a different order from that followed in the application. Likewise, certain pleas have been grouped together, for the purposes of analysis, since they concern the same substantive problem.

A – The 12th plea, alleging that the procedure was excessively long

1. Summary of the administrative procedure

203 It follows from the facts set out in the Decision, and not disputed by Hoechst, that the first request for information pursuant to Article 11 of Regulation No 17 was sent by the Commission on 26 May 1999 to Daicel, Nippon Synthetic and Ueno (recital 6 to the Decision).

204 Further requests for information pursuant to Article 11 of Regulation No 17 were subsequently sent, notably between May and November 2002 (recitals 12 to 18 to the Decision).

205 On 20 December 2002 the Commission sent a statement of objections to the undertakings to which the Decision is addressed (recital 22 to the Decision).

206 On 24 April 2003 the undertakings to which the Decision was addressed took part in the hearing before the Commission (recital 29 to the Decision).

207 On 1 October 2003 the Commission adopted the Decision.

2. Arguments of the parties

a) Arguments of Hoechst

208 Hoechst criticises the Commission for having breached the principle that the procedure must take place within a reasonable time. It refers to Joined Cases C‑238/99 P, C‑244/99 P, C‑245/99 P, C‑247/99 P, C‑250/99 P to C‑252/99 P and C‑254/99 P *Limburgse Vinyl Maatschappij and Others* v *Commission* [2002] ECR I‑8375, paragraph 170, and submits that that principle forms part of the general principles of Community law and has its origin (through Article 6(2) EU) in Article 6(1) of the European Convention for the Protection of Human Rights and Fundamental Freedoms.

209 In this case, Hoechst observes that the period between the first request for information addressed to Daicel, Nippon Synthetic and Ueno on 26 May 1999 and the statement of objections, dated 20 December 2002, was more than 42 months. During that time the Commission was completely

inactive for almost 31 months, namely between the request for information of 25 October 1999 and the request for information of 14 May 2002, or, in any event, until the interview with Daicel on 21 February 2002.

210 In view of the punitive nature of the fine, it can be acceptable for the investigation and the deliberations to take such a long time only where there are exceptional circumstances. Hoechst contends, however, that such circumstances are not present in the present case.

211 Hoechst infers that the duration of the administrative procedure exceeded the limits of what is reasonable. In those circumstances, referring to Case C‑185/95 P *Baustahlgewebe* v *Commission* [1998] ECR I‑8417, paragraph 48 et seq., Hoechst submits that reasons of procedural economy require that the complaint alleging that the length of the proceedings was excessive has the effect that the Decision must be annulled in so far as it fixes the amount of the fine.

212 Hoechst further submits that the rules on limitation periods laid down in Council Regulation (EEC) No 2988/74 of 26 November 1974 concerning limitation periods in proceedings and the enforcement of sanctions under the rules of the European Economic Community relating to transport and competition (OJ 1974 L 319, p. 1) do not preclude a complaint based on the excessive duration of the proceedings. Hoechst emphasises, in that regard, that the rules on limitation periods do not protect an undertaking from excessively long proceedings, since the commencement of an investigation interrupts the limitation period (Article 2 of Regulation No 2988/74).

b) Arguments of the Commission

213 The Commission submits, first of all, that Hoechst’s plea is bound to fail merely because it refers to the amount of the fine and not to the Decision in its entirety. The Commission observes, in that regard, that only the rule on limitation periods in Regulation No 2988/74 is decisive.

214 If the fact of exceeding a reasonable period, in particular where it entails breach of the rights of defence of the parsons concerned, were a ground for annulment of a decision finding an infringement of the competition rules, that would not apply where it is the amount of the fines imposed in that decision that is disputed, since the Commission’s power to impose fines is governed by Regulation No 2988/74, which establishes a limitation period in that regard.

215 The Commission refers to Case 48/69 *ICI* v *Commission* [1972] ECR 619, paragraphs 46 to 49: Case 52/69 *Geigy* v *Commission* [1972] ECR 787, paragraphs 20 to 22; and Joined Cases C‑74/00 P and C‑75/00 P *Falck and Acciaierie di Bolzano* v *Commission* [2002] ECR I‑7869, paragraphs 139 to 141) and contends that, in the presence of Regulation No 2988/74, there is no room for consideration of the Commission’s duty to exercise its power to impose fines within a reasonable time.

216 The Commission submits, next, in a desire to be exhaustive, that even if it is proved that the reasonable time has been exceeded, that constitutes a ground for annulment of the decision only if the breach of that principle adversely affected the rights of defence of the undertakings concerned (Joined Cases T‑5/00 and T‑6/00 *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission* [2003] ECR II‑5761, paragraph 74). In this case, Hoechst has not explained in what way its defence was impeded by what it alleges to have been the Commission’s dilatory treatment of the case.

217 Furthermore, the excessive duration of that phase of the administrative procedure is not in itself capable of adversely affecting the rights of the defence, since the persons concerned are not the subject of a formal accusation of infringement of the competition rules until they receive the statement of objections, and therefore have no need to defend themselves (*Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, paragraph 216 above, paragraph 78).

218 Last, the Commission maintains that the ‘total’ duration of the proceedings did not exceed a reasonable time (Case T‑67/01 *JCB Service* v *Commission* [2004] ECR II‑49, paragraph 43).

3. Findings of the Court

219 It must be observed, first of all, that, as the Commission submits, the present plea seeks, according to the actual wording of the application, to obtain 'annulment of the Decision in so far as it fixes the amount of the fine'. This plea therefore seeks, in substance, to obtain annulment of or, at least, a reduction in the amount of the fine imposed on Hoechst.

220 While the fact that a reasonable period is exceeded may, in certain circumstances, justify annulment of a decision finding an infringement of the competition rules, that does not apply where what is being disputed is the amount of the fines imposed by that decision, since the Commission's power to impose fines is governed by Regulation No 2988/74, which establishes a limitation period for that purpose (Case T–213/00 *CMA CGM and Others* v *Commission* [2003] ECR II–913, paragraph 321).

221 The second recital in the preamble to Regulation No 2988/74 states that the limitation period was introduced to ensure legal certainty. According to that recital, 'for the matter to be covered fully, it is necessary that provision for limitation be made not only as regards the power to impose fines or penalties, but also as regards the power to enforce decisions imposing fines, penalties or periodic penalty payments; … such provisions should specify the length of limitation periods, the date on which time starts to run and the events which have the effect of interrupting or suspending the limitation period; [and] in this respect the interests of undertakings and associations of undertakings on the one hand, and the requirements imposed by administrative practice, on the other hand, should be taken into account'. Thus, with regard to the Commission's power to impose fines, Article 1(1)(b) of Regulation No 2988/74 provides that the Commission's power to impose fines is subject to a five-year limitation period in respect of breaches of the Community competition rules (*CMA CGM and Others* v *Commission*, paragraph 220 above, paragraphs 322 and 323).

222 Under Article 1(2) of that regulation, time is to begin to run upon the day on which the infringement is committed or, in the case of continuing or repeated infringements, on the day on which the infringement ceases. However, the limitation period may be interrupted or suspended, in accordance with Articles 2 and 3, respectively, of Regulation No 2988/74. Under Article 2(1) of Regulation No 2988/74, actions which interrupt the running of the period are to include, in particular, written requests for information by the Commission, the commencement of proceedings by the Commission and notification of the statement of objections. The limitation period is to be interrupted with effect from the date on which the action is notified to at least one undertaking or association of undertakings which have participated in the infringement. Under Article 2(3) of Regulation No 2988/74, each interruption is to start time running afresh; however, the limitation period is to expire at the latest on the day on which a period equal to twice the limitation period has elapsed without the Commission having imposed a fine or a penalty. The limitation period in proceedings is to be suspended for as long as the Commission's decision is the subject of proceedings pending before the Court of Justice of the European Communities.

223 It follows that Regulation No 2988/74 established a complete system of rules covering in detail the periods within which the Commission is entitled, without undermining the fundamental requirement of legal certainty, to impose fines on undertakings which are the subject of procedures under the Community competition rules. In that regard, it must be emphasised that, with respect to fines imposed under the Community competition rules, it follows from Article 2(3) of Regulation No 2988/74 that, subject to any suspension, the limitation period expires in any event after 10 years where it is interrupted pursuant to Article 2(1) of that regulation, so that the Commission cannot put off a decision about fines indefinitely without incurring the risk of the limitation period expiring (*CMA CGM and Others* v *Commission*, paragraph 220 above, paragraph 324).

224 In the light of those rules, there is no room for consideration of the Commission's duty to exercise its power to impose fines within a reasonable period (*CMA CGM and Others* v *Commission*, paragraph 220 above, paragraph 324; see also, to that effect, Case 48/69 *ICI* v *Commission*, paragraph 215 above, paragraphs 46 to 49, and *Geigy* v *Commission*, paragraph 215 above, paragraphs 20 to 22).

225 In the present case, it is common ground that the infringements in question were continuous. Furthermore, the Commission considered, without that point being disputed by Hoechst, that the infringements found had ceased no later than the end of October 1996. Accordingly, in light of the subsequent actions interrupting the limitation period, in particular the requests for information under Article 11 of Regulation No 17 and the statement of objections, and having regard to the fact that the entire period between the end of October 1996 and the adoption of the Decision on 1 October 2003 did not exceed 10 years, the proceedings were not time barred when the Commission adopted the Decision, a circumstance which Hoechst has not in any way disputed in these

proceedings (see, to that effect, *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, paragraph 216 above, paragraph 90).

226 For those reasons, Hoechst's present plea, in that it seeks 'annulment of the Decision in so far as it fixes the amount of the fine', must be rejected.

227 In any event, it must be borne in mind that the fact that a reasonable time is exceeded, even on the assumption that it is established, does not necessarily constitute a ground for annulment of the Decision. For the purposes of the application of the competition rules, the fact of exceeding a reasonable time can constitute a ground for annulment only in the case of a decision finding infringements, provided that it has been established that the breach of that principle adversely affected the rights of defence of the undertakings concerned. Other than in that specific case, failure to observe the duty to deal with the matter within a reasonable time has no effect on the validity of the administrative procedure under Regulation No 17 (*Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 152 above, paragraph 122; Case T‑62/99 *Sodima* v *Commission* [2001] ECR II‑655, paragraph 94; and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, paragraph 216 above, paragraph 74; see also, to that effect, Case C‑105/04 P *Nederlandse Federatieve Vereniging voor de Groothandel op Elktrotechnisch Gebied* v *Commission* [2006] ECR I‑8725, paragraphs 42 to 44).

228 Hoechst has not maintained that the fact that a reasonable time was exceeded in the present case adversely affected its rights of defence. Furthermore, even on the assumption that Hoechst's application may be interpreted in that sense, the arguments put forward in that regard must be regarded as general arguments and would not be of such a kind as to establish that there was an actual breach of its rights of defence, which must be examined by reference to the specific circumstances of each case (see, to that effect, Case C‑105/04 P *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, paragraph 227 above, paragraph 59).

229 For all of those reasons, the 12th plea must be rejected.

B – The 13th plea, alleging improper concealment of certain grounds of the Decision

1. Summary of the Decision

230 At recital 37 to the Decision, the Commission states:

'... Chisso's total worldwide turnover in 2002 was [Japanese yen] 117,711 million (EUR 973.4 million).'

231 At recital 42 to the Decision, the Commission states:

'... Daicel's total worldwide turnover in the fiscal year 2002 was [Japanese yen] 271,341 million (EUR 2,243.9 million).'

232 At recital 50 to the Decision, the Commission states:

'... Nippon [Synthetic]'s total worldwide turnover in the fiscal year 2002 was [Japanese yen] 38,872 million (EUR 321.5 million).'

233 At recital 55 to the Decision, the Commission states:

'... Ueno's total worldwide turnover in 2002 was [Japanese yen] 25,034 million (EUR 199.5 million).'

234 Table I of the Decision is set out as follows:

Size and relative importance in the sorbates market

Undertaking	Worldwide sorbates turnover (in EUR million) and estimated market shares for	EEA sorbates turnover (in EUR million) and estimated market shares for the year

	the year 1995	1995
Chisso	… (more than 9.5% and less than de 15%)	… (more than 4% and less than 15%)
Daicel	… (more than 9.5% and less than 15%)	… (more than 4% and less than 15%)
Hoechst	42.4 (23.6%)	21.6 (48%)
Nippon Synthetic	… (more than 9.5% and less than 15%)	… (more than 4% and less than 15%)
Ueno	… (more than 9.5% and less than 15%)	… (more than 4% and less than 15%)
Others including Cheminova and Eastman	… (less than 30%)	… (less than 16%)
Total	180 (100%)	45 (100%)

235 Last, recital 352 to the Decision is worded as follows:

'Table I shows that in 1995 Hoechst was by far the largest producer of sorbates in the worldwide market with a market share [above 20%] (in the EEA [above 45%]). It is therefore placed in the first group. Daicel, Chisso[,] Nippon [Synthetic] and Ueno all have market shares between [9.5%] and [15%] (in the EEA between [4%] and [15%]). Therefore, they are placed in the second group.'

236 The sign '…' in recitals 37, 42, 50 and 55 and in Table I of the Decision corresponds to a passage concealed by the Commission for reasons of confidentiality, according to the explanation given in the Decision.

2. Arguments of the parties

a) Arguments of Hoechst

237 Hoechst contends that in a final decision in which a fine is imposed, at the latest in the version notified to the persons concerned, there must no longer be any deleted passages containing evidence or assessments of fact or of law. Otherwise, there is a breach of the rights of the defence. Hoechst submits that the obligation to communicate the reasoning on which the Decision is based applies to the addressee of the decision. The situation is fundamentally different from any general interest which the parties to the proceedings may have in maintaining the confidentiality of the evidence vis-à-vis third parties.

238 In this case, recitals 37, 42, 50 and 55 to the Decision contain deleted passages. In particular, in Table I of the Decision the market shares for the determining year (1995) are concealed in such a way that Hoechst can reconstruct only its own market share and not the market conditions applicable to the other undertakings concerned. In so far as, at recital 352 to the Decision, the calculation of the starting amount of the fine is determined by the size of the undertakings and by the market conditions as defined in Table I of the Decision, Hoechst and the Court are unable to understand sufficiently an essential point of the Decision. Furthermore, data relating to 1995 are historical data which can no longer be confidential, even in the public version of the decision appearing in the *Official Journal of the European Union*. The fact that confidential treatment was requested and granted during the administrative procedure has no effect on the question whether the concealed passages in question are still justified in the context of the Decision adopted and notified, as the Commission appears to consider in its letter of 30 October 2003. Hoechst wonders what justification there can be for keeping such data confidential, specifically vis-à-vis Hoechst, when it transferred its sorbates business long ago and has withdrawn from the market in question.

239 Even if the Commission is under no obligation to carry out an arithmetical calculation of the amount of the fines, that does not mean that it does not have the option to do so. On the other hand, where the Commission does carry out such calculations, it is required to communicate them to the addressees of the decision.

240 Referring to the judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above (paragraphs 219 and 227 et seq.), Hoechst contends that any addressee of a decision imposing a fine is entitled to non-discriminatory treatment which complies with the principle of equal treatment in the context of a calculation of fines based on categories determined by reference to market shares. It is clear that errors in the process are of concern not only to the undertakings which, being in the second category, were ordered to pay excessive fines, but also to those in the

first category on which excessive fines were perhaps imposed. The disproportionate nature of the bases for calculation for undertakings which were placed in the first category of fines might be the direct consequence of the relatively low amount of the bases for calculation used in the second category, and vice versa.

241 Hoechst emphasises, moreover, that none of the deleted passages was replaced by summaries or by sufficiently precise figures that would have enabled the grounds of the Decision to be understood precisely.

242 Hoechst also states that, by letter of 10 October 2003 to the hearing officer and to the Commission, it challenged the fact that the passages of the Decision referred to above were wrongly deleted. The Commission responded to that request by a letter of refusal received by Hoechst on 10 November 2003. Hoechst replied by letter of 11 November 2003 and the Commission, by letter of 17 November 2003, informed Hoechst that the decision as notified was complete. Should the Commission maintain that it adopted a decision addressed solely to Hoechst, it would be appropriate to request the minutes of the meeting of the Commission of 1 October 2003 in order to ascertain the number and the form of the decisions adopted on that date in the present case. That is particularly appropriate, since the Commission has departed from its normal procedure in comparable proceedings, which affects the formal regularity of the Decision. Even in that case, however, the deletion of the recitals cited above would have been unjustified.

243 Hoechst concludes that the Decision is vitiated by a serious failure to state reasons, which also constitutes a breach of the rights of the defence in the context of the calculation of its fine, in so far as it is impossible to reconstruct the factual premisses on which the Commission relied. Hoechst emphasises in that regard that the Court, in its judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above, carried out a thorough check of the method which the Commission used in order to place the undertakings in categories and corrected numerous errors in its calculations. In doing so, the Court considered that the market share differentiations of 2% constituted sufficient ground to annul the Commission's initial decisions relating to the division into categories and the starting amount of the fines. The Commission is therefore strictly bound by the criteria for fixing the amount of fines used during the administrative procedure, the non-discriminatory application of which is subject to unlimited individual judicial review.

b) Arguments of the Commission

244 In the Commission's submission, the legitimate interests of the undertakings concerned in the protection of their business secrets must be taken into account not only during the administrative procedure and at the time of publication of the decision pursuant to Article 21(2) of Regulation No 17, but also when it is notified. Notification of the decision does not constitute a derogation.

245 The passages deleted from recitals 37, 42, 50 and 55 and in Table I of the Decision contain information relating to the undertakings involved in the proceedings; those undertakings had requested confidential treatment, which was granted by the Commission during the administrative procedure. The fact that Hoechst is an addressee of the Decision does not deprive the other addressees of their legitimate interest in the maintenance of confidentiality. The Commission emphasises that Hoechst itself, by letter of 16 December 2003, requested that the turnover and market shares relating to it be deleted from the version of the Decision intended for publication and, if necessary, that they be replaced by a sufficiently wide turnover bracket.

246 It is irrelevant that the Commission could have challenged that position when preparing for the adoption of the Decision, on the ground that the information in question no longer constituted business secrets. In the Commission's submission, the Decision, as adopted and notified to Hoechst, satisfied the requirements of Article 253 EC as regards a statement of the reasons on which it was based.

247 First of all, referring to the judgment of 15 October 2002 in *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 208 above (paragraphs 463 and 464), and to *Atlantic Container Line and Others* v *Commission*, paragraph 70 above (paragraph 1558), the Commission submits that the obligation to state the reasons on which a decision imposing a fine is based is fulfilled when the Commission indicates the factors which enabled it to determine the gravity and duration of the infringement. It is not even necessary to indicate in the decision any calculations which may have been carried out for the purpose of applying those factors.

248 In any event, even if it were necessary to provide that type of information, the Commission fully

complied with that requirement. In this case, the Commission began by making general findings on the gravity of the infringement and presenting the particular aspects of the cartel from which it was apparent that this was a very serious infringement (recital 344 to the Decision), for which the likely fine was at least EUR 20 million (recital 354 to the Decision). Next, emphasising the considerable differences between the undertakings' market positions, the Commission explained that it was necessary to adjust that amount by reference to the relative importance of the undertakings concerned on the relevant market and therefore by reference to their capacity to cause serious harm to competition (recitals 345 and 346 to the Decision). The factors which it took into account for the purpose of making that adjustment, in particular for dividing the undertakings into two groups, are set out in the Decision at recitals 349 to 353.

249 It follows, in light of the data in Table I of the Decision, that Hoechst's market share was considerably higher than that of the other parties to the proceedings. That difference led to Hoechst being placed in the first group. In that regard, it follows from recital 352 et seq. to the Decision that, on account of Hoechst's position on the market, the Commission began with that undertaking when it calculated the starting amount of the fines for each undertaking. The starting amount of the fines for the other undertakings was then determined. That amount is lower, since the undertakings were in a less strong position on the market than Hoechst. As Hoechst does not dispute that it was by far the most important undertaking on the market, the precise data relating to the other undertakings' market shares play no part in justifying the starting amount of the fine imposed on Hoechst. They can be of importance solely from the point of view of the other undertakings, since they enable them to know exactly where they stand in relation to Hoechst.

250 Furthermore, Hoechst is perfectly capable of determining for itself the difference between its position and that of the undertakings in the second group, on the basis of the presentation of Table I of the Decision. The precise market shares of the undertakings in the second group are of interest solely from the aspect of any further distinction within the second category, which the Commission decided against, as explained at recital 353 to the Decision. The Commission submits that that has no adverse effect on Hoechst.

251 As regards the reference to the judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above, the Commission contends that Hoechst seeks to infer from a possible error in treatment concerning the undertakings placed in the second category that it was itself the victim of discrimination. The Commission submits in that regard that the Court concluded in that case that one undertaking ought to be placed in a different category and confined itself to placing it in a different category, while maintaining the categories established in the Commission decision. An error consisting in placing an undertaking in one category therefore entails solely the reclassification of that undertaking in a different category and not annulment of the classification of all the undertakings.

252 The Commission therefore maintains that any discrimination within the second category cannot constitute discrimination against Hoechst as an undertaking in the first category.

3. Findings of the Court

253 The Court considers, first of all, in the light of the terms used by Hoechst in its pleadings, that the present plea seeks, in substance, to establish a failure to state reasons as regards recitals 37, 42, 50 and 55 and Table I of the Decision. Thus, Hoechst states that the fact that certain passages in the Decision were deleted constitutes a breach of the Commission's duty to provide its decisions with comprehensible reasoning. That, it contends, makes it impossible for Hoechst and the Court to understand sufficiently an essential point of the Decision. That failure to state reasons must be analysed, in Hoechst's submission, by reference to recital 352 to the Decision, which deals with the classification of the undertakings concerned in different categories for the purposes of determining the starting amount of the fine. Consequently, Hoechst maintains that the failure to state reasons referred to above led to a breach of the rights of the defence.

254 It must be emphasised, moreover, that in so far as the failure to state reasons alleged by Hoechst concerns factors which enabled the Commission to determine the gravity of the infringement, the present plea seeks, in substance, to obtain a reduction in the amount of the fine.

255 First of all, it should be observed that Article 21 of Regulation No 17, which provides that certain decisions are to be published, places the Commission under an obligation to take account of the undertakings' legitimate interest in their business secrets not being published.

256 Next, it must be borne in mind that the statement of reasons for an individual decision must disclose, clearly and unequivocally, the reasoning of the institution which adopted the measure, in such a way as to allow those concerned to know the grounds of the measure adopted and the competent court to exercise its power of review. The requirement to state reasons must be assessed by reference to the circumstances of the case. The reasoning is not required to go into all the relevant facts and points of law, since the question whether it meets the requirements of Article 253 EC must be assessed by reference not only to the wording of the act in question but also to the context in which the act was adopted (Case C‑367/95 P *Commission* v *Sytraval and Brink's France* [1998] ECR I‑1719, paragraph 63).

257 The essential procedural requirement to state reasons is satisfied where the Commission indicates in its decision the factors which enabled it to determine the gravity and duration of the infringement (Case C‑291/98 P *Sarrió* v *Commission* [2000] ECR I‑9991, paragraph 73, and judgment of 15 October 2002 in *Limburgse Vinyl Maatschappij and Others* v Commission, paragraph 208 above, paragraph 463).

258 In the present case, without there being any need to determine whether or not the deleted passages contained business secrets, it must be observed that recitals 37, 42, 50 and 55 and Table I of the Decision, read in the light of recital 352, satisfy the Commission's obligation to state reasons.

259 First, recital 352 to the Decision contains factors which enabled the Commission to place the undertakings concerned in two categories, in the context of the determination of the starting amount of the fines, on the basis of the gravity of the infringement.

260 At recital 352 to the Decision, the Commission thus states that Hoechst was by far the largest producer of sorbates in the worldwide market. The Commission also mentions Hoechst's place on the sorbates market in the EEA. Consequently, the Commission concluded that Hoechst must be placed in the first group of undertakings.

261 In order to arrive at that conclusion, the Commission took as its basis the worldwide market shares for 1995 set out in Table I of the Decision, which were obtained on the basis of the worldwide turnover for the relevant product (recital 351 to the Decision).

262 It is the deleted passages in Table I that are disputed by Hoechst.

263 However, Table I of the Decision contains a sufficiently comprehensible record of the factors to serve as a basis for the conclusion which the Commission drew at recital 352 to the Decision.

264 It will be recalled that the conclusion reached at recital 352 to the Decision is based, as stated above, on the 1995 worldwide market shares for the relevant product.

265 In that regard, Table I of the Decision contains brackets of market shares, for 1995, which enabled the Commission to distinguish two types of undertakings: first, the Japanese undertakings, whose market shares were between 9.5 and 15% in 1995, and, second, Hoechst, whose market share was over 20%. Those factors, read in the light of the conclusion which the Commission reached at recital 352 to the Decision, are sufficiently comprehensible.

266 Furthermore, even if the turnover of the undertakings concerned were deleted in Table I of the Decision, it is possible to determine their extent by reference to the brackets of turnover in that table. Table I of the Decision contains a row entitled 'Total', which shows the total turnover and total market shares of the undertakings concerned. On that basis, a bracket of the turnover of each of the undertakings concerned can be calculated.

267 For those reasons, without prejudice to whether the Commission made an error in that regard, which will be examined in the context of the fifth plea, it must be held that Table I of and recital 352 to the Decision contain the factors which enabled the Commission to determine the gravity of the infringement.

268 As regards recitals 37, 42, 50 and 55 to the Decision, it must be observed that those recitals are not referred to by recital 352 to the Decision, the only recital invoked by Hoechst which dealt with the gravity of the infringement and the classification of the undertakings concerned into groups.

269 Furthermore, Hoechst has not stated how those recitals contain elements of assessment that were used by the Commission for the purpose of assessing the gravity, or indeed the duration of the infringement. Hoechst merely indicates that recitals 37, 42, 50 and 55 to the Decision contain deleted passages.

270 In those circumstances, there is no reason to think that the information deleted from recitals 37, 42, 50 and 55 to the Decision ought to lead to the conclusion that the Commission failed, in this case, to fulfil its obligation to state reasons within the meaning of the case-law cited above.

271 In any event, the deleted passages in recitals 37, 42, 50 and 55 to the Decision cover, in part, the same data as those set out in Table I of the Decision. In effect, recitals 37, 42, 50 and 55 to the Decision contain data relating to Chisso, Daicel, Nippon Synthetic and Ueno respectively and correspond to recital 46 to the Decision so far as Hoechst is concerned. According to the version of the Decision notified to Hoechst, which forms the subject-matter of the present action, recital 46 to the Decision contains, in particular, as regards Hoechst, data relating to its worldwide and EEA turnover for 1995 on the sorbates market, which correspond to the data in Table I of the Decision. Accordingly, for the reasons set out at paragraphs 263 to 267 above, no failure to state reasons can be found in that regard.

272 Furthermore, it must be observed that the reasons stated for placing Hoechst in the first group are not vitiated by any defect, since Hoechst does not deny that it had a larger worldwide market share in 1995 than that of the other undertakings concerned. Accordingly, any error in the classification of the other undertakings in the second group is inoperative.

273 In the light of those factors, Hoechst's assertion of a lack of reasoning in the Decision must be rejected. It also follows that the breach of the rights of the defence which is alleged to result from that supposed failure to state reasons cannot be upheld.

274 As regards, last, Hoechst's assertion that the Commission served on the undertakings concerned a decision which differed as to form, it is sufficient to observe that those differences in form are linked to the protection of the business secrets of the undertakings concerned. However, the fact that certain information in the Decision was deleted, for reasons of confidentiality, at the time of final notification to the undertakings concerned does not support the conclusion that its adoption is affected by any irregularity in that regard. In any event, Hoechst submits no precise details from which it might be concluded that the Decision, as notified to the undertakings concerned, contained, in particular, differences in reasoning. In those circumstances, there is no need to grant Hoechst's request for production of the minutes of the meeting of the College of Members of the Commission of 1 October 2003.

275 For all of those reasons, the third plea must be rejected.

C – Fifth plea, alleging an error of law in the determination of the basic amount of the fine

1. Summary of the Decision

276 At recital 321 to the Decision, the Commission states that the basic amount of the fine is determined according to the gravity and duration of the infringement.

277 First, in order to determine the gravity of the infringement, the Commission relies on the nature of the infringement (recitals 323 to 326 to the Decision), the actual impact of the infringement on the sorbates market in the EEA (recitals 327 to 342 to the Decision) and the size of the relevant geographic market (recital 343 to the Decision).

278 As regards the nature of the infringement, the Commission observes that the infringement in question consisted mainly of price-fixing and market-sharing practices. The Commission further stated that the collusive agreements were mostly conceived, directed and encouraged at a very high level of the undertakings concerned and operated entirely for the benefit of the participating producers and to the detriment of their customers and ultimately the general public (recital 323 to the Decision).

279 As regards the actual impact of the infringement on the sorbates market, the Commission indicates in particular that there is no need to take into account the actual effects of an agreement when it appears to have as its object the prevention, restriction or distortion of competition within the

common market. The Commission states, however, that in this case the infringement had an actual impact on the sorbates market in the EEA (recital 327 to the Decision).

280 The Commission concludes that, in this case, the infringement may be classified as very serious (recital 344 to the Decision).

281 Next, the Commission distinguishes between the undertakings according to their position on the sorbates market in 1995 (recitals 345 to 355 to the Decision). The Commission states that in 1995 Hoechst was by far the largest producer of sorbates in the worldwide market, with a market share of above 20% (above 45% in the EEA). For that reason, Hoechst was placed in the first group. Daicel, Chisso, Nippon Synthetic and Ueno all held market shares of between 9.5 and 15% (between 4 and 15% in the EEA). They were placed in the second group (recital 352 to the Decision).

282 At recital 354 to the Decision, the Commission states that the likely fine for very serious infringements is above EUR 20 million.

283 In those circumstances, at recital 355 to the Decision, the Commission fixes the starting amount of the fine at EUR 20 million for the undertakings in the first group (Hoechst) and EUR 6.66 million for the undertakings in the second group (Daicel, Chisso, Nippon Synthetic and Ueno).

284 Last, in order to ensure that the fine has a sufficient deterrent effect on large undertakings and to take account of the fact that large undertakings have legal and economic knowledge and infrastructures which enable them more easily to recognise that their conduct constitutes an infringement and to be aware of the consequences stemming from that conduct under competition law, the Commission makes a further adjustment to the starting amount of Hoechst's fine. At recital 357 to the Decision, the Commission observes, in that regard, that the starting amount of the fine, calculated on the basis of the criterion of relative importance in the market concerned, should be increased to take account of the 'size and overall importance' of the undertaking. In those circumstances, the starting amount of Hoechst's fine is increased by 100% to EUR 40 million.

285 Second, as regards the duration of the infringement, the Commission observes that Chisso, Daicel, Hoechst and Ueno infringed Article 81(1) EC and Article 53(1) of the EEA Agreement between 31 December 1978 and 31 October 1996. Those undertakings therefore committed a long-term infringement of 17 years and 10 months. The Commission concludes that the starting amount must be increased by 175% (recital 361 to the Decision).

286 Taking into account the gravity and duration of the infringement, the Commission set the basic amount of Hoechst's fine at EUR 110 million (recital 361 to the Decision).

2. Arguments of the parties

a) Arguments of Hoechst

287 In its fifth plea, Hoechst disputes the nature and the duration of the infringement on which the Commission based its determination of the amount of the fine in this case.

288 Hoechst submits, first of all, that the amount of the fine calculated before its cooperation was taken into account, namely EUR 198 million, corresponds to almost five times the total volume of the market for sorbates in the EEA for 1995 as stated in Table I of the Decision, namely EUR 44.6 million. Such a fine is wholly disproportionate.

289 Hoechst further submits that the Commission has a discretion under Regulation No 17 when fixing the amount of the fine, but the exercise of that discretion is not entirely free owing to the general principles of Community law and also to the Guidelines with which the Commission is required to comply when calculating the fine (Hoechst refers in particular to Case T-230/00 *Daesang and Seewon Europe* v *Commission* [2003] ECR II-2733, paragraph 38).

The nature of the infringement

290 Referring first of all in particular to Section 1 A of the Guidelines and to *Daesang and Sewon Europe* v *Commission*, paragraph 289 above (paragraph 38), Hoechst submits that the basic amount of the fine is fixed according to the gravity and duration of the infringement. The gravity of the

infringement is determined according to a number of criteria set out in the Guidelines. Those criteria include the nature of the infringement, its actual impact on the market and the size of the geographical market, and also the actual economic capacity of the undertaking to cause significant damage to its competitors and to consumers.

291 On the substance, Hoechst takes issue in four respects with the finding in the Decision that the infringement was very serious. First, Hoechst contends that the assessment of the gravity of the infringement wrongly attributes damaging effects to it. Second, it submits that none of its directors at a very high level participated in the infringement. Third, Hoechst maintains that the Commission made an error of law in dividing the undertakings into different categories. Fourth, it criticises the multiplier for deterrence used by the Commission.

– The effects of the infringement

292 Hoechst submits that the Commission presumes that the cartel caused harm to consumers. That presumption is an essential ground that led to the imposition of a heavy penalty on the undertakings concerned. Hoechst refers, in that regard, to recitals 333 to 336 and 341 and 341 to the decision and also to a Commission press release dated 1 October 2003.

293 In particular, Hoechst maintains that what are alleged to be the harmful effects of the cartel in question were stated to be one of the three factors (nature of the infringement, its impact and the fact that the cartel covered the whole of the EEA) that served to determine the gravity of the infringement (recital 344 to the Decision). Since no weighting of those factors is to be found in the Decision, Hoechst concludes that one third of the total amount of the fine was fixed on the basis of what are alleged to be the harmful effects of the cartel. In fact the Commission has not succeeded in adducing evidence of a negative impact of the infringement in this case.

294 Thus, recitals 105, 109, 333 to 337 and 342 to the Decision contain no evidence that the infringement had a negative impact.

295 As regards recital 105 to the Decision, Hoechst maintains that the fact that for long periods the target prices were not reached should rather be regarded as indicating or as providing evidence that the price agreements did not work. That is apparent, in particular, from recitals 163 to 188 to the Decision. Hoechst refers, moreover, to the information set out at recitals 210, 217, 224 and 228 to the Decision and emphasises that for five consecutive years no increase in the target prices was obtained.

296 As regards recital 109 to the Decision, it is based solely on an estimate on the part of Chisso.

297 As regards recitals 333 and 334 to the Decision, Hoechst emphasises that the Commission recognises that the effects of the cartel on the relevant market in this case cannot be measured precisely. However, the Commission also finds that the agreement in issue undoubtedly had an actual impact on the sorbates market in the EEA. The explanations provided by the Commission in that regard are far from being probative. In particular, Hoechst is unable to see how a concerted reduction in prices, to which the Commission refers, might have harmful effects for competition, and still less how it might serve to prove that harm was caused to third parties. Hoechst emphasises, moreover, that an actual impact can be found only where, first, it was established that the target prices were higher than the hypothetical market prices and, second, those prices had been achieved, at least in part. Those factors are not present in this case.

298 As regards recital 335 to the Decision, Hoechst contends that the fact that the sales volumes found in the table in recital 112 to the Decision (Table II) coincide with the agreed quotas might indicate that the agreements had operated properly if there had not been any ‘grey quantities’, that is to say, quantities sold and not declared to the members of the cartel. In this case, such sales of ‘grey quantities’ were made, in particular by Hoechst. Furthermore, Hoechst maintains that the Commission ought to have proved, in addition, that agreements on volumes had led to an artificial scarcity of supply and thus to abusive prices being charged to buyers.

299 As regards recital 336 to the Decision, it is incorrect to presume that sorbates producers were able to control not only the sorbates market but also to a large extent the preservatives market. Hoechst asserts in that regard that there is no single market for preservatives.

300 As regards, last, recitals 337 and 342 to the Decision, it is contradictory to claim, on the one hand,

that the agreements in question were implemented throughout the infringement period and, on the other, that the existence of external factors, which may themselves also have influenced the evolution of prices for the product, means that it is difficult to reach conclusions as to the relative importance of all possible causes. The conclusion set out at recital 341 to the Decision, that the conscious implementation of the cartel agreements had an actual impact on the sorbates market in the EEA is, in those circumstances, incorrect.

– The participation of high-level directors in the anti-competitive agreements

301 The Commission contends that the anti-competitive agreements were conceived, directed and encouraged by the directors of the undertakings concerned at a very high level (recital 323 to the Decision).

302 Hoechst maintains that that assertion is contrary to the obligation to state reasons imposed on the Commission under Article 253 EC. In particular, the Commission ought to have established what factors were at the basis of its conclusion (Case T‑15/99 *Brugg Rohrsysteme* v *Commission* [2002] ECR II‑1613, paragraph 210).

303 It is not true, moreover, that the persons who participated in the cartel were directors at a very high level, at least so far as Hoechst is concerned. Referring to the grounds of the judgment in *ABB Asea Brown Boveri* v *Commission*, paragraph 75 above (paragraphs 33 to 38), Hoechst emphasises that its two most senior employees, referred to at recital 96 to the Decision, were sales directors of one of Hoechst's 8 to 12 business areas. They both reported to a sector director and to a sales director of the business sector concerned, and both were at below-director level. The other employees named in the decision were junior management or had no management role.

304 Last, even if employees of other undertakings concerned were to be considered to be directors at a very high level, that could not lead to an increase in the basic amount of Hoechst's fine. In effect, the gravity of Hoechst's infringement cannot depend on the position of the employees of the other undertakings that took part in the infringement.

– The division of the undertakings into categories

305 Hoechst claims that the distinction between the starting amounts, EUR 20 million for Hoechst and EUR 6.66 million for all the other undertakings concerned, is unacceptable in the light of the nature of the infringement, which is the same for all the undertakings.

306 Furthermore, referring to *CMA CGM and Others* v *Commission*, paragraph 220 above (paragraph 405 et seq.), Hoechst asserts that the division of the undertakings into categories, in the context of the calculation of the starting amount, should first and foremost observe the principle of equal treatment.

307 In this case, the Commission differentiated the undertakings' starting amounts according to their supposed capacity to harm competition and according to the damage alleged to have been caused to competition (recital 349 to the Decision). It chose as a yardstick the market share of each undertaking on the worldwide sorbates market (recital 350 to the Decision).

308 In that regard, first, Hoechst observes that the four Japanese producers each held market shares of up to 15%, which, taken together, might constitute a worldwide market share equivalent to more than twice Hoechst's share. In the light of the solidity of the Japanese producers' export cartel and their always perfectly concerted conduct at cartel meetings, Hoechst was of secondary importance in the evolution of the worldwide market. Thus, on the basis of the bracket of the Japanese producers' market shares, Hoechst contends that the basic amount for those producers ought to have been between 1.61 and 2.54 times higher than for Hoechst. That would have corresponded, assuming an appropriate fine for the Japanese producers (including Chisso), to a basic amount of between EUR 10.4 million and EUR 16.65 million and therefore – all other things remaining unaltered – to a reduction of between EUR 16.58 million and EUR 47.52 million in Hoechst's fine.

309 Second, in any event, and even if each Japanese producer's market share were to be considered separately, the calculation of the fine per 1% market share would correspond to a starting amount of between EUR 0.44 million and EUR 0.7 million. Hoechst submits that it was at a disadvantage, since, if the Commission had applied the same criteria to it, its starting amount ought to have been between EUR 10.38 million and EUR 16.52 million. All other things remaining equal, its fine was

between EUR 17.3 million and EUR 47.62 million higher than it ought to have been.

310 Third, a comparison with other recent decisions shows that the Commission departed in this case from its principles relating to the fixing of fines by categories. Hoechst refers in that regard to Commission Decision 2006/460/EC of 17 December 2002 relating to a proceeding pursuant to Article 81 of the EC Treaty and Article 53 of the EEA Agreement against SGL Carbon AG, Le Carbone-Lorraine SA, Ibiden Co., Ltd, Tokai Carbon Co., Ltd, Toyo Tanso Co., Ltd, GrafTech International, Ltd, NSCC Techno Carbon Co., Ltd, Nippon Steel Chemical Co., Ltd, Intech EDM BV and Intech EDM AG (Case COMP/E-2/37.667 – Specialty graphites), which forms the subject-matter of the judgment of 15 June 2005 in Case T–71/03 *Tokai Carbon and Others* v *Commission*, paragraph 118 above. In that decision, the Commission, inter alia, fixed fines with a starting amount of EUR 20 million for an undertaking with a market share of between 30 and 40% and at EUR 14 million for an undertaking with a market share of between 21 and 27%. Furthermore, in the same decision, because they had participated in a different cartel relating to extruded specialty graphite, the two undertakings concerned, whose market shares were between 25 and 30%, were given fines with a starting amount of EUR 15 million. By way of proof, Hoechst offers the non-confidential version of that decision (after publication) and also the testimony of a Commission official. In the light of those principles, Hoechst contends that its basic amount in the present case ought to have been much lower (EUR 24.75 million or EUR 29.7 million, depending on whether the starting amount was EUR 14 million or EUR 15 million, all other things being equal).

– The increase to take account of Hoechst's size and worldwide resources

311 The Commission again subjected Hoechst to unequal treatment when it multiplied its starting amount of EUR 20 million by a group factor of 2. Other undertakings concerned by the Decision were and still are large undertakings operating at international level. Furthermore, the significant reduction in Hoechst's size which has taken place in the meantime and which reduced its group turnover to approximately EUR 9 billion for the reference year 2002, together with the fact that it is restricted to holding activities and has sold its sorbates business to third parties, renders void the justification for a steep increase in its fine. In any event, a factor of 2 should not have been used as a multiplier.

The duration of the infringement

312 Hoechst contends that the increase of 175% decided upon by the Commission to reflect the duration of the infringement is exorbitant and disproportionate.

313 First, increases for the duration of the infringement which exceed 100% are fundamentally contrary to the method for calculating fines established by the Commission in the Guidelines. Hoechst notes that the factors associated with the gravity of the infringement enable a basic amount to be fixed, which, in the second stage, is adjusted according to the duration of the infringement. Under the latter aspect, Section 1 B of the Guidelines provides only for a 'heavy increase' in the basic amount, and not for the fixing of an entirely new amount of a size completely different from that of the basic amount.

314 Second, the increase for the duration of the infringement takes account, for a second time, of the gravity of the infringement. Hoechst contends, in that regard, that cartels on prices and volumes are typically infringements of long duration. Consequently, if the Commission places those cartels in the highest category of 'very serious infringements' it cannot take the serious nature of the infringement into account for a second time when assessing the duration of the infringement.

315 Third, Hoechst fundamentally challenges the fact that a directly proportionate increase, at a flat rate of 10% per annum, can be applied over a long period for the purpose of penalising a cartel. Hoechst emphasises in that regard that in the context of long-term infringements regarded as a single infringement, all sanctions systems provide for *facteurs de majoration* of the penalty at a rate which reduces exponentially as the duration increases. That approach, moreover, observes the principle of proportionality. If it is fair that offences committed in the distant past become time-barred at a given time, then the sanction imposed cannot ignore the same principle. Hoechst further submits that even if the 'principle of the link of continuity' enshrined in Article 1(2) of Regulation No 2988/74 were still applied in Community law, it could not lead to endless increases in the fines imposed.

316 Last, the increase is disproportionate by comparison with the Commission's previous practice.

317 Hoechst refers first of all to Commission Decision 98/273/EC of 28 January 1998 relating to a proceeding pursuant to Article 85 of the EC Treaty (IV/35.733 – VW) (OJ 1998 L 124, p. 60), where the Commission decided that an increase of 10% for each year of the infringement is appropriate only if the gravity of the infringement remains the same throughout the infringement period. In this case, nothing to prove or demonstrate such a fact has been put forward, which is contrary to the Commission's obligation to state reasons.

318 Hoechst refers, next, to a number of decisions in which the Commission increased the basic amount from the second year only, since the Guidelines make provision for an increase only for infringement periods in excess of what is regarded as an 'average' duration. In particular, Hoechst refers to the increase applied in Commission Decision 1999/60/EC of 21 October 1998 relating to a proceeding under Article 85 of the EC Treaty (IV/35.691/E.4 – Pre-insulated pipes) (OJ 1999 L 24, p. 1), and refers also to the judgment in Case T-220/00 *Cheil Jedang Corporation* v *Commission* [2003] ECR II-2473, paragraph 137). Hoechst concludes that only an increase of 165% was foreseeable in this case.

b) Arguments of the Commission

319 As a preliminary observation, and in response to the arguments developed by Hoechst by way of introduction to its fifth plea, the Commission submits that the comparison between the fine and the overall turnover of sorbates on the EEA market in 1995 is not valid. The turnover achieved on the market in one year does not reveal the negative impact which a cartel that has lasted more than 17 years may have had. Furthermore, the amount of the fine before Hoechst's cooperation is taken into account may be explained in this case by a whole range of factors. In addition, EUR 20 million corresponds to the minimum starting amount envisaged in the Guidelines for very serious infringements. That sum is also consistent with the Commission's practice in taking decisions. Last, the Commission emphasises that the specific starting amount is merely an intermediate amount which, when the method defined by the Guidelines is applied, is then adapted to reflect the duration of the infringement and any aggravating or attenuating circumstances (*Cheil Jedang Corporation* v *Commission*, paragraph 318 above, paragraph 95).

The effects of the infringement

320 The Commission contends that it was entitled to assume that the prices charged by the cartel were in principle at least higher than market prices, in any event so far as Hoechst was concerned. The Commission emphasises in that regard that Hoechst had the opportunity to comment on the conclusions set out at recitals 105, 109 and 288 to the Decision, which correspond to paragraphs 78, 82 and 265 of the statement of objections. In the statement of objections, the Commission also indicated that it would take account of the 'impact on the market', in accordance with the Guidelines (paragraphs 291 and 295). In its response to the statement of objections, Hoechst merely stated, concerning that impact, that it was of no relevance to the establishment of the existence of the infringement. Hoechst thus expressly stated in its response that it did not substantially contest the facts of the sorbates cartel, as described in the Commission's statement of objections (recitals 29 and 451 to the Decision).

321 The Commission emphasises, next, that in this case the undertakings concerned had discussed target prices that customers would accept to pay (recital 102 to the Decision). Those prices do not correspond to a free determination by each member of the cartel. Nor does Hoechst seriously deny that the monitoring mechanisms actually allowed the target prices to be reached generally or at least that the parties actively endeavoured to achieve them (recitals 331 and 334 to the Decision). In the Commission's submission, the target prices had to be used systematically as a basis for negotiation (recital 104 to the Decision). Sometimes the participants expressly stated that the target prices had been achieved (recital 205 to the Decision).

322 However, the Commission left open the question of the differential between the prices imposed by the cartel and those that might have been achieved in a situation of normal competition (recitals 333 and 340 to 342 to the Decision). The Decision does not state that prices had increased continuously, but only that the target prices had been fixed in such a way as to enable prices higher than market prices to be achieved. In the Commission's submission, that could include price reductions, the effect of which, however, was only to attenuate the impact of the reduction of market prices for members of the cartel (recital 224 to the Decision).

323 As regards the cartel's consequences for sales volumes, Hoechst does not specifically challenge the figures in Table II in the Decision. Hoechst's assertion (contrary to recital 419 to the Decision) that

there were higher sales of 'grey quantities' by other producers than by Ueno, notably by Hoechst, is wholly inaccurate. Furthermore, the problem of grey quantities became apparent only at the end of 1992, and therefore towards the end of the cartel (recitals 112 and 193 to the Decision). The Commission also observes that in this case supply was adjusted to demand, and refers to recitals 108 and 109 to the Decision.

324 As regards Hoechst's comments on the markets in question, the Commission states that it merely observed, at recital 336 to the Decision, that sorbates were the most-used preservatives and that no other preservative constituted a perfect substitute. It was therefore permissible to conclude that sorbates manufacturers were in a position to control the preservatives sector 'to a great extent'. The Commission further submits that it did not definitively establish whether there was a separate market for sorbates. Even if that were so, the Commission's finding would remain valid.

325 Last, as regards the significance of the harmful consequences of the infringement for the determination of the amount of the fine, Hoechst's argument that those consequences account for exactly one third is wholly unfounded. The Commission's press release to which Hoechst refers contains merely an abridged presentation of the Decision and must not be taken to mean that the impacts in question played a decisive role in the calculation of the fines. That aspect is not even mentioned in the part of the press release entitled 'Calculation of the fines'. Furthermore, factors relating to the object of conduct may be more significant than those relating to its effects, particularly where they relate to infringements which are intrinsically serious, such as price-fixing and market-sharing (Case T–141/94 *Thyssen Stahl* v *Commission* [1999] ECR II–347, paragraph 636).

The participation in the anti-competitive agreements of directors at a very high level

326 As regards the grounds of the Decision, the Commission contends that Hoechst obviously understood what is covered by the expression 'at a very high level' and that, moreover, the statement of objections makes clear that the agreements had been conceived, directed and encouraged at a very high level in the undertakings concerned. Hoechst did not dispute those findings and there was no need to develop that point in greater detail.

327 On the substance, *ABB Asea Brown Boveri* v *Commission*, paragraph 75 above, does not provide a definition of the concept of 'a very high level', applicable to all situations and excluding anyone carrying out lower-level duties than those at issue in that judgment. At recital 323 to the Decision, the Commission seeks to demonstrate that the cartel was not organised by junior staff but by persons at a level capable of conferring authority and stability on the cartel. The sales managers of the Hoechst division concerned satisfy those conditions.

The division of the undertakings into categories

328 Hoechst ignores the fact that the Guidelines are based on the specific weight of each undertaking (Section 1 A, fourth, sixth and seventh paragraphs). The fact that the Japanese manufacturers held regular meetings before the joint meetings and normally also met after those meetings does not necessarily mean that they constitute one and the same undertaking.

329 Furthermore, the Commission observes that, in dividing the undertakings into categories, it began with Hoechst, on which it imposed the minimum fine recommended for very serious infringements. Hoechst's argument that the starting amount of the fine for the undertakings in the second category, which is one third of its own starting amount, is too low, cannot be accepted, since no one can rely to his own advantage on an unlawful act committed in favour of another (Case T–16/99 *Lögstör Rör* v *Commission* [2002] ECR II–1633, paragraph 350). In addition, when fixing the amount of each fine, the Commission has a discretion and cannot be required to apply a precise mathematical formula for that purpose (*CMA CGM and Others* v *Commission*, paragraph 220 above, paragraphs 252 and 383). It is therefore immaterial that the starting amount of the fine for the undertakings in the second category was not adapted in precise proportion to the market shares of the undertakings concerned.

330 As regards the practice in taking decisions on which Hoechst relies, the Commission contends that that practice does not in itself serve as a legal framework for fines in competition matters, which is defined solely in Regulation No 17, and that the factors for comparison can be no more than indicative when the circumstances of competition cases, such as markets, products, countries, undertakings and periods concerned are not the same. The Commission refers, on those points, to

JCB Service v *Commission*, paragraph 218 above (paragraphs 187 and 188). The comparison drawn by Hoechst is therefore irrelevant.

The increase to take account of Hoechst's size and global resources

331 The Commission contends that fixing a factor for deterrence is consistent with the case-law and with its practice in taking decisions. The Commission refers, in particular, to *ABB Asea Brown Boveri* v *Commission*, paragraph 75 above (paragraph 162 et seq.).

332 That factor takes account of the size and resources of the undertaking concerned, which go hand in hand with its importance. In 2002 Hoechst was at least four times as large as Daicel, the next-largest undertaking in terms of turnover. On the other hand, the nature of Hoechst's activity at the time of the adoption of the Decision is irrelevant. The fact that Hoechst transferred its sorbates business to a third party was already taken into consideration when the relevant comparison of the size of the undertakings concerned was made.

The duration of the infringement

333 As regards Hoechst's arguments relating to the method laid down in the Guidelines, the Commission submits that an increase of 10% per annum is provided for at Section 1 B of the Guidelines, with the object of really penalising the restrictions which produced harmful effects on a lasting basis. The Court of Justice has again had occasion recently to emphasise that it is consistent with the general interest to avoid anti-competitive practices, to discover them and to impose sanctions (*Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 54).

334 The Commission emphasises, moreover, that the increase envisaged for the duration of the infringement is not subject to an absolute maximum (as the 100% suggested by Hoechst) and refers, on that point, to its practice in taking decisions in a number of cases.

335 Furthermore, the criteria of gravity and duration of the infringement exist autonomously alongside each other. Together, they enable the basic amount to be determined. To define the increase for the duration of the infringement by reference to the criterion of gravity would be contrary to the autonomy of the two criteria and therefore inappropriate.

336 Furthermore, contrary to Hoechst's opinion, the category of very serious infringements is not reserved for long-term horizontal infringements. It is therefore appropriate to take the actual duration of the infringement fully into account.

337 Nor are the considerations on limitation relevant. In the case of lasting or continuous infringements time begins to run only on the date on which the infringement comes to an end.

338 As regards the argument that in any event only an increase of 165% was foreseeable, on the ground that the first year of the infringement does not count, the Commission replies that the increase of 10% per annum is perfectly consistent with the principles laid down in the Guidelines. The only provision in that regard is that, for infringements of short duration, in general less than one year, no increase is applied (*Cheil Jedang Corporation* v *Commission*, paragraph 318 above, paragraph 133). A comparison of the wording of the second and third indents of Section 1 B of the Guidelines shows that, where an infringement lasts more than one year, the increase is supposed to be applied 'per year' of the infringement, thus including the first year.

339 As regards, last, the decision-taking practice to which Hoechst refers, whereby an increase of less than 10% per year was imposed, the Commission observes that *Cheil Jedang Corporation* v *Commission*, paragraph 318 above, had the particular characteristic that the increase for duration came to 10% for some undertakings and less than 10% for others, so that the decision was not consistent (paragraph 139 of the judgment). The Commission adds that the fact that it may in the past have applied a certain rate of increase to the fine, by reference to the duration of the infringement, cannot deprive it of the option of raising that rate within the limits indicated by Regulation No 17 and the Guidelines, if that is necessary to ensure the implementation of Community competition policy (Case T–203/01 *Michelin* v *Commission* [2003] ECR II–4071, paragraph 277).

340 Furthermore, in the last decisions to which Hoechst refers, the Commission undoubtedly increased the fine by 10% per year for the duration of the infringement. It is necessary, on that point, to

reject Hoechst's assertion that the increase of 10% per year is in any event inadequate since the intensity of the infringement varied. The passage in the Decision which Hoechst cites in order to demonstrate that change in the intensity of the infringement does not permit the slightest conclusion to that effect. In addition, the increase in the fine by 10% per year of the infringement is justified even if the intensity of the infringement may have varied during the period concerned, once the very serious infringement was pursued (*Michelin* v *Commission*, paragraph 339 above, paragraph 278).

3. Findings of the Court

341 As a preliminary point, it should be noted that Hoechst's fifth plea is supported by two parts. The first part is entitled 'Nature of the infringement' and the second 'Duration of the infringement'. However, the first part is aimed, in fact, at the constituent elements of the 'gravity' of the infringement, which incorporates the nature of the infringement. Hoechst must therefore be taken to challenge, in the first part, the elements identified by the Commission as to the gravity of the infringement.

342 Next, it is appropriate to reject Hoechst's general argument that the amount of its fine, calculated before the application of the 1996 Leniency Notice, is disproportionate in so far as it amounts to almost five times the overall volume of the EEA market, for 1995, set out in Table I of the Decision. It must be borne in mind, in that regard, that when determining the amount of each fine, the Commission has a discretion (Case C‑283/98 P *Mo och Domsjö* v *Commission* [2000] ECR I‑9855, paragraph 47, and Case T‑303/02 *Westfalen Gassen Nederland* v *Commission* [2006] ECR II‑4567, paragraph 151). Furthermore, under Article 15(2) of Regulation No 17, the amount of the fine is to be determined on the basis of the gravity of the infringement and its duration. In addition, that amount is the result of a series of arithmetical calculations performed by the Commission in accordance with the Guidelines. That amount is set, inter alia, on the basis of various factors linked to the individual conduct of the undertaking in question, such as the existence of aggravating or attenuating circumstances (Case T‑304/02 *Hoek Loos* v *Commission* [2006] ECR II‑1887, paragraphs 82 and 85). It cannot be inferred from that legal framework that the Commission must ensure a proportion between the amount of the fine, as thus calculated, and the overall volume of the relevant product market in the EEA, for a given year of the infringement (in this case 1995), when the infringement in question lasted more than 17 years and when the amount of the fine also depends on other factors linked to the individual conduct of the undertaking. It follows that Hoechst's general argument in that regard must be rejected.

a) The gravity of the infringement

343 It must be borne in mind that the Guidelines state, inter alia, that in assessing the gravity of the infringement account must be taken of its nature, its actual impact on the market, where this can be measured, and the size of the relevant geographic market. Infringements are thus put into one of three categories: minor infringements, serious infringements and very serious infringements (Section 1A, first and second paragraphs).

344 It must also be borne in mind that the gravity of infringements must be assessed in the light of numerous factors, such as the particular circumstances of the case, its context and the dissuasive effect of fines, although no binding or exhaustive list of criteria to be applied has been drawn up (judgment of 15 October 2002 in *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 208 above, paragraph 465, and Joined Cases C‑189/02 P, C‑202/02 P, C‑205/02 P to C‑208/02 P and C‑213/02 P *Dansk Rørindustri and Others* v *Commission* [2005] ECR I‑5425, paragraph 241).

The effect of the cartel on the sorbates market in the EEA

345 As a preliminary point, it must be noted that the three aspects of the assessment of the gravity of the infringement which are referred to at paragraph 343 above do not have the same weight in the context of the global examination. The nature of the infringement plays a preponderant role, in particular, in characterising 'very serious' infringements. In that regard, it follows from the description of very serious infringements in the Guidelines that agreements or concerted practices aimed in particular, as in this case, at setting target prices or the allocation of sales quotas by volume may entail, solely on the basis of their very nature, the characterisation as 'very serious', without there being any need to characterise such conduct by a particular impact (see, to that effect, Joined Cases T‑49/02 to T‑51/02 *Brasserie nationale and Others* v *Commission* [2005] ECR

II–3033, paragraph 178).

346 In the present case, first, it must be observed that Hoechst does not call in question the unlawful nature of the cartel, namely the setting of target prices, the allocation of sales quotas by volume, the definition of a system of information and control and also the refusal to supply technology to undertakings seeking to enter the market.

347 Second, it must be observed that, in the Decision, the Commission took into consideration the actual impact of the cartel on the market when it assessed the gravity of the infringement. While the Commission asserts, at recital 327 to the Decision, that there is no need to take into account the actual effects when a cartel is shown to have an anti-competitive object, it none the less states, at recitals 333 to 336 to the Decision, that such effects exist in the present case, even though it asserts at recital 333 that it is not possible to measure them in a precise manner. Those effects are the consequence, in particular, of the implementation of the agreements in question. The Commission observes, in that regard, at recitals 330 to 332 to the Decision, referring to Part I of the Decision, that the agreements in question were carefully implemented. Recitals 334 and 336, which deal with the actual effects of the cartel on the market, also refer to the implementation of the agreements in question. At recital 337 to the Decision, which contains the finding concerning the developments devoted to the actual impact of the cartel on the market, the Commission states that that ‘continuous implementation has had an impact on the sorbates market’.

348 The Commission’s finding concerning the implementation of the cartel is not challenged by Hoechst before the Court. It must be emphasised, in that regard, that in the particular case of a price cartel it is permissible for the Commission to draw the inference that the infringement has had effects from the fact that the members of the cartel took measures to apply the agreed prices. On the other hand, when the implementation of a cartel is established, the Commission cannot be required to demonstrate systematically that the agreements actually allowed the undertakings concerned to attain a higher level of prices than that which would have prevailed in the absence of a cartel (see, to that effect, *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 153 above, paragraphs 743 to 745). Accordingly, Hoechst’s arguments cannot upset the Commission’s finding concerning the effects of the cartel flowing from the implementation of the agreement in issue.

349 In addition, it must be observed that the cartel had as its object, inter alia, price-fixing. It must be borne in mind, in that regard, that setting a price, even one that is merely indicative, affects competition because it allows all the participants in the cartel to foresee with a reasonable degree of certainty what pricing policy will be pursued by their competitors. More generally, such cartels entail direct interference with the essential parameters of competition on the relevant market. In expressing a common intention to apply a certain level of prices to their products, the producers concerned no longer determine their policy on the market in an autonomous manner, thus adversely affecting the concept inherent in the Treaty provisions on competition (Case T–64/02 *Heubach* v *Commission* [2005] ECR II–5137, paragraph 81). It follows that, by fixing, inter alia, target prices, the cartel in issue necessarily affected the play of competition.

350 Furthermore, Table II of the Decision shows that the sales quotas agreed between the parties to the cartel were implemented, as the Commission states at recital 335. The figures set out in the table are not disputed by Hoechst, which observes only that ‘grey material’ – that is to say, quantities sold and not declared to the members of the cartel – cast doubt on the proper functioning of the agreements in question. It follows from recitals 112 and 193 to the Decision that the discussions of the members of the cartel concerning any ‘grey material’ related to sales volumes of the Japanese producers which were not included in the ‘official statistics’, that is to say the published export data of those producers. In particular, at recital 335 to the Decision, the Commission states that such ‘grey material’ can be attributed to Ueno. Therefore, even on the assumption that such ‘grey material’ did have an impact on Ueno’s sales figures, or on those of other Japanese producers, set out in Table II of the Decision, those quantities would have no impact on Hoechst’s sales figures. In those circumstances, the cartel would have had, at least, the effect of limiting or controlling the outlets of a competitor present on the EEA market. In that regard, as regards Hoechst’s assertions that it also sold ‘grey material’ of the product concerned, it is sufficient to observe that they are not supported by any objective element, which, moreover, was not provided to the Commission in good time.

351 In the light of the foregoing, Hoechst’s arguments concerning the effect of the cartel on the sorbates market in the EEA must be rejected.

The participation of Hoechst’s high-level directors in the cartel

352 As a preliminary point, it must be noted that the Commission's finding that the collusive agreements in issue were essentially conceived, directed and encouraged at high level in the undertakings concerned is repeated in the context of the assessment of the nature of the infringements in issue.

353 However, there is no ground for concluding that that finding, if it proved incorrect for Hoechst, could in itself call in question the Commission's conclusion that the infringements in question, which were characterised in particular by the setting of target prices and the allocation of sales quotas by volume, were by their very nature very serious.

354 In any event, it is sufficient to observe that the Commission's finding clearly relies on the lists of employees of the undertakings concerned who participated in the meetings, which are set out at recitals 88, 91 and 96 to 98 to the Decision. As regards Hoechst, at recital 96 to the Decision the Commission states that its representatives at the joint meetings were, in particular, the sales directors or sales managers for the product concerned. Hoechst's assertion that the Commission failed to state reasons must therefore be rejected in that regard.

355 It must also be observed that the list of Hoechst's employees set out at recital 96 to the Decision already appeared at paragraph 62 of the statement of objections. Furthermore, at paragraph 295 of the statement of objections the Commission clearly stated that it would take account of the fact that the collusive agreements were conceived, directed and encouraged at top level in the undertakings concerned.

356 Those facts were not disputed by Hoechst during the administrative procedure.

357 There is no ground for the view that the Commission made a manifest error of assessment in concluding that 'sales directors' belonged to the 'top level' in the organisation of the undertakings concerned. In particular, Hoechst merely challenges that conclusion by stating that sales directors are themselves accountable to other directors, without adducing firm evidence to support that assertion, which was not in any event presented to the Commission in good time. Besides, the fact that the sales directors are themselves accountable to other directors does not necessarily mean, in itself, that they were not 'top level' directors.

358 As regards, last, Hoechst's reference to *ABB Asea Brown Boveri* v *Commission*, paragraph 75 above (paragraphs 33 to 38), it is sufficient to state that in that case the Commission had been referring to the role played by the 'group directorate' of the undertaking concerned, which distinguishes that case from the present case.

359 In the light of those factors, Hoechst's arguments concerning the participation of its top level directors in the cartel must be rejected.

The division of the undertakings concerned into categories.

360 As a preliminary point, it must be borne in mind that the differentiation made in respect of the cartel on the sorbates market consisted in determining, in accordance with Section 1 A, third, fourth and sixth paragraphs, of the Guidelines, the individual contribution of each undertaking, in terms of actual economic capacity, to the success of the cartel for the purpose of its classification in the appropriate category (see, to that effect, judgment of 15 June 2005 in *Tokai Carbon and Others* v *Commission*, paragraph 118 above, paragraph 225).

361 At recital 349 to the Decision, the Commission states, in that regard, that the method chosen makes it possible to estimate the relative capacity of each undertaking, its contribution to the overall damage caused to competition in the EEA and its contribution to the effectiveness of the cartel as a whole.

362 In this case, the Commission assessed the individual contribution of the undertakings concerned on the basis of the market share held by each of them in 1995 for the relevant product on a worldwide scale.

363 Hoechst does not take issue with the fact that the Commission divided the undertakings concerned into categories, or the method used in order to do so. Hoechst submits principally that it received unequal treatment by comparison with the Japanese undertakings as regards the starting amounts chosen according to the categories.

364 It must be borne in mind, in that regard, that when the Commission divides undertakings into categories, it must observe the principle of equal treatment, which provides that it is prohibited to treat comparable situations differently and different situations in the same way, unless such treatment is objectively justified (*CMA CGM and Others* v *Commission*, paragraph 220 above, paragraph 406, and judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above, paragraph 219).

365 First, it is clear from the Decision that, after concluding that the infringement in question was 'very serious' (recital 344 to the Decision), the Commission considered that in 1995 Hoechst was the largest producer of sorbates in the worldwide market and placed it in the first category of undertakings (recital 352 to the Decision). Hoechst does not dispute the finding that it was the largest producer of sorbates for 1995, which, moreover, is confirmed by the data in Table I of the Decision. As regards Hoechst's argument that it ought to have been compared with the four Japanese producers taken together, it must be recalled that the Decision, although drafted in the form of a single decision, must be analysed as a bundle of individual decisions finding in respect of each of the undertakings to which it is addressed the infringements alleged and imposing fines on them, where appropriate, as supported, moreover, by the wording of the operative part, and in particular Articles 1 and 3 thereof (order in *Hoechst* v *Commission*, paragraph 31 above, paragraph 16). In those circumstances, the Commission cannot be criticised for having analysed individually the situation of the Japanese undertakings concerned.

366 Second, at recital 354 to the Decision, the Commission states that the likely fine for very serious infringements is above EUR 20 million.

367 Third, at recital 355 to the Decision, the Commission fixes the starting amount of the fines at EUR 20 million for the undertakings in the first group (Hoechst) and at EUR 6.66 million for the undertakings in the second group (Daicel, Chisso, Nippon Synthetic and Ueno).

368 It follows that, in order to apply differentiated treatment to the undertakings concerned, the Commission began by fixing, for the undertakings in the first category (that is to say, Hoechst, which, according to the Decision, was the largest producer of sorbates in 1995), the amount of EUR 20 million envisaged by the Guidelines. The Commission then determined, on the same basis, the amount for the undertakings in the second category.

369 There is nothing in the Decision to permit the conclusion that the amount set for the undertakings in the first category was fixed by reference to the amount set for the undertakings in the second category. Nor is there anything in the Decision to permit the conclusion that the amount of EUR 20 million set for the undertakings in the first category was the result of a mathematical formula applying a starting amount per level of turnover, contrary to Hoechst's apparent suggestion.

370 In those circumstances, even on the assumption that the amount of EUR 6.66 million set for the undertakings in the second category is too low or that certain undertakings classified in the second category ought to have been placed in the first category, that would constitute an unlawful act committed in favour of the undertakings in the second category.

371 It must be emphasised that respect for the principle of equal treatment must be reconciled with respect for the principle of legality, according which no one may rely to his own advantage on an unlawful act committed in favour of a third party (Case T‑327/94 *SCA Holding* v *Commission* [1998] ECR II‑1373, paragraph 160, and *Lögstör Rör* v *Commission*, paragraph 329 above, paragraph 350).

372 Last, as regards the Commission's practice in taking decisions, on which Hoechst relies, it must be borne in mind that that practice does not in itself serve as a legal framework for fines in competition matters, since that framework is defined solely in Regulation No 17 and in the Guidelines (see *Michelin* v *Commission*, paragraph 339 above, paragraph 292 and the case-law cited) and that, furthermore, operators cannot place a legitimate expectation in the maintenance of an existing situation that might be altered by the Commission in the exercise of its discretion (see Case C‑350/88 *Delacre and Others* v *Commission* [1990] ECR I‑395, paragraph 33 and the case-law cited, and *Dansk Rørindustri and Others* v *Commission*, paragraph 344 above, paragraph 171).

373 In those circumstances, and without there being any need to grant Hoechst's request to have witnesses called when the Court considers that it has sufficient information from the documents in the file, Hoechst's arguments concerning the division of the undertakings concerned into categories

must be rejected.

The increase to take account of Hoechst's size and overall resources

374 In order to take account of Hoechst's 'size and overall resources', the starting amount of its fine was increased by 100% to EUR 40 million (recital 357 to the Decision).

375 That increase, according to recital 356 to the Decision, is intended to ensure a sufficient deterrent effect on large undertakings and to take account of the fact that those undertakings have legal and economic knowledge and infrastructures which enable them more easily to recognise that their conduct constitutes an infringement and to be aware of the consequences stemming from that conduct under competition law.

376 In that regard, the Guidelines provide that, in addition to the nature of the infringement, its actual impact on the market and the size of the relevant geographic market, it is necessary to take account of the effective economic capacity of offenders to cause significant damage to other operators, in particular consumers, and to set the fine at a level which ensures that it has a sufficiently deterrent effect (Section 1 A, fourth paragraph).

377 Account may also be taken of the fact that large undertakings are in a better position to recognise that their conduct constitutes an infringement and to be aware of the consequences stemming from it under competition law (Section 1 A, fifth paragraph).

378 In the present case, although recitals 356 and 357 to the Decision appear under the heading 'Sufficient deterrence', it follows from recital 356 to the Decision that the Commission took account, first, of the need to ensure that the fine had a sufficient deterrent effect, within the meaning of Section 1 A, fourth paragraph, of the Guidelines and, second, of the fact that large undertakings, like Hoechst, are better able to recognise that their conduct constitutes an infringement and to be aware of the consequences stemming from it under competition law, within the meaning of Section 1 A, fifth paragraph, of the Guidelines, in order to apply an increase of 100% to the starting amount of the fine.

379 As regards the first factor, namely the need to ensure that the fine has a sufficient deterrent effect, it requires that the amount of the fine be adjusted in order to take account of the desired impact on the undertaking on which it is imposed, so that the fine is not rendered negligible, or on the other hand excessive, notably by reference to the financial capacity of the undertaking in question, in accordance with the requirements resulting from, first, the need to ensure that the fine is effective and, second, respect for the principle of proportionality. The Court thus observed, in the judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above, that owing to its enormous worldwide turnover by comparison with that of the other members of the cartel, one of the undertakings concerned in that case would find it easier to find the funds necessary to pay its fine, which, in order to ensure that the fine was sufficiently deterrent, justified the application of a multiplier (paragraph 241). In that context, the financial resources of the undertaking must be assessed, in order to achieve properly the objective of deterrence, while observing the principle of proportionality, on the date on which the fine is imposed. In that regard, for the same reasons, it must be noted that, in the context of Article 15(2) of Regulation No 17, the upper limit of the fine, fixed at 10% of the turnover of the undertaking concerned, is determined by reference to the turnover achieved during the business year preceding the decision (Case C‑291/98 P *Sarrió* v *Commission* [2000] ECR I‑9991, paragraph 85).

380 It should be noted, in that regard, that in the Decision the Commission does not specify what data were used as a basis for its conclusion that it was necessary to ensure that Hoechst's fine was sufficiently deterrent.

381 However, in the Decision the Commission sets out the worldwide turnover of the undertakings concerned for 2002 (recitals 37, 42, 46, 50 and 55), the year corresponding to the last business year preceding the adoption of the Decision. The Commission also refers to 2002 in its written pleadings before the Court. The worldwide turnover for 2002 came to EUR 9.2 billion for Hoechst, EUR 2.243 billion for Daicel, EUR 973.4 million for Chisso, EUR 321.5 million for Nippon Synthetic and EUR 199.5 million for Ueno. Thus in 2002 Hoechst was by far the largest of the undertakings concerned by the Decision. In particular, its worldwide turnover was at least five times that of the second undertaking concerned, by size, namely Daicel. In those circumstances, the Commission was entitled to seek to ensure that the fine had a deterrent effect on Hoechst.

382 As regards the second factor taken into account by the Commission for the purposes of increasing the starting amount of the fine, namely the legal and economic infrastructures which place undertakings in a better position to recognise that their conduct constitutes an infringement, it must be emphasised, in contrast to what has been set out previously, that that factor is intended to impose a more severe penalty on large undertakings, which are presumed to have knowledge and sufficient structural means to be aware that their conduct constitutes an infringement and to evaluate the advantages to be gained from it. It must be considered that, in that hypothesis, the turnover on the basis of which the Commission determines the size of the undertakings concerned, and therefore their ability to determine the nature and the consequences of their conduct, must relate to their situation at the time of the infringement.

383 In this case, in the Decision, the Commission does not specify what data were used to found its conclusion that Hoechst was in a better position to recognise that its conduct constituted an infringement and to be aware of the consequences stemming from that conduct under competition law.

384 However, it is common ground that Hoechst's worldwide turnover was EUR 28.181 billion in 1995, the last full year before the end of the infringement (recital 46 to the Decision). It cannot be maintained that, on that basis, Hoechst did not have the legal and economic infrastructures available to large undertakings, and Hoechst does not claim that it did not. The fact that the other undertakings concerned may also have been large undertakings in 1995 cannot affect the Commission's assessment in that regard.

385 It follows from the foregoing that the Commission did not err in deciding to apply an increase in this case.

386 The other arguments put forward by Hoechst cannot alter that finding. In particular, the fact that Hoechst contracted and its turnover fell to EUR 9 billion in 2002, or that it transferred its sorbates business before the adoption of the Decision, cannot influence the legality of the application of the increase in this case. The reduction in Hoechst's size does not alter the fact that its worldwide turnover was EUR 28.181 billion in 1995, the last full year of the infringement; and the fact that it transferred its sorbates business does not alter the fact that in 2002, the year corresponding to the last business year before the adoption of the Decision, Hoechst was the largest of the undertakings concerned.

387 As regards Hoechst's assertion that a factor of 100% should not have been applied in this case, it is not founded on any detailed element. In any event, first, there is no reason to consider that the increase applied by the Commission exceeds the limits laid down in Article 15(2) of Regulation No 17 and in the Guidelines. Second, it must be borne in mind that Hoechst's worldwide turnover in 2002 was at least four times that of the second undertaking concerned, by size, namely Daicel. The factor applied by the Commission reflects the difference in worldwide turnover in 2002 between Hoechst and the other undertakings concerned. Furthermore, as regards the fact that Hoechst had, in 1995, legal and economic infrastructures which meant that it was better able to recognise that its conduct constituted an infringement and to be aware of the consequences stemming from it, and on the assumption that the other undertakings concerned were also large undertakings in 1995, there is no need, in that regard, to draw a distinction between two undertakings whose turnover is such that they can be characterised in any event as large undertakings with such infrastructures. It follows from those elements that the factor of 100% applied by the Commission cannot be regarded in this case as disproportionate.

388 In the light of those elements, Hoechst's arguments against the application of an increase of 100% to take account if the undertaking's size and overall resources must be rejected.

389 The first part of the fifth plea must therefore be rejected.

b) The duration of the infringement

390 Under Article 15(2) of Regulation No 17, the duration of the infringement is one of the factors to be taken into consideration when determining the amount of the fine to be imposed on undertakings which have infringed the competition rules.

391 As regards the factor relating to the duration of the infringement, the Guidelines distinguish between infringements of short duration (in general, less than one year), for which the starting amount determined for gravity should not be increased; infringements of medium duration (in

general, one to five years), for which the starting amount may be increased by 50%; and infringements of long duration (in general, more than five years), for which the starting amount may be increased by 10% per year (Section 1 B, first paragraph, first to third indents).

392 In this case, in the Decision, the Commission states at recital 359 that Chisso, Daicel, Hoechst and Ueno infringed Article 81(1) EC and Article 53(1) of the EEA Agreement from 31 December 1978 until 31 October 1996. Hoechst does not dispute that finding, or the fact that the infringement was characterised by the Commission as a 'long-term' infringement.

393 It follows that, as the Commission correctly observes in the Decision, the infringement in question lasted 17 years and 10 months.

394 The increase of 175% applied in Hoechst's case is therefore not in itself contrary to the Guidelines (see, to that effect, *Cheil Jedang Corporation* v *Commission*, paragraph 318 above, paragraph 137).

395 As regards Hoechst's argument that the Guidelines make provision for only a 'significant increase' and not for an entirely new amount, there is no reason to consider that the increase applied by the Commission exceeds the limits laid down in Article 15(2) of Regulation No 17 and in the Guidelines. The use of the words 'significant increase' does not permit the conclusion, as Hoechst maintains, that an increase in excess of 100% would be contrary to the calculation method provided for in the Guidelines. It must be emphasised in that regard that the powers conferred on the Commission by Regulation No 17 are designed to enable it to carry out the task entrusted to it by Article 81 EC of ensuring compliance with the competition rules in the common market. In that context, it is consistent with the general interest to avoid anti-competitive practices and agreements, to uncover them and to impose sanctions (*Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 54).

396 Furthermore, it must be observed that even though the third indent of Section 1 B of the Guidelines does not provide for an automatic increase of 10% per year for long-term infringements, it leaves a margin of discretion to the Commission in that regard (see, to that effect, *Cheil Jedang Corporation* v *Commission*, paragraph 318 above, paragraph 134). The arguments which Hoechst puts forward in support of its plea do not seek to demonstrate that the Commission made a manifest error of assessment in that regard. It should further be emphasised that, in so far as the Guidelines provide that infringements lasting more than five years are to be regarded as long-term infringements, and that such infringements warrant an increase which may be fixed at 10% per year of the amount decided on to reflect the gravity of the infringement, no breach of the principle of proportionality can be found in the determination of the duration of the infringement in which Hoechst took part (see, to that effect, Case T–65/99 *Strintzis Lines Shipping* v *Commission* [2003] ECR II–5433, paragraph 194).

397 As regards Hoechst's assertion that agreements on prices and volumes are typically long-term infringements and that, accordingly, an increase for the duration of the infringement takes the gravity of the infringement into account for a second time, it must be borne in mind that, even on the assumption that certain types of cartels are intrinsically conceived in order to last, a distinction must always be drawn, in application of Article 15(2) of Regulation No 17, between the duration of the actual functioning and their gravity as resulting from their actual nature (judgment of 15 June 2005 in *Tokai Carbon and Others* v *Commission*, paragraph 118 above, paragraph 275). The increase for the duration of the infringement therefore does not take account of the gravity of the infringement for a second time.

398 As regards the contention that events which took place in the distant past become time-barred at a given time and that, accordingly, the level of the fine should reduce exponentially with the passing of time, it is sufficient to recall that the increase applied by the Commission does not exceed the limits laid down in Article 15(2) of Regulation No 17 and in the Guidelines and that the Commission's action was not time-barred in this case in the light of Regulation No 2988/74 (see paragraph 225 above).

399 As regards, last, the Commission's previous practice, and in particular the fact that in certain cases it increased the starting amount of the fine only from the second year, it must be borne in mind that that practice does not in itself serve as a legal framework for fines in competition matters, since that framework is defined solely in Regulation No 17 and in the Guidelines (see *Michelin* v *Commission*, paragraph 339 above, paragraph 292 and the case-law cited) and that, furthermore, operators cannot have a legitimate expectation in the maintenance of an existing situation that might be modified by the Commission in the exercise of its discretion (see *Delacre and Others* v *Commission*,

paragraph 372 above, paragraph 33 and the case-law cited, and *Dansk Rørindustri and Others* v *Commission*, paragraph 344 above, paragraph 171). In addition, it is only in the case of infringements of short duration (in general, less than one year) that the Guidelines state that no increase will be applied. For infringements of long duration, on the other hand, the Guidelines provide that an increase of 10% 'per year' may be applied. In view of the terms used in the Guidelines in that regard, there is no reason to consider that the first year of the infringement must be systematically ignored in the Commission's calculation (see, to that effect, for infringements of medium duration, *Cheil Jedang Corporation* v *Commission*, paragraph 318 above, paragraph 133).

400 For all of those reasons, the second part of the fifth plea and, accordingly, the fifth plea in its entirety must be rejected.

D – The second and sixth pleas, relating to the objection concerning the role as leader of the cartel which, according to the Decision constituted an aggravating circumstance

401 By its second plea, Hoechst claims that there has been a breach of its right to be heard in respect of the objection relating to its role as a leader of the cartel, which, according to the Decision, constituted an aggravating circumstance. By its sixth plea, Hoechst contends that the increase based on its capacity as a leader is unwarranted.

402 The Court will examine the second plea first.

1. Summary of the Decision

403 At recitals 363 to 367 to the Decision, read in the light of recitals 92 to 95, the Commission states that, in Hoechst's case, the gravity of the infringement is aggravated by Hoechst's role as a leader of the cartel.

404 More particularly, in the Decision the Commission observes that Hoechst, along with Daicel, was an important driving force and one of the most active members of the cartel, in the light, particularly, of its position on the market. Hoechst thus succeeded in gaining the most from the cartel and in imposing its proposals on the Japanese producers, for example in 1992, when it proposed to establish a price difference between sorbic acid and potassium sorbates, a proposal which was followed by the Japanese producers in 1994.

405 Furthermore, the Commission states in the Decision that Hoechst, along with Daicel, was responsible for scheduling and chairing the joint meetings. It acted as host for the meetings in Europe, which it organised and paid for. Hoechst also organised some meetings outside the Community. It had regular contacts with Daicel in order to exchange information. In addition, Hoechst took several initiatives to ensure effective monitoring of volume quotas (for example, by proposing the creation in Switzerland of a neutral organisation responsible for collecting the sales figures of the Japanese producers or by unilaterally adding 600 tonnes to its quota in 1995 on account of the existence of 'grey material'). Furthermore, as a member of the Chemical Industrial Products Export Cooperative (CIPEC), Hoechst had access to statistics on Japanese exports.

406 Hoechst also succeeded, according to the Decision, in ensuring control of the European branch of the cartel, in particular by maintaining regular and exclusive contacts with the only other European undertaking in the sector.

407 Last, the Commission states in the Decision that in November 1996, when the last joint meeting took place, Hoechst, along with Daicel, tried to convince the other members to continue with the meetings and the agreements.

408 In the light of those factors, and in order to take account of Hoechst's role as a leader of the cartel, the Commission increased the basic amount of the fine by 30% to take account of the aggravating circumstances.

2. Arguments of the parties

a) Arguments of Hoechst

409 Hoechst observes that the Commission took account of what it alleged to have been the applicant's

position as ‘co-leader’ when setting its fine.

410 Hoechst takes issue with the Commission for not having heard it on the legal assessment which it proposed to make of the applicant’s alleged conduct as a leader. In particular, Hoechst submits that the Commission did not address a statement of objections to it on that point.

411 Before adopting a decision imposing a fine, the Commission ought to give the undertakings the opportunity to defend themselves sufficiently against the objections made in respect of them. That means that the criticisms in fact and in law that the Commission intends to address to them must be communicated to the future addressees of the decision by means of a statement of objections (Hoechst refers, in that regard, to *Atlantic Container Line and Others* v *Commission*, paragraph 70 above, paragraphs 193 and 194).

412 In the present case, there was nothing in the statement of objections addressed to Hoechst to indicate that the Commission would apply the aggravating circumstance of leader of the cartel. Nor did the Commission, after issuing the statement of objections, inform the applicant that it intended to extend its objections in respect of Hoechst by characterising it as a leader. Hoechst also emphasised that, in the absence of objections on that point, it saw no need to address the question of characterisation as a leader (Hoechst refers to its response to the statement of objections). Hoechst submits that it made the same observations at the hearing on 24 April 2003.

413 That oblique approach on the Commission’s part is all the more incomprehensible because the arguments relied on in that regard in the Decision could have been presented at the time of the statement of objections, since they are not based on matters which only subsequently came to the Commission’s attention. The Commission has not only breached Hoechst’s rights of defence but has also breached the right to a fair trial. The principle of equality of arms requires that the essential elements of the subsequent decision be transmitted at the same time as the statement of objections only with respect to facts and evidence invoked later, but also with respect to their legal assessment.

414 It is clear that if Hoechst had been aware of such an objection against it, it would not have awaited the judicial proceedings but would have defended itself at the stage of the administrative procedure. It is absurd, moreover, that the parties concerned should submit observations *pro domo*, as a precautionary measure, on the fact that the requisite factual conditions are not satisfied.

415 Hoechst concludes that the characterisation as a leader applied by the Commission in the Decision cannot be maintained. The increase in the fine on the basis of that characterisation is therefore unlawful. The same applies to the arguments put forward in the grounds of the Decision that, owing to its position as a ‘leader’, the application of Title B of the 1996 Leniency Notice was precluded by law.

b) Arguments of the Commission

416 The Commission contends that the rights of the defence have been respected since, in the Decision, it does not hold the undertakings concerned responsible for different infringements from those referred to in the account of the objections and had regard only to facts on which those concerned had the opportunity to provide an explanation. The account of the objections satisfied that requirement since it sets out, albeit succinctly, but clearly, the essential facts on which the Commission relies (the Commission refers to Case 41/69 *ACF Chemiefarma* v *Commission* [1970] ECR 661, paragraphs 26 and 94, and to *Atlantic Container Line and Others* v *Commission*, paragraph 70 above, paragraphs 138 and 191 et seq.).

417 In the present case, the statement of objections already contained a description of the circumstances of law and of fact taken into account in the Decision for the purposes of the calculation of the fine. Thus, at paragraph 295 of the statement of objections, the Commission stated that it would take account, in particular, of ‘the role played by each participant, in particular the leading role played by some companies’. At paragraph 60 of the statement of objections, Hoechst is expressly criticised for having been a ‘leader’ of joint meetings together with Daicel (the Commission also refers to paragraph 64 of the statement of objections). At paragraph 282 of the statement of objections, Hoechst is presented as one of the ‘main actors’ in the cartel.

418 Furthermore, Hoechst was given advance notice of all the facts on the basis of which it was characterised as a leader of the cartel, by means of the statement of objections (in particular paragraphs 60, 77, 79, 94, 166, 178, 179, 210 et seq. and 282 of the statement of objections). The

Commission also refers to recitals 347 to 367 to the Decision, where there is a reference to recitals 92 to 95.

419 The Commission concludes that Hoechst had the opportunity before the Decision was adopted to express its views on the objection relating to its role as leader, and did so, moreover, both in its response to the statement of objections and at the hearing. The fact that Hoechst did not agree with that objection and that it sought to refute it in its response to the statement of objections does not alter the fact that the objection was levelled against it.

3. Findings of the Court

420 It must be borne in mind that respect for the rights of the defence in any proceedings which might lead to the imposition of penalties, notably fines or periodic penalties, constitutes a fundamental principle of Community law, which must be observed, even in the context of administrative proceedings (Case 85/76 *Hoffmann-Laroche* v *Commission* [1979] ECR 461, paragraph 9; Case C–176/99 P *Arbed* v *Commission* [2003] ECR I–10687, paragraph 19; and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, paragraph 216 above, paragraph 32).

421 That principle requires, in particular, that the statement of objections which the Commission sends to an undertaking on which it envisages imposing a penalty for an infringement of the competition rules contain the essential elements used against it, such as the facts, the characterisation of those facts and the evidence on which the Commission relies, so that the undertaking may submit its arguments effectively in the administrative procedure brought against it (see *Arbed* v *Commission*, paragraph 420 above, paragraph 20 and the case-law cited).

422 As regards, more particularly, the calculation of the fines, the Commission fulfils its obligation to respect the undertakings' right to be heard provided that it indicates expressly in the statement of objections that it is going to consider whether it is appropriate to impose fines on the undertakings concerned and provided that it sets out the main elements of fact and of law which might entail a fine, such as the gravity and duration of the alleged infringement and the fact that the infringement was committed 'deliberately or negligently'. In doing so, the Commission provides the undertakings concerned with the necessary material to defend themselves not only against a finding of infringement but also against the imposition of a fine (*Dansk Rørindustri and Others* v *Commission*, paragraph 344 above, paragraph 428; see also Case T–23/99 *LR AF 1998* v *Commission* [2002] ECR II–1705, paragraph 199 and the case-law cited; judgment of 15 June 2005 in *Tokai Carbon* v *Commission*, paragraph 118 above, paragraph 139; see also, to that effect, Joined Cases 100/80 to 103/80 *Musique Diffusion française and Others* v *Commission* [1983] ECR 1825, paragraph 21).

423 It must also be borne in mind that the role of 'leader' played by one or more undertakings in a cartel must be taken into account for the purposes of calculating the fine, since the undertakings which have played such a role must for that reason bear particular responsibility by comparison with the other undertakings (judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above, paragraph 301, and *BASF* v *Commission*, paragraph 120 above, paragraph 281; see also, to that effect, Case T–347/94 *Mayr-Melnhof* v *Commission* [1998] ECR II–1751, paragraph 291). In accordance with those principles, Section 2 of the Guidelines establishes, under the heading 'Aggravating circumstances', a non-exhaustive list of circumstances which may justify an increase in the basic amount of the fine, including, inter alia, the 'role of leader in, or instigator of the infringement' (third indent). In that context, in order to be characterised as a leader, the undertaking in question must have represented a significant driving force in the cartel (see, to that effect, *BASF* v *Commission*, paragraph 120 above, paragraph 374).

424 In the present case, first, it must be observed that, although all the elements of fact on which the Commission relied in the Decision to substantiate the objection that the applicant was a leader of the cartel were already to be found in the statement of objections, they were set out at various points in that statement of objections, without any link being established between them and without being characterised in any particular way by the Commission. It was only at the stage of the Decision that those elements were brought together in a single part and that the objection that Hoechst was a leader was clearly apparent.

425 More specifically, only paragraph 60 of the statement of objections, among the paragraphs on which the Commission relies in support of its defence, uses the word 'leader' ('führende Rolle' in the German version of the statement of objections) with respect to Hoechst. However, the sentence

concerned, as a whole, reads as follows: 'Hoechst was a leader … of the joint meetings held with the four Japanese producers, together with Daicel'. A similar sentence was set out at paragraph 64 of the statement of objections, concerning Daicel ('[Daicel] … was a leader of the joint meetings, along with Hoechst'). However, the abovementioned sentence at paragraph 60 of the statement of objections may mean that Hoechst had had a particular role in arranging the joint meetings – as is demonstrated, moreover, by the other matters set out at the same paragraph, which deal with the actual organisation of those meetings – without giving the clear impression that Hoechst was a 'leader of the infringement' for the purposes of the Guidelines. That interpretation is borne out, furthermore, by the fact that the Commission changed the terminology used in the Decision. Thus, at recital 92 to the Decision the Commission states: 'Along with Daicel, Hoechst was in charge of scheduling and chairing the joint meetings'. The same change was made with respect to Daicel; the Commission states in the Decision: 'Along with Hoechst, [Daicel] was in charge of scheduling and chairing the joint meetings' (recital 89). In addition, although the Commission states in the Decision that Hoechst, along with Daicel, was in charge of 'scheduling' the joint meetings, in the statement of objections that role seemed to be attributed solely to Daicel, as may be seen from paragraph 64 of the statement of objections, which reads: '[Daicel] organised the pre-meetings, it was in charge of scheduling the joint meetings and was a leader of the joint meetings, along with Hoechst'.

426 Second, as regards the fact, stated at paragraph 77 of the statement of objections, that Hoechst was 'usually' the first to announce the new price in Europe, followed by the Japanese producers, it must be emphasised that the mere fact that a member of a cartel was the first to announce a new price or a price increase cannot be regarded as indicating that it had the role of leader of the cartel when the circumstances of the case show that the price or price increase in question was previously fixed by joint agreement with the other members of the cartel and when those other members also decided which of them would be first to make the announcement, such a designation showing that the fact of being first to announce the price or price increase is merely an act of strict observance of a plan predefined by common intention and not a spontaneous initiative giving an impetus to the cartel (*BASF* v *Commission*, paragraph 120 above, paragraph 427). In this case, as shown at paragraphs 150, 158 and 190 of the statement of objections, certain price announcements were scheduled by the members of the cartel, who decided which undertaking would be the first to make them. Paragraph 77 of the statement of objections therefore does not permit the clear conclusion, in the light of the other elements in that document, that the price announcements made by Hoechst corresponded to a spontaneous initiative giving impetus to the cartel.

427 Third, as regards the fact, described at paragraph 94 of the statement of objections, that Daicel and Hoechst agreed on the agenda for the joint meetings, it must be noted, as shown by paragraph 207 of the statement of objections, that the agenda for the joint meetings were first of all prepared by the Japanese producers during the preparatory meetings and then proposed to Hoechst. Those preparatory meetings also enabled the Japanese producers, as may be seen from paragraph 204 of the statement of objections, to agree upon the target prices and volume allocations, which were then proposed to Hoechst.

428 Fourth, the fact, set out at paragraph 166 of the statement of objections, that Hoechst, as a member of CIPEC, had access to the Japanese export statistics, whereas the Japanese producers could not have access to the official German statistics, cannot be interpreted as meaning in itself that Hoechst represented a driving force for the cartel.

429 Fifth, concerning the bilateral meetings between Hoechst and the Japanese producers referred to at paragraphs 210 and 211 of the statement of objections, it must be observed that even if those contacts were to a large extent with Daicel, Hoechst also maintained relations with Ueno and Nippon Synthetic, as stated at paragraph 211 of the statement of objections. As regards the other bilateral contacts referred to at paragraph 212 et seq. of the statement of objections, it must be held that, as stated in particular at paragraphs 219 and 220 of the statement of objections, certain of those contacts were the result of the intention of all the members of the cartel, or indeed of the Japanese producers alone.

430 Sixth, as regards the sentence set out at paragraph 282 of the statement of objections, and highlighted by the Commission, namely that Hoechst was one of the main players in the cartel, it must be placed in its context. Paragraph 21 et seq. of the statement of objections is clearly intended to specify the extent of the responsibilities of Hoechst and those of Nutrinova, in so far as Nutrinova took over Hoechst's sorbates business from September 1997. That sentence could not be taken, in any event in a sufficiently precise manner, as delimiting any role as leader played by Hoechst.

431 Admittedly, certain factual elements set out in the statement of objections, notably at paragraphs 79 (a proposal to establish a price difference between sorbic acid and potassium sorbates), 178 (a

proposal to increase Hoechst's volume quota) and 179 (a proposal to provide the Japanese producers' sales figures to a neutral organisation), reflect occasional initiatives on Hoechst's part. Taken together, however, the elements mentioned by the Commission in the statement of objections, and on which the Commission based its conclusion in the Decision that Hoechst had played a role as leader, were insufficiently precise as to their scope and their characterisation.

432 Furthermore, even though the Commission gave the impression, at paragraph 295 of the statement of objections, that it would take account of the leading role played by 'some companies', that indication was not sufficient, in light of the lack of precision of the rest of the statement of objections, to allow Hoechst to determine whether or not it was concerned by any characterisation as leader.

433 For all of the foregoing reasons, it must be considered that, even though the facts in respect of which Hoechst is criticised were addressed in the statement of objections, the Commission did not characterise them sufficiently precisely to enable the applicant to defend itself properly.

434 It should further be observed in that regard that, in its response to the statement of objections, Hoechst stated:

'Hoechst/Nutrinova did not play a determining role in the cartel. The word "leader" used in para. 60 of the [statement of objections] is unclear in this respect. … The language referring to "leader" in para. 60 of the [statement of objections] concerns exclusively Hoechst/Nutrinova's role as host and organiser of those joint meetings held in Europe.'

435 Likewise, at the hearing on 24 April 2003, counsel for Hoechst and Nutrinova declared that that undertaking satisfied all the conditions for obtaining immunity from a fine, stating that:

'As regards the role played by Hoechst and Nutrinova as hosts of the joint meetings held in Europe, it must be emphasised that as my clients were the only European undertaking to have participated in those joint meetings, it was quite natural that they should be responsible for organisation of the meetings in Europe. However, that does not mean that they played any role as leader of the cartel.'

436 It follows that the lack of precision in the statement of objections concerning the characterisation of Hoechst as a leader led that undertaking to focus on the organisation of the joint meetings, the only topic initially addressed by the Commission at paragraph 60 of the statement of objections. In the absence of greater precision, and as the other factual elements were scattered throughout the statement of objections, Hoechst was not placed in a position to adopt an effective defence on that point.

437 It must further be borne in mind that the Commission was aware of the lack of precision of the word 'leader' used at paragraph 60 of the statement of objections. That may be seen, in particular, from the fact that the Commission altered the wording used in the Decision.

438 For all of those reasons, the second plea must be upheld. Accordingly, without there being any need to analyse the sixth plea, the Decision must be varied in that it establishes the aggravating circumstance of having been a leader of the cartel as against Hoechst.

439 The consequences of that variation will be determined below.

E – The seventh plea, alleging that the increase in the fine imposed for a repeated infringement was unjustified

1. Summary of the Decision

440 Recital 363 to the Decision reads as follows:

'The gravity of the infringement is aggravated in Hoechst's case by the following circumstances:

(a) Hoechst's role as a leader of the cartel (recitals 92 to 95);

(b) Hoechst has been subject to previous decisions finding an infringement of the same type.'

441 Footnote 211, which accompanies recital 363 to the Decision, reads as follows:

‘See Commission Decisions 94/599/EC (*PVC II*) (OJ L 239, 14.9.1994, p. 14), 89/191/EEC (*PVC I*) (OJ L 74, 17.3.1989, p. 21), 86/398/EEC (*Polypropylene*) (OJ L 230, 18.8.1986, p. 1) and 69/243/EEC (*Dyestuffs*) ([*Journal officiel*, 7.8.1969, p. 11]).

442 At recital 368 to the Decision, the Commission states:

‘It is necessary to ensure that the level of the fine has sufficient deterrent effect. The Commission notes that previous Decisions addressed to Hoechst ordered the company to put an end to its anti-competitive conduct and to refrain from repeating it (see recital 363). This should have prompted it to pay special attention to compliance with Community competition law and refrain from all deliberate violations. The fact that it repeated the same conduct shows that the previous fines were not such a deterrent as to make it change its conduct.’

443 In response to the arguments put forward by Hoechst, the Commission states at recital 372 to the Decision:

‘Concerning Hoechst’s position as recidivist, the Commission notes that the last decision ordering Hoechst to put an end to its anti-competitive conduct and to refrain from repeating it dates from July 1994. After that decision Hoechst continued the infringement which is the subject of these proceedings for more than two years. This clearly shows that the previous decision did not deter Hoechst from continuing its participation in a similar cartel.’

444 In the light of those facts, and to take account of the fact that Hoechst’s conduct constituted a repeated infringement, the Commission increased the basic amount off the fine by 50% to reflect the aggravating circumstances (recital 373 to the Decision).

2. Arguments of the parties

a) Arguments of Hoechst

445 Hoechst states that the Commission increased the basic amount of its fine, EUR 110 million, by 50% because this was a repeated infringement. Hoechst contends that that increase is disproportionate and is unable to see on what ground it could be subjected to an increase for repeated infringement connected with past infringements.

446 First, Hoechst contends that the old proceedings referred to at recital 363 to the Decision (namely the proceedings that led, respectively, to the adoption of Commission Decision 94/599/EC of 27 July 1994 relating to a proceeding pursuant to Article 85 of the EC Treaty (IV/31.865 – PVC) (OJ 1994 L 239, p. 14), ‘the PVC II decision’; Commission Decision 89/191/EEC of 21 December 1988 relating to a proceeding pursuant to Article 85 of the EEC Treaty (IV/31.866 – LdPE) (OJ 1989 L 74, p. 21), ‘the PVC I decision’; Commission Decision 86/398/EEC of 23 April 1986 relating to a proceeding under Article 85 of the EEC Treaty (IV/31.149 – Polypropylene) (OJ 1986 L 230, p. 1); and Commission Decision 69/243/EEC of 24 July 1969 relating to a proceeding pursuant to Article 85 of the EEC Treaty (IV/26.267 – Dyestuffs) (*Journal official* 1969 L 195, p. 11) are wholly unconnected with the present case. More particularly, Hoechst maintains that the *PVC II* decision merely reiterates the *PVC I* decision, which was declared non-existent by the Court of First Instance and then annulled by the Court of Justice. Furthermore, the *PVC I* and *PVC II* decisions relate to old facts, since the facts ceased in 1984. The Commission is therefore wrong to seek, at recital 372 to the Decision, to establish a connection between the *PVC II* decision and the present case. In addition, Hoechst’s former activities in the animal feedingstuffs additives sector have no bearing on its activities in the PVC sector. Hoechst also submits that the Commission recently undertook to establish joint group liability by imposing increases of 10% per year for the period between the decision imposing a fine in one case and the end of the infringement forming the subject-matter of another case. Hoechst refers, in that regard, to Commission Decision 2005/471/EC of 27 November 2002 relating to proceedings under Article 81 of the EC Treaty against BPB PLC, Gebrüder Knauf Westdeutsche Gipswerke KG, Société Lafarge SA and Gyproc Benelux NV (Case COMP/E–1/37.152 – Plasterboard) (OJ 2005 L 166, p. 8). That practice is appropriate in connection with new infringements knowingly committed by one and the same group management, notwithstanding that parallel conduct has been found to constitute an infringement. In the present case, however, the fact that the *PVC II* decision and the infringement at issue in the present case relate to the same period results from the fact that the Commission was not in a position to adopt the *PVC II* decision until 11 years after the infringement at issue in that case had ceased.

447 Second, the cases to which the Commission refers at recital 363 to the Decision concern conduct which came to an end in 1984 at the latest. The facts are therefore time-barred. Hoechst contends that the *Dyestuffs* decision became final more than 30 years ago, by a judgment of the Court of Justice. That decision is too old to support the 'repeated infringement' argument. Hoechst further submits that the facts referred to by the *Polypropylene* decision were definitively settled only in July 1999, and those referred to by the *PVC I and PVC II* decisions in October 2002, thus long after the facts of the present case had come to an end.

448 Third, even if it should ultimately be held that different infringements committed independently within a group and without any subjective connection between them constitute an aggravating circumstance, the increase applied is disproportionate. In particular, the fact that Hoechst is part of a group has already been taken into account twice by the Commission: first when the Commission fixed the starting amount of the fine at EUR 20 million and second when it increased that amount by 100% on account of the size of the Hoechst group. It cannot be fair to add further increases. By way of comparison, Hoechst had to bear a starting amount practically 14 times Daicel's, on account of its group structure, while its turnover is only four times as high. Hoechst also emphasises that in the proceedings leading to the *Plasterboard* decision, an increase of 10% per year had been imposed for the period between the preceding decision imposing a fine and the end of the infringement concerning the relevant product. In this case the increase is 22% per year.

449 In the alternative, Hoechst contends that an increase for repeated infringement is unfair when the undertaking concerned cooperates fully during the administrative procedure. The purpose of the penalty cannot justify that increase.

b) Arguments of the Commission

450 The Commission refers to *Thyssen Stahl* v *Commission*, paragraph 325 above (paragraph 617), and *Michelin* v *Commission*, paragraph 339 above (paragraph 284), and contends that the concept of repeated infringement, as understood in a number of national legal orders, implies that a person has committed new infringements after being punished for similar infringements.

451 In this case, the proceedings culminating in the *PVC I*, *PVC II* and *Dyestuffs* decisions referred to in the Decision all concerned cartels on prices or quotas. The infringements in those cases were therefore similar to the one forming the subject–matter of the present case.

452 It is immaterial, in that context, that certain infringements (such as that giving rise to the *Dyestuffs* decision) are old. The increase for repeated infringement does not serve to increase ex post facto penalties imposed in the past, but to pursue cases of repeated infringement effectively. The Commission emphasises in particular that it must ensure that its action has a deterrent effect (*Irish Sugar* v *Commission*, paragraph 198 above, paragraph 245) and that repeated infringement is among the relevant criteria used to determine the fine (*Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 91). The Commission further submits that there is no doubt in this case as to the continuity of the undertaking to which the decisions mentioned at recital 363 to the Decision were addressed.

453 Contrary to Hoechst's contention, moreover, the Commission maintains that an increase for repeated infringement may be imposed when the infringement at issue was committed even when the infringement in respect of which a sanction had previously been imposed had not yet become final. A warning is given immediately the Commission's decision is notified and not just when the decision becomes final. Likewise, the fact that the starting amount was increased on account of the size of the Hoechst group does not prevent the basic amount from being increased on account of repeated infringement. The increase imposed on account of the size of the group has no connection with the punishment of past infringements. The fact that past infringements are taken into account does not therefore constitute a 'double penalty'.

454 It is also immaterial that Hoechst discontinued its own commercial operations on the relevant market before the infringement ceased, since it was active on that market throughout the infringement.

455 Last, it is irrelevant that the earlier infringements concerned sectors other than the sorbates sector. The penalties applied to collusive activities relating to a product are intended to deter undertakings from breaching the prohibition in question, irrespective of the product at issue.

456 As regards the amount of the increase for repeated infringement, the Commission observes that it has a margin of discretion when fixing the amount of the fine (Case T–150/89 *Martinelli* v *Commission* [1995] ECR II–1165, paragraph 59), and that it is not required to apply a precise mathematical formula. The Commission refers in that regard to a number of decisions in other cases implementing Article 81 EC, and also to *Michelin* v *Commission*, paragraph 339 above (paragraph 292), where increases of 50% were applied or authorised.

457 The comparison which the applicant draws between the present case and the *Plasterboard* case is irrelevant since, between 1969 and 1994, Hoechst was 'warned' on several occasions, without drawing the necessary consequences. It is therefore not excessive to increase the basic amount of the fine by 50%.

458 Last, the fact that the 1996 Leniency Notice was applied does not mean that Hoechst's repeated infringement ceases to be an aggravating circumstance. In the Commission's submission, the 1996 Leniency Notice defines the conditions in which undertakings which have cooperated with the Commission may have their fines reduced. That notice cannot however justify the absence of a penalty in the case of a repeated infringement.

3. Findings of the Court

459 Section 2 of the Guidelines refers, as an example of aggravating circumstances, to 'repeated infringement of the same type by the same undertaking(s)'.

460 Repeated infringement, as understood in a number of national legal systems, implies that a person has committed fresh infringements after having been penalised for similar infringements (*Thyssen Stahl* v *Commission*, paragraph 325 above, paragraph 617, and *Michelin* v *Commission*, paragraph 339 above, paragraph 284).

461 Any repeated infringement is among the factors to be taken into consideration in the analysis of the gravity of the infringement in question (*Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 91, and Case C–3/06 P *Groupe Danone* v *Commission* [2007] ECR I–1331, paragraph 26).

462 The Commission has a discretion as regards the choice of factors to be taken into account for determining the amount of fines, such as, inter alia, the particular circumstances of the case, its context and the dissuasive effect of fines, without the need to refer to a binding or exhaustive list of the criteria which must be taken into account. The finding and the appraisal of the specific characteristics of a repeated infringement come within the Commission's discretion and the Commission cannot be bound by any limitation period when making such a finding (*Groupe Danone* v *Commission*, paragraph 461 above, paragraphs 37 and 38).

463 In the present case, Hoechst does not deny that the four earlier decisions to which the Commission refers in the Decision to support its finding that this was a repeated infringement concerned Hoechst and related to an infringement of the same type as that in the present case.

464 As regards the *Dyestuffs* decision (adopted on 24 July 1969) and the *Polypropylene* decision (adopted on 23 April 1986), it must be observed that the infringement found in the Decision began 10 years after the adoption of the *Dyestuffs* decision, while the *Polypropylene* decision was adopted while that infringement was continuing. Furthermore, although Hoechst was the subject of a finding of infringement in the context of the *Polypropylene* decision in 1986, it continued for 10 years to engage in its unlawful conduct on the sorbates market. The fact that Hoechst repeated its unlawful conduct shows a propensity on its part not to draw the appropriate consequences from a finding that it had infringed the Community competition rules (see, to that effect, Case T–38/02 *Groupe Danone* v *Commission*, paragraph 130 above, paragraph 355). In the light of those factors, Hoechst could expect that the Commission would take account of the earlier decisions referred to above when considering whether the infringement in the present case constituted a repeated infringement. Accordingly, there was nothing to prevent the Commission from relying on the *Dyestuffs* and the *Polypropylene* decisions for the purpose of finding that Hoechst had committed a repeated infringement in the present case.

465 As regards the *PVC I* decision (adopted on 21 December 1988), it must be noted that that decision was declared non-existent by the Court of First Instance (Joined Cases T-79/89, T–84/90 to

T–86/89, T–89/89, T–91/89, T–92/89, T–94/89, T–96/89, T–98/89, T–102/89 and T–104/89 *BASF and Others* v *Commission* [1992] ECR II–315) and ultimately annulled by the Court of Justice (Case C–137/92 P *Commission* v *BASF and Others* [1994] ECR I–2555), before the Commission adopted the Decision in the present case. It should be noted in that regard that, as regards the annulment of the *PVC I* decision by the Court of Justice, Article 231 EC provides that if the action is well founded, the Court of Justice is to declare the contested act void. Furthermore, although the *PVC II* decision, which was adopted by the Commission following the annulment of the *PVC I* decision, to a large extent sets out the factual elements of the latter decision, it may be distinguished from that decision, in particular, by the fact that it finds that the agreement or concerted practice in question dated from around August 1980, whereas the *PVC I* decision stated that the agreement or concerted practice in question dated from approximately September 1976. The same applies to the amount of the fines imposed on Hoechst (ECU 1 million in the *PVC I* decision and EUR 1.5 million in the *PVC II* decision). It follows that the two decisions cannot be regarded as identical. In those circumstances, it must be held that the Commission erred in referring to the *PVC I* decision, in the Decision, for the purpose of finding that Hoechst's conduct constituted a repeated infringement.

466 As regards the *PVC II* decision, it was indeed adopted on 27 July 1994, or during the period of the infringement, but it was the subject of judicial proceedings which culminated, after the end of the infringement at issue in the present case, in the judgments of 15 October 2002 in *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 208 above, and of 20 April 1999 in *Limburgse Vinyl Maatschappij and Others* v *Commission*, paragraph 153 above. It must be emphasised, however, that at Community level, and in accordance with the first paragraph of Article 256 EC, the *PVC II* decision was enforceable, provided that it imposed a pecuniary burden on persons other than the States, notwithstanding the action for annulment of that decision initiated under Article 230 EC. In effect, under Article 242 EC an action before the Community judicature does not have suspensory effect (Case T–275/94 *CB* v *Commission* [1995] ECR II–2169, paragraphs 50 and 51; see also, to that effect, Case T–28/03 *Holcim (Deutschland)* v *Commission* [2005] ECR II–1357, paragraph 121). It is common ground, moreover, that Hoechst did not seek a stay of execution of the *PVC II* decision pursuant to the second sentence of Article 242 EC. Last, it must be observed that the judgments of the Court of First Instance and of the Court of Justice, which, moreover, confirmed the decision, were delivered before the adoption of the Decision. It follows that the Commission was entitled to rely on the *PVC II* decision to find that Hoechst's conduct constituted a repeated infringement.

467 In the light of those factors, it must be concluded that, in finding that Hoechst's conduct constituted a repeated infringement, the Commission was entitled to rely on the *Dyestuffs*, *Polypropylene* and *PVC II* decisions but not on the *PVC I* decision.

468 However, the error on the Commission's part concerning the *PVC I* decision cannot call in question the characterisation of Hoechst's conduct as a repeated infringement in the present case or even the rate of the increase applied.

469 As regards the characterisation of the infringement as a repeated infringement, it is sufficiently supported by the *Dyestuffs*, *Polypropylene* and *PVC II* decisions.

470 As regards the rate of the increase applied in the present case, there is nothing in the Decision to indicate that the Commission's finding that the repeated infringement followed a number of previous infringements gave rise to a greater increase in the fine for an aggravating circumstance than would have been determined if only a single previous infringement had been identified (see, to that effect, judgment of 25 October 2005 in *Groupe Danone* v *Commission*, paragraph 130 above, paragraph 366).

471 Furthermore, as regards Hoechst's argument that the increase applied is disproportionate, including by comparison with the other undertakings at which the Decision was addressed, it is sufficient to bear in mind that the Commission has a discretion when setting the fine and that it is not required to apply a precise mathematical formula. In addition, when determining the amount of the fine the Commission must ensure that its action is deterrent. A repeated infringement is a circumstance that justifies a considerable increase in the basic amount of the fine. Repeated infringement is proof that the penalty previously imposed was not sufficiently deterrent. In this case, there is no reason to consider that the increase of 50% in the basic amount of the fine designed to steer Hoechst's conduct towards respect for the competition rules is disproportionate (see, to that effect, *Michelin* v *Commission*, paragraph 339 above, paragraph 293).

472 It must therefore be held that the characterisation of the applicant's conduct as a repeated

infringement in the present case and the rate of increase applied are well founded.

473 The other arguments put forward by Hoechst cannot affect that conclusion.

474 As regards the fact that Hoechst's former activity in the feedingstuffs additives sector had nothing to do with its activities in the PVC sector, it must be emphasised that the Guidelines refer to an 'infringement of the same type' by the same undertaking. In those circumstances, once an undertaking commits an infringement of the same type, even though the economic sector concerned is a different one, the Commission may find that there is an aggravating circumstance. Hoechst's argument in that regard cannot therefore be upheld.

475 As regards the fact that, in another case preceding the Decision, the Commission undertook to establish joint group liability by imposing increases of 10% per year for the period between the decision imposing a fine in one case and the end of the infringement in another case, it must be borne in mind that the Commission's previous practice in taking decisions does not in itself serve as a legal framework for fines in competition matters, since that framework is defined solely in Regulation No 17 and in the Guidelines (see *Michelin* v *Commission*, paragraph 339 above, paragraph 292 and the case-law cited) and that, furthermore, operators cannot have a legitimate expectation that an existing situation which is capable of being altered by the Commission in the exercise of its discretionary power will be maintained (see *Delacre and Others* v *Commission*, paragraph 372 above, paragraph 33 and the case-law cited, and *Dansk Rørindustri and Others* v *Commission*, paragraph 344 above, paragraph 171).

476 Last, as the Commission emphasises, the fact that the 1996 Leniency Notice was applied does not mean that Hoechst's repeated infringement ceases to be an aggravating circumstance. Therefore Hoechst's argument that an increase for repeated infringement is unfair when the undertaking concerned cooperates in full during the administrative procedure is inoperative.

477 For all of those reasons, the seventh plea must be rejected.

F – The 10th plea, claiming that the 2002 Leniency Notice should be applied by analogy, under a 'most favourable provision' principle

1. Summary of the Decision

478 At Section 12.2.3 of the Decision, which deals with the application of the 1996 Leniency Notice, the Commission observes that Hoechst considers that the 2002 Commission Notice on immunity from fines and reduction of fines in cartel cases (OJ 2002 C 45, p. 3; 'the 2002 Leniency Notice') should be applicable in this case.

479 First of all, the Commission rejects Hoechst's arguments, on the ground that Section 28 of the 2002 Leniency Notice provides that that notice is to apply from 14 February 2002 for all cases for which no undertaking has relied on the 1996 Leniency Notice. In this case, a number of undertakings – including Hoechst – contacted the Commission on the basis of the 1996 Leniency Notice. The 2002 Leniency Notice is therefore not applicable (recitals 431 and 432 to the Decision).

480 Next, as regards the 'most favourable provision' principle on which Hoechst relies, first, the Commission states that the Leniency Notices do not affect the legal framework established by Article 15(2) of Regulation No 17. Since the 'most favourable provision' principle requires a modification of the legal framework determining the amount of fines, that principle does not apply in this case (recital 434 to the Decision). Furthermore, the undertakings concerned which offered to cooperate with the Commission acquired a legitimate expectation that their cooperation would be based solely on the 1996 Leniency Notice, the only one applicable at that time (recital 435 to the Decision).

481 Second, the Commission emphasises that the approach taken in Commission Decision 1999/210/EC of 14 October 1998 relating to a proceeding under Article 85 of the EC Treaty (Case IV/F – 3/33.708 – British Sugar plc, Case IV/F – 3/33.709 – Tate & Lyle plc, Case IV/F – 3/33.710 – Napier Brown & Company Ltd, Case IV/F – 3/33.711 – James Budgett Sugars Ltd) (OJ 1999 L 76, p. 1) cannot to be transposed to this case, as the situations are different. The Commission points out on that point that in the *British Sugar/Tate & Lyle* case no leniency regime was yet in force when the Commission decided to apply, by analogy, the provisions of the 1996 Leniency Notice (recital 436 to the Decision).

482 Third, it is not possible to conclude that the 2002 Leniency Notice is, overall, more favourable to undertakings than the 1996 Leniency Notice. Whether or not the resulting amendments procure an advantage to a given undertaking is highly dependent in its individual situation (recital 437 to the Decision).

2. Arguments of the parties

a) Arguments of Hoechst

483 Hoechst claims that it ought to have obtained immunity, in application, by analogy, of the 2002 Leniency Notice. It submits that it has already set out those arguments in its response to the statement of objections.

484 Hoechst observes that it had already begun to cooperate in autumn 1998, when only the 1996 Leniency Notice existed. However, it is necessary to take into account the fact that, according to the general principles of criminal law, the most favourable rules should be applied. Where the 2002 Leniency Notice is more favourable than the 1996 Leniency Notice, it is the former that ought to be applied.

485 According to the 2002 Leniency Notice, every undertaking which has participated in a cartel, and therefore even a ‘leader’, can apply for immunity. Hoechst emphasises that the provision in Section B of the 1996 Leniency Notice under which a significant reduction in the fine cannot be granted in the case of leaders was not followed in the 2002 Leniency Notice. Furthermore, the 2002 Leniency Notice is more favourable to the first undertaking to cooperate, in the sense that it is no longer a requirement that that undertaking submits evidence enabling the Commission to take a decision ordering an investigation under Article 14(3) of Regulation No 17. For the application for immunity to succeed, it is not even necessary to submit all the evidence which the undertaking has. Such evidence may also be submitted orally, according to the Commission’s consistent practice, if the undertaking relies on a risk that the evidence will be communicated to the United States.

486 In this case, the information which Hoechst provided on 29 October 1998 was sufficient for it to be granted immunity under the 2002 Leniency Notice. Thus, Hoechst was the first to submit a formal request for immunity and was also the first to make the necessary oral statements to the Commission. If the 2002 Leniency Notice had been applicable, the Commission would in those circumstances have sent Hoechst a letter at the beginning of 1999 granting provisional immunity. Its application for immunity would thus have succeeded on the basis of the 2002 Leniency Notice, contrary to what the Commission asserts at recital 437 to the Decision.

487 Hoechst then submits that, as a general principle of law, the ‘most favourable provision’ principle is applicable both in criminal proceedings and in administrative proceedings. Hoechst refers in particular to Council Regulation (EC, Euratom) No 2988/95 of 18 December 1995 on the protection of the European Communities financial interests (OJ 1995 L 312, p. 1), which provides that ‘[n]o administrative penalty may be imposed unless a Community act prior to the irregularity has made provision for it’ and that ‘[i]n the event of a subsequent amendment of the provisions which impose administrative penalties and are contained in Community rules, the less severe provisions shall apply retroactively’.

488 Hoechst further submits that the ‘most favourable provision’ principle was applied by the Court of Justice in Case C‑354/95 *National Farmers’ Union and Others* [1997] ECR I‑4559, paragraphs 40 and 41, and that it is part of the legal tradition common to the Member States. Hoechst submits a comparative study which was produced during the administrative procedure.

489 Hoechst further submits that the Commission recognised the principle in the *British Sugar/Tate & Lyle* decision, paragraph 481 above, where it stated that ‘a direct application of [the 1996 Leniency Notice] is only possible for cooperation which took place after the publication of the notice in the Official Journal on 18 July 1996’ and that ‘[i]n all other cases of cooperation, the notice will be applicable by analogy, meaning in this context essentially an extension ratione temporis. Such analogous application means that favourable treatment in line with [the 1996 Leniency Notice] will depend on fulfilment of all the substantive requirements of cooperation as set out in that Notice’.

490 Hoechst contends that the Court of First Instance confirmed those principles in Joined Cases T‑202/98, T‑204/98 and T‑207/98 *Tate & Lyle and Others* v *Commission* [2001] ECR II‑2035,

paragraph 157 et seq.).

491 Likewise, Hoechst submits that in Commission Decision 2004/421/EC of 16 December 2003 relating to a proceeding under Article 81 of the EC Treaty and Article 53 of the EEA Agreement against Wieland Werke AG, Outokumpu Copper Products OY, Outokumpu Oyj, KM Europa Metal AG, Tréfimétaux SA and Europa Metalli SpA (Case COMP/E‑1/38.240 – Industrial tubes) (OJ 2004 L 125, p. 50), 'the industrial copper tubes decision', the Commission stated that, 'unlike point 23 of the 2002 Leniency Notice, the 1996 Leniency Notice does not provide for any specific reward to a leniency applicant that discloses facts previously unknown to the Commission and affecting the gravity or duration of the cartel' and that '[i]t is therefore appropriate to consider any such cooperation under the attenuating factors' (recital 384 to the industrial copper tubes decision). In consequence, the Commission reduced the basic amount of the fine imposed on one undertaking (Outokumpu) from EUR 38.98 million by EUR 22.22 million 'for effective cooperation outside the 1996 Leniency Notice' (recital 387 to the industrial copper tubes decision). The Commission observed, in that regard, that 'Outokumpu should not be penalised for its cooperation by imposing on it a higher fine than the one that it would have had to pay without its cooperation' and that '[t] herefore, the basic amount of Outokumpu's fine [was] reduced by a lump sum of EUR 22.22 million so that it [would] be the same as the hypothetical amount of fine that would have been imposed on Outokumpu for a four-year infringement' (recital 386 to the industrial copper tubes decision).

492 Hoechst further submits that, even on the principle that the 1996 Leniency Notice does create legitimate expectations on the part of third parties that must be protected, that point is immaterial in the present case. Only Chisso could claim to be a third party deserving of protection. However, Chisso was not alleged to have been a leader and its oral contributions were not denied recognition as acts of cooperation. On the contrary, Chisso had the possibility, and was recognised as having the right, to rely on the fact that the oral and written contributions which it made during the investigation would be taken into account as attenuating circumstances. Nor would Chisso's legitimate expectation have been frustrated if the Commission had applied those principles to Hoechst and if Hoechst had thus been exempted from a fine under one or other Leniency Notice (or under both). In both cases, Hoechst's acts of cooperation ought to have entailed an exemption from the fine whereas Chisso's acts of cooperation, which came about subsequently, ought to have entailed a reduction in the fine.

493 Hoechst concludes that if the Commission was not obliged to grant immunity from a fine under the 1996 Leniency Notice, it ought to have done so in application, by analogy, of the 2002 Leniency Notice.

494 Hoechst further submits that, contrary to the Commission's answer to a question put by the Court, the application of the 2002 Leniency Notice would have allowed it to obtain immunity.

495 First, in Hoechst's contention, in October/November 1998 Chisso did not provide all the documents that could have been submitted. That objection ought therefore not to be addressed solely to Hoechst. In addition, Hoechst states that the Commission officials responsible for the file did not immediately require the submission of the documents declared and submitted later. Nor did they require, at the time, a list of documents that would be submitted later.

496 Second, it is absurd to consider that the material communicated by Hoechst on 29 October 1998 was not sufficient for the purpose of adopting a decision ordering investigations under Article 14(3) of Regulation No 17. Hoechst emphasises, in that regard, that the Commission was in a position to prove the existence of the cartel without there being any need to order an investigation. As regards the fact that the Commission did not have specific information about the undertakings concerned (in particular the addresses of their offices), Hoechst observes that the Commission sent requests for information to those undertakings. It therefore already knew, at the time and on account of Hoechst's cooperation, to whom to address such requests for information.

b) Arguments of the Commission

497 The Commission contends that the application of the 'most favourable provision' principle presupposes an amendment of the legal basis which determines the imposition of the fine. No amendment of that type took place. In particular, Article 15(2) of Regulation No 17 was not amended by the 2002 Leniency Notice. That notice defines only the criteria for the grant of preferential treatment to certain undertakings wishing to cooperate with the Commission, but does not alter the legal framework which determines the fines to be imposed. In that regard, the Commission refers, by analogy, to *LR AF 1998* v *Commission*, paragraph 422 above (paragraph

233).

498 The Commission also submits that, even though it is bound in the exercise of its discretion by the Leniency Notice in force, it is so bound only while those rules are applicable. The Commission emphasises at this point that those rules create a legitimate expectation on the part of the undertakings concerned. In this case, the undertakings' legitimate expectation that they would be given favourable treatment as a consequence of their cooperation was based solely on the Leniency Notice then in force, namely the 1996 Leniency Notice. In so far as the 1996 Leniency Notice did not create a legitimate expectation solely on the part of Hoechst, the application of the 2002 Leniency Notice is precluded.

499 Nor does the present case concern actual criminal provisions, but provisions capable of justifying the imposition of a penalty. The 'most favourable provisions' principle cannot apply with respect to a Leniency Notice. Both the former and the new provisions proceed from the principle that immunity can be granted only to a single undertaking. An application of the 'most favourable provision' principle would have the consequence that, where two undertakings entered into unlawful agreements and sought immunity, one undertaking having been the first to cooperate under the 1996 Leniency Notice and the other the first to do so under the 2002 Leniency Notice, both undertakings would have to be granted immunity. That would lead to a complete lack of penalty for both parties to the agreement, which cannot be the object of a Leniency Notice.

500 Furthermore, the present case may be distinguished from the case in which the Commission adopted Decision 1999/210 (paragraph 481 above). At the time, the Commission applied the 1996 Leniency Notice by analogy in the pending proceedings during which the undertakings concerned had cooperated before the publication of that notice. In the present case, according to the Commission, such an approach was not indicated, since the 2002 Leniency Notice itself contains, at paragraph 28, clear guidelines concerning the treatment of transitional cases. Those guidelines ensure that all the undertakings concerned are treated equally.

501 As regards the industrial copper tubes decision, referred to at paragraph 491 above and relied on by Hoechst, the Commission states that it did not apply the 'most favourable provision' principle with respect to the 2002 Leniency Notice. It merely considered, in accordance with Section 3, sixth indent, of the Guidelines, that a circumstance which, under the new regime, justified a particular reward constituted effective cooperation by the undertaking in the proceedings, outside the scope of the 1996 Leniency Notice.

502 The Commission further submits, in answer to a question put by the Court, that even on the hypothesis that the 2002 Leniency Notice was applicable in this case, Hoechst would not have benefited from immunity, or indeed from a greater reduction of the fine imposed on it.

503 As regards immunity from a fine, first, the Commission observes that Hoechst did not provide, in October/November 1998, all the evidence available to it, contrary to paragraph 13(a) of the 2002 Leniency Notice. For the same reasons, paragraph 13(b) of that notice could not apply, since the Commission did not receive a descriptive list accurately reflecting the nature and content of the relevant evidence. In addition, Hoechst ought to have undertaken to disclose that evidence at a 'later agreed date'. Accordingly, in the Commission's submission, in autumn 1998 Hoechst did not satisfy the conditions laid down in paragraph 13 of the 2002 Leniency Notice. On the basis of the finding that Hoechst provided in March and April 1999 all the evidence available to it, it cannot have satisfied the conditions laid down in paragraph 13 of the 2002 Leniency Notice until then. In fact, the Commission already had sufficient evidence to find an infringement of Article 81 EC, which, in light of paragraph 10 of the 2002 Leniency Notice, prevented Hoechst from benefiting from immunity from a fine.

504 Second, in the absence of detailed information concerning the persons who had taken part in the cartel, and also of the location of the offices, the Commission was unable, according to paragraph 8 (a) of the 2002 Leniency Notice, to adopt a decision ordering an investigation in the sense of Article 14(3) of Regulation No 17. That applies *a fortiori* because the other undertakings involved were Japanese and because Hoechst stated, furthermore, that there was no indication that the only other European operator had participated in the cartel.

505 Third, the Commission refers to recital 456 to the Decision and contends that at the meeting of 29 October 1998 Hoechst provided an imprecise version of the facts and that it misleadingly emphasised the moderate nature of the cartel. That description cannot be regarded as 'evidence' enabling the Commission to find an infringement of Article 81 EC within the meaning of paragraph 8

(b) of the 2002 Leniency Notice.

506 As regards a reduction in the fine, the Commission emphasises that it cannot be greater than 50% under the 2002 Leniency Notice and that it may even be smaller. That reduction takes account of the date and the degree of added value of the evidence in question. On that basis, the Commission maintains that Hoechst's misleading statement as to the moderate nature of the cartel was used against it and that a reduction of under 50% was granted to it.

3. Findings of the Court

507 As a preliminary point, any application 'by analogy' of the 2002 Leniency Notice must be rejected, since Hoechst's cooperation during the proceedings was governed by the 1996 Leniency Notice. The present situation may be distinguished, in that regard, from the cases referred to by Hoechst in which the 1996 Leniency Notice was applied by analogy to situations which had commenced before the adoption of that notice but which were not subject to any other legal rule.

508 In so far as Hoechst's plea may be taken to raise, in reality, the question as to which provision was applicable at the material time, it is sufficient to state that such a question cannot arise. Paragraph 28 of the 2002 Leniency Notice clearly provides that that notice is to apply from 14 February 2002 for all cases in which no undertaking has sought to 'take advantage of [the 1996 Leniency Notice]'. In this case, the undertakings concerned, including Hoechst, sought to take advantage of the 1996 Leniency Notice.

509 It must be observed, moreover, that the cooperation on the part of the undertakings concerned began at the end of 1998, that is to say at a time when only the 1996 Leniency Notice was applicable, but continued after publication of the 2002 Leniency Notice, as the Commission's last request for information was issued on 13 December 2002. It should be emphasised, furthermore, that it was only at the stage of the adoption of the Decision that the Commission definitively ruled on the cooperation of the undertakings concerned and, in particular, on the question of which undertaking, if any, could benefit from immunity from a fine. Accordingly, the acts of cooperation of the undertakings concerned, in the context of the 1996 Leniency Notice, produced their effects after the adoption of the 2002 Leniency Notice. However, in the case of legal situations which have not yet exhausted their effects, a new rule applies immediately to the future effects of a situation which arose under the former rule 'in the absence of transitional provisions' (Case C–512/99 *Germany* v *Commission* [2003] ECR I–845, paragraph 46). As such transitional provisions were in place in this case, it is necessary to take those provisions into account and to consider that the 1996 Leniency Notice was applicable.

510 That conclusion also enables the principles of legal certainty and legitimate expectations to be satisfied. It must be emphasised, in that regard, that a Leniency Notice gives rise to a legitimate expectation in being able to benefit from a certain percentage of reduction (*Dansk Rørindustri and Others* v *Commission*, paragraph 344 above, paragraph 188). Furthermore, regard being had to the wording of section B(b) of the 1996 Leniency Notice, that notice is designed to reward by a very substantial reduction in the fine only the single undertaking which is the 'first' to adduce decisive evidence (see *BASF* v *Commission*, paragraph 120 above, paragraph 550 and the case-law cited).

511 In addition, and without there being any need to determine whether the principle on which Hoechst relies might apply to the Commission's Leniency Notices, it is sufficient to state that the 2002 Leniency Notice is complex, in that it amends the 1996 Leniency Notice on several points, as regards both the substantial rules and the procedural rules. Some amendments are more favourable to the undertakings concerned, while others are less favourable. In addition, the application of the 2002 Leniency Notice varies according to the case. It is not therefore possible to characterise the 2002 Leniency Notice as being more favourable overall than the 1996 Leniency Notice.

512 Furthermore, and specifically, the application of the 2002 Leniency Notice to the present case would not necessarily result in a more favourable result for Hoechst.

513 In that regard, it must be observed that, in order to benefit from immunity from a fine under the 2002 Leniency Notice, the undertaking must 'immediately' provide the Commission with all the evidence relating to the suspected infringement available to it at the time of the submission, 'or' initially present this evidence in hypothetical terms, in which case the undertaking must present a descriptive list of the evidence it proposes to disclose at a later agreed date. This list should accurately reflect the nature and content of the evidence (paragraph 13(a) and (b) of the 2002

Leniency Notice).

514 In the present case, and for the reasons set out at paragraphs 574 to 578 below, it must be held that Hoechst did not immediately provide all the evidence available to it. Nor is it apparent from the documents in the file that Hoechst provided evidence which allowed the Commission to know the nature and content of the evidence in its possession and which could have been disclosed later.

515 Accordingly, the application of the 2002 Leniency Notice to the present case would not necessarily have led to a reduction in Hoechst's fine.

516 Furthermore, and in so far as the 2002 Leniency Notice provides, in addition to immunity, for a reduction in the fine of up to 50%, its application would not necessarily have led to a greater reduction in Hoechst's fine than that already granted.

517 For all of those reasons, the 10th plea must be rejected.

G – The eighth and ninth pleas, relating to the application of the Leniency Notice

518 By its eighth plea, Hoechst maintains that the Commission made an error of assessment in determining the undertaking which was the first to cooperate in this case. By its ninth plea, Hoechst contends that the Commission erred in assessing the content of its cooperation.

519 The Court will examine the eighth plea first.

1. Summary of the Decision

520 At section 12.2.3 of the Decision, relating to the application of the 1996 Leniency Notice, the following statement is to be found (recital 440 to the Decision):

'At a meeting held on 13 November 1998, Chisso submitted an oral description of the cartel's activities and provided documentary evidence … The Commission considers that on that occasion Chisso was the first undertaking to adduce decisive evidence on the existence of the cartel which is found in this Decision. The evidence handed over to the Commission on 13 November 1998 consisted, in particular, of handwritten notes on a number of cartel meetings. The oral description of the cartel's activities allowed the Commission to put the documents in their real context. The information provided by Chisso enabled the Commission to establish the existence, content and the participants of most of the cartel meetings, as described in Part I.'

521 As regards Hoechst, it is stated at recital 451 to the Decision that '[a]lthough it was not the first company to provide the Commission with decisive evidence, [Hoechst] contributed, at an early stage, to establishing important aspects of the case and, after having received the statement of objections, it did not substantially contest the facts on which the Commission based its allegations'.

2. Arguments of the parties

a) Arguments of Hoechst

522 While accepting that the 1996 Leniency Notice was applicable, Hoechst contends that it ought to have been considered the first undertaking to have cooperated with the Commission and to have provided the essential evidence of the cartel.

523 Hoechst carries out a chronological analysis of the facts and submits that Chisso's lawyers met the Commission on 29 September 1998, in connection with another case. It is apparent from the minute of that meeting that Chisso's lawyers mentioned that they also represented another undertaking which had expressed its desire to cooperate with the Commission concerning a cartel relating to sorbic acid.

524 However, Chisso's lawyers were not prepared, or authorised, to disclose the identity of that undertaking on that date. That is apparent, in particular, from the two Commission internal memos dated 1 and 2 October 1998. The fact that the author of the internal memos joined the meeting after it had begun does not permit the conclusion that Chisso's identity had been disclosed beforehand, in particular to the Commission's then Deputy Director-General for Competition.

Furthermore, the reference to another undertaking in the internal memo of 2 October 1998 is not a typographical error on the Commission's part and therefore does not refer, in fact, to Chisso.

525 Hoechst also contends that no request was formulated, on that date, that satisfied the requirements of Section E.1 of the 1996 Leniency Notice, and that no evidence was offered or handed over at that meeting. Furthermore, no aspect of the infringement was described and the names of the participating undertakings were not even provided.

526 On 23 October 1998, the lawyers representing Hoechst and Nutrinova contacted the Commission by telephone in order to request a meeting.

527 On 29 October 1998, during the meeting with the Commission, the lawyers representing Hoechst and Nutrinova formally requested that the undertakings which they represented be treated as principle witnesses of the cooperation. In that context, they described the essential aspects of the sorbates cartel, namely the relevant products, the undertakings involved, the anti-competitive conduct and the period in question. That oral description of the essential facts was then accepted by the Commission as an act of cooperation. A comparison with the subsequent findings of the Decision shows that the information provided by Hoechst on that date had been used without restriction in the Decision. In particular, the Commission made no findings in the Decision concerning the structure of the cartel that were fundamentally different from the information provided by Hoechst on 29 October 1998.

528 On 13 November 1998, Chisso's lawyers gave, for the first time, an oral account of the sorbates cartel. It was only on that date that Chisso's identity was disclosed.

529 Hoechst subsequently sent a number of written communications to the Commission, namely in December 1998, March and April 1999 and till later on various occasions. Hoechst's contribution of 19 March 1999 was the first written contribution confirming, in the form of a 'company statement', the constituent elements of the cartel.

530 The first company statement from Chisso was not made until 20 April 1999. None of the other undertakings which participated in the infringement contacted the Commission during that first stage of the procedure.

531 Those facts show that Hoechst was the first to provide the Commission with 'decisive evidence' within the meaning of the 1996 Leniency Notice, and it did so orally.

532 Hoechst adds that it is consistent with the Commission's practice for an undertaking to be regarded as being the first to cooperate, even if it initially provides oral evidence, provided that that evidence satisfies the 'decisive evidence' criterion and that it is then confirmed in writing and supplemented. That oral evidence already enables the Commission to carry out an inquiry and to undertake inspections or send requests for information. The written form of cooperation is not required either by the 1996 Leniency Notice or by the 2002 Leniency Notice.

533 Hoechst contends at this point that the Commission has been obstructive in so far as, first, it promised to warn Chisso if any other undertakings should overtake it and, second, it abruptly refused to recognise the oral contributions as acts of cooperation, thus going back on its earlier approach. Hoechst refers, on the latter point, to the Commission's letter of 19 January 1999 in which it considered that Hoechst had ceased to cooperate, to Hoechst's letter of 28 January 1999 expressing its incomprehension on that matter, to the telephone interview of 5 March 1999 during which the Commission indicated that the time for 'inconclusive' meetings was over, and also to the Commission's letter of 29 March 1999 in which it refused to receive oral testimony from Hoechst. That approach constitutes a breach of the right to a fair hearing and of the principle of sound administration. Hoechst also observes that since then the Commission's practice has been to accept undertakings' requests and acts of cooperation in oral form. The Commission's approach also gives an impression of unfairness in so far as, on the contrary, Chisso's oral testimony was accepted.

534 In any event, even if the Commission – contrary to its then practice and to its more recent practice – were to consider only the written information, Hoechst's written communication of 19 March 1999 was the first written document submitted on behalf of an undertaking and confirming information given orally.

535 The production of minutes of meetings by Chisso on 13 November 1998 cannot be characterised as

the first written cooperation, since those documents are incomprehensible and make sense only by reference to the account of the facts first provided by Hoechst on 29 October 1998. The lack of probative force of the documents provided by Chisso is also apparent from the fact that the Commission considered it necessary to conduct a further hearing of Chisso's employees on 9 December 1998. Furthermore, the minutes provided by Chisso refer to only some meetings in 1995 and 1996. For the longer period from 1978 to 1994, Chisso did not submit any written document on 13 November 1998. In addition, that 'evidence' is not used in the Decision to establish the activity of the cartel and is therefore not 'decisive'.

536 Hoechst emphasises, in that regard, that in a Commission internal memo of 9 November 1998, communicated in the context of access to the file, it is stated that Chisso's lawyers 'were the first to offer their cooperation and were then overtaken by subsequent events in which other undertakings provided useful information before them'.

537 Hoechst further submits that the Commission cannot criticise it on the ground that the explanations provided on the agreements differ on certain points from those used in the Decision and at the same time accept that the information provided by Chisso, which thereby obtained immunity, does not cover the entire infringement period or all the details of the cartel.

b) Arguments of the Commission

538 The Commission emphasises primarily, as regards its internal memo of 9 November 1998 on which Hoechst relies, that the Commission officials' informal assessment at an early stage of the proceedings cannot prejudge the decision adopted by the Commission itself.

539 For the remainder, the Commission takes pains to correct the way in which Hoechst describes the course of the events in this case.

540 First, as regards the meeting of 29 September 1998 – which concerned two cases, including the sorbates case, and which was held between 16.30 and 18.30 –, the Commission asserts that the lawyers were acting on behalf of Chisso, as may be seen from recital 4 to the Decision.

541 The Commission observes, in that regard, that there are two internal memos relating to that meeting.

542 As regards, the internal memo dated 2 October 1998, relating to a meeting on sorbic acid, the Commission states that the Commission's then Deputy Director-General for Competition met Chisso's lawyers between 16.30 and 17.30. The Commission also observes that that internal memo mentions the 'company Chisso'. That proves that Chisso's lawyers referred to their client by name. Had they not done so, the author of the memo would not have been made aware of the identity of that undertaking. The fact that the internal memo of 2 October 1998 makes reference to an 'undertaking unknown' is not inconsistent. That indicates solely the reference under which the meeting with the lawyers had been agreed. Furthermore, the fact that that memo mentions another undertaking involved in the context of another procedure is a mere typographical error. The undertaking referred to was really Chisso.

543 As regards the internal memo dated 1 October 1998 (which covers two cases, including the sorbic acid case), the Commission emphasises that two officials joined the meeting from 17.30. The explanation for the fact that that internal memo mentions that the undertaking wishing to provide information on a cartel in the sorbates sector was not identified lies in the fact that Chisso was not named before the two officials concerned, one of whom is the author of the internal memo.

544 Second, it is incorrect to assert that Hoechst described the main aspects of the sorbates cartel at the meeting of 29 October 1998. Hoechst itself stated in a letter of 27 October 1998, moreover, that it proposed a 'first discussion designed to clarify the other details'. According to the Commission's internal memo of 6 November 1998, Hoechst stated at the beginning of the meeting that it needed more time to obtain information in sufficient detail, in order to supply full information.

545 The information provided by Hoechst at that meeting of 29 October 1998 was very general and the facts were described in very vague terms. Furthermore, Hoechst mentioned half-yearly meetings at which no specific agreement had been concluded. It also referred to the informal and social nature of the meetings (recital 456 to the Decision).

546 In the relevant part of the section of the Decision devoted to the description of the events (recitals 79 to 251), the Commission did not refer once to the statements made by Hoechst on 29 October 1998. Hoechst's comments concerning the agreements also differed considerably from the facts indicated in the Decision.

547 Third, the Commission contends that Hoechst was not ready to cooperate fully until 19 March 1999. That is clear from the letters of 21 December 1998 and 28 January 1999 in which Hoechst informed the Commission that, owing to the criminal and civil proceedings pending in the United States, it had decided not to provide all the useful information at that time, or the documents or evidence of the cartel available to it. In the letter of 19 January 1999, the Commission stated however that that attitude constituted a refusal to cooperate within the meaning of the 1996 Leniency Notice. In acting as it did, Hoechst assumed the risk of being fined.

548 Contrary to what Hoechst appears to contend, the Commission emphasises that the failure to take the oral contributions into account was not inconsistent with the practice observed at the time. That practice changed only after the adoption of the 2002 Leniency Notice.

549 Furthermore, as regards the objection relating to obstruction during the proceedings, the Commission emphasises that, in its letter of 29 March 1999, on which Hoechst relies, it stated that if Hoechst wished to benefit from the 1996 Leniency Notice it must at least provide information, documents or other evidence contributing to establishing the existence of the cartel. Those words are the words of Section D, paragraph 2, first indent, of the 1996 Leniency Notice. The letter of 29 March 1999 therefore indicates that, in the Commission officials' view, Hoechst did not thus far even fulfil the conditions of that first indent. The minute drawn up by Hoechst's lawyers of certain parts of the telephone conversation of 5 March 1999 with the Commission official responsible for the case does not indicate otherwise. That does not constitute obstruction, but provides a true account of the situation in accordance with the 1996 Leniency Notice.

550 Fourth, the Commission submits that it is incorrect to assert that Chisso handed over a small number of documents at the meeting of 13 November 1998. In the internal memo of 19 November 1998, the Commission refers to several documents relating to contacts between competitors in 1995 and 1996. Those documents are agenda of meetings and personal notes. Furthermore, Chisso submitted tables with the target prices agreed for the entire period of the cartel. That written evidence, which was also explained orally, assumed decisive importance for the Commission in the adoption of the Decision (recital 440 to the Decision), since, for the first time during the administrative procedure, they made it possible to prove the infringement, even though that evidence did not cover all the period found or all the details of the cartel. It cannot be inferred from the promise given to Chisso at that meeting to warn it that that undertaking did not yet satisfy the conditions to benefit from immunity. The very most that can be inferred is that it was not certain that Chisso would obtain immunity on the basis of its acts of cooperation at that time.

551 On the other hand, it was not until 19 March 1999 that Hoechst provided the Commission with information that might be regarded as the beginning of effective cooperation. However, the written communication of 19 March 1999 does not contain a detailed description of the meetings and procedures of the cartel. Hoechst did not provide those details until 28 April 1999, in answer to specific questions from the Commission.

3. Findings of the Court

552 It must be borne in mind that Section B of the 1996 Leniency Notice provides, among other conditions, that the undertaking which 'is the first to adduce decisive evidence of the cartel's existence' (Section B(b) of the 1996 Leniency Notice) will benefit from a reduction of at least 75% of the fine or even from total exemption from the fine that would have been imposed if it had not cooperated.

553 It follows from the very wording of Section B(b) of the 1996 Leniency Notice that the 'first' undertaking is not required to have provided all the evidence proving all the details of the functioning of the cartel, but that it is sufficient for it to adduce 'decisive evidence'. That text does not require that the evidence adduced is in itself 'sufficient' for the purpose of drafting a statement of objections, or indeed for the adoption of a final decision finding an infringement (judgment of 15 June 2005 in *Tokai Carbon and Others* v *Commission*, paragraph 118 above, paragraph 362). However, although the evidence referred to in Section B(b) of the 1996 Leniency Notice need not necessarily be sufficient in itself to establish the existence of the cartel, it must none the less be decisive for that purpose. It must therefore not be simply an indication as to the direction which the

Commission's investigation should take but must be material which may be used directly as the principal evidence supporting a decision finding an infringement (*BASF* v *Commission*, paragraph 120 above, paragraph 493).

554 It must be further emphasised that decisive evidence within the meaning of Section B(b) of the 1996 Leniency Notice may also be adduced orally (*BASF* v *Commission*, paragraph 120 above, paragraph 506).

555 Last, it must be borne in mind that the Commission has a certain discretion in determining whether the cooperation in question was 'decisive' in facilitating its task of finding the existence of an infringement and putting an end to it and it is only where it manifestly exceeds that discretion that it may be criticised (judgment of 15 June 2005 in *Tokai Carbon and Others* v *Commission*, paragraph 118 above, paragraph 362).

556 It is in the light of the foregoing considerations that the Court must examine whether, in this case, the Commission made a manifest error of assessment in finding that Chisso had been the first undertaking to adduce decisive evidence of the cartel's existence.

557 In that regard, it must be borne in mind that, at recital 440 to the Decision, the Commission states that '[a]t a meeting held on 13 November 1998, Chisso submitted an oral description of the cartel's activities and provided documentary evidence' and that it 'considers that on that occasion Chisso was the first undertaking to adduce decisive evidence [of] the existence of the cartel which is found in this Decision'. It follows that the Commission relied solely on the oral description of the cartel's activities and on the documentary evidence provided at the meeting of 13 November 1998, and not later, in order to find that Chisso had been the first undertaking to adduce decisive evidence of the cartel's existence.

558 Second, it must be observed that, at the meeting of 13 November 1998, Chisso provided a detailed oral description of the cartel's activities. It follows from the minute of that meeting, drawn up by the Commission, that Chisso stated who were the participants in the cartel, the duration of the cartel, 19 dates of meetings and the places at which they were held, the object and the functioning of the cartel. On the last two points, Chisso stated, in particular, that the undertakings concerned had concluded agreements on prices and volumes of sorbates and that, while the cartel was in force, they were aware that their activities were unlawful. Chisso also described the method of fixing quotas and any problems encountered, the conduct of the meetings and the preparatory meetings between the Japanese producers, the names of Chisso's employees who had participated in the meetings and the names of certain employees of the other undertakings concerned, the terms of the contacts between Hoechst and Daicel and the system of monitoring the meetings and the method of setting target prices.

559 Third, it must be emphasised that, in addition to a detailed oral description of the cartel's activities, Chisso also provided at the meeting of 13 November 1998 documentary evidence which is found in the case-file (156 pages in all). More particularly, Chisso sent detailed notes (handwritten in Japanese with a translation into English) taken at the cartel meetings in spring and autumn 1995 and 1996 (which reflected the level of target prices fixed between the members of the cartel), the agenda of those meetings, the visiting cards of the persons who participated in the meetings and the sales quota volumes agreed for 1992 to 1995.

560 Contrary to Hoechst's contention, those documents were used by the Commission, since a number of pages are referred to in the Decision, in connection, in particular, with the conduct of and the actual results of the joint meetings (see, in particular, footnotes 82, 140, 141, 144 and 150 to the Decision). Accordingly, those documents were relevant for the purpose of proving, for the purposes of the 1996 Leniency Notice, the 'cartel's existence'.

561 In addition, contrary to Hoechst's contention, those documents were sufficiently clear, in spite of the fact that an employee of Chisso who had participated in the joint meetings provided further information about them at a meeting held with the Commission's services on 9 December 1998. As shown in the minute of that meeting drawn up by the Commission, the information relating to those documents was provided not with a view to their general comprehension but in order to explain certain details connected, in particular, with the use of abbreviations.

562 Fourth, it must be observed that Hoechst met the Commission's services on 29 October 1998, that is to say before Chisso, to provide an oral description of the meetings in question. In particular, Hoechst mentioned the participants in the meetings, the approximate duration of the meetings

(from the end of the 1970s/beginning of the 1980s until 1995/1996), the frequency of the meetings and their object.

563 However, it must be emphasised that at that meeting Hoechst provided no written document to support its statements. In that regard, according to the minute drawn up by the Commission and not contested by Hoechst, Hoechst's representative mentioned 'the great difficulties which Nutrinova had in finding all the relevant details of those meetings'.

564 In the same minute, moreover, it is stated that 'the object of those meetings was to share customers or fix prices, within the strict meaning of the word' and that 'no monitoring system existed' or again that Hoechst's lawyer 'was categoric about the fact that the level of the agreements at those meetings was moderate and not typical of a price-fixing or market-sharing cartel'.

565 Likewise, in the minute of the meeting of 29 October 1998 drawn up by Hoechst, it is stated that 'the discussions between Hoechst/Nutrinova and the Japanese were not about customer-sharing, agreements on calls for tenders or price-fixing in the strict sense of the term'.

566 At no time during the meeting of 29 October 1998 did Hoechst state that the joint meetings had the object of allocating sales volume quotas for Europe to the undertakings concerned, or that a system for monitoring the meetings had been set up, as was concluded in the Decision, in Article 1 of the operative part, on the basis of the statement of objections, without those elements being disputed by Hoechst. As regards the sales quotas, Hoechst mentioned only in the minute referred to above, under the heading 'rate of increase', that 'competitors had discussions on the way in which they see market growth and which would be capable of supplying increased demand'.

567 Last, Hoechst stated in its minute of the meeting of 29 October 1998 that 'the meetings were not organised systematically and that the agenda were very similar'.

568 It follows from all of those factors that, first, at the meeting of 13 November 1998 Chisso provided a detailed description of the activities and functioning of the cartel. Second, Chisso's description was supported by documentary evidence which was relevant for the purpose of proving the cartel's existence. Third, it follows from the meeting of 29 October 1998 that Hoechst did indeed give an account of the meetings in question, but that that account was less detailed than Chisso's, it did not accurately reflect the object and the functioning of the cartel in issue and, last, it was not supported by any documentary evidence.

569 In the light of the foregoing, it must be concluded that the Commission did not make a manifest error of assessment when it considered that Chisso had been the first undertaking to adduce decisive evidence of the existence of the cartel.

570 None of the arguments put forward by Hoechst can upset that conclusion.

571 As regards the fact that the Commission promised Chisso at the meeting of 13 November 1998 that it would warn it if any other undertakings were overtaking it, and as already stated in the context of the analysis of the first plea, that fact cannot affect the finding of fact that Chisso was, on the occasion of that meeting, the first undertaking to adduce decisive evidence of the existence of the cartel.

572 As regards the fact that the Commission bluntly refused to recognise Hoechst's oral contributions as acts of cooperation, in particular the evidence provided by Hoechst during the meeting of 29 October 1998, it must be observed that, at recital 5 to the Decision, the Commission expressly states that at a meeting on 29 October 1998 between the legal representatives of Hoechst and Nutrinova and the Commission services, an oral description of the product market, the producers, market shares, the proceedings in the United States and the cartel's activity was provided. At no point in the Decision is it stated that Hoechst's oral contribution at the meeting of 29 October 1998 was not taken into account. The fact that the Commission was able to take the view, at a particular time during the proceedings, that Hoechst's cooperation did not satisfy the requirements of the 1996 Leniency Notice does not alter the finding that Hoechst's oral contribution at the meeting of 29 October 1998 was ultimately taken into account in the context of the Decision.

573 In any event, it must be observed that Hoechst refers in its written submissions to a letter from the Commission dated 19 January 1999 in which the Commission stated:

‘The Commission services can only take note that your position has been reversed and that Nutrinova does not now intend to cooperate in the terms of [the 1996 Leniency Notice] … Such information on sorbates as has been delivered by Nutrinova to date cannot be considered to have been provided within the framework of this Notice.’

574 It must be observed in that regard that at the meeting with the Commission’s services on 29 October 1998 Hoechst hoped to be able to provide a written contribution by the end of 1998. However, in a letter of 21 December 1998, to which the Commission specifically responds in the letter of 19 January 1999, Hoechst stated, in addition to the fact that cooperation by means of oral testimony could not be contemplated, the following:

‘Unfortunately, we cannot keep our promise of providing you with a full report of the facts by the end of this year … With the proceedings in the [United States] remaining open, we have been advised by [United States] counsel that a full disclosure to the Commission as initially contemplated in our discussions in October would seriously compromise the interests of Nutrinova (and certain individuals) in the [United States].’

575 It follows that Hoechst clearly indicated that at that stage of the proceedings it was unable to cooperate further with the Commission, whether in the form of written cooperation or by oral testimony. In those circumstances, the Commission cannot be criticised for having taken the view, at that stage of the proceedings, that Hoechst was not fully cooperating and that, accordingly, the previous acts of cooperation could, where appropriate, be considered insufficient in the context of the 1996 Leniency Notice.

576 Hoechst’s position was subsequently reiterated in a letter of 28 January 1999, in which it stated:

‘Nutrinova whilst wishing to cooperate fully and immediately with the Commission cannot do so at present without creating serious and unbearable risks for itself and its current and/or former employees under [United States] law.’

577 The fact that the Commission, in a telephone conversation on 5 March 1999 or by letter dated 29 March 1999, stated that a new oral contribution would not be sufficient was the result of uncertainty as to Hoechst’s cooperation at that stage of the proceedings and was intended to draw Hoechst’s attention to the fact that, in order to benefit from the 1996 Leniency Notice, it must adduce further probative evidence of the existence of the cartel.

578 It follows from those considerations that, in the Decision, the Commission ultimately accepts Hoechst’s oral contributions as acts of cooperation and that, in any event, the Commission’s position during the administrative procedure was the result of uncertainty as to Hoechst’s effective cooperation at the beginning of the proceedings, Hoechst having stated, initially, that it could not be contemplated that its employees would provide testimony before the Commission.

579 For all of those reasons, the arguments put forward in the context of the eighth plea must be rejected.

580 In those circumstances, there is no need to examine Hoechst’s ninth plea, since, as it was not the first undertaking to adduce decisive evidence of the existence of the cartel, Hoechst could not expect to obtain a greater reduction in its fine than that granted under Section D of the 1996 Leniency Notice, namely 50% of the amount of the fine that would have been imposed if it had not cooperated.

581 However, it must be observed that certain procedural irregularities can sometimes justify a reduction in the fine even though they cannot lead to the annulment of the contested decision (see, to that effect, *Baustahlgewebe* v *Commission*, paragraph 211 above, paragraphs 26 to 48, and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, paragraph 216 above, paragraphs 436 to 438).

582 In this case, it is necessary to take account of the breach of the principles of sound administration and equal treatment in the application of the 1996 Leniency Notice, established at paragraph 137 above, and on which Hoechst also relied in the eighth and ninth pleas. Accordingly, in light of the importance of the observance by the Commission of those principles in administrative procedures, and in the exercise of its unlimited jurisdiction, the Court decides to reduce the fine imposed on Hoechst by 10%.

583 The specific consequences of that adjustment will be determined below.

H – The 11th plea, alleging breach of the principle non bis in idem

1. Summary of the Decision

584 At recitals 314 to 316 to the Decision, the Commission states, in substance, that the exercise by the United States (or any non-member country) of its jurisdiction against a cartel can in no way limit or exclude the Commission's jurisdiction under Community competition law. More importantly, the Commission has no intention in any event of imposing penalties on the undertakings concerned for the same facts as the United States and Canadian authorities. Likewise, the proceedings conducted and the sanctions imposed by the Commission, on the one hand, and the United States and Canadian authorities, on the other hand, clearly do not pursue the same objectives.

2. Arguments of the parties

a) Arguments of Hoechst

585 Hoechst contends that the Commission breached the principle *non bis in idem* when, at recital 315 to the Decision, it considered that it was not required to deduct the penalty imposed in the United States in the same case. Hoechst asserts that the Commission expressed the view that, in any event, the principle *non bis in idem* cannot be applied in the context of the relationship between Community law and United States law on cartels. In Hoechst's submission, no judgment to date has stated that the principle *non bis in idem* could never be applied in such circumstances.

586 More specifically, Hoechst infers from the grounds of the judgment in Case 7/72 *Boehringer Mannheim* v *Commission* [1972] ECR 1281 that the principle *non bis in idem* is applicable in the context of the relationship between Community law and United States law on cartels. Furthermore, the second sentence of the summary of the judgment in that case states that '[t]he fact that the Commission takes into account a penalty imposed by the authorities of a third State presupposes that the facts established against the undertaking accused by the Commission, on the one hand, and the authorities of the third State in question, on the other, are identical'.

587 In the present case, the Commission does not dispute that the penalties imposed on Hoechst in the United States concerned a situation of fact identical to that forming the basis of the Decision. In that regard, in the Decision, the Commission makes no comment on the elements of the joint meetings and the agreements which related to non-European markets. However, at recitals 4, 65 to 72, 81, 90, 92, 100, 107, 120, 121, 138, 217, 232, 246, 349, 352, 397 and 450 to the Decision the Commission clearly indicates that the infringement was a single infringement.

588 If the Commission should dispute the existence of an '*idem*' in the present case, Hoechst offers, as proof, the agreement concluded with the United States Department of Justice on 3 May 1999 and requests that the prosecutor responsible for the case in the United States and another individual who could be called by Hoechst's intermediary be called as witnesses.

589 In any event, Hoechst maintains that the penalty imposed in the United States must be deducted on grounds of fairness, in application of the principle of 'natural justice' which has applied since the *Wilhelm* decision (Case 14/68 *Wilhelmand Others* [1969] ECR 1).

b) Arguments of the Commission

590 First of all, the Commission observes that Hoechst no longer appears to wish to raise the issue of the penalty imposed by Canada, but only that imposed by the United States.

591 Next, referring in particular to *Aalborg Portland and Others* v *Commission*, paragraph 145 above (paragraph 338), the Commission states that the application of the principle *non bis in idem* is subject to a threefold condition, namely identity of the facts, identity of the offender and identity of the protected legal asset. That principle therefore precludes the same person being penalised more than once for the same unlawful conduct in order to protect the same legal asset.

592 In the present case, neither the facts nor the protected legal asset are identical.

593 As regards the facts, paragraph 4(d) of the plea agreement concluded with the United States Department of Justice on 3 May 1999 states expressly that the sorbates affected by that cartel were sold by Hoechst or its subsidiaries, and by other members of the cartel, to customers in the Northern District of California. It follows that the act penalised by the plea agreement is not the collusive agreement per se but its implementation in the United States. The Commission observes in that regard that the principle of territoriality applies both in United States law and in European law on cartels. It does not follow from the plea agreement between Hoechst and the United States that it also covers the implementing measures and the effects of the collusive agreement outside the country, and in particular in the EEA. The finding made at recital 315 to the Decision is therefore correct. Furthermore, *Boehringer Mannheim* v *Commission*, paragraph 586 above, also establishes that there is no breach of the principle *non bis in idem* when there is no identity of the facts in such a situation.

594 As regards the protected legal asset, the Commission refers to recital 316 to the Decision and to Case T‑224/00 *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission* [2003] ECR II‑2597 (paragraph 90), and submits that the procedures and penalties of the Community authorities and those of the United States authorities do not have the same objective. While in the former case the aim is to protect undistorted competition on the territory of the European Union or in the EEA, in the latter case the protection sought concerns the United States market.

595 The Commission observes, moreover, that in the judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above (paragraphs 130 to 148), the Court expressly stated that it was permissible for the Commission to impose a fine within the limits set by Article 15(2) of Regulation No 17 without being required to take account of the corresponding United States penalties when determining those limits. Those considerations apply to the present case.

596 The Commission adds, in the interest of completeness, that no consideration of fairness argues in favour of the deduction of the United States penalty. A situation such as that which led the Court of Justice, in *Wilhelmand Others*, paragraph 589 above (paragraph 11), to take account, in Community law, of the first penalties imposed by taking guidance from Article 90(2) CS, in light of the close interdependence between the national markets of the Member States and the common market, does not exist in relations between the European Union and the United States (the Commission refers, in that regard, to *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission*, paragraph 594, paragraph 99).

3. Findings of the Court

597 As a preliminary point, it should be noted that the present plea was raised solely with respect to the fact that the fine imposed in the United States was not deducted from the fine imposed in the Community. It must therefore be considered that the present plea does not concern the fine imposed in Canada.

598 The principle *non bis in idem*, which is also enshrined in Article 4 of Protocol No 7 to the European Convention for the Protection of Human Rights and Fundamental Freedoms, is a fundamental principle of Community law, compliance with which the Courts ensure (Case C‑308/04 P *SGL Carbon* v *Commission* [2006] ECR I‑5977, paragraph 26).

599 Furthermore, far from having decided the question whether the Commission is required to set off a penalty imposed by the authorities of a non-member State where the facts with which the Commission charges an undertaking are the same as those alleged by those authorities, the Court regarded the identity of the facts alleged by the Commission and the authorities of the non-member State as a precondition of that question (see, to that effect, Case C‑397/03 P *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission* [2006] ECR I‑4429, paragraphs 48 and 49, and *SGL Carbon* v *Commission*, paragraph 598 above, paragraph 27).

600 More specifically, the Court of Justice recalled that the application of the principle *non bis in idem* was subject to a threefold condition of identity of the facts, unity of the offender and unity of the protected legal interest. That principle therefore precludes a penalty being imposed on the same person more than once for the same unlawful conduct for the purpose of protecting the same legal asset (*Aalborg Portland and Others* v *Commission*, paragraph 145 above, paragraph 338).

601 In that regard, it must be emphasised that the principle *non bis in idem* does not apply to situations

in which the legal orders and the competition authorities of non-member States intervened in the exercise of their own powers (see, to that effect, *SGL Carbon* v *Commission*, paragraph 598 above, paragraph 32).

602 In the present case, even though at certain recitals to the Decision highlighted by Hoechst the Commission states that the facts in question have their origin in the same set of agreements and that the sorbates market could be assessed at worldwide level, first, it must be observed that the application of Community law on cartels presupposes the existence of an agreement, decision or concerted practice 'capable of affecting trade between Member States' or 'between the Contracting Parties' to the EEA Agreement and of 'preventing, restricting or distorting competition within the common market' or within the 'territory' covered by the EEA Agreement (Article 81(1) EC and Article 53(1) of the EEA Agreement). The Commission's action is thus intended to safeguard free competition within the common market, which, under Article 3(1)(g) EC, is a fundamental objective of the Community (see, to that effect, *SGL Carbon* v *Commission*, paragraph 598 above, paragraph 31). The Commission concludes, in that regard, that the anti-competitive conduct at issue had the object and the effect of restricting competition within the Community and the EEA (recitals 280 to 288 to the Decision) and on that basis, in Article 1 of the operative part of the Decision, the Commission finds that the undertakings concerned infringed Article 81(1) EC and, from 1 January 1994, Article 53(1) of the EEA Agreement.

603 Furthermore, although it is clear from the plea agreement concluded on 3 May 1999 between Hoechst and the United States Department of Justice that the facts concerned an agreement covering sorbates sold 'in the United States and elsewhere', it must be borne in mind, first, that the plea agreement also states that the sorbates concerned were sold by Hoechst or its subsidiaries to customers in the Northern District of California and, second, that it has in no way been shown that the proceedings in the United States related to the application of the cartel or its effects other than in the United States, and in the EEA in particular, which, moreover, would have clearly encroached on the territorial jurisdiction of the Commission (see, to that effect, *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission*, paragraph 594 above, paragraph 103, and judgment of 29 April 2004 in *Tokai Carbon and Others* v *Commission*, paragraph 165 above, paragraph 143).

604 Accordingly, the decisions of the United States and the Community competition authorities differ, in this case, as to the legal interest protected.

605 In those circumstances, the principle *non bis in idem* is not applicable. For the same reasons, considerations relating to fairness, which in Hoechst's submission mean that the fine imposed in the United States must be taken into account in the determination of the fine imposed by the Commission, must be rejected. Furthermore, as the Court considers that it has sufficient information from the documents in the file, there is no need to grant Hoechst's request to call witnesses.

606 For all of those reasons, the 11th plea must be rejected.

IV – The final amount of the fine imposed on Hoechst

607 As follows from paragraphs 420 to 439 above, the Decision must be varied in that it takes Hoechst's role as a leader into account as an aggravating circumstance.

608 Furthermore, as follows from paragraph 582 above, and in order to take account of the breach of the principles of sound administration and equal treatment in the context of the application of the 1996 Leniency Notice set out at paragraph 137 above, Hoechst's fine should be reduced by 10%.

609 For the remainder, the Commission's considerations in the Decision, and the calculation method which it applied, remain unaltered.

610 The final amount of the fine imposed on the applicant is therefore calculated as follows: the starting amount of the fine (EUR 20 million) is increased by 100% to reflect Hoechst's size and overall resources in 1995 and 2002, giving a total of EUR 40 million. In order to take account of the duration of the infringement, that amount is increased by 175%. The basic amount of the fine is therefore EUR 110 million. That basic amount of the fine is increased by 50% to take account of Hoechst's repeated infringement, giving a total amount of EUR 165 million. Last, that total amount is reduced by 50% under the 1996 Leniency Notice, that is to say, by EUR 82.5 million, and then by 10% to take account of the breach of the principles of sound administration and equal treatment in the context of the application of the 1996 Leniency Notice established at paragraph 137 above,

which brings the final amount of the fine to EUR 74.25 million.

Costs

611 Under Article 87(3) of the Rules of Procedure, where each party succeeds on some and fails on other heads, or where the circumstances are exceptional, the Court may order that the costs be shared or that each party bear its own costs. In the circumstances of the present case, the Court decides that each party must bear its own costs.

On those grounds,

THE COURT OF FIRST INSTANCE (Fifth Chamber)

hereby:

1. **Sets the amount of the fine imposed on Hoechst GmbH at EUR 74.25 million;**

2. **Dismisses the remainder of the action;**

3. **Orders the parties to bear their own costs.**

JUDGMENT OF THE COURT OF FIRST INSTANCE (Third Chamber, Extended Composition)

8 July 2008 (*)

(Competition – Agreements, decisions and concerted practices – Organic peroxides – Fines – Article 81 EC – Rights of the defence – Right to a fair hearing – Meaning of perpetrator of an infringement – Principle of nullum crimen, nulla poena sine lege – Principle of legal certainty – Legitimate expectations)

In Case T‑99/04,

AC-Treuhand AG, established in Zurich (Switzerland), represented by M. Karl, C. Steinle and J. Drolshammer, lawyers,

applicant,

v

Commission of the European Communities, represented by A. Bouquet, acting as Agent, and by A. Böhlke, lawyer,

defendant,

ACTION for annulment of Commission Decision 2005/349/EC of 10 December 2003 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E-2/37.857 – Organic peroxides) (OJ 2005 L 110, p. 44),

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Third Chamber, Extended Composition),

composed of M. Jaeger, President, J. Azizi and O. Czúcz, Judges,

Registrar: K. Andová, Administrator,

having regard to the written procedure and further to the hearing on 12 September 2007,

gives the following

Judgment

Background to the dispute

1 Commission Decision 2005/349/EC of 10 December 2003 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E-2/37.857 – Organic peroxides) (OJ 2005 L 110, p. 44; 'the contested decision') concerns a cartel formed and implemented on the European market for organic peroxides – chemicals used in the plastics and rubber industry – by the AKZO group ('AKZO'), Atofina SA, successor to Atochem ('Atochem/Atofina'), and Peroxid Chemie GmbH & Co. KG, a company controlled by Laporte plc, now Degussa UK Holdings Ltd ('PC/Degussa'), inter alia.

2 It is apparent from the contested decision that the cartel was founded in 1971 by a written agreement ('the 1971 agreement'), amended in 1975 ('the 1975 agreement'), between three producers of organic peroxides, namely AKZO, Luperox GmbH, which later became Atochem/Atofina, and PC/Degussa ('the cartel'). The aim of that cartel was, inter alia, to preserve the market shares of those producers and to coordinate their price increases. Meetings were held

regularly to ensure the proper functioning of the cartel. Under the cartel, Fides Trust AG ('Fides'), and subsequently, from 1993, the applicant, AC-Treuhand AG, were entrusted, on the basis of agency agreements with AKZO, Atochem/Atofina and PC/Degussa, with, inter alia, storing certain secret documents relating to the cartel, such as the 1971 agreement, on their premises; collecting and treating certain information concerning the commercial activity of the three organic peroxide producers; communicating to them the data thus treated; and completing logistical and clerical-administrative tasks associated with the organisation of meetings between those producers, particularly in Zurich (Switzerland), such as the reservation of rooms and the reimbursement of their representatives' travel costs. However, certain factual elements relating to the applicant's activities in relation to the cartel are contested between the parties.

3 The Commission had initiated an investigation into the cartel following a meeting on 7 April 2000 with AKZO's representatives, who informed it of an infringement of the Community competition rules in order to gain immunity under the Commission notice on the non-imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4; 'the Leniency Notice'). Subsequently, Atochem/Atofina and PC/Degussa also decided to cooperate with the Commission and provided it with additional information (recitals 56 to 63 in the preamble to the contested decision).

4 On 3 February 2003 the Commission sent a request for information to the applicant. In that request, the Commission essentially stated that it was in the process of investigating a putative infringement of Article 81 EC and Article 53 of the Agreement on the European Economic Area (EEA) by the European organic peroxide producers. It also requested the applicant to provide an organigram of its undertaking, to describe its activity and its development, including its takeover of the activity of Fides, its activity as the 'secretariat' for the organic peroxide producers and its turnover for 1991 to 2001. The applicant responded to that request for information by letter of 5 March 2003 (recital 73 of the contested decision).

5 On 20 March 2003 a meeting was held between the representatives of the applicant and the Commission's staff in charge of the case-file, at the end of which the latter stated that the applicant was also concerned by the proceedings initiated by the Commission, without however specifying the offences alleged against it.

6 On 27 March 2003 the Commission initiated the formal examination procedure and adopted a statement of objections which was subsequently served on the applicant, among others. The applicant submitted its observations on the objections on 16 June 2003 and attended the hearing on 26 June 2003. The Commission finally adopted the contested decision on 10 December 2003, which it served on the applicant on 9 January 2004, and by which it imposed a fine on it of EUR 1 000 (recital 454 and Article 2(e) of the contested decision).

7 The adoption and the notification of the contested decision were accompanied by a press release in which the Commission stated, inter alia, that, as a consultancy firm, the applicant had played, from the end of 1993, an essential role in the cartel by organising meetings and covering up evidence of the infringement. Therefore, the Commission concluded that the applicant had also infringed the competition rules and stated:

'The sanction taken [against the applicant] is of a limited amount due to the novelty of the policy followed in that area. The message is clear however: those who organise or facilitate cartels, thus not only their members, must henceforth fear being caught and having very heavy sanctions imposed on them'.

Procedure and forms of order sought by the parties

8 By application lodged at the Registry at the Court of First Instance on 16 March 2004, the applicant brought the present action.

9 By letter lodged at the Court Registry on 30 November 2005, the applicant requested, as regards the publication of the judgment of the Court of First Instance bringing the proceedings to an end, confidential treatment of the entire agreement which it had concluded with Fides, which forms part of the annex to the application, and of the name of Fides and of the applicant's former employee, Mr S.

10 By letter lodged at the Court Registry on 1 February 2006, the applicant stated that it wished to maintain its request for confidentiality and, in the alternative, requested that confidential treatment

be granted to certain passages, rendered unreadable, of the text of the agreement cited in paragraph 9 above, of which it produced a non-confidential version at the Court's request.

11 Pursuant to Article 14 of the Rules of Procedure of the Court of First Instance and on the proposal of the Third Chamber, the Court decided, after hearing the parties in accordance with Article 51 of the Rules of Procedure, to refer the case to a Chamber sitting in extended composition.

12 On hearing the report of the Judge-Rapporteur, the Court of First Instance (Third Chamber, Extended Composition) decided to open the oral procedure.

13 At the hearing, which took place on 12 September 2007, the parties presented oral argument and answered the oral questions put by the Court.

14 The oral procedure was closed at the end of the hearing on 12 September 2007. Pursuant to Article 32 of the Rules of Procedure, since a member of the Chamber was prevented from taking part in the judicial deliberations, the most junior judge within the meaning of Article 6 of the Rules of Procedure accordingly abstained from taking part in the deliberations and the Court's deliberations were conducted by the three judges whose signatures the present judgment bears.

15 At the hearing, the applicant withdrew its request for confidential treatment in so far as it concerned mention of the name of Fides; formal note of this was taken in the minutes of the hearing.

16 The applicant claims that the Court should:

– annul the contested decision in so far as it concerns the applicant;

– order the Commission to pay the costs.

17 The Commission contends that the Court should:

– dismiss the action;

– order the applicant to pay the costs.

Law

A – Preliminary observations

18 The Court of First Instance considers it necessary to address, first, the applicant's request for confidential treatment since it did not withdraw that request at the hearing (see paragraphs 9, 10 and 15 above).

19 As regards the name of the applicant's former employee, the Court took account of that request in accordance with its practice regarding publication in relation to the identity of natural persons in other cases (see, to that effect, Case T‑120/04 *Peróxidos Orgánicos* v *Commission* [2006] ECR II‑4441, paragraphs 31 and 33). However, the Court considers that the existence as such of the agreement between Fides and the applicant has, in any event, lost its potentially confidential character in the light of the identification of that agreement in the extract from the – publicly accessible – companies register of the canton of Zurich regarding the applicant's establishment, as produced in the annex to the application and in recitals 20 and 91 of the version of the contested decision published provisionally on the internet site of the Directorate-General for Competition of the Commission (see, to that effect, the order of the President of the Third Chamber, Extended Composition, of the Court of First Instance in Case T‑289/03 *BUPA and Others* v *Commission* [2005] ECR II‑741, paragraphs 34 and 35), no objection to that publication having been made by the applicant in accordance with the procedure laid down in Article 9 of Commission Decision 2001/462/EC, ECSC of 23 May 2001 on the terms of reference of hearing officers in certain competition proceedings (OJ 2001 L 162, p. 21).

20 Consequently, the request for confidential treatment must be rejected in so far as it concerns the

existence of the agreement between Fides and the applicant.

21 Next, the Court points out that, in support of its action, the applicant relies on five pleas in law: (i) infringement of the rights of the defence and of the right to a fair hearing; (ii) infringement of the principle of *nullum crimen,nulla poena sine lege*; (iii) infringement of the principle of the protection of legitimate expectations; (iv) in the alternative, infringement of the principle of legal certainty and the principle of *nulla poena sine lege certa*; and (v) infringement of the principle of legal certainty and the principle of *nulla poena sine lege certa* as regards the second paragraph of Article 3 of the contested decision.

B – The first plea, alleging infringement of the rights of the defence and of the right to a fair hearing

1. Arguments of the parties

a) Arguments of the applicant

22 The applicant maintains that the Commission was late in informing it – three years after the start of the investigation – of the proceeding which had been initiated and the complaints made against it. It first learned of this when the formal investigation procedure was initiated and the statement of objections of 27 March 2003 adopted. Before that, the applicant had received only the request for information dated 3 February 2003, to which it had duly responded by letter of 5 March 2003. It was not until 20 March 2003, at the meeting with the Commission, that the applicant learned that it was also concerned by the investigation, without, however, receiving any precise information on the extent of the accusations made against it.

23 In the applicant's view, under Article 6(3)(a) of the European Convention for the Protection of Human Rights and Fundamental Freedoms ('ECHR'), signed at Rome on 4 November 1950, anyone charged with a criminal offence has the right to be informed promptly, in a language which he understands and in detail, of the nature and cause of the accusation against him. That right is a corollary of the fundamental right to a fair hearing laid down in Article 6(1) of the ECHR and is an integral part of the rights of the defence, as recognised by the case–law as general principles of Community law applicable to the penalty-based administrative procedures laid down in Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-1962, p. 87) (Cases 41/69 *ACF Chemiefarma* v *Commission* [1970] ECR 661, paragraphs 172 to 176; C–7/98 *Krombach* [2000] ECR I–1935, paragraphs 25 and 26; C–274/99 P *Connolly* v *Commission* [2001] ECR I–1611, paragraphs 37 and 38; and Joined Cases C–204/00 P, C–205/00 P, C–211/00 P, C–213/00 P, C–217/00 P and C–219/00 P *Aalborg Portland and Others* v *Commission* [2004] ECR I–123, paragraphs 63 and 64; see also Case T–15/99 *Brugg Rohrsysteme* v *Commission* [2002] ECR II–1613, paragraphs 109 and 122, and Case T–23/99 *LR AF 1998* v *Commission* [2002] ECR II–1705, paragraph 220), and is confirmed by Article 6(2) EU and by Article 48(2) of the Charter of fundamental rights of the European Union, proclaimed on 7 December 2000 at Nice (OJ 2000 C 364, p. 1).

24 Under Article 15(2) of Regulation No 17, the fines which may be imposed on undertakings do, in fact – notwithstanding what is stated in Article 15(4) of that regulation – have a 'criminal law character' given their deterrent and punitive objective (Opinion of Judge Vesterdorf, acting as Advocate General in Case T–1/89 *Rhône-Poulenc* v *Commission* [1991] ECR II–867; see also the Opinion of Advocate General Roemer in Case 14/68 *Wilhelm* [1969] ECR 1, points 17 and 24; Opinion of Advocate General Mayras in Joined Cases 40/73 to 48/73, 50/73, 54/73 to 56/73, 111/73, 113/73 and 114/73 *Suiker Unie and Others* v *Commission* [1975] ECR 1663; Opinion of Advocate General Léger in Case C–185/95 P *Baustahlgewerbe* v *Commission* [1998] ECR I–8417, I–8422, point 31; and the Opinions of Advocate General Ruiz–Jarabo Colomer in Case C–204/00 P *Aalborg Portland and Others* v *Commission* [2004] ECR I–133, point 26; Case C–205/00 P *Irish Cement* v *Commission* [2004] ECR I–171, point 32; Case C–213/00 P *Italcementi* v *Commission* [2004] ECR I–230, point 26; Case C–217/00 P *Buzzi Unicem SpA* v *Commission* [2004] ECR I–267, point 29; and in Case C–219/00 P *Cementir* v *Commission* [2004] ECR I–342, point 25). That conclusion is also to be inferred from the case–law of the European Court of Human Rights ('Eur. Court H. R.') (*Engel and others* v. *the Netherlands*, judgment of 8 June 1976, Series A no. 22 (1977), § 82; *Oztürk* v *Germany*, judgment of 21 February 1984, Series A no. 73, § 53; and *Lutz* v

Germany, judgment of 25 August 1987, Series A no. 123, § 54).

25 In that regard, the applicant disputes the Commission's statement that no offence is imputed to undertakings during the investigation stage of the administrative proceedings. On the contrary, according to the applicant, the Commission takes measures during that stage which suggest that an infringement has been committed and which have a significant impact on the situation of the undertakings suspected (Joined Cases C–238/99 P, C-244/99 P, C-245/99 P, C–247/99 P, C–250/99 P to C–252/99 P and C–254/99 P *Limburgse Vinyl Maatschappijand Others* v *Commission* [2002] ECR I–8375, paragraph 182). The fact that, under the procedure laid down in Regulation No 17, the persons concerned are not the subject of any formal accusation until they receive the statement of objections (Joined Cases T–5/00 and T–6/00 *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission* [2003] ECR II–5761, paragraph 79) is not decisive and does not rule out the possibility that, during the investigation stage, the applicant may already have become 'a person charged' for the purposes of Article 6(3) of the ECHR, as interpreted by the Eur. Court H. R. In the light of that case–law, a formal indictment is not necessary but the initiation of an investigation procedure of criminal law character is sufficient (Eur. Court H. R. *Delcourt* v *Belgium*, judgment of 17 January 1970, Series A no. 11, p. 13, § 25; *Ringeisen* v *Austria*, judgment of 17 July 1971, Series A no. 13, p. 45, § 110; *Deweer* v *Belgium*, judgment of 27 February 1980, Series A no. 35, p. 22, § 42; *Viezzer* v *Italy*, judgment of 19 February 1991, Series A no. 196-B, p. 21, § 17; *Adolf* v *Austria*, judgment of 26 March 1982, Series A no. 49, p. 15, § 30; and *Imbrioscia* v *Switzerland*, judgment of 24 November 1993, Series A no. 275, p. 13, § 36).

26 The applicant submits that it is apparent from the objective of Article 6(3)(a) of the ECHR that, in the context of criminal proceedings, a person charged with an offence must be informed immediately of the initiation and purpose of the investigation concerning him, so that he is not left in a state of uncertainty for longer than necessary. By contrast, a notification only at the formal indictment stage, which often does not take place until after a series of long investigations, is not sufficient and risks seriously compromising the fairness of the remainder of the proceedings and depriving the right guaranteed by Article 6(3)(c) of the ECHR of its useful effect. Where, as in the present case, the Commission carries out the investigation secretly for approximately three years before adopting the statement of objections, it gains an unfair start in terms of collecting evidence which is incompatible with Article 6 of the ECHR. That stems from the fact that, in view of the time which has elapsed, it is difficult – or even virtually impossible – for the undertakings concerned to reconstruct the facts and to provide evidence to the contrary.

27 In addition, the obligation to notify immediately the undertakings concerned stems from the importance, or decisive nature, of the investigation procedure for the Commission's future decision (Joined Cases 46/87 and 227/88 *Hoechst* v *Commission* [1989] ECR 2859, paragraph 15, and *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 63). After a long investigation, carried out with the support of the applicants for immunity or clemency, which precedes the adoption of the statement of objections, the Commission has a tendency to believe that the facts have already been established and is subsequently not very inclined to review the conclusions which it has drawn from that investigation. The risk of the forthcoming decision being biased is all the greater given that the Commission alone acts as investigator, prosecutor and judge. In the circumstances of the present case, the Commission was no longer an impartial judge and the applicant no longer had an adequate and sufficient opportunity (see Eur. Court H. R., *Delta* v *France*, judgment of 19 December 1990, Series A no. 191-A, p. 16, § 36) to contest the false allegations made by AKZO, the main witness for 'the prosecution'. Thus, at the stage of notification of the statement of objections, the undertaking concerned finds itself in a situation in which its chances of convincing the Commission of the erroneous nature of the presentation of the facts in that statement are significantly reduced, which seriously impairs the effectiveness of its defence.

28 The applicant points out that, in the present case, the Commission based its complaints almost exclusively on the witness statement of the applicant for immunity, AKZO, with which it has had close contact since the year 2000. Accordingly, the applicant maintains that, in the eyes of the Commission, AKZO was more credible than any undertaking, such as the applicant, which did not undertake to cooperate under point B(d) of the Leniency Notice and which the staff in charge of the case-file did not know personally. Consequently, the Commission attributed more weight to AKZO's false statements concerning the applicant's role than to the information provided by the applicant, without giving the applicant the opportunity to defend itself in an effective manner against AKZO's statements and to rectify them.

29 In the present case the Commission should have informed the applicant of the nature and the reasons for the suspicions against it when, on 27 June 2000, AKZO sent it a description of the applicant's alleged role in the cartel – given that, as of that moment, the Commission's future decision risked being biased as a result of AKZO's false allegations – and, at the latest, on 18 June 2001, when AKZO submitted its final witness statement to the Commission. The contested decision was based, as far as concerns the applicant, almost exclusively on that witness statement. Consequently, by not informing the applicant as soon as the inquiry was launched against it, the Commission infringed the applicant's right to a fair hearing and its rights of defence under Article 6 (1) and (3)(a) of the ECHR.

30 In the applicant's view, that illegality must lead to the annulment of the contested decision (Opinion of Advocate General Mischo in Case C‑250/99 P *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, ECR I‑8503, point 80). In order to ensure the useful effect of the right guaranteed under Article 6(3)(a) of the ECHR, which is an elementary procedural guarantee in a society governed by the rule of law, the undertaking concerned cannot be required to show that the Commission's decision would have been different if it had been informed in good time. The act of informing the accused in good time and in an exhaustive manner constitutes the *condicio sine qua non* of a fair hearing and is mandatory. Accordingly, any decision imposing a fine which has been adopted in infringement of that procedural guarantee must be annulled.

31 In the alternative, the applicant claims that, if the Commission had respected the right guaranteed under Article 6(3)(a) of the ECHR and had informed it without delay of the nature and purpose of the investigation against it, it could have reconstructed the relevant facts more easily and more exhaustively than it had been able to in 2003. In particular, it could have drawn the Commission's attention to the erroneous nature of AKZO's witness statement concerning its role in the cartel. That challenge to the evidence would have led the Commission to seek further information from AKZO and, where necessary, to carry out an investigation under Article 14 of Regulation No 17.

32 However, in the absence of timely information, the applicant was deprived of the possibility of exercising decisive influence over the conduct of the investigation or over the Commission's internal decision-making process. Otherwise, the Commission would have concluded that the applicant had not actually committed an infringement and that its relationship to the organic peroxide producers involved in the cartel was one of non-punishable complicity. Thus, at that decisive stage of the procedure, the Commission deprived the applicant of the opportunity to defend itself quickly and effectively against AKZO's allegations.

33 Accordingly, the contested decision should be annulled for infringement of the rights of the defence and of Article 6(3)(a) of the ECHR.

34 In that regard, the applicant none the less acknowledged at the hearing, in response to a specific question put by the Court, that, in its view, even if it had been informed at the stage of the request for information of 3 February 2003 and had thus had the opportunity to defend itself more effectively, that would not have changed the Commission's findings concerning the applicant in the contested decision. Formal note to that effect was taken in the minutes of the hearing.

(b) Arguments of the Commission

35 The Commission disputes that it is required, prior to notifying the statement of objections, to inform the applicant of the nature of and the reasons for the investigation concerning it.

36 First, as is expressly confirmed in Article 15(4) of Regulation No 17, neither the administrative procedure nor the possibility of imposing fines under that regulation is of a criminal law nature. Second, that procedure is divided into two stages, namely a preliminary investigation stage and an inter partes stage which covers the period from notification of the statement of objections to adoption of the final decision. Although the inter partes stage enables the Commission to give a final decision on the infringement concerned (*Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, paragraphs 182 to 184), no offence is imputed to the undertakings concerned during the investigation stage. That stage enables a search to be made for the factual evidence which enables the Commission to determine whether or not it is appropriate to take action against an undertaking. To that end, the Commission can require information and the undertakings are under an obligation to cooperate actively in providing all information relating to the subject-matter of the inquiry (Case 374/87 *Orkem* v *Commission* [1989] ECR 3283, paragraph 27).

37 At the time when such measures of inquiry are adopted, the Commission is not yet in a position to impute offences to undertakings because it is still seeking the evidence which might lead a statement of objections to be adopted. Accordingly, the mere fact that an undertaking is the subject of measures of inquiry on the part of the Commission cannot be assimilated to an accusation of that undertaking (Opinion of Advocate General Mischo in Case C–250/99 P *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, paragraphs 41 to 46). Consequently, the applicant's argument that it should already have been informed at the investigation stage in order to be able to draw up its defence cannot be upheld.

38 The Commission acknowledges that the rights of the defence, as fundamental rights, form an integral part of the general principles of law, whose observance the Community judicature must ensure (*Krombach*, cited in paragraph 23 above, paragraphs 25 and 26, and *Connolly* v *Commission*, cited in paragraph 23 above, paragraphs 37 and 38). In addition, it is true that the Commission has to ensure that those rights are not impaired during the investigation stage, which may be decisive in providing evidence of the unlawful nature of conduct engaged in by undertakings such that they may incur liability (*Hoechst* v *Commission*, cited in paragraph 27 above, paragraph 15, and *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 63). However, that obligation relates only to certain rights of the defence, such as the right to legal representation and the privileged nature of correspondence between lawyer and client, whereas other rights relate only to the inter partes proceedings initiated following the adoption of a statement of objections (*Hoechst* v *Commission*, cited in paragraph 27 above, paragraph 16).

39 In any event, the alleged right to be informed immediately of the nature of and the reasons for the investigation does not exist, nor does it result from Article 6(3)(a) of the ECHR, because there is no element of 'accusation' during the investigation stage. Such formal 'accusation' occurs only at the stage of the notification of the statement of objections (*Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, cited in paragraph 25 above, paragraph 79). That statement implies the initiation of the procedure under Article 3 of Regulation No 17 and demonstrates the Commission's intention to adopt a decision finding an infringement (see, to that effect, Case 48/72 *Brasserie de Haecht* [1973] ECR 77, paragraph 16). At the same time, that statement serves as a means of informing the undertaking of the subject-matter of the procedure which is initiated against it and of the conduct imputed to it by the Commission (Joined Cases T-305/94, T-306/94, T-307/94, T–313/94, T-316/94, T-318/94, T-325/94, T-328/94, T-329/94 and T–335/94 *Limburgse Vinyl Maatschappij and Others* v *Commission* [1999] ECR II–931, paragraph 132, and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied and Technische Unie* v *Commission*, cited in paragraph 25 above, paragraph 80).

40 That is confirmed in the case–law according to which there is no right under Community competition law to be informed of the state of the administrative procedure before the statement of objections is formally issued; an interpretation to the contrary would give rise to a right to be informed of an investigation in circumstances where suspicions exist in respect of an undertaking, which would seriously hamper the work of the Commission (Case T–50/00 *Dalmine* v *Commission* [2004] ECR II–2395, paragraph 110).

41 The Commission adds that, although the case–law of the Eur. Court H. R. in relation to Article 6 of the ECHR may, where necessary, play a role in the context of investigation procedures which have a criminal law character – as regards, for example, the calculation of a 'reasonable time' within the meaning of Article 6(1) of the ECHR – there is nothing to suggest that that is also the case for Article 6(3)(a) of the ECHR. In order to be taken into account, failure to respect the guarantees under Article 6(3)(a) of the ECHR at the investigation stage must seriously compromise the fair nature of the proceedings (Eur. Court H. R. *Imbroscia* v *Switzerland*, judgment of 24 November 1993, Series A no. 275, § 36, and the case–law cited therein), account being taken of the implementation of the procedure as a whole.

42 In the present case, the inter partes stage of the administrative procedure laid down in Regulation No 17 is particularly important in that regard since it aims precisely to inform the person concerned of the nature and grounds of the accusation made against him. However, the applicant has not brought any complaint regarding the proper conduct of that stage of the procedure. Thus, the applicant cannot assert for the first time in its reply that it was not given the opportunity, during the inter partes stage of that procedure, to voice its point of view, in an appropriate and sufficient manner, on the version of the facts adopted by the Commission. In any event, the applicant's false allegation cannot call into question either the inter partes nature of that stage of the administrative

procedure, or its fairness.

43 Consequently, the present plea must be rejected as unfounded.

2. Findings of the Court

44 By its first plea, the applicant claims in essence that the Commission infringed its rights of defence and, in particular, its right to a fair hearing, as recognised by Article 6(3)(a) of the ECHR, by failing to inform it, very early on in the investigation procedure, of the nature of and the reasons for the accusation made against it and, in particular, by failing to send it AKZO's witness statements earlier.

45 It should be pointed out, at the outset, that the Court has no jurisdiction to assess the lawfulness of an investigation under competition law in the light of provisions of the ECHR, inasmuch as those provisions do not as such form part of Community law. That said, the fact remains that the Community judicature is called upon to ensure the observance of the fundamental rights which form an integral part of the general principles of law and, for that purpose, it draws inspiration from the constitutional traditions common to the Member States and from the guidelines supplied by international instruments for the protection of human rights, on which the Member States have collaborated and to which they are signatories. In that regard, the ECHR has special significance, as confirmed by Article 6(2) EU (see, to that effect, Case T‑112/98 *Mannesmannröhren‑Werke* v *Commission* [2001] ECR II‑729, paragraphs 59 and 60 and the case‑law cited therein). That has also been reaffirmed in the fifth recital in the preamble to the Charter of Fundamental Rights of the European Union, and Articles 52(3) and 53 thereof.

46 In that regard, it is settled case‑law that the rights of the defence in any proceedings in which penalties, especially fines or penalty payments, may be imposed, such as those provided for in Regulation No 17, are fundamental rights forming an integral part of the general principles of law, whose observance the Community judicature ensures (see, to that effect, *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 64, and Case C‑3/06 P *Groupe Danone* v *Commission* [2007] ECR I‑1331, paragraph 68).

47 It should also be pointed out that the administrative procedure under Regulation No 17, which takes place before the Commission, is divided into two distinct and successive stages, each having its own internal logic, namely a preliminary investigation stage and an inter partes stage. The preliminary investigation stage, during which the Commission uses the powers of investigation provided for in Regulation No 17 and which covers the period up until the notification of the statement of objections, is intended to enable the Commission to gather all the relevant information confirming or not the existence of an infringement of the competition rules and to adopt an initial position on the course of the procedure and how it is to proceed. By contrast, the inter partes stage, which covers the period from the notification of the statement of objections to the adoption of the final decision, must enable the Commission to reach a final decision on the infringement concerned (see, to that effect, *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, paragraphs 181 to 183, and Case C‑105/04 P *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission* [2006] ECR I‑8725, paragraph 38).

48 First, as regards the preliminary investigation stage, the Court has stated that the starting point of that stage is the date on which the Commission, in exercise of the powers conferred on it by Articles 11 and 14 of Regulation No 17, takes measures which suggest that an infringement has been committed and which have a significant impact on the situation of the undertakings suspected (*Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, paragraph 182, and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, cited in paragraph 47 above, paragraph 38). Second, it is apparent from the case‑law of the Court of Justice that it is not until the beginning of the inter partes administrative stage that the undertaking concerned is informed, by means of the notification of the statement of objections, of all the essential evidence on which the Commission relies at that stage of the procedure and that that undertaking has a right of access to the file in order to ensure that its rights of defence are effectively exercised. Consequently, it is only after the notification of the statement of objections that the undertaking concerned is able to rely in full on its rights of defence (see, to that effect, *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, paragraphs 315 and 316; *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraphs 66 and 67; *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, cited in paragraph 47 above, paragraph 47; and Case

C‑407/04 P *Dalmine* v *Commission* [2007] ECR I‑829, paragraph 59). If those rights were extended to the period preceding the notification of the statement of objections, the effectiveness of the Commission's investigation would be compromised, since the undertaking concerned would already be able, at the preliminary investigation stage, to identify the information known to the Commission, hence the information that could still be concealed from it (*Dalmine* v *Commission*, cited in paragraph 40 above, paragraph 60).

49 Accordingly, the applicant's argument that respect for the rights of the defence and the right to a fair hearing implies that it be granted access to AKZO's witness statements during the preliminary investigation stage must be rejected.

50 The fact nevertheless remains that, as is apparent from the case‑law cited in paragraph 48 above, the measures of inquiry adopted by the Commission during the preliminary investigation stage – in particular, the measures of investigation and requests for information under Articles 11 and 14 of Regulation No 17 – suggest, by their very nature, that an infringement has been committed and may have a significant impact on the situation of the undertakings suspected.

51 Consequently, it is necessary to prevent the rights of the defence from being irremediably compromised during that stage of the administrative procedure since the measures of inquiry taken may be decisive in providing evidence of the unlawful nature of conduct engaged in by undertakings for which they may be liable (see, to that effect, *Hoechst* v *Commission*, paragraph 27 above, paragraph 15). As regards the observance of a reasonable period of time, the Court has thus held, in essence, that an excessively lengthy preliminary investigation may have an effect on the future ability of the undertakings concerned to defend themselves, in particular by reducing the effectiveness of the rights of the defence where those rights are relied on during the inter partes stage. The more time that elapses between a measure of investigation and the notification of the statement of objections, the greater the likelihood that exculpatory evidence can no longer be obtained or only obtained with difficulty. For that reason, examination of any interference with the exercise of the rights of the defence must not be confined to the actual phase in which those rights produce their full effects, that is to say, the inter partes stage of the administrative procedure, but must extend to the entire procedure and be carried out by reference to its total duration (see, to that effect, *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, cited in paragraph 47 above, paragraphs 49 and 50).

52 The Court considers that those considerations apply by analogy to the question whether and, if so, to what extent the Commission is required to provide the undertaking concerned, as of the preliminary investigation stage, with certain information on the subject-matter and purpose of the investigation, which enable its defence in the inter partes stage to be effective. Even though, in formal terms, the undertaking concerned does not have the status of 'a person charged' during the preliminary investigation stage, the initiation of the investigation in its regard, by the adoption of a measure of inquiry concerning it, cannot generally be dissociated, in substantive terms, from the existence of suspicion, hence from an implied imputation of misconduct for the purposes of the case‑law cited in paragraph 48 above, which justifies the adoption of that measure (see also, to that effect, Eur. Court H. R., *Casse* v *Luxembourg*, no. 40327/02, § 29 to 33, 71 and 72, 27 April 2006).

53 As regards the scope of that duty to inform, it should be noted that, in a request for information – whether informal for the purposes of Article 11(2) of Regulation No 17 or in the form of a decision under Article 11(5) thereof – the Commission is required, under Article 11(3) and in order, inter alia, to respect the rights of defence of the undertakings concerned, to state the legal basis and the purpose of that request. Thus, the necessity, for the purposes of Article 11(1) of Regulation No 17, of the information requested by the Commission must be assessed by reference to the purpose of the inquiry, as compulsorily stated in the request for information itself. In that regard, the Court has pointed out that the Commission is entitled to require only the disclosure of information which may enable it to investigate putative infringements which justify the investigation and which are set out in the request for information as such (see, to that effect, Case T‑39/90 *SEP* v *Commission* [1991] ECR II‑1497, paragraph 25, and Case T‑34/93 *Société générale* v *Commission* [1995] ECR II‑545, paragraphs 39, 40, 62 and 63).

54 Next, it should be noted that the Commission is required to point out in a decision ordering investigation, under Article 14(3) of Regulation No 17, the subject-matter and purpose of that investigation. That requirement constitutes a fundamental guarantee of the rights of defence of the undertakings concerned, with the result that the scope of the obligation to state the reasons on which decisions ordering investigations are based cannot be restricted on the basis of considerations

concerning the effectiveness of the investigation. In that regard, it is apparent from the case-law that, although it is true that the Commission is not required to communicate to the addressee of a decision ordering investigation all the information at its disposal concerning the putative infringements or to make a precise legal analysis of those infringements, it must nevertheless clearly indicate the presumed facts which it intends to investigate (see, to that effect, *Hoechst* v *Commission*, cited in paragraph 27 above, paragraph 41; Case 85/87 *Dow Benelux* v *Commission* [1989] ECR 3137, paragraphs 8 and 9; judgment of 12 July 2007 in Case T-266/03 *CB* v *Commission,* not published in the ECR, paragraph 36; see, by analogy, *Société générale* v *Commission*, cited in paragraph 53 above, paragraphs 62 and 63). By the same token, in the context of an investigation based on Article 14(2) of Regulation No 17, the Commission's inspectors must produce written authorisation specifying the subject-matter and purpose of the investigation.

55 The Court considers that the requirements set out in paragraphs 53 and 54 above apply independently of the question whether the request for information, which is sent to an undertaking suspected of having committed an infringement, is a formal decision for the purposes of Article 11 (5) of Regulation No 17, or an informal letter for the purposes of Article 11(2) thereof. In addition, in the context of the preliminary investigation stage, the opportunity for the undertaking concerned to prepare its defence effectively cannot vary depending on whether the Commission adopts a measure of inquiry under Article 11 or Article 14 of Regulation No 17, since all those measures suggest that an infringement has been committed and may have a significant impact on the situation of the undertakings suspected (see, to that effect, *Limburgse Vinyl Maatschappij and Others* v *Commission*, cited in paragraph 25 above, paragraph 182, and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, cited in paragraph 47 above, paragraph 38).

56 It follows that, when the first measure is taken in respect of an undertaking, including in requests for information under Article 11 of Regulation No 17, the Commission is required to inform the undertaking concerned, inter alia, of the subject-matter and purpose of the investigation underway. In that regard, the reasoning does not need to be so extensive as that required for decisions ordering investigation, owing to the more restrictive nature of the latter and the particular intensity of their impact on the legal situation of the undertaking concerned (see, in relation to the Commission's powers of investigation, *CB* v *Commission*, cited in paragraph 54 above, paragraph 71). That reasoning must, however, enable the undertaking to understand the purpose and the subject-matter of that investigation, which means that the putative infringements must be specified and, in that context, the fact that the undertaking may be faced with allegations related to that possible infringement, so that it can take the measures which it deems useful for its exoneration and, thus, prepare its defence at the inter partes stage of the administrative procedure.

57 Consequently, in the present case, the Commission was required, when it sent the request for information of 3 February 2003, to inform the applicant, inter alia, of the putative infringements concerned by the investigation and of the fact that, in that context, the Commission might have to impute to it unlawful conduct. It is apparent solely from that request that the Commission was in the process of investigating a putative infringement of Article 81 EC committed by European organic peroxide producers as a result of certain conduct, mentioned therein by way of example and in a general manner, but without any indication that the investigation also concerned a possible infringement attributed to the applicant. It appears that it was not until the meeting of 20 March 2003 – that is to say, several weeks before initiation of the formal investigation procedure – that the officials of the Commission in charge of the case-file pointed out that the applicant was also covered by the investigation. As matters stood, the need to give prior notice to the applicant was all the greater since, as the Commission itself stated, its decision to investigate a consultancy firm constituted a reorientation of its former decision-making practice and, consequently, the applicant could not necessarily expect to be directly concerned by the statement of objections.

58 However, that circumstance cannot, in itself, lead to the annulment of the contested decision. It is also necessary to establish whether the irregularity committed by the Commission was capable of actually compromising the applicant's rights of defence in the procedure in question (see, to that effect, *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraphs 71 et seq., and *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, cited in paragraph 47 above, paragraphs 55 and seq.).

59 In the present case, the applicant has not produced any concrete evidence to establish that the irregularity in question adversely affected the efficiency of its defence during the inter partes stage of the administrative procedure and that the progress of that procedure, as a whole, and the content of the Commission's decision could have been influenced by a more efficient defence. On

the contrary, at the hearing, the applicant admitted that prior information regarding the allegations against it, in particular at the stage of the request for information of 3 February 2003, would not have had any influence on the conclusions reached by the Commission in its regard in the contested decision, and formal note of that acknowledgement was taken in the minutes of the hearing. The possibility of any such influence is even less likely since there was a gap of only seven weeks or thereabouts between the request for information, on the one hand, and the notification of the initiation of the formal investigation procedure and the notification of the statement of objections, on the other.

60 Consequently, the present plea must be rejected as unfounded.

C – The second plea, alleging infringement of the principle of nullum crimen, nulla poena sine lege

1. Arguments of the parties

a) Arguments of the applicant

General part

61 The applicant maintains that it has not infringed Article 81 EC since its relationship to the cartel members – AKZO, Atochem/Atofina and PC/Degussa – was merely one of non-punishable complicity. It claims that the Commission itself acknowledged, in recital 339 of the contested decision, that the applicant was not a contracting party to the cartel concluded by those organic peroxide producers. None the less, the Commission reached the very vague conclusion, in recital 349 of the contested decision, that the applicant 'was party to the agreement and/or took decisions as an undertaking and/or as an association of undertakings'. Next, the Commission acknowledged, in recital 454 of that decision, that 'addressing a decision to an undertaking and/or association of undertakings having a role of this kind in a cartel is to a certain extent a novelty'. In the applicant's view, the Commission thus overstepped the limits of the power conferred on it by Article 15(2) of Regulation No 17, read in conjunction with Article 81(1) EC, and infringed the principle of *nullum crimen,nulla poena sine lege*. In addition, the Commission's imprecise legal assessment is based on erroneous findings of fact concerning the applicant's role in the cartel.

The challenge of the facts found in the contested decision

62 The applicant essentially disputes the importance attributed by the Commission, in the contested decision, to its activity in the cartel (recitals 95, 105, 332, 333 and 345 of the contested decision). In reality, the applicant, as a consultancy firm and an agent subject to the instructions of AKZO, Atochem/Atofina and PC/Degussa, merely provided those undertakings with clerical-administrative services, the vast majority of which had nothing to do with the cartel.

63 First, between the end of 1993 and the end of 1999, the applicant was linked, by virtue of the Swiss law of obligations and without any anti–competitive intention, to those three organic peroxide producers by service contracts termed 'agency agreements'. On the basis of those agency agreements and on the instructions of those producers, it (i) established market statistics; (ii) organised four official meetings of those producers in Zurich while attending the official part of those meetings; (iii) reserved a meeting room for four unofficial meetings of those producers in Zurich, but without attending – or only partly – those meetings or being aware of their content; (iv) reimbursed the representatives of those producers the travel costs incurred in attending those meetings; and (v) kept hold of certain documents – some of which were anti-competitive – on behalf of PC/Degussa and Atochem/Atofina.

64 In addition, contrary to the finding in recital 340 of the contested decision, those agency agreements did not restrict competition; only the agreements between the producers, in particular the 1971 agreement, to which the applicant was never a party (recital 339 of the contested decision), provided for restrictions of competition on the organic peroxide market. Thus, the statement in recital 335 of the contested decision that the applicant's activity 'formed the basis to realise the cartel' is also incorrect, since that cartel was created in 1971 by AKZO, Atochem/Atofina and PC/Degussa without the applicant's assistance. In essence, the applicant states that, in so far as those of its activities characterised as misconduct were linked to the cartel, such as the reservation of meeting rooms and the reimbursement of travel costs, for the three organic peroxide producers they were merely of a logistical and clerical-administrative nature.

65 Second, the applicant essentially claims that, in referring – in recitals 87, 109 et seq. and, in particular, in recital 209 of the contested decision – to 'Fides/AC-Treuhand' as a single unity, the Commission wrongly attributed to it the acts committed by Fides during the period from 1971 to 1993. In so doing, the Commission infringes the principles of culpability and individual liability and adversely affects the applicant's reputation (Case C‑49/92 P *Commission* v *Anic Partecipazioni* [1999] ECR I‑4125, paragraph 145). The applicant, which was founded in 1993, is not liable for Fides' conduct and there is no structural link, in terms of company law, between the two. At the end of 1993, the applicant acquired from Fides only the department in charge of providing management advice to associations, and then concluded new agency agreements with Fides' former clients. In addition, Fides' letter of November 1993, in which it advised its former clients to continue their commercial relations with the applicant, is not evidence which is relevant to show the alleged 'personal continuity' between Fides and the applicant. It is common practice in the context of company takeovers that, for marketing reasons, the seller sends such 'letters of recommendation' concerning the possible transfer of agency to the company which has taken over. The applicant concludes from this that it cannot be held liable for Fides' conduct, a fact which should have led the Commission to attribute significantly less importance to its role during the decisive period from 1994 to 1999.

66 In that regard, the applicant states that, unlike Fides, it did not participate in the anti-competitive exchange of information between the three organic peroxide producers. The description of the applicant's role in recitals 91 et seq. of the contested decision does not take account of the fact that, in 1993, those producers substantially modified the manner of operation of the cartel by abandoning thereafter the practice of communicating to one another, with the participation of Fides, sales and price figures in meetings. After 1993 that system was replaced by a system run by AKZO, in which the applicant did not participate and of which it was not even aware, under which information was exchanged by fax and in meetings referred to as 'working groups' (recital 136 of the contested decision). In that context, AKZO established detailed statistics to be presented at the meetings of the working group, ran those meetings, ensured that market shares were being respected and insisted that the other producers increase their prices.

67 Third, as regards the storage of the originals of the 1971 and 1975 agreements, the applicant asserts that it stored in its safe only the copies of Atochem/Atofina and PC/Degussa, which were free to take them away or consult them at any time. Furthermore, the applicant admits to having calculated until 1995 or 1996, on behalf of the organic peroxide producers, the deviations from the quotas agreed between them. The members of the cartel were also free to consult the documents relating to that calculation at any time. The conservation of documents of a third party by the applicant does not constitute, in itself, conduct which is prohibited under the competition rules.

68 Fourth, the applicant disputes the allegation that it collected information on the sale of organic peroxide and provided the 'relevant statistics' to the members of the cartel (recital 92 of the contested decision). The applicant claims that those statistics were lawful and had nothing to do with the cartel, as has been confirmed, according to the applicant, by AKZO, Atochem/Atofina and PC/Degussa. Following the implementation by Fides, at the request of those producers, of an official information system on the organic peroxide market, the applicant concluded tacitly, at the end of 1993, new agency agreements with them which concerned the drawing up of 'neutral' market statistics. Those statistics were based on past sales figures (in tons), as provided by those producers, and neither the prices charged by them nor the names of their clients were identified in those statistics. They were accompanied by a list of the categories of relevant goods which the Commission wrongly designated as 'code AC-Treuhand' (recital 105 of the contested decision). However, that list was merely a working tool for the applicant to enable it to establish the market statistics and for the company in charge of auditing the sales volumes communicated by the producers. The statistics established in that manner indicated, for the categories of organic peroxide concerned, merely the total volume of the market for the preceding year or the preceding quarter, the sales volume for each producer and its market share, but no information concerning competitors.

69 In that regard, the applicant points out that, between 1993 and 1999, the exchange between the organic peroxide producers of sales volumes and prices by country and by client and, consequently, the coordination of their conduct, no longer followed the rules agreed in 1971 and in 1975, but was made by fax or at separate meetings of the working group and, occasionally, following official meetings in Zurich, but without the applicant's participation (recitals 128 and 136 of the contested decision). The applicant concludes from this that, contrary to the impression created in recital 92 of the contested decision, the market statistics which the applicant established did not serve to coordinate the conduct of the producers. Nor did the preparation and the review of the data from the market information system constitute the basis of the infringement. From 1993 onwards, the

statistics established by the applicant were not related to its attendance at the meetings of the cartel or proposing of quotas. That link was broken, at the latest, in 1996 when the applicant stopped calculating the deviations from the agreed quotas.

70 The applicant states that the auditing of the sales figures of the organic peroxide producers had nothing to do with the cartel. The applicant neither 'undertook nor approved' the auditing in that regard (recital 333 of the contested decision); nor was it the cartel's 'accountant' (recital 404 of the contested decision). That erroneous assessment is a result of: (i) bracketing together the functioning of the lawful market information system and that of the cartel's system; and (ii) a confusion with the duties of the company acting as sub–agent for the applicant, which audited the sales volumes communicated to the applicant by the producers, every three to six months, concerning each category of products. On that basis, the applicant calculated the respective market shares in order to send the 'total market figures' back to the producers. Finally, the auditing of the sales volumes communicated to the applicant met the wishes of the three producers and is a common and lawful practice in the context of professionally competent market information systems which has nothing to do with the cartel.

71 Fifth, the applicant disputes the Commission's assertion that it attended 'at least at one instance' a working group meeting (recital 92 of the contested decision), or even a number of those meetings (recital 99 thereof). In reality, the applicant almost never attended the meetings of the three organic peroxide producers which were held for anti-competitive purposes. Out of the 63 meetings which took place from the end of December 1993, as set out in table 4 of the contested decision (p. 28 et seq.), of which only nine were held in Zurich, only five were partly attended by employees of the applicant, namely the meetings in Zurich on 25 October 1994, 16 February 1995, 16 January and 19 April 1996 and 23 November 1998. To that list it is appropriate to add the meeting in Amersfoort (Netherlands) on 19 October 1998, which was attended only by representatives of AKZO and a former employee of the applicant, Mr S. However, the applicant disputes, in a very detailed manner, the significance attributed by the Commission, in the contested decision, to the attendance of Mr S. In any event, it is for the Commission to prove that the applicant actually attended meetings which had an anti-competitive purpose (*Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 78).

72 The applicant states that, with the exception of the meeting of 16 January 1996, all the meetings were so-called 'summit' meetings consisting of an 'official' part and an 'unofficial' part. The applicant's employees attended only the official part of those meetings in the context of which only issues relating to official market statistics, product classification and product safety were addressed. In that context, the applicant's role was limited to clerical-administrative activities, such as sending out letters of invitation setting out the agenda, reserving meeting rooms and, where necessary, hotel rooms, welcoming participants and taking minutes of the official meetings. On instruction, the applicant also made a telephone booking to reserve a hotel conference room for the 'unofficial' meetings in Zurich on 23 October 1997, 17 April 1998 and 27 October 1998, but without attending those meetings itself.

73 Accordingly, AKZO's assertion, as reproduced in recital 127 of the contested decision, that the applicant was 'continuously' involved in the yearly meetings – for example, when market shares needed to be adapted – is manifestly erroneous. The applicant's attendance was not necessary for that purpose, since each of the organic peroxide producers knew the 'official' market shares owing to the exchange between them of their sales volumes by fax or at working group meetings (recital 128 of the contested decision).

74 Sixth, the applicant submits that it was neither the chairman nor the moderator of the cartel (recitals 92, 99, 102 and 336 of the contested decision). Firstly, there was no 'chairperson' at the few meetings of the three organic peroxide producers which the applicant attended between 1994 and 1999 and during which its role was limited to welcoming the participants and taking minutes of the official part of the meeting. Secondly, the applicant neither acted as 'moderator' in the case of tension between the members of the cartel nor encouraged the latter to reach a compromise: the participants always came to the conclusion by themselves that abandoning the discussions would only make the situation worse. Furthermore, in view of the fact that the applicant did not attend the unofficial meetings (see paragraph 72 above), it could not have acted as moderator in the case of tension between the members of the cartel.

75 In that regard, the applicant disputes having declared in its response to the statement of objections that it had 'acted as an intermediary' (recitals 92, 94 and 99 of the contested decision). In reality, the applicant had stated that, as secretary, Mr S had merely played an 'organisational role in the

meetings', which means, inter alia, that he opened with a few words of welcome the four official and lawful 'summit' meetings held between 1994 and 1999 (see paragraph 72 above) and that he announced the lunch break. However, Mr S never or almost never attended, during that same period, the unofficial meetings of the three organic peroxide producers. Point 10 of the 1971 agreement, under the title 'Arbitration', shows that the producers themselves played the role of moderators, which was confirmed by Atochem/Atofina in relation to AKZO's role as moderator at numerous meetings. The applicant concludes from this that AKZO made false accusations against it in order to turn attention away from the role which AKZO itself played as moderator.

76 Seventh, the applicant reaffirms that it carried out the task of calculating the deviations from the agreed quotas and sending them to the organic peroxide producers, under the terms of its mandate and on instruction, only until 1995 or 1996. From 1997 at the latest the calculation of those deviations was made by the three producers themselves, under the supervision of AKZO, on the basis of their sales statistics which they exchanged at the meetings of the working group or by fax (see paragraph 69 above). AKZO then established, on that basis, the overall statistics consisting of the sales statistics of all the organic peroxide producers and presented them at the next meeting of the working group. In addition, the documents produced by AKZO with the intention of proving that, in 1996 or in 1997, the applicant continued to calculate the deviations from the agreed quotas originated from AKZO itself and not from the applicant.

77 Finally, the applicant submits that the Commission's assessment of the evidence is unlawful because it fails to have regard to the presumption of innocence (*Baustahlgewerbe* v *Commission*, cited in paragraph 24 above, paragraph 58) or the fundamental right to a fair hearing, as laid down in Article 6(1) of the ECHR and Article 47(2) of the Charter of Fundamental Rights of the European Union. The Commission endorsed AKZO's erroneous witness statement without investigating whether it was well founded in the light of the witness statements provided by Atochem/Atofina, PC/Degussa and the applicant contradicting that statement. It is apparent from Article 6(1) of the ECHR that statements made by a cooperating party can be regarded as credible only when they are supported by additional and independent evidence (Eur. Commission H. R., *X* v *United Kingdom*, no 7306/75, decision of 6 October 1976, *Decisions and Reports*, no 7, p. 119, 122). In addition, credibility is the sole relevant criterion for assessing the evidence produced (Case T‑44/00 *Mannesmannröhren‑Werke* v *Commission* [2004] ECR II‑2223, referring to the Opinion of Judge Vesterdorf, acting as Advocate General in *Rhône-Poulenc* v *Commission*, cited in paragraph 24 above, ECR II‑869; see also, to that effect, Joined Cases C‑310/98 and C‑406/98 *Met‑Trans and Sagpol* [2000] ECR I‑1797, paragraph 29, and Joined Cases T‑141/99, T‑142/99, T‑150/99 and T‑151/99 *Vela and Tecnagrind* v *Commission* [2002] ECR II‑4547, paragraph 223).

78 A cooperating party has every reason not to tell the truth and the Commission is required, of its own motion, to call its statement into question, especially if it is decisive for the final decision and is contradicted by another statement (see also recital 85 in the preamble to Commission Decision 86/399/EEC of 10 July 1986 relating to a proceeding under Article [81 EC] (IV/31.371 – Roofing felt) (OJ 1986 L 232, p. 15), and recital 278 of the contested decision). In the present case, the Commission infringed those principles by accepting numerous false accusations made by AKZO against the applicant without producing other independent evidence to that effect (see also, to that effect, judgment of 14 October 1994 in Case T‑44/02 *Dresdner Bank* v *Commission,* not published in the ECR, paragraph 74). As it is, a particularly critical examination of AKZO's statements was necessary in the light, first, of the danger that AKZO was exaggerating the role and importance of the applicant in order to turn attention away from its own decisive role in the implementation of the cartel and, second, of the fact that AKZO was late in making some of its unfounded accusations against the applicant.

79 If AKZO had admitted in its letter of 17 February 2003 that it was itself responsible for the proposal of new quotas and not the applicant, the Commission would have had no choice but to take note of AKZO's decisive role in the cartel, which – pursuant to point B(e) of the Leniency Notice – would have prohibited it from exempting AKZO from a fine. According to the applicant, the risk of being refused immunity from the fine and the scale of the fine with which AKZO was faced confirm the fact that AKZO had an incentive to testify against the applicant. Consequently, in basing its decision on AKZO's erroneous statements in the absence of additional and independent evidence in support of its complaints and without questioning the credibility of those statements or taking account of all the facts exculpating the applicant, the Commission failed to have regard to the requirements of the fundamental right to a fair hearing and to the presumption of innocence.

The infringement of the principle of *nullum crimen*, *nulla poena sine lege*

– The effects of the principle of *nullum crimen*, *nulla poena sine lege* on the distinction in Community competition law between perpetration and complicity

80 The applicant points out that, under Article 15(2)(a) of Regulation No 17, the Commission may impose fines on undertakings or associations of undertakings where, either intentionally or negligently, they infringe Article 81(1) EC. However, undertakings which, without participating in the cartel within the meaning of that latter provision, merely facilitate the infringement of Community law committed by the members of the cartel or encourage such an infringement to be committed do not infringe Article 81(1) EC and are not liable to a fine under Article 15(2) of Regulation No 17. Consequently, by finding, in the contested decision, that the applicant had infringed Article 81(1) EC and by imposing a fine on it, the Commission infringed the principle of *nullum crimen*, *nulla poena sine lege* as laid down in Article 7(1) of the ECHR. In addition, according to the applicant, the broad interpretation of Article 81(1) EC adopted by the Commission means that the constituent element of the infringement laid down in Article 81(1) EC may be discerned in all manner of conduct and thus fails to have regard for the principle of *nulla poena sine lege certa*.

81 The applicant submits that, under Community competition law, a distinction must be made between, on the one hand, perpetration of an infringement and, on the other, instigation of or complicity in an infringement. That distinction forms part of the general principles of Community law, in view of the similarity between the rules to that effect contained in the national legal orders, such as those laid down in Article 27(1) of the *Strafgesetzbuch* (German penal code), Article 48 of the *Wetboek van Strafrecht* (Netherlands penal code), Article 67 of the *code pénal belge* (Belgian penal code), Article 121-7 of the *code pénal français* (French penal code), Section 8 of the Accessories and Abettors Act 1861 (United Kingdom penal code), Article 28(2)(b) and Article 29 of the *Código penal* (Spanish penal code) relating to complicity, Articles 46 and 47 of the *Poinikos Kodikas* (Greek penal code), Articles 66 and 67 of the *code pénal luxembourgeois* (Luxembourg penal code), Articles 26 et seq. of the *Código penal* (Portuguese penal code), Chapter 23, section 4, of the *Brottsbalk* (Swedish penal code) and Chapter 5 of the *Rikoslaki* (Finish penal code). It is also confirmed by Article 2(1) of the Convention on the protection of the European Communities' financial interests of 26 July 1995 (OJ 1995 C 316, p. 49), and by Article 11 of the Corpus Juris introducing penal provisions for the purpose of protecting the financial interests of the European Union (established under the responsibility of Mireille Delmas-Marty, Economica, 1997).

82 Consequently, where penalties are imposed under Regulation No 17, it is also necessary to distinguish perpetration of an infringement from instigation of the infringement or complicity therein. According to the applicant, in Community competition law there is no legislative provision making it possible to penalise instigation of or complicity in an infringement. Thus, only a person who, as the perpetrator of an infringement, satisfies the condition laid down in Article 81(1) EC concerning the constitution of the infringement may be penalised. Instigation of an infringement or complicity therein is not punishable.

83 A contrary and broad interpretation of Article 81(1) EC, such as that adopted by the Commission in the present case, infringes the principle of *nullum crimen*, *nulla poena sine lege* within the meaning of Article 7(1) of the ECHR and Article 49(1) of the Charter of Fundamental Rights of the European Union. The Eur. Court H. R. has acknowledged that Article 7 of the ECHR enshrines both that principle and the principle that the criminal law may not be applied broadly, in particular by analogy, to the detriment of the defendant. It follows that an infringement must be clearly defined by the law itself (*Streletz and Others* v *Germany*, judgment of 22 March 2001, *Reports of Judgments and Decisions*, no 34044/96 inter alia, ECHR 2001–II, § 50 and the case–law cited therein).

84 The applicant maintains that the principle of *nullum crimen*, *nulla poena sine lege*, as a general principle of Community law, also applies to the penalty-based administrative procedure under Regulation No 17 and, in particular, to the fines provided for in Article 15(2) of that regulation. That follows clearly from both Article 6(2) EU and the case–law (Joined Cases C–74/95 and C–129/95 *X* [1996] ECR I–6609, paragraph 25; *Brugg Rohrsysteme* v *Commission*, cited in paragraph 23 above, paragraphs 109 and 122; and *LR AF 1998* v *Commission*, cited in paragraph 23 above, paragraphs 209 and 210). In addition, it is a principle intrinsic to the rule of law which ensures effective protection against arbitrary prosecution and punishment (Eur. Court H.R. *Streletz and Others* v *Germany*, cited in paragraph 83 above, § 50 and the case–law cited therein).

– The concept of perpetrator for the purposes of Article 81 EC

85 The applicant states that the principle *nulla poena sine lege certa*, laid down in Article 7(1) of the

ECHR (see paragraph 80 above), requires that a restrictive approach be adopted to the concept of perpetrator of an infringement for the purposes of Article 81(1) EC (see also, *X*, cited in paragraph 84 above, paragraph 25, and Case C‑195/99 P *Krupp Hoesch* v *Commission* [2003] ECR I‑10937, paragraph 86). That principle seeks to ensure that the penalty incurred for the infringement of a legal provision, such as the penalty provided for in Article 15(2) of Regulation No 17, is foreseeable for the person to whom that provision applies and that the decision-making power of the competent authority is delimited in such a way as to rule out the possibility of 'surprise' decisions. The Court of Justice has held that a penalty provided for under Community law, even where it is not a criminal penalty, cannot be imposed unless it rests on a clear and unambiguous legal basis (Case 117/83 *Könecke* [1984] ECR 3291, paragraph 11, and Case 137/85 *Maizena* [1987] ECR 4587, paragraph 15).

86 Moreover, according to the applicant, the greater the adverse effects for the individual, the more precise the terms in which the act of Community law must be framed. The Court has ruled to that effect in stating that the requirement of legal clarity is imperative in a sector in which any uncertainty may well lead to the application of particularly serious penalties (Case 32/79 *Commission* v *United Kingdom* [1980] ECR 2403, paragraph 46). In view of the particularly heavy fines which may be imposed under Article 15(2) of Regulation No 17, which is confirmed by the Commission's recent practice, the principle that penalties must have a proper legal basis justifies the application of a restrictive approach to the concept of perpetrator in the context of Article 81(1) EC. By the same token, the broad interpretation of Article 81(1) EC adopted by the Commission goes well beyond the mere gradual clarification, by means of judicial interpretation, of the rules governing criminal liability, since it is incompatible both with the generally recognised definition of the notion of 'agreement' and with the fundamental idea of autonomy which underlies the provisions in the field of competition.

87 The applicant submits that, in the present case, it was not the perpetrator of an infringement since it was neither a party to the cartel nor an association of undertakings. In reality, it merely colluded with AKZO, Atochem/Atofina and PC/Degussa, and such conduct does not constitute an infringement for the purposes of Article 81(1) EC. In the light of the national legislation referred to in paragraph 81 above, the distinction between the perpetrators of an infringement and the participants must be drawn on the basis of objective criteria. In order to be subject to punishment as the perpetrator of an infringement under Article 81(1) EC, it is necessary to belong to the categories of persons referred to in Article 81(1) EC and to commit the act referred to therein. By contrast, a person who, without satisfying the conditions relating to the constitution of an infringement for the purposes of Article 81(1) EC, knowingly facilitates, by either helping or assisting, the preparation or the commission of the infringement is merely complicit in the infringement and not subject to punishment.

88 The infringements specified in Articles 81 EC and 82 EC fall within a category known as 'special' offences since those articles restrict the circle of undertakings capable of being perpetrators of such infringements to those which satisfy specific requirements, namely, in the case of Article 81 EC, the undertakings which are contracting parties to the agreement restricting competition. That follows from the formulation 'agreements between undertakings' used in Article 81(1) EC and is confirmed by the case‑law (*Krupp Hoesch* v *Commission*, cited in paragraph 85 above, paragraph 86). Accordingly, only undertakings which are contracting parties to the agreement restricting competition are liable to a fine under Article 15(2) of Regulation No 17.

89 The applicant claims that the wording and purpose of Article 81(1) EC, which seeks to safeguard competition, make the status of perpetrator dependent on the question whether the undertaking in question is a competitor, hence exposed to competition and required to adopt certain competitive conduct. That provision applies only to undertakings which are subject to that specific obligation related to the objective of free competition. An agreement restricting competition can be concluded only between undertakings which have the status, on the market concerned, of competitors, or sources of supply or demand.

90 Consequently, an undertaking may be classed as the perpetrator of an infringement only where the agreement restricting competition comes into being in the context of its own sector of activity. The restriction of the circle of perpetrators of the infringement is also clear from the case‑law relating to the requirement of 'autonomy' which underlies the Treaty competition rules, according to which each economic operator must determine autonomously the policy which it intends to follow on the common market. That requirement of autonomy thus strictly precludes any direct or indirect contact between operators, the purpose or effect of which is either to influence the conduct on the market of an actual or potential competitor or to disclose to such a competitor the course of conduct which

they themselves have decided to adopt or which they contemplate adopting on the market (*Suiker Unie and Others* v *Commission*, cited in paragraph 24 above, paragraph 174, and Case C‑199/92 P *Hüls* v *Commission* [1999] ECR I‑4287, paragraph 160).

– The applicant's complicit and non-punishable status

91 The applicant maintains that it was not a party to the agreement restricting competition entered into by the organic peroxide producers and that, in consequence, it did not infringe the requirement of autonomy which underlies competition law. It neither contacted its own competitors nor influenced or sought to influence their conduct on the market. Given that its economic activity is unrelated to the organic peroxide market, which was the subject of the infringement, the applicant does not satisfy the conditions laid down in Article 81(1) EC relating to the constitution of the infringement and cannot be considered to be a perpetrator of the infringement. Similarly, the Commission's submission that the 1971 agreement, together with the agency agreements between the applicant, on the one hand, and AKZO, Atochem/Atofina and PC/Degussa, on the other, form an alleged 'general and single agreement' implying the applicant's participation, is erroneous. The preamble to the 1971 agreement refers exclusively to the organic peroxide producers as the parties to that agreement (recital 80 of the contested decision).

92 As it is, the applicant has never been a party to that agreement (recital 339 of the contested decision), which formed the framework for the activities of the cartel between 1971 and 1999 (recitals 89, 90 and 316 of the contested decision); nor was it ever likely to become one since its economic activity is unrelated to the market concerned. However, by classing the applicant's participation in relation to certain aspects of the cartel as an infringement of Article 81(1) EC, the Commission fails to have regard to the wording of that provision. In addition, even supposing that the applicant had actually carried out the role which the Commission wrongly attributes to it (recital 334 of the contested decision), that role, in the absence of direct participation in the agreement which was restrictive of competition on the market concerned, is not capable of infringing Article 81 (1) EC but is one of non-punishable complicity.

– The Commission's former and contrasting decision-making practice

93 In addition, the applicant submits that the Commission's approach in the contested decision is at odds with its former decision-making practice, as followed since 1983, in accordance with which consultancy firms, which are not present on the market concerned by the infringement, are not considered to be parties to the agreement restricting competition or, consequently, as perpetrators of an infringement under Article 81(1) EC. The opposite approach, which was defended by the Commission in Decision 80/1334/EEC of 17 December 1980 relating to a proceeding under Article [81 EC] (IV/29.869 – Italian cast glass) (OJ 1980 L 383, p. 19; 'the Italian cast glass decision'), fails to have regard to the principle of *nullum crimen*, *nulla poena sine lege*, since the consultancy firm concerned was not a party to the agreement restricting competition, but merely complicit in that agreement. For that reason, the Commission was right to abandon that approach implicitly as of 1983. In Decision 83/546/EEC of 17 October 1983 relating to a proceeding under Article [81 EC] (IV/30.064 – Cast iron and steel rolls) (OJ 1983 L 317, p. 1; 'the cast iron and steel rolls decision'), the Commission classed only the undertakings which were present on the market concerned by the infringement and which were parties to the agreement restricting competition as perpetrators of an infringement for the purposes of Article 81(1) EC, and not the consultancy firm entrusted with managing, inter alia, the system for the exchange of information between the members of the cartel (recitals 10 et seq.). That approach was also followed by the Commission in Decision 86/398/EEC of 23 April 1986 relating to a proceeding under Article [81 EC] (IV/31.149 – Polypropylene) (OJ 1986 L 230, p. 1; 'the polypropylene decision'), (see recital 66); Decision 89/191/EEC of 21 December 1988 relating to a proceeding pursuant to Article [81 EC] (IV/31.866, LdPE) (OJ 1989 L 74, p. 21; 'the LdPE decision') (see recitals 11 and 19); and Decision 94/601/EC of 13 July 1994 relating to a proceeding under Article [81 EC] (IV/C/33.833 – Cartonboard) (OJ 1994 L 243, p. 1; 'the cartonboard decision') (see recitals 2, 27 et seq., 33, 37, 61 et seq., 134 and 162).

94 The Commission cannot claim that the applicant played a more important role, in the present case, than the consultancy firms in the decisions cited above. On the contrary, unlike the consultancy firms involved in the cases which gave rise to the cast iron and steel rolls decision and the cartonboard decision, the applicant almost never attended the meetings with an anti‑competitive purpose (see paragraph 72 et seq. above). In addition, the other facts complained of in respect of the applicant lack relevance and have nothing to do with the cartel. Thus, the market information system based on official statistics did not infringe Article 81(1) EC (Case C‑179/99 P *Eurofer* v

Commission [2003] ECR I–10725, paragraph 44, and Case T–136/94 *Eurofer* v *Commission* [1999] ECR II–263, publication by extracts, paragraph 186) since it did not involve the transfer between competitors of information covered by business secrets. In the light of the Commission's settled decision-making practice, that applies a fortiori where a consultancy firm merely uses the sales figures sent to it without itself participating in the exchange as such of sensitive information (recital 12 to Commission Decision 94/599/EC of 27 July 1994 relating to a proceeding pursuant to Article [81 EC] (IV/31.865 – PVC) (OJ 1994 L 239, p. 14); recital 11 to the LdPE decision; and recital 66 to the polypropylene decision). Finally, the auditing by independent expert accountants of the sales figures sent by the cartel members is not restrictive of competition for the purposes of Article 81(1) EC. Accordingly, the applicant's 'secretarial' activities, referred to above, which are related to the cartel, amount merely to acts of complicity.

– The absence of any control over the cartel on the part of the applicant and of a causal link between the applicant's activity and the restriction of competition

95 The applicant states that it had no control over the infringement. The decisions relating to the implementation, the management and the orientation of the cartel were taken exclusively by the three organic peroxide producers. Consequently, there is no causal link between the applicant's activity and the restriction of competition on the organic peroxide market. As an agent under the Swiss law of obligations, subject to the instructions of those producers and to an obligation of confidentiality, the applicant was merely a tool of the cartel members. However, even that is not sufficient reason for the applicant to be regarded as a co–perpetrator of the infringement on the same level as the organic peroxide producers. The applicant's lack of control over the infringement is also evident from the fact that it did not participate in the collusive activity proper, namely the exchange of information between the producers by fax, by mobile telephone and at meetings of the working group at which the applicant was not present (see paragraph 72 et seq. above).

96 In addition, the applicant claims that, contrary to the finding in recital 345 of the contested decision, as regards the services which it provided in the context of the cartel, such as the reimbursement of travel expenses, it could have been replaced at any moment by either the organic peroxide producers themselves or by another consultancy firm, without the functioning of the cartel being disrupted as it would have been if one of the producers had withdrawn.

97 In the light of all the foregoing, the applicant maintains that its relationship with the three organic peroxide producers involved in the cartel should be classed as one of non-punishable complicity. In that regard, it is irrelevant that the applicant had some knowledge of the cartel, since that knowledge is not sufficient to justify the conclusion that the applicant itself committed an infringement (Case C–286/98 P *Stora Kopparbergs Bergslags* v *Commission* [2000] ECR I–9925, paragraph 39, and the Opinion of Advocate General Mischo in that case, ECR I–9928, paragraph 80).

– The erroneous classification of the applicant as an 'association of undertakings'

98 Finally, the applicant disputes its classification as an 'association of undertakings' in Article 1 and recitals 347, 373 and 464 of the contested decision. By adopting a broad interpretation of that concept, the Commission infringed the prohibition against reasoning by analogy which is a corollary of the principle of *nullum crimen*, *nulla poena sine lege* laid down in Article 7(1) of the ECHR (see paragraph 83 above) and which also applies in the penalty-based administrative procedure laid down in Regulation No 17. A consultancy firm such as the applicant is not generally regarded as constituting an 'association of undertakings', that is to say, an organisational structure made up of member undertakings. Since it is not made up of member undertakings, the applicant is an independent undertaking controlled exclusively by natural persons as shareholders. Similarly, it is not linked to its clients by a structural link but by agency agreements which are purely contractual in nature.

99 The Commission's approach also runs counter to the meaning and purpose of the concept of 'association of undertakings'. The purpose of that concept is not to make it possible to penalise persons who are complicit in the conduct of cartel members, but merely to prevent undertakings from being able to circumvent the rules on competition simply by virtue of the form they adopt in order to coordinate their conduct on the market; and, consequently, to encompass also institutionalised forms of cooperation through a collective structure or a common body (Opinion of Advocate General Léger in Case C–309/99 *Wouters and Others* [2002] ECR I–1577, paragraph 62). By contrast, in the present case, the organic peroxide producers did not act through a collective

structure or a common body, but coordinated their conduct directly by fax, by telephone and through the meetings of the working group. In that regard, the applicant merely provided administrative or logistical assistance, which does not mean that it represents the 'collective structure' or the 'common body' of those producers.

100 The applicant concludes from this that, having played a role of non-punishable complicity in relation to AKZO, Atochem/Atofina and PC/Degussa, it is not guilty of infringing Article 81(1) EC and that the fact that the Commission imputed to it such an infringement is contrary to the principle of *nullum crimen*, *nulla poena sine lege*.

b) Arguments of the Commission

The factual context of the contested decision

101 As regards the relevant facts, the Commission essentially submits that the applicant does not question the fact that it stored in its safe, inter alia, copies of the 1971 and 1975 agreements belonging to Atochem/Atofina and PC/Degussa. In addition, the Commission disputes the fact that the applicant classed the official market information system as a separate issue and maintains that that system must be placed back in the context of the cartel. The collecting, preparing and monitoring of figures, and the establishing of statistics, in the framework of that system, in full knowledge of the reasons why and of the anticompetitive aims, constituted – together with the attending of meetings, the proposing of quotas and the calculating of the deviations from the agreed quotas – a *condicio sine qua non* for the functioning of the cartel.

102 In addition, it is not disputed that the applicant attended five meetings in Zurich between 1994 and 1998, of which four were 'summit' meetings, as well as the meeting with the AKZO representatives in Amersfoort. The applicant also admitted to having reserved meeting rooms for three 'unofficial' meetings in Zurich between 1997 and 1998. In the light of those facts, which are not disputed, the applicant cannot minimise its participation by using words such as 'rarely' or 'almost never'. The applicant also does not dispute that it calculated the deviations from the agreed quotas until at least 1995 or 1996. It also acted as a clearing house in order to ensure that the anticompetitive meetings were not traceable from the accounts of the participating undertakings. Thus, the applicant itself ensured, when making reimbursements, that no mention was made thereof in the internal payment orders filled in and signed by Mr S. Finally, the Commission disputes the applicant's argument that the contested decision is based on statements made by AKZO to which no credibility should be attributed. In that regard, the Commission points out that the various statements regarding the relevant facts, even those whose credibility is necessarily tenuous, may be regarded as mutually supportive (*Mannesmannröhren‑Werke* v *Commission*, cited in paragraph 77 above, paragraph 86).

Infringement of the principle of *nullum crimen*, *nulla poena sine lege*

103 The Commission denies that the contested decision infringes the principle of *nullum crimen*, *nulla poena sine lege*. It rejects the applicant's premisses that, under Community competition law, following the example of the criminal laws of a number of Member States, a formal distinction must be made between perpetration, on the one hand, and instigation or complicity, on the other. Neither the relevant primary nor secondary legislation makes such a distinction. In addition, as confirmed by Article 15(4) of Regulation No 17, the administrative procedure laid down in that regulation is not of a criminal-law nature (Case T‑83/91 *Tetra Pak* v *Commission* [1994] ECR II‑755, paragraph 235). Furthermore, it is not necessary to make such a formal distinction in Community competition law since, in determining the amount of the fine, account may be taken of the existence of different forms of participation and of the gravity of the contribution to the infringement (Opinion of Advocate General Stix‑Hackl in *Krupp Hoesch* v *Commission*, cited in paragraph 85 above, ECR I‑10941, footnote 15).

104 In the absence of a rule distinguishing the perpetrator from the participant, any person satisfying the conditions relating to the constitution of the infringement specified in Article 81(1) EC may be fined under Article 15(2) of Regulation No 17. The Commission adds that the imperative requirement, resulting from the principle of legal certainty, that Community legal acts be clear and that their application be sufficiently predictable for the persons concerned does not mean that it is never necessary to interpret those acts. The Eur. Court H. R. also recognises the need to strike a balance between, on the one hand, the obligation to be precise and the prohibition under Article 7 (1) of the ECHR against reasoning by analogy in criminal law matters and, on the other, interpretation by the courts which is intended, in particular, to clarify the rules on criminal liability

gradually, from one case to another (Eur. Court H. R., *S.W.* v *United Kingdom*, judgment of 22 November 1995, Series A no 335-B, § 36). Consequently, any person who satisfies the conditions laid down in Article 81(1) EC is a perpetrator of an infringement.

105 The Commission objects to the applicant's claim that it was not a party to the cartel and could not be one. The 1971 agreement, concluded between the organic peroxide producers, and the agency agreements, concluded between the applicant and those producers, should be regarded as essential elements of one and the same cartel. Given that the agency agreements served for the implementation of the 1971 agreement, they should be assessed together with that agreement as complementary and accessory agreements (recitals 339 and 340 of the contested decision; see also the Italian cast glass decision).

106 In that regard, it is not necessary, in the light of the wording of Article 81(1) EC, for the applicant, in its capacity as a consultancy firm, to be active on the market at issue as a competitor or on the side of supply or demand. Nor is it a requirement that the commercial autonomy of the undertakings concerned, and the competition between them, be restricted: rather, any restriction of competition within the common market is sufficient. That is consistent with the objective of Article 81 EC which, in accordance with Article 3(1)(g) EC, forms part of a system ensuring that competition in the internal market is not distorted (see also recital 9 to Council Regulation (EC) No 1/2003 of 16 December 2002 on the implementation of the rules on competition laid down in Articles 81 [EC] and 82 [EC] (OJ 2003 L 1, p. 1)).

107 Article 81(1) EC is applicable not only to 'horizontal' agreements but also to 'vertical' agreements restrictive of competition, concluded between undertakings situated at different stages of the distribution chain (Joined Cases 56/64 and 58/64 *Consten and Grundig* v *Commission* [1966] ECR 299), or concluded between undertakings active on different markets. In that regard, the notion of agreement seeks merely to enable a distinction to be made between coordination which is prohibited, and parallel conduct which is permitted (see, also, Case T‑61/99 *Adriatica di Navigazione* v *Commission* [2003] ECR II‑5349, paragraph 89). Moreover, an infringement under Article 81(1) EC is in the nature of an *abstraktes Gefährdungsdelikt* (an offence consisting in the creation of a state of affairs which is dangerous, where no specific danger need be statutorily defined) since that provision also concerns the restriction of competition, that is to say, the cartel poses a danger for competition, generally speaking and quite apart from the individual case.

108 Next, the Commission refers to case‑law to the effect that, where an undertaking merely attends meetings with an anticompetitive purpose and tacitly approves an unlawful initiative, without publicly distancing itself from the content of that initiative or reporting it to the administrative authorities, it thereby engages in a passive form of participation in the infringement which is capable of rendering that undertaking liable in the context of a single agreement (*Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraphs 83 and 84; Case T‑7/89 *Hercules Chemicals* v *Commission* [1991] ECR II‑1711, paragraph 232; Case T‑12/89 *Solvay* v *Commission* [1992] ECR II‑907, paragraph 98; and Case T‑141/89 *Tréfileurope* v *Commission* [1995] ECR II‑791, paragraphs 85 and 86). That is a fortiori the case where an undertaking actively participates in a cartel, whether or not that undertaking is active on the market at issue.

109 In the present case, the applicant's role in the cartel was not one of passive complicity: it participated actively in that cartel as an organiser and by fostering its proper implementation (recital 343 of the contested decision). Through its activities, the applicant was of considerable assistance in keeping the cartel alive and in concealing its existence; thus it contributed considerably to the serious and long-term restriction of competition on the organic peroxide market. According to the Commission, those are both necessary and sufficient elements on which to base the applicant's liability under Article 81(1) EC. In that regard, it is irrelevant whether or not a participant in an infringement derives a profit from it (*Krupp Hoesch* v *Commission*, cited in paragraph 85 above), since Article 81(1) EC is not based on the criterion of enrichment but on that of jeopardising competition.

110 In any event, the applicant directly benefited from the success of the cartel (recital 342 of the contested decision). According to the Commission, another factor which is not decisive is whether or not a participant is in a position to exert a direct influence on the prices and quantities which indicate the parameters of competition (see, by analogy, *Brugg Rohrsysteme* v *Commission*, cited in paragraph 23 above, paragraph 61). Otherwise, the useful effect of the prohibition laid down in Article 81(1) EC would be frustrated, as it would be possible to circumvent that prohibition by engaging 'specialists in the provision of collusive services', who could be entrusted with organising

the cartel, keeping it alive and concealing its existence.

111 The Commission therefore contends that the present plea should be rejected.

2. Findings of the Court

a) Preliminary observations

112 It should be pointed out, first, that the applicant does not dispute as such the amount of the fine imposed on it in the contested decision. By the present plea, the applicant essentially submits that, by holding it liable for an infringement of Article 81(1) EC and by imposing a fine on it, the Commission oversteps the limits of the decision-making power conferred on it under Article 15(2) of Regulation No 17 and infringes the principle of *nullum crimen*, *nulla poena sine lege* for the purposes of Article 7(1) of the ECHR. In that regard, according to the applicant, the Commission should have taken account of the fact that the applicant merely played a role of non-punishable complicity in the cartel, and cannot therefore be classed as an undertaking or association of undertakings which is the ‘perpetrator’ of an infringement, as referred to in Article 81(1) EC.

113 Next, it should be pointed out that the procedure before the Commission under Regulation 17 is merely administrative in nature (see, to that effect, *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 200; Joined Cases T-25/95, T-26/95, T-30/95, T–31/95, T-32/95, T-34/95, T-35/95, T–36/95, T-37/95, T-38/95, T–39/95, T-42/95, T-43/95, T-44/95, T-45/95, T–46/95, T-48/95, T–50/95, T-51/95, T-52/95, T-53/95, T-54/95, T-55/95, T–56/95, T–57/95, T-58/95, T-59/95, T-60/95, T-61/95, T-62/95, T-63/95, T–64/95, T-65/95, T-68/95, T-69/95, T-70/95, T-71/95, T-87/95, T–88/95, T–103/95 and T-104/95 *Cimenteries CBR and Others* v *Commission* [2000] ECR II–491, paragraphs 717 and 718) and that, consequently, the general principles of Community law and, in particular, the principle of *nullum crimen*, *nulla poena sine lege*, as applicable to Community competition law (Joined Cases C-189/02 P, C-202/02 P, C-205/02 P to C-208/02 P and C-213/02 P *Dansk Rørindustri and Others* v *Commission* [2005] ECR I–5425, paragraphs 215 to 223) need not necessarily have the same scope as when they apply to a situation covered by criminal law in the strict sense.

114 In order to determine whether it is necessary to draw a distinction, in the light of the prohibition laid down in Article 81(1) EC and the principle of *nullum crimen*, *nulla poena sine lege*, between an undertaking which is a ‘perpetrator’ of an infringement and an undertaking whose role is one of non-punishable ‘complicity’, it is necessary to make a literal, contextual and teleological interpretation of Article 81(1) EC (see, as regards the methodology, Case T–251/00 *Lagardère and Canal+* v *Commission* [2002] ECR II–4825, paragraphs 72 et seq., and Joined Cases T–22/02 and T–23/02 *Sumitomo Chemical and Sumika Fine Chemicals* v *Commission* [2005] ECR II–4065, paragraphs 41 et seq.).

b) The literal interpretation of Article 81(1) EC

115 Article 81(1) EC states that ‘[t]he following shall be prohibited as incompatible with the common market: all agreements between undertakings, decisions by associations of undertakings and concerted practices which may affect trade between Member States and which have as their object or effect the prevention, restriction or distortion of competition within the common market’.

116 It is appropriate to consider the full implications of the term ‘agreements between undertakings’.

117 In that regard, it should be noted, first, that the Community judicature has yet to give an explicit ruling on the question whether the notions of agreement and undertaking as used in Article 81(1) EC are conceived in accordance with a ‘unitary’ perspective, so as to cover any undertaking which has contributed to the committing of an infringement, irrespective of the economic sector in which that undertaking is normally active or – as the applicant submits – in accordance with a ‘bipolar’ perspective, so that a distinction is drawn between undertakings which ‘perpetrate’ an infringement and those whose role is one of ‘complicity’ in the infringement. It should also be noted that, according to the applicant, there is a lacuna in the wording of Article 81(1) EC, in that, in referring to the ‘undertaking’ which is the perpetrator of the infringement and to its participation in the ‘agreement’, that provision covers only certain undertakings with particular characteristics and refers only to certain forms of participation. Consequently, it is only on the assumption that the

notions of undertaking and agreement fall to be so narrowly construed, and that the scope of Article 81(1) EC is accordingly so limited, that the principle of *nullum crimen*, *nulla poena sine lege* could be applied in such a way as to preclude a broad interpretation of the wording of that provision.

118 As regards the term 'agreement', it should be noted, first of all, that that term is merely another way of indicating coordinated/collusive conduct which is restrictive of competition, or a cartel in the wider sense, in which at least two distinct undertakings participate after expressing their joint intention of conducting themselves on the market in a specific way (see, to that effect, *Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraphs 79 and 112; Case T–41/96 *Bayer* v *Commission* [2000] ECR II–3383, paragraphs 67 and 173; and Joined Cases T-44/02 OP, T-54/02 OP, T-56/02 OP, T–60/02 OP and T-61/02 OP *Dresdner Bank and Others* v *Commission* [2006] ECR II–3567, paragraphs 53 to 55). Furthermore, in order to constitute an agreement within the meaning of Article 81(1) EC, it is sufficient that an act or conduct, albeit apparently unilateral, be the expression of the concurrence of wills of at least two parties, the form in which that concurrence is expressed not being by itself decisive (Case C–74/04 P *Commission* v *Volkswagen* [2006] ECR I–6585, paragraph 37). That broad notion of agreement is confirmed by the fact that the prohibition laid down in Article 81(1) EC also covers concerted practice whereby there is a form of coordination between undertakings which does not lead to the conclusion of an agreement as such (see, to that effect, *Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraph 115 and the case–law cited therein).

119 In the present case, the question arises whether, as claimed by the applicant, the cartel must concern a specific sector of activity, or even the same market for goods or services, so that only undertakings which are active in such a sector or market as competitors, or on the side of supply or demand, are capable of coordinating their conduct as undertakings which are the (co–)perpetrators of an infringement.

120 In that regard, it should be noted that Article 81(1) EC applies not only to 'horizontal' agreements between undertakings exercising a commercial activity on the same market for the relevant goods and services, but also to 'vertical' agreements which entail the coordination of conduct between undertakings active at different stages of the production and/or distribution chain, and, consequently, operating on markets for different goods or services (see, in that regard, *Cour Consten and Grundig* v *Commission*, cited in paragraph 107 above, pp. 339 and 340; Joined Cases C–2/01 P and C–3/01 P *BAI and Commission* v *Bayer* [2004] ECR I–23; Case C–551/03 P *General Motors* v *Commission* [2006] ECR I–3173; *Commission* v *Volkswagen*, cited in paragraph 118 above; order of the Court of Justice in Case C–552/03 P *Unilever Bestfoods* v *Commission* [2006] ECR I–9091; Case T–112/99 *M6 and Others* v *Commission* [2001] ECR II–2459, paragraph 72 et seq.; see, also, Commission Regulation (EC) No 2790/1999 of 22 December 1999 on the application of Article 81(3) [EC] to categories of vertical agreements and concerted practices (OJ 1999 L 336, p. 21) and Commission notice (2000/C 291/01) – Guidelines on Vertical Restraints (OJ 2000 C 291, p. 1)).

121 Similarly, it is apparent from the case–law that, to fall within the ambit of the prohibition laid down in Article 81(1) EC it is sufficient that the agreement at issue restricts competition on the neighbouring and/or emerging markets on which at least one of the participating undertakings is not (yet) present (see, to that effect, Case T–328/03 *O2 (Germany)* v *Commission* [2006] ECR II–1231, paragraphs 65 et seq.; see also, as regards the application of Article 82 EC, Case C–333/94 P *Tetra Pak* v *Commission* [1996] ECR I–5951).

122 In that regard, the formulations used in the case–law – the 'joint intention of conducting themselves on the market in a specific way' (*Bayer* v *Commission*, cited in paragraph 118 above, paragraph 67) or 'expression of the joint intention of the parties to the agreement with regard to their conduct in the common market' (*ACF Chemiefarma* v *Commission*, cited in paragraph 23 above, paragraph 112) – stress the element of 'joint intention' and do not require the relevant market on which the undertaking which is the 'perpetrator' of the restriction of competition is active to be exactly the same as the one on which that restriction is deemed to materialise. It follows that any restriction of competition within the common market may be classed as an 'agreement between undertakings' within the meaning of Article 81(1) EC. That conclusion is confirmed by the criterion of the existence of an agreement whose object is to restrict competition within the common market. That criterion implies that an undertaking may infringe the prohibition laid down in Article 81(1) EC where the purpose of its conduct, as coordinated with that of other undertakings, is to restrict

competition on a specific relevant market within the common market, and that does not mean that the undertaking has to be active on that relevant market itself.

123 It is clear from the foregoing that a literal interpretation of the term 'agreements between undertakings' does not require a restrictive interpretation of the notion of perpetrator of the infringement as argued by the applicant.

c) The contextual and teleological interpretation of Article 81(1) EC

The requirement of restricted commercial autonomy

124 In support of its plea, the applicant also claims that the notion of perpetrator of the infringement necessarily implies that the latter restricts its own commercial autonomy vis-à-vis its competitors and thus contradicts the requirement of autonomy which underlies Article 81(1) EC, according to which each economic operator must determine autonomously the policy which it intends to follow on the common market.

125 As pointed out by the applicant by reference to the relevant case-law, the requirement of autonomy was developed, inter alia, in the context of the case-law on the distinction between prohibited concerted practices and parallel conduct which is permitted between competitors (see, to that effect, *Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraphs 115 to 117 and the case-law cited therein, and *Adriatica di Navigazione* v *Commission*, cited in paragraph 107 above, paragraph 89). In addition, it is apparent from the distinction made by the case-law between the existence of an agreement restricting competition for the purposes of Article 81(1) EC, on the one hand, and the presence of a simple unilateral measure adopted by an undertaking seeking to impose a certain form of conduct on other undertakings, on the other, that the restriction of competition must result from the manifestation, sufficiently established, of a concurrence of wills between the undertakings involved as regards the implementation of a particular line of conduct (see, to that effect, *BAI and Commission* v *Bayer*, cited in paragraph 120 above, paragraphs 96 to 102 and 141, and *Commission* v *Volkswagen*, cited in paragraph 118 above, paragraph 37). It follows that, contrary to the applicant's submissions, the requirement of autonomy is not directly linked to the question – which is not relevant in the present case (see paragraphs 120 to 123 above) – whether or not the undertakings restricting their commercial freedom are active in the same sector of activity or on the same relevant market, but rather to the notions of 'concerted practice' and 'agreement', since those notions require proof of a sufficiently clear and precise manifestation of a concurrence of wills between the undertakings involved.

126 Furthermore, the applicant overestimates the importance of the criterion of restriction of commercial freedom in the context of assessing whether there is a restriction of competition for the purposes of Article 81(1) EC. As is apparent from settled case-law, not every agreement between undertakings or every decision of an association of undertakings which restricts the freedom of action of the parties or of one of them necessarily falls within the ambit of the prohibition laid down in Article 81(1) EC. For the purposes of applying that provision to a particular case, account must first be taken of the overall context in which that agreement or that decision was arrived at or produces its effects and, more specifically, of its objectives (*Wouters and Others*, cited in paragraph 99 above, paragraph 97, and Case C-519/04 P *Meca-Medina and Majcen* v *Commission* [2006] ECR I-6991, paragraph 42). In that regard, the Court has made it clear that it was not necessary to hold, wholly abstractly and without drawing any distinctions, that any agreement restricting the freedom of action of one or more of the parties is necessarily caught by the prohibition laid down in Article 81(1) EC but that, in assessing the applicability of Article 81(1) to an agreement, account must be taken of the actual conditions in which it functioned, in particular the economic and legal context in which the undertakings operated, the products or services covered by the agreement and the actual structure and operating conditions of the market concerned (see *M6 and Others* v *Commission*, cited in paragraph 120 above, paragraph 76 and the case-law cited therein).

127 As regards that contextual notion of restriction of competition, it is not therefore to be ruled out that an undertaking may participate in the implementation of such a restriction even if it does not restrict its own freedom of action on the market on which it is primarily active. Any other interpretation might restrict the scope of the prohibition laid down in Article 81(1) EC to an extent incompatible with its useful effect and its main objective, as read in the light of Article 3(1)(g) EC, which is to ensure that competition in the internal market is not distorted, since proceedings against an undertaking for actively contributing to a restriction of competition could be blocked simply on

the ground that that contribution does not come from an economic activity forming part of the relevant market on which that restriction materialises or on which it is intended to materialise. It should be pointed out that, as submitted by the Commission, it is only by making all 'undertakings' within the meaning of Article 81(1) EC subject to liability that that useful effect can be fully guaranteed, since that makes it possible to penalise and to prevent the creation of new forms of collusion with the assistance of undertakings which are not active on the markets concerned by the restriction of competition, with the aim of circumventing the prohibition laid down in Article 81(1) EC.

128 The Court concludes from this that a reading of the term 'agreements between undertakings' in the light of the objectives pursued by Article 81(1) EC and by Article 3(1)(g) EC tends to confirm that the notions of a cartel and of an undertaking which is the perpetrator of an infringement are conceptually independent of any distinction based on the sector or the market on which the undertakings concerned are active.

The conditions in which the participation of an undertaking in a cartel constitutes an infringement of Article 81(1) EC

129 Next, it is necessary to note the case–law concerning the conditions which the participation of an undertaking in a cartel must satisfy for it to be possible to hold that undertaking liable as a co–perpetrator of the infringement.

130 In that regard, it is sufficient for the Commission to show that the undertaking concerned attended meetings at which anticompetitive agreements were concluded, without manifesting its opposition to such meetings, to prove to the requisite legal standard that that undertaking participated in the cartel. In order to establish that an undertaking participated in a single agreement, made up of a series of unlawful acts over time, the Commission must prove that that undertaking intended, through its own conduct, to contribute to the common objectives pursued by the participants as a whole and that it was aware of the substantive conduct planned or implemented by other undertakings in pursuance of those objectives, or that it could reasonably have foreseen that conduct and that it was ready to accept the attendant risk. In that regard, where an undertaking tacitly approves an unlawful initiative, without publicly distancing itself from the content of that initiative or reporting it to the administrative authorities, the effect of its behaviour is to encourage the continuation of the infringement and to compromise its discovery. It thereby engages in a passive form of participation in the infringement which is therefore capable of rendering that undertaking liable in the context of a single agreement (see, to that effect, *Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraphs 83 and 87; *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraphs 81 to 84; and *Dansk Rørindustri and Others* v *Commission*, cited in point 113 above, paragraphs 142 and 143; see also *Tréfileurope* v *Commission*, cited in paragraph 108 above, paragraph 85 and the case–law cited therein). It is also apparent from the case–law that those principles apply *mutatis mutandis* in respect of meetings which are attended not only by competing producers, but also by their clients (see, to that effect, Joined Cases T-202/98, T-204/98 and T-207/98 *Tate & Lyle and Others* v *Commission* [2001] ECR II–2035, paragraphs 62 to 66).

131 In addition, as regards the determination of the individual liability of an undertaking whose participation in the cartel is not as extensive or intense as that of the other undertakings, it is apparent from the case–law that, although the agreements and concerted practices referred to in Article 81(1) EC necessarily result from collaboration by several undertakings, all of whom are co-perpetrators of the infringement but whose participation can take different forms – according to, inter alia, the characteristics of the market concerned and the position of each undertaking on that market, the aims pursued and the means of implementation chosen or envisaged – the mere fact that each undertaking takes part in the infringement in ways particular to it does not suffice to rule out its liability for the entire infringement, including conduct put into effect by other participating undertakings but sharing the same anti–competitive object or effect (*Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraphs 78 to 80).

132 Accordingly, the fact that an undertaking did not take part in all aspects of an anti-competitive scheme, or that it played only a minor role in the aspects in which it did participate, is not material to the establishment of an infringement on its part. Although the limited importance, as the case may be, of the participation of the undertaking concerned cannot therefore call into question its individual liability for the infringement as a whole, it none the less has an influence on the assessment of the extent of that liability and thus on the severity of the penalty (see, to that effect, *Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraph 90; *Aalborg Portland and*

Others v *Commission*, cited in paragraph 23 above, paragraph 86; and *Dansk Rørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraph 145).

133 It is clear from the above considerations that, as regards the relationship between competitors on the same relevant market and the relationship between such competitors and their clients, the case–law recognises the joint liability of the undertakings which are co–perpetrators of an infringement under Article 81(1) EC and/or which have played an accessory role in such an infringement, in so far as it has been held that the objective condition for the attribution of various anti–competitive acts constituting the cartel as a whole to the undertaking concerned is satisfied where that undertaking has contributed to its implementation, even in a subsidiary, accessory or passive role, for example by tacitly approving the cartel and by failing to report it to the administrative authorities, since the potentially limited importance of that contribution may be taken into consideration for the purposes of determining the level of the fine.

134 In addition, the attribution of the infringement as a whole to the participating undertaking depends on the manifestation of its own intention, which shows that it is in agreement, albeit only tacitly, with the objectives of the cartel. That subjective condition is inherent in the criteria relating to the tacit approval of the cartel and to the undertaking having publicly distanced itself from the content of the cartel (*Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 84; *Dansk Rørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraph 143; and *Tréfileurope* v *Commission*, cited in paragraph 108 above, paragraph 85), in that those criteria imply a presumption that the undertaking concerned continues to endorse the objectives of the cartel and to support its implementation. That condition also constitutes the justification for holding the undertaking concerned to be liable together with the others, since it intended to contribute through its own conduct to the common objectives pursued by the participants as a whole and was aware of the anti–competitive conduct of the other participants, or could reasonably have foreseen that conduct, and was ready to accept the attendant risk (*Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraphs 83 and 87, and *Aalborg Portland and Others* v *Commission*, cited in paragraph 23 above, paragraph 83).

135 If the attribution of the infringement as a whole to the undertaking concerned is to be in line with the requirements of the principle of individual liability, the conditions set out in paragraphs 133 and 134 above must be complied with (see, to that effect, *Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraph 84).

136 In the light of the considerations set out in paragraphs 115 to 127 above, the Court considers that those principles apply mutatis mutandis to the participation of an undertaking whose economic activity and professional expertise mean that it cannot but be aware of the anti–competitive nature of the conduct at issue and enable it to make a significant contribution to the committing of the infringement. In those circumstances, the applicant's argument that a consultancy firm cannot be regarded as a co–perpetrator of an infringement – because it does not carry out an economic activity on the relevant market affected by the restriction of competition and because its contribution to the cartel is merely subordinate – cannot be upheld.

The interpretation of Article 81(1) EC in the light of the principle of *nullum crimen*, *nulla poena sine lege*

137 However, the applicant submits, in essence, that such a 'unitary' conception of the perpetrator of an infringement under Article 81(1) EC is incompatible with the requirements flowing from the principle of *nullum crimen*, *nulla poena sine lege* under Article 7(1) of the ECHR, as well as with those flowing from the rules common to the legal systems of the Member States, concerning the distinction between perpetration and complicity, which are applicable to both criminal law and competition law.

138 In that regard, the Court notes, first, as was pointed out in paragraph 45 above, that fundamental rights are an integral part of the general principles of law whose observance the Community judicature ensures by taking account, in particular, of the ECHR as a source of inspiration.

139 Next, the Community judicature has applied the principle of *nullum crimen*, *nulla poena sine lege* as a general principle of Community law in cases concerning competition law, in the light of the case–law of the Eur. Court H. R. (see *Dansk Rørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraphs 215 et seq., and Case T–43/02 *Jungbunzlauer* v *Commission*

[2006] ECR II–3435, paragraphs 71 et seq. and the case–law cited therein). Generally speaking, that principle requires, inter alia, that any Community legislation, in particular where it imposes or permits the imposition of penalties, must be clear and precise so that the persons concerned may know without ambiguity what rights and obligations flow from it and may take steps accordingly. By the same token, that principle must be observed in regard both to provisions of a criminal-law nature and to specific administrative instruments imposing or permitting the imposition of administrative penalties (see, to that effect, *Maizena*, cited in paragraph 85 above, paragraphs 14 and 15, and *X*, cited in paragraph 84 above, paragraph 25), such as penalties imposed under Regulation No 17.

140 In addition, it is apparent from the consistent interpretation which the Eur. Court H. R. has given to Article 7(1) of the ECHR that the principle of *nullum crimen*, *nulla poena sine lege*, which is laid down therein, requires, inter alia, that criminal law not be applied broadly, in particular by analogy, to the detriment of the defendant. It follows that an infringement must be clearly defined by the law, a condition which is satisfied where the individual can know from the wording of the relevant provision – and, if need be, with the assistance of the courts' interpretation – what acts or omissions would make him criminally liable. In that regard, the Eur. Court H. R. has stated that the concept of law used in Article 7 of the ECHR is the same as that to be found in other articles thereof and that it encompasses both law deriving from legislation and that deriving from case-law, and implies qualitative conditions, in particular those of accessibility and foreseeability (see Eur. Court H. R. *Kokkinakis* v *Greece*, judgment of 25 May 1993, Series A no. 260-A, § 40, 41 and 52; *S.W.* v *United Kingdom*, cited in paragraph 104 above, § 35; *Cantoni* v *France*, judgment of 15 November 1996, *Reports of Judgments and Decisions*, 1996-V, p. 1627, § 29; *Başkaya and Okçuoğlu* v *Turkey*, judgment of 8 July 1999, *Reports of Judgments and Decisions*, 1999-IV, p. 308, § 36; *Coëme and Others* v *Belgium*, judgment of 22 June 2000, *Reports of Judgments and Decisions*, 2000–VII, p. 1, § 145; *E.K.* v *Turkey*, no. 28496/95, § 51, 7 February 2002; see also *DanskRørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraph 216).

141 In the light of that case–law, the principle of *nullum crimen*, *nulla poena sine lege* cannot be interpreted as prohibiting the gradual clarification of the rules of criminal liability through interpretation by the courts (*Dansk Rørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraph 217). According to the case–law of the Eur. Court H. R., however clearly a legal provision is drafted, including a provision of criminal law, there is inevitably a need for interpretation by the courts and it will always be necessary to elucidate points of doubt and to adapt the wording to changing circumstances. Moreover, according to the Eur. Court H. R., it is well established in the legal traditions of the contracting parties to the ECHR that case–law, as a source of law, necessarily contributes to the progressive development of the criminal law (*S.W.* v *United Kingdom*, cited in paragraph 104 above, § 36). In that regard, the Eur. Court H. R. has recognised that even the wording of many statutes is not absolutely precise and that, because of the need to avoid excessive rigidity and to keep pace with changing circumstances, much legislation is inevitably couched in terms which, to a greater or lesser degree, are vague and their interpretation and application depend on practice (*Kokkinakis* v *Greece*, cited in paragraph 140 above, § 52, and *E.K.* v *Turkey*, cited in paragraph 140 above, § 52, and *Jungbunzlauer* v *Commission*, cited in paragraph 139 above, paragraph 80). Thus, in addition to the actual wording of the legislation, the Eur. Court H. R. also takes account of the settled and published case-law when deciding whether the concepts used are definite or not (*G.* v *France*, judgment of 27 September 1995, Series A no. 325-B, § 25).

142 Nevertheless, although the principle of *nullum crimen*, *nulla poena sine lege* in principle enables the rules governing criminal liability to be gradually clarified through interpretation by the courts, it may preclude the retroactive application of a new interpretation of a rule establishing an offence. That is particularly true if the result of that interpretation was not reasonably foreseeable at the time when the offence was committed, especially in the light of the interpretation attributed to the provision in the case-law at the material time. Furthermore, the notion of foreseeability depends to a considerable degree on the content of the text in issue, the field it is designed to cover and the number and status of those to whom it applies, and does not preclude the person concerned from taking appropriate legal advice to assess, to a degree that is reasonable in the circumstances, the consequences which a given action may entail. This is particularly true in the case of persons engaged in a professional activity, who are used to having to proceed with a high degree of caution when pursuing their occupation. They can thus be expected to take special care in assessing the risks that such an activity entails (*DanskRørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraphs 217 to 219, referring to *Cantoni* v *France*, cited in paragraph 140 above, paragraph 35).

143 It is apparent from the above considerations that the interpretation of the full implications of Article

81(1) EC and, in particular, of the terms 'agreement' and 'undertaking', according to which any undertaking which has contributed to the implementation of the cartel falls within its scope even if that undertaking is not active on the relevant market affected by the restriction of competition, must have been sufficiently foreseeable, at the time of the perpetration of the alleged misconduct, in the light of the wording of that provision, as interpreted by the case-law.

144 In that regard, it should be pointed out that the terms 'agreement' and 'undertaking', within the meaning of Article 81(1) EC, constitute legal concepts which have not been delimited, the full implications of which fall ultimately to be determined by the Community judicature, and the application of which by the administration is subject to full judicial review. In those circumstances, the gradual clarification of the notions of 'agreement' and 'undertaking' by the Community judicature is of decisive importance in assessing whether their application in practice is definite and foreseeable.

145 First, the Court considers that, in the light of the settled case-law referred to in paragraphs 115 to 128 above, the term 'agreements between undertakings' in Article 81(1) EC constitutes a sufficiently precise expression of the notions of cartel and perpetrator of the infringement, as described in paragraph 128 above – in that that term covers any undertaking which acts in a collusive manner, irrespective of the sector of activity or of the relevant market on which it is active – to ensure that such an undertaking cannot be unaware, or even fail to recognise, that it is exposing itself to legal action if it adopts such conduct.

146 Second, as has been pointed out in paragraphs 129 to 135 above, settled case-law exists in relation to the shared liability under Article 81(1) EC of undertakings which are co-perpetrators of an infringement and/or which are complicit in the overall infringement, to which the anti-competitive conduct of the other participating undertakings is also attributed. That case-law, which is also based on a 'unitary' conception of the notions of cartel and perpetrator of an infringement, states clearly and precisely the objective and subjective conditions which must be satisfied if it is to be possible to hold an undertaking liable in respect of an infringement committed by a number of co-perpetrators or complicit parties. In that regard, the mere fact that the Court of Justice did not define those principles of accountability until 1999 (*Commission* v *Anic Partecipazioni*, cited in paragraph 65 above, paragraphs 78 et seq.) cannot, in itself, detract from their foreseeability at the time material to the applicant (between 1993 and 1999), since the elements determining individual liability already emerged, with sufficient precision, from the broad conception of cartel and undertaking for the purposes of Article 81(1) EC and the earlier case-law of the Court of First Instance (see *Tréfileurope* v *Commission*, cited in paragraph 108 above, paragraph 85 and the case-law cited therein). Furthermore, the fact that the Community judicature has not given a ruling on the specific question whether a consultancy firm which is not active on the same market as the main participants in the cartel can be attributed a share of the liability for an infringement is not sufficient to support the conclusion that an administrative and jurisprudential practice establishing that such an undertaking shares liability – or, at the very least, that such shared liability is possible – is not reasonably foreseeable by professionals in the light of both the wording of Article 81(1) EC and the case-law cited above.

147 On the contrary, as regards the penalty-based administrative practice in that connection, it should be pointed out that, as the applicant itself admits, the Commission had already decided in 1980 to attribute an infringement of Article 81(1) EC to a consultancy firm which had actively participated, in a manner comparable to the way in which the applicant participated in the present case, in the implementation of the cartel in question (the Italian cast glass decision; see, in particular, point II. A. 4. at the end of the recitals). In that regard, the fact that the Commission no longer adopted that approach in a number of subsequent decisions does not justify the conclusion that such an interpretation of the full implications of Article 81(1) EC is not reasonably foreseeable. That is especially true in the case of a consultancy firm, which must be presumed, given the Commission's decision-making practice since 1980, to manage its economic activities with a very high degree of caution and to seek informed advice, in particular from legal experts, in order to assess the risks associated with its conduct (see, to that effect, *Dansk Rørindustri and Others* v *Commission*, cited in paragraph 113 above, paragraph 219).

148 In that context, the applicant cannot legitimately claim that such an interpretation is contrary to the rules common to the Member States on the subject of individual liability, which draw a distinction between the perpetrators of an infringement and those whose role is one of complicity. The rules cited by the applicant (see paragraph 81 above) concern only national criminal law, and the applicant does not explain whether – and, if so, to what extent – those rules also apply, in the

respective national legal systems, in the context of penalty-based administrative procedures and, in particular, to procedures designed to punish anti–competitive practices.

149 Moreover, it is not apparent from either the case–law of the Eur. Court H. R. or the decision-making practice of the former European Human Rights Commission that the principle of *nullum crimen*, *nulla poena sine lege* requires a distinction to be drawn, both in criminal proceedings and in the context of penalty-based administrative procedures, between the perpetrator of the infringement and a party whose role is one of complicity, so that the latter is not punishable where the relevant legal rule does not expressly provide for a penalty to be imposed in such a case. That means, on the contrary, that for that principle to be complied with, the conduct of the person to whom the misconduct is imputed must be covered by the definition of perpetrator of the offence in question, such that it can be inferred from the wording of the provision at issue, where necessary in the light of the interpretation given in the case–law. If that definition is sufficiently broad to cover both the conduct of the main perpetrators of the infringement and that of the parties whose role is one of complicity, there can be no infringement of the principle of *nullum crimen*, *nulla poena sine lege* (see, for the reasoning a contrario, Eur. Court H. R. *E.K.* v *Turkey*, cited in paragraph 140 above, § 55 and 56, and Eur. Commission H. R., decision on admissibility *L.–G. R.* v *Sweden*, of 15 January 1997, application no 27032/95, p. 12).

150 In the light of all the above considerations, the Court concludes that any undertaking which has adopted collusive conduct, including consultancy firms which are not active on the market affected by the restriction of competition, could reasonably have foreseen that the prohibition laid down in Article 81(1) EC was applicable to it in principle. Such an undertaking could not have been unaware, or was in a position to realise, that a sufficiently clear and precise basis was already to be found, in the former decision-making practice of the Commission and in the existing Community case–law, for expressly recognising that a consultancy firm is liable for an infringement of Article 81(1) EC where it contributes actively and intentionally to a cartel between producers which are active on a market other than that on which the consultancy firm itself operates.

d) The applicant's classification as a co–perpetrator of the cartel

151 Next, it must be determined whether, in the present case, the objective and subjective conditions for establishing that the applicant shares liability, in that the anti–competitive conduct of the other participating undertakings can be attributed to it, are satisfied. In that regard, it should be pointed out, first of all, that in order to be able to attribute the whole of an infringement to an undertaking, that undertaking must have contributed, even in a subordinate manner, to the restriction of competition at issue, and the subjective condition relating to the manifestation of that undertaking's intention in that regard must be met.

152 Independently of the question whether the applicant was a 'contracting' party to the 1971 and 1975 agreements and whether the agency agreements concluded with the three organic peroxide producers were an integral part of the cartel in the wider sense, the Court notes that it has become apparent that the applicant actively contributed to the implementation of that cartel between 1993 and 1999.

153 First, it is common ground that the applicant stored and concealed on its premises the originals of the 1971 and 1975 agreements of Atochem/Atofina and PC/Degussa, and in the latter case, until as late as 2001 or 2002 (recitals 63 and 83 of the contested decision). Second, the applicant admits to having calculated and communicated to the members of the cartel the deviations of the respective market shares from the agreed quotas, until 1995 or 1996 at the very least, an activity which was expressly provided for in the 1971 and 1975 agreements, and to having stored secret documents on its premises, pursuant thereto. Third, as regards the meetings between the organic peroxide producers which had some anti–competitive content, the applicant admitted to having organised and partly attended five of those meetings, as well as the meeting held in Amersfoort on 19 October 1998 to prepare a proposal regarding the allocation of quotas among the producers. Fourth, it is common ground that the applicant regularly reimbursed the travel expenses which the representatives of the organic peroxide producers incurred in attending meetings with an anti–competitive purpose, and it did so with the manifest intention of covering up any traces of the implementation of the cartel in the books of those producers, or of not leaving any such traces (see paragraphs 63 and 102 above).

154 Without there being any need to assess in detail the points of dispute between the parties regarding

the actual extent of the applicant's participation in the cartel, the Court concludes from the information set out in paragraph 153 above that the applicant actively contributed to the implementation of the cartel and that, contrary to its submissions, there was a sufficiently definite and decisive causal link between that activity and the restriction of competition on the organic peroxide market. At the hearing, the applicant did not dispute the existence of that causal link but merely challenged the legal classification of its contribution as an act of a perpetrator of the infringement, maintaining that its contribution could be classed only as an act of complicity which could have been carried out by any consultancy firm.

155 Accordingly, it is not relevant that the applicant was not formally and directly a contracting party to the 1971 and 1975 agreements. First, for the purposes of applying Article 81(1) EC, the question whether or not there is an agreement which is in writing, or otherwise explicit, between the participating undertakings is not decisive so long as they act in collusion (see paragraphs 115 to 123 above). Second, the applicant itself acknowledges that, by tacit agreement with the organic peroxide producers, it undertook – in its own name and on its own account – some of Fides' activities as specifically provided for under those agreements, such as the calculation and communication of the deviations from the agreed quotas. It should be added that, given that the Commission merely imposed on the applicant a fine of a minimal amount of EUR 1 000 and that that amount as such has not been called into question by the applicant, the Court is not required to give a ruling on the exact extent of the applicant's participation for the purposes of its effect on the lawfulness of the level of the fine imposed.

156 Moreover, in the light of all the objective circumstances characterising the applicant's participation, the Court finds that the applicant acted in full knowledge of the facts and intentionally when it made its professional expertise and infrastructure available to the cartel, in order to benefit from it, at least indirectly, in the course of implementing the individual agency agreements which linked it to the three organic peroxide producers. Quite apart from the question whether the applicant thus also knowingly infringed the rules of professional ethics by which it is bound as a commercial consultant, it clearly could not have been unaware, or indeed it knew, that the objective of the cartel to which it contributed was anti-competitive and unlawful, that objective having become apparent, inter alia, in the context of the 1971 and 1975 agreements which the applicant stored on its premises, from the meetings which were held with an anti-competitive aim and from the exchange of sensitive information in which the applicant actively participated, at least until 1995 or 1996.

157 In the light of all of the above considerations, the Court finds that, in so far as the contested decision establishes that the applicant shares liability for the infringement committed primarily by AKZO, Atochem/Atofina and PC/Degussa, that decision does not exceed the limits of the prohibition laid down in Article 81(1) EC and that, consequently, by imposing on the applicant a fine of EUR 1 000, the Commission did not exceed the powers conferred on it under Article 15(2) of Regulation No 17.

158 In those circumstances, the Court considers it unnecessary to give a ruling on the question whether the Commission could also have legitimately based the applicant's liability on the notion of a decision by an association of undertakings. As the Commission acknowledged at the hearing, the present case involves a purely alternative or secondary assessment, which can neither confirm nor invalidate the legal legitimacy of the Commission's main approach, as based on the notions of 'cartel' and 'undertaking'. By the same token, it is unnecessary to assess whether the Commission correctly examined and evaluated certain evidence against the applicant which is not decisive for the outcome of the present dispute. In that regard, the applicant's arguments, as set out in paragraphs 77 to 79 above, seek merely to support the well-foundedness of the present plea and do not constitute a separate plea.

159 Consequently, the second plea must be rejected as unfounded.

D – The third plea, alleging infringement of the principle of the protection of legitimate expectations

1. Arguments of the parties

160 The applicant maintains that, in view of the established decision-making practice of the Commission since 1983, it could legitimately expect that the Commission would assess its conduct in the same way as it assessed comparable conduct on the part of other consultancy firms in previous cases. Accordingly, the contested decision runs counter to the principle of protection of legitimate interests. According to the applicant, although the decisions of the Commission are binding only on those to

whom they are addressed, they none the less constitute – particularly where they establish consistent decision-making practice – legal acts which are relevant to comparable situations. The possibility for the individual to rely on the continuance of a certain decision-making practice merits protection a fortiori because the application of Article 81 EC is dependent on a great number of undefined legal terms, the practical implications of which it is vital to specify through decision-making practice.

161 The applicant submits that the principle of protection of legitimate expectations, as recognised in the case–law (Case 112/77 *Töpfer and Others* [1978] ECR 1019, paragraph 19, and Case T–266/97 *Vlaamse Televisie Maatschappij* v *Commission* [1999] ECR II–2329, paragraph 71) precludes the Commission from abandoning, without warning, its own decision-making practice in relation to Article 81 EC, or from retroactively classifying as an infringement, and imposing a fine for, conduct which has hitherto been regarded as falling outside the scope of that provision. Since 1983, contrary to its approach in the Italian case glass decision, the Commission has no longer regarded as an infringement assistance provided by consultancy firms which are not party to the agreement restricting competition (see, inter alia, the cast iron and steel rolls decision of 1983; the polypropylene decision of 1986; the LdPE decision of 1988; and the cartonboard decision of 1994). Thus, at the time of its establishment at the end of 1993, the applicant could legitimately expect that the assistance provided to the three organic peroxide producers was also not classed as an infringement of Article 81(1) EC. According to the applicant, its activity did not go beyond that of other consultancy firms in the cases which gave rise to the cast iron and steel rolls decision or the cartonboard decision. Consequently, the Commission should not have held the applicant liable for an infringement of Article 81(1) EC or imposed a fine on it.

162 The Commission contends that the present plea should be rejected.

2. Findings of the Court

163 The Court considers that, in the light of the recognition under Community competition law of the principle that a consultancy firm which has participated in a cartel shares liability for the infringement, the principle of the protection of legitimate expectations cannot stand in the way of the reorientation of the Commission's decision-making practice in the present case. As is apparent from paragraphs 112 to 150 above, that reorientation is based on a correct interpretation of the full implications of the prohibition laid down in Article 81(1) EC. Since the interpretation of the undefined legal concept of 'agreements between undertakings' ultimately falls to be determined by the Community judicature, the Commission does not have any leeway enabling it, where relevant, to forgo bringing an action against a consultancy firm which satisfies the criteria for shared liability. On the contrary, by virtue of its duty under Article 85(1) EC, the Commission is required to ensure the application of the principles laid down in Article 81 EC and to investigate, on its own initiative, all cases of suspected infringement of those principles, as interpreted by the Community judicature. Accordingly, since – notwithstanding the Italian cast glass decision – the Commission's decision-making practice prior to the contested decision could appear to conflict with the above interpretation of Article 81(1) EC, that practice was not capable of giving rise to legitimate expectations on the part of the undertakings concerned.

164 Furthermore, as is apparent from paragraphs 147 and 148 above, the current reorientation of the Commission's decision-making practice was even more foreseeable for the applicant given the existence of a precedent, namely the Italian cast glass decision of 1980. Also, as is apparent from paragraph 163 above, the Commission's post-1980 decision-making practice could not reasonably be construed as a definitive abandonment of the initial approach followed in the Italian case glass decision. Furthermore, although, in the polypropylene decision of 1986, the Commission did not class Fides Trust as a perpetrator of the infringement, it none the less clearly censured the information exchange system established and managed by that company as being incompatible with Article 81(1) EC (the polypropylene decision, recital 106 and Article 2; see also the cartonboard decision, recital 134). In those circumstances, the Commission's post-1980 decision-making practice – which does not censure or penalise the consultancy firms involved, but goes no further, that is to say, it does not disavow, as a matter of law, the approach initially followed in the Italian cast glass decision – was even less capable of giving rise to a legitimate expectation on the part of the applicant that the Commission would in future abstain from bringing actions against consultancy firms where they participate in a cartel.

165 The present plea must therefore be rejected as unfounded.

E – The fourth plea raised in the alternative, alleging infringement of the principle of legal certainty and of the principle of nulla poena sine lege certa

1. Arguments of the parties

166 The applicant submits that, in so far as it is concerned, the Commission's legal analysis is so vague and contradictory that it infringes the principle of legal certainty and the principle of *nulla poena sine lege certa*. The Commission refrains from indicating with the necessary clarity the parameters and limits of unlawful and punishable conduct on the part of a consultancy firm such as the applicant, and thus deprives the applicant of the legal certainty required in a society governed by the rule of law.

167 The applicant points out that the principle of *nulla poena sine lege certa*, as laid down in Article 7(1) of the ECHR and recognised as a general principle of Community law, is a corollary of the principle of legal certainty (*X*, cited in paragraph 84 above, paragraph 25). The latter is a fundamental principle of Community law (Case 74/74 *CNTA* v *Commission* [1975] ECR 533, paragraph 44; Joined Cases 212/80 to 217/80 *Salumi and Others* [1981] ECR 2735, paragraph 10; and Case 70/83 *Kloppenburg* [1984] ECR 1075, paragraph 11), which requires, in particular, that Community legislation must be certain and its application foreseeable by those subject to it. The applicant states that the decisions of the Commission adopted under Article 81 EC, which may impose very heavy fines, must be particularly precise and certain (Case 32/79 *Commission* v *United Kingdom* [1980] ECR 2403, paragraph 46), so that the undertakings concerned can review and determine their conduct in the light of and in accordance with criteria which are sufficiently clear and concrete in terms of indicating the unlawful nature of certain conduct.

168 Contrary to those requirements, in the contested decision the Commission devoted almost five pages to setting out the reasons why it considers that the applicant infringed Article 81(1) EC (recitals 331 et seq. of that decision). Nevertheless, that reasoning does not clearly show which aspects of the applicant's conduct actually fall within the scope of Article 81(1) EC, and which do not (see, inter alia, recitals 339, 343, 344 and 349 of the contested decision). The applicant adds that the Commission mistakenly alleges that it gave legal advice (recital 339 of the contested decision). Even if that were to be established, the fact of dispensing legal advice cannot be regarded as an infringement of the competition rules. In any event, the Commission cannot maintain that legal advice and supportive action given by the applicant, as described in the contested decision, collectively constitute an infringement of Article 81(1) EC when such acts do not amount to an infringement when considered individually. Otherwise, it would be impossible to predict at what precise moment a lawful act slides into illegality. Next, the applicant criticises the Commission's mode of expression in recitals 332 et seq. of the contested decision as vague, incomprehensible and contradictory as regards the applicant's alleged participation in the cartel. As regards the Commission's contention that the present plea is not autonomous, the applicant objects that, even supposing that it were guilty of an infringement of competition law, the grounds of the contested decision do not show, with the requisite clarity and precision, which of the specific acts imputed to it constitute an infringement of Article 81(1) EC.

169 In the absence of a clear answer to the question why and how the applicant infringed Article 81(1) EC, the contested decision should be annulled for infringement of the principle of *nulla poena sine lege certa* and the principle of legal certainty.

170 The Commission contends that the present plea should be rejected in so far as it merely constitutes a repetition of the second plea.

2. Findings of the Court

171 It should be noted, first of all, that, in the context of the present plea, the applicant essentially raises the same arguments as in the context of the second and third pleas. It is thus sufficient to refer to the considerations set out in paragraphs 112 to 159 above in order to conclude that the contested decision contains sufficient information establishing the active and intentional participation of the applicant in the cartel, thus making it possible for the applicant to be held liable for an infringement of Article 81(1) EC, independently of the real extent of that participation in detail.

172 Even supposing that the present plea had also to be understood as alleging an infringement of the duty to give reasons under Article 253 EC, it is also apparent from those considerations that the contested decision contains all the relevant information for the purposes of making it possible for the applicant to dispute its well-foundedness and for the Court to review the lawfulness of the decision in accordance with the case-law established in that regard (see Case T-228/02

Organisation des Modjahedines du peuple d'Iran v *Council* [2006] ECR II–4665, paragraph 138 and the case–law cited therein).

173 Accordingly, the present plea must also be rejected as unfounded.

F – The fifth plea, alleging that the second paragraph of Article 3 of the contested decision infringes the principle of legal certainty and the principle of nulla poena sine lege certa

1. Arguments of the parties

174 According to the applicant, in the absence of a clear and precise indication of the unlawful acts imputed to it, both the legal analysis and the second paragraph of Article 3 of the contested decision are contrary to the principle of legal certainty and the principle of *nulla poena sine lege certa*. The grounds of the contested decision do not show, in a precise manner, the specific acts by virtue of which the applicant is deemed to have infringed Article 81(1) EC. Consequently, it is also impossible for the applicant to know which of its acts are concerned by the obligation laid down in Article 3 of that decision. It follows that Article 3 infringes the 'requirement of certainty and predictability' of Community legislation, which must be observed all the more strictly in the case of rules liable to entail financial consequences, so that those concerned may know precisely the extent of the obligations thereby imposed on them (Case 169/80 *Gondrand and Garancini* [1981] ECR 1931, paragraphs 17 and 18; Case 325/85 *Ireland* v *Commission* [1987] ECR 5041, paragraph 18; Case 326/85 *Netherlands* v *Commission* [1987] ECR 5091, paragraph 24; Joined Cases 92/87 and 93/87 *Commission* v *France and United Kingdom* [1989] ECR 405, paragraph 22; Case C–30/89 *Commission* v *France* [1990] ECR I–691, paragraph 23; Case C–354/95 *National Farmers' Union and Others* [1997] ECR I–4559, paragraph 57; and Case C–177/96 *Banque Indosuez and Others* [1997] ECR I–5659, paragraph 27).

175 The lack of precision in the legal analysis and in the obligation laid down in Article 3 of the contested decision is exacerbated by the fact that, under that article, the applicant is also required to refrain from any agreement or any concerted practice with a 'similar' object or effect, and any infringement of that article may lead to the imposition of a fine, which may be very heavy by virtue of Article 15(2) of Regulation No 17. Moreover, the Commission admitted that it had addressed a 'new aspect' of law (recital 454 of the contested decision). That being so, the precision of the requirement to refrain from repeating the infringement should have to satisfy particularly strict requirements in order to enable interested undertakings to assess the true and full implications of the prohibition laid down in Article 81 EC. The ensuing legal uncertainty poses a threat to the commercial activity of consultancy firms such as the applicant, as regards the drawing up of market statistics and administering federations.

176 As regards the Commission's contention that the present plea is directed against the requirement that the infringement be brought to an end (first paragraph of Article 3 of the contested decision), the applicant states that its action concerns only the requirement to refrain from repeating the infringement (second paragraph of Article 3 of the contested decision). The first requirement does not affect it adversely since the infringement had already ceased by the end of 1999 or the beginning of 2000 (recital 91 of the contested decision).

177 The applicant maintains that Article 3 of the contested decision should therefore be annulled in so far as it concerns the applicant.

178 The Commission contends that the present plea is unfounded and should be rejected.

2. Findings of the Court

179 The Court considers that the present plea constitutes merely a reformulation of the fourth plea – which also alleges infringement of the principle of legal certainty and of the principle of *nulla poena sine lege certa* – and cannot therefore be assessed differently.

180 In so far as the present plea refers to the second paragraph of Article 3 of the contested decision, it is sufficient to point out that the Commission is empowered, on the basis of Article 3(1) of Regulation No 17, to impose on the addressees of a decision taken pursuant to Article 81(1) EC a binding instruction to put an end to the unlawful conduct and to refrain in future from practices which may have the same object or effect, or a similar object or effect (*Limburgse Vinyl*

Maatschappij and Others v *Commission*, cited in paragraph 39 above, paragraphs 1252 and 1253).

181 Accordingly, the present plea must also be rejected as unfounded.

182 It follows that the action must be dismissed as unfounded in its entirety.

Costs

183 Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the applicant has been unsuccessful, it must be ordered to pay the costs, in accordance with the form of order sought by the Commission.

On those grounds,

THE COURT OF FIRST INSTANCE (Third Chamber, Extended Composition)

hereby:

1. Dismisses the action;

2. Orders AC-Treuhand AG to pay the costs.

JUDGMENT OF THE COURT OF FIRST INSTANCE (Third Chamber)

8 July 2008 (*)

(Competition – Cartels – Plasterboard market – Decision finding an infringement of Article 81 EC – Single and continuous infringement – Repeated infringement – Fine – Guidelines on the method of setting fines – Leniency Notice)

In Case T‑53/03,

BPB plc, established in Slough (United Kingdom), represented by T. Sharpe QC, and A. Nourry, Solicitor,

applicant,

v

Commission of the European Communities, represented by F. Castillo de la Torre, acting as Agent, J. Flynn QC, and C. Kilroy, Barrister,

defendant,

APPLICATION for the annulment in part of Commission Decision 2005/471/EC of 27 November 2002 relating to a proceeding under Article 81 [EC] against BPB plc, Gebrüder Knauf Westdeutsche Gipswerke KG, Société Lafarge SA and Gyproc Benelux NV (Case No COMP/E-1/37.152 – Plasterboard) (OJ 2005 L 166, p. 8), or, in the alternative, annulment or reduction of the fine imposed on the applicant,

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (Third Chamber),

composed of M. Jaeger, President, V. Tiili and O. Czúcz, Judges,

Registrar: K. Pocheć, Administrator,

having regard to the written procedure and further to the hearing on 24 January 2007,

gives the following

Judgment

Facts

1 BPB plc manufactures and markets plasterboard-based building materials.

2 On the basis of information received, on 25 November 1998 the Commission carried out unannounced inspections at the premises of eight undertakings operating in the plasterboard sector, including the applicant. On 1 July 1999, it pursued its investigations at the premises of two other undertakings.

3 The Commission then sent requests for information under Article 11 of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959–1962, p. 87) to the various undertakings concerned. It sent four such requests to the applicant. BPB replied to them on 17 March 1999, 28 October 1999, 18 May 2000 and 6 September 2002.

4 On 18 April 2001, the Commission initiated the procedure in this case and adopted a statement of objections which it addressed to the applicant and to Gebrüder Knauf Westdeutsche Gipswerke KG ('Knauf'), Société Lafarge SA ('Lafarge'), Etex SA and Gyproc Benelux NV ('Gyproc'). The undertakings concerned submitted their written observations and were given access to the Commission's investigation file in the form of a copy on CD-Rom which was sent to them on 17 May 2001.

5 The applicant replied to the statement of objections on 8 July 2001.

6 On 27 November 2002, the Commission adopted Decision 2005/471/EC relating to a proceeding under Article 81 [EC] against BPB, Knauf, Lafarge and Gyproc (Case No COMP/E-1/37.152 – Plasterboard) (OJ 2005 L 166, p. 8; 'the contested decision').

7 The operative part of the contested decision states:

'Article 1

BPB … , the Knauf Group, … Lafarge … and Gyproc … have infringed Article 81(1) [EC] by participating in a set of agreements and concerted practices in the plasterboard business.

The duration of the infringement was as follows:

(a) BPB …: from 31 March 1992, at the latest, to 25 November 1998

(b) [the] Knauf [Group]: from 31 March 1992, at the latest, to 25 November 1998

(c) … Lafarge …: from 31 August 1992, at the latest, to 25 November 1998

(d) Gyproc …: from 6 June 1996, at the latest, to 25 November 1998

…

Article 3

In respect of the infringement referred to in Article 1, the following fines are imposed on the following undertakings:

(a) BPB …: EUR 138.6 million

(b) … Knauf …: EUR 85.8 million

(c) … Lafarge …: EUR 249.6 million

(d) Gyproc …: EUR 4.32 million …

…'

8 The Commission found in the contested decision that the undertakings concerned participated in a single and continuous agreement which was manifested in the following conduct constituting agreements or concerted practices:

– the representatives of BPB and Knauf met in London (United Kingdom) in 1992 and expressed the common desire to stabilise the plasterboard markets in Germany, the United Kingdom, France and the Benelux;

– the representatives of BPB and Knauf established, as from 1992, information exchange arrangements, to which Lafarge and subsequently Gyproc acceded, relating to their sales volumes on the German, French, United Kingdom and Benelux plasterboard markets;

– the representatives of BPB, Knauf and Lafarge exchanged information, on various occasions, prior to price increases on the United Kingdom market;

– in view of particular developments on the German market, the representatives of BPB, Knauf, Lafarge and Gyproc met at Versailles (France) in 1996, Brussels (Belgium) in 1997 and The Hague (Netherlands) in 1998 with a view to sharing out or at least stabilising the German market;

– the representatives of BPB, Knauf, Lafarge and Gyproc exchanged information on various occasions and concerted their action on the application of price increases on the German market between 1996 and 1998.

9 For the purpose of calculating the amount of the fine, the Commission applied the methods set out in its Guidelines on the method of setting fines imposed pursuant to Article 15(2) of Regulation No 17 and Article 65(5) of the ECSC Treaty (OJ 1998 C 9, p. 3; 'the Guidelines').

10 In fixing the starting amount of the fines, determined according to the gravity of the infringement, the Commission initially considered that the undertakings concerned had committed an infringement which was very serious by its very nature in so far as the aim of the practices at issue was to put an end to the price war and to stabilise the market through exchanges of confidential information. The Commission also considered that the practices at issue had had an impact on the market, since the undertakings concerned represented almost all plasterboard supply and the various manifestations of the cartel had been put into practice in a highly concentrated and oligopolistic market. As regards the geographic extent of the relevant market, the Commission considered that the cartel had covered the four main European Community markets, namely Germany, the United Kingdom, France and the Benelux.

11 Considering, next, that there was a considerable disparity between the undertakings concerned, the Commission took a differentiated approach, relying for that purpose on the sales turnover for the product concerned on the relevant markets during the last complete year of the infringement. On that basis, the starting amount of the fines was set at EUR 80 million for BPB, EUR 52 million for Knauf and Lafarge and EUR 8 million for Gyproc.

12 In order to ensure that the fine had an adequate deterrent effect having regard to the size and aggregate resources of the undertakings, the starting amount of the fine imposed on Lafarge was increased by 100%, becoming EUR 104 million.

13 In order to take account of the duration of the infringement, the starting amount was then increased by 65% for BPB and Knauf, by 60% for Lafarge and by 20% for Gyproc, the infringement being classified by the Commission as of long duration in the case of Knauf, Lafarge and BPB and of medium duration in the case of Gyproc.

14 In respect of aggravating circumstances, the basic amount of the fines imposed on BPB and Lafarge was increased by 50% on account of recidivism.

15 Next, the Commission reduced by 25% the fine imposed on Gyproc on account of attenuating circumstances, in that it had acted as a destabilising element helping to limit the impact of the cartel on the German market and it was absent from the United Kingdom market.

16 Finally, the Commission reduced the amount of the fines by 30% for BPB and by 40% for Gyproc, pursuant to Section D.2 of the Commission Notice on the non–imposition or reduction of fines in cartel cases (OJ 1996 C 207, p. 4; 'the Leniency Notice'). Accordingly, the final amount of the fines imposed was EUR 138.6 million for BPB, EUR 85.8 million for Knauf, EUR 249.6 million for Lafarge and EUR 4.32 million for Gyproc.

Procedure and forms of order sought

17 By application lodged at the Registry of the Court of First Instance on 14 February 2003, the applicant brought the present action.

18 Following a change in the composition of the Chambers of the Court at the beginning of the new judicial year, the Judge-Rapporteur was assigned to the Third Chamber, and this case was therefore also assigned to it.

19 On hearing the report of the Judge-Rapporteur, the Court (Third Chamber) decided to open the oral procedure and, by way of measures of organisation of procedure under Article 64 of the Rules of

Procedure of the Court of First Instance, requested the parties to lodge certain documents, and put questions in writing to which they replied within the prescribed period.

20 The parties presented oral argument and their answers to the oral questions put by the Court at the hearing on 24 January 2007.

21 At the hearing, the Court requested the applicant to clarify its request for confidentiality before 7 February 2007. A period of time was also granted to the Commission for any observations it might have on the applicant's reply concerning the confidential information.

22 The oral procedure was closed on 27 March 2007.

23 The applicant claims that the Court of First Instance should:

– annul Articles 1 and 2 of the contested decision in so far as they relate to it;

– in the alternative, annul Article 3 of the contested decision in so far as it relates to it, or, in the further alternative, reduce appropriately the amount of the fine imposed on it by the Commission in the contested decision;

– subject to the annulment of Article 3 of the contested decision or reduction of the amount of the fine, order repayment of the principal sum paid by the applicant, together with such interest as the Court may determine in accordance with law;

– order the Commission to pay the costs.

24 The Commission contends that the Court of First Instance should:

– dismiss the application;

– order the applicant to pay the costs.

Law

1. The first plea: breach of the rights of the defence

Arguments of the parties

25 The applicant considers that the Commission has infringed the rights of the defence and the general principal of equality of arms by relying on evidence not provided to the applicant.

26 First, the applicant submits that the Commission did not grant it access to information provided by an anonymous informant. According to the applicant, that information was used by the Commission on 19 November 1998 in order to obtain a search warrant from a United Kingdom court. The applicant also considers that it appears from the affidavit attached as an annex to the application for a search warrant that the Commission considered that information to be convincing. The applicant maintains that the Commission's conviction that there was a complex cartel influenced its interpretation of all the facts and evidence.

27 Second, the applicant submits that the Commission should have granted access to the replies of the other addressees of the statement of objections. The Commission relied on those replies on several occasions in the contested decision for the factual and evidential findings.

28 The Commission considers that the obligation to observe the rights of the defence does not require it to disclose the entire contents of the file to the undertakings concerned and thereby compromise any confidentiality of elements of the file. It is under no obligation to disclose to an addressee of a statement of objections inculpatory documents on which the Commission does not propose to rely. In this case, the Commission drew its inferences only from the evidence before it which is described in the statement of objections and in the contested decision.

29 The Commission denies that the applicant's rights of defence have been infringed by its having been unable to examine the replies of the other addressees of the statement of objections. The Commission states that if, after adoption of the statement of objections, new matters come to light which it intends to use and regarding which the undertakings have not had the opportunity to submit their views, it must send a supplementary statement of objections or a letter asking the undertakings concerned for further observations on that new evidence. Its failure to do so would prevent it from relying on those matters as against the addressees of the initial statement of objections.

30 In this case, all the examples given by the applicant concerned admissions or denials of allegations which already appear in the statement of objections, on which therefore the applicant had the opportunity to comment. None of those statements introduces any new objection or new piece of factual information on which the Commission relied for its conclusions.

Findings of the Court

31 It must first be recalled that access to the file in competition cases is intended in particular to enable the addressees of statements of objections to acquaint themselves with the evidence in the Commission's file so that, on the basis of that evidence, they can express their views effectively on the conclusions reached by the Commission in its statement of objections. Access to the file is thus one of the procedural safeguards intended to protect the rights of the defence and to ensure, in particular, that the right to be heard can be exercised effectively (see Joined Cases T–191/98, T–212/98 to T–214/98 *Atlantic Container Line and Others* v *Commission* [2003] ECR II–3275, paragraph 334 and the case-law cited).

32 With regard to inculpatory evidence, the obligation to allow access to the file relates merely to the evidence ultimately relied on in the decision and not to all the complaints which the Commission may have expressed at any stage of the administrative procedure (*Atlantic Container Line and Others* v *Commission*, paragraph 31 above, paragraph 337). A document can be regarded as a document that incriminates an applicant only where it is used by the Commission to support a finding of an infringement in which that party is alleged to have participated (Joined Cases T–25/95, T–26/95, T–30/95 to T–32/95, T–34/95 to T–39/95, T–42/95 to T–46/95, T–48/95, T–50/95 to T–65/95, T–68/95 to T–71/95, T–87/95, T–88/95, T–103/95 and T–104/95 *Cementeries CBR and Others* v *Commission* [2000] ECR II–491, '*Cement*', paragraph 284).

33 Further, the applicant may not demand access, in a general and abstract way, to documents or information which have not been communicated to it without stating how the inculpatory evidence relied upon by the Commission in the contested decision was determined by those documents or that information. According to the case-law, an infringement of the rights of the defence cannot be founded on a general argument but must be examined in relation to the specific circumstances of each particular case (*Atlantic Container Line and Others* v *Commission*, paragraph 31 above, paragraphs 353 and 354).

34 In the present case, as regards the information provided by the anonymous informant, the Commission does not dispute that that information was a factor in triggering the investigations. However, as is apparent from the contested decision, that information was ultimately not referred to as such by the Commission and the objections upheld were proved by other evidence.

35 Similarly, the applicant has not indicated any objection maintained either in the statement of objections or in the contested decision which is based solely on the information provided by the anonymous informant and to which it did not have access.

36 Further, even if the Commission has an obligation to make available to the undertakings involved in proceedings under Article 81(1) EC all documents, whether in their favour or otherwise, which it has obtained during the course of the investigation, that obligation does not extend to business secrets of other undertakings, the internal documents of the Commission or other confidential information (Joined Cases C–204/00 P, C–205/00 P, C–211/00 P, C–213/00 P, C–217/00 P and C–219/00 P *Aalborg Portland and Others* v *Commission* [2004] ECR I–123, paragraph 68 and *Atlantic Container Line and Others* v *Commission*, paragraph 31 above, paragraph 335). Thus, as the Commission asserts, in the case of information supplied on a purely voluntary basis, accompanied by a request for confidentiality in order to protect the informant's anonymity, an institution which accepts such information is bound to comply with such a condition (Case 145/83 *Adams* v *Commission* [1985]

ECR 3539, paragraph 34). The Commission's ability to guarantee the anonymity of certain of its sources of information is of crucial importance with a view to ensuring the effective prevention of prohibited anti–competitive practices (Case C–94/00 *Roquette Frères* [2002] ECR I–9011, paragraph 64).

37 Consequently, proceedings initiated on the basis of information from an undisclosed source are lawful, provided that this does not affect the opportunity for the person concerned to make known his views on the truth or implication of the facts, on the documents communicated or on the conclusions drawn by the Commission from them (Case 85/76 *Hoffmann-La Roche* v *Commission* [1979] ECR 461, paragraph 14).

38 In the light of the obligation to ensure the confidentiality of the information, and of the fact that the applicant has not referred to any objection maintained either in the statement of objections or in the contested decision which is based on evidence to which it did not have access, it cannot complain that the Commission infringed the rights of the defence and the general principle of equality of arms on the ground that the Commission did not give it access to the information provided by the anonymous informant.

39 As regards access to the replies of the other addressees of the statement of objections, it is common ground that the applicant did not have access to those replies during the administrative procedure.

40 As regards, first, the failure to communicate the alleged inculpatory evidence which was not in the investigation file, the Court notes that the observance of the rights of the defence constitutes a fundamental principle of Community law which must be respected in all circumstances, in particular in any procedure which may give rise to penalties, even if it is an administrative procedure. It requires that the undertakings and associations of undertakings concerned be afforded the opportunity, from the stage of the administrative procedure, to make known their views on the truth and relevance of the facts, objections and circumstances put forward by the Commission (*Hoffmann-La Roche* v *Commission*, paragraph 37 above, paragraph 11, and Case T–11/89 *Shell* v *Commission* [1992] ECR II–757, paragraph 39).

41 Next, it should be borne in mind that, if the Commission wishes to rely on a passage in a reply to a statement of objections or on a document annexed to such a reply in order to prove the existence of an infringement in a proceeding under Article 81(1) EC, the other undertakings involved in that proceeding must be placed in a position in which they can express their views on such evidence. In such circumstances the passage in question from a reply to the statement of objections or the document annexed thereto constitutes evidence against the various parties alleged to have participated in the infringement (see *Cement*, paragraph 32 above, paragraph 386, and Case T–314/01 *Avebe* v *Commission* [2006] ECR II–3085, paragraph 50 and the case-law cited).

42 A document cannot be regarded as an inculpatory document unless it is used by the Commission in support of its finding of an infringement by an undertaking. In order to establish a breach of the rights of the defence, it is not sufficient for the undertaking in question to show that it was not able to express its views during the administrative procedure on a document used in a given part of the contested decision. It must demonstrate that the Commission used that document in the contested decision as evidence of an infringement in which the undertaking participated (Joined Cases T–44/02 OP, T–54/02 OP, T–56/02 OP, T–60/02 OP and T–61/02 OP *Dresdner Bank and Others* v *Commission* [2006] ECR II–3567, paragraph 158).

43 Since documents that have not been communicated to the undertakings concerned during the administrative procedure are not admissible evidence, it will be necessary to exclude those documents as evidence if it should prove that the Commission relied in the Decision on documents that were not in the investigation file and were not communicated to the applicants (*Cement*, paragraph 32 above, paragraph 382).

44 If there is other documentary evidence of which the undertakings concerned were aware during the administrative procedure that specifically supports the Commission's findings, the fact that an incriminating document not communicated to the person concerned is inadmissible as evidence does not affect the validity of the objections upheld in the contested decision (*Aalborg Portland and Others* v *Commission,* paragraph 36 above, paragraph 72).

45 It is thus for the undertaking concerned to show that the result at which the Commission arrived in

its decision would have been different if a document which was not communicated to that undertaking and on which the Commission relied to make a finding of infringement against it had to be disallowed as evidence (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 73).

46 In the present case, BPB refers only to recitals 130, 232, 393 and 524 of the contested decision in order to illustrate that the Commission relied on the replies of the other addresses of the statement of objections as inculpatory evidence.

47 Concerning those examples, it should be observed that, at recital 524 of the contested decision, the Commission merely cites Gyproc's statement, in its reply to the statement of objections, that its participation was of a different intensity. Thus, that evidence was in no way used against BPB.

48 As regards recital 130 of the contested decision, it is an extract from Lafarge's reply to the statement of objections claiming that BPB was the instigator of the information exchange system. However, at no point in the contested decision does the Commission use that statement of Lafarge in order to prove that BPB was the instigator of that system. Similarly, BPB's fine was not increased on the ground that it was the instigator of the cartel. Further, as is apparent from an examination of the second plea below, BPB admitted that it infringed competition law by participating in an exchange of information on sales volumes on the four markets concerned.

49 As regards recital 232 of the contested decision, namely the interpretation by Gyproc of the memorandum and the statements of Mr [E], managing director of Gyproc, in its reply to the statement of objections, reference should be made to Gyproc's words:

'Gyproc later backtracked on the memo and Mr [E]' explicit statement by arguing that "the so-called Versailles agreement was only an attempt and was never effectively implemented" and also that "there was never a proper meeting of minds among the participants, and definitely not as far as Gyproc was concerned, about all the details of how the German market should be shared. The [undertakings concerned] never agreed about the precise market share that Gyproc should have. … So Gyproc scuppered the attempt to conclude an agreement between the four".'

50 As the Commission noted at recital 233 of the contested decision, the statements by Gyproc, which in principle have less probative value than the abovementioned memorandum and the spontaneous statements of Mr [E], do not negate either the content or the purpose of the talks that were held but only, possibly, their result. Further, it should be recalled that BPB admitted that the Versailles meeting took place and that the purpose of the meeting was to discuss the situation on the German market.

51 Moreover, it should be noted that the Commission found only that the undertakings in question had met in Versailles in 1996, Brussels in 1997 and The Hague in 1998 with a view to sharing or at least stabilising the German market, but it did not claim that they had succeeded in concluding an agreement on allocating shares of the German market.

52 In those circumstances, even if Gyproc's interpretation of Mr [E]'s memorandum and statements set out at recital 232 of the contested decision were disregarded, that fact would not influence the assessments made by the Commission in that decision.

53 Accordingly, the result at which the Commission arrived in the contested decision would not have been different if the extracts from Gyproc's and Lafarge's replies to the statement of objections referred to by BPB had been removed from the file.

54 Lastly, it is apparent from recital 393 of the contested decision that Gyproc accepted the Commission's description of the facts regarding the price increases on the German market. This is indeed a factor that the Commission used to support its contention that there had been concerted action on price increases on the German market, a contention which BPB disputes. Thus, it is necessary to disregard that factor as evidence and then consider, so far as concerns BPB, whether the Commission demonstrated to the requisite legal standard that BPB, Knauf, Lafarge and Gyproc had exchanged information on various occasions and had concerted their action on the application of price increases on the German market between 1996 and 1998.

55 As regards, second, whether the replies of the other addresses of the statement of objections might have contained exculpatory evidence, the applicant has not put forward any arguments to that effect in the application.

56 In response to a written question of the Court requesting it to indicate the paragraphs of the application in which a plea alleging infringement of the rights of the defence relating to exculpatory evidence was raised, the applicant merely referred to paragraphs 75 to 120 of its application. Yet in those paragraphs the applicant does not submit that the replies of the other addressees of the statement of objections might have contained exculpatory evidence which it could have used for its defence. In those circumstances, the applicant's arguments that the replies of the other addressees of the statement of objections might have contained exculpatory evidence must be rejected.

57 It follows from the foregoing that the first plea must be rejected, without prejudice to the possible effect of the fact that Gyproc's statements in its reply to the statement of objections and referred to by the Commission in recital 393 of the contested decision are not to be taken into account. Consequently, it is necessary to examine the complaint in the second plea contesting the Commission's findings on the exchange of information on price increases in Germany.

58 Furthermore, and for the sake of completeness, the Court will examine the substance of the case, disregarding all the inculpatory evidence derived from the replies of the other addresses of the statement of objections, in order to ascertain whether the Commission's assessment as to the existence and effects of the infringement is demonstrated to the requisite legal standard even without that evidence.

2. The second plea: manifest errors and/or inadequacy of the statement of reasons concerning the application of Article 81(1)EC

The standard of proof

Arguments of the parties

59 The applicant takes the view that, in cases leading to the imposition of a heavy fine, the standard of evidence required is comparable to that in criminal proceedings. In that regard, the applicant submits that the burden of proof falls upon the Commission and that the infringement must be demonstrated to the requisite legal standard, a term which, according to the applicant, must be interpreted as requiring that convincing proof be adduced that the alleged infringements have been committed. It considers that, in such a situation, the ordinary application of the balance of probabilities is not sufficient. Moreover, in order to respect the presumption of innocence, any doubts about evidence must favour the defence.

60 The Commission disputes that the standard of proof to be applied in competition cases is the same as that required in criminal proceedings.

Findings of the Court

61 According to case-law, where there is a dispute as to the existence of an infringement of the competition rules, it is incumbent on the Commission to prove the infringements which it has found and to adduce evidence capable of demonstrating to the requisite legal standard the existence of circumstances constituting an infringement. In doing this, the Commission must establish in particular all the facts enabling the conclusion to be drawn that an undertaking participated in such an infringement and that it was responsible for the various aspects of it (Case C-49/92 P *Commission* v *Anic Partecipazioni* [1999] ECR I-4125, paragraph 86).

62 When the infringement involves anti-competitive agreements and concerted practices, the Commission must, in particular, show that the undertaking intended to contribute by its own conduct to the common objectives pursued by all the participants and that it was aware of the actual conduct planned or put into effect by other undertakings in pursuit of the same objectives or that it could reasonably have foreseen it and that it was prepared to take the risk (*Commission* v *Anic Partecipazioni*, paragraph 61 above, paragraph 87).

63 It is normal, in the context of anti-competitive practices and agreements, for the activities to take place in a clandestine fashion, for meetings to be held in secret, and for the associated documentation to be reduced to a minimum. It follows that, even if the Commission discovers evidence explicitly showing unlawful contact between traders, it will normally be only fragmentary and sparse, so that it is often necessary to reconstitute certain details by deduction. Accordingly, in most cases, the existence of an anti-competitive practice or agreement must be inferred from a

number of coincidences and indicia which, taken together, may, in the absence of another plausible explanation, constitute evidence of an infringement of the competition rules (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraphs 55 to 57).

64 It is apparent from that case-law that the Court must reject the applicant's assertion that the Commission must adduce proof 'beyond reasonable doubt' of the existence of the infringement in cases where it imposes heavy fines.

The London meeting

Arguments of the parties

65 The applicant considers that the Commission has failed to prove that an agreement was entered into at the London meeting and that the subsequent information exchanges were a device to monitor the implementation of that agreement. The London meeting is the key to the Commission's case, since the other events are linked to it and it marks the inception of the infringement.

66 The applicant admits that that meeting took place but submits that the Commission's interpretation of that admission goes beyond what it actually said. Even though Mr [A] (its then Chief Executive Officer (CEO)) discussed with the cousins of the Knauf family the vigorous competition in the plasterboard market and even though both parties recognised the problem, it denies categorically having reached an agreement on a solution with the cousins of the Knauf family. Moreover, no common wish to stabilise the market was expressed at that meeting.

67 The applicant also admits that that meeting may have been a factor in accelerating the end of the price war. However, that meeting is not the only causal factor. The applicant claims that the economic situation on the relevant market was such that in 1992 the price war had ended in any event. That is confirmed by the expert economist retained by it, whose report was however not taken into account by the Commission in the contested decision.

68 The applicant considers that the fact that competition continued on the market concerned contradicts the Commission's interpretation of the London meeting. The Commission's assertions in recitals 212 and 395 of the contested decision are not supported by any evidence. In that regard, the applicant maintains that the Commission decided not to take account of numerous proven examples of price volatility which it had given to the Commission in its reply to the statement of objections. The applicant also contests the Commission's assertions regarding the stability of market shares. It claims that the Commission's own tables in the annex to the contested decision show the contrary. It also states that the Commission's allegations are devoid of probative value, since the Commission nowhere states in the contested decision what the pre-1992 market shares of the undertakings concerned were and, therefore, a comparison of market shares was impossible.

69 As regards the Commission's assertion that there is no need to take account of the concrete effects of an infringement, the applicant claims that, where the existence of an agreement is merely asserted by the Commission and is not supported by any evidence, it is necessary to take account of evidence of what took place in the market. The applicant is of the opinion that, if that evidence tends to establish the absence of any anti-competitive agreement and no other evidence to the contrary has been adduced by the Commission, the latter must consider that no agreement was made. The applicant states that it is not merely a question of determining whether the agreement was implemented but rather of determining whether the Commission has established the existence of the alleged agreement.

70 The Commission states that the applicant's argument that no agreement existed is based on the misapprehension that the agreement has to be finite, detailed and legally binding. It adds that the object of Article 81 EC is to bring within the prohibition of that article a form of coordination between undertakings which, without having reached the stage where an agreement properly so called has been concluded, knowingly substitutes practical cooperation between them for the risks of competition. The elaboration of an actual plan is not therefore required. The Commission maintains that even if the discussions that took place at the 1992 meeting can not be classified as an agreement, they can be classified as a concerted practice, which is just as serious an infringement.

71 The Commission considers that the London meeting and the agreement concluded there constitute the first practical manifestation of the complex and continuous infringement on which the contested decision is based. In view of the observations set out in recitals 56 to 69 of the contested decision

and in particular of the fact that the information exchanges commenced at the London meeting or shortly afterwards, that conclusion is fully justified. It adds that it is unnecessary to prove that all the elements of the infringement were present or foreseen at the initial stage to establish that that agreement formed part of a single, complex and continuous infringement.

72 As regards BPB's statement that the Commission failed to take account of the economic evidence, the Commission contends that it simply explained in recitals 329 to 402 of the contested decision that, in view of the circumstances of the case, the attempt by BPB and the other undertakings concerned to show, on the basis of economic analyses, that the competitive situation on the plasterboard market between 1992 and 1998 excluded any possibility of a restrictive agreement during that period was beside the point. The Commission states that it does not rely on mere similarity of observed conduct, nor does it use economic evidence to establish the infringement of Article 81(1) EC. Its conclusions are based on direct evidence of the anti-competitive agreement, which the economic analyses do nothing to explain away. Where the Commission makes reference, in the contested decision, to improved stability in the market concerned or price increases (as in recitals 289 and 539), the aim was to demonstrate the effects of the anti-competitive activity, not its existence. The Commission adds that the existence of an agreement can be established without the complete elimination thereby of all competition from the plasterboard market. Moreover, since the infringement established by the Commission pursued an anti-competitive purpose, it is settled case-law that there is no requirement for it to take account of the agreement's concrete effects.

73 The Commission takes the view, in response to the applicant's argument that 'fierce' competition or the 'price war' was bound to end for economic reasons, that that argument is not relevant in determining the reasons for which and the conditions under which the 'price war' actually ended and in particular whether or not anti-competitive conduct by certain operators was the reason for that development. It considers that, having demonstrated that the cartel participants' aim was to put an end to the price war and stabilise market shares and thereby restrict competition at least in the German, French, United Kingdom and Benelux plasterboard markets, it was fully entitled to conclude, as it did in recitals 72, 196, 212, 289 and 395 of the contested decision, that that objective was largely achieved. It contends that the market instability before 1992 was described in paragraph 28 of the statement of objections and was never contested. Moreover, as is clear from recitals 212 and 395 of the contested decision, the Commission found that prices on the United Kingdom and German markets tended to rise or at least be stable, in contrast to the position prior to 1992.

Findings of the Court

74 BPB admits that the London meeting took place and that Mr [A] and the cousins of the Knauf family each expressed the view that it would be in the interests of the industry as a whole to put an end to the destructive price war. It also admits that, at that meeting or at the latest in 1992, the undertakings began to exchange overall market volume data for each principal market.

75 However, BPB disputes that an express agreement to stabilise European markets destined to last for six years was concluded at that meeting.

76 It is therefore necessary to examine whether the London meeting had an anti–competitive object.

77 In this respect, according to recital 55 of the contested decision, BPB stated in its second reply to the request for information that, at that meeting, its representatives and those of Knauf '[had] reached an understanding that it was in [its] interest, [that of] Knauf['s] and [that of] the industry as a whole (including, ultimately, the interests of consumers) for the ruinous price war to end and for producers to attempt to compete at more sustainable economic levels'.

78 BPB subsequently argued that the term 'understanding' used by it should be interpreted in its most general sense as meaning a 'consensus of views'.

79 It is settled case-law that in order for there to be an agreement within the meaning of Article 81(1) EC, it is sufficient that the undertakings in question should have expressed their joint intention to conduct themselves on the market in a specific way (Case T–9/99 *HFB and Others* v *Commission* [2002] ECR II–1487, paragraph 199; Case T–61/99 *Adriatica di Navigazione* v *Commission* [2003] ECR II–5349, paragraph 88; and Joined Cases T–49/02 to T–51/02 *Brasserie nationale and Others* v *Commission* [2005] ECR II–3033, paragraph 118). As regards the form in which that common intention is expressed, it is sufficient for a stipulation to be the expression of the intention of the

undertakings concerned to behave on the market in accordance with its terms (Case T–56/02 *Bayerische Hypo- und Vereinsbank* v *Commission* [2004] ECR II–3495, paragraph 60).

80 It follows that, in order to constitute an agreement within the meaning of Article 81(1) EC, it is sufficient that an act or conduct which is apparently unilateral be the expression of the concurrence of wills of at least two parties, the form in which that concurrence is expressed not being by itself decisive (Case C–74/04 P *Commission* v *Volkswagen* [2006] ECR I–6585, paragraph 37).

81 The criteria of coordination, convergence and cooperation, far from requiring the elaboration of an actual 'plan', must be understood in the light of the concept inherent in the Treaty provisions relating to competition, namely that each economic operator must determine independently the policy which it intends to adopt on the common market. Although that requirement of independence does not deprive economic operators of the right to adapt themselves intelligently to the existing and anticipated conduct of their competitors, it strictly precludes any direct or indirect contact between such operators with the object or effect either to influence the conduct on the market of an actual or potential competitor or to disclose to such a competitor the course of conduct which they themselves have decided to adopt or contemplate adopting on the market (Joined Cases 40/73 to 48/73, 50/73, 54/73 to 56/73, 111/73, 113/73 and 114/73 *Suiker Unie and Others* v *Commission* [1975] ECR 1663, paragraphs 173 and 174, and *Adriatica di Navigazione* v *Commission*, paragraph 79 above, paragraph 89).

82 That is the case where there is a gentlemen's agreement between a number of undertakings representing the faithful expression of such a joint intention concerning a restriction of competition. In those circumstances, the question whether the undertakings in question considered themselves bound – in law, in fact or morally – to adopt the agreed conduct is irrelevant (*HFB and Others* v *Commission*, paragraph 79 above, paragraph 200).

83 As regards, in particular, agreements of an anti-competitive nature which are reached at meetings of competing undertakings, the Court of Justice has held that Article 81(1) EC was infringed where those meetings had as their object the restriction, prevention or distortion of competition and were thus intended to organise artificially the operation of the market (Joined Cases C–238/99 P, C–244/99 P, C–245/99 P, C–247/99 P, C–250/99 P to C–252/99 P and C–254/99 P *Limburgse Vinyl Maatschappij and Others* v *Commission* [2002] ECR I–8375, paragraphs 508 and 509).

84 The Court considers that BPB's explanation regarding the object of the London meeting satisfies the criterion laid down by the case–law referred to above. BPB's statements suffice to show that Knauf and BPB both expressed their intention to put an end to a price war and therefore to restrict competition.

85 Furthermore, it must be recalled that, where an undertaking participates, even without taking an active part, in meetings between undertakings with an anti-competitive object and does not publicly distance itself from what occurred at those meetings, thus giving the impression to the other participants that it subscribes to the results of the meetings and will act in conformity with them, it may be considered as established that it participates in the cartel resulting from those meetings (*HFB and Others* v *Commission*, paragraph 79 above, paragraph 137).

86 Furthermore, the anti–competitive object of the London meeting is confirmed by the exchange of information which the undertakings carried out after that meeting. According to recital 58 of the contested decision, BPB stated, in its reply to the second request for information, the following:

'[A]t that meeting [Mr [A] and the cousins of the Knauf family] agreed to exchange sales volume information for 1991, to give themselves a reliable basis going forward to monitor whether this understanding was effective (i.e. simply to give each other a more accurate picture of the overall size of the market and thus their own market share). This was necessary because there were no reliable industry statistics.'

87 BPB's arguments that it was at most a mere attempt at an agreement must fail. The fact that BPB and Knauf expressed their common intention to put an end to the price war and to stabilise the markets in question constitutes an agreement for the purposes of Article 81(1) EC.

88 Further, as the quotation at paragraph 86 above demonstrates, BPB and Knauf executed their plan by implementing that agreement through the exchange of information on sales volumes on the four

markets concerned. If those undertakings did not consider that they had concluded an agreement to put an end to the price war and to stabilise the markets concerned, they would not have needed to monitor the markets by exchanging information on sales volumes.

89 The applicant's arguments that the Commission has not shown that there had been stability of prices or market shares cannot invalidate that conclusion.

90 In this respect, for the purposes of applying Article 81(1) EC, it is sufficient that the object of an agreement should be to restrict, prevent or distort competition irrespective of the actual effects of that agreement. Consequently, in the case of agreements reached at meetings of competing undertakings, that provision is infringed where those meetings have such an object and are thus intended to organise artificially the operation of the market. In such a case, the liability of a particular undertaking in the infringement is properly established where it participated in those meetings with knowledge of their object, even if it did not proceed to implement any of the measures agreed at those meetings. The greater or lesser degree of regular participation by the undertaking in the meetings and of completeness of its implementation of the measures agreed is relevant not to the establishment of its liability but rather to the extent of that liability and thus to the severity of the penalty (Joined Cases C‑189/02 P, C‑202/02 P, C‑205/02 P to C‑208/02 P and C‑213/02 P *Dansk Rørindustri and Others* v *Commission* [2005] ECR I‑5425, paragraph 145). Undertakings which conclude an agreement whose purpose is to restrict competition cannot, in principle, avoid the application of Article 81(1) EC by claiming that their agreement was not intended to have an appreciable effect on competition.

91 Moreover, BPB's assertion that the London meeting did not have any effects is contradicted by its reply to the statement of objections, in which it stated that there had been a turning point in prices in 1992. BPB also admits that the London meeting may have been a factor in accelerating the end of the price war. However, it submits that the commercial and economic reasons set out in the application show that it was not the only cause.

92 The Court considers that the applicant's admission that the London meeting was a factor in accelerating the end of the price war supports the interpretation that the object of the London meeting was anti‑competitive. Even if there were other economic reasons which prompted the end of the price war, that does not call in question the anti‑competitive object of the London meeting, which was to raise prices and to reduce the intensity of the competition between the undertakings concerned.

93 Lastly, account must be taken of the fact that the applicant stated, in its reply to the statement of objections, that it did not object to the Commission's categorising that meeting as an infringement of Article 81(1) EC. It also admitted, in its reply to an oral question put by the Court, that the London meeting constituted an infringement of Article 81(1) EC.

94 It follows that the Commission was right to find that, at the London meeting, BPB and Knauf had expressed their common intention to put an end to the price war and to stabilise the market concerned. This complaint cannot therefore be upheld.

Exchanges of information concerning quantities sold in Germany, France, the Benelux and the United Kingdom

Arguments of the parties

95 The applicant admits that, either at the London meeting or some time later in the same year, Mr [A] and the cousins of the Knauf family agreed to exchange highly aggregated sales volume data for 1991. However, Mr [A] said that that had been done to enable him to assess whether there was any 'new mood' in the industry, by giving him a more accurate picture of the size of the market and thus of the applicant's own market share. The applicant also admits that those information exchanges may have contributed to ending the price war. However, the applicant denies that the exchanges decided upon by Mr [D] – director of Gyproc and CEO of BPB from 1994 to 1999 – as from 1993 had any bearing on the first two annual information exchanges. The applicant also denies that those exchanges were a method of monitoring any agreement or understanding between producers. In this respect, the applicant claims that the Commission produced no evidence of any command and control structure in relation to the implementation of the cartel. The applicant states that it would have been informed by customers if it was being undercut on price by its competitors and would not have waited months to learn, by the exchange of information, of developments in market shares.

96 The applicant states that the Commission ignores the evidence concerning the nature of the data which was actually exchanged. In that connection, the applicant states that exchanges were initially annual, then half-yearly, but never more than quarterly. Moreover, the data were highly aggregated, being the total square metre surface area of all plasterboard products sold in the period in question, of all thicknesses, dimensions and specifications, expressed as a single figure. It also observes that there are enormous price variations between products. Moreover, the information related to national markets and, in the case of the Benelux, was wider than that. Furthermore, the information was not exchanged at regular intervals. For those reasons, the applicant considers that the exchanges could not constitute a mechanism for close surveillance of the market.

97 The applicant considers that the Commission's argument is also undermined by the fact that market shares developed considerably over the period in question. In addition, it states that price cutting had taken place. Moreover, the Commission has produced no evidence of any systematic attempt to adjust market shares or prices. The applicant takes the view that all these factors are solid evidence of the lack of any cartel in this case.

98 The Commission states that the applicant does not deny the existence of those exchanges, but contests their purpose. It considers that it responded in detail to those arguments in recitals 104 to 170 of the contested decision.

99 The Commission states that the argument relating to the absence of any 'command and control' structure is irrelevant. The case-law shows that the fact that no measures are taken to force undertakings to adhere to agreements does not mean that there is no infringement. The absence of evidence of such measures simply shows that no retaliatory measures were necessary.

100 The Commission repeats that it has never asserted that the cartel completely excluded all competition or that there were fixed quotas or fixed market shares. The important achievement of the cartel was overall market equilibrium and stability, not necessarily static market shares in particular markets.

Findings of the Court

101 It should be noted that the applicant stated, in its reply to the statement of objections, that it did not object to the Commission's categorising those exchanges of information as an infringement of Article 81(1) EC. It also admitted, in its reply to a written question put by the Court, that the exchanges of information concerning quantities sold in Germany, France, the Benelux and the United Kingdom constituted an infringement of Article 81(1) EC. The applicant none the less disputes certain assessments made by the Commission in the contested decision.

102 BPB admits that, either at the London meeting or some time later in the same year, Mr [A] and the cousins of the Knauf family agreed to exchange aggregated sales volume data for 1991. Mr [A] said that that was done to enable him to assess whether there was any 'new mood' in the industry, by giving him a more accurate picture of the size of the market and thus of BPB's own market share.

103 BPB also admitted that the information exchanges effected by Mr [A] in 1992 and 1993 in relation to the 1991 and 1992 data may have contributed to ending the price war. However, BPB denies that those information exchanges were a monitoring mechanism for a wider anti-competitive purpose.

104 BPB also admits that, under Mr [D]'s direction, the information exchanges on sales volumes on the four markets concerned became half–yearly from 1993 and quarterly from 1995. None the less, it claims that the exchanges organised by Mr [D] were unrelated to the first two annual exchanges of information effected by Mr [A].

105 Thus, since the applicant has admitted the existence of the information exchange in question, its arguments seek only to call in question the Commission's legal assessment of undisputed facts.

106 According to the case-law, agreements on the exchange of information are incompatible with the rules on competition if they reduce or remove the degree of uncertainty as to the operation of the market in question with the result that competition between undertakings is restricted (Case C–238/05 *ASNEF-EQUIFAX and Administración del Estado* [2006] ECR I–11125, paragraph 51).

107 It is inherent in the Treaty provisions on competition that every economic operator must determine

autonomously the policy which it intends to pursue on the common market. Thus, according to that case-law, such a requirement of autonomy precludes any direct or indirect contact between economic operators of such a kind as either to influence the conduct on the market of an actual or potential competitor or to reveal to such a competitor the conduct which an operator has decided to follow itself or contemplates adopting on the market, where the object or effect of those contacts is to give rise to conditions of competition which do not correspond to the normal conditions of the market in question, taking into account the nature of the products or the services provided, the size and number of the undertakings and also the volume of the market (*ASNEF-EQUIFAX and Administración del Estado*, paragraph 106 above, paragraph 52).

108 As regards the lawfulness of the exchange of information, it is apparent from the case–law that, on a truly competitive market, the fact that an economic operator takes into account information on the operation of the market, made available to it under the information exchange system, in order to adjust its conduct on the market, is not likely, having regard to the atomised nature of the supply, to reduce or remove for the other operators all uncertainty about the foreseeable nature of its competitors' conduct. However, on a highly concentrated oligopolistic market, the exchange of information on the market is such as to enable operators to know the market positions and strategies of their competitors and thus to impair appreciably the competition which exists between the operators (Case C–7/95 P *Deere* v *Commission* [1998] ECR I–3111, paragraphs 88 and 90).

109 Subject to proof to the contrary, which the economic operators concerned must adduce, the presumption must be that the undertakings taking part in the concerted arrangements and remaining active on the market take account of the information exchanged with their competitors when determining their conduct on that market. That is all the more the case where the undertakings concert together on a regular basis over a long period (*HFB and Others* v *Commission*, paragraph 79 above, paragraph 216).

110 In the present case, the plasterboard market was oligopolostic and the applicant does not dispute that this was the case. It is therefore necessary to ascertain whether, in the light of that market characteristic, the exchanges of information reduced or removed the degree of uncertainty of the undertakings concerned as to the operation of the market in question and thus restricted competition on that market.

111 The applicant takes the view that, as organised, the exchange of information made it possible to achieve only one objective, namely to check in broad terms the individual estimates of the market conditions and, in particular, the volume of that market.

112 Such an explanation is not convincing. It is apparent from the explanation given by Mr [D] in his statement of 9 July 2001 in order to justify the exchanges of information that, whilst the data were useful to see the size of the market, they also made it possible to determine market trends and competitors' market shares so that 'one was not operating completely in the dark'.

113 For the same reasons, the applicant's argument that the market was transparent and the data could be collected on the market must be rejected.

114 That finding is borne out by BPB's reply of 28 October 1999 to the second request for information, referred to in recital 58 of the contested decision, according to which:

'[The representatives of BPB and Knauf] agreed to exchange sales volume information for 1991, to give themselves a reliable basis going forward to monitor whether this understanding was effective (i.e. simply to give each other a more accurate picture of the overall size of the market and thus their own market share). This was necessary because there were no reliable industry statistics.'

115 In this respect, proof of the collusory nature of the exchange of information is even more cogent in the light of BPB's reply to the statement of objections. According to 106 of the contested decision:

'BPB subsequently specified that the objective of the agreement to exchange information with Knauf was to provide Mr [A] with "a basis to assess whether there was a new mood in the industry", i.e. that "the information exchange, at a high level, would provide the degree of mutual assurance that the price war was ending". BPB has moreover explicitly acknowledged that the purpose of the information exchanges effected by Mr [A] was to put an end to the fierce competition prevalent in the plasterboard industry in the early 1990s: "the subsequent two exchanges of historical data effected by Mr [A] may have served, and have been intended to serve, to assist the ending of the price war".'

116 The applicant's argument that there was no restriction of competition in the absence of any informative value of the sales data exchanged, given that the figures had been communicated in a very global and imprecise form without being broken down according to the different types of plasterboard, is irrelevant in so far as the information exchanges between the undertakings in question were intended to monitor that their respective market shares remained stable or, at the very least, did not diminish. Since the applicant and Knauf had expressed a common intention to put an end to the price war and to stabilise the markets in question at the London meeting, it sufficed, in order to attain that objective, that the undertakings in question knew that by terminating the price war they would not lose market shares. To that end, the general sales data, which made it possible to calculate market shares, were sufficient. That also explains why the figures did not need to be broken down according to the different types of plasterboard.

117 As regards the applicant's argument that the exchange of data was not effected at regular intervals and, for that reason, it was not a monitoring mechanism, it is clear that the anti-competitive nature of that exchange of information, the objective of which – as clearly described by the applicant itself in its reply to the statement of objections – was to put an end to the price war, can in no way be called in question.

118 As regards BPB's argument distinguishing Mr [A]'s information exchanges in 1991 and 1992 from those of Mr [D], it is a mere assertion which is devoid of any real foundation. In his statement, Mr [A] said that he had counselled Mr [D] in 1993 against making the exchanges too frequent, which shows that both were well aware that those exchanges were being made. The mere fact that the exchanges of information were effected by two different persons is thus explained by the change of person at the head of BPB. Moreover, the reason for those exchanges of information, in particular as regards their object, is identical. In his account of the exchanges which he effected from 1993, Mr [D] states that, even in highly aggregated form, the information was useful to see the size of the market and the trends and that knowledge of competitors' market shares meant that 'one was not operating completely in the dark'.

119 In conclusion, the collusive nature of the exchanges of information concerning quantities sold in Germany, France, the Benelux and the United Kingdom from 1992 to 1998 is sufficiently established.

The exchanges of information on sales volumes in the United Kingdom

Arguments of the parties

120 The applicant maintains that the purpose of the United Kingdom information exchange was to have a better view of the total size of the United Kingdom market for plasterboard and of its market share.

121 The applicant claims that, even if the data exchanged were monthly data on highly aggregated sales volumes, the exchanges were not monthly but were sporadic and related to information concerning several months.

122 The Commission replies that it does not claim that the exchanges occurred on a monthly basis but simply that they remained remarkably consistent over time (seven successive years) and that the assertions that the exchange was an irregular ad hoc exchange are contradicted by the content of the table kept by Mr [N], managing director of British Gypsum ('BG'), the subsidiary of BPB in the United Kingdom, from which the existence of a regular flow of information can be inferred.

Findings of the Court

123 It should first be noted that the applicant stated in its reply to the statement of objections that it did not object to the Commission's categorising the exchanges of data on sales volumes in the United Kingdom as an infringement of Article 81(1) EC. It also admitted in its reply to a written question put by the Court that those exchanges had taken place from 1992 until the beginning of 1998 and constituted an infringement of Article 81(1) EC.

124 Next, it should be noted that in response to a written question of the Court the Commission confirmed that the exchange of information on sales on the United Kingdom market and that on the

sales of the four markets concerned were both elements of the single and continuous infringement, even if their anti-competitive effects might have duplicated and mutually reinforced one another in so far as they related to the United Kingdom market. Given that the applicant disputes the object and the frequency of the exchanges of sales volume data on the United Kingdom market, it is necessary to consider whether the contested decision is vitiated by errors regarding that exchange.

125 As regards the object of the exchange of sales volume data on the United Kingdom market, the Commission found, at recital 171 of the contested decision, that it was identical to that of the exchange of information on sales volumes on the four markets concerned. However, the applicant asserts that its object was to have a better view of the total size of the United Kingdom market for plasterboard and of its market share.

126 The applicant's explanation does not alter the anti-competitive nature of the information exchange, having regard to the general context of the infringement in question, which was characterised by the pursuit of the objective, expressed at the London meeting, of putting an end to the price war.

127 The applicant's assertion that the fact that the data were compiled on a monthly basis in the tables does not show that the exchange of those data also took place with the same frequency is immaterial in the present case. Even if the sales volume data were exchanged less frequently, that would not invalidate the conclusion that such an exchange was anti-competitive for the same reasons as those set out regarding the exchange of data on the four markets concerned. In any event, the applicant has not adduced any evidence showing that, although the data were compiled monthly, the exchange did not take place monthly. In those circumstances, it must be concluded that the applicant has failed to show that the Commission's finding at recital 194 of the contested decision, that the systematic and detailed nature of Mr [N]'s table was based on a regular flow of information, is vitiated by error.

128 It follows that the Commission's assessment concerning the exchange of sales volume data on the United Kingdom market is not vitiated by any error.

Exchanges of information on price rises in the United Kingdom from 1992 to 1998

Arguments of the parties

129 The applicant claims that the Commission made no finding that the parallel price rises were other than independently arrived at.

130 The evidence relied on by the Commission consists, first, of a conversation in 1996 between the regional directors of Knauf and BG, second, a conversation in 1998 between Lafarge's sales director and a member of BG's sales staff and, third, one or two communications from Mr [N] to his opposite numbers to inform them of price rises.

131 The applicant maintains that the Commission attached unjustified importance to those isolated events. Moreover, the first two contacts were two years apart and the discussions took place in the course of social events. In addition, there were only one or two communications by Mr [N], and, contrary to the Commission's allegations, it was not a question of exchanges of information but of unilateral communications.

132 The applicant contests the Commission's conclusion that those contacts corroborate the existence of a single and continuous infringement. The applicant submits that they took place only between November 1996 and March 1998 and related only to the United Kingdom.

133 The Commission states that it never alleged that prices had been agreed or negotiated. It takes the view that the very fact that the contacts concerning certain price rises were reported internally indicates their importance.

134 The Commission considers, referring to recitals 471 to 477 of the contested decision, that exchange of information to be a concerted practice which was part of the particular manifestations of the complex and continuous agreement having as its object the restriction of competition at least in the four main European plasterboard markets.

Findings of the Court

135 As is apparent from the application and an examination of BPB's cooperation, it was BPB which informed the Commission of those exchanges on price rises in the United Kingdom. Moreover, the facts mentioned in the contested decision are not contested by BPB.

136 Account must also be taken of the fact that the applicant stated in its reply to the statement of objections that it did not object to the Commission's categorising those contacts as an infringement of Article 81(1) EC. In its reply to a written question of the Court, the applicant also admitted that the fact that Mr [N] had, once or twice, informed Knauf and Lafarge of the list price increases in the United Kingdom constituted an infringement of Article 81(1) EC.

137 However, BPB attempts to qualify the anti–competitive nature of those exchanges by stating that the conversations which took place at the golf days were just a report of industry gossip and that the memoranda recording them present this information as such. Further, the information was imparted unilaterally. Lastly, it submits that the price rises would have been known in any event through market intelligence and that the exchanges of information were merely the communication of decisions which had already been made. Moreover, the communication related only to list prices and did not reflect the 'net net' prices (net of discounts).

138 It is apparent from recitals 198 to 200 of the contested decision that, as regards the period prior to 7 September 1996, the price rise announcements were virtually simultaneous in four cases. Thus, BG's announcement on 21 July 1992 (with effect from the end of August 1992) was followed by Lafarge's (Redland's) announcement of 31 July 1992 (with effect from 31 August 1992). Knauf announced its new prices on 3 August 1992 (with a new price list for September 1992).

139 In November 1993 BPB announced a 12% rise with effect from January 1994. Lafarge followed this announced rise but Knauf did not follow it in full.

140 On 29 September 1994 Knauf announced a rise of approximately 6.5% with effect from 1 March 1995 and on 2 December 1994 BPB announced a 9% rise with effect from 27 February 1995. That rise was followed by the announcement of an identical rise by Lafarge on 6 January 1995, with effect from the same date.

141 On 22 September 1995, BG announced a 12% price rise for standard board to enter into force on 1 January 1996. This announcement was followed by Lafarge, which announced the same increase on 13 October 1995 with effect from 1 January 1996 and by Knauf, which announced the same increase on 27 October 1995 with effect from the same date.

142 Thus, as regards the period prior to 7 September 1996, the price rises of BPB, Lafarge and Knauf succeeded one another at very close intervals or were even simultaneous.

143 It must therefore be ascertained whether the near-simultaneity of the price rise announcements and the parallelism of the prices announced, as found, constitute a sound, precise and consistent body of evidence of prior concertation designed to inform the competing undertakings of the price rises. Parallel conduct cannot be regarded as furnishing proof of concertation unless concertation constitutes the only plausible explanation for such conduct. It is necessary to bear in mind that, although Article 81 EC prohibits any form of collusion which distorts competition, it does not deprive economic operators of the right to adapt themselves intelligently to the existing and anticipated conduct of their competitors (Joined Cases C–89/85, C–104/85, C–114/85, C–116/85, C–117/85 and C–125/85 to C–129/85 *Ahlström Osakeyhtiö and Others* v *Commission* [1993] ECR I–1307, paragraph 71).

144 In the present case, even if the intervals between the various price rise announcements may have enabled the undertakings to ascertain those price rises by information from the market and even if those rises were not always exactly of the same level, the near-simultaneity of the price rise announcements and the parallelism of the prices announced amount to strong evidence of concerted action prior to those announcements, since those rises were made in a context characterised by the fact that, as the Commission found in the contested decision, the applicant and Knauf agreed at the London meeting at the beginning of 1992 to put an end to the price war on the four European markets.

145 In any event, the fact remains that, as regards the exchange of data on price increases on the United Kingdom market, the Commission concluded, at recital 476 of the contested decision, only that there were contacts – acknowledged by BPB, Knauf and Lafarge – which accompanied certain

price increases, referring in this respect to recital 211 of the contested decision. Otherwise, as is apparent from recital 210 of that decision, the Commission stated that it could only note the parallel behaviour between undertakings which were also engaged in other collusive contacts, without inferring from this that that parallel behaviour had necessarily been preceded by concerted action. Further, by its use of the word 'nevertheless' in the English, French and Dutch versions of recital 211 of the contested decision, it clearly placed that mere parallelism in the context of the admitted existence of contacts preceding the price rise announcements.

146 As regards the period after 7 September 1996, the existence of contacts between the competitors on prices rises in the United Kingdom is demonstrated by the following documentary evidence.

147 First, it is apparent from an internal BG memorandum that, during the weekend of 7 and 8 September 1996, Knauf announced that it would follow the BG price increase initiative when BG's intentions were expressly stated. As is clear from recital 201 of the contested decision, that discussion took place before BG sent out announcements of a price rise on 9 September 1996.

148 Further, that increase was followed, on 20 September 1996, by that of Lafarge.

149 Second, the near-simultaneity of the price rise announcements and the parallelism of the prices announced continued. Thus the Commission found, at recitals 203 and 204 of the contested decision, that on 3 June 1997 BG had announced a rise of 3.8% for standard board with effect from 1 August 1997. Lafarge announced a rise of 3.7% with effect from 4 August 1997 and Knauf announced a rise of 3.7% with effect from the same date as Lafarge. Further, on 27 January 1998, BG announced a rise of 4.4% with effect from 1 April 1998. Lafarge announced a rise of 4.1% with effect from 6 April 1998 and Knauf announced an identical rise with effect from 1 April 1998.

150 Third, according to recital 205 of the contested decision, before the announcement on 8 September 1998 of BG's 5% price rise with effect from 1 November 1998, a Lafarge representative mentioned to a member of British Gypsum's staff that, for budgetary reasons, Lafarge had decided not to follow the price increase planned for the beginning of January of the following year. However, if the undertakings concerned had not agreed to exchange information on price rises, Lafarge would not have needed to inform the BG representative that it was not going to follow the planned increase.

151 Fourth, BPB acknowledged what it calls 'isolated instances' when Mr [N] had telephoned the managing directors of Lafarge and Knauf in the United Kingdom to inform them of BG's pricing intentions and the planned range of increases (recital 207 of the contested decision). Even though BPB does not indicate even the approximate date of these telephone calls, and even though it terms them 'pure courtesy calls', they show that the competing undertakings were in contact regarding price rises.

152 In those circumstances, the Commission was right to find, at recital 477 of the contested decision, that the contacts on price rises on the United Kingdom market constituted a concerted practice prohibited by Article 81(1) EC.

153 That finding cannot be invalidated by the argument that it was unilateral conduct. It is true that the concept of concerted practice does in fact imply the existence of reciprocal contacts. However, that condition is met where the disclosure by one competitor to another of its future intentions or conduct on the market is requested or, at the very least, accepted by the latter (*Cement*, paragraph 32 above, paragraph 1849).

154 As regards the applicant's claims that the price information transmitted was known by the customers of the undertaking concerned before it was transmitted to the competitors and that, therefore, the information disclosed could already have been collected on the market by those competitors, it should be recalled that the mere fact of receiving information concerning competitors, which an independent operator preserves as business secrets, is sufficient to demonstrate the existence of an anti–competitive intention (Joined Cases T–204/98 and T–207/98 *Tate & Lyle and Others* v *Commission* [2001] ECR II–2035, paragraph 66). Moreover, the discussions for which the Commission found direct evidence or whose existence was acknowledged by the applicant occurred before the official price rise announcements.

155 In view of the circumstances of the present case, the Commission has shown to the requisite legal standard that the three undertakings informed one another of price rises on the United Kingdom market during the period 1992 to 1998.

The stabilisation of German market shares

Arguments of the parties

156 The applicant admits that the objective of the Versailles meeting was to arrive at an agreement to stabilise German market shares. However, that attempt was unsuccessful. It claims that Gyproc's subsequent statement supports its statement.

157 The applicant also admits that at the meetings in Brussels and The Hague the discussions continued to focus on the market shares of each undertaking in question in Germany. Further, the latter discussions were preceded by a further exchange of market share data for the first four months of 1998. However, those discussions likewise did not yield any results.

158 The applicant states that although the parties met and had a common interest in establishing stability in the German market, they did not make a common commitment. However, the applicable law requires such a commitment. The applicant claims that undertakings may share a common view of what they would like to see occur but unless an undertaking, by contact and conduct, acts in a manner which unmistakably conveys to the other that it proposes to act in a certain way and that it feels under an obligation to do so, that does not constitute an agreement in law. It contends that the Commission cannot consider that negotiations are equivalent to an agreement.

159 The applicant claims that the Commission's approach consists in asserting that a common objective is evidenced by 'manifestations' of an agreement within the meaning of Article 81(1) EC and that the 'manifestations' themselves are evidence of a common objective. According to the applicant, that argument is devoid of any legal merit.

160 The applicant submits that the Commission was wrong to consider that the information exchange system that the undertakings in question had organised in November 1996 with the assistance of an independent expert ('the information exchange system') was more sophisticated and that it supplied them with more accurate and verifiable information than the other exchanges. It states that the producers provided information to the independent expert, but that he did not carry out any verification of it. Moreover, the exchanges within the information exchange system were no more frequent than those between the CEOs of the undertakings in question, both having been quarterly in the period from 1996 to 1998. Moreover, the exchanges made within the information exchange system provided the undertakings in question with less information than those between the CEOs, given that the independent expert provided those undertakings only with a total market size figure.

161 It also claims that the fact that the information exchange system was launched after the Versailles meeting was a coincidence.

162 The Commission contends that even if the undertakings did not succeed in concluding an agreement as to how the German market could be shared between them, they expressed a common wish to restrict competition in the plasterboard market by sharing the German market or, at least, stabilising it. According to it, the mere disclosure by an undertaking of the fact that it does not want to increase its market share is sufficient to inform competitors of an essential element in its strategy and is manifestly anti-competitive. It submits that the undertakings did feel bound to act in a particular way, as demonstrated by the continuous discussions in that sense.

163 The Commission submits that the only plausible explanation for an information exchange which the participants wish to keep secret and which is based on figures allegedly of limited value for defining future strategy is that there is a tacit agreement between the undertakings in question to respect traditional flows.

164 The Commission considers that even if market shares in Germany continued to fluctuate after the Versailles meeting in 1996, those fluctuations were minimal and are consistent with its findings, in so far as it never maintained that there was a strict market sharing agreement.

165 The Commission states that even if the information exchange system itself is not contrary to Community law, it should not be examined in isolation but in the light of the fact that it was set up to supply more accurate and verifiable information. Moreover, BPB's assertion that the information provided was no more accurate than that already being exchanged does not explain why BPB and the other undertakings participated in the system. Furthermore, the explanation put forward by BPB, that the undertakings wanted an accurate measure of the size of the German market, merely

supports the Commission's interpretation.

Findings of the Court

166 It is apparent from the applicant's arguments that it does not dispute the existence of the Versailles, Brussels and The Hague meetings. Further, it admits that it participated in those meetings and discussed the situation on the German market. It also acknowledges that a proposal was made at the Versailles meeting in order to arrive at an agreement to stabilise German market shares at their 1995 levels.

167 However, it submits that the Commission has not shown that the undertakings in question made a common commitment. In its submission, the applicable law requires that there be such a commitment, but in the present case there were merely negotiations with a view to securing an agreement.

168 Consequently, the question on which the applicant and the Commission disagree concerns the legal classification of the Versailles, Brussels and The Hague meetings and the information exchange system.

169 As regards the applicant's argument seeking to demonstrate that there was no agreement on German market shares, it should be noted that in the contested decision the Commission found, at recital 469, *in fine*, that 'an agreement [had been] concluded between the [undertakings concerned], who aimed to divide up the German market between them or at least to stabilise it, this agreement being a particular manifestation of the complex, continuous agreement having as its object the restriction of competition on the plasterboard market at least in the four major European markets'. Moreover, it is apparent from recitals 462, 463, 465 and 469 of the contested decision that the Commission found that, irrespective of whether such an agreement had been concluded or not, the undertakings in question, by expressing their common intention to divide up the German market between them or at least to stabilise it, had concluded an agreement within the meaning of Article 81(1) EC.

170 Thus, even if the Commission had not succeeded in showing that the undertakings penalised had concluded an agreement, in the strict sense of the term, as to how the German market could be shared between them, it would suffice if it were clear from undisputed facts that the undertakings in question knowingly substituted for the risks of competition practical cooperation between them by remaining in direct contact with a view to stabilising the German market. Consequently, it is necessary to ascertain whether that is the case here.

171 The existence of the Versailles meeting of June 1996 is not disputed, nor the fact that, during that meeting, the undertakings in question disclosed their real sales figures for 1995, that they discussed the stabilisation of their German market shares and that Gyproc was not satisfied with the market share that the other undertakings were offering it.

172 BPB also admits the existence of the Brussels meeting of 4 December 1997, but states that it was also an opportunity to discuss the stabilisation of the German market.

173 Nor does BPB dispute that The Hague meeting of May 1998 took place. However, it submits that, even if the object of the talks was the situation in Germany, they did not yield any concrete results. In this respect, it is apparent from recital 257 of the contested decision that, according to Gyproc, the participants exchanged their figures on sales volumes in Germany for the first four months of 1998, that each participant mentioned the share of the German market he wished to have and that, since the total of those market shares represented 101%, the participants proposed that Gyproc limit its market share to 11%, but Gyproc refused.

174 Consequently, it follows from the foregoing that, even if a specific agreement on the sharing of the German market could not be concluded either at the Versailles meeting or at the subsequent Brussels and The Hague meetings, the four undertakings in question expressed a common intention to stabilise the German market, and therefore to restrict competition. Thus, the Versailles meeting proves the existence of an agreement on the principle of sharing the German market between BPB, Knauf, Lafarge and Gyproc, as the Commission asserted at recital 264 of the contested decision.

175 It is not contested by BPB that, at the Versailles meeting, notwithstanding the position adopted by Gyproc, the three other undertakings, Knauf and Lafarge and itself, informed each other of the

market shares they agreed to and that those market shares corresponded to the shares those undertakings actually held. In this respect, it should also be recalled that the undertakings do not dispute having exchanged their sales figures for 1995 at the Versailles meeting.

176 Account must also be taken of the information exchange system. The existence of that system supports the Commission's contention that those undertakings wished to stabilise the German market. Each producer gave its figures to the independent expert on a confidential basis and the results were compiled by it, giving an aggregate figure, which was then sent to the participants. This figure enabled each producer to calculate its own market share, but not that of the others. The figures were supplied every quarter and concerned the sales figures of each producer. In addition, the producers supplied the independent expert, on a confidential basis, with the figures for January to December 1995 and for January to September 1996.

177 The information exchange system thus enabled the undertakings in question to check whether their market shares on the German market were remaining relatively stable.

178 As regards the legal assessment of that situation, it must be recalled that the disclosure of information to one's competitors in preparation for a cartel suffices to prove the existence of a concerted practice within the meaning of Article 81 EC (see, to that effect, Case T‑148/89 *Tréfilunion* v *Commission* [1995] ECR II‑1063, paragraph 82).

179 The concept of a concerted practice within the meaning of Article 81(1) EC refers to a form of coordination between undertakings which, without being taken to the stage where an agreement properly so called has been concluded, knowingly substitutes for the risks of competition practical cooperation between them (*Suiker Unie and Others* v *Commission*, paragraph 81 above, paragraph 26, and *Ahlström Osakeyhtiö and Others* v *Commission*, paragraph 143 above, paragraph 63).

180 The criteria of coordination and cooperation necessary for determining the existence of a concerted practice, far from requiring an actual 'plan' to have been worked out, are to be understood in the light of the concept inherent in the provisions of the EC Treaty on competition, according to which each economic operator must determine independently the policy which it intends to adopt on the common market and the conditions which it intends to offer to its customers (*Deere* v *Commission*, paragraph 108 above, paragraph 86, and Case C‑194/99 P *Thyssen Stahl* v *Commission* [2003] ECR I‑10821, paragraph 82).

181 While it is true that this requirement of independence does not deprive operators of the right to adapt themselves intelligently to the existing or anticipated conduct of their competitors, it does, however, strictly preclude any direct or indirect contact between them, the object or effect of which is to create conditions of competition which do not correspond to the normal conditions of the market in question, regard being had to the nature of the products or services offered, the size and number of the undertakings and the volume of the said market (*Deere* v *Commission*, paragraph 108 above, paragraph 87, and *Thyssen Stahl* v *Commission*, paragraph 180 above, paragraph 83).

182 Further, as the Court of First Instance held in *Cement*, paragraph 32 above (paragraph 1852), in order to prove that there has been a concerted practice, it is not necessary to show that the competitor in question has formally undertaken, in respect of one or several other competitors, to adopt a particular course of conduct or that the competitors have colluded over their future conduct on the market. It is sufficient that, by its statement of intention, the competitor eliminated or, at the very least, substantially reduced uncertainty as to the conduct to expect from it on the market.

183 In this respect, the Commission rightly took the view, at recital 466 of the contested decision, that the mere disclosure by an undertaking of the fact that it does not want a larger market share than the one it already holds is sufficient to inform competitors of an essential element of its strategy.

184 Moreover, it must be recalled that the market in question is a highly concentrated oligopolistic one. On such a market, the exchange of information is liable to enable undertakings to be aware of the market positions and business strategies of their competitors and thus to impair appreciably the competition which exists between economic operators (*Deere* v *Commission*, paragraph 106 above, paragraphs 88 to 90, and *Thyssen Stahl* v *Commission*, paragraph 180 above, paragraph 84).

185 Further, as regards the applicant's argument that the Commission's reasoning is circular, it must be recalled that all the elements of the case in question must be examined, not separately as isolated

infringements, but in the overall context, as possible elements of a single infringement having as its object the restriction of competition on the plasterboard market in the four European markets concerned. According to the case–law, the items of evidence on which the Commission relies in the Decision in order to prove the existence of an infringement of Article 81(1) EC by an undertaking must not be assessed separately, but as a whole (see, to that effect, Case 48/69 *ICI* v *Commission* [1972] ECR 619, paragraph 68).

186 Moreover, in the light of the general context, the objective of stabilising the markets concerned, the exchange of information on the German market enabled the undertakings in question to check that their competitors' market shares remained stable.

187 Lastly, as regards the applicant's argument that, in the absence of an agreement, the Commission ought at least to have proved the effects on the market, it must be recalled that, for the purposes of applying Article 81(1) EC, there is no need to take account of the actual effects of an agreement once it appears that its object is to restrict, prevent or distort competition within the common market (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 261).

188 Likewise, a concerted practice falls within Article 81(1) EC even where there are no anti-competitive effects on the market. First of all, it follows from the very wording of that provision that, as in the case of agreements between undertakings and decisions of associations of undertakings, concerted practices are prohibited, independently of any effect, where they have an anti-competitive object (Case C–105/04 P *Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission* [2006] ECR I–8725, paragraphs 137 and 138).

189 Next, although the very concept of a concerted practice presupposes certain conduct by the participating undertakings on the market, it does not necessarily mean that that conduct should produce the specific effect of restricting, preventing or distorting competition (*Nederlandse Federatieve Vereniging voor de Groothandel op Elektrotechnisch Gebied* v *Commission*, paragraph 188 above, paragraph 139).

190 In the light of the overall context of the case, the Court finds that, on the basis of the undisputed facts, the Commission has demonstrated to the requisite legal standard that even if the undertakings in question did not succeed in concluding a specific agreement on sharing the German market between them, they did express their common intention to conduct themselves on that market in a specific manner, namely to restrict competition by stabilising that market.

Exchanges of information on price rises in Germany

Arguments of the parties

191 The applicant contests the Commission's allegation that the four producers kept each other informed of their intentions or that there was coordination concerning the dates and levels of the planned price increases in the period from the end of 1994 to September 1998. It considers that the Commission has not adequately proved its allegations. The fact that competition continued in the German market shows, on the contrary, that producers continued to operate independently. In any event, the contacts in question cannot prove the existence of a common wish or be evidence of an agreement concluded in 1992.

192 As regards the alleged direct contact that it had with competitors concerning price rises in Germany, BPB stated that it had not sent copies of its own price increases to its competitors. As regards the sending by Knauf of its price list to its competitors, such information cannot constitute collusion on prices because the letters concerned price rises which were already widely known or anticipated in the market. Moreover, list prices were frequently reduced by the granting of discounts.

193 The applicant disputes that the Lafarge memorandum of 17 December 1996 was drawn up following the discussion of prices between Mr [V], commercial director at Rigips, the applicant's German subsidiary, and Mr [X], managing director of Lafarge Gips. It has always denied the existence of that discussion. Moreover, it rejects the Commission's conclusion that that memorandum is evidence of direct contacts between the producers. So far as concerns the parallelism of the price increases, the applicant states that, in an oligopolistic market, it is normal for undertakings to follow competitors' prices and act in parallel, at least in respect of list prices. However, competition remained vigorous at the level of net net prices.

194 With regard to the Lafarge memorandum of 7 October 1998, the applicant considers that it describes the normal mechanism of price increases in an oligopolistic market. It submits that the memorandum discloses a number of facts which contradict the Commission's allegations, such as the fact that producers granted discounts even after raising list prices, the fact that Rigips announced an increase eight weeks before the date of the memorandum without the other producers following that increase, the fact that there was uncertainty about competitors' reactions to a price increase, the fact that most price increases were limited during the previous years and that until 1993–1994 Lafarge attempted to gain market share.

195 As regards the Knauf internal memorandum of 15 November 1993, the applicant claims that, even if that memorandum recommended the adoption of a course of action which might be anti-competitive, that does not mean that that course of action was actually adopted.

196 As regards the Rigips internal memorandum of October 1994, the applicant submits that the phrase 'it is expected that the prices will be frozen on this level' does not disclose any collusion but merely records Rigips' assessment of the outlook for price developments.

197 As regards the price increase of 1 December 1995, the applicant denies that the failure of that rise was the reason for the Versailles meeting. It contends that the fall in prices from December 1995 to June 1996 is in fact evidence of the absence, rather than the existence, of an agreement.

198 As regards the September 1997 price increase, the applicant denies having participated in the attempts made by other producers to avoid 'poaching' of customers. The applicant submits that, even if the producers had discussions on market sharing, those discussions did not yield any results. Thereafter, competition continued in the market and, therefore, the proposed September 1997 list price increase failed.

199 As regards the September 1998 price rise, the applicant maintains that it did not participate in any collusion between producers. It argues that the Commission's only evidence regarding it is the fact that it received a copy of a letter from Knauf concerning a price increase. However, that adds nothing to the admission by Knauf that it occasionally sent letters to its competitors informing them of a price increase. In addition, it denies having received a communication from Gyproc. Thus, the Commission's assertion that the September 1998 price increase constituted a further manifestation of collusion in which the applicant participated in the German market is unsupported by evidence.

200 As regards the Lafarge memorandum of 7 October 1998, the Commission contends that it was used not to decide whether there were contacts between the undertakings in question but as evidence of the fact that price increases followed a particular pattern. The fact that the announced price increases were not always reflected in achieved increases in transaction prices does not mean that the contacts established were not illegal or that they had no effect. It also considers that the fact that Lafarge tried to gain market share until 1993–1994 does not call in question its findings in that respect, since it merely found that there was coordination of price increases from the end of 1994 or the beginning of 1995.

201 As regards the fact that Knauf sent its price lists to its competitors, the Commission refers to recitals 313, 314 and 472 to 474 of the contested decision.

202 The Commission accepts that the Knauf internal memorandum of 15 November 1993 does not describe a course of action already adopted, but rather recommends a course of conduct. However, the content of that memorandum illustrate the attitudes within Knauf which led to the later contacts between competitors, which the Commission has proven and which clearly corroborate the Commission's findings that those contacts were anti-competitive. They also cast light on the motives underlying those later contacts.

203 As regards the Rigips internal memorandum of October 1994, the Commission contends that the context in which it was written, including the fact that it is dated one month before letters announcing the February 1995 price increases, is not just evidence that the author of the memorandum was well informed.

204 As regards the 1 December 1995 price increase, the Commission contests the applicant's claim that the failure of that increase shows that no agreement was concluded in 1992. Moreover, subsequent events showed that contacts had been made in 1996 (perhaps in response to that failure), including the June 1996 meeting in Versailles, and that a price increase had been agreed for 1 February 1997.

205 As regards the Lafarge memorandum of 17 December 1996, the Commission submits that the price increases agreed upon are a manifestation of the complex and continuous agreement described in recitals 430 to 434 of the contested decision. Moreover, the importance of that memorandum is described in recitals 335 to 352 of the contested decision.

206 As regards the September 1997 price increase, the Commission states that the failure of that increase does not show that there was no agreement.

207 As regards the September 1998 price increase, the Commission observes that, if an undertaking receives price information from a competitor and does not protest, there is sufficient reciprocity to constitute a concerted practice. The Commission also considers that the fact that Gyproc admitted that there were concerted attempts to raise prices on the German market supports its conclusion. It observes that the BPB memorandum referred to in recital 380 of the contested decision (containing a reference to a second price increase in the first quarter of 1999) preceded the Knauf instructions referred to in recital 337 of the contested decision, and therefore could not be a reaction to those instructions or to the market rumours that undertaking suggested provoking.

Findings of the Court

208 BPB disputes that it had direct contact with its competitors on price rises on the German market and that there was concerted action on the application of the price rises. It also submits that, in any event, even if direct contact with competitors were established, that could not prove a common wish to concert with one another on prices.

209 It is necessary to examine, first, evidence of contacts and concerted action between the undertakings, which is expressly contested by BPB.

210 In this respect, it should be recalled that those contacts must be viewed in the context of a period characterised by a series of anti-competitive manifestations demonstrating a common wish of the competitors to stabilise the plasterboard market in the four major European markets, including the German market. It must also be observed that, although the content of an isolated document found by the Commission may not unequivocally disclose the existence of anti-competitive conduct and so might possibly be explained otherwise than by a wish to restrict competition, that fact cannot preclude that document from being interpreted as corroborating the existence of such a wish when it is one of a series of other documents which provide reliable indicia of the existence of contemporaneous and similar anti-competitive conduct.

211 As regards Knauf's internal memorandum of 15 November 1993 (recital 305 of the contested decision), BPB observes merely that that memorandum recommends a line of conduct which could be anti-competitive, but that it does not constitute evidence that that line of conduct was actually adopted. It should be noted that, according to that memorandum, '[Knauf's] new price list was sent to all direct customers at the end of October. At the same time, a copy was sent to all [its] competitors to inform them'. Thus, BPB's explanation is contradicted by the fact that the event mentioned in that memorandum of November 1993 took place at the end of October 1993. Consequently, the explanation given by BPB of that memorandum is not convincing. In any event, BPB's argument seeks at most to reproach the Commission for not demonstrating that the exchange of information in question had had any effect, an argument which cannot diminish its anti–competitive object.

212 As regards the internal memorandum of October 1994 discovered at Rigips' premises, the applicant maintains its explanation set out in recital 323 of the contested decision. In its view, that memorandum reflects a company manager's assessment of the state of the German market based on the knowledge he had acquired from information collected by his sales staff.

213 In this respect, the Commission's interpretation of that memorandum is more convincing in view of the other evidence in the file which shows that, at the time, there was concerted action between the undertakings in question. The Commission rightly considers that that memorandum reveals knowledge of competitors' strategies and points to contact between them. Having first summarised the situation on the market, the author of that memorandum explains that Gyproc's sales manager had complained that his firm had lost market share and had to win it back. Further, the memorandum envisaged a price freeze at the level referred to therein and that a price increase would take place from 1 February 1995. That last comment is particularly revealing. If the notification of the price rise announcements by Knauf were unilateral and if BPB was merely following that price rise, BPB could not have known in October 1994 that a price rise was planned

for 1 February 1995, given that Knauf announced that price rise only in November 1994. Furthermore, if, as BPB claims, it had been aware of that price rise through its customers, nothing prevented it from demonstrating that so as to contradict the tangible evidence that the Commission found. Further, it should be recalled that a price rise actually took place on 1 February 1995.

214 Furthermore, it is noteworthy that, despite that concrete evidence of collusive contact between producers, the Commission merely finds, at recital 329 of the contested decision, that the competitors informed each other of their intentions concerning the price rise of 1 February 1995 but does not claim that that memorandum constitutes direct evidence of concerted action on the price rise.

215 As regards the price increase in December 1995 (recitals 330 to 333 of the contested decision), the applicant submits that the fact that it failed is further evidence of the non–existence of the 1992 agreement. In this respect, it is sufficient to recall that, even if there are no economic effects, that is not proof that there was no cartel, but, at most, evidence that the cartel did not function well, which is irrelevant for a finding that there has been concerted action with an anti–competitive object.

216 Moreover, the fact that the Commission again mentions, in that context, the Versailles meeting of June 1996, the purpose of which was to stabilise the German market is entirely relevant, since it is evidence that the undertakings concerned felt the need to rediscuss the situation on the German market after the failure of the 1995 price rise.

217 That view is backed up by Lafarge’s memorandum of 17 December 1996 (recital 335 of the contested decision). The author begins that memorandum by stating:

‘[W]e were discussing again the current situation on the German market.’

218 BPB disputes that that discussion with its representative, to which reference is made, took place. BPB submits that it is normal market behaviour in an oligopolistic market for undertakings to follow each other’s prices and act in parallel. Competition was vigorous at the level of transaction prices.

219 BPB’s argument must be rejected. Given that the memorandum of 17 December 1996 recounts the events that took place at the meeting of the German Plasterboard Association on 16 December 1996, there is no reason to doubt that the discussion between the BPB representative and the author of that memorandum, a Lafarge employee, took place.

220 Further, the Commission’s interpretation of that memorandum, marked ‘strictly confidential and personal!’, is not vitiated by error. That memorandum clearly reflects the author’s concern, against the background of a price increase announced by all producers for 1 February 1997, about the conduct of competitors and the pricing policies, especially discounts, that they applied. It establishes the existence of direct contacts between the competitors during which they conveyed their analyses and intentions. The author of that memorandum explained that the price offered by BPB to certain customers would be ‘below the [then] agreed lowest price level’ and that ‘[t]his [would] lead to a destabilization again.’ He adds:

‘[Knauf] gave them prices for projects until May [19]97 for a lower than agreed price level. With us they insist on discipline for the price increase … To increase the price to the agreed level ([2.5-3] DM/m²) will be very tough again.’

221 In those circumstances, the Court considers that the Commission was right to find, at recital 352 of the contested decision that, on the occasion of the February 1997 price rise, the competitors colluded directly on the price rise and, at the very least, had informed one another of their intentions in anticipation of the price rise.

222 So far as concerns the attempted price increase of September 1997, BPB submits that none of the documents submitted by the Commission relates to it and that any imputation of customer sharing does not concern it.

223 First of all, it must be pointed out that the four undertakings in question sent out letters announcing the price increase of 1 September 1997 in May or at the beginning of June 1997 (recital 353 of the contested decision). Those facts are not contested by the applicant.

224 In addition, even if the Commission does not provide direct evidence of contacts between BPB and its competitors concerning that increase, the exchanges between Knauf and Lafarge, referred to in recital 356 of the contested decision by way of example, confirm that there was concerted action on the price increases and monitoring of the prices charged by distributors in general. The fact that an undertaking did not hesitate to contact a competitor to discuss customers or the prices charged by a distributor bears out the fact that there was cooperation between producers.

225 The Commission gives another example which, in its view, is an additional manifestation of the collusion between BPB, Knauf, Lafarge and Gyproc on the German market. It concerns an attempted price increase in September and October 1998.

226 In this respect, it is true that as early as June 1998 BPB announced a price increase for September 1998 and that the other competitors did so only in August 1998 for an increase planned to start in October 1998. It is also true that the only other evidence directly concerning BPB that the Commission cites in the contested decision is the fact that Knauf sent a copy of its announcement of a price increase to the private address of a BPB director.

227 It should be borne in mind that it is normal, in the context of anti-competitive practices and agreements, for the activities to take place in a clandestine fashion, for meetings to be held in secret and for the associated documentation to be reduced to a minimum. It follows that, even if the Commission discovers evidence explicitly showing unlawful contact between traders, it will normally be only fragmentary and sparse, so that it is often necessary to reconstitute certain details by deduction. Accordingly, in most cases, the existence of an anti–competitive practice or agreement must be inferred from a number of coincidences and indicia which, taken together, may, in the absence of another plausible explanation, constitute evidence of an infringement of the competition rules (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraphs 55 to 57).

228 In this instance, given the context of the case, the Court considers that the fact that Knauf sent a copy of its announcement of a price increase to the private address of a BPB director, which is an unusual manner of communication between competing undertakings, suffices to show that there was also close cooperation between the producers concerning the price rises on the German market in September and October 1998.

229 Lastly, as regards the Lafarge memorandum of 7 October 1998 (recitals 290 to 294 of the contested decision), BPB takes the view that it is a mere description of the operation of the market. It is true that if that memorandum were the only item of evidence found, it would not constitute sufficient evidence of prior concerted action on price rises. However, examined in the context of the other evidence described above, that memorandum confirms, first, that there were contacts between the competitors on price rises and that there was a connection between them and, second, that there were discussions on German market shares. Having regard to the other steps taken by the undertakings in question in order to stabilise the German market, the parallelism of the price rises and the discovery by the Commission, during its investigations, of numerous copies of announcements of their competitors' price increases in those undertakings' premises, which those undertakings admitted in part having sent to or received directly from their competitors, the coherent interpretation of that memorandum cannot be the one given by the applicant.

230 It is necessary to consider, second, the applicant's argument that, even if proved, the direct contacts between the competitors did not amount to anti-competitive conduct.

231 As regards the applicant's assertion that it was purely unilateral conduct given that the applicant never sent to its competitors copies of its letters announcing price increases, it is true that the concept of concerted practice does in fact imply the existence of reciprocal contacts. However, that condition is met where the disclosure by one competitor to another of its future intentions or conduct on the market is requested or, at the very least, accepted by the latter (*Cement*, paragraph 32 above, paragraph 1849).

232 In addition, in Case T–1/89 *Rhône-Poulenc* v *Commission* [1991] ECR II–867, in which the applicant had been accused of taking part in meetings at which competitors exchanged information concerning, inter alia, the prices which they intended to adopt on the market, the Court of First Instance held that an undertaking, by its participation in a meeting with an anti-competitive purpose, had not only pursued the aim of eliminating in advance uncertainty about the future conduct of its competitors but could not have failed to take into account, directly or indirectly, the information obtained in the course of those meetings in order to determine the policy which it intended to pursue on the market (paragraphs 122 and 123).

233 That conclusion also applies where, as in the present case, the participation of one, or more than one, undertaking in a concerted practice with an anti-competitive purpose is limited to the mere receipt of information concerning the future conduct of its market competitors.

234 Each economic operator must determine independently the commercial policy which he intends to adopt on the market. That therefore precludes any direct or indirect contact between economic operators with the object or effect of influencing their conduct on the market, giving rise to conditions of competition which do not correspond to the normal conditions of the market in question, but also any disclosure by an undertaking to a competitor of the course of conduct which it itself has decided to adopt or contemplates adopting on the market (Joined Cases T‑305/94 to T‑307/94, T‑313/94 to T‑316/94, T‑318/94, T‑325/94, T‑328/94, T‑329/94 and T‑335/94 *Limburgse Vinyl Maatschappij and Others* v *Commission* [1999] ECR II‑931, '*LVM* v *Commission*', paragraph 720).

235 As regards the applicant's claim that the price information which was transmitted was known by the customers of the undertaking concerned before it was transmitted to the competitors and that, therefore, the information disclosed could already have been collected on the market by those competitors, it should be recalled that the mere fact of receiving information concerning competitors, which an independent operator preserves as business secrets, is sufficient to demonstrate the existence of an anti‑competitive intention (*Tate & Lyle and Others* v *Commission*, paragraph 154 above, paragraph 66).

236 The applicant's claim that the price information was known by customers before it was transmitted to the competitors and, therefore, could be collected on the market must be rejected. That fact, if proved, does not mean that, at the time that the price lists were sent to the competitors, those prices already constituted objective market data that were readily accessible. The fact that those price lists were sent directly allowed the competitors to become aware of that information more simply, rapidly and directly than they would via the market. Further, that prior notification allowed them to create a climate of mutual certainty as to their future pricing policies.

237 In those circumstances, the Court considers that, even if the Commission has not been able to prove that there were contacts between all the producers as regards each price rise on the German market during the period in question and even if Gyproc's acknowledgement of price collusion on the German market cannot be taken into account (see the first plea), the Commission was right to find that the information exchange system set up between BPB, Knauf, Lafarge and Gyproc on price rises on the German market constituted a concerted practice which is contrary to Article 81(1) EC.

The geographic scope of the cartel

238 The applicant asserts that the Commission has failed to show to the requisite legal standard that the geographic scope of the cartel also extended to France and the Benelux.

239 In this respect, it is sufficient to recall that the London meeting and the exchanges of information on quantities sold also concerned France and the Benelux.

240 When the Commission is legally entitled to conclude that the various manifestations were part of a single infringement in that they were elements of an overall plan designed to distort competition, the fact that the number and intensity of the collusive practices varied according to the market concerned does not mean that the infringement did not concern the markets on which the practices were less intense and less numerous. It would be artificial to split up continuous conduct, characterised by a single purpose, into a number of separate infringements on the ground that the collusive practices varied according to the market concerned. Those factors must be taken into consideration only when the gravity of the infringement is assessed and if and when it comes to determining the amount of the fine (see, by analogy, *Commission* v *Anic Partecipazioni*, paragraph 61 above, paragraph 90).

241 In conclusion, the Commission did not commit an error of law or a manifest error of assessment in its examination of the various elements constituting the infringement in question.

242 In those circumstances, the second plea must be rejected.

3. The third plea: misapplication of the concept of single infringement

Arguments of the parties

243 The applicant claims that the essential legal condition in establishing a continuous infringement is proof of continuity of the undertakings' participation in the pursuit of the final objective. It submits that the Commission erred in considering that the alleged 1992 common purpose could be a basis for the illegality of the various subsequent acts. According to the applicant, the subsequent events, such as the Versailles meeting, do not constitute an infringement but only an attempted infringement and that classification cannot be called in question by presuming that it is a continuous infringement. The applicant thus considers that, in order to prove the existence of a complex and continuous agreement, the Commission must examine each manifestation with sufficient rigour in declaring it illegal. Moreover, the Commission committed an error of deduction in finding the existence of a common wish on the basis of those manifestations and in considering that their illegality derived from the common wish. The applicant submits that the Commission must show that the common wish exists independently of the infringement in question.

244 According to the applicant, the Commission's explanation, namely that it found the common wish by looking at the five instances of anti-competitive conduct in conjunction, is unconvincing. The applicant observes that the identity of object found by the Commission is vague and goes no further than saying that all anti–competitive activity ultimately achieves the same purpose because all anti–competitive conduct will, ultimately, have an impact on price. It also states that the Commission is quite unable to explain with any clarity what the alleged agreement actually contained and when it was made, if it was not made at the 1992 meeting. It also maintains that the alleged single and continuous infringement in which four undertakings participated and which lasted from 1992 to 1998 is further undermined by the limited number of undertakings which took part in some of the anti–competitive manifestations or by the non–involvement of certain undertakings in them. The applicant and Knauf participated in the 1992 London meeting, but Lafarge and Gyproc did not. Although it is common ground that the information exchanges that followed that meeting were extended to Lafarge and Gyproc, the Commission does not explain how or when that took place or through whom those undertakings acceded to the common wish or joint intention allegedly underlying the information exchanges. Moreover, the applicant considers that the Commission could not draw any inference from the anti–competitive manifestations with regard to the French and Benelux markets, since they related only to the German and United Kingdom markets.

245 The Commission claims that it set out considerations concerning the factual elements of each of the five instances of conduct referred to in recital 429 of the contested decision and that it is the existence of those factual elements that it must demonstrate. It adds that it concluded, in the light of those factual considerations, that those instances of conduct were the expression of a common wish to restrict competition to a minimum in the four main European plasterboard markets. Once those deductions had been made, the only logical way of describing those instances of conduct was to consider them as manifestations of that common wish. The Commission did not thus engage in any circular reasoning in that analysis. It also contends that the various elements of the single infringement are clearly complementary, that complementarity being evidence of the identity of object of the various manifestations of that infringement. For example, for the price rises to be successful, the competitors had to be satisfied with the market shares they held.

Findings of the Court

246 As a preliminary paragraph, it must be observed, according to the contested decision (recital 479), that the Commission found that the set of agreements and concerted practices in the present case formed part of a series of actions by the undertakings in question pursuing a single economic aim, namely the restriction of competition, and constituted the various manifestations of a complex, continuous agreement, the object and effect of which was to restrict competition. Taking the view that the abovementioned agreements and concerted practices had given, without interruption from 1992 until 1998, substantive shape to those undertakings' common wish to stabilise, and hence restrict competition on at least the German, French, United Kingdom and Benelux plasterboard markets, the Commission characterised the infringement as single, complex and continuous.

247 Thus, Article 1 of the contested decision states that the undertakings concerned, including the applicant, 'have infringed Article 81(1) [EC] by participating in a set of agreements and concerted practices in the plasterboard business'.

248 It is first necessary to examine the applicant's argument that the Commission erred in law by finding that there was an overall plan on the basis of the various manifestations of the infringement,

without showing that the common wish existed independently of those various manifestations.

249 It should be recalled that, in most cases, the existence of an anti–competitive practice or agreement must be inferred from a number of coincidences and indicia which, taken together, may, in the absence of another plausible explanation, constitute evidence of an infringement of the competition rules (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 57). That case–law can be transposed to the concept of a single and continuous infringement. Where there is a complex, single and continuous infringement, each manifestation corroborates the actual occurrence of such an infringement.

250 Thus, contrary to what the applicant claims, the various manifestations of the infringement in question must be assessed in the overall context explaining the reason for their existence. It is not a question of circular reasoning but of evaluation of evidence, in which the evidential value of various facts is corroborated or weakened by other facts, which, taken as a whole, may show that there has been a single infringement.

251 BPB also submits that the Commission has not demonstrated to the requisite legal standard the common purpose causing the various manifestations to constitute a single and continuous infringement.

252 In this respect, it should be recalled that an infringement of Article 81(1) EC may result not only from an isolated act but also from a series of acts or from continuous conduct. That interpretation cannot be challenged on the ground that one or several elements of that series of acts or continuous conduct could also constitute, in themselves and in isolation, an infringement of that provision. When the different actions form part of an overall plan because their identical object distorts competition within the common market, the Commission is entitled to impute responsibility for those actions on the basis of participation in the infringement considered as a whole (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 258).

253 In the present case, examination of the second plea clearly shows that, following the London meeting, BPB participated in a single, complex and continuous infringement characterised by the sole purpose of putting an end to the price war and stabilising the four plasterboard markets. The meetings, the exchange of information and the price–fixing practices pursued the same anti-competitive object of maintaining prices at a supra–competitive level and of reducing competition between the undertakings on the relevant market.

254 The matters set out in the second plea permit the conclusion that the Commission was right to find, at recital 432 of the contested decision, that:

‘These various manifestations are … clearly complementary in the light of the functioning of the plasterboard market. The improvement of the economic situation of the undertakings through an increase in prices rendered necessary a coordination of those undertakings at the level of market shares.’

255 In the present case, the Court finds that, owing to their identical object and close synergies, the agreements and concerted practices formed part of an overall plan which was itself part of a series of efforts made by the undertakings in question in pursuit of a single economic aim, namely to influence the normal movement of prices. As the Commission correctly states at recital 422 of the contested decision, it would be artificial to split up such continuous conduct, characterised by a single purpose, by treating it as consisting of several separate infringements, when what was involved was a single infringement which progressively manifested itself in both agreements and concerted practices. The infringement constitutes a single infringement by virtue of the identical nature of the objective pursued by each participant in the cartel, not by virtue of the methods of implementing it (see, to that effect, *Cement*, paragraph 32 above, paragraph 4127).

256 Further, in the context of an overall agreement extending over several years, a gap of several months between the manifestations of the cartel is immaterial. The fact that the various actions form part of an overall plan owing to their identical object, on the other hand, is decisive (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 260).

257 As regards the argument alleging that there was no such plan, it is sufficient to recall that the notion of a single infringement covers precisely a situation in which several undertakings participated in an infringement in which continuous conduct in pursuit of a single economic aim was

intended to distort competition, and also individual infringements linked to one another by the same object (all the elements sharing the same purpose) and the same subjects (the same undertakings, who are aware that they are participating in the common object).

258 Lastly, as regards the applicant's assertion that the single nature of the infringement is contradicted by the fact that a limited number of undertakings took part in some of the anti-competitive manifestations and that some of the undertakings did not participate in the infringement from the beginning, it is sufficient to recall that the fact that an undertaking has not taken part in all aspects of a cartel or that it played only a minor role in it is not material to the establishment of the existence of an infringement committed by it. Those factors must be taken into consideration only when the gravity of the infringement is assessed and if and when it comes to determining the amount of the fine (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 86).

259 Thus, even if the agreements and concerted practices referred to in Article 81(1) EC necessarily result from collaboration by several undertakings who are all co–perpetrators of the infringement, their participation can take different forms according, in particular, to the characteristics of the market concerned and the position of each undertaking on that market, the aims pursued and the means of implementation chosen or envisaged.

260 Consequently, the mere fact that each undertaking participates in the infringement in forms specific to it does not affect the categorisation of the infringement as a single and continuous infringement.

261 It follows from the foregoing considerations that the complaints challenging the categorisation of the cartel as a single and continuous infringement are unfounded.

4. The fourth plea: infringement of Articles 253 EC and 15(2) of Regulation No 17 and breach of general principles in the calculation of the amount of the fine

262 This plea comprises five parts. First, with regard to the starting amount of EUR 80 million, the applicant considers that amount to be arbitrary, disproportionate and not supported by a statement of reasons. In this respect, it also submits that the Commission erred in classifying the infringement as very serious. Furthermore, it claims that the Commission was wrong to conclude that the infringement had an actual adverse impact on the plasterboard market. Second, the increase of the starting amount in respect of the duration of the infringement is based on an incorrect interpretation of the duration of the infringement and of the Guidelines. The Commission also failed to assess and take due account of the limited intensity of the infringement during the relevant period or during certain periods concerned. Third, the applicant considers that the Commission erred by increasing the amount of the fine on account of aggravating circumstances. Fourth, the Commission did not take proper account of the attenuating circumstances. Fifth, the Commission erred in applying the Leniency Notice.

The disproportionate nature of the starting amount of the fine determined according to the gravity of the infringement

The gravity of the infringement

– Arguments of the parties

263 The applicant considers that, in view of its limited impact on the market, the infringement should have been classified as serious rather than very serious.

264 The applicant observes that in Commission Decision 1999/271/EC of 9 December 1998 relating to a proceeding pursuant to Article [81] EC (IV/34.466 – Greek Ferries) (OJ 1999 L 109, p. 24) and Commission Decision 1999/210/EC of 14 October 1998 relating to a proceeding pursuant to Article [81] EC (Case IV/F–3/33.708 – British Sugar plc, Case IV/F-3/33.709 – Tate & Lyle plc, Case IV/F-3/33.710 – Napier Brown & Company Ltd, Case IV/F-3/33.711 – James Budgett Sugars Ltd) (OJ 1999 L 76, p. 1), the Commission considered that the infringements in question could be regarded as serious rather than very serious on the basis of their limited market impact.

265 The applicant submits, in the alternative, that, even if the Commission's classification were correct, it should have recognised that even infringements within the very serious category vary in their

degree of gravity and that in comparison with other cartel cases, the agreement alleged in this case was a considerably less intensive and anti-competitive example of a cartel. The applicant states that when the contested decision was adopted, the fine imposed on the undertakings concerned was the second highest imposed by the Commission, after that imposed in the case which gave rise to Commission Decision 2003/2/EC of 21 November 2001 relating to a proceeding pursuant to Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E–1/37.512 – Vitamins) (OJ 2003 L 6, p. 1). It claims that the cartel alleged in the present case was much less intensive than, for example, that in the Vitamins case and in the cases which gave rise to Commission Decision 2002/742/EC of 5 December 2001 relating to a proceeding pursuant to Article 81 [EC] and Article 53 of the EEA Agreement (Case No COMP/E–1/36.604 – Citric acid) (OJ 2002 L 239, p. 18), Commission Decision 1999/60/EC of 21 October 1998 relating to a proceeding under Article [81 EC] (Case No IV/35.691/E–4 – Pre–Insulated Pipe Cartel) (OJ 1999 L 24, p. 1), Commission Decision 2001/418/EC of 7 June 2000 relating to a proceeding pursuant to Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/36.545/F3 Amino Acids) (OJ 2001 L 152, p. 24) and Commission Decision 2002/271/EC of 18 July 2001 relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Case COMP/E–1/36.490 – Graphite electrodes) (OJ 2002 L 100, p. 1). It claims that those five cases concerned very serious infringements of Article 81(1) EC. Thus, they all involved cartels which covered the entire common market or the European Economic Area (EEA). Those cartels displayed attempts to set up cartels which were much more intensive than the alleged cartel among plasterboard producers which, compared with other cartels, was a rather loose and vague agreement, lacking any form of structure or organisation. In those circumstances, the applicant considers that the starting amount of the fine imposed on it by reason of the gravity of the infringement in question is disproportionate and contrary to the principle of equal treatment, given that that amount is the third highest set in comparison with all the participants in the other cartels mentioned above.

266 The applicant submits that the Commission was wrong to compare the various fines by reference to the size of the relevant market. First, the Guidelines do not say that account should be taken of the size of the market in terms of value in order to assess the gravity of the infringement. Second, the Commission took account only of the size of the market and not of other factors which determine the gravity of the infringement. Third, the Commission does not usually take account of the size of the product market in assessing the gravity of an infringement.

267 The Commission refers to the aspects of the infringement which were found to be particularly serious in this case (recitals 534, 535 and 539 to 542 of the contested decision). It also states that the cartel was conceived, directed and encouraged at the senior levels of each of the undertakings participating. BPB was involved in all the manifestations of anti-competitive conduct in question and it was accepted by BPB that the same persons, Mr [D] and Mr [A] (both CEOs of BPB), were directly involved in all but one of the instances of offending conduct described in the contested decision.

– Findings of the Court

268 For the purpose of fixing the amount of the fine, the gravity of the infringement is to be assessed by taking into account, in particular, the nature of the restrictions on competition, the number and size of the undertakings concerned, the respective proportions of the market controlled by them within the Community and the situation of the market when the infringement was committed (Case 41/69 *ACFChemiefarma* v *Commission* [1970] ECR 661, paragraph 176).

269 Article 81(1)(a) EC expressly states that concerted practices which directly or indirectly fix purchase or selling prices or any other trading conditions are incompatible with the common market.

270 Infringements of that kind, particularly in the case of horizontal cartels, are classified by the case–law as ‘particularly serious’ since they involve direct interference with the essential parameters of competition on the market in question (Case T–141/94 *Thyssen Stahl* v *Commission* [1999] ECR II–347, paragraph 675) or clear infringements of the Community competition rules (*Tréfilunion* v *Commission*, paragraph 178 above, paragraph 109, and Case T–311/94 *BPB de Eendracht* v *Commission* [1998] ECR II–1129, paragraph 303).

271 It is also important to bear in mind that very serious infringements within the meaning of the third indent of the second paragraph of Section 1.A of the Guidelines are ‘generally horizontal restrictions such as price cartels and market–sharing quotas’.

272 It follows that the Commission was right to classify the infringement at issue as very serious, having regard to its nature. It is nevertheless necessary to examine the factors capable of moderating that classification on which the applicant relies.

273 As regards the applicant's argument that the infringement should have been classified as serious on the ground that its impact on the market was limited, it must be observed that in Case T–203/01 *Michelin* v *Commission* [2003] ECR II–4071, paragraphs 258 and 259, the Court held that the gravity of the infringement could be established by reference to the nature and the object of the abusive conduct and that factors relating to the object of a course of conduct may be more significant for the purposes of setting the amount of the fine than those relating to its effects.

274 Therefore, even if the size of the geographic market concerned and the impact on the market, when measurable, must also be taken into account, the nature of the infringements constitutes an essential criterion for assessing the gravity of an infringement (Case T–241/01 *Scandinavian Airlines System* v *Commission* [2005] ECR II–2917, paragraph 84).

275 As regards the applicant's argument that the Commission has reduced the amounts of fines in its other decisions owing to the limited impact of the cartels on the market, assuming that this is correct, it should be pointed out that the Commission's previous decision-making practice does not in itself serve as a legal framework for fines in competition matters (Case T–23/99 *LR AF 1998* v *Commission* [2002] ECR II–1705, paragraph 234).

276 As regards the applicant's alternative claim that, even if the classification of the infringement were correct, the Commission should have recognised that even infringements within the very serious category vary in their degree of gravity and that in comparison with other cartel cases, the agreement alleged in this case was a considerably less intensive and anti-competitive example of a cartel, that question overlaps with the question, which will be examined below, whether the amount of the fine imposed by the Commission was proportionate to the gravity of the infringement.

277 It must none the less be borne in mind that, in any event, a comparison between the gravity of the various cartels is virtually impossible because of the different circumstances in each case.

278 As regards the applicant's claim that the Commission erred in comparing the various fines by reference to the size of the relevant market, it must be borne in mind that, in assessing the gravity of an infringement, the Commission is required to take account of numerous factors, the nature and importance of which vary according to the type of infringement at issue and the specific circumstances surrounding the infringement in question (Joined Cases 100/80 to 103/80 *Musique diffusion française and Others* v *Commission* [1983] ECR 1825, paragraph 120). The factors tending to establish the gravity of an infringement may, where appropriate, include the size of the market for the relevant product (Case T–330/01 *Akzo Nobel* v *Commission* [2006] ECR II–3389, paragraph 37).

279 Lastly, it must be observed that a horizontal price cartel as extensive as the one found by the Commission in the contested decision, relating to such an important economic sector, cannot normally escape classification as a very serious infringement, whatever its context. In any event, the circumstances invoked by the applicant in this case are not such as to call in question the validity of the Commission's assessment of the gravity of the infringement.

280 The Court must therefore reject the applicant's complaints challenging the classification of the infringement as very serious on account of its nature.

The actual impact of the infringement on the market

– Arguments of the parties

281 The applicant submits that in the contested decision, the Commission was not able to demonstrate any quantifiable loss.

282 The applicant considers that the impact of the cartel on the market concerned was limited given that, during the period 1992 to 1998, the 'net net' prices remained at the same level in real terms in the United Kingdom and fell by 11% in Germany. The applicant states that the Commission has not

demonstrated any effects on the market in France or the Benelux. Moreover, the Commission has failed to show any consumer detriment.

283 The applicant further claims that prices and market shares moved in the United Kingdom and Germany during the period concerned in a predictable manner in the context of the return to more normal conditions of competition after a savage price war.

284 It admits that the London meeting may have contributed to an acceleration of the ending of the price war but denies that it could have been the only cause. According to the applicant, the price war would have ended anyway.

285 The applicant also maintains that the information exchanges had little effect. It submits in that connection that it used the information obtained only to determine whether there was a new mood in the industry. Moreover, Mr [D] had disclosed the data to no-one, except once in 1993. The lack of effect of those exchanges is borne out by an examination of the data actually exchanged. The applicant states that the initial exchanges were of annual data. In 1993, the exchanges became half yearly, and in 1996 they became quarterly. However, the exchanges did not occur on a regular basis. Moreover, the information was of an aggregated nature, being a single figure for the entire national market.

286 The applicant refers to *Deere* v *Commission,* paragraph 108 above, and the judgment in *Thyssen Stahl* v *Commission*, paragraph 270 above, and submits that the circumstances giving rise to the present case are completely different from those which led to those two judgments. In those two cases the information exchanged was much more detailed and recent.

287 As regards the advance warnings of list price increases, the applicant argues that in almost every case the advance warning preceded the announcement of those increases to customers by only a few days and that, in certain cases, was even made at the same time. Thus, the information was not confidential when it was imparted. Moreover, the applicant observes that the list prices are rarely the prices which customers pay.

288 The applicant also considers that the alleged infringement could not have caused harm to consumers because the customers are nearly all commercial concerns with considerable buyer power and the ability to negotiate discounts by playing the producers off against each other.

289 The applicant also contests the Commission’s conclusion that competition tends to be more limited in an oligopolistic market. It submits that market shares moved considerably, with considerable customer switching.

290 Finally, the Commission has not shown that the infringement had an impact on the French and Benelux markets. It states that the Commission’s main evidence is that the information exchanges extended to those markets. However, it failed to produce evidence of anti-competitive conduct relating to those two markets.

291 The Commission considers that the infringement committed in this case had a practical impact by reason of the very nature of the relevant market.

292 Further, the end of the price war was one of the principal objectives of the cartel and the price war did end as a result of the cartel. As to BPB’s argument that the infringement was not the only cause of the ending of the price war, it submits that even if that were true it does not lessen the practical impact of the infringement on the market concerned.

293 As regards the information exchanges, the Commission found that they were used to monitor the market and to prevent any competition considered too aggressive by the undertakings in question in the four markets concerned.

294 The fact that the undertakings actually announced the agreed price increases and that the prices so announced served as a basis for fixing individual transaction prices suffices in itself for a finding that the collusion on prices had as both its object and its effect a serious restriction of competition. It is not therefore necessary to determine whether the variations in the transaction prices obtained evolved in parallel with those of the prices announced in order to show a practical effect on the market concerned.

295 The Commission states that it is not required to demonstrate either that the infringement caused a quantifiable loss or that consumers were harmed. It contends, however, referring to recital 534 of the contested decision, that increased price and market share stability is consistent with the implementation of the cartel. It also states that plasterboard is used in the construction industry, and that it affects housing prices and therefore consumers.

296 As regards the geographic scope of the cartel, the Commission contends that the fact that anti-competitive activity may have been less intense in some markets does not mean that the cartel did not operate in those markets.

– Findings of the Court

297 It should be borne in mind that, according to Section 1A, first paragraph, of the Guidelines, the Commission is to take account, inter alia, of '[the] actual impact [of the infringement] on the market, where this can be measured', when calculating the amount of the fine on the basis of the gravity of the infringement.

298 In this regard, it is necessary to analyse the exact meaning of the words 'where this [i.e. the actual impact] can be measured'. In particular, it is a question of establishing whether those words mean that the Commission can take account of the actual impact of an infringement for the purpose of calculating fines only if, and in so far as, it is able to quantify that impact.

299 It should also be emphasised that when appraising the effects of agreements or practices in the light of Article 81 EC it is necessary to take into consideration the actual context in which they are situated, in particular the economic and legal context in which the undertakings concerned operate, the nature of the goods or services affected, as well as the real conditions of the functioning and the structure of the market or markets in question (*ASNEF-EQUIFAX and Administración del Estado*, paragraph 106 above, paragraph 49).

300 Further, consideration of the impact of a cartel on the market necessarily involves recourse to assumptions. In this respect, the Commission must in particular consider what the price of the relevant product would have been in the absence of a cartel. When examining the causes of actual price developments, it is hazardous to speculate on the part played by each of those causes. Account must be taken of the objective fact that, because of the price cartel, the undertakings concerned specifically waived their freedom to compete with one another on prices. Thus, the assessment of the influence of factors other than that voluntary decision of the undertakings concerned in the cartel not to compete with one another is necessarily based on reasonable probability, which is not precisely quantifiable.

301 Therefore, unless the criterion of Section 1A, first paragraph, of the Guidelines is to be deprived of its effectiveness, the Commission cannot be criticised for referring to the actual impact on the market of a cartel having an anti–competitive object even though it does not quantify that impact or provide any assessment in figures in this respect. Consequently, the actual impact of a cartel on the market must be regarded as having been sufficiently demonstrated if the Commission is able to provide specific and credible evidence indicating with reasonable probability that the cartel had an impact on the market.

302 In the present case, it is apparent from the summary of the Commission's analysis (see recitals 534 to 538 of the contested decision) that it relied on several indicia in order to find that the cartel had an actual impact on the market. The Commission relied on the fact that the cartel participants held all or almost all plasterboard supply on the four markets to which the cartel extended. It also found that the various elements of the cartel were put into practice in that the undertakings in question effectively modified their conduct after the London meeting and that the information exchanges decided on were implemented throughout the period in question, on the main markets and more specifically on the United Kingdom and German markets. As regards prices, it added, referring to recitals 212 and 395 of the contested decision, that they had tended to rise or, at least, stabilise and that the contacts relating to price increases were effectively linked to the publication of price lists subsequently taken into account in the prices invoiced to customers. Furthermore, the Commission, referring to recitals 71, 196 and 289 of the contested decision and the annex thereto, found that market shares had been relatively stable during the period in question, more so than during the period before 1988–1992, which was characterised by the undertakings in question as a price war.

303 Both the fact that the parties involved in the cartel held the majority (indeed even almost all) of the

market concerned and that the arrangements brought to light were specifically intended to increase prices to a level higher than that which they would otherwise have reached are indications tending to show that the infringement was capable of producing significant anti–competitive effects.

304 Thus, the Commission cannot be criticised for having found that the fact that the cartel participants held a very considerable share of the market concerned was an important factor which ought to be taken into account in examining the cartel's actual impact on the market. It cannot be denied that the probability that a cartel on prices and on market stabilisation is effective increases with the size of the market shares divided among the participants in that cartel. Although that alone does not prove an actual impact, nevertheless in the contested decision the Commission did not show a cause-and-effect relationship of that kind, but merely took it into account in the same way as other factors.

305 As regards the Commission's assertion that prices effectively tended to rise or, at least, stabilise (recital 534 of the contested decision), it must be pointed out that the Commission does not present statistics on price developments, but notes merely that BPB and Lafarge stated in their replies to the statement of objections that prices on the United Kingdom and German markets had tended to rise or, at least, stabilise.

306 In this respect, the following should be noted. First, concerning Lafarge's reply to the statement of objections, it is apparent from paragraph 58 above that the Court has decided, for the sake of completeness, to disregard it as inculpatory evidence against the applicant. Second, even if the applicant's reply to the statement of objections can be interpreted in the way that the Commission claims, namely that, for the United Kingdom and German markets, the applicant itself admitted that prices tended to rise or, at least, to stabilise, the French and Benelux markets are not covered by that assertion. Third, it is apparent from the applicant's reply to the statement of objections that it stated that, during the period 1992 to 1998, transaction prices had remained at the same level in real terms in the United Kingdom and had fallen in Germany.

307 However, the Commission cannot be required, where the implementation of a cartel has been established, systematically to demonstrate that the agreements in fact enabled the undertakings concerned to achieve a higher level of transaction prices than that which would have prevailed in the absence of a cartel. It would be disproportionate to require such proof, which would absorb considerable resources, given that it would necessitate making hypothetical calculations based on economic models whose accuracy it would be difficult for the Court to verify and whose infallibility is in no way proved (Opinion of Advocate General Mischo in Case C-283/98 P *Mo och Domsjö* v *Commission* [2000] ECR I–9855, I–9858, point 109).

308 In the present case, it is apparent from the contested decision and from the applicant's own admission that the price war came to an end, which, by definition, had the effect of increasing prices to levels higher than they would have reached without the illicit arrangements.

309 Further, the fact that the contacts relating to price increases were linked to the publication of price lists subsequently taken into account in the prices invoiced to customers (recital 534 of the contested decision) had, by its very nature, an impact on the market and on the conduct of the various operators, both on the supply and demand side, given that such announcements influenced the pricing process, in that the price announced constituted a point of reference for individual negotiation of transaction prices with customers (see, to that effect, Case T–338/94 *Finnboard* v *Commission* [1998] ECR II–1617, paragraph 342), who inevitably saw their scope for price negotiation restricted (see, to that effect, *LVM* v *Commission*, paragraph 234 above, paragraph 745).

310 Moreover, the fixing of a price, even one which merely sets a target, affects competition because it enables all the cartel participants to predict with a reasonable degree of certainty what the pricing policy pursued by their competitors will be (Case 8/72 *Vereeniging van Cementhandelaren* v *Commission* [1972] ECR 977, paragraph 21). More generally, such cartels involve direct interference with the essential parameters of competition on the market in question (*Thyssen Stahl* v *Commission*, paragraph 270 above, paragraph 675). By expressing the common intention to apply a given price level to their products, the producers concerned do not independently determine their policy in the market, thus undermining the concept inherent in the provisions of the Treaty relating to competition (see, to that effect, *BPB de Eendracht* v *Commission*, paragraph 270 above, paragraph 192).

311 The Court therefore considers that the Commission has demonstrated to the requisite legal standard that the cartel had an actual impact on the marked concerned as regards prices.

312 As regards the Commission's assertion at recital 534 of the contested decision that market shares were relatively stable during the period in question on account of the infringement in question, that assertion is not borne out. Admittedly, it is apparent from the table in the annex to the contested decision, to which the Commission refers, that market shares during the period 1992 to 1998 seem to have remained relatively stable. None the less, in the absence of data relating to the situation on the market concerned before the cartel, that table does not prove to the requisite legal standard that the stability, if established, was the consequence of the infringement in question.

313 So far as concerns the exchanges of information, it is settled case–law that, subject to proof to the contrary, which the economic operators concerned must adduce, the presumption must be that the undertakings taking part in the concerted arrangements and remaining active on the market take account of the information exchanged with their competitors when determining their conduct on that market. That is all the more true where the undertakings concert together on a regular basis over a long period, as is the case here (see *HFB and Others* v *Commission*, paragraph 79 above, paragraph 216, and the case-law cited).

314 In the light of the foregoing considerations, the Court finds that the Commission has sufficiently proved the effects of the infringement on the market concerned, with the exception of the stability of market shares. Given the gravity of the conduct in question and the nature of the market, it may also be presumed that there was an effect on the French and Benelux markets.

315 Thus, it is still necessary to consider whether the fact that the Commission has not proved all the alleged effects of the infringement has an impact on the classification of the infringement as a very serious infringement and therefore on the amount of the fine.

316 In this respect, it should be recalled that the gravity of infringements has to be determined by reference to numerous factors, such as the particular circumstances of the case, its context and the deterrent effect of fines; moreover, no binding or exhaustive list of the criteria which must be applied has been drawn up (Case C–219/95 P *Ferriere Nord* v *Commission* [1997] ECR I–4411, paragraph 33).

317 The Court held, in *Michelin* v *Commission*, paragraph 273 above (paragraphs 258 and 259), that the gravity of the infringement could be established by reference to the nature and the object of the abusive conduct and that, according to settled case–law, factors relating to the object of a course of conduct may be more significant for the purposes of setting the amount of the fine than those relating to its effects.

318 The Court of Justice has confirmed that approach by holding that the effect of an anti-competitive practice is not a conclusive criterion for assessing the proper amount of a fine. Factors relating to the intentional aspect may be more significant than those relating to the effects, particularly where they relate to infringements which are intrinsically serious, such as price fixing and market sharing (judgment of the Court of Justice in *Thyssen Stahl* v *Commission*, paragraph 180 above, paragraph 118).

319 Moreover, it must be remembered that horizontal price agreements have always been regarded as among the most serious infringements under Community competition law (*Tate & Lyle and Others* v *Commission*, paragraph 154 above, paragraph 103, and Case T–213/00 *CMA CGM and Others* v *Commission* [2003] ECR II–913, paragraph 262).

320 Finally, it is also important to point out that the Commission did not attach primary significance to the criterion of the actual impact of the infringement on the market in setting the starting amount of the fine. The Commission also based its determination on other considerations, namely the finding that the infringement was to be classified as very serious by its very nature (recitals 528 to 530 of the contested decision) and that the relevant geographic market constituted a large part of the Community market, geographically and in terms of value, since it represented approximately 80% of the market's total value (recitals 539 to 542 of the contested decision).

321 Consequently, in the light of all the foregoing considerations, the Commission was right to classify the infringement as very serious.

322 Further, the Court finds, in the exercise of its unlimited jurisdiction and in the light of the foregoing considerations, that the fact that the Commission demonstrated only partially the effects of the infringement is not capable of calling in question the Commission's assessment of the starting amount of the fine set according to gravity.

The determination of the starting amount of the fine according to the gravity of the infringement

– Arguments of the parties

323 The applicant considers that, according to the third indent of the second paragraph of Section 1.A of the Guidelines, a very serious infringement will attract a fine of a starting amount which will be likely to be above EUR 20 million. The applicant takes the view that, in view of that provision, the Commission should explain on the basis of which criterion it chose an amount above EUR 20 million. In the absence of such an explanation, the figure chosen appears to have been chosen at random.

324 The applicant asserts that its fine is also disproportionate and excessive when compared with its turnover. It observes that the fine imposed represents 18.1% of its plasterboard turnover in Europe, 24.3% of its plasterboard turnover in the four main markets, and 44.4% of its plasterboard turnover in the United Kingdom and Germany in 2001–2002. Moreover, its fine is much higher in terms of its turnover than the other fines imposed for the same or comparable infringements.

325 The applicant submits that, in examining the proportionality of the fine, a comparison with other cases must be 'illuminating'. It asks by what yardstick proportionality is to be measured if it is not able to argue that the fine is disproportionate by comparison even with contemporaneous cases or by reference to the applicant's turnover or that of other undertakings.

326 The applicant also maintains that the Commission's delay of at least one year in taking the contested decision has contributed to the imposition of a much higher fine than would have been likely had that decision been taken at the end of 2001 rather than on 27 November 2002. At that time, the Commission tried to deflect public attention away from a number of setbacks in a series of merger cases and therefore sought to derive maximum political capital from the imposition of 'heavy fines' for that cartel.

327 The Commission asserts that the starting amounts it selected for each of the undertakings bear a clear and proportionate relationship to each other and to the gravity of the infringement.

328 The Commission states that the reasons which prompted it to set the initial amount at EUR 80 million are set out in recitals 545 to 549 of the contested decision. It states that it is not required to give further reasons for its choice.

329 The Commission contends that any comparison between the fines imposed in the other cases is not illuminating, because it determines the amount of the fines case by case and may in any event increase the general amount of fines within the limits set by Regulation No 17 if that proves necessary in order to implement competition policy. The Commission gives a table of the starting amounts of fines imposed in cases concerning markets with the largest values to demonstrate that the starting amount of the fine imposed on the applicant is no higher than those of the fines imposed in other cases and that, on the contrary, it is significantly lower when the size of the relevant market is taken into account. It emphasises, however, that it does not seek to justify the starting amount by reference to that table, which relates to only one of the factors taken into account in assessing the starting amount.

330 Finally, the Commission submits that BPB has shown neither that there has been unreasonable delay, given the complexity of the case, nor that this delay had caused any prejudice to its rights of defence. BPB's assertions concerning the political climate are pure speculation, and wholly irrelevant to the question whether the fine was lawfully imposed.

– Findings of the Court

331 As regards the scope of the duty to state reasons as it applies to the setting of a fine imposed for infringement of the Community competition rules, it should be noted, first, that such a fine must be fixed in the light of the provisions of the second subparagraph of Article 15(2) of Regulation No 17, which states that '[i]n fixing the amount of the fine, regard shall be had both to the gravity and the duration of the infringement'. In this respect, the Guidelines and the Leniency Notice indicate what

factors the Commission takes into consideration in measuring the gravity and duration of an infringement (Case T–220/00 *Cheil Jedang* v *Commission* [2003] ECR II–2473, paragraph 217). In those circumstances, the essential procedural requirement to state reasons is satisfied where the Commission indicates in its decision the factors which it took into account in accordance with the Guidelines and, where appropriate, the Leniency Notice and which enabled it to determine the gravity of the infringement and its duration for the purpose of calculating the amount of the fine (*Cheil Jedang* v *Commission*, cited above, paragraph 218).

332 It is true that, in the present case, the Commission has not indicated figures other than those relating to the market shares of the undertakings in question on the basis of which it set the starting amount of the fine imposed on the applicant at EUR 80 million.

333 However, there is no obligation on the Commission, as part of its duty to state reasons, to indicate in its decision the figures relating to the method of calculating the amount of fines (Case C–286/98 P *Stora Kopparbergs Bergslags* v *Commission* [2000] ECR I–9925, paragraph 66).

334 Statements of figures relating to the calculation of the amount of fines, however useful such figures may be, are not essential to compliance with the duty to state reasons for a decision imposing fines; in any event, the Commission cannot, by mechanical recourse to arithmetical formulas alone, divest itself of its own power of assessment (Case C–182/99 P *Salzgitter* v *Commission* [2003] ECR I–10761, paragraph 75).

335 As regards the reasons underlying the setting of the amount of fines in absolute terms, it must be borne in mind that fines constitute an instrument of the Commission's competition policy and the Commission must be allowed a margin of discretion when fixing their amount in order that it may channel the conduct of undertakings towards observance of the competition rules (Case T–150/89 *Martinelli* v *Commission* [1995] ECR II–1165, paragraph 59).

336 Moreover, it is important to ensure that fines are not easily foreseeable by economic operators. If the Commission were required to indicate in its decision the figures relating to the method of calculating the amount of fines, the deterrent effect of those fines would be undermined. If the amount of the fine were the result of a calculation which followed a simple arithmetical formula, undertakings would be able to predict the possible penalty and to compare it with the profit that they would derive from the infringement of the competition rules.

337 In the present case, it must be noted that in recitals 522 to 553 of the contested decision the Commission set out the factors which it took into account in calculating the fines on the basis of the gravity of the infringement of each of the undertakings concerned. Those recitals plainly set out the reasoning followed by the Commission in a clear and detailed manner, thereby allowing the applicant to ascertain the factors taken into account in order to measure the gravity of the infringement for the purposes of calculating the amount of the fine and the Court to exercise its power of review. It must therefore be held that the contested decision satisfies the duty to state reasons imposed on the Commission under Article 253 EC.

338 Concerning the applicant's argument that its fine is disproportionate and excessive when compared with its turnover, it is sufficient to recall that, as the Commission is not obliged to calculate the fine by reference to amounts based on the turnover of the undertakings concerned, it is likewise not required to ensure, where fines are imposed on several undertakings involved in the same infringement, that the final amount of the fines produced by the calculation for the undertakings concerned reflects any distinction between them regarding their total turnover or their turnover in the relevant product market (*Dansk Rørindustri and Others* v *Commission*, paragraph 90 above, paragraphs 255 and 312).

339 Further, Community law contains no general principle that the penalty be proportionate to the undertaking's size on the product market in respect of which the infringement was committed (Case C–397/03 P *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission* [2006] ECR I–4429, paragraph 101).

340 Article 15(2) of Regulation No 17 likewise does not require that, where fines are imposed on several undertakings involved in the same infringement, the fine imposed on a small or medium-sized undertaking must not be greater, as a percentage of turnover, than those imposed on the larger undertakings. It is clear from that provision that, both for small or medium-sized undertakings and

for larger undertakings, account must be taken, in determining the amount of the fine, of the gravity and duration of the infringement. Where the Commission imposes on undertakings involved in a single infringement fines which are justified, for each of them, by reference to the gravity and duration of the infringement, it cannot be criticised on the ground that, for some of them, the amount of the fine is greater, by reference to turnover, than that imposed on other undertakings (Case T‑21/99 *Dansk Rørindustri* v *Commission* [2002] ECR II‑1681, paragraph 203).

341 The applicant's argument that the disproportionate nature of the fine imposed is obvious when its amount is compared with that of fines imposed on other undertakings in similar cases must also be rejected. The Commission cannot be compelled to set fines that are proportionate to turnover and also perfectly coherent with those imposed in earlier cases.

342 It must be emphasised, in that connection, that the Commission's practice in earlier decisions does not in itself serve as a legal framework for fines in competition matters. The fact that in the past the Commission has applied fines of a particular level for certain types of infringements does not mean that it is estopped from raising that level within the limits indicated by Regulation No 17 if that is necessary to ensure implementation of Community competition policy (*Musique diffusion française and Others* v *Commission*, paragraph 278 above, paragraph 109).

343 Furthermore, the gravity of infringements must be established by reference to numerous factors, such as the particular circumstances of the case, its context and the deterrent effect of fines; moreover, no binding or exhaustive list of the criteria which must be applied has been drawn up (*Ferriere Nord* v *Commission*, paragraph 316 above, paragraph 33, and *LR AF 1998* v *Commission*, paragraph 275 above, paragraph 236). The relevant data, such as the markets, the products, the countries, the undertakings and the periods concerned differ in each case. It follows that the Commission cannot be compelled to impose on undertakings fines whose amount corresponds to the identical percentage of their respective turnovers in cases that are comparable as regards the gravity of the infringements (see, to that effect, Case T‑67/01 *JCB Service* v *Commission* [2004] ECR II‑49, paragraphs 187 to 189).

344 In this respect, it must be borne in mind that the Court has power to assess, in the exercise of its unlimited jurisdiction under Article 229 EC and Article 17 of Regulation No 17, the appropriateness of the amount of the fines.

345 In the present case, the Court finds that the infringement is particularly serious in the light of certain factors, as observed by the Commission at recitals 534, 535 and 539 to 542 of the contested decision, in particular the oligopolistic nature of the market and the fact that the infringement in question affected all or almost all plasterboard supply on the four national markets covered by the cartel. Further, the size of the market concerned, both geographically and in terms of value, was large. The four markets concerned were the four main Community plasterboard markets and accounted for approximately 80% of the total value of the Community market, which amounted to EUR 1.21 billion in the last complete year of the infringement. Lastly, having regard to the nature of the product concerned, the cartel necessarily had an impact on a substantial part of the construction market and thus affected a sector which is very important for the whole of the economy.

346 Moreover, it is not evident that the starting amount set according to the gravity of the infringement in the present case is more severe than that imposed in other cases, having regard to the size of the market in question. However, that comparison does not mean that the size of the relevant market is the best or only criterion for comparing the fines imposed in different cartels. Comparison between different cartels is difficult, given the large number of the various factors that the Commission may take into account in order to assess the gravity of the infringement. Further, as was recalled at paragraph 342 above, such a comparison, in any event, only serves as an indication, since the Commission's practice in earlier decisions cannot itself constitute a legal framework for fines in competition matters.

347 Given the numerous factors which made the infringement particularly serious in the present case (see paragraph 345 above), the Court finds that the starting amount of the fine imposed on the applicant determined according to the gravity of the infringement is proportionate.

348 Lastly, the applicant's argument that its fine would have been less severe had the Commission brought the administrative procedure to an end at an earlier stage, given that it is only very recently that it has increased the general level of penalties, must be rejected. Even if it is accepted that the general level of fines has increased during the period of the administrative procedure, it is sufficient

to recall that the fact that the Commission, in the past, imposed fines of a certain level for certain types of infringement does not mean that it is estopped from raising that level within the limits indicated in Regulation No 17 if that is necessary to ensure the implementation of Community competition policy. On the contrary, the proper application of the Community competition rules requires that the Commission may at any time adjust the level of fines to the needs of that policy (*Musique diffusion française and Others* v *Commission,* paragraph 273 above, paragraph 109, and judgment of the Court of Justice in *Dansk Rørindustri and Others* v *Commission*, paragraph 90 above, paragraph 169).

349 It follows from all the foregoing that the applicant's arguments seeking to show that the starting amount of the fine determined according to the gravity of the infringement was disproportionate must be rejected.

– Duration of the infringement

Arguments of the parties

350 The applicant considers that the Commission incorrectly assessed the duration of the alleged infringement on the basis of separate and distinct facts. The Commission was wrong to conclude that it had committed an infringement lasting from 31 March 1992 to 25 November 1998, namely six years and seven months, amounting to an infringement of long duration justifying an increase of 65% of the starting amount of the fine.

351 The applicant maintains that the alleged infringements relate to two separate periods. The first includes the London meeting and the exchange of information between Mr [A] and the cousins of the Knauf family from 1992 to early or mid-1993, and the second includes information exchanges from mid– or late 1993 to 1998 between Mr [D] and the CEOs of the undertakings in question. Those events have no connection with other alleged infringements, which occurred in the period 1994 to 1998 or with the information exchanges on United Kingdom sales from mid–1992 to February 1998.

352 In those circumstances, the applicant maintains that there was no complex and continuous agreement and contends that, under Regulation (EEC) No 2988/74 of the Council of 26 November 1974 concerning limitation periods in proceedings and the enforcement of sanctions under the rules of the European Economic Community relating to transport and competition (OJ 1974 L 319, p. 1), infringements occurring before the five-year period ending with the commencement of the Commission inspections are time barred and cannot be the subject of any fine.

353 Moreover, the applicant maintains that Mr [D] continued the information exchanges in March and November 1998, even though it had prohibited them in March 1998. The applicant considers that it cannot be responsible for action taken by an employee who is acting contrary to its instructions and that the end of the infringement should therefore be set at the end of March 1998.

354 The applicant further claims that the Guidelines are unclear on the question whether the Commission is entitled to take into account partial years. Adopting a strict interpretation of the Guidelines, the applicant submits that the Commission was entitled only to impose an increase of 60% of the starting amount, rather than 65%, that is to say 10% for each complete year of infringement.

355 The applicant also observes that the Commission should not always apply a 10% increase, as it has automatically in all the recent cartel cases. The Commission should take account of all the relevant circumstances of the case in determining the increase of the fine. It adds that that was the Commission's practice in its Decisions 98/273/EC of 28 January 1998 relating to a proceeding under Article [81 EC] (Case IV/35.733 – VW) (OJ 1998 L 124, p. 60) and 2002/190/EC of 21 December 2000 relating to a proceeding under Article 81 [EC] (Case COMP.F.1/35.918 – JCB) (OJ 2002 L 69, p. 1), and in the pre-insulated heating pipes case, in which it took account of the intensity of the infringement in the different periods.

356 The Commission considers that BPB's arguments are yet another attempt to challenge the Commission's finding in the contested decision of a single, complex and continuous infringement.

357 As regards the conduct of Mr [D], the Commission contends that it is not required to distinguish between various organs of the undertakings, some of whom are actively involved in the cartel and

some of whom were attempting to put an end to the infringement.

358 According to the Commission, there is nothing in the Guidelines to indicate that the Commission must confine itself to increasing the amount of fines only for complete years of infringements. It explains that the risk of having to pay a much larger fine, proportionate to the duration of the infringement, will necessarily increase the incentive to denounce it or to cooperate with the Commission. Any other approach would be inconsistent with its stated goal of increasing the fine proportionately to the duration of the infringement.

Findings of the Court

359 The applicant's arguments seeking to show that this case involves separate infringements, part of which is therefore time barred, overlap with those set out in the third plea. Thus, since the Court held earlier that the Commission did not err in finding that it was a single and continuous infringement, the applicant's arguments must be rejected.

360 The applicant's argument that its participation in the infringement would have already come to an end in March 1998 if Mr [D] had not disobeyed its instructions is irrelevant. An undertaking – that is to say an economic unit comprising personal, tangible and intangible elements (Case 19/61 *Mannesmann* v *High Authority* [1962] ECR 357, 371) – is directed by the organs provided for in its articles of association and any decision imposing a fine on it may be addressed to the management as provided for in those articles of association (management board, management committee, chairman, manager, and so on). The rules of competition would be easily circumvented if the Commission, faced with unlawful conduct on the part of an undertaking, were required to ascertain and to prove who is the author of the various activities, which could have the effect of preventing it from penalising the undertaking which benefited from the cartel.

361 As regards the applicant's assertion that the Guidelines are unclear on the question whether the Commission is entitled to take into account partial years, it is sufficient to note that nothing in the Guidelines prevents the actual duration of the infringement from being taken into account in the calculation of the amount of the fine. Such an approach is entirely logical and reasonable and falls, in any event, within the Commission's discretion.

362 As regards the applicant's objection to the fact that the Commission automatically applied the maximum rate of 10% per year, it must be borne in mind that, even if the third indent of the first paragraph of Section 1.B of the Guidelines does not provide that there should be an automatic increase of 10% per year for infringements of long duration, it leaves the Commission a margin of assessment in that connection (*Cheil Jedang* v *Commission*, paragraph 331 above, paragraph 134).

363 In the present case, at recital 554 of the contested decision, the Commission found that BPB had committed the infringement for six years and seven months, that is a long duration for the purposes of the Guidelines, and it thus increased the amount of the fine determined on the basis of the gravity of the infringement to 65%. It is apparent from this that the Commission complied with the rules which it had imposed upon itself in the Guidelines. Furthermore, the Court considers that, having regard to the duration of the infringement, the increase of 65% is not disproportionate in the present case.

364 So far as concerns the applicant's assertion that the Commission did not take account of the different levels of intensity of the infringement during the period in question, it must be borne in mind that the increase is calculated by the application of a certain percentage to the starting amount which is determined according to the gravity of the infringement as a whole, thus already reflecting the different levels of intensity of the infringement. Thus, it would not be logical to take into account, for the increase of that amount on the basis of the duration of the infringement, a variation in the intensity of the infringement during the period concerned.

365 In so far as BPB submits that in other cases concerning restrictions of a similar nature and duration the Commission applied increases in respect of the duration of the infringement that were lower than that applied in the present case, it is sufficient to point out that the Commission's practice in earlier decisions does not in itself serve as a legal framework for fines in competition matters, since that framework is defined solely in Regulation No 17 and that, moreover, economic operators cannot have a legitimate expectation that an existing situation which is capable of being altered by the Commission in the exercise of its discretionary power will be maintained (judgment of the Court of Justice in *Dansk Rørindustri and Others* v *Commission*, paragraph 90 above, paragraph 171).

366 It follows that the complaint alleging that the Commission erred in increasing the amount of the fine in respect of the duration of the infringement must be rejected.

Repeated infringement

Arguments of the parties

367 The applicant considers that the increase of 50%, that is EUR 66 million, of the basic amount of the fine for repeated infringement is excessive and disproportionate.

368 First, the applicant claims that the role played by its subsidiary in the earlier infringement was minor and passive (Commission Decision 94/601/EC of 13 July 1994 relating to a proceeding under Article [81 EC] (IV/C/33.833 – Cartonboard) (OJ 1994 L 243, p. 1)). Consequently, the fine ultimately imposed on its subsidiary was only EUR 750 000. Moreover, the earlier infringement was penalised more than eight years before the contested decision was issued. The applicant maintains that the Commission is not entitled to determine an increase mechanically on the basis of the existence of an earlier infringement. It should take account of all the circumstances of the earlier infringement: its nature, the circumstances in which it was committed, how long ago it took place and the penalty imposed. The applicant refers to a number of jurisdictions to show that the nature of any earlier infringement and the time that has elapsed since it was committed are taken into account when a court envisages an increase of the penalty for repeat offences.

369 Second, the applicant claims that the Commission is not entitled to increase the fine on account of repeated infringement where the first offence is contemporaneous with the second offence. In this case, the decision in Cartonboard (see paragraph 368 above) was adopted on 13 July 1994 and, accordingly, the increase of 50% should have been applied only as from that time. According to the applicant, the increase should therefore be reduced accordingly to EUR 43.7 million. Looked at another way, the aggravation factor should only be applied to the fine increased in respect of the duration of the infringement from July 1994. In that case, the amount to be added for aggravating circumstances would be EUR 56 million.

370 Third, the applicant maintains that the increase is excessive and disproportionate because it exceeds the starting amount of the fine imposed in respect of the gravity of the infringement on Knauf, Lafarge and Gyproc.

371 Fourth, the applicant claims that the increase exceeded the 30% decrease in the fine awarded to it to recognise its cooperation with the Commission in this case. Reductions granted for cooperation should be real and should not be cancelled out on account of the increase for repeated infringment.

372 Fifth, the applicant claims that there is only one Commission decision, that concerning the British Sugar case (see paragraph 264 above), in which the increase was higher, namely 75% of the basic amount, and that, in that case, the increase was based on British Sugar's role as instigator of the first infringement. In the light of the circumstances of that case and of Commission Decision 2002/405/EC of 20 June 2001 relating to a proceeding pursuant to Article 82 [EC] (COMP/E-2/36.041/PO – Michelin) (OJ 2002 L 143, p. 1), the increase of 50% which was applied to it is excessive.

373 Finally, the applicant claims that the Commission applied to it the same increase in respect of repeated infringement as to Lafarge even though the infringement committed by Lafarge in the case which gave rise to Commission Decision 94/815/EC of 30 November 1994 relating to a proceeding under Article [81 EC] (Cases IV/33.126 and 33.322 – Cement) (OJ 1994 L 343, p. 1) was more serious than that penalised in the Cartonboard case. The Commission should have taken account of the differences between the two earlier cartels, in particular Lafarge's significant role, the long duration of the cartel in which Lafarge had participated and the fact that Lafarge had been fined EUR 14.9 million for that infringement. By not taking account of those differences and by imposing the same increase of 50% on both the undertakings, the Commission infringed the principle of equal treatment.

374 The Commission considers repeat offending to be an aggravating circumstance because the undertaking commits a further infringement despite having been penalised for an infringement of the same type and therefore having received a clear warning that those actions were unlawful and not to be repeated.

375 As regards the applicant's argument that the first and second infringements are contemporaneous and that the increase should be applied pro rata, the Commission maintains that the applicant fails to take account of the aim of the increase, which is to penalise the undertaking's willingness to infringe the competition rules despite earlier penalties being imposed.

376 It is wholly irrelevant whether the increase for repeat offending is above or below the starting amount of the fine imposed on other undertakings or the reduction granted on account of BPB's cooperation.

377 According to the Commission, BPB has added a complaint which was not made in the application, namely that the Commission should have considered the length of time that has elapsed since its previous offence which, according to the reply, took place 'more than eight years before the decision in this case was issued'. That complaint is inadmissible under Article 44(1)(c) of the Rules of Procedure.

Findings of the Court

378 It follows from the case-law that the taking into account of aggravating circumstances when setting the amount of the fine is consistent with the Commission's task of ensuring compliance with the competition rules (Case C-308/04 P *SGL Carbon* v *Commission* [2006] ECR I-5977, paragraph 71).

379 Thus, any repeated infringement is among the factors to be taken into consideration in the analysis of the gravity of the infringement in question (*Aalborg Portland and Others* v *Commission*, paragraph 36 above, paragraph 91).

380 The applicant's argument that the Commission did not correctly take account of all the circumstances of the earlier infringement must be rejected.

381 First of all, as regards the period of time which elapsed between the two infringements, it is common ground that the first infringement was penalised after the beginning of the infringement at issue.

382 In accordance with settled case-law, the Commission has a discretion as regards the choice of factors to be taken into account for the purposes of determining the amount of fines, such as the particular circumstances of the case, its context and the dissuasive effect of fines, there being no need to refer to a binding or exhaustive list of the criteria which must be taken into account (order in Case C-137/95 P *SPO and Others* v *Commission* [1996] ECR I-1611, paragraph 54, and Case C-219/95 P *Ferriere Nord* v *Commission* [1997] ECR I-4411, paragraph 33).

383 It must be emphasised that the finding and the appraisal of the specific characteristics of a repeated infringement come within the Commission's discretion and that the Commission cannot be bound by any limitation period when making such a finding. Repeated infringement is an important factor which the Commission must appraise, since the purpose of taking repeated infringement into account is to induce undertakings which have demonstrated a tendency towards infringing the competition rules to change their conduct. The Commission may therefore, in each individual case, take into consideration the indicia which confirm such a tendency, including the time that has elapsed between the infringements in question.

384 In this respect, it should be noted that the Court has held that a time lapse of less than 10 years between the findings of two infringements showed a tendency on the part of an undertaking not to draw the appropriate conclusions from a finding that it had infringed the competition rules (Case T-38/02 *Groupe Danone* v *Commission* [2005] ECR II-4407, paragraphs 354 and 355).

385 *A fortiori*, in the present case, the history of the infringements found against the applicant shows a tendency on its part not to draw the appropriate conclusions from a finding that it had infringed the competition rules, given that, having already been the subject of Commission measures imposed previously by the decision in the Cartonboard case, the applicant continued for more than four years to participate actively in the cartel at issue in the present case after that decision had been notified to it.

386 In those circumstances, it is not necessary to examine the admissibility of the applicant's argument relating to the period of time which elapsed between the sanctioning of the first infringement and

the issuing of the contested decision.

387 Next, with regard to the characteristics of the previous conduct, the concept of repeated infringement does not necessarily imply that a fine has been imposed in the past, but merely that a finding of infringement of Community competition law has been made in the past (*Groupe Danone* v *Commission*, paragraph 384 above, paragraph 363).

388 The purpose of taking repeated infringement into account is to induce undertakings which have demonstrated a tendency towards infringing the competition rules to change their conduct when it transpires that a previous finding of infringement on its part has not been sufficient to prevent the repetition of unlawful conduct. Thus, it is not the previous imposition of a fine, and *a fortiori* not the amount thereof, which is determinative of repeated infringement, but the fact that a previous finding of infringement has been made.

389 Lastly, the applicant does not even claim that the infringement for which its subsidiary was penalised in the Cartonboard case is not of the same type as that in question in this case.

390 Consequently, the Commission did not err in finding, in the present case, that the specific circumstances of the case, in particular the fact that the same undertaking had already been the subject of a finding of infringement and that, despite that finding and the penalty imposed, it had continued to participate in a similar infringement of the same Treaty provision, were proof of repeated infringement.

391 Concerning the applicant's argument that where the first offence is contemporaneous with the second offence the Commission is entitled to increase the amount of the fine on account of repeated infringement only from the time of the adoption of the first decision penalising one of those offences, it must be rejected.

392 It is true that a policy of penalising repeated infringement can have no practical effect on the perpetrator of an infringement unless the threat of a more severe penalty for a new infringement is capable of inducing him to change his conduct. The taking into account of a repeated infringement is justified by the need to ensure a higher level of deterrence, as demonstrated by the fact that a previous finding of an infringement had not been sufficient to prevent the repetition of the infringement. Thus, a repeated infringement necessarily arises after the finding and the sanctioning of the first infringement, since it is explained by the fact that that penalty was not a sufficient deterrent.

393 In this respect, in *Thyssen Stahl* v *Commission,* paragraph 270 above, the Court of First Instance held that the Commission's decision was vitiated by an error of law in so far as the increase of the amount of the fine imposed on Thyssen Stahl AG was based on the consideration that the Commission had already penalised it for similar infringements by Decision 90/417/ECSC of 18 July 1990 relating to a proceeding under Article 65 of the ECSC Treaty concerning an agreement and concerted practices engaged in by European producers of cold-rolled stainless steel flat products (OJ 1990 L 220, p. 28), whilst, in the case then before the Court, the greater part of the infringement period, from 30 June 1988 to the end of 1990, taken into account against Thyssen Stahl, pre-dated that decision (paragraphs 617 to 625).

394 However, unlike in *Thyssen Stahl* v *Commission*, paragraph 270 above, in which the greater part of the infringement took place before the first decision, in the present case, BPB continued to participate in the cartel in question for more than four years after the decision adopted in the Cartonboard case.

395 As stated in paragraph 382 above, the assessment of the specific characteristics of a repeated infringement depends on an appraisal of the circumstances of the case by the Commission in the course of its discretion.

396 In the circumstances of the present case, the Court holds that the Commission did not exceed its discretion in finding that the fact that BPB had continued to participate, after the first finding of an infringement, in a similar infringement of the same Treaty provision for more than four years was proof of repeated infringement, and in therefore increasing the amount of the fine for that reason.

397 With regard to the level of that increase, the Court recalls that, when fixing the amount of the fine, the Commission has discretion. In this respect, it is not required to apply specific mathematical

formulae (*Michelin* v *Commission*, paragraph 273 above, paragraph 292).

398 Furthermore, in the context of deterrence, repeated infringement justifies a significant increase in the basic amount of the fine. It is evidence that the sanction previously imposed was not sufficiently deterrent (*Michelin* v *Commission*, paragraph 273 above, paragraph 293).

399 As regards the rate of increase applied in the present case, the Court considers that it is proportionate. In this respect, it should be noted that the decision adopted in the Cartonboard case and the contested decision concern similar infringements. The consequences of that finding cannot be called in question by the applicant's assertion that the role played by its subsidiary in the Cartonboard case was minor and passive. What matters is the fact that, despite the finding that there has been an infringement of Community competition law, the undertaking in question continued to infringe it. Accordingly, the Commission was entitled to increase the basic amount of the fine by 50% in order to channel the conduct of the applicant towards observance of the Treaty competition rules.

400 In so far as the applicant's argument that the increase on account of repeated infringement was not proportionate relies, in essence, on the fact that the increase in absolute terms (EUR 66 million) is disproportionate, it must be rejected.

401 When setting an increase for repeated infringement, the Commission may confine itself to examining what would be the proportional percentage and does not need to take into account the amount, in absolute terms, of the increase of the basic amount of the fine as a result of the application of that percentage. As long as the percentage increase is not excessive, the increase in absolute terms is only the mathematical consequence of the application of that percentage to the basic amount, whose proportionality in relation to the gravity and duration of the infringement in question was examined separately.

402 Consequently, the increase of 50% of the basic amount of the applicant's fine on account of repeated infringement is not disproportionate.

403 So far as concerns the Commission's previous practice, the applicant claims that there is only one Commission decision, in the British Sugar case, in which the increase was higher (75%), and that, in that case, the increase was based on British Sugar's role as instigator of the first infringement. The applicant considers that, in the light of the circumstances of that case, the increase of 50% applied to it is excessive.

404 As regards the comparisons with other Commission decisions imposing fines for infringements of the competition rules, those decisions can be relevant from the point of view of observance of the principle of equal treatment only where it is demonstrated that the facts of the cases in those other decisions are identical to those of the present case (see, to that effect, *JCB Service* v *Commission*, paragraph 343 above, paragraph 187).

405 However, the applicant has failed to adduce sufficient evidence that those conditions have been met in the present case. In particular, the applicant does not refer to any decisions contemporaneous with that of the present case in which the Commission applied a lower percentage increase for circumstances similar to those of the present case. As regards the reference to the Michelin decision, in which Michelin was penalised for repeated infringement in respect of a rebate system designed to secure customers' loyalty, that is clearly a different set of circumstances from those of the present case, since such a rebate system cannot be deemed equivalent, in terms of the gravity of the Community competition law infringement, to a secret cartel concerning prices and the stabilisation of a market of considerable value.

406 In any event, the mere fact that, in another decision, the Commission increased the basic amount for a repeated infringement differently does not mean that it was required to apply the same percentage increase in the contested decision. The Commission's practice in previous decisions does not itself serve as a legal framework for the fines imposed in competition matters, since that framework is defined solely in Regulation No 17 (*Michelin* v *Commission*, paragraph 273 above, paragraph 292).

407 The applicant also maintains that the increase is excessive and disproportionate because it exceeds the starting amount of the fine imposed for the gravity of the infringement on Knauf, Lafarge and Gyproc.

408 That argument is irrelevant. Since BPB's fine was determined correctly and the increase for repeated infringement is proportionate, the fact that the increase in absolute terms is higher than the starting fines imposed on the other cartel participants is just a mathematical consequence of the increase which is unrelated to the amount of the other fines.

409 The applicant also claims that the increase was more than the 30% decrease in the fine awarded in recognition of its cooperation with the Commission in this case.

410 That argument is also irrelevant, since they are two separate stages in determining the amount of the fine.

411 Finally, the applicant claims that the Commission applied to it the same increase for repeated infringement as to Lafarge even though the infringement committed by Lafarge in the Cement case was more serious than that penalised in the Cartonboard case.

412 That argument is also unfounded. As explained above, since the increase for repeated infringement relates to an aggravating circumstance specific to the undertaking in question, the fact that the characteristics of the earlier infringement committed by Lafarge are not analogous to those of the earlier infringement attributed to the applicant is irrelevant. What is relevant is the fact that both undertakings were previously involved in very serious infringements, but that, despite the finding of those infringements, they did not bring to an end their involvement in the infringement penalised in the case in point.

413 It follows from all the foregoing that the applicant's arguments relating to the taking into account of the repeated infringement must be rejected.

Attenuating circumstances

Arguments of the parties

414 The applicant considers that the Commission should have reduced the amount of the fine by virtue of the measures taken before and after the Commission's investigation. It submits that the Commission was wrong to regard its efforts as ineffective. The Commission's refusal to recognise its efforts is contrary to the principles of equal treatment and protection of legitimate expectations.

415 First, the applicant claims that, on the basis of allegations contained in the anonymous letter, it engaged the services of independent lawyers to carry out its own investigations ('Project Alpha'). On the basis of the conclusions of Project Alpha, the applicant's Board of Directors implemented a more formal competition law compliance programme, under which it adopted a more formal policy statement on compliance which the directors, the other officers and members of staff concerned were required to sign. The applicant also decided to cease all information exchanges and instructed a firm of lawyers to help it design and implement various further elements of its formal compliance programme.

416 Second, the applicant claims that, after the opening of the Commission investigation, the measures taken by it evinced a high level of cooperation. It gave the inspectors unhindered access to its business records and computers. It also provided the documents requested and Mr [D] accurately answered the questions put by the Commission. Moreover, it provided the Commission, in its reply to the second request for information, with information of which the Commission had no previous knowledge. The applicant considers that, because of its efforts to bring the infringement to an end even before the start of the Commission's investigations and its willing cooperation during the investigations, the amount of its fine should be further reduced.

417 The applicant rejects the Commission's argument that it destroyed or concealed evidence. The applicant states that those allegations are not supported by any evidence. It states that, although documents were removed in connection with Project Alpha, a note recording their removal was left in the file.

418 Third, with regard to the fact that its CEO, Mr [D], disobeyed the instructions of its Board of Directors and continued the information exchanges without the knowledge of the Board or that of any of the staff, the applicant considers that it cannot be held responsible for Mr [D]'s activities, particularly because of his independent position. The applicant also claims that when Mr [D]'s continued information exchanges came to light, he had to leave his position immediately without

any compensation. The applicant states that Mr [D]'s failure to obey its instructions was the only occasion on which its efforts to terminate the infringement failed. Consequently, the Commission cannot say that the measures taken by the applicant were ineffective.

419 Fourth, the applicant maintains that it withdrew from the information exchange system in April 1998. Thus, had it not been for Mr [D]'s wilful disregard of the instructions from the Board of Directors, there would have been total compliance from March 1998. Furthermore, it submits that it is entitled to a reduction of the fine for having terminated the infringement immediately after the Commission's intervention.

420 Fifth, the applicant submits that it did not profit from the infringement. Prices remained at the same level in real terms in the United Kingdom and fell in Germany whilst its costs were rising. Moreover, its market share in each of the four markets concerned was less in 1998 than in 1992 and its turnover did not reach its 1991–1992 level until 1997–1998. Furthermore, prices would have recovered in any event following the end of the price war. The applicant considers that if the Commission can increase the amount of a fine on account of profits obtained following an infringement, it should also take account of the absence of any profit from the infringement and reduce the amount of the fine.

421 The Commission disputes the applicant's arguments.

422 The Commission considers that, in its reply, BPB sets out a new argument seeking a reduction of the amount of the fine for ceasing the infringement after the Commission's investigations at the end of 1998. That new argument is inadmissible at this stage of the procedure. It is also unfounded since the Commission is not required, as a general rule, either to regard the continuation of an infringement as an aggravating circumstance or to regard the termination of an infringement as a mitigating circumstance.

Findings of the Court

423 First, with regard to the measures adopted by the applicant in order to prevent a repeated infringement on its part (the dismissal of its senior executive officers involved in the offending conduct and the adoption of internal programmes to ensure compliance with the competition rules and awareness-raising initiatives for the staff in that connection), it should be noted that, whilst it is indeed important that an undertaking takes steps to prevent fresh infringements of Community competition law from being committed by members of its staff in the future, that circumstance cannot affect the fact that an infringement was found to have been committed. It follows that the mere fact that in certain cases the Commission took the implementation of a competition law compliance programme into consideration as a mitigating factor does not mean that it is obliged to act in the same manner in any given case (Case T-224/00 *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission* [2003] ECR II-2597, paragraph 280).

424 The Commission is therefore not required to take a circumstance such as that into account as a mitigating factor, provides that it adheres to the principle of equality of treatment, which requires that it should not assess the matter differently for any undertaking addressed by the same decision (judgment of the Court of First Instance in *Archer Daniels Midland and Archer Daniels Midland Ingredients* v *Commission*, paragraph 423 above, paragraph 281). There is no indication whatsoever in the contested decision that the Commission's assessment differentiated in this respect as between the four undertakings in question, and the applicant does not claim that that was the case.

425 Second, the applicant claims that the measures that it took after the opening of the Commission investigation evinced a high level of cooperation and that, consequently, its fine should be further reduced. Those arguments overlap with the question whether the Commission correctly took account of the applicant's cooperation in the context of the Leniency Notice. Accordingly, the applicant's cooperation during the administrative procedure will be examined below, but does not constitute an attenuating circumstance justifying a reduction separate from that granted under the Leniency Notice.

426 It should, however, be borne in mind that the possibility of granting to an undertaking which has cooperated with the Commission during proceedings for infringement of the competition rules a reduction of the fine outside the framework laid down by the Leniency Notice is recognised by the Guidelines, the sixth indent of Section 3 of which provides for the taking into account, as an attenuating circumstance, of 'effective cooperation by the undertaking in the proceedings, outside

the scope of the [Leniency Notice]'.

427 However, to the extent that this complaint must be interpreted as seeking a finding that the Commission should have granted the applicant another reduction of its fine under that provision, it must be pointed out that the infringements in the present case fall well within the scope of application of the Leniency Notice, Section A.1, first subparagraph, of which refers to secret cartels between undertakings aimed at fixing prices, production or sales quotas, sharing markets or banning imports or exports. The applicant cannot therefore validly complain that the Commission failed to take into account the extent of its cooperation as an attenuating circumstance outside the legal framework of the Leniency Notice (Case T-15/02 *BASF* v *Commission* [2006] ECR II-497, paragraph 586).

428 Moreover, such a complaint cannot be levelled at the Commission, even if it were necessary to accept that cooperation with an investigation into horizontal cartels which fix prices and share sales is capable of being rewarded under the sixth indent of Section 3 of the Guidelines. If that were to be the case, a reduction under that provision would necessarily mean that the cooperation in question was not capable of reward under the Leniency Notice and that it was effective, that is to say, that it facilitated the Commission's task of finding and putting an end to infringements of the competition rules (*BASF* v *Commission*, paragraph 427 above, paragraphs 587 and 588).

429 Third, the applicant considers that it cannot be held responsible for the fact that Mr [D], its CEO, disobeyed the instructions of its Board of Directors and continued the information exchanges without the knowledge of the Board or of any of the staff.

430 That argument is irrelevant. An undertaking – that is to say an economic unit comprising personal, tangible and intangible elements (Case 19/61 *Mannesmann* v *High Authority*, paragraph 360 above, 357, 371) – is directed by the organs provided for in its articles of association and any decision imposing a fine on it may be addressed to the management as provided for in those articles of association (management board, management committee, chairman, manager, and so on). The rules of competition would be easily circumvented if the Commission, faced with unlawful conduct on the part of an undertaking, were required to ascertain and to prove who is the author of the various activities, which could have the effect of preventing it from penalising the undertaking which benefited from the cartel.

431 Although BPB claims to have been betrayed by its former CEO, who failed to follow the explicit instructions of his Board of Directors, the solution to that conflict must be sought in the relationship between Mr [D] and BPB, and not at the level of the Commission's application of competition law. Thus, even if Mr [D] did in actual fact disobey the instructions of BPB's Board of Directors and continue the information exchanges without the latter's knowledge, the Commission was entitled to impose a fine on the undertaking, whilst BPB and/or its owners were free to pursue any action deemed appropriate against Mr [D].

432 Fourth, the applicant maintains that it withdrew from the information exchange system in April 1998. Thus, had it not been for Mr [D]'s wilful disregard of the instructions from the Board of Directors, there would have been total compliance from March 1998.

433 That argument overlaps in part with the previous one and is no more relevant. Since the applicant is responsible for Mr [D]'s activities, the infringement continued until November 1998.

434 Furthermore, the Commission rightly found that, even if the withdrawal from the information exchange system demonstrated a willingness to avoid conduct which could give rise to suspicion, it was not accompanied by other measures designed to put an end to the collusive arrangements, as illustrated by the continued exchange of information or the discussions which took place between competitors at The Hague.

435 As regards the applicant's argument relating to the termination of the infringement after the Commission's investigation, which the Commission regards as inadmissible, it must be stated that the applicant already referred, in its application, to 'prompt termination of the infringement as a mitigating factor'. Thus, that argument does not constitute a new plea for the purposes of Article 48 (2) of the Rules of Procedure but the amplification of a plea made previously, whether directly or by implication, in the original application and must be considered admissible (see Case C-66/02 *Italy* v *Commission* [2005] ECR I-10901, paragraph 86, and the case-law cited).

436 Under the third indent of Section 3 of the Guidelines, 'termination of the infringement as soon as the Commission intervenes (in particular when it carries out checks)' is an attenuating circumstance. However, a reduction of the fine by reason of the termination of an infringement as soon as the Commission intervenes cannot be automatic but depends on an appraisal of the circumstances of the case by the Commission in the course of its discretion. In that regard, the application of that provision of the Guidelines in favour of an undertaking will be particularly appropriate where the conduct in question is not manifestly anti–competitive. Conversely, its application will be less appropriate, as a general rule, where the conduct is clearly anti–competitive, on the assumption that it is proven (Case T–44/00 *Mannesmannröhren–Werke* v *Commission* [2004] ECR II–2223, paragraph 281; see also, to that effect, judgment of 15 June 2005 in Joined Cases T–71/03, T–74/03, T–87/03 and T–91/03 *Tokai Carbon and Others* v *Commission* [2005], not published in the ECR, paragraphs 292 and 294).

437 Even if, in the past, the Commission has regarded voluntary termination of an infringement as an attenuating circumstance, it is entitled, when applying its Guidelines, to take account of the fact that, even though their illegality was established at the inception of Community competition policy, very serious manifest infringements are relatively frequent and, therefore, to take the view that it is appropriate to abandon that generous practice and no longer reward the termination of such an infringement by a reduction of the fine.

438 In those circumstances, the appropriateness of a reduction of a fine by reason of termination of the infringement depends on whether the applicant could reasonably doubt the illegality of its conduct.

439 In the present case, it should be recalled that the infringement in question relates to a secret cartel whose object was an exchange of information in an oligipolistic market and a stabilisation of markets. That type of cartel constitutes a very serious infringement. The undertakings concerned must therefore have been aware of the unlawful nature of their conduct. The secret nature of the cartel confirms moreover the fact that the undertakings concerned were aware of the unlawful nature of their actions.

440 Accordingly, for the reasons set out above, the failure in the present case to take the termination of the infringement as soon as the Commission intervened into account as an attenuating circumstance cannot be regarded as incorrect.

441 Fifth, with regard to the applicant's argument that the Commission did not take account of the fact that it had not benefited from the infringement in question, it must be borne in mind that, whilst the amount of the fine imposed on an undertaking must be proportionate to the duration of the infringement and the other factors capable of affecting the assessment of the gravity of the infringement, including the profit that it was able to derive from those practices, the fact that an undertaking did not benefit from an infringement cannot preclude the imposition of a fine since otherwise it would cease to have a deterrent effect (Case T–52/02 *SNCZ* v *Commission* [2005] ECR II–5005, paragraph 89).

442 Lastly, it must be stated that, although the Commission may, under its Guidelines (Section 2, fifth indent) and in respect of aggravating circumstances, increase a fine in order to exceed the amount of gains improperly made as a result of the infringement, that possibility does not mean that the Commission is then under an obligation to establish in every case, for the purpose of determining the amount of the fine, the financial advantage linked to the infringement found to have been committed. In other words, the absence of such an advantage cannot be regarded as an attenuating circumstance (*SNCZ* v *Commission*, paragraph 441 above, paragraph 91).

443 Consequently, the applicant's arguments seeking to obtain a reduction in respect of attenuating circumstances must be rejected.

Cooperation

Arguments of the parties

444 The applicant maintains that the Commission infringed the principle of the protection of legitimate expectations and the principle of fairness by deciding that the measures taken by it merited a reduction of only 30% of the amount of the fine in accordance with Section D of the Leniency Notice. The applicant considers that it should have been granted a reduction of 50% to 75% of the

amount of the fine in accordance with Section C of the Leniency Notice.

445 The applicant submits that it provided decisive information on which the contested decision relied heavily. For example, that the Commission would not have obtained any information concerning the London meeting, which was the factual basis of the start of the infringement, without its admission in response to the second request for information. In that connection, it states that the Commission's question related only to the information exchanges conducted under the direction of the chief executives of the four companies in question. It could therefore have confined itself strictly to answering that question. However, in the meantime, it had learned from its former Chairman and Chief Executive, Mr [A], that a meeting had taken place in 1992. It chose to disclose that meeting and what took place. That was therefore a major admission. The information exchanges in the United Kingdom and the advance warning of one or two list price rises in the United Kingdom would likewise not have come to light without its cooperation. It states that, on a fully voluntary basis, it admitted that there had been discussions on the attempt to share the German markets in Versailles and also admitted in its reply to the statement of objections that other discussions had taken place in Brussels at the end of 1997 and at a dinner in The Hague, even though it contends that no agreement had been concluded. The applicant states that it also admitted its participation in the information exchange system. Moreover, even though certain information concerning those exchanges was obtained from the inspection of BPB's head office, the information provided by BPB gave the Commission a better understanding of the exchanges.

446 Although Knauf confirmed the existence of the London meeting and the Commission also relied to some extent on the evidence provided by Knauf concerning that meeting, Knauf acted in that way only because the meeting was referred to in the statement of objections. Knauf would have had nothing to confirm if BPB had not disclosed the existence of the meeting prior to the issue of the statement of objections. Moreover, after its initial inspections, the Commission was not in a position to initiate an administrative procedure because, rather than doing so, it continued the preliminary investigation phase by issuing requests for information to the undertakings concerned. One of those requests, addressed to the applicant, was based entirely on information it had provided voluntarily. It was therefore only after the receipt of the applicant's information that the Commission was in a position to issue the statement of objections.

447 The applicant claims that, had Mr [D] not disobeyed its instructions, it would have already ended its involvement in any infringement eight months before the Commission's inspection.

448 The applicant further observes that it did not compel any other undertaking to take part in the cartel, did not instigate it and did not play a determining role in the offending conduct at issue.

449 Finally, the applicant maintains that, even if the Commission were right to grant it a reduction only under Section D of the Leniency Notice, it infringed the principle of equal treatment by granting Gyproc a reduction of 40% and as regards the applicant a reduction of only 30%. The information provided by it was more decisive for the Commission's arguments on the ground that the information provided by Gyproc related exclusively to the period 1996 to 1998 and to the German market. As regards the Commission's argument that Gyproc's participation in the infringement was less serious than the applicant's, the applicant takes the view that the extent of the reduction of the amount of the fine the Commission grants to an undertaking should depend on the quality of the information provided, and not on the gravity of an undertaking's participation in the infringement.

450 The applicant adds that the Commission is not entitled to treat it differently from Gyproc on the basis that Gyproc did not contest the facts or their classification as infringements. It emphasises that its objections related mainly to the inferences the Commission drew from the facts rather than the facts themselves.

451 The Commission considers that its findings under the Leniency Notice could only be annulled if they were vitiated by an error of fact or a manifest error of assessment.

452 The Commission claims that, with the exception of paragraphs 5, 6 and 9 of the table set out on pages 151 to 154 of the application, the information referred to by the applicant was provided either in response to requests for information or given orally in response to questions during investigations. The Commission considers itself entitled not to take account of information of that kind when assessing the cooperation of an undertaking. The Commission states that it took account of the fact that the answers were very detailed and on occasion went further than was necessary to give a full answer.

453 As regards the information given spontaneously, the Commission contends that, as regards paragraph 6 of the table, it already had the information indicated at recitals 201 and 205 of the contested decision. It states that, even before BPB's admissions, it had sufficient information about paragraph 9 (and paragraph 10) of the table. As regards paragraph 5, although the information was useful and the Commission took account of it to determine the reduction of the amount of the fine under the Leniency Notice, it adds that there were two reports to Mr [D] mentioned in paragraph 77 of the statement of objections. They contain detailed information on sales of the other producers, which could have provided the basis for further inquiries on that question, even though it was not decisive in itself. Thus, much of the information provided by BPB was not decisive.

454 As regards the London meeting, the Commission does not deny that that meeting is an important element of the infringement, but states that, without the information provided on that subject, it would still have been able to establish the existence of a single, complex and continuous infringement on the basis of the anti-competitive conduct as a whole, including the information exchanges regarding which it had direct contemporary proof. Moreover, the information concerning the London meeting was provided in response to a specific question in the second request for information concerning the origins of the exchange of information, so that its disclosure was not absolutely spontaneous. Also, the Commission's second request for information was not based entirely on the information provided voluntarily by BPB. In fact, the second part of that request related to information provided orally by Mr [D] following the discovery of the two series of tables setting out details of sales by the four major European producers on BPB's premises on the first day of the Commission's investigation on 25 November 1998.

455 Consequently, the Commission contends that none of the information provided by BPB was decisive evidence of the cartel's existence.

456 The Commission emphasises that Gyproc's participation in the infringement was less serious than that of BPB. On the other hand, in relation to those elements of the cartel in which it participated actively, Gyproc provided important information. Thus, the findings concerning the German market are heavily based on Gyproc's contribution. The Commission maintains that the information given by that undertaking was as valid for the finding of the infringement as that provided by BPB. Moreover, Gyproc's statement of 1 September 1999 was not a reply to a request for information. In addition, Gyproc has never contested that those activities constituted an infringement of Article 81(1) EC.

Findings of the Court

457 In the Leniency Notice, the Commission set out the conditions under which undertakings cooperating with it during its investigation into a cartel may be exempted from a fine or be granted a reduction in the fine which would otherwise have been imposed on them (see Section A, paragraph 3 of the Leniency Notice).

458 As is stated in Section E, paragraph 3, of the Leniency Notice, the notice has created legitimate expectations on which undertakings may rely when disclosing the existence of a cartel to the Commission. In view of the legitimate expectation which undertakings intending to cooperate with the Commission are able to derive from the notice, the Commission must therefore adhere to the notice when, for the purpose of determining the fine to be imposed on an undertaking, it assesses the latter's cooperation (Case T–26/02 *Daiichi Pharmaceutical* v *Commission* [2006] ECR II–713, paragraph 147).

459 In accordance with Section B of the notice, an undertaking 'will benefit from a reduction of at least 75% of the fine or even from total exemption from the fine that would have been imposed if [it] had not cooperated' if it:

'(a) informs the Commission about a secret cartel before the Commission has undertaken an investigation, ordered by decision, of the [undertakings] involved, provided that it does not already have sufficient information to establish the existence of the alleged cartel;

(b) is the first to adduce decisive evidence of the cartel's existence;

(c) puts an end to its involvement in the illegal activity no later than the time at which it discloses the cartel;

(d) provides the Commission with all the relevant information and all the documents and evidence available to it regarding the cartel and maintains continuous and complete cooperation throughout the investigation;

(e) has not compelled another [undertaking] to take part in the cartel and has not acted as an instigator or played a determining role in the illegal activity'.

460 Furthermore, pursuant to Section C of the notice, '[undertakings] which both satisfy the conditions set out in Section B, paragraphs (b) to (e) and disclose the secret cartel after the Commission has undertaken an investigation ordered by decision on the premises of the parties to the cartel which has failed to provide sufficient grounds for initiating the [administrative] procedure leading to a decision, will benefit from a reduction of 50% to 75% of the fine'.

461 The applicant submits, principally, that the Commission was wrong to deny it the reduction of 50% to 75% referred to in Section C of the Leniency Notice. It is thus necessary to ascertain whether the Commission failed to have regard to the conditions for applying that provision.

462 In the present case, the relevant question for deciding whether Section C was applicable in the determination of the amount of the fine imposed on the applicant is whether the investigations carried out by the Commission provided it with sufficient grounds for initiating the administrative procedure leading to the contested decision.

463 The Commission states at recitals 593 and 594 of the contested decision that following its investigations, it had enough information to prove the existence of the cartel and that since BPB did not meet the conditions of Section B(b) of the Leniency Notice, it was therefore not eligible for a major reduction in the amount of its fine under Section C of the Notice.

464 In this respect, it is important to note that the applicant does not claim that it provided decisive evidence in relation to all the manifestations of the cartel or that the Commission would not have been able to demonstrate the existence of the cartel without the evidence that it provided the Commission. It asserts, in essence, that the Commission would not have been able to prove the existence of a single and complex cartel in the way that it did.

465 Consequently, it is necessary to ascertain whether, following its investigations, the Commission had enough information to prove the existence of the cartel which was ultimately penalised.

466 As regards the London meeting, BPB disclosed information about that meeting only in its reply to the second request for information (of 21 September 1999) in response to a specific question: 'Please state at whose suggestion or initiative the exercise of exchanging data amongst the CEO's was initiated.'

467 Thus, since it already knew about the exchanges of information on sales volumes on the four markets concerned, the Commission had, on the basis of the investigations carried out in November 1998, sufficient grounds for initiating the administrative procedure leading to a decision.

468 In this respect, it must be borne in mind that in Case C‑301/04 P *Commission* v *SGL Carbon* [2006] ECR I‑5915 the Court held that replies given pursuant to Article 11(1) of Regulation No 17 did not constitute voluntary cooperation but the performance of an obligation. It recalled that, in carrying out the duties assigned to it in the matter, the Commission could obtain all necessary information from the governments and competent authorities of the Member States and from undertakings and associations of undertakings. The Commission is therefore entitled to compel an undertaking to provide all necessary information concerning such facts as may be known to it and to disclose to it, if necessary, such documents relating thereto as are in that undertaking's possession, even if the latter may be used to establish, against it or another undertaking, the existence of anti‑competitive conduct (paragraphs 34, 39, 41 and 44).

469 As regards the exchanges of information on sales volumes on the four markets concerned, it is not contested by the applicant, as is indeed apparent from paragraph 334 of the application, that the Commission found direct evidence of those exchanges during the investigations which it carried out in November 1998.

470 As for the exchanges of information on sales volumes and market shares in the United Kingdom, the Commission states that two reports to Mr [D], mentioned in paragraph 77 of the statement of objections, contained detailed information on sales of the other producers, which could have

provided the basis for further inquiries on that question, even though it was not sufficient in itself.

471 In that connection, it is noteworthy that the documents mentioned in paragraph 77 of the statement of objections are reports by Mr [M], managing director of BG before Mr [N], on developments in the United Kingdom market sent to Mr [D]. Thus, those internal documents do not show that the information in question was disclosed to persons outside BPB. However, in its note of 17 March 1996 and, in a more detailed manner, in its statement of 28 May 1999, BPB admitted that an exchange of information on sales volumes on the United Kingdom had taken place between the competitors during the period 1992 to the beginning of 1998.

472 So far as concerns the exchanges of data on price rises on the United Kingdom market, the Commission claims that it already had the information set out in recitals 201 and 205 of the contested decision. As is apparent from those recitals, not only do the two BPB internal memoranda found during the investigations prove only that the price rises were discussed, but the Commission relies on the parallelism of the price rises to demonstrate that aspect of the infringement. In those circumstances, the fact that BPB admitted in its note of 17 March 1996 and in a more detailed manner in its statement of 28 May 1999, as is clear from recital 207 of the contested decision, that there had been 'isolated instances' when Mr [N] had telephoned the representatives of Lafarge and Knauf in the United Kingdom to inform them of BG's pricing intentions and the planned range of increases, significantly strengthened the Commission's reasoning.

473 Concerning the Versailles and The Hague meetings, only in its reply to the statement of objections did the applicant admit that it took part in those meetings. With regard to the Brussels meeting, it admitted that it participated in it only in response to an explicit question by the Commission in the context of the first request for information.

474 Lastly, as regards the information exchange system, it is apparent from recital 271 of the contested decision that the Commission knew of its existence on the basis of the information found during the inspections.

475 Consequently, the Court finds that, to the extent that the information provided by BPB can be regarded as voluntary in the light of the case-law of the Court of Justice referred to in paragraph 468 above, it does not constitute decisive evidence of the cartel's existence and that, in fact, the Commission had sufficient information to establish its existence following those inspections.

476 In the light of the cumulative nature of the conditions set out in Section B(b) to (e) of the Leniency Notice, as referred to in Section C thereof, and since at least one of those conditions, namely that laid down in Section B(b), in conjunction with Section C of that notice, is not satisfied, it is not necessary to consider whether BPB satisfied the other conditions laid down in those provisions.

477 It follows that the Commission did not err in denying the applicant a reduction in the amount of its fine under Section C of the Leniency Notice.

478 None the less, it is still necessary to ascertain, in the exercise of the Court's unlimited jurisdiction, whether the reduction granted by the Commission in respect of BPB's cooperation under Section D of the Leniency Notice was sufficient.

479 In this connection, it must be pointed out, as recitals 592 and 596 of the contested decision make clear, that BPB was the first cartel participant to send, after the Commission's request for information but in a way that went beyond what was requested, evidence in addition to that discovered during the inspections, confirming the existence of the cartel. The Commission admits that this information includes details regarding the meetings in question, especially that in London, and the sharing of information on the major European markets, and the United Kingdom market in particular.

480 Further, as is apparent from the examination of the second plea, although the Commission could, without knowledge of the London meeting, have proved the existence of the cartel, its perception of it would have been different. The Court has found that the information provided by BPB, in particular regarding the London meeting, substantially strengthened the Commission's arguments concerning the existence of an overall plan and, consequently, made it possible to substantially increase the amount of the fines in respect of the gravity of the infringement. The same reasoning applies to the detailed information that BPB provided on the exchanges of information on sales volumes and price rises on the United Kingdom market. That conclusion is supported by the

numerous references in the contested decision to evidence provided by BPB.

481 Lastly, as is apparent from point 2.2.2 of its reply to the statement of objections and from the examination of the second plea, BPB also admitted most of the facts set out in the statement of objections. Similarly, as is apparent from points 1.1.4, 2.2.2 and 6.2.27 of its reply to the statement of objections, from the examination of the second plea and from the reply to the written question of the Court, BPB does not dispute the classification of some of the evidence as infringements of Community law. Thus, BPB acknowledged that the London meeting, the exchange of data on the four markets concerned and in particular on the United Kingdom market together with an exchange, on one or two occasions, on price rises on the United Kingdom market constituted infringements of Article 81 EC.

482 In the exercise of its unlimited jurisdiction, the Court holds that is appropriate to grant the applicant an additional reduction of 10% of the amount of its fine, as calculated before the application of the Leniency Notice, in addition to the 30% already granted by the Commission.

483 In those circumstances, it is no longer necessary to examine the applicant's arguments that the Commission infringed the principle of equal treatment in granting a 40% reduction in respect of Gyproc's cooperation.

5. The claim that the Commission should be ordered to repay the amount of the fine or, in the alternative, the amount by which the fine is reduced, plus interest

Arguments of the parties

484 The applicant claims that it has already paid the fine. However, it deplores the fact that the rate of interest applicable in the event that the Commission is required to repay it wholly or in part is not mentioned in the contested decision. It considers that that interest rate should, at the minimum, be the same as that which would have been applied if BPB had provided a bank guarantee, namely 4.79%. However, it relies on the wisdom of the Court with regard to the applicable interest rate and asks the Court to give a decision on that point if its fine is annulled or the amount thereof is reduced. It also requests that default interest be paid from the date of the present judgment until full reimbursement of the sums due by the Commission.

485 The Commission considers that those arguments are premature. Moreover, the third head of claim is inadmissible in so far as the Court of First Instance cannot order that type of measure.

Findings of the Court

486 It has been held on numerous occasions that as a consequence of a judgment of annulment, which takes effect *ex tunc* and thus has the effect of retroactively eliminating the annulled measure from the legal system, the defendant institution is required, by virtue of Article 233 EC, to take the necessary measures to reverse the effects of the illegalities as found in the judgment of annulment, and, in the case of a measure that has already been executed, this may take the form of restoring the applicant to the position he was in prior to that measure (Case T‑48/00 *Corus UK* v *Commission* [2004] ECR II‑2325, paragraph 222).

487 Foremost amongst the measures referred to in Article 233 EC, in the case of a judgment annulling or reducing the fine imposed on an undertaking for infringement of the Treaty competition rules, is the Commission's obligation to repay all or part of the fine paid by the undertaking in question in so far as that payment must be characterised as a sum unduly paid following the annulment decision. That obligation applies not only to the principal amount of the fine overpaid but also to default interest on that amount (*Corus UK* v *Commission*, paragraph 486 above, paragraph 223).

488 It follows that, if the Commission did not consent to any default interest on the principal amount of the fine reimbursed following such a judgment, it would be failing to take a measure necessary to comply with that judgment and would thereby be in breach of its obligations under Article 233 EC.

489 Thus, the claim that the Commission should be ordered to repay the amount by which the fine is reduced, plus interest, is inadmissible.

6. The application for measures of organisation of procedure

490 The applicant stated in its application that '[t]he Court may wish to consider a measure of inquiry, in the form of an independent expert's report, to determine which of the parties is correct regarding the economic context'.

491 In so far as that application must be interpreted as an application for measures of organisation of procedure, the Court considers that it is not necessary to act on it, given that the examination of the case has demonstrated the clearly anti-competitive nature of the cartel in question.

Costs

492 Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Under the first subparagraph of Article 87(3) of the Rules of Procedure, the Court may, where each party succeeds on some and fails on other heads, order costs to be shared.

493 In the present case, the Commission has been unsuccessful only in so far as the reduction that it granted in respect of BPB's cooperation was not sufficient.

494 In such a situation, the Court will make an equitable assessment of the case in holding that the Commission is to pay one tenth of its own costs and one tenth of the costs incurred by BPB and that BPB will pay nine tenths of its own costs and nine tenths of the costs incurred by the Commission.

On those grounds,

THE COURT OF FIRST INSTANCE (Third Chamber)

hereby:

1. **Sets the amount of the fine imposed on BPB plc by Article 3 of Commission Decision 2005/471/EC of 27 November 2002 relating to a proceeding under Article 81 [EC] against BPB plc, Gebrüder Knauf Westdeutsche Gipswerke KG, Société Lafarge SA and Gyproc Benelux NV (Case No COMP/E-1/37.152 – Plasterboard) at EUR 118.8 million;**

2. **Dismisses the action as to the remainder;**

3. **Orders the Commission to pay one tenth of its own costs and one tenth of the costs incurred by BPB;**

4. **Orders BPB to pay nine tenths of its own costs and nine tenths of the costs incurred by the Commission.**

Case T-151/01

Der Grüne Punkt – Duales System Deutschland GmbH

v

Commission of the European Communities

(Competition – Abuse of a dominant position – Collection and recovery system for packaging carrying the Der Grüne Punkt logo and put into circulation in Germany – Decision finding abuse of a dominant position – Barrier to entry – Fee payable under the 'Trade Mark Agreement')

Summary of the Judgment

1. *Competition – Dominant position – Abuse – Concept*

   (Art. 82(2)(a) EC)

2. *Competition – Dominant position – Abuse – Concept*

   (Art. 82(2)(a) EC)

3. *Competition – Undertakings entrusted with the operation of services of general economic interest*

   (Art. 86(2) EC)

1. The concept of abuse is an objective concept referring to the behaviour of an undertaking in a dominant position which is such as to influence the structure of a market where, as a result of the very presence of the undertaking in question, the degree of competition is weakened and which, through recourse to methods different from those which condition normal competition in products or services on the basis of the transactions of commercial operators, has the effect of hindering the maintenance of the degree of competition still existing in the market or the growth of that competition.

   In particular, it is apparent from point (a) of the second paragraph of Article 82 EC that such abusive practice may consist, inter alia, of directly or indirectly imposing unfair prices or other unfair trading conditions. Thus, an undertaking abuses its dominant position where it charges for its services fees which are disproportionate to the economic value of the service provided.

   Similarly, an undertaking in a dominant position may commit an abuse by obstructing its competitors through binding its customers in law or in fact to its services and thereby prevent them from using competing suppliers.

   (see paras 120-122)

2. Abuse of a dominant position is constituted by conduct of a nationwide undertaking in Germany, which manages a collection and recovery system for sales packaging, consisting in requiring undertakings which use its system to pay a fee for all sales packaging carrying its logo and put into circulation in Germany, where those undertakings show that they do not use that system for some or all of that packaging. As long as the users of the logo in question prove that the quantities of packaging for which they do not use the system have actually been taken back and recovered by one or more other collective or individual systems which they use, that undertaking cannot claim that it is disproportionate to ask it not to be paid for a service which it does not provide. That does not, however, exclude the possibility of that undertaking levying an adequate fee for merely using the mark where it is shown that the packaging bearing its logo has been taken back and recovered by another system, since the placing of the logo, which indicates to the consumer that he has the

possibility of using the system offered by the undertaking, corresponds to a service, namely the making available of the system.

(see paras 148, 164, 181, 193, 195)

3. Assuming an undertaking which manages a system of collection and recovery of sales packaging is entrusted with the operation of services of general economic interest within the meaning of Article 86(2) EC, the fact that it cannot be remunerated for a service which has been shown to be provided by another system in no way leads to the conclusion that the carrying out, under economically acceptable conditions, of the take–back and recovery service entrusted to the system is threatened.

(see paras 207-209)

Judgment of the Court of First Instance (First Chamber)
First Instance (First Chamber)First Instance (First Chamber)2007. Der Grüne Punkt - Duales System Deutschland GmbH v Commission of the European Communities. Competition - Abuse of a dominant position - Collection and recovery system for packaging carrying the Der Grüne Punkt logo and put into circulation in Germany - Decision finding abuse of a dominant position - Barrier to entry - Fee payable under the Trade Mark Agreement'. Case T-151/01.

In Case T151/01,

Der Grüne Punkt - Duales System Deutschland GmbH, formerly Der Grüne Punkt - Duales System Deutschland AG, established in Cologne (Germany), represented by W. Deselaers, B. Meyring, E. Wagner and C. Weidemann, lawyers,

applicant,

v

Commission of the European Communities, represented initially by S. Rating, and subsequently by P. Oliver, H. Gading and M. Schneider, and finally by W. Mölls and R. Sauer, acting as Agents,

defendant,

supported by

Vfw AG, established in Cologne (Germany), represented by H.F. Wissel and J. Dreyer, lawyers,

and by

Landbell AG für RückholSysteme, established in Mayence (Germany),

BellandVision GmbH, established in Pegnitz (Germany),

represented by A. Rinne and A. Walz, lawyers,

interveners,

APPLICATION for annulment of Commission Decision 2001/463/EC of 20 April 2001 relating to a proceeding pursuant to Article 82 [EC] (Case COMP D3/34493 - DSD) (OJ 2001 L 166, p. 1)

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (First Chamber),

composed of R. García-Valdecasas, President, J.D. Cooke and I. Labucka, Judges,

Registrar: K. Andova, Administrator,

having regard to the written procedure and further to the hearing on 11 and 12 July 2006,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (First Chamber)

hereby:

1. Dismisses the action;

2. Orders the applicant, Der Grüne Punkt - Duales System Deutschland GmbH, to bear its own costs and those incurred by the Commission, Landbell AG Rückhol Systeme and BellandVision GmbH, including those relating to the interlocutory proceedings;

3. Orders Vfw AG to bear its own costs, including those relating to the interlocutory proceedings.

Law

A - Ordinance on the avoidance of packaging waste

1. On 12 June 1991 the German Government adopted the Verordnung über die Vermeidung von Verpackungsabfällen (Ordinance on the avoidance of packaging waste (BGBl. 1991 I, p. 1234)), the amended version of which - applicable in the present case - entered into force on 28 August 1998 (the Ordinance' or the Packaging Ordinance'). That ordinance is intended to prevent and reduce the impact of packaging waste on the environment. For that purpose it requires manufacturers and distributors to take back and recover used sales packaging outside the public waste disposal system.

2. Under Paragraph 3(1) of the Ordinance, sales packaging (packaging') is packaging which is provided as a unit at the point of sale and passes to the final consumer. It also includes packaging used by trades, restaurants and other service providers which enables or supports the handing over of goods to final consumers (service packaging), and non-returnable tableware and cutlery.

3. Paragraph 3(7) of the Ordinance defines the manufacturer as someone who manufactures packaging, packaging materials or products from which packaging is directly made, or who imports packaging into German territory. Paragraph 3(8) of the Ordinance provides that a distributor is someone who puts into circulation, regardless of the marketing stage, packaging, packaging materials or products from which packaging is directly made, or packaged goods. The mail-order trade may also be a distributor within the meaning of the Ordinance. Lastly, a final consumer is principally defined in Paragraph 3(10) of the Ordinance as someone who does not resell the goods in the form in which they are delivered to him.

4. The obligations to take back and recover which are imposed on manufacturers and distributors under the Ordinance can be met in two ways.

5. First, pursuant to Paragraph 6(1) and (2) of the Ordinance, manufacturers and distributors are obliged to take back from final consumers used sales packaging, free of charge, at or in the immediate vicinity of the actual point of sale and to recover it (the selfmanagement solution'). The distributor's take-back obligation is limited to packaging of the type, shape and size, and of the goods which are part of his range. In the case of distributors with a sales area of less than 200 square metres, the take-back obligation applies only to packaging for the brands sold by the distributor (fourth and fifth sentences of Paragraph 6(1) of the Ordinance). Under the third sentence of Paragraph 6(1) of the Ordinance, in a self-management solution, the distributor must draw the attention of the final consumer by means of clearly visible and legible signs' to the fact that the packaging may be returned.

6. Second, in accordance with the first sentence of Paragraph 6(3) of the Ordinance, manufacturers and distributors may participate in a system which guarantees the regular collection, throughout the distributor's sales territory, of used sales packaging from the final consumer or in the vicinity of the final consumer in order for them to be recovered (the exemption system'). Manufacturers and distributors participating in an exemption system are exonerated from their take-back and recovery obligations in respect of all packaging covered by that system. Pursuant to the second sentence of point 4(2) of Annex I to Paragraph 6 of the Ordinance, manufacturers and distributors have to make it known that they are participating in an exemption system by marking packaging or by other suitable means'. They can thus make such participation known on the packaging or use other measures, such as informing customers at the point of sale or by a package leaflet, for example.

7. Pursuant to the 11th sentence of Paragraph 6(3) of the Ordinance, exemption systems need to be approved by the competent authorities in the Länder concerned. To be approved, those systems

must, inter alia, cover the territory of at least one Land , ensure regular collections reaching the final consumer and have signed agreements with the local bodies responsible for waste management. Any undertaking which satisfies those conditions in a Land is entitled to organise an authorised exemption system in that Land.

8. Since 1 January 2000 both self-management solutions and exemption systems are subject to the same recovery rates. Those rates, which are laid down in Annex I to the Ordinance, vary depending on the packaging material. Compliance with the takeback and recovery obligations is ensured, in the case of selfmanagement solutions, by certificates provided by independent experts and, in the case of exemption systems, by the provision of verifiable data on the quantities of packaging collected and recovered.

9. In addition, the ninth sentence of Paragraph 6(1) of the Ordinance states that, if a distributor does not comply with his takeback and recovery obligations by means of a self-management solution, he must do so by means of an exemption system.

10. In that regard, in their observations of 24 May 2000, sent to the Commission in the context of the administrative proceedings (the observations of the German authorities'), the German authorities stated that the Packaging Ordinance allowed distributors to combine the taking back of packaging in the vicinity of his business, in the context of a selfmanagement solution, and the collection of packaging in the vicinity of the final consumer, in the context of an exemption system, by participating in the exemption system for only part of the packaging which it had put into circulation.

11. In the observations of the German authorities it was also stated that, if the distributor chose to participate in an exemption system for all the packaging which he put into circulation, he was no longer subject to the obligations laid down in Paragraph 6(1) and (2), which meant that a subsequent individual waste collection solution was not possible. However, if the distributor chose to participate from the outset in a self-management solution, subsequent participation in an exemption system was possible if the recovery rate was not achieved in the context of the individual waste disposal.

B - The exemption system of Der Grüne Punkt - Duales System Deutschland GmbH and the Trade Mark Agreement

12. Since 1991, Der Grüne Punkt - Duales System Deutschland GmbH (the applicant' or DSD') is the only undertaking which operates a Germany-wide exemption system (the DSD system'). For that reason, in 1993, DSD was approved by the competent authorities in all of the Länder .

13. The relationship between DSD and the manufacturers and distributors which participate in its system is governed by a standard agreement which concerns the use of the Der Grüne Punkt logo (the Agreement' or the Trade Mark Agreement'). In signing that agreement, the participating undertaking is authorised, in return for a fee, to affix the Der Grüne Punkt logo to sales packaging included in the DSD system (Article 1(1) of the Trade Mark Agreement).

14. DSD ensures, on behalf of the undertakings which participate in its system, the collection, sorting and recovery of the used sales packaging which it decides to include in the DSD system, thus relieving them of their take-back and recovery obligations of that packaging (Article 2 of the Agreement).

15. The participating undertakings are obliged to notify the types of packaging which they wish to dispose of by means of the DSD system and to affix the Der Grüne Punkt logo to each piece of packaging belonging to those types and destined for domestic consumption in Germany so that DSD may release the participating undertaking from that obligation (Article 3(1) of the Agreement).

16. The user of the logo pays DSD a fee for all the packaging bearing the Der Grüne Punkt logo which he distributes on German territory in accordance with the Trade Mark Agreement. The exceptions

to that rule must be given separate written approval (Article 4(1) of the Agreement). Article 5(1) of the Agreement also specifies that all packaging bearing the Der Grüne Punkt logo and distributed by the user of the logo on Germany territory are billed (Article 5(1) of the Agreement).

17. The amount of the fee is determined on the basis of two factors, namely, (i) the weight of the packaging and the type of material used, and (ii) the volume or surface area of the packaging. Fees are calculated without any profit mark-up and they serve solely to cover the costs incurred in collecting, sorting and recovering packaging and the associated administrative costs (Article 4(2) and (3) of the Agreement). Fees may be adjusted by decision of the DSD if those costs vary.

18. In the context of the DSD system, packaging bearing the Der Grüne Punkt logo may be collected in either special bins and divided up into metal, plastic and composite materials, or in containers placed close to private households (in particular for paper and glass), while residual waste must be put into the bins provided by the public waste disposal bodies.

19. However, DSD neither collects nor takes back used packaging itself, but sub-contracts that service to collection undertakings. The relations between DSD and those undertakings are governed by a standard agreement, amended on a number of occasions, which seeks to create and operate a system to collect and sort packaging. By reason of those Service Agreements signed between DSD and 537 local undertakings, each of those undertakings has the exclusive power to carry out, in a determined zone, the collection of packaging on DSD's behalf. Once sorted, that packaging is transported to a recycling centre for it to be recovered.

20. The Service Agreement is the object of Commission Decision 2001/837/EC relating to a proceeding under Article 81 [EC] and Article 53 of the EEA Agreement (Cases COMP/34493 - DSD, COMP/37366 - Hofman + DSD, COMP/37299 - Edelhoff + DSD, COMP/37291 - Rechmann + DSD, COMP/37288 - ARGE and five other undertakings + DSD, COMP/37287 - AWG and five other undertakings + DSD, COMP/37526 - Feldhaus + DSD, COMP/37254 - Nehlsen + DSD, COMP/37252 - Schönmakers + DSD, COMP/37250 - Altvater + DSD, COMP/37246 - DASS + DSD, COMP/37245 - Scheele + DSD, COMP/37244 - SAK + DSD, COMP/37243 - Fischer + DSD, COMP/37242 - Trienekens + DSD, COMP/37267 - Interseroh + DSD) (OJ 2001 L 319, p. 1). That decision was the subject of an action for annulment brought by applicant in Case T289/01 Duales System Deutschland v Commission.

Facts at the origin of the dispute

21. On 2 September 1992 DSD notified the Commission of its Statutes and also of a number of agreements, including the Trade Mark Agreement and the Service Agreement with a view to obtaining negative clearance or, failing that, a decision granting exemption.

22. Following publication of the notice in the Official Journal of the European Communities of 27 March 1997 (OJ 1997 C 100, p. 4), pursuant to Article 19(3) of Regulation No 17 of the Council of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ, English Special Edition 1959-1962, p. 87), in which the Commission announced its intention to take a favourable view of the agreements notified, it received observations from interested third parties concerning, inter alia, various aspects of the application of the Trade Mark Agreement. In particular, those interested third parties complained of the distortion of competition which might arise if an undertaking were charged twice as a consequence of participating in the DSD system and the system of another service provider.

23. On 15 October 1998 DSD submitted to the Commission a series of commitments aimed at preventing manufacturers and distributors of packaging participating in the DSD system and in another exemption system operating at regional level from being charged twice. In particular, DSD envisaged the situation in which exemption systems, restricted to one or more Länder , are set up alongside the DSD system. In that case, packaging of the same type and of the same distributor or manufacturer

could be taken back, in those Länder , by one of the new exemption systems and, in the other Länder , by the DSD system. DSD gave the following commitment in that regard (recitals 4, 58 and 59 of the contested decision):

On condition that regional alternative systems to [the DSD system] are created and are formally approved by the highest competent regional authority under Paragraph 6(3) of the Packaging Ordinance, [DSD] is prepared to apply the Trade Mark Agreement in such a way that licensees are able to participate in such a system as regards some of their packaging. [DSD] will not charge a licence fee under the Trade Mark Agreement for packaging that can be shown to be covered by such an alternative system. A further condition for release from the licence fee obligation in respect of packaging bearing the mark [Der Grüne Punkt] is that protection of the trade mark [Der Grüne Punkt] should not be impaired.'

24. On 3 November 1999, the Commission considered that the series of commitments given by DSD on 15 October 1998 should also include self-management solutions used for the disposal of some of the packaging and not be restricted only to exemption systems.

25. On 15 November 1999 certain manufacturers of packaging sent a complaint to the Commission. They claimed that the Trade Mark Agreement prevented the setting up of a selfmanagement solution for taking back packaging. They considered that the use of the logo, where the waste disposal service has not actually been provided by DSD, constituted an abuse of a dominant position on the part of DSD.

26. By letter of 13 March 2000, DSD submitted two further commitments to the Commission. The first one concerned the case where manufacturers and distributors of packaging opt for a selfmanagement solution for part of their packaging and participate in the DSD system for the remainder. In that case, DSD undertook not to charge a fee under the Trade Mark Agreement for the part of the packaging taken back by the selfmanagement solution, on the condition that it is provided with evidence in respect of that second type of collection. That evidence should be furnished in accordance with the requirement laid down in point 2 of Annex I to the Packaging Ordinance. In its letter of 13 March 2000 DSD also stated that it did not seem necessary to amend the series of commitments given on 15 October 1998 (see recitals 7, 60 and 61 of the contested decision).

27. On 3 August 2000 the Commission sent a Statement of Objections to DSD, which replied by letter of 9 October 2000.

28. On 20 April 2001 the Commission adopted Decision 2001/463/EC relating to a proceeding pursuant to Article 82 [EC] (Case COMP D3/34493 - DSD) (OJ 2001 L 166, p. 1; the contested decision').

Procedure and forms of order sought

29. By application lodged at the Registry of the Court of First Instance on 5 July 2001, the a pplicant brought an action seeking annulment of the contested decision under the fourth paragraph of Article 230 EC.

30. By a separate document, lodged on the same day, the applicant also brought an application under Article 242 EC to suspend application of Article 3 of the contested decision, and Articles 4, 5, 6 and 7 thereof in so far as they refer to Article 3, until the Court of First Instance gives a ruling on the substance.

31. By order of 15 November 2001 in Case T151/01 R Duales System Deutschland v Commission [2001] ECR II3295, the President of the Court of First Instance rejected the application to suspend application of the contested decision.

32. By applications registered at the Registry of the Court of First Instance on 16, 19 and 20 July 2001, Vfw AG, Landbell AG für Rückhol-Systeme (Landbell') and BellandVision GmbH sought

leave to intervene in the present proceedings in support of the form of order sought by the Commission. Those applications for leave to intervene were notified to the parties, which submitted their observations within the prescribed period.

33. By order of 5 November 2001, the Court of First Instance (Fifth Chamber) granted the three undertakings leave to intervene and they submitted their observations on 7 February 2002.

34. Upon hearing the report of the Judge-Rapporteur, the Court of First Instance (First Chamber) decided to open the oral procedure and, by way of measures of organisation of procedure, sent the parties a number of questions to be answered orally at the hearing. Those questions concerned the different stages of the collection of recovery process of packaging and the conditions in which competition between selfmanagement solutions and exemption systems could exist. The Court also called on the Commission to produce a document presented by the German authorities in the context of the administrative proceedings. The Commission sent that document on 26 June 2006.

35. The parties presented oral argument and answered the questions put by the Court at the hearing on 11 and 12 July 2006.

36. The applicant claims that the Court should:

- annul the contested decision;

- order the Commission to pay the costs.

37. The Commission contends that the Court should:

- dismiss the action;

- order the applicant to pay the costs.

38. Vfw claims that the Court should dismiss the action.

39. Landbell claims that the Court should:

- dismiss the action;

- order the applicant to pay the costs.

40. BellandVision claims that the Court should:

- dismiss the action;

- order the applicant to pay the costs.

Law

41. Before examining the arguments of the parties on the admissibility and the substance of the dispute, the content of the contested decision must first be set out.

A - The contested decision

42. By contrast with the Ordinance, in which it is not stated whether it is possible to combine a selfmanagement solution with an exemption system or even to use several exemption systems to take back and recover the marketed packaging, the contested decision takes as a starting point the possibility that a manufacturer or distributor of packaging may combine those different systems in order to comply with the obligations imposed on him under the Ordinance.

43. In that respect, the Commission's legal assessment is divided into two parts: the first part concerns the analysis of DSD's conduct in light of Article 82 EC (recitals 65 to 160 and Article 1 of the contested decision). The second part relates to the examination of the measures enabling the Commission, on the basis of Article 3(1) of Regulation No 17, to bring an end to the abuse

found (recitals 161 to 167 and Articles 3 to 7 of the contested decision). The contested decision does not take a view on the legality of DSD's conduct in the light of Article 86(2) EC.

1. The possibility of combining several takeback and recovery systems to comply with the obligations under the Packaging Ordinance

44. The possibility of using several takeback and recovery systems to comply with the obligations under the Packaging Ordinance (mixed systems') constitutes the premiss of the contested decision in which the Commission envisages the following three cases (recital 101 of the contested decision):

- Case No 1 corresponds to the case in which a manufacturer or distributor uses the DSD (national) exemption system for part of its packaging and uses another (regional) exemption system for the remainder of the packaging;

- Case No 2 corresponds to the case in which a manufacturer or distributor uses the DSD system for part of its packaging and uses a selfmanagement solution for the remainder of the packaging;

- Case No 3 corresponds to the case in which a manufacturer or distributor has all of his sales packaging in Germany disposed of by systems in competition with the DSD system, while participating in a system which uses the Der Grüne Punkt logo in other Member States.

45. The contested decision sets out several facts enabling the finding that it is possible to use mixed systems. Thus, the decision states that it is apparent from the observations of the German authorities (recital 20 of the contested decision) that the Ordinance makes it possible to combine a self-management solution and an exemption system by participating in an exemption system only for the taking back of some of the packaging put into circulation. In such a case, the German authorities state, however, that it is necessary to clearly define, in the interests of the consumer and of the authorities, which packaging is subject to the takeback obligation at, or in the immediate vicinity of, the points of sale and the packaging which is not (recital 20 of the contested decision). The contested decision also points out that it is apparent for an earlier response of the German authorities that Article 6(3) of the Ordinance does not imply that it is possible to use only one system. It was never the intention of the German authorities that only one exemption system should be created in the whole of the country or in each Land (recital 23 of the contested decision).

46. The observations of the German authorities also permit the finding that the alternative presentation of the Ordinance, according to which a manufacturer or distributor of packaging may use a selfmanagement solution or an exemption system to respect its obligations, does not preclude a mixed system. Moreover, the Court points out that, in the present case, the applicant does not dispute that a manufacturer or distributor of packaging may use a mixed system, but challenges the Commission's assessment of its conduct in relation to Article 82 EC and Article 3(1) of Regulation No 17.

2. Assessment relating to Article 82 EC

47. According to the contested decision, DSD is the only undertaking which offers a Germanywide exemption system and the DSD system collects approximately 70% of the sales packaging in Germany and approximately 82% of the sales packaging collected in Germany from final consumers (recital 95 of the contested decision). DSD's dominant position is not contested in this case.

48. In the present case, the abuse of a dominant position found in the contested decision is based on the fact that the fee which DSD charges manufacturers and distributors of packaging who participate in the DSD system is not conditional upon the actual use of that system, but calculated on the basis of the amount of packaging bearing the Der Grüne Punkt logo which those manufacturers and distributors put into circulation in Germany (Article 4(1) and Article 5(1) of the Agreement). Manufacturers and distributors who participate in the DSD system must affix the Der Grüne Punkt logo to every piece of packaging notified to DSD and intended for consumption in Germany (Article

3(1) of the Agreement). Thus, according to the decision, DSD abuses its dominant position by not linking the fee payable under the Agreement to the actual use of the DSD system. It is apparent from the investigation carried out by the Commission, on the basis of complaints lodged by customers and competitors with DSD, that the method of calculation of the fee paid to DSD stands in the way of the wish of certain packaging manufacturers, which are customers of the DSD system, to be able to use their own selfmanagement solution or another exemption system to take care of part of the packaging which they put into circulation (recitals 100 to 102 of the contested decision).

49. In that regard, the contested decision considers that the solution proposed by DSD, namely to refrain from marking with the Der Grüne Punkt logo packaging which is not to be covered by the DSD system, but by another system, whether a selfmanagement solution or exemption system, would, in a not inconsiderable number of cases', be economically unrealistic (recital 103 of the contested decision). Such a solution would require selective labelling of packaging (with or without the Der Grüne Punkt logo), which results in significant additional costs in the case where only one form of presentation is used for packaging or where different distribution channels are used (recitals 104 and 105 of the contested decision). In addition, such a solution requires manufacturers and distributors of packaging which use mixed systems to ensure that packaging bearing the Der Grüne Punkt logo ends up only in places where it is picked up by the DSD system and that the packaging which does not bear that logo is placed where the other systems can ensure that it is taken back, which is impossible in practice (recital 106 of the contested decision). Finally, in the light of the fact that the final consumer will often not decide until after buying the packaged product and sometimes after consuming the product whether to dispose of the packaging by means of an exemption system close to his home or to bring it back to the place where he bought it for it to be taken back by a selfmanagement solution, it is impossible to allocate the portion of the packaging bearing the Der Grüne Punkt logo to one type of collection or another (recital 107 of the contested decision).

50. In the contested decision, the Commission considers that the effects of the abuse, established as regards the fee system linked to the Trade Mark Agreement, are twofold. First, by making the fee subject exclusively to the use of the logo, DSD exposes to unfair prices and trading conditions the undertakings which do not use the service assuming the obligation to dispose of packaging, or those which use the service for only some of their packaging. As a result of the excessive difference between the cost of the service provision and its price, there is an abuse of a dominant position for the purposes of point (a) of the second paragraph of Article 82 EC (recitals 111 to 113 of the contested decision). Second, by virtue of the fee system established in the Trade Mark Agreement undertakings subject to it have no economic interest, in participating in a competing self-management solution or exemption system because those undertakings must either pay a fee to DSD in addition to the remuneration paid to the competitor or introduce separate lines of packaging and distribution channels. The fee system thus makes it more difficult for organisations competing with the DSD system to enter the market (see recitals 114 and 115 of the contested decision).

51. The Commission describes the abuse constituted by the contractual fee in further detail in the three cases cited above. As regards Case No 1, namely a mixed system combining the use of the national DSD exemption system with the use of another regional exemption system, the contested decision states that that case currently requires either the affixing of a different mark depending on the system used, or payment of a fee to two systems. Therefore, for DSD to require payment of a fee for the total amount of packaging put into circulation in Germany has the effect of depriving participation in a regional exemption system of any financial interest (see recitals 118 to 123 of the contested decision).

52. In order to address that problem, DSD undertook, in the context of the administrative proceedings (recitals 58 and 59 of the contested decision), to apply the Trade Mark Agreement in such a way

that the manufacturers and distributors concerned are able to participate in another exemption system for some of their packaging, on the condition, however, that the protection of the mark Der Grüne Punkt is not impaired. Since DSD refused to withdraw the condition concerning the protection of the mark, an expression which was not explained in more detail, the contested decision considered that that commitment was not sufficient to allay the Commission's concerns (recitals 122 and 123 of the contested decision).

53. As regards Case No 2, concerning a mixed system combining the use of a selfmanagement solution and the DSD system, the contested decision states that for DSD to require payment of the fee for the total amount of packaging put into circulation in Germany has the effect of excluding participation in a selfmanagement solution for some of that packaging (see recitals 124 to 128 of the contested decision).

54. In order to address that problem, DSD undertook, during the administrative proceedings (recitals 60 and 61 of the contested decision), not to charge a fee under the Agreement for the part of the packaging taken back by a selfmanagement solution, on the condition, however, that evidence is furnished thereof. In that commitment, DSD also stated that the use of the Der Grüne Punkt logo remained restricted to packaging taken back by the DSD system and that it could thus not be affixed to packaging taken back by a selfmanagement solution. The Commission considered that it was hardly conceivable, in practice, to put in place separate packaging lines and distribution channels given that it was virtually impossible for the manufacturer or distributor of the packaging concerned to be able to determine, at that stage, which packaging consumers were going to bring back to the exemption system and which packaging they were going to bring back to the selfmanagement solution. Therefore, the Commission considered that that commitment was not sufficient to allay the Commission's concerns regarding the competition situation (see recitals 127 and 128 of the contested decision).

55. As regards Case No 3, which assumes the absence of participation in the DSD system in Germany but participation in a take-back and disposal system which uses the Der Grüne Punkt logo in another Member State, a case in which DSD could request payment of a fee in Germany, the contested decision states that a commitment and a declaration from DSD presented in the context of the administrative proceedings enable the problems identified by the Commission in that regard to be addressed (see recitals 62 to 64 and 129 to 135 of the contested decision).

56. The contested decision states that the abuse found is not justified by the alleged incompatibility between the provisions of the Ordinance and the affixing of the Der Grüne Punkt logo to packaging for which no service assuming the obligation to dispose of waste is provided (see recitals 136 to 142 of the contested decision). It is also not justified by the need to preserve the distinctive character of the Der Grüne Punkt logo (see recitals 143 to 153 of the contested decision). In that regard, the decision refers to a judgment of the Kammergericht Berlin (Higher Regional Court, Berlin, Germany) of 14 June 1994 and states that the essential function of that logo is fulfilled when it signals to the consumer that he has the option of having the packaging collected by DSD'. Therefore, the function of that logo does not require, where participation in the DSD system is only partial, that it be affixed only to the packaging which the DSD system is responsible for (see recital 145 of the contested decision).

57. The contested decision also points out that, in the light of the circumstances specific to the taking back and recovery of the packaging in Germany and in the common market, the abuse of the dominant position constituted by the way in which the contractual fee in dispute is imposed is likely to have an appreciable effect on trade between Member States (see recitals 155 to 160 of the contested decision). The effect on trade between the Member States is moreover not contested in the present case.

58. By way of conclusion in its assessment under Article 82 EC, the contested decision states

that, in certain cases, the conduct of DSD in requiring payment of a fee for the total quantity of the packaging carrying the Der Grüne Punkt logo and put into circulation in Germany constitutes an abuse of a dominant position. That infringement of Article 82 EC is characterised in Article 1 of the contested decision in the following terms:

The conduct of [DSD] in requiring, under the first sentence of Article 4(1) and the first sentence of Article 5(1) of the Trade Mark Agreement, payment of a licence fee for the total quantity of sales packaging carrying the [Der Grüne Punkt logo] and put into circulation in Germany is incompatible with the common market even where undertakings subject to the obligations arising out of the Packaging Ordinance:

(a) either use DSD's exemption service as referred to in Article 2 of the Trade Mark Agreement only for partial quantities [Cases No 1 and 2] or, instead of using the said service, put into circulation in Germany uniformly designed packaging which is also in circulation in another member country of the European Economic Area and participates in a take-back system using the [Der Grüne Punkt logo] [Case No 3], and

(b) prove that, in respect of the quantity or partial quantity for which they do not use the exemption service, they fulfil their obligations under the Packaging Ordinance through competing exemption systems or through self-management solutions.'

3. Assessment relating to Article 3(1) of Regulation No 17

59. After finding the existence of an abuse of a dominant position, the contested decision determines, in accordance with Article 3(1) of Regulation No 17, the way in which DSD must bring the infringement to an end (recitals 161 to 167 and Articles 2 to 7 of the contested decision).

60. The most important of those measures requires DSD not to charge any licence fee for such quantities of packaging carrying the Der Grüne Punkt logo as are put into circulation in Germany for which the exemption service is not used and for which the Packaging Ordinance obligations have been fulfilled in another way. That measure, established in Article 3 of the contested decision, as regards Cases No 1 and 2, is the following:

DSD shall undertake vis-à-vis all parties to the Trade Mark Agreement not to charge any licence fee for such partial quantities of sales packaging carrying the [Der Grüne Punkt logo] as are put into circulation in Germany for which the exemption service referred to in Article 2 of the Trade Mark Agreement is not used and for which the Packaging Ordinance obligations have demonstrably been fulfilled in another way.

The commitment in the first paragraph shall replace a derogation under the second sentence of Article 4(1) of the Trade Mark Agreement.'

61. In addition, in Article 5 of the contested decision, the Commission sets out the rules of evidence required in those Cases as follows:

(1) [Case No 1] Where there is partial or complete participation in a competing exemption system, the system operator's confirmation that the relevant quantity of packaging is covered by the competing system shall constitute sufficient proof that the Packaging Ordinance obligations under Articles 3 and 4 have been fulfilled in another way.

(2) [Case No 2] Where there is partial or complete participation in a self-management solution, the subsequent presentation of an independent expert's certificate stating that the take-back and recovery requirements for the relevant amount of packaging have been fulfilled shall be sufficient. The certificate may be issued either to the individual manufacturer or distributor or to an association of self-managers.

(3) DSD may on no account require the certificate to be presented at an earlier time than is laid down under the Packaging Ordinance.

(4) Irrespective of the version of the Packaging Ordinance in question, the fact that the certificate confirms to the contractual partner that the take-back and recovery requirements, related to a specific quantity of packaging, have been fulfilled shall suffice for the proof to be furnished to DSD.

(5) Should the certificate contain other information, this shall be obliterated.

(6) Both the system operator's confirmation and the independent expert's certificate may be replaced by an accountant's certificate confirming retrospectively the fulfilment of the Packaging Ordinance obligations in respect of a specific volume of packaging.

(7) Other provisions of the Trade Mark Agreement shall not be applied in such a way as to require a higher level of proof to be furnished to DSD.'

62. Article 4 of the decision envisages the specific situation of Case No 3:

(1) In the case of packaging which is collected and recovered in another Member State under a system using the [Der Grüne Punkt logo] and which is put into circulation using the trade mark in the territory covered by the Packaging Ordinance, DSD shall not charge a licence fee if the requirements of the Packaging Ordinance have demonstrably been met otherwise than through participation in the system set up by DSD under [Paragraph] 6(3) of the Ordinance.

(2) DSD may require, as a precondition for the waiver of the licence fee, that it be made clear to the final consumer on the packaging referred to in paragraph 1, in words or other suitable form placed close to the [Der Grüne Punkt logo], that the packaging does not participate in the dual system set up by DSD under [Paragraph] 6(3) of the Ordinance.

(3) In the event of disagreement over the recognisability of the notice, the parties shall within one week of either or both sides finding that such disagreement has arisen, ask the Commission to appoint an expert.

The expert shall be charged with determining within four weeks whether, having regard to the packaging's basic function, the possible forms of the notice discussed by the parties fulfil the requirements set out in paragraph 2.

...'

63. It is against that background that the arguments of the parties need to be examined.

B - The admissibility of the action

1. The admissibility of the action in so far as it concerns Article 4 of the contested decision

64. The Commission claims that the action seeks the annulment of the contested decision in its entirety without referring to the particular situation laid down in Article 4, which is separable from the rest of the contested decision. The applicant's failure to mention that point does not conform with the requirements of Article 44(1)(c) of the Rules of Procedure of the Court of First Instance and the action must be declared inadmissible in so far as it concerns Article 4 of the contested decision.

65. The applicant submits that, in accordance with the requirements of the Rules of Procedure, the application contains a clear and precise presentation of the facts and pleas in law which enables the Commission to prepare its defence and the Court to exercise its power of judicial review (order in Case T85/92 De Hoe v Commission [1993] ECR II523, paragraph 20). In particular, the applicant lists the reasons why the provisions of the Trade Mark Agreement at issue cannot be considered to be abusive in the light of Article 82 EC. This has the effect of depriving the measures laid

down in Article 4 of the contested decision of all effect.

66. The Court observes that the contested decision finds an abuse of a dominant position (Article 1) and therefore imposes certain obligations on DSD in order to bring an end to that abuse (Articles 3 to 7). In particular, in Article 4 of the contested decision, the Commission imposes an obligation seeking to bring an end to the abuse of a dominant position in the case where a manufacturer or a distributor envisages marketing packaging in a Member State other than Germany by participating in a takeback and recovery system which uses the Der Grüne Punkt logo, but which, for the same packaging put into circulation in Germany, complies with its obligations without participating in the DSD system.

67. In the context of the first plea in law, alleging infringement of Article 82 EC, the applicant seeks annulment of the contested decision in so far as it, erroneously, finds there to be an abuse of a dominant position. If the Court finds in favour of that plea, all the obligations imposed on DSD by the contested decision, seeking to put an end to that abuse, would have to be annulled without the need to examine the particular situation laid down in Article 4 of the contested decision.

68. Similarly, in the context of the second plea in law, alleging infringement of Article 3 of Regulation No 17 and of the principle of proportionality, the applicant seeks annulment of the obligation laid down in Article 4 of the contested decision in so far as it is disproportionate in view of the possibility of selectively labelling packaging or refraining from using the mark Der Grüne Punkt', it requires DSD to provide its services while being paid for them at a later stage and it excludes payment of a fee just for using the mark.

69. It must be found that the application satisfies the formal conditions laid down in Article 44(1)(c) of the Rules of Procedure and that the Court is thus able to exercise its power of judicial review. The Commission's application for the action be found inadmissible in so far as it concerns Article 4 of the contested decision must consequently be rejected.

2. The introduction of new pleas in the course of proceedings

70. The Commission submits that the reply contains three new pleas, concerning a new interpretation of the Trade Mark Agreement (see paragraph 115 below), the criticism of the citations of an old version of the Packaging Ordinance in the presentation of the facts of the contested decision and the fact that the consumer cannot request selfmanagement solutions to collect packaging in the vicinity of his home. Those pleas should therefore be declared inadmissible.

71. The Court points out that, under the first subparagraph of Article 48(2) of the Rules of Procedure, the introduction of a new plea in law in the course of proceedings is not allowed unless it is based on matters of law or of fact which come to light in the course of the procedure. In that regard, a plea which constitutes an amplification of a submission previously made, either expressly or by implication, in the original application and is closely linked to it must be declared admissible (see Case T195/00 Travelex Global and Financial Services and Interpayment Services v Commission [2003] ECR II1677, paragraphs 33 and 34, and the caselaw cited).

72. In the present case, the alleged new pleas criticised by the Commission amount, in reality, to nothing more than arguments developed by the applicant in response to the arguments presented by the Commission in its defence as to the first plea in law, alleging infringement of Article 82 EC.

73. Consequently, the plea of inadmissibility raised by the Commission as regards the introduction of new pleas in the course of proceedings must be dismissed.

3. The taking into account of certain annexes produced by the applicant

a) The annexes prepared by C. Weidemann

74. The Commission submits that the annexes prepared by C. Weidemann, one of DSD's lawyers, concerning the environmental management of the packaging system in Germany (Annex A to the application) and the justification for the DSD system in the light of Article 86 EC (Annex A to the reply), contain explanations which are not referred to in the applicant's pleadings. Therefore, the Court cannot take account of those annexes in so far as an allegation of infringement of the legislation cannot be made by a mere referral to annexes.

75. The Court observes that, in order to ensure legal certainty and the sound administration of justice, if an action is to be admissible, the essential points of fact and of law on which it is based must be apparent from the text of the application itself, even if only stated briefly, provided the statement is coherent and comprehensible (Joined Cases 19/60, 21/60, 2/61 and 3/61 Société Fives Lille Cail and Others v High Authority [1961] ECR 281, 294, and Case T-87/05 EDP v Commission [2005] ECR II3745, paragraph 155, and the caselaw cited). In that regard, although specific points in the text of the application can be supported and completed by references to specific passages in the documents attached, a general reference to other documents cannot compensate for the lack of essential elements of legal arguments which, under Article 44(1) of the Rules of Procedure, must be included in the application (order in Case T-154/98 Asia Motor France and Others v Commission [1999] ECR II-1703, paragraph 49, and EDP v Commission , paragraph 155 and the caselaw cited).

76. In the present case, it must be found that the annexes prepared by C. Weidemann, concerning the environmental management of the packaging system in Germany and the justification for the DSD system in the light of Article 86 EC constitute actual written pleadings submitted by one of the lawyers representing DSD before the Court. The essential elements of the legal arguments developed in those annexes must therefore be included in the application or in the reply, which must refer to the extracts of those annexes in order to substantiate or to complement the content of those arguments and not merely make a general reference to those annexes.

77. Where it refers to the first of those annexes, the application indicates only - without further explanation - that the conclusion reached by Mr Weidemann, at the end of his examination of the environmental management of the packaging system in Germany, is also the conclusion referred to in the application, without stating the specific points of that 54 page annex to which reference is made.

78. It is only in regard to that indication alone, from which it is apparent that the author of the annex shares the analysis presented in the application, that account should be taken of the annex on the environmental management of the packaging system in Germany.

79. As regards the second annex prepared by C. Weidemann, concerning the justification for the DSD system in the light of Article 86 EC, it should be pointed out that that 58 page annex was submitted as an additional reference' at the stage of the reply, which refers completely to the arguments in the annex for the statement of the pleas relating to Article 86 EC'.

80. In principle, such indications cannot be considered to be sufficient in the light of the caselaw cited above, in so far as a general reference to an annex cannot compensate for the lack of essential elements of legal arguments which must be included in the application. The reply takes care, however, to give a succinct resume of the content of that annex, which supplements the line of argument put forward in that regard in the application and enables, as such, the Commission to prepare its defence and the Court to examine the third plea alleging infringement of Article 86(2) EC.

81. Accordingly, the annex concerning the justification for the applicant's system in the light of Article 86 EC will be taken into consideration by the Court only in so far as it relates specifically to the arguments raised expressly by DSD in its written pleadings.

b) The opinion polls joined to the reply

82. The Commission submits that the applicant did not give any reasons for the delay in presenting the evidence constituted, in particular, by two opinion polls annexed to the reply, which is contrary to Article 48(1) of the Rules of Procedure.

83. The Court points out the opinion polls produced by the applicant in the reply are not offers of evidence for the purposes of Article 48(1) of the Rules of Procedure, but serve to substantiate the arguments submitted, in the reply, in response to the arguments raised in the defence as to the roles played by the mark Der Grüne Punkt and by the final consumer in the taking back and recovery of packaging.

84. Consequently, the plea of inadmissibility opposed by the Commission as regards the opinion polls annexed to the reply must be dismissed.

C - Substance

85. The applicant raises three pleas in support of its action. The first alleges infringement of Article 82 EC. The second alleges infringement of Article 3(1) of Regulation No 17 and of the principle of proportionality. The third plea alleges infringement of Article 86(2) EC.

1. The first plea, alleging infringement of Article 82 EC

a) Preliminary observations on the contention that there is a free, compulsory licence

Arguments of the parties

86. The applicant submits that, in Article 3 of the contested decision, the Commission requires it to grant free, compulsory licenses' to use its mark Der Grüne Punkt to undertakings which participate in its system, in so far as the logo corresponding to that mark may now, as a result of the decision, be affixed to all packaging, irrespective of the takeback and recovery system concerned. According to the caselaw of the Court of Justice, a compulsory licence of an intellectual property right may be granted only in exceptional circumstances', namely when the refusal of the licence concerns an industrial property right for which the licence is indispensable for the carrying on of the activity in question and is likely to exclude all competition on the derivative markets and when that refusal is not objectively justified (Joined Cases C241/91 P and C242/91 P RTE and ITP v Commission (Magill ') [1995] ECR I743, paragraphs 50 to 56, and Case C7/97 Bronner [1998] ECR I7791, paragraph 39). Since none of those factors is established in the present case, no abuse of a dominant position can be found on the basis of Article 82 EC. In support of its contention the applicant essentially raises the following arguments: (i) the mark Der Grüne Punkt is not indispensable to participation in a system in competition with the DSD system; (ii) competition is not excluded by the contractual provisions in dispute; (iii) several objective reasons justify DSD's conduct, namely the need to meet the objectives of the Ordinance, the need to preserve the different functions of the mark Der Grüne Punkt, which cannot be the subject of a compulsory licence under trade mark law, and the need to enable the DSD system to function properly.

87. The Commission, supported by the interveners, maintains that the contested decision does not require DSD to grant free, compulsory licences contrary to international law and Community law. The abuse found results from the mere fact that the fee system is contrary to Article 82 EC in th at DSD requires remuneration for a service which it does not provide and which is shown to have been provided by another system.

Findings of the Court

88. In the context of the first plea, which concerns Article 82 EC, the applicant essentially contests the consequences which would follow from the implementation of the obligation adopted on the basis of Article 3(1) of Regulation No 17, as laid down in Article 3 of the contested decision (see paragraph 60 above), in order to bring an end to the abuse of a dominant position found in

Article 1 of the decision (see paragraph 58 above). According to the applicant, the obligation defined in Article 3 of the decision requires it to grant a free, compulsory licence' to use the mark Der Grüne Punkt for packaging intended to be disposed of by systems in competition with the DSD system.

89. However, in criticising the legality of such a compulsory licence, the applicant submits that the mark Der Grüne Punkt is not indispensable to participation in a system in competition with DSD (see paragraph 93 below) and that competition is not excluded by the contractual provisions at issue (see paragraph 95 below). Those arguments are tantamount to claiming DSD's conduct, as found in Article 1 of the contested decision, does not have an impact on competition and does thus not constitute an abuse of a dominant position within the meaning of Article 82 EC.

90. Similarly, the applicant claims that the fee system established by the Trade Mark Agreement is justified by considerations drawn from the Ordinance (see paragraphs 98 to 100 below), from trade mark law (see paragraphs 103 to 114 below) and the need to ensure the proper functioning of the DSD system (see paragraphs 115 and 116 below). Those considerations represent just as many objective justifications for the fee system which is the subject of the abuse found in Article 1 of the decision and that system can thus not be considered to be abusive under Article 82 EC.

91. Consequently, rather than examining the consequences which the applicant's arguments could have with regard to the obligation imposed in Article 3 of the contested decision - namely, according to DSD, the free, compulsory licence' - which are covered by the second plea alleging infringement of Article 3(1) of Regulation No 17, it is necessary to restrict the Court's assessment in relation to the first plea - which concerns Article 82 EC - to only the arguments relating to the abuse of a dominant position found in Article 1 of the contested decision. In the absence of abuse of a dominant position for the purposes of Article 82 EC, Article 3 of the contested decision is unfounded by reason of Article 3(1) of Regulation No 17, since there is no longer an infringement to bring to an end. A contrario , if there is an abuse of a dominant position, the Commission has the power, under Article 3(1) of Regulation No 17, to require the undertaking concerned to bring the infringement found to an end.

92. It is in that context that the arguments of the parties in relation to the abuse of a dominant position found in the contested decision need to be set out.

b) Arguments of the parties regarding the abuse of a dominant position

i) No need to use the mark Der Grüne Punkt to participate in a system competing with DSD

93. First, the applicant submits that a compulsory licence for use of its mark is in no way indispensable, within the meaning of Magill , to enabling a manufacturer or distributor of packaging to opt for a competitor system (paragraph 50 above and Bronner , paragraph 41). In that regard, in the contested decision, the Commission confines itself to stating that it is merely more convenient and simpler' to affix DSD's mark to packaging for which a competitor system is used in order to avoid the additional costs linked with the selective labelling of packaging (see recitals 103 to 105 of the contested decision). In that regard, the applicant points out that, in the case of concurrent use of a system other than the DSD system, the Der Grüne Punkt logo could be affixed to packaging or not, depending on the system used. That process is used moreover in the wine sector, in which the only bottles which are labelled with the DSD mark are those sold in the retail trade and which are not taken back to the shop, in the IT and construction sectors, in which products are sold in packaging bearing DSD's mark in the case of delivery to the retail trade and in packaging not bearing that mark in the case of deliveries to specialised trades or professional clients, and in the food sector, in which large packaging, tinned food and boxes are not labelled with the mark if they are delivered to the industry, restaurants or canteens, even though they are labelled when delivered to the retail trade. Manufacturers and distributors of packaging could thus make sure that packaging bearing

the Der Grüne Punkt logo is deposited only in the facilities belonging to the DSD system and that packaging which does not bear that logo is deposited only in facilities for which competitor systems ensure disposal.

94. The Commission, Landbell and BellandVision claim that selective labelling is not economically viable for manufacturers and distributors of packaging. Vfw also points out that DSD required its customers to pay the fee for all packaging bearing the mark Der Grüne Punkt, regardless of whether that packaging is actually disposed of by the DSD system or not.

ii) No elimination of competition in the absence of a compulsory licence for the mark Der Grüne Punkt

95. Second, the applicant criticises the contested decision in so far as it states (recital 115) that the fee system makes it more difficult for organisations competing with the DSD system to enter the market, which is not sufficient to show the elimination of competition required in Magill (paragraph 56, and Bronner , paragraph 41). As a result of the requirements of the Ordinance, selfmanagement solutions can, as a general rule, compete with the DSD system only for packaging delivered at small craft, retail and industrial undertakings. In that small segment of the market, there are approximately 40 selfmanagement solutions which do not use the mark Der Grüne Punkt and the quantities attributed to such systems increased by 60% between 1997 and 2000. Several large distribution chains have also moved to a system other than the DSD system, which is thus possible without difficulty and without DSD being required to grant a compulsory licence. There is thus no question of making market entry more difficult.

96. The Commission contests the statistical information provided by the applicant, which is explainable by the 1998 reform and the fact that there was, initially, very little packaging covered by selfmanagement solutions.

iii) The different forms of justification for DSD's conduct

97. Third, the applicant submits that the provisions of the Trade Mark Agreement in dispute are necessary to ensure the attainment of the objectives of the Ordinance, to preserve the different functions of the mark Der Grüne Punkt - which cannot, in any case, be subject to a compulsory licence - and to enable the DSD system to function properly.

- The need to ensure the objectives of the Ordinance

98. The applicant sets out the content of the transparency requirement linked to the principle of responsibility for the product, which is laid down in the Packaging Ordinance and the object of which is, according to the observations of the German authorities, to establish, in a transparent way for consumers and the authorities, which packaging is subject to the takeback obligation in the shop or in the direct vicinity and which packaging is not' (response to Question 2.a). Thus, in the case of use of an exemption system, the transparency requirement takes the form of a labelling requirement as defined in point 4(2) of Annex I to Paragraph 6 of the Ordinance, according to which manufacturers and distributors have to make it known that [certain packaging is part of the exemption system] by labelling or by other appropriate measures', whereas, in the case of use of a selfmanagement solution, it takes the form of the requirement to provide information as defined in the third sentence of Paragraph 6(1) of the Ordinance, according to which the distributor must make it known to the final, private consumer, by means of clearly identifiable and legible signs, that it is possible to return [the packaging]'. That transparency requirement makes it possible to know whether, for a specific piece of packaging, the manufacturer or distributor in charge of that packaging complies with his obligations by means of a selfmanagement solution or an exemption system. That also enables the consumer to know which system he needs to take that packaging to. Therefore, packaging participating in the DSD system should be taken back and recovered by that

system and packaging participating in another exemption system or selfmanagement solution should be taken back and recovered by that system. Packaging cannot belong to two systems.

99. Next, the applicant states that Article 3 of the contested decision infringes that transparency requirement since it is now possible for packaging participating in competing systems to bear the mark Der Grüne Punkt, which identifies the DSD system. If all packaging were to bear that mark, the final consumer would not be able to know which packaging should be brought back to the point of sale as part of a selfmanagement solution, and which should be deposited in the vicinity of his home as part of an exemption system. In that regard, the applicant points out that it is impossible to determine with any degree of certainty ex ante whether a specific type of packaging will actually be disposed of by the DSD system or by another system and that it is also impossible to determine, even ex post, whether a consumer has actually disposed of packaging through the DSD system (recital 134 of the contested decision). It is precisely for that reason that it is stipulated in the Ordinance that the consumer must be informed by means of clear labelling so that he knows whether the specific packaging in question is part of the DSD system and must, consequently, be taken to that system.

100. In addition, the applicant submits that the takeback and recovery obligation of a selfmanagement solution does not apply to packaging participating in an exemption system (see the letter of the Environment Minister of the Land Baden-Württemberg of 27 November 2001, p. 7). According to the Ordinance, such packaging is exonerated' from that obligation since it is allocated to the DSD system and bears the Der Grüne Punkt logo. That packaging can thus not be taken back by a selfmanagement solution. The Ordinance aims to prevent a waste war' in which competitor systems seek to collect any amount of waste in order to be able to achieve their recovery rates. Fair and orderly competition supposes rather that the different systems take back and recover only the packaging for which they assume the responsibility of disposing of the product (the case of selfmanagement solutions) or take over that responsibility (the case of exemption systems).

101. In addition, the applicant submits that the contested decision misinterprets the observations of the German authorities when it asserts that the consumer may freely decide whether he is to recover packaging through the DSD system or through another system where the manufacturer of distributor of packaging decides to use the DSD system together with another exemption system or with a selfmanagement solution (recitals 138, 141 and 145 of the contested decision). In response to a question put by the Commission, the German authorities merely stated that, in the case of use of a selfmanagement solution and an exemption system, the final consumer was free to decide whether to leave the packaging in the shop or to take it back there, or to take it to a disposal point near to his home, since the Packaging Ordinance does not contain any precise instructions requiring the final consumer to return packaging' (answer to Question 1.b.aa). The concept of disposing of waste in the vicinity of the home of the final consumer refers only to the disposal by means of public waste disposal bodies, the grey bin', and not to disposal through the DSD system, which also takes place in the vicinity of the home of the final consumer, the yellow bin'. Consumers are thus not free to chose the waste disposal system used.

102. The Commission claims that the applicant exaggerates the importance of marking packaging, since the obligation to take back and recover applies to quantities of packaging and not to specific packaging. In addition, according to Landbell and BellandVision, the Ordinance does not require that DSD's mark be affixed to packaging.

- The justification relating to trade mark law

103. First, the applicant submits that, in the contested decision, the Commission denies the distinctive function - also termed indicationoforigin - of the mark Der Grüne Punkt, whose objective is to distinguish packaging allocated to the DSD system from that covered by a competing exemption system or selfmanagement solution, by making it possible for that mark to be affixed to packaging intended

to be disposed of by a system other that the DSD system. Such an impairment of the distinctive function of the mark Der Grüne Punkt is, in principle, contrary to German, Community and international trade mark law.

104. As regards German law, the applicant states that the mark Der Grüne Punkt is registered in Germany as a collective mark and that it thus makes it possible to distinguish the goods or services of the undertakings affiliated to the owner of the collective mark from those of other undertakings in terms of commercial or geographical origin, type, quality or other property' (Article 97(1) Markengesetz of 25 October 1994 (Law on trade marks)). Therefore, a compulsory licence to use the mark Der Grüne Punkt would have the effect of depriving that mark of its distinctive character and would risk leading it to being deleted from the trade mark register.

105. As regards Community law, the applicant submits that the specific object of the mark Der Grüne Punkt, namely to guarantee the identity of the origin of the marked goods to the final consumer (Case 3/78 Centrafarm [1978] ECR 1823, paragraphs 11 to 14) and to protect its proprietor against a risk of confusion (Case C317/91 Deutsche Renault [1993] ECR I6227, paragraph 30, and the caselaw cited), would no longer be respected if certain packaging participating in the DSD system and others covered by a competitor system were to bear the mark Der Grüne Punkt without any distinction so that competitors with DSD could benefit from the fact that the DSD system is well known.

106. In addition, the applicant points out that the unlawfulness of the principle of compulsory licences for marks is laid down in Article 5A of the Paris Convention for the Protection of Industrial Property of 20 March 1883, as last revised at Stockholm on 14 July 1967 and amended on 28 September 1979 (United Nations Treaty Series , Vol. 828, No 11847, p. 108), ratified by all of the Member States, and in Article 21 of the Trade-Related Aspects of Intellectual Property Rights of 15 April 1994 (Annex 1 C to the Agreement establishing the World Trade Organisation, ratified by all of the Member States and approved by the European Community by Council Decision 94/800/EC of 22 December 1994 concerning the conclusion on behalf of the European Community, as regards matters within its competence, of the agreements reached in the Uruguay Round multilateral negotiations (1986-1994) (OJ 1994 L 336, p. 1, 214), which do not provide for compulsory licenses for marks.

107. The Commission maintains that the contested decision concerns only the fee system put in place by DSD and not the presumed effects of the decision on its activity as the proprietor of the mark Der Grüne Punkt. In that regard, the only effect of the decision is that undertakings which use the DSD system are not charged the fee twice if they use another system. Landbell and BellandVision also point out that the contested decision concerns only the legal relationship between DSD and its contractual partners in the context of the Trade Mark Agreement, and does not give third parties, which are not contractual partners, the right to use the mark Der Grüne Punkt.

108. Second, the applicant submits that the contested decision fails to have regard to the distinctive function of the mark Der Grüne Punkt, which makes it possible to influence consumer behaviour in the field of waste disposal in a way which is essential to the proper functioning of its system. If consumers do not place packaging bearing the Der Grüne Punkt logo back into the DSD system, the applicant risks no longer being able to achieve the recovery rates laid down in the Ordinance and losing its authorisation. Similarly, if consumers place into the DSD system packaging which does not bear the Der Grüne Punkt logo, the applicant is still required to recover that packaging even if the rates imposed have already been achieved (see the first sentence of point 1(5) of Annex I to Paragraph 6 of the Ordinance).

109. In that regard, the applicant criticises the assertion in recitals 138, 139 and 145 of the contested decision that the essential function of the Der Grüne Punkt logo is met once that logo informs the consumer that he has the option of having the packaging collected by DSD, in so far as it is based on a quote, taken out of context, of the judgment of 1994 of the Kammergericht Berlin

(footnote 22 of the contested decision). The passage cited in the decision merely states that the mark Der Grüne Punkt does not contain any assertion regarding the recyclable nature of the packaging. In another passage of the judgment the Kammergericht recognises the appeal function of the mark Der Grüne Punkt in holding that secondary packaging could bear that mark on overriding environmental grounds, even though, in a sense, consumers would be deceived.

110. Similarly, the applicant also contests the assertion contained in the contested decision that the consumer is free to decide whether to recover the packaging in question by the DSD system or by a competitor selfmanagement solution or exemption system (recital 145 of the contested decision), given that it is fundamental that the consumer be able to identify, by means of the mark Der Grüne Punkt, the fact that the packaging concerned is covered by the DSD system and not by another system. In that regard, the applicant submits that the distinctive function of its mark is confirmed by the survey conducted when preparing the reply. Thus, 60.8% of the consumers surveyed understood the mark Der Grüne Punkt as an indication of an entirely specific organisation which is responsible for recovering and disposing of such packaging' and 27.9% of those consumers referred specifically to the DSD system (see the results of the poll conducted by the Infratest Burke Institute, report of August 2001, Annex 85 to the reply), which shows the link existing between the mark and the DSD system in the mind of the consumer. According to another survey, conducted by the same institute, only 3.3% of the consumers surveyed stated that the mark conveys the information which is attributed to it in the contested decision, namely the indication that it is possible to dispose of the packaging (see the results of the survey conducted by the Infratest Burke Institute, report of August 2001, Annex 86 to the reply).

111. Finally, the applicant submits that the affixing of the mark Der Grüne Punkt to packaging participating in a competitor system impairs the distinctive function of that mark, since consumers are deceived in all of the cases envisaged in the contested decision. In the applicant's view, even where several systems are used, the consumer must always be able to determine for each piece of packaging the system which needs to be used, whether that be the DSD system - by the mark Der Grüne Punkt - or another exemption system - in a way consistent with point 4(2) of Annex I to Paragraph 6 of the Ordinance - or a selfmanagement solution - in a way consistent with Paragraph 6(1) of the Ordinance. Thus, in the case of competitive use of a selfmanagement solution and the DSD system, almost 48.4% of the consumers surveyed in the context of one of the surveys cited above would not understand the contradictory information represented, first, by the indication that packaging may be taken back to a shop in accordance with Paragraph 6(1) of the Ordinance and, second, by the indication transmitted by the Der Grüne Punkt logo that packaging is taken back in the vicinity of the home of the final consumer by the DSD system.

112. More broadly speaking, the applicant submits that the contested decision will lead to a situation where almost all packaging in Germany will bear the mark Der Grüne Punkt. Thus, participation in the DSD system for just 1% of marketed packaging could enable a user of the logo to use that mark, free of charge, for the remaining 99%. T he DSD system therefore is likely, in the short term, to have to treat packaging brought erroneously to its system and for which DSD does not receive any fee. In addition, and almost simultaneously, by virtue of the restriction of the meaning of the mark Der Grüne Punkt to a mere possible means of disposal, the DSD system's collection figures would fall and it would be in danger of not being able to achieve the statutory recovery rates.

113. In addition, the applicant asserts that the mark Der Grüne Punkt also fulfils a control function which makes it possible to prevent and take action against abuses committed by manufacturers and distributors of packaging which use the DSD system without paying a fee by means of checks carried out in shops, sorting checks or checks by the authorities. In that regard, the contested decision makes it more difficult to protect effectively against the problem of the profiteers which very

nearly led DSD to bankruptcy in 1993.

114. The Commission, supported by the interveners, observes that, in the absence of deception or confusion, the indicationoforigin function of a mark, which serves to distinguish or individualise the origin of goods or services, is not affected. In the present case, the perception of the mark Der Grüne Punkt by the final consumer buying the consumer goods and using different systems to dispose of the packaging is in essence that it is possible to ensure the disposal of packaging by the applicant's system. In addition, the mark Der Grüne Punkt does not play a decisive role during the collection of packaging since it is far from the case that the yellow bins and glass and paper containers used by the DSD system bear the mark in all of the collection areas. It is indeed for that reason that consumers do not associate the collection bins with the logo, but with the type of material concerned.

- The proper functioning of the DSD system

115. After having initially submitted that the provisions in dispute concerning the fee were proportionate to the services rendered, in so far as flatrate payment for authorisation to use the mark Der Grüne Punkt and the making available of the DSD system constituted the only practical solution in the absence of being able to determine the exact amount of packaging actually brought to the DSD system, the applicant submitted, at the reply stage, that the fee payable under the contested provisions was valid only for packaging for which the DSD system was used. Thus, the licence conferred by DSD under the Trade Mark Agreement was valid only for packaging participating in the DSD system and not for packaging covered by another exemption system or selfmanagement solution. Such a restriction of the licence to packaging bearing the Der Grüne Punkt logo is consistent with the Ordinance, which requires clear labelling of packaging participating in an exemption system in order to indicate that the manufacturer or distributor concerned is exonerated' from the obligation to take back and recover packaging, which is now DSD's responsibility (order of the Verwaltungsgerichtshof Kassel (Higher Administrative Court, Kassel, Germany) of 20 August 1999). Such a system could not function if the packaging for which the DSD system was not used were also to bear the logo identifying that system. No provision of the Trade Mark Agreement thus enables or requires the user of the logo to affix the mark Der Grüne Punkt to the packaging for which the DSD system was not used and there is no imbalance between DSD's service provision (the taking back and recovery of packaging) and the fee charged in consideration.

116. As regards the reference made by the Commission in the judgment of the Bundesgerichtshof (Federal Court of Justice, Germany) of 15 March 2001, given in BäKo , the applicant states that in that judgment the Bundesgerichtshof did not find that the contractual provisions relating to the fee were not appropriate. On the contrary, it noted that the applicant cannot claim the full fee under Article 4(1) and Article 5(1) of the Trade Mark Agreement for packaging which does not fall within its statutory competence, namely packaging from the industry and large undertakings. In that case, which is not covered in the contested decision (footnote 14 of the contested decision), the applicant had not provided the service providing exemption from the obligations which it had been called upon to provide. However, in the present case, the packaging at issue bears the mark Der Grüne Punkt and thus falls indisputably within DSD's competence, that is to say that it is deposited at the homes of private final consumers to whom DSD supplies the service providing exemption from the packaging treatment and recovery obligations, and even when consumers take packaging, by mistake, to a public waste disposal system or a competitor system which collects and recovers packaging.

117. The Commission submits that, in the case of use of the DSD system and another exemption system or selfmanagement solution, the relation between the service provided by DSD and the fee charged in consideration would be imbalanced if it were limited to taking into account the affixing to packaging of the Der Grüne Punkt logo since such a system would not take account of the reality

of the service provided to the participating undertakings.

118. In addition, the Commission observes that the arguments put forward by the applicant in the reply, according to which the fee applies only to packaging treated by its system, is contrary to its former practice. In that regard, the Commission invokes, first, the judgment in BäKo (paragraph 116 above), in which the Bundesgerichtshof held that, contrary to DSD's assertions, no claim could be made by that undertaking against one of its customers in relation to packaging bearing the mark Der Grüne Punkt which was delivered to professional buyers. Second, the Commission refers to the judgment in Hertzel , in which DSD relied on the Trade Mark Agreement to oppose the request of one of its customers for reimbursement of the part of the fee corresponding to the packaging for which DSD was not in a position to ensure a service providing exemption from the obligation to dispose of packaging (judgment of the Oberlandesgericht Düsseldorf (Higher Regional Court, Düsseldorf, Germany) of 11 August 1998, Hertzel , which was the subject of an appeal before the Bundesgerichtshof).

c) Findings of the Court

i) The abuse established in the contested decision

119. According to the contested decision, DSD abuses a dominant position in requiring payment of a fee for the total quantity of packaging bearing the Der Grüne Punkt logo and put into circulation in Germany, even though evidence is provided that, as regards the quantity of packaging for which the manufacturer or distributor does not use the DSD system, the takeback and recovery obligations laid down in the Ordinance are met by means of another exemption system or selfmanagement solution (see paragraph 58 above). The effects of that abuse are, according to the contested decision, twofold and demonstrate both an exploitation of DSD's customers, as a result of the disproportion between the payment required and the service provided, and an obstacle to the entry onto the market of competitors offering alternative solutions to the DSD system, in the light of the costs related to the linked use of a system other than the DSD system (see paragraph 50 above).

120. In that regard, it should be pointed out that the concept of abuse is an objective concept referring to the behaviour of an undertaking in a dominant position which is such as to influence the structure of a market where, as a result of the very presence of the undertaking in question, the degree of competition is weakened and which, through recourse to methods different from those which condition normal competition in products or services on the basis of the transactions of commercial operators, has the effect of hindering the maintenance of the degree of competition still existing in the market or the growth of that competition (Case 85/76 HoffmanLa Roche v Commission [1979] ECR 461, paragraph 91).

121. In particular, it is apparent from point (a) of the second paragraph of Article 82 EC that such abusive practice may consist, inter alia, of directly or indirectly imposing unfair prices or other unfair trading conditions. Thus, an undertaking abuses its dominant position where it charges for its services fees which are disproportionate to the economic value of the service provided (Case 26/75 General Motors v Commission [1975] ECR 1367; Case 27/76 United Brands v Commission [1978] ECR 207, paragraphs 235 to 268; and Case 226/84 British Leyland v Commission [1986] ECR 3263, paragraphs 27 to 30).

122. Similarly, an undertaking in a dominant position may commit an abuse by obstructing its competitors though binding its customers in law or in fact to its services and thereby prevent them from using competing suppliers (see, to that effect, HoffmanLa Roche v Commission , paragraph 90).

ii) The exclusivity claimed by the applicant

123. In that regard, the main argument raised by the applicant in its action is that competition

between the systems can take place only as a result, first, of the fact that the manufacturer or distributor concerned transfers to DSD the packaging in respect of which it wishes to be exonerated from the takeback and recovery obligation imposed in the Ordinance and, second, of the fact that the final consumer must be able to clearly identify the packaging which he may put back into the DSD system and that which he may put back into another exemption system or selfmanagement solution (see paragraph 115 above).

124. The mark Der Grüne Punkt thus makes it possible, at the same time, to indicate the packaging which is to be transferred to DSD, and thus exonerated from the takeback and recovery obligations imposed on manufacturers and distributors, and to inform the consumer as to what he is to do with it, which makes it possible to ensure that DSD is able to carry out the tasks assigned to it by that manufacturer or distributor of packaging. Consequently, only packaging for which the DSD system is used should be marked with the Der Grüne Punkt logo corresponding to that system, since it is packaging for which the applicant relieves the manufacturer or distributor concerned, both contractually and legally, of his takeback and recovery obligations under the Ordinance. In addition, the fact that the packaging concerned is the subject of a single indication regarding the takeback and recovery system to be used makes it possible to influence the behaviour of the final consumer, who is thus not mislead by other indications requesting him to take that packaging back to another system.

125. On the basis of that line of argument, the applicant submits that its fee system does not constitute an abuse in the light of Article 82 EC, given that that system restricts the remuneration payable in consideration for the take-back and recovery service by the DSD system solely to packaging bearing the Der Grüne Punkt logo for which the manufacturer or distributor of packaging has sought to be exempted from his obligations under the Ordinance. By way of example, that means that, if a manufacturer or distributor of packaging decided to market 100 items of packaging in Germany and to entrust the taking back and recovery of half of that packaging to DSD, he should affix the Der Grüne Punkt logo to 50 items of packaging to indicate to the consumer that those 50 items of packaging are intended to be taken back and recovered by DSD, namely the undertaking he has entrusted to treat that packaging. If the manufacturer or distributor decided to affix the logo to all 100 items of the packaging which it markets, it should thus pay a fee calculated on that basis - and do so even if, in concrete terms, only 50 items of that packaging are part of the DSD system - given that DSD could potentially find itself required to take back and recover the 100 items of packaging bearing the Der Grüne Punkt logo which it has been entrusted with pursuant to the Ordinance. The amount of the fee paid under the Trade Mark Agreement thus depends on the amount of packaging bearing the Der Grüne Punkt logo.

126. None the less, the applicant does not contest the fact that the manufacturer or distributor of packaging may combine the DSD system with another exemption system or a selfmanagement solution in order, inter alia, to avoid paying for a service which is not actually provided by the DSD system (see paragraph 46 above). However, in such a case, the applicant submits that that manufacturer or distributor should be in a position - before delivering the product to the final consumer - to distinguish the packaging for which it uses the DSD system from that for which it uses a different system. Taking the above example again, that means that for the other half of the 100 items of packaging placed on the market, the manufacturer or distributor should make it apparent that that packaging is part of another exemption system and not DSD's by a note on the packaging or any other appropriate means or by ensuring, in the case of use of a selfmanagement solution, that the distributor informs the final consumer that it is possible to return the packaging to the point of sale. In any event, the applicant considers that the Der Grüne Punkt logo cannot be affixed to the 50 items of packaging for which that manufacturer does not use the DSD system.

127. Following the applicant's line of argument, the Der Grüne Punkt logo is exclusive and may

not be used jointly with another indication likely to identify a system competing with the DSD system. The packaging marked with the Der Grüne Punkt logo comes exclusively within its system and cannot be taken into account by another system.

128. In order to support those arguments and contest the content of the contested decision, the applicant puts forward both the way in which competition takes place (see paragraph 93), which could be done on the basis of exclusive marking of the relevant packaging of the system used (see paragraph 95), and the Ordinance (see paragraphs 98 to 100), trade mark law (see paragraphs 103 to 113) and the individual needs of the functioning of the DSD system (see paragraphs 115 and 116), which that exclusive marking would require in the case of use of the DSD system.

iii) The detailed rules for the operation of mixed systems

129. The examination of the applicant's arguments requires the Court to check the premises on which they are based. It is necessary, inter alia, to establish whether, as asserted by the applicant, the manufacturer or distributor of packaging transfers to DSD a set amount of packaging intended to bear the Der Grüne Punkt logo and whether, which the applicant contests, the packaging which DSD is entrusted with may be covered by another takeback and recovery system at the same time as the DSD system.

130. At the hearing, the parties were questioned about the detailed rules for the operation of mixed systems in order to enable the Court to understand what the role of the packaging was, as such, and more specifically, that of the packaging bearing the Der Grüne Punkt logo in fulfilling the takeback and recovery obligations imposed in the Ordinance. That adversarial account enables the Court to make the following findings.

131. First, the recovery rates established in Annex I to Paragraph 6 of the Packaging Ordinance are calculated as a percentage of the total of the marketed material which is actually taken back and recovered and not according to the number or type of packaging concerned, whether it bears a logo identifying an exemption system or not. Point 1(1) of Annex I to Paragraph 6 of the Ordinance thus states that manufacturers and distributors of packaging must meet the requirements relating to the recovery of the packaging which they have put into circulation and that the same applies to operators of exemption systems for packaging in respect of which manufacturers and distributors participate in those systems. In that regard, it is stated in point 1(2) of Annex I to Paragraph 6 of the Ordinance that the quantities of relevant packaging are determined as a percentage of the total', whether it concerns packaging put into circulation by the manufacturer or by the distributor or packaging in respect of which the manufacturer or the distributor participates in an exemption system. In addition, since 1 January 2000, selfmanagement solutions and exemption systems have been subject to the same recovery rates per material (recital 19 of the contested decision).

132. Second, it follows from the above that the division of the quantities of packaging between the different systems, decided by the manufacturer or the distributor of packaging, does not concern predetermined quantities of packaging, but totals of the material which correspond to that packaging. That means, in practice, that where a packaging manufacturer decides to entrust in DSD the take back and recovery of half of the plastic packaging which it puts into circulation in Germany, DSD assumes the responsibility of taking back and recovering a quantity of material corresponding to half of that packaging. In order to achieve the recovery rates laid down in the Ordinance, DSD must therefore show the German authorities that it has submitted for recovery 60% of the total amount of plastic assigned to it by that manufacturer (60% is the recovery rate applicable to plastic). Similarly, if the manufacturer can show that it has placed on DSD the burden of the obligation to take back and recover in respect of half of the quantity of plastic put into circulation, it must also prove that it took back and recovered the remaining quantity of the material, corresponding to the remaining half, by means of a self-management solution or another exemption system.

133. Third, as soon as the recovery rates laid down in the Ordinance are achieved and the quantities of packaging are divided between the systems on the basis of the mass of material concerned and not by reference to the packaging as such, whether it bears the Der Grüne Punkt logo or not, that logo ceases to have the role or importance which the applicant claims. Thus, a manufacturer or distributor of packaging which decides to entrust DSD with the taking back and recovery of part of the packaging which it puts into circulation in Germany and to deal personally with the taking back and recovery of the other part of that packaging, by means of a self-management solution or by assigning it to another exemption system, must merely divide the quantities of materials between the different systems concerned without worrying about a specific definition of the conduct of the final consumer, contrary to the applicant's assertion.

134. Taking the specific example of a fastfood chain, raised at the hearing, that means that, where the final consumer purchases a sandwich sold in packaging intended to retain heat, that consumer is free to decide either to consume the product there and then and to place the packaging in the bins provided by the fastfood chain, in the context of its selfmanagement solution, or to take that product home and to place the packaging into the DSD collection facilities situated in the vicinity of his home. That packaging can thus be put back into two collection and recovery systems made available by the fastfood chain to comply with its obligations laid down in the Ordinance.

135. Contrary to the applicant's assertion (see paragraph 112), the fact that the packaging at issue may bear the Der Grüne Punkt logo, even though it may be taken back and recovered by another system, does not adversely affect the proper functioning of the DSD system, since what is important, in the contractual relations between the applicant and the manufacturer or distributor of packaging, is to ensure that the quantities of material to be recovered which are placed on the market are actually taken back and recovered in order to achieve the rates laid down in the Ordinance. As stated above, the achievement of those rates by the DSD system is not based on whether the packaging at issue bears the Der Grüne Punkt logo or not.

136. Also, in the case where a fastfood chain markets 100 tonnes of plastic in a given year and where it knows, in the light of the results of the previous year, that 50 of those 100 tonnes end up in its own selfmanagement solution, it must engage an exemption system to show that the other 50 tonnes of plastic placed on the market will be taken back or recovered in accordance with the obligations under the Ordinance. If the behaviour of that fastfood chain's customers is in line with that division of quantities, that is to say 50 tonnes of plastic to be taken back and recovered by a selfmanagement solution and 50 other tonnes of plastic to be taken back and recovered by an exemption system, the recovery rates of the different systems concerned will be achieved.

137. If, however, the consumer behaviour of that chain is not in line with the anticipated division of quantities, correction mechanisms will be implemented in order to take account of that reality. For example, if only 10 tonnes of plastic end up in the selfmanagement solution, the fastfood chain will thus have to buy back the missing 40 tonnes of plastic from systems which have a surplus, precisely, for having to take back and recover 40 extra tonnes of plastic. Similarly, if 90 tonnes of plastic end up in the selfmanagement solution, the fastfood chain will be able to request the exemption system concerned to reduce its fee, in so far as that chain has shown that it t ook back and recovered 40 of the 50 tonnes entrusted to it. Those rectification possibilities ensure that each system complies with the obligations laid down in the Ordinance while being remunerated for the service actually provided.

138. Such possibilities for rectification of quantities of material attributed on a contractual basis depending on actual collection and recovery results also exist in the case where a manufacturer or a distributor of packaging decides to use two or more exemption systems, such as the DSD system and the Landbell system. Incidentally, it must also be pointed out that concrete expression has

been given to those rectification possibilities in a compensation agreement, referred to at the hearing, which enables different system operators to share the quantities of material recovered by the collection undertakings to which they have recourse in respect of the quantities of the material for which they are responsible under the contracts signed with manufacturers and distributors of packaging.

139. Consequently, it follows from the above that the manufacturer or distributor of packaging does not transfer to DSD a set number of items of packaging intended to bear the Der Grüne Punkt logo, but rather a quantity of material which that manufacturer or distributor is going to market in Germany and whose taking back and recovery he intends to entrust to the DSD system. It is therefore possible for a manufacturer or distributor of packaging to use mixed systems in order to comply with the recovery rates laid down in the Ordinance.

iv) The applicant's criticism of the analysis in the contested decision

140. That account of the practical detailed rules for the operation of mixed systems makes it possible to assess the significance of the applicant's criticism of the analysis in the contested decision.

141. As a preliminary point, it should be recalled that only the provisions of the Trade Mark Agreement concerning the fee are regarded as abusive in the contested decision (namely Article 4(1) and Article 5(1) of the Agreement). Thus, the contested decision does not criticise the fact that Article 3(1) of the Agreement requires the manufacturer or distributor wishing to use the DSD system to affix the Der Grüne Punkt logo to each piece of notified packaging which is intended for domestic consumption. On the contrary, the Commission regards as abusive the conduct of DSD in requiring payment of a fee for the total quantity of packaging carrying that logo and put into circulation in Germany, even though evidence is provided that certain items of that packaging have been taken back and recovered by another exemption system or selfmanagement solution.

- The lack of need to affix the Der Grüne Punkt logo to all packaging in the case of use of a mixed system because it is possible to use selective marking on the basis of the system used

142. First, as regards the applicant's argument that it is not necessary that the Der Grüne Punkt logo feature on the packaging in the case of use of a mixed system, as the mark Der Grüne Punkt may be affixed, or not, to all packaging on the basis of the system being used, it is apparent from the above that no provision of the Ordinance requires selective marking of packaging.

143. In addition, as is stated in the contested decision (recitals 103 to 107 of the contested decision), the selective marking of packaging on the basis of the system used leads to a significant additional costs for manufacturers and distributors wishing to put uniform packaging into circulation in Europe or use mixed systems, because of the need to intervene at the stage of deciding on the packaging range and the need to control its marketing up until delivery to the final consumer. Furthermore, such efforts are likely to be nugatory in the light of the fact that it is the final consumer and not the manufacturer or distributor who decides on the place of take back and recovery of the packaging. In any event, in it arguments the applicant does not contest that selective marking has the effect of dissuading manufacturers and distributors of packaging from using alternative systems to the DSD system, which constitutes, precisely, one of the effects of DSD's conduct which is characterised as abusive in the contested decision (recitals 114 and 115 of the contested decision).

144. Moreover, the examples of selective marking cited by the applicant do not fall within the ambit of the contested decision, since they concern sectors for which part of the packaging at issue, namely the part aimed at business clients, is situated outside of the applicant's field of action, namely packaging for the final consumer.

145. It must therefore be found that the solution of selective marking, advocated by the applicant, is not imposed by the Ordinance and does not make it possible to put an end to the abuse found

in the contested decision.

- The arguments relating to the lack of elimination of competition

146. Second, as regards the applicant's arguments that competition is not eliminated by its conduct given that the quantities of packaging attributed to selfmanagement solutions increased by 60% between 1997 and 2000 and that some of DSD's customers went from using its system to using a different exemption system (see paragraph 95 above), it should be pointed out that that information does not take into account mixed systems which use partly the DSD system and partly a different exemption system or selfmanagement solution.

147. In addition, the increase in the quantities attributed to selfmanagement solutions cited by the applicant is decisive in the light of the information provided by the Commission in the rejoinder, in so far as very little packaging was actually handled by selfmanagement solutions in 1997 and only 333 000 tonnes were collected by selfmanagement solutions in 2000, namely only 6% of the 5.5 million tonnes collected by the DSD system in that same year.

148. In any event, that information cannot suffice to call into question the Commission's assessment in the contested decision as regards the abusive nature, in the light of Article 82 EC, of the conduct of DSD in requiring payment of a fee for all packaging carrying the Der Grüne Punkt logo and put into circulation in Germany, even where it has been proved that some of that packaging has been taken back and recovered by another exemption system or selfmanagement solution.

149. The argument based on the development of selfmanagement solutions and the moving of certain customers from the DSD system to another exemption system must therefore be rejected.

- The need to ensure that the objectives of the Ordinance are met

150. Third, as regards the need to ensure that the objectives of the Ordinance are met by enabling the applicant to require that packaging which is entrusted in the DSD system be equipped only with the Der Grüne Punkt logo (see paragraphs 98 to 100 above), it is apparent from the account of the practical detailed rules for the operation of mixed systems that such exclusivity is not imposed by the Ordinance in the case of use of mixed systems. In addition, the examination of those detailed rules shows that the logo does not have the effect which the applicant claims it to have, given that the recovery rates which must be achieved in order to comply with the takeback and recovery obligations laid down in the Ordinance are calculated on the basis of the material collected and not on the basis of the mark affixed to the packaging.

151. In that regard, as regards determining the role played by the final consumer, the applicant agrees that it is impossible to determine with any degree of certainty ex ante whether a specific type of packaging will actually be disposed of by the DSD system. In addition, the applicant cannot validly deny that, in response to a question put by the Commission which was seeking to find out whether it was accurate that, according to the Packaging Ordinance, the final consumer is free to decide whether to leave the packaging in the shop or to bring it back there, or to take it to a disposal point near his home', the German authorities responded that the Ordinance does not contain any express provision requiring the final consumer to return the packaging' and that the assumption contained in the question [put by the Commission] is therefore correct' (see the observations of the German authorities, response to Question 1.b.aa; reproduced in the contested decision, recital 20, footnote 8). In that regard, the applicant may claim only that the term disposal point near his home' concerns disposal by means of the public waste disposal system and not use of an exemption system, given that it follows clearly from the wording of the first question put by the Commission, concerning ways of complying with the recovery rates laid down in the Ordinance, and from the observations of the German authorities in response to Question 1(a), which states that collection in the vicinity of the final consumer is to take place on the basis of an exemption system, that that term refers

to an exemption system within the meaning of Paragraph 6(3) of the Ordinance.

152. Consequently, none of the arguments presented by the applicant makes it possible to call the contested decision into question in so far as it is stated there that, under the Ordinance, the final consumer is free to decide, in the case of a mixed system, which system he wishes to return the packaging to (recitals 138, 141 and 145 of the contested decision).

153. In addition, in respect of the possibility of indicating to the consumer that packaging may be taken back and recovered by several systems, it is apparent from the contested decision (recitals 141 and 145) that the different types of advertising laid down in the Ordinance - namely by marking packaging or other suitable means for exemption systems (point 4(2) of Annex I to Paragraph 6 of the Ordinance) and the indication of the possibility of returning packaging at the point of sale for selfmanagement solutions (third sentence of Paragraph 6(1) of the Ordinance) - make it possible to inform the final consumer about the different possibilities for returning the packaging at issue without thereby validating the applicant's arguments that the affixing of the Der Grüne Punkt logo to packaging has the effect of preventing the take back and recovery by a system other than the DSD system.

154. In that regard, it should be pointed out that it is not stated in the Ordinance that the Der Grüne Punkt logo may not be affixed to packaging collected in the context of a competitor exemption system or a selfmanagement solution if they comply, in addition, with the conditions laid down in the Ordinance to identify the system used in conjunction with the DSD system. Such indications may be cumulative and the same piece of packaging may thus be covered by several systems at the same time. It is with that in mind that the Commission rightly interprets the transparency requirement defined by the German authorities in their observations, namely that it is necessary to clearly define, in the interests of the consumer and of the authorities, which packaging is subject to the takeback obligation at or in the immediate vicinity of the points of sale and which is not (see the observations of the German authorities, the response to the final sentence of Question 2.a; recitals 20, 141 and 142 of the contested decision).

155. The arguments relating to the need to ensure that the objectives of the Ordinance are met must therefore be rejected.

- The justification relating to trade mark law

156. Fourth, as regards the applicant's arguments relating to trade mark law (see paragraphs 103 to 113 above), the fact that, in the case of shared use of two exemption systems, the Der Grüne Punkt logo and the indication by a suitable means' of another exemption system within the meaning of point 4(2) of Annex I to Paragraph 6 of the Ordinance feature on the same packaging, and the fact that, in the case of shared use of the DSD system and a selfmanagement solution, the Der Grüne Punkt logo and an indication that it is possible to return the packaging to the shop appear on the same packaging, does not adversely affect the essential function of DSD's mark (see, to that effect, Case 238/87 Volvo [1988] ECR 6211, paragraph 9; Magill , paragraphs 49 and 50; and Case T198/98 Micro Leader v Commission [1999] ECR II3989, paragraph 56). As stated in the contested decision, it is apparent from a judgment of the Kammergericht Berlin of 14 June 1994 that for the market in question' that mark says no more than that the product thus identified may be collected via the DSD system' and gives no indication as to the quality of the service offered (recital 145 of the contested decision). In addition, in the case of allocation of part of the packaging to one of DSD's competitors, the consumer is free to decide whether he has the packaging recovered through the DSD system or a competitor system.

157. Therefore, since the function of the Der Grüne Punkt logo is to identify the possibility of having the package at issue collected by the DSD system and since that logo may be affixed

together with other signs of other mechanisms making it possible to identify another possibility for collection by a competitor selfmanagement solution or exemption system, it cannot be claimed that the contested decision constitutes a disproportionate impairment of the trade mark right or, in any event, an impairment which is not justified by the need to prevent an abuse of a dominant position within the meaning of Article 82 EC.

158. In that regard, the applicant's criticism of the use made, in the contested decision, of the judgment of the Kammergericht Berlin (see paragraph 109 above) is not relevant. It merely points to the particular context of the judgment in which the Kammergericht Berlin rejects the idea that the Der Grüne Punkt logo could give any indication as to the quality of the waste disposal service, but does not call into question the conclusion arrived at by the Commission, namely that several indications informing the consumer about the steps to be taken in relation to the different takeback and recovery services may feature on the same packaging. The above example of the fastfood chain thus shows the actual meaning of the mark Der Grüne Punkt where it is affixed to packaging which is also collected and recovered by another system.

159. As regards the arguments based on the surveys provided by the applicant (see paragraph 110 above), it should be pointed out that the results of those polls do not call into question the reasoning in the contested decision. It is logical that consumers identify the Der Grüne Punkt logo affixed to the packaging as being the indication that that packaging may be placed in the collection facilities situated close to their homes. However, that does not disclose the reactions of those consumers when faced with packaging to which several logos identifying exemption systems are affixed. The Commission and the interveners state in that regard, as was confirmed at the hearing, that the collection facilities used by those systems are generally the same and that, most of the time, the consumer deposits packaging in those facilities on the basis of the material used and not on the basis of the logo on the packaging. Similarly, as regards the case of a mixed system combining the DSD system and a selfmanagement solution, the indication that 48.4% of consumers would not understand the contradictory indications referring to those two systems does not seem relevant in the light of the fact that they merely indicate the free choice given to consumers in the case of a mixed system and that, consequently, they cannot give rise to a contradiction, as illustrated by the example of the fastfood chain examined above.

160. In addition, the argument based on deception of the public targeted by the mark cannot be upheld (see paragraph 111 above), given that the Trade Mark Agreement concerns only users of that logo, namely manufacturers and distributors of packaging which use the DSD system, and not consumers.

161. Moreover, accepting the exclusivity claimed by the applicant would have no other effect than to prevent manufacturers and distributors of packaging from using a mixed system and to legitimise the possibility, for the applicant, of being paid for a service which the interested parties have nevertheless shown that it did not actually provide, they having entrusted it to another exemption system or selfmanagement solution in accordance with the detailed rules laid down in Article 1 of the contested decision.

162. The arguments relating to trade mark law must therefore be rejected since the specific function of the mark Der Grüne Punkt in the case of mixed systems is not adversely affected.

- The proper functioning of the DSD system

163. Finally, as regards the arguments concerning the need to respect the proper functioning of the DSD system (see paragraphs 115 and 116 above), it follows from the above that the proper functioning of that system is not called into question in the case of mixed systems. In any event, the specific needs of the functioning of the DSD system cannot justify the applicant's conduct, described in the Bäko judgment of the Bundesgerichtshof and the Hertzel judgment of the Oberlandesgericht

Düsseldorf, cited by the Commission (see paragraphs 116 and 118 above), the various complaints put forward by the Commission (recitals 3 and 6 of the contested decision) and DSD's initial submission in its application (see paragraph 115 above), whereby it requires payment of a fee for all packaging carrying the Der Grüne Punkt logo and put into circulation in Germany, even where it is proved that some of that packaging has been taken back and recovered by another exemption system or a selfmanagement solution.

v) Conclusion

164. It follows from the above that, in accordance with what is stated in the contested decision, neither the Packaging Ordinance, nor trade mark law or the specific needs of the functioning of the DSD system authorise the applicant to require undertakings which use its system to pay a fee for all packaging carrying the Der Grüne Punkt logo and put into circulation in Germany, where those undertakings show that they do not use the DSD system for some of that packaging.

165. Consequently, the first plea must be dismissed.

2. The second plea, alleging infringement of Article 3 of Regulation No 17 and infringement of the principle of proportionality

166. The applicant states that, according to Article 3 of Regulation No 17, the Commission may, by decision, require the undertakings to bring the infringement found to an end. The decision seeking to bring an end to the infringement must respect the principle of proportionality and can, therefore, order only what is appropriate and necessary to bring an end to the infringement and to re-establish compliance with the rules infringed (Case T76/89 ITP v Commission [1991] ECR II575, paragraph 80, and Case T7/93 Langnese Iglo v Commission [1995] ECR II1533, paragraph 209). In the p resent case, the measures imposed by Articles 3, 4 and 5 of the contested decision do not satisfy those requirements.

a) The selective marking

167. In essence, the applicant alleges that selective marking of packaging depending on the system used is more appropriate than the obligation imposed in the contested decision.

168. The applicant observes that, in the contested decision, the Commission states that, for DSD's customers, the selective labelling of uniformlydesigned packaging (with or without the mark Der Grüne Punkt) would, in a not inconsiderable number of cases, be economically unrealistic' (recital 103 of the contested decision). No compulsory licence should therefore be imposed in cases where selective labelling would not fail because of economic realities. In such cases, an abuse of a dominant position is, in itself, excluded and the measures laid down in Article 3 and Article 4(1) of the contested decision are disproportionate.

169. The Commission submits that the contested decision envisages cases where the packaging is identical and that it gives the reasons why it would not be realistic to ask manufacturers and distributors of packaging to differentiate the packaging on the basis of the takeback and recovery system which it belongs to.

170. The Court points out that, when characterising the abuse of a dominant position, the contested decision examined DSD's arguments that manufacturers and distributors of packaging which use its system should be in a position not to affix the Der Grüne Punkt logo to packaging which is not covered by the DSD system. According to the contested decision, the selective marking of packaging on the basis of the system used does not constitute a suitable solution for enabling manufacturers and distributors of packaging to use a selfmanagement solution or another exemption system in conjunction with the DSD system. The Commission considers that that would lead to a significant increase in production and distribution costs (recitals 104 and 105 of the contested decision), that it is

difficult, if not impossible, to control the actual route taken by packaging right up to the final point of sale (recital 106 of the contested decision) and that it is up to the consumer to decide on the place where he wishes to return the packaging in the case of use of a selfmanagement solution and an exemption system (recital 107 of the contested decision).

171. It is in that context that the extract of the contested decision cited by the applicant needs to be understood, where it states that the nonaffixing of the Der Grüne Punkt logo to packaging which does not come under the DSD system would, in a not inconsiderable number of cases, be economically unrealistic' (recital 103 of the contested decision).

172. However, it cannot be inferred from that assessment that the measures imposed in Articles 3 to 5 of the contested decision are disproportionate. Those measures merely require DSD not to charge a fee on the total amount of packaging marked with the Der Grüne Punkt logo where it is shown that some of that packaging has been taken back and recovered through another system. As shown by the examination of the detailed rules for the operation of mixed systems carried out in the context of the first plea (see paragraphs 131 to 138 above), the competition between systems takes place on the basis of the quantities of material to be recovered and not on the basis of predetermined quantities of packaging which fall exclusively - in particular by means of selective marking - within one or the other of the systems used. In addition, the measures at issue do not disproportionately impair DSD's interests, since it is still remunerated for the service which it provides, namely the taking back and recovery of quantities of material entrusted by the manufacturers and distributors of packaging which participate in its system.

173. Therefore, the fact that it may theoretically be possible to affix the logo to packaging selectively cannot entail the annulment of the above measures, since that solution is more expensive and difficult to implement for manufacturers and distributors of packaging than the measures laid down in Articles 3 to 5 of the contested decision, which seek only to limit the remuneration for the service offered by DSD to the service actually provided by its system.

174. Moreover, for the Commission to accept the principle of selective marking would be akin to permitting DSD to continue to abuse its dominant position, in so far as the costs related to that solution and the practical difficulties involved in its implementation are likely to dissuade DSD's customers from using an alternative system to the DSD system to take back and recover in Germany some (Cases No 1 and 2), or all, of their packaging (Case No 3).

175. In consequence, the first complaint must be rejected.

b) The imposition of a compulsory licence without any time restriction

176. The applicant submits that Articles 3 and 4(1) of the contested decision are disproportionate because they require the granting of a licence to third parties to use the mark Der Grüne Punkt without any time restriction and even if the case of nonparticipation in the DSD system, although the only reasoning given in that regard relates to the fact that as a result of the provisions in dispute of the Agreement, it is much more difficult for competitors to enter the market (see recital 115 of the contested decision). A compulsory licence could thus be envisaged only for the period corresponding to the entry of competitors on the market.

177. The Commission observes that the applicant's potential competitors would be excluded from the market once again if their customers were to become liable (again) for payment of the fee to DSD for the quantities outside the DSD system.

178. The Court points out that, in the context of its assessment concerning Article 82 EC, the contested decision considers that the conduct of DSD in requiring payment of a fee for the total quantity of packaging carrying the Der Grüne Punkt logo and put into circulation in Germany amounted

to an abuse of its dominant position and a barrier to market entry (recitals 110 to 135 and Article 1 of the contested decision). According to the decision, the fee cannot be required when the manufacturers and distributors of packaging which use the DSD system for only some of the packaging put into circulation in Germany show that they fulfil the takeback and recovery obligations laid down in the Ordinance through competitor exemption systems or selfmanagement solutions (Cases No 1 and 2). Similarly, the fee cannot be required when the manufacturers and distributors of packaging which have not used the DSD system in Germany, but put into circulation in that country standardised packaging which they also put into circulation in another Member State for which they participate in a takeback system using the Der Grüne Punkt logo, show that they fulfil the obligations under the Ordinance through competing exemption systems or self-management solutions (Case No 3).

179. It is in order to bring an end to the infringement of Article 82 EC that the Commission requires DSD to comply with the obligations laid down in Article 3 and Article 4(1) of the contested decision.

180. Those obligations thus do not concern third parties but manufacturers and distributors of packaging which are either contractual partners of DSD in the context of the Trade Mark Agreement (the case of Article 3, which concerns Cases No 1 and 2), or holders of a licence to use the mark Der Grüne Punkt in another Member State in the context of a take-back and recovery system using the logo corresponding to that mark (the case of Article 4(1), which concerns Case No 3).

181. Similarly, those obligations do not seek to force DSD to grant a licence to use the mark Der Grüne Punkt without any restriction in time, but merely to require it to not charge a fee on the total amount of packaging bearing the Der Grüne Punkt logo where it is shown that all or only some of that packaging has been taken back or recovered through another system.

182. Consequently, as long as the users of the Der Grüne Punkt logo prove that the quantities of packaging for which they do not use the DSD system have actually been taken back and recovered by the exemption system(s) or selfmanagement solution(s) which they use, the applicant cannot claim that it is disproportionate to ask it not to be paid for a service which it does not provide.

183. Accordingly, the second complaint must be rejected.

c) The prior provision requirement

184. The applicant states that it is apparent from the first sentence of Article 3, Article 4(1) and Article 5(2) and (3) of the contested decision that users of the logo are free to refuse to pay the fee to use the mark Der Grüne Punkt by affirming that they no longer intend to use the DSD system for some of their packaging and that they are going to satisfy the obligations resulting from the Ordinance by personally disposing of the packaging. Article 5(3) and (7) of the contested decision prohibits the applicant from demanding the submission of the certificate from an expert before the date laid down in the Ordinance (1 May of the following year) or to demand other proof. In the applicant's view, that measure is disproportionate and leads to an unfair division of risks in so far as the applicant is to forgo payment of the fee in advance and subject that payment to a submission of evidence procedure, which should take place 16 months later, while bearing its customer's liquidity risk during that period.

185. The Commission claims that a situation in which almost all of the distributed packaging is taken back from the DSD system is hardly likely to materialise in view of the obligations to furnish evidence which are associated with it. In addition, the concept of prior provision' is inexact since the applicant would be required to obtain payment after the event only if the other collection systems did not achieve the rates laid down. Undertakings which offer selfmanagement solutions for collection will not advise their customers to act in that way since they seek to achieve the rate laid down for the quantity which has been allocated to them contractually, in order to avoid

the subsequent obligation to obtain a partial licence, from a competitor, supplemented by payment of interest if necessary, if that rate is not achieved.

186. First of all, the Court points out that the case put forward by the applicant that certain users of the logo could refuse to pay the fee to use the mark Der Grüne Punkt by affirming that they no longer intend to use the DSD system for some of their packaging is, in practice, hardly likely in the light of the fact that the Ordinance requires those users to prove that they have complied with their obligations to take back and recover packaging marketed through another system and that, if that were not the case, those users would then have to buy the missing quantities from the DSD system if that system had taken back the quantities of material corresponding to that packaging (see paragraphs 137 and 138 above).

187. In addition, it is apparent from Article 5(3) of the contested decision that DSD may on no account require the certificate to be presented at an earlier time than is laid down under the Packaging Ordinance' and Article 5(7) that other provisions of the Trade Mark Agreement shall not be applied in such a way as to require a higher level of proof to be furnished to DSD'.

188. Those measures seek to guarantee the possibility, for the manufacturer or the distributor of packaging who uses a competitor exemption system or a selfmanagement solution for some of the packaging which he puts into circulation, to provide DSD with the confirmation from the operator or independent expert, or an accountant's certificate, necessary to show that the obligations imposed in the Ordinance are met by a system other than the DSD system for a specific quantity of packaging (see Article 5(1), (2), (4) and (6)).

189. Therefore, the applicant cannot claim that those measures are disproportionate since the certification process is valid for all systems, including the DSD system, and it does not give any particular reasons justifying its derogation from that process. In addition, the concept of prior provision' raised by the applicant is deceptive, given that DSD is remunerated in consideration for the quantities of material entrusted to it by its customers and that it is only in the case of problems, namely if the other collection systems do not achieve the rates laid down for the quantities with which they are entrusted, that DSD may request payment for the surplus.

190. Consequently, the third complaint must be rejected.

d) The exclusion of an adequate fee for merely using the mark

191. The applicant claims that, by Articles 3 and 4 of the contested decision, the Commission requires it to not charge a fee where it is proven that the obligations resulting from the Ordinance are complied with in some other way. DSD is thus not entitled to claim a fee from users of the logo for merely using the mark Der Grüne Punkt. That exclusion is contrary to the caselaw of the Court of Justice which accepts that a reasonable fee may be levied (see Volvo , paragraph 11).

192. The Commission submits that the contested decision does not impose a compulsory licence on DSD but merely seeks to prevent DSD from levying a fee when the packaging to which the logo is affixed is not taken back and recovered by the DSD system. At the hearing, the Commission stated that, as the Trade Mark Agreement notified by DSD does not distinguish the fee payable for use of the mark from that due for use of the DSD system, the decision does not address the issue as to whether a fee may be requested for merely using the mark.

193. The Court observes that the obligation imposed on DSD, in Article 3 of the contested decision, enables manufacturers and distributors which use its system for only some of their packaging not to pay the fee to DSD where it is proved that the packaging bearing the Der Grüne Punkt logo has not been collected and recovered by the DSD system but by a competitor system.

194. However, even in that case, it cannot be excluded that the mark Der Grüne Punkt affixed to

the packaging at issue may have economic value as such, since it can inform the consumer that the packaging at issue may be brought to the DSD system, as is also stated in the contested decision (recital 145). Therefore, even if that packaging is not actually brought to the DSD system and it is shown that its equivalent in material has been collected or recovered by a competitor system, it is none the less the case that the mark leaves it open to the consumer to dispose of that packaging through the DSD system. Such a possibility offered to the consumer for all the packaging put into circulation with the Der Grüne Punkt logo, whether part of the DSD system or not, after checking the quantities collected, is likely to have a price which, even if it cannot represent the actual price of the collection and recovery service, as could be the case under the provisions in dispute of the Trade Mark Agreement, should be able to be paid to DSD in consideration for the service offered in the present case, namely the making available of its system.

195. When questioned in that regard at the hearing, the Commission accepted that that question was not envisaged in the contested decision, which merely examined the legality of DSD's conduct as regards the payment of a fee for a service in respect of which it has been proved that it was not provided by the DSD system but by another system.

196. Consequently, it must be found that the contested decision must be interpreted as not precluding the possibility for DSD to levy an adequate fee for merely using the mark where it is shown that the packaging bearing the Der Grüne Punkt logo has been taken back and recovered by another system.

e) The possibility of affixing an explanatory note

Arguments of the parties

197. The applicant claims that the obligation laid down in the first paragraph of Article 3 of the contested decision is disproportionate in so far as it prevents it from requiring users of the logo to affix an explanatory note to packaging in Cases No 1 and 2. According to DSD, such a note, which could be affixed without great difficulty by the manufacturers and distributors of packaging which use its system, would make it possible to attenuate the infringement of the mark Der Grüne Punkt which follows from the contested decision. That note could thus indicate to the consumer that, in a given Land , the packaging is not part of the DSD system but part of another exemption system (Case No 1) or that, even if the packaging is labelled with the Der Grüne Punkt logo, certain points of sale do not use the corresponding system but a selfmanagement solution (Case No 2).

198. In addition, the applicant states that, under Article 4(2) of the contested decision, it may require manufacturers or distributors of packaging which do not use the DSD system in Germany but put into circulation in another Member State standardised packaging for which they participate in a takeback system using the Der Grüne Punkt logo (Case No 3), to affix an explanatory note to the packaging in order to draw the attention of the consumer to the fact that that packaging is not taken back by the DSD system in Germany. According to the applicant, such a measure is disproportionate since a different measure, namely the total concealment of the Der Grüne Punkt logo and not the mere affixing of a note next to that logo, would have less of an adverse effect on the indicationoforigin function of its mark.

199. The Commission observes that, as regards Case No 1, nothing permits the inference that the Ordinance prohibits competitor systems from using the same logo. In the applicant's view, undertakings subject to the fee should amend the explanatory note each time that the competitor system is introduced into a new Land. That would, in particular during the launch of the competitor system, require continuous amendment of the packaging. For Case No 2, an explanatory note on the packaging would be impossible. As regards Case No 3, the Commission states that, if the mark Der Grüne Punkt were to benefit from the protection claimed by the applicant, manufacturers would have to provide

different packaging for each Member State, which would not be of any economic interest and would constitute a barrier to trade.

Findings of the Court

200. As regards the complaint relating to the first paragraph of Article 3 of the contested decision, the affixing of explanatory notes desired by the applicant cannot have the effect of putting an end to the abuse of a dominant position characterised in Article 1 of the decision. Such notes are based on the idea that it would be possible to distinguish packaging bearing the Der Grüne Punkt logo, which is part of the DSD system, from that to which the Der Grüne Punkt logo is indeed affixed but which is not part of the DSD system and which should thus be the subject of a note aimed at drawing the consumer's attention. However, as has been pointed out (see paragraphs 131 to 138 above), the specific rules for the operation of mixed systems are not based on the identification of packaging by consumers, who remain free to decide which system they are going to bring the packaging back to, but on the allocation of total material to be recovered.

201. The affixing of the notes sought by the applicant thus does not make it possible to bring an end to the abuse of a dominant position found by the Commission in Cases No 1 and 2.

202. Consequently, the Court must reject the complaint alleging that Article 3(1) of the contested decision is disproportionate in so far as it does not envisage the possibility of affixing an explanatory note.

203. As regards the complaint concerning Article 4(2) of the contested decision, it is apparent from that measure that DSD may require, as a precondition for the waiver of the licence fee, that it be made clear to the final consumer on the packaging referred to [in Case No 3], in words or other suitable form placed close to the [Der Grüne Punkt logo], that the packaging does not participate in the dual system set up by DSD under Paragraph 6(3) of the Ordinance'. That provision is merely a reproduction of a commitment proposed by DSD in the context of the administrative proceedings (recitals 63 and 133 of the contested decision). DSD cannot therefore claim, in the context of the current proceedings, that a solution other than that which DSD itself proposed to the Commission now constitutes a more appropriate solution to address the problem identified during the proceedings. In addition, to accept the solution advocated by the applicant, namely the concealing of the Der Grüne Punkt logo rather than placing a note close to that logo would be akin to requiring packaging manufacturers to provide different types of packaging for each Member State, which would not be economically rational.

204. Consequently, the complaint alleging that Article 4(2) of the contested decision is disproportionate in so far as it requires the affixing of a note to packaging even though it would have been possible to conceal the Der Grüne Punkt logo must be rejected.

3. The third plea, alleging infringement of Article 86(2) EC and of Article 253 EC

a) Arguments of the parties

205. The applicant submits that an infringement of Article 82 EC is ruled out because it is entrusted with the operation of services of general economic interest within the meaning of Article 86(2) EC, namely waste management for environmental purposes and, more precisely, the collection and recovery of packaging throughout Germany including in unprofitable rural areas (Case C393/92 Almelo [1994] ECR I1477, paragraph 47; Case C209/98 Sydhavnens Sten & Grus [2000] ECR I3743, paragraphs 75 and 76; and Case T106/95 FFSA and Others v Commission [1997] ECR II229, paragraph 72). That service of general economic interest has been entrusted to it by the German Länder as a result of the recognition of the DSD system under the 11th sentence of Paragraph 6(3) of the Ordinance. The contested decision threatens the carrying out, under economically acceptable

conditions, of that service, since it destroys the signal effect of the mark Der Grüne Punkt and is likely to prevent it from disposing of waste throughout the country. Similarly, the contested decision infringes the duty to give the reasons upon which it is based, to which it is subject under Article 253 EC, since it does not deal with Article 86(2) EC.

206. The Commission, supported by the interveners, disputes that DSD provides a service of general economic interest entrusted to it by the German regional waste authorities, in so far as any operator of an exemption system may obtain the same authorisation as DSD on the basis of the 11th sentence of Paragraph 6(3) of the Ordinance. In addition, it follows from the Ordinance that the legislature did not seek to prevent the coexistence of selfmanagement solutions and exemption systems, parallel to the system put in place by the applicant. That competition is not a risk but the objective of the Ordinance.

b) Findings of the Court

207. Under Article 86(2) EC, undertakings entrusted with the operation of services of general economic interest are to be subject to the rules contained in the Treaty, in particular to the rules on competition, insofar as the application of such rules does not obstruct the performance, in law or in fact, of the particular tasks assigned to them. That article also states that the development of trade must not be affected to such an extent as would be contrary to the interests of the Community.

208. In the present case, it must be pointed out that, even supposing that the applicant is entrusted with a service of general economic interest within the meaning of Article 86(2) EC, and in the same way as all exemption systems approved by the authorities of the Länder , the fact remains that the risk of that task being called into question as a result of the contested decision has not been shown.

209. Contrary to the applicant's claim in the context of the present plea, the fact that DSD cannot be remunerated for a service which has been shown to be provided by another system in no way leads to the conclusion that the contested decision threatens the carrying out, under economically acceptable conditions, of the takeback and recovery service entrusted to the DSD system.

210. In particular, it is apparent from paragraphs 156 to 158 above, that the contested decision does not call the essential function of the mark Der Grüne Punkt into question in the context of the Trade Mark Agreement. Similarly, there is nothing in the casefile which leads to the conclusion that the contested decision is likely to prevent DSD from disposing of packaging throughout Germany.

211. In addition, since the applicant did not rely on Article 86(2) EC in the administrative proceedings, the Commission cannot be accused of not having given reasons in that regard in its decision.

212. Consequently, the third plea must be dismissed.

213. It follows from the above that the action must be dismissed in its entirety.

Costs

214. Under Article 87(2) of the Rules of Procedure, the unsuccessful party is to be ordered to pay the costs if they have been applied for in the successful party's pleadings. Since the applicant has been unsuccessful in its pleadings, and the Commission, Landbell and BellandVision have applied for costs, the applicant must be ordered to pay, in addition to its own costs, those of the Commission, Landbell and BellandVision, including those relating to the interlocutory proceedings. Vfw, which has not applied for costs, shall bear its own costs, including those relating to the interlocutory proceedings.

Case T-289/01

Der Grüne Punkt – Duales System Deutschland GmbH

v

Commission of the European Communities

(Competition – Agreements, decisions and concerted practices – Collection and recovery system for packaging marketed in Germany bearing the Der Grüne Punkt logo – Decision granting exemption – Obligations imposed by the Commission to ensure competition – Exclusivity granted by the system operator to the collection undertakings used – Restriction of competition – Need to guarantee the access of competitors to the collection facilities used by the system operator – Commitments given by the system operator)

Summary of the Judgment

1. *Competition – Agreements, decisions and concerted practices – Not allowed – Exemption – Commitment given during the administrative proceedings*

   (Art. 81 EC)

2. *Competition – Agreements, decisions and concerted practices – Not allowed – Exemption – Conditions*

3. *Competition – Agreements, decisions and concerted practices – Not allowed – Exemption – Conditions*

   (Art. 81(1) and (3) EC; Council Regulation No 17, Art. 8(1))

4. *Competition – Community rules – Application by national courts*

   (Art. 81(1) EC)

5. *Competition – Undertakings entrusted with the operation of services of general economic interest*

   (Art. 86(2) EC)

1. A commitment given by an undertaking during the administrative proceedings to address the concerns voiced in such proceedings by the Commission has the effect of clarifying the content of the agreements notified for the purposes of obtaining negative clearance or exemption under Article 81 EC, by showing the Commission the way in which that undertaking intends to act in the future. The Commission is thus entitled to take account of that commitment in adopting its decision, and it is not the task of the Court of First Instance to examine the legality of that decision in the light of a right which the undertaking waived during the administrative proceedings.

   (see paras 87-89)

2. Where facilities belonging to the contractual partners of an undertaking which handles the greater part of demand form a bottleneck for that undertaking's competitors, the Commission may oblige that undertaking, as a condition for granting negative clearance or an exemption under Article 81 EC, to allow shared use of those facilities between itself and its competitors, since otherwise the latter would be deprived of any real opportunity of entering, and remaining on, the market in question.

   (see paras 107, 112-113)

3. Article 8(1) of Regulation No 17 provides that conditions and obligations may be attached to decisions granting exemption without stipulating under what conditions the Commission must choose a particular one of those possibilities. In addition, since Article 81(3) constitutes, for the benefit of undertakings, an exception to the general prohibition contained in Article 81(1) EC, the Commission enjoys a large measure of discretion in relation to the detailed rules to which it may subject the exemption, while at the same time having to act within the limits imposed upon its competence by Article 81 EC.

   The fact that, in certain cases, the Commission has preferred to impose conditions rather than obligations is not sufficient, in itself, to call into question the possibility provided for in Regulation No 17 of coupling a decision granting exemption with obligations rather than conditions.

(see paras 153-154)

4. Where national courts rule on agreements or practices which are already the subject of a decision by the Commission, acting within the competence conferred upon it to enforce the Community competition rules, they cannot take decisions running counter to that of the Commission, even if the latter's decision conflicts with a decision given by a national court of first instance.

(see para. 197)

5. Even if an undertaking managing a collection and recovery system for sales packaging is entrusted with a service of general economic interest within the meaning of Article 86(2) EC, the fact that the Commission has imposed an obligation on it not to impede collection undertakings from concluding with that undertaking's competitors contracts authorising them to use their bins and other collection and sorting facilities for packaging and to apply those agreements does not in any way prove that the attainment, on economically acceptable conditions, of the take-back and recovery service entrusted to that system is threatened.

(see paras 207-208)

Judgment of the Court of First Instance (First Chamber)
First Instance (First Chamber)First Instance (First Chamber)2007. Der Grüne Punkt - Duales System Deutschland GmbH v Commission of the European Communities. Competition - Agreements, decisions and concerted practices - Collection and recovery system for packaging marketed in Germany bearing the Der Grüne Punkt logo - Decision granting exemption - Obligations imposed by the Commission to ensure competition - Exclusivity granted by the system operator to the collection undertakings used - Restriction of competition - Need to guarantee the access of competitors to the collection facilities used by the system operator - Commitments given by the system operator. Case T-289/01.

In Case T289/01,

Der Grüne Punkt - Duales System Deutschland GmbH , formerly Der Grüne Punkt - Duales System Deutschland AG, established in Cologne (Germany), represented by W. Deselaers, B. Meyring and E. Wagner, lawyers,

applicant,

v

Commission of the European Communities , represented initially by S. Rating, and subsequently by P. Oliver, H. Gading and M. Schneider, and finally by W. Mölls and R. Sauer, acting as Agents,

defendant,

supported by

Landbell AG für Rückhol-Systeme , established in Mayence (Germany), represented by A. Rinne and A. Walz, lawyers,

intervener,

APPLICATION for annulment of Article 3 of Commission Decision 2001/837/EC of 17 September 2001 relating to a proceeding under Article 81 of the EC Treaty and Article 53 of the EEA Agreement (Cases COMP/34493 - DSD, COMP/37366 - Hofman + DSD, COMP/37299 - Edelhoff + DSD, COMP/37291 - Rechmann + DSD, COMP/37288 - ARGE and five other undertakings + DSD, COMP/37287 - AWG and five other undertakings + DSD, COMP/37526 - Feldhaus + DSD, COMP/37254 - Nehlsen + DSD, COMP/37252 - Schönmakers + DSD, COMP/37250 - Altvater + DSD, COMP/37246 - DASS + DSD, COMP/37245 - Scheele + DSD, COMP/37244 - SAK + DSD, COMP/37243 - Fischer + DSD, COMP/37242 - Trienekens + DSD, COMP/37267 - Interseroh + DSD) (OJ 2001 L 319, p. 1), or, in the alternative, annulment of that decision in its entirety and of the applicant's commitment reproduced in recital 72 of that decision.

THE COURT OF FIRST INSTANCE OF THE EUROPEAN COMMUNITIES (First Chamber),

composed of R. García-Valdecasas, President, J.D. Cooke and I. Labucka, Judges,

Registrar: K. Andova, Administrator,

having regard to the written procedure and further to the hearing on 11 and 12 July 2006,

gives the following

Judgment

On those grounds,

THE COURT OF FIRST INSTANCE (First Chamber)

hereby:

1. Dismisses the action;

2. Orders the applicant, Der Grüne Punkt - Duales System Deutschland GmbH, to bear three quarters of its own costs, three quarters of the costs incurred by the Commission, and the costs incurred by Landbell AG RückholSysteme;

3. Orders the Commission to bear a quarter of its own costs and a quarter of the costs incurred by the applicant.

Law

A - Ordinance on the avoidance of packaging waste

1. On 12 June 1991 the German Government adopted the Verordnung über die Vermeidung von Verpackungsabfällen (Ordinance on the avoidance of packaging waste (BGBl. 1991 I, p. 1234)), the amended version of which - applicable in the present case - entered into force on 28 August 1998 (the Ordinance' or the Packaging Ordinance'). That ordinance is intended to prevent and reduce the impact of packaging waste on the environment. For that purpose it requires manufacturers and distributors to take back and recover used sales packaging outside the public waste disposal system.

2. Under Paragraph 3(1) of the Ordinance, sales packaging (packaging') is packaging which is provided as a unit at the point of sale and passes to the final consumer. It also includes packaging used by trades, restaurants and other service providers which enables or supports the handing over of goods to final consumers (service packaging), and non-returnable tableware and cutlery.

3. Paragraph 3(7) of the Ordinance defines the manufacturer as someone who manufactures packaging, packaging materials or products from which packaging is directly made, or who imports packaging into German territory. Paragraph 3(8) of the Ordinance provides that distributor is someone who puts into circulation, regardless of the marketing stage, packaging, packaging materials or products from which packaging is directly made, or packaged goods. The mail-order trade may also be a distributor within the meaning of the Ordinance. Lastly, a final consumer is principally defined in Paragraph 3(10) of the Ordinance as someone who does not resell the goods in the form in which they are delivered to him.

4. The obligations to take back and recover which are imposed on manufacturers and distributors under the Ordinance can be met in two ways.

5. First, pursuant to Paragraph 6(1) and (2) of the Ordinance, manufacturers and distributors are obliged to take back from final consumers used sales packaging, free of charge at, or in the immediate vicinity of the actual point of sale and to recover it (the self-management solution'). The distributor's take-back obligation is limited to packaging of the type, shape and size, and of the goods which are part of his range. In the case of distributors with a sales area of less than 200 square metres, the take-back obligation applies only to packaging for the brands sold by the distributor (fourth and fifth sentences of Paragraph 6(1) of the Ordinance). Under the third sentence of Paragraph 6(1) of the Ordinance, in a self-management solution, the distributor must draw the attention of the final consumer by means of clearly visible and legible signs' to the fact that the packaging may be returned.

6. Second, in accordance with the first sentence of Paragraph 6(3) of the Ordinance, manufacturers and distributors may participate in a system which guarantees the regular collection, throughout the distributor's sales territory, of used sales packaging from the final consumer or in the vicinity of the final consumer in order for them to be recovered (the exemption system'). Manufacturers and distributors participating in an exemption system are exonerated from their take-back and recovery obligations in respect of all packaging covered by that system. Pursuant to the second sentence of point 4(2) of Annex I to Paragraph 6 of the Ordinance, manufacturers and distributors have

to make it known that they are participating in an exemption system by marking packaging or by other suitable means'. They can thus make such participation known on the packaging or use other measures, such as informing customers at the point of sale or by a package leaflet, for example.

7. Pursuant to the 11th sentence of Paragraph 6(3) of the Ordinance, exemption systems need to be approved by the competent authorities in the Länder concerned. To be approved, those systems must, inter alia, cover the territory of at least one Land , ensure regular collections reaching the final consumer and have signed agreements with the local bodies responsible for waste management. Any undertaking which satisfies those conditions in a Land is entitled to organise an authorised exemption system in that Land.

8. Since 1 January 2000 both self-management solutions and exemption systems are subject to the same recovery rates. Those rates, which are laid down in Annex I to the Ordinance, vary depending on the packaging material. Compliance with the takeback and recovery obligations is ensured, in the case of selfmanagement solutions, by certificates provided by independent experts and, in the case of exemption systems, by the provision of verifiable data on the quantities of packaging collected and recovered.

9. In addition, the ninth sentence of Paragraph 6(1) of the Ordinance states that, if a distributor does not comply with his takeback and recovery obligations by means of a selfmanagement solution, he must do so by means of an exemption system.

10. In that regard, in their observations of 24 May 2000, sent to the Commission in the context of the administrative proceedings (the observations of the German authorities'), the German authorities stated that the Packaging Ordinance allowed distributors to combine the taking back of packaging in the vicinity of his business, in the context of a self-management solution, and the collection of packaging in the vicinity of the final consumer, in the context of an exemption system, by participating in the exemption system for only part of the packaging which it had put on the market.

11. In the observations of the German authorities it was also stated that, if the distributor chose to participate in an exemption system for all the packaging which he marketed, he was no longer subject to the obligations laid down in Paragraph 6(1) and (2), which meant that a subsequent individual waste collection solution was not possible. However, if the distributor chose to participate from the outset in a selfmanagement solution, subsequent participation in an exemption system was possible if the recovery rate was not achieved in the context of the individual waste disposal.

B - The exemption system of Der Grüne Punkt - Duales System Deutschland GmbH, the Trade Mark Agreement and the Service Agreement

12. Since 1991, Der Grüne Punkt - Duales System Deutschland GmbH (the applicant' or DSD') is the only undertaking which operates a Germany-wide exemption system (the DSD system'). For that reason, in 1993, DSD was approved by the competent authorities in all of the Länder .

13. In order to be able to take part in the DSD system, manufacturers and distributors have to sign a contract with DSD granting them the right to use the Der Grüne Punkt logo, which is the collective trade mark Der Grüne Punkt of which DSD is the proprietor. In return, the manufacturers and distributors concerned pay a royalty to DSD. The Trade Mark Agreement is the subjectmatter of Commission Decision 2001/463/EC of 20 April 2001 relating to a proceeding under Article 82 EC (Case COMP D3/34493 - DSD (OJ 2001 L 166, p. 1)). That decision was the subject of an action for annulment brought by applicant in Case T151/01 DSD v Commission.

14. Under the DSD system, the applicant neither collects nor takes back used packaging itself, but subcontracts that service to collection undertakings. The relations between DSD and those undertakings are governed by a standard agreement, amended on a number of occasions, which seeks

to create and operate a system to collect and sort packaging (the Service Agreement'). Once sorted, that material is transported to a recycling plant to be recovered.

Facts at the origin of the dispute

15. On 2 September 1992 DSD notified the Commission of its Statutes and also of a number of agreements, including the Service Agreement - the only agreement which is relevant in the present case - with a view to obtaining negative clearance or, failing that, a decision granting exemption.

16. On 27 March 1997 the Commission published the notice in the Official Journal of the European Communities (OJ 1997 C 100, p. 4), pursuant to Article 19(3) of Council Regulation No 17 of 6 February 1962, First Regulation implementing Articles [81 EC] and [82 EC] (OJ English Special Edition 195962, p. 87) in which it stated its intention to take a favourable view of the notified agreements.

17. In that notice, the Commission stated, inter alia, that DSD had given a series of commitments to it, including a commitment not to oblige collection undertakings to work exclusively for DSD and to refrain from obliging those undertakings to use containers or other collection facilities exclusively for the performance of the Service Agreement. DSD had however stated that that second commitment did not apply when the use of the containers and collection facilities by third parties was incompatible with the permission given by the public authorities', or when the Packaging Ordinance or other legislation determined otherwise, or when for other reasons it would have been unreasonable to permit them to be used, related, for example, to the use of dangerous substances. DSD also stated that it was able to take account of the use of containers and other collection facilities by third parties in the calculation of the remuneration of collection undertakings (recitals 66 and 67 of the notice in the Official Journal, and recitals 71 and 134 of the contested decision).

18. Following the publication of that notice in the Official Journal, the Commission received observations from interested third parties concerning different aspects of the application of the Service Agreement. Those third parties submitted that, in practice, and contrary to the commitments referred to above, DSD did not allow them unimpeded access to the collection facilities used by DSD's contractual partners (recitals 76 and 77 of the contested decision). In the contested decision, the Commission thus states that DSD had requested that its contractual partners be permitted to use those facilities only with its authorisation. This formed one of the grounds for complaint lodged under Article 82 EC by the Vereinigung für Wertstoffrecycling (VfW'), and was also the subjectmatter of an action brought before the Landgericht Köln (Cologne Regional Court, Germany) (recitals 57 and 136 of the contested decision).

19. In that case DSD brought an action, on the basis of the German law on unfair competition, against a selfmanagement solution, namely VfW, which was trying to use, free of charge, the collection facilities used by the DSD system in certain German hospitals. That case gave rise to the judgment of the Landgericht Köln of 18 March 1997 in which DSD was successful in so far as the German court found unlawful the free, shared use of the collection facilities belonging to the DSD system. In that judgment, the Landgericht Köln also stated that, in the light of the circumstances of the case, adequate compensation for such shared use could be determined only if VfW paid directly to DSD a sort of royalty in return for such use of those collection facilities.

20. In that context, the Commission pointed out to DSD by letter of 21 August 1997 that conduct consisting of preventing third parties from using the collection facilities of its contractual partners could fall within the scope of Article 82 EC and it stressed the importance that such conduct could have in respect of the exemption procedure, in so far as, in accordance with the fourth condition laid down in Article 81(3) EC, an agreement notified for exemption purposes cannot afford the possibility of eliminating competition in respect of a substantial part of the products in question.

21. After the Commission had put forward its view, DSD gave the following commitment in order to address the preliminary concerns expressed by that institution in its letter of 21 August 1997 (recitals 58, 72 and 137 of the contested decision):

DSD is prepared to refrain from seeking to restrict use in the manner referred to in the judgment of the [Landgericht Köln] of 18 March 1997 in [the] particular case of VfW and in comparable cases. DSD may however pursue claims for information and settlement against collectors in a contractual relationship with DSD.'

The contested decision

22. On 17 September 2001 the Commission adopted Decision 2001/837/EC relating to a proceeding under Article 81 EC and Article 53 of the EEA Agreement (Cases COMP/34493 - DSD, COMP/37366 - Hofman + DSD, COMP/37299 - Edelhoff + DSD, COMP/37291 - Rechmann + DSD, COMP/37288 - ARGE and five other undertakings + DSD, COMP/37287 - AWG and five other undertakings + DSD, COMP/37526 - Feldhaus + DSD, COMP/37254 - Nehlsen + DSD, COMP/37252 - Schönmakers + DSD, COMP/37250 - Altvater + DSD, COMP/37246 - DASS + DSD, COMP/37245 - Scheele + DSD, COMP/37244 - SAK + DSD, COMP/37243 - Fischer + DSD, COMP/37242 - Trienekens + DSD, COMP/37267 - Interseroh + DSD) (OJ 2001 L 319, p. 1; the contested decision' or the decision').

23. The assessment made by the Commission in the contested decision commences with the application made by DSD to obtain negative clearance or, failing that, a decision granting exemption in respect of the Service Agreement.

A - The contractual relations between DSD and the collection undertakings

24. DSD does not itself collect packaging but employs collection undertakings with which it concludes a Service Agreement. Pursuant to Paragraph 1 of that standard agreement, DSD entrusts each collection undertaking with the exclusive task of collecting and sorting packaging in a certain district in accordance with an exemption system and this for a duration of around 15 years (the exclusivity clause in favour of the collection undertaking' or the exclusivity clause').

25. The packaging is either collected in containers placed close to the households of the consumers concerned or removed or emptied from plastic bags or bins which are provided to consumers by the collection undertaking. That undertaking owns the containers and the packaging deposited therein or which it has collected. The sorting of the collected material is the responsibility of the collection undertakings and is generally done in a specialised sorting centre. Each collection undertaking is remunerated by DSD according to the weight of each type of material, the cost of treatment of the sorted waste and the success rate of the collection (recitals 32, 45 and 51 of the contested decision).

26. The contested decision incidentally observes that collection undertakings usually also collect printed matter (newspapers and magazines) at the same time as packaging made of paper a nd card. However, since that printed matter, which accounts for about 75% of that type of material, does not form part of the DSD system, DSD does not pay for its collection (recital 32 of the contested decision).

B - Assessment relating to Article 81(1) EC

27. In the context of that assessment, the contested decision concerns two aspects of the Service Agreement.

1. The exclusivity clause in favour of the collection undertaking

28. First, the contested decision states that the effect of the exclusivity clause in favour of the collection undertaking, which is inserted into all Service Agreements concluded between DSD

and its contractual partners, is to prevent other collection undertakings from offering their services to DSD (recitals 122 to 124 of the contested decision).

29. In order to analyse that clause in the light of Article 81(1) EC the Commission examines, first of all, the situation of the demand on the German market for collecting and sorting packaging from consumers (the market for collection from consumers'). In that regard, the contested decision states that DSD deals with approximately 70% of packaging capable of being collected in Germany and at least 80% of the demand in the market for collection from consumers. DSD's influence is therefore decisive both at national level, where it constitutes the only available exemption system, and in the 500 areas covered by Service Agreements (recitals 126 and 127 of the contested decision).

30. On the supply side, the contested decision points out, next, that numerous actors offer collection services. The contested decision also states that primarily for reasons of spatial organisation and collection logistics, it is unlikely at present that an additional collection system for private final consumers will be set up alongside that already established by DSD'. The decision states, on the contrary, that given the infrastructure bottleneck at the point of collection from households, it is surely more realistic to suppose that a potentially competing exemption system or selfmanagement arrangement would cooperate with those collectors who already provided collection services for DSD under a Service Agreement'. Thus, for the Commission, it is only at certain collection points deemed equivalent to private households, such as hospitals or canteens, subject to certain conditions relating to collection logistics and types of packaging, that collection undertakings other than the contractual partners of DSD might be able to conceive installing additional collection containers to those used by the DSD system. It is considered in the decision, however, that such opportunities are of relatively limited economic importance and that it is unlikely, therefore, that any appreciable new opportunities for excluded undertakings will arise during the lifetime of the Agreement in the contracting areas covered by the DSD Service Agreement (recitals 127 and 128 of the contested decision).

31. In addition, the decision states that, in an assessment of the effect of these exclusivity obligations on competition, a decisive factor is their duration, given that the longer that duration, the more that clause has the long-lasting effect of excluding other collection undertakings which are not contractual partners of DSD from the possibility of offering their services to meet the demand of the most important German exemption system (recitals 129 and 130 of the contested decision).

32. Following that analysis, the Commission notes that the access of collection undertakings to the market for collection from consumers is greatly obstructed; this goes a considerable way towards partitioning off a substantial part of the common market. Consequently, the exclusivity clause in favour of the collection undertaking constitutes a restriction of competition for the purposes of Article 81(1) EC (recital 132 of the contested decision). When questioned on that point at the hearing, DSD stated that it did not dispute that analysis.

2. Access to the facilities of collection undertakings

33. Second, the contested decision examines the extent to which competitors with DSD may have access to the facilities of collection undertakings. In that regard, the Commission points out that, in its view, there would be a restriction of competition for the purposes of Article 81(1) EC if the Service Agreement was so designed that it excluded competitors with DSD from access to the collection infrastructure' (recital 133 of the contested decision).

34. In support of that claim, the decision states, first, that the infrastructure for collection in the vicinity of households forms a bottleneck, so that [the facilities of the collection undertakings are] especially important in terms of competition law'. Thus, the decision states that that type of collection is carried out, in general, directly at all households in the local authority's area

(collection systems), with the exception of a few cases where waste is brought voluntarily by the public (waste collection centres). The decision also states that, for logistical reasons collection points at households, if they are to be served at optimum cost, have usually to be served by only a limited number of collectors. In addition, the decision points out that only one container can be placed at each collection point for each type of material (such as glass, paper or lightweight packaging), for reasons of space and the established habits of final consumers in respect of collection. Such facts constitute the main reason why there is usually only one household refuse and reusable materials collection from households, which is carried out by just one collector (recital 133 of the contested decision, read in conjunction with recitals 92 and 93 thereof). Second, the decision draws attention to the fact that objections were put forward on competition grounds following the publication of the notice in the Official Journal. The Commission refers here to the fact that, on that occasion, several interested third parties stated that, contrary to a first series of commitments given by DSD (see paragraph 17), that undertaking did not allow third parties to access the collection facilities of its contractual partners freely by requiring them to agree to share the use of those facilities (recital 133 of the contested decision, read in conjunction with recitals 76 and 77 of that decision).

35. In that context, the contested decision draws attention, first, to the fact that DSD had claimed that joint use of the collection facilities of DSD's contractual partners by third parties should be possible only if DSD had authorised it. The decision states, however, that, following the Commission's letter of 21 August 1997, which pointed out to DSD that such conduct could fall within the scope of Article 82 EC, DSD had decided no longer to insist that third parties obtain its authorisation in order to be able to use the collection facilities of its contractual partners (see paragraphs 20 and 21). That decision also states that there would also be a difficulty if DSD were to demand payment for such use directly from third parties, or to claim that it ought to have a say in the negotiation by collectors and third parties of an appropriate payment for the joint use of collection containers'. Nonetheless, the decision takes care to point out that, in the case of the shared use of the facilities of its contractual partners, DSD remains free to negotiate a reduction of the royalty paid to those undertakings and it may also ensure that it is not charged for any service provided for a third party (recitals 136 to 138 of the contested decision).

36. In the light of those commitments and that information, the Commission considers that the Service Agreement does not confer any exclusivity on DSD, and that collection undertakings are free to offer their services to competitors with DSD. The decision also points out that it does not, therefore, follow from the Service Agreement that competitors with DSD are denied access to the collection infrastructure, so that there is no restriction of competition here within the meaning of Article 81(1) [EC]' (recitals 134 and 139 of the contested decision).

C - Assessment relating to Article 81(3) EC

37. In order to declare the provisions of Article 81(1) EC inapplicable to the Service Agreement, the contested decision examines the exclusivity clause in favour of the collection undertaking in the light of the conditions laid down in Article 81(3) EC.

38. In that context, the contested decision considers that that clause contributes to improving the production of goods and to promoting technical or economic progress because it enables environmental objectives to be met (recitals 142 to 146 of the contested decision), while reserving a fair share of the resulting benefit to consumers (recitals 147 to 149 of the contested decision).

39. Similarly, as regards whether or not the exclusivity clause laid down in the Service Agreement is indispensable, the contested decision points out that the putting in place of the DSD system requires considerable investments from the collection undertakings, which need to be able to obtain certain guarantees from DSD as regards the duration of the agreement in order to be able to recoup

and obtain a profit from those investments. After examination, the Commission considers it necessary, however, to reduce the initial duration laid down for the exclusivity clause by setting it a termination date of 31 December 2003 (recitals 150 to 157 of the contested decision).

40. Finally, the contested decision examines the question whether the exclusivity clause is not likely to eliminate competition on the market for collection from consumers. In that regard, the Commission starts by pointing out that collection undertakings excluded from the DSD system remain free to offer their services to firms wishing to manage their own waste. Such arrangements are possible at least in respect of certain combinations of sales packaging and collection points on the margins of the market for collection from consumers (recital 159 of the contested decision).

41. In addition, the Commission notes that the market for collection from consumers is characterised by the fact that it is economically more advantageous to entrust the whole of a designated area to just one collection undertaking and that it is, in many cases, rather less profitable to have several collection facilities for household collection for reasons of spatial economics, collection logistics and traditions of waste collection established among consumers. For the Commission, the containers used for collecting, which are situated close to households, thus form a bottleneck. It thus considers it realistic to expect that exemption schemes competing with the DSD system and some self-management solutions will often work together with the collection undertakings which work for DSD. That analysis enables the Commission to draw attention to the need for the contracting parties of DSD to share the use of the collection facilities, given that free and unimpeded access to the collection infrastructure set up by collectors contracted to DSD under a Service Agreement is therefore a vital condition of more intense demand-side competition for collection and sorting services for [household packaging] and more intense competition on the upstream market in the organisation of the take-back and recovery of [packaging from consumers]' (recital 162 of the contested decision). The decision observes, in that regard, that the Service Agreement does not tie the collection undertakings exclusively to DSD and that DSD has given several commitments, including one to refrain from requiring collection undertakings to use collection facilities solely for the purposes of the Service Agreement and not to seek to restrain third parties from using those collection facilities in the case of shared use (recitals 158 to 163 of the contested decision).

D - Obligations imposed by the Commission to be attached to the decision granting exemption

42. In order to ensure that the anticipated effects on competition do in fact take place and that the tests for exemption in Article 81(3) EC are accordingly satisfied, the Commission considers it necessary to attach obligations to its decision to exempt the Service Agreement under Article 8 of Regulation No 17 (recital 164 of the contested decision).

43. The first obligation is imposed on DSD in Article 3(a) of the contested decision, according to which DSD shall not impede collectors wishing to conclude and apply agreements with organisations competing with DSD for the joint use of containers or other facilities for the collection and sorting of used sales packaging'.

44. The second obligation is defined in Article 3(b) of the decision and states that where collectors conclude agreements with competitors with DSD providing for the joint use of containers or other facilities for the collection and sorting of used sales packaging, DSD may not require that they inform DSD of volumes of packaging not collected for the DSD system'.

45. In order to explain in what respect such obligations have to be imposed notwithstanding DSD's commitment to authorise its competitors to use the collection facilities, the contested decision refers to the vital importance of unimpeded access to those facilities for the existence of competition and the qualifications made by DSD in relation to the implementation of one of the commitments set out in recital 71 (recital 164 of the contested decision).

E - Conclusions

46. On the basis of the commitments given by DSD and the obligations attached to the decision, the contested decision concludes by stating that free and unimpeded access to the collection infrastructures is possible in practice. According to the decision, there is realistic scope for entry to the market for collection from consumers both for exemption systems competing with the DSD system and for individual collection systems. That scope will also allow the conditions to be established which are necessary for the intensification of competition on the upstream market in the organisation of the take-back and recovery of packaging from consumers (recitals 176 to 178 of the contested decision).

47. Consequently, the contested decision states that the exclusivity clause in favour of the collection undertaking, contained in the Service Agreement, satisfies the test for the application of Article 81(3) EC (recital 179 of the contested decision). In Article 2 of the contested decision, the Commission thus states that acting under Article 81(3) [EC]..., the Commission declares Article 81(1) [EC]... inapplicable to individual Service Agreements containing an exclusivity clause running no further than the end of 2003' and that this exemption shall run from 1 January 1996 to 31 December 2003'.

48. The two obligations mentioned above (see paragraphs 43 and 44) are attached to that exemption, as laid down in Article 3 of the decision, in order, first, to ensure access to the collection infrastructures of DSD's partners in the Service Agreement, and to prevent the elimination of competition on the relevant markets and, second, to enable DSD's competitors to make unrestricted use of the quantities of packaging collected for them in the context of that shared use of the collection facilities. These obligations are indispensable in order to prevent the elimination of competition on the relevant markets, and constitute a clarification of the commitments given by DSD which helps to increase their legal certainty (recital 182 of the contested decision).

49. Finally, the contested decision states that, if it proves from a decision of a German court of last resort that, contrary to the Commission's view, the use by third parties of the collection facilities of Service Contract collection undertakings is not compatible with the Packaging Ordinance, there would then have been a major change in the facts basic to the making of the decision, and the Commission would reconsider the requirements for the applicability of Article 81(3) EC to the Service Agreement, and would if necessary revoke the declaration of exemption (recital 183 of the contested decision).

F - Operative part

50. Article 1 of the operative part sets out the Commission's position on DSD's constitution and the Guarantee Agreements which had been notified by DSD at the same time as the Service Agreement:

On the basis of the facts in its possession and of the commitments given by DSD, the Commission finds that there are no grounds under Article 81(1) [EC] and Article 53(1) of the EEA Agreement for action on its part in respect of the Constitution of DSD or the Guarantee Agreements.'

51. Article 2 of the contested decision exempts the Service Agreement:

Acting under Article 81(3) [EC] and Article 53(3) of the EEA Agreement, the Commission declares Article 81(1) [EC] and Article 53(1) of the EEA Agreement inapplicable to individual Service Agreements containing an exclusivity clause running no further than the end of 2003.

This exemption shall run from 1 January 1996 to 31 December 2003.'

52. In Article 3 of the decision, the Commission attaches two obligations to that exemption:

The following obligations are attached to the declaration of exemption in Article 2:

(a) DSD shall not impede collectors wishing to conclude and apply agreements with organisations competing with DSD for the joint use of containers or other facilities for the collection and sorting of used sales packaging.

(b) Where collectors conclude agreements with competitors with DSD providing for the joint use of containers or other facilities for the collection and sorting of used sales packaging, DSD may not require that they inform DSD of volumes of packaging not collected for the DSD system.'

Procedure and forms of order sought

53. By application lodged at the Registry of the Court of First Instance on 27 November 2001, the applicant brought an action seeking annulment of the contested decision, under the fourth paragraph of Article 230 EC.

54. By application registered at the Registry of the Court of First Instance on 26 February 2002, Landbell AG für Rückhol-Systeme (Landbell'), an exemption system in competition with DSD, sought leave to intervene in the present proceedings in support of the form of order sought by the Commission. That application for leave to intervene was notified to the parties, which submitted their observations within the prescribed period.

55. By order of 17 June 2002, the Court of First Instance (Fifth Chamber) granted Landbell leave to intervene and it submitted its observations on 9 October 2002.

56. Upon hearing the report of the Judge-Rapporteur, the Court of First Instance (First Chamber) decided to open the oral procedure and, by way of measures of organisation of procedure, sent the parties a number of questions to be answered orally at the hearing.

57. The parties presented oral argument and answered the questions put by the Court at the hearing on 11 and 12 July 2006.

58. The applicant claims that the Court should:

- annul Article 3(a) and (b) of the contested decision;

- in the alternative, annul the contested decision in its entirety;

- annul DSD's commitment reproduced in recital 72 of the contested decision;

- order the Commission to pay the costs.

59. The Commission contends that the Court should:

- dismiss the action;

- order the applicant to pay the costs.

60. Landbell claims that the Court should:

- dismiss the action;

- order the applicant to pay the costs.

Law

61. The applicant raises four pleas in law in support of its action. The first plea alleges that the obligation laid down in Article 3(a) of the contested decision infringes Article 81(3) EC and the principle of proportionality. The second plea alleges that that obligation infringes Article 86(2) EC. The third plea alleges that the obligation laid down in Article 3(b) of the contested decision infringes Article 81(3) and Article 86(2) EC. The fourth plea, linked to the application for annulment of the applicant's commitment referred to in recital 72 of the contested decision,

alleges infringement of the fundamental right of access to justice.

A - The first plea, alleging that the obligation laid down in Article 3(a) of the contested decision infringes Article 81(3) EC and the principle of proportionality

62. The applicant claims that the obligation laid down in Article 3(a) of the contested decision (the first obligation'), according to which DSD shall not impede collectors wishing to conclude and apply agreements with organisations competing with DSD for the joint use of containers or other facilities for the collection and sorting of used sales packaging', infringes Article 81(3) EC and the principle of proportionality. That plea is essentially divided into three parts.

63. First, the applicant claims that the first obligation is not objectively necessary in the light of Article 81(3) EC since the shared use of the collection and sorting facilities (the collection facilities') is not indispensable for the activity of DSD's competitors. At the very least, the applicant submits that the contested decision does not provide sufficient reasoning on that point.

64. Second, the applicant claims, in response to the arguments raised in the statement in defence, that the alleged threat of infringement of Article 81(1) EC or Article 82 EC claimed by the Commission is speculative and cannot justify the first obligation, which - in any case - can only seek to prevent the elimination of competition on the market in which a restriction of competition has been found beforehand.

65. Third, the applicant submits that the first obligation is disproportionate and alleges (i) that the shared use of the collection facilities imposed by that obligation is contrary to the Packaging Ordinance; (ii) that the first obligation leads to a distortion of competition to its detriment; (iii) that the obligation at issue adversely affects the specific subject-matter of the mark Der Grüne Punkt; and (iv) that it infringes its fundamental right of access to justice.

66. Before expounding those arguments the applicant first states why it is necessary to obtain its agreement in the case of shared use of the collection facilities.

67. Those reasons need to be examined before assessing the three parts of the first plea.

1. The need to obtain DSD's agreement to share the use of the collection facilities

a) Arguments of the parties

68. The applicant submits that, even though it is not the legal owner of the collection facilities referred to in the first obligation, those facilities must nevertheless be considered to be facilities which belong to DSD given that (i) it finances them; (ii) they are an integral part of the DSD system and; (iii) they bear the mark Der Grüne Punkt. Consequently, any shared use of the facilities by collection undertakings which have concluded a service agreement with DSD should be subject to the applicant's agreement.

69. In order to establish the need to obtain that agreement, the applicant puts forward, first, the fact that it financed the collection facilities used by the DSD system. In that regard, the applicant bases its arguments, inter alia, on Article 7(1) of the Service Agreement, according to which the remuneration paid by DSD to the collection undertaking constitutes the consideration for all the services supplied by that undertaking as regards, inter alia, the provision of collection containers, the transport and the sorting of packaging and the availability of the waste. The applicant also relies on a judgment of the Landgericht Köln of 18 March 1997, stating that a competitor of DSD benefits from the DSD system in the case of shared use of the collection facilities and that such use is possible only after obtaining [DSD's] agreement (in return for payment)'. The applicant also cites the principle laid down in Article 242 of the Bürgerliches Gesetzbuch (German Civil Code; the BGB') that contractual obligations should be performed in good faith imposing on contractors the obligation to take particular precaution in long-term contractual relations involving

close economic cooperation.

70. Similarly, it is necessary to obtain the applicant's agreement in the case of shared use of the collection facilities in order to enable it to respect its obligations under the Packaging Ordinance, both in terms of the need to ensure that the whole territory is covered and the need to comply with the recovery rates and to prove the volume flows for each Land (second sentence of Paragraph 10 of the Service Agreement; points 1.1 and 1.5.1 of the fourth agreement amending the Service Agreement and the judgment of the Verwaltungsgericht Gieen (Administrative Court, Gieen, Germany) of 31 January 2001). That agreement is also required to ensure that the packaging forming part of the DSD system and bearing the logo Der Grüne Punkt is actually brought by the consumer to the corresponding system, namely to the collection facilities bearing that logo.

71. The Commission and Landbell point out that the financing of the collection facilities is a logical consequence of the Service Agreement, which determines the services requested and the remuneration paid in consideration. In addition, the applicant did not invoke Article 242 BGB during the administrative proceedings and its current position is contrary to that which it adopted in that context. In addition, the obligations under the Ordinance apply to DSD in the same way as they apply to any other operator placed in the same position and the affixing of the mark Der Grüne Punkt to the collection facilities is of no importance to the consumer, who essentially associates those facilities with the type of material to be recovered. Landbell also claims that all the local authorities of the Land Hessen accepted that their exemption systems use the same collection facilities as those used under the DSD system.

b) Findings of the Court

72. It is apparent from the contested decision that, during the administrative proceedings, DSD gave a commitment to the Commission not to require collection undertakings to work exclusively for the DSD system and to refrain from requiring those undertakings to use their own collection facilities exclusively for the performance of the Service Agreement (see paragraph 17). Similarly, DSD also gave a commitment to the Commission to refrain from making the use by third parties of the collection facilities of DSD's contractual partners subject to its agreement (see paragraph 21).

73. Those commitments concern, first, the collection undertakings, which are DSD's contractual partners and, second, the undertakings wishing to have access to the collection facilities of DSD's contractual partners. They address the concerns expressed by the Commission in the context of the administrative proceedings in respect of both the possible application of Article 81(1) EC to the Service Agreement, if it were found to contain an exclusivity clause in DSD's favour in respect of third party access to the collection facilities (see paragraph 35), and the possible application of Article 82 EC, if it were established that DSD's wish to subject the shared use of the collection facilities to its agreement falls within Article 82 EC (see paragraph 20).

74. In order to address those concerns DSD proposed the abovementioned commitments. The commitment reproduced in recital 72 of the contested decision is particularly illustrative in that regard, since it was proposed in order to address the Commission's concern regarding DSD's initial demand that the shared use by third parties of the collection facilities of its contractual partners should be subject to its agreement (recitals 57, 58, 136 and 137 of the contested decision). That commitment was also intended to reassure the Commission by showing it that DSD had waived its right to bring actions to restrict use of the type described in the judgment of the Landgericht Köln of 18 March 1997, which had been brought by DSD on the basis of the German law on unfair competition against a competitor which was seeking to use certain collection facilities of the DSD system free of charge.

75. It should be pointed out that the commitments proposed by DSD were taken into account by the Commission in assessing the Service Agreement notified by DSD. That is true both in the examination of any restriction of competition under Article 81(1) EC concerning the access of collection undertakings to the facilities (see paragraphs 33 to 36, recitals 133 to 140 of the contested decision), and in the analysis under Article 81(3) EC in respect of assessing the possibility of maintaining competition (see paragraph 41; recitals 158 to 163 of the contested decision). In the contested decision the Commission refers expressly, by way of example, to the commitments in concluding that the Service Agreement does not tie the collection undertakings exclusively to DSD and that the collection undertakings may therefore propose their services to DSD's competitors both freely and without unnecessary obstacles (see paragraph 46, and recital 176 of the contested decision).

76. After the administrative proceedings, the applicant has nevertheless submitted, before the Court, that any shared use of the collection facilities of its contractual partners requires its agreement.

77. First, the applicant claims that that requirement results from the fact that it participated in the financing of the collection facilities used by the DSD system through the remuneration paid under the Service Agreement. It must be pointed out, in that regard, that the DSD system is the first approved exemption system in the whole of Germany and that its importance is considerable in that country, in so far as it represents approximately 70% of packaging capable of being collected in Germany and at least 80% of the demand in the German market for collection from consumers (see paragraph 29). It thus goes without saying that DSD is the first and primary, if not only, source of revenue for collection undertakings in respect of the collection and sorting of packaging.

78. However, the applicant does not dispute that it is the task of the collection undertakings and not of DSD to make the necessary investments for the collection and sorting of packaging (recital 151 of the contested decision). Similarly, it does not dispute that the sorting facilities which did not exist until then required considerable investments from the collection undertakings (recital 53 of the contested decision). It is also to enable those undertakings to redeem their investments, which have been estimated at ten billion German marks (DEM) during the lifetime of the Service Agreement, that the Commission accepted that the DSD exclusivity clause in favour of the collection undertakings should be quite substantial in duration (see paragraph 39). That duration thus seeks to ensure the profitability of investments made by collection undertakings and not to enable DSD to assert a right to monitor the use of those investments.

79. In addition, examination of the Service Agreement shows that DSD does not bear the risks related to the investments necessary to implement the DSD system by means other than the abovementioned exclusivity clause. Thus, DSD is not responsible for the risks incurred by collection undertakings in using the system (Paragraph 5(1) of the Service Agreement). Similarly, in the event of termination of the Service Agreement, DSD neither repays the investment of the collection undertakings nor pays damages for it (Paragraph 9(3) and (4) of the Service Agreement). In addition, it is apparent from Paragraph 7(1) of the Service Agreement that the fee paid by DSD to its contractual parties is proportional to the weight of the packaging collected, which means that, if a collection undertaking stops collecting packaging for DSD, the latter does not have to remunerate that undertaking for investments made.

80. Furthermore, DSD does not take into account the fact that, in the case of shared use, the Commission expressly recognised, in the contested decision, that it had the right to ensure that it is not charged for any service provided by the collection undertakings for a third party and, consequently, authorises DSD to reduce the remuneration payable to its contractual partners (see paragraph 35). That makes it possible to guarantee DSD that shared use will not be at its cost in terms of remuneration paid to the collection undertakings. There can thus be no free usage'

of the collection facilities, as was the case in the judgment of the Landgericht Köln, at a time when the German Packaging Ordinance had not yet been revised and when DSD was not in a position to reduce its payments to the collection undertakings in proportion to the shared use of the collection facilities.

81. Finally, as regards the argument based on Article 242 BGB, which in the applicant's view imposes obligations on contractual partners to take particular precaution - although it is difficult to perceive in what way they could show the need for DSD to agree to shared use - the Court can only find that, since that argument based on German law was not raised during the administrative proceedings, the Commission cannot be criticised for not having taken it into account when adopting the contested decision.

82. Consequently, the fact that DSD was the first exemption system to call on the services of collection undertakings and that it is the primary, if not the only, source of revenue for those undertakings is not sufficient to establish DSD's right to give its agreement in the case of shared use.

83. Second, the applicant submits that its agreement is necessary in the case of shared use of the collection facilities in order to enable it to comply with the obligations resulting from the Packaging Ordinance and to ensure that packaging which forms part of the DSD system is effectively put back into that system by the consumer.

84. In that regard, it should be pointed out that the obligations resulting from the Ordinance apply to DSD as they do to any other exemption system operator. In addition, the provisions of the Service Agreement relied on by DSD do not establish DSD's right to make the shared use of the collection facilities of its contractual partners subject to its agreement. Thus, the second sentence of Paragraph 10 of the Service Agreement does not concern the case of shared use of the collection facilities but that of an amendment to the organisation of the DSD system and that provision merely states that a different organisation of that system requires the agreement of the contracting parties and the local authority concerned. As will be explained below, shared use does not prevent the DSD system from satisfying its obligations under the Ordinance (see paragraphs 161 to 170). Equally, points 1.1 and 1.5.1 of the fourth amending agreement do not concern packaging, which is the only relevant item in the present case, but additional materials which are not packaging'. In addition, in the judgment of 31 January 2001 the Verwaltungsgericht Gieen did not examine the need for DSD to agree to shared use of the collection facilities but merely found that the LahnDillKreis (LahnDill district) had to come to an agreement with the applicant on a collection and recovery system that they had set up and which did not constitute a system consistent with Paragraph 6(3) of the Packaging Ordinance.

85. Moreover, in respect of the alleged need to preserve the role played by the mark Der Grüne Punkt at the stage of collecting the packaging, it should be noted that it is apparent from the documents before the Court that numerous collection facilities do not bear that mark (see paragraph 189). In addition, consumers do not associate the bins with that mark but with the type of packaging (sales packaging) and, in particular, the type of material (lightweight materials, paper/card, glass etc.) to be placed in the different types of collection facilities. The example of the joint collection of printed matter (newspapers and magazines) and packaging made of paper and card, given in the contested decision, illustrates the possibility of a shared use of the collection facilities without the need to take account of any affixing of the mark Der Grüne Punkt to those facilities (see paragraph 26).

86. Therefore, the fact that DSD was the first exemption system to integrate the collection facilities in its system or the first system to use the mark Der Grüne Punkt to identify its system is not sufficient to establish its right to make shared use subject to its approval.

87. In any event, even supposing that the applicant could rely on a right to give its approval for the shared use by third parties of the collection facilities of its contractual partners - which, as is apparent from the preceding paragraphs, is in no way established - the Court cannot but find that, during the administrative proceedings, the applicant stated that it had waived its claim to such a right. Subject to a specific argument relating to the commitment reproduced in recital 72 of the decision - which will subsequently be examined (see paragraph 218 et seq.) - the applicant does not challenge the validity or the legality of the different commitments put forward during the administrative proceedings to address the concerns voiced by the Commission.

88. Those commitments had the effect of clarifying the content of the Service Agreement notified by DSD, for the purposes of obtaining negative clearance or an exemption, by showing the Commission the way in which DSD intended to act in the future. The Commission thus legitimately took account of those commitments in its assessment in such a way that DSD obtained the decision granting exemption which it sought. Therefore, the Commission was not obliged to take a stance on whether or not DSD has the right to make the shared use of the collection facilities subject to its agreement, given that, in its commitments, that undertaking had agreed to refrain from opposing such shared use.

89. Consequently, the Commission rightly adopted the contested decision without taking into account DSD's alleged right to oppose shared use, because commitments had been given to that effect by DSD to address the problems identified by the Commission. Therefore, it is not the task of the Court to examine the legality of that decision in the light of a right which the applicant had waived.

2. The first part, alleging the lack of need to share the use of the collection facilities

a) Arguments of the parties

90. By analogy with the case-law on essential facilities (Joined Cases C-241/91 P and C-242/91 P RTE and ITP v Commission (Magill ') [1995] ECR I743, paragraphs 53 and 54; Case C7/97 Bronner [1998] ECR I7791, paragraph 41; Joined cases T-374/94, T-375/94, T-384/94 and T-388/94 European Night Services and Others v Commission [1998] ECR II3141), the applicant claims that the shared use, imposed by the first obligation, must be indispensable for the activity of DSD's competitors, which is not so in the present case.

91. In relation to exemption systems, the applicant submits that those systems can access approximately 70% of the market without resorting to shared use. It states that approximately 70% of the packaging treated under its system (packaging made of glass, most packaging made of paper and card, and lightweight packaging in the South of Germany) is collected by voluntary collection systems, namely either by means of containers placed at designated sites to that effect or by means of waste collection centres. Those systems are the rule and not an ad hoc' solution, as pointed out in the decision (see paragraph 34). It is therefore sufficient that competitor collection systems install their own containers to avoid having to resort to shared use. The applicant also gives the example of the blue bag', used in April 1998 by Landbell to collect certain types of packaging in the Lahn-Dill-Kreis, to illustrate that a separate collection system from the DSD system may be put in place without difficulty. In addition, it is apparent from the Order of the Verwaltungsgerichtshof Kassel (Higher Administrative Court, Kassel, Germany) of 20 August 1999 that competing collection systems could be used alongside each other', which means that they could use their own collection facilities.

92. In relation to selfmanagement solutions, the applicant points out that such systems cannot, generally speaking, collect packaging in collection facilities situated close to private households, as would however be possible as a result of the first obligation. That prohibition is decisive in terms of respecting the recovery rates laid down in the Ordinance. By way of exception, the applicant acknowledges that selfmanagement solutions may collect packaging from, or close to, private

households in marginal cases, namely from small craft undertakings, small businesses and industrialists and mailorder companies (see the observations of the German authorities, p. 7). However, in those two periphery fields, selfmanagement solutions already use their own collection facilities and shared use is thus not necessary.

93. Finally, the applicant submits that the decision infringes Article 253 EC by not stating why shared use is indispensable for the activity of DSD's competitors. As regards collection facilities, the decision should contain studies on the structure of the market and on the alleged restrictions of competition in order to establish how shared use is indispensable. In that regard, the applicant points out, in recital 160 of the contested decision, which concerns the spatial economics, collection logistics and traditions of waste collection established among consumers (see paragraph 41), that the Commission does not base its findings on variable facts. Similarly, merely stating in that same recital that the duplication of collection facilities is economically difficult in many cases' is not sufficient. In respect of sorting facilities, the applicant notes that the decision does not contain any reasons explaining why their use needs to be shared, unless that reason is the general indication, in recital 182 of the contested decision, that such use is necessary to prevent the elimination of competition.

94. The Commission considers that the reference made to the case-law on essential facilities is inappropriate given that the collection facilities do not belong to DSD and that third parties must be able to use them without its agreement. In the present case, it should be considered, rather, that the decision grants an exemption under Article 81(3) EC to a restriction of competition by attaching to that exemption an obligation aimed at ensuring that competition is maintained. In that regard, the decision states, in recitals 133 to 139 (see paragraphs 33 to 36), the reasons why the access of DSD's competitors to collection facilities is essential. Equally, the exclusivity clause linking DSD to the collection undertakings, examined in recitals 128, 160 and 162 of the contested decision, would restrict the arrival of competitors on the market considerably (see paragraphs 30 and 40). The Commission claims, essentially, that if the first obligation was not imposed, the exclusivity clause uniting the applicant and the collection undertakings would have the effect of preventing the entry of DSD's competitors into the market for collection from consumers. Consequently, the contested decision is sufficiently reasoned in that regard.

95. As regards the criticism concerning the shared use of the collection facilities for exemption systems, the Commission and Landbell submit that such use is necessary to enable effective competition. Landbell also states that, from the beginning, the DSD system has shared the communal collection facilities which existed for collecting packaging made of paper, card and glass.

96. As regards the criticism in relation to the shared use of collection facilities for selfmanagement solutions, the Commission observes that such use is envisageable only where there is an overlap between the collection points of the selfmanagement solutions and those of the DSD system under national law. Therefore, the Commission observes that the first obligation applies to situations where selfmanagement solutions are authorised to collect from consumers. In such a case, the Commission states that shared use will occur only where the collection points may be equipped with one facility only. Furthermore, the Commission notes that, in respect of packaging arising from the mailorder trade, selfmanagement solutions will only need to share use where the turnover of their customers is so low that it would not be economically viable to install collection containers at a reasonable distance' from the place of establishment of those customers.

97. As regards the criticism of the lack of reasoning as to why shared use of the sorting facilities is necessary, the Commission raises the point that the applicant does not take into account the fact that, in the case of shared use of the collection facilities, it is obviously necessary to sort packaging together.

b) Findings of the Court

98. By way of a reference to the Magill case-law, which concerns a situation in which the party concerned had an incontestable power of disposal over the facilities at issue - which is not the case here (see paragraphs 87 to 89) - the applicant submits, in essence, that the first obligation must be annulled in so far as it imposes the shared use of the collection facilities, including the sorting facilities, even though it is not necessary to enable the activity of exemption systems and selfmanagement solutions and without sufficient reasons under Article 253 EC.

99. In order to examine those arguments, it should first be noted that, in recital 182 of the contested decision, the Commission states clearly that the purpose of the first obligation, under which DSD may not prohibit collection undertakings from concluding contracts with DSD's competitors authorising those competitors to use their containers and other collection and sorting facilities, is to prevent the elimination of competition on the relevant markets', namely the market for collecting packaging from consumers and the upstream market in the organisation of the take-back and recovery of packaging from consumers (see paragraph 48, recital 182 of the contested decision, in conjunction with paragraph 46 and recital 176 of the contested decision for identification of the relevant markets).

100. In addition, as regards the meaning of the term organisations competing with DSD' in the first obligation, a distinction must be made between the situation of exemption systems, which indisputably compete with DSD on the two markets referred to, and selfmanagement solutions, which have only a marginal impact on those markets, given that they must, in principle, collect packaging at the point of sale or in the vicinity of that point and not from final consumers (see paragraphs 5 and 6).

i) The need for shared use in respect of competing exemption systems

101. In essence, it is considered in the contested decision that the different types of facilities used by the DSD system throughout Germany form a bottleneck to which access is necessary to enable other exemption systems to compete with DSD on the market for collection of packaging from consumers and, consequently, to be active on the upstream market in the organisation of the take-back and recovery of packaging from consumers.

102. For that purpose, the facilities covered by the first obligation are more precisely defined as the containers or other facilities for the collection and sorting of packaging' of the collection undertakings which have concluded a service agreement with DSD. Those facilities are also referred to in the contested decision as collection infrastructures' (recitals 162, 164, 171 and 176 of the contested decision) or under the general term collection facilities' (recitals 164 and 182 of the contested decision). According to that decision, at issue are containers placed close to the households of the consumers on a site provided for that purpose and the infrastructures necessary to collect the plastic bags or to empty the bins which have been distributed to consumers by the collection undertaking (recital 32 of the contested decision).

103. Similarly, in so far as the sorting of the material is the responsibility of the collection undertakings, the notion of collection facilities also includes specialised centres in which that sorting is generally carried out. That explanation, set out in recital 32 of the decision, makes it possible to understand why the shared use of collection facilities also concerns sorting facilities. The collection phase is only the first stage in the process of recovering packaging. The sorting stage is logically the next stage in that process and the necessary corollary. Therefore, as of the moment when the collection undertakings may collect the packaging belonging to the DSD system and the packaging belonging to other exemption systems, those undertakings may also sort the quantities collected on behalf of those different systems. The applicant is well aware of that since the Service Agreement envisages both the collection and sorting of packaging. It is also for that reason that

the Commission considers that the market for collection of packaging from consumers includes both the collection of packaging and the sorting of it according to its use, which are two different activities requiring different infrastructures, but which constitute a single market as a result of the fact that DSD requires both of those services together (recital 87 of the contested decision).

104. It can thus not be claimed that the contested decision does not contain sufficient reasons for the inclusion of sorting facilities in the general term collection facilities and the complaint put forward in that regard by the applicant must be rejected.

105. In order to establish the need to provide for shared use of the collection facilities to enable exemption schemes competing with DSD to gain access to, and to remain on, the markets for collection and the organisation of the take back and recovery from consumers, the decision examines the role played by the collection undertakings in the context of an exemption system and the characteristics specific to collection facilities.

106. As regards collection undertakings, the decision rightly points out that it is economically advantageous to entrust the task to one collector in each designated area since the collection services from consumers are characterised by marked network effects and effects of scale and scope (recital 160 of the contested decision). Thus, the fact that DSD contracts a single collection undertaking for a specific area makes it easier to obtain the authorisation and information necessary to satisfy the applicable legislation and enables the collection of packaging in the whole of the area concerned without the need to contract several companies.

107. The decision also rightly points out that for reasons of spatial organisation and collection logistics it is quite unlikely that another collection system will target the collection undertakings which do not participate in the DSD system, which represents 80% of the demand on the market for collection from consumers (recital 128 of the contested decision). The fact that 80% of packaging capable of being collected from consumers is already covered by a network of collection undertakings authorised by the local authorities makes it much more difficult to put another network in place alongside DSD. It is on that basis that the Commission considers that the duplication of the network put in place by the collection undertakings forming part of the DSD system seems quite unlikely.

108. As regards the collection facilities as such, the contested decision rightly points out that there are considerations of spatial economics, collection logistics and traditions of waste collection established among consumers which make it economically difficult in many cases to duplicate the arrangements for collection from consumers (recital 160 of the contested decision). That is understandable inasmuch as the duplication of facilities is neither in the interests of the public authorities, which issue the necessary approval and authorisation, nor in the interests of the consumers, whose cooperation is required in order for exemption systems to work, since they are the ones who place the packaging in the bag to be collected, in the bin to be emptied or in the relevant container.

109. From that point of view, asking consumers to fill two or more bags with packaging not depending on the material but on the exemption system used, or asking them to store in their homes two or more different containers to be emptied depending on the system used would be counterproductive, or even incompatible with the way in which competition is organised when the manufacturer or distributor of packaging decides to engage several exemption systems to be sure that the packaging is taken back and recovered (see Case T151/01 DSD v Commission [2007] ECR II0000, paragraphs 129 to 139, in which the Court sets out the content of the explanations given at the hearing in respect of the functional workings of systems combining several exemption systems to ensure that packaging is taken back and recovered). It is in that way that the term traditions of waste collection established among consumers' (recitals 93 and 160 of the contested decision) needs to be understood. Those consumers wish to contribute to improving the environment but in a way which produces the least

possible inconvenience for them.

110. Similarly, the multiplication of systems for collecting bags and emptying containers, just as the multiplication of containers or of sites provided to enable consumers to dispose of packaging close to their homes, is not economically rational in so far as available space is limited (recital 93 of the contested decision) and in so far as those same containers may be used by two or more exemption systems in the same way as is currently practised as regards, first, packaging made of paper and card which is collected under the DSD system and, second, printed matter (newspapers and magazines) which is collected by the municipal areas (recital 32 of the contested decision). The Commission was therefore entitled to take spatial economics and the nature of collection facilities into consideration when assessing under what conditions it was possible to enable exemption systems to gain access to consumers.

111. DSD is perfectly aware of those sociological and economic considerations and took account of them when setting up its system. From the outset, DSD decided to use the preexisting communal collection facilities to collect packaging made of paper, card and glass. Those preexisting facilities thus enabled the DSD system to be able to be set up quickly and efficiently in order to reach easily the consumers who were already used to using the sites provided for handing in that type of packaging.

112. It is apparent from the above that the contested decision sets out, to the requisite legal standard, the reasons why the facilities of the collection undertakings which have concluded a Service Agreement with DSD form a bottleneck for the exemption systems in competition with DSD, including Landbell in particular.

113. In those circumstances, allowing DSD to prevent collection undertakings from concluding and applying agreements with DSD's competitors would effectively deprive those competitors of any real opportunity of entering, and remaining on, the market for collection from consumers and the Commission may legitimately conclude that shared use is necessary to prevent the elimination of competition on that market.

114. That conclusion is not called into question in the arguments raised by the applicant to criticise the need for exemption systems to share use.

115. Thus, the fact that 70% of the weight of the packaging collected by the applicant is collected by means of packaging being taken voluntarily to a container or a waste collection centre and not by bag collection or bin emptying systems does not call the above reasoning into question, namely that both collection facilities used by the voluntary collection systems and the collection infrastructures used by the takeback system constitute a bottleneck which the exemption systems in competition with DSD must be able to access in order to penetrate the market for collection from consumers.

116. Similarly, the example of the blue bag' set up by Landbell in the LahnDillKreis, submitted by the applicant as an example of how an independent takeback system may be set up, cannot hide the fact that that example did not concern a Land but merely a district and thus prevented authorisation as an exemption system of any kind, that it was a pilot project put in place with the support of the local authorities and that DSD brought an action against that system. In addition, with effect from the decision, Landbell was in fact able to enter the market for collection from consumers as an exemption system for the Land Hessen, where Landbell uses, with the agreement of the undertakings at issue and the local authorities concerned, the same collection facilities as those which are used by the DSD system.

117. Finally, the quotation of a passage from the Order of the Verwaltungsgerichtshof Kassel of 20 August 1999, which envisages the setting-up of exemption systems alongside each other', does not lead to the conclusion that separate collection facilities must be used by competing exemption

systems.

118. It follows from the above that the contested decision establishes, to the requisite legal standard, as regards the Commission's obligations under Article 81 EC and the duty to give reasons, why shared use of the collection facilities, including the sorting facilities, of undertakings which have concluded an agreement with DSD is necessary to enable competing exemption systems to penetrate the market for collection from consumers, and consequently to be active on the upstream market in the organisation of the take-back and recovery of packaging from consumers.

119. Consequently, the applicant's arguments alleging the erroneous or insufficient reasoning of the contested decision as regards the need to guarantee shared use to maintain competition between exemption systems must be rejected.

ii) The alleged need for shared use in respect of selfmanagement solutions

120. As DSD is an authorised exemption system in all of the German Länder , it is clear that the term organisations competing with DSD' referred to in the first obligation refers, primarily, to all competing exemption systems, that is to say all the systems authorised by the German authorities to take back and recover packaging from consumers. The question does arise, however, as to whether that term also includes self-management solutions. In that regard, the applicant submits that shared use is not necessary for self-management solutions, although the Commission states in its submissions that the first obligation applies to selfmanagement solutions where they are authorised to collect directly from consumers.

121. The Court considers that, for the following reasons, the first obligation must be interpreted as meaning that the term organisations competing with DSD' includes only exemption systems and not selfmanagement solutions.

122. First of all, it is incontestable that selfmanagement solutions must, in principle, collect packaging at, or in the vicinity of, the point of sale and not from consumers. Such an interpretation is based on the wording of the Packaging Ordinance (see paragraphs 5 and 6). It is also based on the observations of the German authorities submitted to the Commission during the administrative proceedings, from which it is apparent that the quotas which have to be met are to be met exclusively by taking back sales packaging at, or in the immediate vicinity of, the actual point of sale and that any additional collections organised near private dwellings may not count towards these quotas' (observations of the German authorities, pages 3 to 6, and recital 15 of the contested decision). In that regard, it cannot be claimed that selfmanagement solutions and exemption systems are in direct competition as regards collection from consumers.

123. Next, it should be noted that the parties no longer challenge that, by way of exception from that principle, selfmanagement solutions may play a role on the margins of the market for collection of packaging from consumers and, consequently, on the upstream market in the organisation of the take-back and recovery of packaging from consumers. Thus, in the context of the definition of the market for collection, the Commission states that, if the view set out by the German authorities should prevail (see paragraph 122), selfmanagement arrangements will exert demand only on the margin of this market, particularly in respect of collection points deemed equivalent to private households, or in the case of delivery to the final consumer' (recital 87 of the contested decision, read in conjunction with recital 15 of that decision, see also recital 159 of the contested decision). Similarly, the Commission states, in response to DSD's submission that collection from consumers was not possible in the context of selfmanagement solutions, that it is not disputed, however, that even self-managers must collect packaging from the vicinity of the final consumer if the goods are delivered to the final consumer's address, as is the case for example with mail order or deliveries by small traders' (recital 167 of the contested decision).

124. In addition, in their pleadings, the parties agree that the intervention possibilities of a selfmanagement solution on the market for collection from consumers are restricted to two cases of overlap defined in the Packaging Ordinance. The first of those cases concerns mail-order companies which use a selfmanagement solution. Under the sixth sentence of Paragraph 6(1) of the Packaging Ordinance, in the case of mail-order measures shall be put in place to ensure the taking back of packaging at an acceptable distance from the final consumer'. That means that the notion of taking back from the point of sale, which, in principle, characterises the selfmanagement solution, must be able to be applied here in the vicinity of the consumer. The second case concerns the situation where the addressee of the packaging is treated as a consumer in the Ordinance. It is thus apparent from the second sentence of Paragraph 3(10) of the Ordinance that cafes, hotels, canteens, government offices, barracks, hospitals, educational establishments, charitable organisations, the offices of professional people, agricultural undertakings and craft enterprises, excluding print shops and other paper-using businesses, which can have their packaging material disposed of at the rate normally associated with private households by way of traditional means of collection for paper, card, board and other lightweight packaging and containers no greater than 1 100 litres for each group of material' are considered to be consumers.

125. Finally, by contrast with the exemption systems competing with DSD, in respect of which the decision states why the collection undertakings which are contractual partners of DSD and their collection facilities constitute a bottleneck, the Commission does not explain why it is necessary for self-management solutions to have access to those undertakings and to their facilities in order to maintain the competition on the relevant markets.

126. On the contrary, in its analysis of the condition concerning the maintenance of competition (see paragraph 40), the Commission states that collection undertakings excluded from the DSD system remain free to offer their services to firms wishing to manage their own waste' and explains that such arrangements are possible at least in respect of certain combinations of sales packaging and collection points on the margins of the market for collection from consumers' (recital 159 of the contested decision, with a reference to recital 87 thereof). That explanation supports the conclusion that the Commission was not concerned, or in any case had ceased to be in view of the commitments given by DSD (recital 163 of the contested decision), with the possibility for selfmanagement solutions to find a collection undertaking to take back and recover packaging from consumers in the cases of overlap laid down in the Ordinance.

127. Such an analysis is confirmed by the fact that the Commission points out, in the context of the assessment of the sensitivity for competition of the exclusivity clause in favour of the collection undertakings (see paragraph 30), that there are only a few particular collection points deemed equivalent to private households, such as hospitals or canteens, which subject to certain conditions relating to collection logistics and types of packaging might conceivably be able to entrust the work to other collectors, which would involve installing additional containers for the purpose' (recital 128 of the contested decision). That means that it appears possible, in those cases, for two collection systems to coexist.

128. By contrast with exemption systems, which have to meet strict conditions in respect of territorial coverage, selfmanagement solutions may confine themselves to taking back packaging from where it is marketed. Thus, although it appears difficult, for the reasons given above (see paragraphs 105 to 113), to duplicate all of the facilities necessary for an exemption system, it is easier for a selfmanagement solution to ensure that a second facility is put in a given place to enable it to collect the packaging which belongs to its system.

129. Consequently, in the absence of explanations as to why shared use could be necessary for self-management solutions in order to prevent the elimination of competition on the relevant markets', it is apparent

from the above that the term organisations competing with DSD' used in the first obligation must be interpreted as meaning that selfmanagement solutions are not included, but only exemption systems competing with DSD.

130. Such an interpretation of the term organisations competing with DSD' is also confirmed in a passage in the decision in which it is expressly stated that shared use of collection facilities by competing systems' does not concern selfmanagement solutions. To dismiss an argument raised by DSD against the sharing of the containers by competing systems, the Commission states that that argument relates only to the question whether self-managers are entitled to collect or buy in packaging from the vicinity of the final customer, and does not concern the question of the joint use of receptacles by competing systems' (see footnote 16 in recital 169 of the contested decision). That quotation, which contrasts self-management solutions and competing systems, clearly excludes self-management solutions from the shared use of collection facilities, which is thus restricted to competing systems, namely exemption systems competing with DSD.

131. In that context, it is not necessary to respond to the applicant's arguments concerning the unlawfulness of the contested decision in so far as the first obligation relates to selfmanagement solutions.

132. Similarly, the Court cannot take into account certain arguments raised by the Commission at the rejoinder stage, according to which shared use could be necessary in the case of low turnover, in so far as concerns self-management solutions which deal with packaging supplied in the course of mailorder, and where a single collection facility may be installed, in a hospital for example, in so far as concerns collection points treated as consumers. Those arguments do not appear in the contested decision (the turnover) or contradict it (the hospital) and the arguments raised by the Commission in the course of the proceedings cannot remedy the insufficiency of the reasoning in the contested decision in that regard (see, to that effect, Joined Cases C329/93, C62/95 and C63/95 Germany and Others v Commission [1996] ECR I5151, paragraphs 47 and 48, and Case T93/02 Confédération nationale du Crédit mutual v Commission [2005] ECR II143, paragraph 126).

3. The second part, alleging that it is impossible to impose an obligation to remedy a possible infringement of Article 81(1) EC and Article 82 EC

a) Arguments of the parties

133. In response to the argument raised in the statement in defence (see paragraph 94), the applicant submits that the possible infringement of Article 81(1) EC or Article 82 EC alleged by the Commission is purely speculative and cannot justify the first obligation which - in any event - can seek only to prevent the elimination of competition on the market on which a restriction of competition has been found, namely the market for collection from consumers.

134. First, the applicant observes that the only restriction of competition identified in the decision, within the meaning of Article 81(1) EC, is to be found in the exclusivity clause concluded by DSD in favour of the collection undertaking (see paragraphs 28 to 32). That restriction concerns the market for collection from consumers and prevents other collection companies from offering their services to DSD, which has the effect of appreciably reducing competition between the collection undertakings in the designated area (recitals 123, 124 and 140 of the contested decision). That restriction has, however, been exempted by the Commission under Article 81(3) EC (see paragraphs 37 to 41), in particular inasmuch as it was not likely to eliminate competition on the market for collection from consumers (recitals 158 and 178 of the contested decision). In those circumstances, the applicant submits that the first obligation, whose stated objective is to enable competitors to access the upstream market in the organisation of collection from consumers (recitals 162 and 177 of the contested decision), is not related to the abovementioned restriction of competition,

which does not concern DSD's competitors on the organisation market, but those of the collection undertakings which are contractual partners with DSD. The first obligation is thus not likely to intensify the competition on the market for collection from consumers.

135. Second, the applicant states that the Commission cannot impose an obligation in order to prevent an alleged threat of restriction of competition or abuse on a secondary market, namely the market in the organisation of the collection from consumers, on which no restriction of competition within the meaning of Article 81(1) EC has been found or, a fortiori, exempted under Article 81(3) EC. In that regard, the applicant points out that, in the decision, the Commission states clearly that the Service Agreement does not confer any exclusivity in DSD's favour in respect of access to the collection facilities of its contractual partners (see paragraph 36). Similarly, the Commission states that there is no restriction of competition as regards the organisation market (recital 86 of the contested decision). The applicant also submits that there is no evidence to suggest that DSD is likely to enter into such a commitment of exclusivity with its contractual partners or to impose that exclusivity unilaterally. In those circumstances, the market which needs to be taken into account for the application of Article 81(3) EC must be identical to that examined in relation to Article 81(1) EC. In addition, just like the object of the examination under Article 81(3) EC, the possibility of imposing an obligation under Article 8(1) of Regulation No 17 is also limited by the restriction of competition found on the basis of Article 81(1) EC. Article 8 of Regulation No 17 can thus not serve as a legal basis for the imposition of an obligation for the purpose of dealing with an alleged problem of competition.

136. Third, the applicant considers that, even if the Commission could impose an obligation in a decision granting exemption in order to prevent a restriction of fictitious competition on a secondary market, it was not entitled to do so in the form of an obligation, which is a wholly separate measure (Article 15(2)(b) of Regulation No 17), but only in the form of a condition making that agreement eligible for exemption' (Joined Cases T79/95 and T80/95 SNCF and British Railways v Commission [1996] ECR II1491, paragraph 63 et seq.). That is confirmed by the previous practice of the Commission (quoted in the reply, footnotes 20 and 21), which has almost always coupled its decisions granting exemption with conditions and not obligations, if, and in so far as, it considers a particular form of action to be necessary to prevent the elimination of competition for the purposes of Article 81(3) EC.

137. The Commission submits, as a preliminary point, that the above line of argument is inadmissible in that it is a new plea in law produced out of time for the purpose of Article 48(2) of the Rules of Procedure of the Court of First Instance. In addition, the Commission states that the purpose of the first obligation is to guarantee the commitments given by DSD in order to remedy certain problems identified during the administrative proceedings and certain ambiguities inherent in those commitments. What is important is thus whether the conduct from which DSD agreed to refrain was capable of being examined in the light of Article 81(1) EC. In the decision, the Commission voices its concerns in that regard, which not only relate to the exclusivity clause in favour of the collection undertakings but also the question of the access of competitors to the facilities of the collection undertakings which are contractual partners with DSD. In addition, the Commission notes that its assessment, in the context of Article 81 EC, must not be restricted only to the market for collection from consumers, which in any case has two aspects - the offering of services by collection undertakings on the one hand, and the demand for services by DSD and the other exemption systems on the other - but may also concern the possible repercussions of the Service Agreement on the upstream market in organisation.

b) Findings of the Court

i) Admissibility

138. In response to the Commission's application that DSD's line of argument stated above be declared inadmissible since it constitutes a new plea in law produced out of time for the purposes of Article 48(2) of the Rules of Procedure, it should be pointed out that, although that provision does prohibit new pleas in law from being produced in the course of proceedings, a plea which constitutes an amplification of a submission previously made, either expressly or by implication, in the original application and is closely linked to it must be declared admissible. The same applies to a submission made in support of a plea in law (see, inter alia, Case T231/99 Joynson v Commission [2002] ECR II2085, paragraph 156).

139. In the present case, the line of argument put forward by DSD in the reply merely continues the arguments raised in the application in support of the plea of the unlawfulness of the first obligation in the light of Article 81 EC. In addition, those arguments merely respond to those raised by the Commission in the defence in order to relocate the aim of the action around the finding that the contested decision grants an exemption under Article 81(3) EC to a restriction of competition by attaching to that exemption an obligation based on the need to protect competition. It should be pointed out, in particular, that the applicant's contention that the first obligation infringes Article 8 of Regulation No 17, submitted for the first time in the reply, is closely linked to that of the infringement of Article 81(3) EC presented in the first plea, given that that plea challenges the legality of the first obligation in the light of the applicable law and that it is precisely Article 8 of Regulation No 17 which enables the Commission to couple a decision granting exemption under Article 81(3) EC with an obligation.

140. In any event, the Commission had the opportunity, in the rejoinder and at the hearing, to submit its comments on what it considers to be a new plea.

141. It follows from the above that the Court must reject the Commission's application for a declaration of inadmissibility of the arguments raised by the applicant as regards the possibility of imposing an obligation to eliminate a possible threat of infringement of Article 81(1) EC and Article 82 EC.

ii) Substance

142. It is thus necessary to examine the arguments raised by the applicant alleging that the Commission was not able, in the present case, to attach to the decision granting exemption, which was adopted on the basis of Article 81(3) EC, an obligation imposed under Article 8 of Regulation No 17.

143. Under Article 81(3) EC, the provisions of Article 81(1) EC may be declared inapplicable in the case of any agreement between undertakings which contributes to improving the production or distribution of goods or to promoting technical or economic progress (first condition), while allowing consumers a fair share of the resulting benefit (second condition), which does not impose on the undertakings concerned restrictions which are not indispensable to the attainment of these objectives (third condition) and afford such undertakings the possibility of eliminating competition in respect of a substantial part of the products in question (fourth condition).

144. In addition, Article 8(1) of Regulation No 17 enables the Commission to couple a decision granting exemption under Article 81(3) EC with conditions and obligations.

145. In that context, it should be pointed out, first, that the way in which the applicant presents the contested decision is incorrect. At all the stages of the Commission's assessment under Article 81 EC, the contested decision also considered the question of access to the facilities of the collection undertakings and was not restricted to examining solely the effects on competition of the exclusivity clause for collection undertakings.

146. That is true both of the assessment relating to Article 81(1) EC (recitals 28 to 32 and 33

to 36 of the contested decision), and the assessment relating to Article 81(3) EC (see recitals 37 to 39 in relation to the first three conditions of applicability of that provision of the Treaty, where the analysis focuses on the collection undertakings, and recitals 40 and 41, in which the condition relating to maintaining competition is examined not only in respect of the collection undertakings, but also, and especially, in respect of the exemption systems competing with DSD).

147. It is only in the explanations given by the Commission to justify the obligations attached to the decision granting exemption pursuant to Article 8 of Regulation No 17 that the decision merely refers to the need to guarantee the access of DSD's competitors to the facilities of the collection undertakings which had concluded a service agreement with DSD, and it does so in order to counter the applicant's reservations in respect of one of the com mitments reproduced in recital 71 and to avoid the elimination of competition on the market for collection from consumers and on the upstream market in the organisation of the takeback and recovery of packaging from consumers (see paragraphs 42 and 45).

148. In addition, in its arguments, the applicant makes an artificial distinction between the market for collection from consumers, which it seeks to restrict to the collection undertakings whose services are used by DSD and to collection undertakings which have not concluded a Service Agreement with DSD, and the market in the organisation of the take-back and recovery of packaging from consumers, which concerns DSD and its competitors. In reality, as stated in the contested decision (see paragraph 41), what is important is rather the question whether or not the exemption systems competing with DSD must have access to the collection facilities of DSD's contractual partners in order to be able to enter the market for collection of packaging from consumers and, consequently, to be active on the upstream market in the organisation of the take-back and recovery of packaging from consumers.

149. Therefore, it cannot be alleged that the decision granting exemption concerns only the restriction of competition identified in the assessment relating to Article 81(1) EC, namely the exclusivity clause in favour of the collection undertakings. That decision concerns the whole of the Service Agreement notified by DSD whose conditions of application were clarified by the various commitments given by that undertaking.

150. It is therefore necessary to take account of the fact that the Commission agreed to exempt the Service Agreement because DSD assured it, inter alia, that no provision of that agreement was capable of binding the collection undertakings to DSD and that it would not bring any actions against third parties to restrict use in the case of shared use. Those assurances are decisive since they enable the Commission to find that the exemption condition linked to the maintenance of competition is, in the present case, satisfied. In that regard, it should be pointed out that, in the absence of such assurances, the Commission clearly stated during the administrative proceedings that it had no intention of authorising or exempting the Service Agreement, but was considering either finding that the existence of a possible barrier to the access of competitors with DSD to the collection facilities of DSD's contractual partners constituted a restriction of competition as such (see paragraph 33), or considering whether DSD's conduct seeking to prevent its competitors from accessing those facilities might fall under Article 82 EC (see paragraph 35).

151. Consequently, since the Commission adopted the decision granting exemption on the basis of both its assessment of the exclusivity clause in favour of the collection undertakings and in the light of the need to maintain competition in such a way that the exemption systems in competition with DSD have the possibility of gaining access to the collection facilities of DSD's contractual partners (see paragraphs 118 and 128), the Commission did not infringe Article 81(3) EC and Article 8 of Regulation No 17 by adopting the first obligation.

152. Finally, the applicant submits that, even if the Commission could impose a duty on DSD in the contested decision, it could do so only in the form of a condition and not as an obligation,

on the ground that the legal consequences attached to an obligation are more severe than those attached to a condition. Pursuant to Article 8(3)(b) of Regulation No 17, the Commission may revoke or amend its decision or prohibit specified acts by the parties where they commit a breach of any obligation attached to the decision, and pursuant to Article 15(2)(b) of that regulation the Commission could impose a fine if the applicant committed a breach of any obligation.

153. However, it is necessary to point out that Article 8(1) of Regulation No 17 provides that conditions and obligations may be attached to decisions granting exemption without stipulating under what conditions the Commission must choose a particular one of those possibilities. In addition, since Article 81(3) constitutes, for the benefit of undertakings, an exception to the general prohibition contained in Article 81(1) EC, the Commission enjoys a large measure of discretion in relation to the detailed rules to which it may subject the exemption, while at the same time having to act within the limits imposed upon its competence by Article 81 EC (Case 17/74 Transocean Marine Paint v Commission [1974] ECR 1063, paragraph 16).

154. The fact that the Commission preferred to impose conditions rather than obligations in other cases is not sufficient, in itself, to call into question the possibility provided for in Regulation No 17 of coupling a decision granting exemption with obligations rather than conditions.

155. It follows from the above that the Commission did not infringe Article 81(3) EC and Article 8 of Regulation No 17 by attaching to the decision granting exemption an obligation concerning the need to guarantee the shared use by exemption systems competing with DSD of the collection facilities of the undertakings used by the DSD system.

4. The third part, alleging infringement of the principle of proportionality

156. Even supposing that the shared use of the collection facilities is necessary to enable competition to be maintained, the applicant submits, however, that the first obligation is none the less disproportionate because, first, it infringes the Packaging Ordinance, second, it leads to a distortion of competition to the detriment of DSD, third, it unduly impairs the mark Der Grüne Punkt and, fourth, it infringes DSD's fundamental right of access to justice.

a) The alleged infringement of the Packaging Ordinance

Arguments of the parties

157. The applicant submits that the first obligation is disproportionate because the shared use of DSD's collection facilities is incompatible with the principle of responsibility for the product laid down in the Packaging Ordinance. That principle requires manufacturers and distributors of packaging to achieve the recovery rates in respect of the packaging which they have put on the market' (first sentence of point 1(1) of Annex I to Paragraph 6 of the Ordinance). In addition, in the case of participation in an exemption system, the manufacturer's or distributor's responsibility for that packaging is transferred to the operator of that system which is required to recover the packaging fed into the system' (second sentence of Paragraph 6(3) of the Ordinance) and to achieve the recovery rates in respect of packaging for which manufacturers and distributors participate in [its] system' (second sentence of point 1(1) of Annex I to Paragraph 6 of the Ordinance). As a result of that approach, which is based on specific packaging, it is unlawful to buy packaging from other systems to achieve the recovery rates laid down in the Ordinance. In that respect, the applicant submits that the systems in competition with its own should, in principle, meet their obligations to take back and recover with their own collection facilities, termed collection facilities of the system' (see the seventh indent of point 3(3) of Annex I to the Ordinance).

158. Thus, in the case of shared use of collection facilities by two competing systems, the allocation to one or the other of those systems of a specific type of packaging is not, as a general rule,

possible. In that regard, the applicant states that the allocation of the volumes of packaging... to different systems on a polluterpays basis if they are shared by means of quotas', mentioned in the contested decision (recital 170), requires expensive and complicated sorting analysis. In addition, the example of paper and card used by the Commission gave rise to unfair results, in so far as the share of the volume collected, constituted by packaging attributed to DSD and determined by the sorting analysis, was initially 25%, although the share of the packaging actually licensed by DSD was significantly lower than that quota. In DSD's view, such a general solution for all packaging is unacceptable.

159. In addition, the applicant submits that the Ordinance makes any shared use of collection facilities by selfmanagement solutions unlawful. As a general rule, they cannot collect packaging in the vicinity of consumers. Therefore, in submitting that DSD cannot rely on the Packaging Ordinance with regard to its contractual partners (recital 167 of the contested decision), the Commission failed to have regard to the fact that the Ordinance also pursues the objective of protecting the applicant from distortions of competition.

160. The Commission submits that the way in which the applicant presents the Ordinance is inaccurate given that the recovery rates are not based on specific types of packaging or on the total volume of packaging put on the market, but on the quantity of packaging collected by the relevant system. Landbell submits that the shared use of the collection facilities is, in any event, compatible with the Packaging Ordinance, the amendment of which in 1998 sought to increase competition between exemption systems.

Findings of the Court

161. The applicant submits, in essence, that the shared use of the collection facilities of undertakings which have concluded a Service Agreement with DSD has the effect of preventing it from taking back and recovering the packaging which has been attributed to it specifically by the manufacturer or the distributor of the packaging concerned in accordance with the principle of responsibility for the product laid down in the Packaging Ordinance. Therefore, by preventing DSD from opposing shared use, the first obligation disproportionately infringes the rights and obligations which DSD derives from that ordinance.

162. At the hearing, the parties were questioned about the ways in which the exemption systems and self-management solutions function, in order to enlighten the Court as to the part played by the packaging as such, which the applicant refers to as specific packaging', in meeting the obligations to take back and recover imposed by the Ordinance. Their explanations enabled the Court to make the following findings.
