45. In this case, and following the logic of our basic distinction between publicly controlled companies and privately controlled ones, we believe that the principles should in general follow those set out at paragraph 37 above, unless the public legal entity has already won the contract under a tendering process, in which case the only issue relates to the choice of private partner (see paragraph 43 above). To recap, there should be two options available for the public authority. First, from the time of change of control to treat the mixed entity as a private undertaking, and to follow the relevant legal procurement processes in relation to public contracts or concessions, as the case may be. Or second, from the outset – and before selecting the private partner - to decide to award a contract to a mixed entity. Accordingly, the advertising and tender selection would be for a private sector partner who best met the combined requirements as legal partner in the company and the service / technical requirements of the contract(s) to be delivered.

46. To complete the picture, there is logically a final scenario, in which an existing mixed entity, controlled by the public sector, changes to a mixed entity controlled by the private sector, usually by one or more existing private partners taking an additional equity stake. The same principles apply, we suggest, as in relation to the previous scenario.

Public-Public Partnerships: inter-communal structures

47. Whilst this Green Paper is about Public-Private Partnerships, we wish to comment briefly on the legal position of local / regional institutional Public-Public partnerships. We are aware that the Commission has over recent months engaged in correspondence with certain governments in which, amongst other matters, the legality of the attribution of public service tasks to inter-communal legal entities without tendering has been challenged - for example the letter of Commissioner Bolkestein to the Belgian Minister of Foreign Affairs of 16th December 2003. We have major concerns about the nature of the legal arguments put forward by the Commission in this correspondence, which in our view go, at certain points, well beyond anything justified by the clear terms of the Treaty, Directives or case law. We are in particular concerned at the implications for inter-communal structures, in which several local governments combine together to deliver important public services for their joint areas, which in their view are more efficiently and effectively delivered through such vehicles than by each commune alone.

48. Without reiterating the arguments set out above, we believe that local and regional self-government must involve freedom on the part of the local / regional authority to decide the means by which a service should be delivered, including via inter-communal co-operation arrangements and inter-communal joint legal entities. In relation to service concessions, the principles we have set out and proposed above should equally apply to publicly controlled inter-communal undertakings. We believe that the Teckal "in-house" exception, in the case of public works and contracts, should apply mutatis mutandis to inter-communal legal entities, where the control exercised by the local authorities is broadly analogous to the control each would have if the service were delivered directly, *and provided that the entity does not compete or offer services outside its constituent municipalities' areas*. If this is not existing law, then the law needs to be amended.

Conclusions

49. In our introduction, we recalled that the express aim of the Green Paper is to launch a debate, and we believe that the issues we have raised - and there are many we have not touched on - demonstrate the need for such a public debate, based on better and wider information and understanding, before any new legislation is proposed at Community level.

50. Indeed, we note and share the perspective of Commissioner Bolkestein, who in his speech of 17th May queried whether, at least at the outset, the "most classical instrument" - legislation - was the best way forward; he suggested rather that at this stage we should seek prag-

matic solutions to such problems as exist, and actively promote exchange of good practice.

51. We make this point in particular because the Green Paper has a relatively narrow agenda - the legal rules - rather than a wide one about how best to promote knowledge and understanding of the roles and possibilities afforded by different models of PPP. Any changes to the law - and we have recommended some, in particular in relation to the current Teckal exception - should flow from a wider information-base and understanding of the current uses of PPPs, the advantages and disadvantages they offer, and the obstacles to their wider use where it might be beneficial to do so. They should also take into account the principles of subsidiarity and local self-government. The law should not be seen simply through an abstract economistic prism of "eliminating barriers to competition", but as a more pragmatic tool to enable the public and private sectors to work together for common advantage, respecting the roles of each, in the interests of the citizens.

ANSWERS TO QUESTIONS

[We have summarised the questions for the sake of brevity.]

1. What types of purely contractual PPP set-ups do you know of; are they subject to supervision?

The principal common kinds. As a European organisation, we are not aware of any special innovative types of PPP. We are not aware of national supervision arrangements.

2. For purely contractual PPPs, will the transposition of the competitive dialogue procedure into national law provide a well-adapted procedure in relation to public contracts?

We believe so, for most cases, but this will need to be tested in practice.

3. In the case of such contracts, are there other points which may pose a problem in terms of Community law on public contracts?

We are not aware of any.

4. Have you organised, participated in, a procedure for the award of a concession within the EU? What was your experience of this?

Our members' authorities have of course organised procedures for the award of concessions. The general experience is that the procedures for granting concessions are generally simpler and less costly than those under the public procurement Directives.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? Is competition normally guaranteed in this framework?

The simple answer is "yes". Given the nature of most works and services required by local and regional authorities, our general experience is that even when going through the processes required for public contracts, few non-national companies show interest, except for those who already have a presence in the country of the authority, for most contracts.

6. Is a Community legislative initiative to regulate the award of concessions desirable?

For reasons set out in our response, we do not favour a new Community legislative instrument for concessions.

7. If the Commission should propose new legislative action, should such legislation cover all contractual PPPs, whether designated contracts or concessions, and make them subject to identical award arrangements?

Even if we were in favour of a new Community legislative instrument for concessions, we would not favour using the same award arrangements for all. It is true that some types of PPP may be difficult to define at the outset as contracts or concessions; we believe that in any case of doubt, the public authority should assume from the outset that the Directive applies. To make all contractual PPPs subject to the identical award arrangements would involve a clear legal definition of what is a PPP in this context, something not attempted in the Green Paper, and which may be difficult to get agreement on. The only other way of doing so would be to make all concessions subject to the same detailed procedures as public contracts, which we would strongly contest

8. Are non-national operators guaranteed access to private initiative PPP schemes? Is there adequate advertising? Is the selection procedure genuinely competitive?

We do not have sufficient information to answer this point.

9. What would be the best formula to ensure the development of private initiative PPPs while guaranteeing compliance with the relevant principles?

As indicated in our response, we do not yet have a fixed view on this point, and believe a fuller debate is required.

10 - 14 These deal with the phase following the selection of the private partner

We are not generally able to assist on these points. However, some of our members have indicated that they do not fully share the Commission's concern over step-in arrangements (Q13), which may be necessary to ensure that a project (which has been tendered) is carried through. In general, we consider that the approach taken in this part, both in the text and the questions, is rather one-sided and rigid. Everything seems to be looked at from the point of view of "barriers" to freedom of establishment etc., rather than looking at what is the correct balance between contractual certainty and the need for a reasonable degree of flexibility to deliver, and even adjust, a project over its lifetime.

15. Are there specific problems in relation to subcontracting?

We are not aware of any.

16. Does the phenomenon of contractual PPPs, involving transfer of a set of tasks to a single partner, justify more detailed rules for subcontracting?

No.

17. Is there a need for a Community level initiative to clarify or adjust the rules on subcontracting.

We believe not, subject to the product of this consultation.

18. What experience do you have of arranging institutionalised PPPs, and do you think that Community law on public contracts and concessions is complied with in such cases? If not, why not?

Our members across Europe have a wide and diverse experience, under differing national legal systems, of institutional PPPs (i.e. public-private mixed entities). In general, we and they consider that they comply with Community law on public contracts, and with relevant national and, so far as applicable, Community law on concessions. However, many of our members do not agree with all aspects of the Commission's opinion on the current Community law on concessions (see our main response), in particular in relation to public service missions assigned to their publicly controlled legal entities.

19. Do you think an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what points and in what form? If not, why not?

No. We believe that where there is a requirement or a choice to advertise to find an institutional PPP private partner, it is for the public authority in question to carry out. This is an area where exchange of good practice may be beneficial.

20. Which measures or practices act as barriers to the introduction of PPPs within the European Union?

We do not believe that it is helpful to look at the question in terms of "barriers". What is needed, at least for local and regional authorities, is a European exchange of practice and guidance for public bodies on the pros and cons of different types of PPP, assistance with legal documentation, etc. The issues are pragmatic and technical. Most of the support needs to be provided at national level, but a European dimension would be beneficial.

21. Do you know of other forms of PPP developed in countries outside the EU?

No

22. Would a collective consideration of these questions pursued at regular intervals among the actors concerned, also allowing for exchange of best practice, be useful? Should the Commission establish such a network?

We strongly support this point. We believe it would be useful for the Commission to take the initiative in setting up such a network, including of course local and regional government involvement. CEMR would be pleased to cooperate in this.

CEMR Response to the European Commission's Green Paper on

PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

Background document:

Green Paper on PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

COM(2004) 327

EXECUTIVE SUMMARY

Introduction

1. We welcome the publication of the Green Paper on Public-Private Partnerships (PPPs) and Community law on contracts and concessions. Noting that the present Green Paper concentrates on the technical legal issues, ***we hope that the Commission will launch a wider debate to examine the positive and negative experience of PPPs to date, in order to promote their best use across Europe.***

2. We do not fully accept, as regards local and regional government, the Green Paper's proposition that "the development of the PPP is also part of the more general change in the role of the State in the economy, moving from a role of direct operator to one of organiser, regulator and controller." There are advantages and disadvantages to each of the methods of service delivery - whether by the public authority itself, by outsourcing to the private sector, or by using public-private mixed companies or other forms of PPP. For each service, local and regional governments need to make pragmatic decisions based on their own circumstances. ***We consider that the principle of local and regional self-government - now expressly recognised in Article I – 5 of the European Constitution - must enable local and regional authorities to decide democratically the best means of delivering each service, including decisions to use companies they own or control.***

3. We also believe that ***there needs to be a wider political debate about the future of local and regional public services within the EU, to discuss the proper balance between, on the one hand, local self-***

government and subsidiarity, and on the other, the rules of competition that need to apply in the European interest. Several connected issues – the White Paper on Services of General Interest, the “Monti package” on the relationship between public service compensation and state aids rules, and now this Green Paper – need to be seen and debated politically as a coherent whole.

The existing legal framework for PPPs

4. A principal concern for European local and regional government relates to the uncertainty that applies to what the Green Paper calls "institutional PPPs", i.e. mixed public-private legal entities. ***Our response therefore sets out our understanding of the current main legal rules that apply, which differs in some important respects from that of the Commission*** as set out in the Green Paper.

5. The new EU Public Procurement Directive of 2004 lays down a clear code of rules for the tendering of public works and service contracts, which accordingly apply also to many contractual PPPs. However, the Directive does not apply to service concessions, where the private party his given the power to "exploit" the service, i.e. to charge users of the service (with or without additional payment from the public authority). A key issue raised in the Green Paper is whether service concessions should be brought under the same or similar legal rules as works and service contracts. ***CEMR believes that service concessions should not be subject to the detailed and complex EU procurement regime***, since the nature of most concessions, with the additional risk passing to the private party requires more flexibility than is possible under the current Directive.

6. The European Court of Justice (in the ***Teckal*** case) decided that, under the public procurement Directive, all relevant contracts must be tendered out by local authorities wherever a contract is to be concluded between it and "a person legally distinct" from the authority. The only exception the Court permits is where the authority exercises over the company a control similar to that it exercises over its own departments, and the company carries out the essential part of its activity with its parent authority. ***CEMR considers that the Commission gives an unduly limited interpretation to this exception, and in particular believes that, when the Directive falls to be amended, this exception should be expanded to cover companies owned or legally controlled by the local authority.***

7. The Green Paper expresses the Commission's view that, in relation to service concessions, and despite the absence of any Directive, there are Treaty rules that require all concessions to be tendered, including (it appears) the case of local authority controlled public-private mixed legal entities. ***CEMR on the other hand believes that there is no EU law that requires local services to be tendered, if the local authority chooses to allocate the concession task to a company it wholly owns, or a mixed public-private entity that it controls.***

Purely contractual PPPs

8. ***We agree that for purely contractual PPPs that fall within the public procurement Directive, the new "competitive dialogue" procedure appears to offer an appropriate means to enable the parties to work out the best solution and to select the best private partner for the task.*** This will need to be kept under review as this procedure is a new one, not yet operational. We recommend that the Commission issues guidance to public authorities in relation to complex cases where it may not be fully clear at the outset whether the proposed PPP will be a works or service contract, or a concession. Public authorities should err on the side of caution, and use the Directive's procedure in case of doubt.

9. We believe that further consideration needs to be given before reaching a view on whether further incentives should be given by law to promote "private initiative PPPs", i.e. where the concept for the proposed PPP comes from a particular private sector body.

Institutionalised PPPs (public-private mixed legal entities)

10. This section of the Green Paper raises very important issues for local and regional government, since our authorities use a very wide range of legal entities which they either wholly own, or which are mixed public-private companies. These companies to date have a wide range of public service tasks and missions entrusted to them, often because they can combine the benefits of access to private sector investment and know-how, together with public control and adaptability to meet new needs and circumstances.

11. In the light of the Commission's legal analysis (which we do not wholly share), ***CEMR is in particular concerned to avoid an excessive administrative and financial cost and delay that would be involved in any legal situation that would require a "double tendering"*** - i.e. one process of competitive tendering for the selection of the private partner, followed by another such process for the award of the public contract or concession. Our experience shows that the costs and delays are very real in such a scenario.

12. ***We therefore propose that, to avoid costs and unnecessary regulation, double tendering be avoided, by permitting authorities to invite tenders to carry out a defined task or service by using a public-private company only***. The tender documentation would make clear the proposed legal format, as well as the technical specification etc., and the competitive dialogue process could be used to make the choice. In this way, all private sector companies could bid, but the public sector's choice of means of delivery would be respected.

13. Our response looks more specifically at the Green Paper's comments in relation to (a) the creation of an ad hoc legal entity jointly owned by the public and private sector, and (b) the control of a public entity by a private

entity. We point out that in fact there are two scenarios under each heading. When a new legal entity is created, it may be controlled by the public or by the private sector. Likewise, in the second case, an existing company wholly owned by an authority may become a mixed public-private entity, with legal control either remaining with the public authority, or passing to the private sector

14. ***CEMR believes, in relation to these scenarios, that there is a clear distinction between publicly controlled companies, and privately controlled ones.*** In either case, the authority should be able to use the process of a single tender (as outlined above) for the choice of partner and attribution of the contract / concession. In general, a privately controlled mixed entity should be treated similarly to other private sector companies. However, we consider that local and regional authorities have, and should have, more discretion over companies they own or control, e.g. they may (where appropriate) lawfully entrust concessions for local services to such entities without a tendering process.

15. ***In relation to the choice of private sector partner for mixed legal entities, we consider that the principles of transparency and good public administration should apply.*** Any public authority must be able to justify its decision to its citizens. Whilst we envisage that the private sector partner will often be selected via an advertising process, but there may also be proper grounds, based on local circumstances, for selecting an individual partner.

Inter-communal structures

16. We draw attention to one form of public-public partnership where we have concerns about the approach currently being taken (outside the Green Paper process) by the Commission. This relates to inter-communal structures, where two or more municipalities jointly establish a legal entity to deliver specific services solely for their joint area and population. The Commission has challenged the legality of local authorities entrusting services to such structures without those services being tendered out. ***We believe that it normally is, and should be, lawful for the relevant municipalities to entrust local public service tasks to such structures, on the same basis (mutatis mutandis) as a single local authority can do in relation to its own company, and the Teckal case should be interpreted on this basis.***

Conclusion

17. We share the view of Commissioner Bolkestein who in a speech on the launch of the Green Paper queried whether "the most classical instrument" - new legislation - was, at least at the outset, the best way forward. He suggested that at this stage we should seek pragmatic solutions to such problems as exist, and actively promote exchange of good practice.

18. We believe this is right, even though we have proposed amendments to legislation (to extend the Teckal exception), in particular because the Green Paper has a relatively narrow agenda, namely the legal rules. ***We consider that any changes to the law should flow from a wider information-base and understanding of the current uses of PPPs, their advantages and disadvantages, and the obstacles to their wider use where it may be beneficial to do so. They should also take into account the principles of subsidiarity and local self-government***. The law should not be seen simply through an abstract economistic prism of "eliminating barriers to competition", but as a more pragmatic tool to enable the public and private sector to work together for common advantage, respecting the roles of each, in the interests of the citizens.

CER filing: 01.04.03

European Commission Green Paper on Public-Private Partnerships

---

A general response from CER

The *Community of European Railway and Infrastructure Companies* (CER) welcomes the discussion initiated by the European Commission in their recent Green Paper[i] on Public-Private Partnerships (PPPs).

In order to meet the objectives contained in the Commission's 2001 White Paper on Transport Policy[ii], the European railway market requires new investment along key trading corridors, such as the TEN-T. PPPs are a relatively new financing opportunity, at least in the rail sector. CER recognises that, in specific cases, PPPs may usefully broaden the existing range of financing instruments available to governments to fund new investment. Moreover, as with all contracts, PPPs impose a welcome discipline on the public sector: once the project is agreed, governments are not able to change the project design for short-term political gain.

However, we do not see this discussion on PPPs as applicable to public service transport contracts, or regional franchise agreements. These are already regulated under Regulation 1191/69[iii] which applies tailored procedures to these rail services[iv]. Public service contracts should therefore be excluded from the Commission Green Paper on PPPs.

As the Green Paper makes clear, even in the context of funding new infrastructure, 'PPPs cannot be presented as a miracle solution…' (para 5). PPPs may help with the *financing* of new rail infrastructure – that is spreading current expenditure needs over future budgets, but they will not replace the basic need for public funding, commitment and risk-participation. Indeed, examples of PPPs within the rail sector remain scarce[v]. We stress two potential general difficulties in applying PPPs to the rail sector:

- Borrowing money from the private sector is more expensive than raising public money: the government ends up paying a 'mark-up' in order to provide infrastructure. The size of the mark-up increases as the private partner bears more risk. In addition, the high degree of integration and interdependency required within the rail network (e.g. technical standards, safety requirements and access points) can make the involvement of a private company, other than the national infrastructure manager, difficult: for instance, a recent report by *PricewaterhouseCoopers*[vi] argues that the upgrading of high-speed rail lines within Europe is unlikely to be done at lower cost by the private sector.
- If a few links within a national rail network are owned and operated by a separate private company other than the national infrastructure manager, complex contractual arrangements are required in order to satisfy the performance regime requirements of Article 11 of Directive 2001/14 on access charging. This will reduce the attractiveness of the project to the private sector, or, equivalently, increase the 'mark-up' that the government has to pay to secure private financing of the project.

The Green Paper largely avoids this discussion on PPPs, however, by recognizing that this is ultimately a question for Member States. Instead it questions whether there is a need to harmonise the national legal bases of

PPPs. For CER, the need for harmonisation is most apparent in cross-border rail projects. This view is also supported by the recent *PricewaterhouseCoopers* report, which states that: 'the alignment of legal requirements in different Member Countries…, for example relating to procurement, property and planning, and risk sharing, would facilitate cross-border TEN-T projects.' (pg 19).

The Green Paper asks a number of specific questions on the experience of participants in PPP processes within Europe. We have the following comments:

- On the 'competitive dialogue' procedure: the complexity of negotiations surrounding PPP projects requires a flexible approach to specifying the project and timing of negotiations. We are concerned that the competitive dialogue might increase the complexity, and hence cost, of a project. We support its use only as a case of last resort i.e. where current 'negotiated' procedures demonstrably fail.

- The problem of low bids: the range of bids for a particular project may contain one extremely low bid. This bid may reflect genuine lower production costs from a particular supplier. However, it can also reflect either predatory pricing or poor judgement. This latter case may lead private operators to run into financial difficulties. Renegotiating these contracts is time consuming and costly to the public budget. Creditworthiness, amongst other qualitative and quantitative decisive factors, should therefore be an important criterion when selecting PPP partners.

- Duration of the partnership: the Green Paper states that the duration of the relationship must be fixed in terms of the need to guarantee the economic and financial stability of a project, while securing that it does not limit open competition beyond what is required to ensure that the

> investment is paid off and there is a reasonable return on invested capital. CER is concerned that setting an undifferentiated 'duration cap' applicable to all sectors of the economy is unrealistic. Rail projects typically take tens of years to mature.

In conclusion, CER supports the discussion within the Green Paper, provided that it does not cover public service transport contracts and regional franchise agreements. We see the objective of Community legislation as simplifying the administrative and legal complexities of cross-border TEN projects. We also support exchange of information between Member States on applying novel financing instruments, including PPPs, to develop national rail infrastructure.

[i] COM (2004) 327 Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions.

[ii] COM (2001) 370 White Paper on European Transport Policy for 2010: a time to decide.

[iii] Regulation on action by Member States concerning public service requirements and the award of public service contracts in passenger transport by rail, road, and inland waterways, as amended by Regulation 1893/91, OJ L 169 of 26 June 1991.

[iv] Further, Regulation 1191/69 is currently in the process of being revised (see COM (2000) 7 and COM (2002) 107. The proposal put forward by the European Commission maintains specific tendering rules in the sector in order to take into account the flexibility needs when awarding public service contracts.

[v] Italy and the UK have taken a lead with PPP financing. Well known rail examples include the Dutch High-speed rail project (HSL Zuid); the Messina road-rail bridge, linking Sicily with mainland Italy; the French-Spanish Perpignan-Figueras link; the UK Channel Tunnel Rail Link and the Danish-Swedish Øresund link.

[vi] PricewaterhouseCoopers, 2003, The trans-European Transport Network: from aspiration to reality' pg 18 reads: '..An example…is an upgrade of an existing railway line, where it may be more practical and cheaper for the incumbent operator and maintainer to take responsibility for the new infrastructure, particularly where it is closely integrated with existing infrastructure'.

CESI

OPINION

of the Association of Public Sector Trade Unions of CESI

on the

Green Paper

on public-private partnerships and Community law on public contracts and concessions

(presented by the Commission)

COM(2004) 327 final

Rapporteur: Klaus Geiser

EN Brussels, 27 July 2004

USSP

Brussels, 27 July 2004

Opinion

of the Association of Public Sector Trade Unions of CESI

on the

Green Paper

on public-private partnerships and Community law on public contracts and concessions

(presented by the Commission)

COM(2004) 327 final

The Association of Public Sector Trade Unions of CESI,

given the Green Paper on public-private partnerships and Community law on public contracts and concessions (presented by the Commission), COM(2004) 327 final;

acknowledging the sovereignty of the Member States of the European Union as regards the definition, organisation and financing of their public services;

acknowledging the principle of subsidiary embedded in the European conventions;

considering that the USSP/CESI, in its capacity as the umbrella organisation of public sector trade unions, is commenting on this Green Paper from the whole European perspective and is therefore not giving an opinion on the individual issues – which affect the Member States in varying ways – relating to the tensions between European and national law when defining public-private partnerships;

adopted the following resolution on 27 July 2004.

1. The USSP/CESI acknowledges that, in its Green Paper, the European Commission is for the first time tackling the increasingly important issue of whether, and if so how, competition can also embrace original local and regional organisational forms.

2. The USSP/CESI demands – as it did in its resolution on "Public Services in Europe" of 19 March 2003 (DOC/CESI-158/2003-DE) – that European citizens should benefit from high quality public services at affordable prices and that the issues relevant to supply reliability, complete and fair access and quality guarantees must continue to be solely the responsibility of Member States, regions and local authorities.

3. The USSP/CESI therefore advocates a very cautious approach to the liberalisation envisaged by the Green Paper and a meticulous investigation into its effects.

4. The USSP/CESI points out that there is no need for regulation as regards service concessions, nor is there any competence at European level in this regard. Furthermore, there is no regulatory competence for local organisational decisions.

5. The USSP/CESI expects that, in the continuing decision-making process with regard to the Green Paper, the following basic positions will be borne in mind:

   - The structures of the system of property ownership and of local political autonomy – which will be constitutionally guaranteed following the ratification of the treaty and are protected by the constitutional principles of the recognition of local and regional political autonomy (Art. I-5 of the draft treaty) and the subsidiarity clause (Art. I-9) – must be respected;
   - The freedom of the local authorities to determine how public services are provided by particular companies or by mandated third parties must be preserved;
   - The "In-house Principle" at public-public enterprises and locally controlled public-private partnerships must be recognised.

Brussels, 27 July 2004

Christian Chapuis	Helmut Müllers
President of the USSP/CESI	Secretary General

Brussels, 23 July 2004

EBC POSITION

regarding the

Green Paper on Public-Private Partnerships
Published by the European Commission on the 30th of April 2004, Com (2004) 327 final.

The E.B.C. (European Builders Confederation) is the European professional organisation that represents national associations of SMEs and craft enterprises working in the construction sector. E.B.C was set up in 1990 and currently has thirteen member organisations representing approximately 400.000 craftsmen and small and medium-sized enterprises in the building sector.

These are the EBC answers to the Commission's questions on the Green Paper on Public-Private Partnerships.

****

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

Here are two examples provided by our French and English members:

> At present two types of contractual PPP are recognised by French legislation:

- The sub-contracting of public procurement, where the party executing the works insures his return on investment, through the management of the facilities over a certain amount of time (concessions). The tender procedures for these contracts are specified in the "loi Sapin".

- The partnership contracts introduced by an order, dated 17th of July 2004, despite the opposition of craftsmen and SMEs in the construction sector, supported by architects, a law enabling PPP has recently been introduced. In fact all the above professions consider that the current law, giving all responsibility for the project including conception, financing, construction and maintenance, to a private supplier, is destined to prevent free competition. Moreover they consider that this would limit direct access to public procurement for craftsmen and SMEs, although, up to now, it represented close to 85% of their contracts.

> In the UK, the Private Finance Initiative has been in operation since 1992, although it is only since 1997 that projects have been started. PFI provides for what is effectively the hire purchase by the Government of capital assets over a period of 30 years. The scheme is attractive to Government, as it shifts the capital assets out of Government borrowing, and therefore improves

the apparent state of Government finances. However, there are increasing concerns about the value for money of PFI projects, especially as the borrowing costs of private sector operators are invariably higher than those of Government. Most UK PFI projects are schools, hospitals and roads.

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

EBC agrees with the Commission on the two fundamental points of the question:

- *maintain the distinction "public procurement/concession" dependant on the payment modes*
- *include the PPP in the competitive dialogue procedure destined only to projects of particular complexity, as in the Public Procurement Directive 2004/18/EC.*

If this were not to be the case, SMEs would progressively be excluded from direct access to public procurement.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

The PPP because of their global character are not accessible to SMEs, as they do not have the financial or administrative resources to bid for very large, long-term contracts. The procedure is therefore inherently discriminatory, even though SMEs and craftsmen supply the majority of services and production in the construction industry. In consequence PPPs limit the competition to only a few large firms.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

Due to the characteristics of the enterprises that are represented by EBC, they are not likely to be candidates for such concessions, but neither does this procedure result in any particular prejudice.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?
No response

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?
No response

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual

PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?
No response

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?
No response

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

EBC is not favourable to the further development of PPPs. On the contrary EBC would like to see them limited to exceptional situations (see Question 2).

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?
No response

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?
No response

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?
No response

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other "standard clauses" which are likely to present similar problems?
No response

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?
No response

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

The public procurement PPPs generally result in the fact that SMEs are reduced to acting as sub-contractors. Yet, sub-contracting companies do not have the possibility to negotiate with large contractors. In consequence they are sometimes forced to accept pricing levels that are beneath their profitability levels. This does not only endanger their company but also represents a clear *abuse of a dominant position and a breach of the rules relative to the access to public procurement.*

Beyond the pricing of sub-contracts, the behaviour of the main contractor with regard to delays in payment and in a general manner regarding the management of the project, may also put the existence of the sub-contracting companies at risk.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

YES. EBC has prepared the following suggestions:

- *In the case of a PPP the total amount of the sub-contracted works should be known by the private or public person in charge of the public procurement, and should be published in an official journal.*
- *A public invitation to tender should be published by the party holding the PPP in order to insure fair competition between sub-contractors.*
- *Precise work schedules should be supplied by the holder of the PPP to the companies undertaking the works.*
- *The contracts should be attributed in batches organised by profession.*
- *The sub-contractor should be protected from unfair competition by selection procedures based on the economically most advantageous tender, avoiding abnormally low bids.*
- *The holder of the PPP should have to publish a notice in an official journal, giving the results of the tender process*

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

YES. EBC considers that there is a need for European Legislation to clarify and adjust the rules on subcontracting.

To avoid their social and employment obligations, many companies sub-contract works out to craftsmen and small enterprises on which they impose pricing levels and execution conditions beneath profitability and economic feasibility levels.

A European legislation on this subject seems to be needed in particular to help enterprises in the countries where such legislation does not exist and thereby assist in the proper functioning of the Internal Market.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

No response

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?
No response

In general and independently of the questions raised in this document:

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?
No response

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate*.*
No response

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

EBC maintains that PPP should be applicable only to complex, large scale operations. If further collective consideration should be organised on the subject of PPPs, EBC would like to take part and is further of the opinion that the Commission should establish such a network.

EBC approves of the consultative procedure instigated by the Commission through the publication of this green paper and would like to see the results published. In particular EBC would like them to show the differences in opinion between Member States and between the roles of the respondents.

16 July 2004

Dear Mr Petschke,

Consultation on the Green Paper on public-private partnerships and Community law on public procurement

As we believe that possible follow-up actions to the Green Paper are unlikely to target or affect the broadcasting sector, we have not felt the need to prepare a formal contribution on the Green Paper.

Nevertheless, we would like to submit some comments just in case the Commission should decide to draw up a horizontal framework on public-private partnerships *and* extend it beyond infrastructure projects – i.e. the traditional area of public-private partnerships – so as to apply it to general interest services. We believe that the inclusion of broadcasting in such a horizontal framework would be incompatible with the European audiovisual model.

While it is true that public broadcasting services are considered as services of general interest under Community law, they are significantly different from the normal type of such services, in particular the network industries. This has just recently been recognized again in the draft Community Framework for state aid in the form of public service compensation. (In its Communication of 15 November 2001 on the application of State aid rules to public service broadcasting, the Commission stated that public service broadcasting was "not comparable to a public service in any other economic sector".) Various aspects of this specificity have been explained in the EBU Reply of 9 September 2003 to the Green Paper on Services of General Interest, to which we should like to refer here (see attachment).

According to the Amsterdam Protocol on the system of public broadcasting in the Member States, "the system of public broadcasting in the Member States is directly related to the democratic, social and cultural needs of each society and to the need to preserve media pluralism". The public service remit in broadcasting is thus closely linked to imperatives such as independence from the government, media pluralism, cultural diversity, and support for creativity.

According to the same Protocol, it is for the Member States to define the public service remit, to confer the remit to particular broadcasters, and to decide on the organization of public service broadcasting. As far as broadcasting is concerned this would certainly rule out the option of drawing up detailed Community rules on the entrustment of a public service remit.

With regard to the awarding of contracts by public service broadcasters, it should be noted that the latter's independence from the government, their organizational structure and the way they carry out their activities, as decided by the Member States, often mean that they do not fall under the category of "contracting authorities" under the Public Procurement Directive. Even when they are considered as such authorities, they benefit from the specific exclusion of contracts for "the acquisition, development, production or co-production of programme material intended for broadcasting by broadcasters and contracts for broadcasting time" (Article 16(b) of Directive 2004/18/EC). As explained in Recital 25, "the awarding of public contracts for certain audiovisual services in the field of broadcasting should allow aspects of cultural or social significance to be taken into account which render application of procurement rules inappropriate".

Outside the scope of the PP Directive and in the absence of relevant legal provisions, self-regulation would seem to be the most appropriate way of defining a transparent framework for awarding contracts, and applying tendering procedures where they are appropriate – but only where appropriate. This makes it possible to ensure that financial resources are used in the most rational and economic manner possible, without affecting the independence of broadcasting, programme autonomy, diversity and pluralism of programmes and information sources, journalistic and artistic freedoms, or – last but not least – the need for rapid decision-making in media organizations which produce and broadcast a large number of news and current affairs programmes.

It may be argued that in the new digital environment there is a case for extended forms of cooperation between public service broadcasters and commercial companies which are active in converging sectors, especially with regard to multimedia or new distribution platforms. Here, however, the primary problem lies in finding ways to reconcile such forms of cooperation with the existing restrictive regulations on public service broadcasting. In practice, moreover, it seems that such partnerships, where they exist, have more of an experimental character. The lack of experience and the variety of national broadcasting systems therefore do not permit any general conclusions at this stage. Nevertheless, it is fair to say that in view of the strong content-related aspects normally inherent in such partnerships the choice of the partner cannot be subject to any rigid or purely economic parameters.

We should be very grateful if the Commission could be most attentive to the points mentioned above when it draws conclusions from the consultation and considers options for Community intervention.

Yours sincerely,

Michael A Wagner

EBU Reply to the Green Paper on Services of General Interest

Introductory comments

The EBU welcomes the opportunity to comment on the Green Paper on Services of General Interest presented by the Commission on 21 May 2003. It supports the Commission's idea of launching a debate on the scope of possible Community action on services of general interest, including any action that can contribute to greater legal certainty.

The EBU appreciates the fact that the Green Paper recognizes the role and importance of services of general interest (SGI) and of general economic interest (SGEI) within the European Community. We also welcome the Commission's recognition of the specificity of broadcasting and, in particular, public service broadcasting and the significance accorded to the Amsterdam Protocol in treating broadcasting within the concept of SGI.

From the broadcaster's viewpoint, a higher profile for SGI in general is certainly a positive step. However, the limited role of the Community with regard to the system of public service broadcasting in the Member States needs to be borne in mind:

- The Green Paper recognizes that it is "primarily for the competent national, regional or local authorities to define, organise, finance and monitor services of general [economic] interest" (paragraph 31).

- Beyond this, it has to be taken into account that public service broadcasting is covered by the Amsterdam Protocol, whose importance for the regulation of SGEI is acknowledged by the Green Paper (paragraphs 8 and 31). The Protocol clearly limits the application of the Treaty by clarifying that conferring, defining, organizing and funding of public service broadcasting are primarily a matter for the Member States.

- Furthermore, it is established in the case law of the Commission and the European Court that Article 86(2) of the EC Treaty is applicable (to broadcasting and in particular) to public service broadcasting, with the consequence that it provides for (partial) protection of SGEI from the application of Treaty rules, and particularly from the rules on competition law.

Our understanding is that this legal framework will remain unchanged under the new draft Constitutional Treaty.

The EBU also welcomes the Commission's efforts to take up the issue of media pluralism, explicitly relating it to the protection of freedom of expression in order to ensure that the media reflect a range of views and opinions as is required in any democratic society (paragraph 73).

Independent public service broadcasting plays a major role in protecting and enhancing media pluralism in Europe. Pluralism of opinion and cultural diversity are at the heart of the public service broadcasting remit. The Amsterdam Protocol recognizes explicitly that the system of public broadcasting in the Member States is directly related to the need to preserve media pluralism.

The EBU thus supports the idea of recognizing the need to safeguard media pluralism also at the European level, to allow for consideration thereof, particularly vis-à-vis media concentration, within any action under the Treaty. On the other hand, it may be wondered whether it is appropriate and feasible to address the concept of media pluralism within the framework of SGEI. Moreover, since there is currently no genuine Union competence for regulatory measures regarding media pluralism, there needs to be discussion of whether and, if so, how an appropriate legal basis for Community action might be created.

What kind of subsidiarity?

(1) Should the development of high-quality services of general interest be included in the objectives of the Community? Should the Community be given additional legal powers in the area of services of general economic and non-economic interest?

The EBU appreciates the fact that the Green Paper stresses the importance for the European Union of services of general interest (SGI) and of general economic interest (SGEI), including broadcasting and, particularly, public service broadcasting. It agrees with the idea that within any action at the European level the role of public services should be taken fully into account, so as to allow Europe's common values to be preserved and the goals of the Union to be achieved. This would correspond to the services' contribution to the objectives of the Union as defined under Article 3 of the current draft Constitutional Treaty as drawn up by the European Convention.

On the other hand, the draft Constitutional Treaty does not change the limited character of Community competences as described above. It mentions SGEI in the clauses of general application, and in the Fundamental Charter, without it being necessary to give the Community a genuine competence for regulating SGEI. Our understanding is that the new sentence two in Article III-6 would enable the Union, where it has competences (but only there), to use those competences to regulate SGEI in a European law. Irrespective of the explicit inclusion of SGEI as an objective of the Union, it should be feasible for the Community to take into account the objective of developing high-quality services of general economic and non-economic interest in any action throughout its areas of competence. The first sentence of Article III-6 should provide a sufficient basis for this task.

(2) Is there a need for clarifying how responsibilities are shared between the Community level and administrations in the Member States? Is there a need for clarifying the concept of services without effect on trade between Member States? If so, how should this be done?

Responsibilities are defined in the new draft Constitutional Treaty (Articles I-11 to I-16). Under these rules there is no genuine competence for the Commission to regulate services of general interest. With regard to Member States' specific competences for many SGEI sectors on the one hand and the horizontal competences of the Union in such other areas as competition law and the internal market on the other (paragraph 31 of the Green Paper), a carefully balanced approach vis-à-vis each area seems necessary. The specificity of the broadcasting sector and, in particular, public service broadcasting, vis-à-vis other SGI and SGEI needs thereby to be taken into account.

In terms of the effect on trade between Member States it should be noted that this concept is currently understood and applied by the Commission and the Court so broadly, by accepting any possible international dimension (which can always be found in a liberalized market), that it has become virtually meaningless. Thus, any initiative to restore the relevance of this criterion would be welcome, as it would go hand-in-hand with strengthening the subsidiarity principle. It should be borne in mind that public service broadcasting provides, unlike other general interest services such as supply of electricity, gas or telecommunication, a service which is - owing to its national character - not substitutable between Member States.

(3) Are there services (other than the large network industries mentioned in para. 32) for which a Community regulatory framework should be established?

The EBU agrees with the Green Paper's assessment that there is a difference between large network industries and other industries. If the idea of a framework Directive is pursued, it should be limited to such networks with similar characteristics. As far as broadcasting is concerned, the Amsterdam Protocol on the system of public broadcasting in the Member States clarifies substantially how responsibilities are distributed between the Union and the Member States.

Broadcasting has little in common with larger network industries. An example of this is the specific regulation of broadcasting in the Television without Frontiers Directive as mentioned in paragraph 32 of the Green Paper. The EU Communications Directives also provide a specific framework, thereby distinguishing between content services and network services and acknowledging in this regard the different regulatory needs. In the case of State aid regulation, the Commission Communication of 15 November 2001 on the application of State aid rules to public service broadcasting provides for a specific regulation which cannot be applied more generally to other services.

As noted in Recital 6 of the 15 November 2001 Communication, public service broadcasting "is not comparable to a public service in any other economic sector", and a framework Directive would not be appropriate.

(4) Should the institutional framework be improved? How could this be done? What should be the respective roles of competition and regulatory authorities? Is there a case for a European regulator for each regulated industry or for Europe-wide structured networks of national regulators?

As indicated by the previous answer above, there is no case for improving the institutional framework or for establishing a European regulator for broadcasting.

Sector-specific legislation and general legal framework

(5) Is a general Community framework for services of general interest desirable? What would be its added value compared to existing sectoral legislation? Which sectors and which issues and rights should be covered? Which instrument should be used (e.g. directive, regulation, recommendation, communication, guidelines, inter-institutional agreement)?

Regardless of whether there will be a respective Community competence, because of the Member States' competences and the specificity of the broadcasting sector, as pointed out above, it would not be appropriate to apply the rules of a *horizontal* framework Directive or other instrument to this sector.

(6) What has been the impact of sector-specific regulation so far? Has it led to any incoherence?

The EBU is currently aware of no incoherence arising from the sector-specific approach, as applied, for example, in the Television without Frontiers Directive and in the Communication on the application of State aid rules to public service broadcasting (which is discussed in the reply to question 21 below). As noted above, the Commission has characterized the public service broadcasting sector as not being comparable with any other public service in other sectors.

Economic and non-economic services

(7) Is it necessary to further specify the criteria used to determine whether a service is of an economic or a non-economic nature? Should the situation of non-for-profit organisations and of organisations performing largely social functions be further clarified?

The Green Paper acknowledges that in recent decades more and more activities have become of economic relevance and that, for an increasing number of services, this distinction has become blurred (paragraph 45). Since any kind of general interest service may have economic implications, the distinction would lose its purpose if it resulted in including all kinds of general interest services in the concept of SGEI. It thus seems debatable whether such a rigid distinction between services of general economic or non-economic interests is feasible for regulatory purposes.

However, there is a clear difference between, on the one hand, the economic significance of large network industries, such as electricity, gas and transport, and, on the other, the economic activities of organizations such as public service broadcasters. For the regulation of economic and non-economic services the EBU therefore proposes considering - with respect to each sector and separately for each area of regulation (such as competition or internal market rules) - the differences in economic significance, including the different economic orientation, i.e. whether an entity has, predominantly, a profit-making or a common-interest objective.

(8) What should be the Community's role regarding non-economic services of general interest?

The Green Paper properly states that there are different rules applicable to SGEI and SGI. The EBU agrees with the principle that the Community should have no jurisdiction over SGI, unless provided for in sectoral provisions. In any case, the graduated approach as mentioned in the reply to question 7 above, should enable the regulatory authorities to allow a flexible assessment of the application of Articles 16 and 86(2) of the Treaty to SGEI and SGI, depending on their economic significance; at the same time due account needs to be taken of the specificity of public service broadcasting as recognized in the Amsterdam Protocol.

A common set of obligations

(9) Are there other requirements that should be included in a common concept of services of general interest? How effective are the existing requirements in terms of achieving the objectives of social and territorial cohesion?

(10) Should all or some of these requirements be extended to services to which they currently do not apply?

(11) What aspects of the regulation of these requirements should be dealt with at Community level and which aspects left to the Member States?

(12) Have these requirements been effectively implemented in the areas where they apply?

(13) Should some or all of these requirements also be applied to services of general interest of a non-economic nature?

(9)-(13): As pointed out in our reply to question 3, there are various sector-specific regulations dealing with broadcasting. Broadly speaking, the Community's sector-specific regulation of the audiovisual sector is satisfactory overall. With regard to the current review of the Television without Frontiers Directive we would refer to our contribution to the public consultation by the European Commission.[1] Concerning the EU Communications Directives, it seems too early to draw even initial conclusions, since Member States have only just begun to transpose the package into their national laws.

The EBU agrees with the Commission that criteria such as the universal service, continuity, quality, affordability and user/consumer protection have been developed for certain network industries. These criteria are relevant also for broadcasting to a certain extent and in a specific way. However, they address the cultural, democratic and social functions of broadcasting in

[1] See EBU Position paper of 15 July 2003, which is available at the EBU website under http://www.ebu.ch/departments/legal/position.php

only a very limited manner. The discussion on the review of the Television without Frontiers Directive has established and confirmed the need for a specific regulation for broadcasting. With regard to the specificity of this sector, see the replies to questions 3 and 5 above.

Sector-specific obligations

(14) Which types of services of general interest could give rise to security of supply concerns? Should the Community take additional measures?

With regard to broadcasting, security of supply can be an issue, especially in emergencies. However, the EBU is not aware of any relevant occurrences which would justify any legal measures.

(15) Should additional measures be taken at Community level to improve network access and interconnectivity? In which areas? What measures should be envisaged, in particular with regard to cross-border services?

Access and interoperability issues also arise in broadcasting, and particularly digital television. The EU Communications Directives provide the basis for national legislators and regulators to address these issues.

(16) Which other sector-specific public service obligations should be taken into consideration?

The underlying principle of public service broadcasting is that it is made for the public, funded by the public and controlled by the public. Thus all groups in society must be served by the programme output. Fulfilment of the public service remit requires independence from government and public authorities, as is recognized by the Council of Europe in the Recommendation No. R (1996) 10 on the guarantee of independence of public service broadcasting and in the Recommendation Rec. (2000) 23 on the independence and functions of regulatory authorities for the broadcasting sector. These principles have to be respected by the Commission too.

Media pluralism

(17) Should the possibility to take concrete measures in order to protect pluralism be reconsidered at Community level? What measures could be envisaged?

As commented above, the EBU shares the Green Paper's view on the importance of media pluralism. However, as recognized in the Green Paper itself, guaranteeing media pluralism is primarily a task (and an obligation) for the Member States, so that all citizens can fully exercise their freedom of expression and information. Within its fields of competence, it is also an obligation for the Union (see Article 11 of the Charter of Fundamental Rights and Article 10 of the European Convention on Human Rights).

Member States achieve this objective by a variety of means, including the setting of legal limitations on media ownership and cumulative control of media outlets, the drawing-up of national or regional policies on the award of broadcasting licences and frequencies, and, last but not least, the guaranteed existence and development of public service broadcasting with internal pluralism safeguards.[2]

Consequently, and despite the role of public service broadcasting as a cornerstone of media pluralism as acknowledged, for example, by the Amsterdam Protocol, the protection of media pluralism cannot simply be translated into a public service obligation for broadcasting organizations. It is thus questionable what kind of added value can be expected from addressing the issue of media pluralism in the context of SGI regulation only.

At the time the 1992 Green Paper was discussed the EBU had considerable reservations about Community initiatives on media pluralism undertaken solely in terms of internal market policy. Similar reservations may be justified now vis-à-vis Community action in terms of SGI policy.

In view of the current discussions on the need to preserve and promote cultural diversity, media pluralism should be addressed in the same context. The concepts of cultural diversity and media pluralism are very closely linked. Both the Council of Europe Declaration on Cultural Diversity and the UNESCO Universal Declaration refer to the links between cultural and media policies and make it very clear that media pluralism is one of the essential elements for guaranteeing cultural diversity.[3] Consequently, the EBU considers that placing media pluralism in the cultural context would seem the most appropriate solution.

With regard to the draft Constitutional Treaty, consideration should be given to, for example, an explicit mention of media pluralism in the horizontal cultural clause (Article 151(4) of the EC Treaty and Article III-181 (4) of the draft Constitutional Treaty). Such an amendment would make it possible to address the issue of media pluralism in an appropriate way independently of the concept of SGI.

The proposed amendment would furthermore make it easier to take into account the concept of media pluralism when competition law is applied to the broadcasting sector. This would permit the Commission to include media pluralism aspects in a transparent manner when dealing with a merger proceeding or within a State aid proceeding, whilst still leaving it to each Member State to apply specific rules against media concentration within the scope of Article 21(3) of the merger regulation. To achieve transparency, the Commission could publish a list of criteria related to media pluralism which it intends to apply.

[2] For further details see Sections 350 and 375 of the 2003 UK Communications Act, as well as Sections 25-34 of the German Broadcasting Treaty.

[3] See, in particular, Article 6 of the UNESCO Universal Declaration on Cultural Diversity.

Definition of Obligations and Choice of Organization

(18) Are you aware of any cases in which Community rules have unduly restricted the way services of general interest are organised or public service obligations are defined at national, regional or local level? Are you aware of any cases in which the way services of general interest are organised or public service obligations are defined at national, regional or local level constitutes a disproportionate obstacle to the completion of the internal market?

The Green Paper is correct to highlight the importance of the Amsterdam Protocol, which, as pointed out above, clearly limits the application of the Treaty to public service broadcasting. Despite this clarification, there is still some degree of uncertainty regarding the Commission's application of Community rules; this is discussed further in our reply to question 21 below since the issue of organization cannot be separated from financing.

(19) Should service-specific public service obligations be harmonised further at Community level? For which services?

Under the Amsterdam Protocol it is for each individual Member State to define the remit of public service broadcasting. This, together with Article 151(5) of the EC Treaty, excludes any harmonization of public service broadcasting at Community level. It should be clear that differences among public broadcasting services are inevitable to a certain extent, and even intentional and necessary in view of the differing national media systems and markets.

(20) Should there be an enhanced exchange of best practice and benchmarking on questions concerning the organisation of services of general interest across the Union? Who should be involved and which sectors should be addressed?

Under Article 23a of the Television without Frontiers Directive a Contact Committee has been set up *inter alia* to facilitate an exchange of information between Member States and the Commission on the situation and development of regulatory activities regarding television broadcasting services, taking into account the Community's audiovisual policy, as well as relevant developments in the technical field. Concerning the specificity of broadcasting, the EBU regards this exchange platform as sufficient, but would encourage the Commission to make the Contact Committee's work more transparent.

Financing

(21) Are you aware of any cases in which Community law, and in particular the application of State aid rules, has impeded the financing of services of general interest or led to inefficient choices?

With regard to the application of State aid rules to broadcasting, the sector-specific provisions of the Amsterdam Protocol and the Communication on the application of State aid rules to public service broadcasting need to be respected. The Green Paper acknowledges this by defining the Commission's competences as "the duty to check abusive practices and the absence of over-compensation according to the specific criteria as laid down in the Communication" (see paragraph 32, Footnote 17).

However, there is still some degree of uncertainty in the Commission's application of State aid rules. This uncertainty potentially compromises the stability and dependability of the funding of public service broadcasters and could make it more difficult for them to fulfil their remit. Notification procedures can also lead to unjustified delays.

As a measure to enhance legal certainty as far as public service broadcasting is concerned, the EBU therefore suggests that the Commission should recognize control mechanisms, set up by Member States under national law, which ensure the absence of over-compensation for discharging the public service. Such a solution, which could be included in the above-mentioned Commission Communication, would take up, in an appropriate manner, the Commission's case law, which has accepted and relied on scrutiny of the funding needs of public broadcasters by independent national bodies.[4] In the absence of any specific circumstances which would justify the Commission's control of abusive practices, the existence of such a mechanism ensuring the economic reasonableness of the funding should preclude the applicability of State aid rules.

The introduction of such a rule could also be regarded as an appropriate reaction to the recent C-280/00 *Altmark* decision of the European Court of Justice, and to the earlier cases C-379/98 *Preussen Elektra* and C-53/00 *Ferring/Acoss*. It would, furthermore, be in line with the Commission's Report of 5 June 2002 to the Seville European Council on the status of work on the guidelines for State aid and services of general economic interest, where the Commission stated that, depending on confirmation of the *Ferring/Acoss* decision, the funding of public services will have to be regarded as not constituting State aid under Article 87(1) of the EC Treaty in the absence of over-compensation (see Report, end of paragraph 12).

(22) Should a specific way of financing be preferred from the point of view of transparency, accountability, efficiency, redistributive effects or competition? If so, should the Community take appropriate measures?

The Green Paper explicitly recognizes the Member States' competence to choose and define the system for financing the SGEI. It therefore does not seem possible for the Community to favour one specific way of financing.

As far as public service broadcasting is concerned, the Amsterdam Protocol leaves the choice of the funding system to the Member States, within very broad limits. The current funding systems of public service broadcasting in Europe are characterized, on the one hand, by a strong and indispensable element of public funding and, on the other, by a plurality of sources. Member States must have the freedom to choose the system which is the most suited to evolving national circumstances.

(23) Are there sectors and/or circumstances in which market entry in the form of "creamskimming" may be inefficient and contrary to the public interest?

The remit of public service broadcasting includes the obligation of universal programming, which covers all kinds of output, such as news, culture, entertainment and sport. This obligation is, in principle, independent of whether or not there are commercial broadcasters which are free to concentrate on certain programming areas, such as entertainment and sport. "Creamskimming" is therefore unlikely to occur where the obligation of universal programming exists.

[4] NN 70/98 of 22 March 1999: *Kinderkanal/Phoenix*, pages 12-13.

(24) Should the consequences and criteria of solidarity-based financing be clarified at Community level?

The compulsory broadcasting fee paid by viewers and listeners may be regarded as a form of "solidarity-based financing". However, for the reasons mentioned above, it would certainly not be appropriate to regulate the details at Community level.

Evaluation

(25) How should the evaluation of the performance of services of general interest be organised at Community level? Which institutional arrangements should be chosen?

(26) Which aspects should be covered by Community evaluation processes? What should be the criteria for Community evaluations? Which services of general interest should be included in an evaluation at Community level?

(27) How could citizens be involved in the evaluation? Are there examples of good practice?

(28) How can we improve the quality of data for evaluations? In particular, to what extent should operators be compelled to release data?

(25)-(28): An evaluation at Community level is justified in areas of particular cross-border relevance, such as major infrastructure networks, or in areas where the Union has certain competences. In contrast, broadcasting is not primarily a network service but a content service. As pointed out in our replies to questions 2 and 3 above, broadcasting, and particularly public service broadcasting, cannot be compared with large network industries.

Moreover, the various definitions of the public service broadcasting remit at Member States' level make a common evaluation at Community level rather pointless, quite apart from other differences between the national media systems and markets.

Trade Policy

(29) Is there any specific development at European Community internal level that deserves particular attention when dealing with services of general interest in international trade negotiations? Please specify.

The EBU greatly appreciates the inclusion of international trade aspects in the Green Paper. Although we broadly share the Green Paper's analysis, we are slightly less confident that international trade rules will never have an impact on how services of general interest are regulated and financed in Europe. Despite the "bottom-up approach" and the flexibility of GATS described in the Green Paper, there are (and will probably be an increasing number of) horizontal trade rules, disciplines and principles (including the principle of progressive liberalization) which apply across sectors, irrespective of whether market access commitments have been made; moreover, the dynamics of trade negotiations may create inherent risks of trade-offs between different sectors, and between trade interests and other public policy objectives.

As the Union made clear in spring 2003 when presenting its initial offer on trade liberalization of services within the current round of GATS negotiations, it is important fully to preserve public services within the Union and also to maintain the ability to design and implement appropriate institutional and regulatory frameworks aimed at ensuring, for example, equitable access to essential services. More generally, it will be important to ensure that trade rules will not prejudge the way public services are defined, organized and financed.

As far as broadcasting and other audiovisual services are concerned, these "public service" considerations are overlaid - and reinforced - by cultural considerations (in particular, cultural diversity and media pluralism), which have so far excluded any commitments for trade liberalization in this sector. It is of crucial importance to maintain this position, so as to preserve the European audiovisual model and the ability to adapt audiovisual and cultural policies to future developments.[5] Cultural diversity, as well as the exchange of cultural and audiovisual goods and services, can be better served and promoted by means of an international convention on cultural diversity than by trade liberalization.

Development Co-operation

(30) How can the Community best support and promote investment in the essential services needed in developing countries in the framework of its development co-operation policy?

As far as the audiovisual sector is concerned, an international legal instrument on cultural diversity (question 29) can also help to support and promote investment in developing countries (e.g. through co-productions). The same applies to other bilateral or multilateral agreements entered into by the European Union and/or its Member States with third countries.

[5] See EBU Position paper of 17 January 2003 entitled "Audiovisual services and GATS negotiations", which is available at the EBU website under http://www.ebu.ch/departments/legal/position.php

EUROPEAN ECONOMIC AREA

STANDING COMMITTEE

OF THE EFTA STATES

Brussels, 31 August 2004
Ref. No.: 1046327

SUBCOMMITTEE I ON THE FREE MOVEMENT OF GOODS

EEA EFTA COMMENTS ON THE GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS (COM(2004) 327 FINAL)

I EXECUTIVE SUMMARY

The EEA EFTA States welcome the public consultation on the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions. The issues that are raised in the Green Paper are of great importance and the EEA EFTA States provide some of their comments in this paper. The EEA EFTA Comments concern the definition of Public-Private Partnership contracts (II), the transposition of the competitive dialogue procedure into national law (III), the Community legal framework (IV), the desirability of Community initiative (V) and "step-in" clauses (VI).

II DEFINITION OF PUBLIC-PRIVATE PARTNERSHIP CONTRACTS

The EEA EFTA States do not have a common legal definition of Public-Private Partnership (PPP) contracts in their national legislation, but have based the PPP on characteristics similar to those described in the Green Paper item 1.1.2. Since the concept of PPP contracts is based upon a plan to constantly improve and find more efficient ways to handle public tasks, the legal framework needs to allow sufficient flexibility with respect to the content and nature of the contracts. Because of this, the EEA EFTA States are of the opinion that a common legal definition of PPP contracts should not be developed. A fixed legal definition may exclude similar contracts that should be dealt with in the same legal framework as a typical PPP. However, the EEA EFTA States welcome further discussions, examples and clarifications concerning the characteristics of PPP contracts.

III TRANSPOSITION OF THE COMPETITIVE DIALOGUE PROCEDURE INTO NATIONAL LAW

In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

At this point in time, no contracting authority has legal or practical experience with respect to the new "competitive dialogue" procedure, so predictions are hard to make. However, provided that the interpretation of “particularly complex contracts” is subject to reasonably broad understanding, the EEA EFTA States expect the introduction of this procedure to meet the need for dialogue on complex contracts in general and on several types of PPP contracts. In fact, the experience from the EEA EFTA States indicates that when contracting authorities have awarded PPP contracts, they have conducted the negotiated procedure in a manner similar to that described in the new procedure. This new procedure is, therefore, welcomed and should be regarded as a positive step towards meeting the needs of several types of PPP contracts. However, the competitive dialogue may not fit all types of PPP contracts. The EEA EFTA States still regard the negotiated procedure and current legal framework for work and service concessions to be appropriate for certain PPP contracts. In this respect, the EEA EFTA States welcome further discussions, examples and clarifications concerning the type of contract that may follow the new "competitive dialogue" procedure.

IV THE COMMUNITY LEGAL FRAMEWORK

Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

With regards to concessions, fundamental principles in the Treaty seem to provide sufficient legal procedures for interested parties. The governments of the EEA EFTA States have not received any complaints concerning minimum requirements (non-discrimination, predictability and public announcement) from potential participants. However, it is possible that the current legal framework for remedies and enforcement in this area do not provide adequate legal basis when authorities fail to respect the principles.

V THE DESIRABILITY OF COMMUNITY INITIATIVE

In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

Reference is made to the previous paragraph. The EEA EFTA States do not believe that a Community legislative initiative to regulate the procedure for the award of public works concessions is necessary.

For service concessions or concessions in general, a clear EU-wide definition, demarcation and explanation of the term "concession" needs to be established before it is possible to consider the effect and need of such procedures. For example, the real impact on national regulation has proven difficult to identify, since it remains unclear what the term “concessions” covers. Furthermore, as the Commission points out, some important sectors are already subject to specific sector legislation (ex. EEC No 2408/92 and No 3577/92). This makes the need for general rules less imperative.

VI “STEP-IN” CLAUSES

Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

"Step-in" clauses do represent a challenge with respect to transparency and equality of treatment. However, it is often necessary to include such clauses in order to achieve proper and reasonable financing for the project. When "step-in" clauses are initiated, it is usually as a result of serious financial or management problems that constitute a possible breach of the PPP contract. Under such circumstances, the main objective must be to secure investments for all parties and bring the project back on track. In this context, it is imperative that the Procurement directives allow such capital investments to be handled without obstacles, so that appropriate business solutions can be found. It is the EEA EFTA States’ opinion that the risk of financial parties misusing "step-in" clauses, or basing their decisions on non-economical considerations, must be regarded as low.

30 July 2004

EFCA RESPONSE TO THE COMMISSION CONSULTATION ON ITS GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

Q 1. **What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?**

The concession model is prominent: many of the new investments are contracted in the form of Design – Build – Finance – Operate – Maintain (DBFOM) with a direct or an indirect toll / payment system.

In some countries public authorities established a Public Private Partnership Knowledge Centre designed to assist in the set up and monitoring the PPP projects. These Centres collect and share information on the development of different types of PPP. This information would be available to the public and private sector.

Most of the combinations of DBFOM seen in contractual PPPs also apply institutional PPPs.

There are already many general contract documents available which have a relation to PPP projects.

Examples of existing national legislation:

- In Germany in the so-called Kreislaufwirtschaftsgesetz (Krw-/AbfG) and a specific regulation for Water and Waste Management.
- Italian legislation on public concessions, including concessions related to project finance initiatives (law 109/94) or “the promoter legislation” as it is sometimes called, is an advanced law that encourages private investments in public works which are suitable for management by companies. In particular, the current law in force mixes the need for transparency and free competition with the need to guarantee a certain freedom to the concessionary in his following subcontracting.
- In Spain, the new legislation (law 13/2003) provides a good framework for the whole process and most precisely for the private financing method.
- In France concession legislation is strongly developed and specific new legislation is currently being introduced.

Q 2. **In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?**

PPPs are not necessarily complex by nature and therefore don't necessarily require the use of the competitive dialogue. An excessive use of the competitive dialogue as the basic procedure may induce distortion of competition.

The excessive use of the competitive dialogue procedure impairs fair competition and evaluation of tenders. A true dialogue between the partners of any contract is only possible if they are at the same level of knowledge and practice. With an extensive use of the competitive dialogue some knowledgeable private partners might influence less experienced public authorities. There is a need for involvement of both independent advisors and skilled consulting engineers to assist awarding authorities.

Experience with PPPs shows that procurement needs to be strictly framed. To be transparent and fair the awarding authority has to be able and capable to define its project, its needs and the technical specifications in a way that secures the comparability of bids.

The possible use of the competitive dialogue procedure provided for in national legislation may be advantageous in extra-ordinary complex PPP's. But this does not mean that the competitive dialogue procedure should be automatically favoured or recommended above more traditional instruments. The project definition and the specifications can be made so clear and concrete in many cases that a straight decision would be possible without further consultation.

Tenderers and operators will be very anxious in safeguarding their intellectual property. Great emphasis has to be put on the compensation of the tenderers' expenses in the dialogue phase. If the contracting authority expects to receive solutions which are based on the use of the tenderers' know-how to the full extent and also requiring the solutions to comply exactly or even better with the functional specifications, the contracting authority has to safeguard the interests of the bidding competitors. The risk of cherry picking has to be minimised.

Long-term key performance indicators will have to be developed to make the procedure and the selection decisions more transparent.

Criteria as to how long this competitive comparison (if any) is allowed to take, and to what extent the contracting authority is obliged to publish beforehand the decisive criteria according to which the contract shall be awarded, will be essential for the success of this dialogue.

However the same pros and cons of this new procedure would also apply to the award of public contracts in the form of both contractual and institutionalised PPPs. Institutional PPPs often handle particularly complex projects too.

Q 3. **In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.**

Difficulties could be encountered in specifying the focus of a public contract awarded in the context of a PPP where this is – as is typical of a PPP – a mixed-type contract with public works, supply and service components. According to the "focus theory", developed by the European Court of Justice, clear solutions are not provided in all cases.

It will be very challenging to elaborate more detailed legislation for a contract type where long-term and unforeseeable later political and economic developments could have retrospectively a lot of influence on the level of transparency during the evaluation before contract award.

In line with the focus theory it would have to be ensured that the substantial know-how contribution of the “engineer” in the tendering and the award dialogue be adequately and even separately rewarded.

This is particularly relevant with regard to the design and realisation of an economically outstanding and most advantageous solution with a very good economic result. As the share / participation of the technical and or economic consultants’ service in the initial investment of a project is usually below 10 percent of the costs and the effect of a good or bad design in the operational phase can be enormous, the protection of intellectual property should be taken into account duly.

The effect of independent, intellectual, conceptual thinking is not sufficiently considered and sometimes underestimated in PPP thinking.

PPPs might be a source of reducing competition by some public authorities thus awarding the contracts to a restricted group of private partners. Since PPPs might also be considered as a barrier to market access in some national legislation (France Conseil constitutionnel 2003), it might be of interest to examine these laws and the risks they entail. In addition an assessment of the use of PPPs would be required prior to choosing this procedure.

Q 4. **Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?**

As this is a report of 25 engineering associations with a great number of very successful projects in which members participated the experience is enormous.

A number of issues are worth mentioning when considering developing legislation:

- The required audit of the evaluation for the private partners.
- Key specifications are not always clearly defined at the invitation stage or even clear before contract signature. Problems come later in the execution and financing of the project.
- Political risks - which are normally public risks and sometimes too high risks - were allocated to the private partner and consequently costs increased extremely. These costs could have been foreseen and taken into account in the contract or even been avoided.
-The process of building up trust and confidence between the two parties was sometimes extremely harmed because of lack of key specifications in the bidding phase.
-Existing national laws regulating similar processes are laws on concessions. They are very strict on deadlines (for example: 90 days for reaching a financial close is not enough to reach success). The procedures are not always clearly stipulated.
- More specifically EFCA would like to draw the attention to frequent imbalance of risk allocation between the financier / contractor and the designer (consulting engineer / architect) – see Q 15.

Q 5. **Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?**

Although it is probably possible to exclude non-national companies or groups in the procedures for the award of concessions, more detailed legislation is not required. National contracting authorities have to publish tenders and use clear selection criteria in addition to developing commercial key performance indicators which have to be known at the start of tender procedure.

Nevertheless secondary EU legislation simply refers to principles of the EU Treaty such as non-discrimination, transparency etc.; this causes uncertainty with persons concerned, even with national legislators. The Community law at hand should perhaps be more precise instead of prescribing more detailed rules.

Q 6. **In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?**

A Community legislative initiative to regulate the procedure for the award of public works concessions is not believed to be necessary.
If the Commission decides to initiate something in this field it should consider looking at the legal framework in the long term and its influence on the evaluation. These effects are hardly to be regulated in detailed Community legislation.

In any event Community law should be more precise, more clear but not more detailed and stricter. The definition of quality criteria for intellectual services should be more concrete.

For service concessions, a clear EU-wide delineation of the term concession needs to be laid down first.

Q 7. **More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?**

See Q 5 & 6

Q 8. **In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?**

The legislation and the procedures are sufficient.

It appears necessary to face a more general type of problem that is the level of existing competition in concessions and particularly in the concessions for motorways and public services, especially on a local level (municipality transportations, water, gas, etc). The decreasing number of market players and the growing monopolies in some countries are becoming a problem.

Q 9. **In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?**

Generally it is felt that the application of the existing open or restricted procedures can guarantee compliance with the principles of transparency, equal treatment and non-discrimination in private initiative PPP’s as well. But understanding the words transparency, non-discrimination, level playing field, equality of treatment and audit can be difficult in so many languages.

If a contracting authority wants to realise a given project based on fair competition and in the PPP context, it's possible to oblige them to publish their invitation at European level and to follow the standard award procedures. Nothing wrong with that.

The solution for the success of the PPP has to be found in the initial phase and the development of a genuine market interesting for many players, small and large, consultants, engineers, facility managers, contractors and financiers in joint companies, joint ventures whatsoever.

The actual problem with private initiative PPP's is rather to gain sufficient companies as initiators. In the meantime companies proposing their ideas are not given any guarantee that they will be involved in the execution of the PPP. The proposal to pay the initiators for their efforts and their intellectual property at an attractive level (see No. 41 of the Green Paper), is right and necessary and will create many initiatives.

Private initiatives require tactful treatment. The author of the idea should be rewarded and protected, which could represent at the same time a non-genuine competence practice and contracting authorities should compensate for generating projects and perform control in a non-restrictive way.

A proposal is to act as follows: if there is a private initiative, it shall be detailed, then on that basis the public partner could launch a tender with the exclusion of the initiating private partner, but agreeing in advance what happens if there are better offers / solutions. The outcome can be as follows: no better solution then the contract is awarded to the initiating partner. If there is a better solution then there should be compensation for the initiating partner and / or striving to set up an agreement / co-operation between the winner and the original initiating party.

Q 10. **In contractual PPPs, what is your experience of the phase, which follows the selection of the private partner?**

Some countries complain that no clear risk allocation was possible as the technical and organisational framework was too unclear and there was only little experience on the public side.

Comparability of the bids was hardly reached, as the framework of the bids did not comply with the specifications. In addition even during the negotiations new circumstances appeared (tax changes environmental requirements, competing new public projects affecting the cash flow of the concession takers).

Q 11. **Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?**

There are no examples or statistical information yet. This has to be developed. No country organisation will disclose negative information.

An example is that in long-term projects technical innovations appear. Consequently the legal situation is not clear; if the contract contents are changing the contract has to be re-negotiated or even according to for example the German Procurement law a new tender would be required. This is unrealistic in a PPP, but could lead to monopoly situations which are harmful in their nature if not open to new bids.

Q 12. **Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?**

By using complex selection criteria for the evaluation of tenders it's probably well possible to create a discriminatory effect. However there are no clear examples available.

Many factors can influence this phenomenon: insolvency, liquidation, selling of companies during the concession phase can easily disrupt the original contract. Contract clauses can solve these "problems". But including or excluding new partners in the later phase cannot be regulated by legislation.

Q 13. **Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?**

The change of a single project manager (personnel) doesn't present a problem, but the forced cancellation of a concession and subsequent change of the private companies can. Especially if the involvement of the private company in the PPP is considerable.
It could be impossible to create regulation, tender and award procedures in which the later change of the partners can be completely excluded. That is against the nature of economy.

EFCA does not share the Commission's view. The PPP's singularity, mainly in financial aspects, requires flexibility and a field of application as wide as possible. The real competence is already demonstrated in the awarding phase with step-in conditions specified in the contract clauses. Furthermore, financial markets act under standards which make it possible to set up project under their conditions.

Q 14. **Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?**

According to EFCA the national contract law and regulations for the execution of PPP's are more than sufficient. Most member countries do not think that any action is necessary here.

Many other countries are still developing momentum in PPP's. They require framework and guidelines to create their national legislation on this subject.

Q 15. **In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.**

Comparable to Q13 (changing commercial partners) subcontracting of substantial parts of the works in the contractual (concession) arrangement should be limited, but also subject to the approval of the original awarding public authority within the framework of the EU rules.

Is the Concession Company allowed to transfer all risks, works and services to a number of different sub-contractors suppliers and facility managers? Is the Concession Company then becoming the contracting authority? Legally this cannot be avoided. There should be guidelines at national level.

In case architects and designers are assumed to take up responsibility for tasks in the general interest, EFCA suggests that such professions could be directly contracted by the public authority. When they are part of the contractor team, the proposal must point out clearly their position, responsibility and tools all along the project duration, in order to put to the public authority in the position to clearly select its partners.

Q 16. **In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?**

At the moment there are too many possibilities to escape from the basic legislation. See further Q15

Some countries oppose further legislation. They believe that the private partner should manage the project in freedom since the contract contains specific terms of functional requirements and performance.

However, it might be a possibility in some cases to have the national contracting body force the concessionaire to award a part of the public works to third parties. This subcontracting would concern solely the works, and not the whole concession. The reasons for stipulating this is that if it concerns an economically important work it could of a public interest to have various companies execute those works.

In some countries there is already the risk of abuse of a dominant position.

Q 17. **In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?**

See Q16.

Q 18. **What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?**

Cooperation between private companies is governed by market economy, competition, profitability, and private law. As most institutionalised PPP's are founded to facilitate monopolies for private companies supervised and influenced by public authorities improper, unrealistic economic conditions are temporarily created which normally cause great output insufficiencies and at the end financial overruns.

Initially attempts were made to circumvent the application of procurement law through specific company law made up in the context of institutionalised PPP's. The verdict of the EJC in the case C 107/98 (Teckal) and the restrictive decision-making practice of the national procurement inspection bodies based on this, however, caused the number of cases to drop significantly.

How to implement private, legal and economic principles in cooperation with public authorities. The participation of public authorities should be in the initiative phase only on transparent conditions and complying with all procurement laws and regulations. Most institutionalised PPP's can be replaced by purely contractual PPP's.

In many PPP projects private companies have already a commercial position which is introduced as an asset to create an institutionalised PPP. Ground positions and the like. To solve this issue in the European procurement legislation is a very challenging task for the Commission in order to create clarity for many public-private initiatives.

Q 19. **Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?**

Yes. See the answer to Q18 This could be done in the form of a guidelines document for companies statutes, business principles, business ethics, legal form of the business, and the required minimum capital in relation to risk involved and the maximum involvement of the public authorities etc.

Q 20. **In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?**

The non-willingness of public parties, civil servants more than politicians, to involve private parties can be a barrier. The reasons can be various: no trust in private parties, loss of control etc., loss of public jobs and lack of experience in assessment of private business.

If the need exists and the law requires to comply with the regulations of public procurement law, then this could unnecessarily constrain even the effort to explore the creativity of both contracting authorities and private tenderers.

Also a lack of information and uncertainty among the contracting bodies as to when it makes sense to form PPP's, and the expertise how to structure them successfully;

A lack of willingness on the part of the public contracting authorities to give up intervention rights and commercial opportunities for the treasury and transfer these to private companies.

At national level political discussions and decisions to pay toll instead of taxes. At national and international level investors could simply decide not to invest in contractual PPP's, concessions, preferring to invest only in PPP's with involvement of public authorities and covered by public guarantees.

Q 21. **Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.**

Q 22. **More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?**

Yes, the exchange of best practice in the form of market consultations can be very successful. EFCA created for this particular consultation a task force, consisting of project managers / engineering consultants from many member states, who are already working on this subject before the green paper was publicised. This proved to be a very interesting exercise, especially when you take the big differences in implementation between member states into account.

The establishment of a European network by the Commission would only be useful if the consulting industry was involved in a partner-like manner. The focus of such a network should be the exchange of information and experiences.

These considerations should extend to those PPP projects, which enjoy non-refundable EU support e.g. from the Cohesion Fund, which are becoming a part of the national budget, and no particular supervision by the Commission on these funds can be observed.

EIC Position Paper

on the

EU Green Paper on Public Private Partnerships (PPP)

Introduction

European International Contractors (EIC) is an industry association that represents the interests of the European construction industry in all questions related to its international activities. It has as its members construction industry federations from 15 European countries and the annual revenue of the international business carried out by those contractors affiliated to EIC's Member Federations amounts to more than 50 billion € annually, i.e. without the revenue from inside the European Union. A significant portion of the national and international turnover of EIC member companies is already generated through PPP infrastructure projects.

One of the main priorities of our association is the **promotion of new financing techniques, including PPP models**. Since most PPP infrastructure projects have a substantial construction component, the construction industry was among the first industries to be involved – as investors and concessionaires – in this new market, and is now among the first industries with a broad knowledge of the political, legal and financial prerequisites, the administrative and regulatory needs and the required risk control and mitigation measures to make PPP projects successful on a long-term basis. Hence, most internationally active players among the European contractors – exactly the group represented by EIC - have in recent years developed significant activities in the fields of infrastructure development and services as well as in public buildings. For further information about EIC, its organisation and objectives, please contact our website under http://www.eicontractors.de.

With its **"Green Paper on Public Private Partnerships"** the European Commission has launched a public consultation intended to verify whether the rules and principles deriving from Community law are sufficiently clear and suitable for the requirements and characteristics of PPPs. Since the term public-private partnership is not a defined term at Community level, the Commission seeks advice on whether there is a need for further legislative action, in particular in the field of public procurement laws.

EIC submits its comments on the questions put forward by the Commission on the basis of the **broad international experience** of our member companies which could be applied by the Commission for the preparation and implementation of more privately developed and financed infrastructure and building schemes in Europe.

Against this background, a clear signal of caution has to be given right from the outset: It is today universally acknowledged in the relevant World Bank, UNIDO and UNCITRAL documents that, from a procurement point of view, **PPPs cannot be regulated in exactly the same way as conventional construction projects**. This is, firstly, because of the important role played by third parties, such as commercial lenders, developers, accountants, legal advisers, etc., and, secondly, because of the long-term nature of the PPP contract. Due to the complexity and the long duration of PPP projects, it is highly unlikely that the contracting authority and the selected bidder agree on the terms of a draft project agreement without discussing in detail the technical, legal and financial details of the project. This is particularly true for projects involving the development of new infrastructure where the final negotiation of the financial and security arrangements takes place only after the selection of the concessionaire. Therefore, the traditional relationship between contracting authority and bidders, as regulated in the Directives 2004/17/EC and 2004/18/EC on the co-ordination of procedures for the award of public works, etc., has to be adapted to the specific requirements of a PPP contract.

The need for regulation must not be limited to the issue of ensuring competition, but should include best practice principles for the procurement and implementation of PPP projects in the European Union. EIC supports the opinion that the European Commission has an important role to play in order to further improve the legal framework for PPPs in the Union. In our view, this **role of the Commission should be "catalytic"** rather than that of a European regulator. When defining this role, the Commission has to carefully analyse in which areas regulation on the European level would be conducive to the various PPP policies in its Member States and which areas are better addressed by the Member States directly. As a next step, EIC would recommend that the Commission set up a **catalogue of principles for PPP projects**.

Based on the international experience of its member companies, EIC has tried to highlight the most important risks and pitfalls which occur during the crucial stages of any PPP project in the **"EIC White Book on BOT / PPP"**, published April 2003 (Attachment), and has offered advice how to avoid or effectively mitigate the many obstacles and risks through the careful preparation and structuring of PPP projects. We would like to quote from the Outlook of our publication: "In order for the PPP concept to be successful on a broader basis**, new skills in the public sector** and a **new risk sharing philosophy between commercial and public risk** have to be developed. If private funds are to be a major portion of the financing of the infrastructure project, it is necessary that the public sector understands the financial instruments that bankers use to bind these deals together."

We would in particular like to point out that the EU should make an effort to support the development of PPP in the new EU Member States in Eastern Europe. In those states there are threefold needs: There is a huge need for upgraded public infrastructure to support the economic development, there is an urgent need to attract private capital to invest in such infrastructure and there is a sustained need to strengthen the legal and institutional framework in order to implement such PPP projects. Particularly in the last of these, the EU could make an important contribution, drawing from experiences in the "old" EU member states. Experience from PPP in developing countries has not been encouraging and we would all like to see a better development in the new member states.

Please find below our detailed comments:

Comments

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

   Numerous project models, e.g. PFI, DBFO, BOT, etc., have been created and implemented globally throughout the past years. They are all aiming at private sector participation in the project and are normally regulated by specific laws or Acts of the country. It is important to note that PPP describes many variants. The appropriateness of a particular variant for a given type of infrastructure is a matter to be considered individually by each EU Member State for each and individual project in view of the national needs for infrastructure development.

2. In the Commission's view, in the context of a purely contractual PPP, the transportation of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

   When considering the "Competitive Dialogue", EIC generally welcomes that the European Commission has acknowledged the need for **more flexibility in the procurement of PPP projects** as compared to the conventional construction projects. Crucial differences in the project set-up have to be addressed appropriately: PPP projects are output-driven rather than input-driven and they involve a potentially complex contractual structure. Last but not least, financial and legal issues take precedence over technical issues.

   As pointed out already in Chapter 3.1 of our *"EIC White Book"* (Enclosure), a **variety of strategies exists** for the definition of the project objectives and requirements of a contract which in turn have an impact on the structure of the tender procedure used for a particular PPP project. The options for the contracting authority range from a case where the objectives of a contract and the means to achieve it are strictly defined by the Authority - which leaves few or no possibilities for the bidders to differ from the predetermined technical and commercial project parameters - to a case where the Authority defines the objectives of the contract but leaves essential project parameters such as the development and optimisation of technical and commercial solutions open to proposals from and negotiation with the candidates.

   The former is inspired by the traditional public procurement methods and requires increased pre-tender efforts by the Authority (technical investigations and design, investment and financing models, etc.) and thus a longer preparation time. If the tender period itself can be reduced, bid results are often easier to control and the Authority has a high influence on the technical and commercial solutions offered and finally selected.

However, in our experience most PPP projects are highly complex and involve elaborate technical, financial and commercial considerations with which public authorities are not best equipped to deal. **A strategy of the second type gives bidders more freedom and flexibility in selecting the means to achieve the project, therefore increasing chances that creative and optimised technical, financial and commercial solutions are identified and offered.** This option, naturally, requires a longer tender period and makes it necessary that the Authority establishes and strictly abides by highly professional procedural regulations for the tender process itself in order to safeguard comparability of the bids and procedural fairness.

Past experience has shown that valuable and innovative contributions can be obtained through an open dialogue about the project and the tender structure between the public and the private sector prior to issuing the final invitation for tender. Indeed, contractors enjoy a considerable amount of technical, financial and commercial expertise and it is the essence of a partnership to create the necessary environment to enable them to specify in co-operation with the Authority the most appropriate means to meet the identified objectives. Involvement of the private partners at tender stage is one of the best guarantees for promoting innovation and maximising Value for Money. The conduct of such an open dialogue requires a transparent and non-discriminatory framework. **The Authority must define minimum mandatory requirements in terms of objectives, quality, timeframe and special features of the contract. Those should remain unchanged throughout the entire procedure.** The dialogue procedure should also provide for a mechanism to answer queries and to disseminate to all bidders any additional information supplied to one of them.

Hence**, the "Competitive Dialogue" as defined in the new "Legislative Package" must be applied with great skill and care**. Whilst it allows bidders to optimise their offers in line with the contracting authority's potential review of the initial project specifications, it sets equally the danger that entrepreneurial ideas and innovations being circulated to competitors during the tender process **("cherry picking")**. Such practice clearly deters qualified bidders from competing for PPP projects. The "Competitive Dialogue" should not disrupt one of the great benefits with PPP, which is that essentially what is tendered is the provision of a service to cover a need and not the procurement of a specific "technical, legal or financial solution". To develop the solution is part of the bidders know-how and frequently involves considerable costs and efforts. There must be procedural rules making clear to the bidders how the "Competitive Dialogue" is supposed to work in the relevant procurement situation. It should be avoided that the technical solution developed by one bidder be disclosed to competitors. Instead, the purpose of the dialogue should be for the contracting authority to adjust the description of its needs, functional specifications, or contract conditions to allow bidders to be even more innovative or to allow them to confirm that the proposed solutions likely cover the need.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

No comments.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

It is common knowledge that the practice of awarding concessions is rather heterogeneous across the globe and also throughout the European Union. Such differences in the legal implementation **are based on the Member States' different legal and administrative systems** and can hardly be prevented by Community law. As a matter of fact, if the Commission can establish through this survey that some Member States are more open to foreign competition than others, it should try to ensure a level playing field through appropriate measures.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

As the Commission has found out in its "Report on the functioning of public procurement markets in the EU: benefits from the application of EU directives and challenges for the future" (Doc. 03/02/2004), **direct cross-border procurement** within the European Union only amounts to **3%**, whereas 67% of the total number of bids are submitted by national firms in their home countries. EIC would guess that for construction projects the share of direct cross-border procurement is even well below the 3 %. This again confirms the **importance of indirect cross-border procurement** through **subsidiaries**.

On the other hand, the figures of direct and indirect cross-border procurement seem to have improved since the late 1990s and that may be evidence that the Community legal framework is generally fostering participation of non-national bidders in the procurement procedures. It is our conclusion then that there must be **additional conditions other than the Community's procurement directives which are having an influence in the grade of foreign competition** in the different segments of public procurement. One must also not forget that concession of infrastructure services are globally politically sensitive and sometimes explicitly excluded from competition under the rule of **"Services of General Interest"** which are not open to competition.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

For large and complex contracts as well as transnational projects there might be added value in having clear European competition rules. EIC would suggest that the Commission, as a first step, updates its "Interpretative Communication on Concessions in Community law" of April 2000.

In our view, any new Community legislation on PPPs should provide, in the first place, for a **clear and reliable framework for the protection of investment**, which should be taken for granted particularly in case of the EU's financial involvement in the PPP project, e.g. through the structural or pre-accession funds.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

   No comments.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

   In our perception, there have not been too many cases in the past within the European Union where PPP projects were granted directly to a private company without some form of prior competition. However, some countries encourage private sector initiative under the assumption that it may help a country's PPP programme to better or quicker succeed. If the contracting authority should decide to pursue the proposal further, it should be required to award the project by the normal tender procedures, **acknowledging**, however, in some form the **up-front investment of the private company**.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

   EIC has stated in the *"EIC White Book on BOT / PPP"* (Enclosure) in Chapter 4.6 that in cases where PPP projects are admissibly identified and/or promoted by a private sponsor – i.e. "Unsolicited Proposals" – the sponsor that finances the preliminary studies runs the risk that the concession contract – after a public invitation for tenders issued by the contracting authority – may eventually be won by a competitor. Thus, the **cost of producing a proposal, associated with the risk of not being awarded the contract, may act as a deterrent to the private sector** to spend the considerable resources required for the elaboration of an unsolicited proposal. At the same time, it should be stressed that the public sector may significantly benefit from the creativity of private sector initiatives and should consequently encourage unsolicited proposals.

   The market knowledge and market presence of private companies together with their ability to spot and identify public and private demands for services of various kinds can be exploited to the benefit of the public sector and private users. It is therefore recommended that private sector efforts in connection with project identification and preparation be encouraged through the **grant of incentives to the private sponsor**, should the contracting authority wish to carry on with the project and launch a competitive award procedure. Such incentives may take a variety of forms, the most relevant being the award of an advantage in the tender evaluation phase or the so-called "first refusal" right. Alternatively, in case of failure some form of financial compensation may be awarded.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

As an industry association, EIC does not have a direct experience on this issue other than made public in the *"EIC White Book on BOT / PPP"* (Enclosure). What can be said in short, though, is that in those countries where the Government is deeply committed politically to a fully-fledged PPP programme and has introduced a **"deal flow" or a "pipeline" of projects** as well as a solid institutional framework, well-developed tender procedures, and follows an adequate risk-sharing or partnering philosophy, the PPP contracts are normally running smoothly and create "Value for Money" due to the efficiency gains of private sector involvement.

On the other hand, where PPP projects are one-offs lacking adequate preparation by the contracting authority and have to be implemented under relatively unstable political, legal and financial conditions, successful implementation of PPP projects has proven to be much more difficult. There are certainly examples of failures of PPP projects and even programmes which, if analysed closely, appear to be caused through a poor project set-up.

11. Are you aware of cases in which the conditions of execution - including the clauses on adjustments over time - may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

In our experience, it is almost impossible to exactly define in large and complex PPP projects which conditions of execution may have a "discriminatory effect" or represent an "unjustified barrier". The contracting authority should strive to achieve the fundamental principles of equal treatment, non-discrimination and transparency also in PPP projects.

Therefore, **each contracting authority has the responsibility to prepare the project with due care and to share all relevant information at its disposal with all the bidders in order to provide for a level playing-field**. With reference to Chapter 3.2. of our *"EIC White Book on BOT / PPP"* (Enclosure) EIC demands that the documents to be circulated shall at least include the following data:

- General technical information, including geo-technical conditions;
- Demand study;
- Financial and economic feasibility study;
- Environmental impact assessment;
- Service performance indicators;
- Availability of facility and capacity output;
- Security and environmental standards and norms;
- Construction specifications, standards and norms;
- Duration of design and construction phase;
- Operation and maintenance standards;
- Duration of operation and maintenance phase.

Moreover, the tender documents should also include a **detailed outline for a concession contract** in which the main principles regarding performance guarantees, non-performance penalties (in both construction and operation phases), conditions for property transfer, liabilities and liability limits, insurance requirements, Force Majeure, changes in law, compensation, termination, indemnification, dispute resolution, etc., are stated. Eventually, the request for proposals and its related documents should clearly and unambiguously provide all necessary specifications on project performance and evaluation criteria in order to enable comparability of bids in an objective and fair manner.

If all these conditions are met, there will be left little room for any distortion of competition, and the tender process will pass a **threefold filter**: first, technical advisers will duly go through the due diligence process, second, banks (also advised by their experts) will duly analyse the economic viability of the project and finally, the contracting authority will select the contractor duly on the basis of the "economically most advantageous tender".

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

In case the contracting authority does not follow the process described under Question No. 11, there might be cases where not all bidders have the same level of information at their disposal, which in turn can lead to unsustainable bids so that the Contracting authority can not base its award on the "economically most advantageous tender".

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

EIC does not at all share the Commission's view that step-in rights present any kind of problem in terms of transparency and equality of treatment. Conversely, **step-in type arrangements are absolutely normal and common place in PPP projects**. This is because commercial lenders are the most common source of debt financing, and, therefore, it is self-evident that their concerns have to be addressed and reflected in the contract structure. Since the operations of commercial lenders essentially revolve around the creditworthiness of borrowers and the security of their loans, they put much stress on prudential lending and precautions aimed at ensuring loan repayment also in case of interruption or termination of the concession contract. That means that any security package in connection with a commercially financed PPP project typically contains step-in rights, supplemented usually by a direct agreement between the Contracting authority and the lenders. The main purpose of such clauses is to allow the lenders to avert termination by the contracting authority when the concessionaire is in breach by substituting a concessionaire that will continue to perform under the project agreement in place of the concessionaire in breach.

Similarly , EIC also would like to make clear that changes in the course of PPP contracts as well as additional works are normal and foreseeable characteristics of long-term contracts (up to 30 years) and should not be put into question by the Commission (*cp. paragraphs 49 and 50 of the survey*).

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

A **catalogue of general principles on the European level**, e.g. on guarantees, penalties, conditions for property transfer, protection of investment, liabilities, insurance, Force Majeure, changes in law, compensation, termination, indemnification, dispute resolution, etc., would be helpful to promote the PPP concept and to reduce the sometimes prohibitive transaction costs.

15. In the context of PPPs, are you aware of specific problems encountered in relation to sub-contracting? Please explain.

When addressing the question of sub-contracting, EIC recommends that the Commission applies the same rule as the World Bank in 3.13 of their Procurement Guidelines, i.e. **if the concessionaire has been selected already on the basis of international competitive bidding, *"which may include several stages in order to arrive at the optimal combination of evaluation criteria"* then it is free to procure the goods, works, and services required for the facility from eligible sources, using its own procedures**. Only such liberty allows the concessionaire to manage properly the construction, operation and supply risks he usually assumes with a PPP contract. The risk and reward structure of PPP projects has to be taken into consideration when regulating the rules of sub-contracting.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of sub-contracting?

Not at all. Any limitations and restrictions of a non-economic nature on the concessionaire to select his suppliers and subcontractors may easily result in a reduction of project efficiency.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on sub-contracting?

No. See above.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

In the case of institutionalised PPPs, the policy of the European Commission should aim at **abolishing and preventing all regulations** which could **lead to a distortion of the competition between public and private companies**. Such policy could take a variety of measures, such as equal information to all bidders, the requirement of full cost calculation for public companies, rather than administrative cost, or the interdiction of public companies to participate in the competition, neither alone nor in consortia with the private companies.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project?

EIC holds the opinion that institutionalised PPPs should be introduced where this brings Value for Money to the public and is preferable to other PPP forms due to the specifics of the project. We have noticed on a number of markets an increased interest to create mixed entities for performing institutionalised PPPs. In the UK for instance, the Government has launched a program "schools for the future" in which it is proposed that the public and private sector partners will set up a joint company to be responsible for the building and maintenance of schools in the relevant authority area.

It could be useful to have **a clarification regarding the conditions requiring a call for competition**. In this connection, EIC cannot fully agree with the last sentence in paragraph 64, as the stipulated principle may in some cases contradict the purpose of creating the mixed entity in the first place. The private partner should at all times have the right to reserve certain tasks, such as executing the works, for itself, provided that certain requirements are fulfilled. If a direct negotiation was not permitted, then the very purpose of the mixed entity could be lost. This form of co-operation could be preferred where it e.g. is of value to reduce the time to procure work and reduce bid costs.

Any new rules should cover this situation. There are manners in which to ensure fairness. If already the competitive selection of the private partner included reference to prices and conditions for work earlier performed for the contracting authority by the private entity, then such prices and conditions could be used as a benchmark when the mixed entity negotiates for work to be performed by the private entity partner.

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

There is not yet a comprehensive fiscal accounting and reporting standard for PPPs. Therefore, EIC recommends that the EU adopt a modern accounting system that takes the complexity and particular characteristics of the PPP model into account. An inadequate accounting system might give a distorted view of the risks and rewards of such contracts and could lead to difficulties in raising finance for such projects.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

The most frequently cited example for a successful PPP programme is Chile where a significant portion of the sizeable infrastructure gap has been filled. Since 1994, the government has engaged the private sector in 36 PPP projects with a total value of 5 billion US$. The projects contracted thus far comprise 24 transport projects, 9 airports, 2 prisons, and a reservoir. Over 20 of these projects are already in the operation phase. We suggest that the EU closely analyse the genesis of the **Chilean PPP programme**.

In the **U.S.**, the long tradition of toll road revenue bond issuance through quasi-public authorities has provided a solid foundation for the launching of new PPPs in the 1990s, as federal and state laws changed to accommodate private capital.

As a general remark it must be pointed out that the legal and policy framework for PPP projects differs greatly across the world, reflecting the wide range of political, historic, and cultural traditions. For instance, in **China** some bond financing of toll roads has taken place, but the security required for bonds, including tested legal protections, is simply lacking.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

EIC would welcome such an institutionalised dialogue between all interested parties in PPP and would, of course, be pleased to participate in such a network.

Enclosure: **EIC White Book on BOT / PPP**

The Green Paper: A tunnel-vision approach to PPPs

1. EPSU's initial response draws principally on the points raised in the attached PSIRU paper "*PPPs: A critique of the Green Pape*r".

2. EPSU regrets the fact that the Green Paper does not seek to develop a coherent EU policy on PPPs. It follows a rigorous tunnel vision approach and is concerned only with competition policy and extending the Internal Market in public services. The Green Paper misses the more fundamental questions: How can the social and economic impact of the risks and future liabilities created by PPPs be evaluated?[1] Why and on what criteria should PPPs be preferred to public sector investment and operation of services? How can democratic control and transparency be assured? To answer these questions a wide range of public interest concerns and policies need to be taken account, including the need for quality public services, employment, sustainable development, cohesion…. Only in this way will public authorities be in a position to assess whether PPPs do provide the best option for investment and the best option for operating services.

3. Despite some helpful suggestions in relation to tendering of concessions (paras 31 – 38) this is not the Green Paper on PPPs that Europe needs. The Commission should produce a report which addresses:

   - The risks and problems experienced with PPPs
   - The dangers for public authorities in entering into long-term deals with the private sector
   - The need to protect public services, their workers, and citizens from erosion of quality by commercial opportunism
   - The economic and social case for public sector investment and provision of services.

4. The Green Paper turns a blind-eye to the risks and future liabilities that are being created by PPPs. This is astonishing when in many countries arguments about public debt and consequent liabilities for future generations are being used to make cuts in public services. The Paper does not take account of remarks by DG Economic and Financial Affairs[2] about the dangers of PPPs, especially when used to avoid fiscal restraints. Indeed, it seems that it is encouraging them for exactly this purpose. Nor does the Green Paper integrate the experiences of DG Regio regarding how PPPs can be put together in the central and eastern Europe[3] and still be eligible for cohesion funds.

5. The Green Paper claims that it does not make any "*value judgment*" on the decision whether or not to externalise services (para 17), and that the rules it is concerned

[1] The European Parliament in its resolution on the Internal Market Strategy - Priorities 2003-2006 also called on the Commission to evaluate the impact of Private/Public Partnerships on the democratic accountability of public authorities in providing public services, and the long-term viability of PPPs, to assess the social consequences for workers and users and to consult with relevant societal organisations, including the social partners, through the inter-sectoral and sectoral social dialogue structures.

[2] See Public Finances in EMU 2003 report "*there is the risk that the recourse to PPPs is increasingly motivated instead by the purpose of putting capital spending outside government budgets, in order to bypass budgetary constraints. If this is the case, then it may happen that PPPs are carried out even when they are more costly than purely public investment*." (summary of part III, p.102) http://europa.eu.int/comm/economy_finance/publications/european_economy/2003/ee303en.pdf

[3] See for example *"Resource Book of PPP Case Studies*" published in June 2004 http://europa.eu.int/comm/regional_policy/sources/docgener/guides/PPPResourceBook.htm

with apply "*downstream of the economic and organisational choice made by a local or national authority*" on whether to use the private sector. However, encouraging PPPs by removing obstacles to them and by offering guarantees to entice private contractors, clearly implies discouraging the use of alternatives, namely the public sector. It also implies a preference for private ownership. The asset financed by a PPP needs to be classified as a private asset, off the public sector balance sheet, and so escaping the curbs on government debt. Encouraging PPPs entails encouraging the formation of privately owned assets over the alternative of publicly owned assets. This seems, in principle, to be a breach of the Treaty's neutrality on public or private ownership (Article 295 of the Treaty).

6. The Commission argues that it is only facilitating the development of PPPs *"under conditions of effective competition and legal clarity"* (1.2). However, while it is a matter of public policy for the European Union to aim for effective competition (and of course legal clarity), there is no public policy objective to facilitate the development of PPPs. Effective competition can exist irrespective of the number of PPPs. There is no public interest in increasing the number of PPPs for their own sake. The Green Paper however acts as though this was the case, and this is reflected in the language: e.g., "*obstacles*" to PPPs, "*develop*" PPPs, "*remove barriers*" to PPPs (paras 14,16, 19).

7. Furthermore, the Green Paper strays beyond the issue of PPPs by including comments on the *Teckel* judgment[4] (para 63). The Commission concludes that work should be submitted to compulsory tendering before it can be assigned to arms-length public entities. However this would seriously distort the choices available to public authorities. It is highly contentious and has no place in a Green Paper that is supposed to be concerned with PPPs.

Beyond the Green Paper: evaluating PPPs against the public interest

8. The two elements of a PPP are normally (1) financing a public sector capital investment project through a private company and (2) a contract for services, usually operating the capital assets financed under (1). The two central questions on PPPs, for public authorities, are therefore:
   - Is the PPP a better way of financing the capital investment involved than alternatives?
   - Is the PPP a better way of operating the service than alternatives?

9. The key choice is between public sector provision and a PPP, or other variants on these options. The Green Paper acknowledges that *"recourse to PPPs cannot be presented as a miracle solution for a public sector facing budget constraints. Experience shows that, for each project, it is necessary to assess whether the partnership option offers real value added compared with other options…"* (para 5). However, it fails to discuss these other options, and does not elaborate at any point on how this assessment should be carried out, or on what principles such an evaluation should be made.

10. This weakness can be seen in the discussion of risk. The question that should be addressed is whether the PPP option carries more risks (and benefits) than the alternatives of public sector provision (or other forms of contracting). In the context of this choice it is important that PPPs are not made too easy or attractive, e.g. by offering exemption from fiscal restraint, or from procurement disciplines, or providing state-backed guarantees which are not properly costed. These inducements can

[4] Case C-107/98 on the definition of " in-house". Several other cases on the same point are currently before the European Court of Justice.

distort any evaluation between a PPP and a public sector provision. Thus the Eurostat ruling, which is noted by the Green Paper as helping make PPPs more attractive, should in fact be criticised for making PPPs too easy[5].

11. Rather, if the fiscal rules of the EU are preventing enough public investment from being made, or preventing it being made in the most efficient way, then the rules themselves need to be reviewed and changed. Evading the rules by using PPPs, when they may be a more costly, more risky, less equitable and less effective option than public provision, does not solve the problem: it makes it worse.

Long-term effects on provision of services

12. The Green Paper takes the view that *"The success of a PPP depends to a large extent on a comprehensive contractual framework for the project, and on the optimum definition of the elements which will govern its implementation. In this context, the appropriate assessment and optimum distribution of the risks between the public and the private sectors, according to their respective ability to assume these risks, is crucial."* (para 45)

13. There are two great weaknesses in this position. Firstly, it ignores the key 'top-level' choice between public provision or PPPs – the key question is not allocation of risk within PPPs, but the riskiness of PPPs compared with the alternative of public sector provision. Secondly, in reality it is impossible to specify everything in a contract, because unforeseen circumstances will arise. This is especially important in the case of public services, because the State can never transfer responsibility for assuring the public interest to a private operator. Entering into long-term PPP contracts limits the ability of public authorities to respond to future changes in the public interest.

14. The Green Paper's belief in complete contracts is repeated when it addresses the question of contract revisions (para 49). This need for constant renegotiation is often seen as an opportunity for the private partner to improve the terms of their contract, but for the public partner it is normally disadvantageous, partly because the greater knowledge and legal expertise of the private companies leads to contract revisions more favourable to the contractor. In any case the real problem is the need for a comparative evaluation of PPP proposals with other public sector options: the risk to the public authority of this kind of future deterioration in the terms of the contract has to be quantified.

Damage to staff: working conditions, morale and public service ethos

15. The Green Paper makes no reference to the employment effects of PPPs, yet public services are responsible for generating high levels of employment. EU policies need to take this more into account if the Lisbon targets are to be met.

16. The quality of employment is also intrinsically inked to the quality of services provided. One effect of PPPs is often to damage the working conditions and morale of workers. A survey carried out by EPSU in 2003 found that in a number of

[5] The IMF also commented that the "*recent Eurostat decision on accounting for risk transfer gives considerable cause for concern, because it is likely to result in most PPPs being classified as private investment. …. Since most PPPs involve the private sector bearing construction and availability risk, they will probably be treated as private investment, even though the government bears substantial demand risk (e.g., when it guarantees to the private operator a minimum level of demand for the service provided through the PPP). …the recent decision …. thus could provide an incentive for EU governments to resort to PPPs mainly to circumvent the Stability and Growth Pact (SGP) fiscal constraints*."
http://www.imf.org/external/np/fad/2004/pifp/eng/031204.htm

countries workers were displaced outside sectoral agreements on pay and conditions, or forced onto worse conditions. The development of outsourcing in energy has displaced workers from mainstream energy companies to contractors who have an incentive to cut costs to retain the next contract: as a result there is a training crisis throughout Europe for energy workers.

17. Damaging effects on labour have been noted by a number of reports of experience with PPPs in the UK. A recent review of the impact of PPPs on labour in the UK observed that the tendering process, based on lowest price, had damaged the security and conditions of the workforce, especially of women, as well as the quality of service; in the case of prison service Public Finance Initiatives (PFI) schemes, the effect had been to reduce wages, increase hours, and increase staff turnover.

Conclusion

18. EPSU reiterates that the Green Paper not the right starting point to develop EU policy on PPPs. It ignores the main question that needs to be addressed, namely not whether a PPP should be done this way or that, but whether it should be done at all. While the Green Paper acknowledges that *"recourse to PPPs cannot be presented as a miracle solution for a public sector facing budget constraints. Experience shows that, for each project, it is necessary to assess whether the partnership option offers real value added compared with other options…"* (para 5), it fails to discuss these other options, and does not elaborate at any point on how this assessment should be carried out, or on what principles such an evaluation should be made.

19. The Green looks at PPPs exclusively from the perspective of competition policy and the interest of private economic operators. It ignores issues linked to the broader, long-term public interest and to social and employment concerns. It does not evaluate PPPs or show that they provide "value for money". It assumes that the private sector is better than the public sector and so it can ignore all evidence to the contrary.

1. Introduction

A Green Paper on PPPs was published by the EC (DG Markt) on 30 April 2004 [1]. It is related to a series of papers that seek to develop the Commission's position on how the private sector can operate in public services. These include reports from DG Markt, DG Regio and Eurostat (the statistical arm of the EC) that seek to encourage PPPs as a way of raising investment, through financial and administrative incentives, with the encouragement of private interests which stand to gain from PPPs. Other public interests concerns are not addressed by these approaches, but are of great importance, including the fundamental question of whether PPPs are a better way of financing investment public services than the public sector.

2. One-sided approach: promoting PPPs

The background to the Green Paper is a series of initiatives aimed at extending the role of the private sector in public services, promoting PPPs, and especially ensuring that PPPs have access to public funds. These initiatives have come from a number of divisions of the EC, with the support of the private sector. They are motivated by a wish to expand the internal market into public services, use PPPs as a way of avoiding fiscal restraints, and providing the private sector with more business.

2.1. Extending internal market into public services

The main origin of the paper is DG Markt's current strategy for developing the internal market of the EU, set out in May 2003, which prioritises public services as the next sectors for liberalisation[2]. Part of that strategy is "*to facilitate public-private partnerships*", based on the belief that "*The private sector will play an increasingly important role in financing infrastructure and in modernising our vital services and ensuring that they are affordable and of the highest possible quality.*" The strategy promised a Green Paper to "*ensure that such partnerships are compatible with public procurement rules*", as well as to clarify the relationship between PPPs and state aid rules, as part of a general commitment to review EU legislation in order to facilitate the greater role of the private sector in public services. [3] The paper also addresses the issue of the current exemption from procurement rules of concessions, which are the oldest form of PPP: this has been the subject of previous communications from the EC.[4]

2.2. Promoting PPPs in accession countries: accessing EC funds

DG Regio has also published papers that are concerned to support and facilitate the use of PPPs, especially in new member states and accession countries, so that the grants for investment in environmental and transport infrastructure can be available to PPPs. The first DG Regio paper, in 2003, was a guide to "*developing successful PPP projects in the candidate countries*" so that they were compatible with the rules for providing ISPA funds, stating that "*The European Commission has an interest in promoting and developing PPPs within the framework of the grants it provides*" [5]. In June 2004 DG Regio published a collection of case studies intended to demonstrate that "*it is possible to successfully manage these constraints [of ISPA and cohesion fund rules] and integrate the needs of all parties*". [6]

2.3. Eurostat: easing conditions for fiscal exemption

A key motive for public authorities' interest in PPPs, as stated in the green paper, is that PPPs are seen as enabling governments, constrained by the EU's own fiscal rules, to make more investments in public services: "*In view of the budget constraints confronting Member States, it meets a need for private funding for the public sector…*".

The problem however has been a lack of clarity over the circumstances in which PPPs are officially recognised as being outside the categories of public borrowing and public assets and debts that are constrained by the EU rules. This has been considerably eased, for supporters of PPPs, by a ruling by Eurostat, the Statistical Office of the EC, in February 2004, that the assets involved in a PPP should be classified as non-government assets, and therefore recorded off balance sheet for government, if the private partner bears the construction risk, and the private partner bears either availability or demand risk. [7] This is an easy requirement – availability risk simply means that the private sector accepts responsibility if its own asset stops working at a time when it is needed.

2.4. EC support for PPP financing of international transport links

The EC itself is encouraging PPP schemes as a way of financing the large-scale capital investment needed for the planned trans-European networks. A report from the commission in 2003 [8] proposed that more use could be made of concessions for this purpose, referring to historical precedents. This report saw the purpose of the Green Paper on PPPs as being *"to launch a major public consultation regarding the rapid development of various forms of PPP and the legal regulation of public contracts through Community law."*

2.5. Private sector encouragement

The expansion of PPPs is naturally supported and encouraged by the private companies that gain from the growth in such projects, especially in sectors such as water and construction of transport links such as roads and tunnels. The market for the private sector grows as PPPs replace public sector investment and operation, and this is an especially attractive market where it can be combined with government guarantees that secure the returns on investment, and with access to EC level grants that increase the total value of schemes. A good summary of this market-seeking approach can be seen in the paper published by PriceWaterhouseCoopers in June 2004 [9], which sees PPPs as an important market, seeks greater certainty about EU rules on procurement and funding in relation to PPPs, and recommends that the EU funds the creation of special PPP units, and a central EU task force to assist member states "tackle the issues involved in integrating EU funding and grant requirements with private sector finance and PPP approaches".

2.6. The other side: economic and social concerns with PPPs

This encouragement for PPPs however ignores a range of concerns about PPPs based on public interest considerations. Most fundamentally, there are questions about whether PPPs should be preferred to public sector investment and operation of services, and the need to evaluate the social and economic impact of the risks and future liabilities created by PPPs. There are a number of specific public interest concerns: about the way PPPs transfer the costs of paying for investment from present generation to future generations; about the dangers of fragmenting, casualising and worsening conditions of employment of public service workers employed in them; about the transparency of the processes by which PPPs are established, operated, and

terminated, including the dangers of corruption; and about the comparative economic consequences of PPPs and public sector options.

2.7. Green Paper and beyond

This paper starts with some comments about the Green Paper itself and some of its recommendations, and then raises some key issues concerning PPPs, including the need for an assessment of how PPPs impact on public interests, and the ability of public authorities to come to the best decisions for the public interest.

3. The Green Paper

3.1. Missing the procurement directives

There is a general question about the relationship between the Green Paper (GP) and EC policy initiatives. The bulk of the paper is concerned with possible changes to the public procurement regime of the EU, yet it was published one month after the enactment of the new, comprehensively revised procurement directives 2004/17 and 2004/18.[10] The Green Paper itself had been delayed 18 months from its originally announced date. The opportunity of including relevant provisions in the revised directives has thus been lost: any changes relating to PPPs would need a further revision to the directive.

3.2. Concessions

At present, concessions fall outside the scope of the procurement directives, which leaves many major contracts not subject to full rigours of competitive tendering. There is a public interest in such competition, however, to help avoid corruption and favouritism, and it is a serious anomaly that major contracts in water supply or toll roads should not be subject to these rules. It is therefore welcome that the GP argues that service concessions should be subject to tendering rules like other contracts, and suggests that EC legislation should impose this requirement (paras 31-36). Previous EC communications on concessions had been prepared to allow the current favoured regime to continue.

3.3. Structured selection methods and 'competitive dialogue'

The GP also makes a strong statement of principle of the public interest in rigorous procurement procedures, even in relation to PPPs : *"structured selection methods should be protected in all circumstances, as these contribute to the objectivity and integrity of the procedure leading to the selection of an operator. This in turn guarantees the sound use of public funds, reduces the risk of practices that lack transparency and strengthens the legal certainty necessary for such projects."* (para 26). Unfortunately, this is in the context of a discussion of the new 'competitive dialogue' procedure of the revised procurement directive (article 29), which does not exhibit many of these virtues: it allows confidential discussions with tenderers after the contract notice has been issued, and even after the best tender has been identified. The time for DG Markt to insist on rigour was before the introduction of this kind of 'dialogue' into the directive.

3.4. First movers: a recipe for corruption?

The Green Paper endorses proposals that 'first movers' should have some privileged treatment to maintain the incentive to initiate proposals for public spending on their projects. (paras 37-41). Such proposals have always been made b y private companies in the hope of the proposer getting extra contracts, or less competitive contracts (not, as naively suggested in para 39 *"to develop or apply innovate technical solutions, suited to the particular needs of the contracting body"*). There are serious dangers in these initiatives, not least of corruption and higher costs from the resulting contracts precisely because they are less rigorously scrutinised and subjected to competition and evaluation of alternatives, as a recent World Bank paper warned, concluding: *"The many negative experiences with unsolicited proposals for private infrastructure*

[10] DIRECTIVE 2004/18/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts Official Journal of the European Union EN 30.4.2004 L 134/133 http://europa.eu.int/eur-lex/pri/en/oj/dat/2004/l_134/l_13420040430en01140240.pdf

projects may lead some governments to see blanket refusals as the only way to safeguard against potential problems with corruption and lack of transparency.”.[11] The GP should take heed of that advice.

3.5. Sub-contracting

The GP rightly raises the question of sub-contracting as creating potential problems (paras. 51-52). Sub-contracting in its various forms has led to worsening of conditions, loss of training and unreliable and dangerous work in many public services in many countries - the examples of the Hatfield train crash in the UK, and the recent collapse of the airport building at Charles de Gaulle airport in France, both illustrate the dangers of this practice. These problems are general to all sub-contracting, however, whereas the Green Paper considers them only in the context of whether a PPP partner can restrict sub-contracting to its own affiliates.

3.6. Proposal of compulsory tendering of public sector work

The Green Paper includes a paragraph (para 63) that claims that work has to be submitted to compulsory tendering before it can be assigned to arms-length public entities, referring to one of the cases heard by the ECJ that affects this issue. The para asserts that: *“Only entities that fulfil these two conditions at the same time [subject to the same kind of control as an in-house entity, and carrying out the essential part of its work for the authority] may be treated as equivalent to "in-house" entities in relation to the contracting body and have tasks entrusted to them without a competitive procedure.”*

If applied, this policy would seriously distort the choices available to public authorities. Inter-municipal companies, and similar arms-length corporatised public sector bodies, have often been developed to take advantage of perceived economies of scale, accounting and managerial disciplines analogous to the private sector, and an ability to borrow without being constrained by the EU limits on government borrowing and debt (which do not apply to public sector trading entities). The Green Paper’s policy would rule these out as policy options, as any such arms-length form would have to be subject to tender against commercial private operators able to make strategic bids and operate cross-subsidies between divisions (as was done by all major refuse collection contractors entering the UK market under the Thatcher compulsory tendering regime in 1989 (and, in the other direction, by Vivendi in 2000, when it loaded all the debts of its acquisitions in telecoms and media onto its existing concessions in water, waste and other public services). The development of the public sector would be strangled by removing such arms-length options.

The GP’s position threatens to force compulsory tendering on a high percentage of public sector operators, and is highly contentious: it has no place in a Green Paper that is supposed to be concerned with PPPs.

While this would be a welcome development from the point of view of private contractors seeking to capture business from the public sector, it is not a welcome development for public authorities, as it reduces their ability to choose the best option for public services.

3.7. Definitions

The PPPs Green Paper states that the term PPP is not defined at Community level, and then goes on to give a remarkably vague account of the elements normally characterising PPPs. However, a definition in the EC report on EMU in 2003 refers to more precise characteristics. The recent IMF paper also provides more technically specific definition, based on the elements of a Design, Build, Finance and Operation (DBFO) contract; a similar approach to an earlier PSIRU definition (see Annexe 1)

While it is correct that the term PPP is used to cover a wide variety of arrangements, any policy-oriented paper needs to provide itself with precise terms that define its subject matter and what it is acting upon. The definitions in paras 1 and 2 include the vague phrase: “forms of cooperation between public authorities and the world of business” with six alternative objectives. This is far too wide a definition, and would include for

[11] Unsolicited proposals : the issues for private infrastructure projects. John Hiodges. Public Policy for the Private Sector. Note no 257. http://www-wds.worldbank.org/servlet/WDSContentServer/WDSP/IB/2003/08/19/000160016_20030819180828/Rendered/PDF/263990PAPER0VP0no10257.pdf

example joint seminars. This is followed by a list of four elements, which are the "relatively" long duration – relative to what? Funding partly from the private sector "sometimes by means of complex arrangements"; the "important role" of the economic operator; and the "distribution of risks" – which is a feature of any contract. [12]

More precise definitions are already available, for example in the EC report Public finances in EMU 2003, or the IMF paper on PPPs, which defines the category as projects involving the private partner in DBFO of an asset, which constitutes a clear framework for discussion.

3.8. Private and public interests: encouraging PPPs and private ownership

The public interests in the subject are most fundamentally concerned with getting the best option for investment, and the best option for operating a service. There are also other public interests and policies, some specified in the treaty, such as the freedom for companies to compete with each other throughout the EU, but also the community objectives of quality public services, high employment etc.

There are also private interests at stake with PPPs. There is the natural interest of contractors in relevant sectors in maximising the size of the market available to them, which would be achieved by increasing the use of PPPs for public investment. There is a similar natural interest from financiers, who are interested in a potentially larger market for investment finance that may be secured by government guarantees. It is to be expected that these groups will seek to encourage the use of PPPs, on terms as favourable as possible to themselves.

Private interests are not the same as the public interest objective of fair competition. That objective can be sought whether there are 2 PPPs in Europe, or 2 million. There is no public interest in increasing the number of PPPs for their own sake. The Green Paper however acts as though this was the case: section 1.2 is headed "The challenge for the Internal Market: to facilitate the development of PPPs under conditions of effective competition and legal clarity." : while it is a matter of public policy for the EC to aim for effective competition (and of course legal clarity), there is no public policy objective to facilitate the development of PPPs. The same mistake occurs elsewhere (paras 14,16, 19) which talk of "obstacles" to PPPs, "develop" PPPs, "remove barriers" to PPPs.

3.8.1. Not neutral on public or private

One reason why this matters is because of the importance of the Treaty's principle of neutrality on public or private ownership (under article 295 of the Treaty). At one point the Green Paper claims that it does not make any "value judgment" on the decision whether or not to externalise services (para 17), arguing that the rules it is concerned with apply "downstream of the economic and organisational choice made by a local or national authority" on whether to use the private sector. But encouraging PPPs, removing obstacles to them, clearly implies discouraging the alternative, of using the public sector.

It also involves a preference for private ownership. The asset financed by a PPP needs to be classified as a private asset, off the public sector balance sheet, and so escapes the curbs on government debt. Encouraging PPPs entails encouraging the formation of privately owned assets over the alternative of publicly owned assets. This seems, in principle, a breach of the treaty's neutrality. [13]

[12] This vagueness is consistent with an approach based on the private interest of expanding the market – to those interested in market opportunities, it does not matter much exactly what are the features of the contract.

[13] This preference is also implicit in the fiscal rules of the growth and stability pact themselves.

4. Beyond the Green Paper: evaluating PPPs against public interest

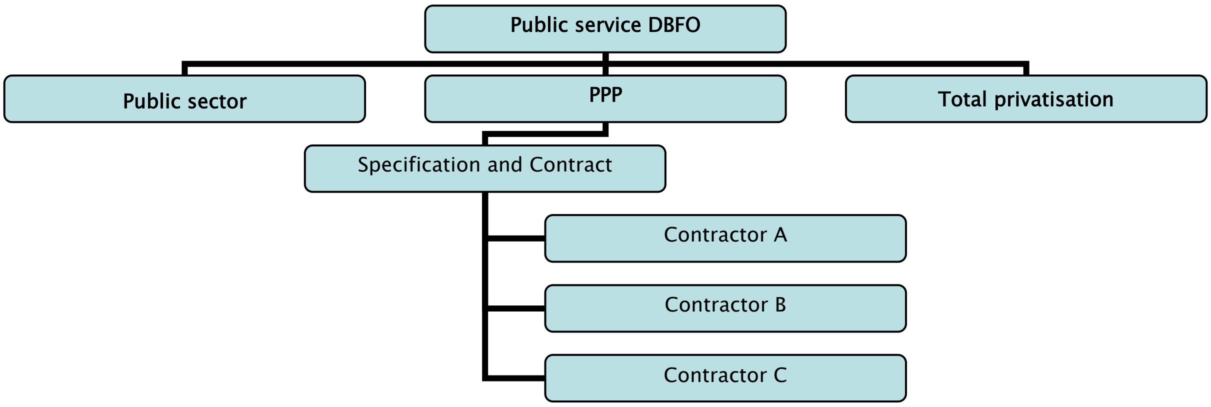
4.1. Two central comparative questions

The two elements of a PPP are normally (1) financing a public sector capital investment project through a private company; (2) a contract for services, usually operating the capital assets financed under (1).The two central questions on PPPs, for public authorities, are therefore:

- Is the PPP a better way of financing the capital investment involved than alternatives?
- Is the PPP a better way of operating the service than alternatives?

Both the IMF and the EC report on EMU 2003 agree that the key questions are these comparative ones. They stand at the peak of a decision-tree, where the public authority can evaluate options for carrying out a public service involving design, building, and financing some capital assets, and operating the service. (DBFO). Thus the key choice is between public sector provision and a PPP, or other variants on these options, as the IMF insists: "When considering the PPP option, the government has to compare the cost of public investment and government provision of services with the cost of services provided by a PPP" (PPPs, para 23).

Chart A: Different levels of decision on the best way to achieve public service objectives



DG Markt's Green Paper however largely ignores these key questions, and assumes that a PPP has been chosen as the way forward. It acknowledges that "*recourse to PPPs cannot be presented as a miracle solution for a public sector facing budget constraints. Experience shows that, for each project, it is necessary to assess whether the partnership option offers real value added compared with other options…*" (para 5). However, it fails to discuss these other options, and does not elaborate at any point on how this assessment should be carried out, or on what principles such an evaluation should be made. Ignoring this top level choice is dangerously similar to assuming, with Mrs Thatcher, that "there is no alternative" (TINA).

As a result, the paper easily slips into claiming that the point is to encourage PPPs, and remove obstacles to them: but doing this may have the effect of distorting the higher level choice, for example by offering guarantees to entice private contractors.

This weakness can be seen in their discussion of risk. The comparative question addressed by others is whether the PPP option carries more risks (and benefits) than the alternatives of public sector provision (or other forms of contracting). So the question of guarantees for example is treated by the IMF as a comparative one e.g. "*it is also possible that the government overprices risk and overcompensates the private sector for taking it on, which would raise the cost of PPPs relative to direct public investment*"[14]. The Green Paper however ignores this comparison, and discusses the question of how risks are distributed

[14] International Monetary Fund Public-Private Partnerships March 12, 2004 p.14 http://www.imf.org/external/np/fad/2004/pifp/eng/031204.htm

within a PPP, as a search for the 'best' allocation between the public and private partners: *"In this context, the appropriate assessment and optimum distribution of the risks between the public and the private sectors, according to their respective ability to assume these risks, is crucial."* (para 45).

4.2. Making PPPs too easy

In the context of this choice it is important that PPPs are not made too easy or attractive, e.g. by offering exemption from fiscal restraint, or from procurement disciplines, or providing state-backed guarantees which are not properly costed. These inducements would distort any evaluation between a PPP and a public sector provision.

Thus the Eurostat ruling, which is noted by the Green Paper as helping make PPPs more attractive, should rather be criticised for making PPPs too easy. This is the view taken by the IMF, in March 2004, when it described the Eurostat decision as *"problematic"* [15], and declared that the *"recent Eurostat decision on accounting for risk transfer gives considerable cause for concern , because it is likely to result in most PPPs being classified as private investment. …. Since most PPPs involve the private sector bearing construction and availability risk, they will probably be treated as private investment, even though the government bears substantial demand risk (e.g., when it guarantees to the private operator a minimum level of demand for the service provided through the PPP). …the recent decision …. thus could provide an incentive for EU governments to resort to PPPs mainly to circumvent the Stability and Growth Pact (SGP) fiscal constraints."* [16]

This echoed the general concern expressed in the EC's own report on EMU in 2003 (produced before the Eurostat ruling): "there is the risk that the recourse to PPPs is increasingly motivated instead by the purpose of putting capital spending outside government budgets, in order to bypass budgetary constraints. If this is the case, then it may happen that PPPs are carried out even when they are more costly than purely public investment." (summary of part III, p.102) [17]

These anxieties may be predictable on the part of fiscal authorities, but they form part of a wider debate about the appropriateness of those policies themselves. The EMU 2003 report devoted a whole section to the question of public investment, how it is affected by PPPs, and whether the fiscal rules of the EU are constraining public investment and, if so, whether they should be changed. The IMF papers of March 2004 have a similar agenda, and indeed the IMF has proposed a significant alteration in its own fiscal rules, precisely in order to facilitate public investment by public authorities and public sector operators.

If the fiscal rules of the EU (or the IMF) are preventing enough public investment from being made, or preventing it being made in the most efficient way – as both bodies acknowledge may be happening - then the rules themselves need to be reviewed and changed. Evading the rules by using PPPs, when they may be a more costly, more risky, less equitable and less effective option than public provision, does not solve the problem: it makes it worse.

4.3. Capital investment: private borrowing is more expensive

The Green Paper, as stated above, shares the view that PPPs are helpful because they allow public investment outside the fiscal guidelines. The report on EMU 2003 points out two crucial weaknesses in this position: the by-passing of better alternatives, and the failure to make a long-term assessment of the implications of PPPs: *"First, it does not address why PPPs should be preferred to alternative schemes to finance capital formation with public purposes that do not imply an increase in government borrowing (for*

[15] International Monetary Fund Public-Private Partnerships March 12, 2004 para 38 http://www.imf.org/external/np/fad/2004/pifp/eng/031204.htm

[16] International Monetary Fund Public Investment and Fiscal Policy March 12, 2004 para 36 http://www.imf.org/external/np/fad/2004/pifp/eng/PIFP.pdf

[17] European Economy No 3 / 2003 Issn 0379-0991 European Commission Directorate-General For Economic And Financial Affairs. Public finances in EMU 2003 http://europa.eu.int/comm/economy_finance/publications/european_economy/2003/ee303en.pdf

example, classical privatisation [author's note: or borrowing through a corporatised public sector entity, which is also outside the EU definition of government borrowing]*). Second, even if the impact on current budget balances of PPP schemes is most likely to be smaller compared with the alternative of pure public procurement, the long-term impact of PPPs on public finances is to be assessed carefully*." [18] PPPs have to be demonstrated to be a better option than other ways of investing and delivering the same service.

PPPs have a fundamental disadvantage as a way of financing capital expenditure, compared with finance raised by government borrowing: governments can invariably borrow money more cheaply than any private company, As the IMF puts it; *"private sector borrowing generally costs more than government borrowing. ….. This being the case, when PPPs result in private borrowing being substituted for government borrowing, financing costs will in most cases rise …"*[19] This means that the PPP has to demonstrate that there are significant efficiency gains from involving the private sector, in order to offset the borrowing costs. The EMU 2003 report agrees: "*The rationale for the use of PPP schemes is rather that of microeconomic efficiency*."

4.4. The efficiency argument

The Green Paper has nothing to say on the subject of efficiency. It assumes from the outset that the public sector will benefit *"from the know-how and working methods of the private sector."* (para 4) but does not at any stage justify this. But there is no systematic evidence that the private sector is more efficient than the public sector. The IMF, by contrast, is aware that the evidence does not support a general assumption of superior private sector efficiency: *"Much of the case for PPPs rests on the relative efficiency of the private sector. While there is an extensive literature on this subject, the theory is ambiguous and the empirical evidence is mixed."* [20]

A good summary of this mixed evidence is contained in a review by Finnish economist Johann Willner of empirical evidence from comparative studies in a range of sectors. This shows that public ownership is at least as efficient in more than half of the studies, and developed a theoretical analysis that concludes that political intervention may actually produce better results in oligopolistic markets, even if it creates 'over-manning'.[21] And in infrastructure sectors where monopoly is common and competition in the market is weak, there is little theoretical justification for the normal presumption that competition makes the private sector more efficient.

4.5. Long-term impact: guarantees and contingent liabilities

Both the IMF and the EMU 2003 report note the importance of assessing the real value of the contingent liabilities taken on by governments through the various guarantees commonly offered to PPPs. The EMU report notes that "given the possible relevant debt impact of contingent liabilities, the inclusion of information (also quantitative when possible) on each provision giving raise to contingent liabilities in supplementary budgetary documents is recommended in international codes of fiscal transparency" (5.3.3, p.131).

The use of government guarantees in PPPs is also an extra burden on the public authorities, which should be taken into account when comparing them with other possible options. The IMF paper notes that : "….resort to guarantees to secure private financing can expose the government to hidden and often higher costs than traditional public financing…." (PPPs para 40). The use of government guarantees is also an obvious potential source of corruption, if politicians or public officials are induced to provide guarantees that protect the private partner but offer no benefit to the public. To try and make guarantees more transparent, the IMF proposes that the public policy objectives and the intended beneficiaries of all guarantees should be stated: "Good disclosure practice is to publish detailed information on guarantees. This should cover the public policy purpose of each guarantee or guarantee program, the total amount of the guarantee classified by sector

and duration, the intended beneficiaries, and the likelihood that the guarantee will be called. Information should also be provided on past calls of guarantees." [22] Both the IMF [23] and the OECD [24] have produced codes on fiscal transparency that require these liabilities to be clearly stated.

In 2002 the government of China took the decision not to offer any kind of guarantees in future to international companies operating in China. This poses a more fundamental question, as to why the EC, and European governments, in a supposedly more liberalised market, regard state guarantees for private operators as acceptable. It has been pointed out that in the UK, "future service payments under PFI contracts amount to an explicit off-balance-sheet liability totalling £100 billion which has significant implications for future borrowing or taxes.[25]

5. Long-term effects on provision of services

5.1. Uncertainty and incomplete contracts

A problem with all outsourcing is the uncertainty of the future, which means that contractual relations have to be renegotiated, limiting the range of options and flexibility of the public authority. The Green Paper takes the view that what happens after the contract can be determined by provisions in the contract itself, and in this way the allocation of risks can be defined and controlled: *"The success of a PPP depends to a large extent on a comprehensive contractual framework for the project, and on the optimum definition of the elements which will govern its implementation. In this context, the appropriate assessment and optimum distribution of the risks between the public and the private sectors, according to their respective ability to assume these risks, is crucial."* (para 45)

There are two great weaknesses in this position. Firstly, it ignores the key 'top-level' choice between public provision or PPPs – the key question is not allocation of risk within PPPs, but the riskiness of PPPs compared with the alternative of public sector provision. Secondly, in reality it is impossible to specify everything in a contract, because unforeseen circumstances will arise.

This is a key reason why businesses are vertically integrated instead of outsourcing core activities, and by the same logic provides a reason for public ownership rather than use of PPPs:*"ownership does matter when contracts are incomplete: … ownership gives the government special powers in the form of residual control rights."* [26] This is especially important in the case of public services, because the state can never transfer responsibility for the public interest that the service is serving, and so entering into long-term PPP contracts limit the state's ability to respond to uncertain future changes in the public interest – the state is reducing its own powers to act. [27]

5.2. Renegotiation: unequal opportunities

The Green Paper's belief in complete contracts is repeated when it addresses the question of contract revisions. *"In general, changes made in the course of the execution of a PPP, if not covered in the contract documents, usually have the effect of calling into question the principle of equality of treatment of economic operators. ……… any substantial modification relating to the actual subject-matter of the contract must be considered equivalent to the conclusion of a new contract, requiring a new competition"* (para 49).

[22] IMF PPPs , section VII, para 48, p.28

[23] The IMF's *Code of Good Practices on Fiscal Transparency* and the related *Manual on Fiscal Transparency* require statements as part of the budget documentation that describe the nature and significance of all contingent liabilities.

[27] Julie Froud, "The Private Finance Initiative: risk, uncertainty and the state", *Accounting, Organizations and Society* 28 (2003) 567–589

This need for constant renegotiation is often seen as an opportunity for the private partner to improve the terms of their contract, but for the public partner it is normally disadvantageous, partly because of the greater knowledge and legal expertise of the private companies leads to contract revisions more favorable to the contractor. In France, which has the longest experience of such concessions to build roads, water works and other infrastructure, an official report observed that the system *"left elected councillors on their own, without support, to deal with conglomerates wielding immense political, economic and financial power"* [28]

The Green Paper's solution is hardly practicable however: if every substantive revision has to be retendered, then PPPs will become so uncertain that private companies will lose interest. This real problem should rather be addressed in a comparative evaluation of PPP proposals with other public sector option: the risk to the public authority of this kind of future deterioration in the terms of the contract has to be quantified.

5.3. Uncertainty of outcome: secrets, corruption, lies and mistrust

The uncertainty of the future is compounded because of strategic behaviour by the companies designed to improve their own position, and exploit omissions and failures by public authorities. There is real experience of these problems – none of them noted by the Green Paper.

PFI schemes in the UK show common exaggeration of costs or reduction in quality. An official audit report on PFI in schools warned that expected savings were not being delivered, and that "there is a strong case for changing capital funding incentives to enable options other than PFI to be pursued equally advantageously. This would open up the PFI mechanism itself to competition"[29]: one PFI project to improve schools in north London resulted in an extra costs of £6.25m for the council, due to lack of provision for items like desks, chairs and cabling for computers.[30] With hospitals, the cost of PFI schemes has invariably been higher than originally forecast, requiring 30% cuts in bed capacity and 20% reductions in staff in hospitals financed through PFI. [31]

Corruption is a common problem with public sector contracts, and PPPs are at least as susceptible as others. The Portuguese hospital PPP, Amadora-Sintra has been the subject of allegations of over-charging, use of fraudulent expense claims (a state auditor in mid-2003 found over-charging of €75m, although an arbitration court controversially overturned this), and allegations of misuse of hospital property for private clinical services, reinforced by the fact that the contract with the hospital was signed in 1995 by the outgoing health minister, who, after the electoral defeat of the government, subsequently went to work for the de Mello Group which was the private partner in the hospital.[32] In water, executives of the major groups Suez and Veolia have been convicted of corruption in Grenoble, Angouleme and Reunion (France) and in Milan (Italy).[33]

The impact of strategic behaviour by companies has also been demonstrated in a global study of infrastructure construction contracts for railways. The study found that the actual final cost of these contracts was always consistently far higher than the original estimates: a statistical analysis confirmed that the one coherent explanation of this phenomenon is "systematic lying" on the part of the companies. [34] Underestimating costs in public works projects: Error or lie? by Bent Flyvbjerg; Journal of the American Planning Association; Summer 2002; Vol. 68, Issue 3; pg. 279

A recent study of the use of PPPs in defence in the UK concluded that PPPs do not necessarily lead to efficiency gains and that there are significant costs and disadvantages: “*The conclusion of the analysis is that the use of PPPs will not necessarily lead to improved economic efficiency in defence procurement and that considerable care will need to be taken both in terms of negotiating PPPs, monitoring their performance, and in their renewal. The UK defence sector illustrates that PPPs involve significant transaction costs which must be set against any benefits in terms of economic efficiency incentives*”[35].

5.4. Damage to staff: working conditions, morale and public service ethos

One effect of PPPs is often to damage the working conditions and morale of workers. A survey carried out by EPSU found that in a number of countries workers were displaced outside sectoral agreements on pay and conditions, or forced onto worse conditions.[36] The development of outsourcing in energy has displaced workers from mainstream energy companies to contractors who have an incentive to cut costs to retain the next contract: as a result there is a training crisis throughout Europe for energy workers. [37]

Damaging effects on labour have been noted by a number of reports of experience with PPPs in the UK. A recent review of the impact of PPPs on labour in the UK observed that the tendering process, based on lowest price, had damaged the security and conditions of the workforce, especially of women, as well as the quality of service; in the case of prison service PFI schemes, the effect had been to reduce wages, increase hours, and increase staff turnover. [38] The study of UK defence contracts (see above) found that there had been damaging consequences for staff morale. [39] And a similar result emerged from a study of PPPs in the health and municipal services sectors in the UK: “*a vicious circle of monitoring and distrust between partner organizations, in place of the old faith in bureaucratic process*”. The study also concluded that PPPs present a significant threat to the ‘public service ethos’. [40]

5.5. Eternal concessions

The Green Paper states that a fixed contract length has to be set to provide a form of guarantee for the private partner in PPPs – the longer the better, for the private partner: “*the period during which the private partner will undertake the performance of a work or a service must be fixed in terms of the need to guarantee the economic and financial stability of a project.*” (para 46). Certainly, public services and those that work in them benefit from security and stability, an environment that facilitates service delivery: public sector operations in general can provide this stability. However, fixing contract length in a PPP creates risks for the public sector that are not present if the work is done by the public sector itself.

[40] PPPs and the changing public sector ethos: case-study evidence from the health and local authority sectors . Gail Hebson, Damian Grimshaw, Manchester School of Management, Mick Marchington
Work, employment and society Volume 17 n Number 3 n September 2003

One such risk, implicitly acknowledged in the Green Paper, is the risk of the private company having no incentive to work efficiently, because it will not be exposed to competition for a long time. The paper makes the obscure suggestion that *"An excessive duration is likely to be censured on the basis of the principles governing the internal market or the provisions of the Treaty governing competition"* (para 46), but does not say by whom it will be censored, or what sanctions will be applied. PPPs which are in effect eternal already exist in the EU: the Barcelona water concession has been running continuously for 136 years, without ever being retendered, and there is now no prospect of it being competitively tendered because the costs of compensation to the incumbent are too high. In the UK, all the private water companies hold monopoly concessions which now require 25 years notice of termination: it is very unlikely that in practice such notice can ever be given effectively.

A second risk is not noted in the Green Paper but is very real: the risk that terminating the contract early will be impossibly costly because of compensation claims. An example is the experience of the Hungarian city of Szeged, where water supply was privatized under a concession PPP involving the French multinational Veolia. After a few years the municipality re-evaluated the scheme, which had legal flaws, and found it would be cheaper and preferable to carry it out in-house. The change proved impossible however as Veolia brought a court case for compensation equivalent to all expected profits from the remainder of the contract. Szeged had to settle for renegotiation with Veolia. [41]

6. Summary and conclusion

There appears to be no coherent overview being taken of PPPs by the Commission. DG Economy is raising concerns about the dangers of PPPs, especially when used to avoid fiscal restraints, whereas DG Markt (and Eurostat) are encouraging them for exactly this purpose. DG Regio spends large amounts of time and energy explaining how PPPs can be arranged in central Europe and still be eligible for cohesion funds, while being more aware than most of the risks and problems involved. The Green Paper itself follows a rigorous tunnel vision principle: DG Markt is concerned with ensuring competition and extending the internal market in public services, and has no responsibility at all for the public services themselves, those who work within them, or the evaluation of public sector and PPP options.

Despite some helpful suggestions in relation to tendering of concessions, this is not the paper on PPPs that Europe needs. The Commission should find a way of producing a report that includes:

- the risks and problems experienced with PPPs
- the dangers for public authorities in entering into long-term deals with the private sector
- the need to protect public services and their workers from erosion of quality by commercial opportunism
- the economic and social case for public sector investment and provision of services.

7.1. Hart on contradictions with theory of firm

INCOMPLETE CONTRACTS AND PUBLIC OWNERSHIP: REMARKS, AND AN APPLICATION TO PUBLIC-PRIVATE PARTNERSHIPS Oliver Hart. The Economic Journal, 113 (March), C69–C76. _

"…the issues of vertical integration and privatisation have much more in common than not. Both are concerned with whether it is better to regulate a relationship via an arms-length contract or via a transfer of ownership. Given this, one might have expected the literatures to have developed along similar lines. However, this is not so. Whereas much of the recent literature on the theory of the firm takes an 'incomplete' contracting perspective, in which inefficiencies arise because it is hard to foresee and contract about the uncertain future, much of the privatisation literature has taken a 'complete' contracting perspective, in which imperfections arise solely because of moral hazard or asymmetric information.
……. this is unfortunate. One of the insights of the recent literature on the firm is that, if the only imperfections are those arising from moral hazard or asymmetric information, organisational form – including ownership and firm boundaries – does not matter: an owner has no special power or rights since everything is specified in an initial contract (at least among the things that can ever be specified). In contrast, ownership does matter when contracts are incomplete: the owner of an asset or firm can then make all decisions concerning the asset or firm that are not included in an initial contract (the owner has 'residual control rights').
Applying this insight to the privatisation context yields the conclusion that in a complete contracting world the government does not need to own a firm to control its behaviour: any goals – economic or otherwise – can be achieved via a detailed initial contract. However, if contracts are incomplete, as they are in practice, there is a case for the government to own an electricity company or prison since ownership gives the government special powers in the form of residual control rights."

7.2. Parker and Hartley on risks and defence PPPs in UK

Transaction costs, relational contracting and public private partnerships: a case study of UK defence David Parker and Keith Hartley Journal of Purchasing and Supply Management Volume 9, Issue 3 , May 2003, Pages 97-108
http://www.sciencedirect.com/science?_ob=JournalURL&_cdi=12893&_auth=y&_acct=C000027518&_version=1&_urlVersion=0&_userid=634187&md5=c5218be5e9f78f1fd27ddb01b951c843

Organisational boundaries are becoming much more fluid, involving networking, joint ventures, strategic alliances, partnership sourcing, and the like ([Van Tulder (1999]). PPPs including in the UK PFIs are part of this new 'relational contracting' environment aimed at reducing costs, speeding up time to market, and promoting innovation. They involve a change in the boundary of government, blurring the distinction between public and private provision. Not surprisingly, the early entrants to PPP contracts in the UK 'tendered on the basis that the political risks were high and construction costs were likely to overrun……' ([Financial Times, 6 April 2000b]).
PPP is a new policy initiative in need of economic analysis and evaluation. The paper has developed a framework for assessing PPPs drawing on transaction cost theory, supplemented by resource-based theory and an understanding of the roles of reputation and trust in contracting. The implications from this framework have been considered using a case study of the UK defence sector. The defence sector was chosen because it has been a leading user of PPP/PFI initiatives in recent years and, prima facie, involves a number of significant problems for long-term contracting given the uncertainties surrounding defence from both supply and demand perspectives.
PPPs involve agreeing long-term contracts characterised by incompleteness in their specification, asset specificity and scope for opportunism because of asymmetric information. The case study has highlighted a number of major potential transaction costs in defence procurement, arising from incomplete information, asset specificity and the resulting scope for opportunistic behaviour, which cannot be obviously offset by developing trust relationships. It has particularly illustrated the tensions between competition to reduce costs,

the need for contractors to generate profits, and the building of partnerships and trust. The study has also drawn attention to motivation in the public sector. PPPs can be distorted by the incentives within the Armed Forces; it does not necessarily follow that military personnel will behave efficiently. They neither share in any profits from efficient behaviour or experience losses from poor performance. Military personnel may pursue their own utility, shunning those schemes that adversely affect their own status.

The conclusion of the analysis is that the use of PPPs will not necessarily lead to improved economic efficiency in defence procurement and that considerable care will need to be taken both in terms of negotiating PPPs, monitoring their performance, and in their renewal. The UK defence sector illustrates that PPPs involve significant transaction costs which must be set against any benefits in terms of economic efficiency incentives. This conclusion has significance going beyond the defence sector to other forms of PPPs sharing the same sort of uncertainties, both in the UK and internationally. The study suggests that the costs and benefits of PPPs must be carefully balanced against the costs and benefits of more traditional forms of public sector procurement. Future research could usefully focus on better quantification of PPP costs and benefits and identification of the circumstances in which information asymmetry problems can be overcome by developing true partnership relationships.

7.3. Hebson et al on ethos

PPPs and the changing public sector ethos: case-study evidence from the health and local authority sectors .
Gail Hebson, Damian Grimshaw, Manchester School of Management, Mick Marchington
Work, employment and society Volume 17 n Number 3 n September 2003

ABSTRACT

This article explores the extent to which a new contractual approach to delivering public services, through public private partnerships (PPPs), is transforming the traditional values underpinning the public sector ethos among both managers and workers. Drawing on two detailed case studies of PPPs – a Private Finance Initiative in the health sector and the outsourcing of housing benefit claims in the local government sector – we identify a range of new pressures impacting on five key elements of a traditional notion of the public sector ethos. Our findings demonstrate that the contractual relations of PPPs have led to a clear weakening of traditional notions of managerial accountability and bureaucratic behaviour, reflecting both a shift to new lines of accountability (private sector shareholders) and a vicious circle of monitoring and distrust between partner organizations, in place of the old faith in bureaucratic process. Among workers, certain traditional values – especially a concern for working in the public interest – continue to inform the way they identify with, and understand, their work in delivering public services. However, the cost cutting and work intensification associated with PPPs present a significant threat to these values. The article identifies examples of short-term resilience of the traditional public sector ethos, as well as developments that threaten its long-term survival.

Discussion and conclusions

Our case-study evidence demonstrates that the contractual arrangements accompanying PPPs have exerted transformative pressures on the traditional public sector ethos. By exploring the five principles identified by Pratchett and Wingfield, this article isolates specific pressures that may challenge the public sector ethos as well as reasons why it may be more or less resilient to change. Interviews with managers reveal that principles of accountability and bureaucratic behaviour are threatened under PPPs. The transparency in decision- making that is the hallmark of accountability and bureaucratic behaviour, albeit often at the price of time-consuming structures, has been replaced with contract-led decision structures that are negotiated and fought over. Although managers may not have always agreed with decisions in the past, they were respected because they were made in accordance with impartial rules governing traditional public administration. Such respect for decisions has withered. Instead, decisions are openly questioned, with a view among managers that it is the most strategic (and, perhaps, opportunistic) partner that wins. Private and public sector managers have conflicting priorities, and this encourages manipulation and strategic behaviour. The contract limits the opportunities for high trust relationships, since one partner is responsible for monitoring the contract and this inevitably leads the other to use their expertise to evade this. There is also greater scope for managerial discretion, which facilitates an abuse of trust. In both case studies, there was an initial sense of mutual trust, but as this broke down public sector managers intensified monitoring practices and adapted their behaviour in order to secure 'value for money'. Faced with this evidence, the optimistic view that private sector managers will learn from their public sector counterparts (OPSR, 2002) is misplaced. Instead public sector managers mimic private sector techniques and so threaten the traditional values of accountability and bureaucratic behaviour. Among non-managerial workers transferred to the private sector, the evidence is less clear-cut. One might expect the public sector ethos to erode as it has always been premised on a two-way relationship – the provision of certain working conditions in exchange for a specific form of commitment. Indeed, our evidence demonstrates that workers have experienced a decline in working conditions and there has been some weakening of values associated with a public sector ethos. In particular, notions of loyalty have changed, with greater emphasis on loyalty to 'the service' and less to either the public sector as former employer (now as client) or their new private sector employer. But workers' values of public interest and altruistic motivation seem relatively resilient. Emphasis on contractual performance targets often conflicts with workers' customary emphasis on working for the public interest. Examples of such conflicts, together with evidence that workers often negotiate ways around strict performance targets, suggests that the principle of public interest and altruistic motivation have not been eroded.

8. Annex: definitions of PPPs

8.1. EC DG Markt Green Paper 30 April 2004 :

“**The “public-private partnership” phenomenon**

1. The term public-private partnership ("PPP") is not defined at Community level. In general, the term refers to forms of cooperation between public authorities and the world of business which aim to ensure the funding, construction, renovation, management or maintenance of an infrastructure or the provision of a service.

2. The following elements normally characterise PPPs:

- The relatively long duration of the relationship, involving cooperation between the public partner and the private partner on different aspects of a planned project.
- The method of funding the project, in part from the private sector, sometimes by means of complex arrangements between the various players. Nonetheless, public funds - in some cases rather substantial - may be added to the private funds.
- The important role of the economic operator, who participates at different stages in the project (design, completion, implementation, funding). The public partner concentrates primarily on defining the objectives to be attained in terms of public interest, quality of services provided and pricing policy, and it takes responsibility for monitoring compliance with these objectives.
- The distribution of risks between the public partner and the private partner, to whom the risks generally borne by the public sector are transferred. However, a PPP does not necessarily mean that the private partner assumes all the risks, or
even the major share of the risks linked to the project. The precise distribution of risk is determined case by case, according to the respective ability of the parties concerned to assess, control and cope with this risk.” (1.1, p.3)

8.2. EC DG ECONOMIC AND FINANCIAL AFFAIRS Public finances in EMU 2003

“There is no unambiguous definition of what constitutes a PPP. Broadly speaking, PPPs concern the transfer to the private sector of investment projects that traditionally have been executed or financed by the public sector (see, for example, Grout, 1997). Four elements, however, seem required to qualify PPPs:

- the project should concern the construction or the operation of physical assets in areas characterised by a strong public function (for example, transport, urban development, security, etc) and involve the public sector (general government) as the principal purchaser. Although PPPs are especially relevant in transport infrastructure, examples of public–private partnerships can be found in the provision of defence, health, education and cultural services, the building and operation of prisons or the area of water and waste management;

• the PPP must involve a corporation outside the general government (normally a private corporation) as the principal operator, that is, the agent that carries out the project;
• the principal finance of the project should not come from public debt but from other sources, such as private bonds;
• by way of the partnership, the way the project is executed must change compared with the alternative of pure public supply. This means that in PPPs, the private operator provides significant inputs in the design and conception of the project and bears a relevant amount of risk." (5.3, p.128)

8.3. IMF: Public-Private Partnerships March 12, 2004

"9. **A typical PPP takes the form of a design-build-finance-operate (DBFO) scheme.** Under such a scheme, the government specifies the services it wants the private sector to deliver, and then the private partner designs and builds a dedicated asset for that purpose, finances its construction, and subsequently operates the asset and provides the services deriving from it. This contrasts with traditional public investment where the government contracts with the private sector to build an asset but the design and financing is provided by the government. In most cases, the government then operates the asset once it is built. The difference between these two approaches reflects a belief that giving the private sector combined responsibility for designing, building, financing, and operating an asset is a source of the increased efficiency in service delivery that justifies PPPs.
10. **The government is in many cases the main purchaser of services provided under a PPP.** These services can be purchased either for the government's own use, as an input to provide another service, or on behalf of final consumers; a prison, a school, and a free-access road would fall into these respective categories. Private operators also sell services directly to the public, as with a toll road or railway. Such an arrangement is often referred to as a concession, and the private operator of a concession (the concessionaire) pays the government a concession fee and/or a share of profits." (3A, p.7)

8.4. PSIRU Terminology of Public-Private Partnerships (PPPs) March 2003

In terms of getting an overview and an international comparison, it is useful to divide the elements that can make up a PPP scheme into four parts: Construction, Operation, Finance and Ownership (see Table 1 below).

Outsourcing of services just involves a contract to operate a specific service, e.g. refuse collection, without any construction or financing of a capital investment. Under UK PFI schemes (private finance initiative)a private company designs and builds specific investments on the basis of finance provided by it, and recoups the money by a contract to provide services for a period of years, usually decades, while the asset itself remains owned by the public sector. Concessions e.g. in water are similar, but the finance is recouped through charges to the users. With leases (affermage in French) the company does not make its own investments but operates and maintains the system for the municipality, financed by charging users. Under BOT schemes (build, operate, transfer.), the investment asset is built and owned by the company for the period of operation, and later transferred to the public sector. …" (section 2.1)

Table 1: ***Elements of different PPP schemes***

		Out-sourcing	**PFI**	**Concession**	**Lease**	**BOT**
Operation	Operation of service	X	X	X	X	X
Finance	Capital investment financed by private operator		X	X		X
	Recouped by user charges			X	X	
	Recouped by contract from municipality	X	X			X
Construction	Construction of asset by private company		X	X		X
Ownership	public during and after contract	X	X	X	X	
	private during contract, public after			X		X
	Private indefinitely					

9. Annex: extracts on PPPs from EMU report 2003

5.3 Public-private partnerships
5.3.1 Definition, taxonomy, and recent experiences The involvement of private sector corporations to build and operate public projects has become an increasingly widespread practice in EU countries. The rationale for the use of PPP schemes is rather that of microeconomic efficiency. Even assuming that competitive tenders for the selection of private counterparts are feasible and efficient, pure privatisation schemes may not be optimal when there are reasons that justify a form of control on the design of the project by the public sector. This is the case when the project concerns the delivery of pure public goods (e.g., a prison), when externalities are particularly relevant (e.g., when projects have a considerable environmental impact) or when the distributive consequences of the project are a major concern (e.g., the provision of health facilities). In those cases regulation mechanisms may not be sufficient to ensure that public objectives are satisfactorily met. The standard alternatives are direct public provision or public procurement through competitive tenders. In many instances public procurements (contracting out) guarantees higher cost efficiency than direct public provisions.126 In both alternatives, however, it is the public sector that provides the financial funds to carry out the project and that exercise the control on the design of the asset. PPP schemes offer a third alternative. In such a case, the finance of the project is provided by the private sector, as in privatisation schemes, but the public sector plays a relevant role as client of the services provided by the asset. In particular, PPP contracts may specify that the private operator will be remunerated only if the actual supply of services is judged to be successful. The fact that the object of PPP contracts is the supply of services rather than the provision of the asset can make a major difference with respect to public procurement schemes. Specifying and monitoring the desired characteristics of services is normally easier than specifying and monitoring those of assets. Thus, contracts that have as their object the flow of services rather than the build of assets help to reduce the incentives that the private supplier may have to cut on quality, while preserving the incentives to contain costs (Grout, 1997). 127
5.3.3 Contingent liabilities normally arise when in PPP contracts governments offer a guarantee to the debt issued by the private operator to finance the project. Public guarantees do not constitute effective government liabilities because there is no certainty that they will translate into increased debt in the future. However, this may be the case if certain contingencies occur, i.e., in the case of default of the private counterpart. Since with public guarantees there is no certainty concerning the impact on public debt, they are recognised only under cash accounting, if and when the contingent event (the PPP counterpart default) actually occurs and payment is made.

125 The conditions under which external constraints on budget deficits can effectively reduce public investment have been discussed in section 5.2.1. 126 The reasons are well-known (see, e.g., Domberger and Jensen (1997) for a survey). In particular, bureaucracy theories suggest that government officials tend to focus on objectives different than that of cost minimization (e.g. maximising the size of their budget). 127 Hart Shleifer and Vishny (1997) develop an incompletecontracts model of public procurement and show that, compared with direct public provisions, private operators will in general have higher incentives to keep costs low but lower incentives to keep quality high. They provide supporting evidence in the context of prisons in the US.

10. Annex: selected provisions of new procurement directive

DIRECTIVE 2004/18/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts Official Journal of the European Union EN 30.4.2004 L 134/133 **http://europa.eu.int/eur-lex/pri/en/oj/dat/2004/l_134/l_13420040430en01140240.pdf**

The coverage of the directive is defined by reference to two lists of services attached in the annexes. Article 20 says that services listed in the first annexe, IIA, (referred to in the Green Paper para 11 as “defined as having priority”) have to be subject to public tendering open to companies from all member states, governed by the rules in articles 23-55; those listed in the second annexe, IIB, (referred to in the Green Paper para 11 as “non-priority”) are subject only to the requirement of article 35(4)to report the contract. These lists and phrases are unchanged from the first directive on procurement of services, EC 92/50.

ANNEX II A (1)
1 Maintenance and repair services
2 Land transport services , including armoured car services, and courier services, except transport of mail
3 Air transport services of passengers and freight, except transport of mail
4 Transport of mail by land and by air
5 Telecommunications services
6 Financial services: (a) Insurance services (b) Banking and investment services
7 Computer and related services
8 Research and development services
9 Accounting, auditing and bookkeeping services
10 Market research and public opinion polling services
11 Management consulting services (6) and related services
12 Architectural services; engineering services and integrated engineering services; urban planning and landscape engineering services; related scientific and technical consulting services; technical testing and analysis services
13 Advertising services
14 Building-cleaning services and property management services
15 Publishing and printing services on a fee or contract basis
16 Sewage and refuse disposal services; sanitation and similar services

ANNEX II B
17 Hotel and restaurant services
18 Rail transport services
19 Water transport services
20 Supporting and auxiliary transport services
21 Legal services
22 Personnel placement and supply services
23 Investigation and security services, except armoured car services
24 Education and vocational education services
25 Health and social services
26 Recreational, cultural and sporting services
27 Other services (2) Except contracts for the acquisition, development, production or co-production of programmes by broadcasting organisations and contracts for broadcasting time.

GREEN PAPER ON PUBLIC PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

ETF OPINION

The Green Paper intends to start a discussion on PPP at European level. The ETF principally welcomes a debate on PPP including experiences and good practices. However, we regret that the European Commission did not use the chance of the Green Paper to identify and discuss the advantages and disadvantages/risks of PPP in general.

The ETF is reacting to the following questions only:

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

and

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPP, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

The underling philosophy of the Green Paper and among others questions 6. and 7. give priority to the principle of competitive awarding of any kind of contract between public and private partners. This concerns Services of General Interest and Services of General Economic Interests.

The ETF is of the opinion that priority has to be given to the definition of a framework for SGI and SGEI.

Public authorities principally must have the choice to decide how to organize SGI and SGEI. Consequently they must have the freedom to choose with which partner of their confidence they work together.

EU Public Procurement legislation is clearly defined and must be applied. Beyond that there is no need to legislate concession procedures and definitely no service contracts.

The judgment of the European Court of Justice on the so-called Altmarkt case (C-280/00) confirmed that direct award of compensation for public service obligations is possible without tendering when certain criteria are respected.

Also the European Parliament decided in favor of the right of choice of public authorities how to organize public services in the context of the draft regulation on public service obligations in passenger transport (1st reading on 14 November 2001; OJ 140 from 13 June 2002).

The treatment of PPP shall follow those guidelines.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalized project? If so, on what particular points and in what form? If not, why not?

As already stated in the answer to questions 6 and 7, public authorities must have the right to choose how to organize public services and with which partner.

A Community initiative is not necessary.

European Transport Workers' Federation
29 July 2004

COMMENTS ON GREEN PAPER ON PPP AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

1. General

The European Dredging Association is pleased to respond to the Commission Green Paper COM(2004)327.

EuDA notes with satisfaction that the Commission confirms that public procurement law does not cover all forms of public-private partnerships. As underlined in the Green Paper, it is important to define the Public-Private Partnership at Community level.

The Economic and Social Committee, in its advice CES 1192/2000 concerning public-private partnerships, has confirmed this unequivocally : 'A clear definition of concessions and a suitable framework for these (PPP) contracts are needed in order to enable them to develop'.

1.1. Definition

The Commission proposes to make a distinction between two groups of PPP :

- The "purely contractual", with as sub-division BOT (Build-Operate-Transfer), DBFO (Design-Build-Finance-Operate), etc. contracts and public works concessions.
- The "institutional PPP" involving the formation of a separate organisational entity with mixed public and private participation.

While it is true that there is no formal definition of PPP at Community level, several valuable attempts have been made to clarify the matter; Table 1 lists pertinent examples. It may be helpful to use different names for contractual PPPs (public-private cooperation ?) and institutional PPPs.

Table 1 : Defining Public-Private Partnerships

Public-Private Cooperation (definition)	Comments
An agreement between a public body and contractor(s) to provide comprehensive works infrastructure and services, including project finance, while sharing project risks and benefits. *EuDA proposal*	A PPC may be realised in the form of Build-Operate-Transfer (BOT) contracts, Design-Finance-Build-Operate (DFBO) contracts or similar contracts where the private party takes responsibility for a considerable part of the project risk and the parties develop a relationship of mutual trust and respect.

Public works concession (definition)	Comments
(1) : A contract between a public body and a concession party for the execution or the design and execution of works whereby the compensation consists in the right to exploit the construction for a period of time, or in this right together with payment. *Dir. 93/37/EEC*	This definition seems to group concessions with works contracts, which makes no sense. Specific for the concession are : – Delegation – Public authority retains ownership
(2) : An act (whether by contract or unilateral) whereby a public authority delegates to a private organisation the task of designing, constructing, financing, maintaining and operating an infrastructure for a predetermined extended period. *CES 1192/2000*	One could clarify by adding ‘while retaining ownership’.

Public-Private Partnership (Broad definition)	**Comments**
A public-private partnership is a partnership between various public administrations and public bodies on the one hand and legal persons subject to private law on the other, for the purpose of designing, planning, constructing, financing and / or operating an infrastructure project. *Kinnock High Level Group on PPP financing of Trans-European Networks (1997)*	Under this definition the involvement of the private party can take a variety of forms such as concession agreements for design and operation, the commitments taken under the private finance initiative (PFI), or the forming of a dedicated project company where the public party has a seat on the Board.

Public-Private Partnership (Narrow definition)	**Comments**
A public-private partnership is a sustained, collaborative effort between government agencies and private organisations in which each of the partners shares in the planning of projects and programmes designed to meet a public need and contributes a portion of the financial, managerial and technical resources needed to implement those plans. *Fosler & Berger (1982)*	This definition implies the forming of a joint undertaking between the public and the private party. The mixed undertaking becomes a private entity with public service responsibilities. It could be argued that such an undertaking falls under the scope of Dir. 93/38/EC as a ‘utility’. This forms the typical category of institutionalised PPPs.

1.2. Classification

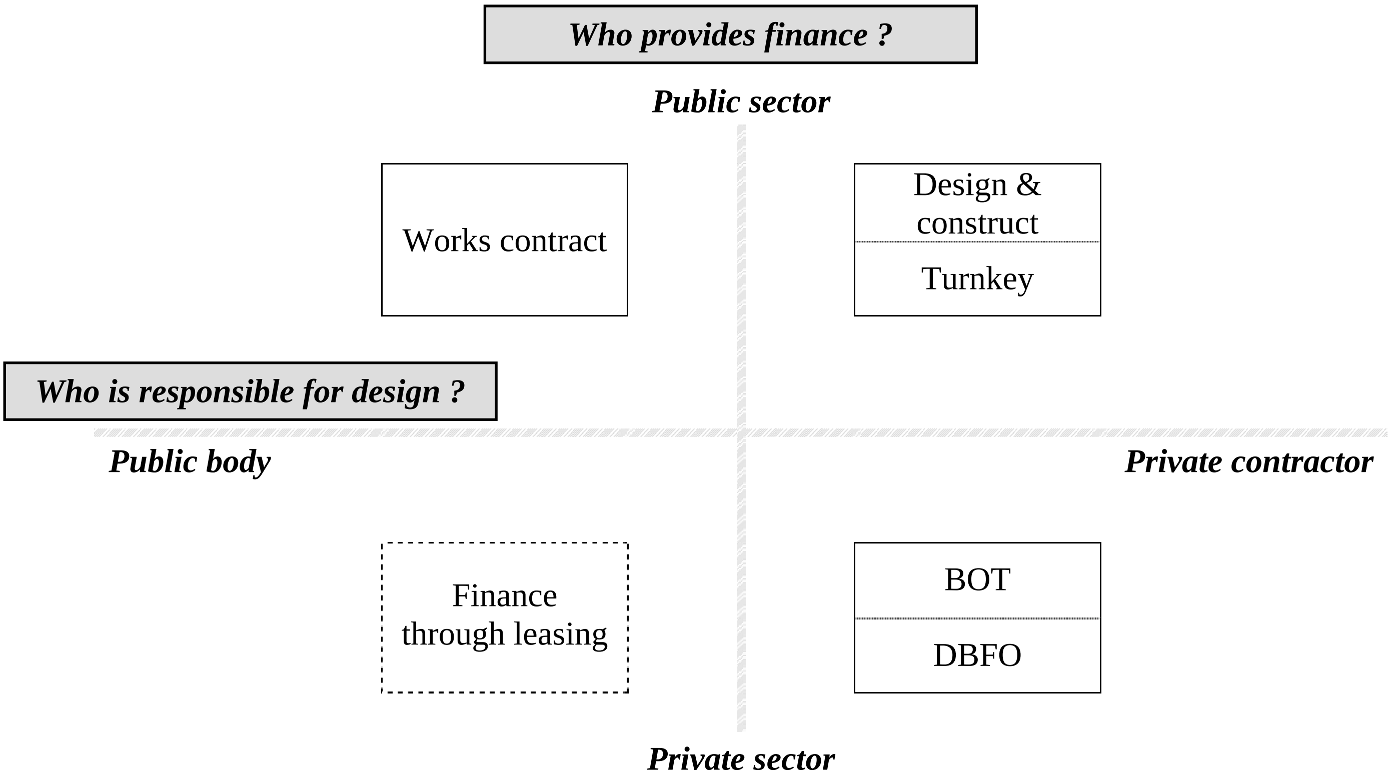
In Fig. 1 public works contracts are classified in terms of responsibility for design work and project finance. This leads to 3 different groups of contracts; the differentiating feature, in terms of procurement, will be the drawing-up of tender specifications, the distribution of risks and responsibilities and the complexity of the negotiations. For a BOT type of contract long negotiations are typical before finalising contractual details, while a traditional public works contract can be concluded with comparative ease.

Fig. 2 adds to the figure the hatched area that covers the class of contracts where closer public-private cooperation and partnerships are required. Fig. 2 also clarifies the notion that PPPs may take a variety of contractual forms.

Fig. 1. : Classification of construction contracts

BOT = Build-Operate-Transfer

DBFO = Design-Build-Finance-Operate

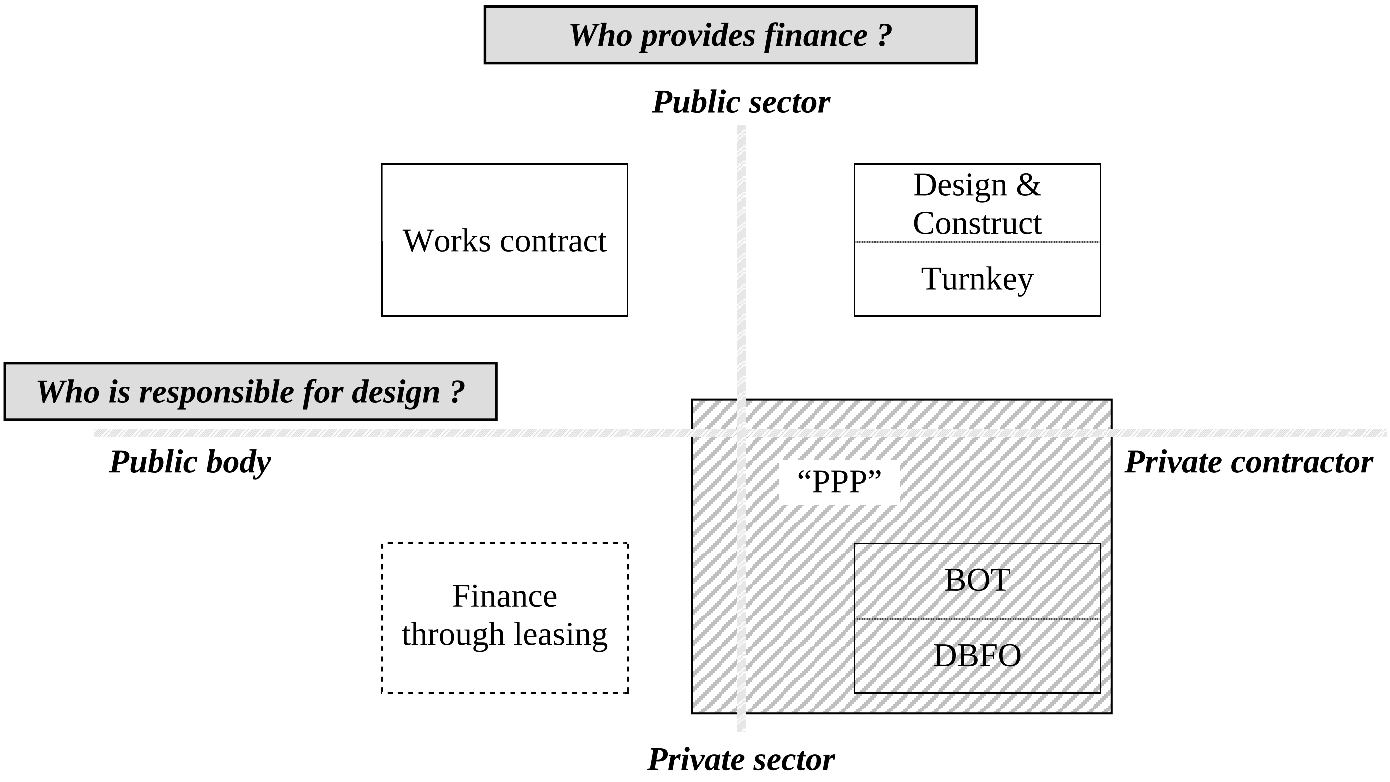


Who provides finance ?
Public sector
Works contract
Design & construct
Turnkey
Who is responsible for design ?
Public body
Private contractor
Finance through leasing
BOT
DBFO
Private sector

Fig. 2. : Classification of construction contracts vs. PPP

BOT = Build-Operate-Transfer

DBFO = Design-Build-Finance-Operate



Who provides finance ?
Public sector
Works contract
Design & Construct
Turnkey
Who is responsible for design ?
Public body
Private contractor
"PPP"
Finance through leasing
BOT
DBFO
Private sector

2. Questions raised in the Green Book

2.1. Contractual PPPs

1) What type of purely contractual PPP set-ups do you know of ? Are there set-ups subject to specific supervision (legislative or other) in your country ?

EuDA as a European trade association is not in a position to answer the question. We are however pleased to note that the Green Book makes a distinction between the public works concession and the institutionalised PPPs. In several EU Member States a tendency exists to equate public works concessions with institutionalised PPPs; in the EU context they must be treated differently if only because of the differing legal (contractual) frameworks in e.g. northern and southern European countries.

2) In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view ? If not, why not ?

In the case of complex technology or advanced technology projects the competitive dialogue has certain advantages compared to the open or restricted procedure, in particular for the procurement of products. However :

– Contractors are still very concerned that the competitive dialogue provides insufficient guarantees to protect their intellectual property rights or innovative ideas. The alternative to offer design variants as supplement to a base tender provides more protection.

– It is not always optimal to proceed with the procurement process until the design is frozen. Our sector has positive experiences with an approach where the client selects a contractor on objective grounds in order to define the optimal technical solution. A reference price is set with a proviso of gain sharing. If the final price is lower the benefit is shared; if the price is exceeded, both parties share the excess costs. A gain-sharing scheme is always to be preferred to an inadequate tender specification.

– A PPP requires complex contractual and financial arrangements. The final result cannot be achieved via a single firm pricing round at the end, as seems to be the case in the competitive dialogue, but will be the outcome of a negotiated procedure.

– The compensation for often significant amounts of proposal engineering (in PPP projects also the costs of legal and financial advisors) should be an obligatory requirement.

3) ***In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts ?***
If so, what are these ? Please elaborate.

Contractual PPPs involving financing are of interest for the realisation of larger (infrastructure) works. This favours large contractors and thus reduces the role of smaller contractors to that of subcontractors.

4) ***Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union ? What was your experience of this ?***

N.A.

5) ***Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions ? In your opinion is genuine competition normally guaranteed in this framework ?***

EuDA wishes to remind that public works concessions require long-term stability, financial strength and local presence and we would normally expect that bids are prepared involving, as a minimum, local subsidiary companies.

There have been examples of non-national groups that obtained contracts for PPPs (usually with the involvement of the EIB) and which also include concessions for exploitation. A very practical constraint for non-national tenders is that the period for bid preparation is usually insufficient to prepare a quality bid.

6) ***In your view, is a Community legislative initiative designated to regulate the procedure for the award of concessions desirable ?***

Community law should not be detailed, only be a guideline.

The new Directive 2004/18 on ‘Coordination of procedures for the award of public works contracts, public supply contracts and public service contracts’ covers the concessions under Title III. The Directive essentially requires a public announcement of the wish to award a concession. The award procedure that is to be used is not specified and it would seem quite normal to apply the negotiated procedure for a candidate that has been selected on objective grounds.

Provided the principles of the Treaty on these matters as highlighted in the “Interpretative Communication on Concessions under Community Law” (April 2000) can be respected, we see no need for further legislation.

7) ***More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements ?***

EuDA is not in favour of further European rules for concessions or complex contracts. The award procedures for institutionalised PPPs and contractual public-private agreements are likely to differ. As concessions appear both as public works concessions in their own right and as an element of some institutionalised PPPs, one may expect more problems than solutions from adding legislation. The main concern is that all forms of PPP contracts are complex and sufficient flexibility in contract award is needed.

8) ***In your experience, are non-national operators guaranteed access to private initiative PPP schemes ? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators ? Is the selection procedure organised to implement the selected project genuinely competitive ?***

No opinion; it would seem odd that an initiative developed by the private sector is subsequently advertised for open competition.

9) ***In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment ?***

The mere phenomenon of a private initiative PPP underlines the fact that private entities seek to serve the public purpose by developing entrepreneurial initiatives and opportunities.

Prior to discussing transparency, non-discrimination and equal treatment, it should be clarified how parties developing private initiatives for public needs may be rewarded. The fact that a solution is developed with private means to solve a problem with infrastructure should be recognised publicly as beneficial for society. A private initiative PPP should lead to a competitive advantage for the initiator.

In this case we plead for clear guidance that recognises the private initiative and includes one or more of the following elements :

- Compensation for preliminary engineering work at the time of award.
- Preferential treatment in the award procedure.
- “Right of first refusal”.

All 3 measures represent ‘unequal treatment’; it would be intellectually honest to clarify that a private initiative that leads to the solution of a public problem is hardly compatible with the concept of equal treatment of other, less entrepreneurial contractors. In this case unequal treatment is not equivalent to discrimination !

We consider it urgent to resolve the uncertainty surrounding private initiative PPPs and remove hurdles that make contracting authorities hesitate about their appropriate response. Practice has shown that lower (regional) authorities are very uncertain about the way they may respond to private initiatives.

10) In contractual PPPs, what is your experience of the phase which follows the selection of the private partner ?

No comment.

11) Are you aware of cases in which the conditions of execution - including the clauses on adjustments over time - may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment ? If so, can you describe the type of problems encountered ?

No comment.

12) Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect ?

We refer to the comments on this Green Paper submitted by the European International Contractors (EIC) : The contracting authority must provide comprehensive information to all bidders.

13) Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment ? Do you know of other "standard clauses" which are likely to present similar problems ?

No. PPP arrangements are by definition complex and involve contractual relationships between project developer and contracting authority, lenders, contractors, operators, etc. It is up to these parties to decide what should be in the contracts (market practice). The delicate balance of this structure could change over time, the financial commitments must be protected, the position and strength of the project developer may evolve over the years.

The European legislation can guide the award of contracts, but it is impossible to legislate all the developments that may take place during the course of the concession period nor is this the role of the Commission. Step-in clauses (required by lenders) and other provisions to protect the future health of the project are common practice and should not be discouraged.

14) ***Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level ? If so, which aspects should be clarified ?***

    As contract law is embedded in national law we see no reason to clarify the structure of PPP contracts at EU level.

15) ***In the context of (contractual) PPPs, are you aware of specific problems encountered in relation to subcontracting ? Please explain.***

    The project developer accepts major risks, both in the contractual PPP form and under the institutionalised PPP. The management of these risks must not be constrained by specific requirements on contracting. Even the option in Art. 60 of Dir. 2004/18/EC on public procurement to specify a minimum of 30% subcontracting for concessions is not appropriate.

16) ***In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and / or a wider field application in the case of the phenomenon of subcontracting ?***

    /

17) ***In general, do you consider that there is a need for supplementary initiative at Community level to clarify or adjust the rules on subcontracting ?***

    We do not see any need for further rules. It should be understood that a private contractor having obtained the contract for a contractual PPP must be free to subcontract work in accordance with its own procedures, but within the restrictions laid down in the tender documents.

2.2. Institutionalised PPPs

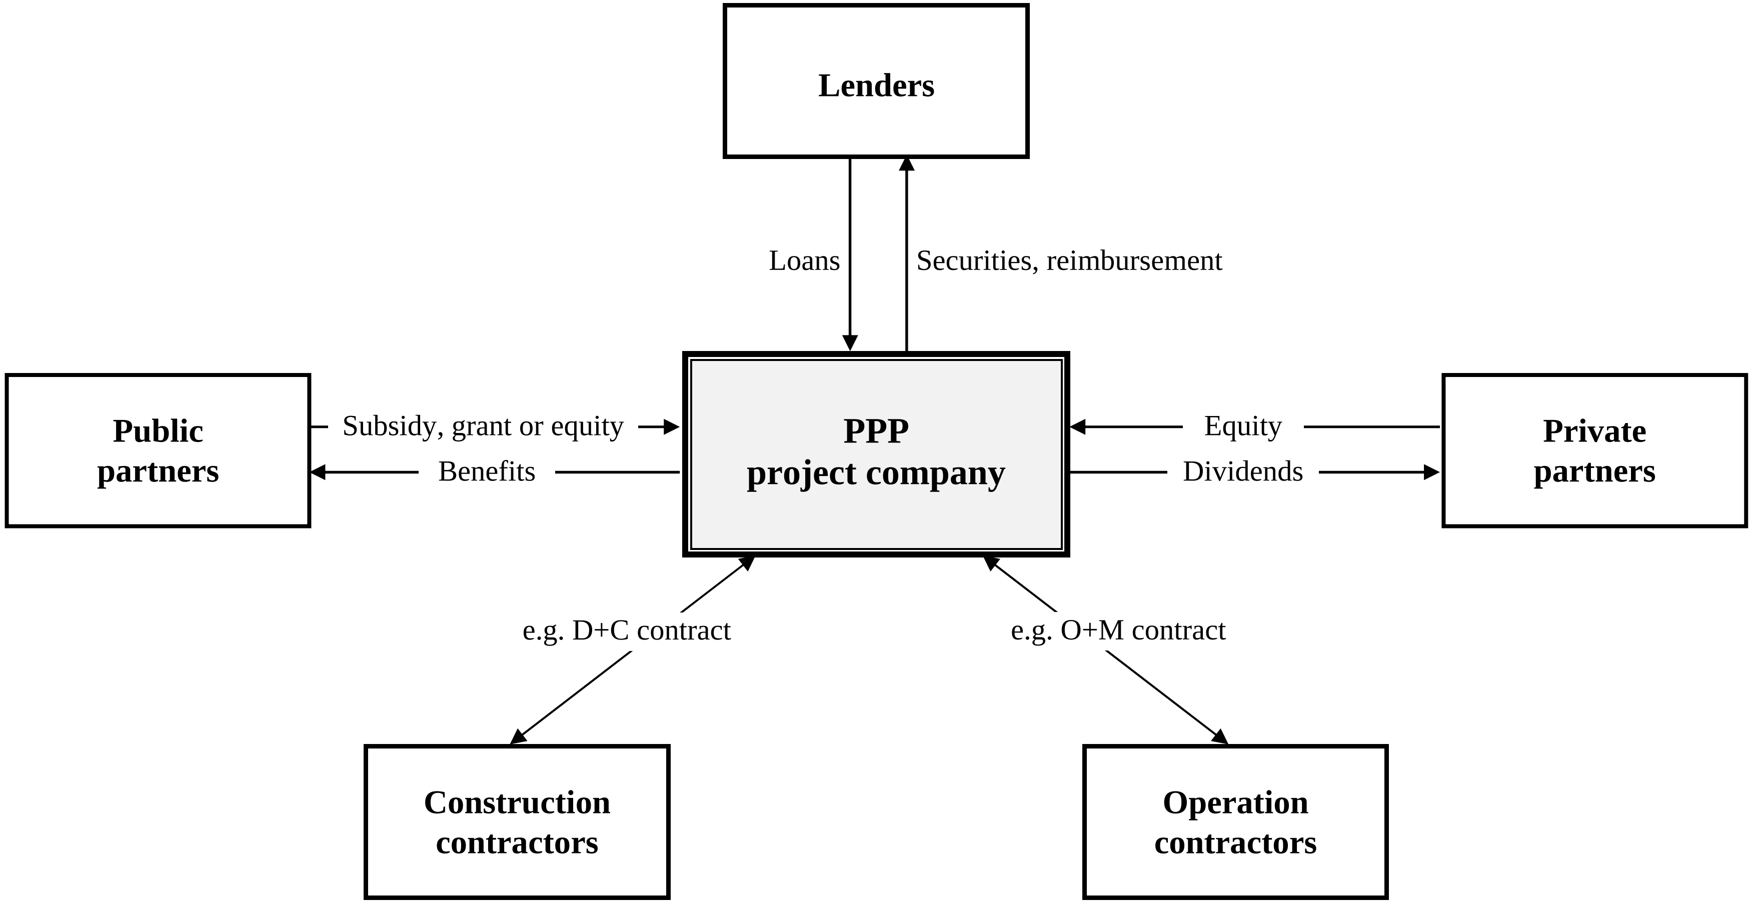
The institutionalised PPP is characterised by the creation of a mixed public-private entity to form the project company; this joint undertaking will put in place the necessary contractual agreements with other stakeholders. An example of such a relationship between (groups of) stakeholders is shown in Fig. 3.

This procedure is very much a 2-step process : the selection of the private partner and the negotiation on ownership participation and other arrangements comes first. This will normally be done on the basis of a project outline plan, but without contract in place.

The detailed contractual arrangements will develop after the establishment of a mixed project company. The focus of Community law should be on a fair process of partner selection.

The private partner will often be a holding company with diverse in -house capabilities that may be utilised in the project realisation; alternatively it may be a general contractor that maximises the amount to be subcontracted.

Fig. 3. : PPP - Role of Stakeholders



Lenders
Loans
Securities, reimbursement
Public partners
Subsidy, grant or equity
Benefits
PPP project company
Equity
Dividends
Private partners
e.g. D+C contract
e.g. O+M contract
Construction contractors
Operation contractors

We submit that the PPP project company with majority private ownership is no longer comparable to a public contracting body and should not be subject to the same rules for tendering. At most one could consider obligations similar to the “utility” directive, but one could also argue the case that a mixed PPP falls under private contract law.

18) ***What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases ?***
If not, why not ?

As outlined in the introduction on institutionalised PPPs, we are of the opinion that the initial partner selection is subject to the general principles of community law, but the subsequent phase of contract placement with partners, in-house divisions or subcontractors should leave maximum freedom to the PPP project company. We see no conflict with Community law.

19) ***Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project ? If so, on what particular points and in what form ?***
If not, why not ?

The only obligation that may have to be clarified is the requirement to publish the search for partners followed by a transparent and fair selection process.

20) ***In your view which measures or practices act as barriers to the introduction of PPPs within the European Union ?***

The main barrier to the introduction of PPPs at a wider scale within the EU is a widespread uncertainty amongst contracting authorities on which rules to apply to what kind of public contract. This represents legal uncertainty and potential exposure for the contracting bodies as well as for private partners. In particular the lack of guidance on how to treat private initiative PPPs acts as a formidable barrier to tapping entrepreneurial iniatives.

21) ***Do you know of other forms of PPPs which have been developed in countries outside the Union ? Do you have examples of “good practice” in this framework which could serve as a model for the Union ? If so, please elaborate.***

No comment.

22) ***More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful ? Do you consider that the Commission should establish such a network ?***

An example of reflection at EU level on PPPs was the Kinnock High Level Group. In the final reports one finds a fairly complete overview of good practices, reference models and implementation problems. We have seen little evidence from the side of the Commission to deal with the Kinnock recommendations during the past 8 years. Prior to forming new networks the existing analysis should be evaluated and the recommendations implemented.

In summary, when reflecting on the position of PPP under community law, the most urgent issue to clarify is the nature of the existing obligations for each separate category. Our understanding is the following :

	Works contract (BOT, DBFM, etc.)	Public works concession	PPP with mixed project company	Private initiative PPP
Notification procedure	PP	PP (publication)	PP (publication)	??
Tendering	PP	Com Law	Com Law	?
Selection / award procedure	PP	Com Law	Com Law	?
Requirements for subcontracting ?	No	(PP) *	No	No

PP = Public Procurement Directive 93/37/EEC resp. 2004/18/EC.

CL = Community Law : transparency, equality of treatment, proportionality.

* The Directives contain options, but no requirements for subcontracting.

The position of the public works concessionaire and the mixed PPP project company is not entirely clear under public procurement law. A case could be made that both forms of project companies should be treated as ‘Utilities’ as in Dir. 2004/17/EC. This, however, would require an amendment to the Directives.

More generally it is the opinion of EuDA member companies that for such complex contractual arrangements as PPPs only minimal regulatory obligations at Community level should apply. The opportunity must be published and the partner selection must be made on objective grounds, with maximum transparency. Once the partner has been selected the contract can be negotiated following the negotiated procedure.

In some Member States it is common practice to require potential subcontractors to a PPP project company to take an equity position in the project company. This demand could lead to the obligation for "subcontractors" to consolidate part of the financing debt on the balance sheet. This practice may be seen as discriminatory and limits in any case the enthusiasm of potential subcontractors for PPPs.

The practice can be circumvented by providing state guarantees, but this in turn undermines the principle of private financing.

EUREAU

European Union of National Associations of
Water Suppliers and Waste Water Services

127 rue Colonel Bourg, B-1140 Brussels
Tél+32/2/706.70.80 Fax+32/2/706.40.81

CONTRIBUTION TO THE GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIP AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS – COM(2004) 327

Eureau is the federation of national associations of drinking water suppliers and waste water services. It brings together the views of water operators across twenty EU countries, the three EFTA countries, and three candidate countries, which collectively provide sustainable water services to around 400 millions European citizens[1].

Eureau's members reflect the very diverse way in which the European water sector has been organised. Some operators are departments of local government, and some are joint-stock or private companies whose shares are being traded on the stock-exchange. Some are water boards, that combine the operation of waste water treatment with the granting and suspending of the licenses to discharge, and some are holding a fixed-term concession to operate the water assets of local governments. Some are serving an area in which only some hundred people live, others serve millions.

PPPs have a long tradition in the European water industry. More recently we have seen the introduction of new types of PPP like the DBFO-schemes. PPPs can be instrumental in obtaining a good solution when insufficient knowledge or institutional capacity is available to meet local necessities through usual public procurement. PPPs, however, can also create complex situations of assignments of tasks and responsibilities between multiple parties and setting up a PPP often requires extensive legal, technical and financial expertise. It is the task of the local or regional authority responsible for water services to meet the local needs in an optimal way, both in the short run (building infrastructure) and in the long run (operation and maintenance). Eureau fully agrees with the Green Paper that a miracle solution does not exist and welcomes the debate about the application of EU law to this domain in order to increase legal certainty.

Due to the variety of "models" of PPP for water services throughout Europe, some of the questions of the Green Paper cannot be answered at Eureau level. National associations of water operators are better placed to answer them.

1. *What types of purely contractual PPP sets up do you know ? Are these sets-up subject to specific supervision (legislative or other) in your country ?*

The diversity of situations in the member States corresponds to history, to legal tradition, and to local and technical aspects of water organisation. Water is a local resource and competence[2] for organising the service is entrusted, in nearly all EU countries to municipal/ inter-municipal, or to regional bodies.

See also the annexed table (page 9) on the individual situation of Member States

[1] More information is available on the website www.eureau.org
[2] *Aqualibrium* Report, Study on European Water management published in 2003 by the European Commission

2. *In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not ?*

First of all, this question includes a risk of confusion between public procurement and PPP. Competitive dialogue is a procedure described in the Public Procurement Directive. In the following paragraph we only give a point of view on the question whether this procedure is suitable for public procurements issues - not for PPP issues, since the Public Procurement Directives do not cover PPPs, which considerably differ from public procurements.

Eureau members think that this competitive dialogue procedure - for public procurements - can favour the search for appropriate solutions to complex issues - e.g. strategy for continuous provision of drinking water under difficult circumstances (water scarcity, polluted resources, technical failures etc). The competitive dialogue as it is described in the Directive 2004/17/EC seems to take into consideration the necessary principles such as flexibility of discussions and transparency of the results of the discussions, and also protection of innovation which has to be taken into consideration. These objectives can be met with the competitive dialogue procedure provided that further negotiations be possible, in other words the competitive dialogue should not be considered as the preliminary step for a "formal" tender. Referring to some recent cases where the transposition of the competitive dialogue in national law (e.g. France) resulted in procedures which were neither flexible nor stimulated innovation, Eureau wants to express its concerns about the way this procedure may be transposed under national law.

Eureau considers, in this perspective, that the competitive dialogue procedure may be a suitable solution for situations where contracting authorities need to identify and define the most appropriate technical solutions that would best satisfy their needs (provided that confidentiality and protection of innovation are respected) for contracts of purchase of goods, works or services.

A PPP is much larger than a public procurement (contract of purchase of goods, works or services). Eureau members stress that the competitive dialogue procedure is not necessarily adapted to encompass all elements that characterise PPPs, particularly in the case of concessions. Indeed, this procedure gives no answer to the necessity to define the precise content of the missions - and responsibilities - entrusted to each of the parties. This procedure appears also insufficient to cover situations where some complex and long-term missions need to be optimised over time so that they continue to respond to the needs of the contracting authority and of the populations.

3. *In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.*

Awarding a PPP and awarding a Public procurement must not be the same procedures. Management of water services is more complex, the responsibilities are broader and on a longer term, than providing a service in the sense of Public procurement of services. However, general principles behind Public Procurement rules – such as transparency, non-discrimination, equality of treatment, free circulation of capital – also apply to PPPs.

After the award of the contract, rules that govern the implementation of the contract must also be appropriate for PPP : sub-contracting (question 16), adaptation of the contract in case of major change or difficulty, duration of the contract (water management issues and water network issues rely on mid/long term time scale, not only on the investments life time).

Formalism must be avoided in order to allow adaptation in the course of time, under the responsibility of the selected operator. Water services must be continuously adapted to evolving circumstances : development of EU legislation (enforcement of the water Framework Directive, revision of the Drinking Water and Bathing Water Directives), degradation of water resource, technological progress, change in the economic context, or more simply for necessity of upgrading/ renewing the installations and infrastructures.

4. *Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?*

   See the annexed table (page 9) on the individual situation of Member States

5. *Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?*

   Due to the variety of national situations, the national associations of water operators are better placed to answer this question.

6. *In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?*

   Eureau thinks that any answer to this question would be premature as far as the water sector is concerned. Eureau suggests the Commission to have further reflection on the desirability and/or necessity of a Community legislative initiative after analysing the national legislations on concessions and other forms of PPP.

7. *More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?*

   We would like to emphasize that awarding PPP should not be subject to identical arrangement as awarding public contracts other than PPP, since PPP and public procurement are very different - considering criteria such as shared responsibilities, risks, investments, complexity of the tasks, duration of the contract, obligation of result. All these elements explain the difference between PPP and “simple” contracts of purchase of services. Any further work to clarify the definition of PPP, regarding their differences from public procurement (in the sense of purchasing of goods or services), is to be encouraged.

8. *In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?*

   Eureau knows very few private initiatives in water sector which would not end with a public selection procedure. This question would be better addressed at the level of public authorities.

9. *In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment covered below: the contractual framework of the PPP and sub-contracting.*

   Projects in water services are mostly public-driven. As a matter of fact the public authorities are almost always the owners of the drinking water/waste water infrastructures (exceptions are England and Wales, and, in the acceding countries, the city of Tallinn). Public authorities are always very much involved in monitoring/protecting quality of raw water, and monitoring/controlling quality of drinking water and effluents. When discussing PPP, it is important to distinguish these regulatory functions from operating and infrastructure development activities, for which, generally, PPP initiatives could be well suited. The confusion between these functions makes it more difficult for private sector to launch real "initiatives". There are a few exceptions. It happens that waste water plants for the treatment of industrial process water offer part of their capacity to treat municipal waste water. Eureau welcomes these private initiative PPP's, provided they help to find the optimal technical and economic solution for a particular situation when there is insufficient knowledge or institutional capacity to meet local necessity (not only in new member States).

   Having said that, how could "private initiative PPP" be promoted ? How can the one that brings the idea/efforts and takes the risk, get the advantage of developing it ?

   Firstly, Eureau's members highlight that there should be at least no discrimination, no restrictive rules applying to public/European funding of PPP (given the fact that water prices paid by households are in some countries not able to finance the entire cost of investments for water and waste water infrastructure.

   Secondly, there should be a positive counterpart offered to the private party which takes risks and assumes costs in developing proposals of solutions on its own initiative. There seems indeed to be a real contradiction between the ideas of promoting private initiative PPP by granting some advantage (easier access to European Funds, even refunding of preliminary studies? Easier awarding rules, such as right of preselection or right of first refusal ? less formalism for sub-contracting ?) and, at the same time, with some formal rules that EC law imposes on public contracts/European funding.

   To be able to propose answers to this major question, which deserves in-depth sector by sector reflection, Eureau's members suggest to give support to the proposal made in question 22.

10. *In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?*

Eureau has no direct experience. According to the general feeling among its members, PPPs are characterised, before and after the selection, by the consolidation of the partnership between the public authority and the private operator. Considering the needs for mid/long term PPP, possibilities must be left to adapt the contract to new situations (evolution of the needs of population, ”force majeure”) which might arise, after the selection of the private partner. As the operator is responsible for the execution of the contract, he needs flexible procedures in the choice of sub-contractors, due to the complexity of the tasks and to the transfer of responsibility to the private partner.

11. *Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?*

Eureau has no direct experience.

12. *Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?*

Eureau has no direct experience.

13. *Do you share the Commission’s view that certain “step-in” type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other “standard clauses” which are likely to present similar problems?*

“Step in” arrangements may be necessary to organise solutions in case of economic difficulties, only in exceptional circumstances - it does not mean substitution of a water operator by a bank - and does not harm competition. They are in principle covered from the beginning by provisions in the contract. It is important to avoid discontinuity or economic bankruptcy in a water services contract.

Eureau supports the idea that conditions of stepping in or taking over from the failing operator must be - and in fact, are - subject to clear and transparent provisions, formally agreed by the partners and with the authorisation of public authorities - but stresses that in practice “ step-in” arrangements do not lead to non-competitive succession of water operators.

Other “standard clauses” which endow an external actor (e.g. not signatory of the contract) with significant rights to control or to give an opinion are often more problematic than pure step-in arrangements. It can be the case when an international or European funding authority interferes with decisions agreed between the operator and the public authority responsible for water services.

14. *Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?*

Eureau welcomes the recognition of a general need for clarification of definitions as well as the criteria that are mentioned for PPPs in the Green paper. However, Eureau would like to point out that there is an additional criterion which deserves attention : obligation of result. We also underline the necessity to distinguish PPP and Public Procurement - definitions and procedures. More generally, PPP in the water sector highlight the different tasks of public authorities. They either produce and control the legal rules applicable to water services (e.g. national or more local administrations, regulators, jurisdictions), or they have the responsibility to organise water services at local level (e.g. municipalities, or other local authorities). PPP are in principle concluded with these last authorities. Eureau is in favour that European authorities take up responsibility for further clarification on these responsibilities reflecting diversity of situations and missions of authorities for assuring a good governance of PPP.

15. *In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.*

We again plead in favour of flexibility in the choice of sub-contractors and adaptation to complexity of the tasks devoted to PPP.

16. *In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?*

Eureau's members think that detailed/new rules for subcontracting are not required.

No additional rules should be requested for subcontracting in particular if PPPs are awarded after transparent/competitive procedures. Two levels of competition (upstream and downstream the main PPP contract) are not justified.

Too much formalism does not necessarily allow to choose subcontractors in due time, with the exact skills : not only complex tasks are transferred to the private partner, but also the responsibility for proper management of the service.

17. *In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?*

No need for additional rules (same answer question 16) than the existing ones.

18. *What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?*

See the annexed table (page 9) on the individual situation of Member States

19. *Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?*

The general principles behind Public Procurement rules – for instance on transparency, non-discrimination, equality of treatment, free circulation of capital – must apply to institutional PPPs. However, the Public Procurement rules themselves cannot be directly applied to PPPs.

Public Procurement law is not adapted to govern constitution of public-private bodies. The major question is the link between the mixed body and the act that entrusts to operate the service. It is important to match the duration of the mixed-parties body and the right to operate the service.

Both the constitution of such bodies and the awarding of the right to operate the service should respect Treaty principles.

20. *In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?*

The procedures and administrative practices that govern eligibility of projects for European funding - ISPA, Cohesion Fund, Regional Fund - (for the benefit of public authorities partners of a PPP) can be incentive /deterrent to PPP. Undue reluctance from the European Commission to fund public water equipments being then operated by private sector, which has been observed in the past, can lead to a lack of projects. Eureau thinks that this Green Paper should be completed by a review of European funding rules when PPPs are involved.

21. *Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.*

European water operators are and have been involved in water operations all over the world already from the 19th century. In our experience it is very important to adapt to the local conditions, there is no single solution that could serve as a model for the European Union.

22. *More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?*

Yes, Eureau is in favour of building such an exchange network on best practices.

	Northern Ireland	- Water & Waste Water Projects	N	Yes	No	Yes

[i] Legislation on intercommunal collaboration

[ii] They are however not largely used in water and waste water services

[iii] Local Government Act and the legislation on public procurement have to be taken into account in governmental decision making

[iv] On this subject, an interesting example is the Italian law on Project Financing, concerning the realization of public works through public authority’s initiatives. There were huge expectations about the effects of this legislation (called Merloni Law), but the final results we have obtained are disappointing, due to the very limited use of these instruments by operators. The main reason is related to a “crowding out normative effect”, consisting of the great attention that the Merloni Law has on the respect of public contracts’ legislation that has lead to neglect the financial complications.

[v] Our more relevant experience is the Italian Reform approved by the end of 2003. The fundamental idea of the reform is to allow to public authorities a range of solutions with respect to the organization of SGIs: the public procurement procedure (PP); the establishment of a mixed ownership enterprise (MOE) in which the private partner has to be selected through competitive bidding procedures, assuring the complete and rigorous respect of national and community legislations; the establishment of a completely public enterprise in which public authorities exercise over it a control which is similar to that which they exercise over their own departments and, at the same time, that enterprise carries out the essential part of its activities with the controlling authorities (in house providing, IHP).

[vi] There are some private companies having the Luxembourg state as one of the shareholders or even as the only shareholder

[vii] According to the Royal Decree 2/2000, of 16th June, there are two other contractual forms: "**gestión interesada**" and "**concierto**". Moreover, in Spain still exit different types of "**leasing contracts**" between private companies and local councils.

EUROCHAMBRES

Position Paper

2004

EUROCHAMBRES Response to the Green Paper on Public-Private Partnerships

July 2004

EUROCHAMBRES
ASSOCIATION OF EUROPEAN CHAMBERS OF COMMERCE AND INDUSTRY

EXECUTIVE SUMMARY

EUROCHAMBRES, the European Association of Chambers of Commerce and Industry, sees Public Private Partnerships (PPPs) as a useful tool to **increase efficiency** in public services, to **promote competition** and open up new markets. We welcome the discussions on this **emerging phenomenon**

EUROCHAMBRES' VIEW

We believe that the Commission should refrain from imposing legal regulations and instead encourage **further dialogue** and an **exchange of best practices** in order to develop **more efficient PPP models throughout Europe.**
An interpretive Communication to **clarify the key issues** may be useful as well as increased co-operation and harmonisation between the Member States on this issue. Finally the Union must address the other factors within the economy which hamper the developments of PPPs

Introduction

EUROCHAMBRES, the Association of European Chambers of Commerce and Industry, has member organisations in 41 countries representing a network of 2,000 regional and local Chambers with over 17 million member companies. EUROCHAMBRES is the sole European body that serves the interests of every sector and every size of European business - due to the multi-sectoral membership of Chambers - and the only one so close to business, as a result of the Chambers' regional focus.

The European Chambers see Public Private Partnerships (PPP) as a useful tool to **increase efficiency** in the provision of public services or goods as well as a way to **promote modernisation**. Furthermore, they are a means of increasing competitiveness and innovation in the economy as PPPs often give private companies access to areas where solely public entities or companies have been operating before.

EUROCHAMBRES therefore welcomes the latest discussions concerning Public-Private Partnerships and hopes to see **further dialogue** and an **exchange of best practices** in this area in the future, as a way of encouraging such partnerships and increasing transparency and cross-border participation in PPPs. The **wealth of different experiences** across Member States should be seen as a positive thing and by exchanging information, these experiences can lead **more efficient PPPs models** throughout Europe.

However, PPPs are still an **emerging phenomenon** and we believe that the development of this concept should not be restricted by legal regulations at this stage. Effective PPPs often depend on finding a creative solution to a unique set of circumstances in each individual case and a Europe-wide set of rules would hamper the scope for this.

We therefore believe that the Commission continue to **lead the debate on PPPs and promote co-operation** but that it should refrain from imposing the restrictions associated with a Directive in this area.

Detailed Response

EUROCHAMBRES believes that some level of **co-operation and even harmonisation** in the area of PPPs would be reasonable to improve the basic conditions throughout Europe and we would appreciate the existence of a European network combining both parties of PPP contracts to encourage the **exchange of experience and ideas**. However it is important to **avoid over-regulation** and guidelines need to be restricted to cover only basic and necessary conditions.

At European level, the discussions on PPPs and the Green Paper on the services of general interest show that there are **different approaches** to public service provision and services of general interest and therefore a regulatory framework at European would not be appropriate. Many aspects of PPP contracts are already **covered by existing regulations**, including the basic treaty obligations such as freedom of establishment and freedom to provide services as well as more specific provisions within the Community Directives on public works contracts and it is important to **avoid duplication** and additional bureaucracy. When dealing with public works at a national level we believe that the **principle of subsidiarity must be respected** to take into account the different experiences and stages of PPPs development in each Member State.

EUROCHAMBRES would welcome the involvement of the Commission in promoting actions to **improve the co-ordination** of national practices and to encourage closer co-operation between the national authorities. However as an appropriate model has to be negotiated on a case by case basis between the private and public partners, it is not possible to legislate as to the model to be used. For complex PPP projects contract adaptations must be possible and there needs to be a **degree of flexibility** within certain limits.

With regard to the **competitive dialogue procedure** EUROCHAMBRES does not believe it is an appropriate method for resolving the major problems in the context of complex PPP projects where the search of private partners is very complicated. The procedure requires a detailed description in the form of tasks and technical and economical specifications which may not be possible in such cases. This procedure may also **imply risks** for private companies in delivering their know-how to the awarding authority who will then ultimately choose the cheapest offer.

Although there is no need to create a legal framework at the European level we would suggest that the Commission issue a Communication to **clarify the interpretations** of concession in European law and other key issues. In addition the use of financial assistance within the public sector needs to be standardised within the Internal Market.

The use of PPPs to provide public services and goods **promotes competition** and can be seen as the first step towards opening up the market in areas which were previously controlled by public monopolies. However, when PPPs are established it is important that **checks exists** to consider to what extent competition in the sector will be hindered as monopoly position of the state will be handed to a private company.

Finally it is also important to address the other key factors which hamper the developments of PPPs in Europe including the **slow liberation** of some public sectors, the **level of risk** transfer to private partners, **lack of experience** or knowledge of best practice and complex financial restrictions.

EUROCITIES STATEMENT ON PUBLIC-PRIVATE PARTNERSHIPS AND CONCESSIONS

Response to the European Commission Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions

14 SEPTEMBER 2004

EUROCITIES

EUROCITIES is the network of European large cities, representing 120 cities from across Europe. These cities are home to more than 100 million inhabitants. Membership is open to democratically elected governments in cities. They should be important regional centres with an international dimension and a population of more than 250 000.

POLICY CONTEXT

In most European Union Member States, cities have a crucial role in ensuring social inclusion and territorial cohesion, and in working towards sustainable development. Across the European Union, local governments are the public authorities closest to the citizens, and they are also responsible for delivering a wide range of services of general interest. They are expected to guarantee that high quality services of general interest are accessible to all and are provided at a reasonable price.

EUROCITIES' response to the European Commission Green Paper on public-private partnerships and Community law on public contracts and concessions should be seen in the framework of its Strategic Objectives, and it follows from EUROCITIES' contribution to the Commission's consultation in 2003 on the Green Paper on services of general interest. It has been elaborated by EUROCITIES' Working Group on Services of General Interest on behalf of EUROCITIES' Executive Committee. The response entails a series of general reactions in a first part, and answers to the specific questions of the Green Paper in a second part.

1. **Access for all to high quality services** is a fundamental dimension of the social and economic model in each of the Member States. As to the form of provision of the services, the choices vary from one country to another. In most of the Member States, local and regional authorities are able to choose how services will be provided, whether directly through their own administration or by entrusting the service to a third party (which can be either public, private or a mixed entity).

2. **Cities today face a wide range of challenges** which, together, are difficult to meet. They include: delivering high quality and affordable public services to the citizens, promoting innovation and competitiveness, and creating an attractive environment for businesses and people.

3. **Cities do not reject existing or future competition** with the private sector, but rather demand **fair conditions for all market participants**. Successful cooperation with private suppliers already exists in many sectors. Cities, however, want to make **political decisions on how to provide services**. Cities promote competition and economic development in the interest of citizens.

4. In this perspective, EUROCITIES aims to contribute to a European context where **cities can be inclusive, prosperous, creative, and sustainable, with democratic and effective governance**. In order to carry out its mission, EUROCITIES, at the occasion of its EUROCITIES AGM in Porto in 2003, has identified

a series of long-term strategic objectives in five main policy dimensions, among which "The prosperous city" represents the economic dimension.

5. **Prosperous cities** provide a positive environment for business to grow and expand. They aim to cooperate with private companies, universities and research institutes to promote innovation, growth and competitiveness. They supply water management, waste disposal, housing, education, social and health services, as well as a wide range of cultural and leisure facilities. They invest in maintaining a modern infrastructure for transport and other network industries.

6. An integral part of the prosperous city is the **commitment to ensuring that all citizens are able to access a wide range of high-quality services** with regard to efficiency, reliability and affordability.

PART I

INTRODUCTION

The issues of great importance to local authorities are: respect for the principle of subsidiarity; freedom of choice of local authorities as to the form of provision of services; the need for greater legal certainty; and the promotion of social, economic and territorial cohesion and sustainable development.

1. **EUROCITIES welcomes the European Commission's idea to launch a consultation on public-private partnerships (PPP) and concessions**. While the Green Paper is a basis for the dialogue on the use of PPPs, EUROCITIES notes that its scope is focussed mainly on the legal framework, especially procurement and concessions, and it does not genuinely address **the political significance of PPPs**. The Green Paper concentrates on Community legislation on the procedures for the award of public contracts.

2. To achieve **a balanced approach on PPP** both the public and the private interests should be given their proper weight. The Green Paper rather focuses on the private company perspective while the challenges of public authorities do not appear to have been taken into account sufficiently.

3. The aim of Community measures should be to encourage authorities to **elaborate new and innovative means to finance the services required by citizens** and to reduce barriers that prevent authorities from using PPPs, without necessarily expanding the Community legislation on public contracts.

4. The use of PPP can offer a valuable means to introduce funding, know-how and working methods from the private sector into the public sector, particularly in those cities in new EU Member States suffering from budget constraints. PPPs can bring added value in relation to a wide range of local services, such as urban transport, waste and water management, urban regeneration, schools and sports facilities. They may represent **a funding alternative** that can make the use of public resources more efficient.

5. Nevertheless, it is important to evaluate the fields in which PPPs can be a valuable alternative, given the differences between various sectors and different cultural and legal frameworks. **The aims of PPPs should be to improve the level of quality of services to the public and to make service provision more cost efficient.** The public sector may have important lessons to learn, for example in terms of cost efficiency, from private companies. However, in practice in the PPPs of most European countries, **the public sector remains responsible for quality, continuity, affordability, accessibility and security** of the whole range of services which are fundamental to citizens' basic needs.

6. A number of **legal, financial and political concerns** need to be taken into account when considering the use of PPP. One should be careful **not to consider PPP as the only or ultimate solution to any financial constraints.**

7. The following aspects, in particular, are of importance for local authorities when considering the choice of a PPP or concession as a means to finance a service or infrastructure:

- **Political aspects**;
- **Financial aspects**; and
- The **legal framework**.

POLITICAL ASPECTS

EUROCITIES is committed to reinforcing the rights and the responsibilities of local public authorities across the enlarged European Union. A decentralised and democratic decision-making system can provide the necessary flexibility, responding to lo cal circumstances and to the demands of citizens.

1. **The principles of subsidiarity and of local self-government** are fundamental for democracy in the European Union. In accordance with these principles, **the choice as to the form of provision of local services of general interest, including whether or not to tender out, is best made at local level**. The right of local authorities to choose the most appropriate form of provision should therefore be maintained and enforced in line with the principle of subsidiarity. The Cities demand sufficient financial means to provide the necessary level of services and reject budget constraints as a force for PPP.

2. Local authorities have a **responsibility**, which is normally not shared by a private partner, towards **fulfilling the public interest and maximising the added value of these actions for the citizens**. This responsibility includes compliance with a number of basic principles governing the relationship between the public authorities and the citizens, such as transparency, accessibility, sustainability, participation etc. **The citizens' quality of life** must be at the centre of the debate on how to finance the services required by the citizens, taking these guiding principles for public administration into account.

3. **With a view to providing the best services to its citizens**, a public authority may consider the possibility of establishing a **partnership with a private entity for the delivery of the services**. From a public authority perspective, there can be a number of reasons behind the choice of cooperating with a private entity – budget constraints requiring the involvement of private investments in the financing of services or infrastructure, or the appreciation of the know-how, technique or experiences of the private sector within a particular field.

4. Before choosing PPP as a model of financing or operating, **the global impact** of this choice such as **accessibility, quality and safety of the service** must be carefully assessed. Special provisions have to be made regarding the aspects of local responsibility as well as ability to continue and finance the service after the end of the contract.

5. When considering the possibility of entering into partnership with a private entity, a public authority needs to bear in mind the basic principles laid down in the EC Treaty in order to assure the **freedom of establishment and freedom to provide services** (Article 43 and 49 TEC). They apply to all acts whereby a public entity entrusts the provision of an economic activity to a third party: transparency,

equality of treatment, proportionality, and mutual recognition. A public authority also needs to consider a similar set of **basic principles in relation to the citizens: transparency, accessibility** etc. These principles may not be explicitly referred to in the current Treaties although they are an integral part of the Community responsibility for ensuring a high level of employment and of social protection, a high level of protection and improvement of the quality of the environment, the raising of the standard of living and quality of life, and economic and social cohesion (Article 2 TEC). A private company does not have the same responsibility vis-à-vis the citizens.

6. When starting PPP negotiations, **public authorities** are well aware of the fact that they **do not free themselves entirely from their responsibility vis-à-vis the citizens**. On the basis of this knowledge, both **advantages and risks** of entering into a partnership with a private entity must be carefully assessed before signing a contract, particularly considering the substantial contractual or practical changes of circumstances that may appear throughout, often long, duration of a PPP or concession and which could be difficult to foresee initially.

7. **From a democratic point of view, the influence of the political bodies and the local government** must be maintained in the interest of the citizens. Before losing direct influence and control, the necessary instruments to keep the major political influence on the provision of the service have to be established. Public authorities also need to consider that they often commit, when agreeing on a long term PPP contract, not only themselves but also future political majorities and developments.

8. When entering a PPP **the role of the local authority** moves from the delivery of the service to **controlling the legal, economic and technical aspects**. Accepting this change of role and implementing new tools is crucial for the success of every PPP. Local authorities need to ensure that private partners not only benefit from profits but also assume responsibility for any losses incurred.

FINANCIAL ASPECTS

PPPs can offer positive economic effects for the whole society. By reducing the spending temporarily and postponing the payment of costs, public authorities risk, however, encountering unforeseen and additional costs which will limit its choices for future investments.

1. A PPP should gain from the effects of **increased incentives, innovation, and the use of the commercial competence of the private sector** when planning, developing and providing public services.

2. If managed in the right way, through appropriate and efficient economic governance, the use of PPP should lead to a **more effective use of resources**.

3. Before choosing PPP as a model of finance, **the total cost** of this choice must be carefully **assessed and compared with other alternatives**. The cost over the whole period of the contract and the cost at the end of the contract have to be fully and honestly calculated. **The long duration of many PPPs may make it difficult to foresee changes in management and related costs.**

4. Local authorities must calculate what **the cost for the citizens** will be in the end, whether they pay through taxes, other redistribution schemes or through direct fees. If choosing to enter into partnership with a private entity, the most effective type of PPP structure must be identified.

LEGAL FRAMEWORK

EUROCITIES does not consider any additional Community legislation on concessions, or the extension of current public procurement rules on service concessions, as desirable.

Initiatives that aim at simplifying or clarifying the use of existing legislation, as a way of reducing legal uncertainty, are supported.

Services provided "in-house" must remain exempt from Community legislation on public contracts and concessions.

1. To allow the public sector to gain from increased involvement of private sector incentives, innovation and competence, for the maximum benefit of the citizens, **the legal framework must not bring obstacles but facilitate the use of PPPs and concessions** as a third way between solely public delivery and private operations.

2. **Provisions on public procurement**, both at national level and at European level, provide a very **complicated and restrictive legal framework for PPPs**, which is generally difficult as well as both time and resource consuming to apply. The situation of concessions in this framework is particularly unclear.

3. EUROCITIES does not consider that additional legislation at European level would facilitate the use of PPP. In particular, **an extension of the current public procurement rules to cover service concessions is not desirable**. The Commission's actions to assist and encourage the **exchange of experiences and knowledge** are welcome.

4. PPPs cannot be defined in a single concept at EU level as they represent a **large variety of structures and contracts**. It would be impossible for public authorities to implement a single concept defined at EU level.

5. EUROCITIES therefore does not favour a decrease of choice as to the range of different contracts and structures behind the term of PPP through a single EU definition and framework, which applies a strict and narrow use of the concept. It is inherent in the concept of PPP that this instrument should offer valuable ways of identifying new and innovative tools to finance and provide services to the citizens.

6. Finally, EUROCITIES insists that all **services provided "in-house"** should continue to be **exempt from Community legislation on public contracts**. The ad-hoc regulation of the "in-house" issue on a case-by-case basis through the European Court of Justice should be avoided and the European Commission should work towards correcting the lack of political oversight and accountability.

PART II

RESPONSES TO COMMISSION QUESTIONS

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

PPP as a concept represents a large variety of contracts and partnerships without any single, coherent definition. A few examples of contractual PPP set-ups in which cities are involved:

- **The United Kingdom**: The idea of PPP originates from the UK, through the "private finance initiative" (PFI), which gradually has developed into the public-private partnership. The local government PFI is regulated through special PFI regulations in the Local Authorities (Capital Finance) Regulations 1997 (SI 319/1997).

- **Austria** and **Germany**: The "Betreibermodell" refers to a contract, by which the private partner takes over, in cooperation with the municipality but under its own responsibility and bearing the economic risk, the planning, development, and operation of a service or infrastructure, receiving payment from the municipality. The private partner becomes the owner of the property. In the case of the "Betriebsführungsmodell", on the other hand, the public partner remains the owner of the installation/infrastructure. Through the contract, which regulates the rights and obligations of the partners, the running of the service is transferred to the private partner.

Another example is the "leasingmodelle"/"leasinggeschäfte", by which a third (private) partner assures the financing and development of the project, renting the installation to the municipality.

- **France**: Public services and utilities in France have long been based on concessions. At national, regional and local level, many basic networks (railway, gas, electricity and water distribution) have been built and operated under concession. Many of the urban rail transport systems (metros, tramways and similar) are also based on concessions.

The "marché d'entreprise de travaux publics" (METP) is a form of contract, by which a public body charges a company with building, financing and operating a utility or other asset to be used for public purposes in exchange for payment over time by the public body. Waste disposal facilities built for local authorities are a typical example of METPs.

Apart from the laws transposing the EU Directives on public procurement into French law, a law generally known as the "loi Sapin" contains rules regulating the procedure for grant of concessions and similar contracts, "délégations de service public". It also lays down certain substantive rules, particularly concerning their duration and renewal. The distinction between "délégations de service public" and public procurement contracts/"marchés publics" is complex but important, since the procedures for the award of contracts of the former category are less complex than those imposed by the rules applicable to public procurement contracts. The law known as the "loi MURCEF", "Mesures urgentes de réformes à caractère économique et financier", adopted in 2001, has clarified the definition of "délégation de service public".

Additionally, certain countries have a kind of "supervisory" body, such as the PPP Knowledge centre (Ministry of Finance) in the Netherlands and the Italian PFI Task Force (Ministry of the Economy and Finance).

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

The competitive dialogue procedure may be a useful tool. So far no real experience exists. Most cities do not yet see the added value of the competitive dialogue procedure, and therefore they do not share the Commission's view that this particular procedure will allow for simplification of awarding procedures and that it would render awarding more efficient and/or more adapted to local administrative needs. Additionally, cities find it difficult to distinguish the characteristics and effects of the competitive dialogue from those of the negotiated procedures.

3. In the case of such contracts, do you consider that there are other points, apart from these concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

Alongside Community law on public contracts and concessions, aspects of tax regulations, contract law, company law, and state aid provisions also need to be taken into account and, in cases when individual provisions are in conflict, weighed against each other. Each case needs to be considered on the basis of its individual circumstances and of the different national legal frameworks of different countries in relation to the award of PPPs and concessions.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

--

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

The Community legal framework on the procedures for the award of concessions is sufficiently precise to allow the participation of non-national companies. The obstacles to an increased degree of trans-national tenders and participation of non-national companies in award procedures caused for example by the impact of tax legislation at both national and Community level, could however be considered by the Commission.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

EUROCITIES does not consider that additional legislation at European level would facilitate the procedures for the award of concessions and/or help in applying the existing Community rules. There is, subsequently, no need for a further extension of the Community legal framework.

Alternative measures to reduce legal uncertainty, such as interpretative communications etc. can be considered. Initiatives that aim at simplifying or clarifying the use of existing legislation are useful.

The aim and effect of any Community initiative on PPPs and concessions, should be a reinforcement of the capacity at local level to use and gain from partnerships with private entities. In particular, improved tools for financial and administrative management correspond to the need for strengthened control capacity at local level.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

PPP cannot be defined as one single concept at EU level, as it represents a large variety of structures and contracts. It would be impossible for public authorities to apply a single concept defined at EU level.

The use of PPP depends to a large extent on the sector in question, the national legal framework and the competences of the particular public authority. The variety of contexts, in combination with the wide range of different forms of PPP, makes it inconvenient to develop further European legislation on PPP.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to

implement the selected project genuinely competitive?

Generally, the advertising and selection procedures of tenders are organised in such a way that non-national operators have access to private initiative PPP schemes, although the interest fro m non-national operators is usually quite low.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

The selection of a private partner on the basis of a private initiative should not necessarily be made subject to a strict procurement regime. In any case, the basic Treaty provisions ensure a transparent process without discrimination.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

If all terms of reference are given in the tendering procedure, this phase is no longer subject to legislation on public contracts. At this stage, the relationship between the public and private partner becomes strictly contractual. It is therefore subject to contract law.

The particular difficulty for local authorities is that the contract may be subject to substantial change over time, in terms of cost, law and management, considering that the duration of PPP contracts is generally long.

11. Are you aware of cases in which the conditions of execution - including the clauses on adjustments over time - may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

No.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

No.

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

Notwithstanding their effects, certain "step -in" arrangements are necessary from a local perspective, in order to give a local authority the possibility to keep control over a private partner stepping into the contract.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

Contract law remains a national competence.

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

The problems that may appear in relation to subcontracting relate to the issue of responsibility that a public authority cannot avoid. Given this responsibility, the public authority also needs to be able to keep a certain level of control over its partner(s). This may be difficult in the case of subcontracting.

From a strictly legal point of view, subcontracting is subject to national legislation and normally does not cause any problem in relation to Community legislation on public contracts.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field of application in the case of the phenomenon of subcontracting?

No.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

No.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

Examples of institutionalised PPPs:

The French “société d’économie mixte” (SEM) is one the most frequent examples of institutionalised PPPs. The performance of the SEMs concerns the inhabitants of the French cities in their everyday lives, as they provide daily services in a wide range of areas: water, energy, tourism, parking places, sports and culture facilities etc.

Other forms of institutionalised PPPs exist for example in Germany and Austria, e.g. the “Kooperationsmodell” or “Beteiligungsmodell” by which a public authority and a private partner set up a company, in which the public authority is the major shareholder. The model occurs for example for projects in the sector of energy and waste disposal.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

The relationship between the contracting authority and the joint contractor is exempt from the Community legislation on public contracts and concessions in certain cases – "in-house" contracts.

EUROCITIES insists that joint entities created in the future as institutionalised PPPs must still come within the framework of local self-government and benefit from the particular legal situation of "in-house" services. The "in-house" character of such an entity must not be given a restrictive interpretation in the application of European Community Law.

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

The real barriers to enhanced introduction of PPPs in the European Union include the national and European tax legislation as well as a number of other detailed provisions at national and European level, restricting rather than supporting the use of PPPs. Considering the great risks connected with long term PPPs and concessions and the difficulties in foreseeing the total costs of these projects, local authorities will not engage in PPPs if it requires too complex and costly procedures. The main barrier for local authorities is their budgetary position in combination with their responsibility vis-à-vis the citizens.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

--

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

The Commission's actions to assist and encourage the exchange of experiences and knowledge are welcome. (E.g. The DG REGIO initiative to publish a Resource Book on PPP.) The establishment of a network specifically for this purpose is, however, not needed. EUROCITIES as a European platform of cities, and other existing thematic or geographic networks, already serve this purpose.

Fragen aus dem Grünbuch zu PPP und den EU Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Frage 1

Frage 1.1 **Welche Formen von PPPs auf Vertragsbasis sind Ihnen bekannt?**

Antwort 1.1 Uns sind folgende Formen von PPPs auf Vertragsbasis bekannt:

Nach rechtsspezifischer Unterscheidung:

- Betreibermodelle (BOT-Modelle)
- Kooperationsmodelle
- Betriebsführungsmodelle
- Konzessionsmodelle
- Contractingmodelle
- Mautmodelle

Nach finanzspezifischer Unterscheidung:

- Leasingmodelle
- Forfaitierungsmodelle
- Fondsmodelle
- Miet-/Mietkaufmodelle

Frage 1.2 **Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?**

Antwort 1.2 Da wir in den neuen EU-Mitglieds- und Beitrittsländern tätig sind, gibt es teilweise rechtliche Rahmenbedingungen für PPP-Projekte. Falls Sie existieren, werden sie aufgrund der erst neuen kommunalen Verwaltungsstrukturen, noch nicht richtig umgesetzt. Für die dringend notwendigen Infrastrukturmassnahmen fehlt auf kommunaler Seite nicht nur das Kapital, sondern auch das Know-how.

Frage 2

Frage 2.1 **Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer PPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu?**

Antwort 2.1 Wir stimmen diesem **voll** zu.

Frage 2.2 **Falls nein, warum nicht?**

Antwort 2.2 -

Frage 3

Frage 3.1 **Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über**

öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Antwort 3.1

Diese sehen wir bei den neuen EU Richtlinie 2004/17/EG und 2004/18/EG nicht.

Frage 4

Frage 4.1

Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen?

Antwort 4.1

Da wir im Vorfeld und Anbahnungsphase eines PPP Projektes tätig sind konzentriert sich unsere Arbeit auf folgende Tätigkeitsfelder:

- PPP-Konsortiumbildung aus fünf Standardpartnern:
  - Planer
  - Baufirma
  - Anlagenbauer
  - Investor
  - Betreiber

EuroPPP

Hierbei heisst unsere Initiative **EuroPPP – A Branche for Europe**. Dabei können sich verschiedene europäische Firmen in Konsortien einbringen, die, als Europäische wirtschafliche Vereinigungen (EWIV) organisiert, sich bei Ausschreibungen beteiligen oder durch Eigeninitiative mit PPP-Projektvorschlägen an lokale Regierungen herantreten.

MASTERPLAN

Für die Regionen heisst unsere Initiative **MASTERPLAN – A Region for Europe**. Dabei können sich lokale kommunale Interessensgruppen in eine regionale Wirtschaftförderagentur anschliessen. Ein **MASTERPLAN** ist somit

- eine Stadt- und Regionalentwicklungsgesellschaft nach EUREK-Kriterien
- ein PPP Kompetenzzentrum
- städtetechnologisches Kompetenzzentrum
- ein EIC (europäisches Informationszentrum)
- eine Investionsförderagentur
- exekutives Organ der lokalen Verwaltungen.

Frage 4.2

Welche Erfahrungen haben Sie gemacht?

Antwort 4.2

Auf allen Seiten, sowohl bei der privaten als auch bei der öffentlichen Hand herrscht grosser Informationsbedarf. Leider kennen sich über Verfahren und Prozesse bei einer PPP-Auschreibungen die wenigsten aus, da es zu viele nicht standardisierte Verfahren gibt. Zudem gibt es keinen neutrale Institution, die beide Parteien als eine Art **PPP-Mediator** bei diesem komplexen Prozess begleitet und bei den zahlreich auftretenden Interessenkonflikten schlichtend einwirkt.

Frage 5

Frage 5.1

Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die

konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen?

Antwort 5.1

Wir halten das derzeitige Gemeinschaftsrecht für **nicht** präzise genug, da Rechte, Pflichten, Einstieg und Ausstieg der beiden Parteien für ein PPP-Projekt nicht geregelt sind. Desweiteren werden der langfristige Horizont der Zusammenarbeit und die Innovationsgeschwindigkeit bei Infrastrukturprojekten nicht berücksichtigt.

Frage 5.2

Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Antwort 5.2

Hier herrscht kein Wettbewerb, da nur Grosskonzerne an PPP Ausschreibungen teilnehmen. Hierbei sehen wir enorme Chancen für europäische Mittelstandsunternehmen, die ohne Probleme die Aufgaben in einem Konsortium erfüllen können,wenn sie entsprechendes PPP-Know-How in ihren Unternehmen aufbauen könnten. Hier scheitern die meisten Unternehmen zudem an der mangelnden finanziellen Kraft und an fehlenden Referenzprojekten im PPP-Bereich.

Frage 6

Frage 6.1

Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Antwort 6.1

Wir halten einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für **sehr** wünschenswert, da eine integrierte Vergabe von Bauherren-, Projektmanagement-, Planungs-, Bau-und Finanzierungsleistungen sowie Leistungen für den Betrieb von Immobilien- und Infrastrukturobjekten und somit für Life-Cycle-Projekte ungenügend geregelt ist.

Frage 7

Frage 7.1

Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche PPPs auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Antwort 7.1

Objektive Gründe sind:

∉ Durch eine europäische Festlegung von Verfahrensregeln bei einem PPP-Projekt wird eine rechtssichere, transparente und interessensausgleichende Vergabe sichergestellt.

∉ Weiterhin ergeben sich Kosten- und Zeitersparnisse durch eine standardisierte Regelung.

∉ Das Risiko des Scheitern eines PPP-Projektes wird insgesamt minimiert, da die Ursachen für die meisten Probleme bei einem PPP-Projekt bei der Ausschreibung und Vergabe zu finden sind.

Frage 8

Frage 8.1

Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten PPPs gewährleistet?

Antwort 8.1

Der Zugang ist nicht gewährleistet, da die Zuständigkeiten für ein kommunales PPP-Projekt und die verantwortlichen Verwaltungssstrukturen in den jeweiligen Ländern nicht eindeutig sind. Es fehlen One-Stop-Shops zum Thema PPP in den jeweiligen Ländern, die national und regional organisiert sind. Somit fehlen den ausländischen Konsortien die fachkundigen Ansprechpartner.

Frage 8.2

Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können?

Antwort 8.2

Der Aufruf wird angemessen bekannt gemacht, jedoch sind viel zu wenige Anbieter mit PPP-KnowHow , um bei diesen Ausschreibungen mitzumachen. Hier stellt sich die Frage: Wie kann ein neues PPP-Konsortium, das ein neues Life-Cycle-Infrastrukturprojekt anbietet, Referenzen vorweisen, die zwar in den einzelnen Abschnitten des Projektes vorhanden sind, jedoch nicht in der Gesamtheit.

Frage 8.3

Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Antwort 8.3

Ein effektiver Wettbwerb wird nicht durchgeführt, da viele Präqualifikationen für PPP-Projekte in den neuen EU-Mitglieds- und Beitrittsländern sich auf allgemeine Prospektsammlung der einzelnen Unternehmen beschränken. Die Auswahl der Bewerber erfolgt unter kulturspezifischen Aspekten des jeweiligen Landes wie z.B. Religion, Bürokratie, Kriminalität, Korruption usw. und hängt somit stark vom lokalen Partner im jeweiligen Land ab.

Frage 9

Frage 9.1

Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter PPPs in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Antwort 9.1

Ein mögliches Verfahren könnte folgendermaßen ablaufen:

1. Privates Konsortium geht an eine öffentliche Hand und bekundet Interesse für ein PPP-Projekt.
2. Öffentliche Hand macht eine Ausschreibung für Interessensbekundung für dieses PPP-Projekt.
3. Die ersten 3 Bewerber werden von der öffentlichen Hand ausgewählt.
4. Die 3 Bewerber beauftragen einen neutrale Consulting-Gesellschaft die Ausschreibungsunterlagen zu erstellen.
5. Die 3 Bewerber erstellen das konkrete Angebot.
6. Öffentliche Hand wählt ein Konsortium aus.
7. Der Gewinner entschädigt gemeinsam mit der öffentlichen Hand die Verlierer der Ausschreibung.

Frage 10

Frage 10.1

Welche Erfahrungen haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von PPP auf Vertragsbasis gemacht?

Antwort 10.1

Nach Auswahl des privaten Partners fangen die Probleme erst richtig an, da sich beide Parteien ohne eine eindeutige Regelung in unendliche Nachverhandlungen verstricken. Hierbei sind ganzheitliche, unparteiische und auf der EU-Ebene verankarte **PPP-Mediatoren** notwendig, die bei Interessenskonflikten eine **Win-Win-Situation** herbeiführen.

Frage 11

Frage 11.1

Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Antwort 11.1

Bei den Ausführungsbedingungen sind uns keine diskriminierenden Klauseln bekannt.

Frage 12

Frage 12.1

Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Antwort 12.1

Uns sind folgende diskriminierende Praktiken bekannt:

∉ Ein Unternehmen ist in zwei Bietergemeinschaften vertreten mit zwei unterschiedlichen Angeboten.

∉ Zu kurze Ausschreibungsfristen

∉ Zu hohe finanzielle Sicherheiten bei Angebotsangabe

∉ Referenzobjekte im Ausschreibungsland als Auswahlkriterium

∉ Angebotsabgabe in landesspezifischer Sprache

Frage 13

Frage 13.1

Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können?

Antwort 13.1

Wir sind der selben Auffassung wie die Kommission.

Frage 13.2

Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Antwort 13.2

Uns sind solche Klauseln nicht bekannt.

Frage 14

Frage 14.1

Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen

Rahmenbedingungen für PPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Antwort 14.1

Es sollten folgende Rahmenbedingungen für PPPs auf Gemeinschaftsebene geklärt werden:

∉ Rechte und Pflichten der jeweiligen Partner

∉ Festlegung einer Verpflichtung der Vergabestelle zum Vergleich der Vorteilhaftigkeit von öffentlicher und privater Trägerschaft

∉ Aufhebung der Benachteiligung zwischen betriebswirtschaftlichen Berechnungsgrundsätzen von Privaten und dem Gebühren- und Beitragsrecht.

Frage 15

Frage 15.1

Sind Ihnen bei PPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Antwort 15.1

PPP-spezifische Probleme bei der Vergabe von Unteraufträgen sind uns nicht bekannt.

Frage 16

Frage 16.1

Rechtfertigt die Existenz von PPPs auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, Ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Antwort 16.1

Für Unteraufträge müssen keine neuen Regeln eingeführt werden, da diese bereits im bisherigen Gemeinschaftsrecht genügend dokumentiert sind.

Frage 17

Frage 17.1

Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Antwort 17.1

Für Unteraufträge müssen keine neuen Regeln eingeführt werden, da diese bereits im bisherigen Gemeinschaftsrecht genügend dokumentiert sind. Desweiteren kann die Art und Menge von Unteraufträgen als Entscheidungskriterium bei den Ausschreibungsunterlagen festgelegt werden.

Frage 18

Frage 18.1

Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter PPPs gemacht?

Antwort 18.1

Wir haben folgende Erfahrung gemacht:

∉ Generell scheuen Unternehmen die Einrichtung institutionalisierter PPPs.

∉ Die Europäische wirtschafliche Interessenvereinigung (EWIV) hat sich als ein sehr gutes Instrument erwiesen auch die öffentliche Hand unkompliziert und schnell einzubinden.

Frage 18.2

Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten PPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Antwort 18.2

Die Rechtsvorschriften werden nicht eingehalten. Durch die institutionalisierten PPP-Konsortien werden die gemeinschaftlichen Rechtsvorschriften viel leichter ausgehebelt, da die Intransparenz steigt.

Frage 19

Frage 19.1

Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten PPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Antwort 19.1

Wir halten eine solche Initiative auf Gemeinschaftsebene für erforderlich. Es sollten dabei folgende Aspekte berücksichtigt werden:

∉ Die öffentliche Hand muss den wirtschaftlichen Vorteil eines PPP-Projektes auf Joint-Venture-Basis im Vergleich zur Vertragsbasis dokumentieren.

Hierbei können Einheitsvergabemuster und – formblätter verwendet werden, die ein PPP-Projekt in drei verschiedene Richtlinien aufteilen:

∉ PPP-Modellspezifische Richtlinie
∉ Branchenspezifische Richtlinie
∉ Länderspezifische Richtlinie

Frage 20

Frage 20.1

Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von PPPs?

Antwort 20.1

Folgende Maßnahmen oder Verfahren behindern die Einrichtung von PPPs in der EU:

∉ Deminimis-Regelung für PPP-Projekte muss aufgehoben werden, um mehr Anreize insbesonder für mittelständische Unternehmen zu geben, sich aktiv an PPP-Projekten zu beteiligen
∉ International Accounting Standard (IAS) ist auf PPP-Projekte noch nicht abgestimmt.

Frage 21

Frage 21.1

Kennen Sie andere PPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Antwort 21.1

Die Nationalpark-PPPs aus den USA können sehr gut für das Europäische Raumentwicklungskonept (EUREK) verwendet werden.

Frage 22

Frage 22.1

Denken Sie, dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Antwort 22.1

Es wäre sehr nützlich mit Hilfe der europaweiten Erfahrungen aus schon durchgeführten Projekten Standardregeln für PPP-Projekte aufzustellen. Zu diesem Zweck soll die Kommission eine **Europäische PPP-Agentur** etablieren, die für folgende Tätigkeiten zuständig wäre:

∉ Ausbildung und Zertifizierung von **PPP-Mediatoren**, die bei der Anfangsphase eine unparteiischen Schiedsrichterfunktion bei diesem komplexen PPP-Verhandlungsprozess übernehmen.

∉ Fortführung unserer **EuroPPP**-Initiative, die eine **PPP-Matchingdatenbank** enthält, in der sich Regionen und Unternehmen eintragen können.

∉ Visualisierung und Wissensvermittlung des komplexen Themengebietes rund um PPPs durch **Topic Maps** und **semantische Netze**

∉ Definition von PPP-Projekten als **lernende Organisationen**

∉ Definition von **kybernetischen Modellen** für PPP-Projekte

∉ Fortführung unserer **MASTERPLAN**-Initiative zur Etablierung von nationalen und regionalen PPP-Kompetenzzentren.

FIEC contribution to the Green Paper on public-private partnerships and Community law on public contracts and concessions

FIEC welcomes the publication of the Green Paper on public-private partnerships (PPPs) and the opportunity to comment on behalf of the European construction industry.

As previously stated, FIEC supports the idea of a European Internal Market for public procurement, implementing and safeguarding fair and transparent competition.

The Green Paper is clearly limited to only those aspects relating to the rules governing the award of PPPs in a context of compliance with the rules of competition and the proper functioning of the internal market. However, the global and complex nature of the PPP model means that other economic, financial and accounting factors particularly those relating to the transfer of risks etc., should be taken into account in order to enable PPPs to contribute usefully to:

- full realization of the internal market;
- the success of the growth initiative, in particular through realization of the TENs;
- greater involvement of SMEs;
- broad dissemination of PPPs among local authorities and other public entities.

By way of introduction, it is important to emphasize that Community law does not at the present time provide a definition of PPPs. Contrary to what was announced in the draft interpretative communication on concessions under Community law on public contracts[1], the interpretative communication published in 2000[2] did not address the specific distinctions between the other forms of partnership.
Before addressing the specific questions raised in the Green Paper, we would like to make a few general comments:

1. Based on the distinctions made in the paper between contractual and institutionalised PPP models, we believe that the Commission's approach to contractual PPPs should - subject to further remarks made below - allow a broad consensus to be achieved. On the other hand, the approach to institutional PPPs raises fundamental questions, which FIEC considers are insufficiently covered in the relevant chapters of the Green Paper. Therefore, FIEC wishes to contribute comments which, in its view, should facilitate appropriate treatment of the cases of distortion of competition to which institutional PPPs can lead.

2. As some areas raised in the Green Paper relate to the newly agreed EU procurement directives, we would urge that after implementation the Commission allows sufficient time for national use before any assessment is made that could bring about further legislative changes in the area of procurement.

[1] OJEC C94 of 7 April 1999 (« *Draft Commission interpretative communication on concessions under Community law on public contracts* »)
[2] OJEC C121 of 29 April 2000 (« *Commission interpretative communication on concessions under Community law »)*

1. What types of purely contractual PPP set-ups do you know of ? Are these set-ups subject to specific supervision (legislative or other) in your country ?

From the various currently applied forms of PPPs as understood in the Green Paper, we have identified in a non-exhaustive manner, being a European federation, and without going into the details of national rules, the following underlying principles :

- the delegation of a public service (concession, lease etc.), under the control of the contracting authority, for which the company is, besides any subsidy, remunerated mainly by the users;
- an overall general interest task of public administration, the remuneration of which is guaranteed mainly by the public authority.

PPPs are generally characterized by the multiplicity of their tasks (design, construction, financing, exploitation), their long performance duration and other specificities such as : transfer of risk and responsibilities, differed payment, performance, etc.

Their implementation of the legislative framework differs according to the method of payment which can be guaranteed either by the user or by the public authority.

As a result, the definition contained in the interpretative communication on concessions is too limitative inasmuch as it sums up this type of contract as consisting only of assumption of a risk of exploitation.

In some EU countries there are already some legislative provisions governing such various types of contracts.

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

The competitive dialogue procedure can prove to be suited to certain partnership contracts. It is important that the new procedure does respect confidentiality and safeguards the technical solutions during the discussion phase with the contracting authorities, as well as that the rules governing advertising, which are likely to safeguard the fundamental rights of operators.

However, most of the PPPs contracts (mainly concessions) fall outside the scope of the public procurement directives and therefore have to follow specific procedures which take into consideration the specific character of PPPs, as is currently the case in some countries.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

Generally speaking, particular points of conflict have not arisen. However, in some countries infringements have been noted in cases where the original consultation which was to result in a contractual PPP was transformed into institutionalisation of the partnership with other actors on the pretext of a lack of success thus permitting the re-use of technical solutions identified upstream.

On this assumption and in accordance with the fundamental rules and principles deriving from the Treaty, provision should be made for a new call for competition under conditions of equality of treatment as between competitors who may have submitted tenders. This is particularly true as regards their cost structures which, in order to allow a fair comparison, should be drawn up in accordance with the common principles of a market economy, as publicly financed or controlled entities may be able to benefit from more favorable financing and costs structures not available to private companies.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

FIEC, as a European trade association, is unable to provide detailed comment.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

Yes. The fundamental rules governing advertising, transparency and non-discrimination are likely to ensure effective participation by non-national competitors.

As regards the texts under discussion within the European institutions, the greatest vigilance is, on the other hand, called for (in particular the proposal for a Directive on services in the internal market - COM (2002) 2 which is based on the country of origin principle).

In practice the largest share of construction cross-border procurement is carried out through subsidiaries.

In any case operators will accept to participate in PPPs on foreign markets only if there is a clear and reliable framework guaranteeing the protection of their investment against any form of arbitrary frustration by the local authorities.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

No, as things stand at present, legislation does not appear to be necessary.

The new public procurement directives have just been adopted and it is therefore important to allow a “bedding down” period before any evaluation of further policy is considered.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

Not applicable (see answer to question 6).

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

The practice of an invitation to present an initiative is, for the time being, used mainly in Italy. Generally speaking, where Directives and related fundamental rules governing advertising, transparency and non-discrimination are complied with, there should not be obstacles to effective participation by non-national competitors, although as mentioned in item nr. 5 most of the access to PPPs on foreign markets is carried out through subsidiaries.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

Some countries encourage private sector initiative under the assumption that it may help a country's PPP programme to better or quicker succeed. It is therefore recommended that private sector efforts in connection with project identification and preparation be encouraged through the grant of incentives to the private initiator.

Compliance with these principles should be ensured by the granting of a “right of first refusal” to the initiator of a proposal. Failing acceptance of the benefit of this right by the tenderer, compensation should be granted to him in an amount not covering all of the costs involved with a view to avoiding certain forms of distortion of competition generated only by the purpose of such compensation.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

FIEC, as a European trade association, is unable to provide detailed comment.

However as regards the phase which follows the selection we would like to draw the Commission's attention to the items 3, 4 and 5 of our conclusive remarks, concerning the duration of contracts, the changes taking place during the performance of the contract and the cases of early termination.

11. Are you aware of cases in which the conditions of execution - including the clauses on adjustments over time - may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

In order to avoid such barriers and discrimination, it is essential that the contract documents should be sufficiently detailed as regards compliance with the functionalities required and the performance to be achieved and also as regards the general conditions governing performance of the service as well as the clauses on adaptation over time.

The terms of the response to the invitation to tender by the selected candidate, which will be recorded in the contract, should be applicable to him.
On the other hand, the award criteria may not impose unreasonable conditions as regards the tariff level or the requirements to be met.

In any case, each contracting authority has the responsibility to prepare each project with due care and to share all relevant information at its disposal with all the bidders in order to provide for a level-playing field.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

Practices or mechanisms for evaluating tenders which have a discriminatory effect have been observed where the conditions laid down in Point 11 are not complied with.

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other "standard clauses" which are likely to present similar problems?

No, the construction sector does not share the Commission's view regarding "step-in" arrangements which are involved in lenders' confidence.

A change in recipient in the case of bankruptcy of the candidate selected does not appear to be a problem if the terms of the initial contract are maintained and if all of the initial candidate's commitments are fulfilled. The ability of lenders to obtain a reasonable reimbursement of the loans granted should be stated in order to maintain both a sufficient degree of competition among the financial institutions and to offer acceptable margin conditions.

That means that any security package in connection with a commercially financed PPP project typically contains step-in rights, supplemented usually by a direct agreement between the Contracting authority and the lenders.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

As indicated in Point 6, the new public procurement directives have just been adopted and it is therefore important to allow a “bedding down” period before any evaluation of further policy is considered.

Once experience is made on these new directives, before envisaging any new legislative initiative at the EU level, it could be useful to elaborate an informal document which would cover, amongst others, the following aspects :

- *force majeure* and unforeseen events;
- conditions governing early termination (unilateral or on grounds of fault);
- right to compensation;
- the procedures for regulating conflicts and lawsuits;
- adaptation of the accounting rules;
- etc.

In other words, the main principles which are usually included in PPPs contracts.

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

No, the practice of subcontracting in the context of PPPs has not, to our knowledge, given rise to any particular difficulty.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field of application in the case of the phenomenon of subcontracting?

Additional rules do not appear to be desirable as long as, as is foreseen in Directive 2004/18 (Art.60 regarding public works concession), the contracting authority may set a minimum share of the amount of investment which can be awarded to third parties.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

See item 16.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

The concept of an institutionalised PPP covers very different realities from one country to another. As regards semi-public companies, it is possible in some cases to observe distortions of competition as emphasized by the Green Paper. Semi-public companies, both existing and newly created entities, benefit from preferential access to information and from a cost structure unrelated to economic reality (i.e. publicly financed or controlled entities may be able to benefit from more favorable financing and costs structures not available to private companies). In addition, they can enlarge their field of activity by simply amending their statutes and this is the cause of the distortion previously emphasized.

It cannot be accepted that an operation should be entrusted by the contracting authority to a new company prior to its formation, irrespective of who the shareholders are, as mentioned in paragraph 60 of the Green Paper .

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

As indicated in item 6, it is important to allow a “bedding down” period before any evaluation of further policy is considered.

Once further experience is made, if the need arises, it could be useful to elaborate at the EU level a clarifying document which would address the following concerns :

- introduction of a specific procedure which will make it possible to demonstrate the actual failure of the private sector to respond to the service project envisaged and justify recourse to an institutionalised PPP;
- compliance with fair conditions of competition in determining the reference cost structure, in particular by the use of equipment, means and public staff at market costs and by the use of the data required for prior evaluation (see Point 1 of the additional observations);
- equality of access to public subsidies;
- guarantee of absence of interest as between the contracting bodies and the governing bodies of the semi-public companies.

As regards the acquisition of an interest by a private-sector operator in a public entity, the basic principles of transparency and equality of treatment should be complied with.

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

In general, the risk of loosing control, especially from contracting authorities, on each single part of a PPP contract (conception, financing, works execution, supply, management once the project is completed and so on) seems to be the highest barrier for the development of PPPs. Therefore, the decisions taken in this area belong more to ideological positions adopted by the contracting authorities than to the wish not to comply with the principles of free competition in an open economy.

Another relevant problem is the need to have a clear and stable legal framework, which would facilitate the access of private finance to public works initiatives.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

FIEC, as a European trade association, is unable to provide detailed comment.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

We do support the Commission's suggestion to establish a network of experts to facilitate the exchange of best practice and of value for money considerations.

It is important, however, to set clearly the task and the operating and monitoring rules in the recommendations for this network when it is being established.

The questions addressed by the Green Paper do not exhausts all of the subject specific to PPPs and, as emphasized in the introduction, taking account of the economic, financial and accounting factors and those relating to the transfer of risks etc. gives rise to the following additional observations.

1. Prior evaluation of the PPP contracts

A prior evaluation should be carried out by the contracting authority with a view to choosing the procedure which is most favorable as regards the proper management of public funds.
It should also include a scale of criteria making it possible to check the balance of the tenders submitted by the tenderers, thereby precluding distortions of competition arising from cost structures which do not reflect economic reality.

2. The most economically advantageous tender

As is the case for the competitive dialogue, it is essential to promote and encourage at the EU level the award of PPPs according to the principle of the most economically advantageous tender on the basis of previously announced award criteria.
Any clarification as to the methods which could be applied, in particular the weighting of these criteria, is highly desirable.

3. Duration of contracts

Determination of the duration of the contracts should not be based solely on conditions relating to depreciation and a reasonable profit. To be operative, these two ideas should be defined more precisely in accordance with the economic and financial characteristics of the projects and the extent of transfer of risks.

4. Effect of changes taking place during performance of the contract

Provided that the initial object defined by the public authority is complied with, this type of contract should allow changes to be made in accordance with changes (environmental and technical constraints, development of demand by users etc.) which may take place throughout its performance without having to call into question the award to the holder. That is why it is highly desirable that competition and the contract resulting therefrom should relate to the functionalities and performance to be obtained from the competitors rather than locking the latter into a "detailed-design" resulting from public contracts and not from this spirit of a PPP. Failing this, the essential conditions for confidence in the private-sector operator and lenders would not be fulfilled.

5. Cases of early termination

The contract documents should provide for procedures for compensating the holder in cases of early termination, in particular those related to a change taking place in the conditions governing the execution of the project.

6. Access by SMEs to PPPs

It is important to make sure that the size of these projects as well as the conditions governing their award will permit actual access by SMEs.

IPFA Summary of the Green Paper on Public-Private-partnerships and Community Law on Public Contracts and Concessions

The Green Paper has been issued by the Commission for consultation; inviting comments on the questions set out in the paper by 30th July 2004.

The paper, which is relatively brief, outlines the history of Public-Private-Partnerships within the member states and emphasises the term Public-Private-Partnerships (‘PPP’) is not defined at community level.

As most procurement Directives have been developed to deal with traditional contract procurement, the evolving concept of PPP is not adequately covered within the EU legislation and this inevitably leads to uncertainty in the procedures to be adopted.

However, the Commission recognised at European level that the issue of PPPs could help to develop trans-European transport networks, which had fallen behind schedule, mainly owing to the lack of funding. The Council has approved a series of measures in support of PPPs for that reason.

The commission does not see PPP’s as a miracle solution for a public sector facing budget constraints but for each project real value should be identified.

THE INTERNATIONAL
PROJECT FINANCE
ASSOCIATION

The paper addresses the effect of community legislation on public contracts and concessions on PPPs. In particular the principles of freedom of establishment and freedom to provide services under the Treaty (Articles 43 to 49) which encompasses the principles of transparency, equality of treatment, proportionality and mutual recognition. Directives have been introduced which deal with coordination of procedures for the award of public contracts which reflect these principles.

The fact remains that many representatives of interested groups consider that the Community rules applicable to the procurement of PPPs are insufficiently clear and lack cohesion between the member states.

This situation is proving an obstacle to the creation or success of PPPs which in turn restricts member states in the development of badly needed infrastructure projects.

The paper is intended to provoke a debate to ensure that PPPs can develop in effective competition and have legal clarity.

The commission emphasises that the concept of a transfer of a service from the public sector to the private sector is an economic and political decision which, as such, falls within the sole competence of the member states.

The paper is therefore examining the procedure after the decision by a local or national authority to transfer the service from the public to the private sector.

The paper separates PPPs into two models:

- Contractual nature – contract provides a partnership between the public and private sectors.
- Institutional nature_– cooperation or venture between the public and private sector within a distinct entity

Contractual Nature

Often referred to as the 'concession model' with a direct link between the private sector and final user – the private sector provides a service to the public 'in place of', though under the control of the public sector.

Other types include the right for the private sector to carry out and administer an infrastructure for the public (eg; school, hospital, prison), the UK PFI model and the German Betreibermodell are examples. Community Directives lay down detailed rules on advertising and participation. The Directives state that the public authority should follow the open or restricted procedure to choose its partner. Negotiated procedure is an exception but sometimes possible when 'the nature of the works or the risks attaching do not permit prior overall pricing'.

The commission are of the view that difficulty of prior pricing owing to the complexity of the legal and financial package is not to be treated as an exception.

Directive 2004/18/EC has introduced a new procedure known as 'competitive dialogue' to be used when awarding particularly complex contracts. It can be used if it is not possible to define the technical means that would best satisfy the needs of the project or where it is not possible to define the legal and/or financial form of a project. The new procedure will allow the contracting bodies to open a dialogue with the candidates to identify solutions to meet the needs of the project, at the end of the dialogue the candidates then submit their final tender based on the solutions identified.

The Commission considers that the rules resulting from the treaty can be summed up:

- fixing rules for selection of private partner
- adequate advertising of proposed concession and rules for selection to monitor impartiality
- introduction of genuine competition
- Compliance with equality of treatment through procedure and selection.

The Report questions the duration of the concession – the duration of the relationship must be set so that it does not limit open competition beyond what is required to ensure that the investment is paid off and that there is reasonable return on invested capital. An excessive duration is likely to be censured on the

basis of the principles governing the internal market and Treaty provisions on competition
“Step in” clauses, may result in changing the private partner without a call for competition. This is acceptable only if made through unforeseen circumstances or public policy grounds. Substantial modification must be considered equivalent to a new contract, requiring a new competition.

The report reviews the anomalies in the sub contract arrangements.

Institutional PPPs

The joint entity (public and private) delivers the service for the benefit of the public (eg; water supply, waste collection). The public authority participates in the decision making body.

The law on public contracts and concessions does not apply to a transaction creating a mixed – capital entity. However, the Treaty and the Directives, if applicable, do apply.

The selection of the partner should take into account the most economically advantageous offer in terms of the services to be provided. The absence of clear and objective criteria on selection could constitute a breach of the law on public contracts and concessions. The conditions governing the creation of the entity must be clearly laid down when issuing a call for competition.

The report raises the problems surrounding an award of contract prior to the incorporation of the entity which can be confused with the phase of allocating the tasks.

The report states that such formulae do not appear to offer satisfactory solutions in terms of provisions applicable to public contracts. Competition can be distorted by the privileged position of the company being incorporated, and likewise the private partner. In addition the subject matter of the contract is often insufficiently clear until after incorporation of the company. This raises issues on the principles of transparency and equality of treatment, are these principles being correctly followed?

Where tasks are awarded for an unlimited period, competition issues arise. Joint creation of these entities must respect the principle of non-discrimination in respect of nationality in general and free circulation of capital in particular.

Tasks allocated to the private partner after the entity has been formed must be put out to competition, if they were not included in the original competitive tender. To do otherwise would breach the law on public contracts and concessions.

THE INTERNATIONAL
PROJECT FINANCE
ASSOCIATION

Issues

1. Are the Commissions objectives under the Treaty and Directives being achieved in the PPP process within the Member States? If not, why not? What differences arise within the member states?

2. Has the introduction of Directive 2004/18/EC on ‘competitive dialogue’ resolved issues or added to them?

3. The issues surrounding subcontracting remain complex – would new legislation clarify the uncertainties?

4. How should the duration of projects and step-in rights be dealt with? At the present time they appear open to challenge by the Commission in the future

5. The issues surrounding joint public/private entities appear complex and ambiguous and open to Commission challenge after a deal has been competed. Is legislation necessary to clarify the issues?

6. Should the EC adopt a new Directive with the aim of introducing new rules on concessions and PPPs for all Member States?

7. Is there a lack of effective competition in the market? Has the Treaty and Directives contributed to this? Are other measures needed to produce a more competitive environment?

8. A concession contracted after negotiation may be redefined as a public contract. How can this legal uncertainty be resolved?

9. Are non – national operators guaranteed access to the PPP schemes? Are they adequately advertised? Do the selection procedures produce genuine competition?

10. Are there any practices for evaluating tenders which have a discriminating effect?

11. Is there a good PPP model in another country which the Union could adopt and develop?

International Project Finance Association (IPFA) submission to the Commission of the European Communities on the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions

United Kingdom Branch Submission

30th July 2004

The IPFA has circulated the Green Paper to its members and invited comments. In the limited time for consultation, the IPFA has held two branch meetings, in London and Holland, to facilitate discussion of the issues raised.

This Submission represents the views of the members in those branches raised at the meetings, including subsequent individual Submissions. The Submission concentrates on the main issues raised.

Has the introduction of Directive 2004/18/EC on 'Competitive Dialogue' resolved issues or added to them?

There are few people who are aware of the 'Competitive Dialogue' Directive. When the Consolidated Procurement Directive was first published by the EU and the implications of the Directive were reviewed it appeared to a number of UK contractors to raise more questions than answers. Even the title of the procedure, "Competitive Dialogue", is a dramatic departure from established PPP concepts in the UK of full-blown negotiation, when conducting contractual discussions.

The Dialogue procedure centres on “very complex contracts”, which is not defined in the Consolidated Procurement Directive. Under the procedure, there must be a minimum of three bidders to ensure fairness. Each of these three bidders applies in response to an Authority’s advertisement; each of the bidders are then asked to enter into exclusive dialogue with the Authority to arrive at a fully developed technical solution. At this point, the Authority then looks at each of the three tenderers submissions and is then able to pick either one bidders solution or retain ‘the best’ aspects of the tenders and use this as a hybrid tender. Once the final specifications are confirmed by the Authority, the Authority then goes back to the bidders and asks them to submit new bids based upon the “hybrid” final specification, or “best” bidders solution, as the case may be. It begs the question as to what extent there will be latitude to negotiate following the issue of this tender. In the UK’s experience post selection of preferred bidder stage is used as an important part of the contractor’s due diligence in order to finalise issues such as staff transfer and legacy equipment assessment.

Another issue that UK contractors are concerned about relates to each bidders’ intellectual property rights. The Consolidated Procurement Directive merely states that each awarding Authority must “observe the law on protection of intellectual property”. How will each bidder view the possibility of its best ideas/trade secrets being shared with its rival bidders? How will the costs of licensing such intellectual property rights be approached? Will this be part of bid costs?

Clearly, the “Competitive Dialogue” is a much more complicated procedure than the traditional Negotiated Procedure. Will this procedure have an impact on deal flow in the PPP sector?

The main issue that concerns the contracting community is the likely huge rise in bid costs. In addition, the cost of issuing and holding separate negotiations for a minimum of three strands of tenders is likely to be huge. Do the Local Authorities have the resources to undertake the “Competitive Dialogue”? If not will they be provided with such resources? It has been reported, as an initial assessment that bid costs in UK PFI schemes are likely to increase to 20 to 25% as a result of this process. However, this is viewed by many as a conservative estimate and the actual increases could be much higher.

How will the bid costs be paid by the Authorities in the initial stages? There is some provision for bid costs or compensation within the text of the “Competitive Dialogue” procedure as set out in the Directive, but how will these be paid, will costs be capped? Can any public body afford to sign up and agree to pay these costs if the project never reached financial close? Will the Commission agree to pay these costs on behalf of the Local Authorities?

Unfortunately, a large number of these uncertainties will not be resolved until the Consolidated Procurement Directive is incorporated into National law which is scheduled for the third quarter of 2005.

A further concern is the ability of the Commission to intervene in a process where no bidder feels aggrieved by the Negotiated Procedure. The only reason why the EC feel there is a need to interfere is due to concern over corruption. It is agreed that “Competitive Dialogue” can identify corruption; however, there is no real concern in the UK market on this issue. The utilities industry is one of the main sectors and they are able to use the Negotiated Procedure; what is the “Competitive Dialogue” going to achieve for other sectors?

The Commission is simply creating more complex procedures for the procurement of projects in the industry which are neither cost effective nor justified on competition grounds. The Commission wishes to restrict the Negotiated Procedure for reasons that may not be warranted. They have set themselves against the Negotiated Procedure but “Competitive Dialogue” simply will not work.

The Paper focuses hard on transparency and fairness, but very little on innovation and the efficiency of the bidding process; the “Competitive Dialogue” procedure could have a significant adverse impact on innovation (due to the loss of bidders’ intellectual property) and by increasing bidding costs, could deter companies from participating in bids. In addition, whilst there have been no changes to the Negotiated Procedure, the Green Paper reinforces the EU’s view that this should be very rarely used, so it remains to be seen whether the UK’s use of that Procedure can be sustained in the long-term.

The Consolidated Procurement Directive does appear to set out that in **“**very complex contracts” where the “Competitive Dialogue” is used, it may be possible to revert back to the Negotiated Procedure where there is a reduction in the number of bidders or an increase in discontinued bids, but at what level will that decision be made? Can a local government Authority be confident to make this decision under the current regime?

Further clarification and guidance is required on the ‘particularly complex contracts’ aspect of the new Directive. When can a contracting Authority legitimately consider a proposed contract to be "particularly complex" such as to allow it to adopt the “Competitive Dialogue” procedure?

When using the “Competitive Dialogue! procedure, where should the contracting authority be required to "draw the line" on the "clarification", "specification" and "fine-tuning" of tenders? When will such communications be considered to have the effect of "modifying substantial aspects of the tender or the call for tender" such as to risk distorting competition?

The issues surrounding subcontracting remain complex - would new legislation clarify the uncertainties?

There appears to be some general confusion on sub-contracting that requires clarification. As it stands, the new Directive provides essentially for two separate provisions on sub-contracting: (i) contracting Authorities may be required to insist in contract documents that tenderers indicate the share of the contract that they intend to sub-contract to third parties (Article 25); and (ii) contracts that are not awarded by contracting Authorities but which are nevertheless subsidised by more than 50% by contracting Authorities have to be awarded in accordance with the procurement rules (Article 8).

Conceptually why do we need to require subcontracts to be tendered on a similar basis as the project concession? This level of uncertainty created by the Green Paper does not assist the stability of the PFI/PPP market.

The added value of PFI/PPP projects is an integral approach to the activities and risks of all participants. Tendering subcontracts thereby undermines the very approach that provides for the added value of PPP projects and presents projects with the additional interface risks that PFI/PPP has managed to eliminate.

The Green Paper appears to be concerned with Institutional PPPs. What is the future for NHS LIFT projects? The industry perhaps should be a lot more concerned with the future than originally thought. Could signed NHS LIFT projects be challenged? How can the original concept of LIFT work if the Commission starts interfering?

Within the variation mechanism, one project can lead onto the signing of others, however, in principle these may well be in breach of EC procurement. As one project has spawned another and they won't have been put out to tender, such exclusivity may be found to be illegal; will the EC forbid the extension of contracts?

There appears to be a complete lack of harmony on how EC legislation is being adopted domestically and the UK market could be penalised for introducing new innovative concepts which are both cost effective and in the interest of fostering local investment.

The Paper as we have mentioned, raises many more questions then it proposes solutions. From a UK perspective we have an established oversight within the National Audit Office and an excellent framework within bodies such as Partnerships UK and the Office of Government Commerce. A ‘one size fits all’ policy will not achieve the model contract.

It would be far more helpful if the Commission stop using the term ‘concessions’ in a general manner. It must be more clearly and specifically defined.

How should the duration of projects and Step-in rights be dealt with? At the present time they appear open to challenge by the Commission in the future

Further clarification and guidance is required on Step-in provisions. Will the enforcement of so-called "Step-in" clauses, whereby a financial institution reserves the right to replace the project manager in the event of poor performance or similar solutions, constitute the award of a new contract, constituting a new procurement event? Surely not, this process is included in contracts to remove inefficient practices and prevent delays and cost overruns occurring on the project.

This is an issue raised by the Commission in the Green Paper (paragraph 48), but it seems possible to solve the issue by ensuring that the contract awarded includes the contracting authority's consent to the "step-in" provision. Would it not follow that, provided that the award process was conducted in accordance with the rules, the "economic opportunity" to provide the works or services would have been effectively advertised and awarded and the enforcement of the step-in provision would not constitute a new procurement event for the purposes of the rules? The parties would, however, have to be careful to ensure that when consenting to a new project manager, the scope of the works/services to be provided are not revised substantially or that the contract term is extended (or that any other terms and conditions were to be substantially revised).

Step-in rights are the key to ensuring bankable contracts; any interference will cause a disruption to project deal flow.

Limiting the concession to a fixed maximum period would affect bankability and economic viability and is not common practice in the rest of the world.

The doubts raised over the future legality of step-in rights could severely impact the future financing of public projects on a PPP basis as step-in rights are a key element of the protection sought by banks and are routine in any project financing.

With regard to contract duration, together with the Commission, the National Administrations need to produce guidance on appropriate contract duration. This should be done using as a guiding principle the objective requirements of the provider to make a reasonable return on his investment (to be decided on a case-by-case basis).

Should the EC adopt a new Directive with the aim of introducing new rules on concessions and PPPs for all Member States?

Given the point that we have reached within the market, more rules can only burden the industry and have a negative effect on the market.

Unfortunately the industry will not know the full cost of the Commissions intervention until after it has been implemented. There is little point in introducing new rules with which the industry as a whole will not and cannot comply.

The history of PPPs that is described in the Green Paper does not reflect or consider the experience and history of the UK PFI market, nor does it consider the UK Best Practice developments, such as standard form contracts and guidance, networks of Private Finance Units and the role of Partnerships UK. The Commission has not touched upon the experience and work of such important groups as Partnerships UK.

For example South Africa and Italy have adopted the UK model and adapted it to suit their needs and objectives. They used and followed the guidelines set by

Partnerships UK. It is fundamental that the Commission do not ignore these guidelines as they have been used successfully by other countries.

The Green Paper does not touch upon the role of Accession Countries, in particular the likely investment required for infrastructure over the next 10 years. There is also nothing in the Green Paper that relates to the possibility of EU financial support in the form of co-funding and potential Co-Funding from EU sourcing.

The Commission should certainly consider developing a central EU Task force to make available and encourage best practice. This knowledge could improve the use of PPP's in many countries, and ease their implementation, rather than the current situation where ad-hoc advice has to be gathered by potential procurers from many different sources and advisors. It is felt that this would naturally enhance open competition and transparency to a far larger degree than by restricting this development top down by implementing new EU Directives.

In an ideal world, it would be good to remove the inconsistencies between the different existing Directives – for instance, why should there be different fundamental rules governing "concessions", other forms of Contractual PPP's, and Institutional PPP's? The Commission should recognise that the PPP industry is working satisfactorily in a number of EU countries without the need for further EU intervention. The EU role should be to set up an EU Knowledge Centre which can act between governments and the private sector.

The issue was raised that although in principle it is agreed that this is the best way forward, the Commission would have to set up an EU PPP department initially as at present there is no central department or executive responsible for the promotion of PPPs within the EU. The Commission needs a distinct and identified PPP Department and Centre of Excellence with responsibility for policy and co-ordination within the EU Administration itself.

One issue that was raised by the Netherlands members was with regard to the possible standardisation of document language. At the present time the initial advertisement of the project in the OJEC would be in English. However, all of the supporting documentation is normally in the local language. This approach leads to high translation and other costs and favours local bidders. Consideration could be given to standardisation of processes and use of a common language for all the project documentation.

Are there any practices for evaluating tenders which have a discriminating effect?

Put simply the UK industry is working, competition is very genuine and the bidders for each contract are trying hard to win. The UK has experienced twelve years of trial and error, what is the benefit of a third party trying to change things?

One area which could be reviewed is whether Award Criteria are specified clearly enough, to introduce sufficient objectivity into the tendering process.

Together with the Commission, National Administrations urgently need to consider developing review systems that can operate effectively within procurement processes (i.e. prior to the actual award of the contract). Together, they may also consider producing guidance for contracting Authorities when planning the procurement of PPP projects.

Additional Comments

The most important issue for the UK is one that is addressed only indirectly in the Paper. That is that, although the Paper suggests that PPPs are likely to be of increasing importance in the delivery of infrastructure projects throughout the European Union, their use is likely to be made much more difficult, if not impossible by the negative attitude adopted by the Commission to the use of the Negotiated Procedure for ‘run of the mill’ PFI projects, and the unavailability and unsuitable nature of the “Competitive Dialogue” for such projects. The UK has led the way in developing innovative structures and procurement procedures for PPP projects, but the Commission has not kept pace with this development by adapting the procurement rules to legitimise procedures which, in practice have worked extremely well in encouraging competition. It is ironic that the very people who suffer from the Commission’s inability to keep pace with developments in the UK are those whom the rules are intended to protect, that is the potential bidders for the future PPP projects, which now appear to be at risk.

Concern has been expressed by most people at the meeting about the implications for the PPP/PFI market arising from the ideas contained in the Green Paper. There is no reason to believe from reading the Green Paper that the authors have ever had any direct experience of what is involved in a PFI deal or understand the time and effort required to develop a track record in delivering deals which gives confidence to investors in the process. Moreover, there is virtually no recognition of the interests of private sector investors whose capital will be used for the benefit of a project used by the public sector.

While the intentions underlying the Green Paper may be laudable, in terms of facilitating the use of PPPs more widely in European markets, one has to be concerned about the effect on the existing market for PFI/PPP deals which are complex and don't readily fit into the existing categories of public procurement contracts. The doubts cast by the Green Paper on important commercial rights and issues simply create uncertainty, which is extremely unwelcome in any area which relies on financial markets.

It is generally acknowledged that the UK model of contractual PPP arrangements is covered within the scope of the revised Directive 2004/18. However, there is still considerable confusion (as there is under the existing "classic" Directives) as to how contractual PPPs should be awarded under the procurement rules. Specifically, how a proposed PPP project should be defined for the purposes of the rules (public works, services or works concession contract?) and what procedure the contracting authority is permitted to follow to award the contract (use of the new “Competitive Dialogue” procedure and the circumstances in which they can use the Negotiated Procedure?). In particular, the award of PPP contracts is characterised by a series of negotiations with providers and, once a preferred bidder has been appointed, a series of further negotiations to agree the final terms of the contract. Also, the scope and value of the contracts is such that providers are required to invest a considerable amount of resource to participate in these tender processes and the priority for our members is to have legal certainty as to the award process to be followed in each case.

The introduction of a new draft Directive on PPPs is likely to create more confusion rather than less, and less clarity rather than more. The new Directive 2004/18 provides an adequate and proportionate framework within which contractual PPPs should be awarded in an open and transparent fashion. The Commission should focus its resources on assisting the National Administrations to effectively transpose this new Directive into national legislation.

From the UK perspective, an institutionalised PPP arrangement agreed between a contracting authority and a third party provider (i.e. who is not under the *de jure* or *de facto* control of the contracting Authority) and under which the provider is funded at least partially by the Authority, will necessarily involve the award of a contract of some description. Where this is the case, these arrangements should be considered under the existing public procurement rules in the new Directive 2004/18 and the case-law of the European Court of Justice (*the Teckal case*).

In situations where a private legal entity is simply entrusted with a public mission, the act of entrustment may not necessarily involve a contract and may simply be effected by means of a specific legislative act (regional/local). In this situation the Authority does not award a "public contract" for the purposes of the procurement rules. This situation is already specifically addressed in the new Directive 2004/18. Article 3 provides that where a contracting Authority grants special or exclusive rights to carry out a public service activity to an entity other than another public body, the act by which the right is granted has to include a requirement on the provider to comply with the principle of non-discrimination on the basis of nationality ("non-discrimination clause"). This issue has also been discussed by the Commission in the recent White Paper on services of general economic interest (*COM(2004)374 final*) and there is now a serious risk that the debate on PPPs will confuse the services of the Commission and the National

Administrations currently transposing Directive 2004/18, thereby creating even more legal uncertainty.

Rather than initiating this debate on PPPs, the Commission should focus its resources on assisting national administrations transpose the new Directives to ensure the new rules are implemented and applied effectively. For example, further guidance would be welcomed from the Commission on what is meant by a "concession". Importantly, a clear distinction has to be made between a concession awarded as a form of "public contract" and a concession awarded as an "act" granting a special or exclusive right to perform a service in the general economic interest.

THE INTERNATIONAL
PROJECT FINANCE
ASSOCIATION

The Netherlands Branch Submission
30th July 2004

These comments are specifically from the viewpoint of IPFA members in the Dutch market.

The stated aim of the Green Paper is to launch a debate on the best way to ensure PPPs can develop in a context of effective competition and legal clarity (paragraph 16). Whilst the aim is a laudable one, the new Public Sector Directive (Directive 2004/18) and the general EC Treaty rules already provide an adequate and proportionate legal framework to protect the interests of traders established in other Member States who wish to participate in PPP projects. At this stage, more legislation would simply risk confusing the new framework currently being implemented across Europe. What is required is a concerted effort by the Commission and by the national administrations to transpose the new Directive effectively into national law and, in particular, to provide for adequate enforcement and review procedures to ensure the rules are complied with.

It appears that on one hand the Commission want to promote the Trans-European Network and promote PPPs. On paper at least, the European Commission has proposed to encourage Public Private Partnerships (PPPs). PPPs, the Commission has agreed, are a viable but under-used option for financing transport infrastructure in Europe, and measures are therefore required to make them more attractive both to private investors and reticent Member States.

However, there is still a wide spread feeling that not enough is being done to promote and create awareness of PPPs.

It is recommended that the only way that PPPs can work is if the public sector; both the European Commission and Ministries start pushing forward and begin to be seen to commit to PPPs. They must demonstrate a strong and clear political will.

The issues surrounding joint public/private entities appear complex and Ambiguous and open to Commission challenge after a deal has been completed. Is legislation necessary to clarify the issues?

The Green Paper addresses both PPPs created on the basis of purely contractual links ("contractual PPPs"), and PPPs involving joint participation of a public partner and a private partner in a mixed capital legal entity ("institutional PPPs").

It is very important to make a clearer distinction between contractual and institutional PPPs. Contractual PPPs - created on the basis of purely contractual links and arrangements involving the joint participation of a public partner, are not working and that Institutional PPPs - private partner in a mixed-capital legal entity, already exist in the form of Joint Ventures between, for example, banks and cities etc. These have worked well, is there any benefit from third party interference?

The principle of institutional PPPs has been growing for a long time. The industry has to set itself goals. It is important that the institutional PPP must be and remain a private enterprise and not a public one.

One suggestion is that there needs to be a distinction between large and small projects. Large projects have international competition; however, the smaller projects have just national level competition. It is becoming a difficult balance between domestic and international companies.

One issue that was raised was with regard to the possible standardisation of document language. Should PPPs have a directive to help investors and bidders to standardise documentation, where all documentation is in the same language?

The language in contractual documents should be seriously addressed by the European Commission. Any document one level below the main document is almost always written in local language. This can be extremely difficult and is a contributing factor between the balance of national and international firms. Standardisation may well be needed in order to ensure that competition is fair and all interested parties can understand the documents. This issue could be dealt by developing a Centre of Excellence.

With reference to the principle of open transparency, the Treaty lays down a commendable concept but in practice the rules of implementation inhibit the project process and the industry suffers as a result.

In the Netherlands for instance there are not too many projects being put out onto the market. The Commission must try and come up with unilateral rules. In small entities PPPs work well – do we need to have EU guidelines that are very strict? Or do we need to have models for specific entities for example the Dublin model.

Has the introduction of Directive 2004/18/EC on 'Competitive Dialogue' resolved issues or added to them?

Considerable concern has been voiced as to whether this was to be an additional public procurement tool or whether it would replace the Negotiated Procedure.

Within the Negotiated Procedure for example the Dutch projects of the A59 & N31 could not have used the standard procedure; it is not just contractual issues that should be looked at but the whole process.

Competitive Dialogue is not to be introduced until 2006, however it can be included if it complies with current laws. One of the main points made by the IPFA members was that we need more freedom for the Negotiated Procedures.

Competitive Dialogue focuses on technical innovations and an open and transparent fashion to promote these, whilst failing to realise that PPP/PFI projects are more concerned with an integral approach of technical solutions, risks and rewards that together provide for value for money for the procuring entities. Without negotiation the correct balance of all these aspects is unachievable and leaves procuring entities worse off.

The procedures for PPPs are just not adequate enough. There have been five projects in the Netherlands that have all ended at the Negotiated Procedure. “Competitive Dialogue” will not be helpful as the problems with it will just contribute to the breakdown of procedures.

The European Public Procurement Directives say very little indeed about Negotiated Procedures. The Dutch *Uniform Aanbestedingsreglement*, **UAR**-EG 1991 contains more detailed rules (articles 40-53).

In the consultation period each tender is discussed separately, this can be very frustrating during consultation stage as too much creativity is allowed. We must try and set in stone the consultation stage but still allow for negotiation. There is a need to build a project Negotiated Procedure.

The issues surrounding subcontracting remain complex - would new legislation clarify the uncertainties?

There is substantial confusion in the Green Paper in relation to issues surrounding subcontracting. Conceptually why do we need to require subcontracts to be tendered on a similar basis as the project concession? This level of uncertainty created by the Green Paper does not assist the stability of the PFI/PPP market.

The added value of PFI/PPP projects is an integral approach to the activities and risks of all participants. Tendering subcontracts thereby undermines the very approach that provides for the added value of PPP projects and presents projects with the additional interface risks that PFI/PPP has managed to eliminate.

How should the duration of projects and Step-in rights be dealt with? At the present time they appear open to challenge by the Commission in the future

An important point discussed was the duration of project and Step-in rights, the position of financial players is quite clear; Step-in rights would deprive them of a key contract remedy.

Interference with step-in rights and limiting the concessions to a certain time period will affect bankability and economic viability and is not common practice in the rest of the world.

In terms of duration it is very country specific, some countries have a maximum duration ie; France, Spain have 60 years. Why should the Community interfere with local practice which has been successfully used in the financing and operation of existing projects?

Step-in rights are a mechanism required by the banks to deal with default. What alternative protection would the Commission suggest be applicable if these were deemed inappropriate under the Treaty or Directives?

From the pubic sector side prices are fixed, if by step-in rights the new contractor replaces the former, will it be the same price?

The members attending the meeting in Holland were concerned that some issues raised by the Commission in the Green Paper indicated that the writers did not fully understand the negotiation and operation of a typical PPP project, including the role of the banks and operators. In parts the Report adopted a theoretical approach to the project as opposed to a practical approach.

Step-in rights are not used to let projects without being tendered, but are a last resort measure to save distressed projects and as such provide for more competitive PFI/PPP projects, as they decrease the risks for banks.

There is a need for clarity of the overall system; however, due to the different status of countries, from a practical perspective standardisation can not apply.

There should be a general rule but the issue should ultimately be up to the individual country, policies should keep to the main principles and then each country should be allowed to set its own rules under these guidelines.

It is just not feasible to have ‘one size fits all’ single EU contract for all countries. There appears to be little advantage of the EC producing a global model, even if it does make a one size fits all, changes will have to be made constantly over the years in order to keep up. A ‘one size fits all’ policy will not achieve the model contract.

In terms of EU standardisation of PPP/PFI contracts, the UK model and standard documents could be used as guidance in other EU Member States. The Netherlands branch was surprised that the Commission had not referred to the UK experience and the work carried out by important groups such as Partnerships UK. A great deal of the guidance was being used in other countries outside the EU.

It has been demonstrated by the UK Highways Agency DBFO road model that well drafted and practical documents used for the first project can be improved for subsequent projects. When understood and accepted by the private sector operator and banks this can enable additional risks to be transferred from the public to the private sector.

Complete standardised documents in the Netherlands is premature with only five projects completed.

However, risk profile and analysis of projects are resulting in high costs. Standardisation of risk profiles could cut bidding costs considerably.

The best approach would be to utilise 'best practice'. The UK is the most advanced in this regard. However, the UK approach may not suit all countries. .

Does the market standardise itself? For example the German 'A' model consists of twelve programmes that are all using the same model. If the market is working well by itself why intervene? Lessons are still being learned, the Commission should leave the market to regulate itself; what is the benefit of a third party interfering?

The key to moving forward as an industry in the Netherlands is through active public sector participation at the government departmental level.

The public sector fails to maintain a dialogue on key issues with the private sector. Active dialogue could lead to an early solution of issues as and when they arise.

The branch believed that the Netherlands required a platform to enable the public and private sectors to have the ability to discuss issues affecting projects. The benefits would be reduced bidding costs and an improved deal flow.

The Commission should form or encourage the formation of a European PPP Knowledge Centre – representatives from each country would set general guidelines and would be able to determine which models work best.

This Knowledge Centre should have a clear agenda, focus on the key issues within the industry and provide training sessions to less experienced member states, it should consist of experienced representatives form various countries.

The International Project Finance Association

IPFA Recommendations Based on IPFA Member Comments

Following a consultation period with IPFA members and two meetings held in the Utrecht, Holland and London, England the IPFA offer the following comments on the Green Paper for consideration by the Commission.

- We recommend that the Commission carry out a cost benefit analysis to clarify the potential increase of bid costs in bidding costs as a result of implementation of the "Competitive Dialogue" procedure. If a procuring Authority is required to take a minimum three bidders through the initial bidding stage, it may well lead to an increase in bidding costs in excess of 20 to 25%. It is very difficult to see any advantage requiring separate confidential negotiations with a minimum of three bidders. What is going to be gained by the use of “Competitive Dialogue”, other than bidders incurring substantial additional costs? We also question whether public awarding authorities in the EU Member States have the resources to undertake these separate negotiations?

- We would suggest that the principles of “Competitive Dialogue" can be captured by use of PPP convergence/consultation phases within a PPP project timetable in order to test market responses to a PPP project. As a result the whole market would be able to comment on how the project can be structured without the need for formalistic expensive parallel bidding discussions. In addition, potential concerns of bidders to the use of their intellectual property rights would be removed. Under this convergence/consultation phase approach, procuring Authorities would not be restricted to the views of at least three formal bidders, but potentially the entire PPP market.

- It is accepted that the objective of the Green Paper is to provoke discussion and debate on the procurement issues surrounding PPP projects. However, the Paper is disappointing in that it identifies problems but offers no solutions. In addition, the comments on Step-in rights, concession duration and sub-contracting have caused concern within the PPP community throughout Europe. This Paper questions fundamental principles of project finance adopted throughout the world.

- We would recommend that the Commission review the Treaty and Directives and suggest positive proposals to make changes to them so that they fall in line with the existing market for PPPs in Europe.

- We would recommend that extensive consultation takes place before the Commission introduces further Directives affecting the PPP industry in Europe.

The introduction of the ‘Competitive Dialogue’ procedure in Directive 2004/18/EC was not subject to detailed consultation with PPP participants. As a result the industry is now faced with a procedure which will prove to be cumbersome, ineffective and expensive for participants – both public and private sectors.

- We would recommend that further consideration is given to the increased use of the ‘ Negotiated Procedure’. The Commission has not provided any valid grounds to restrict its use and it has proved to be a resilient and cost effective process to conclude PPP projects in Europe.

- We would recommend that the Commission set up an EU PPP Taskforce - a centralised force consisting of experienced representatives from various countries. The Taskforce should have a clear agenda, focus on the key issues within the industry and provide strategic direction - The taskforce should provide clear and specific guidance on how it proposes to assist the Member States with the development of PPPs, in particular the implementation of pilot projects. It should identify key issues that the Member States may face when implementing any new guidelines or legislation for projects and suggest how they can minimise risk.

- In addition to the Taskforce we would recommend that the Commission sets up a Centre for Excellence with a permanent staff under the control and guidance of the Taskforce. The Centre would develop best practice procedures, produce guidelines to assist Member States and be empowered to resolve any differences that may arise between national law and EU law in respect of sector issues or project issues.

- The Commission needs to provide the industry with far more clarity and guidance as to its existing concerns and future intentions on the issue of

-

- Step-in rights and Project Duration. The present uncertainty created by this report will have an impact on financing of future public projects.

- The comments regarding sub-contracting and contract duration seek to address a perceived "evil" which in practice is difficult to recognise, at least in the UK market. There is substantial confusion in the Green Paper in relation to issues surrounding subcontracting. This level of uncertainty created by the Green Paper does not assist the stability of the PFI/PPP market. The Commission must react to this concern by providing a much clearer set of guidance not legislation. Additional legislation should be avoided.

ISUPE
Initiative pour des services d'utilité publique en Europe

POSITION D'ISUPE SUR LE LIVRE VERT SUR LES PARTENARIATS PUBLIC-PRIVE ET LE DROIT COMMUNAUTAIRE DES MARCHES PUBLICS ET DES CONCESSIONS

Bruxelles, le 22 juillet 2004

Introduction

ISUPE (Initiative pour des services d'utilité publique en Europe) est une association sans but lucratif regroupant de grands opérateurs locaux, nationaux ou européens de services publics en réseaux (transport, énergie, poste, télécommunications…). Son but est de promouvoir une conception moderne des services d'intérêt économique général (SIEG) tant au plan national qu'européen.

ISUPE souhaite présenter ses observations sur le Livre vert sur les partenariats public-privé (PPP) et le droit communautaire des marchés publics et des concessions publié le 30 avril dernier par la Commission européenne.

ISUPE se félicite de l'objectif poursuivi par le Livre vert visant à assurer plus de sécurité juridique aux utilisateurs des PPP. Les membres d'ISUPE participent très largement aux montages de PPP, voire sont à l'origine de tels montages. Les secteurs représentés par ISUPE, comme l'énergie et le transport, sont en effet riches en infrastructures et missions de services publics ouverts aux possibilités offertes par les PPP.

ISUPE regrette cependant que l'approche adoptée par la Commission ne relève que de la seule perspective juridique des marchés (et semble déjà assez directive pour un Livre vert) et oublie de traiter des volets économiques, industriels, sociaux et financiers des PPP. A ce titre, le guide intitulé « *guidelines for successful public-private partnership* » publié à l'initiative de la Direction régionale politique régionale de la Commission en mars 2003 remplit plus complètement ce rôle d'information et de clarification des pratiques.[1]ISUPE est ainsi favorable à l'élaboration de communications de ce type par la Commission, communications qui aident les opérateurs dans leur démarche de montage et de constitution de PPP au plan européen.

[1] Ce guide est publié sur le site de la Commission : http://www.europa.eu.int/comm/regional_policy/sources/docgener/guides/ppp_en.pdf

ISUPE souhaite mettre l'accent sur trois points et laissent aux opérateurs le soin de détailler leur approche dans le cadre de leurs propres positions :

1. Non assimilation des PPP concessifs aux marchés publics
2. Application des principes communautaires aux PPP concessifs
3. Clarifications souhaitées sur les PPP institutionnels

Non assimilation des PPP concessifs aux marchés publics

ISUPE estime que la réglementation applicable aux marchés publics n'est pas parfaitement adaptée aux PPP de forme concessive. Le type de relations entre la collectivité et les opérateurs, la complexité des montages, la durée de la relation contractuelle, les formes de rémunération, le risque encouru, la nécessité de rechercher des formules innovantes plaident pour une prise en compte des particularités des PPP concessifs par rapport aux traditionnels marchés des autorités publiques.

De plus, la forme concessive a été créée en Europe pour répondre aux besoins spécifiques des délégations de service public en réseaux auxquels les marchés ne pouvaient seuls faires face.

ISUPE estime par ailleurs que la mise en place de la procédure de dialogue compétitif dans les marchés ne peut apparaître comme une procédure satisfaisante pour les PPP de forme concessive (les concessions ne peuvent être assimilées ispo facto aux marchés complexes). En effet, cette procédure n'a pu encore être pratiquée à grande échelle et il est mal aisé de savoir si elle offre la flexibilité souhaitable en matière de PPP concessifs.

De plus, aux dires des praticiens, la procédure de dialogue compétitif pose d'importants problèmes de confidentialité des savoir-faire et des procédés inclus dans les offres. Or, le renforcement de la confidentialité rendrait complexe cette procédure et donc en grande partie inadaptée aux nécessités des PPP concessifs.

De même, la procédure de dialogue compétitif suppose une formalisation poussée et a été élaborée pour répondre aux besoins spécifiques des marchés publics. La procédure négociée qui offre la flexibilité la plus forte ne s'applique qu'à des contrats bien spécifiques et ne saurait concerner les PPP concessifs dans leur ensemble.

Enfin, la soumission des PPP concessifs au régime actuel des concessions de travaux serait contraire à la différence de nature entre la réalisation d'un ouvrage et l'accomplissement d'une mission de service public.

ISUPE souhaite ainsi que les PPP à caractère concessif conservent leurs spécificités au plan communautaire, dans le respect des règles de concurrence de l'UE, et ne soient pas soumis aux règles communautaires des marchés publics.

Application des principes communautaires aux PPP concessifs

ISUPE soutient pleinement l'objectif de transparence de la Commission en matière de PPP. Il s'agit en effet d'un objectif indispensable pour assurer le bon fonctionnement des montages et permettre la meilleure utilisation des fonds publics.

ISUPE estime que cet objectif est parfaitement rempli par l'application des principes du Traité aux articles 43 et 49 dans le respect des règles de concurrence. En particulier, lorsque les conditions d'octroi de subventions publiques à un PPP concessif sont remplies, celles-ci ne peuvent avoir pour effet de distordre le marché par rapport aux autres opérateurs.

Les principes de transparence, d'égalité de traitement, de proportionnalité et de reconnaissance mutuelle forment un corpus de règles indispensables pour assurer le succès des PPP. Plusieurs pays européens, dont la France, ont d'ailleurs mis en œuvre ces principes dans des législations nationales (loi Sapin de 1993 et récente ordonnance de 2004 sur les PPP en France).

Le montage des PPP doit pour sa part garder la plus grande flexibilité possible afin de ne pas décourager les opérateurs face à des encadrements réglementaires trop stricts. Il appartient aux autorités publiques, mais aussi aux organismes financiers, chambres de Commerce, associations professionnelles de promouvoir des outils souples permettant d'assurer le bon fonctionnement des PPP.

ISUPE estime, sans préjudice de l'application des règles de concurrence de l'Union, que la mise en place d'un encadrement communautaire trop précis des PPP concessifs n'apporterait pas de valeur ajoutée par rapport aux instruments existants au plan européen et national.

Un tel encadrement pourrait par ailleurs compliquer l'application de régimes juridiques aux PPP au lieu de simplifier la situation et de garantir la sécurité juridique: réglementation nationale ou règles communautaires sur les concessions (si aucun seuil n'est prévu) ou encore règles sur les marchés publics selon le type de PPP.

Par contre, ISUPE pense qu'un exercice d'évaluation, de consolidation, d'inventaire et de communication sur les outils juridiques à la disposition des opérateurs pourrait aider les acteurs des PPP (en particulier une communication exposant des cas concrets et des exemples de modèles contractuels à titre facultatif).

De même, une communication de la Commission qui clarifierait la distinction et les définitions des PPP de forme marché ou concessive serait très utile aux opérateurs dans le but d'éviter les contentieux.

Le Commissaire Bolkenstein a d'ailleurs soutenu cette approche d'évaluation des bonnes pratiques relatives aux PPP dans une intervention récente sur le livre vert[2].

[2] Discours publié par la Commission sous : http://europa.eu.int/rapid/pressReleasesAction.do?reference=SPEECH/04/253&format=HTML&aged=0&language=FR&guiLanguage=en

Clarifications souhaitées pour les PPP institutionnels

En matière de PPP institutionnels, la Commission ouvre des voies nouvelles s'agissant de la question de l'attribution des missions aux entités juridiques créées en partenariat par les autorités publiques et le secteur privé.

ISUPE estime que des réflexions plus poussées doivent avoir lieu s'agissant de ce champ nouveau d'investigation pour la Commission. En effet, ce dernier touche de très prés près au principe de libre administration des collectivités locales (rappelé dans le nouvel article I.5.1 du Traité de Constitution européenne).

Les collectivités doivent rester libres de travailler sous la forme de régies (« in house »), de délégations de service public ou d'entités mixtes sans se voir imposer des contraintes qui les dissuaderaient de choisir une forme juridique plutôt qu'une autre. Si le livre vert ne semble pas vouloir forcer au choix d'une technique juridique par rapport à une autre, il n'en demeure pas moins qu'une réglementation en ce domaine pourrait avoir un effet similaire.

Les membres d'ISUPE participent à l'activité d'entités mixtes et souhaitent ainsi que cette forme juridique reste disponible dans sa souplesse actuelle.

ISUPE demande ainsi qu'avant toute initiative de la Commission dans ce domaine, une étude détaillée et une communication de la Commission soient réalisées visant à évaluer le champ en Europe de ces pratiques (en particulier le champ juridique du « in house »), les données économiques et sociales à prendre en compte et l'évaluation de la dimension communautaire en cause dans ce champ de la politique locale.

Conclusion

ISUPE rappelle que l'Union européenne doit veiller à ce que les services d'intérêt général (SIG) fonctionnent de la manière la plus satisfaisante en Europe comme l'a rappelé le récent livre blanc sur les services d'intérêt général (SIG)[3] publié par la Commission en mai dernier.

Il s'agit maintenant de mettre en œuvre cette prescription de l'article 16 du Traité, repris et amplifiée par l'article III-6 du nouveau du Traité constitutionnel.

Le livre vert PPP, à l'instar d'autres textes récents de la Commission, doit constituer un premier signe de la volonté de la Commission en la matière.

C'est pourquoi ISUPE espère que les suites du livre vert PPP confirmeront la volonté indiquée par le livre blanc SIG[4] et prendront en compte les préoccupations émises par ISUPE dans sa position.

The Green Paper consultation process

OGNETs experience on PPP

1. The *Competitive Dialogue* is a process that has been used to choose players in Contractual PPP's. Why isn't this system also used as a guideline for Institutionalised PPP's? The case of Liverpool[1]-UK shows that using a competitive dialogue for Institutionalised PPP can be very useful.

2. Public local actors tend to work mainly with Contractual PPPs rather than Institutionalised PPPs. It seems that the reason for this is the lack of understanding—from public actors—on when it is convenient / appropriate to use a Contractual PPPs and/or Institutionalised PPPs. How can the EC help local authorities better understand the differences between them? The EC could play an important role in explaining local authorities what are the main differences between these contracts, especially in terms of the level, detail and the destination of the product.

3. It seems that PPPs are now being geared more towards privatization and use of international players rather than public local players. The problem with such an approach is that this could be inhibiting further Local Economic Development and/or Territorial Development. Why not establish an obligation where public authorities have to justify their choice? It is important that local players can compete at both local and international levels. The EC, for example, could make an obligation concerning transparency and/or justification of why such actor/player was chosen for that specific PPP.

4. In regards to the purchase/selling of public lands, no clear guidelines have been established until now. Because of this, there is a potential lack of transparency—which many times leads to corruption—because the land is being sold out without a proper competition. A lot of example show that public lands are sold sometimes with not enough concurrency and in a second stage the new owner is in a monopolistic state for the set-up of a PPP. Therefore, it is important that clear guidelines are established in order to prevent this. An idea could be to establish a rule that when a public land is sold out, there is an interdiction of approximately 5 years for the set up of mixed bodies for Contractual and/or Institutional PPPs.

5. Important financial institutions such as the European Investment Bank, World Bank, etc tend to work mainly with international players rather than small local players. In what ways can we help these global institutions work more closely with local players (e.g. construction firms, NGOs, etc)? It is important that they also have the possibility to have access to these funds.

[1] An Institutional PPP setup between the Livelpool city council and a private company in order to improve the organizational efficiency and the services offered (i.e. high costs, poor services, "do nothing" option) by the city council. The PPP was a success because of the partnership fundamentals, because it had effective structures supporting it and because it was carefully designed and implemented.

July 2004

Green Paper on public-private partnerships and Community law on public contracts and concessions: COM(2004)327

Dear Sir

RICS welcomes the opportunity to comment on the European Commission's *Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions*. RICS is the world's leading professional body on all aspects of land, property, construction and the associated environmental issues, and regulates, represents and promotes 110,000 individually qualified chartered surveyor members in 120 countries worldwide. An independent, not-for-profit organisation, RICS acts objectively and in the public interest, providing authoritative advice on issues affecting business and society worldwide.

Chartered surveyors are neither architects nor engineers nor property lawyers, but the qualification and training of the chartered surveyor combines many of the skills and competence of these professionals with other skills relating to construction, land use planning and management of the natural and built environment. As well as their training and experience, chartered surveyors are bound by rules of conduct on matters such as client confidentiality and conflict of interest.

Our members work across both the public and private sectors, and are frequently affected directly or indirectly by the rules relating to Public-Private Partnerships (PPPs). Principally this is through their work in the construction industry, in which we have over 40 000 qualified surveyors active in Europe, but also includes their work in urban regeneration, the planning and financing of infrastructure projects and facilities management.

General comments

PPPs are an important delivery mechanism for the public sector, and an increasingly significant source of contracts within the wider construction industry. Many of our members interface with the current Community level regulations that impact upon PPPs and the national laws governing their use. While there are many case studies of effective PPP projects, there are also numerous examples where the current regulations and guidelines hinder their use. **RICS welcomes any attempt to remove barriers to the use of PPPs** and to create a more practicable and appropriate regulatory environment. RICS also **supports the promotion of PPPs as a vital model for financing and delivering infrastructure and other public projects**.

RICS supports the current overall strategy of DG Markt for developing the internal market, prioritising the public services for further liberalisation, as set out in the Communication in May 2003[i]. RICS believes liberalisation of public services can, with the right guidance and regulations in place, increase both efficiency and delivery quality. However, the facilitation of PPPs as part of that strategy is not properly followed through by the Green Paper.

The various models of PPPs that have developed over the last 10-15 years are increasingly critical tools for the funding, construction and management of key social infrastructure, and the regeneration of our urban fabric. Many public authorities are now looking to initiate PPPs as a means of funding projects, and preferring models of PPP over other potential funding mechanisms such as developer levies, taxes and user charges. PPPs offer scope for increased infrastructure investment without significant risk of inducing macro-economic instability. PPPs also have benefits in linking the payment for infrastructure with its use over time, which essentially helps to shift debt from public to private balance sheets.

PPPs are not the only option for funding and delivery, nor are they appropriate in every case. However, the full potential benefit of using PPPs to deliver infrastructure, as a means of contracting construction projects and of securing public service delivery, is not being achieved. RICS believes that PPPs can play a very significant role right across Europe in financing and delivering infrastructure and other capital-intensive projects in the future, providing the right regulations are in place.

The current problems stem from deficiencies in the operation of the internal market for the tendering and procurement of construction contracts, confusion regarding national and European laws, high levels of complexity and an overall perceived lack of transparency. The rules applied to PPPs vary between different Member States and this creates difficulties for many potential private sector partners to work cross-border on such projects. The uneven playing field is also reflected in a lack of common understanding regarding the form and definition of PPPs, their potential benefits and risks, and wariness between both the public and private sectors of forming long-term contractual partnerships.

The rules relating to public procurement, and particularly how they impact on often large and very complex construction projects, remain a concern of our members. Despite the steps taken to modernise procurement, through initiatives such as the competitive dialogue procedure, the current regulations still fail to reflect the particular complexities and requirements of PPP projects.

In addition to removing unnecessary regulatory barriers, **RICS supports a far more proactive promotion of PPPs** as a valuable model where individual projects are deemed to be appropriate. The goal stated in the May 2003 Communication to clarify the relationship between state aid and PPPs has also not been tackled by the Green Paper and remains a cause of concern for many practitioners in both the public and private sectors.

Given the potential benefits that a better understanding and utilisation of PPPs could bring, RICS welcomes the Green Paper as a step towards creating a more consistent and appropriate regulatory system for the creation and management of PPPs in the future. We also support the Commission’s goal to create greater legal clarity and effective competition in the sector.

We support the Commission’s acknowledgement that any act whereby a public entity entrusts the provision of an economic activity to a third party must be examined in the light of the rules and principles resulting from the Treaty, particularly regarding the principles of freedom of establishment and freedom to provide services, encompassing the need for transparency, equality of treatment, proportionality and mutual recognition.

We regret to note the continued lack of central definition of PPPs in Community legislation, and the lack of a specific Community level policy relating to PPPs.

Given their importance and the experience and best practice that has been developed by organisations and professionals such as our members, RICS encourages the Commission to consider developing further specific policies relating to PPPs for construction, urban regeneration and the delivery of public services. Although the form and types of PPPs can also be complex, **RICS strongly supports the creation of a set of common definitions** or taxonomy of what constitutes a PPP, and of the common models that have been developed, with particular reference to the form of contract applied. Particular emphasis should be placed on developing a Community level definition of the term public-private partnership at the earliest opportunity, and we encourage the Commission to move towards this as a next step.

This would help foster common understanding and transparency, a foundation for more consistent national regulations and facilitate competition within the internal market and, therefore, more competitive procurement. This could build upon the wealth of good work already carried out in this area by projects such as URBACT's research on PPPs in regeneration[ii], work by UNECE's Build-Operate-Transfer Group, the Commission report Public finances in EMU 2003[iii], recent work carried out on PPPs by the IMF, and the nascent but useful definitions already included in the Green Paper itself.

RICS believes the Commission should encourage the development of new and innovative forms of contract and facilitate the dissemination of such developments and other emerging best practice. For example, the work carried out in the UK by the Joint Contracts Tribunal alongside members of RICS in defining a groundbreaking approach to construction, the Major Project Form. This type of contract is shorter and less complex than traditional forms of construction contracts, flexible in the type of projects it can be applied to, and is compatible with current national and European private finance initiative (PFI)/PPP procedures.

RICS specifically welcomes

- The current strategy of DG Markt for developing the internal market, prioritising public services for further liberalisation, as set out in the Communication in May 2003 (internal Market strategy: Priorities 2003-2006).

- The attempt to understand how procurement rules impact upon the creation, management and delivery of PPP projects.

- The highlighting of the potential of PPPs for international transport infrastructure developments, particularly relating to TENs.

- The acknowledgement of PPPs as an important market in their own right, particularly within the construction sector.

- The need for the regulatory framework at the European level to reflect the experience of partners in PPPs at ground level.

- The need for transparency and a consistent approach.

- The continued application of structured selection methods. Common, well structured, standardised procedures contribute to objectivity and integrity of the selection process.

Concerns

RICS also has a number of concerns, and would therefore like to highlight some areas that would benefit from further consideration and where further clarity is required. These include:

- The lost opportunity represented by the significant delays in launching the Green Paper. This led to its publication one month after the adoption of the revised procurement directives, losing the opportunity to amend the directives in response to the current consultation.

- The lack of clear linkages between current PPP regulations and the Green Paper, and current state aid rules and the review of regional funding. This will be particularly critical in the new Member States. For a good discussion of the main issue, we highly recommend the recent report by PricewaterhouseCoopers 'Developing Public Private Partnerships in New Europe'[iv].

- RICS supports the Commission's promotion of PPPs within the accession states in the DG Regio paper 'Guide to Successful Public-Private Partnerships'[v] launched in March last year. We believe the accompanying information set out in the 'Resource Book on PPP Case Studies'[vi] launched in June this year sets out in detail some of the linkages between cohesion funding and operational PPPs, and is a valuable resource for policy makers and practitioners alike. Yet the Green Paper does not build upon this. We encourage the Commission to address this need for greater clarity in more detail in the period following the Green Paper consultation.

- The issue of 'first movers' (Paragraph 39). Many innovative and technical solutions are developed by the private sector, and many in direct response to the specific needs of a contracting, public body. Such innovation and forward thinking approaches do require nurturing, and therefore we welcome the suggestion that first movers have some form of incentive for their actions in initiating proposals for a project. However, it is difficult to see how this can be reconciled with need for an overall, horizontal structured approach to procurement and selection processes. The principles of scrutiny, transparency and best value must also be applied in the case of first movers and private initiatives. This is a complex problem that requires further analysis and examples of best practice to be identified.

RICS would appreciate the opportunity to discuss possible solutions with you further. We will also endeavour to provide you with case studies to illustrate and amplify the issues raised in our response and to provide possible solutions. In the meantime, we remain at your disposal for any further details you may require.

Yours faithfully

Ewan Willars
European Policy Officer

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

The main types of purely contractual relationships have been outlined in the Green Paper quite comprehensively. There are of course many slight variations to these main relationships depending on the particular circumstances of the project in hand.

The UK has a Task Force which specifically looks at PPP Contracts, and offer best practice advice. The UK National Audit Office also performs regular reviews of PPP and PFI contracts, and is available to offer advice and support. Many of the PPP are very complex and raise many previously unexplored issues, for example in terms of levels of service and Public Sector Borrowing Requirement comparators.

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

RICS supports the concept of competitive dialogue procedure. Too many PPP/PFI projects have in the past been contracted without really understanding the other parties view of the nature and requirements of the project. Engaging the private partner at the earliest stage can ensure that a great deal of money and expense can be saved by avoiding protracted negotiations at the end. Many RICS members have seen the frustrations on projects which take years to get from Issue of the Invitation to Tender and then to Award, in some cases taking as long as 6 years.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

There always seems to be a great deal of debate about EU Procurement rules and how this will affect the PPP tendering process and the operation of the PPP. It would seem that further clarity is required as outlined in this paper.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

Many of our members have been involved in PFI and PPP contracts for both public and private partners, and in a range of capacities. The overall lack of clarity and guidance, or knowledge of sources of guidance, and the continued confusion on EU rules and how they may apply are common difficulties identified by our members. The need for considerable legal expertise in the procurement process is also deemed to be excessive, adding to both the cost and timescale for commencing the project.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

RICS does not believe that there is any active discrimination. However, it is apparent that many contracting authorities are not always sufficiently aware of developments in best practice and delivery of projects developed outside of their national boundaries, or of suitable partners available in other countries.

A general advertisement is often sufficient to encourage a competitive procurement process. However, we believe that a more focused knowledge base of other PPP/PFI contracts across the EU would be of benefit when initiating advertisement and the selection process.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

Yes. Clearer guidance would be very useful to practitioners and would go far towards ensuring compliance with the relevant regulations.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

This would be desirable.Consistency in the form and application of rules relating to PPPs would be of benefit and, in the opinion of RICS, do much to encourage greater competition and cross-border tendering. A horizontal, non-sectoral approach would do most to harmonise and simplify existing rules and create a level playing field for all prospective partners in PPP arrangements, from both the public and private sectors.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

There is little evidence of any active discrimination however, as stated above in Q5, there is not sufficient awareness of the advantages and possible benefits of a broad, international tender process. A more focused knowledge base of other PPP/PFI contracts in the EU would help to increase awareness and competition.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

Better sharing of knowledge, best practice, successful case studies, exemplars, and information on the companies active in this field, together with improved and clearer legislation, would be a major step towards facilitating PPPs across the EU25.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

Long drawn-out negotiation is a major feature. This often involves reviewing/challenging some of the core concepts/principals of the project. This process may take several months, however, by the end of this process all partners will have a better understanding of the projects and the issues involved in its delivery.

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

Long-term contracts with periodic or annual reviews are more likely to feature the problems outlined in the Green Paper. In long-term PPPs the whole environment and context surrounding the project may well change radically. As a result of this process the project may unintentionally develop into some other form of project, with different requirements and characteristics. It is difficult to prevent this from happening, but in some cases this may be interpreted as a barrier to the freedom to provide services.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

No evidence.

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other "standard clauses" which are likely to present similar problems?

The point raised in the Green Paper is valid and needs to be addressed. Step In, Periodic Review, Annual review, break clauses, etc are all clauses which need careful consideration, due to perceived lack of transparency and equality of treatment.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

There is a need to clarify a number of points, raised elsewhere in this response. The need for clarity and simplification is such that options for the future review of the whole contractual framework should be considered.

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

The problems our members encounter often involve the issue of contracts to sister companies, or affiliated companies who are part of the successful consortium. Many seem to take the view that the regulations only apply to the head agreement and they are free to subcontract how they wish. Others take an opposing view.

In operation it is not uncommon for every single subcontract to be the subject of debate and discussions because people are unclear as to the rules which may affect them. This is good news only for lawyers, seldom for the project itself or the interests of the contracting authority.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

Yes

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

Yes

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

The experience of our members is that most parties do try to ensure that they comply with the regulations.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not? In general and independently of the questions raised in this document:

It needs to be clarified overall, not just on particular points.

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

The practice and requirement to advertise, although adhered to, do not always seem to reach the widest or most appropriate target audience. The main issues holding back PPPs at the EU level are the confusion between the regulations on PPPs and other community policy, for example the links to state aid and the use of EU funding. The lack of a common definition and common taxonomy are also barriers, as is the lack of a clear network/framework for the dissemination of information.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of “good practice” in this framework which could serve as a model for the Union? If so, please elaborate.

No, although there is a great deal of research being carried out in the US and Australia as well as by UNECE and the UN Habitat programme.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

The EU should play an active role in promoting best practice in the field of PPPs. Getting together the key players working cross-border on PPPs in the EU may potentially bring many benefits to the EU Member States through the sharing knowledge and learning.

National and/or regional PPP units, such as those established in Italy, France and UK (the Treasury Taskforce and subsequently Partnerships UK, and the Financial Partnerships Unit established by the Scottish Executive) have had many benefits in terms of understanding of the issues, clarification of national and EU regulations, and the dissemination of best practice. The creation of such units should be encouraged. The creation of a European PPP Unit would also be supported by RICS. This would enable a regular re-evaluation of the regulatory framework and dissemination of best practice and innovative contractual and delivery models.

Restoring the Past U.E.P.C. Building the Future

GREEN PAPER ON PUBLIC PRIVATE PARTNERSHIPS

COM(2004)327

UEPC COMMENTS

UEPC represents more than 30,000 developing and house building companies, affiliated with its 13 member federations. Directly or indirectly the activities of these developers and house builders represent 10% of gross national product and employment in Europe. Together, they annually build and develop several millions m² of offices and shopping centers as well as more than 1.000,000 new homes.

EXECUTIVE SUMMARY

UEPC wishes to emphasize the need to improve delivery in PPP, ensuring at the same time value for money and flexibility in privately financed projects.

Therefore the Commission should stimulate/facilitate EU Member States :

- to ensure the development of effective legislative and regulatory provisions before developing PPP relationships;
- to improve efficient organization and transparent frameworks to streamline the process of delivering PPP projects;
- in improving the general procurement skills of the public sector to deliver value for money in investment;
- to put in place an information resource, accessible to all public authorities and private partners, providing accreditation of PPP advisers to ensure the PPP-partners appoint experienced and qualified advisers who have performed well on other procurements;
- to enforce the standardization of PPP contracts across the public sector to reduce the length and cost of PPP procurements;
- to promote the sharing of best practice;
- to promote the communication with stakeholders

By improving the role of the public sector client, the EU will help to:

UNION EUROPEENNE DES PROMOTEURS-CONSTRUCTEURS
EUROPEAN UNION OF DEVELOPERS AND HOUSE BUILDERS
EUROPÄISCHE UNION DER FREIEN WOHNUNGSUNTERNEHMEN

AUSTRIA – BELGIUM – FRANCE – GERMANY – IRELAND – ITALY – THE NETHERLANDS – NORWAY – POLAND – PORTUGAL – SPAIN – TURKEY – UNITED KINGDOM

RUE DE LA VIOLETTE 43, B-1000 BRUXELLES - Tel. (32) 25 11 25 26 - Fax (32) 22 19 71 99 - www.uepc.org - e-mail: info@uepc.org

- enable authorities to focus more effectively on securing overall value for money, taking in whole-of-life costs, allowing scope for innovative design and using discretion and good judgment in evaluating procurement options;
- increase the speed with which investment is delivered to the public by reducing time spent in procurement;
- reduce the cost to the public sector of procuring PPP projects, improving their value for money; and
- by being a better client, encourage the private sector to bid for PPP projects, strengthening competition and innovation in PPP

According to UEPC, the Commission should clarify the principles of transparency, equality of treatment, proportionality and mutual recognition in relationship with the award arrangements of all kind of PPP-projects, whether institutional or pure contractual. A clarification of these principles should itself respect the principles of non-discrimination and equal treatment, meaning that a different approach is only accepted if there are enough objective reasons for a separate treatment and in respect of the principle of proportionality.

According to UEPC, PPP projects can only be successful if the partners can negotiate in a sufficiently flexible manner*, regardless the (final) formal juridical structure of these projects*. Therefore, negotiations should be considered as the standard rule for PPP-projects.

In principle there is no need to petrify such clarification through purely legislative action. However, an informal clarification document could lead to the necessity of modifying existing regulations that are considered to be too restrictive for successful PPP.

Finally, if the EU considers it necessary to establish itself a contractual framework, such a framework should only cover the basic issues and certainly not all the aspects of the contractual PPPs. This framework may determine some measurable standards such as technical capacity, human resource capacity, financial ability, experience, bidding process (costs), and confidentiality of innovative know-how.

1. UEPC AND THE GREEN PAPER ON PUBLIC PRIVATE PARTNERSHIPS

UEPC is a European association created in 1958. It represents the national federations of developers and house builders and is recognized by the European Authorities. UEPC is a Non-governmental Organisation with consultative status in the Economic and Social Council of the United Nations. It is also a member of the European Construction Forum, the Construction Contact Point and one of the founding members of the European Housing Forum. UEPC is also a member of the Working Group on Sustainable Construction in the Framework of the European Commission Study on the Competitiveness of the Construction Sector as well as of the Expert Group on Accessibility (DG Employment of the European Commission).

The Green Paper of the Commission analyses the phenomenon of PPPs with regard to Community law on public procurement and concessions. Under Community law, there is no specific system governing PPPs. The aim of this Green Paper is to launch a wide ranging debate to find out whether the Community needs to intervene to ensure that the economic operators in the Member States have better access to the various forms of public private partnership in a situation of legal certainty and effective competition.

The Green Paper does not propose any particular option or set of options for Community intervention. The instruments available for improving the opening of PPP operations to competition are in fact very diverse: Community legislative instruments, interpretative communications, measures aimed at better coordination of national practice, or the exchange of best practice between Member States. In fact, The Commission has no wish to prejudge the outcome and will take the fullest possible account of the results of the debate.

The Green Paper contains a list of 22 questions. UEPC decided to elaborate some general considerations and to answer, thereafter, some specific and general questions regarding the experience of UEPC, the need for clarification of the principles of equal treatment, transparency and non-discrimination in relationship with PPP projects, mainly concerning the award arrangements and the contractual framework.

2. GENERAL CONSIDERATIONS

2.1. PRIVATE SECTOR PARTICIPANTS SEEK TO FIND REASONABLE PROFITS

UEPC wishes to emphasize that, for private sector participants, the first requirement for any type of involvement is the potential to derive a reasonable profit. In addition, in return for greater risk exposure, the private sector will also require the potential for commensurate increases in profit potential. Similarly, before committing its own capital in the development of projects, it will require clear legal and regulatory structures, and will want to see the potential for future economic growth, together with reasonable levels of political support and stability.

Some procuring authorities are pursuing an approach to risk transfer that is unsustainable, seeking to transfer too much risk to the private sector. The Government's approach to risk sharing in PPP should be to seek to transfer only those risks that the private sector can more effectively manage. It should not seek to maximise risk transfer, as this would offer poor value for money.

2.2. POLICY INITIATIVES AND MEASURES

According to UEPC, the EU needs to put in place policy initiatives and measures designed to make the public sector a better client in all PPP procurement. UEPC supports the initiatives already taken on the EU-level (guidelines for successful PPP, adoption of the statute for a European Company, Eurostat's recent recommendation that the assets involved in a PPP should be classified as non-government assets, and therefore recorded off balance sheet for government if both of the following conditions are met : 1. The private partner bears the construction risk, and 2. The private partner bears at least one of either availability ord demand risk.).

EU should further stimulate/facilitate all Member States:

1. to ensure the development of effective legislative and regulatory provisions before developing PPP relationships

In this respect UEPC supports the Commission's point of view set forth in its "Guidelines for successful Public-Private Partnerships" of March 2003.

UEPC thinks it would be wise for Member States to institute an assessment of the potential value for money of procurement options when overall investment decisions are being made in the context of the Spending Review, to ensure PPP is only used when it is the best option and has a good prospect of offering value for money. By making a value for money assessment of all procurement options at an early stage, as investment programmes are being considered, this new initial stage will allow maximum flexibility in the choice of procurement options in these areas.

It is wise to use PPP only where it represents the best procurement option. This is unlikely to be the case for projects with a small capital value. It is important then that local authorities have the flexibility to develop such projects through a wide range of procurement routes, choosing the most appropriate option that delivers the best value for the project. This flexibility is part of a wider commitment to devolve responsibility to local councils to meet local priorities, increase local choice and improve performance by removing unnecessary controls that stifle local innovation.

Delivery of the Member States' objectives for housing are dependent on significant programmes of capital investment. In some States PPP is already contributing to delivery of that objective, but its role could also be expanded. Affordable housing provision could benefit from PPP investment because:

- it involves the provision of capital assets where effective project management incentivised by appropriate risk-sharing would bring significant benefits; and
- because of their long life, these assets could benefit from design, construction and costing made on a whole of life basis by private sector parties incentivised to ensure best value.

2. to improve efficient organization and transparency to streamline the process of delivering PPP projects

The private sector should be provided with the confidence to invest in the additional capacity necessary to facilitate several public plans to increase investment in new public sector infrastructure. Local authorities in several Member States have encouraged to bring PPP projects forward, as a limited amount of central government revenue support has been available, but there has been no (clear) basis for allocating such support between different local authority schemes. Projects have therefore been taken forward at considerable risk to the local authority, incurring development costs on the procurement process, with no assurance about the availability of revenue support. Bidders, similarly, have had to bid on schemes whilst uncertain whether they would receive necessary Government support or not. A framework to streamline the allocation of the of central government revenue support should therefore be established.

To ensure value for money and flexibility in privately financed projects, the different governments should explore the provision of framework funding, to make available a faster, cheaper funding solution for bundled small schemes.

UEPC also promotes the establishment of public sector procurement centra specialized in structuring and delivery of PPP projects, which will work with local public sector managers in certain suitable areas to procure such projects, to increase the quality of specifications and reduce delays in the process.

These procurement centra can then support local procuring authorities in particular markets. By increasing the public sector's ability to procure quickly robust and effective PPP projects, these supporting centra will also allow the introduction of PPP into new areas as well as offer a way to increase the number of PPP projects in existing areas. However, there is no need for these centra to become themselves PPPpartners. Their task should be limited to support (local) procuring authorities.

These specialized centra could design a range of new procurement models to bring all the necessary expertise and experience to locally procured PPP projects, providing procuring authorities with the support they need to obtain value for money, while maintaining local control and local accountability in the delivery of public services and public service investment. These models are therefore likely to be most applicable where small projects can be grouped together, and there is no obvious centralized procuring authority.

3. in improving the general procurement skills of the public sector to deliver value for money in investment

It should be an overall EU priority to improve general procurement skills across the public sector. A lasting step-change in the quality of public services in the EU can only be achieved if the public sector has the skill sets necessary to ensure that public investment projects deliver value for money improvements in frontline public service facilities. Improvements in this area need to focus on both the quality of public sector procurement skills and on the way in which they are used. Public sector managers need to:

- be skilled enough to assess procurement options over the long term;
- effectively identify the value for money option, not simply opt for the least-cost option, including taking full account of the quality of design in bids;
- negotiate effectively with the private sector;
- apply skills with sufficient confidence to ensure that appraisal is a real test of procurement, and not an exercise in fulfilling set criteria without regard to a wider view of which option is in the public interest; and
- carry out the evaluation and management of investment delivery in a way that ensures that the public sector is accountable for both the public money which it spends and the public services which it provides.

4. to put in place an information resource, accessible to all public authorities and private partners, providing PPP advisers to ensure the PPP-partners appoint experienced and qualified advisers who have performed well on other procurements

UEPC believes that it is important that public sector managers are well advised, especially when undertaking complex procurement projects such as PPP. Poor advice contributes to slowing the procurement process, can inflate procurement costs, and will impair the ability of the public sector to identify value for money in options appraisal and negotiation.

To assist in meeting these objectives, the EU could seek to put in place a single information resource, covering advisers who have demonstrated their expertise and performance in PPP projects in fields such as law, commercial structuring or finance. This resource will be developed over time, reflecting the experiences of PPP-partners, thus also departments and public sector managers. It is crucial to its successful implementation that this single point of information and experience in hiring and managing professional advisers reflect the qualitative judgment of PPP clients on the standard of the advice they have received, rather than representing simply a list of potential advisers in different areas of expertise.

5. to enforce the standardization of PPP contracts across the public sector to reduce the length and cost of PPP procurements

The European Commission should stimulate Member States to implement general and specific guidance for public authorities on a standardized contractual approach to the most common issues likely to feature in PPP schemes. Standardized Contractual Guidance (as in the UK) should intend to enable public authorities to strike a balanced contractual position that is commercially deliverable for the private sector and can provide value for money for the public sector. In providing a common understanding and approach to common issues, it is also hoped that it will help further reduce the time and cost of negotiations of PPP contracts. This will enable the focus of negotiations to be on the deal specific issues rather than on issues that are generic to PPP projects generally.

UEPC believes that he process of standardizing PPP contracts helps spread best practice, improving PPP procurements across the public sector, and significantly reduces the length and cost of PPP procurement. However, these standard terms should maintain the individual flexibility of a particular procurement to set its needs and requirements, but provide a standard form for those aspects of PPP common to all its procurements. Member States should also be stimulated to produce a ‘procurement pack’ for different contractual PPP projects, such as a “Procurement Pack housing PPP”. The Pack should be intended to provide a guide for public authorities procuring contractual PPP projects and should include template or model documentation.

There should also be a regular dialogue with the private and public sectors over how successfully the standardized PPP contract is being applied.

6. to promote the sharing of best practice

European Centre for Public-Private Partnerships

UEPC believes there is a need for a European Centre for Public-Private Partnerships. The mission of this Centre is to advocate and facilitate the formation of public-private partnerships and to raise the awareness of governments and businesses of the means by which their cooperation can cost effectively provide the public with quality goods, services and facilities.

The objective of the European Centre for Public-Private Partnerships is to foster innovative forms of cooperation between the public sector and the private sector, for the benefit of all Europeans.

The Centre's vision is to influence the way in which public services are financed and delivered in Europe by:

- Encouraging public-private partnerships
- Providing information on public-private partnerships

- Sponsoring conferences and seminars on partnerships
- Stimulating dialogue between public and private sector decision-makers on the financing and delivery of public services
- Educating the public
- Conducting objective research on key issues that influence the effective use of partnerships

The Centre should concentrate on the following activities :

- Promotion and facilitation of public-private partnerships across Europe
- Compilation of a resource library on PPP issues and projects
- An annual conference and regional events on a wide variety of PPP topics
- Informative newsletters (Public-Private Bulletin) on Centre activities, news and issues discussed at the national conference
- Workshops and seminars that allow participants to share innovative ideas and solutions through a national network
- Centre-sponsored publications, including research papers, case studies, guidelines, opinion surveys and national inventories on key public-private partnership subjects

Supporting Authorities Through Project Networks

In the UK, “4ps” supports local authorities developing and delivering housing PFI projects in part through project networks. Networks are seen as an important way of facilitating an exchange of information between project staff. The project networks also have access to 4ps’ hosted ‘extranets’ through which local authority project staff can share, electronically, project documentation. This practice should be stimulated in all EU countries.

Consulting the Market European Housing Practitioners Group

UEPC and the Commission could convene a small working group or ‘practitioners group’ from the housing bidding side as a consultative forum to discuss ‘technical’ and commercial issues related to large housing PPP projects.

7. to promote the communication with stakeholders

More people will be affected by a partnership than just the public officials and the private-sector partner. Affected employees, the portions of the public receiving the service, the press, appropriate labor unions and relevant interest groups will all have opinions, and frequently significant misconceptions about a partnership and its value to all the public. It is important to communicate openly and candidly with these stakeholders to minimize potential resistance to establishing a partnership.

2.3. THE DISTINCTION BETWEEN PURELY CONTRACTUAL PPS AND PPS OF AN INSTITUTIONAL NATURE

The distinction made in the Green Paper between PPP of a purely contractual nature and PPP of an institutional nature makes sense only to a certain point. In fact, institutional PPS is commonly set up on the basis of contracts. A distinction that is made in function of the procurement requirements, and thus based on a purely formal criterium, does not take into account the practical side of different projects. Intrinsically, and apart from the procurement methods, an institutional PPP is more complex as a formula than an contractual PPP (such as a combination of Design-Build-Finance-Maintain-Operate-Transfer), for the public partner can always discuss on the role and the risk sharing as a participant in a juridical vehicle. Moreover, as the public partner is subject to other regulatory measures than private partners, this could create problems in the management of the vehicle.

3. QUESTIONS

3.1. QUESTIONS REGARDING THE EXPERIENCE OF UEPC

1. What types of purely contractual PPP set-ups do you know of?

In its “guidelines for successful public-private partnerships” the European Commission distinguishes four main groupings of PPP relationships: (1) DB and variant forms; (2) BOT and variant forms; (3) DBFO and variant forms (4) Concession (page 28). In its actual Green Paper on PPP, the Commission also refers to PFI-contracts and concessive models (DBFOMT). UEPC-members have experience with these PPP relationships.

Assessing the mean features of this four groupings set out by the Commission in the above mentioned EU guidelines, UEPC concludes that, according to the Commission, those four groupings have all in common that the public facility remains in public ownership or is handed back to the public sector after a period.

However UEPC has also experience with relationships where public facilities do not necessarily have to be transferred to the public authority, but remain in private ownership. According to UEPC these relationships can also be defined as “contractual” :

Turnkey

A public agency contracts with a private investor/vendor to design and build a complete facility in accordance with specified performance standards and criteria agreed to between the agency and the vendor. The private developer commits to build the facility for a fixed price and absorbs the construction risk of meeting that price commitment. Generally, in a turnkey transaction, the private partners use fast-track construction techniques (such as design-build) and are not bound by traditional public sector procurement regulations. This combination often enables the private partner to complete the facility in significantly less time and for less cost than could be accomplished under traditional construction techniques.

In a turnkey transaction, financing and ownership of the facility can rest with either the public or private partner.

Buy/lease, develop / renovate, operate

The private sector buys or leases an existing asset from the public authority, renovates, modernizes and/or expands it, and then operates the asset with/without obligation to transfer the ownership back to the government.

Build-Own-Operate (BOO)

The private sector finances, builds, owns and operates a facility or service in perpetuity. The public constraints are stated in the original agreement and through on-going regulatory authority.

The contractor constructs and operates a facility without transferring ownership to the public sector. Legal title to the facility remains in the private sector, and there is no obligation for the public sector to purchase the facility or take title.

Buy-Build-Operate (BBO)

A BBO is a form of asset sale that includes a rehabilitation or expansion of an existing facility. The government sells the asset to the private sector entity, which then makes the improvements necessary to operate the facility in a profitable manner.

Transfer of a public asset to a private or quasi-public entity usually under contract that the assets are to be upgraded and operated for a specified period of time. Public control is exercised through the contract at the time of transfer.

Sale/Leaseback

This is a financial arrangement in which the owner of a facility sells it to another entity, and subsequently leases it back from the new owner. Both public and private entities may enter into a sale/leaseback arrangements for a variety of reasons. An innovative application of the sale/leaseback technique is the sale of a public facility to a public or private holding company for the purposes of limiting governmental liability under certain statues. Under this arrangement, the government that sold the facility leases it back and continues to operate it.

Finally, UEPC wishes to point out that Member States often select a DBFOMT or concession contract for highway infrastructure, meaning the private partner bears the risk associated with traffic demand, whilst after a certain regulatory measures are taken to stimulate public railway traffic and discourage the use of the motor highway on the basis of environmental considerations.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union?

United Nations Development Program - www.undp.org/ppp/

UNDPs Public-Private Partnerships for the Urban Environment (PPPUE) facility supports the development of innovative partnerships between public and private actors at the local level. Focusing on assisting small and medium-sized cities, PPPUE works with all potential stakeholders to meet the challenge of providing basic urban environmental services.

USA National Council for Public-Private Partnerships - www.ncppp.org

The national organization on PPP in the U.S., the NCPPP website contains up-to-date news, publications, case studies, issue papers and upcoming events south of the border.

Privatization Center - www.privatization.org

Provided through the Reason Public Policy Institute, this is an excellent resource on the issue, including: definitions; statistics and trends; practices and strategies; over 20 specific service areas at three levels of government; details of comprehensive government programs; and the pros and cons of privatisation. It also includes a long list of studies, publications and a directory of private providers in the U.S.

Partnerships Victoria - www.partnerships.vic.gov.au

This site, provided by the State of Victoria Government in Australia, includes guidance materials, information on projects and details of contacts in departments.

Republic of South Africa National Treasury – www.treasury.gov.za

Tenders, manuals, reports and project summaries related to PPP in South Africa (Hint: click on "public-private partnerships" from the homepage).

Japan - www8.cao.go.jp/pfi

Private Finance Initiative Cabinet Office for the Government of Japan

Korea Research Institute for Human Settlements – www.krihs.re.kr

Activities, news and publications from South Korea's main centre of economic promotion and PPP activity (Hint: English version available by clicking link on top navigation bar).

The Canadian Council for Public-Private Partnerships : http://www.pppcouncil.ca

Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

The main law for the PPP projects in Turkey is known as "Concerning the Provision of Certain Investment in the Build-Operate-Transfer Model" (Published June 8, 1994, Law No: 3996). More detailed information can be found in enclosure n°1 of this UEPC- report.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

The actual regulations provide few opportunities for the private candidate launching the innovative idea to really execute his proper idea.

Our Turkish member wishes to stress that, Turkey, especially after the 1980's, has liberated almost all sorts of in and out capital movements radically. Therefore, one can easily say that Turkey has a fully liberal regime for the non-national candidates for the PPP's in hospitals, schools, bridges, rail networks, tunnels, airports, water and sanitation plants etc. and access to the private initiative PPP for a foreign entity is easy. In their application a request for qualification is distributed mostly in a national newspaper. After receiving applications, the contractual body selects a few companies or consortia to get their proposals and amongst these a company or consortium is chosen. After this step, the High Planning Council approves the bid.

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

UEPC has no bad experience regarding this issue.

With certain PPP/PFI, the contract entered into at the outset recognizes that there will be a need for changes over the 15-30 year life of the contract. The key flexibility rights given to the public sector are:

- the public sector has a right to change any aspect of the building or service provision, subject to agreement with the PPP/PFI contractor on cost;
- to ensure that value for money is maintained, for changes over a certain amount in value the public sector can require a competitive tender for any works; and
- where there is a requirement to change service configuration, there is a similar right for the public sector to change any aspect of service provision, subject to agreement on costs, with the ability to require a competition as set out above.

It is important for the public sector to retain flexibility in delivering services. For example, if there is new technology which could improve service delivery, a desire to change the service configuration of the facility such as a shift from in-patient to out-patient care or an expectation that the volume of support services required may change, the public sector needs to retain the flexibility to manage such changes efficiently.

There will always be constraints on the public sector in facilitating such changes whichever procurement method is employed in delivering new infrastructure. Once complete, a new building inevitably presents a degree of inherent inflexibility by its very design.

UEPC therefore recognizes that the public sector client should have the ability to incorporate flexibility mechanisms into (standard) PPP contracts. However this flexibility should never result in juridical uncertainty and loss of reasonable profit for the private partner. In fact, any change is also likely to require new funds to finance any new construction work needed, so affordability could also constrain.

3.2. QUESTIONS REGARDING THE NEED TO CLARIFY THE TREATY PRINCIPLES IN RELATIONSHIP WITH THE AWARD ARRANGEMENTS OF ALL KINDS OF PPP

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

6. In your view, is a Community legislative initiative, designed to regulate the *procedure* for the award of concessions, desirable?

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

UEPC first wishes to point out that any act, whether it be contractual or unilateral, whereby a public entity entrusts the provision of an economic activity to a third party must be examined in the light of the rules and principles resulting from the Treaty, particularly as regards the principles of freedom of establishment and freedom to provide services, which encompass in particular the principles of transparency, equality of treatment, proportionality and mutual recognition.

UEPC further wishes to emphasize that the EU legislative framework governing the choice of private partner is based on the distinction between different types of *contracts*, defined at the EU-level. The contracts denoted as public works or public services contracts, defined as having priority, are subject to detailed provisions of Community Directives. The concessions of so-called "non-priority" works and public services contracts are governed only by some sparse divisions of secondary legislation. Lastly, some projects, and in particular services concessions, fall completely outside the scope of secondary legislation. The same is true of any assignment awarded in the form of a unilateral act.

According to UEPC, the Commission should clarify the principles of transparency, equality of treatment, proportionality and mutual recognition in relationship with the award arrangements of all kind of PPP-projects, whether institutional or pure contractual.

A clarification of these principles should itself respect the principles of non-discrimination and equal treatment, meaning that a different approach is only accepted if there are enough objective reasons for a separate treatment and in respect of the principle of proportionality.

According to UEPC there are no objective reasons to provide in Directive 2004/18 particular rules on “subsidised” housing schemes, thus excluding the non-subsidised housing schemes. In fact in the case of public contracts relating to the design and construction of a housing scheme, - *whether subsidised or not* - the size and complexity of which, and the estimated duration of the work involved require that planning be based from the outset on close collaboration within a team comprising representatives of the contracting authorities, experts and the contractor to be responsible for carrying out the works, a special award procedure may be adopted for selecting the contractor most suitable for integration into the team.

According to UEPC, PPP projects can only be successful if the partners can negotiate in a sufficiently flexible manner*, regardless the (final) formal juridical structure of these projects*. Applying negotiations into the bidding process is a good idea since the dialogue process will lead to a clear understanding between the parties, avoids misunderstandings, gives a great chance to see the real abilities and approaches of the construction companies, in turn, both contracting authority and contractors and the consumers enjoy the benefits of well established PPP projects based on this clear understanding. This process will also give a great chance to the authority not the finalize the tender by evaluating only tender documents which may lead to wrong decisions. Having negotiations would be an important step to choose the best company.

In principle there is no need to petrify such clarification through purely legislative action. However, an informal clarification document could lead to the necessity of modifying existing regulations that are considered to be too restrictive for successful PPP.

Since the adoption of Directive 2004/18/EC, criteria for the award of the contract should also be indicated in the contract notice. It is clear that to comply with the new regulations, public authorities will have to develop award and selection criteria much further in advance of the contract notice than is the current practice, which is to define criteria during the award procedure.

The negotiated procedure allows contracting entities to discuss contract terms and conditions with tenderers on receipt of their offers, and is intended to allow for flexibility and cost savings in the preparation of tenders. However, the use of this procedure is restricted to strictly defined circumstances, and is an exception to the rule that contracting authorities should award their contract under either an open or restricted procedure. It is still uncertain as to whether PPP contracts qualify for the negotiated procedure.

Actually the discussion will start whether to applicate the competitive dialogue or the negotiated procedure. UEPC wishes to stress that there is a major problem in defining the scope of application between the negotiated procedure and the competitive dialogue.

In its « guidelines for successful Public-Private Partnerships » the Commission stated that the case for the use of the negotiated procedure is difficult to make in a Design and Build or BOT contract. According the Commission there will usually be adequate project definition and the nature of the works or the risks attaching to them will usually permit overall pricing. According to the Commission the factors which influence a decision in favour of the use of the negotiated procedure tend to exist in those projects where it is intended to utilise private finance or to achieve a greater degree of risk transfer than is normally anticipated. The Commission also stated that, where private finance is involved, the use of the negotiated procedure is likely to be appropriate for major projects so that optimal value for money proposals are received.

However in the « green paper on public private partnerships » the Commission seems to consider that the use of private finance is no longer a valid argument for the negotitated procedure, as the latter is, according to the Commission, « to cover solely the exceptional situations in which there is uncertainty *a priori* regarding the nature or scope of the work to be carried out, but is not to cover situations in which the uncertainties result from other causes, such as the difficulty of prior pricing owing to the complexity of the legal and financial package put in place.” In a footnote the Commission states that the negotiated procedure may apply when the works are to be carried out in a geologically unstable or archaeological terrain and for this reason the extent of the necessary work is not known when launching the tender procedure.

The Commission seems to be determined that the scope for the negotiated procedure is not to be extended. UEPC wants to point out to the Commission that there is a great difference between an unregulated negotiated procedure without a call for competition and a regulated competitive negotiated procedure with a call for competition in which there are rules on equal treatment, transparency, debriefing, etc.

According to UEPC, PPP projects can only be successful if both parties can negotiate through the PPP-process on the basis of flexible general principles. Therefore, negotiations should be considered as the standard rule for PPP-projects.

3.3. QUESTIONS REGARDING THE NEED TO CLARIFY THE CONTRACTUAL FRAMEWORK PPP PROJECT AND SOME SPECIFIC ASPECTS OF IT (APART FROM THOSE CONCERING THE SELECTION OF THE TENDERING PROCEDURE)

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

Bidding Costs

The cost of bidding for PPP projects can be a consideration as important as the funding of an investor's equity and subordinated debt investments. In funding such costs, a key consideration for the private sector is its success rate in winning bids. Irrespective of success, however, the aggregate level of bid costs expensed in a year does limit the number of bids a company can undertake in that year, usually determined by the overall financial capability of the contractor.

UEPC wishes to warn for increased bidding costs by using the "competitive dialogue"-procedure. Since the contracting entity will have to keep up to 3 bidders in the "race" until the final award, unless there is only one compliant bid after the Competitive Dialogue, the new process may result in increased bidding costs. It was initially proposed that contracting entities would pay a contribution of up to 15% towards the cost of tendering, so as to keep bidders in reserve and allow more competition, but this was rejected. The text is now extremely vague, stating that contracting entities may provide for a "price or payment" for participation to the competition. Potential tenderers should therefore assess whether the contribution to bid costs offered by the contracting entity is sufficient and does not create a risk of unrecovered expenses and costs. More equitable cost sharing deals should become increasingly common in the EU PPP-market.

Some Member States are providing budget facilities for bid costs, others do not reimburse these costs. UEPC believes the Commission should provide Member States with common basic rules regarding the reimbursement of bid costs.

UEPC is quite aware that reimbursing the bid costs of losing bidders will in effect subsidise less successful PPP companies or artificially discourage them from redeploying resources to other PPP opportunities where this could be more successful. Therefore, Member States should priorly aim to reduce these costs by improving public sector capacity : (improve the enforcement of standardisation, develop new procurement models and reinforce procurement expertise to the public sector, to ensure all departments operate as best practice clients, improve the transparency of future PPP programmeS to encourage private sector investment, and continue to encourage new entrants into the PPP market, including non-national operators)

Confidentiality

A further risk is that the contracting authority will cherry-pick the best ideas of tenderers from their Outline Submission for incorporation into an optimum set of output specifications in the invitation to negotiate. Why would potential bidders take the risk that someone else may implement the innovative technical/artistic solution they put forward during the Competitive Dialogue? Under Article 29 of Directive 2004/18, the Competitive Dialogue must be carried out without disclosing the solutions proposed or any confidential information to any candidates without the participant's consent (Article29(3)). However, it is debatable as to whether this includes any information in the outline proposal.

UEPC finds a clarification necessary. Innovative technical/artistic solutions should not be transferred to concurrent parties without the consent of the party that established the innovation.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

The Commission has already published a standard lexicon of common terms for drafting and advertising the award of a contract.

The European Commission should further stimulate Member States to implement general and specific guidance for public authorities on a standardised contractual approach to common issues likely to feature in PPP schemes. Guidance should intend to enable public authorities to strike a balanced contractual position that is commercially deliverable for the private sector and can provide value for money for the public sector. In providing a common understanding and approach to common issues, it is also hoped that it will help further reduce the time and cost of negotiations of PPP contracts. This will enable the focus of negotiations to be on the deal specific issues rather than on issues that are generic to PPP projects generally.

If the EU considers to establish itself a contractual framework, such a framework shoud only cover the basic issues and certainly not all the aspects of the contractual PPPs. This framework may determine some measurable standards such as technical capacity, human resource capacity, financial ability, experience, bidding process (costs) and confidentiality of innovative solutions.

13. Do you share the Commission’s view that certain “step-in” type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other “standard clauses” which are likely to present similar problems?

UEPC refers to the Commission’s “Guidelines for successful Public-Private Partnerships” in which the Commission states that main contractual documents also should include collateral warranties, allowing the contracting Authority for step-in rights.

UEPC also believes that “lenders”step-in clauses will enhance financial aspects of certain PPP projects. The concern of the lenders is that they have financed the project on the basis of projected cash flows and if the Contract (under which these cash flows are agreed to be paid) is terminated, they will not, typically, have any rights to sell the Assets, as would be the case in many types of secured financings. Where direct agreements are required such documents are increasingly seen as advantageous to the public sector, in that they give lenders an opportunity to “revive ” the Project and, therefore, to avoid the disruption that invariably follows termination. If the Project can be restored with minimal disruption to the Service and there is no need for the Authority to get involved to ensure that this occurs, then both the Authority and the lenders benefit.

In some Member States, step-in clauses are part of a standardised contractual approach to common issues likely to feature in PPP schemes. In this context transparency and equal treatment can be secured.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

The Authority often has the perception that it must retain a large degree of control of a subjective nature over Sub-contractors. An Authority may feel it needs to use the contract to allow it to intervene at Sub-contractor level to protect its interest if a Sub-contractor is underperforming (e.g. the Authority may want the right to direct or require the replacement of the Sub-contractor).This approach is not recommended as it should be for the Contractor to manage its Sub-contractors and intervention by the Authority will affect the degree of risk transfer achieved.The Authority should instead rely on the payment mechanism and its termination rights to address sub-standard performance.

UEPC ’s wishes to stress that the private partner who originally selected these Sub-contractors and has taken risk on their performance, should be entitled to change them at will (for example,if they are not performing).

In general, any attempt by the Authority to control Sub-contractors is to be discouraged as it is in most cases unnecessary and may dilute the level of risk transfer achievable by the Authority.

Only in certain limited cases, there may be overriding reasons why the Authority should have a degree of control over Sub-contractors. For example, there may be national security issues (particularly in some defence projects), other public interest issues (e.g.regarding who should be allowed to be involved in schools), or the Authority may have a statutory duty that it needs to carry out. In such cases, the criteria that a replacement Sub-contractor must satisfy should be reasonable (for example, they should require that the potential Sub-contractor is not a threat to national security or other relevant aspect of the public interest).Any judgment that the potential Sub-contractor does not satisfy the criteria should be based on objective evidence.

In cases in which there is no specific reason to control Sub-contractors, the Authority may still want some control on the basis that it placed reliance on the original Sub-contractor 's identity and ability to perform in awarding the Contract to the Contractor. In such cases, satisfaction of a limited set of *objective* criteria should prove an acceptable level of control to the Authority and the Contractor.Any such criteria should include:

- technical ability and competence;and
- financial strength (including any willingness to give guarantees to the Contractor)

Rarely will further criteria be needed.

3.3. General questions

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful?
Do you consider that the Commission should establish such a network?

We do not think there is a magic or best formula to develop the private initiative PPPs, however, a harmonization of the following items will help to have far better results :

- PPP should be promoted as an instrument to enhance quality and should not be presented as an approach to risk transfer that is unsustainable, seeking to transfer too much risk to the private sector;
- Under a PPP approach, a cooperation between government and private parties is achieved where the government works “together” with the private sector, not “over” or “against” the private sector. Therefore political commitment is essential.
- The classical procurement regulations are not established on the basis of a private initiative but on the basis of a public’s initiative and strict procedures, giving few opportunities for innovative action. However, the main issue of PPP is to seek for innovative actions in project(execution).
- **As a result of these classical procurement rules, governements and procuring bodies think too much in terms of “product”-specifications in stead of “service”-specifications.**
- Good governance, and economic stability seem as preconditions for the success of PPP programs. Any uncertainty leads to more risky environment which makes difficult the long-term business decisions.
- Together with this, an appropriate legislative framework is essential if PPP’s are to succeed. Probably most of the authorities accept as a general rule that, challenges in the developing countries would be greater than the developed EU countries to prepare such appropriate legislation.
- Both foreign and national investor must know that the government will be fair in the deal and meet the commitments.
- The responsibilities of both private sector and the government must be pre-determined clearly and objectively.

- Transparency and accountability must be accepted by all the parties as a must.
- A proper communication way must be set-up.

In general, the EU needs to put in place policy initiatives and measures designed to make the public sector a better client in all PPP procurement. UEPC refers to its general considerations.

Enclosure N° 1 : Turkish Practice

TURKISH PRACTICE

I. Introduction

II. Constitutional Amendments and the Public Service Concept

III. Private Participation in Infrastructure under Turkish Legislation

a) Built-Operate-Transfer-BOT Model

1. Law No. 3096

2. Law No. 3996

3. Parties and Agreements in BOT Model

b) Built-Operate-BO Model

- Law No. 4283

c) Transfer of Operation Rights-TOR Model

d) Auto-production Model

IV. Treasury Guarantees and Risk Allocation in the PPI Contracts

V. Municipal Services and Legal Impediments

VI. Conclusion

I. INTRODUCTION

The last decade or so has witnessed what amounts to a worldwide revolution in the funding of infrastructure projects. For much of the twentieth century, the implementation of such project tended to be viewed as primarily or even exclusively the responsibility of national governments. Nevertheless lack of sufficient financial resources and idea of economic liberalization for the sake of ensuring competiton in relevant areas caused the governments to bring private sector into the infrastructure sector. In virtually every region of the globe, governments have in recent years been looking for new ways of implementing these projects, and new techniques for funding them, which place less emphasis on government resources and involvement. As a result of these changes several models have been created in this area ranging from Built-Operate-Transfer (BOT) to Built-Lease-Transfer (BLT) models.

Turkey has not totally been distant form these global developments. Turkey is one of the countries that focused on the alternative models for the involvement of the private sector in infrastructure projects.

II. CONSTITUTONAL AMENDMENTS AND THE PUBLIC SERVICE CONCEPT

There had been some legal obstacles in the BOT model. Turkish Constitutional Court ruled previously that generation, transmission and distribution of energy constituted “public services” and as such, if not provided by state, they could only be entrusted by the state to private companies pursuant to the “concession” contracts. Under Turkish Constitution, concession contracts had to be reviewed by the State Council. In light of this requirement, The Minisrty of Energy and Natural Resources were to submit these contracts to the State Council’s review and approval. There are several concession contracts for locally financed and operated plants. Nevertheless, the concession contracts approved by the State Council differed from the earlier BOT projects. The major problem here for the foreign investors and creditors was the arbitration issue. The State Council, as a feature of the administrative law, did not allow having an arbitration clause in the concession contracts, maintaining that concession contracts were administrative contracts and that therefore all disputes arising thereto could only be resolved by the State Council.

The State Council had taken this approach based on the Constitutional Court's decision that the production, transmission and distribution of electricity was "public service" and therefore subject to concession. the State Council was mainly concerned with ensuring the continuity of such public service and emphasized this concern in the implementation contracts. We also want to draw your attention to the following: Once the IC is agreed among the parties including the State Council, any amendment would need to be reviewed and approved by the State Council as well.

This bottleneck has precluded the concession contracts from being realized for a lengthy period of time and finally the Parliament resolved in 1999 through an amendment to the Constitution that concession contracts may be decided by the judiciary to be in the form of implementation contracts and thus could be made subject to international arbitration. In the aftermath of this decision the Parliament has further enacted some other laws for adopting this change into the Turkish legal system. As a result, Law No. 3996 now stipulates that the contracts made in accordance with this Law are implementation contracts and thus subject to arbitration if the parties to the contract wishes as such. This, for sure, has caused some concerns over the fate of "public service" concept as set forth in our administrative law terminology, but as a matter of "current legislation in force" now it seems there is no legal impediment in this specific sense.

III. PRIVATE PARTICIPATION IN INFRASTRUCTURE UNDER TURKISH LEGISLATION

Apart from direct privatization applications, there are four alternative ways of private project financing allowed by the Turkish Legislation. These are;

a) Build-Operate Transfer (BOT)

b) Build-Own-Operate (BO)

c) Transfer of Operation Rights (TOR)

d) Autoproduction methods

a) BUILD-OPERATE-TRANSFER (BOT) MODEL

Turkey is one of the first countries introducing BOT model to the marketplace during the early 1980's. Although discussions of the model started as early as 1980's, the first contract on BOT structure was only signed in 1995. This was due to lack of legal framework of the BOT model, which took quite a long time to develop. It is the first model launched in Turkey for public and private partnership in the public service related activities (electricity energy).

There are two laws enacted for BOT implementations; Laws No. 3096 and 3996.

1. Law No. 3096

This Law regulates the BOT model in energy sector and was issued in 1984 with the aim of attracting private sector funds to large-scale energy investments. By means of the above-mentioned Law, domestic private sector as well as foreign sector were encouraged to produce electricity.

According to the Law, the Ministry of Energy and Natural Resources submits a proposal to the Council of Ministers and the letter nominates and authorizes the Company for this purpose.

The Company is required to be established as a limited liability company with the participation of Turkish and foreign private sector, if any, in which public companies and agencies (including State Economic Enterprises) may also participate as shareholders.

Electricity produced by the Company could be sold only to TEAŞ (the Turkish Electricity Co. Inc.) or to the company nominated by TEAŞ at a certain district. The tariff for the electricity is fixed between the Ministry of Energy and Natural Resources and the company.

The contract signed between the Ministry of Energy and Natural Resources and the company may have duration up to 99 years, but actually the amortization period of the power plant defines the duration, which can be extended if requested by the company and accepted by the Ministry of Energy and Natural Resources.

At the end of the duration, the power plant with all of its assets is to be transferred to the Ministry of Energy and Natural Resources. The contract between the Ministry of Energy and Natural Resources and the company can be cancelled before the end of its duration under certain conditions, which are defined in the contract.

The tariff is set by the Ministry of Energy and Natural Resources and the Company and includes operation and maintenance costs, reserved funds for new investments, exchange currency differences, technical and capital amortizations, other costs and expenses and a normal rate of profit for the shareholders.

An energy sales agreement ("ESA") needs to be signed between TEAŞ and the company. ESA includes certain articles for determination of the tariff.

If there is a need for the power plant site to be expropriated, this will be done by the Ministry of Energy and Natural Resources but the cost will be undertaken by the company and included in the total investment cost.

2.Law No. 3996

The BOT model gained momentum in Turkey with the execution of the Law No: 3996 enacted on June 1994.

The purpose of this Law is the provision of certain investments and services which used to be realized through public institutions and corporations (including state economic enterprises) before and which require high technology and substantial financial resources, to be realized via involvement of the private sector within the framework of the BOT model. These investments and services include, inter alia, bridges, tunnels, dams, irrigation, water supply and treatment plants, sewerages, communications, transportation, transmission and distribution of energy, highways, railways, ports, etc.

As it is the case with the Law No. 3096, again the executing company is required to be established under the Laws of the Republic of Turkey, in which public companies and agencies may also participate as shareholders.

The company is permitted to operate pursuant to the provisions of the Law No. 6224, being the Encouragement of Foreign Capital. Therefore, the company benefits from the investment incentives.

A separate company is to be established for each specific BOT project.

The Decree No. 94/5907 issued on October 1994 determines the implementation procedure and rules for the Law No. 3996. This Decree also outlines in detail the required characteristics of the executing company, scope and duration of contracts and the principles to be applied in determining tariff for the goods and services provided.

The investments and services covered under the BOT model are to be
presented to the Supreme Board of Planning via the relevant ministry. Upon such application, the Supreme Board of Planning determines the administration authorized to implement the BOT project, the investments and services which will be handled on the BOT basis and grants a permit to such administration.

The administration and the investing company sign an implementation contract.

Duration of the contract covers investment and operating periods, beginning from the effective date as set forth in the implementation contract. The duration may never exceed a total of 49 years including any possible time extensions granted due to force majeure or the reasons attributable to the administration's failure.

The investing company is obliged to design and finance the investments and services, build and operate, maintain and repair the facilities and premises within the contractual duration and transfer the facility in a serviceable, useable and operating condition free from any kinds of liabilities and obligations to the administration at the end of the contract period.

3. Parties to and Agreements in the BOT Model

BOT is a significantly more complex model than classic finance, both in structure and documentation.

To give some examples of the parties involved in the BOT model we can exemplify the following:

- sponsors and shareholders
- project company
- authorizing agency
- project implementing agency
- Treasury
- supplier of input
- buyer of output
- operation and maintenance contractor
- construction contractor
- insurance company

- financiers, banks and export credit agencies
- legal and financial advisers
- trustee and escrow agent

One reason the government plays a large role in BOT projects is that it turns over an activity it would otherwise engage in itself to the private sector. The Project company enters into several contractual relations with the governmental agencies. Initially the project company will enter into an implementation agreement with the administration in charge, aiming at setting out the framework of the project and the obligations of the parties. The main issues addressed in this agreement are as follows:

- the authorization of the project company for a period of time including the construction and operation period,
- provisions enabling the company to have usufruct rights on land of site,
- the obligations of the project company and the host government in scope of the agreement and the penalty for not fulfilling these obligations,
- the provision regarding the cost and financing of the project,
- the provision regarding the cancellation of the agreement,
- the tariff of the product or services to be provided by the project,
- transfer after the end of the contract,
- the other agreements that will be entered into for the project,
- governning law and jurisdiction

The project company will in most instances enter into agreements with other governmental agencies for the supply of raw materials and/or the purchase of the project output or for related guarantees.

The government or its agencies may enter the picture also for the financial aspects of the project through its contribution in equity, by providing loans and/or by other means of financial support such as guarantees.

In such a complex structure concerning different ministries it is a difficult task to eliminate the inconsistencies which may arise. Therefore in the process of implementing a BOT project, the implementing authority undertakes a very important role in minimizing -if not totally discharging- any inconsistencies via timely obtaining necessary contribution from all relevant parties.

b) BUILT-OPERATE (BO) MODEL

The Built-Operate (BO) model was developed in 1996 in response to the Constitutional Court decision dated 1996 and was designed to avoid the concessional limitations in the BOT model. This model may also be viewed as a further attempt in favor of privatization of the energy sector since it does not foresee the transfer of the electricity generation plants back to the state.

Law No. 4283 authorizes the Treasury for granting guarantee to the payment obligations of TEAŞ under energy sale contracts. Thereafter, Council of Ministers Decree dated August 29, 1997 aligned details of the implementation.

In general the BO model is based, according to the new legislation, on granting permission to generation companies other than TEAŞ to establish, own and operate plants to produce energy. An implementation contract is signed between TEAŞ and the company.

The company applying to TEAŞ or at least one of its shareholders must have previously performed investment or operation activities in the same field of work. Any other requirement sought should be mentioned in the tender announcement. Announcing a tender is at the discretion of TEAŞ but companies wishing to establish generation facilities may also apply to the TEAŞ, indicating the consumers to whom they intend to sell the electricity which they are planning to produce. After evaluation of the bidding proposals by TEAŞ, the Ministry grants the permission for power generation.

Issues such as the extent of buy-back guarantee of TEAŞ; the price for which determination of the unit price and the criterion of yearly price adjustment; the authorization period -not to be more than 20 years- with the option of an extension at the end of the authorization period; dispute resolution mechanisms and governing law shall be articulated in the Agreement.

The Law No. 4283 regarding the Build-Own model excludes the hydroelectric, geothermal and nuclear energy production and the idea behind this was not to create any links with the concession concept. Thus, these areas of energy production will be the concentration of the BOT model applications.

Treasury guarantee will be provided only for the payment obligations of TEAŞ under the ESA for BO projects, and, implementation contracts for such BO projects will not need to go to the State Council for preliminary review.

c) TRANSFER OF OPERATION RIGHTS (TOR) MODEL

Transfer of Operational Rights (TOR) model is also based on the same legislation as the BOT and the Constitutional Court also labeled the TOR's as concessionary. the Ministry of Energy and Natural Resources had to submit these concession contracts to the State Council for rewiev and approval.

According to the Article 5 of the Law No. 3096, the operation rights
of the power plants owned by the public sector in a certain district can be transferred to the private companies. The decision of the transfer of operational rights is to be taken by the Council of Ministers.

Then the private companies that are entrusted with the operational right should perform according to the Law No. 2983, being the “Encouregement of Savings and Promotion of Public Investments”.

The “transfer value” of the plant is to be agreed upon between TEAŞ and the private company according to the economic and technical specifications of the plant. The transfer value covers all of the operation costs of the plant, including the interest on the loans obtained to pay the transfer value.

The transfer value is the basic figure in the tariff, together with a profit. Insurance of the plant is necessary. The beneficiary of the insurance policy is the public authority.

The term of the operational rights is 20 years. The tariff is fixed at the outset of the transfer and does not change throughout the operational period.

The Treasury also provides guarantee for this model for the payment obligations of TEAŞ arising out of the ESA in due course.

The plant will be transferred back to the Government at the end of 20 years in good operating conditions and without any debts or damages.

d) AUTOPRODUCTION MODEL

Auto-production model in electricity was allowed through Regulation No. 85/9799 dated September 1985 for industrial own use.

An auto-producer can be one industrial company or a group of companies. Authorization for auto-production is given by the Ministry of Energy and Natural Resources to the auto-producer subject to approval of the responsible administration of the district or TEAŞ.

The Council of Ministers has issued a Decree No. 96/8269 in May 1996 to establish rules and regulations for electricity auto-production.

According to the said Decree, a contract will be signed between the auto-producer company and TEAŞ to define the amount of excess energy to be bought by TEAŞ, its tariff, duration and other related issues.

Treasury guarantee may be provided for the excess energy to be bought by TEAŞ.

According to the above-mentioned Decree, the auto-production contract is exempt from the State Council approval, and an international arbitration clause for disputes to arise among the parties is allowed.

The auto-producer is allowed to sell the energy, other than its own use, to;

- companies who own transmission lines,
- distribution companies with the condition of paying transmission cost to the transmission companies,
- organized industrial districts,
- small industrial areas,
- companies with more than 4000 kwh established capacity.

IV. TREASURY GUARANTEES AND RISK ALLOCATION IN THE PPI CONTRACTS

If requested by the authorizing agency**,** in support of properly structured and implemented projects, Turkish Treasury is authorized to provide guarantees for BOT, BO and TOR models according to Laws No. 4180 and 4283. There are 5 different types of guarantees provided for BOT and TOR projects. These guarantees are as follows:

1.Guarantee of payments to be made to the project company for the goods and services purchased by the related administration.

2.Guarantee of full and partial payment to the lenders for any subordinated loans to be supplied from the financial institutions, or guarantees in favor of the funds undertaking financial liabilities for subordinated loans for the project company.

3.Guarantee in favor of the lenders for repayment of any senior loans in case of an early transfer of the facilities to the related public administration.

4.Guarantee of provision of input to be supplied by the related administration.

5. Payment guarantees to be made by the electricity energy fund.

These are all payment guarantees and no performance guarantees are allowed.

Guarantee of foreign exchange currency risk is not covered under the guarantee law, therefore Treasury is not allowed to extend such a guarantee. However, since there are no foreign currency controls or restrictions and the tariff payments were determined to be made in foreign currency in most of the BOT projects, we have not encountered any problems because of our not extending such a guarantee.

For the BO and auto-production, there is only purchase of electricity guarantee on a take-or-pay basis to be provided to the project company.

WHERE THE TREASURY STEPS IN

The terms and conditions of agreements between the project company and governmental agencies are in the responsibility of the relevant government agency within the scope of its legal authority. Therefore, relevant governmental agency determines the project company and prepares the Implementation Contract (IC) that would, inter alia, also cover the basis of the Treasury guarantees. Before an IC is prepared, the project company should have submitted all required feasibility reports, cost-benefit and similar studies.

We would like to stress that the Treasury should be involved in negotiations of all the related documents so long as and to the extend that its guarantees are effected.

Experience shows that most of the times Treasury went beyond its responsibilities to find constructive solutions when the negotiations among the government institutions, companies and creditors got stuck.

All parties to a BOT-project should realize that the Treasury Guarantee letter is the final document to be signed during the course of the project, but a critical and important one. Therefore necessary action should be taken from the outset of negotiations and the Treasury should go over every agreement signed between the parties.

V. MUNICIPAL SERVICES AND LEGAL IMPEDIMENTS

Municipal infrastructure services has been traditionally covered within the scope of Law No. 1580 dated April 1930. Referring again to the century old "public service" concept, the Law stipulates that "concessions" may be given to private parties regarding such municipal services as electricity, natural gas and water provision, and light rail transportation services. Nevertheless, Law No. 3996 transferred the scope to this new law and as clearly referring to the BOT model this new law started to be the main legislative reference for provision of such municipal services.

In the light of the new Constitutional amendments, it may be asserted that by now there are no legal impediments at least in the context of international arbitration for municipal PPI applications. Nevertheless, this new law has some deficiencies in itself, in that it requires approval by the central authority for any specific project, thus allowing a discretionary power to be used by the central administration. For example, even for a simple multi-storage car parking facility, municipalities need to submit their PPI project to the central authority and need to get approval.

Furthermore, this law refers to the BOT projects that require high technology and amounting to high investment figures. On the other hand, not all the BOT projects are necessarily of this kind. Therefore, some changes into the Law No. 3996 should be considered to further ease realization of minor-scale regular PPI applications, especially in the municipal level.

VI. CONCLUSION

The previous experience has helped us understand the pitfalls for private participation in infrastructure. In the past we have unfortunately created a ground whereby the investors were provided with unnecessarily extensive guarantees. Therefore it is now a good opportunity to start taking steps towards a more liberal and risk-balanced era for attracting private investment into infrastructure investments in line with the international experience that proved to be successful in this respect.

uni europa

European Commission,
C 100 2/005
B - 1049 Brussels

Tuesday, 13 July 2004

Dear Sir/Madam,

Re: Consultation on the Green Paper on Public-Private Partnerships and Community law on public procurement

Please find enclosed UNI-Europa's response to the public consultation and a selection of our materials of relevance to this matter.

UNI-Europa believes that high-quality, universal, well-developed and well-financed services of general interest are essential in a knowledge-based economy and are a precondition to achieving the Lisbon goals on employment and social and territorial cohesion.

UNI-Europa's main concerns about PPPs and public procurement are focused on employees' rights and working conditions, particularly those within outsourced or quasi-public service providers. On the basis of experience amassed by our affiliates in different countries our approach to PPPs is a very cautious one.

We welcome the opportunity to participate in this consultation, and are available to clarify any questions arising from this submission.

Yours sincerely,

Bernadette Ségol
Regional Secretary

Public-private partnerships and Community law on public contracts and concessions

UNI-Europa's response to the Green Paper

UNI-Europa is a European trade union federation for services and communication. UNI-Europa has 320 affiliates and speaks for 7 million organised workers in the commerce, finance, telecommunication, postal, graphical, cleaning, security, business services, IT, personal services, social protection, leisure, sport, media and entertainment sectors. UNI-Europa develops a horizontal approach to cross sectoral issues confronting the service sector. UNI-Europa is a recognised social partner in the EU. UNI-Europa is a member of the European Trade Union Confederation.

UNI-Europa est une fédération syndicale européenne pour les services et la communication. UNI-Europa compte 320 syndicats-membres et représente 7 millions de travailleurs syndiqués dans le commerce, la finance, les télécommunications, les postes, le nettoyage, la sécurité, les services aux entreprises, la protection sociale, les loisirs, le sport, les médias et spectacles. UNI-Europa élabore une approche horizontale aux questions auxquelles est confronté le secteur des services. UNI-Europa est un partenaire social reconnu par l'Union européenne. UNI-Europa est membre de la Confédération européenne des syndicats.

UNI-Europa's President is Frank Bsirske (Ver.di, Germany).
The Regional Secretary is Bernadette Ségol

Uni-europa@union-network.org

UNI-Europa response to the Commission's consultation on public-private partnerships and Community law on public contracts and concessions

High-quality, universal, well-developed and well-financed services of general interest are essential in a knowledge-based economy and are a precondition to achieving the Lisbon goals on employment and social and territorial cohesion.

Employees are key stakeholders in the development of high-quality services of general interest. UNI-Europa represents 320 member unions and speaks for 7 million organised workers in the commerce, finance, telecommunication, postal, graphical, cleaning, security, business services, IT, personal services, social protection, leisure, sport, media and entertainment sectors. UNI-Europa is also a recognised social partner in the EU. We welcome the opportunity to participate in this consultation.

Funding panacea or privatisation by stealth?

Public authorities are increasingly under pressure to deliver high-quality, universal services of general interest in an economic context characterised by reducing use of direct taxation and fiscal stringency. As public authorities at all levels search for means to secure future sources of funding for services of general interest and increase the efficiency of service delivery, PPPs are increasingly touted as a solution, particularly for the new member states and accession countries.

UNI-Europa is concerned that PPPs may neither fulfil their promise as a future panacea of public funding nor the promise that private participation will bring greater efficiency and high-quality service provision.

Rather, although there are a number of success stories, public authorities and the taxpayer often end up shouldering heavy financial burdens resulting from misuse or misapplication of PPPs. While employees often bear the brunt of contracting companies aiming to reduce overheads and their overall bids for public sector contracts. Furthermore, research conducted by the ETUC and CEEP on services of general interest in the new member states and candidate countries, confirms our experience in the older member states that the privatisation of services does not lead per se to more efficient and cost-effective services or a better performance.

These experiences highlight some of the very real threats associated with PPPs, particularly as far as infrastructure funding is concerned. We welcome the Commission's recognition of this fact: '…recourse to PPPs cannot be presented as a miracle solution for a public sector facing budget constraints' (pp.4).

In conjunction with European rules on competition and market liberalisation, the development of PPPs could constitute a means to further liberalisation of public services in the long run and the increased commercialisation of national welfare states. The emergence of PPPs raises fundamental questions about the future of the European social model based on solidarity and universal high-quality public services. PPPs should not be used as a vehicle for privatisation of public services.

Therefore, UNI-Europa believes that certain basic principles should underpin the development of policies on PPPs. Fundamentally, a PPP:

- Must demonstrate that it brings about desirable outcomes such as efficiency and best value for money in reality;
- Must be compatible with wider economic, social and environmental objectives, and therefore must include employee information, consultation and participation at all stages; and
- Must not be a vehicle for privatisation of public services.

Providing high-quality services and respecting employees: contractual v. institutional PPPs

UNI-Europa's main concerns about PPPs and public procurement are focused on employees' rights and working conditions, particularly those within outsourced or quasi-public service providers. UNI-Europa absolutely opposes the emergence of a two-tier workforce.

It must be stated that these experiences differ greatly between EU member states, generally the worse experiences stem from the UK. UNI-Europa demands that employment and working conditions be taken into account in the elaboration of a regulatory framework on PPPs.

Contractual PPPs

Evidence, collected respectively by CoESS and UNI-Europa for the private security sector and EFCI and UNI-Europa for the industrial cleaning sector, overwhelming demonstrates that the vast majority of contracts are awarded on the basis of lowest bid. In the private security industry, 90% and more of Austrian, Belgian, Danish, Finnish, French, German, Irish, Luxembourg contracts were awarded to the cheapest bid in 1998. This has a direct effect on the quality of the service, and the workers concerned, since these services are highly labour intensive. In most cases, this is due to a lack of available guidance to contracting authorities.

Although rules on the transfer of undertakings apply to externalised contracts, staff have a much better chance of maintaining jobs, terms and conditions and trade union organisation where a local authority has a strong commitment to retaining services in-house than with outsourcing.

The contracting-out or outsourcing of 'in-house' services more often than not alters conditions for staff. A growing mass of evidence demonstrates that private sector restructuring and relocation have resulted in changes to pension entitlement, pay and conditions, holidays and sick leave, trade union representation and negotiation, equal opportunities, job satisfaction, training and career development in all cases of externalisation. It does not remove the uncertainties facing staff working in local government but rather is likely to create new ones.

In the cleaning sector, wage disparities between 'in-house' and private employees are often unacceptably high. Many hospital cleaners who work for outsourcing companies, such as ISS Mediclean, are paid 'poverty wages' in effect. ISS Mediclean provides hospital cleaning, portering and other non-medical services in many British NHS hospitals (Newham, Hairmyres, etc.) on a contractual basis. Industrial disputes have occurred throughout the UK due to the differences between wages for 'in-house' cleaners and their private sector counterparts, which demonstrates a company policy rather than individual instances.

In the private security sector, Group4 Falck (and its current and former subsidiaries: Falck, GSL etc.) provide contracted private security services in many EU countries. While GSL run some custodial institutions in the UK, they also have contracts to transport prisoners to and from courts. Recent empirical evidence from the UK think-tank Catalyst demonstrates, while the custodial services have been championed as a success story of public-private partnership, in reality 'only a small part of the cost-savings achieved by private prisons are the result of innovative management practices. By far the larger part can be related to employees working longer hours, with fewer holidays, for lower pay and inferior pensions and other benefits' (Sachdev, 2004).

On the other hand, Falck provides virtually all ambulance and rescue services in Denmark and is expanding in Sweden and Norway. In Denmark the effective PPP in rescue services stretches back to 1901 and the founding of Falck's predecessor company. About two-thirds of Falck's business is derived from servicing local government contracts to provide 'basic' emergency services to the Danish population. Workers are covered and protected by sectoral collective agreements according to the Danish industrial relations system, and trade unions have a strong role in the company.

Institutional PPPs

Our experience suggests that the freedom to innovate has been greater where authorities have looked at restructuring in-house services.

UNI-Europa believes that joint ventures are more genuinely partnerships that those in which the contractor is kept at arms length with a formal client-side relationship. There are concrete examples where institutional PPPs have been created which do not resort to outsourcing and these should be explored further.

A renowned example is that of Liverpool City Council's joint venture company with BT, in which BT has effectively invested in the improvement of ICT skills amongst call centre workers for Liverpool Direct (local authority information and service line), while the employees remain local authority in-house staff.

Alternatively, the joint venture company created by London Borough of Islington and Accord – Islington Cleansing Services Limited – represents a good example of how outsourced workers can be involved in the management of a service provider. Within this joint venture company, employees are included in the decision-making process through a stakeholder review committee at board level, which includes their trade union representatives, and ultimately the local authority has a 'golden share' with the power of veto over key decisions.

On the basis of the experience amassed by our affiliates in different countries our approach to PPPs is a very cautious one.

Application of EU rules to the selection process

Our primary conclusion from all these different experiences is that much depends on the definition of the PPP concerned and the selection process.

A number of our affiliates have highlighted the lack of transparency and coherence in terms of the role and applicability of EU rules on public procurement, and the confusion that reigns at local authority level.

UNI-Europa believes that EU rules and regulation on public procurement, as revised by Directive 2004/18/EC should apply equally to PPPs. This is essential to ensure not only for transparency in this field, but also to ensure that local authorities are able to select partners on the basis of non-economic social and environmental conditions.

Selecting best practice in contracted cleaning and security services

Beyond these broad principles, UNI-Europa would like to draw the Commission's attention to the joint guides on selecting contractors for public authorities, produced by UNI-Europa and our respective employers organisations in the cleaning (EFCI) and private security (CoESS) sectors (attached to this paper). See: www.securebestvalue.org for more details about the private security sector's initiatives.

In both broad sectors, public contracts account for an increasing proportion of sectoral turnover. In 1997 research demonstrates that public procurement accounted for an average of 33% of turnover in the industrial cleaning sector, in those countries concerned (Belgium, Spain, France, the Netherlands, Portugal and the UK). While in the private security sector that figure was closer to 30%. However, in both cases the overwhelming majority of public contracts are awarded on the basis of lowest cost bid.

UNI-Europa and our employer counterparts are in the process of challenging this trend. Our common concept of *best value* seeks to take into account not only a favourable price, but weighs this up with the quality elements of a bid for service provision.

The jointly agreed manuals on '*Selecting best practice*' provide public authorities with guidelines on identifying selection criteria for high-quality bids. UNI-Europa demands that the Commission take into account, endorse and promote these sectorally agreed guidelines.

Need for a EU Observatory on SGIs collecting information on PPPs

It is crucial that more evidence and experience be accrued from the examples already undertaken. We reaffirm our commitment to the creation of an Observatory at European level analysing services of general interest, which should investigate the use of PPPs and support local/regional authorities in their definition of proposals. UNI-Europa believes that such an organisation should be tripartite in nature, like the European Foundation for the Improvement of Living and Working Conditions, to ensure that employees and their representatives are heard and involved.

UNICE
THE VOICE OF BUSINESS IN EUROPE

29th July 2004

UNICE RESPONSE TO THE COMMISSION CONSULTATION ON ITS GREEN PAPER ON

PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

UNICE primarily wishes to stress that many of the questions in the Commission's Green Paper referring to possible legislation cannot be answered without first having a clear definition of what a Public Private Partnership (PPP) is in the sense of the Community. In this context, we would like to point to the UNICE paper **Recommendations for Promoting Public/Private Partnerships (PPP)** published on the 25th February 2002 which addresses this matter.

Question 1.

What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

Examples of purely contractual PPPs are the operator model (with varying works scope) the concession model and institutionalised PPPs. They correspond to the models listed in Nos. 22 and 23 of the Green Paper.

With the exception of the Spanish Law 13/2003, which regulates and creates a specific framework for public works concessions we are not aware of any other framework conditions for contractual PPPs that are in existence.

Question 2.

In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

Competitive Dialogue is intended for use in any contract which is complex, howsoever that complexity may have arisen. PPPs, by their very nature, are likely to be complex. It is thus probable that Competitive Dialogue will need to be used in most PPPs.
However, it is not logical that this new procedure should, as contemplated by the phrasing of the Commission's question, only apply to purely contractual PPP. Institutionalised PPPs often handle particularly complex projects too.

It is to be hoped that the regulations in Article 1 Para 11 Letter c and Article 29 of the Directive 2004/18/EC provide sufficient legal certainty to enable Competitive Dialogue to be used for PPPs. Article 29 Para. 8 only allows for the possibility but not the obligation to pay candidates who are then not involved in the contract. The tendering process for PPPs is very expensive; at the end of the day the purchasers pay the cost – there is no other source of revenue – and it makes sense for the Contracting Authority to pay the reasonable costs of tendering at the time. Should they not offer to do so, it may stop many companies from participating in such a tender.

Deleted: Page Break

Question 3.

In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

Difficulties could be encountered in specifying the focus of a public contract awarded in the context of a PPP where this is – as is typical of a PPP – a mixed-type contract with public works, supply and service components. The “focus theory” developed for this by the European Court of Justice does not provide for clear solutions in all cases. There are other areas which might pose difficulty, for example the application of Public Procurement rules on PPPs (to the leasing/acquisition of property) or the lack of legal protection in the case of complete contempt of the public procurement rules, which can be of particular importance in the field of PPPs, since these are typically long-term contracts.

Question 4.

Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

Experience gathered so far in the award and processing of works concessions has, in general, been positive.

Question 5.

Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

In the field of works concessions, the relevant regulations of the Public Works Directive have proven to be sufficiently precise. In any case, no criticism has been received so far. In the absence of any proof to the contrary, it is assumed that there is general competition in this area as well.

Question 6.

In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

Repeating the content of our reply to question 5, we do not believe that a Community legislative initiative to regulate the procedure for the award of public works concessions is necessary. For service concessions, a clear EU-wide delineation of the term “concession” needs to be laid down first.

Question 7.

More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

The regulations in the existing directives, apart from the present exclusion of service concessions, are sufficient for the purpose. With regard to PPPs which are not concessions, there is as yet insufficient experience for sound regulations to be drawn up. UNICE recommends that the question might be revisited in due course when more experience has been gained. It is of the view that, should additional regulation for non-concession PPPs prove to be necessary, it may well have to be different from that for concessions, but only time will tell.

Question 8.

In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

As far as we know, PPP schemes are generally publicly tendered so that in this context – if they are above the EU threshold – access for foreign operators is ensured.

Question 9.

In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

As already mentioned in our answer to question 8, it is assumed that the application of an open or restricted procedure will guarantee compliance with the principles of transparency, equal treatment and non-discrimination in private initiative PPPs as well.

The actual problem with private initiative PPPs is to find companies willing to develop ideas without any guarantee that they will be involved in the execution of the PPP realising that idea. The proposal to pay the initiator for their efforts in such a case (see No. 41 of the Green Paper) would therefore seem useful.

The public authority has to take care that eventual advantages of the company initiating the PPP are neutralized, in order to put it in the position to participate in the tendering, without violating the principles of equal treatment and non-discrimination.

In general there should be no different rules for public or private initiative PPPs.

Question 10.

In contractual PPPs, what is your experience of the phase, which follows the selection of the private partner?

Since competitors rarely become aware of possible adjustments to contracts (which might properly require a new tendering procedure), they have no chance to take legal action. Accordingly, the regulatory authorities do not become aware of many of these cases. However and especially in very complex PPPs, adjustment to the contract should be possible.

Furthermore, unlike public purchase contracts, PPPs (whether or not they are concessions) need adjustment over the duration of the PPP. Indeed, it is necessary to adapt PPP conditions over its life to take account of changes in the environment, in the priorities of the public authority, in technical changes, and other circumstances largely without the control of the operator

Question 11.

Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

The automatic contract renewal clauses which have come up in several cases could lead to the object of contract being closed for competition permanently if the term for which the contract is renewed when the option to terminate is not exercised is lengthy.

Question 12.

Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

Question 13.

Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

UNICE feels, in line with the Commission's view, that "step-in" type arrangements as they are currently constituted can be a problem and as such steps should be taken (e.g. more transparency and easily understood rules) which will guarantee the compatibility of such actions with Community law on public contracts and concessions.

It is also UNICE's view that private companies involved in PPPs should also have the right to transfer their contracts subject to the compatibility of such actions with Community law.

Question 14.

Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

A stipulation at Community level would, in our opinion, necessarily lead to rejections of national regulation of contract law and cause problems without a European contractual framework actually bringing any tangible benefit. The national contract law regulations for the execution of PPPs are wholly sufficient. We do not think that any action is necessary here.

Question 15.

In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

We see no need for more extensive regulations for the award of subcontracts in the context of a PPP. It would, at most, be conceivable to include an obligation whereby subcontractors may not be submitted to worse conditions than those agreed in relation between the contracting authority and the main contractor.

Question 16.

In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

Question 17.

In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

See answer to question 15.

Question 18.

What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

UNICE feels that the Commission ought to be aware of the possibility to use institutionalized PPPs to circumvent the application of procurement law.

It is also the case that sometimes if there has been a correct tendering procedure for the initial contract, there is still the question of whether the public authority as associate can conclude a contract with a subsidiary without tendering and to which limits the subsidiary can operate on the market without loosing its in-house privilege. Therefore a clear guideline to which extent the Teckal[1] criteria are applicable to such cases would be welcome.

Question 19.

Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

It would be very welcome if the Commission's Green Paper and the collected answers from the consultation resulted in detailed Commission guidelines on PPPs which sets out obligations to apply Community law on public contracts and concessions in the setting up of a PPP.

[1] *Teckal SRL v Commune di Viano & Azienda Gas-Acqua Consorziale (AGAC) di Reggio Emilia,* Judgement of the ECJ 18/11/1999, C-107/98.

In general and independently of the questions raised in this document:

Question 20.

In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

- ❑ A lack of information and experience as well as uncertainty among the contracting bodies as to when it makes sense to form PPPs, and how to structure them successfully;
- ❑ A lack of political will to give up intervention rights and opportunities and transfer these to the private partner;
- ❑ Protection of in-house interests (interpreted in the strictest possible terms) against foreign participation and application of public procurement rules,
- ❑ Too hesitant liberalisation and opening of the market in certain sectors, e.g. railway;
- ❑ Open questions regarding the stability and growth pact concerning criteria budget deficits and national debt;
- ❑ Tax discriminations against private companies;
- ❑ Unequal access to local, national and European subsidies between public and private operators;
- ❑ Current accounting harmonisation proposals, if not appropriately adapted, could prove to make the PPP process impossible.

Question 21.

Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

Question 22.

More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

The establishment of a European network by the Commission would only be useful if industry was involved in a **partner-like manner**. The exchange of information in such a network should not take place "anonymously" but be gathered and included in the position papers put forward by the parties involved, i.e. the contracting bodies and the executing industry, before Commission's recommendations, communications or other statements based on these are made. The focus of such a network should therefore be the exchange of information and experiences.

UNICE

THE VOICE OF BUSINESS IN EUROPE

25 February 2002

UNICE RECOMMENDATIONS FOR PROMOTING

PUBLIC / PRIVATE PARTNERSHIPS (PPP)

Today more and more countries are turning to private financing for infrastructure and service projects in order to overcome the lack of public funds or to reserve public funding for other priority areas. In the current public deficit situation of most developed and developing countries, private financing becomes a means for public action. PPP is also an alternative to privatisation for dismantling infrastructure or service monopolies. PPP constitutes a mechanism for having a range of suppliers delivering public services, bringing new sources of innovation and management and creating a healthy competitive pressure on all providers to improve their performance.

Private participation in public infrastructure projects is not an innovation; it has existed for several centuries and was particularly used during the 19th century in railways. But operators face more and more difficulties in Europe when they try to set up PPPs, and they are convinced that these difficulties come in part from an uncertain legal and financial environment and from the lack of knowledge and skill of some public authorities, this second reason being partially a consequence of the first.

For these reasons several members of the UNICE Public Procurement Working Group have been asked by their organisations to discuss the issue within UNICE and with the European institutions.

The UNICE PPP Task Force (“TF”) was set up at the beginning of 2001 with the objective of promoting concessions and other public-private partnerships as one of the means to liberalise some sectors, services in particular, and to examine whether or not the existing legal environment is favourable for the development of these schemes in Europe.

The TF has interviewed several experts listed in the annex.

A large majority of these experts have expressed the view that the lack of consistent rules in Europe can hinder or slow down the setting up of PPPs; major and significant public infrastructure projects are thus postponed, to the detriment of citizens.

For instance, in the area of European transport networks the lack of financing is estimated at between € 40 and 50 billion. The delay in implementation of projects, in particular transborder infrastructure projects, is regularly pointed out by the EU Commission’s Transport Directorate General[1].

For the candidate countries facing the acquis communautaire, the need for investment is huge. As stated in the Communication from the Commission “The challenge of environmental

[1] Draft proposal from the Council and the EP on the development of the Trans-European transport network (2001).

financing in the candidate countries": "Even if recent estimations place the total cost of compliance for the ten Central and Eastern European Countries lower than initially estimated – between € 79 and € 110 billion instead of € 120 billion - the need for investment planning remains crucial. The new legislation adopted in 2000 and expected in 2001 will add to the financing needs, since it includes some investment heavy pieces of law, such as a new directive on power plants"[2]. This evaluation for the environmental and energy sectors confirms the potential of PPP as a tool, among others, for the development of infrastructure and services of general interest.

The results of interviews with experts and discussions in TF meetings lead UNICE to the following observations:

- PPPs are complex and take various forms but characteristics common to all PPPs constitute a basis on which common principles can be formulated. Hence, for example, the United Nations Commission on International Trade (UNCITRAL) recently adopted a Legislative Guide to Privately Financed Infrastructure projects (Part I).

- The current legal status of PPPs in Europe does not allow the proper development of PPP projects and the EU needs to examine the means for facilitating PPP transactions. (Part II).

In conclusion, UNICE will add a few recommendations based on points which have been raised regularly during the TF discussions (Part III).

I. Various forms of PPP with common elements

Public-Private Partnerships (PPP) may take different forms, depending on countries, sectors and the parties' preferences. More and more sectors are now becoming involved; not only the infrastructure sector, but also services sectors such as transport, water, waste, municipal services, electronic delivery of public services, prisons, hospital-building, etc.

PPP agreements may cover all or part of a very large range of tasks relating to a public service or an infrastructure: design, building, operating, financing, management and customer care.

Concessions, Build-Operate-Transfer, Build-Own-Operate, PFI and others are all variations of the same basic scheme: an agreement between a public authority and a private entity for the implementation of a project relating to an economic activity. There are different levels in the transfer of management, responsibilities and asset ownership, but the operating risk is always assumed by the private entity. In some cases, the end-user funds or partly funds the cost through direct user charges. In other cases, the public sector client pays – sometimes taking on volume or demand risk and sometimes not.

UNICE does not intend to describe all these forms of PPP in detail. Appropriate definitions and descriptions can be found in many relevant books, guides and regulations.

However, it seems important to underline the following key points:

1. **Current Public Procurement rules are not adapted to the requirements of PPP,** in that PPPs are based on long-term and complex agreements involving three or four parties: the public authority, the private entity, possibly the provider of finance and the

[2] Commission Communication 501PC0304

end-user. Moreover, current public procurement rules concern only the award phase of the contract while PPPs and concessions include the award and execution of the contract.

2. PPP schemes are not the same as privatisations in which the public authority transfers all duties and ownership of the asset to the private entity.

3. All PPPs **have the following common elements:**

   1. they are based on a contract between a public authority and a private entity,
   2. they generally provide for long-term commitment,
   3. the duties are shared between the public authority and the private entity,
   4. the private entity operates, invests and assumes financial risk,
   5. the public authority defines requirements, manages the relationship with the private provider and holds the provider to account for delivering the agreed outputs under the agreed terms. In some cases, the public authority also regulates.

4. PPPs have **advantages** for the parties involved:

- For the public entity :

  - PPP may be the best response to a public need for a long period of time,
  - it may be a means to provide a better quality of service,
  - it requires a “best value for money” approach,
  - it constitutes a means for the better use of the public budget,
  - the public entity does not bear the major risks of a project because they are transferred to the private entity; and
  - the public entity is thereby able to control its costs better.

- For the private entity :

  - it is intended to be profitable;
  - it provides a long-term source of income;
  - it can be a means to diversify activities; and
  - it is a means to export know-how.

- For the user:

  - it may be the only means to obtain a missing infrastructure or service, and
  - to benefit from a better infrastructure or service.
  - development of PPPs should diminish the overall tax burden; and
  - it may also reduce the prices paid by the end-user as a result of the introduction of competition in sectors where monopolistic conditions prevailed before.

5. But PPPs may also raise **difficulties and criticisms:**

   (a) In the opinion of the public, PPPs can suffer from a poor image, frequently because of bad public relations. PPPs are sometimes criticised as being a means to transfer public service to private management with a negative impact on quality, employment, social protection or environment. In such cases, political and ideological reasons can lead to the wrong economic decision that the project should be abandoned, or that it should be financed by the public authority, thereby finally putting an additional burden on taxpayers.

(b) For the parties involved, PPPs are often unduly complex because, in addition to the project and its technical difficulties, many other elements are involved including social, environment, financial and legal aspects. The drafting of the agreement may sometimes require negotiations over several years. The lack of clear rules, combined with a lack of knowledge from some public authorities, contributes to this unnecessary complexity.

Better communications and proper rules on transparency, economic balance between the parties and political certainty should help to overcome these difficulties.

II. Legal status

(a) **Some EU Member States** have specific rules, regulations or systems applicable only to some kinds of PPPs. For example, in France, concessions were developed in many sectors during the 19th and 20th centuries and are regulated by statute and detailed case law. The UK has recently developed a successful tool for attracting investors: the Private Finance Initiative (PFI). PFI deals are also expanding in Ireland, Finland, Norway and Denmark.
(b) **At EU level** there is no global and coherent approach to PPPs. The only provision can be found in the Works Directive 93/37, which concerns publicity before award of a public works concession. There is no provision relating to service concessions.

The Interpretative Communication on Concessions of 26 April 2000 was a first attempt by the EU Commission to clarify the legal regime, but covered only concessions and did not give practical information to operators.

Further articles, reports and seminars have been added to the debate. The following publications have more particularly attracted UNICE's attention:

- Mr A. Mattera's article "La communication interprétative de la commission sur les concessions de services d'utilité publique: un instrument de transparence et de libéralisation" published in issue 2/2000 of the "Revue de Droit de l'Union Européenne".

- The EU Economic and Social Committee Report of 16 January 2001 "Strengthening the law on concessions and PPPs".

- The EU Commission Questionnaire on PPPs to the Consultative Committees (June 2001).

(c) **At International level** organisations like the World Bank or UNCITRAL have adopted rules or guidelines which are useful tools for operators and states and which constitute a framework suitable for privately financed infrastructure projects.

The recent UNCITRAL Guide, adopted in July 2001 after four years of work, constitutes the most interesting set of recommendations because, rather than proposing a model law, it contains recommended legislative principles intended for use as a reference to assist national authorities and legislative bodies when preparing their own laws and regulations.

III. UNICE recommendations

As mentioned above, several international organisations have acknowledged the economic benefit that PPPs can bring to countries and have adopted modern rules or guidelines in order to encourage and promote PPPs. But in Europe, public authorities sometimes mistrust

PPPs or are not aware of the benefits they can bring. They often lack the skills to feel comfortable negotiating on an equal level with experienced operators. PPP programmes often take too long to develop and individual contracts often take too long and cost too much to establish.

This is why UNICE believes that some action at EU level would help to:

1) clarify the issues through **definitions and descriptions of the different PPP schemes**: project agreements, concessions, BOT, Build-Rent-Operate-Transfer (BROT), Build-Own-Operate-Transfer (BOOT), etc. This work would simply consist of collecting the definitions which have been published by several organisations and are used by operators. Collection of these definitions would be very helpful to create a common language and improve communication between interested parties.

2) introduce more transparency in the process leading to these deals and on their technical, legal and financial aspects through the setting-up of **an information exchange system**, for example a website including data about these contracts.

3) ensure **flexibility, transparency and fair treatment in the awarding of PPPs**.

   (a) flexibility because many provisions must be decided by the parties according to the nature of the project and should be adapted to the evolution of the project or of its environment. A freedom of contract approach to the content of the PPP contract is essential in order not to discourage privately financed infrastructure projects.

   (b) transparency and fair treatment must be present at all stages of organising a PPP: bidding, negotiation, contract, economic balance and review.

   Setting up a mechanism for the exchange of good practice would help to accelerate learning across Europe, without jeopardising innovation or slowing down the inevitable and desirable evolution of new models of PPP. The Commission's approach must recognise that PPPs are typically based on contracts which must be adapted to the specific nature of each project.

4) **Introduce the following principles** which have been identified in most of the case studies and presentations as being particularly important.

- The PPP agreement should be set up in a written contract.
- The PPP should be awarded through a transparent and a fair procedure, according to clear selection criteria.
- Ample room for negotiation should be left to the parties because PPPs are based on contracts which must be adapted to the specific nature of each project. Negotiations must respect each party's interest.
- Allocation of risks is an important part of the negotiation: as the UNCITRAL Guide recommends, unnecessary regulation should not limit the ability of the contracting parties to allocate risks as they best see fit.
- It must be possible to modify the PPP contract according to the evolution of the project or of the context. For example, a road concession contract should include a clause providing for the revision of the agreement in case of traffic reduction.
- The parties must be free to set the duration of the contract, the conditions for its extension, its termination and the consequences of termination.
- Mechanisms for settlement of disputes should be part of the recommendations to the negotiator and left to the parties to decide according to the needs of the project.

- In order to ensure the stability of the contract, no change of the legal and regulatory framework by the public authority without agreement of the private entity should be possible.

We recommend that **the EU Commission sets up a panel of specialists** including representatives of operators, public authorities and experienced international organisations to promote the exchange of good practice. In this exercise, particular care is needed to involve practitioners and Government experts from across Europe and to avoid taking any action that would inhibit the evolution of PPPs. It must be recognised that this evolution will occur at different speeds and in different directions across Europe, depending on each country's needs and procurement strategies. The Commission's approach should recognise the benefits of such evolution and aim to accelerate learning.

Annex

HOW UNICE PPP TASK FORCE HAS PROCEEDED

UNICE had adopted an earlier position, on 23 June 1999, in which it expressed the wish to see a consistent approach to all forms of concessions and PPPs and the need for further regulation on this matter.

A new UNICE PPP Task Force ("TF") has been set up at the beginning of 2001 with the objective of promoting concessions and other public-private partnerships as one of the means of liberalising some sectors, services in particular, and of examining whether or not the existing legal environment is favourable for the development of these schemes in Europe.

Presentations on case studies in different countries and sectors and presentations of the work done in other international organisations have enabled the TF to understand better the difficulties which arise when PPPs are being organised.

The TF work programme included the following presentations:

- the World Bank guidelines and experience by Pierre Guislain, World Bank;
- the French system of concession by Xavier Bezançon, Entreprises Générales de France-BTP;
- the UK Private Financing initiative ("PFI") system, by Timothy R. Steadman;
- the work completed by the Syndicat des Entrepreneurs Français Internationaux (SEFI) "For new public-private partnerships in infrastructures and public facilities" by Roger Fiszelson, VINCI;
- ONDEO's experience and case studies by Jack Moss, ONDEO;
- Hochtief's experience and case studies by Bernard Kulle, Hochtief;
- public-private competition in the waste sector in Europe by Paul Huggard, SITA Group;
- the United Nations Commission on International Trade Law (UNCITRAL) Legislative Guide on Privately Financed Infrastructure Projects by Mark Reichel, consultant for the World Bank.

UNIFE
Association of the European Railway Industries

UNIFE Position Paper on PPPS

UNIFE recognises that major infrastructure investment of any kind (not only rail, but also road, airport, utilities etc.) is typically a public sector task. Private sector investment in such schemes requires that investors secure reasonable rates of return based on the level of risk being transferred.

PPP models cannot be standardised across different sectors. The provision of railway infrastructure requires unique solutions.

Regulatory measures taken at European level should establish guidelines clarifying the benefits that an effective private/public partnership in the rail sector can offer and key issues to be addressed. Structuring the preferred approach and setting the regulatory and contractual framework should remain under national responsibility and control.

The PPP concept should encourage the maximum participation of suppliers and sub-suppliers.

Note: This paper replays to the EC public consultation from the April to July 2004, on its Green Paper COM(2004)327
16/07/04
****

What is UNIFE?
UNIFE is the European association for railway suppliers based in Brussels. Its members come from leading edge industries, covering the rail system supply chain, such as major rolling stock system integrators, sub systems suppliers and component manufacturers, suppliers and integrators of rail infrastructure systems and signalling. Furthermore, thousand small- and medium-sized companies are represented at UNIFE through their national associations. Rail track-work contractors are represented through EFRTC, as associated member of UNIFE.

UNIFE key statistics:
The rail supply industry generates €36 billion in revenue per year (excluding infrastructure, which counts for another €25 billion) and employs 100.000 people. UNIFE members manufacture 70% of the world-wide production of rail equipment.

UNIFE mission:
UNIFE represents its members' interests towards the European institutions, rail operators and other business organisations. UNIFE works in partnership with other European and world-wide entities to promote sustainable rail transport. UNIFE supports its members with products and services, as promoting pre-competitive joint innovation solutions for the European transport system.

Paris, le 20 juillet 2004

Contribution au Livre Vert sur les partenariats public-privé et le droit communautaire des marchés publics et des concessions

A titre liminaire, il importe de souligner que le droit communautaire ne fournit pas, à l'heure actuelle de définition des PPP. Contrairement a ce qui avait été annoncé par le projet de communication interprétative sur les concessions en droit communautaire des marchés publics en 1999[1], la communication interprétative publiée en 2000[2] n'a pas appréhendé la problématique spécifique des autres formes de partenariats.

Les définitions suivantes sont proposées :
Le contrat ou l'acte par lequel une autorité publique confie une mission globale à une entité tierce -en général privée- de concevoir, construire, financer, entretenir et exploiter un ouvrage ou un service (en totalité ou partiellement) pour une période longue et déterminée est

- **soit une délégation de service public (concession**, **affermage, etc.) lorsque l'entreprise est, au-delà d'une subvention éventuelle, rémunérée à titre principal par les usagers** ;
- **soit un contrat de partenariat lorsque la rémunération est assurée majoritairement par l'autorité publique**.

Deux critères caractérisent, par conséquent, ce type de contrat :

- la nécessité d'un transfert de responsabilité de l'autorité publique à l'entité tierce avec objectifs de performance ;
- la globalité du contrat qui inclut de nombreuses missions sur une longue durée.

1. Quels types de montage de PPP purement contractuels connaissez-vous? Ces montages font-ils l'objet d'en encadrement spécifique (législatif ou autre) dans votre pays ?

En France, les contrats de délégation de service public (concession, affermage, etc.) et autres contrats de partenariat peuvent entrer dans la notion de PPP telle qu'appréhendée par le Livre Vert, ce qui n'est pas le cas des marchés publics.
Ils se caractérisent par la multiplicité de leurs missions (conception, construction, financement, exploitation) et leur longue durée d'exécution.
Leur encadrement législatif diffère en fonction du mode de paiement qui peut être assuré soit par l'usager soit par l'autorité publique.

S'agissant des contrats à paiement par l'usager, le droit de la passation des contrats est régi par la loi du 29 janvier 1993, dite "loi Sapin".

S'agissant des contrats à paiement public, les dispositions législatives sectorielles suivantes s'y appliquent :

- loi n° 88-13 du 5 janvier 1988 d'amélioration de la décentralisation;
- loi n° 94-631 du 25 juillet 1994 complétant le code du domaine de l'Etat et relative à la constitution de droits réels sur le domaine public;
- loi n° 2002-1094 du 29 août 2002 d'orientation et de programmation pour la sécurité intérieure;
- loi n° 2002-1138 du 9 septembre 2002 d'orientation et de programmation pour la justice;
- loi n° 2003-73 du 27 janvier 2003 relative à la programmation militaire;
- loi n° 2003-591 du 2 juillet 2003 habilitant le gouvernement à simplifier le droit qui a donné lieu à l'ordonnance n° 2003-850 du 4 septembre 2003 portant simplification de l'organisation et du fonctionnement du système de santé;
- loi n° 2003-1119 du 26 novembre 2003 relative à la maîtrise de l'immigration, au séjour des étrangers en France et à l'immigration.

[1] JOCE C94 du 7 avril 1999.
[2] JOCE C121 du 29 avril 2000.

Dans le cadre de la loi n°2003-591 du 2 juillet 2003, une seconde ordonnance, au champ d'application plus général, s'appliquant tant à l'Etat qu'aux collectivités locales, est en cours d'adoption**.**

Il en résulte que la définition issue de la communication interprétative sur les concessions est trop partielle en tant qu'elle résume ce type de contrats à la seule prise de risque d'exploitation**.**

2. **De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation de contrats qualifiés de marchés publics lors de la mise en place de PPP purement contractuels, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? Si non, pourquoi ?**

En France, le cadre des marchés publics n'a pas vocation à donner naissance à un PPP. En conséquence, la question posée ne peut concerner que les délégations de service public et les autres contrats de partenariat.
Or, les délégations de service public font l'objet de procédures déjà adaptées.
Il n'en reste pas moins que la procédure de dialogue compétitif pourra se révéler adaptée pour certains contrats de partenariat, pour autant que les règles de publicité, de nature à préserver les droits fondamentaux des opérateurs, soient respectées et qu'une plus grande sécurité soit apportée à la préservation du savoir-faire des entreprises.

3. **En ce qui concerne ces contrats, existe-t-il selon vous des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics ? Si oui, lesquels et pour quelles raisons ?**

Des entorses ont été observées dans les cas où la consultation d'origine qui devait aboutir à un PPP contractuel s'est transformée en une institutionnalisation du partenariat avec d'autres acteurs, sous prétexte d'infructuosité, permettant la réutilisation des solutions techniques identifiées en amont.
Dans cette hypothèse, et conformément aux règles et principes fondamentaux découlant du Traité, il convient de prévoir une nouvelle mise en concurrence de compétiteurs qui présenteraient des offres dans des conditions d'égalité de traitement, notamment quant à leur structure des coûts qui, pour permettre leur comparaison, devraient être établis selon les principes communs d'une économie de marché.

4. **Avez-vous déjà organisé, participé, ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ? Quelle expérience en avez-vous ?**

Sans objet.

5. **Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non-nationaux aux procédures de passation de concessions ? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre ?**

Les règles fondamentales de publicité, de transparence et de non discrimination sont de nature à assurer une participation effective des compétiteurs non-nationaux.
S'agissant de textes en discussion au sein des Institutions européennes, la plus grande vigilance est, en revanche, à apporter (notamment la proposition de directive relative aux services dans le marché intérieur – COM(2002)2).

6. **Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation de concessions, est souhaitable ?**

En l'état actuel, un encadrement législatif ne paraît pas indispensable.
En revanche, l'adoption d'une nouvelle communication interprétative, qui prendrait en compte les observations du présent document, est souhaitable, notamment pour distinguer les marchés publics des contrats de délégation de service public et des contrats de partenariat..

7. **D'une manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de**

viser dans cet acte tous les PPP de type contractuels, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identiques?

Sans objet.

8. **Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de PPP d'initiative privée est-il assuré ? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu ?**

La pratique de l'invitation à présenter une initiative observée en Italie n'est pas mise en œuvre en France pour l'instant. La législation en cours d'adoption devrait la prévoir, ainsi que le respect des règles fondamentales de publicité, de transparence et de non discrimination.

Dès lors, il ne devrait pas y avoir d'obstacle à la participation effective des compétiteurs non-nationaux.

9. **Quel serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement ?**

Le respect de ces principes doit être assuré par l'octroi d'un droit de premier refus à l'initiateur de la proposition. A défaut de l'acceptation du bénéfice de ce droit par le soumissionnaire, une indemnisation, pour un montant ne couvrant pas la totalité des coûts engagés, devrait lui être accordée.

10. **Quelle expérience avez-vous de la phase postérieure à la sélection du partenaire privé dans les opérations de PPP contractuels ?**

Sans objet.

11. **Avez-vous connaissance de cas dans lesquels les conditions d'exécution – y compris les clauses d'adaptation dans le temps – ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d'établissement? Si oui, pouvez-vous décrire le type de problèmes rencontrés ?**

Pour éviter de telles entraves et discriminations, il est indispensable que le cahier des charges soit suffisamment précis sur le plan du respect des fonctionnalités demandées, de la performance à atteindre mais également sur les conditions générales de délivrance de la prestation ainsi que des clauses d'adaptation dans le temps. Les termes de la réponse à l'appel d'offres du candidat retenu, qui seront repris dans le contrat, doivent pouvoir lui être opposables.

En revanche, les critères d'attribution ne pourront pas imposer de conditions déraisonnables en matière de niveau de tarif ou d'exigences à satisfaire.

12. **Avez-vous connaissance de pratiques ou de mécanismes d'évaluation d'offres ayant des incidences discriminatoires ?**

Des pratiques ou mécanismes d'évaluation discriminatoires sont observés dès lors que les conditions posées au Point 11 ne sont pas respectées.

13. **Partagez-vous le constat de la Commission selon lequel certains montages du type "step-in" peuvent poser problème en termes de transparence et d'égalité de traitement? Connaissez-vous d'autres "clauses types" dont la mise en œuvre est susceptible de poser des problèmes similaires ?**

Le secteur de la construction ne partage pas la position de la Commission sur le "step-in", qui participe à la confiance des prêteurs.

Un changement d'attributaire en cas de défaillance du candidat retenu n'apparaît pas problématique si les termes du contrat initial sont préservés.

La capacité des prêteurs à obtenir raisonnablement le remboursement des prêts consentis doit être affirmée pour maintenir tout à la fois un degré suffisant de concurrence entre les institutions financières et offrir des conditions de marge acceptables.

14. Estimez-vous nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quel(s) aspect(s) devraient porter cette clarification ?

Comme indiqué au Point 6, il est souhaitable de clarifier la nature propre et la définition des PPP contractuels au moyen d'une communication interprétative.

15. Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

La pratique de la sous-traitance dans le cadre des opérations de PPP n'a entraîné, à notre connaissance, aucune difficulté particulière.

16. Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mis en place en ce qui concerne le phénomène de sous-traitance?

Des règles supplémentaires ne paraissent pas souhaitables dès lors que le pouvoir adjudicateur conserve la possibilité de fixer une part minimale du montant d'investissement devant donner lieu à sous-traitance.

17. De manière générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier ou d'aménager les règles relatives à la sous-traitance ?

Cf. Point 16.

18. Quelle expérience avez-vous de la mise en place d'opérations de PPP de type institutionnalisé ? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montage de PPP institutionnalisé ? Si non, pourquoi ?

Historiquement, la création des sociétés d'économie mixte se justifiait pour répondre aux besoins spécifiques de l'économie d'après-guerre alors que la capacité du secteur privé était insuffisante.

Cette situation a perduré et conduit à des distorsions de concurrence que souligne le Livre Vert. Les sociétés d'économie mixte, tant existantes que les entités créées *ex novo*, bénéficient d'un accès privilégié à l'information et d'une structure de coûts sans lien avec les réalités économiques. Elles peuvent élargir leur champ d'activité par simple modification de leurs statuts ce qui est la cause de la distorsion soulignée précédemment.

Il ne peut être accepté qu'une opération soit confiée par le pouvoir adjudicateur à une nouvelle société, préalablement à sa constitution, et ce quels qu'en soient les actionnaires.

19. Estimez-vous qu'une initiative doit être prise au niveau communautaire en vue de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé? Si oui, sur quels points particuliers et sous quelle forme? Si non, pourquoi ?

Une initiative s'impose d'urgence pour préciser les obligations des organismes adjudicateurs.

Elle pourrait s'inscrire dans une communication interprétative, dont l'intérêt a déjà été souligné au Points 6, et devrait notamment couvrir les aspects suivants :

- la mise en place d'une procédure spécifique permettant de démontrer la carence effective du secteur privé à répondre au projet de prestation envisagé et de justifier le recours à un PPP institutionnalisé;
- le respect des conditions équitables de concurrence dans la détermination de la structure des coûts de référence, notamment par l'utilisation d'équipements, de moyens et de personnels publics à des coûts de marché, et par l'utilisation des éléments de l'évaluation préalable (Cf. Point 1 des observations complémentaires);
- l'égalité d'accès aux subventions publiques;
- la garantie d'une absence d'intérêts entre les organismes adjudicateurs et les organes sociaux des sociétés d'économie mixte.

En ce qui concerne, la prise de participation par un opérateur privé dans une entité publique, les principes fondamentaux de transparence et d'égalité de traitement doivent être respectés.

20. **Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des PPP au sein de l'Union européenne ?**

D'une manière générale, les décisions prises dans ce domaine relèvent plus de positions idéologiques des pouvoirs adjudicateurs que de la volonté de ne pas respecter les principes de la libre concurrence dans une économie ouverte.

21. **Connaissez-vous d'autres formes de PPP développées dans les pays en dehors de l'Union? Connaissez-vous des exemples de "bonnes pratiques" développées dans ce cadre, dont l'Union pourrait s'inspirer? Si oui, lesquelles ?**

Néant.

22. **De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique et social durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange des meilleures pratiques? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?**

Un réseau d'experts pourrait, en effet, alimenter utilement la réflexion de la Commission, notamment dans la perspective de l'élaboration de la Communication interprétative envisagée.

Il importe, toutefois, de fixer clairement la mission, les règles de fonctionnement et de suivi des recommandations de ce réseau lors de sa mise en place.

Les questions posées n'épuisent pas la totalité des sujets spécifiques aux PPP et le secteur de la construction souhaite faire part de ses observations sur les différents points suivants :

1. **Evaluation préalable des contrats de PPP**

Une évaluation préalable doit être réalisée par l'autorité adjudicatrice afin de choisir la procédure la plus favorable à une bonne gestion des fonds publics.

Elle doit également comprendre une grille de critères permettant de vérifier l'équilibre des offres remises par les soumissionnaires, interdisant par là les distorsions de concurrence provenant de structures de coûts ne reflétant pas la réalité économique.

2. **Offre économiquement la plus avantageuse**

Il est essentiel qu'une communication interprétative vienne rappeler la nécessité, dans l'attribution d'un PPP, de pratiquer le choix de l'offre économiquement la plus avantageuse, à partir de critères d'attribution annoncés préalablement.

Toute clarification quant aux méthodes susceptibles d'être appliquées, en particulier de pondération de ces critères, est vivement souhaitable.

3. **Durée des contrats**

La détermination de la durée des contrats ne doit pas uniquement s'appuyer sur des conditions d'amortissement et de rentabilité raisonnables. Pour être opératoires, ces deux notions devraient faire l'objet d'une définition plus précise, en fonction des caractéristiques économiques et financières des projets et de l'ampleur du transfert de risques.

4. **Incidence des changements intervenant au cours de l'exécution du contrat**

Pour autant que l'objet initial défini par l'autorité publique soit respecté, ce type de contrat doit permettre qu'il lui soit apporté des modifications en fonction des changements (contraintes environnementales, techniques, évolution de la demande des usagers,…) pouvant survenir tout au long de son exécution sans avoir à remettre en cause l'attribution au titulaire, à défaut de quoi les conditions de confiance indispensables à l'opérateur privé et aux prêteurs ne seraient pas remplies.

5. **Cas de résiliation anticipée**

Le cahier des charges doit prévoir les modalités d'indemnisation du titulaire pour les cas de résiliation anticipée, en particulier ceux liés à un changement intervenant dans les conditions d'exécution du projet.

FÉDÉRATION DES Sem

Maires de grandes villes

LIVRE VERT SUR LES PARTENARIATS PUBLIC-PRIVE ET LE DROIT COMMUNAUTAIRE DES MARCHES PUBLICS ET DES CONCESSIONS

REPONSE COMMUNE DE :

- L'Association des maires des grandes villes de France (AMGVF)
- La Fédération nationale des sociétés d'économie mixte (Fédération des Sem)

29 juillet 2004

INTRODUCTION

- Avec 89 villes et agglomérations de plus de 100 000 habitants, l'Association des Maires de Grandes Villes (AMGVF) de France représente plus de 16 millions de personnes, soit 28 % de la population française. Elle entend promouvoir l'urbain en général et notamment traiter des problématiques liées à la gestion des services publics locaux. Elle agit également pour faire reconnaître l'Europe des villes comme un espace privilégié de dynamisme économique, d'innovation sociale et de citoyenneté.

  La Fédération des Sem rassemble les 1198 entreprises publiques locales françaises qui emploient 65700 personnes et génèrent un chiffre d'affaires annuel de 13 milliards d'euros. Tout en étant présentes et actives sur l'ensemble du territoire, c'est dans les grandes villes que les Sem développent le plus fréquemment dans son intégralité toute la palette de leur activité, au service des populations comme de la cohésion et de l'attractivité des territoires : transports publics, renouvellement urbain et aménagement, logement social, loisirs, tourisme, développement économique, environnement (réseaux d'eau et d'énergie, déchets), télécommunications.

- En rédigeant cette réponse commune, l'AMGVF et la Fédération des Sem ont tenu à manifester la convergence de vues entre des élus des collectivités locales d'une part, les opérateurs d'autre part, sur le partenariat public-privé.

- L'AMGVF et la Fédération des Sem se félicitent de la publication de ce Livre vert. Il lance un large débat sur le cadre juridique le plus approprié aux concessions et aux autres formes de partenariat public-privé (PPP). Or si le droit européen s'applique d'ores et déjà pour une large part aux PPP, c'est jusqu'à présent sur la base de textes pour la plupart élaborés sans que les parties directement concernées aient été associées (principes du Traité, jurisprudence de la Cour, communication interprétative)

  Cette concertation est d'autant plus opportune que contrairement à ce qui est précisé en page 3 du Livre vert, on n'assiste pas en France, au niveau des collectivités locales, au passage « d'un rôle d'opérateur direct à un rôle d'organisateur, de régulateur et de contrôleur ». Dans ce pays de décentralisation très récente (20 ans à peine) et à ce jour inachevée, les collectivités locales et leurs élus restent très attachés à un suivi efficace et au « plus près » de leurs nouvelles compétences, ce qui les conduit fréquemment à opter pour la gestion directe, via des régies ou des entreprises qu'ils contrôlent.

  Si le présent avis tend à répondre aux propositions de la Commission qui visent directement les entités mixtes, l'Association des Maires de Grandes Villes de France n'en demeure pas moins attentive aux conséquences qu'une action législative ultérieure pourrait avoir sur les modes de gestion directe. Comme l'atteste l'étude jointe en annexe 1 sur les services publics locaux des grandes villes et de leurs groupements, il apparaît que la régie reste l'outil privilégié dans certains secteurs, comme l'eau et l'assainissement où la gestion directe avec autonomie financière est majoritaire (47 % pour la distribution d'eau et 58 % pour l'assainissement).

- On peut regretter que pour une première analyse au plan communautaire des PPP, l'approche retenue soit exclusivement juridique, sous le seul angle des marchés publics et des concessions alors que la problématique est bien plus large, renvoyant au champ économique mais aussi politique et social.

- En revanche, la reconnaissance pour la première fois au niveau européen de l'existence d'un «PPP institutionnel », qui en France prend la forme de la société d'économie mixte, constitue un point nettement positif.

- Compte tenu du très vif intérêt qu'elles portent au sujet traité, l'AMGVF et la Fédération des Sem ont jugé opportun de répondre aux 22 questions posées en les illustrant le plus possible par des exemples concrets. Dans un souci de clarté et de synthèse, elles n'en tiennent pas moins à résumer ici l'essentiel de leur contribution.

- L'analyse distincte du PPP contractuel et du PPP institutionnalisé est pleinement justifiée car ces modes de partenariat sont tout à fait différents. Ils ne sauraient par conséquent être traités de la même manière par le droit communautaire, hormis la nécessité, dans les deux cas, d'insérer dans le droit dérivé une définition claire et pérenne du in house.

  Pour les concessions, une nouvelle législation européenne n'est pas nécessaire, car un tel cadre juridique existe déjà. Il a commencé à se constituer, par les apports successifs du Traité, de la Cour de justice et de la Commission. Il est globalement adapté aux situations qui se caractérisent dans chaque Etat membre par leur diversité et leur complexité. En France, ce cadre juridique communautaire a été complété par une législation conforme aux prescriptions communautaires. Une initiative supplémentaire risquerait de rendre le corpus existant trop complexe et inadapté aux réalités du terrain.

  La situation est inverse pour les PPP institutionnalisés, car leur essor très récent n'a pas jusqu'à présent permis qu'ils soient pris en compte par le droit communautaire. Dans un souci de clarté comme de sécurité, un certain nombre de précisions pourraient opportunément être apportées par un cadre législatif élaboré en codécision et dans le respect du principe de libre administration des collectivités locales :

  - reconnaissance du PPP institutionnel comme un mode de gestion à part entière des services publics locaux, la création d'une Sem pouvant constituer un critère de l'exécution d'une mission par une entreprise
  - mise en égalité des Sem avec les autres modes opératoires, par l'impossibilité d'une double concurrence en amont et en aval
  - garantie de la liberté pour chaque Etat membre de préciser les modalités de désignation des représentants des collectivités locales actionnaires dans les instances dirigeantes des sociétés d'économie mixte.

- L'AMGVF et la Fédération des Sem entendent par la présente contribution marquer leur satisfaction à l'égard d'un document qui constitue une occasion privilégiée de clarification comme de réelle sécurité pour les différentes formes de PPP. Elles se tiennent à la disposition de la Commission pour poursuivre l'échange engagé.

REPONSES AUX QUESTIONS DU LIVRE VERT

(1) Quels types de montages de PPP purement contractuels, connaissez-vous ? Ces montages font-ils l’objet d’un encadrement spécifique (législatif ou autre) dans votre pays ?

Si l’adoption d’un cadre législatif par la France des partenariats public-privé contractuel est récente, on peut cependant considérer que nombre de relations contractuelles visaient déjà à une collaboration de savoir faire privés aux missions que doivent assurer les personnes publiques, Etat et collectivités locales.

Il existe, en effet, une large gamme de contrats administratifs, présentés dans le tableau qui suit, et que le droit identifie au sein de trois grandes catégories que sont :

- les marchés publics ;
- les délégations de service public ;
- les conventions d’occupation du domaine public.

DELEGATIONS DE SERVICE PUBLIC ET AUTRES CONTRATS ADMINISTRATIFS

	Définition	Caractéristiques	Rémunération	Sources juridiques
DSP	Contrat par lequel une personne morale de droit public confie la gestion d’un service public dont elle a la responsabilité à un délégataire public ou privé, dont la rémunération est substantiellement liée aux résultats de l’exploitation du service.	· Gestion d’un service public confiée à un délégataire public ou privé ; · Risques commercial et financier assumés par le délégataire avec participation financière possible de la collectivité délégante selon le type de délégation ; · Autonomie du délégataire vis-à-vis du délégant dans la limite du contrôle dudit délégant sur l’exécution du contrat.	Le cocontractant perçoit une rémunération substantiellement liée aux résultats de l’exploitation du service délégué dite « rémunération sur l’usager ».	Loi n° 93-122 du 29 janvier 1993. Décret n° 93-471 du 24 mars 1993. Loi n° 2001-1168 du 11 décembre 2001 (article 3-1).
Marché public	Contrat conclu à titre onéreux avec des personnes publiques ou privées par l’Etat, ses établissements publics autres que ceux ayant un caractère industriel et commercial , les collectivités territoriales et leurs établissements publics, pour répondre à leurs besoins en matière de travaux, de fournitures ou de services.	· Leur conclusion n’est pas conditionnée par l’existence d’un service public ; · L’entrepreneur de travaux, le fournisseur ou le prestataire de services n’ont pour seul interlocuteur que la collectivité publique avec laquelle ils ont contracté.	La rémunération du cocontractant est un prix payé par la collectivité publique en contrepartie des prestations réalisées pour cette dernière.	Code des marchés publics (décret n° 2004-15 du 7 janvier 2004).

Contrat de partenariat	Nouvelle catégorie de contrat, le contrat de partenariat permet de confier à des entreprises privées, par un contrat global, la conception, la réalisation, le financement et la gestion de certains équipements. Il devrait être réservé à des montages complexes auxquels les maîtres d'ouvrage publics ne savent répondre dès la définition du cahier des charges.	. Conception, réalisation, financement, gestion des équipements publics par un cocontractant privé. . C'est un contrat de longue durée (au moins 5 ans) . Suppose une répartition des risques (technique et commercial) entre public et privé.	La rémunération du cocontractant privé n'est pas fondée sur l'exploitation de l'ouvrage ou du service rendu. Elle reposera sur des critères de performance. L'opérateur privé sera essentiellement rémunéré par l'Administration moyennant le versement d'un prix pendant la durée du contrat.	Ordonnance du 16 juin 2004 sur les contrats de partenariat entre le secteur public et les entreprises privées prise en application de l'art.6 de la Loi du 2 juillet 2003.
Bail emphytéotique administratif (BEA)	Convention par laquelle une collectivité territoriale donne à bail une dépendance de son domaine public ou privé à un preneur dénommé « emphytéote » en vue de l'accomplissement pour le compte de celle-ci d'une mission de service public ou de la réalisation d'une opération d'intérêt général.	· L'équipement réalisé est remis, au terme du bail, à la collectivité bailleresse et devient sa propriété ; · Risque de requalification en DSP si le bail est accompagné d'une convention d'exploitation non détachable confiant au preneur l'exploitation de l'ouvrage construit par lui, et que ledit ouvrage constitue le lieu d'activité d'un servie public.	L'emphytéote tire sa rémunération de l'activité pour laquelle le bail lui a été consenti (loyers issus de la location de l'ouvrage réalisé par exemple).	Loi n° 88-13 du 5 janvier 1988 codifiée aux articles L. 1311-2 et suivants du Code général des collectivités territoriales.
Concession d'occupation du domaine public	Contrat par lequel une collectivité territoriale permet à un particulier d'occuper une parcelle de son domaine public dans un but déterminé, de manière exclusive mais précaire et révocable et moyennant le paiement d'une redevance.	Le titulaire de la concession n'a pas de droit acquis à son maintien et l'autorité administrative qui l'a octroyée peut la retirer à tout moment	La rémunération du cocontractant découle de l'activité pour l'exercice de laquelle il a sollicité l'autorisation d'occupation privative du domaine de la collectivité concédante.	Voir article L. 2122-21 du CGCT sur les attributions de l'exécutif local au nom de la collectivité publique.

On peut aujourd'hui conclure que la forme nationale des contrats PPP consiste en un contrat global qui permet à une personne publique d'associer un tiers au financement, à la conception, à la réalisation voire à l'exploitation et à la maintenance d'un équipement public mais que la pratique révèle une grande diversité de relations contractuelles pour ce type d'opérations développées ci-après.

La forme usuelle de partenariat contractuel que constitue la délégation de service public (DSP), consacrée par voie législative en 1993 dans le cadre de la loi Sapin doit rester la forme privilégiée de collaboration des intervenants privés pour répondre aux besoins de professionnalisme, d'externalisation de financement ou de compétence des personnes publiques.

Les conventions de délégation de service public constituent une catégorie autonome de contrats administratifs. Il convient donc de ne pas les confondre avec d'autres types de contrats dont les personnes publiques sont amenées à faire usage.

On se doit de différencier la DSP des autres relations contractuelles que peut avoir la personne publique avec l'intervenant privé ou public.

- **Distinction avec le marché public**

Contrairement à la DSP où le délégataire assure la maîtrise d'ouvrage et le financement d'éventuels travaux, le titulaire du marché, opérateur public ou privé, fournit une prestation à une collectivité publique moyennant le paiement, par elle, d'un prix convenu au contrat.

Le titulaire du marché n'est pas responsable de l'exécution d'un service public, et à ce propos, la présence d'une activité de service public n'est nullement nécessaire à la qualification de marché public. Partant, il n'assume pas de risque d'exploitation et la durée du contrat est strictement limitée à celle nécessaire à la fourniture des prestations convenues.

- **Distinction avec les contrats de partenariat**

Les contrats de partenariat ne visent que la nouvelle catégorie de contrats qui est prévue dans l'ordonnance du 16 juin 2004 sur les contrats de partenariat entre le secteur public et les entreprises privées et permettant une maîtrise d'ouvrage privée et un financement privé d'équipements.

A la différence des marchés publics, ces contrats peuvent s'étendre sur le long terme, comprendre une prestation globale.

A la différence des DSP, l'exploitation de l'ouvrage ou du service n'est pas le principal critère de rémunération du partenaire privé de l'Administration. Celle-ci pourra comprendre des éléments annexes. Elle reposera sur des critères de performance.

- **Distinction avec le bail emphytéotique administratif (BEA)**

Celui-ci semble se rapprocher de la convention de DSP, à un détail près, et non des moindres : le critère de rémunération du cocontractant titulaire du bail.

En effet, bien que le BEA doive toujours se rapporter à une opération d'intérêt général, son titulaire n'est pas substantiellement rémunéré par les résultats de l'exploitation de l'équipement public construit ou de la parcelle dont il bénéficie.

- **Distinction avec la concession d'occupation du domaine public**

Ces deux types de convention obéissent à deux logiques différentes :

Dans le cadre d'une concession domaniale, le contrat est conclu, d'une part, en vue du profit exclusif de l'occupant privatif du domaine public et, d'autre part, cet occupant n'est soumis à aucune contrainte de service public.

La délégation de service public, quant à elle, vise à satisfaire un intérêt public avec des obligations de service public à la charge du délégataire.

Mais il peut arriver que l'une et l'autre formule contractuelle se superposent. Reste alors à déterminer quel est l'intérêt dominant.

(2) De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? si non , pourquoi ?

(3) En ce qui concerne ces contrats, existe-t-il selon vous des poins autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics ? Si oui, lesquels et pour quelles raisons ?

- **Enjeux et définition du dialogue compétitif :**

Le dialogue compétitif est introduit à l'article 29 de la Directive 2004/18/CE du Parlement européen et du Conseil relatif à la coordination des procédures de passation des marchés publics de travaux, de fournitures et de services en date du 31 mars 2004.

Il intéresse le pouvoir adjudicateur lorsqu'il réalise des projets exceptionnellement complexes et qu'il ne réussit pas à définir les moyens nécessaires à la satisfaction de ses besoins en lui offrant la faculté de dialoguer avec les candidats afin de définir le cahier des charges et l'offre la plus adaptée à leurs besoins.

La France, par l'ordonnance du 16 juin 2004, a adopté une législation spécifique aux contrats de PPP visant prioritairement à encadrer et à sécuriser certains montages dits complexes. Celle-ci est caractérisée par un paiement public pendant toute la durée du contrat, pouvant être lié à des critères de performance assignés au cocontractant.

En ce sens, le décret n°2004-15 du 7 janvier 2004 portant Code des marchés publics, a institué le dialogue compétitif qui remplace l'appel d'offres sur performances.

Présentant de nombreux avantages, le dialogue compétitif apparaît être un outil très utile pour la réalisation de projets complexes. Toutefois, il semble devoir être limité à ce type de projets dans le cadre des marchés.

- **Une procédure qui se veut efficace :**

De prime abord, le dialogue compétitif semble introduire une certaine souplesse, par rapport aux procédures de marché, permettant aux collectivités d'adapter au mieux l'offre à leurs besoins.
De plus, cette procédure entraînera, très certainement, un accroissement des possibilités pour les collectivités publiques de développer des relations partenariales avec leurs prestataires.
Enfin, le dialogue compétitif permet aux entreprises de valoriser leur savoir-faire et d'utiliser des réponses innovantes.

- **Une procédure qui suscite des questionnements :**

Tout d'abord, il convient de signaler que le dialogue compétitif ne dispose pas de véritable tradition dans la législation des Etats membres et notamment en France. Il constitue plutôt une procédure très récente dans le droit communautaire comme dans le droit français**.** Une application contrainte et directe de cette nouvelle procédure risquerait de bouleverser l'économie générale de la passation des concessions et des PPP, fondé en France sur la négociation.

En outre, cette procédure pourrait conduire à des inégalités de traitement entre les candidats. En effet, le dialogue compétitif permet aux pouvoirs adjudicateurs de recueillir plusieurs solutions et de choisir parmi cet éventail celle qui convient pour la rédaction du cahier des charges. Cette rédaction peut résulter d'un «cherry picking», qui consiste à choisir parmi les différentes offres des éléments de solutions parfois confidentiels.

De plus, nous tenons à signaler que cette procédure fut élaborée pour les cas où l'autorité publique n'est pas en mesure soit de définir les moyens techniques pouvant répondre à ses besoins, soit d'établir le montage juridique ou financier d'un projet. Or, de manière générale, concernant les PPP et les concessions, l'autorité publique connaît ses besoins et peut parfaitement définir ses objectifs.

Par ailleurs, la Fédération des Sem et l'Association des Maires des Grandes Villes de France estiment regrettable le caractère restrictif des critères du choix définitif de l'adjudicataire dans la procédure de dialogue compétitif. En effet, il convient de rappeler que celle-ci se décompose en plusieurs phases et que ce n'est qu'après la phase de dialogue et la remise du cahier des charges que le choix de l'adjudicataire interviendra. Or, il est prévu que celui-ci se fera à partir d'un classement des offres économiquement les plus avantageuses, l'adjudicateur apparaissant privé de tout autre critère de choix, notamment technique. La procédure de dialogue compétitif ne permet pas de prendre en compte toutes les perspectives des propositions des candidats, restreignant le choix à un unique critère économique.

- En conclusion, la Fédération des Sem et l'AMGVF estiment que le dialogue compétitif est un instrument utile pour les marchés publics mais qu'il constituerait un dispositif complexe, lourd et coûteux, et par conséquent inadapté, pour les concessions.

  Nous considérons donc, à titre principal, que le cadre réglementaire existant doit rester inchangé. Si la Commission décidait cependant d'élaborer une législation, il conviendrait qu'elle privilégie, dans le respect des principes du Traité la procédure négociée, du même type que celle décrite dans la Loi Sapin (cf réponse à question 7).

  Nous souhaiterions à titre subsidiaire, dans l'éventualité d'un complément législatif au sujet de la procédure de dialogue compétitif, en sécuriser la mise en œuvre.

  Il conviendrait que le recours au dialogue compétitif soit toujours réservé à des cas où la collectivité n'est objectivement pas en mesure de définir les moyens techniques à mettre en œuvre ou de faire le montage juridique et financier, c'est à dire dans des opérations réellement complexes ou mettant en œuvre des techniques particulières qui ne sont maîtrisées que par le secteur privé.

  Au regard de la nouveauté de cette procédure pour les droits des Etats, nous estimons préférable que le dialogue compétitif voie ses premiers résultats appréciés sur les marchés avant d'envisager de l'appliquer aux concessions. Une évaluation pourrait opportunément être engagée au plan communautaire, dans le cadre d'un observatoire européen afin d'envisager à terme des améliorations du dispositif et son éventuelle extension aux concessions.

(4) Avez-vous déjà organisé, participé ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ? Quelle expérience en avez-vous ?

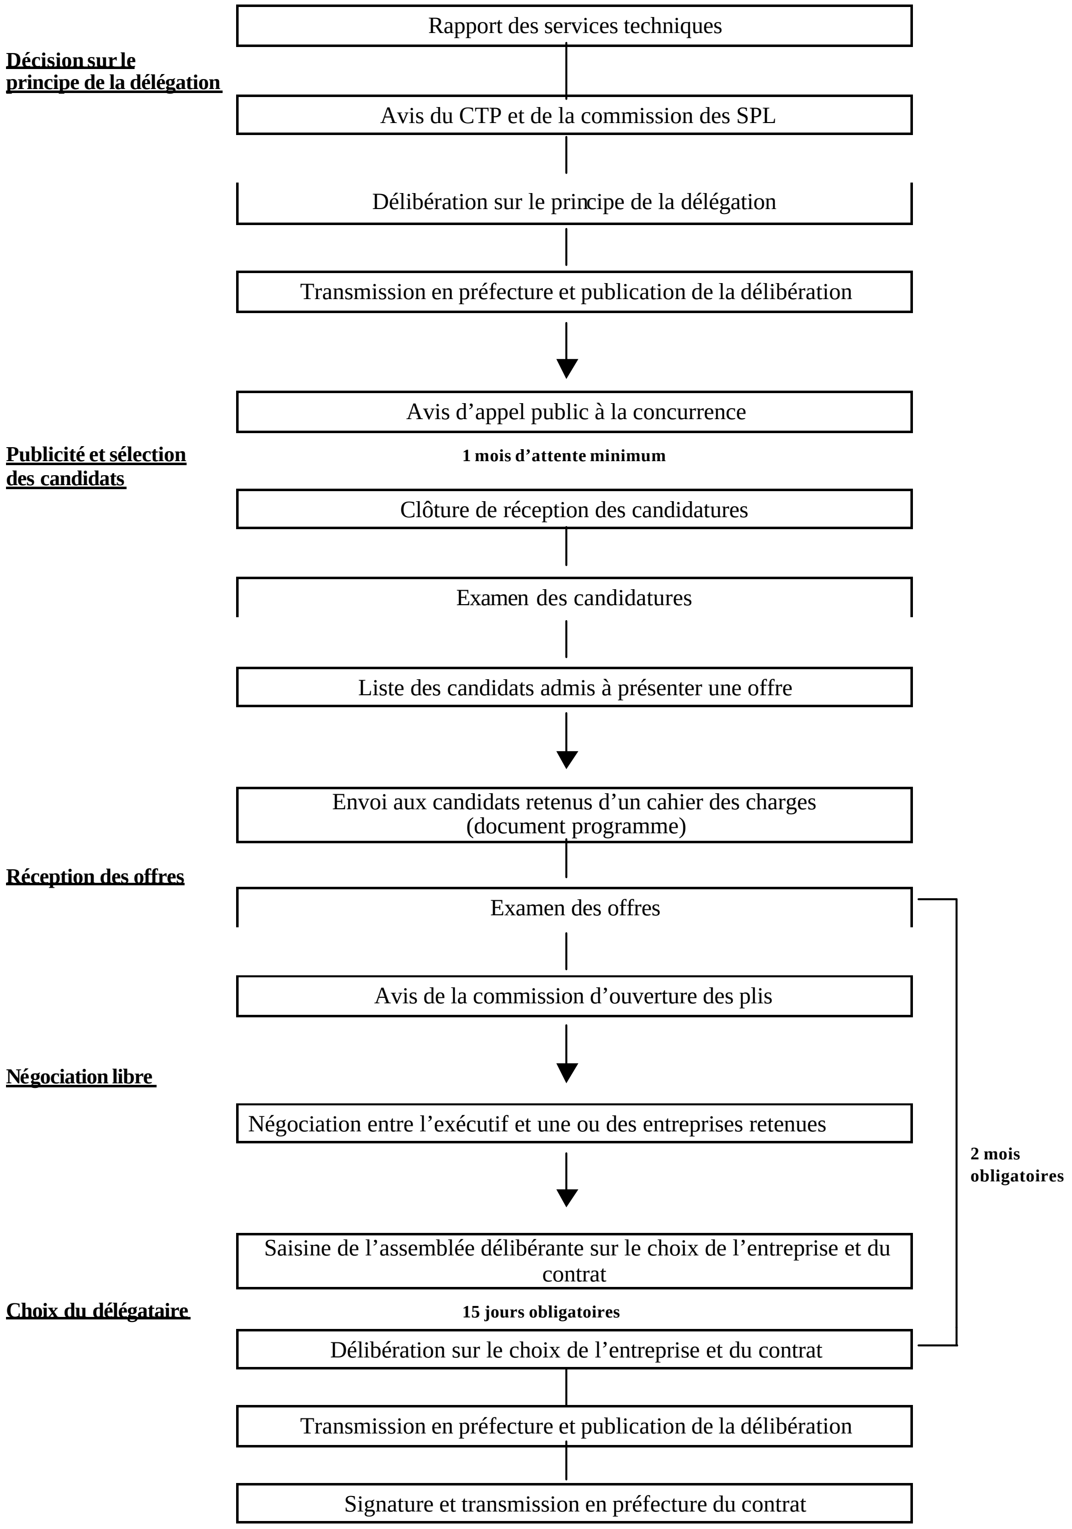
La loi française du 29 janvier 1993 (dite loi Sapin) organise la procédure de passation des contrats entre les autorités délégantes et les entreprises chargées d'assurer ces prestations :

- soit en portant elles mêmes l'investissement ("concession de service public")
- soit en se voyant confier l'exploitation d'un équipement déjà construit ("affermage" ou "régie intéressée")

  Dans les deux cas le délégataire doit se rémunérer de façon substantielle par des droits perçus sur l'usager du service.

LES CINQ ETAPES DE LA PROCEDURE DE DELEGATION DE SERVICE PUBLIC

POUR LE CHOIX DU DELEGATAIRE



Décision sur le principe de la délégation

Rapport des services techniques

Avis du CTP et de la commission des SPL

Délibération sur le principe de la délégation

Transmission en préfecture et publication de la délibération

Publicité et sélection des candidats

Avis d'appel public à la concurrence

1 mois d'attente minimum

Clôture de réception des candidatures

Examen des candidatures

Liste des candidats admis à présenter une offre

Réception des offres

Envoi aux candidats retenus d'un cahier des charges (document programme)

Examen des offres

Avis de la commission d'ouverture des plis

Négociation libre

Négociation entre l'exécutif et une ou des entreprises retenues

Choix du délégataire

Saisine de l'assemblée délibérante sur le choix de l'entreprise et du contrat

15 jours obligatoires

Délibération sur le choix de l'entreprise et du contrat

2 mois obligatoires

Transmission en préfecture et publication de la délibération

Signature et transmission en préfecture du contrat

Cette législation donne globalement toute satisfaction : elle trouve son application dans de très nombreux services locaux pour lesquels l'usager acquitte un droit d'usage finançant tout ou partie du coût du service. Elle permet la remise en compétition périodique, dans une procédure qui allie transparence, libre choix et contrôle des autorités publiques.
Cette émulation a permis de construire des services performants, avec une grande souplesse dans les montages financiers entre partenaires publics et privés.

(5) Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non-nationaux aux procédures de passation de concessions ? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre ?

En ce qui concerne les concessions qui relèvent du nouveau cadre communautaire des marchés publics, la transposition dans le droit français de la procédure de dialogue compétitif doit permettre de couvrir les marchés globaux et complexes. Pour le reste, le principe de subsidiarité prévaut. La procédure de passation d'une concession de service public prévoit une publicité préalable dans le Journal Officiel de l'Union Européenne avant la diffusion d'un avis dans une publication habilitée à recevoir des annonces légales et dans une publication spécialisée.

(6) Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation de concessions, est souhaitable ?

Un droit communautaire des concessions existe déjà, il s'est progressivement bâti sur la base des règles du Traité, de la jurisprudence de la Cour de justice, et de la communication interprétative de 2000. Il présente l'avantage d'être bien adapté à la situation des concessions, qui est à la fois complexe et diverse, et de respecter la subsidiarité.

Ces règles communautaires ont fait l'objet en France d'une transposition nationale dans le cadre de la loi Sapin dont le bilan, 10 ans après son entrée en vigueur, est jugé positif par l'ensemble des acteurs concernés.

L'AMGVF et la Fédération des Sem ne sont donc pas favorables à une initiative législative communautaire supplémentaire dont la plus-value reste à démontrer. Le risque serait plutôt de voir «s'effondrer le millefeuille » existant, qui donne satisfaction, mais supporterait difficilement un étage supplémentaire. Le résultat serait par conséquent contre-productif puisque contraire à l'objectif affiché d'encourager le PPP.

(7) De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les PPP de type contractuel, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identique ?

- Dans l'éventualité d'une nouvelle action législative, les signataires sont d'avis que la Commission devrait proposer, en complément de l'appel d'offres traditionnel et de la procédure du dialogue compétitif, une troisième voie de passation mieux adaptée à la nature des concessions (longue durée, risques pris par le partenaire, adaptation future du contrat, intuitu personae,....). La Commission pourrait s'inspirer de l'expérience reconnue et confirmée de la loi française du 29 janvier 1993 (dite loi Sapin), ou de la loi Merloni en Italie, qui, tout en garantissant le libre choix du délégataire dans la phase finale de la procédure, assurent le respect des principes du Traité (égalité de traitement, non discrimination, transparence).

- En outre, l'opportunité qui s'offrait dans le cadre du « Paquet législatif marchés publics » n'ayant pas été saisie**, il demeure nécessaire d'insérer une définition claire et pérenne du in house dans le droit dérivé.**

  Celle-ci ne relève en effet actuellement que de la jurisprudence de la Cour de justice. Un ancrage dans le droit dérivé offrirait une plus grande sécurité juridique.

  Cette nécessité d'une reconnaissance claire du droit à l'autoproduction a récemment été soulignée par le Parlement européen lors de l'adoption le 14 janvier 2004 du rapport sur le livre vert relatif aux services d'intérêt général.

  L' AMGVF et la Fédération des Sem proposent une définition reposant sur deux critères cumulatifs :

  - Le contrôle doit être caractérisé dès lors que le(s) pouvoir(s) adjudicateur(s) possède(nt) la majorité des droits de vote dans les instances dirigeantes de l'entreprise publique locale et exerce(nt) notamment de ce fait, un contrôle effectif.

  - Le chiffre d'affaires doit être réalisé :
    → soit au moins à 80% pour le(s) pouvoir(s) adjudicateur(s) actionnaire(s)
    → soit en totalité à l'intérieur des limites territoriales du (ou des) pouvoirs(s) adjudicateur(s) actionnaire(s), puisqu'il n'y a pas dans ce cas d'affectation des échanges entre les Etats membres.

    et sur une condition :

    L'entreprise publique locale applique, pour la sélection de ses propres co-contractants les règles de mise en concurrence dont elle est dispensée, en amont, pour ses relations avec le(s) pouvoirs(s) adjudicateur(s) actionnaire(s)

- Dans l'esprit du récent projet de décision de la Commission relative à l'application de l'article 86 du Traité destiné à apporter plus de sécurité juridique aux acteurs locaux, il pourrait être opportun, comme cela est proposé pour les aides d'Etat, d'envisager l'instauration d'un seuil de minimis aux contrats de concessions et autres PPP de faible montant. Cela ne dispenserait pas, naturellement, du respect des principes du Traité dès le premier euro.

- Pour que les collectivités locales continuent de pouvoir assumer leurs missions dans des conditions satisfaisantes, il pourrait également être opportun d'envisager que le recours à des contrats de partenariat public-privé soit précédé d'une évaluation démontrant que cette formule présente un réel avantage en terme d'intérêt général et de coût global. L'évaluation serait soumise à l'assemblée délibérante de la collectivité avant que celle-ci ne prenne la décision de recourir au partenariat public-privé

(8) Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de PPP d'initiative privé est-il assuré ? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu ?

Les contrats de partenariat public-privé s'apparentent le plus souvent à des conventions par lesquelles une collectivité confie à un opérateur privé le soin d'exécuter une mission d'intérêt général. Si elle est importante à la bonne conduite du projet, la dimension économique n'est pas à l'origine du projet.

Dans ce cadre, les formules de PPP d'initiative privée doivent être clairement réglementées, notamment le recours à un conseil extérieur et la production d'un projet de référence dans la phase des études préalables qui doivent faire l'objet d'une publicité adéquate. Faute de quoi, le fait de procéder à des études de marché pourrait engendrer un risque de favoritisme ultérieur lorsque, au moment de la mise en concurrence, le maître d'ouvrage cherche à rentabiliser l'investissement ainsi réalisé.

A l'heure actuelle, lorsque l'initiative revient aux collectivités locales, en particulier aux grandes villes et à leurs groupements, les règles de publicité sont strictement observées et font l'objet d'un contrôle de légalité de la part des autorités préfectorales. Il semble normal qu'il en soit de même lorsque l'initiative provient du secteur privé.

(9) Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d’initiative privée dans l’Union européenne tout en assurant le respect des principes de transparence, de non discrimination et d’égalité de traitement ?

L’AMGVF et la Fédération des Sem n’ont pas de suggestion à faire valoir sur ce point et soulignent leur attachement au développement des PPP, quel qu’en soit l’initiateur (public ou privé).

(10) Quelle expérience avez-vous de la phase postérieure à la sélection du partenariat privé dans les opérations de PPP contractuels ?

Le PPP contractuel, dont la forme la plus proche en France est la délégation de service public, est un outil attrayant, que les administrations nationales ou locales utilisent de plus en plus pour la réalisation d'infrastructures ou la gestion de missions d'intérêt général. Les personnes privées sont ici, amenées à contribuer directement à la mission de service public, ces formes de coopération apportant un savoir-faire et des méthodes de fonctionnement qui font parfois défaut à la sphère publique.

Mais, cette forme de commande publique ne pourra prospérer que dans un contexte de réelle sécurité juridique : les parties à ces contrats, de longue durée et portant sur des enjeux financiers importants, ne peuvent courir le risque d'un contentieux.

Ainsi, l'AMGVF et la Fédération des Sem, représentant respectivement des adjudicateurs et opérateurs de DSP, souhaitent, dans le cadre de l'examen de la phase postérieure de la sélection du candidat, mettre en exergue, pour les Sem, les différentes formes de marchés susceptibles d'être conclus dans le cadre des PPP contractuels ainsi que la procédure de contrôle destinée à sécuriser leur passation et leur bon déroulement.

- **Sur les différentes formes de contrats conclus par les Sem**

Les contrats passés par les Sem, agissant en qualité de délégataires des collectivités publiques, sont soumis à des procédures de publicité et de mise en concurrence prévues par l'article 48-1 de la Loi du 29 janvier 1993. Ces mêmes procédures sont applicables lorsque la Sem agit dans le cadre d'une convention publique d'aménagement.

Par conséquent, il convient de constater que les marchés des Sem entrent dans le champ d'application de la Loi Sapin, garantissant ainsi le respect des règles de passation gouvernées par les règles de publicité, de transparence et de mise en concurrence.

- **Sur les procédures de contrôle des opérations de PPP contractuels**

Que ce soit lors de la passation, en cours d'exécution ou à son terme, la convention de DSP peut être amenée à subir des contrôles tant internes qu'externes à l'opérateur lorsque celui-ci est une Sem.

Les Sem sont soumises de par leur double nature de société anonyme d'une part et d'entreprise publique d'autre part, à de multiples contrôles qui relèvent du droit des sociétés, du droit public, du droit financier et du droit communautaire. Cette addition de contrôles à la fois internes et externes, qui différencie les Sem des autres opérateurs, assure un climat de sécurité juridique particulièrement appréciable au regard des exigences de transparence.

- *Les contrôles internes à l'opérateur*

Ils sont exercés par les dirigeants et organes délibérants, le commissaire aux comptes et les actionnaires de la Sem. Les actionnaires minoritaires disposent d'un droit d'information garanti par le droit des sociétés. Plusieurs moyens de contrôle s'offrent à la collectivité délégante afin de s'assurer de la bonne exécution du service délégué.

Ainsi et tout d'abord, l'autorité délégante peut exercer des contrôles ponctuels en dépêchant, à tout moment, des agents sur place afin de vérifier le fonctionnement du service ainsi que l'état des installations qui en dépendent.

Ensuite, l'autorité délégante peut exercer des contrôles périodiques qui contribuent directement à la transparence des relations entre délégant et délégataire. Dans cette perspective, la loi impose au délégataire de produire, tous les ans, avant le 1er juin, un compte d'exploitation destiné à la collectivité et devant lui permettre d'apprécier l'équilibre économique du contrat : il s'agit du rapport annuel du délégataire. Ce rapport annuel comprend «notamment les comptes retraçant la totalité des opérations afférentes à l'exécution de la DSP et une analyse de la qualité du service. Ce rapport est assorti d'une annexe permettant à l'autorité délégante d'apprécier les conditions d'exécution du service public». Il sera obligatoirement soumis à la commission consultative des services publics locaux ainsi qu'à l'assemblée délibérante de la collectivité.

- *Les contrôles externes à l'opérateur*

Les contrôles externes auxquels sont assujettis les Sem sont nombreux et de nature variée.

En effet, malgré son statut de SA, la Sem a la charge de missions d'intérêt général qui donnent vocation à plusieurs juridictions ou instances de contrôle pour conduire des investigations tendant à vérifier la satisfaction des objectifs imposés à la société. Des contrôles administratifs sont ainsi exercés à plusieurs niveaux.

Tout d'abord, le représentant de l'Etat exerce un contrôle accru. En effet, le Code général des collectivités territoriales (CGCT) impose aux autorités territoriales la transmission au préfet ou au sous-préfet des conventions de DSP.

De plus, les Chambres régionales des comptes (CRC) peuvent s'immiscer dans la relation délégant/délégataire puisque, dans le cadre du contrôle des comptes de la collectivité délégante, la CRC peut exiger que lui soit transmis le rapport annuel du délégataire prévu à l'article L.1411-3 du CGCT.

Par ailleurs, le Conseil de la concurrence, même s'il a été jugé incompétent en matière de contrôle des actes de dévolution du service public telle qu'une convention de DSP, demeurera compétent en cas d'entente entre entreprises ou d'abus de position dominante.

(12) Avez-vous connaissance de pratiques ou de mécanismes d'évaluation d'offres ayant des incidences discriminatoires ?

La nouvelle directive 2004/18/CE offre aux organismes adjudicateurs la possibilité de formuler des « spécifications techniques en termes de performances ou d'exigences fonctionnelles » et ainsi d'apprécier plus finement les offres selon le critère d'attribution de «l'offre économiquement la plus avantageuse », ce qui permet d'intégrer dans la grille d'évaluation, aux côtés du critère de prix, des critères sociaux et environnementaux. De ce point de vue, la législation européenne est souple et adaptée à la procédure itérative de la passation des contrats. En France, l'ordonnance sur les contrats de partenariat permet ainsi de prendre en considération dans chaque offre la part de marché accordée aux petites et moyennes entreprises de la région.

Le nouveau cadre communautaire permet également de valoriser les offres dites du «mieux disant social » grâce à des mécanismes de discrimination positive à l'attention de publics défavorisés.

(13) Partagez-vous le constat de la Commission selon lequel certains montages du type « step in » peuvent poser problème en termes de transparence et d'égalité de traitement ? Connaissez-vous d'autres « clauses types » dont la mise en œuvre est susceptible de poser des problèmes similaires ?

L'AMGVF et la Fédération des Sem n'ont pas eu connaissance de difficultés de cette nature.

(14) Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quel(s) aspect(s) devrait porter cette clarification ?

cf réponse à la question 7

(15) Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

La France s'est dotée de systèmes de passation des marchés qui se conforment aux normes de transparence et d'une concurrence ouverte et loyale. Le principe-clef, généralement accepté, est donc celui de la libre-concurrence. Ces principes sont valables pour toutes les activités relatives à la passation des marchés pour le secteur public, qu'il s'agisse des marchés publics, des délégations de service public ou encore des activités de sous-traitance.

- Les obligations de publicité et de mise en concurrence des sous-traités

  En application de la procédure issue de la loi Sapin, une convention de subdélégation doit être soumise aux obligations de publicité et de mise en concurrence (*CGCT, art. L.1411-1 et s.*). Sont invoqués à l'appui de cette position, plusieurs arguments. D'une part, la conclusion d'un sous-traité d'exploitation constitue une nouvelle délégation en modifiant substantiellement le contrat de délégation initial puisqu'il opère un transfert de droits et d'obligations à un nouvel exploitant. D'autre part, le sous-traité comporte généralement des stipulations spécifiques à l'exécution du service qui n'apparaissent pas dans le contrat de délégation initial .

  En l'état actuel, les sous-traités dans le cadre des PPP et notamment des Sem, tout comme les DSP, sont également soumis aux obligations de publicité et de mise en concurrence. Ainsi, à ce premier niveau de concurrence, qui touche l'acte de création lui-même du PPP, intervient un deuxième niveau de concurrence, qui touche à l'attribution des missions du sous-traité du PPP le délégataire du service public ayant lui-même été sélectionné par l'autorité publique.

  En ce sens, les Sem peuvent, elles aussi, être soumises à une double procédure amont et aval puisqu'elles ont en général la qualité d'organisme adjudicateur, cette qualité leur imposant le respect des règles de concurrence lorsqu'elle souhaite confier une ou plusieurs missions à un sous-traitant.

  Par ailleurs, la directive 93/36 impose aux opérateurs de réseaux titulaires d'un droit exclusif l'application des règles de mise en concurrence.

- Selon nous, la question est posée de la nécessité de cette double procédure de mise en concurrence. Un tel dispositif, faisant intervenir deux niveaux de concurrence en amont et en aval, nous paraît excessif.

  Nous estimons, en effet, qu'il y a là une distorsion de concurrence entre opérateurs selon leur statut et qu'il s'agit d'une entorse au libre accès des entreprises au marché, notamment les entreprises moyennes et petites. Cela encourage une structuration en oligopoles.

(16) Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mise en place en ce qui concerne le phénomène de sous-traitance ?

(17) De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance ?

En France, la loi sur la sous-traitance oblige les collectivités publiques à procéder au paiement direct des sous-traitants . Lorsque le PPP a pour objet principal la réalisation d'un équipement public, il serait normal que les sous-traitants bénéficient de la même protection pour les paiements correspondant à la phase d'investissement.

Les Maires de Grandes Villes de France et la Fédération des Sem refusent que toute évolution de la commande publique se fasse aux dépens du tissu économique local. Les petites et moyennes entreprises ainsi que les artisans risquent à terme d'être mis en position d'infériorité dans des partenariats public-privé qui privilégient des entreprises à forte capacité d'ingénierie.

(18) Quelle expérience avez-vous de la mise en place d'opérations de PPP de type institutionnalisé ?

- L'AMGVF et la Fédération des Sem constatent avec satisfaction que le Livre vert est le premier document communautaire à traiter du partenariat public-privé institutionnalisé, c'est-à-dire en France la société d'économie mixte (Sem). Il s'agit d'une avancée significative dans un contexte où ce mode de PPP est en plein essor dans l'Union européenne.

- Lors d'un premier recensement des entreprises publiques locales (EPL) effectué en 1998, la Fédération des Sem et Dexia avaient identifié environ 1400 EPL à capitaux mixtes, essentiellement en France et en Belgique, les autres EPL, soit plus de 11 500, étant à 100% publiques.

  Une nouvelle étude réalisée en 2002, et qui figure en annexe 2, attestait du doublement en quatre ans du nombre de Sem locales, et cette tendance s'est poursuivie depuis, particulièrement en Allemagne et en Italie. Les collectivités locales décident le plus souvent de rester majoritaires dans ces entreprises, alors même que nombre d'entre elles percevaient initialement cette ouverture du capital comme une étape vers la privatisation complète. Ce mode de gestion des services publics locaux permet en effet comme cela est précisé au paragraphe 54 du Livre vert de concilier expertise et financements privés avec contrôle public.

  Le partenariat public-privé sous la forme d'une Sem ne consiste donc pas simplement en un lien contractuel ou financier plus ou moins formalisé et renégocié à des échéances précises. Il s'agit sans doute de la forme la plus aboutie du PPP puisqu'il est sociétal. Il se traduit par la constitution d'une personnalité juridique commune, l'opérateur. Un tel mode de fonctionnement, où les actionnaires se choisissent librement contribue à la sécurité comme à la stabilité du PPP, ce qui est particulièrement nécessaire pour des opérations risquées de développement et de cohésion territoriale.

- La France a mis en œuvre dès 1926 un régime juridique permettant la collaboration de partenaires publics et privés au sein d'entreprises dites «d'économie mixte ». Parallèlement à des formes de partenariats contractuels sous forme de concession, dès le début du siècle des formes institutionnalisées ont été proposées aux pouvoirs publics pour l'exploitation de services publics (logement social, eau, transport…). En 1983, le statut juridique de l'entreprise d'économie mixte locale est défini par la loi. La France décide alors que les collectivités seront majoritaires au capital (mais ne pourront détenir 100%, et devront toujours associer au moins 15% d'autres actionnaires) comme au sein des organes de décision et que ces entreprises publiques locales seront des sociétés commerciales de droit commun. Leur nombre est passé de 600 en 1982 à 1158 en 2004. Cet essor s'inscrit dans le sillage de la décentralisation française et de la volonté des collectivités locales, au premier rang desquelles les grandes villes, de disposer d'outils adéquats pour exercer leurs nouvelles compétences.

- L'analyse du PPP institutionnel effectuée dans le Livre vert apparaît comme une première étape vers une analyse nécessairement plus approfondie.

  Elle tend en effet à définir ce PPP comme une coopération entre un partenaire public et un partenaire privé, selon seulement deux cas de figure :

  - la création d'une entité détenue conjointement par le secteur public et le secteur privé
  - la prise de contrôle d'une entreprise publique existante par le secteur privé,

  l'acteur privé assurant dans les deux cas le management effectif de la société ainsi créée.

La réalité est autrement plus diverse et complexe, comme l'atteste la situation française où l'on peut recenser, toujours sous la forme de Sem, quatre types de PPP institutionnalisés illustrés par des exemples concrets :

- un PPP où se trouve partie prenante une grande entreprise (privée ou publique) qui exerce parfois la mission confiée à la Sem

La Sem **Colmarienne des Eaux**, est organisée selon une structure proche de celle exposée dans le Livre Vert PPP. En effet, créee à l'initiative de diverses collectivités locales, elle possède un actionnariat composé, pour 30%, de différents acteurs privés, au premier rang desquels, Suez-lyonnaise des Eaux avec un apport de plus de 50 000 euros au capital de l'entreprise soit 18% de l'actionnariat.

C'est le seul type de PPP institutionnel pris en compte par le Livre vert dont l'analyse demeure pour le moins réductrice car ce cas de figure ne se trouve que dans une centaine de Sem en France au maximum, dans les réseaux principalement.

- le partenariat public-public, particulièrement fréquent dans les Sem d'aménagement public et de logement social. Dans ces secteurs, l'absence de réelle perspective de rentabilité du capital comme de l'activité ne contribue pas à mobiliser des actionnaires réellement privés. Aussi les collectivités locales, nettement majoritaires, ont-elles comme partenaires dits privés, des organismes ou institutions publics ou para-publics (Caisse des Dépôts et Consignations, chambres de commerce ou autres organismes consulaires, des organismes de logement social,…) qui souscrivent au capital au titre de leurs missions d'intérêt général.

La **SEMAPA** se consacre à l'aménagement de Paris Rive Gauche avec le double parti de conserver les aménagements urbains existants et de réaliser de nouveaux quartiers en continuité avec l'environnement urbain existant afin de poursuivre le rééquilibrage économique de la capitale vers l'Est. Ce projet ambitieux, de par son ampleur n'a pu se développer que grâce à la confiance et à l'actionnariat commun entre les collectivités territoriales détenant 61.96% du capital, l'Etat et divers entreprises et organismes publics qui représentent 30.01% de l'actionnariat. Ainsi la composition de l'actionnariat de cette Sem fait apparaître une grande majorité d'acteurs publics.

Le partenariat public-privé réside alors dans le choix, par la collectivité locale, à travers la formule Sem, d'une forme juridique de droit privé, offrant plus d'efficacité que la régie directe ou d'autres formes existantes (établissement public, …).

- le PPP territorial, qui associe collectivité(s) locale(s), banques et PME. Dans ce cas de figure, le plus fréquent parmi les 1158 Sem françaises, des PME souscrivent au capital d'une Sem non dans l'attente d'un retour sur investissement direct du capital investi ou pour assurer la gestion effective, mais pour participer au financement et au management d'un outil qui par son activité contribuera, fréquemment avec l'appui de fonds structurels, au développement comme à la cohésion du territoire sur lequel ces PME exercent l'essentiel de leur activité.

La **Semeccel** gère la Cité de l'espace à Toulouse. Elle a pour mission d'articuler le développement touristique de ce grand site culturel français et d'effectuer la promotion du savoir-faire du secteur aéronautique et spatial. La composition de son actionnariat témoigne de cette double finalité. En effet, la Ville de Toulouse et la Région Midi-pyrénées s'engagent à hauteur de 57% du capital, avec la volonté de hisser Toulouse au rang de destination culturelle et touristique à part entière. A leurs côtés, plusieurs partenaires privés parmi lesquels Aérospatiale, Matra, Alcatel Espace totalisent 30% de participations avec l'intention de constituer une vitrine de leurs compétences technologiques.

Dans le cadre d'un vaste programme de modernisation du centre ville d'Amiens, la Sem **Amiens Aménagement** assure les missions d'aménagement et de développement économique. Amiens Aménagement est créée en juin 1999 sur la base d'un actionnariat diversifié et équilibré à la fois public et privé permettant, ainsi de mettre en place des moyens importants et efficaces. Ainsi, les collectivités territoriales et les acteurs publics et parapublics détiennent 66% du capital. Les actionnaires privés sont principalement l'Omnium générale Laborde, Proxidev. Ils prennent part à la partie restant du capital, dotant ainsi l'agglomération d'un outil puissant, capable de s'adapter aux sujétions des grands projets.

Dans un souci de mieux faire connaître et d'appuyer ce type de PPP, la Fédération des Sem a mis en place un instrument d'évaluation intitulé « bilan global » qui permet d'évaluer la contribution d'une Sem au développement économique de son territoire, au delà des seules informations fournies par le bilan comptable de la société. Cet instrument d'évaluation des entreprises de services d'intérêt général pourrait opportunément figurer parmi les différentes méthodes utilisées par la Commission européenne.

- le PPP où la collectivité locale vient au secours d'une initiative privée en difficulté en rachetant une participation – forcément majoritaire du fait de la loi française – dans l'entreprise.

La Société organisatrice du Vendée Globe, course nautique en solitaire sans escale et sans assistance, a été placée en liquidation judiciaire en 2003. Les actifs du Vendée Globe ont été mis en vente laissant l'avenir de la course entres les mains d'un éventuel repreneur. Le Vendée Globe représentant pour la région un intérêt économique et touristique majeur, la **Sem Vendée**, caractérisée par un actionnariat à 82% public, a été désignée, à l'issue d'un appel d'offres, comme repreneur de la course permettant ainsi de préserver la pérennité de la course.

Ce cas de figure n'est autorisé que si l'activité de l'entreprise présente un caractère d'intérêt général, afin d'éviter une intervention excessive des collectivités locales sur le marché.

(18) bis En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisé ? Si non , pourquoi ?

Les expériences de PPP institutionnels existants montrent que le droit communautaire des marchés publics est respecté ainsi que les principes fondamentaux du Traité de l'Union européenne.

Les Sem ne bénéficient pas en France de régime d'exception quant aux règles de mise en concurrence pour l'exploitation d'un service d'intérêt général ou la prestation de service par une collectivité publique. Dans le cadre de la loi Sapin mise en œuvre dès 1993 pour les règles d'attribution des concessions, la collectivité qui décide de recourir à la Sem comme mode d'exécution de la mission procède selon les règles de droit commun.

Sauf cas de prestations in house qui répondent à la définition jurisprudentielle actuelle de la CJCE, les Sem interviennent dans le cadre de réponses à des appels d'offres des collectivités pour les prestations de travaux, fournitures ou service conformément aux directives marchés 2004-17 et 2004-18 et de leur transposition en droit français dans le Code des marchés publics.

(19) Estimez-vous qu'une initiative doit être prise au niveau communautaire en vu de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui, sur quels points particuliers et sous quelle forme ? Si non, pourquoi ?

- Compte tenu de leur très récent essor et à la différence des concessions, les PPP institutionnels n'ont pas été pris en compte, jusqu'à présent par le droit communautaire. Cela n'a pas pour autant empêché des pays comme la France et l'Italie de les doter d'un cadre juridique qui garantit dans le droit national une application du droit communautaire de la concurrence et le respect des principes du Traité. Pour autant une plus grande sécurité juridique doit être garantie et précisée au niveau de l'Union.

  Il est donc nécessaire de préciser dans le droit dérivé de l'Union, en codécision, quelques règles contribuant à la mise en place d'un cadre plus clair et plus sécurisant pour les PPP institutionnels, chaque Etat membre conservant la responsabilité de veiller à leur respect comme à leur mise en œuvre dans un droit interne respectueux de la libre administration comme des règles du marché intérieur.

- L'AMGVF et la Fédération des Sem proposent de fixer à toutes les collectivités locales européennes qui choisissent la Sem comme mode de gestion quatre règles communes :

  - une définition claire et pérenne du in house (voir réponse à la question 7)

  - l'affirmation de la liberté pour chaque Etat membre de décider pour les Sem à quel stade il est préférable d'organiser la concurrence (lors de l'attribution de la mission ou du choix de l'actionnaire), étant précisé que celle-ci ne saurait être à la fois en amont et en aval.

    Il est précisé au paragraphe 57 du Livre vert que les règles de concurrence doivent s'appliquer lors de la mise en place de l'entité mixte. Cette position semble contradictoire avec le paragraphe 58 qui considère par ailleurs que la décision de création d'une Sem ne résulte pas d'un contrat mais d'un acte unilatéral de l'administration, expression de son pouvoir discrétionnaire.

    Le deuxième niveau de concurrence concerne l'attribution des missions à la Sem et s'ajoute à un troisième niveau de concurrence concernant les contrats passés par la Sem elle-même lorsqu'elle a la qualité d'organisme adjudicateur, ce qui est pratiquement toujours le cas.

    Il convient d'ajouter un quatrième niveau lorsqu'un nouveau partenaire privé prend le contrôle de l'entité mixte, ce qui revient à mettre en concurrence les ouvertures de capital. Un dispositif faisant intervenir deux niveaux, voire plus, de concurrence en amont et en aval nous paraît excessif et discriminatoire.

  - la reconnaissance du PPP institutionnalisé, dans sa diversité, comme un mode de gestion à part entière des services publics locaux. Sur cette base, la constitution d'une entreprise mixte peut constituer le critère de l'exécution d'une mission par une entreprise. Dans ce cas, l'entreprise mixte est créée sans mise en concurrence mais avec un partenaire sélectionné au préalable par appel d'offre.

  - l'affirmation que le mode de représentation des collectivités locales dans les instances dirigeantes des Sem relève de la subsidiarité, et qu'il revient par conséquent à chaque Etat membre de décider si des élus locaux peuvent ou non être désignés à cet effet. Dans le cas de la France, la représentation obligatoire de l'actionnaire collectivité locale par des élus constitue une garantie de contrôle comme de légitimité dans l'exercice des missions de la société, surtout dans les situations relevant du in house.

(20) Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des PPP au sein de l'Union européenne ?

L'absence de statut européen des sociétés à capitaux mixtes et les contraintes administratives et juridiques différentes d'un Etat membre à l'autre rendent difficiles la constitution et le développement de partenariats public-privé transfrontaliers. L'adoption envisagée par la Commission d'un règlement instituant un instrument de coopération doté de la personnalité juridique au riveau communautaire serait un pas décisif dans la mise en œuvre de partenariats transfrontaliers opérationnels.

(21) Connaissez-vous d'autres formes de PPP développés dans les pays en dehors de l'Union ? Connaissez-vous des exemples de « bonnes pratiques » développées dans ce cadre, dont l'Union pourrait s'inspirer ? Si oui, lesquelles ?

L'AMGVF comme la Fédération des Sem sont de plus en plus fréquemment sollicités par des interlocuteurs étrangers désireux d'en savoir plus sur les modes de PPP existant en France.

Un vif intérêt est porté à la Société d'économie mixte, notamment car elle permet d'associer capitaux et expertise privés avec contrôle et impulsion publics. Cet outil fait en particulier l'objet d'interrogations croissantes de la part de représentants :

- des nouveaux ou futurs Etats membres (Pologne, Hongrie, Roumanie), où les élus semblent désireux de disposer de solutions permettant de moderniser les modes opératoires publics existants sans pour autant les privatiser afin d'en conserver la maîtrise directe (voire de la reprendre dans le cas de la Hongrie)

- de pays émergents d'Afrique australe et d'Asie du Sud-est. Le succès remporté par la formule Sem dans toutes les régions ultra périphériques françaises (80 sociétés jouant un rôle d'entraînement sur toute la vie économique locale comme sur la cohésion) atteste en effet du bien fondé du recours à ce type d'outil à ce stade de développement économique et social, en particulier pour le logement, l'aménagement public, l'eau, les transports publics et les déchets. De nombreuses Sem constituées avant la décolonisation dans des Etats africains et du Maghreb continuent d'ailleurs à jouer un rôle économique majeur dans ces pays notamment pour le logement.

- des villes des Etats-Unis d'Amérique et du Japon qui considèrent le PPP institutionnel comme une solution innovante évitant un transfert total de la collectivité au partenaire. Le maintien d'une expertise municipale aux côtés d'entreprises privées dans une entité ad hoc est un gage de contrôle du service rendu.

Loin d'être une exception française, la formule Sem est un type de PPP qui a fait ses preuves dans de nombreux pays et semble vouée à se développer davantage au cours des années à venir.

Des règles juridiques communautaires appropriées semblent donc particulièrement opportunes pour contribuer à cet essor.

L'AMGVF et la Fédération des Sem se tiennent à la disposition de la Commission pour participer à l'élaboration de recueils de bonnes pratiques en matière de PPP au sein de l'Union comme en dehors.

L'intérêt croissant porté au PPP dans le reste du monde justifierait sans doute l'organisation, avec le soutien de la Commission, voire en son sein, de missions d'expertise, d'appui comme de conseil. Les signataires du présent document font part de leur forte motivation pour s'y associer.

(22) De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique social et durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange des meilleures pratiques ? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?

Comme cela a été démontré lors des réponses précédentes, les attentes à l'égard du PPP ne sont pas exclusivement financières et limitées à « des besoins importants d'investissements ». Le PPP, en particulier institutionnel, constitue une composante du modèle socio-économique européen de développement et de cohésion territoriale, et pas seulement une solution «par défaut » relevant de considérations uniquement financières.

L'AMGVF et la Fédération des Sem n'en sont que plus motivées pour participer activement à des réseaux d'échange qui seraient animés par la Commission.

La Commission pourrait également opportunément apporter son appui aux réseaux de ce type qui ont déjà pu se constituer par exemple au sein du CEEP (Centre européen des entreprises à participation publique) sous la forme de groupes déchets, eau, funéraire, tourisme, et bientôt habitat et renouvellement urbain.

Un observatoire européen du partenariat public-privé, indépendant et pluraliste, pourrait également être constitué. Il permettrait de promouvoir les bonnes pratiques, de développer les échanges. Il contribuerait également à ce que toutes les parties prenantes à des PPP puissent disposer du même degré d'information, et donc de négocier ces PPP à « armes égales ».

Grandes Villes et Groupements

Maires de grandes villes

DEXIA
Crédit Local

Les services publics locaux

mars 2004

AVANT-PROPOS

Le présent fascicule est la synthèse de l'enquête sur la gestion des services publics locaux lancée par l'Association des Maires de Grandes Villes de France début 2004.

Cette initiative, mise en œuvre avec le soutien de la Direction des Etudes de Dexia - Crédit Local, a pour objectif de dresser un panorama de la gestion des services publics des grandes villes de France et de leurs groupements. Par souci de concision, deux axes ont été privilégiés.

Le contexte actuel est celui d'une couverture presque optimale des aires urbaines par le phénomène intercommunal ; il était donc nécessaire de mener un état des lieux des rôles respectifs des villes et de leurs groupements dans la mise en œuvre des services publics locaux.

Les modalités de gestion de ces services locaux sont présentées synthétiquement puis analysées selon un axe financier. L'objectif est d'expliquer, en termes budgétaires, les conséquences, très différentes, de ces choix sur les masses financières des membres de l'association.

L'enquête complète en ce sens les différents annuaires financiers mis à votre disposition en affinant la validité des comparaisons par ratios.

Cette année, seuls les principaux services publics locaux que sont l'eau, l'assainissement, la collecte et le traitement des ordures ménagères, les transports en commun urbains et les cantines scolaires ont été traités.

L'actualité de l'ouverture des marchés à la concurrence nous a poussé à aborder également les services plus atypiques de l'électricité et du gaz.

Dans un paysage décentralisé mouvant, la pérennisation de cette étude permettrait de suivre, d'année en année, l'évolution des compétences des collectivités et leurs conséquences sur les budgets locaux.

Introduction

La note qui suit analyse les résultats de l'enquête menée par l'Association des Maires des Grandes Villes de France et Dexia Crédit Local sur la gestion des services publics locaux.

Le questionnaire envoyé aux 88 membres de l'association (47 villes et 41 groupements) concerne les 5 principaux services publics locaux que sont : l'eau (production et distribution), l'assainissement (collecte et traitement des eaux usées), les déchets (collecte et traitement), les transports en commun urbains et les cantines scolaires. Il répond, pour chacun d'entre eux, à deux questions :

- qui détient la compétence ?
- comment est géré le service ?

69 questionnaires ont été reçus et traités : 37 villes et 32 groupements. 21 villes sont traités en même temps que leurs groupements, membres de l'association.

La présente analyse s'attache principalement à l'année 2002, afin de permettre une mise en parallèle avec les résultats de l'*annuaire 2002 des comptes consolidés des grandes villes et des groupements* réalisé par Dexia – Crédit Local et l'Association Des Maires De Grandes Villes De France.

L'évolution entre 2002 et 2003 est abordée en complément.

1 – Présentation synthétique des résultats

Le présent questionnaire part d'un constat : les modes de gestion choisis par les collectivités pour leurs services publics locaux ont des conséquences budgétaires diverses qui atténuent la pertinence des comparaisons financières.
Du fait des choix différents opérés par les villes et leurs groupements, la notion de comptes consolidés «budget principal – budgets annexes », introduite par l'*annuaire 2002 des comptes consolidés des grandes villes et des groupements* ne recouvre pas les mêmes champs d'une collectivité à l'autre.
L'objectif de la première partie de cette note, avant de s'attarder sur l'analyse détaillée du questionnaire, est de donner une vision synthétique de la manière dont chaque service public « pèse » sur les comptes de la collectivité.

Le tableau qui suit retrace les résultats individuels de chacune des collectivités et permet de mieux apprécier les différences observées entre les données financières des collectivités membres de l'Association des Maires de Grandes Villes de France.
Il présente en colonne les services publics étudiés :

- eau (E)
- assainissement (A)
- collecte des déchets (CD)
- traitement des déchets (TD)
- transports (T)
- cantines scolaires (C)

Différents cas ont été distingués pour chacun d'entre eux et pour chaque membre de l'association. Ils sont classés selon le poids financier que le service fait supporter à la collectivité, via un budget annexe ou le budget principal :

- la collectivité n'a pas la compétence : ***aucun impact budgétaire*** ;
- le service public est géré en DSP ou par un établissement public et aucune recette relative au service délégué (TEOM, VT) n'a pu être détectée au sein du budget principal ou du budget annexe : ***aucun impact budgétaire visible*** ;
- le service public est géré en DSP, par un établissement public ou en marché public et un budget annexe retrace certains des flux relatifs au service (TEOM, REOM, versement transport, subventions d'équilibre, prix du marché, dépenses d'équipements …etc…) : ***impact partiel sur les finances de la collectivité via un budget annexe*** ;
- le service public est géré en gestion directe et l'intégralité des dépenses et des recettes sont retracées au sein d'un budget annexe : ***impact sur les finances de la collectivité via un budget annexe*** ;
- le service public est géré en DSP, par un établissement public ou en marché public et le budget principal retrace certains des flux relatifs au service (TEOM, REOM, versement transport…etc…) : ***impact partiel sur le budget principal de la collectivité*** ;
- le service public est géré en régie directe : l'intégralité des dépenses et des recettes sont retracées au sein du budget principal : ***impact sur le budget principal de la collectivité.***

Le niveau de coloration de chaque ligne est, de par cette méthode, un indicateur du poids des services publics locaux dans les budgets (budget principal – budgets annexes) de chaque collectivité.

L'impact budgétaire du choix des modes de gestion des collectivités

2- Analyse détaillée du questionnaire

➢ Présentation du questionnaire et des services étudiés

La première partie du questionnaire étudie les compétences, liées aux 5 services publics étudiés (eau, assainissement, déchets, transports, cantines), détenues par chacune des collectivités membres de l'association en distinguant 3 cas : la compétence est détenue par une ville, par un groupement à fiscalité propre (CC, CA, CU ou SAN) ou par un syndicat dédié.

On distingue deux types de services publics locaux : les services publics industriels et commerciaux (SPIC) et les services publics administratifs (SPA). A l'inverse de ceux des SPA, les comptes des SPIC ont l'obligation d'être équilibrés en dépenses et en recettes et leur comptabilité doit être retracée au sein d'un budget annexe, autonome financièrement du budget principal.
La distinction SPIC / SPA est, de fait, nécessaire pour expliquer les modes de gestion choisis par les collectivités.
Les services étudiés sont, à l'exception des cantines scolaires et de la collecte des déchets ménagers, des services publics industriels et commerciaux.
Le service de la collecte des déchets est un cas particulier : il a une double qualification (SPIC ou SPA) selon son mode de financement. La collecte et le traitement des ordures ménagères ont été traités séparément dans le questionnaire.

Quatre modes de gestion ont été différenciés : la gestion directe (avec ou sans budget annexe), l'établissement public (administratif ou industriel et commercial), le marché public et la délégation de service public.
Le mode de gestion du service n'est étudié que si la compétence est détenue par la collectivité membre de l'association.
De même dans le cas où la collectivité ne gère qu'une partie du service[1] seule la manière dont cette dernière est gérée par la collectivité est analysée.

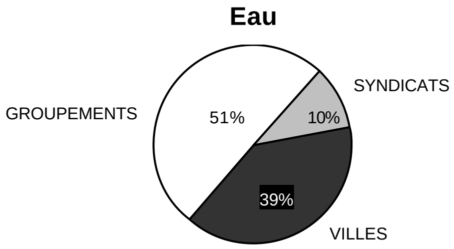
Les modes de gestion

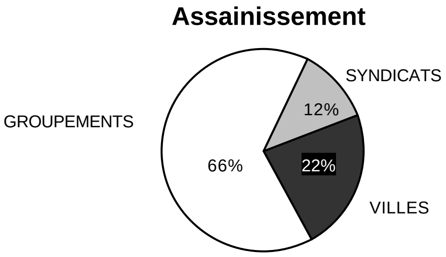
- **la gestion directe** : la collectivité gère le service à l'aide de ses services ou par le biais d'un établissement public.
  Au sein de la gestion directe, on distingue, selon leur niveau d'autonomie par rapport à la collectivité :
  - la **régie simple** : elle n'a aucune autonomie (financière ou administrative) par rapport à la collectivité ; ce mode de gestion est, en principe réservé aux seuls SPA. Il ne donne pas lieu à la création d'un budget annexe.
  - La **régie dotée d'une autonomie financière** : elle possède des organes de gestion distincts de la collectivité, cette dernière conservant le pouvoir de décision. Le coût de fonctionnement du service est obligatoirement retracé dans un budget annexe distinct de celui de la collectivité.
  - La **régie dotée de l'autonomie financière et de la personnalité morale** : c'est un établissement public autonome (juridiquement et financièrement) de la collectivité, administré par un Conseil d'Administration (désigné par le Conseil Municipal). Son budget est autonome, non annexé à celui de la collectivité et soumis aux règles de la comptabilité publique.
- **La gestion indirecte** dont on distingue deux principaux modes de gestion :
  - Le **marché public** : c'est un contrat de prestation (travaux, fournitures, services) passé entre la collectivité et une entreprise qui porte sur tout ou partie du service public (administratif ou industriel et commercial). L'entreprise est rémunérée par un prix.
  - La **délégation de service public** : c'est un contrat par lequel la collectivité confie à un tiers l'exploitation du service, sous son contrôle. Le délégataire est rémunéré pour l'exploitation directement par l'usager.

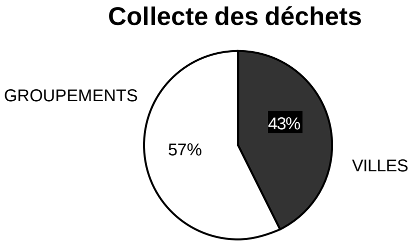
[1] La collectivité peut, par exemple, gérer la distribution d'eau et avoir transféré à un syndicat la production.

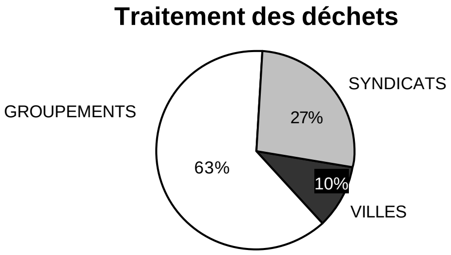
➢ Exercice de la compétence :

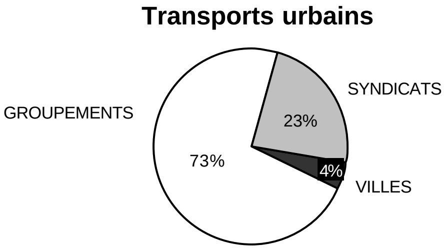
Les graphiques ci-dessous donnent une vision synthétique, pour chaque service public étudié, de la répartition des compétences entre chaque type de structure.

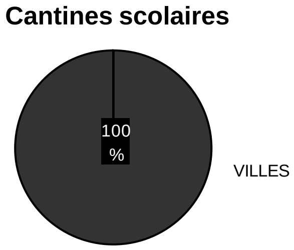












Les principaux services publics locaux sont, en 2002, majoritairement gérés par les groupements intercommunaux, à l'exception des cantines scolaires, qui sont restées de la compétence des communes.

Les services publics dont la compétence est la plus largement transférée aux **structures intercommunales** sont les transports (gérés à 73% par des groupements), le traitement des déchets (63%) et l'assainissement (66%).

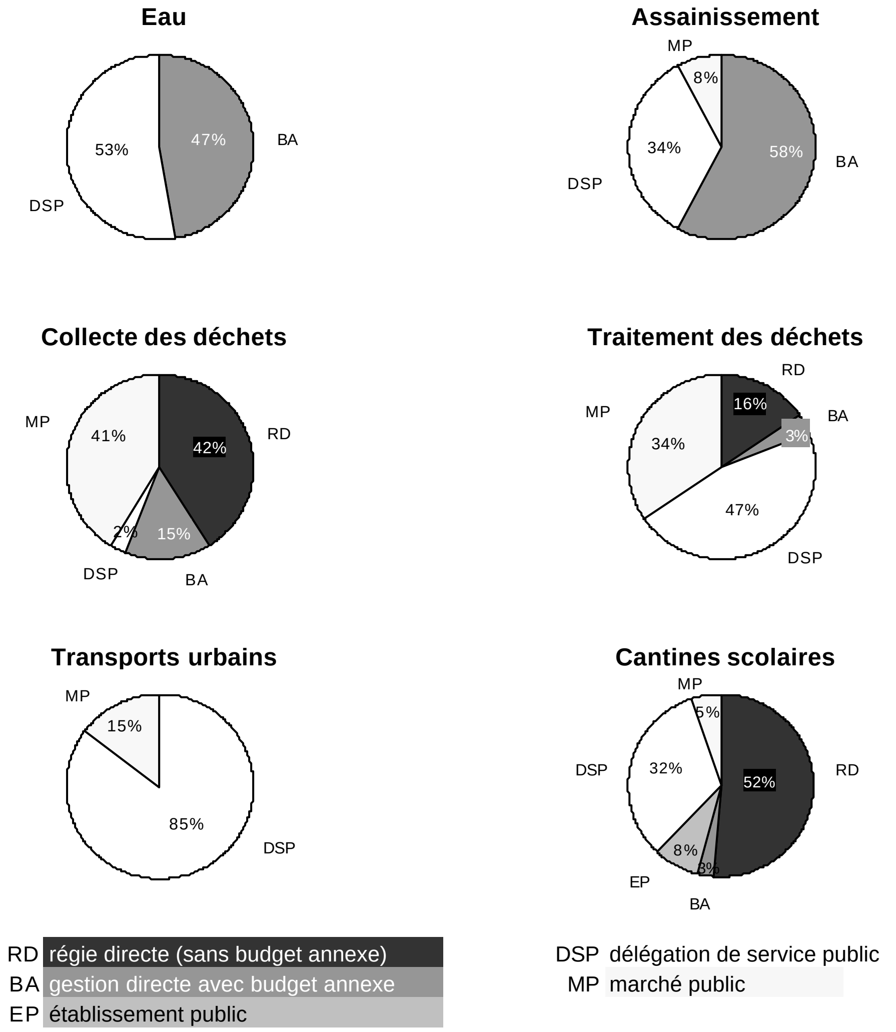
Le transfert de ces deux derniers services peut s'expliquer par les coûts importants des usines de traitement des déchets et des stations d'épuration et la nécessité qui en découle d'atteindre une taille critique et de parvenir à des économies d'échelle, ce que permet l'échelon intercommunal. La gestion des services de transports par l'intercommunalité naît souvent de la nécessité de gérer les déplacements sur l'aire urbaine et non uniquement sur le territoire de la commune.

Les **communes** restent plus souvent compétentes pour l'eau (39%) et la collecte des déchets (43%).

Les transports en commun urbains et le traitement des déchets sont, dans un quart des cas, gérés par des **syndicats intercommunaux**. Leurs interventions dans les autres domaines sont plus limitées.

➢ Mode de gestion des services

Les graphiques ci-dessous présentent les choix des collectivités compétentes en terme de mode de gestion. Les résultats des villes et des groupements ont été traités ensemble.



Le service public de l'**eau** est géré en gestion directe (47% des cas) ou en délégation de service public (53%). Sa qualification en SPIC donne obligation à la collectivité, lorsqu'il est géré en régie, de créer un budget annexe dédié.
Sur les 17 structures intercommunales compétentes, 5 gèrent ce service par deux modes de gestion différents. Cette situation est due, dans 4 cas sur 5, au fait que la production et la distribution d'eau ne sont pas gérées de manière identique. Le dernier cas est une communauté d'agglomération qui n'a pas encore homogénéisé, sur son territoire, les différents modes de gestion antérieurs de chacune des communes.

Le service public de l'**assainissement** a un schéma relativement similaire à celui du service public de l'eau. Il est géré en gestion directe, avec autonomie financière (58% des cas), en délégation (34%) et en marché public (8%).

Là encore, 7 structures intercommunales ont un double mode de gestion :

- 2 ont conservé le mode de gestion antérieur sur le territoire de chacune des communes,
- 3 gèrent le service de collecte en régie et leur station d'épuration en délégation ou en marché public[2].

Le mode de gestion des services de l'eau et de l'assainissement explique l'importance des budgets annexes eau et assainissement relevés dans l'*annuaire 2002 des comptes consolidés des grandes villes et des groupements*. Ils représentent, pour les villes, respectivement, 21 et 35%, des dépenses totales de leurs budgets annexes. Ces pourcentages sont de 16 et 39% pour les groupements.

Le service public de la **collecte des déchets** est plus complexe à appréhender du fait de sa double qualification possible en SPIC ou en SPA. Il est géré par les collectivités principalement en gestion directe (42% sans autonomie financière et 15% par le biais d'un budget annexe), en marché public (41%) ou en délégation (2%).
La qualification de la collecte des déchets dépend de son mode de financement : si la collectivité se finance par la TEOM ou le budget principal, le service est un SPA ; si la collectivité se finance par la REOM, le service est un SPIC. La TEOM est le mode de financement prépondérant des collectivités, ce qui explique l'importance des régies directes et des marchés publics.
Les cas de délégation ou de régie avec autonomie financière concernent plus particulièrement les centres de tri qui, dégageant des recettes commerciales, ont une structure de financement différente de la collecte proprement dite.
Cinq collectivités ont deux modes de gestion[3].

Le **traitement des déchets** est géré, par les collectivités compétentes, à 47% en DSP, à 34% en marché public, à 19% en régie directe (dont 16% sans budget annexe). 6 collectivités ont un double mode de gestion. Dans deux cas[4], il est lié à une gestion différente du centre de compostage, de la déchetterie et de l'usine d'incinération.

Les **transports en commun urbains** sont gérés par les collectivités à 85% en délégation de service public et à 15% en marché public. Une collectivité a un double mode de gestion pour son service des transports (délégation de service public et marché public).
En cas de délégation ou de marché public, les collectivités retracent, au sein d'un budget annexe, en dépense, la subvention d'équilibre (ou le prix) versée à leurs délégataires (ou au prestataire) et, en recette, le versement transport perçu des entreprises. Ceci explique le poids très important des budgets annexes transports relevés dans l'annuaire financier consolidé des collectivités membres de l'association, malgré l'importance de la gestion indirecte.
Les transports représentent 37% des dépenses des budgets annexes des groupements intercommunaux en 2002.

La gestion des **cantines scolaires**, qui concernent uniquement les communes, sont gérés dans une majorité des cas (55%) en régie directe (dont 52% sans budget

[2] 2 collectivités ne nous ont pas communiqué de détail sur ce double mode de gestion.
[3] Aucune information supplémentaire ne nous a été communiquée sur ces situations.
[4] Les autres cas ne sont pas renseignés.

annexe). 32% ont délégués le service, 5% ont recours au marché public et 8% à un établissement public.

➢ Evolution 2002 / 2003

De 2002 à 2003, on note une accélération du mouvement de transfert des compétences des villes vers leurs groupements.

C'est pour le service de collecte des déchets, géré dans 43% des cas par des communes en 2002, que ce mouvement est le plus fort, 8 communes transférant ce service à leur groupement. Aucun de ces 8 transferts n'est la conséquence de la création d'une nouvelle structure intercommunale.

Il est à noter qu'une communauté d'agglomération gère, depuis 2003, les cantines scolaires.

Transfert du service ….	… d'une commune à un EPCI	… d'un syndicat à un EPCI
eau	0	0
assainissement	1	1
collecte des déchets	8	0
traitement des déchets	2	0
transports	0	2
cantines scolaires	1	0

Enfin, très peu de modifications sont à observer dans les choix opérés par les collectivités pour leur mode de gestion, y compris en cas de transfert.

3- Les services publics de l'électricité et du gaz

➢ Législation et organisation des services

Les directives européennes du 19 décembre 1996 (électricité) et du 22 juin 1998 (gaz) transposées en droit français ont organisé l'ouverture progressive et partielle de la fourniture d'énergie à la concurrence en Europe.

Dans un premier temps, seuls étaient concernés les consommateurs d'énergie les plus importants. La directive européenne du 26 juin 2003 impose de généraliser l'éligibilité en deux étapes :

- intégralité du marché des clients professionnels au 1er juillet 2004
- marché des ménages au 1er juillet 2007.

Ce passage au marché d'une activité exercée jusque là en monopole dans le cadre d'un service public modifiera le contenu des missions d'intérêt général dévolues aux communes et à leurs groupements, collectivités organisatrices de la distribution publique d'énergie.

Pour évaluer concrètement les conséquences futures de ces directives, il a paru intéressant de photographier, avant l'ouverture des marchés, les modes de gestions de des grandes villes et de leurs groupements.

En France, la composante «distribution » des services publics de l'électricité et du gaz est locale. Certes la distribution est assurée – dans la plupart des communes – par une entreprise nationale (EDF et GDF), mais l'autorité organisatrice est une collectivité locale.

5% des communes de France sont approvisionnées par des régies, des sociétés d'économie mixte, des sociétés d'intérêt collectif ou par des entreprises analogues. Ces entreprises locales de distribution n'ont pas été nationalisées en 1946, comme le furent EDF et GDF.

La distribution d'électricité et de gaz reste un véritable service public, garant de l'égalité de traitement des usagers, d'un aménagement équilibré du territoire et de la qualité de l'environnement.

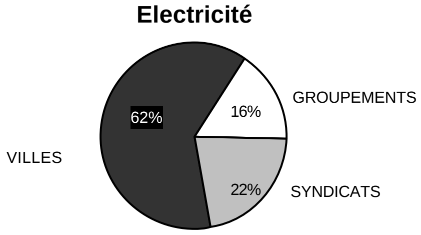
Les acteurs du système de distribution d'énergie en France

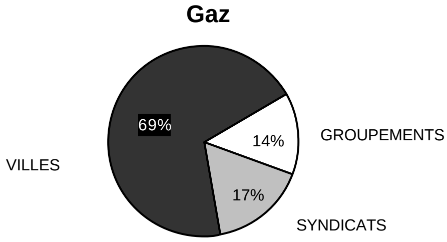
	Activité de production et de fourniture	**Activité de réseau (acheminement)**	
		Transport	**Distribution**
Propriété des équipements	- Opérateurs actuels (EDF et GDF) - Nouveaux opérateurs à l'ouverture des marchés	EDF GDF	Collectivités locales
Gestion des équipements		EDF GDF	- Distributeurs actuels (EDF GDF) - Entreprises locales de distribution

➢ Analyse du questionnaire

Sur les 70 questionnaires qui ont été retournés par les membres de l’association, 46 collectivités (20 groupements et 26 villes) ont répondu à la partie concernant les services publics du gaz et de l’électricité.

Il ressort des réponses envoyées que les villes restent majoritairement compétentes pour la gestion de ces services (62% pour l’électricité et 69% pour le gaz). Par ailleurs, près d’un service sur cinq est géré par un syndicat.





Une très large majorité des collectivités compétentes (86% pour l’électricité et 92% pour le gaz) ont passé des conventions avec EDF ou GDF pour la gestion de ces deux services.

Seules 3 ont adopté un mode de gestion différent :

- mise en place d’une régie autonome pour le service public d’électricité,
- gestion directe avec budget annexe pour les services de l’électricité et du gaz,
- autre mode de gestion[5].

LE PARTENARIAT PUBLIC-PRIVE DANS LES ENTREPRISES PUBLIQUES LOCALES EN EUROPE

Rapport introductif par Axelle Verdier

Chargée d'études - secteur public local Europe
Département des Etudes de Dexia Crédit Local

La synthèse présentée ici de l'enquête succincte sur les entreprises publiques locales sous l'angle des partenariats publics / privés a été conduite par la Fédération des sem et Dexia Crédit local, et à l'initiative de la Fédération des sem.

L'implication de Dexia aux côtés de la Fédération des sem sur cette thématique s'inscrit pleinement dans le champ d'intervention du groupe Dexia, présent à l'échelle européenne : groupe bancaire franco-belge spécialisé dans le financement des équipements collectifs et des services financiers aux collectivités locales dans le monde, Dexia est aussi partenaire des acteurs du développement local. Le groupe, qui opère dans la quasi totalité des pays de l'Union européenne, a acquis par le biais de ses filiales et implantations une connaissance approfondie du fonctionnement des collectivités locales en Europe. C'est à ce titre, et en tant que partenaire de longue date de la Fédération des sem, que cette dernière nous a associés pour travailler à approfondir la connaissance des entreprises publiques locales à l'échelle européenne.

La petite enquête lancée à la fin du mois de juin dernier se fait l'écho du livre réalisé par Dexia en partenariat avec la Fédération des sem, et présenté en cette même place voilà déjà trois années de cela, à l'occasion de la 1ère convention européenne des entreprises publiques locales qui se réunissait alors.

Il ne s'agissait pas, en 3 mois, de réactualiser le livre – aussi le champ de l'enquête est largement plus restreint que le champ de l'ouvrage, tant en ce qui concerne les thématiques abordées que les pays ciblés :
- l'axe d'actualisation choisi a été celui de la composition du capital des entreprises publiques locales, afin d'apprécier la réalité de ces entités sous l'angle des acteurs qui les composent aujourd'hui ;
- les pays visés : pour des questions d'accès à l'information et de délais, 8 pays de l'Union européenne (Allemagne, Autriche, Belgique, France, Grèce, Italie, Portugal, Suède) + la Norvège, correspondant aux pays membres actifs de la commission entreprises locales du CEEP– presque tous ont répondu.

A propos de l'accès à l'information: la collecte statistique et le recueil d'informations globales à l'échelle d'un pays ne sont toujours pas aisés :
- dans la plupart des pays, il n'existe pas d'organe représentatif de l'ensemble des entreprises publiques locales, ou bien, s'il en existe, ce sont par exemple des fédérations de métier, une entreprise publique locale gérant plusieurs activités pouvant être adhérente de plusieurs organismes fédérateurs, ce qui rend le recensement statistique difficile ;
- il n'existe pas non plus encore à notre connaissance de recensement systématique de ces entités à l'échelle nationale via les offices statistiques, ni à l'échelle européenne via eurostat - A la différence des collectivités locales par exemple, qui commencent à bénéficier d'une harmonisation européenne au niveau de la comptabilité nationale et qu'il est donc aujourd'hui possible d'appréhender dans une approche européenne globale.

Aussi les informations présentées ici proviennent principalement d'entretiens et de témoignages recoupés. Ces limites rendent d'autant plus difficile la synthèse transversale.

***

En préambule, la définition de l'entreprise publique locale

Définition retenue de l'entreprise publique locale :
Toute entreprise à forme sociétaire exerçant une mission d'intérêt général et dont plus de la moitié du capital est détenue par une ou plusieurs collectivités locales, par exception moins de 50 % si ces collectivités disposent d'un contrôle réel sur l'activité de l'entreprise.

Il convient également de préciser que le champ de l'étude est focalisé sur les entreprises des collectivités locales décentralisées – en sont donc exclues les entreprises relevant directement des Etats fédérés (Allemagne, Autriche, Belgique).

Rappel état des lieux 1999

En 1999, le panorama des entreprises publiques locales européen était caractérisé par :
- près de 13 000 entreprises,
- pour la plupart détenues à 100 % par des collectivités locales
- avec pourtant des règles souples et sans contraintes particulières de composition du capital : généralement, le législateur n'a pas encadré la participation des collectivités locales par des seuils, sauf dans deux pays (France, Italie) où les seuils de participation concernent :

/ la participation des collectivités locales :
- minima en Italie (20 %), en France (50 %)
- maxima en France (85 %)

/ la participation des partenaires privés :
- mixité obligatoire en France (seul pays où la mixité est obligatoire compte tenu du plafonnement des participations publiques).
- mixité possible Italie, Portugal pas de seuils de participation, seulement des déclinaisons de types d'entreprises prévues par le législateur.

Etat des lieux 2002

Aujourd'hui, le tour d'horizon européen (, non exhaustif), fait apparaître un nombre d'entreprises publiques locales stable, autour de 13 000. L'analyse aurait pu s'arrêter là si l'on ne s'était penché sur les mouvements constatés au sein des entreprises locales elles-mêmes, et plus particulièrement sur les acteurs parties-prenantes au capital de ces entités : en effet, on constate que les grands équilibres entre les collectivités locales et les investisseurs privés se sont modifiés au sein du capital social des entreprises publiques locales. Estimée à 10 % environ en 1999, la proportion d'entreprises publiques locales européennes ayant ouvert leur capital à d'autres partenaires est aujourd'hui de l'ordre de 20%.

Cette évolution se traduit, dans la plupart des pays, par un accroissement plus ou moins marqué de la présence de partenaires privés – quelques grandes tendances se dessinent, parmi lesquelles on relève :
- un développement des entreprises à capital mixte en plein essor en Allemagne et en Italie ;
- une mixité en progression régulière en Autriche, Grèce, Portugal, Suède ainsi qu’en France ;
- une mixité en repli en Belgique.

1 – La tendance à l’ouverture du capital à d’autres actionnaires que les collectivités locales est à replacer dans les contextes juridique et économique dans lesquels les entreprises publiques locales évoluent
2 - Cette tendance est à nuancer en fonction des métiers exercés par les entreprises publiques locales
3 - Cette tendance ne remet cependant pas en cause pour l’instant le poids des collectivités locales au sein du partenariat public / privé

I – L’évolution du capital vers plus de partenariat semble plutôt contrainte que volontaire

1 – Contrainte, parce que les entreprises publiques locales sont perméables aux contextes juridique et économique dans lesquels elles évoluent

1-1 Un contexte juridique européen tout d’abord, influent sur les entreprises publiques locales

L’accroissement de la participation privée au capital des entreprises publiques locales s’inscrit dans un contexte de :
- libéralisation des marchés engagée au niveau communautaire depuis une dizaine d’années environ et progressivement intégrée dans les droits internes par les législateurs nationaux (par exemple en Belgique, avec les dispositions sur l’énergie prises par les Régions et Communautés, en Italie avec la loi de décembre 2001 actuellement en attente d’application).
Si l’ouverture des marchés jusqu’alors protégés touche plus particulièrement les entreprises publiques locales et leur capital, c’est que, dans certains pays :
/ les collectivités locales leur avaient confié l’exercice de secteurs d’activité aujourd’hui libéralisés. C’est notamment le cas de l’énergie, et plus particulièrement de l’électricité (notamment en Suède, en Belgique, en Allemagne).
/ le droit interne prévoit de réorganiser les modalités de gestion de ces secteurs d’activité en faveur d’entreprises locales à forme sociétaire (cf. infra, en Italie, pour le pôle services publics locaux industriel eau, énergie, transport avec la loi de décembre 2001 en suspens).

- normalisation communautaire en matière de déchets, d'assainissement pour l'amélioration des équipements (sécurité, respect de l'environnement). Le traitement des déchets peut être pris en charge par des entreprises publiques locales en Belgique par exemple.

1-2 Le contexte juridique interne régissant les entreprises publiques locales

D'abord, c'est l'évolution de l'environnement juridique des collectivités locales qu'il faut considérer, car il pourrait avoir des répercussions sur les entreprises publiques locales :

- en Belgique, le contexte juridique des entreprises publiques locales pourrait être davantage influencé par les Régions, qui, déjà compétentes pour réglementer l'organisation des intercommunales, sont, depuis la loi de juillet 2001, désormais responsables de l'organisation et des compétences des communes et des provinces. Ainsi la Communauté flamande a-t-elle pris le décret-loi du 6 juillet 2001 portant réglementation de la coopération intercommunale venant réglementer les ABSL intercommunales.

- au Portugal, la loi de 1999, qui accroît les transferts de compétences aux communes et aux paroisses, pourrait également influer sur la réalité des entreprises publiques locales en élargissant leurs champs d'activité (métiers).

Concernant les lois applicables aux entreprises publiques locales, c'est surtout l'Italie qui fait montre de changements : les *aziende speciali* (entités dépendantes des collectivités locales) qui, depuis 1997, pouvaient être transformées en sociétés par action, feront très prochainement l'objet d'une procédure de privatisation juridique obligatoire aux termes de la loi du 28 décembre 2001 dès lors que les derniers obstacles juridiques encore en suspens auront été levés.
En France également, le statut des sem a été clarifié par la loi de janvier 2002, notamment le statut du mandataire des élus administrateurs des Sem, et les relations financières avec les collectivités locales.

Concernant plus précisément les règles de composition du capital, les règles juridiques ne semblent pas avoir beaucoup évolué depuis notre première enquête.
Sauf en Belgique, où la libéralisation du secteur de l'énergie (gaz et électricité), qu'ont accompagnée de récentes dispositions législatives dans le droit interne (lois de 2001), aura des conséquences directes sur les intercommunales d'énergie et plus particulièrement sur leurs actionnaires : les activités de distribution (gestion et exploitation du réseau) et de fourniture d'énergie (achat et vente d'électricité) étaient traditionnellement confiées à des intercommunales mixtes, dont le capital, dans la pratique, étaient en effet généralement majoritairement détenu par un actionnaire privé (Electrabel). Cependant, quelque soit leur participation au capital, les collectivités locales y disposaient toujours de la majorité des voix.
Avec l'entrée en vigueur des nouvelles dispositions, et de la mise en œuvre de la scission entre les activités de gestion du réseau de distribution (activité monopolistique) et de fourniture de l'énergie, le capital des intercommunales qui

exerceraient ces deux activités doit désormais être détenu majoritairement par les collectivités locales. Celles-ci doivent donc renforcer leur positionnement financier dans le capital des intercommunales mixtes d'énergie et l'actionnaire privé renoncer à son droit de veto. Ainsi en Flandre par exemple, 70 % du capital des intercommunales devra être détenu par les collectivités locales d'ici à septembre 2006. Cette scission des activités ne sera pas sans conséquences sur les finances locales.

Voilà pour le contexte juridique interne, somme toute plutôt stable si l'on considère l'ensemble des pays de l'Union européenne.

1-3 le contexte macro-économique local

Les entreprises publiques locales, alors même qu'elles sont constituées en structures juridique de forme sociétaire, évoluent, en raison de la présence des collectivités locales actionnaires, dans le contexte macro-économique du secteur public local. Et ce contexte, on va le voir, n'est pas sans répercussions sur les entreprises publiques locales et sur la composition de leur capital.

La bonne santé du secteur public local entre 1996 et 2000 connaît une inflexion en 2001, en raison du ralentissement économique général qui s'est répercuté sur les ressources fiscales des collectivités locales. D'après nos estimations (Note de conjoncture sur les finances locales en Europe en 2002 publiée par Dexia, à paraître fin octobre), les recettes locales n'ont que très légèrement progressé en 2001 : +1 % pour l'ensemble des recettes fiscales locales européennes entre 2000 et 2001 contre 4,8 % en moyenne annuelle en volume entre 1996 et 2001. Particulièrement en Allemagne (recettes fiscales locales en diminution de 6,9 %), les recettes de taxe professionnelle ont chuté du fait de l'augmentation de la part de la taxe reversée par les communes au Bund et aux Länder et de la forte sensibilité au contexte économique de l'assiette de la taxe.
Les difficultés financières rencontrées par les collectivités locales allemandes par exemple, permettent d'expliquer en partie la recherche de partenaires privés au sein des entreprises publiques locales.

En outre, dans la plupart des pays, les collectivités locales sont parties prenantes dans les politiques de régulation des finances publiques liées à la mise en œuvre du traité de Maastricht. L'objectif de retour des finances publiques à l'équilibre prévu dans le Pacte de Stabilité et de Croissance de l'Union européenne dernièrement reporté à 2006 et la détérioration des soldes budgétaires en 2001 ont conduit la plupart des Etats à étendre aux collectivités locales les mécanismes de maîtrise du déficit et de la dette ou à renforcer les dispositifs existants. Au Portugal par exemple, la loi de stabilité budgétaire de juillet 2002 impose désormais des limites à l'endettement des collectivités locales et aux entreprises publiques locales, assorties de sanctions. En Italie, le décret-loi de septembre 2002 sur le gel des dépenses publiques pourrait avoir également des conséquences sur les entreprises publiques locales et leurs investissements.

Ainsi les contraintes liées à l'environnement économique et juridique actuel conduisent-elles les collectivités locales à s'associer à des partenaires privés pour :
- améliorer leur situation financière
- s'adapter au contexte juridique (libéralisation des marchés)

2- L'essor du recours aux partenaires privés dans les entreprises publiques locales tient aussi au libre choix des collectivités locales

Les motivations d'ouverture du capital à d'autres actionnaires répondent aussi à de multiples autres contingences (d'opportunité par exemple), qui s'inscrivent davantage dans une démarche volontaire des collectivités locales :

Parmi les motivations du recours à des investisseurs privés :
- Financer l'activité de l'entreprise publique locale ou des projets portant sur de lourdes infrastructures, pour permettre son développement et sa modernisation dans un contexte concurrentiel ;
- Bénéficier du savoir-faire et de l'expertise technique du partenaire ;
- Doter l'entreprise publique locale d'alliés dans un contexte concurrentiel, comme l'énergie et les réseaux (Italie, Allemagne) ;
- Améliorer et moderniser le management de l'entreprise (en terme de méthodes, de personnel).

Les partenaires privés sont variés :
- des PME spécialisées dans la gestion des services publics ;
- des grands groupes ;
- des banques ;
- le personnel des entreprises publiques locales.

Enfin, il faut noter que la recherche de nouveaux partenaires pour l'ouverture du capital n'est pas seulement orientée vers les actionnaires privés :
- l'association d'autres partenaires publics (Etat, organismes para-publiques) - c'est le cas en France, au Portugal en Allemagne ou en Autriche ;
- ou d'autres entreprises publiques locales – en Autriche, Allemagne, Italie

est également recherchée pour mettre en place des stratégies d'alliances économiques ou de partenariats institutionnels.

II - Le constat de l'essor du recours au partenariat public / privé est à moduler en fonction des métiers exercés par les entreprises publiques locales

L'essor est particulièrement sensible dans les secteurs très concurrentiels (ou rendus concurrentiels au niveau communautaire on l'a vu tout à l'heure), en général lucratifs, où interviennent des grands groupes nationaux ou internationaux, publics ou privés : il s'agit principalement des secteurs de l'eau, l'énergie, les déchets – c'est le cas en France, Allemagne, Suède, Autriche.

Dans les autres secteurs, l'orientation vers davantage de partenariat public-privé est moins perceptible : la tendance est certes à son développement, mais à un rythme beaucoup moins soutenu : il s'agit notamment des transports, du tourisme, du développement économique – c'est le cas en Allemagne, Grèce, France, Suède, Italie. Les partenaires privés sont en général des PME, des banques, des organismes de développement local qui entendent participer au développement de leur territoire d'intervention.

III – Au final, la présence accrue des partenaires privés est à mettre en balance avec le poids des collectivités locales toujours fort dans l'équilibre du partenariat public/privé

Même dans certains pays comme l'Allemagne, l'Autriche, l'Italie, où l'ouverture du capital a pu dans certains cas être présentée comme une étape vers une privatisation complète, celle-ci a, jusqu'à présent, rarement été conduite à son terme :
- dans certains pays, l'un des freins à la réalisation de certaines privatisations annoncées, totales ou partielles, d'entreprises publiques locales, a été notamment le risque de prise de participations étrangères, avec la volonté exprimée de refuser de faire sortir du patrimoine local ou national la propriété ou la gestion d'une activité exercée à l'échelle locale, en la confiant à des investisseurs étrangers, éloignés des réalités territoriales
- dans certains pays également, la cession des parts détenues par les collectivités locales, a pu être reportée du fait des mauvaises conditions du marché, sous-évaluant la valeur de l'entreprise.

Même si une grande souplesse dans la composition du capital est laissée aux acteurs locaux, rien ne s'opposant à ce que l'ouverture au privé porte sur la majorité du capital (sauf en France on l'a vu tout à l'heure), le plus souvent les collectivités locales choisissent d'en conserver la majorité (Allemagne, Italie, Grèce, Suède).

Et, lorsque la majorité du capital est cédée,
- la participation financière des collectivités locales ne descend en général pas au dessous de la minorité de blocage (Allemagne, Autriche, Italie),
- des dispositifs de protection existent en faveur des collectivités locales – par exemple en Belgique, où elles conservent la majorité des voix quelque soit leur participation financière au capital.

Les collectivités locales montrent ainsi qu'elles souhaitent conserver la maîtrise des entreprises au sein desquelles elles sont engagées et rester garantes de l'utilisation de l'argent public et du service offert à la population.

Juillet 2004

LIVRE VERT SUR LES PARTENARIATS PUBLICS-PRIVES ET LE DROIT COMMUNAUTAIRE DES MARCHES PUBLICS ET DES CONCESSIONS

CONTRIBUTION DE L'ASSOCIATION DES MAIRES DE FRANCE

I. Observations préliminaires

1. La consultation publique organisée par la Commission européenne est utile dans la mesure où elle devrait permettre d'identifier si en ce domaine la réglementation européenne, ou dans certains cas l'absence de réglementation, est source d'instabilité juridique pour les contrats conclus entre les pouvoirs publics et les personnes privées dans les différents pays de l'Union
2. En outre, au-delà des questions précises posées par la Commission, le livre vert a le mérite de rappeler les règles communautaires régissant les différentes formules de PPP mises en œuvre dans les Etats de l'Union européenne.
3. S'agissant de la réglementation française en matière de PPP, le cadre juridique nationale, qu'il s'agisse des formules contractuelles (contrats de partenariat crées par l'ordonnance de juin 2004, marchés publics, concessions) ou des formules institutionnelles (sociétés d'économie mixte), répond aux exigences soit des directives en vigueur, soit des principes de transparence et d'équité fixés par les Traités.
4. Aussi, au regard de ce rappel et des éclaircissements apportés par le livre vert sur le cadre juridique en vigueur, l'Association des Maires de France ne considère pas qu'un nouvel instrument juridique et un surcroît de réglementation européenne apporteraient une plus value communautaire en ce domaine

II. Observations sur l'attribution des concessions de service.

5. Les concessions sont définies par le livre vert en parfaite cohérence avec la définition française.
6. La concession est une forme de délégation de service public déjà très ancienne en France et qui a contribué à la constitution de services publics performants. Depuis la loi dite Sapin, la procédure d'attribution d'une concession de service, et plus généralement de toute forme de délégation d'un service public, est soumise aux règles de concurrence et respectent les obligations imposées par le Traité (voir en ce sens l'arrêt Telaustria de la Cour de Justice de l'Union européenne).
7. De même, et conformément aux observations de la Commission dans sa communication interprétative sur les concessions d'avril 2000, la durée d'un contrat de concession ne peut excéder selon la loi celle nécessaire à l'amortissement des investissements.
8. La concession est ainsi strictement distinguée du marché public tant en droit communautaire qu'en droit national. C'est pourquoi, l'Association des Maires de France n'est pas favorable à un régime communautaire unique applicable à la fois aux procédures de passation des concessions et des marchés publics.
9. L'Association des Maires de France juge de plus qu'un cadre juridique européen existe déjà au travers des Traités, des arrêts de la Cour de Justice et de la communication interprétative de la Commission. Elle estime que ce cadre est suffisamment adapté aux différentes situations qui se caractérisent dans chaque Etat membre par leur diversité et leur souplesse.
10. Il en résulte qu'un texte communautaire sur l'attribution de concession de service serait sans réelle valeur ajoutée.
11. Enfin, dans l'hypothèse où la Commission estimerait pertinent de définir un cadre européen en matière de concession, l'Association des Maires de France considère que ce cadre devrait offrir la souplesse nécessaire à l'adaptation du service dans le temps et qu'en conséquence il n'encadre pas de façon contraignante les possibilités d'insertion de clauses d'évolution du service ou de clauses de révision.

III Observations sur les sociétés d'économie mixte (PPP de type institutionnel).

12. L'Association des Maires de France tient à rappeler son attachement au principe de libre administration des collectivités locales, et donc en l'espèce au libre choix du mode de gestion de leurs services publics : auto-production (régie), marchés publics, délégation de service public (notamment concession), création d'une société d'économie mixte.
13. Ce principe de libre administration vaut particulièrement quant au choix de créer ou non une société d'économie mixte dès lors qu'il s'agit de gérer un service public ou d'assurer une mission d'intérêt général. La

société d’économie mixte en effet n’est qu’un mode de gestion d’un service public parmi d’autres.

14. Compte-tenu de ces observations, et parce que la création d’une SEM ne résulte pas d’un contrat mais d’un acte unilatéral des pouvoirs publics, l’Association des Maires de France estime que la décision de créer une société d’économie mixte ne relève pas du droit de la concurrence mais de la libre administration des collectivités locales. C’est pourquoi, il est tout à fait justifié que soient confondues la phase de constitution de la SEM et celle d’attribution des tâches à cette même SEM. En effet une SEM est toujours créée en vue d’accomplir une ou plusieurs missions.
15. Si un texte européen devait encadrer les modalités de création d’une SEM, l’Association des Maires de France considère qu’il ne saurait y avoir deux niveaux de mise en concurrence cumulatifs, l’un pour le choix des actionnaires, l’autre pour l’attribution des missions, ainsi que le suggère la Commission européenne.
16. Enfin, et conformément au droit français, la société d’économie mixte doit mettre en œuvre la concurrence pour la sélection de ses propres co-contractants.

IV Observations sur les organismes de coopération intercommunale.

17. Bien que le livre vert n’aborde pas ce sujet, l’Association des Maires de France souhaite appeler l’attention de la Commission sur les relations conventionnelles entre les organismes de coopération intercommunale et leurs communes membres.
18. En effet, récemment la Commission européenne s’est interrogée sur les dispositifs belge et allemand présidant aux relations conventionnelles entre un organisme de coopération intercommunale et ses communes membres.
19. Le dispositif français en la matière a pour but de favoriser une meilleure organisation administrative.
20. Ainsi les Communautés urbaines, d’agglomération ou de communes sont constituées uniquement de communes, ce qui les distingue d’autres formules de coopération en vigueur dans nombre de pays de l’Union. Les communes délèguent leurs compétences à la Communauté selon des dispositions prévues par la loi. Par ailleurs, la loi oblige à une délégation obligatoire de compétences dans un certain nombre de domaines.
21. Il est à noter également que pour l’exercice des ses compétences, la Communauté peut faire appel à un opérateur privé au travers d’une procédure de délégation de service public, telle que la concession par exemple.
22. En conséquence et compte-tenu de ces éléments, le droit des marchés publics ne saurait s’appliquer aux relations conventionnelles entre les Communautés et leurs communes membres, telle que par exemple la mise à disposition des services de la Communauté en faveur des communes

membres. Ces mises à disposition n'ont d'ailleurs d'autre objet que de faciliter la bonne organisation des services. Enfin, il est à noter qu'une Communauté ne peut agir que dans un champ territorial limité, celui constitué par les communes membres, ce territoire devant être d'un seul tenant et sans enclave.

V. Réponses à certaines questions posées dans le livre vert.

Question 1 : Tous les types de PPP contractuels (concession de service, délégation de service public, contrat de partenariat institué récemment par ordonnance) font l'objet en France d'un encadrement législatif.

Question 2 : la procédure de dialogue compétitif a été transposée en droit français dans le code des marchés publics. S'agissant de l'attribution des concessions, un tel dialogue n'est pas imposé par la loi..

Question 5 : Dans l'Union européenne la participation de sociétés non-nationales aux procédures de passation de concessions de services est garantie, sinon par un texte communautaire spécifique, du moins par les principes découlant du Traité et en conséquence par la Cour de Justice de l'Union européenne. S'agissant de la France la loi dite SAPIN garantit bien évidemment ce droit pour les non-nationaux

Question 16 : l'ordonnance française sur les contrats de partenariat fixe des règles précises quant à la prise en compte des sous-traitants et des PME dans l'exécution du contrat Par ailleurs, une loi oblige au paiEment direct des sous traitants.

Question 22 : Ainsi que le propose la Commission, dans un premier temps et de préférence à un nouvel instrument juridique communautaire, l'Association des Maires de France est favorable à la poursuite d'une réflexion collective et organisée sur les questions soulevées par le livre vert, associant notamment les autorités publiques locales. Il s'agirait à la fois de faire le point sur les dysfonctionnements éventuellement constatés en l'absence d'un texte communautaire spécifique et de favoriser l'échange de bonnes pratiques.

LES PARTENARIATS PUBLIC-PRIVE

REACTIONS DE LA CCIP AU LIVRE VERT DE LA COMMISSION EUROPEENNE

Rapport de M. Gilbert DIÉPOIS
au nom de la Commission du commerce intérieur

adopté par le Bureau du 16 septembre 2004, selon la procédure d'urgence

- SYNTHESE DES PROPOSITIONS -

Sur la base d'un Livre vert, la Commission européenne a ouvert un débat sur l'opportunité de faire évoluer les règles communautaires en matière de marchés publics et de concessions, pour accompagner le développement des partenariats public-privé (PPP). La Chambre de commerce et d’industrie de Paris, dans la continuité de ses précédents travaux sur la commande publique, souhaite aujourd’hui réagir à ce document.

I/ DEFINIR LES PRINCIPES DIRECTEURS D’UN EVENTUEL NOUVEAU CONTRAT

- ***Position de la CCIP en faveur de la rédaction par la Commission de Bruxelles d’une simple communication interprétative, pour permettre un meilleur développement des PPP. Un outil rigide, comme la directive, pourrait nuire à ce développement ;***

- ***Faire bénéficier une définition européenne des PPP de l’apport des enseignements théoriques et des bonnes pratiques des deux grands ensembles juridiques (latin et common law)*** qui existent au sein de l’Union ;

- ***Proposer une définition multicritère*** comprenant comme principes directeurs l’utilisation d’un vocabulaire fonctionnel pour désigner les missions confiées au cocontractant ; la mention du long terme (celui-ci variant en fonction des contraintes liées à l’investissement) ; la liste des acheteurs publics autorisés à conclure de tels contrats, c’est-à-dire l’État, les collectivités territoriales et leurs établissements publics ; la précision des principes que ces contrats devront respecter (transparence, égal accès des candidats…) ; le fait que le partenaire privé assume une partie des risques de l’opération envisagée.

II/ PRESERVER L’INTERET PUBLIC

- ***Tenir compte des recommandations d’Eurostat soulignant que les PPP devraient répondre à des règles très précises pour ne pas être intégrés dans le calcul de la dette publique. En tout état de cause, la personne publique doit faire preuve d’une***

transparence financière sur la part des fonds qu'elle engage dans l'opération de PPP ;

- ***S'inspirer de l'article 8 de l'ordonnance française qui pose, parmi les critères d'attribution, « la part d'exécution du contrat que le candidat s'engage à confier à des PME et à des artisans »*** ;

- ***Inciter les personnes publiques à choisir leur cocontractant en fonction de critères précis et fixés préalablement*** Outre le renforcement de la transparence de la commande publique et la sécurité juridique des acteurs concernés, cela serait également source d'information pour les usagers-clients (avec le relais des associations professionnelles, par exemple) et de possibilité pour les entreprises de défendre au mieux leurs intérêts en présentant des offres parfaitement adaptées aux attentes des personnes publiques ;

- Procéder à une ***évaluation approfondie des opportunités de chaque modalité de contrat d'achat public qui devra, de plus, être réalisée en toute transparence*** (cela signifie, par exemple, que dans le cadre d'une commune, le conseil municipal en soit informé).

III/ FOURNIR DES REGLES ADAPTEES A L'OBJET DES CONTRATS DE PPP

- ***Écarter le dialogue compétitif comme unique mode de passation des PPP***. Hormis le risque de confusion avec les marchés publics, cette procédure peut manquer de souplesse, face à certaines situations économiques et risque de restreindre le concept même de partenariat. Le choix ou non d'une phase de dialogue dans l'attribution des contrats devra varier selon leur objet ;

- ***Instaurer un dialogue permanent entre les deux parties contractantes tout au long de la relation contractuelle ; une collaboration étroite se mettant ainsi en place avec pour bénéficiaire principal l'utilisateur du service*** ;

- ***Faire figurer dans un rapport technique et financier certains éléments propres à permettre un suivi satisfaisant des opérations de PPP et, également, à favoriser la mission de contrôle***. Il s'agit d'indicateurs permettant d'évaluer la qualité du service et le choix des tarifications, de démontrer la continuité du service (justification des pannes éventuelles ou des interruptions), et d'attester des modalités d'adaptabilité et de mutabilité du service ;

- ***Conférer à l'autorité publique à l'origine du contrat de PPP un rôle d'interface*** l'amenant à recueillir les attentes de la population en matière d'information, d'une part, et à transmettre les éléments fournis par le délégataire quant aux modalités de prestation du service, les explications concernant la qualité, les tarifs…, d'autre part.

En conclusion, notre Compagnie considère que les PPP doivent bénéficier à des contractants, entreprises privées ; les entités mixtes n'ayant pas vocation à y prendre part.

- SOMMAIRE -

PARTIE PRELIMINAIRE : DEFINIR LES PRINCIPES DIRECTEURS D'UN EVENTUEL NOUVEAU CONTRAT ____ 8

PREMIERE PARTIE : PRESERVER L'INTERET PUBLIC ____ 13

I / L'OPTIMISATION DES MISSIONS ET INFRASTRUCTURES PUBLIQUES ____ 14

II / LA SAUVEGARDE DES PRINCIPES D'EGAL ACCES A LA COMMANDE PUBLIQUE ET DE TRANSPARENCE DES CONTRATS ____ 15

SECONDE PARTIE : FOURNIR DES REGLES ADAPTEES A L'OBJET DES CONTRATS DE PPP ____ 20

I / LA QUESTION DE LA PERTINENCE DE L'APPLICATION DE LA PROCEDURE DE DIALOGUE COMPETITIF ____ 21

II / L'INSTAURATION D'UN SUIVI DES MODALITES D'EXECUTION ____ 22

Dans un contexte de contractualisation croissante de l'action publique, de nécessité renforcée pour l'administration à être plus accessible et plus performante et face à l'interaction entre les différents ordres juridiques qui existent au sein de l'Union européenne, la Commission de Bruxelles a présenté, le 30 avril dernier, un « Livre vert sur les partenariats public-privé et le droit communautaire des marchés publics et des concessions »[1].

Ce document se veut l'instigateur d'un débat auprès des différents acteurs économiques concernés, afin d'examiner la pertinence d'une intervention communautaire en matière de réglementation relative aux partenariats public-privé (PPP). Pour ce faire, il expose les règles et principes du droit communautaire des marchés publics et des concessions en matière de sélection du cocontractant et d'exécution du contrat. Il soulève également différentes questions visant à obtenir davantage d'informations sur l'applicabilité de ces règles et principes, pour déterminer si ceux-ci sont suffisamment clairs.

Les PPP correspondent à des contrats globaux permettant aux personnes publiques de confier à des entreprises privées, moyennant rémunération, la conception, la réalisation, le financement, la gestion et la maintenance de certains équipements et infrastructures publics. Ces dernières années, de nombreux États membres ont multiplié les recours à ces contrats. C'est la Grande-Bretagne qui la première a développé cette nouvelle forme de coopération au travers de la PFI (Private Finance Initiative). Créée à l'origine par le gouvernement thatcherien[2], son but était alors à la fois financier (remédier au retard d'équipement dans un contexte de réduction drastique des dépenses budgétaires) et politique (promouvoir la gestion privée des services publics). Ce programme a perduré au-delà des alternances politiques, lui conférant ainsi continuité et ancrage[3]. Et cela, d'autant plus, que la PFI a été relayée

[1] *Ce Livre vert s'inscrit parmi les priorités établies par la Commission européenne dans sa Stratégie pour le marché intérieur 2003-2006 et constitue une contribution aux actions prévues dans le cadre de l'Initiative pour la Croissance en Europe (adoptée le 7 mai 2003). http://europa.eu.int/comm/internal_market/publicprocurement/ppp_fr.htm*

[2] *Le programme des PFI a été lancé dans le discours du Chancelier de l'Échiquier, Norman Lamont, le 12 novembre 1992.*

[3] *Alors qu'en Grande-Bretagne, les services publics étaient traditionnellement gérés en régie directe par les collectivités publiques, la PFI a permis de confier la construction et la gestion d'infrastructures publiques au secteur privé, moyennant un tarif payé par l'usager ou, le plus souvent, un prix versé régulièrement par l'administration ; la dimension financière du projet étant ici prééminente.*

dans plusieurs États européens : l'Espagne, le Portugal, l'Italie et les Pays-Bas, principalement, recourent désormais à ce système de contrats, en particulier dans les secteurs de l'enseignement et hospitalier. C'est la volonté des autorités étatiques d'obtenir des investissements sûrs au travers de meilleurs achats qui a, avant tout, contribué au développement des PPP.

Il convient, par ailleurs, de noter que ces conventions se développent en dehors de toute référence au service public (notion française plus restrictive que celles d'activité ou de partenariat visées dans les PFI[4]). Aussi, et bien qu'à l'origine de la conception moderne des délégations de service public dans lesquelles les PPP prennent source, notre pays a-t-il longtemps paru en retrait. La Chambre de commerce et d'industrie de Paris avait ici à plusieurs reprises alerté les pouvoirs publics nationaux sur les risques pour la compétitivité de nos entreprises[5]. Elle salue donc l'adoption par le gouvernement français de l'ordonnance « sur les contrats de partenariats »[6].

Dans la continuité de ses différents travaux, notre Compagnie souhaite aujourd'hui contribuer au débat communautaire. A cette fin, elle propose différentes recommandations tendant à définir les principes directeurs d'un éventuel nouveau contrat, préserver l'intérêt public et fournir des règles adaptées à l'objet des PPP[7].

[4] *La communication interprétative de la Commission européenne sur les concessions en droit communautaire (JOCE n°C121 du 29 avril 2000) ne mentionne d'ailleurs que le terme d'« activité », celui de « service public » n'y figurant pas.*

[5] *Voir, notamment, les rapports de Gilbert Diépois, « Délégations de service public - Pour un renouveau » du 19 septembre 2002 (www.etudes.ccip.fr/archrap/rap02/die0209.htm) et de Andrée Hallauer, « Les entreprises face à la modernisation de la commande publique » du 5 juin 2003 (www.etudes.ccip.fr/archrap/rap03/hal0306.htm).*

[6] *Prise sur le fondement de la loi d'habilitation datant de près d'un an auparavant, elle est le fruit d'une vaste consultation et de quelques arbitrages. Ordonnance n°2004-566 du 17 juin 2004 (JORF du 19 juin 2004).*

[7] *Le présent rapport ne constitue pas une réponse exhaustive à l'ensemble des questions soulevées par la Commission européenne, certaines de celle-ci n'ayant pas vocation à être traitées par notre Compagnie.*

PARTIE PRELIMINAIRE : DEFINIR LES PRINCIPES DIRECTEURS D'UN EVENTUEL NOUVEAU CONTRAT

La création en France du « contrat de partenariat » était fort attendue, car ce nouvel engagement contractuel entre les personnes publiques et le secteur privé devrait permettre de réaliser des travaux d'infrastructures et d'équipements jusque là « au point mort », notamment faute de financements publics suffisants ou en raison de la complexité des projets.

En pratique, il s'agit d'une opportunité pour relancer l'aménagement de nos territoires en grandes infrastructures et équipements d'intérêt général qui viendront encourager et soutenir le développement économique et territorial, tout en apportant des services de qualité aux usagers-clients.

En effet, ces chantiers de longue durée devraient être synonyme de gains sur plusieurs plans : le professionnalisme et l'expérience des entreprises retenues devraient assurer une meilleure programmation des opérations, une analyse complète de la répartition des risques de construction et d'exploitation, et une exécution plus rapide des travaux. Les conditions d'un fonctionnement optimal des équipements et infrastructures créés devraient également être garanties.

Le recours aux PPP n'est cependant pas pertinent pour tous types de projets. L'appel au secteur privé est justifié prioritairement dans le cadre de services publics capitalistiques, complexes, tarifables et locaux. Mais le recours à des contrats de partenariat est également envisageable afin d'obtenir des gains de productivité par une gestion innovante d'un service, ou bien encore lorsqu'une technologie de pointe est requise. Ils sont également adaptés à des biens ou des services publics pour lesquels la rémunération de l'exploitant ne peut venir directement de l'usager, par exemple, dans le cas d'une infrastructure routière où une barrière de péage serait impossible (« péage virtuel ») ou pour un service d'éclairage public.

C'est ainsi que de nombreux projets sont déjà à l'étude en France dans divers domaines, comme la construction ou l'extension d'hôpitaux, de prisons, de commissariats de police, d'incinérateurs de déchets, de musées (Musée de l'air et de l'espace du Bourget, futur centre d'exposition du Grand Palais à Paris). Dans le domaine des transports, plusieurs opérations sont étudiées, tels le TGV Angoulême - Bordeaux, le tramway Lyon - aéroport Saint Exupéry et, en Ile-de-France, la liaison

Paris – aéroport Roissy CDG (projet CDG Express), ainsi que le doublement du tronc commun des autoroutes A4 et A86 à l'Est de Paris.

Sur le plan juridique, aux termes de l'article 1er de l'ordonnance française, « *les contrats de partenariats sont des contrats administratifs par lesquels l'État ou un établissement public de l'État confie à un tiers, pour une période déterminée en fonction de la durée d'amortissement des investissements ou des modalités de financement retenues, une mission globale relative au financement d'investissements immatériels, d'ouvrages ou d'équipements nécessaires au service public, à la construction ou transformation des ouvrages ou équipements, ainsi qu'à leur entretien, leur maintenance, leur exploitation ou leur gestion, et, le cas échéant, à d'autres prestations de services concourant à l'exercice, par la personne publique, de la mission de service publique dont elle est chargée.* ».

Il n'existe pas, en revanche, ainsi que le souligne la Commission européenne dans son Livre vert, de définition communautaire des PPP. Néanmoins, ils présentent d'un État à l'autre des caractéristiques communes :

- une durée relativement longue de la relation entre les contractants ;
- un mode de financement assuré pour partie par le secteur privé ;
- un rôle important de l'opérateur économique qui participe à différents stades du projet (conception, réalisation, mise en œuvre, financement) ;
- une répartition des risques entre le partenaire public et celui privé, sur lequel sont transférés des aléas habituellement supportés par le secteur public. Les PPP n'impliquent cependant pas nécessairement que le partenaire privé assume tous les risques.

Autre constat préalable de la Commission, celui de la création par certains États membres d'outils de coordination et de promotion. Il s'agit là d'échanges de bonnes pratiques qu'il est, selon notre Compagnie, fortement souhaitable de généraliser. Car, si le renouveau des réflexions sur le partenariat public-privé émane des États anglo-saxons et s'est ensuite diffusé aux pays méditerranéens, il est nécessaire *d'associer, en une démarche commune, les savoir-faire originels de notre pays[8] et ceux, plus récents, de nos voisins. Les PPP représentent un instrument qui a vocation à être partagé.*

Si une définition européenne des PPP devait être formulée, elle devrait bénéficier de l'apport des enseignements théoriques et des bonnes pratiques des deux grands ensembles juridiques (latin et common law) qui existent au sein de l'Union.

Des différents travaux de la CCIP[9] sur les éléments indispensables à une telle définition, il ressort, en premier lieu, la nécessité de l'emploi d'un vocabulaire fonctionnel permettant la désignation des PPP via des terminologies opérationnelles et non purement théoriques : construction, exploitation, maintenance…

En deuxième lieu, le long terme doit fondamentalement caractériser ces nouveaux contrats, cela compte tenu des investissements induits et des amortissements afférents. En outre, l'investissement devra être pour une grande partie assuré par le secteur privé.

En troisième lieu, il conviendra de préciser les acheteurs susceptibles de passer des PPP, à savoir l'État, les collectivités territoriales et leurs établissements publics. Une liste exhaustive des entités adjudicatrices est, par conséquent, nécessaire.

En quatrième lieu, il est fondamental que les candidats soient choisis dans des conditions d'objectivité et de mise en concurrence effective. Cela signifie que les PPP doivent être soumis aux principes de transparence et d'égalité devant la commande publique.

[8] *Sur l'évolution de ces contrats et les origines modernes de la délégation de service public, cf. Xavier Bezançon, « 2000 ans d'histoire du partenariat public-privé pour la réalisation des équipements et services collectifs », Presses de l'École nationale des Ponts et Chaussées, 2004.*

[9] *Cf. les rapports de Gilbert Diépois et Andrée Hallauer, précités.*

Enfin, la notion de transfert de risque - même s'il n'est pas entièrement assumé par le partenaire privé - est, pour notre Compagnie, un élément indispensable de définition, car il est inhérent à l'ensemble des activités économiques[10]

Dès lors, une définition multicritère des PPP devra comprendre les principes directeurs suivants :

- ***utiliser un vocabulaire fonctionnel pour désigner les missions confiées au cocontractant (construction, exploitation, maintenance) ;***
- ***être caractérisée par le long terme (celui-ci variant en fonction des contraintes liées à l'investissement) ;***
- ***mentionner précisément les acheteurs publics autorisés à conclure de tels contrats, c'est-à-dire l'État, les collectivités territoriales et leurs établissements publics ;***
- ***souligner les principes que ces contrats devront respecter (transparence, égal accès des candidats…) ;***
- ***préciser que le partenaire privé assume tout ou partie des risques de l'opération envisagée.***

Il s'agit là de principes directeurs indispensables et devant être partagés par l'ensemble des États du marché unique. Toutefois, relativement à l'opportunité d'une telle définition et sur son récipiendaire, ***la Chambre de commerce et d'industrie de Paris se prononce en faveur de la rédaction par la Commission européenne d'une simple communication interprétative, pour permettre un meilleur développement des PPP. Un outil rigide comme la directive pourrait nuire à ce développement.***

[10] *Rappelons que la délégation de service public, quant à elle, trouve sa justification première dans le transfert de risque de la personne publique vers le délégataire. Cf., notamment, l'arrêt « Teleaustria » dans lequel la Cour de Justice des Communautés Européennes estime que les concessions comportent pour le concessionnaire lui-même, l'obligation de supporter le risque économique principal, ou du moins substantiel, associé à la prestation du service concerné (CJCE, 7 décembre 2000).*

PREMIERE PARTIE : PRESERVER L'INTERET PUBLIC

Qu'il s'agisse du débat suscité lors de la création de la PFI en Grande-Bretagne ou de celui qui a prévalu à l'adoption de l'ordonnance française, les partisans et adversaires de cette forme de contrats ont permis, par les discussions ainsi engendrées, d'en relever les principaux avantages et inconvénients.

Notre Compagnie a, quant à elle, eu l'occasion de souligner que les PPP sont susceptibles de conférer une véritable souplesse dans la gestion et le financement, de garantir une plus grande rapidité de réponse aux attentes de la population et des entreprises, de permettre d'associer le secteur privé avec son expertise et ses savoir-faire… En parallèle, elle dénonçait les obstacles (juridiques, financiers…) existants et susceptibles d'en freiner l'essor : rigidité de certains cadres juridiques, absence de véritable protection du secteur public…

I / L'OPTIMISATION DES MISSIONS ET INFRASTRUCTURES PUBLIQUES

Le PPP comporte, avant tout, une dimension culturelle. En effet, leur esprit correspond à une externalisation des missions par l'appropriation des méthodes privées au bénéfice des clients et citoyens.

Dès lors, l'une des finalités premières réside-t-elle dans la nécessité de bonne gestion des deniers publics. Or, le recours au financement privé permet une diminution notable du coût des projets envisagés, puisqu'ils ne sont plus directement assumés par la personne publique. Cela peut, en outre, constituer une réponse au risque d'impécuniosité de certaines collectivités.

De plus, la souplesse pour les personnes publiques est renforcée par la possibilité de paiement différé qu'ils comportent. Les ressources publiques ne sont ainsi engagées que de façon étalée et évitent un endettement trop important[11]. Au delà, c'est la gestion elle-même des équipements et infrastructures qui serait performée grâce, en particulier, à la vision d'ensemble des projets et aux principes la

[11] *Rappelons que le Code français des marchés publics prohibe les paiements différés. Il était donc impossible, avant l'adoption de l'ordonnance sur les PPP, de procéder à certains types d'achats, en particulier les besoins en services publics non marchands (c'est-à-dire ceux pour lesquels il n'y a pas de paiement par l'usager). C'est, notamment, ce vide juridique que les PPP permettent de palier.*

gouvernant (émanant des entreprises). La recherche de rentabilité et de rationalité serait ainsi alliée à une souplesse accrue due à l'émancipation des cadres de la comptabilité publique.

D'un point de vue technique, les PPP sont censés apporter aux équipements et infrastructures publics les connaissances et outils de la sphère privée. Les solutions performantes et innovations technologiques de cette dernière profiteraient à l'ensemble des utilisateurs et renforceraient la qualité des services proposés.

Enfin, les délais seraient considérablement réduits : le caractère global des contrats entraînant des économies d'échelle temporelle en matière de construction.

II / LA SAUVEGARDE DES PRINCIPES D'EGAL ACCES A LA COMMANDE PUBLIQUE ET DE TRANSPARENCE DES CONTRATS

S'il est incontestable que l'ordonnance française sur les PPP a permis de remédier au vide juridique qui existait dans notre pays en la matière, cette nouvelle forme de contrat n'est pas sans susciter différentes inquiétudes et interrogations.

La problématique est, en premier lieu, financière. Certes, les PPP engendrent a priori une diminution du coût des infrastructures, préservant ainsi les deniers publics. Toutefois, il existe un coût indirect pour les administrés et les contribuables. Alors que les personnes publiques empruntent au taux d'intérêt le plus bas du marché, les entreprises privées sont soumises à des taux plus élevés. Ce différentiel sera répercuté par les cocontractants sur les loyers payés par les administrations, surcoût auquel il convient d'ajouter la marge qu'établiront naturellement les entreprises.

Or, ce supplément financier ne pourra pas véritablement être porté à connaissance du citoyen. En effet, lorsqu'une administration finance elle-même ses travaux, elle inscrit à son budget les sommes nécessaires et acquitte les factures et avances qui y sont afférentes. C'est le principe de transparence qui serait ici remis en cause. De plus, dès lors que le partenaire public s'engage pour plusieurs années à verser un loyer à son cocontractant, il grève d'autant ses ressources. Il s'agit donc d'un endettement indirect affecté au remboursement futur de l'entrepreneur.

C’est pour palier d’éventuelles dérives que l’Office statistique européen, Eurostat, a établi des recommandations relativement au traitement comptable dans les comptes nationaux des contrats ainsi souscrits par les autorités publiques en précisant l'impact sur le déficit / excédent public et la dette publique.

Eurostat conseille que les actifs liés à un partenariat public-privé soient classés comme actifs non publics et ne soient donc pas enregistrés dans le bilan des administrations, si deux conditions cumulatives sont réunies :

- le partenaire privé supporte le risque de construction ;
- il supporte aussi au moins l'un des deux risques suivants : celui de disponibilité[12] ou celui lié à la demande[13].

En outre, si le risque de construction[14] est assumé par l'État, ou si le partenaire privé endosse seulement le risque de construction et aucun autre risque, les actifs sont classés comme actifs publics.

Aussi, convient-il de tenir compte des recommandations d’Eurostat soulignant que les PPP devraient répondre à des règles très précises pour ne pas être intégrés dans le calcul de la dette publique. En tout état de cause, la personne publique doit faire preuve d’une transparence financière sur la part des fonds qu’elle engage dans l’opération de PPP.

Toujours en matière financière, on peut se poser la question de la faillite de l’entrepreneur. Ce dernier ne risque-t-il pas de demander la vente de l’hôpital, de l’école… qu’il aura construit ? Les banques elles-mêmes ne solliciteront-elles pas une telle démarche ?

[12] *Le risque de disponibilité correspond, notamment, au cas où le partenaire privé ne peut livrer le volume contractuellement convenu ou répondre, comme spécifié dans le contrat, aux normes de sécurité ou de certification publiques liées à la prestation de services aux utilisateurs finals.*

[13] *Ce risque couvre la variabilité de la demande (plus élevée ou plus faible qu'escomptée lors de la signature du contrat) lorsque celle-ci n'est pas imputable à la gestion du partenaire privé.*

[14] *Le risque de construction implique, en particulier, la livraison tardive, le non-respect de normes spécifiées, les surcoûts, la déficience technique…*

Face à ce risque pour la continuité des services publics, notre Compagnie souhaite que les ouvrages et infrastructures construits ne soient pas considérés comme des biens privés.

Autre grand principe susceptible d'être écarté par les PPP, celui d'égal accès des entreprises à la commande publique. La mise en concurrence serait illusoire dès lors que seules les grandes entreprises (ayant à la fois la capacité financière et la crédibilité auprès des banques) semblent aptes à assurer le financement et la réalisation d'importants projets. Aussi, certaines PME, notamment du BTP, redoutent-elles d'êtres exclues de ces contrats ou soumises aux firmes plus importantes en qualité de sous-traitant[15].

Or, toutes les structures doivent avoir leur place dans les PPP. Si les opérations de moyenne importance seront plus naturellement ouvertes aux PME, celles d'une plus forte envergure peuvent privilégier les grandes entreprises.

Dans ce contexte, notre Compagnie recommande de s'inspirer de l'article 8 de l'ordonnance française qui pose, parmi les critères d'attribution, « la part d'exécution du contrat que le candidat s'engage à confier à des PME et à des artisans ».

En matière de marchés publics, le principe d'égal accès est un des éléments fondamental. Le Code français[16] impose la hiérarchisation et le porter à connaissance, dès la publicité, des critères de choix. Ces derniers se rapportent, notamment, à la valeur technique, la rentabilité, le service après-vente, le prix des prestations… Tous ces éléments doivent concourir au choix de l'offre qualifiée d'« économiquement la plus avantageuse ». La volonté des auteurs de ce texte était de faire évoluer l'achat public dans le sens d'une meilleure efficacité des services et dans celui du choix des prestations les plus en adéquation avec leurs besoins. Le prix a d'ailleurs été placé en dernier dans la liste des critères de sélection des

[15] *Les concepteurs et architectes ont, eux aussi, fortement alerté les pouvoirs publics quant à leur place et leur rôle dans les PPP, craignant d'être écartés de la commande publique au profit des bureaux d'étude intégrés.*

[16] *Article 53 du Code des marchés publics français.*

entreprises, afin de souligner que des éléments non exclusivement économiques devaient être pris en compte.

Une telle démarche pourrait utilement être transposée dans le cadre des PPP, avec l'énonciation de critères de sélection permettant de déterminer la ou les entreprises susceptibles d'offrir les prestations les plus satisfaisantes aux citoyens. En parallèle, cela optimiserait les réponses des personnes privées qui soumettraient des offres parfaitement en adéquation avec les besoins du public.

Il serait souhaitable d'inciter les personnes publiques à choisir leur cocontractant en fonction de critères précis et fixés préalablement.

Outre le renforcement de la transparence de la commande publique et la sécurité juridique des acteurs concernés, cela serait également source d'information pour les usagers-clients (avec le relais des associations professionnelles, par exemple) et de possibilité pour les entreprises de défendre au mieux leurs intérêts en présentant des offres parfaitement adaptées aux attentes des personnes publiques.

Enfin, il convient de rappeler que le PPP ouvre une « troisième voie » dans la commande publique, à côté des concessions et des marchés publics. Le choix de la personne publique pour ce type de contrat doit être encadré. Selon le droit français, avant de conclure un PPP, une évaluation préalable (économique, financière, d'intérêt) du projet est obligatoire[17]. Elle permet de décider de la solution la plus à même de répondre aux besoins des administrations. Ces contrats ne peuvent alors être passés que lorsqu'il a été démontré que la personne publique n'est pas en mesure objectivement de définir seule et à l'avance les moyens techniques pouvant répondre à ses besoins ou d'établir le montage financier et juridique du projet, ou que celui-ci a un caractère d'urgence.

[17] *Sollicité le Conseil Constitutionnel français avait déclaré, dans un avis du 26 juin 2003, que les PPP devaient être considérés comme une « dérogation » au droit commun de la commande publique et ne pouvaient s'appliquer qu'à « des situations répondant à des motifs d'intérêt général, tels que l'urgence ».*

Non seulement, une évaluation approfondie des opportunités de chaque modalité de contrat d'achat public est nécessaire, mais encore devra-t-elle être réalisée en toute transparence.

Cela signifie, par exemple, que dans le cadre d'une commune, le conseil municipal en soit informé.

SECONDE PARTIE : FOURNIR DES REGLES ADAPTEES A L'OBJET DES CONTRATS DE PPP

I / LA QUESTION DE LA PERTINENCE DE L'APPLICATION DE LA PROCEDURE DE DIALOGUE COMPETITIF

Dans son Livre vert, la Commission européenne soulève la question de la procédure de passation des contrats de PPP et décrit les différentes modalités applicables aux autres achats publics.

C'est ainsi qu'elle rappelle que les marchés publics peuvent être contractés, notamment, à la suite d'un « dialogue compétitif ». Il s'agit d'une procédure ouverte dans les cas où l'organisme adjudicateur n'est pas objectivement en mesure de définir les moyens techniques pouvant répondre à ses besoins et à ses objectifs, ainsi que dans les cas où l'organisme adjudicateur n'est pas objectivement en mesure d'établir le montage juridique et / ou financier d'un projet[18]. Le dialogue compétitif permet l'instauration d'échanges avec les candidats, les discussions ayant pour objet de développer des solutions aptes à répondre aux besoins des administrations. Au terme du dialogue, les candidats sont invités à remettre leur offre définitive.

Par ailleurs, la Commission décrit les procédures d'attribution relative, en particulier, aux concessions. Il s'agit de déterminer les modalités de choix les plus à même de correspondre aux PPP. De l'avis de la Commission, « la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques ».

[18] *En droit français, le dialogue compétitif a été introduit par le Code des marchés publics de 2004. Proche de l'ancien appel d'offres sur performance, ses cas d'ouverture diffèrent selon le type de marché :*

- *s'il s'agit d'un marché de fournitures ou de services, le dialogue compétitif est possible quand l'administration n'est pas en mesure soit de définir les moyens permettant de répondre à ses besoins, soit d'établir le montage juridique et financier d'un projet ;*
- *s'il s'agit d'un marché de travaux, ces conditions ne s'appliquent qu'à partir de 5 900 000 € HT annuels.*

La CCIP estime, quant à elle, que la procédure de dialogue compétitif est parfaitement adaptée aux marchés publics, mais elle émet quelques réserves quant à sa généralisation aux PPP.

Certes, les cas d'ouverture des PPP en France ne sont pas sans rappeler ceux du dialogue compétitif des marchés publics. En effet, l'art. 2 de l'ordonnance dispose que les contrats de partenariat ne peuvent être conclus que pour la réalisation de projets pour lesquels une évaluation préalable :

- *montre ou bien que, compte tenu de la complexité du projet, la personne publique n'est pas objectivement en mesure de définir seule et à l'avance les moyens techniques pouvant répondre à ses besoins ou d'établir le montage financier ou juridique du projet, ou bien que le projet présente un caractère d'urgence ;*
- expose avec précision les motifs de caractère économique, financier, juridique et administratif, qui l'ont conduite, après une analyse comparative, à retenir le projet envisagé et à décider de lancer une procédure de passation d'un contrat de partenariat. En cas d'urgence, cet exposé peut être succinct.

Notre Compagnie estime que le dialogue compétitif comme unique mode de passation des PPP doit être écarté. Outre que cela risquerait d'entraîner une confusion avec les marchés publics, il s'agit d'une procédure qui peut manquer de souplesse, face à certaines situations économiques et qui risque de restreindre le concept même de partenariat. Le choix ou non d'une phase de dialogue dans l'attribution des contrats devra varier selon leur objet.

Par ailleurs, la CCIP rappelle que les PPP devront respecter strictement les principes de transparence et d'égal accès des candidats.

II / L'INSTAURATION D'UN SUIVI DES MODALITES D'EXECUTION

La Commission européenne souligne que le droit dérivé des marchés publics et des concessions vise principalement la phase d'adjudication d'un contrat. La phase postérieure à la sélection du partenaire privé, n'est, en revanche, pas visée. « Cependant, les principes d'égalité de traitement et de transparence qui découlent du Traité s'opposent, de manière générale, à toute intervention du partenaire public postérieurement à la sélection d'un partenaire privé, dans la mesure où une telle intervention serait de nature à remettre en cause l'égalité de traitement entre opérateurs économiques ».

Dans ce contexte, il semble important de prévoir différentes modalités permettant d'adapter les contrats aux évolutions économiques. Cela passe avant tout par le dialogue entre les partenaires, l'entreprise privée bénéficiant naturellement d'une certaine autonomie lui octroyant liberté d'appréciation et souplesse dans les modalités de gestion[19]*.*

Il est indispensable d'instaurer un dialogue permanent entre les deux parties contractantes ; une collaboration étroite se mettrait ainsi en place avec pour bénéficiaire principal l'utilisateur du service.

Par ailleurs, si l'on se rapporte aux délégations de service public telles qu'elles existent en France, les délégataires sont légalement tenus[20] de produire, chaque année, un rapport financier et technique retraçant la totalité des opérations afférentes à l'exécution de la délégation et une analyse de la qualité du service. Ce rapport est assorti d'une annexe permettant à l'autorité délégante d'apprécier ces conditions d'exécution.

Ce rapport pourrait utilement inspirer les PPP, à condition que certaines mentions obligatoires d'aide au contrôle y figurent.

Pour permettre un suivi satisfaisant des opérations de PPP et, également, favoriser la mission de contrôle, certains éléments devraient figurer dans le rapport technique et financier ; il s'agirait notamment :

- ***d'indicateurs permettant d'évaluer la qualité du service et le choix des tarifications ;***
- ***d'indicateurs démontrant la continuité du service (justification des pannes éventuelles ou des interruption) ;***

[19] *Il est d'ailleurs à noter que le dialogue est un des aspects à l'origine du succès des contrats de PFI.*

[20] *Art. 40-1 de la « loi Sapin » (loi n°93-122 du 29 janvier 1993 relative à la prévention de la corruption et à la transparence de la vie économique et des procédures publiques).*

- ***d'indicateurs attestant des modalités d'adaptabilité et de mutabilité du service.***

Enfin, le choix du cocontractant et les actions de celui-ci doivent pouvoir être présentés au public, usagers-clients. Ce dernier est, en effet, le destinataire premier des prestations offertes dans le cadre des PPP. Il est, à ce titre, habilité à bénéficier d'un droit de regard sur les modalités de réalisation du contrat. En outre, les remarques (celles positives aussi bien que celles négatives) peuvent conférer réactivité et adaptation au service. Dès lors, l'information se doit d'être la plus complète et la plus transparente possible.

L'autorité publique à l'origine du contrat de PPP devrait avoir un rôle d'interface consistant à :

- ***recueillir les attentes de la population en matière d'information, d'une part ;***
- ***transmettre les éléments fournis par son contractant quant aux modalités de prestation du service, les explications concernant la qualité, les tarifs…, d'autre part.***

Par ailleurs, cette autorité devrait également être le relais entre les éventuelles réflexions et remarques des usagers-clients, d'un côté, et les réponses qui y sont apportées par l'entreprise privée, de l'autre.

**

** **

En conclusion, notre Compagnie considère que le PPP doit bénéficier à des contractants, entreprises privées ; les entités mixtes n'ayant pas vocation à y prendre part.

Juillet 2004

REPONSE DE LA FG3E AU LIVRE VERT DE LA COMMISSION EUROPEENNE SUR LES PARTENARIATS PUBLIC-PRIVE ET LE DROIT COMMUNAUTAIRE DES MARCHES PUBLICS ET DES CONCESSIONS

La Fédération Française des Entreprises Gestionnaires de Services aux Equipements, à l'Energie et à l'Environnement (FG3E) groupe, au sein de six syndicats nationaux, les entreprises françaises qui assurent la gestion des équipements de production et de distribution de chaleur et de froid de toutes tailles, ainsi que d'autres équipements techniques ; certaines d'entre elles gèrent aussi des services non techniques.

Les équipements concernés relèvent aussi bien du chauffage urbain, que de l'installation collective de chauffage ou de climatisation, ou encore de l'équipement individuel de chauffage, sans oublier la production d'énergie thermique ou électrique à partir de l'incinération des déchets ménagers.

Ces activités représentent un chiffre d'affaires de 6 milliards d'Euros en France (et l'équivalent hors France) et elles emploient environ 35 000 salariés en France.

* * *

La FG3E a pris connaissance du Livre Vert sur les PPP soumis à consultation par la Commission. Elle a manifesté un grand intérêt pour les questions soulevées

Les entreprises de la profession ont développé une activité importante depuis des décennies, en France et dans de nombreux autres pays européens ou hors de l'Europe, tant en matière de réseaux de chauffage urbain ou de froid, que dans celui de l'exploitation d'équipements collectifs thermiques, que dans le secteur du traitement des déchets ménagers par incinération avec valorisation énergétique.

Ces prestations sont fournies au secteur public (Etat et collectivités territoriales ainsi que leurs établissements) via des relations partenariales organisées différemment selon le droit national qui s'applique.

La FG3E note que les questions liées au développement des PPP sont complexes dans la mesure où chaque Etat membre a déjà mis en place ses propres concepts nationaux ; pour autant elles revêtent une importance primordiale dans la perspective d'une réflexion globale sur le phénomène des PPP.

La FG3E tient donc à apporter ses réponses afin que la Commission, dans sa grande sagesse, soit en mesure de prendre les dispositions qui conviennent après avoir entendu tous les points de vue.

N'étant pas concernée par toutes les questions, elle s'attachera à répondre à celles qui sont plus directement en rapport avec les activités des entreprises de la profession

* * *

Question n°1 : Quels types de montages de PPP purement contractuel connaissez-vous ? Ces montages font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays ?

La France connaît plusieurs formes de relations contractuelles entre un opérateur public et un prestataire :

- Les marchés publics sont des contrats conclus entre une autorité publique et une entité - généralement privée - dont l'objet porte sur des travaux, des services ou des fournitures, et dont le **paiement immédiat** est effectué par la personne publique.
  Ces contrats relèvent du décret n°2004-15 du 7 janvier 2004 portant Code des marchés publics ;

- Les délégations de service public sont des contrats **de longue durée** par lesquels une personne morale de droit public confie la gestion d'un service public, dont elle a la responsabilité, à un délégataire public ou privé, **dont la rémunération est substantiellement liée au résultat de l'exploitation du service.**
  Les investissements peuvent être financés, soit par la collectivité (affermage), soit par le prestataire (concession au sens français du terme).
  Ces contrats sont régis par la loi n°93-122 du 29 janvier 1993, dite loi Sapin et par la loi n°2001-1168 du 11 décembre 2001 portant Mesures urgentes de réformes à caractère économique et financier.

- Les contrats de partenariat, introduits récemment en droit français ; sont des **contrats de longue durée** conclus entre une autorité publique et un prestataire privé portant sur une mission globale de financement, construction, entretien, maintenance, exploitation et gestion, qui concourent à l'exercice par la personne publique de la mission de service public dont elle a la charge.
  La rémunération du prestataire privé se fait pendant toute la durée du contrat et **peut être liée à des objectifs de performance**.
  Ces contrats relèvent de l'ordonnance n°2004-559 du 17 juin 2004.

Question n°2 : De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? Si non pourquoi ?

La procédure de dialogue compétitif nous paraît adaptée à la passation de **contrats qualifiés de marchés particulièrement complexes,** dès lors qu'elle permet à l'autorité adjudicatrice de définir ses besoins avec les opérateurs qui ont ainsi l'opportunité de proposer des solutions innovantes.

Toutefois, cette opinion ne vaut qu'à la condition qu'il soit fait une application rigoureuse de la procédure telle qu'est est organisée par la directive 2004/18/CE du 31 mars 2004, afin de respecter l'égalité de traitement des candidats, et de préserver leur savoir faire et leur propriété intellectuelle.

L'autorité adjudicatrice doit donc :

- S'interdire de révéler aux autres candidats les solutions proposées par l'un d'entre eux ;

- S'obliger à communiquer à tous les candidats les mêmes informations.

L'autorité adjudicatrice, une fois le dialogue clos, invite les candidats à remettre leur offre finale sur la base de la ou des solutions spécifiée(s) au cours du dialogue.

Il s'avère qu'en France, la procédure de dialogue compétitif instituée par les dispositions réglementaires du décret du 7 janvier 2004, ne nous paraît pas, sur ce point, être en conformité avec la directive, dans la mesure où elle prévoit la communication d'un **cahier des charges unique** aux candidats, une fois le dialogue clos.

Question n°3 : En ce qui concerne ces contrats, existe-t-il selon vous des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics ? Si oui, lesquels et pour quelles raisons ?

On peut regretter les situations dans lesquelles les pouvoirs adjudicateurs commencent une consultation en s'orientant vers un PPP de type contractuel, pour passer à un montage de PPP institutionnel, voire à une gestion en régie, après avoir bénéficié des solutions innovantes proposées par les candidats, et une fois la procédure déclarée infructueuse.

Ces observations valent pour tous les types de PPP contractuels (marchés publics ou concessions).

Par ailleurs, la FG3E considère que certaines situations pourraient bénéficier plus facilement de propositions de variantes de la part des opérateurs privés.

L'article 24 de la directive 2004/18/CE du 31 mars 2004 limite en effet trop restrictivement le recours aux variantes, en prévoyant notamment que sauf dispositions contraires dans l'avis de marché, les variantes ne sont pas autorisées.

Question n°4 : Avez-vous déjà organisé, participé, ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ? Quelle expérience en avez-vous ?

Sans objet pour la FG3E

Question n°5 : Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non-nationaux aux procédures de passation de concessions ? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre ?

Pour certains aspects de la procédure, le cadre juridique actuel peut s'avérer insuffisamment protecteur des droits et intérêts des sociétés ou groupements non nationaux, notamment en matière de publicité.

La communication interprétative sur les concessions du 29 avril 2000 pourrait utilement être complétée sur ce point.

Question n°6 : Pensez-vous qu'une initiative législative communautaire, visant à encadrer les procédures de passation de concessions est souhaitable ?

Sous réserve de la réponse à la question 5, la FG3E estime qu'à l'heure actuelle les règles de passation des concessions sont suffisamment définies par:

- la communication interprétative de la Commission sur les concessions en droit communautaire du 29 avril 2000 ;

- la jurisprudence de la Cour de Justice des Communautés Européennes (et notamment l'arrêt Telaustria du 30 mai 2002) faisant obligation de respecter les principes des **articles 43 et 49 du Traité de Rome** pour la passation des contrats de concession (transparence, égalité de traitement, proportionnalité et reconnaissance mutuelle).

Il n'est donc pas juridiquement nécessaire de se doter d'un nouvel outil législatif communautaire, dès lors que les principes qui doivent présider à la passation des concessions sont déjà posés.

En revanche, il serait particulièrement opportun d'adopter une communication interprétative sur les différentes formes de PPP, y compris les PPP institutionnels (notamment les « in-house »), afin de rappeler les principes qui les régissent.

Question n°7 : D'une manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les PPP de type contractuels, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identique ?

Considérant qu'il n'y pas lieu à une initiative législative communautaire concernant la passation des concessions, la FG3E ne peut que s'opposer à la perspective d'une directive soumettant à un régime de passation identique tous les PPP contractuels.

Comme cela a été précisé en réponse à la question n°2, la procédure de dialogue compétitif trouve son utilité pour ceux des contrats particulièrement complexes qui relèvent de la directive marchés publics, mais elle ne doit pas être généralisée à d'autres PPP contractuels, en raison notamment du fait que la lourdeur de cette procédure ne se justifie que pour des « *particulièrement complexes* », ce qui n'est pas le cas de l'ensemble des PPP contractuels.

Pour ce qui concerne les concessions, les dispositions retenues dans la communication interprétative du 29 avril 2000 sont plus adaptées à la grande diversité des situations rencontrées et apportent une meilleure réponse à la nécessaire souplesse dans la définition de ce type de contrat, tout en respectant les principes du Traité.

Question n°8 : Selon votre expérience, l'accès à des opérateurs non-nationaux aux formules de PPP d'initiative privée est-il assuré ? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu ?

Question n°9 : Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée dans l'Union Européenne tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement ?

La FG3E fera une réponse unique à ces deux questions :

La FG3E approuve, dans son principe, le recours à un PPP d'initiative privée, qui permet à une entreprise de faire valoir ses capacités d'innovation.

Toutefois, une telle pratique doit faire l'objet d'un strict encadrement juridique pour assurer le respect des principes de transparence, de non discrimination et d'égalité de traitement des candidats.

Il s’agit en effet :

- d’une part, d’assurer une juste indemnisation pour l’initiateur d’un projet qui n’aurait pas été retenu *in fine* ;

- d’autre part, d’organiser les règles de publicité adaptées permettant d’informer les éventuelles entreprises intéressées, une fois la décision prise par les autorités publiques d’examiner le projet.

La FG3E considère donc que le recours au PPP d’initiative privée ne doit être encouragé qu’à la condition de l’encadrer de règles protectrices des intérêts des initiateurs et garantissant les respect des principes de transparence, de non discrimination et d’égalité de traitement.

Question n°10 : Quelle expérience avez-vous de la phase postérieure à la sélection du partenaire privé dans les opérations de PPP contractuels ?

Sans objet pour la FG3E

Question n°11 : Avez-vous connaissance de cas dans lesquels les conditions d’exécution – y compris les clauses d’adaptation dans le temps – ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d’établissement ? Si oui , pouvez-vous décrire le type de problèmes rencontrés ?

La FG3E n’a pas connaissance de tels cas.

Question n°12 : Avez-vous connaissances de pratiques ou de mécanismes d’évaluation d’offres ayant des incidences discriminatoires ?

La FG3E regrette de devoir constater que les mécanismes d’évaluation de l’offre d’une prestation selon qu’elle est envisagée en *in-house* ou en marchés publics ou concessions conduit à des différences de traitement, notamment sur le plan fiscal (Taxe Professionnelle, T.V.A., Impôt sur les sociétés, redevance d’occupation du domaine public...).

Question n°13 : Partagez-vous le constat de la Commission selon lequel certains montages de type « step-in » peuvent poser problème en termes de transparence et d’égalité de traitement ? Connaissez-vous d’autres « clauses types » dont la mise en œuvre est susceptible de poser des problèmes similaires ?

La FG3E ne partage pas le point de vue de la Commission et considère que le step-in participe à la confiance des prêteurs, assurés d’obtenir le remboursement des emprunts, y compris lorsque le titulaire du contrat défaillant est substitué par un autre attributaire.

Plus généralement, la FG3E est favorable à la cession de contrat dans les PPP, dès lors naturellement qu'il n'en résulte pas de modification dans l'exécution du contrat.

Il doit en effet être rappelé, qu'outre la personne du candidat, la mise en concurrence préalable a porté essentiellement sur l'offre proposée : un changement de contractant n'est donc pas constitutif d'obstacle lorsque les termes du contrat initial sont préservés.

La cession de contrat peut par ailleurs faire l'objet de clauses contractuelles qui en définissent les conditions dans l'éventualité où elle se présenterait, de sorte que l'autorité publique puisse en appréhender par avance les conséquences.

Question 14 : Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quel(s) aspect(s) devrait porter cette clarification ?

La Commission semble considérer que les modifications qui peuvent intervenir en cours d'exécution d'un PPP ne sont pas, en principe, admissibles car elles remettent en cause le principe d'égalité de traitement.

La Commission envisage ainsi une application particulièrement extensive de ce principe ; cette vision maximaliste peut avoir des conséquences préjudiciables pour la vie des contrats qui, notamment lorsqu'ils sont de longue durée, nécessitent parfois certaines adaptations pour répondre aux besoins à satisfaire.

Des modifications peuvent en effet être rendues nécessaires :

- par des considérations macro et micro-économiques qui apparaissent en cours d'exécution du contrat ;
- par les nécessités du service confié au partenaire privé, afin notamment de satisfaire au mieux les besoins qui ont pu évoluer.

Ces impératifs exigent donc de concilier le nécessaire respect du principe d'égalité de traitement avec la prise en compte de la nécessité de préserver l'intérêt général, l'équilibre économique du contrat, et de s'adapter à l'évolution des besoins.

Pour toutes ces raisons, la FG3E n'est pas favorable à des dispositions législatives qui encadreraient l'exécution des PPP contractuels.

Question 15 : Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

Sans objet pour la FG3E.

Question 16 : Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mise en place en ce qui concerne le phénomène de sous-traitance ?

Dès lors que le PPP a pour objet de confier à un partenaire privé un ensemble de tâches constituées en une mission globale, il appartient au titulaire du contrat de choisir librement ses sous-traitants.

L'attribution des contrats de sous-traitance n'a pas à être soumis à une procédure de passation avec mise en concurrence.

Cette position ne fait toutefois pas obstacle à la possibilité pour l'autorité adjudicatrice d'imposer une part minimale de sous-traitance, comme le précise l'article 25 de la directive 2004/CE 18

Question 17 : De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance ?

Pour les raisons exposées ci-dessus, il n'apparaît pas opportun de modifier les règles en matière de sous-traitance.

Question n°18 : Quelle expérience avez-vous de la mise en place d'opération de PPP de type institutionnalisé ? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisé ? Si non, Pourquoi ?

En France, les Sociétés d'Economie Mixte (SEM) relèvent des PPP de type institutionnalisé.

Les SEM sont créées par des autorités publiques : le capital est majoritairement composé de capitaux publics, l'autre partie du capital étant détenue par un ou des opérateurs privés.

Si la constitution d'une SEM ne nécessite pas une mise en concurrence préalable du ou des opérateurs privés qui la composeront, elles doivent en revanche être soumises aux mêmes règles que les autres opérateurs, lors de l'attribution d'une activité économique par l'autorité publique.

Les principes du Traité doivent en effet trouver la même application selon que le PPP est de type contractuel ou institutionnel.

Question n°19 : Estimez-vous qu'une initiative doit être prise au niveau communautaire en vu de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui, sur quels points particuliers et sous quelle forme ? Si non, pourquoi ?

Comme la FG3E l'a fait valoir dans sa réponse à la question 6, il serait particulièrement opportun que la Commission adopte une communication interprétative définissant les différents PPP de type institutionnel et contractuel et rappelant les principes du Traité qui doivent recevoir application.

Question n°20 : Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des PPP au sein de l'Union Européenne ?

Sans objet pour la FG3E.

Question n°21 : Connaissez-vous d'autres formes de PPP développées dans les pays en dehors de l'Union ? Connaissez-vous des exemples de « bonnes pratiques » développées dans ce cadre, dont l'Union pourrait s'inspirer ? Si oui, lesquelles ?

La FG3E n'a pas connaissance de tels exemples.

Question n°22 : De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique et social durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange des meilleures pratiques ? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?

Une réflexion collective permettrait la mise en place d'un contexte juridique adapté, susceptible d'autoriser les prestataires privés à répondre aux besoins des Etats membres qui nécessitent un investissement important.

Cette réflexion collective permettrait, en outre, de mieux définir les critères des conditions d'utilisation des crédits communautaires, afin de les rendre les plus efficaces possibles.

Livre vert sur le partenariat public-privé
Avis de la FNCCR

1. La distinction de trois familles de procédures impose la mise en œuvre simultanée d'au moins deux critères de définition non équivoques (i.e. prenant chacun des valeurs binaires oui/non).

Les montages contractuels de partenariat public-privé –au sens large - relèvent actuellement, en France, de trois régimes juridiques distincts et alternatifs :

- code des marchés publics, issu du décret n° 2004-15 du 7 janvier 2004 ;
- délégations de service public, relevant des dispositions législatives issues de la loi n° 93- 122 du 29 janvier 1993 (pour les collectivités territoriales : articles L 1411-1 à L 1411-8 du code général des collectivités territoriales) ;
- contrats de partenariat (au sens strict), relevant des dispositions issues de l'ordonnance n° 2004-559 du 17 juin 2004 (pour les collectivités territoriales : articles L 1414-1 à L 1414-16 du code général des collectivités territoriales).

La création récente d'une troisième catégorie (contrats de partenariat) de contrats publics, faisant l'objet de règles, notamment procédurales, spécifiques (même si elles sont « voisines » de certaines procédures préexistantes), en sus des catégories préexistantes des marchés publics et des délégations de service public, augmente sensiblement les risques juridiques inhérents à une mauvaise qualification du contrat.

La distinction entre marché public et convention de délégation de service public s'est en effet avérée, au cours des dernières années, encore trop souvent malaisée à établir de manière claire et incontestable, en raison de l'existence d'un continuum de formes contractuelles d'une catégorie à l'autre. Il en est résulté un nombre élevé de contentieux, nuisant à la continuité et à la qualité des services publics, freinant l'initiative publique, et conduisant finalement à ce que ces obligations de procédure constituent trop souvent des obstacles à la fluidité des remises en concurrence et à l'ouverture des marchés.

Il est donc à craindre que la création d'une troisième voie contractuelle, participant à certains égards de principes afférents aux marchés publics, et à d'autres d'une logique proche de celle des délégations de service public, augmente encore cette instabilité juridique, et présente ainsi davantage d'inconvénients que d'avantages. En particulier, les contrats de partenariat et ceux de délégation de service public ayant en commun la caractéristique d'être des contrats à caractère global, et celle de transférer des risques d'exploitation au cocontractant de la personne publique, la pertinence de l'arbitrage entre l'une ou l'autre de ces procédures de passation pourrait s'avérer fréquemment difficile à démontrer. La mise en œuvre d'un seul critère de discrimination (celui du risque d'exploitation) conduit en effet à un classement binaire (critère rempli ou pas), et se prête donc particulièrement mal à la mise en œuvre d'une tripartition.

Deux types de solutions semblent envisageables pour remédier à ces difficultés :

- le premier consisterait à rétablir la distinction de seulement deux familles de procédures, la discrimination entre l'une et l'autre reposant, comme c'est actuellement le cas pour la différenciation entre les marchés et les délégations, sur le critère du risque d'exploitation ;
- le second permettrait de conserver trois familles distinctes de procédure, en combinant le critère du risque d'exploitation avec un autre critère, qui pourrait être celui de l'habilitation donnée au cocontractant à faire des actes juridiques (et pas seulement matériels) afférents aux usagers du service public au nom et/ou pour le compte du service public. Un cocontractant habilité sera alors celui qui peut ainsi passer lui-même les contrats avec les usagers du service public, et fera écran entre ceux-ci et la personne publique organisatrice du service ; en revanche, un cocontractant non habilité ne passera contrat qu'avec la personne publique, celle-ci conservant la responsabilité juridique des relations avec les usagers du service.

La combinaison de ces deux critères permettrait de discriminer plus sûrement les trois catégories de contrats, ainsi que cela apparaît dans le tableau ci-dessous.

	Transfert d'un risque d'exploitation sur le cocontractant ?	Habilitation du cocontractant à effectuer des actes juridiques concernant les usagers du service public ?
Marchés publics	non	non
Délégations de service public	oui	oui
Autres contrats de partenariat	oui	non

2. La création de nouvelles formes de partenariat public-privé ne doit pas avoir pour conséquence l'attribution en toute propriété, au patrimoine privé des entreprises cocontractantes, d'ouvrages affectés au service public

Alors que la délégation de service public est traditionnellement caractérisée par le régime juridique des biens de retour, reconnaissant à la collectivité publique la propriété « ab initio » des biens affectés au service public délégué, y compris lorsque ces biens sont construits sous la maîtrise d'ouvrage du délégataire, certaines formes nouvelles de partenariat pourraient conduire en revanche à ce que la propriété des ouvrages soit reconnue au titulaire du contrat de partenariat, bien que la rémunération de ce cocontractant lui soit versée par la personne publique et s'avère donc adossée à la fiscalité.

Une telle évolution ferait peser un risque évident sur la fluidité des remises en concurrence de l'activité d'exploitation des ouvrages, ainsi que sur le pouvoir de contrôle de la personne publique sur la qualité des ouvrages et services publics ainsi externalisés.

En effet, si les ouvrages affectés au service public appartiennent à l'entreprise gestionnaire du service public, celle-ci disposera d'un avantage évident au moment de la remise en concurrence de cette gestion, puisqu'il sera nécessaire de lui verser une indemnité de rachat avant que la gestion de l'ouvrage ne puisse être, le cas échéant, attribuée à l'un de ses concurrents : cette contrainte financière fonctionnera pour la collectivité publique comme un frein puissant au changement d'attributaire, ou conduira ladite collectivité publique à demander aux concurrents des propositions sur un droit d'entrée couvrant l'indemnité de rachat due au sortant. Rappelons qu'un tel droit d'entrée, facteur important de corruption, a été expressément interdit par la loi française.

Plus généralement, la reconnaissance, au titulaire d'un contrat de partenariat, de la propriété d'ouvrages affectés à un service public est motivée par la volonté de faciliter le recours, par ce titulaire, à un financement bancaire, objectif de pertinence discutable. Il ne suffira pas, en effet, à garantir que les conditions de financement obtenues par de tels opérateurs privés soient compétitives par rapport à celles auxquelles ont accès les collectivités publiques, toujours beaucoup plus intéressantes du fait de l'écart de solvabilité entre le secteur public et le secteur privé.

Par ailleurs, une collectivité publique aura beaucoup plus de difficultés à assurer le contrôle de la bonne exécution de missions de service public ou d'intérêt général afférentes à un ouvrage dont le cocontractant (et non la collectivité) serait reconnu propriétaire, les droits de propriété étant un facteur essentiel de légitimité pour une telle action de contrôle.

Enfin, le développement de formes de partenariat attribuant à l'entreprise privée titulaire la propriété d'ouvrages dont le financement serait adossé aux recettes fiscales acquittées par les contribuables peut conduire à assujettir les services d'intérêt général à des intérêts privés.

Pour l'ensemble de ces raisons, il semble très souhaitable que les formes de partenariat public-privé autres que les marchés publics ou les délégations de service public préservent l'attribution à la collectivité publique de la propriété d'ouvrages affectés au service public, ou qu'elles soient, à défaut strictement limitées à des cas exceptionnels.

GART
GROUPEMENT DES AUTORITES RESPONSABLES DE TRANSPORT

Position du GART sur le Livre vert de la Commission européenne sur les partenariats publics/privés et le droit communautaire des marchés publics et des concessions

Les élus du GART, réunis en Bureau élargi le 16 juin 2004, se sont accordés sur un certain nombre de grands principes à respecter par la Commission européenne dans l'élaboration de normes communautaires ayant pour objet de réglementer les partenariats publics / privés (PPP) contractuels et institutionnels (ces 2 types de partenariats étant intégrés dans la réflexion lancée par la Commission dans son Livre vert du 30 avril).

Ainsi, plutôt que de répondre à chacune des 22 questions posées dans le Livre vert, le GART propose une contribution assise sur le rappel de ces grands principes, qui sont au nombre de trois.

1). La nécessité d'une définition communautaire des concessions souple et adaptée

Le GART souhaite en premier lieu exprimer son accord en faveur d'une intervention communautaire en matière de concessions et autres dispositifs contractuels (PPP) qui ne sont pas des marchés publics (matière qui, à ce jour, n'est régie par aucune règle de droit dérivé, seuls les grands principes du traité trouvant à s'appliquer, à la différence des marchés qui, eux, sont régis par des directives).

Néanmoins, **nous souhaitons que cette intervention se fasse dans le respect de la distinction qui existe, et qui doit continuer d'exister, entre marchés publics et délégations de service public (DSP)** [1]. Il s'agit en effet de 2 outils distincts, qui ne poursuivent pas les mêmes finalités (même si, en France, le marché public est de plus en plus utilisé pour la gestion de services publics et que les 2 corpus de règles – marchés et DSP – tendent à se rejoindre) et qui, donc, ne doivent pas obéir aux mêmes contraintes.

De ce fait :

- **Nous ne soutenons pas l'idée d'un régime unique applicable aux 2 dispositifs contractuels** comme le suggère la Commission en page 13 du Livre vert (question n°7, dans laquelle la Commission évoque la possibilité de « régimes de passation identiques »). Il convient en effet de préserver aux DSP leur spécificité et leur souplesse.

- **Nous souhaitons l'élaboration d'une définition communautaire adaptée aux caractéristiques des DSP**. Celle qui est donnée par la Commission dans son Livre vert (page 6), et qui reprend celle déjà proposée dans sa commission interprétative sur les concessions en droit communautaire du 8 février 2000, nous convient : « contrat présentant les mêmes caractéristiques qu'un marché public à l'exception du fait que la contrepartie des travaux ou des services effectués consiste, soit uniquement dans le droit d'exploiter l'ouvrage ou le service, soit dans ce droit assorti d'un prix ».

[1] Les DSP (délégations de service public) en droit français correspondent à l'appellation communautaire de « concessions ».

Il s'agit d'une définition large, qui s'appuie sur la notion de risque d'exploitation et qui, ce faisant, rejoint la définition française des DSP.

Cette définition se différencie de celle qui a été proposée dans le projet de règlement communautaire relatif aux exigences de service public dans le domaine des transports de voyageurs (« ROSP »), dont l'article 3 i donne des concessions de transport la définition suivante : **contrats dont la majeure partie de la rémunération de l'opérateur provient des voyageurs**, notamment par la perception de redevances.
Dans ses différentes prises de position sur le « ROSP », le GART a critiqué cette définition trop restrictive des concessions, non adaptée au secteur des transports, dans lequel la part voyageurs ne couvre qu'une faible part des recettes, et susceptible de contentieux sur un sujet déjà sensible (on sait en effet que de nombreux contrats qualifiés de DSP ont été requalifiés par le juge au motif que le risque d'exploitation n'était pas suffisamment établi).

- **Nous tenons à rappeler que les dispositifs contractuels de type concessif sont le plus souvent utilisés pour la gestion ou l'exploitation de services publics ; de ce fait, ils doivent offrir la souplesse nécessaire à l'adaptation du service dans le temps**. Aussi, même si nous reconnaissons que les modalités d'exécution des projets de PPP doivent être définies de manière claire, transparente et non discriminatoire dans les cahiers des charges et qu'il ne doit pas y avoir de bouleversement substantiel des termes du contrat en cours d'exécution, **nous souhaitons que le cadre communautaire à venir n'encadre pas de façon trop contraignante les possibilités d'insertion de clauses d'évolution du service** ou de clauses de révision ou de réajustement, qui porteront notamment sur le régime financier du contrat.

Dans cet esprit, il convient de conserver un minimum de souplesse quant à la possibilité de prolonger, selon des modalités bien définies (motif et durée de la prolongation), les contrats de type concession (à l'image de ce qui a été reconnu en droit français avec la loi Sapin[2]).

2). Un encadrement des PPP institutionnalisés respectueux de la libre administration des collectivités territoriales

En parlant « d'entités détenues conjointement par le partenaire public et le partenaire privé », la Commission vise directement les SEM. Les régies, généralement créées et détenues par la seule puissance publique, ne sont donc pas directement concernées, étant entendu qu'elles pourront l'être indirectement par les solutions qui seront retenues.

Si nous ne sommes pas hostiles à une intervention communautaire visant à légiférer sur les PPP institutionnalisés, les termes du débat posés par la Commission dans son Livre vert nous laissent néanmoins circonspects, et ce à plusieurs niveaux[3].

Il ressort en effet des propos de la Commission (pp 19 et 20) que les règles de concurrence trouveront à s'appliquer au moment même de la mise en place de l'entité mixte si celle-ci a pour objet de se voir attribuer une ou plusieurs missions. Comment ne pas trouver cette formulation fallacieuse lorsque l'on sait qu'une SEM est toujours créée en vue d'accomplir une ou plusieurs missions (gestion d'un équipement, exploitation d'un service, etc) ?

[2] Tout en imposant que les contrats de délégation de service public soient limités dans leur durée, la loi Sapin a reconnu la possibilité de prolonger ces contrats de une année pour des motifs d'intérêt général ou lorsque des investissements nouveaux s'imposent.
[3] Même si le Livre vert a pour objet d'ouvrir le débat et qu'aucune « option prédéterminée d'intervention communautaire n'a été décidée » (Livre vert p 8), certaines solutions transparaissent néanmoins de la manière même de la Commission d'ouvrir le dialogue.

La formulation nous semble d'autant plus fallacieuse que les propos de la Commission sèment le doute : d'un côté elle estime que « l'option consistant à créer une entité au capital mixte n'est pas en elle-même visée par le droit des marchés publics et des concessions » ; de l'autre elle estime que « le choix d'un partenaire privé appelé à effectuer de telles missions dans le cadre … d'une entité mixte ne saurait être fondé exclusivement sur la qualité de son apport en capital ou de son expérience, mais devrait prendre en compte les caractéristiques de son offre. ... faute de disposer de critères clairs et objectifs permettant au pouvoir adjudicateur de retenir l'offre économiquement la plus avantageuse, l'opération en capital pourrait constituer une violation du droit des marchés publics et des concessions ».
Ne doit-on pas en déduire que c'est le choix, en tant que tel, du ou des partenaires de la personne publique qui devra être soumis à concurrence, alors même que la Commission dit ne pas avoir à se prononcer sur le choix et alors même que la décision de création d'une SEM ne résultera pas d'un contrat mais d'un acte unilatéral de l'administration, expression de son pouvoir discrétionnaire ?

A ce premier niveau de concurrence, qui touche à l'acte de création lui-même, intervient un 2ème niveau de mise en concurrence, qui touche à l'attribution des missions à l'entité mixte. Cela signifie qu'une fois la SEM créée après mise en concurrence, il sera impossible, pour la collectivité publique, de confier à cette SEM quelque mission que ce soit sans l'avoir préalablement mise en concurrence.
A ces 2 niveaux de mise en concurrence s'ajoute une 3ème niveau, qui concerne les contrats passés par la SEM elle-même. En effet, lorsque la SEM a le statut d'organisme adjudicateur (ce qui sera pratiquement toujours le cas), cette qualité lui impose le respect des règles de concurrence lorsqu'elle souhaite confier une ou plusieurs missions à un tiers (ce tiers pouvant être indépendant de la SEM ou, au contraire, être son actionnaire privé : dans ce dernier cas, la mise en concurrence des missions qui seront confiées audit partenaire s'imposera lorsque la création de la SEM n'aura pas, elle-même, fait l'objet d'une procédure de mise en concurrence.

Intervient, enfin, un 4ème niveau auquel la concurrence doit jouer d'après la Commission : lorsqu'il y a un changement de partenaire partie prenante à l'entité mixte (la Commission vise le cas précis d'une prise de contrôle d'une entité publique par un opérateur privé). Cela revient, en d'autres termes, et quoi qu'en dise la Commission, à mettre en concurrence les ouvertures de capital (alors même que, d'après le Livre vert, « le droit communautaire des marchés publics n'a pas en soi vocation à s'appliquer aux opérations représentant de simples apports de fonds par un bailleur à une entreprise »).

Ainsi, pour résumer : les contrats passés par les SEM (3ème niveau), de même que les contrats confiés à des SEM (2ème niveau), de même également que la création même de la SEM (1er niveau), de même, enfin, que les changements de partenaires de la SEM (4ème niveau), sont soumis à concurrence.

Un tel dispositif, faisant intervenir 4 niveaux de mise en concurrence, nous paraît excessif.

Si nous sommes d'accord avec une mise en concurrence des actionnaires de la SEM, procédure qui interviendrait donc au moment même de la création de la structure (niveau 1), ou en cas de changement d'actionnaire (niveau 4), nous ne voyons pas, par contre, l'intérêt d'une mise en concurrence de l'attribution des missions à ladite SEM (niveau 2) dans la mesure où, comme on l'a dit, lorsqu'une SEM est créée, elle l'est toujours dans l'objectif de se voir confier une ou plusieurs missions déterminées.

De ce point de vue, la SEM doit être vue comme une modalité de gestion d'un service ou, pour reprendre les termes de la Fédération Nationale des SEM (FNSEM), comme « critère de la mission d'exécution d'un service public par une entreprise privée »[4].

Dans un tel cas (absence de mise en concurrence des relations entre la SEM et le pouvoir adjudicateur actionnaire), nous ne sommes pas opposés à ce que la SEM applique les règles de concurrence pour la sélection de ses propres co-contractants (niveau 3).
Cette prohibition de la double mise en concurrence (niveaux 2 et 3) est une application pure et simple du droit français des marchés publics, qui n'impose pas la mise en concurrence pour les missions confiés à des entités « sur lesquelles l'administration exerce un contrôle comparable à celui qu'elle exerce sur ses propres services et qui réalise l'essentiel de ses activités pour elle » (2ème niveau) à partir du moment où cette entité soumettra à concurrence la passation de ses propres contrats (3ème niveau). Il s'agit donc d'un dispositif alternatif et non cumulatif.

3). L'impérieuse nécessité de définir les relations in house et de préciser leur régime juridique

Pour terminer, **le GART souhaite insister sur la nécessité d'une pleine reconnaissance par le droit communautaire de la notion de relation inter-organique (ou relation « in house ») qui n'a, à ce jour, fait l'objet d'aucune disposition spécifique**, n'ayant été reconnue que par le seul juge communautaire d'une part, et dans le seule contexte des marchés publics d'autre part.

En effet, dans l'arrêt Teckal du 18 novembre 1999, la Cour de Justice européenne a jugé que les seules exceptions permises au principes de concurrence énoncés dans les directives relatives aux marchés publics (il s'agissait en l'espèce de la directive fournitures) visent les contrats conclus par écrit par un pouvoir adjudicateur avec une entité qui est certes distincte de lui au plan formel mais sans autonomie par rapport à lui au plan décisionnel d'une part (première condition) et qui réalise l'essentiel de son activité avec le pouvoir adjudicateur d'autre part (deuxième condition).

C'est donc sur ces 2 critères (organique – absence d'autonomie par rapport au pouvoir adjudicateur – et matériel – prestations essentiellement réalisées pour le compte du pouvoir adjudicateur) que repose la notion de prestation in house. En principe, la régie, même dotée d'une personnalité morale distincte de la collectivité qui l'a créée, répond pleinement à ce double critère. Les SEM peuvent également, dans certains cas, exercer leurs missions dans un cadre « in house ». **Il semble néanmoins que les critères de définition d'une prestation in house soient loin d'être clairs, si l'on en juge par le nombre d'affaires pendantes devant la Cour européenne, qui visent à obtenir une clarification de la portée des critères dégagés dans l'arrêt Teckal. Aussi l'intervention d'un texte en la matière nous semble plus que jamais nécessaire**.

En outre, il convient de redonner à l'arrêt Teckal sa juste valeur en précisant qu'il est de portée limitée : les critères dégagés par la Cour dans cet arrêt visent à qualifier les contrats uniquement au regard des directives relatives aux marchés publics. Cet arrêt ne règle donc pas la question des autres contrats qui ne relèvent pas du champ d'application des directives (à savoir les concessions et autres PPP).

[4] La FNSEM estime que « dans ce cas, la SEM est créée sans mise en concurrence avec le partenaire privé retenu au préalable par appel d'offres. La SEM serait ainsi pleinement reconnue comme un mode de gestion à part entière des services publics locaux ».

En effet, dans la communication interprétative précitée, la Commission est restée prudente en considérant « qu'un problème particulier se pose lorsqu'il existe, entre le concessionnaire et le concédant, une forme de délégation interorganique qui ne sort pas de la sphère administrative du pouvoir adjudicateur ». En fait, la Commission s'en est remise jusqu'à aujourd'hui à l'interprétation de la Cour en rappelant que les avocats généraux se sont déjà penchés sur la question à plusieurs reprises.

Il nous semble que **ce contexte d'incertitude juridique place les régies et les SEM dans une situation délicate.**
Aussi le texte à venir devrait-il préciser que les relations in house échappent à toute mise en concurrence quelle qu'elle soit (qu'il s'agisse des règles applicables aux marchés publics ou celles applicables aux concessions et autres PPP). Ce texte, de portée transversale, devrait s'appliquer à tous les secteurs d'activité (rappelons que le « ROSP », tel qu'il est aujourd'hui proposé par la Commission, impose une mise en concurrence systématique des contrats de transports, y compris des « contrats » - la notion de contrat étant entendue largement par la Commission, qui y intègre également les actes unilatéraux - confiés à des régies).

En résumé, le GART souhaite :

1 Une définition communautaire des concessions souple et adaptée ;

2 La prohibition d'un double niveau de mise en concurrence pour les PPP institutionnalisés (SEM), la concurrence ne devant intervenir qu'en aval pour les propres contrats de la SEM et non en amont, dans les relations entre la SEM avec la collectivité actionnaire, les actionnaires privés de la SEM ayant, eux, préalablement fait l'objet d'une mise en concurrence ;

3 Une définition communautaire claire et précise des relations « in house ».

Fondation d'Entreprise

INSTITUT DE LA GESTION DÉLÉGUÉE

Livre vert de la Commission Européenne
Sur les Partenariats public-privé

Réponse de l'Institut de la Gestion Déléguée à la consultation

Préambule :

Les membres de l'Institut de la Gestion Déléguée (I.G.D.) dans leur ensemble, administrateurs, entreprises fondatrices et ensemble des organismes représentés, accueillent très favorablement l'initiative de la Commission de publier un *Livre vert sur les Partenariats public-privé et le droit communautaire des marchés publics et des concessions*.

Ils expriment à la Commission leur reconnaissance de voir enfin abordée, de manière spécifique et autonome des marchés publics, la question des partenariats public-privé tout en émettant le vœu que cette question soit traitée dans l'avenir avec un surcroît de vision économique.

La présente réponse de l'Institut de la Gestion Déléguée au Livre vert sur les partenariats public-privé du 30 avril 2004 s'explique par le statut particulier de l'Institut, fondation fédérant la plupart des acteurs et partenaires des SIG/SIEG en France (voir Annexe 1). Cette réponse n'est pas la juxtaposition de positions reflétant des intérêts politiques, sociaux ou professionnels mais se trouve être le fruit d'une concertation mettant au centre du débat **l'efficacité et la performance des services publics** (c'est-à-dire les SIG/SIEG) pour bâtir des solutions d'intérêt général. Cette démarche est illustrée dans la Charte des Services Publics Locaux signée en janvier 2002 à l'initiative de l'IGD (voir Annexe 2).

Elle fait suite à la première contribution de l'Institut adressée à la Commission le 7 avril 2004 (voir Annexe 3). Elle a été élaborée au sein d'un groupe d'experts présidé par M. Yves-Thibault de Silguy, Directeur Général de Suez, ancien Commissaire européen et administrateur de l'Institut, et a fait l'objet d'une large consultation auprès des membres de l'Institut, notamment associations d'élus locaux, associations de consommateurs, organisations professionnelles…

Le rapport comprend deux parties :

- la première, sous forme d'un rapport structuré permettant d'argumenter les propositions de l'Institut sur l'appréhension du phénomène PPP par le droit communautaire ;
- la seconde, qui répond aux questions posées dans le Livre vert.

En toute hypothèse, et compte tenu de l'importance et de la complexité de ce sujet, nous souhaiterions pouvoir être auditionnés par les membres de la Commission, et leurs cabinets, dans le cadre de la suite qu'ils jugeront utiles de donner au présent Livre vert.

***   *   ***

SOMMAIRE

Première partie : Position et propositions de l'IGD en réponse au Livre vert

1. Ce que recouvrent les partenariats public-privé : notions et définitions

1.1. Les « PPP » dans le Livre vert

1.2. Les expériences de PPP dans l'Union européenne

2. L'impact économique des PPP et leur nécessaire développement au niveau communautaire

3. L'absence d'encadrement communautaire des PPP porte atteinte au respect des principes du Traité

3.1 Droit communautaire et « PPP contractuels »

3.1.1.Un dispositif réglementaire manifestement incomplet

3.1.2.Les PPP ne se confondent pas avec les Marchés publics

3.2. Les « PPP institutionnels »

4. Les positions de l'IGD en réponse globale au Livre vert

4.1. La publication d'une directive pour les PPP contractuels en concession

4.2. La fixation de règles pour les PPP institutionnels

Deuxième partie : les réponses aux questions du Livre vert

Annexes

1. Présentation de l'Institut de la Gestion Déléguée
2. Charte des Services publics locaux
3. Première contribution de l'Institut de la Gestion Déléguée, 7 avril 2004

Première partie : Position et propositions de l'IGD en réponse au Livre vert

La présente partie réitère la position globale de l'IGD prenant en considération, à la fois la dimension économique fondamentale des PPP pour le développement économique de l'Union et l'insuffisance d'encadrement juridique du phénomène, préjudiciable au respect des Traités.

La diversité des « phénomènes PPP » nécessite toutefois, pour une appréhension complète du sujet, qu'ils soient préalablement et précisément identifiés et définis.

1 Ce que recouvrent les partenariats public-privé : notions et définitions

1.1. Les « PPP » dans le Livre vert

La Commission, précisant que ce terme « *n'est pas défini au niveau communautaire* », vise l'ensemble des « *formes de coopération entre les autorités publiques et le monde des entreprises qui visent à assurer le financement, la construction, la rénovation, la gestion ou l'entretien d'une infrastructure ou la fourniture d'un service* », [1] caractérisés par les éléments suivants :

- une durée relativement longue ;
- un mode de financement pour partie assuré par le secteur privé ;
- le rôle important de l'opérateur économique ;
- la répartition des risques et le transfert de certains d'entre eux vers le partenaire privé.

Une telle description, plutôt large et vaste, induit nécessairement une grande variété de mécanismes et d'outils, non décrits dans le Livre vert.

1.2. Les expériences de PPP dans l'Union européenne

Les partenariats public-privé expérimentés dans différents pays de l'Union Européenne recouvrent notamment les mécanismes suivants :

- l'expérience française[2] des délégations de service public, contrats par lesquelles l'autorité publique confie la gestion du service public, éventuellement après réalisation de travaux, à l'opérateur, dont « *la rémunération est substantiellement liée aux résultats de l'exploitation du service* », que ce soit par paiement de l'usager final et/ou par l'administration publique : concessions, affermages et régie intéressée.

[1] § 1.1.1.

[2] On citera également, pour mémoire à ce stade, compte tenu du caractère récent de sa création et l'absence, à ce jour, d'expériences concrètes, le Contrat de partenariat, créé par l'ordonnance du 17 juin 2004, « *contrats par lesquels* [la Personne publique] *confie à un tiers* […] *une mission globale relative au financement d'investissements immatériels, d'ouvrages ou d'équipements nécessaires au service public, à la construction ou transformation des ouvrages ou équipements, ainsi qu'à leur entretien, leur maintenance, leur exploitation ou leur gestion, et le cas échéant, à d'autres prestations de services concourant à l'exercice, par la personne publique, de la mission de service public dont elle est chargée* ».

On y ajoute également l'ensemble des montages complexes associant conventions d'exploitation et Baux emphytéotiques administratifs ou Autorisations d'occupation temporaires du domaine public consentis par les personnes publiques, avec mécanismes de financement (location, crédit-bail…) associés, mettant en œuvre une forme de coopération entre le public et le privé pour l'exercice d'une activité d'intérêt général.

- le modèle anglais de la Private Finance Initiative (PFI) et l'ensemble des contrats appartenant à la famille des BOT (build opérate transfer),[3] contrats de travaux et de services à paiement public, portant sur le financement, la conception, la réalisation et la gestion d'une infrastructure et du service dont elle est le support ;[4]

- certains marchés publics de longue durée, comme il en existe en France.

Les principaux critères communs à l'ensemble de ces contrats sont :

- **La délégation** à un partenaire privé tiers de la responsabilité **de la gestion d'une activité d'intérêt général**, la plupart du temps de caractère économique ;

- **La globalité du contrat**, déclinée sous la forme de :

    - la substitution à la personne publique pour exercer des « missions d'exploitation » dont la globalité repose sur plusieurs facteurs se combinant en privilégiant, soit le transfert de responsabilités, soit la complexité à assumer dans la durée, soit les deux, le tout conduisant à un transfert tangible de risques dans la durée ;
    - plusieurs missions élémentaires à exécuter comprenant *a minima* l'exploitation et la *possibilité* d'une participation au financement ;
    - la prise en charge d'une partie des risques, d'une part, sur la construction/reconstruction/remise en état finale et/ou, d'autre part, sur l'exploitation ;
    - des engagements de résultats et une relative liberté de choix pour les moyens.

- **La longue durée du contrat** fixée selon :

    - les objectifs d'organisation et d'exploitation ;
    - les caractéristiques du montage financier ;
    - la durée d'amortissement des investissements ;
    - l'ampleur des adaptations autorisées et la possibilité de révisions périodiques ou conditionnelles.

[3] BOOT (Build-own-operate-transfer); BTO (Build-Transfer-Operate) ; BOST(Build-Operate-Subsidize-Transfer), DBFO (Design-Build-Finance-Operate), BOO (Build-Own-Operate), Lease Contract…..

[4] Selon la typologie financière, les « services sold to the public sector », contrats par lesquels un entrepreneur réalise une prestation contre une rémunération versée par l'administration et les « financially freestanding », contrats dans lesquels un entrepreneur réalise une prestation contre une rémunération versée par l'administration, auxquels on peut ajouter les joint-ventures.

- **Le mécanisme d'équilibrage du contrat** fondé sur :

  - le contrôle des opérations et l'évaluation des résultats contractuels ;
  - l'information sur les résultats financiers ;
  - le droit au rééquilibrage du contrat en cas d'évènement justifiant leur révision (force majeure, imprévision, fait du prince…).

Concernant les actifs et l'exploitation, ces contrats ont en commun le partage des risques suivants :

- **Immobilisation** : risque de « construction », soit au titre du premier établissement, soit au titre du renouvellement/remise en état de fin de contrat,[5]
- **Exploitation** : risque de disponibilité, de performances, de qualité et de continuité, ou risque de fréquentation, d'utilisation ou de demande.[6]

2 L'impact économique des PPP et leur nécessaire développement au niveau communautaire

L'objectif principal recherché par les entités publiques faisant appel à ces formules est d'améliorer le rapport qualité/performance/prix des prestations obtenues par rapport au recours à la méthode classique des marchés publics (« value for money »). Tous les retours d'expérience indiquent, qu'en assignant aux partenaires privés des objectifs de résultats et non d'engagements de moyens et en les rémunérant en fonction, non pas de leurs engagements de dépenses mais de leur réalisation de la performance dans le temps, les entités publiques recourant à des PPP accroissent la « value for money » pour les raisons suivantes :

- ils laissent aux partenaires privés la possibilité de s'organiser de la manière la plus efficace ;
- ils peuvent optimiser l'allocation des tâches et des risques de la façon la plus efficace ;
- en organisant une relation de long terme en forme de jeu « gagnant-gagnant », le PPP créé une relation durable dans laquelle le co-contractant est engagé au plan technique, financier et « réputationnel », empêchant les comportements de prédateur ;
- ils assurent un emploi efficace et non spéculatif des investissements privés et, en permettant de mobiliser l'épargne mondiale, apportent à la part du financement d'origine publique un effet de levier maximal sur les capitaux propres et une diminution sensible des coûts de financement ;

[5] Les principes applicables au risque « construction » doivent également s'appliquer aux investissements immatériels.

[6] Le risque de « demande » s'applique également aux péages virtuels liés à la fréquentation ; ce risque ne couvre qu'une partie des risques de recettes. Par ailleurs, le paiement par l'usager final est fréquemment plus sûr que celui par l'Administration dans lequel les composantes facturation, délai, recouvrement, contestabilité sont souvent plus fortes que dans le cas de paiement par le client final. Dans le cas où l'opérateur gère en tout ou partie des ouvrages existants, le risque « premier établissement » se transforme en risque renouvellement/reconstruction/remise en état finale.

- ils permettent de répondre à des besoins d'investissement de long terme sûrs (retraites, assurances…).

Ainsi, comme l'a justement reconnu le Conseil dans le cadre de l'Initiative pour la Croissance pour les infrastructures du réseau transeuropéen, les PPP représentent un outil essentiel de développement économique pour l'ensemble de l'Union, et particulièrement des pays nouveaux entrants en fort besoin d'investissements matériels et immatériels.

3 L'absence d'encadrement communautaire des PPP porte atteinte au respect des principes du Traité

3.1. Droit communautaire et PPP « contractuels »

3.1.1. Un dispositif réglementaire manifestement incomplet

Le droit communautaire prend en compte deux familles de contrats permettant de faire appel à un tiers pour l'exercice d'une activité économique d'intérêt général :

- les Marchés publics, régis par les directives 2004-17 et 2004-18 et définis comme « *des contrats à titre onéreux conclus par écrit entre un ou plusieurs opérateurs économiques et un ou plusieurs pouvoirs adjudicateurs et ayant pour objet l'exécution de travaux, la fourniture de produits ou la prestation de services au sens de la précédente directive* » ;

- les « *Concessions* », qui, de fait, ont été reconnues comme seconde famille de contrats répondant à des besoins spécifiques et de nature distincte des marchés publics dès la directive n° 93/37 portant coordination des procédures de passation des marchés publics de travaux, définissant la « *concession de travaux publics* » comme « *un contrat présentant les mêmes caractères que ceux [des marchés publics de travaux], à l'exception du fait que la contrepartie des travaux consiste soit uniquement dans le droit d'exploiter l'ouvrage, soit dans ce droit assorti d'un prix* ».[7]

  Par la suite, la communication interprétative du 29 avril 2000 a défini les concessions comme « *les actes* […] *par lesquels une autorité publique confie à un tiers la gestion totale ou partielle de services qui relèvent normalement de sa responsabilité et pour lesquels ce tiers assume les risques d'exploitation* ».[8]

  Enfin, les récentes directives relatives aux marchés publics ont défini les contrats de concession – de service et de travaux – par référence auxdits marchés publics, comme les contrats « p*résentant les mêmes caractéristiques qu'un marché public,*

[7] Article 1er, d) de la directive n° 93/37.
[8] § 2.4. de la communication interprétative.

> *à l'exception du fait que la contrepartie [des travaux ou de la prestation de services] consiste soit uniquement dans le droit d'exploiter [l'ouvrage ou le service], soit dans ce droit assorti d'un prix* ».[9]

Alors que les marchés publics bénéficient d'un régime clair et détaillé, l'ensemble des concessions n'est soumis qu'à un encadrement juridique minimal, seuls les principes rappelés par la communication interprétative et la jurisprudence *Telaustria* donnant des indications de principe aux acteurs concernés quant au respect des principes du Traité.

Or, la plupart des partenariats public-privé contractuels répondent aux éléments de définition des concessions, à condition de revenir sur l'interprétation restrictive faite par la communication interprétative du « *droit d'exploiter l'ouvrage ou le service* », lorsqu'elle invoque la rémunération par l'usager comme élément caractéristique indispensable.

Le risque d'exploitation trouve son origine, en effet, dans de nombreux éléments, de fréquentation, de disponibilité des ouvrages, de risques techniques, de financement, d'évolutions des conditions règlementaires et environnementales…..qui ne se réduisent pas au paiement par l'usager.

Il apparaît donc clairement qu'à ce jour, le droit communautaire est **insuffisant** pour définir précisément ces phénomènes, au préjudice du respect des principes du Traité :

- **persistance de discriminations, au détriment notamment des pays ayant développé des législations pour mettre en œuvre les concessions sur des principes de transparence et d'égalité d'accès ;**

- **absence de sécurité juridique, notamment dans les nouveaux pays entrants, créant des risques d'entraves à la liberté d'établissement et à la libre prestation de services dans ces nouveaux pays.**

  Il est également important de souligner que l'insécurité juridique constitue un frein non négligeable à l'afflux de capitaux privés dans ces zones, ce qui en limite la capacité de développement et de rattrapage de l'acquis communautaire.

3.1.2. Les PPP contractuels ne se confondent pas avec les Marchés publics

Comme l'a reconnu elle-même la Commission en éprouvant le besoin de rédiger une communication spécifique aux concessions, et en suscitant la consultation autour du Livre vert aujourd'hui, les PPP contractuels, de nature concessive, ne peuvent s'assimiler aux marchés publics et comportent des caractéristiques substantiellement différentes.

Il s'agit de **contrats de long terme**, **par nature évolutifs**, qui, au-delà de la simple fourniture d'un bien ou d'un service, confient à l'opérateur une mission d'exploitation du service sur la

[9] Directive 2004-18, articles 1-3 et 1-4. La définition de la concession de travaux est inchangée par rapport à celle figurant dans la directive 93/37 précitée.

durée dans un **environnement changeant**. Fondés sur un partage des risques, des critères de performance et d'équilibre économique dans la durée, de tels contrats, par nature adaptables, doivent être, en particulier, **négociés de façon approfondie**, voire **renégociés** dans la durée. Ils mettent donc en place un partenariat durable qui ne peut se résumer à une relation acheteur/fournisseur.

Cette distinction de nature justifie également une distinction sur le plan procédural. Ainsi, si l'introduction de la procédure de « dialogue compétitif » représente une avancée notable pour une meilleure définition des besoins des autorités publiques, s'agissant des « marchés particulièrement complexes », son extension aux PPP contractuels de type concessif apparaît restrictive et peu adaptée aux exigences de tels contrats. Cette procédure ne laisse, en effet, pas de place aux discussions, dans un cadre transparent et équitable, tant pour construire le projet sur l'apport et les suggestions du partenaire, sa réputation et sa capacité à réagir dans la durée, dans une logique de satisfaction durable de l'intérêt général que pour répondre aux évolutions des besoins de l'autorité publique au fur et à mesure de la procédure. Ainsi, la procédure de dialogue compétitif apparaît plus à même de définir le projet que le contrat.

Un tel « dialogue négocié » permet également de procéder aux adaptations du contrat que l'évolution de l'environnement rendra indispensables.

A titre d'exemple, la procédure de passation des délégations de service public en France régies par la loi dite Sapin du 29 janvier 1993[10] fait, après une mise en concurrence organisée selon des règles précises, une large place à la libre négociation et autorise le libre choix des candidats pour l'approfondissement et la mise au point d'une offre finale, dans le respect des principes d'égalité d'accès et de concurrence –sanctionnés, qui plus est, par le droit pénal – au bénéfice de la qualité et de la performance des Services d'intérêt économique général ainsi considérés, et de l'usager final.

Sans être nécessairement la référence en la matière, une telle expérience pourrait légitimement offrir une source d'inspiration au législateur communautaire, dans la prise en compte de la phase de négociation, fondamentalement liée à la complexité et la durée des montages contractuels envisagés et conditionnant leur viabilité économique et sociale.

3.2. Les PPP « institutionnels »

L'Institut se félicite de l'intérêt porté par la Commission aux PPP dits institutionnels, impliquant une coopération entre le secteur public et le secteur privé au sein d'une entité distincte.

Les règles à définir doivent concerner aussi bien l'attribution de l'activité à des organismes mixtes que le choix des partenaires privés ou publics au sein des organismes mixtes ou encore celui des entreprises opératrices par les organismes mixtes, même si cette attribution ne prend pas de forme contractuelle. La clarification des règles doit conduire à un encadrement aussi rigoureux

[10] Loi n°93-122 du 29 janvier 1993 relative à la prévention de la corruption et à la transparence de la vie économique et des procédures publiques, Titre Ier, Dispositions relatives à la transparence des activités économiques, chapitre IV, les délégations de service public.

que pour les partenariats contractuels. Il convient d'ajouter à cet encadrement, le rappel des règles définissant les « tiers » et de celles relatives à l'égalité d'accès aux subventions publiques.

Une réflexion semble devoir ainsi être menée au niveau communautaire pour déterminer les conditions d'attribution à ce type de sociétés, lorsqu'elles apparaissent comme des tiers à la personne publique, de l'exercice d'une activité d'intérêt économique général.

A titre d'exemple, en France, les société d'économie mixte locales sont soumises aux dispositions de la loi Sapin et mises en concurrence lorsqu'elles se portent candidates pour les contrats de délégation de service public des collectivités locales qui sont leurs actionnaires majoritaires, suivant une décision du Conseil constitutionnel.[11]

En outre, lorsque l'organisme mixte n'est pas « tiers » et sauf dans les cas où les missions sont le prolongement direct de prérogatives régaliennes, les règles de bonne gouvernance (séparation des fonctions d'actionnaire, de direction, de contrôle, d'autorité organisatrice, voire d'autorité politique) doivent s'imposer pour gérer un service en respectant des obligations qui dans la plupart des cas se trouvent intégrées dans le cahier des charges du contrat de service public lorsque l'opérateur est un « tiers ». Il convient également, dans ces hypothèses, que la durée de l'habilitation de l'organisme non tiers soit limitée dans le temps, par exemple en fonction de la durée des engagements, et que les partenaires privés de l'entité publique soient *a minima* mis en concurrence.

Par ailleurs, l'entrée dans le capital des organismes tiers, à majorité publique ou non, devrait être organisée avec d'autant plus de soins pour les partenaires privés que leur pouvoir effectif d'administration sera élevé et qu'ils apporteront des prestations pour l'organisme tiers. Il en est de même pour l'entrée dans le capital des personnes publiques non autorités organisatrices du service, lorsqu'elles seront chargées de l'exécution de tout ou partie des activités de l'organisme mixte tiers.

Les différentes dimensions du Partenariat institutionnel –quasi-mode de gestion, opérateur de service public, entreprise de droit commun- doivent être analysées en profondeur pour en formuler les fondamentaux et se donner les moyens d'un bon usage de ces montages. Le dossier est ouvert par l'Institut plus sous la forme d'interrogations que de propositions, afin que soit menée cette analyse associant l'ensemble des partenaires et notamment les Sociétés d'Economie Mixte ou plus généralement les « entreprises publiques locales ».

4- Les propositions de l'IGD en réponse globale au Livre vert

4.1. La publication d'une directive pour les PPP contractuels en concession

Les développements qui précèdent justifient une nécessaire intervention du droit communautaire pour mettre en place un régime communautaire des partenariats public-privé, reprenant également l'ensemble des concessions, qui soit clairement distinct du régime des marchés publics

[11] CC, 20 janvier 1993, n° 92-316 DC.

et garantisse, sur le territoire de l'Union, sécurité juridique, reconnaissance mutuelle et effectivité du marché intérieur, ainsi que les conditions économiques de développement des investissements.

L'Institut de la Gestion déléguée estime que seule une directive, donnant aux PPP contractuels qualifiés de "concessions" un régime législatif à l'échelle communautaire, serait à même d'assurer stabilité juridique et cohérence économique. Une communication interprétative, même allant au-delà de celle de 2000, maintiendrait une incertitude sur le régime de tels contrats, de nature à pénaliser le développement du marché intérieur et n'écartant pas la menace de leur absorption progressive par la régime des marchés publics, dont nous avons cherché à démontrer qu'il n'était pas adapté, sur un plan économique, à la particularité de ces contrats complexes de longue durée.

Une telle directive devrait notamment aborder les points suivants :

- **un approfondissement de la définition actuelle des concessions** permettant d'y ranger les PPP contractuels répondant à des critères minima d'objet et de risques : il apparaît en effet nécessaire, au préalable, d'aborder la question de la définition de la notion de "concessions" dans le sens d'une meilleure prise en compte de sa réalité économique, autour de la notion de risque (risque de construction, de reconstruction ou de remise en état, risques de demande ou de disponibilité, transfert de risque, longue durée) ;

- **l'obligation de soumettre la passation de ces contrats à une procédure préalable de mise à concurrence**, suivie d’une phase de "dialogue librement négocié" indispensable à la complexité des montages contractuels considérés, et rigoureuse en terme de non-discrimination et de transparence, donc de traçabilité.

4.2. La fixation de règles pour les PPP institutionnels

Il apparaît que toute attribution par la personne publique du droit d'exercer une activité économique au profit **d'un tiers**, doit respecter les principes de transparence et de concurrence.

Pour garantir le libre choix et la réversibilité des choix des modes de gestion, nous proposons d’encadrer les partenariats institutionnels par des règles de fonctionnement cohérentes et exhaustives s’étendant également aux relations organiques avec les partenaires publics.

Par ailleurs, la complexité de l’analyse économique appliquée à ces montages conduit à s’interroger sur la pertinence d’une triple mise en concurrence : celle de l’organisme pour l’obtention du droit d’exploiter, celle du choix du partenaire privé au sein de l’organisme, enfin celle des prestataires. L’interdépendance économique entre ces différents niveaux de compétition doit être étudiée pour aider à la définition d’options sur les modalités d’organisation faisant une juste place à la concurrence ; la mise en concurrence à tous les niveaux limite sensiblement les responsabilités : il convient également d’identifier les arrangements efficaces.

Cet encadrement doit *a minima* comprendre les quatre éléments suivants :

- rappel des règles de saine concurrence entre les opérateurs publics, mixtes ou privés, sans oublier le cas des régies ou des établissements publics ;

- définition de la notion de tiers –fondement de la pratique contractuelle ;
- organisation de l'égal accès aux subventions publiques et harmonisation des conditions de compétition ;
- organisation de la concurrence applicable aux organismes mixtes selon qu'ils sont tiers ou pas, à adapter et répartir entre les trois niveaux : attribution des missions, participation au capital et activités de l'organisme.

En complément de l'élaboration d'une Directive relative aux PPP contractuels, donc en concession, une réflexion pourrait donc être utilement menée au niveau communautaire sur les quatre éléments ci-dessus. L'IGD ne peut que souhaiter sur cette question, l'intervention à terme d'une législation de droit dérivée, qui pourrait être précédée, à l'instar de ce que la Commission a déjà engagé pour les concessions, d'une communication interprétative sur le sujet.

* * *

Telles sont les positions de l'Institut de la Gestion Déléguée, qui souhaite que l'Union se dote de mesures d'ordre législatif pour encadrer, sécuriser et garantir le développement des partenariats public-privé dans l'Union.

Nous sommes, par ailleurs, à l'entière disposition des membres de la Commission européenne, et de leurs cabinets, pour présenter ces propositions et développer notre argumentation. Nous ne manquerons pas, à cet effet, de prendre plusieurs contacts utiles dès septembre 2004, et espérons que l'expérience de nos membres sur le sujet, tant en France qu'en Europe et dans le monde entier, sera positivement accueillie, dans le souci du développement global et durable des services d'intérêt économique général en Europe.

Deuxième partie : les réponses aux questions du Livre vert

Question 1. Quels types de montages de PPP purement contractuel connaissez-vous ? Ces montages font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays ?

Les membres de l'Institut de la Gestion Déléguée ont eu à connaître de la quasi-totalité des montages pratiqués en France et, pour certains de ses membres, la connaissance des montages dépasse le cadre européen.

L'encadrement des montages PPP en France est ancien et développé, au travers des concessions mais aussi des contrats à risques répartis,[12] des partenariats statutaires ou capitalistiques,[13] des entreprises à vocation mixte public-privé.[14]

Les principaux textes législatifs français[15] couvrant le champ des responsabilités locales en matière de PPP sont complétés par un nombre important de textes plus spécialisés[16] ou de décisions jurisprudentielles parachevant un édifice juridique relativement complet.

Question 2. De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? Si non, pourquoi ?

Avant de présenter une procédure comme susceptible de devenir la procédure universelle pour les PPP, il nous semble qu'il conviendrait, au préalable, d'analyser les procédures déjà utilisées et qui ont fait leurs preuves. Il nous semble prématuré, à ce stade, d'affirmer que la procédure de dialogue compétitif serait la seule procédure de sélection appropriée, tant pour les marchés publics que pour l'ensemble des PPP.

[12] Les contrats de gérance annoncent les BOT et les PFI ; les garanties d'achat ou souscriptions publiques ont permis de réduire les risques d'entreprises que l'Etat ne voulait ou ne pouvait plus financer.

[13] Les sociétés à capitaux mixtes ont pris plusieurs formes (sociétés mixtes, SICAE, …).

[14] L'entreprise à vocation publique-privée a connu un grand essor avec l'aménagement urbain ou commercial dans la deuxième partie du XIX^{ème} siècle.

[15] 1982-décentralisation, 1983-SEML, 1988-intercommunalité, 1992-ATR, 1993-Délégation de service public Sapin, 1999-Chevènement, 2004-contrat de partenariat.

[16] Textes sectoriels (transport, eau, assainissement, déchets, énergies, …), textes relatifs à la gestion des propriétés publiques.

S’agissant de la France, la loi Sapin du 29 janvier 1993 qui traite notamment des procédures de dévolution des délégations de service public,[17] fait une large place à la libre négociation et autorise le libre choix du nombre de candidats retenus pour l’approfondissement et la mise au point d’une offre finale. Dans cette procédure, la personne publique considère bien sûr ce que le partenaire propose, comme dans le dialogue compétitif, mais peut davantage prendre en compte, d’un point de vue prospectif, la capacité du partenaire à réagir, à s’adapter et à intégrer des objectifs non financiers dans une logique plus durable de satisfaction de l’intérêt général.

Or, à ce jour, les services publics concernés en France sont plutôt plus compétitifs que la moyenne,[18] les opérateurs sont considérés comme performants et leurs marges financières nettes restent plutôt contenues.

Il apparaît donc, au vu de cette expérience reconnue et confirmée, qu’en complément de l’appel d’offre traditionnel et du dialogue compétitif, une troisième procédure de passation comportant une part de négociation finale reste nécessaire, car plus adaptée à la nature des concessions : longue durée, adaptation future du contrat, transfert de risques, …

En effet, tout contrat dit « complet » ne s’accommode pas facilement de la longue durée car l’évolution de l’environnement fait perdre progressivement la visibilité technique et financière à l’offre initiale. Ce ne sont plus des marchés publics à 3 ans qu’il faut conclure mais des contrats à 20, 30 ans ou plus. La compétition initiale exacerbée et détaillée dans le cadre d’une procédure du type dialogue compétitif ne dévoilera jamais la capacité de l’opérateur à contribuer à l’intérêt général à moyen et à long terme. Seul le libre choix éclairé aidera à bâtir les bonnes concessions du futur.

Question 3. En ce qui concerne ces contrats, existe-t-il selon vous des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics? Si oui, lesquels et pour quelles raisons ?

Aujourd’hui les différences de traitement résultant des règles et usages nationaux aboutissent, dans certains Etats, à surexposer les opérateurs de certains secteurs sans leur offrir de contrepartie au titre de la réciprocité alors que dans d’autres secteurs, les droits exclusifs sont cantonnés dans des modes de gestion imposés au sein desquels les opérateurs ne peuvent être vraiment stimulés.

[17] Loi n°93-122 du 29 janvier 1993 relative à la prévention de la corruption et à la transparence de la vie économique et des procédures publiques, Titre Ier, Dispositions relatives à la transparence des activités économiques, chapitre IV, Les délégations de service public.

[18] Annexe : étude NUS sur les prix de l’eau reprise dans AQUAE.

Question 4. Avez-vous déjà organisé, participé, ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ?
Quelle expérience en avez-vous ?

Les membres de l'Institut participent à de telles procédures dans différentes fonctions (opérateurs, autorités concédantes), sachant que la définition de la concession n'est pas stabilisée, concernant le droit d'exploiter l'ouvrage (qui ne s'identifie pas à notre sens obligatoirement à la rémunération par l'usager du service).

Question 5. Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non nationaux aux procédures de passation de concessions ? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre ?

La grande majorité des concessions de travaux en France font l'objet d'une publicité par la Commission du fait des seuils financiers en vigueur.

Il s'avère que cette publicité a des effets inégaux selon les secteurs quant à l'augmentation du nombre de candidats souhaitant soumissionner et quant à l'origine géographique de ces candidats ; **l'intérêt à harmoniser les règles de procédures est très grand** et se révèle tout spécialement dans le cas des **opérations transfrontalières** qui mettent en évidence la disparité des règles nationales existantes.

La publicité communautaire est l'instrument minimal de l'harmonisation ; celle-ci doit être complétée par une appréhension claire et non restrictive des concessions dans une approche mettant en évidence les caractéristiques essentielles de ces contrats, des procédures d'attribution disponibles (appel d'offres restreint, négociation après appel à propositions) et de leurs domaines de pertinence respectifs.

Question 6. Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation de concessions, est souhaitable ?

Nous répondons favorablement à cette question sur la pertinence d'une initiative législative communautaire visant, au-delà de sa définition, à encadrer la procédure de passation de concessions. Cette harmonisation doit également s'appliquer pour limiter les disparités entre opérateurs et entre modes de gestion.

Cette initiative serait une réponse pertinente pour les pays européens souhaitant se doter d'une législation nationale, qui pourraient utilement transposer une telle directive. L'Institut reçoit régulièrement des demandes allant dans ce sens, regrettant de ne pouvoir y répondre favorablement à ce jour.

Question 7. De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les PPP de type contractuel, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identique ?

Les procédures de passation doivent être celles répondant le mieux aux objectifs visés par les contrats concernés. Notre position est d'affirmer à nouveau que la diversité de nature des contrats et l'expérience des procédures existantes, efficaces et éprouvées, doivent être prises en considération. L'unicité de procédure ne peut être une fin en soi et les procédures d'attribution des marchés publics ne conviennent généralement pas aux PPP contractuels (cf. réponse à la question n°2).

Question 8. Selon votre expérience, l'accès des opérateurs non nationaux aux formules de PPP d'initiative privée est-il assuré ? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu ?

Cette question soulève le degré inégal d'ouverture des pays et la difficulté à organiser la réciprocité des mesures en faveur d'une meilleure application des principes du Traité. Le sujet des PPP est d'autant plus délicat à traiter que les principes du Traité ne peuvent y recevoir une déclinaison mécanique.

Les adaptations à apporter à ces principes dans les cahiers des charges et les procédures de mise en œuvre sont directement liées au contexte institutionnel et culturel de chaque pays. La France, en ouvrant les concessions locales, a pris les risques consécutifs à un défaut de réciprocité. Le réalisme économique a prévalu en provoquant la stimulation des opérateurs français sur le territoire national et en leur donnant des capacités et une compétitivité nouvelles à intervenir en dehors de leurs champs habituels.

Question 9. Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée dans l'Union européenne tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement ?

La question est de trancher si cette initiative doit conduire à traiter avec l'inventeur du projet ou au contraire si le projet doit faire l'objet d'une mise en compétition.

La seconde solution apparaît dans la plupart des cas plus conforme aux principes du Traité. Plusieurs options doivent être prises pour la rémunération de l'inventeur, selon qu'il est le candidat retenu ou pas. Dans le cas où l'idée est mise en œuvre par un autre candidat, il convient également de distinguer les circonstances où le rachat de l'idée est possible de celles où elle génère des droits d'usage consécutifs à sa protection. En aucun cas, il ne faudrait admettre que l'idée ne puisse être valorisée car son inventeur en a admis l'utilisation dès lors qu'il en a proposé la mise en œuvre. Ce dernier ne peut subordonner son utilisation à son exclusivité de mise en œuvre. Il faut admettre, en contrepartie, que l'auteur soit justement récompensé.

D'une façon générale, les opérateurs et professionnels du secteur sont très attentifs aux conditions du respect de la propriété intellectuelle et industrielle par les autorités organisatrices, en l'absence duquel il serait illusoire d'espérer recueillir des propositions novatrices spontanées.

Question 10. Quelle expérience avez-vous de la phase postérieure à la sélection du partenaire privé dans les opérations de PPP contractuels ?

Les membres de l'IGD ont une grande expérience de la mise en œuvre et du suivi dans les PPP contractuels.

La spécificité des contrats de long terme réside principalement dans la capacité à tenir les engagements dans un environnement évolutif. Le suivi du contrat doit être organisé et garantir la transparence requise afin de pouvoir juger dans le temps de sa bonne exécution, de la performance de l'opérateur, des gains de productivité et de leur répartition.

Question 11. Avez-vous connaissance de cas dans lesquels les conditions d'exécution – y compris les clauses d'adaptation dans le temps - ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d'établissement ? Si oui, pouvez-vous décrire le type de problèmes rencontrés ?

L'IGD n'a pas connaissance de tels cas.

Question 12. Avez-vous connaissance de pratiques ou de mécanismes d'évaluation d'offres ayant des incidences discriminatoires ?

L'IGD n'a pas connaissance de tels cas.

Question 13. Partagez-vous le constat de la Commission selon lequel certains montages du type "step-in" peuvent poser problème en termes de transparence et d'égalité de traitement ? Connaissez vous d'autres "clauses types" dont la mise en œuvre est susceptible de poser des problèmes similaires ?

Les clauses de « step-in » relèvent de la volonté des banquiers de limiter leurs risques et apparaissent aujourd'hui indispensables à la mise en œuvre de beaucoup de PPP, en réduisant, de fait, le coût du financement. Par ailleurs, à ce jour, aucune clause de ce type n'a jamais donné lieu à exécution.

Elles ne semblent pas poser, par elles-mêmes, de problèmes en terme de transparence et d'égalité de traitement. S'agissant des cessions, il convient de s'écarter de l'arbitraire consistant à prévoir l'accord systématique de la personne publique, qui devra, lorsqu'il sera prévu, être fondé sur des motifs objectifs liés à la bonne exécution du contrat.

Ces clauses, de même que le champ des adaptations prévisibles à l'origine du contrat, doivent être clairement décrites dans les contrats.

Question 14. Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quel(s) aspect(s) devrait porter cette clarification ?

Nous rappelons que **l'Institut de la Gestion Déléguée souhaite que l'Union Européenne se dote d'une directive « concessions** distincte de celles relatives aux marchés publics avec pour thèmes principaux :

- la définition des concessions ;
- la clarification des critères (ampleur des missions et degré de délégation, durée et adaptation des conditions, allocation des risques et modalités de rémunération, contrôle et transparence, traitement comptable, fiscal et statistique) ;
- la définition et le champ des procédures d'attribution.

Question 15. Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

Question 16. Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mise en place en ce qui concerne le phénomène de sous-traitance ?

Question 17. De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance ?

L'Institut ne s'est pas directement intéressé aux questions de sous-traitance. Plusieurs aspects de cette question reviennent cependant de manière récurrente :

- difficultés dans la phase d'exécution des contrats lorsque les garanties appelées dépassent la surface des sous-traitants et de leurs garants ;
- règles d'hygiène, de sécurité et protection sociale disparates favorisant les déplacements de main d'œuvre et pénalisant les entreprises socialement responsables ;
- incapacité de nombreux sous-traitants à garantir leur intervention en couvrant l'ensemble des risques liés (disponibilité, délais, pertes des utilisateurs…).

Question 18. Quelle expérience avez-vous de la mise en place d'opérations de PPP de type institutionnalisé ? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisés ? Si non, pourquoi ?

Les questions de gouvernance du PPP institutionnalisé sont inséparables de celles liées au choix des partenaires au sein des organismes mixtes et de la question de la mise en concurrence des missions qui lui sont confiées.

Les contraintes d'organisation qui pèsent sur le tour de table et le contrôle des PPP institutionnalisés sont grandes si l'on veut organiser une véritable séparation des pouvoirs entre les instances dirigeantes et celles chargées du contrôle, notamment lorsqu'elles émanent d'une autorité publique unique. En fonction des mesures prises pour prendre en compte ces contraintes, il convient d'adapter le dispositif de sélection des partenaires.

L'attribution de missions statutaires aux organismes mixtes doit rester possible lorsqu'ils ne sont pas tiers, au regard des critères dégagés par la jurisprudence *Teckal* caractérisant les phénomènes « in house ». La mise en compétition des organismes mixtes pour pouvoir exercer cette mission doit être la règle au moins lorsque les critères de la jurisprudence *Teckal* ne sont pas ou plus remplis Dans ce cas, même si d'autres personnes publiques participent au tour de table, il y a bien attribution d'une mission économique à un tiers (quel que soit son statut et celui de l'acte attributif) et les principes du Traité doivent s'appliquer.

Il en est de même lorsqu'une collectivité publique propose ses services à une autre collectivité pour une compétence que cette dernière ne lui a pas transférée[19]. Dans ce cas, la collectivité prestataire doit être mise en concurrence et répercuter les coûts réels dans son offre. Elle doit également s'interdire de rendre son offre anormalement basse dans l'intention de proposer de remplacer la prestation par un transfert de la compétence correspondante à son profit. En effet, ce transfert aurait pour effet de mutualiser les coûts dans un ensemble plus large, permettant de ne pas faire apparaître la sous-évaluation des prestations et diluant le manque à gagner dans l'ensemble des charges de la collectivité prestataire devenue attributaire de la compétence.

Question 19. Estimez-vous qu'une initiative doit être prise au niveau communautaire en vue de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui, sur quels points particuliers et sous quelle forme ? Si non, pourquoi ? De façon générale et indépendamment des questions soulevées dans ce document :

L'IGD souhaite ainsi que l'Union engage une réflexion sur l'utilité d'un cadrage législatif du partenariat institutionnalisé, éclairant les notions suivantes :

- Définition
- Règles de gouvernance et harmonisation des conditions de compétition et de gestion
- Sélection des partenaires
- Notion de « tiers » et procédures d'attribution
- Limitation de la durée d'exercice de l'activité par l'entité mixte
- Egalité d'accès aux subventions publiques

Compte tenu de la complexité du sujet et des différences d'appréhension culturelle selon les pays de l'Union, **une démarche progressive, commençant par l'adoption d'une communication interprétative** de la Commission, pourrait être opportune à ce stade.

Question 20. Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des PPP au sein de l'Union européenne ?

Certaines mesures ou pratiques apparaissent effectivement de nature à entraver la mise en place de PPP au sein de l'Union européenne, non pas forcément par elle-même, mais par manque d'encadrement juridique ou de position à leur égard. Il s'agit notamment :

- de l'imprécision de la notion de « in-house », qui mériterait d'être définie et encadrée ;

[19] Cf. en France, arrêt du Conseil d'Etat, 20 mai 1988, *Communauté de communes du Piémont de Barr.*

- d’une meilleure connexion entre développement des PPP et utilisation des fonds strucurels dans les pays nouveaux entrants ;

Question 21. Connaissez-vous d’autres formes de PPP développées dans les pays en dehors de l'Union ? Connaissez-vous des exemples de 'bonnes pratiques' développées dans ce cadre, dont l’Union pourrait s'inspirer ? Si oui, lesquelles ?

L’IGD n’a pas de réponse utile à cette question.

Question 22. De façon plus générale, et compte tenu des besoins importants d’investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique social et durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange des meilleures pratiques ? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?

L’Institut de la Gestion Déléguée note que le Livre vert sur les PPP n’aborde le sujet des PPP que d’un point de vue procédural, sans les situer comme un outil majeur du développement durable de l’Europe. Une réflexion plus générale sur les financements, leur objet, leurs caractéristiques principales, et les formes de concurrence qu’ils requièrent mériterait d’être menée au niveau communautaire. L’IGD se tient à la disposition de la Commission dans le cadre de travaux qui pourraient être utilement menés sur ce sujet.

La question de l’animation par la Commission d’une réflexion et d’un réseau sur le PPP est très intéressante notamment pour les organismes existants comme l’Institut de la Gestion Déléguée.

REPONSE DU MEDEF AU LIVRE VERT DE LA COMMISSION EUROPEENNE SUR LES PARTENARIATS PUBLIC/PRIVE ET LE DROIT COMMUNAUTAIRE DES MARCHES PUBLICS ET DES CONCESSIONS

Le MEDEF, organisation professionnelle représentant plus de 750 000 entreprises françaises de toutes tailles et de tous secteurs, a été consulté sur le Livre vert de la Commission européenne concernant les partenariat public/privé (PPP) et le droit communautaire des marchés publics et des concessions.

Avant de répondre aux questions posées par la Commission, il propose une synthèse introductive de sa position.

Synthèse introductive

Le MEDEF accueille très favorablement la décision de la Commission européenne, après sa Communication interprétative du 29 avril 2000, d'approfondir sa réflexion sur l'ensemble des modes de coopération entre les autorités publiques et les entreprises pour la mise en œuvre des activités d'intérêt général, à juste titre qualifiés de phénomène « *partenariat public/privé* ». Il est résolument convaincu de l'intérêt social, politique et économique de ces contrats pour la cohésion de l'Union, le développement de chacun de ses membres, particulièrement les nouveaux entrants, mais aussi pour chacun de ses habitants. Il se réjouit donc de la reconnaissance du rôle que l'entreprise, en sa qualité d'opérateur d'activités économiques, peut jouer aux côtés des autorités publiques, pour y contribuer.

Le MEDEF approuve l'approche pragmatique de la Commission européenne qui s'efforce de cerner le phénomène du PPP qui, sous des formes juridiques diverses, recouvre des réalités profondément semblables justifiant une démarche commune.

Pour clarifier ses propos, le MEDEF estime utile de préciser le sens qu'il entend donner dans sa réponse aux termes de « PPP » et de « concession ».

Il utilisera le vocable de « *PPP* » pour évoquer toutes les formes de relations entre une autorité publique et un tiers emportant attribution du droit d'exercer une activité économique d'intérêt général (dans les conditions rappelées aux paragraphes suivants). Sont exclues les relations relevant de la définition des marchés publics au sens des Directives 2004/17 et 2004/18, que cette relation soit contractuelle ou non. Il réservera le terme de « *concession* » à tous les contrats ayant un tel objet, dès lors qu'ils ne constituent pas un marché public au sens desdites directives. Cette notion de concession inclut les concessions de travaux publics régies par des règles particulières insérées dans la Directive 2004/18. Enfin, le vocable de « *PPP institutionnels* » sera retenu pour tous les PPP qui ne se présentent pas sous la forme de contrats de concession.

Tous les PPP - qu'ils prennent ou non la forme d'un contrat - ont un objet commun qui les caractérise mais surtout qui justifie pour eux un régime particulier. Le MEDEF entend insister dans ses propos introductifs sur cette question de l'objet qui lui paraît primordiale :

Dans un PPP, l'autorité publique, par son initiative, ses actes et ses décisions, confère à un tiers - qui peut être une entreprise à capitaux publics ou privés mais aussi une autre entité publique - le droit d'exercer une activité économique relevant de ses prérogatives ou de sa compétence (qu'elle aurait pu ou dû exercer elle-même si elle ne l'avait pas confiée à un tiers). Il s'agit, le plus souvent, d'un service d'intérêt économique général (SIEG).

Le transfert de responsabilité ainsi effectué est partiel car ce mode de gestion d'un SIEG se caractérise par la dissociation de deux fonctions, celle d'organisation du service rendu (sa définition, son périmètre, ses tarifs…) qui reste la prérogative de l'entité publique (l'Autorité Organisatrice) et celle de la production ou de la prestation du service rendu qui, seule, constitue une activité économique et peut être confiée à l'entreprise qualifiée alors d'« *opérateur* ». Ce dernier exerce donc l'activité sur les initiatives et sous le contrôle de l'autorité publique qui se comporte en entité ayant des obligations vis-à-vis des habitants en termes d'activité économique mais qui les exerce en définissant les contenus, les besoins, les attentes et en confiant à un tiers la responsabilité de leur exécution. Autorité Organisatrice et opérateur sont donc co-acteurs d'une même mission d'intérêt général, et coresponsables de la bonne exécution d'un SIEG.

Un second trait commun caractérise les PPP : ils se distinguent des marchés publics par le rôle attendu de l'entreprise et le mode d'exécution de la mission confiée qui implique durée, initiative, adaptation, autonomie et engagements de la part de l'entreprise ce qui implique plus de contrôle, sanction et droit d'intervention par l'Autorité Organisatrice. Les accords initiaux sont moins conclus dans l'intérêt des parties que dans celui des habitants bénéficiaires du service confié qui doivent rester la référence des deux acteurs et, de ce fait, céder devant les nécessités de l'intérêt général et l'évolution des besoins.

Cette dévolution du droit d'exercer une activité économique, caractéristique première du PPP, ne passe pas nécessairement par un contrat, en tous cas pas par un contrat formalisé en tant que tel. Elle peut se concrétiser par un acte juridique unilatéral (par exemple dans des statuts d'une entité créée spécifiquement) mais aussi, par l'attribution d'un droit économique, tels que le droit à une contribution publique, le droit d'utiliser une facilité essentielle, des droits exclusifs ou spéciaux permettant *de facto* d'exercer une activité qui, sans ces aides, ne serait pas économiquement rentable. Il y a donc toujours, en réalité, dans un PPP un acte de dévolution à un tiers, qu'il soit explicite (un contrat de concession) ou implicite (le PPP institutionnel). En ce sens, le PPP s'oppose à l'autre seul mode possible de gestion des SIEG, celui selon lequel l'Autorité Organisatrice décide d'exploiter elle-même ou par ses propres services ou assimilés (entités « *in house* ») avec, le cas échéant, l'intervention ponctuelle d'entreprises dans le cadre de marchés publics.

Or, pour tous les cas d'attribution du droit d'exercer une activité économique, le Traité de l'Union européenne exige le respect des principes découlant des articles 43 et 49 (transparence, égalité de traitement, proportionnalité et reconnaissance mutuelle). La Commission européenne l'a très justement relevé et le MEDEF est très favorable à cette analyse.

Toutefois, le texte du Livre vert pourrait laisser penser que la Commission européenne envisage d'aller au plus simple et à la préparation d'un instrument législatif communautaire complémentaire nouveau et spécifique aux seules concessions (PPP contractuels autres que les marchés publics). Ce serait méconnaître le fait qu'en réalité, les PPP institutionnels dissimulent très souvent un contrat, ou au moins l'attribution d'une activité économique à un tiers, et qu'ils doivent par conséquent également respecter les règles du Traité. Succomber à la tentation de cette facilité serait tout à fait regrettable et ne répondrait pas aux véritables enjeux d'ouverture de ce type d'activité économique aux règles de la concurrence ni aux attentes des entreprises françaises. L'effet d'éviction qui s'ensuivrait à l'encontre des formes soumises à réglementation au profit de celles qui ne le seraient pas serait inadmissible. Le MEDEF est en outre convaincu que l'excès de réglementation de certaines formes de PPP aurait paradoxalement un effet anticoncurrentiel, en favorisant la fermeture de marchés par le renforcement de PPP institutionnels qui, trop souvent, ne prévoient pas de remise en concurrence périodique.

En définitive, les entreprises françaises sont moins préoccupées par les conditions de passation des concessions que par les conditions dans lesquelles se mettent en place nombre de PPP institutionnels et les fermetures de marchés qui en découlent.

Le MEDEF partage l'avis de la Commission européenne selon lequel il serait souhaitable d'harmoniser, entre les différents Etats membres, les règles de passation des contrats de concession. Mais il est avant tout convaincu qu'il ne faut pas, par le biais de procédures trop contraignantes, tarir le courant encore timide mais prometteur d'ouvertures au PPP de la gestion de SIEG actuellement en autoproduction par l'autorité publique. Il craint également que la mise en place de règles inadaptées ou trop rigides sous le processus de compétition fasse obstacle à l'enrichissement qu'autorise la mise au point des droits et obligations des partenaires à un PPP, au cours d'un processus de discussions itératives.

⇨ Le MEDEF attend beaucoup d'une intervention communautaire qu'il appelle de ses vœux. Il est toutefois d'avis qu'en l'état, il serait prématuré d'élaborer un droit nouveau pour toutes les formes de PPP. Il serait plus rapide, plus efficace et surtout plus réaliste de se contenter de rappeler fermement les principes du Traité qui doivent s'appliquer à toutes les formes de PPP, quelle qu'en soit la nature juridique. Il ne paraît pas opportun de faire figurer ces rappels du droit existant dans une directive ; ils pourraient faire l'objet d'une communication interprétative plus ambitieuse que celle du 29 avril 2000, notamment en ce qu'elle y inclurait les PPP institutionnels. Cette étape permettra de préparer une directive ultérieure pour tous les PPP.

Le MEDEF développera ces différents points dans ses réponses aux différentes questions de la Commission européenne.

Question 1 : Quels types de montages de PPP purement contractuel connaissez-vous ?
Ces montages font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays ?

1. TYPES DE CONTRATS DE CONCESSION

Pour clarifier sa réponse sur le PPP contractuel (qu'il appelle concession – à distinguer de marchés publics), le MEDEF rappelle ses propos introductifs selon lesquels dans tout PPP apparemment institutionnel, il y a en réalité contrat implicite d'attribution à un tiers du droit d'exercer une activité économique.

Les montages constatés sont très variés et c'est heureux. En effet, l'important est d'assurer la liberté contractuelle. Par ailleurs, il doit toujours être possible aux autorités publiques et aux entreprises de construire des relations contractuelles adaptées aux décisions publiques, aux besoins des habitants mais aussi au contexte juridique qu'il convient de respecter.

De ce fait, toute tentative de classification a un caractère artificiel sur le plan opérationnel. Ces classifications ne se recouvrent pas selon les systèmes juridiques, dans la mesure où il existe un continuum de « types » contractuels selon la nature des missions confiées et les conditions dans lesquelles elles sont confiées, l'étendue des engagements et responsabilités demandées à l'entreprises, des risque transférés… Par suite, les classifications vont dépendre des critères privilégiés de caractérisation. D'où l'importance d'identifier l'essentiel et notamment les éléments justifiant un régime juridique spécifique.

Les contrats peuvent être classés :

- selon le régime des biens, selon qu'ils sont mis à disposition ou qu'ils sont réalisés (et éventuellement) financés par l'entreprise (avec ou sans retour obligatoire à la personne publique),
- selon l'objet de la mission : service directement rendu aux habitants au lieu et place de la personne publique, ou service rendu à la personne publique pour contribuer à des missions qu'elle se réserve,
- selon la nature des risques assumés par l'entreprise par rapport à la performance promise,

- selon la nature et l'importance des risques économiques inhérents à l'activité assumée par l'entreprise (risque de fréquentation, risques du niveau des recettes commerciales, risque de la demande…).

A partir de ces différents critères, le MEDEF s'est efforcé d'établir une typologie des contrats qu'il connaît (voir en annexe).

2. PRATIQUE ET DROIT ADMINISTRATIFS FRANÇAIS

Le droit administratif français a été essentiellement construit par le juge à partir de la notion de service public. Traditionnellement, il a distingué deux grands types de relations dans les relations entre les autorités publiques et les entreprises : les relations qui relèvent des marchés publics au sens français du Code des marchés et toutes les autres formes de relations contractuelles. Jusqu'en 1993, seul le code des marchés publics était applicable. Pour tous les autres types de relations contractuelles, la tradition administrative française était très sensible au caractère très spécifique et polymorphe des liens pouvant se nouer entre l'autorité publique responsable et l'entreprise chargée de l'exécution d'un service public.

Il a progressivement été reconnu que le service public et l'intérêt général primaient sur la force du contrat et le juge administratif français a progressivement élaboré des principes du droit de ces contrats, consubstantiels à leur réalité même : l'obligation de continuité du service public et d'adaptation constante à ses nécessités et à leurs pendants, la mutabilité des contrats, le droit de modification unilatérale par l'autorité publique dans l'intérêt général ainsi que l'imprévision (qui oblige au rétablissement de l'équilibre financier initial voulu par les parties).

Il a également été considéré que cette relation singulière ne pourrait s'établir correctement si la concurrence devait se déployer dans le cadre d'une procédure rigide d'appel d'offres à partir d'un cahier des charges détaillé prédéfinissant les tâches de l'entreprise. La France en a tenu compte lorsqu'elle a décidé, avant la plupart des autres Etats membres, de légiférer[1] sur les conditions de passation des délégations de service public - qui correspondent sensiblement aux concessions de travaux publics et de service du droit communautaire. Elles ont pour objet commun principal la prestation de SIEG à destination des habitants. La France a ainsi par exemple affirmé la nécessité de mettre au point les conventions, tout au long d'un processus itératif d'échanges et de discussions entre l'entité publique et chacun des candidats retenus pour ce faire (processus dit de « *libre négociation* »). Ce processus permet de confronter les offres de l'entreprise à la réalité et aux contraintes qui n'avaient pu être suffisamment exprimées dans le dossier de consultation et doit aboutir à optimiser globalement l'ensemble en choisissant en définitive, sur chaque point, la meilleure solution en la circonstance, tout en respectant les principes d'égalité de traitement et de transparence.

La législation française en revanche n'avait pas prévu de règle particulière pour la passation des contrats confiant aux entreprises des missions complexes à destination des administrations mais, au contraire, les avaient progressivement supprimées dans le Code des marchés publics. En définitive, à trop vouloir

[1] Elle l'a fait par une loi du 29 janvier 1993 dite *loi Sapin* qui ne tentait même pas une définition de la délégation de service public, terminologie nouvelle dont il a été admis qu'elle recouvrait les contrats traditionnels de concession, d'affermage et de régie intéressée. Ces contrats sont regroupés dans une catégorie juridique commune puisque, tous, ont pour objet de confier tout ou partie des tâches nécessaires pour que soit rendu aux habitants un SIEG. Cet objet de service est central en droit français, les missions susceptibles d'être confiées concernant les biens étant considérées comme accessoires ; on distingue donc la concession qui confie au concessionnaire des travaux de premier établissement et l'affermage qui prévoit la mise à disposition au fermier des biens existants à charge pour lui de les entretenir, la régie intéressée étant une variante de d'affermage. Il y a bien entendu en pratique des contrats qui empruntent à ces différents types.
Ce n'est que par une loi du 11 décembre 2000 que la délégation de service public a été définie : « *Une délégation de service public est un contrat par lequel une personne morale de droit public confie la gestion d'un service public dont elle a la responsabilité à un délégataire public ou privé, dont la rémunération est substantiellement liée aux résultats de l'exploitation du service. Le délégataire peut être chargé de construire des ouvrages ou d'acquérir les biens nécessaires au service* ».

restreindre et réglementer les marchés, le législateur français a paradoxalement non pas interdit les contrats pour des missions complexes (intégrant construction/financement/exploitation)[2], mais les avait seulement dispensés de toute réglementation explicite.

Dans le cadre de la toute récente ordonnance du 17 juin 2004, le législateur français s'est employé à définir le régime de ces autres contrats qu'il a qualifié de contrats de partenariat. Il l'a fait en s'efforçant de respecter le nécessaire besoin de souplesse, de flexibilité de la procédure de passation et des conditions d'exécution de ce contrat. Pour la plupart, dans la mesure où les paiements sont publics, ils pourraient rentrer dans la catégorie des marchés publics au sens communautaire : c'est pourquoi la procédure de passation retenue est à titre principal celle du dialogue compétitif, celle de l'appel d'offres étant réservée aux cas d'urgence.

Enfin, il n'existe en France aucun texte spécifique pour les PPP institutionnels. Les sociétés d'économie mixte locales (SEML) font l'objet d'une réglementation particulière (article L 1521-1 et suivants du Code général des collectivités territoriales, issus d'une loi de 1983) mais elles ne bénéficient pas du droit de se voir attribuer des contrats de marchés publics, de délégation de service public ou de partenariat sans être mises en concurrence comme n'importe quelle autre société[3].

Question 2 : De l'avis de la Commission, la transposition au droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation du contrat qualifié de marché public lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? Si non, Pourquoi ?

La position du MEDEF sur la pertinence de la procédure du dialogue compétitif diffère selon la nature de l'activité confiée et la forme juridique du contrat.

1. DIALOGUE COMPETITIF POUR LES MARCHES PUBLICS

Lors de la mise au point des dispositions actuelles des directives 2004/18 et 2004/17, nombre d'entreprises, dont les entreprises françaises, ont fait valoir à la Commission européenne que, si la procédure d'appel d'offres est adaptée pour un marché simple dont l'objet peut être clairement défini dans un cahier des charges, cette procédure était paralysante pour certains marchés qui justifient une discussion entre l'autorité adjudicatrice et les candidats. Le MEDEF juge positivement que la directive 2004/18 ait prévu, en son article 29, une procédure de dialogue compétitif pour la passation des marchés publics.

[2] Comme le besoin était certain, la pratique a en effet imaginé d'autres formes de relations contractuelles, à partir de contrats de droit commun (vente, location, crédit-bail…) et de contrats d'occupation du domaine public (bail emphytéotique administratif de la loi du 5 janvier 1988, autorisation d'occupation temporaire du domaine public), pour offrir à l'Administration les solutions et services intégrés que le secteur privé pourrait leur fournir. Ont ainsi été mis au point des montages contractuels complexes conduisant à la réalisation d'investissements, à leur financement et leur exploitation, leur maintenance et, le cas échéant, à l'exploitation des services dont ils sont le support.

[3] Décision du Conseil constitutionnel du 20 janvier 1993 : « *Considérant en revanche que la loi exclut de l'application de ces dispositions… toutes les sociétés dont le capital est directement ou indirectement majoritairement détenu par la collectivité délégante à la seule condition que l'activité déléguée figure expressément dans leurs statuts ; que ces dispositions qui portent sur la publicité préalable aux négociations, sur les formalités d'examen des offres et sur l'exigence d'un contrôle préalable de l'assemblée délibérante sur l'attribution des délégations méconnaissent le principe d'égalité; qu'en effet elles ne peuvent se justifier ni par les caractéristiques spécifiques du statut des sociétés en cause, ni par la nature de leurs activités, ni par les difficultés éventuelles dans l'application de la loi propres à contrarier les buts d'intérêt général que le législateur a entendu poursuivre* ».
Toutefois, jusqu'à l'adoption de l'ordonnance du 17 juin 2004, elles bénéficiaient du droit exclusif de se voir confier des contrats de mandat ou de conduite d'opération. Elles bénéficient toujours du droit exclusif de conclure des concessions d'aménagement.

Cette approbation n'est pas cependant sans quelques réserves ou craintes. En effet, cette procédure ne paraît pas adaptée en l'état pour les concessions. Le MEDEF déplore d'abord les conditions, selon lui excessivement restrictives, d'autorisation de ce dialogue et estime que la question n'est pas de savoir si on peut ou non attribuer un marché par une procédure d'appel d'offres ; mais de savoir si le dialogue compétitif ne permettrait pas un meilleur contrat pour l'entité publique que celui conclu après appel d'offres classique.

Le MEDEF souhaiterait en outre qu'il soit clairement dit que le dialogue doit se poursuivre avec chacun des candidats *sur la base des solutions de ce candidat.* L'idée, quelquefois exprimée, d'une remise en concurrence de l'ensemble des candidats sur des solutions identifiées comme bonnes par l'Administration, est inadmissible au regard du droit des entreprises sur leurs solutions. Elle est par ailleurs inefficace et anti-productive puisque les entreprises se garderont bien de se mettre en compétition sur leurs solutions techniques et innovations si ces solutions doivent bénéficier à leurs concurrents. Le MEDEF est d'avis que ce dialogue n'a pas pour objet de définir les bonnes solutions, mais de choisir la bonne offre qui sera celle qui aura prévu la (ou les) bonne(s) solution(s).

Le dispositif prévoit la remise d'une offre finale au moment où le pouvoir adjudicateur décide de mettre fin au dialogue. On ne saurait contester la nécessité d'arrêter la discussion à un moment donné et de demander à chacun de s'engager sur leur proposition. Mais, c'est mal connaître la difficulté de la mise au point de certains dossiers complexes que d'empêcher d'affiner les dispositions contractuelles jusqu'à la signature. Ainsi, le MEDEF est d'avis qu'il y a une place à faire à la discussion pour la mise au point de l'offre retenue, jusqu'au terme de la procédure.

2. DIALOGUE COMPETITIF POUR LES AUTRES PPP

Le MEDEF n'est pas favorable à une procédure de dialogue compétitif du type de celle applicable aux marchés publics pour les concessions et autres PPP.

Les réserves précitées seraient *a fortiori* valables pour les PPP. Mais son opposition tient plutôt à ses convictions :

- le MEDEF est fermement opposé à ce que la Commission édicte des règles différentes pour les PPP contractuels et pour les PPP institutionnels ; or il est évident que la procédure de dialogue compétitif est beaucoup trop rigide et fermée pour les PPP institutionnels ;
- il est également fermement opposé à ce que les PPP soient assimilés à des marchés publics et soumis au même régime de passation.

Sur ce second point, il estime que c'est la nature même du PPP que de ne pouvoir être attribué au vu seulement d'une offre écrite sans aucune discussion. La raison n'est qu'en partie liée à la complexité. En réalité, le contrat doit traduire le résultat du travail effectué au cours d'un dialogue pour interfacer les exigences de l'entité publique (qui évoluent en fonction des observations des entreprises) avec la capacité de l'entreprise à imaginer et mettre en place une organisation performante, à proposer des optimisations et des améliorations de service, à rechercher des économies et des gains de productivité, en vue d'arrêter ensemble les solutions économiquement et qualitativement les plus satisfaisantes.

Le MEDEF ne partage pas les réserves exprimées par la Commission européenne sur la négociation, estimant qu'il y a de bonnes négociations. Sous la terminologie de « *libre négociation* » qui a été posée par la *loi Sapin*, le législateur français n'a pas prévu autre chose qu'une discussion constructive permettant d'arrêter point par point, en connaissance de cause, les inévitables options puis la mise au point itérative des droits et obligations respectifs jusqu'à la signature du contrat.

Question 3 : En ce qui concerne ces contrats, existe-t-il, selon vous, des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics ? Si oui, lesquels et pour quelles raisons ?

Certaines pratiques parallèles à la procédure d'adjudication méritent d'être relevées car elles posent problèmes eu égard aux principes fondamentaux du Traité. Il s'agit des cas où la consultation d'origine qui devait aboutir à un PPP contractuel s'est transformée en une institutionnalisation du partenariat avec d'autres acteurs, sous prétexte d'infructuosité, permettant la réutilisation des solutions techniques identifiées en amont à partir des offres des entreprises.

Dans cette hypothèse, et conformément aux règles et principes fondamentaux découlant du Traité, il convient de prévoir une nouvelle mise en concurrence de compétiteurs qui présenteraient des offres dans des conditions d'égalité de traitement, notamment quant à leur structure de coûts qui doivent être établies selon les principes communs d'une économie de marché.

Question 4 : Avez-vous déjà organisé, participé, ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ? Quelle expérience en avez-vous ?

Sans objet pour le MEDEF.

Question 5 : Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non nationaux aux procédures de passation de concession ? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre ?

Question 6 : Pensez-vous qu'une initiative législative communautaire, visant à encadrer les procédures de passation de concessions, est souhaitable ?

En matière de concessions, le cadre juridique communautaire actuel diffère selon qu'il s'agit d'une concession de travaux publics ou d'une concession de services.

Pour les concessions de travaux, les règles actuelles donnent toute satisfaction car elles permettent la mise au point de contrats complexes avec négociation jusqu'à leur finalisation. Les précisions de la directive 2004-18 sur la publicité et le délai minimal pour le dépôt des offres sont opportunes. On peut seulement déplorer que les concessions de travaux publics ne soient pas plus clairement distinguées des marchés publics, le critère du « *droit d'exploitation* »[4] ne traduisant qu'imparfaitement les spécificités de ce PPP contractuel.

[4] Directive n° 2004/18, article 1er.3 : « *La concession de travaux publics est un contrat présentant les mêmes caractéristiques qu'un marché public de travaux à l'exception du fait que la contrepartie des travaux consiste soit uniquement dans le droit d'exploiter, soit dans ce droit assorti d'un prix* ».

Pour les concessions de service, le besoin d'un instrument communautaire à caractère législatif n'est plus aussi prégnant qu'il l'était en 2000[5] en raison de la reconnaissance des exigences du Traité rappelées par l'arrêt *Telaustria*[6].

Il est vrai que l'application effective de ces principes et surtout la sanction de leur non application restent parfois théoriques et qu'il serait donc sans doute utile d'en préciser les modalités pratiques en termes de publicité et de délai (comme pour les concessions de travaux publics). Il n'est en revanche nul besoin de dispositions supplémentaires puisque il paraît préférable que les procédures utilisées demeurent suffisamment souples pour demeurer compatibles avec la nature particulière des PPP et que l'harmonisation des règles édictées par les différents Etats membres ne paraît pas vraiment utile.

La spécificité des concessions implique en effet que soit reconnue et préservée la singularité de la nature du choix que fait une collectivité publique quand elle décide de ne pas assurer elle-même un service d'intérêt général à destination des habitants et de se substituer une entreprise. Ce choix doit prendre en compte des données qui ne sauraient apparaître ou se traduire dans la seule production d'une offre écrite au vu d'un cahier des charges de consultation, même si la procédure admet un certain dialogue pour la mise au point progressive du contrat. Ce choix implique une relation de confiance et ce serait totalement méconnaître sa réalité que de nier le droit de prendre en considération la conviction que le candidat présente des garanties suffisantes en termes de références et de compétences pour honorer son offre.

Par suite, d'éventuelles indications complémentaires sur la procédure de publicité (qui pourraient prendre la forme de simples recommandations) ne relèveraient pas de la préoccupation essentielle du MEDEF relative au non respect des principes du Traité pour les PPP institutionnels.

Le MEDEF considère avant tout qu'il serait gravement contre-productif de faire un sort particulier aux contrats de concession parmi tous les autres PPP. Un instrument communautaire à valeur législative qui ne traiterait que de la question des conditions de passation des concessions pourrait être interprété comme l'indicateur selon lequel il n'est pas nécessaire de mettre de l'ordre dans tous les mécanismes relationnels entre les entités publiques et les entreprises qui n'ont pas la forme de concessions. Il serait par ailleurs prématuré aujourd'hui d'imaginer une procédure adaptée à toutes les formes de PPP (concession et PPP institutionnels) et respectueuse de leurs singularités.

Par conséquent, le MEDEF est d'avis que les règles actuelles, celles de la directive 2004-18 pour les concessions de travaux publics et celles qui ont été, très opportunément, rappelées par la CJCE pour tous les autres PPP, suffisent à assurer une concurrence réelle pour les concessions de service et ne réclame pas une initiative législative communautaire à valeur législative en matière de concessions.

[5] Au moment de la concertation sur la communication interprétative sur les concessions et autres formes de partenariats du 29 avril 2000, le MEDEF avait insisté sur l'impérieuse nécessité que l'ensemble des Etats membres ouvrent à la concurrence toutes les attributions d'activité économique à des tiers et prennent les mesures nécessaires, y compris par une directive.

[6] Décision qui a rappelé qu'il fallait mettre en oeuvre des procédures garantissant la transparence, l'égalité de traitement, la proportionnalité et la reconnaissance mutuelle.

Question 7 : De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les PPP de type contractuel, qu'ils soient qualifiés de marché public ou de concession, pour les soumettre à des régimes de passation identiques ?

Le MEDEF croit comprendre la question de la Commission européenne comme évoquant certains PPP contractuels qui ne seraient pas des concessions et qui, par conséquent, seraient actuellement soumis à la directive Marchés publics (étant entendu que les concessions de travaux publics sont distinguées des marchés publics, même si un régime particulier est inscrit dans cette directive). Il ne pense pas utile de remettre en cause la distinction entre marchés et concessions qu'il convient au contraire de réaffirmer.

Question 8 : Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de PPP d'initiative privée est-il assuré ? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu ?

La France (contrairement à l'Italie et à l'Espagne) n'a pas de législation encadrant les PPP d'initiative privée. Le MEDEF a donc une expérience limitée de ce type de formules mais ne peut que se faire l'écho de l'intérêt que les entreprises portent à de telles formules.

L'initiative privée permet de faire bénéficier les autorités publiques du travail argumenté d'une entreprise qui a eu une bonne idée et en a assuré une pré-étude, à ses risques et périls, avant de la présenter. Ainsi ces formules permettent aux entreprises de faire valoir leur capacité d'innovation. Le MEDEF accueille très favorablement la mesure prise par la Commission européenne sur ce point.

Question 9 : Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée dans l'Union européenne tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement ?

Pour assurer le développement des PPP d'initiative privée dans l'Union européenne, il faut encourager ces initiatives mais également garantir leur viabilité juridique (en particulier leur compatibilité avec les règles de la concurrence).

L'obtention d'un avantage compétitif par l'entreprise est sans doute plus motivante pour elle qu'une indemnité car elle prend l'initiative dans le but de pouvoir participer à un projet et non pas pour de simples raisons pécuniaires. Si, en définitive, le marché n'est pas obtenu, l'attribution d'une prime apparaît alors comme une compensation justifiée. Cette prime ne doit toutefois pas couvrir la totalité des frais engagés afin de ne pas susciter un marché des offres spontanées. Toutefois, l'attribution de ces avantages devra être sécurisée juridiquement afin qu'il n'y ait pas de distorsion de concurrence. A défaut, il n'y aura pas d'études approfondies sur des idées complexes.

Pour assurer une bonne transparence, le MEDEF suggère que soit posée une obligation de publicité pour avertir les différentes entreprises susceptibles d'être intéressées, lorsque la personne publique accepte d'étudier une proposition d'initiative privée.

Question 10 : Quelle expérience avez-vous de la phase postérieure à la sélection du partenaire privé dans les opérations de PPP contractuels ?

Cette question est très importante. L'expérience des entreprises françaises les autorise à insister sur la nécessité impérative de laisser vivre ces contrats qui ont besoin de flexibilité, de durée et de mutabilité. A cet égard, le MEDEF est d'accord avec les analyses pertinentes de la Commission (voir notamment paragraphes 45 & 46) qui a exactement identifié les éléments essentiels de la vie d'un contrat de concession.

La durée est indispensable et elle ne l'est pas seulement en raison de la durée des investissements. Ce besoin de durée, assez généralement identifié si l'entreprise prend en charge les financements, est trop souvent méconnu quand la mission est simplement de service, alors qu'on attend d'elle qu'elle apporte du surplus et qu'elle fasse bénéficier la collectivité de sa capacité à améliorer l'équation économique grâce, notamment, à ses capacités d'organisation. Or certaines actions ne génèreront de gains de productivité qu'après de longs délais (par exemple : mise en œuvre d'une politique d'achats rigoureuse). D'autres impliquent, dans un premier temps, des dépenses ou des risques supplémentaires (par exemple : réorganisation du travail qui peut nécessiter des mesures de restructuration coûteuses et des tensions sociales). Enfin, les améliorations les plus importantes impliquent généralement des investissements qui doivent s'amortir.

Il faut en second lieu pouvoir adapter le contrat. Cette adaptation est d'autant plus nécessaire que la durée est longue mais elle l'est avant tout en raison de l'objet même de ce type de contrat : confier à un partenaire privé la mission de satisfaire des besoins d'intérêt général. Adapter le contrat à l'évolution des besoins n'est donc pas une faculté, c'est une obligation pour les deux parties car c'est la condition nécessaire au respect de l'objet du contrat, de satisfaire les besoins, non pas seulement ceux identifiés initialement, mais ceux qui seront constatés tout au long du contrat. Ceci est particulièrement vrai quand il s'agit de concessions de service public et que ces besoins sont ceux des habitants bénéficiant du service délégué.

Le contrat doit également pouvoir évoluer en fonction des circonstances, l'accord initial ne pouvant pas prévoir tous les évènements de nature à porter atteinte à l'équilibre financier envisagé à l'origine. Il faut donc admettre des révisions de bonne foi (le défaut d'accord pouvant conduire à la résiliation pour intérêt général avec indemnité, éventuellement sous le contrôle du juge) pour pouvoir, le cas échéant, rétablir les conditions de l'équilibre financier initial voulu par les parties. De telles modifications, dès lors qu'elles seront objectivement justifiées, ne doivent pas être considérées comme des atteintes aux conditions de la mise en concurrence initiale. Il serait désastreux que des contraintes excessives sur la vie des contrats au prétexte de concurrence conduisent les acteurs à privilégier des montages tels les PPP institutionnels échappant de fait à de tels handicaps.

Il faudrait aussi prendre en considération les situations inextricables créées par le refus d'une modification contractuelle nécessaire, au prétexte qu'elle apporterait au contrat initial des modifications trop substantielles pour ne pas nécessiter une remise en concurrence. Si l'objet de la modification n'est pas dissociable de la mission initiale, la résiliation du contrat initial devient inévitable et porte atteinte aux droits légitimes du contractant et, au surplus, risque de coûter cher en indemnisation à l'autorité publique.

Cette insécurité de la situation contractuelle des contractants des entités publiques est un très sérieux problème des PPP et handicape d'ailleurs très fortement la mise en place de financements adaptés dès lors que l'opération est légèrement complexe. Le MEDEF admet qu'il est normal que, quand l'intérêt général l'exige, l'autorité publique puisse imposer à ses contractants les modifications nécessaires, voire puisse mettre fin de façon anticipée à un contrat moyennant indemnité. Mais il considère que ces prérogatives doivent rester exceptionnelles.

Question 11 : Avez-vous connaissance de cas dans lesquels les conditions d'exécution – y compris les clauses d'adaptation dans le temps – ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d'établissement ? Si oui, pouvez-vous décrire le type de problèmes rencontrés ?

Le MEDEF n'a pas connaissance de tels cas.

Question 12 : Avez-vous connaissance de pratiques ou de mécanismes d'évaluation d'offres ayant des incidences discriminatoires ?

Le MEDEF n'a pas d'exemples de telles pratiques discriminatoires. Il rappelle toutefois q'une vigilance accrue est indispensable envers les candidats qui, en raison de leur nature juridique, de moindres charges ou d'avantages reçus au titre d'une autre activité (aides, droits exclusifs et spéciaux), bénéficieraient d'avantages concurrentiels discriminatoires.

Question 13 : Partagez-vous le constat de la Commission selon lequel certains montages de type « *step-in* » peuvent poser problème en termes de transparence et d'égalité de traitement ? Connaissez-vous d'autres « *clauses types* » dont la mise en œuvre est susceptible de poser des problèmes similaires ?

Le MEDEF ne partage pas les inquiétudes de la Commission européenne sur les clauses de *step-in*. Ces clauses (qui permettent, avant résiliation du contrat pour faute du titulaire, de proposer aux prêteurs de substituer un autre organisme qui prendra le relais du titulaire défaillant) donnent une chance à la poursuite du contrat avant la résiliation effective. Ces clauses participent donc à la confiance des prêteurs qui est essentielle dans une opération de PPP. A sa connaissance, aucune clause de *step-in* n'a encore été appelée à jouer en France.

Plus largement, cette question permet de s'interroger sur la cessibilité des contrats. Dans ce domaine, il faut prendre en compte deux aspects : d'une part la légitime préoccupation de l'autorité publique que le contrat cédé continuera à être correctement exécuté par le cessionnaire et, d'autre part, le caractère patrimonial d'un contrat pour son titulaire à combiner avec les exigences du droit de la concurrence.

Sur le premier aspect, il est incontestable que la substitution d'un titulaire à un autre dans ses droits et obligations n'est pas, pour l'autorité adjudicatrice, un évènement négligeable qui puisse lui être imposé sans qu'elle puisse s'exprimer. Le MEDEF trouve normal que la collectivité publique puisse refuser un transfert mais elle ne doit pouvoir le faire que pour un motif légitime.

Sur le second aspect, le MEDEF s'oppose à toute interdiction par principe de la cessibilité du contrat. De tels contrats concrétisent le droit obtenu par l'entreprise d'exercer une activité économique et constituent un de leurs principaux actifs. Il serait gravement préjudiciable à l'équilibre macro-économique des Etats membres que des dispositions excessives sur la non cessibilité des contrats entravent des opérations de cession de branches d'activité, voire des opérations d'évolution du contrôle du capital des sociétés.

D'ailleurs, les exigences de la concurrence, souvent invoquées, ne justifient pas l'interdiction *a priori* de telles cessions. En effet, ce qui est mis en concurrence, ce ne sont pas les personnes des candidats mais la nature des offres, en vue de sélectionner l'offre économiquement la plus avantageuse. Certes, le choix fait par une autorité publique peut légitimement prendre en considération l'appréciation sur la capacité de la personne du candidat et son aptitude présumée à exécuter le contrat mais, pour autant, ce n'est pas la personne qui est mise en concurrence mais l'offre. Par suite, l'autorité publique a le droit de refuser un cessionnaire qui ne présenterait pas toutes les garanties nécessaires mais ne peut refuser *a priori* le principe d'une cession.

En outre, il convient d'observer que dans la quasi-totalité des cas de cession, l'ensemble de l'organisation en hommes, matériels… mis en place par le titulaire initial pour exécuter le contrat est transféré au cessionnaire. Cela est même obligatoire pour les personnels, notamment en vertu de la directive 2001/23/CE[7].

Question 14 : Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quel(s) aspect(s) devrait porter cette clarification ?

Le MEDEF a déjà souligné que les acteurs de l'entreprise partenaire ont besoin de se développer dans la durée et ne peuvent être figés dans un contrat initial inchangé mais la durée du contrat et ses conditions d'adaptation relèvent de l'accord des parties. Ils ne justifient pas une réglementation communautaire en matière d'exécution du PPP, dont les fondements légaux seraient en outre douteux.

En revanche, il appartient à la Commission de rappeler que les exigences de mise en concurrence impliquent des procédures périodiques mais ne sauraient justifier l'interdiction de faire vivre les contrats entre deux appels d'offres. Cela relève toutefois d'un guide de bonne pratique et non d'une directive.

A cet égard, les remarques du Livre vert (point 49) sont beaucoup trop restrictives[8] et méconnaissent la réalité de la vie de ces contrats (voir développements sur la durée sous la question 10).

[7] Directive « *concernant le rapprochement des législations des Etats membres relatives au maintien des droits des travailleurs en cas de transfert d'entreprises, d'établissements ou de parties d'entreprises ou d'établissements* ».

[8] Point 49 du Livre vert : Les seules modifications pouvant faire l'objet d'avenants seraient celles qui « *sont rendues nécessaires par un événement imprévisible, ou lorsqu'elles sont justifiées par des raisons d'ordre public, de sécurité publique, ou de santé publique* ».

Question 15 : Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

Question 16 : Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mise en place en ce qui concerne le phénomène de sous-traitance ?

Question 17 : De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance ?

Il existe déjà un certain encadrement pour les concessions de travaux publics[9] qui oblige le concessionnaire qui souhaite confier des marchés à des tiers à une obligation de publicité au dessus de certains seuils mais prend grand soin de préserver les exigences du montage de ces opérations (autorisation de recourir aux entreprises liées et à celles qui se sont groupées pour obtenir la concession, et dérogation quand sont réunies les conditions de recours à une procédure négociée).

Sur le plan général, le titulaire doit pouvoir librement choisir ses sous-traitants comme le font les titulaires de marchés publics classiques, sauf encadrement en vertu d'une loi nationale ou par voie contractuelle. A partir du moment où le contrat principal a été mis en concurrence (« *contrat amont* »), il n'y a pas lieu de soumettre à une procédure de passation l'attribution des contrats de sous-traitance (« *contrat aval* »). *A fortiori*, si lors de la mise en concurrence initiale, les sous-traitants du titulaire ont été déclarés, il n'y a pas lieu d'exiger que le titulaire organise une nouvelle procédure en aval ; d'ailleurs, aucun consortium ne pourrait se constituer pour la réalisation de grands projets si les « *sponsors* » (entreprises groupées pour répondre à l'offre et constituer l'entité *ad hoc*) ne peuvent assurer l'activité dans le cadre de contrats consentis par la société *ad hoc* titulaire du contrat.

En réalité, il n'est légitime de soumettre à concurrence les contrats de sous-traitance que si le titulaire a la qualité d'autorité ou d'entité adjudicatrice titulaire d'un contrat au sens de la directive 2004/17[10] ou bien si l'entité a le caractère d'une entité « *in house* ».

Toutefois, l'autorité publique est également en droit, dans certaines circonstances, de considérer comme souhaitable d'encadrer ou de contrôler le recours à la sous-traitance (selon le cas en le limitant ou au contraire en l'imposant ou en exigeant de la transparence) mais cela relève de contrats et non d'une législation communautaire. Par ailleurs, la transparence, voire la mise en concurrence obligatoire de certains marchés avals, sera légitimement imposée pour la réalisation de certains travaux ou services sous-traités (par exemple les marchés de travaux conclus avec un tiers par un concessionnaire de service public, s'il y a subventions d'investissement ou attribution de fonds de cohésion ou de fonds structurels communautaires). Mais il s'agit de cas particuliers qui relèvent des règles d'attribution de l'aide publique en cause.

[9] Article 63 de la directive 2004/18

[10] Directive du parlement européen et du conseil 2004/17 du 31 mars 2004 portant coordination des procédures de passation des marchés dans les secteurs de l'eau, de l'énergie, des transports et des services postaux.

Question 18 : Quelle expérience avez-vous de la mise en place d'opérations de PPP de type institutionnalisé ? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisés ? Si non, pourquoi ?

Question 19 : Estimez-vous qu'une initiative doit être prise au niveau communautaire en vue de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui, sur quels points particuliers et sous quelle forme ? Si non, pourquoi ?

La Commission européenne n'a pas éludé la question des PPP institutionnels et le MEDEF s'en réjouit. Le développement de formules d'associations entre entités publiques et entreprises à capitaux privés au sein d'entités communes est un fait incontestable, dont la portée économique ne peut être négligée, même si aborder cette question est politiquement sensible et techniquement délicat.

C'est politiquement sensible parce qu'en abordant cette question, on peut facilement se voir opposer le principe de subsidiarité et celui de la liberté d'organisation administrative des autorités publiques qui sont en droit de choisir le mode de gestion des services d'intérêt économique général. C'est techniquement délicat parce que, en abordant cette question, on peut se voir opposer les règles sur le libre droit de créer des sociétés et sur la libre circulation des capitaux.

Pour pouvoir légitimement aller plus loin, il faut se donner la peine et discerner derrière les apparences la réalité de l'opération qui résulte des objectifs assignés à cette association, par l'un et l'autre partenaire : faire assurer l'activité économique par cette entité nouvelle.

Il convient alors d'abord de s'interroger sur l'existence réelle de cette entité nouvelle et de se demander si elle est ou non un tiers par rapport à l'autorité publique qui l'a créée, au regard des critères de la décision *Teckal*. Si la réponse est positive, on doit considérer que l'opération a pour effet l'attribution d'une activité économique à un tiers à l'initiative et sur la décision d'une entité publique et que les règles du Traité s'appliquent.

Ces règles doivent s'appliquer avec pragmatisme car il serait regrettable que trop de rigidité entrave ce phénomène encore trop timide d'ouvertures d'entités publiques « *in house* » à des partenaires extérieurs qui peut constituer une première étape prometteuse avant l'appel au marché.

En pratique le plus souvent, le PPP institutionnel n'est pas constitué autour d'une société poursuivant un but lucratif et susceptible d'intéresser des actionnaires motivés par des considérations financières et les dividendes. Généralement, la société est largement conçue comme un service administratif (sans toutefois être sous contrôle au sens de la décision *Teckal*). De surcroît, l'intérêt du partenaire privé est d'être en situation pour apporter de l'extérieur à la société sa compétence et son savoir-faire (par exemple par la mise à disposition de dirigeants ou techniciens, par un contrat de management ou d'assistance technique, plus opérationnellement par des contrats de sous-traitance). Dans le cas d'une telle participation à vocation exclusivement financière, le principal actif de la société est constitué par un droit d'exécuter l'activité économique et l'opération financière est nécessairement - même si implicitement sous-tendue par un contrat lui confiant l'activité - un contrat qui aurait dû être conclu dans le respect des règles du Traité.

Dans le deuxième cas, il y a également nécessairement ce contrat d'attribution de l'activité. Mais il y a des contrats (contrat de management, pacte d'actionnaires…) par lesquels la société commune confie des missions à son actionnaire privé. En théorie, c'est bien le premier contrat qui devrait être conclu dans le respect des règles du Traité mais, à défaut, il faut au minimum que les contrats avals conclus avec le partenaire privé, le soient. Et ce, bien que, du point de vue de l'ouverture des marchés, l'attribution de missions limitées et ponctuelles par ces contrats avals ne puisse être mise sur le même plan que l'attribution de la mission amont du droit d'exercer l'activité économique globale.

Dans tous les cas, ce n'est pas l'entrée au capital des partenaires privés qui est visée mais ce que représente économiquement cette participation au capital en termes d'activité économique.

Pour ce qui concerne les applications concrètes, le MEDEF n'a pas qualité pour s'exprimer sur le développement des PPP institutionnels dans les différents Etats membres. Il observe qu'en France, la décision du Conseil constitutionnel de 1993 a mis un sérieux frein aux velléités des sociétés d'économie mixte d'obtenir des contrats de marchés ou de délégation de service public sans mise en concurrence. Dès lors, il n'est pas anormal que l'entrée au capital de partenaires privés ne donne lieu à aucune procédure. D'ailleurs, le plus souvent, la loi de 1983 sur les SEM locales n'autorise aux partenaires à capitaux privés qu'une participation minoritaire (article 1521-1 et suivants du Code général des collectivités territoriales).

Question 20 : Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entrave à la mise ne place des PPP au sein de l'Union européenne ?

Ainsi qu'évoqué ci-dessus, le MEDEF est très préoccupé par la multiplication d'entités plus ou moins proches des autorités publiques responsables des SIEG qui se qualifient d'« *in house* » et sont prétexte à la sortie de pans entiers d'activités économiques d'intérêt général du champ de la concurrence et donc interdits aux entreprises de l'Etat ou d'autres Etats membres.

Le MEDEF insiste sur l'impérieuse nécessité de limiter le concept d'entités « *in house* » ; la mise en concurrence des marchés avals conclus par les organismes « *in house* » alors considérés comme autorités adjudicatrices, est une solution dégradée en termes d'ouverture du marché de ce type d'activités par rapport à la mise en concurrence de l'activité économique globale attribuée à l'entité de premier rang qui prétend à la qualité de « *in house* ».

Il est, par ailleurs, essentiel de veiller par la voie du contrôle communautaire des aides d'Etat à ce que l'octroi de subventions soit non discriminatoire entre les opérateurs, quels que soient leurs statuts[11].

Enfin, la politique communautaire en matière d'attribution de fonds communautaires n'est pas en faveur du développement des PPP et, par son manque de clarté, freine le développement de ces projets, notamment dans les nouveaux Etats membres[12].

[11] Le Conseil d'Etat français a validé en décembre 2003 la décision du Conseil général des Landes d'accorder aux communes exploitant leurs services en régie, un taux de subvention supérieur à celui accordé aux communes ayant délégué leurs services d'eau potable et d'assainissement.

[12] Voir notre réponse sous la question 22.

Question 21 : Connaissez vous d'autres formes de PPP développées dans les pays en dehors de l'Union ? Connaissez-vous des exemples de « bonnes pratiques » développées dans ce cadre, dont l'Union pourrait s'inspirer ? Si oui, lesquels ?

Le MEDEF n'a pas qualité pour répondre à cette question.

Question 22 : De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique social et durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange de meilleures pratiques ? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?

Le MEDEF souhaiterait une réflexion et la mise au point de règles de bonne pratique pour que les fonds de cohésion communautaires puissent bénéficier à des activités attribuées à des entreprises dans le cadre de PPP.

L'intervention d'entreprises engagées sur la globalité de la mission (réalisation de l'investissement et exploitation) est la meilleure garantie qui soit que les parties retenues en termes d'investissements sont adaptées aux besoins en termes d'exploitation. Les PPP autorisent également l'apport de financements privés qui permettraient de démultiplier les effets des fonds de cohésion en leur conférant un effet de levier.

Or, bien au contraire, on constate aujourd'hui, avec les fonds communautaires, une très grande réticence en pratique, alors qu'il n'y a pas de raison de principe, à attribuer des aides lorsqu'une entreprise se voit confier l'exploitation, au prétexte que l'aide à l'investissement bénéficierait à cette entreprise et/ou qu'il pourrait y avoir conflit d'intérêt.

Il devrait être remédié rapidement à cette anomalie. Une réflexion approfondie doit être engagée pour décrire les mécanismes de procédure qui éviteront les dérives craintes. Ces préoccupations ne doivent toutefois pas conduire à *de facto* interdire les PPP dans les secteurs prioritaires de développement de l'Union, susceptibles de bénéficier des fonds européens. Ce serait catastrophique et paradoxal. Les aides sont attribuées aux SIEG et, en définitive, à l'habitant et pas à l'entreprise titulaire du contrat.

Les dérives craintes sont parfaitement évitables et des mécanismes pour éviter ces dérives existent. Il suffit d'y réfléchir pour les définir et les mettre en œuvre et d'édicter des règles adaptées dans les textes qui régissent les conditions d'attribution des fonds. Il y a urgence et le MEDEF est prêt à participer à tous travaux sur ce point.

D'une façon générale, le MEDEF souhaiterait que soit mieux intégré l'ensemble des composantes du PPP au travers de ses aspects économiques, financiers, de transfert de risques…

ANNEXE 1

TYPOLOGIE DES CONTRATS SELON LEUR NATURE JURIDIQUE OU LEUR NATURE OPERATIONNNELLE

Contrat Caractères	Affermage	Concession (*au sens français*)[13]	Opération et maintenance[14]	BOT (*build, operate, transfer*)	DBFO (*design, build, finance, operate*)	BOO (*build, own, operate*)
Ouvrages **:**						
- conception		X		X	X	X

PARTENARIAT PUBLIC-PRIVE

POSITION DE SYNTEC INFORMATIQUE

I. Cadre juridique

1.1. Présentation du Partenariat Public-Privé (PPP) :

Le Partenariat Public-Privé (PPP) est un concept de gestion publique permettant à des personnes publiques de confier à une entreprise privée la conception, la réalisation, le financement, la maintenance et la gestion de certains équipements publics ou investissements immatériels pour une période déterminée en fonction de la durée d'amortissement des investissements ou des modalités de financement retenues.
La mise en place du Partenariat Public-Privé en France passe par la création d'un nouveau type de contrat, distinct des Marchés Publics et des Délégations de Services Publics, régi par l'Ordonnance n° 2004-559 du 17 juin 2004 publiée au Journal Officiel du 19 juin 2004. La procédure de passation des PPP telle que définie par l'Ordonnance du 17 juin **inclut la procédure de dialogue compétitif** instituée par le nouveau Code des Marchés Publics. Le projet de guide de bonnes pratiques du Minefi, en cours d'élaboration, détaille les modalités de ce dialogue compétitif. Cette Ordonnance contribue à la mise en place d'instruments juridiques indispensables à une remise à niveau du droit français dans le domaine des Partenariats Public-Privé.

Tous les projets ne sont pas éligibles à la forme PPP. Le recours au PPP, et non à un autre type de contrat administratif, **doit être préalablement justifié** par des avantages objectifs et financiers établis par un **audit approprié** qui prendra la forme d'une « évaluation comparative » suivant les termes du décret 2004-1119 du 19 octobre 2004 portant création de la **Mission d'appui à la réalisation des contrats de partenariat** (on pourra trouver en Annexe II le décret paru au Journal Officiel portant création de l'organisme expert et permettant la mise en œuvre de projets au titre de l'ordonnance sur les contrats de partenariat).
Entrent clairement dans cette catégorie les projets réputés **complexes** ou revêtant un caractère **d'urgence**, par exemple, un projet nécessitant un investissement lourd ou un important degré de technicité auquel l'Administration ne peut répondre seule.
Le projet peut bénéficier de ventes de services supplémentaires destinés à d'autres clients que la puissance publique.

Le PPP doit permettre une optimisation des performances respectives du privé et du public, il doit contribuer à la modernisation de l'Administration, par le recours aux capitaux privés et par la mise en place d'une répartition des risques auprès de l'entité la mieux à même de les porter.

La Commission européenne, consciente de la nécessité de réglementer ce domaine au niveau communautaire, a publié un « Livre vert sur les Partenariats Public-Privé et le droit communautaire des Marchés Publics et des Concessions ». Ce Livre vert, accompagné d'une procédure de consultation publique à laquelle Syntec informatique a pris part, constitue la première étape vers la possible élaboration d'une proposition de directive appelée à réglementer à la fois le secteur des Concessions de Service Public et celui des PPP[1].

1.2. Distinction entre PPP et Outsourcing :

S'il se greffe la plupart du temps sur un montage d'externalisation, le PPP se distingue de l'Outsourcing en ce qu'il permet des projets beaucoup plus globaux (conception, réalisation, exploitation), plus longs (10-15 ans voire 15-20 ans) et souvent plus importants en terme de volume financier.
En outre, le PPP peut répondre à des besoins de financement exceptionnels de l'Etat aujourd'hui aux prises avec des contraintes budgétaires fortes. Le risque financier supporté par l'entreprise privée est beaucoup plus lourd dans le cadre du PPP puisque cette dernière investit et amortit son investissement par une phase d'exploitation longue.
Le PPP implique une véritable mutualisation des compétences, il suit tout autant une logique de partenariat qu'une logique d'infogérance pure. Grâce au PPP, des projets d'envergure peuvent ainsi voir le jour. Ils seraient inconcevables en dehors d'une telle procédure.

La proximité entre PPP et infogérance assure de fait une prime aux infogérants qui ont l'habitude des concepts de type variabilité, intéressement, réversibilité… Mais le développement de projets en PPP aura valeur pédagogique pour toutes les SSII.

1.3. Distinction entre PPP, Concessions de Service Public et Marchés Publics:

Le PPP se distingue de la Concession de Service Public par sa durée généralement plus courte, par le mode de rémunération (le concessionnaire est rémunéré par l'usager alors que les coûts d'une opération en PPP sont portés par l'entreprise privée) et par la répartition des responsabilités entre l'Administration et l'entreprise privée.

En matière de PPP, l'Administration conserve le pouvoir de contrôle qu'elle perd largement dans le cadre d'une Concession de Service Public. Dans un PPP, la rémunération du service est payée ou gérée par la puissance publique. Si l'entreprise perçoit des fonds, c'est pour compte de la puissance publique. Elle lui reverse ces sommes collectées, comme dans le cas du métro londonien, suivant les clauses contractuelles convenues. Le prestataire privé est rémunéré quant à lui au travers d'une facturation faite à la puissance publique. Dans ce type de montage, les banques, qui financent les projets de PPP, en amont trouvent ainsi une garantie physique inégalable.

Le PPP se distingue également des Marchés Publics puisque, dès le démarrage du projet, on s'intéresse à une qualité de service rendu, aux niveaux de performance à atteindre avec intéressement sur le résultat, et non aux seules techniques qui permettent d'y aboutir.

[1] Avis du Parlement européen en première lecture sur la proposition de la Commission COM (2000) 275 du 10 mai 2002.

En somme, le PPP constitue un outil intermédiaire qui se situe entre les deux grandes catégories de contrats administratifs que sont les Marchés Publics et les Concessions de Services Publics.

II. Avantages du système PPP

2.1. Avantages pour l'Administration :

Le PPP permettrait de favoriser la mise en place de nouveaux systèmes informatiques destinés à la modernisation des services de l'Etat et des collectivités. Il constitue un véritable levier permettant **l'accélération du processus de modernisation** de l'Etat par la mise en place de projets, qui n'auraient pas pu voir le jour sans un recours à des capitaux privés, et par l'augmentation de la qualité de service.

En outre, le PPP n'a pas pour conséquence l'abandon de ses prérogatives par l'Administration puisque ce type de contrat suit une logique de partenariat et non une logique de transfert au privé d'un Service Public. Le PPP permet à l'Administration **de bénéficier de l'expertise du secteur privé** dans un domaine particulier (**avec des clauses de réversibilité en fin de contrat**). Les formules de partenariat permettront d'assurer une meilleure exécution des missions régaliennes de l'Etat, notamment en établissant un lien entre la qualité de service et la rémunération effective du partenaire.
Le PPP suscite une meilleure coordination entre les différents concédants dans la mise au point et le suivi des contrats. Dans la concession, on assiste à une perte de contrôle de l'Etat alors que dans le PPP l'Etat conserve le contrôle du dispositif de bout en bout et le suivi du projet. Le PPP va permettre à l'Etat de mieux piloter sa transformation en se concentrant sur le processus de transformation : l'Etat trouve ici une excellente occasion d'apprendre à « faire faire » et non plus à « faire ». L'Etat pourra dès lors se recentrer sur sa fonction de pilotage, en développant sa capacité de maîtrise d'ouvrage, et laisser aux partenaires privés l'opportunité de la réalisation et la maîtrise d'œuvre.
Le PPP permet de replacer l'Etat dans son domaine réservé, les services régaliens, et de relancer une dynamique industrielle au travers de grands projets publics.

Le PPP est un moyen **de remédier à une vision trop annuelle des crédits** ; il s'inscrit parfaitement dans le plan de modernisation de l'Etat et, tout particulièrement, dans le mouvement de la LOLF en contribuant à la fongibilité entre les dépenses d'investissement et les dépenses de fonctionnement puisqu'il évite à l'Administration de devoir supporter le poids du financement en début de projet : le partenaire privé se substitue à la puissance publique en supportant l'investissement. Il permet de rentabiliser les investissements et de rechercher les gains de productivité pour les services offerts par le biais du partenaire privé. Il est plus souple que les Marchés Publics en ce sens qu'il n'est pas encadré par autant de lignes directrices et qu'il permet une adaptation, en cours de contrat, aux évolutions technologiques. En effet, dans le cadre du PPP, les partenaires cherchent à tout moment l'optimum entre la qualité ou le niveau de service offert et les prix. Ils s'attacheront davantage à la qualité de service à atteindre plutôt qu'aux techniques qui devront être employées pour l'exécution du contrat.

In fine, si le PPP semble coûter plus cher à l'Etat du fait des coûts inhérents à la nature du montage juridique et financier, il contribue néanmoins à la rationalisation des processus et permet le transfert de tâches (MOE d'ensemble) vers le secteur privé, structurellement mieux à même que l'Etat de tirer parti de phénomènes industriels. De ce point de vue, des synergies avec d'autres activités peuvent être envisagées, dégageant des possibilités de mutualisation, ce que les acteurs publics peuvent difficilement obtenir du fait de la règle de la verticalisation budgétaire en silo. De la même manière, le partenaire privé est spontanément à la recherche d'innovations qu'il peut déployer sans délais. Un acteur public aurait, par contre, à convaincre nombre d'interlocuteurs internes à envisager un processus d'achat par le Code des Marchés Publics, voire à casser des contrats existants, d'où des délais considérables, par définition improductifs et démotivants.

En outre, doit être mis au crédit du PPP, une qualité de service accrue liée à la possibilité d'intéresser fortement aux résultats le personnel à statut privé, y compris du personnel éventuellement détaché. Enfin, selon Eurostat, les actifs liés à un PPP étant classés comme actifs non publics, ils ne sont pas enregistrés dans le bilan des Administrations publiques si les deux conditions suivantes sont réunies :

- le partenaire privé supporte le risque de construction,

- le partenaire privé supporte l'un des deux risques suivants, à savoir celui de la disponibilité ou celui lié à la demande.

On notera que dans le cas des opérations informatiques, ces deux conditions sont le plus souvent réunies. Quand le système n'est utilisé que par le client public, le prestataire supporte automatiquement le risque lié à la demande.

On soulignera enfin que la notion de « programme » avec ses différentes phases d'évaluation, de négociation, d'exécution et de bilan est tout à fait cohérente avec les mécanismes de PPP. L'Administration pourrait ainsi assimiler un projet de PPP à un programme LOLF, voire à une action LOLF. Lisibilité, visibilité, traçabilité des niveaux de service seraient ainsi assurées dans une perspective pluri-annuelle.

2.2. Avantages pour les partenaires privés :

Les PPP apporteront aux SSII un volant d'affaires non négligeable susceptible, par les nouvelles méthodes utilisées, de les aider à se positionner sur des marchés internationaux et à **exporter le savoir-faire français.**
Ils permettront un partage de la culture de service du secteur privé avec le partenaire public. Les industriels, plus impliqués dans les objectifs de qualité de service, pourront mieux comprendre les préoccupations du service public. Ce faisant, ils sont conduits à intégrer une capacité de maîtrise d'œuvre globale et deviennent capables de soutenir un dialogue sur un pied de plus en plus grande égalité avec les responsables concernés du secteur public.

2.3. Avantages communs aux deux parties :

Le PPP doit permettre de favoriser l'initiative privée et de développer la collaboration, en amont, entre les différentes parties au projet tant sur les caractéristiques techniques, financières que juridiques des projets. L'évaluation en amont du projet permettra de partager une vision sur les coûts réels d'une opération et de connaître toutes les métriques qui restent inconnues à ce jour.

Le PPP doit également permettre d'assurer un partage des risques, transparent et équilibré, entre les différents partenaires.

Il s'agit d'une véritable mutualisation des compétences de l'Administration et du secteur privé.

III. Freins et risques du système PPP

3.1. Freins et risques pour l'Administration :

L'Administration devra opérer un changement dans les modalités de conduite du projet, laisser plus d'autonomie au partenaire privé que dans les Marchés Publics, évoluer **d'une position de maîtrise d'œuvre vers une véritable maîtrise d'ouvrage**, autant d'éléments qui constituent des freins culturels à la mise en place de ce dispositif. Le rôle de l'Administration est ainsi clarifié. La visibilité de ses actions vis-à-vis des partenaires privés est quant à elle améliorée.

Il existe également un risque de renchérissement du coût financier des projets sur le long terme pour l'Administration.

Le sénateur Jean Arthuis, dans un rapport du Sénat intitulé « Pour un Etat en ligne avec tous les citoyens » (Annexe III), précise que « si les PPP peuvent permettre un lissage des dépenses…la facilité de trésorerie peut libérer des moyens pour l'engagement d'autres opérations et donc constituer une incitation à la dépense ». Selon lui, il convient de ne pas faire du PPP un substitut à la **« nécessaire rigueur budgétaire ».**

La mise en place de textes particulièrement adaptés aux technologies de l'information permettrait une meilleure prise en compte de leurs spécificités.

Enfin, il pourrait exister **un risque social** aux yeux des syndicats de la Fonction Publique qui pourraient y voir une remise en cause potentielle de la notion de « Service Public ».

3.2. Freins et risques pour les partenaires privés :

Les partenaires privés devront prendre garde à ne pas s'engager dans des projets inadaptés ou dont la convention de service a été mal évaluée. L'évaluation prévue en amont du projet devrait permettre de pallier ce risque. Le parti-pris de réalisme et l'engagement de transparence des coûts permettent en effet de partager la même vision des coûts réels d'une opération et d'appréhender les facteurs inconnus à ce jour.

3.3. Freins et risques communs aux deux parties:

On assimile trop souvent le PPP à un dispositif destiné uniquement au secteur du BTP alors qu'il existe d'autres secteurs, en premier lieu celui des TICs, éligibles au mécanisme du PPP. Mais le PPP appliqué aux services informatiques souffre d'un manque d'intérêt spontané de la part des Administrations.

La mise en place du PPP est complexe car les intervenants sont nombreux. Le nombre des intervenants dans un PPP est en lui-même un facteur de complexité. Il faut s'attendre à ce que les délais de contractualisation soient plus longs que ceux constatés actuellement dans la passation des Marchés Publics.

Il conviendra de trouver un équilibre dans la définition de la durée du contrat de partenariat puisque les intérêts de l'Administration et du secteur privé peuvent diverger en la matière. La personne publique pourra souhaiter un engagement de courte durée alors que le partenaire privé souhaitera un délai plus long pour pouvoir amortir sur la durée des projets globaux.

Il existe également un risque de mauvaise appréciation et allocation des risques. En effet, il conviendra d'allouer à chacun les risques qu'il sait le mieux gérer.

IV. Recommandations

4.1. Recommandations à destination des Ministères et du Gouvernement :

4.1.1. Favoriser l'émergence de PPP :

Il existe de nombreux projets dans le domaine des TICs susceptibles de faire l'objet de PPP et pour lesquels, s'ils ne sont pas traités suivant ce mécanisme, le risque est fort qu'ils ne soient jamais réalisés, ou au mieux réalisés avec un retard important.

Il convient à notre sens d'établir une graduation dans le choix des projets. En effet, **le mécanisme PPP devrait pouvoir être expérimenté dans le cadre de projets de taille raisonnable** pour permettre aux entreprises du secteur privé (y compris les entreprises de taille moyenne) et à l'Administration de se familiariser avec ce nouveau type de contrat.

Les projets en question pourraient être choisis parmi les suivants, cette liste n'étant pas exhaustive :

● Modernisation du système d'information des CHU qui se caractérise par un réel besoin de financement (Caen, Lens, Amiens, Le Havre),

- Gestion de la production de soins,
- Dématérialisation des achats…

● Externalisation de la fonction encaissement des amendes (centre de recouvrement de Nantes),

● Chaîne de production informatique pour les tribunaux,

● Externalisation de la fonction approvisionnement des Armées (Centrales d'achats, logistique, etc.),

● Le Dossier Médical Personnalisé (DMP), pourrait également être traité sous la forme d'un PPP. Il est strictement conforme aux critères d'éligibilité : complexité –tout projet informatique l'est par nature- urgence, défaut de financement public…

D'ailleurs, des retours d'expérience existent déjà. Quelques exemples de PPP réalisés à l'étranger figurent en Annexe IV du présent document (on pourra trouver notamment un cas de PPP relatif à la logistique d'équipement des personnels de l'armée allemande démontrant une forte économie pour le budget de l'Etat, à service au moins égal et un partage des gains de productivité). Les premiers PPP menés sur le territoire français pourront tirer parti avec avantage de ces expériences européennes.

4.1.2. Démontrer la viabilité du modèle :

S'il existe de nombreux projets de PPP potentiels, plusieurs difficultés peuvent constituer des obstacles.

En premier lieu, un montage de PPP fait intervenir trois catégories d'acteurs. En effet, la contractualisation permise par le cadre réglementaire devra comprendre un volet financier, ce qui conduit naturellement le client public à voir intervenir aux côtés d'un prestataire technique, un Etablissement financier qualifié, Banque, Caisse des Dépôts, etc.

En second lieu, on notera qu'à l'heure actuelle, les sociétés de services informatiques ne connaissent en général pas les coûts de fonctionnement des services de l'Etat (exemple: le recouvrement des amendes). Ces sociétés sont donc à ce stade dans l'impossibilité d'établir avec certitude l'intérêt économique d'une opération de PPP. Ce qui réduit la possibilité pour ces sociétés de se positionner en force de proposition pour l'Etat.
Pour surmonter cet obstacle, seule une transparence des coûts des différents services de l'Etat permettra aux sociétés de services de faire montre d'initiative grâce à des métriques qui leurs sont nécessaires pour établir l'intérêt des projets de PPP, ce qui va dans le sens des recommandations du groupe de travail du Medef consacré à la « transparence des coûts ».

En troisième lieu, on ne sent pas de la part des acteurs informatiques des Administrations une motivation spontanée pour monter des projets en PPP comme dans d'autres secteurs d'activité. De ce fait, pour amorcer le mouvement, la personne publique doit adopter une démarche pro-active pour susciter les premiers **projets pilotes** permettant d'expérimenter des PPP « à la française » dans le secteur des TICs. Elle pourrait faire reconnaître des dossiers de différente envergure, comme pilotes en la matière, et notamment quelques projets phares comme le DMP.

4.1.3. La procédure d'évaluation préalable :

Nous proposons d'aller plus avant dans la transposition en droit français du **dispositif du PSC** (Public Sector Comparator) anglais. Le décret du 19 octobre 2004, dont Syntec informatique prend acte de la publication avec satisfaction, crée une **Mission d'évaluation** au sein du ministère des Finances. Cette Mission d'évaluation prend la forme d'un organisme central appelé à proposer des projets de PPP en évaluant les différences pour l'acheteur public entre des achats classiques (Code de Marchés Publics) et le recours au PPP. Dans cette logique, Syntec informatique estime souhaitable que tous les efforts soient faits pour parvenir sinon à une totale transparence des coûts, du moins garantir le caractère objectif de l'estimation des performances comparées (coût/qualité), notamment en faisant intervenir divers organismes de l'Etat (la Cour des Comptes ou tout autre organisme de contrôle), et ceci sous le contrôle du Parlement (par exemple la Commission Economique et celle des Finances).

4.2. Recommandations à destination des entreprises privées :

Il convient de prendre conscience du fait que le PPP vient en complément des autres types de contrats administratifs, et notamment des Marchés Publics, mais qu'il ne constitue pas une réponse à tous les types de marchés ou de contrats.

Les partenaires privés devront réfléchir et mettre au point les solutions techniques et financières permettant de répondre aux besoins définis au moment de l'appel d'offres. Ils devront être partie prenante en tant que profession dans la définition des SLAs adaptés à leur métier en introduisant des **métriques propres au secteur** des TICs, par exemple avec l'aide de l'AFNOR.

Les entreprises devront s'engager, dans les PPP à venir, à atteindre, sur la base d'indicateurs et de critères précis, le niveau de qualité du service qui aura été défini.
Elles devront garantir une structure de PPP « à la française » en proposant, notamment, de trouver des critères adéquats pour déterminer la durée optimale du contrat.

4.3. Recommandations communes :

De façon à faire droit aux TICs aux côtés notamment des entreprises du secteur du BTP et de services traditionnels aux collectivités comme la restauration, Syntec informatique propose que soit créé, au sein de la mission d'évaluation, un **Observatoire des performances du PPP**, impliquant l'Administration et les partenaires privés, par secteur d'application. Cet observatoire où l'on retrouverait des représentants des organismes professionnels et du Ministère des Finances, aurait vocation à remonter les informations concernant les projets de PPP en cours (retours d'expérience), ce qui permettrait de faire évoluer le Code de bonnes pratiques auquel travaille Bercy pour précisément « encadrer » les premiers PPP. Cet observatoire serait l'interlocuteur privilégié de la Mission créée par le décret du 19 octobre 2004.

Un séminaire pratique dédié à la mise en place du PPP « à la française » regroupant les industriels et l'Administration pourrait être mis en place. Il s'attacherait à promouvoir la culture du partenariat et à faire évoluer les mentalités en donnant la possibilité aux acteurs du PPP d'intégrer les subtilités de ce nouveau mode de contractualisation, de s'expliquer sur les enjeux respectifs et de mieux se comprendre.

Pendant les premières années de mise en pratique du PPP, les partenaires devront s'assurer que les organismes professionnels concernés soient bien consultés en cas de contestations juridiques et puissent donner un **avis consultatif** lors des éventuels litiges portés devant les tribunaux administratifs.

En outre, les parties concernées par le PPP devront se donner comme objectifs la rédaction de **guides contractuels**. Ces guides seront rédigés en partenariat avec les Administrations concernées. Ils visent à (i) alléger les coûts pour les partenaires publics et privés, (ii) optimiser la répartition des risques et (iii) assurer la plus grande transparence. Ces contrats pourraient, par exemple faire appel à la notion de Joint Venture de façon à permettre à l'Etat de contrôler et de suivre l'exécution ultérieure du PPP.

Enfin, les partenaires devront mettre en place une allocation des risques équilibrée et adaptée au projet.

V. Participation de Syntec informatique :

5.1. Mise en place d'un séminaire pratique dédié aux PPP :

Syntec informatique se propose de participer activement à la mise en place d'un séminaire pratique (cf infra. 4.3.) dédié aux PPP à la Française qui permettrait aux différents acteurs d'échanger sur ce nouveau mode de contractualisation et sur ses spécificités par grand secteur d'activité.

5.2. Déroulement des appels d'offres :

Sur le plan du déroulement des procédures d'appel d'offres en vue d'un PPP, des discussions pourraient être menées sur les modalités du « dialogue compétitif » dans le cadre d'une consultation en PPP pour la réalisation d'un projet informatique. Il serait souhaitable que la formalisation des étapes à l'intérieur de ce dialogue soit précisée **avec la collaboration de Syntec informatique.**

5.3. La reconnaissance de l'initiative privée pour générer des projets :

Il conviendra également d'assurer une plus grande implication des partenaires privés en les incitant à se positionner en force de proposition en vue de la réalisation de projets sous forme de PPP. C'est surtout vrai pour l'identification de ces projets. Du fait de l'existence d'un a priori peu favorable au PPP au sein des ministères, **Syntec informatique devrait avoir un accès direct et permanent auprès de la Mission d'évaluation** pour proposer des projets. Au-delà, la notion d'« initiative privée », telle que décrite dans le Livre vert de la Commission Européenne, devra sans doute être précisée. Il faudra en particulier définir dans quelle mesure et à quelles conditions la personne publique est habilitée à rémunérer « une initiative privée ».

5.4. Des formes de contractualisation basées sur le principe du « gagnant-gagnant » :

Le terme « partenariat » sous-entend la fixation d'objectifs communs clairement définis et acceptés, la transparence des coûts et des stratégies adoptées par les partenaires, la définition d'une structure de gouvernance (permettant une réévaluation du projet initial en fonction de l'évolution des objectifs, des besoins…) et de pilotage des processus à haut niveau, et enfin la détermination du partage des risques (boni et pénalités) et des gains de productivité.

Dans le cadre du processus de transformation qu'elle a initié en son sein en faveur de la performance et de la « culture du résultat », la puissance publique devra prévoir des formes de rémunération innovantes qui incitent à l'amélioration constante des services fournis. A cette fin, il est souhaitable qu'elle favorise, d'une part, l'établissement d'un mode de rémunération du partenaire privé qui reflète sa prise de risque et, d'autre part, les conditions de répartition entre la personne publique et le partenaire privé des gains liés aux résultats obtenus (par exemple, les gains de productivité). **Syntec informatique se propose de suggérer à la Mission (ou à l'Observatoire des performances, cf infra) des règles en la matière dérivées de l'expérience de ses membres et applicables au secteur des TICs**, à charge pour la Mission de les répercuter auprès des acheteurs publics concernés. En effet, Syntec informatique pourrait par exemple transmettre à la mission ou à l'observatoire des performances une information régulière concernant les projets traités à l'étranger sous forme de PPP. Ainsi, cet organisme pourrait bénéficier de l'expérience étrangère, mieux cerner les avantages de l'adoption de telle ou telle forme de contractualisation et identifier les pièges à éviter.

Par ailleurs, Syntec informatique pourrait entretenir des contacts avec d'autres organismes équivalents en Europe pour faire préciser par l'Union Européenne certains aspects juridiques du PPP appliqués à l'informatique et liés aux aspects de Joint Venture à mettre en place lors de la contractualisation en fin de consultation. Il est rappelé à cet égard qu'une interprétation étroite au plan juridique des textes européens sur les PPP pourrait interdire tout changement pendant la période de consultation dans l'identité d'un groupement en compétition. Ceci est peut-être admissible pour une affaire de BTP (secteur dont la maturité est extrêmement avancée, et où les acteurs sont stables), mais tout à fait inadéquat pour le secteur des TICs qui est soumis à des changements permanents tant du point de vue des technologies que du point de vue des acteurs.

Syntec informatique se propose de rédiger un guide contractuel en matière de PPP relatifs aux prestations informatiques. Ce guide mettrait en exergue les spécificités du contrat de partenariat par rapport aux autres types de contrats administratifs et permettrait de dégager des lignes directrices concernant la rédaction des contrats de partenariat.

5.5. Contribuer à la disparition des freins principaux :

Il est rappelé que les montages de PPP quand ils sont appliqués au secteur des TICs viennent se greffer sur des mécanismes d'infogérance. En outre, du fait de l'existence d'équipes informatiques nombreuses au sein des Administrations, il se peut que de tels montages rendent nécessaires le recours à des transferts de personnel (exemple de la logistique de l'équipement des personnels de l'armée Allemande déjà évoqué plus haut). Il est donc nécessaire que soit traité convenablement le problème du détachement dans le cadre d'opérations en PPP pour le secteur des TICs. **Syntec informatique suggère que s'ouvre une discussion à ce sujet avec le Ministre en charge de la fonction publique**. A cet égard, la Commission Sociale de Syntec informatique va rédiger un premier document de travail afin d'amorcer ladite discussion. Naturellement, un tel document sera orienté dans le sens des spécificités propres au personnel informaticien du secteur public.

VI. Conclusion :

Le PPP est la solution permettant à l'Etat de réussir ses projets en contrôlant :

- ses objectifs,
- ses budgets,
- les évolutions technologiques et les aléas.

Les Marchés Publics sont trop structurés et ne permettent pas un contrôle des évolutions technologiques en cours de contrat puisque la technique permettant d'obtenir le résultat recherché au moment de l'appel d'offres est figée. Le PPP s'intéresse à la rentabilité du projet, à la qualité du service rendu et à l'efficacité de ce dernier. Dans ce cadre, le choix de la technique permettant d'atteindre les objectifs fixés est laissé à la discrétion du partenaire privé.

La Concession de Service Public permet au partenaire privé d'adapter la technique employée aux évolutions technologiques mais présente un inconvénient considérable pour l'Etat qui perd le contrôle sur les objectifs et sur leur modification.

Le PPP regroupe les avantages du Marché Public et de la Concession de Service Public et minimise les inconvénients que ces derniers présentent pour l'Etat. Ce n'est pas un transfert d'activités relevant du service public vers un partenaire privé.

Soucieuse de la qualité et de la continuité des services informatiques, notre Chambre patronale a rédigé, en collaboration avec le CIGREF (Club Informatique des Grandes Entreprises Françaises), une Charte édictant des principes de gouvernance des projets informatiques ayant vocation à s'appliquer dans les relations maître d'ouvrage/ Maître d'œuvre (Annexe III). **Cette Charte pourrait trouver à s'appliquer dans le cadre des contrats de partenariat.**

Les projets informatiques que l'Etat peut lancer ont cette vertu particulière d'accélérer le changement. En ce sens, les TICS participent de manière éminente au processus même de transformation de l'Etat appelé de ses vœux par le Premier Ministre.

LIVRE VERT SUR LES PARTENARIATS PUBLIC-PRIVÉ ET LE DROIT COMMUNAUTAIRE DES MARCHÉS PUBLICS ET DES CONCESSIONS

RÉPONSE DE L'UNSPIC

L'Union Nationale des Services Publics (UNSPIC) regroupe, via leurs organisations professionnelles ou directement, les entreprises mettant au service de l'Etat, des collectivités territoriales et de leurs groupements ainsi qu'au service des entreprises leur expérience – parfois plus que centenaire – et leur savoir-faire dans les domaines de la propreté, des réseaux d'énergie, de l'eau et de l'assainissement, des transports, des autoroutes et du stationnement, des équipements sportifs, de la restauration collective ainsi que de l'ingénierie financière.

Elle s'attache à valoriser les atouts et les performances de la gestion déléguée et à en promouvoir le développement à l'international.

Les S.I.E.G. gérés par les entreprises gestionnaires de services publics adhérentes ont le plus souvent un cadre géographique régional, départemental voire local et sont mis en œuvre en application de contrats à durée déterminée conclus avec des autorités publiques locales après mise en concurrence.

Les entreprises représentées par l'UNSPIC représentent plus de 250.000 Salariés et environ 30 milliards d'euros de chiffre d'affaires en France et 400.000 Salariés pour un chiffre d'affaires de près de 70 Milliards d'euros au niveau de l'Europe des 25 ; certaines d'entre elles ont d'ores et déjà une longue expérience de la gestion déléguée dans ce cadre géographique élargi.

L'UNSPIC sait gré à la Commission d'avoir élaboré un livre vert sur les P.P.P. et ouvert une vaste consultation sur ce thème qui vient fort opportunément compléter les livre vert et livre blanc sur les SIEG.

L'UNSPIC partage totalement la préoccupation de la Commission de doter les autorités publiques et les entreprises des outils les plus adaptés pour contribuer dans les conditions les plus efficaces à mettre à la disposition des populations de l'Union Européenne et notamment celle de ses dix nouveaux membres, des équipements et services d'intérêt économique général de qualité.

Forte de l'expérience de ses membres dans le domaine des concessions, notamment des concessions de service, l'UNSPIC attache la plus grande importance à toute démarche européenne visant à améliorer la qualité de service, réduire les coûts et assurer des financements pérennes .

L'UNSPIC :

- **Tient à marquer son attachement aux principes de transparence, d'égalité de traitement, de proportionnalité et de reconnaissance mutuelle découlant du traité et à leur application à toute activité économique, qu'elle revête ou non un caractère de service public**

- **Partage l'objectif de la Commission que les diverses formes de partenariats puissent s'exercer et se développer « dans un contexte de concurrence efficace et de clarté juridique » (paragraphes 16 et 40)**

- **Relève que le débat ouvert par la Commission « se situe en aval du choix économique et organisationnel » d'externaliser ou non la gestion des services publics (paragraphe 17)**

- **Salue le rappel que, dès lors que la gestion d'un service public est confiée à un tiers, l'autorité publique compétente « est tenue de respecter le droit des marchés publics et des concessions même si ce service est considéré comme relevant de l'intérêt général » (paragraphe 7)**

- **Apprécie que la Commission ait fait entrer dans le champ de sa réflexion les attributions de missions réalisées par la voie d'un acte unilatéral et la notion de P.P.P. de type institutionnalisé. Il s'agit bien là en effet de situations s'analysant comme des contrats de fait entre une entité publique et un organisme tiers : l'UNSPIC souhaiterait que celles-ci fassent l'objet d'une analyse plus complète.**

- **Enfin et surtout, tient à souligner le caractère spécifique des concessions, tant au plan économique qu'au plan juridique ainsi que l'avait relevé la Commission dans sa communication interprétative sur les concessions de 2000 ; cette spécificité doit orienter l'énoncé des règles applicables tant pour l'attribution des concessions que pour l'adaptation des contrats pendant leur durée.**

Les réponses de l'UNSPIC aux questions précises du livre vert sont présentées ci après. Consciente que la présente contribution n'épuise pas un sujet aussi important et complexe, l'UNSPIC souhaite poursuivre le dialogue avec la Commission par tout moyen que celle ci jugera utile, notamment lors d'une audition devant les responsables de la Commission Européenne.

1. *Quels types de montages de PPP purement contractuel connaissez-vous? Ces montages font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays?*

1. En retenant l'acception la plus large de la notion de « PPP purement contractuel » les contrats dont nos adhérents ont la pratique sont, selon les cas, du type « concession » ou du type « marché public » au sens du droit communautaire.

   Dans l'un et l'autre cas, ils présentent une très grande variété, traduisant l'accord des parties sur un objet ou une mission, la nature et la répartition des risques, le partage des responsabilités, le type de relation entretenu avec le client final, l'origine et les modalités du financement du service.

   C'est dans le domaine des concessions que les contrats s'avèrent les plus variés à raison de leurs caractères communs spécifiques :

   - le service opéré correspond au transfert d'une mission de service public que l'autorité publique délégante entend toutefois strictement encadrer
   - les bénéficiaires finaux sont constitués par la population au profit de laquelle l'autorité choisit de faire rendre un service par un autre qu'elle même
   - la relation contractuelle est par nécessité de longue durée et adaptable
   - le prix du service est généralement acquitté directement et de manière significative par les habitants bénéficiaires

   Sur ce dernier point, deux remarques doivent être faites :

   - le cas où les contrats comportent le versement d'une subvention par la collectivité publique n'est pas le plus fréquent
   - lorsqu'une rémunération complémentaire existe, comme cela a été bien analysé par l'Arrêt ALTMARK, cette rémunération ne saurait être considérée comme une aide d'Etat ; son montant varie d'ailleurs selon divers paramètres tels que la qualité du service rendu, son volume ou l'atteinte d'objectifs contractuellement définis.

2. En France, les montages relevant des PPP contractuels font l'objet d'encadrements distincts selon qu'il s'agit de marchés publics – au sens du droit interne français- ou de délégations de service public.

   Le Code des Marchés Publics, qui a été réformé en 2003, traite notamment des marchés conclus par l'Etat ainsi que de ceux conclus par les collectivités locales et leurs groupements, qu'il s'agisse de marchés de travaux ou de services.

Après une longue période d'élaboration progressive d'un droit jurisprudentiel, la loi du 29 janvier 1993 – dite loi SAPIN- a donné un cadre légal spécifique aux missions de gestion déléguée des services économiques d'intérêt général ; ce texte a été complété par la loi du 8 février 1995 faisant obligation au délégataire de produire chaque année à l'autorité délégante un rapport financier et relatif à la qualité de service, assorti d'une annexe sur les conditions d'exécution du service public. Enfin la loi du 11 décembre 2000 a donné une définition de la « délégation de service public » que ne comportait pas le texte de 1993.

Dans de tels cas, il ne s'agit pas de privatisation de services publics mais d'un partage de responsabilités dans lequel la personne morale de droit public fixe les objectifs, les tarifs et assure le contrôle de la bonne gestion du délégataire. La complexité de la mission confiée au délégataire implique toujours que ces contrats aient une durée longue, indépendamment de l'importance des seuls investissements mis à sa charge.

A ces deux types de montage contractuels, il convient d'ajouter celui des « contrats de partenariat » institué par la récente ordonnance du 17 juin 2004 dont les textes d'application ne sont pas parus à ce jour : ce nouveau cadre a pour origine la volonté des pouvoirs publics de proposer un cadre approprié à des montages complexes qui ne pouvaient être réalisés dans aucun des deux dispositifs législatifs et réglementaires rappelés ci-dessus.

2. De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue? Si non, pourquoi?

Le champ d'application de la nouvelle procédure de dialogue compétitif instaurée par les Directives 2004/17 et 2004/18 est circonscrit aux actes attributifs qualifiés de marchés publics et vise les seuls cas où l'organisme adjudicateur n'est pas en mesure de définir, soit les moyens techniques, soit le montage juridique et / ou financier d'un projet.

Dans ces situations, les candidats sont appelés à participer à co-définir le projet conjointement avec l'organisme adjudicateur ce qui constitue une différence fondamentale avec les concessions, pour lesquelles l'organisme adjudicateur définit seul le projet et reçoit des candidats une offre unique.

Il nous paraît de la plus haute importance que dans la phase initiale de dialogue, chaque candidat puisse être assuré de la manière la plus absolue que les échanges avec l'organisme d'adjudicateur conservent un caractère strictement bilatéral et confidentiel afin que soient respectés les droits fondamentaux des acteurs économiques.

Dans la mesure où cette procédure de dialogue compétitif – qui peut s'avérer d'un grand intérêt pour des projets innovants et présentant une grande complexité - devrait être interprétée comme incluse dans le « régime de passation » évoqué au paragraphe 36, il nous paraîtrait totalement inopportun qu'elle soit étendue à tous les PPP contractuels qualifiés de marchés publics car elle risquerait de générer, tant pour les organismes adjudicateurs que pour les entreprises candidates des surcoûts et des allongements de procédure pour des projets clairement pré-définis pour lesquels les diverses parties ont une pratique éprouvée et dont l'efficacité technique et économique est avérée.

A fortiori la procédure du dialogue compétitif ne nous semble pas adaptée aux PPP contractuels qualifiés de concessions : voir notre réponse à la question 7.

3. En ce qui concerne ces contrats, existe-t-il selon vous des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics? Si oui, lesquels et pour quelles raisons?

La situation particulière, mais non exceptionnelle, dans laquelle une entité adjudicatrice déclare une procédure infructueuse, notamment lorsqu'elle a reçu plusieurs offres, nous paraîtrait mériter une attention particulière de la part de la Commission.

Sans nullement remettre en cause le droit des entités adjudicatrices de prendre une telle décision, cette situation, préjudiciable aux entreprises candidates devrait conduire à une application particulièrement rigoureuse des obligations de transparence, d'impartialité des procédures et le cas échéant de pertinence des éléments de preuve, selon les principes issus de l'arrêt TELAUSTRIA.

Par ailleurs, pour les P.P.P. qualifiés de marchés publics de longue durée, car comportant investissement et exploitation ou maintenance, il est impératif de prévoir la possibilité d'adaptation du contrat au cours de sa durée.

4. Avez-vous déjà organisé, participé, ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union? Quelle expérience en avez-vous?

En sa qualité d'association professionnelle, l'UNSPIC n'a pas d'expérience directe en la matière mais ses adhérents ont éprouvé certaines difficultés à bénéficier des Fonds ISPA et sont préoccupés, s'agissant notamment des dix nouveaux Etats membres de l'Union, que l'attribution des fonds communautaires ne donne pas lieu à distorsion selon les modes de gestion, directs ou concessifs.

5. ***Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non-nationaux aux procédures de passation de concessions? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre?***

Nous n'avons pas connaissance de cas dans lesquels des sociétés ou groupements n'auraient pu participer à des procédures de passation de concessions à raison de leur nationalité et, à cet égard, le cadre juridique communautaire actuel nous paraît suffisant.

On peut observer d'ailleurs que, le plus souvent, les entreprises européennes étrangères à un pays membre créent dans ce pays une filiale locale nationale, moins pour échapper à un obstacle juridique que pour disposer d'équipes susceptibles par leur culture locale, d'exercer au mieux les missions de service public..

6. ***Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation de concessions, est souhaitable?***

Les concessions de travaux relèvent d'un cadre juridique communautaire très récemment actualisé par la Directive 2004/18 qui donne satisfaction et n'appelle pas, de notre point de vue, de nouvelle initiative législative communautaire.

Si en matière de concessions de services il n'existe pas de cadre juridique similaire, la Cour de Justice européenne a énoncé dans l'arrêt TELAUSTRIA du 7 décembre 2000, des règles claires tirées du principe de non-discrimination du Traité, en matière de transparence : tout soumissionnaire potentiel doit bénéficier de la double garantie d'un « degré de publicité adéquat » et d'un « contrôle de l'impartialité des procédures d'adjudication »

Nous ne verrions pas d'inconvénient à ce que soit mise en chantier une directive sur les concessions à la condition que les P.P.P. institutionnels y soient inclus ; cependant, conscients que la récente adhésion de dix nouveaux Etats rend cette perspective peu probable dans un avenir proche, le plus réaliste nous parait être de devoir s'en tenir aux principes fixés par le Traité en matière de concurrence et de neutralité à l'égard du statut des opérateurs.

Enfin nous tenons à préciser qu'une action législative qui n'inclurait pas les P.P.P. institutionnels ferait courir le grave risque de jeter le discrédit ou la suspicion sur les P.P.P. de type contractuel qui seuls apparaîtraient comme nécessitant d'être encadrés, alors qu'au contraire on peut attendre des effets positifs de l'ouverture à la concurrence des P.P.P. institutionnels.

7. ***De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les PPP de type contractuel, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identiques?***

L'UNSPIC tient à rappeler qu'elle avait porté le plus grand intérêt à l'initiative prise par la Commission en 2000 en adoptant une communication interprétative sur les concessions en droit communautaire.

Plus particulièrement, elle avait relevé les éléments distinctifs des concessions de services énoncés par la Commission que constituent :

- ➢ Le critère de l'exploitation
- ➢ La prise de risques liés au service par l'opérateur et le mode de rémunération par l'usager qui y est associé.
- ➢ Le transfert de la responsabilité d'exploitation lequel ne peut être assimilé à une simple fourniture de services
- ➢ Leur domaine normal de mise en œuvre : « des activités qui, de par leur nature, leur objet et les règles auxquelles elle sont soumises, sont susceptibles de relever de la responsabilité de l'Etat »

Ces critères nous étaient apparus tout à fait adéquats pour distinguer les notions communautaires de « marchés publics » et de « concessions ».

Dans le prolongement de cette première approche et au vu de l'extension du « phénomène partenariat – public - privé » selon la juste expression du Livre Vert, il nous paraîtrait opportun que la notion de concession puisse être complétée et précisée sous quelques aspects.

Ainsi, en matière de concessions de services, la prise de risque n'est pas circonscrite aux seuls risques d'exploitation ou financiers : elle porte également sur les diverses aspects que comporte une prestation continue rendue à une population dont les attentes sont diverses et les exigences de qualité croissantes et évolutives. Les choix opérés par l'autorité publique au cours de l'exécution du contrat concourent également à conférer à la prise de risque un caractère global et multiforme exercé dans le cadre contractuel défini.

En effet le concessionnaire se voit confier une mission – et non un ensemble de tâches à exécuter – assortie d'un transfert d'aléas lié à celui de la responsabilité d'un service rendu au public dans le cadre d'un partenariat.

Ce dernier se traduit notamment par une collaboration active et durable dans des domaines tels que : la définition précise du service offert, la suite donnée aux propositions du concessionnaire pour faire évoluer le service et en optimiser la gestion**,** les choix à opérer en matière d'évolution technique ou technologique, les réponses à apporter aux exigences croissantes des bénéficiaires du service en termes de qualité ou de protection environnementale, aux suites à donner aux suggestions des représentants des consommateurs….

L'UNSPIC souligne également que, de manière générale, le concessionnaire se voit explicitement confier une mission globale de conseil pour le développement et la meilleure organisation du service.

Ces observations correspondent au constat fait tant par la Commission au paragraphe 2 du Livre Vert selon lequel « le partenaire public se concentre essentiellement sur la définition des objectifs à atteindre en termes d'intérêt public, de qualité de services offerts, de politique des prix, et assure le contrôle du respect de ces objectifs » que par nos entreprises adhérentes.

La différence de nature, en droit communautaire, entre les concessions et les marchés publics nous paraît appeler un corollaire indispensable : l'existence de deux procédures distinctes de mise en concurrence.

On ne voit pas comment de tels critères peuvent s'intégrer dans une procédure de type « dialogue compétitif ». Au contraire, la procédure française de la loi SAPIN qui prévoit, encadrée par la concurrence, la possibilité pour l'autorité publique de disposer, en phase finale, d'une libre négociation, répond bien à ces nécessités.

S'agissant des marchés, des textes existent. S'agissant des concessions, aucune des procédures existantes – y compris celle du dialogue compétitif - ne nous parait adaptée ; en effet :

- le dialogue compétitif a été conçu pour la fourniture d'ouvrages ou d'équipements complexes pour lesquels l'entité publique ne dispose pas à elle seule de la compétence technique pour choisir les meilleures technologies.
- Dans le cas des concessions de service, la préoccupation première n'est généralement pas d'ordre technologique ou technique mais réside dans la capacité de l'opérateur à exercer de manière satisfaisante et durable la mission de service public ; cette capacité se traduit par exemple, par la qualité du climat social, la pertinence de la politique de formation ou l'aptitude à répondre de manière réactive et appropriée aux attentes des clients.

La procédure propre aux concessions devrait contribuer à faire assurer le respect des principes de transparence et d'égalité de traitement découlant du Traité tout en laissant aux entités adjudicatrices et aux entreprises candidates l'espace de négociation indispensable à la clarification des offres, en particulier aux plans techniques et de partage des responsabilités pour la mise en œuvre de la mission confiée dans la perspective du partenariat à conclure.

8. ***Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de PPP d'initiative privé est-il assuré? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu?***

La France ne dispose pas d'une législation propre aux PPP d'initiative privée, contrairement à ce qui existe en Italie et en Espagne.

Toutefois, en élargissent le champ d'observation, il sera intéressant, le moment venu et avec le recul et l'expérience suffisants, de faire un bilan des premières applications du « contrat de partenariat » institué très récemment en France.

9. ***Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée dans l'Union européenne tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement?***

L'UNSPIC émet la suggestion que la Commission invite les autorités publiques à rendre publics – préalablement à la décision politique de faire ou de faire faire et en respectant ce choix – les projets de création de services ou d'équipements collectifs, afin de contribuer à la transparence, éclairer la décision politique, contribuer au meilleur choix sous les aspects technique, qualitatif et de coût.

10. ***Quelle expérience avez-vous de la phase postérieure à la sélection du partenaire privé dans les opérations de PPP contractuels?***

1. Ainsi que le Livre Vert le constate avec raison le laps de temps qui s'écoule entre la sélection du partenaire et la signature est parfois long. Ceci peut être particulièrement vrai en matière de concessions pour lesquelles ce temps est celui de la négociation, phase du processus qui aurait mérité d'être approfondie.

En effet, comme indiqué plus haut, la négociation est capitale puisque, sur la base d'une offre remise, elle permet aux deux futurs partenaires d'obtenir les précisions nécessaires à la bonne compréhension des engagements réciproques et de préparer dans les meilleures conditions la vie du contrat à conclure qui sera inévitablement soumis aux aléas extérieurs ; c'est lors de cette étape que sont notamment précisées les procédures d'examen en commun du suivi de l'exécution du contrat ainsi que de l'analyse des évènements pouvant en affecter les modalités et de la recherche des solutions correspondantes.

2. L'expérience et la pratique des relations contractuelles entre entités publiques et entreprises montrent que les contrats conclus à l'issue d'une procédure concurrentielle doivent pouvoir être ultérieurement modifiés par accord des parties.

   En effet, quel que soit le soin apporté à la rédaction d'un contrat, l'entité publique et l'entreprise co-contractante ne peuvent d'autant moins tout prévoir que le contrat est long et que, par ailleurs, des évènements ou situations échappant totalement à leur emprise peuvent survenir. A cet égard on peut citer des modifications sensibles de la répartition géographique de la population desservie au sein d'une zone donnée, l'intervention de nouvelles normes environnementales, l'extension de l'aire de responsabilité de l'entité publique – en France le cas est fréquent dans le cadre du développement de l'intercommunauté - la nécessité de renforcer les mesures de sécurité pour la protection de personnes et des biens, la prise en compte de l'évolution des modes de vie des consommateurs, etc.

   Ce point nous parait devoir être souligné car il est au cœur de toute activité de service et constitue une préoccupation commune très forte dans la gestion des SIEG locaux tant de la part des représentants des autorités publiques que des entreprises qui en sont en charge.

   Aussi, l'UNSPIC souhaite-t-elle très vivement voir évoluer l'approche très rigide que traduit notamment le paragraphe 49 vers une vision plus empirique de la réalité qui n'a d'autre but que d'adapter et d'optimiser les SIEG en permettant d'apporter aux contrats qui les régissent la nécessaire souplesse qui en constitue le corollaire.

11. Avez--vous connaissance de cas dans lesquels les conditions d'exécution –y compris les clauses d'adaptation dans le temps- ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d'établissement? Si oui, pouvez-vous décrire le type de problèmes rencontrés?

Nous n'avons pas connaissance de conditions d'exécution des contrats qui ait été de nature à fausser la concurrence.

12. ***Avez-vous connaissance de pratiques ou de mécanismes d'évaluation d'offres ayant des incidences discriminatoires?***

Nous n'avons pas connaissance de pratiques ou de mécanismes d'évaluation d'offres déposées par des entreprises privées ayant eu des incidences discriminatoires.

En revanche nous avons souvent relevé des pratiques discriminatoires constitutives de distorsions de concurrence en cas de gestion directe de type « in house » ou de PPP institutionnels ainsi que nous le mentionnons en réponse à la question 20.

13. ***Partagez-vous le constat selon lequel certains montages du type « step-in » peuvent poser problème en termes de transparence et d'égalité de traitement? Connaissez-vous d'autres « clauses types » dont la mise en œuvre est susceptible de poser des problèmes similaires?***

Le Livre Vert relève (paragraphe 48) que la mise en œuvre des clauses de « step-in » peut aboutir au changement du partenaire privé de l'adjudicateur sans mise en concurrence et soulève la question de la compatibilité de cette éventualité avec le droit communautaire des marchés publics et des concessions.

Bien qu'aucune indication ne soit fournie quant à la fréquence ou l'étendue du type de situation évoquée, elle appelle de notre part les observations suivantes :

- L'UNSPIC, si elle comprend les interrogations que peut susciter de la part de l'organisme adjudicateur une modification dans l'actionnariat de l'entreprise avec laquelle elle a contracté, tient à rappeler son attachement au principe de liberté de circulation de capitaux, issu du Traité, lequel a un caractère général et ne comporte pas d'exception fondée sur la nature des entités avec lesquelles les entreprises contractent

- Le seul critère à retenir par l'autorité délégante nous parait devoir être celui de l'exécution par l'entreprise des engagements contractuels qu'elle a pris et sur lesquels une éventuelle modification de l'actionnariat ne doit pas avoir d'incidence ; dans le cas particulier où la tenue de ces engagements est pour partie liée à l'appartenance de l'entreprise délégataire – constituée à l'effet d'avoir pour client unique telle autorité délégante - à un groupe qui lui apporte le concours de ses moyens humains et techniques, il nous parait légitime que la poursuite de ce concours ne soit pas affectée par la modification d'actionnariat.

14. ***Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP? Si oui, sur quel(s) aspect(s) devrait porter cette clarification?***

D'une manière générale, la matière est trop diversifiée pour pouvoir relever d'un cadre global et unique.

Plus précisément, sur la durée, l'UNSPIC estime inappropriée voire dangereuse la limitation au seul amortissement du critère de durée des contrats : elle semble inspirée par les seuls contrats de construction et de gestion d'infrastructure et méconnaître les spécificités des services lesquels ne comprennent pas nécessairement d'investissements financiers mais peuvent comporter des engagements de productivité ; à cet égard l'UNSPIC rappelle que dans les professions de services qu'elle représente, les engagements contractuels en matière de qualité de service sont très largement répandus, de plus en plus nombreux et complexes et peuvent inclure des objectifs progressant au fur et à mesure du déroulement des contrats.

Il convient également de souligner que la connaissance approfondie d'un service par un nouvel exploitant nécessite du temps : il en est ainsi – à titre d'exemple – de la connaissance détaillée des pratiques de déplacements des habitants d'une agglomération pour un exploitant de réseau de transport ou de celle de l'état d'un réseau de canalisations de distribution d'eau potable.

L'UNSPIC partage totalement l'observation faite (paragraphe 47) que les relations de PPP « doivent pouvoir évoluer afin de s'adapter » tant aux changements de l'environnement macro-économique ou technologique qu'aux besoins de l'intérêt général : ceci justifie que puissent s'opérer des ajustements de la relation contractuelle et milite en faveur d'une approche multicritères de l'appréciation de la durée adéquate des contrats.

En matière de durée, l'UNSPIC propose qu'en cas de gestion directe, « in house » ou partenariat institutionnel, les entités adjudicatrices assortissent leur décision d'une fixation de durée, (déterminée, maximale ou en cohérence avec la pratique en cas de gestion déléguée) : en effet la situation actuelle entrave de manière injustifiée la libre prestation de services et la liberté d'établissement car elle ferme définitivement un marché alors que l'environnement technique, économique, social …. évolue et qu'il serait inéquitable que la notion de « durée excessive » s'applique à la seule gestion déléguée.

Une autre suggestion pourrait être soumise à la Commission en matière de gestion institutionnelle : l'évaluation, à intervalles réguliers, de la qualité et du coût du service.

15. ***Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance? Lesquels?***

16. ***Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mise en place en ce qui concerne le phénomène de sous-traitance?***

17. ***De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance?***

La décision d'une collectivité publique de confier à un tiers la mise en œuvre d'une activité économique de service n'est pas réductible au transfert « d'un ensemble de tâches » mais correspond au transfert d'une mission : ceci nous parait constituer une différence de nature d'avec les concessions des travaux et marchés publics évoqués au paragraphe 52.

Aussi**,** l'UNSPIC considère qu'en matière de concession de services – lesquelles présentent la spécificité d'emporter un transfert, contrôlé, de la responsabilité de mise en œuvre d'un service public – les entreprises qui en sont contractuellement chargées dans une enveloppe de coût préalablement définie doivent se voir reconnaître la plus large autonomie de gestion dont celle du choix de leurs sous-traitants et des exigences correspondantes en matière de prestations confiées à ces derniers ***:*** le transfert de la mission emporte en effet une responsabilité globale, vis à vis de l'autorité concédante et il lui appartient donc d'assumer seule le choix des entreprises auxquelles elle estime devoir recourir au regard notamment des exigences de qualités sur lesquelles elle a pris des engagements.

En outre, l'évolution de l'environnement économique de l'entreprise peut la conduire pendant la durée du contrat à opérer, pour des raisons de meilleure gestion ou de nature technique, des choix entre gestion interne et gestion sous-traitée des divers éléments qui concourent à la mise en œuvre du service rendu.

Cette large autonomie doit également être respectée dans le cas, évoqué au paragraphe 64, où une entité mixte a la qualité d'organisme adjudicateur, dans le strict respect du droit communautaire actuellement applicable.

18. ***Quelle expérience avez-vous de la mise en place d'opérations de PPP de type institutionnalisé? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisés? Si non, pourquoi?***

19. ***Estimez-vous qu'une initiative doit être prise au niveau communautaire en vu de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui, sur quels points particuliers et sous quelle forme ? Si non, pourquoi ?***

En France, les seules entités distinctes au sein desquelles coopèrent le secteur public local et le secteur privé sont les sociétés d'économie mixtes (S.E.M.)

Sociétés de droit privé à capitaux majoritairement publics, elles ne se distinguent pas, au regard du « phénomène P.P.P. », des sociétés à capitaux privés et se trouvent dans la même situation que ces dernières par rapport aux entités adjudicatrices pour l'obtention d'une tâche ou d'une mission de service public.

La question soulevée par la Commission relative à la prise de contrôle d'une entité publique par un opérateur privé correspond à la situation de passage d'un PPP institutionnel dans lequel une entité publique exerce une influence dominante à un PPP de type contractuel.

A cet égard, il convient d'observer et de souligner que ce passage ne peut s'opérer que parce que le PPP institutionnel se caractérise - et il se distingue en cela de la situation d'in house- par l'existence d'un lien, de nature contractuelle mais non formalisé, entre l'entité publique qui est à l'origine de sa constitution et lui-même.

L'UNSPIC est d'avis que, dès lors que l'opération en capital conduit à céder à un tiers une participation lui permettant d'exercer une influence certaine, elle soit assortie de la formalisation d'un contrat et de la détermination de la durée certaine de celui-ci.

L'UNSPIC souscrit à la critique formulée par la Commission de la pratique tendant à confondre la phase de constitution de l'entité et celle d'attribution des taches : la première doit en effet être distincte de la seconde et antérieure à celle-ci ; elle souhaite que la Commission adopte des dispositions appropriées pour y remédier et s'assurer que cette pratique ne perdure pas en invitant les Etats membres à y veiller.

20. *Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des PPP au sein de l'Union européenne?*

L'expérience qu'ont nos adhérents sur leurs marchés respectifs montre que les situations critiquables rencontrées tiennent moins à des obstacles ou entraves objectifs qu'à des différences entre acteurs économiques à raison de leur statut juridique ou de leur régime de propriété, selon que celle-ci est privée ou publique, ce qui, au regard du droit communautaire devrait être neutre.

Les discriminations peuvent porter – outre le coût d'accès au marché des capitaux du fait de garanties d'Etat- sur la fiscalité et les charges assises sur les salaires : ainsi en France, les régies d'eau, d'assainissement, de gestion des déchets et de transport ne sont pas assujetties à la taxe professionnelle non plus qu'à la taxe foncière ni à l'impôt sur les sociétés ; de même le droit d'entrée acquitté par les usagers d'une piscine supporte ou non la TVA selon que sa gestion est déléguée ou assurée en régie.

Très récemment, par un arrêt rendu le 12 décembre 2003 la décision prise par un Conseil Général d'accorder aux communes gérant en régie leur service des eaux un taux de subvention supérieur à celui octroyé aux communes ayant délégué ce service à des entreprises a été validée par le Conseil d'Etat.

21. *Connaissez-vous d'autres formes de PPP développées dans les pays en dehors de l'Union? Connaissez-vous des exemples de « bonnes pratiques » développées dans le ce cadre, dont l'Union pourrait s'inspirer? Si oui, lesquelles?*

Nous n'avons pas connaissance de formes de PPP développées en dehors de l'Union et dont elle pourrait s'inspirer.

22. *De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique social et durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange des meilleures pratiques? Est-ce que vous considérez que la Commission devrait animer un tel réseau?*

Les adhérents de l'UNSPIC partagent totalement le constat fait par la commission des importants besoins d'investissements, notamment mais non exclusivement, dans les pays qui viennent de rejoindre l'Union Européenne.

Aussi, l'UNSPIC appelle t-elle de ses vœux une réflexion, la plus proche possible, qui serait consacrée à la recherche de la meilleure mise en œuvre possible des fonds communautaires au profit des services d'intérêt économique général opérés par des entreprises dans le cadre de concessions et d'autres formes de PPP au service des populations.

Une initiative d'envergure, assortie d'une communication appropriée sur les aires géographiques des SIEG ainsi pris en considération, permettrait d'illustrer auprès des habitants bénéficiaires la coopération fructueuse entre l'Union Européenne, les collectivités publiques responsables et les entreprises en vue du meilleur développement économique et social durable.

POSITION DE L'UTP

LIVRE VERT

SUR LES PARTENARIATS PUBLIC PRIVE
ET LE DROIT COMMUNAUTAIRE
DES MARCHES PUBLICS ET DES CONCESSIONS

21 JUILLET 2004

L'Union des Transports Publics représente l'ensemble des entreprises françaises de transport public urbain. Ces entreprises sont des opérateurs privés, des opérateurs publics ou des sociétés à capitaux publics.

L'UTP salue le lancement d'un important débat au niveau européen par la Commission Européenne sur le phénomène des Partenariats Public Privé (PPP), après sa communication d'avril 2000, consacrée aux concessions. Ce débat ne manque pas de soulever des questions fondamentales, comme celles de la mise en concurrence des concessions de service, la vie des contrats … questions qui sont susceptibles d'affecter profondément le droit des contrats. Elle regrette cependant que les questions relatives au phénomène des PPP et les solutions qui y sont proposées, soient présentées uniquement sous l'angle du droit existant des marchés publics et des concessions, et que la Commission n'ait pas adopté une vision plus prospective des solutions à apporter.

Toutefois, l'UTP tient à attirer l'attention de la Commission sur le traitement de certaines questions actuellement vecteurs d'insécurité juridique et qui jusqu'ici concernent plus particulièrement le secteur des transports publics de proximité.
En effet, comme l'UTP le développe ci-après[1], le secteur est actuellement fragilisé par les incertitudes qui entourent la question des modalités d'attribution des compensations pour la réalisation des obligations de service public et de celle des droits exclusifs.

Ces questions n'étant pour l'instant pas encore réglées, notre secteur connaît une situation d'insécurité juridique, qui handicape fortement la prise d'initiatives des autorités compétentes et des entrepreneurs publics et privés.
L'UTP est donc favorable à tout débat ou à toute démarche juridique qui pourrait permettre de préciser et de clarifier ces questions, et in fine d'adopter un instrument législatif sectoriel, en amont même des discussions relatives à l'adoption éventuelle d'un encadrement des PPP.

La position de l'Union des Transports Publics est centrée sur le type de PPP qui concerne le plus couramment ses membres pour l'exploitation de services de transport public, à savoir ce qu'on appelle en France la "délégation de service public". Les propositions présentées ne représentent donc pas nécessairement un cadre unique, identique pour toutes les formes de PPP .

Question 1 :
Quels types de montages de PPP purement contractuel connaissez-vous ? Ces montages font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays ?

Les contrats de délégation de service public qui sont passés en France pour l'exploitation des transports publics urbains peuvent entrer dans la notion de PPP, telle que présentée dans le livre vert ; ce qui n'est pas le cas des marchés publics.
En effet, dans les délégations de service public, le délégataire est en charge de l'exploitation du service et peut se voir confier le financement de certains biens, tels que le matériel roulant, les dépôts de véhicules, les systèmes d'aides aux voyageurs … Sa rémunération est assurée en tout ou partie par les voyageurs, le délégataire supportant un risque sur la

[1] Confere réponse à la question 6

fréquentation. Ces contrats se caractérisent en outre par une durée assez longue, en raison même des obligations prises en charge par le délégataire.

Les PPP contractuels sont très présents dans notre secteur. En effet, en dehors de la région parisienne, 94 % des réseaux de transport public sont gérés en France sous la forme de délégation de service public.

Seuls quelques réseaux épars ont donné lieu à la passation de marchés publics, le reste des réseaux étant géré en autoproduction sous la forme de « régies » (structures publiques dotées généralement de la personnalité juridique et de l'autonomie financière) sans mise en concurrence.
Outre le respect des principes fondamentaux du traité, la passation des délégations de service public est encadrée par la loi Sapin (loi du 29 janvier 1993). Cette loi prévoit une mise en concurrence des contrats après publicité et la possibilité pour l'autorité compétente de négocier avec les différents candidats après remise de leur offre.

Question 2 :
De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? Si non, pourquoi ?

En France, le cadre des marchés publics n'a pas vocation à donner naissance à un PPP.
De plus, comme il vient d'être précisé, très peu de contrats sont passés sous la forme de marchés publics pour l'exploitation de réseaux de transports publics …
La France vient toutefois de se doter d'un nouveau type de contrat, différent des marchés publics et des délégations de service public, par ordonnance du 17 juin 2004, qui pourrait s'apparenter dans certains cas au marché public-PPP présenté dans le livre vert.

Question 6 :
Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation de concessions, est souhaitable?

Avant d'encadrer la procédure de passation des concessions, l'UTP [2] considère qu'il est essentiel que la Commission s'intéresse en amont au traitement de certaines questions actuellement vecteurs d'insécurité juridique et qui jusqu'ici concernent plus particulièrement le secteur des transports publics de proximité.

Les transports publics de proximité sont actuellement organisés de trois manières à travers l'Union européenne : les marchés fermés ; les situations de concurrence régulée (passation de concessions) ; et la déréglementation.

[2] A l'exception de son adhérent AGIR, qui est une association qui regroupe des opérateurs indépendants et des autorités compétentes.

L'organisation du secteur est principalement marquée[3], en France comme dans le reste de l'Union européenne, par deux facteurs :
- La nécessité de recourir à des financements publics pour assurer l'équilibre financier de l'opérateur. En particulier, les autorités publiques compétentes attribuent des compensations pour la réalisation des exigences de service public qu'elles déterminent ;
- L'attribution de droits exclusifs pour exploiter les services de transport sur une ligne ou sur l'ensemble d'un réseau.

La question de savoir selon quelles modalités les compensations financières et les droits exclusifs d'exploitation peuvent être attribués par l'autorité publique compétente est source d'insécurité juridique dans notre secteur depuis maintenant plusieurs années, alors même que ce secteur a été reconnu comme étant un marché européen, notamment par la Cour de Justice des Communautés européennes[4].

Aussi afin de remédier à cette situation d'insécurité juridique et éviter que ces questions ne soient résolues au cas par cas par les tribunaux, la Commission a proposé en juillet 2000 un règlement sur les « Exigences de Service Public » dans les transports publics, modifié en février 2002. La Commission propose dans ce règlement de soumettre à la concurrence toute passation de contrat de service public. Sont définis comme « contrat de service public », tout contrat (en dehors des marchés publics), et tout acte unilatéral attribuant des droits exclusifs ou des compensations pour exigences de service public pour l'exploitation d'un service de transport public[5].
Ce texte n'a pour l'instant abouti à aucun accord politique sur ces questions, pourtant génératrices d'un contentieux croissant[6]. Par ailleurs, le projet de communication de la Commission[7] portant sur l'attribution de compensations pour exigences de service public n'a pas fait avancer le traitement de cette question dans notre secteur, ce dernier étant exclu de son champ d'application, en raison notamment de ses spécificités.
Notre secteur connaît donc aujourd'hui une situation d'insécurité juridique, qui handicape fortement la prise d'initiatives des autorités compétentes et des entrepreneurs publics et privés, alors que le développement des transports publics est indispensable à la réussite des politiques de développement durable.
L'UTP considère donc comme prioritaire tout débat ou toute démarche juridique qui pourrait permettre de préciser et de clarifier ces questions, et in fine d'adopter un instrument législatif sectoriel, en amont même des discussions relatives à l'adoption éventuelle d'un encadrement des PPP.
Elle estime de plus, qu'en raison même de la multiplicité des formes de PPP, il paraît plus approprié dans un premier temps que la Commission européenne adopte une communication interprétative sur ce sujet.
Elle tient néanmoins à saisir l'opportunité de la consultation lancée par la Commission européenne pour donner son opinion sur une éventuelle initiative législative communautaire en la matière.

L'UTP estime tout d'abord que toute éventuelle initiative législative communautaire visant à encadrer la procédure de passation des concessions devrait nécessairement tenir compte de la nature spécifique des concessions par rapport notamment aux

[3] En dehors des expériences de déréglementation intervenues au Royaume Uni (à l'exception du cas de Londres),

[4] Confere décision Altmark Trans GmbH (C-280/00, arrêt du 24 juillet 2003).
[5] Le principe adopté était celui de la concurrence régulée, modéré néanmoins par des exceptions.
[6] Confere décision précitée Altmark Trans GmbH de la Cour de Justice des Communautés Européennes et la décision du tribunal de 1ère instance, (T157/01- 16 mars 2004), société Combus.

[7] Paquet proposé en février 2004 et comprenant une décision pour les aides de faible montant, un encadrement et une proposition de modification de la directive « transparence »

marchés publics. Cette procédure devrait concerner non seulement les concessions, mais également tous les contrats qui pourraient y être assimilés.

Avant d'aller plus avant dans la discussion sur la nécessité d'adopter une procédure particulière pour la passation des concessions, **il paraît essentiel à l'UTP de réagir sur le risque de requalification des contrats** qui est présenté au paragraphe 34 du présent livre vert. Les autorités publiques françaises disposent depuis de nombreuses années du choix entre la passation d'un marché public ou d'une concession. La passation de l'un ou de l'autre de ces contrats ne fait pas peser les mêmes obligations, ni les mêmes contraintes sur l'autorité compétente et sur l'opérateur. Le choix de l'un de ces deux contrats résulte donc d'une véritable réflexion menée en amont par l'autorité compétente sur la politique qu'elle entend mettre en œuvre sur son territoire. Ainsi, même lorsque l'autorité compétente ne sait pas exactement quelles solutions précises elle envisage de mettre en place pour la réalisation d'une infrastructure ou l'exploitation d'un service, elle sait dans la plupart des cas, le budget qu'elle compte y affecter, les risques qu'elle est prête à assumer ou ceux qu'elle souhaite transférer, l'organisation qu'elle veut mettre en place pour suivre et contrôler l'exécution du contrat. Avant même de lancer la procédure, l'autorité compétente prépare au moins un cahier des charges et le cas échéant un cadre de négociation conformes à la politique qu'elle a définie en amont et au type de contrat choisi. **Aussi, les craintes exprimées au paragraphe 34 sur un risque de requalification du contrat ne se concrétisent-elles que très rarement en réalité.**
Il ne paraîtrait dès lors pas utile de soumettre les concessions aux mêmes règles que les marchés publics-PPP.

Mais surtout, **les nombreuses spécificités des concessions par rapport aux marchés publics nécessiteraient, si une initiative législative en la matière était confirmée, l'adoption d'une procédure particulière pour leur passation et un régime adapté pour leur exécution.**
En effet, comme la communication de la Commission sur les concessions du 29 avril 2000 l'a rappelé à juste titre, les concessions se caractérisent tout d'abord par une prise en charge de risques par le concessionnaire, que le titulaire d'un marché public n'assume pas, notamment en matière de risques commerciaux et de financements. De plus, tout ou partie de la rémunération du concessionnaire provient généralement directement des clients ; le concessionnaire est donc particulièrement attentif à leurs besoins et entretient des relations étroites avec ces derniers. Ces contrats sont en outre généralement passés pour une durée assez longue en raison même des obligations pesant sur les concessionnaires.
La concession confie donc à son titulaire la réalisation d'une mission de service public, qu'il doit accomplir sous sa responsabilité tout en bénéficiant d'une certaine autonomie.
En contrepartie de ces importantes responsabilités, le concessionnaire peut être tenu comme c'est le cas en France, de rendre compte annuellement à l'autorité compétente de l'exploitation du service public ou de l'ouvrage qui lui a été confié dans un rapport détaillé. L'autorité compétente est par ailleurs à même de contrôler à n'importe quel moment l'exploitation effectuée par le concessionnaire ainsi que les investissements réalisés.

En ce qui concerne les caractéristiques de la procédure de passation des concessions, ces dernières étant des contrats distincts des marchés publics, **il paraîtrait essentiel que cette procédure de mise en concurrence soit prévue dans un texte différent de celui des directives marchés publics,** comme cela est d'ailleurs proposé au paragraphe 35 du présent livre vert. Cette procédure devrait être la même pour les concessions de services et celles de travaux, notamment pour éviter toute difficulté d'interprétation relative à la part respective des travaux et des services dans un même contrat, au vu de son régime de passation.

Tenant compte des particularités des concessions, cette procédure devrait permettre d'assurer à la fois une réelle ouverture à la concurrence, le respect des principes communautaires de concurrence ainsi qu'une viabilité économique de ces contrats. Un équilibre devrait ainsi être trouvé entre une application rigide de certains principes et la souplesse nécessaire à la réussite de ces contrats. Cette procédure devrait de plus assurer une réelle sécurité juridique, indispensable au bon développement des PPP, tout en étant relativement simple et modérément coûteuse pour les autorités compétentes.

L'adoption d'une procédure permettant une négociation encadrée, garante du respect de la transparence et d'un traitement égal des candidats, paraîtrait être la meilleure solution pour tenir compte de l'ensemble de ces préoccupations.
En effet, seule la négociation permet aux candidats de commenter et d'apporter des explications sur les solutions proposées contenues dans leur offre, ce qui est essentiel pour des contrats complexes, susceptibles de comporter des enjeux importants. La négociation s'avère de plus un instrument indispensable à la constitution de bases solides d'un partenariat réellement satisfaisant pour l'ensemble des parties. La possibilité offerte à l'autorité compétente d'organiser une négociation serait en outre d'autant plus nécessaire, si des règles communautaires devaient dorénavant régir certains aspects de l'exécution des contrats. Cette procédure devrait être encadrée afin d'assurer l'indispensable traçabilité des échanges et éviter que des abus puissent être commis.
Cette négociation devrait pouvoir porter sur l'ensemble des aspects du contrat.

La procédure de passation des concessions devrait par ailleurs veiller à garantir une protection efficace des savoirs-faire et des secrets commerciaux des entreprises. Par exemple, les autorités compétentes ne devraient en aucun cas pouvoir conditionner la remise des offres par l'acceptation préalable des candidats d'autoriser la transmission de leurs solutions aux autres candidats concurrents.

Question 7 :
De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les PPP de type contractuel, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identique ?

Comme l'UTP l'a déjà indiqué dans sa réponse à la question précédente, elle n'est pas favorable à ce que la Commission européenne lance prochainement une nouvelle action législative. **Il lui paraît néanmoins fondamental de donner dès à présent son opinion sur la procédure du dialogue compétitif, procédure que la Commission pourrait envisager de proposer pour la passation de l'ensemble des PPP contractuels**.
Cette procédure est pour l'instant réservée aux marchés publics particulièrement complexes, lorsque la collectivité publique ne peut déterminer que des besoins ou des exigences. Telle que prévue dans la directive secteurs classiques nouvellement adoptée, cette procédure permet à l'autorité compétente de consulter des candidats qui vont l'aider à choisir une ou plusieurs solutions[8] à partir desquelles ils pourront présenter une offre complète. Sur la base des offres remises, l'autorité compétente choisira ensuite l'offre économiquement la plus avantageuse.
L'effort de transparence et d'encadrement qui caractérise la procédure du dialogue compétitif doit être salué.

[8] voir ci-après

Cependant, cette procédure, peut s'avérer longue, coûteuse et adaptée aux seules hypothèses pour lesquelles elle a été prévue, à savoir les cas où l'autorité compétente ne peut définir en amont que des besoins ou des exigences fonctionnelles.
En effet, cette procédure implique en premier lieu d'organiser de nombreux échanges et auditions avec les candidats sélectionnés pour l'élaboration progressive d'un ou de plusieurs cahiers des charges définitifs. Cette première phase peut s'avérer très longue et nécessiter plusieurs mois de discussions. Elle requiert en second lieu la consultation des candidats sur la base d'un cahier des charges définitif, en vue de la remise d'une offre finale à laquelle ils ne pourront apporter que des précisions, clarifications ou compléments.

Cette procédure exige donc la mise en œuvre d'une organisation structurée, complexe et onéreuse, aussi bien pour les autorités compétentes que pour les candidats, afin de permettre la rédaction d'un cahier des charges qui donnera lieu ensuite à la remise d'offres.
L'ensemble des étapes de la procédure de dialogue compétitif ne paraît néanmoins pas nécessaire pour la passation des PPP contractuels. En effet, si les PPP sont toujours des contrats complexes, (confere leurs caractéristiques, 1.1 du présent livre vert et réponse de l'UTP à la question 6) les autorités compétentes peuvent dans la plupart des cas, déterminer préalablement des obligations qui vont bien au-delà de la fixation de besoins ou d'exigences fonctionnelles.

Ainsi, lorsqu'une ville moyenne envisage de concéder son réseau de transports urbains, elle peut souhaiter mettre en place de nouvelles solutions pour l'exploitation de son réseau et faire appel à la créativité des candidats, sans que cela nécessite toutefois la conduction d'une procédure aussi lourde que celle prévue dans le dialogue compétitif. En effet, l'autorité compétente transmet un cahier des charges aux candidats (surtout lorsque le réseau de transports publics est déjà existant) dans lequel elle a généralement déjà défini la consistance des services par référence à sa politique de transports (réseau de base hors variantes).
A l'appui de ce cahier des charges, l'autorité compétente peut solliciter plus particulièrement les candidats sur une démarche qualité originale, sur nouvelles technologies à mettre en place ou sur des solutions innovantes pour desservir, par exemple, des quartiers plus excentrés.

La procédure du dialogue compétitif prévue dans la directive secteurs classiques comporte par ailleurs des ambiguïtés sur les modalités de rédaction des cahiers des charges. Il existe en effet une incertitude sur le fait de savoir si la procédure du dialogue compétitif, permet aux autorités compétentes de consulter les candidats sur la base d'un unique cahier des charges élaboré à partir de diverses solutions proposées par les candidats ; ou si les autorités compétentes doivent consulter les candidats à partir d'un cahier des charges dédié, qui reprend pour chacun des candidats les solutions qu'il avait proposées.

La première hypothèse, soulève des difficultés quant au respect d'une parfaite confidentialité des solutions proposées par les candidats lors des discussions. En effet, il ne faudrait pas notamment que la procédure du dialogue compétitif puisse permettre à des autorités compétentes de conditionner la remise des offres par l'acceptation préalable des candidats d'autoriser la transmission de leurs solutions aux autres candidats concurrents. De plus, il devrait être clairement précisé que les autorités compétentes ne sont pas autorisées à mélanger les solutions présentées par les différents candidats et encore moins à les communiquer. Cette procédure pourrait en effet se révéler contre-productive à termes, les entreprises devenant extrêmement réticentes à communiquer leur savoir-faire s'il est susceptible d'être transmis à leurs concurrents.

Dans l’hypothèse où chaque candidat serait consulté sur la base d’un cahier des charges rédigé en fonction des solutions proposées par lui, le respect du principe de non discrimination entre les candidats et la possibilité de comparer des offres remises en fonction de cahiers des charges différents ne paraissent pas garantis.

Aussi, en raison notamment de sa lourdeur intrinsèque et des importantes incertitudes sur son déroulement, la procédure du dialogue compétitif ne paraît pas devoir être généralisée à tous les PPP contractuels. Une telle généralisation ne manquerait d’ailleurs pas de décourager de nombreuses autorités compétentes et par là-même de compromettre le développement futur des PPP.

Questions 8 et 9 :
Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de PPP d'initiative privée est-il assuré? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en oeuvre du projet retenu?

Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée dans l'Union européenne tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement ?

La formule des PPP d’initiative privée ne paraît pas conciliable avec les principes mêmes de transparence, de non discrimination et d’égalité de traitement des candidats.
En effet, par définition, le contrat de PPP d’initiative privée, a initialement été proposé et rédigé par un opérateur économique, qui souhaite se voir attribuer ce contrat. Cet opérateur économique maîtrise parfaitement les solutions qu’il a proposées à l’autorité compétente, ce qui n’est pas forcément le cas des autres candidats, surtout si ces solutions sont innovantes.
Aussi, **l’initiateur du PPP garde-t-il un indéniable avantage sur ses concurrents,** quelles que soient les modalités prises ultérieurement pour assurer une meilleure égalité lors de la mise en concurrence. La rétribution de l’initiateur du PPP ne corrige pas les inégalités entre les candidats, elle permet seulement à l’opérateur économique qui a pris une telle initiative d’être au moins partiellement indemnisé pour le travail en amont qu’il a effectué dans l’hypothèse où le contrat ne lui serait finalement pas attribué.
La publicité d’un PPP d’initiative privée ne permet pas non plus d’assurer une totale égalité entre les candidats, mais juste de permettre à d’autres opérateurs économiques de se porter candidats à l’obtention d’un tel contrat.
Dans ces conditions, il paraît impossible d’assurer une réelle égalité et une absence de discrimination entre les candidats.
Par ailleurs, les PPP d’initiative privée soulèvent de sérieuses inquiétudes concernant la protection de la propriété industrielle et intellectuelle des solutions innovantes qui pourraient être proposées à d’autres candidats et sur lesquelles l’opérateur économique pourrait perdre ses prérogatives en la matière.
Pour toutes ces raisons, l’UTP n’est pas favorable à ce que le droit communautaire permette la passation de PPP d’initiative privée.

Question 13 :
Partagez-vous le constat de la Commission selon lequel certains montages du type « step in » peuvent poser problème en termes de transparence et d'égalité de traitement ? Connaissez-vous d'autres « clauses types » dont la mise en œuvre est susceptible de poser des problèmes similaires ?

L'UTP comprend parfaitement les inquiétudes que les autorités compétentes peuvent nourrir lors de la mise en œuvre de clauses de step-in ou lors de cessions de capital aboutissant à un changement de l'actionnaire majoritaire du concessionnaire.
Cependant, elle entend rappeler que les mises en concurrence portent sur l'attribution des contrats. Aussi, l'offre qui a été choisie par l'autorité compétente devra être réalisée, même si le concessionnaire connaît des modifications de son capital. L'autorité compétente dispose d'ailleurs de moyens pour faire exécuter cette offre.
Par ailleurs, le pragmatisme et le fonctionnement d'un système basé sur l'économie de marché, doivent devoir être pris en compte dans le traitement de cette question.
En effet, il n'est pas du tout souhaitable que la mise en œuvre de clauses de step-in ou les cessions de capital puissent être soumises à une éventuelle approbation de la part des autorités compétentes. Cela aurait pour conséquence d'entraîner une immixtion dans la vie des entreprises, alors même qu'il est vital que ces dernières conservent leur indépendance de gestion.

Question 14 :
Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quel(s) aspect(s) devrait porter cette clarification?

Le livre vert semble se fonder principalement sur le respect des principes de transparence et d'égalité de traitement des candidats pour proposer l'adoption de règles visant à encadrer l'exécution des PPP contractuels.
Il est certes essentiel que ces principes soient respectés, notamment afin d'éviter des détournements de procédure, cependant une application trop stricte de ces principes pourrait aboutir à un véritable déni de la réalité économique des concessions et mettre en péril leur bonne exécution.
En effet, les concessions peuvent porter directement sur la gestion de services qui sont des SIEG. Or, comme l'ont souligné le livre vert [9] et le livre blanc sur les SIG[10], il est essentiel d'assurer une certaine adaptabilité de ces services aux besoins des clients. Cette adaptabilité peut même s'avérer indispensable pour la survie de certains services, d'autant plus que les concessions sont généralement passées pour une durée assez longue. Ainsi, les transports publics urbains sont en concurrence permanente avec la voiture individuelle et doivent sans cesse s'adapter pour maintenir leur clientèle.
Il serait en conséquence souhaitable que la Commission fasse preuve de beaucoup de pragmatisme dans la définition d'un cadre contractuel des PPP et trouve un compromis entre les principes de transparence et d'égalité de traitement des

[9] Paragraphes 50 à 54
[10] Paragraphes 3.3

candidats et les principes fondamentaux nécessaires aux SIEG comme l'adaptabilité des services rendus aux clients.

Sur la durée des PPP :

L'UTP partage la position du livre vert qui préconise que la durée soit fixée au cas par cas en fonction de la « nécessité de garantir l'équilibre économique et financier d'un projet » et son lien avec l'amortissement des investissements et une rémunération raisonnable des capitaux investis. Elle estime en conséquence que la durée des contrats doit être clairement indiquée dans le contrat, mais qu'elle ne doit pas être plafonnée par type de contrat au sein d'un encadrement législatif.

Elle considère en revanche que la durée excessive d'un contrat ne peut être assimilée à une aide d'Etat, plus particulièrement dans le domaine des SIG (paragraphe 46).
Une distinction doit être effectuée entre la durée d'un contrat d'une part et les compensations pour obligations de service public qui peuvent être imposées à un opérateur, d'autre part. En effet, la durée des contrats est dans la plupart des cas liée aux investissements et aux risques pris en charge par l'opérateur, alors que le montant des compensations doit être déterminé au regard des obligations de service public imposées par l'autorité compétente.
La jurisprudence Altmark de la Cour de Justice des Communautés européennes (précédemment citée sous question 6), fixe d'ailleurs les règles en ce qui concerne l'attribution de compensations pour réalisation d'obligations de service public. Cette jurisprudence définit déjà les conditions dans lesquelles le versement de compensations pour obligations de service public ne correspond pas à des aides d'Etat. La Cour exige notamment que les obligations de service public soient préalablement déterminées et que les modes de calcul des compensations soient fixés de façon transparente. Elle demande en outre que le montant des compensations soit proportionnel aux obligations fixées.
Par ailleurs, les contrats portant sur les SIG, que ce soient des marchés publics ou des concessions sont mis en concurrence et tout candidat intéressé peut y répondre.

Sur la passation d'avenants aux contrats :

Afin d'éviter que des missions supplémentaires ne soient confiées postérieurement à la passation du contrat, le livre vert prévoit notamment que les modifications qui ne sont pas prévues au contrat, ne sont acceptables que si « elles sont rendues nécessaires par un événement imprévisible ou justifiées pour des raisons d'ordre public, de sécurité publique ou de santé publique ». (paragraphe 49) Le livre vert prévoit des conditions très strictes pour que les contrats puissent être modifiés.
Or, force est de constater qu'il n'est pas toujours possible de prévoir précisément les modifications nécessaires à la vie du contrat, surtout pour les contrats d'une certaine durée. Les modifications ultérieures du contrat, notamment par voie d'avenant, répondent ainsi à la nécessaire adaptabilité du service public, du fait de l'évolution des besoins de la collectivité et des clients du réseau de transport. Il est notamment fréquent que le périmètre territorial de l'autorité compétente en matière de transports urbains soit amené à être modifié pendant l'exécution même du contrat. Dans la plupart des réseaux français, l'autorité compétente est maintenant un groupement de communes auquel de nouvelles communes peuvent adhérer pour lui confier l'organisation des transports urbains. Cette modification est rarement complètement prévisible lors de la passation des contrats ; il est en même temps très difficile de déterminer à l'avance les communes qui adhéreront finalement à ce groupement et les nouvelles zones urbanisées qui devront donner lieu à des dessertes en transport en commun.

Par ailleurs, les entreprises de transports urbains, ainsi que les autorités compétentes sont de plus en plus sensibilisées à l'avis des consommateurs et des voyageurs, qui se manifestent de plus en plus, et dont la prise en compte peut aboutir à des modifications au service initialement défini. (demandes de nouveaux services, nouvelles exigences de qualité …).

Une politique trop stricte en matière de passation d'avenants paraît inopportune et pourrait aboutir à des situations inextricables. Elle pourrait de plus fragiliser les contrats et augmenter l'insécurité juridique. Une éventuelle initiative législative venant encadrer les concessions devrait donc permettre une souplesse de l'évolution des contrats.

L'UTP tient par ailleurs à souligner que si des règles d'exécution des concessions devaient finalement être adoptées, il semble alors que les directives marchés publics devraient elles-mêmes être modifiées pour intégrer des contraintes comparables, ces contrats étant également soumis à des principes de transparence et d'égalité de traitement entre les candidats.

Question 15.
Dans le contexte des opérations de PPP, avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels?

Question 16 :
Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mis en place en ce qui concerne le phénomène de sous-traitance?

Question 17 :
De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance?

L'UTP tient à attirer l'attention de la Commission sur la confusion qui pourrait s'établir sur les sociétés de projet. En effet, il semble à la lecture des paragraphes 51 et 52 que la Commission souhaite que les sociétés de projet lorsqu'elles sont pouvoirs adjudicateurs, organisent des appels d'offres pour la réalisation des prestations qui leur ont été confiées. (Paragraphes 50 à 51).
Cette proposition paraît toutefois surprenante. En effet, les sociétés de projet sont des sociétés ad hoc constituées d'entreprises ayant des compétences différentes pour répondre à des appels d'offres déterminés. Ces entreprises s'associent donc en amont à leur réponse à l'appel d'offres pour pouvoir travailler ensemble. **Mais surtout, ces entreprises ont déjà été mises en concurrence et ont été choisies par l'autorité compétente qui avait connaissance de leur composition.**

Question 18 :
Quelle expérience avez-vous de la mise en place d'opérations de PPP de type institutionnalisé ? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisé? Si non, pourquoi ?

De nombreuses sociétés d'économie mixte locale (SEM) interviennent dans le secteur des transports publics urbains. Ces entreprises sont librement mises en place par les autorités compétentes qui sont en France, des autorités locales. Le capital de ces sociétés est composé majoritairement de capitaux publics et doit être constitué au minimum de 15 % de capitaux privés.
En vertu de la loi Sapin et de l'interprétation qui en a été donnée par le Conseil Constitutionnel français, **les SEM doivent répondre aux mises en concurrence au même titre que les autres candidats pour l'attribution de concessions.**

Question 19 :
Estimez-vous qu'une initiative doit être prise au niveau communautaire en vu de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé? Si oui, sur quels points particuliers et sous quelle forme? Si non, pourquoi?

Pour répondre à cette question, il convient avant tout de distinguer les règles de constitution de ces sociétés, les conditions de création de ces entités, les conditions d'entrée dans leur capital et les attributions de missions ou de contrats.

Il paraît nécessaire que les PPP institutionnalisés soient soumis aux mêmes règles de concurrence que les autres opérateurs pour l'attribution de missions ou de contrats déterminés. Les règles de plus qui pourraient être fixées concernant le régime des concessions (durée, passation d'avenants …) devraient également leur être appliquées.
Ces règles devraient s'appliquer aussi aux entreprises en cours de constitution ou venant d'être constituées.

En revanche, il ne paraît pas nécessaire de prévoir que l'entrée du capital privé soit soumise à la concurrence, sauf si cette entrée au capital est liée à l'attribution de contrats ou de missions. En effet, la mise en concurrence du capital ne peut pas avoir la même portée que celle effectuée pour l'attribution de missions ou de contrats, l'entrée dans le capital d'une société étant notamment effectuée pour une durée non limitée.

L'UTP souhaiterait apporter des précisions sur la mesure des performances :

Par ailleurs, le livre vert recommande de fixer « des spécifications techniques en termes de performances ou d'exigences fonctionnelles » (paragraphe 27) et conseille d'effectuer régulièrement des contrôles de la performance du titulaire du PPP (paragraphe 45).
L'UTP est tout à fait favorable à ce qu'un contrôle de la performance des opérateurs puisse être effectué. Elle estime cependant que les indicateurs de qualité de service doivent être préalablement déterminés dans le contrat et qu'ils doivent assurer une mesure objective de la qualité réalisée**. En outre, la définition de ces indicateurs de qualité de services ou de ces performances ne doit pas répondre à l'application d'un référentiel standard mais doit pouvoir être adaptée selon la taille, la complexité des réseaux de transport et la volonté de l'autorité compétente.**

Brüssel, 28. Juli 2004

Stellungnahme zu ausgewählten Aspekten des PPP Grünbuchs

Einleitung

Die Aussage im Grünbuch, den Mitgliedsstaaten kämen Public Private Partnerships angesichts der haushaltspolitischen Sachzwänge entgegen, da dem öffentlichen Sektor Finanzmittel aus der Privatwirtschaft zuflössen, ist zumindest missverständlich.

Zwar wendet der private Bieter zur Erfüllung einer der öffentlichen Hand obliegenden Aufgabe (z.B. Bau und Betrieb einer Schule, Krankenhauses, Gefängnisses) zunächst erhebliche Investitionskosten auf, die in den öffentlichen Haushalten nicht der erforderlichen Höhe zur Verfügung stehen. Gleichzeitig übernimmt die öffentliche Hand aber in der Regel die Verpflichtung, regelmäßig Miet- oder Leasingraten über den gesamten Zeitraum der Partnerschaft an den Bieter zu zahlen, welche in der Regel über den entstandenen Beschaffungs-, Investitions- und Betriebskosten liegen. Es findet daher mit Hilfe des privaten Bieters lediglich eine haushaltsverträgliche Streckung öffentlicher Finanzmittel statt, jedoch ohne dass damit Mehreinnahmen für die öffentliche Hand verbunden sind.

Anders verhält es sich nur in den (Ausnahme-) Fällen, in denen die öffentliche Hand etwa bei Infrastrukturprojekten gänzlich auf eine wirtschaftliche/finanzielle Einbindung verzichtet („reines Betreibermodell") und deshalb keine Lasten und Risiken in die Zukunft verlagert werden.

Aus Sicht der Architekten bietet das Public Private Partnership gleichwohl interessante Möglichkeiten, planerische Eigeninitiativen in Bereichen zu entfalten, aus denen sich die öffentliche Hand zurückgezogen hat.

Antworten

Frage 1.
Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Die gesetzlichen Rahmenbedingungen für ÖPP-Projekte ergeben sich insbesondere aus den haushaltrechtlichen Vorschriften. Demnach ist genau zu prüfen, ob eine Eigenfinanzierung von Projekten nicht wirtschaftlich günstiger ist als die Durchführung im Rahmen eines ÖPP. Ausführliche Informationen zu diesem Thema – auch zu den vergabe- und vertragsrechtlichen Fragen – sind im Gutachten „ÖPP im öffentlichen Hochbau“ enthalten, welches vom Bundesministerium für Verkehr, Bau- und Wohnungswesen in Auftrag gegeben wurde[1].

Frage 2
Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Antwort:
Soweit sich ein auf Vertragsbasis eingerichtetes ÖPP auch auf die Planung und Ausführung von Bauwerken bezieht, dürfte auch hier der allgemeine, von den Rechnungshöfen aufgestellte Grundsatz richtig sein, dass eine Trennung von Planung und Ausführung zu den wirtschaftlich günstigsten Resultaten führt. Insofern ist die Nutzung des wettbewerblichen Dialogs schon deshalb wenig sinnvoll, als der vor ein Verfahren zur Vergabe anderer Auftragskomponenten geschalteter Planungswettbewerb ein größeres Potential zur Auffindung des qualitativ (gestalterisch und wirtschaftlich) hochwertigsten Angebots bietet als der wettbewerbliche Dialog. Anders als der wettbewerbliche Dialog folgt die Auswahl des Leistungsträgers im Architektenwettbewerb auf ausschließlich sachlichen Erwägungen, da aufgrund der Anonymität der Teilnehmer zunächst nur das „Angebot“ selbst als Bewertungsgrundlage zur Verfügung steht. Darüber hinaus ergeht die Entscheidung über die Preisträger durch eine qualifizierte, unabhängige Jury, was eine weitere wesentliche Voraussetzung für eine rein qualitätsorientierte Auswahl ist.

Auch aus Teilnehmersicht ist der wettbewerbliche Dialog letztlich kein akzeptables Verfahren: weder die Regelung zum Vertrauensschutz noch die Separierung der Verhandlungen mit den Einzelbietern in sukzessiven Schritten bietet hinreichende Gewähr, dass der Auftraggeber keine konzeptuellen Überlegungen von Teilnehmern an Konkurrenten weitergibt. Die Vorstellung, dass die im Kompromissweg erzielte vorliegende Verfahrensgestaltung dem entgegenwirken könnte, ist lebensfremd.

Frage 3
Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

ÖPP’s können auf Grundlage des jetzigen Gemeinschaftsrechts rechtskonform durchgeführt werden. Da eine Reihe von ÖPP’s vergaberechtlich jedoch als Dienstleistungskonzession zu qualifizieren sein wird, ist fraglich, ob der gemeinschaftliche Rechtsrahmen hier ausgewogen ist. Es ist schwer nachvollziehbar, aus welchem Grund Baukonzessionen im neuen europäischen Vergaberecht ausführlich geregelt werden, Dienstleistungskonzessionen hingegen jedoch nur den primärrechtlichen Vorschriften unterfallen. Die bestehende Rechtslage könnte von öffentlichen Auftraggebern zu einer „Flucht ins primäre Gemeinschaftsrecht“ genutzt werden.

[1] Auf Wunsch senden wir Ihnen dieses gerne zu.

Frage 4.
Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Nein.

Frage 5.
Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Mit der Möglichkeit zur Einrichtung von Präqualifikationssystemen liefert das neue europäische Vergaberecht bedauerlicherweise die Grundlage für mögliche Diskriminierungen von Bietergemeinschaften. Da zumindest in einem konkreten Vergabeverfahren eine nicht vorliegende Präqualifikation zu einem faktischen Ausschluss des Teilnehmers führt, haben Bietergemeinschaften eigentlich keine wirkliche Teilnahmechance mehr. Bietergemeinschaften bilden sich in aller Regel ad hoc für bestimmte Projekte. Damit wird möglicherweise ein sehr flexibles – und auch mittelstandsfreundliches – Instrument ins Abseits gedrängt. Gerade im Planungsbereich spielen Bietergemeinschaften eine wichtige Rolle. Die Leistungsträger können auf diese Weise flexibel auf die wechselnden Marktanforderungen reagieren. Besonders für kleinere Unternehmen aus dem Ausland ist deshalb mit einer erheblichen Verschlechterung der Marktzugangschancen zu rechnen.

Frage 6.
Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Ja, da der Charakter des öffentlichen Auftrags auch bei Konzessionen und daraus folgender Vergabeverfahren klargestellt werden sollte (siehe auch Antwort zu Frage 4).

Frage 7.
Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Da bei ÖPP sowohl als öffentliche Aufträge oder als Konzessionen Vergaberecht anzuwenden ist, sollten die Vergabeverfahren auch in einem einheitlichen Gesetzgebungsvorhaben geregelt werden.

Frage 8.
Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Hierüber liegen keine ausreichenden Erkenntnisse vor. Selbstverständlich haben ausländische Akteure genau wie national ansässige Wirtschaftsteilnehmer die Möglichkeit, ÖPP's zu initiierten. Insbesondere bei der Vergabe von Dienstleistungskonzessionen ist es aufgrund des unzureichenden rechtlichen Regelungsrahmens zweifelhaft, ob Auswahlverfahren auf der Basis eines effektiven Wettbewerbs stattfinden.

Frage 9.
Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Die Auswahl des Vertragspartners in einem privat initiierten ÖPP muss unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot erfolgen. Auch bei privat initiierten ÖPP handelt es sich um öffentliche Aufträge. Soweit die Durchführung des Projektes Bauplanungsleistungen einschließt, ist der Wettbewerb (Art. 1 g Richtlinie 92/50/EWG des Rates vom 18. Juni 1992 über die Koordinierung der Verfahren zur Vergabe öffentlicher Dienstleistungsaufträge bzw. Titel VI der Richtlinie 2004/18/EG des EUROPÄISCHEN PARLAMENTS UND DES RATES vom 31. März 2004 über die Koordinierung der Verfahren zur Vergabe öffentlicher Bauaufträge, Lieferaufträge und Dienstleistungsaufträge) vorzusehen.

In den Fällen, in denen Wirtschaftsteilnehmer ausführliche Projektvorschläge ausarbeiten, ohne hierzu von der Verwaltung aufgefordert worden zu sein, wirft eine Anwendung der vergaberechtlichen Vorschriften jedoch erhebliche Probleme auf. Derartige Vorschläge können qualitativ hochwertige technisch-innovative und wirtschaftlich günstige Lösungen für bestehende Probleme bieten. Eine Verwendung durch die öffentliche Hand, auch im Rahmen eines ÖPP, ist aber schon aus urheberrechtlichen Gründen in der Regel nicht möglich. Der Ankauf der Nutzungsrechte würde sich wiederum selbst als öffentlicher Auftrag darstellen. Eine Ausschreibung des Projektes kann jedoch dazu führen, dass Teilelemente des im Rahmen der Initiative entwickelten Vorschlags von Konkurrenten aufgegriffen und in eigene Lösungskonzepte eingebaut werden, ohne dass dies urheberrechtlich zu fassen wäre. In diesen Fällen ist es naturgemäß auch ungesichert, ob der Initiator den Auftrag erhält. Hier muss das Vergaberecht Kompensationsmöglichkeiten für Initiatoren von ÖPP vorsehen.

Frage 10.
Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Keine.

Frage 11.
Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Nein.

Frage 12.
Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Uns sind keine solchen Praktiken oder Mechanismen bekannt, die aufgrund des materiellen Vergaberechts zulässig wären und die nicht durch die Inanspruchnahme von Vergaberechtsschutzmitteln angegriffen werden könnten.

Frage 13.
Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

In die Interventionsklauseln könnte ein Zusatz aufgenommen werden, nach dem beim Austausch von Projektpartnern für bestimmte Leistungsbereiche jeweils eine neue Ausschreibung durchzuführen ist.

Frage 14.
Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Aufgrund des breiten Spektrums an möglichen ÖPP ist die Einführung vertraglicher Rahmenbedingungen – erst recht auf Gemeinschaftsebene – kaum praktikabel.

Frage 15.
Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Die Anwendung der Vorschriften für die Vergabe öffentlicher Aufträge auf Unteraufträge ist umstritten. Aus diesem Grund sollte der öffentliche Auftraggeber gehalten sein, den privaten Bieter im Rahmen der Vertragsfreiheit zu verpflichten, hinsichtlich der Vergabe von Unteraufträgen ebenfalls öffentliches Vergaberecht anzuwenden. Dieses gilt naturgemäß nicht für die erstmalige Zusammenstellung des Bieterkonsortiums, welches sich um den ÖPP-Auftrag bemüht.

Frage 16.
Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Ja, vergleichbar den Grundsätzen der „Scheinprivatisierung“, wonach die öffentliche Hand zwar Leistungen an Private zur Aufgabenerfüllung übergibt – der private Auftraggeber jedoch in Erfüllung dieser öffentlichen Aufgaben selbst wiederum vergaberechtlich wie ein öffentlicher Auftraggeber zu handeln hat.

Frage 17.
Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Ja, denn die regelmäßige Laufzeit einer ÖPP (ca. 20 – 30 Jahre) darf nicht dazu führen, dass während der gesamten Laufzeit öffentliches Vergaberecht nicht eingehalten wird, obwohl die gesamte Maßnahme entweder direkt (Miete, Leasing) oder indirekt (Konzessionen) von der öffentlichen Hand finanziert wird. Die Grundsätze zur Vergabe öffentlicher Aufträge müssen auch hier auf Unteraufträge Anwendung finden.

Frage 18.
Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Noch keine Erfahrungen.

Frage 19.
Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Ja, denn auch hier müssen die allgemeinen Grundsätze des Vergaberechts zum Tragen kommen. Besonders wichtig wäre die Klärung der Frage, inwieweit bei einer institutionellen ÖPP der private Bieter selbst als öffentlicher Auftraggeber auftritt.

Allgemein und unabhängig von den in diesem Grünbuch aufgeworfenen Fragen:
(Siehe auch Antwort zu Frage 4.)

Frage 20.
Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

ÖPP kann nur in bestimmten Einzelfällen die öffentliche Aufgabeerfüllung durch Private verbessern. Dafür sind kompetente Ansprechpartner auf Auftraggeberseite ebenso erforderlich wie eine gewisse Größenordnung des Vorhabens. Effizienzgewinne durch die Berücksichtung von Lebenszykluskosten sind nicht spezifische Vorteile von ÖPP, da diese Gesichtspunkte generell der Bauplanung zu Grunde liegen. Von einer Behinderung von ÖPP aufgrund gemeinschaftsrechtlicher Vorschriften kann also nicht gesprochen werden; vielmehr hängt die Entscheidung zur erfolgreichen Durchführung einer ÖPP von zahlreichen Faktoren ab, die insbesondere auch die Qualität der Planungsleistung zu berücksichtigen haben. Wenn jedoch die Voraussetzungen für die Durchführung einer ÖPP vorliegen, müssen die o .g. vergaberechtlichen Grundsätze berücksichtigt werden.

Frage 21.
Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Nein.

Frage 22.
Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Der Aufbau eines solchen Netzwerks wird als ausgesprochen sinnvoll angesehen.

Dr. Tillman Prinz
Bundesgeschäftsführer

Zur Beibehaltung kommunaler Dienstleistungen in der Europäischen Union

Stellungnahme des Wissenschaftlichen Beirats
der Gesellschaft für öffentliche Wirtschaft

Thesen

(1) In Deutschland erbringen die Städte und Gemeinden zahlreiche Dienstleistungen von allgemeinem und von allgemeinem wirtschaftlichen Interesse für ihre Bürger traditionell in eigener Regie. Dass dabei die Bedürfnisse der Bürger im Vordergrund stehen, macht den besonderen Wert der kommunalen Selbstverwaltung in Deutschland aus.

(2) Die von der EU betriebene Liberalisierung bringt dieses System der kommunalen Leistungserbringung in Gefahr. Nachdem in Art. I/5 Abs. 1 des EU-Verfassungsentwurfs festgelegt wurde, dass die EU die nationale Identität der Mitgliedstaaten einschließlich der Selbstverwaltung zu achten hat, ist an die EU die Forderung zu richten, die Erbringung der Dienstleistungen von allgemeinem wirtschaftlichen (und nichtwirtschaftlichen) Interesse durch Städte und Gemeinden weiter zu ermöglichen und zu fördern, auch wenn dies – im Interesse anderer Prinzipien des EG-Vertrages – Abstriche am reinen Wettbewerbsprinzip erforderlich macht. Das Inhouse-Prinzip sollte nicht eingeschränkt, sondern im Gegenteil ausgeweitet werden.

(3) Der deutsche Gesetzgeber in Bund und Ländern sollte die sich nach Art. 86 Abs. 2 EGV bietenden Möglichkeiten zur Betrauung von Unternehmen mit bestimmten Dienstleistungen von allgemeinem wirtschaftlichen Interesse mehr als bisher ausschöpfen und im Gemeindewirtschaftsrecht die Chancen der kommunalen Unternehmen im Wettbewerb verbessern.

(4) Die Verantwortlichen in den Städten und Gemeinden sowie in den kommunalen Unternehmen sollten sich des Wertes der örtlichen Selbstverwaltung für die Bürger bewusst bleiben und wichtige Dienste nicht leichtfertig an Dritte abgeben. Neben ordnungspolitischen Überlegungen muss bei der Entscheidung die Absicherung der Wirtschaftlichkeit eine Rolle spielen.

Dazu im Einzelnen:

I. Die derzeitigen kommunalen Dienstleistungen in Deutschland – Wert und Bedeutung

In Deutschland besitzt die kommunale Selbstverwaltung der Städte, Gemeinden und Kreise eine lange Tradition – in politischer, aber auch in wirtschaftlicher Hinsicht. Die Kommunen verfügen über eigene Einnahmen, eigene Haushalte und eigene Vermögen und stärken damit ihre wirtschaftliche und zugleich politische Selbständigkeit.

Von jeher gehört es zur politischen Kultur in Deutschland, dass Kommunen ihre Position im föderalen System auch auf diese Weise sichern. Sie festigen damit zugleich ein Stück bürgernaher Demokratie. In diesem Sinne ist die kommunale Selbstverwaltung in Art. 28 Abs. 2 GG verfassungsrechtlich verankert.

Auf dieser Grundlage erbringen und sichern die deutschen Gemeinden, namentlich die Städte, seit langem in eigener Regie zahlreiche Dienstleistungen für ihre Einwohner, indem sie entsprechende Unternehmen und Einrichtungen vorhalten und betreiben.

Es handelt sich dabei teils um Dienstleistungen von allgemeinem wirtschaftlichen Interesse (insbesondere Energie- und Wasserversorgung, Entsorgung, öffentlicher Personennahverkehr, Sparkassen), teils um „nichtwirtschaftliche“ Dienstleistungen von allgemeinem Interesse, insbesondere solche des Kultur- und Bildungswesens (z.B. Museen, Theater, Bibliotheken, Schulen, Kindergärten), Sportstätten und Freizeiteinrichtungen, Einrichtungen des Sozial- und Gesundheitswesens (Jugend- und Altenheime, Beratungsstellen, Krankenhäuser u.ä.) und sonstige Einrichtungen (z.B. Feuerwehr, Friedhöfe, zoologische und botanische Gärten). Je nach den örtlichen Gegebenheiten betreiben Städte und Gemeinden zahlreiche weitere Unternehmen und Einrichtungen wie Häfen, Flughäfen, Messehallen und Kureinrichtungen.

Mit diesen Dienstleistungen von allgemeinem wirtschaftlichen und nichtwirtschaftlichen Interesse tragen die Kommunen eine besondere Verantwortung für die Sicherung der intergenerationellen Daseinsvorsorge ihrer Bürger, für die Gestaltung des kommunalen Lebensraums und für die Stabilität der infrastrukturellen Grundlage wirtschaftlicher Aktivitäten.

Wichtig ist, dass diese Dienstleistungen von den kommunalen Unternehmen und Einrichtungen *örtlich erbracht* und *örtlich verantwortet* werden. Über grundsätzliche Fragen bezüglich der Leistungserbringung, insbesondere über größere Investitionen, und darüber, welche Leistungen in welcher Qualität zu welchem Preis erbracht werden sollen, entscheidet die gemeindliche Volksvertretung; sie ist berufen, die Interessen der Bürger zu wahren. Dies lässt sich am Beispiel des städtischen Nahverkehrsangebots verdeutlichen: Die städtische Volksvertretung bestimmt, wie viel Investitionsmittel sie für das Liniennetz bereitstellen will, welche Verkehrsdichte es geben soll. In diesem Sinne bestimmt z.B. § 3 Abs. 1 S. 1 ÖPNVG NRW, dass die Planung, Organisation und Ausgestaltung des ÖPNV Aufgabe der Kreise und kreisfreien Städte ist. In diesem Rahmen behalten die Leiter der örtlichen Nahverkehrsunternehmen unternehmerischen Gestaltungsspielraum, den sie zu möglichst wirtschaftlicher Leistungserbringung zu nutzen haben. Die Grundsätze der Unternehmensführung im kommunalen Interesse legt jedoch die Stadt als Inhaberin des Unternehmens fest. Die kommunale Selbstverwaltung trägt dabei auch den Erwartungen der Bürger an eine preisgünstige Versorgung mit Dienstleistungen von allgemeinem Interesse Rechnung.

Das Prinzip örtlicher Leistungserbringung und Leistungsverantwortung hat niemals ausgeschlossen und schließt nicht aus, dass die Gemeinde ein privates (örtliches, regionales Groß- oder sogar internationales) Unternehmen mit der Erbringung einer Leistung beauftragt, ein gemischtwirtschaftliches Unternehmen gründet oder eine Public Private Partnership eingeht. Dieser Weg bietet sich z.B. dann an, wenn Kooperationen oder Partnerschaften Synergieeffekte entstehen lassen, welche die Erbringung der Dienstleistungen zum Nutzen der Bürger fördern, z.B. auch ermöglichen, dass Kostendegressionen über die Preise an die Verbraucher weitergegeben werden (Vorteile, die allerdings bei der Kooperation mit auswärtigen Unternehmen nicht immer eintreten). *Die Gemeinden können in solchen Fällen das kommunale Interesse durch Verträge sichern, die z.B. festlegen, wie das Leistungsangebot aussehen soll. Bei Unzuträglichkeiten können sie den Vertrag kündigen oder nicht verlängern und so im Prinzip zur Eigenregie zurückkehren. Um den Weg der Rückverlagerung (Insourcing) offen zu halten, darf den Gemeinden aber nicht die Fähigkeit abhanden kommen, öffentliche Aufgaben in eigener Regie zu erfüllen, zumindest die fremde Aufgabenerfüllung zu kontrollieren.*

Vielfach wird heute gefordert, die Gemeinden sollten weitestgehend auf die eigene Leistungserbringung verzichten und sie privaten Unternehmen überlassen. Die Gemeinden sollten danach ihre Interessen grundsätzlich durch Verträge sichern und sich so auf die Sicherstellung (Gewährleistung) des gewünschten Leistungsangebots beschränken (Stichwort: Gewährleistungsstaat). Eine solche Lösung kann sich durchaus anbieten, ihre Effizienz wäre aber von Fall zu Fall nachzuweisen. Dabei ist zu berücksichtigen, dass eine flächendeckende Privatisierung öffentlicher Dienstleistungen die Selbstverwaltung gefährden kann. Eine Privatisierung „um jeden Preis" bedeutet einen Verlust an gesellschaftlicher Gestaltungsfähigkeit und demokratischer Legitimation. So würde den Gemeinden – möglicherweise irreversibel – der Kontakt zur Leistungserstellung verloren gehen. Deshalb sollte weiterhin ein Schwergewicht der Leistungserbringung bei der Gemeinde selbst liegen.

Die deutsche Tradition der gemeindlichen Leistungserbringung verdient eine Fortsetzung auch in der durch den gemeinsamen Binnenmarkt bestimmten Zukunft. Zum einen ist Föderalismus prinzipiell zu befürworten. Denn dezentrale politische Entscheidungen können grundsätzlich den Präferenzen der Kunden besser Rechnung tragen als zentralisierte; sie ermöglichen ein effizientes raumbezogenes Angebot an öffentlichen Leistungen. Zum anderen wird durch sie weit mehr als das ökonomische Umfeld erschlossen: Es lassen sich außer den Interessen des Investors auch die der Bürger insgesamt in die Entscheidungen einbeziehen. Dies kann die Bürgerverantwortung stärken und somit einer demokratischen Entwicklung förderlich sein.

Das System des Binnenmarkts begünstigt Großunternehmen, bei denen die Gefahr besteht, dass sie von einer ortsfernen Konzernzentrale aus das Geschehen bestimmen. Dieser Umstand erschwert es auf Dauer den Gemeinden, die Belange ihrer Bürgerschaft nachhaltig zu wahren. Über die Gestaltung beispielsweise des ÖPNV in einer Stadt sollte auch künftig am Ort nach den Bedürfnissen der Bürger und den verfügbaren Ressourcen entschieden werden, nicht aber ausschließlich nach den kaufmännischen Interessen eines privaten Großunternehmens oder gar eines internationalen Konzerns. *Es kommt darauf an, dass die Gemeinde über die Gestaltung des Leistungsangebots (Eigenregie oder Beauftragung) entscheiden kann und nicht von außen zu einer bestimmten Lösung gezwungen wird. Kommunalpolitischer Gestaltungsspielraum muss erhalten bleiben.* Zu verlangen ist jedoch, dass der Gestaltungsspielraum verantwortungsbewusst ausgefüllt wird.

II. Forderungen an die EU

An die EU ist die Forderung zu richten, im Rahmen der Möglichkeiten, die der EG-Vertrag bietet, mehr als bisher den Gestaltungsspielraum der Gemeinden zu achten und zu wahren, den der jeweilige nationale Gesetzgeber ihnen bietet, wie zum Beispiel in Deutschland. Bezüglich der sogenannten nichtwirtschaftlichen Einrichtungen ist zu begrüßen, wenn die EU-Kommission in dem „Grünbuch zu Dienstleistungen von allgemeinem Interesse“[1] die Bereitschaft erkennen lässt, sich auf diesem Gebiet zurückzuhalten, weil ihr der EG-Vertrag und ebenso die geplante Verfassung insoweit keine Regelungskompetenz verleihen.

In den letzten Jahren hat die EU nahezu ausschließlich den Gedanken der Förderung des europaweiten Wettbewerbs verfolgt und in diesem Sinne die Liberalisierung betrieben. Es kam ihr, und dies im Ausgangspunkt mit Recht, darauf an, für alle Unternehmen in Europa gleiche Chancen zu eröffnen, Aufträge von den öffentlichen Verwaltungen zu erhalten. Dem dient in Umsetzung der entsprechenden EG-Richtlinien die inzwischen im deutschen GWB und in der Vergabeverordnung näher ausgestaltete Pflicht, größere Aufträge öffentlich, und zwar europaweit, auszuschreiben. Diese Ausschreibungspflicht soll nun schrittweise auch für öffentliche Dienstleistungen, die wegen der Netzbedingungen sinnvollerweise nur *ein* Unternehmen erbringen kann (z.B. ÖPNV oder Wasserversorgung in einer Stadt), eingeführt werden.

Gemäß der EuGH-Rechtsprechung gibt es eine Ausnahme von der Ausschreibungspflicht, nämlich wenn die Stadt ein von ihr wie eine Verwaltungsabteilung beherrschtes Unternehmen beauftragen will (sog. *Inhouse-Prinzip*).[2] Aber damit ist für die deutsche kommunale Wirtschaft wenig gewonnen, weil man so geknebelte, das heißt der unternehmerischen Entscheidungsfreiheit beraubte kommunale Unternehmen hierzulande gerade nicht einsetzen möchte. Dies würde gegenüber den Eigenbetriebsgesetzen zum Teil einen gravierenden Rückschritt darstellen, wurden die Eigenbetriebe doch gerade geschaffen, um eine Unternehmensplanung zu gestatten, die von den starren Regeln der Haushaltsplanung befreit ist und allfälligen Bedarfsveränderungen flexibel zu folgen vermag. Im Übrigen möchte die EU-Kommission das Inhouse-Prinzip ganz abgeschafft sehen. Würde sie sich damit durchsetzen, wären die Gemeinden gezwungen, z.B. die Wasserversorgung oder den

[1] KOM(2003)270 endg., Brüssel, 21. Mai 2003, Rn.43.

[2] EuGH-Urteil vom 18. November 1999 in der Rechtssache C-107/98, Teckal Srl. gegen Gemeinde Viano und AGAC Reggio Emilia.

ÖPNV (oder Teile hiervon) für ihr Gebiet in einem starren Verfahren auszuschreiben, mit der Folge, dass sich alle einschlägig tätigen Unternehmen aus den europäischen Ländern, große wie kleinere, öffentliche wie private, mit Angeboten bewerben können, ohne dass sie am Wohl der entsprechenden Gemeinde und ihrer Bürger interessiert sein müssen. Dass Ausschreibungswettbewerb nicht nur zu Kostendegressionen im Interesse der Bürger führt, sondern die Konzentration und Oligopolisierung der Märkte verstärken kann, zeigt die Entwicklung auf dem skandinavischen ÖPNV-Markt, der inzwischen durch Kostensteigerungen mitgeprägt wird.

Eine Ausschreibungspflicht dürfte für den größten Teil der Kommunalwirtschaft in Deutschland, vor allem für die kleineren und mittleren kommunalen Unternehmen, in vielerlei Hinsicht Probleme aufwerfen: Zwar kann sich das bisher in der Gemeinde tätige Unternehmen auch bewerben und im Fall des Zuschlags weiterarbeiten, aber wenn ein anderes Unternehmen obsiegt, müsste das gemeindeeigene Unternehmen, weil nun ohne Aufgabe, im ungünstigsten Fall liquidiert werden; denn wegen des Örtlichkeitsprinzips könnte das Unternehmen als ganzes nicht anderenorts Kompensation erlangen. Dies ist vor allem deshalb bedenklich, weil die Gemeindebürger das Unternehmen über lange Jahre im Wege der Selbstfinanzierung über den Preis aufgebaut und so den inneren Wert des Unternehmens gesteigert haben. An der nächsten Ausschreibung könnte es sich, weil nicht mehr existent, nicht wieder beteiligen. Will die Gemeinde dann die Aufgabe wieder in Eigenregie übernehmen, muss sie ein neues eigenes Unternehmen dafür gründen, und dieses zunächst virtuelle Unternehmen müsste sich an der Ausschreibung beteiligen und den Zuschlag erhalten – ein nahezu unrealistischer Fall. *Bei realistischer Betrachtung muss man davon ausgehen, dass die einmal an einen Dritten abgegebene Dienstleistung in dem von der EU favorisierten System nicht rückholbar ist: Die Gemeinde kann, unter völligem Verlust ihrer organisatorischen Gestaltungsfreiheit, nur noch ausschreiben und den Gewinner der Ausschreibung beauftragen. Im Ergebnis würden die kommunalen Unternehmen in dem System, das mehr Wettbewerb schaffen soll, vom Wettbewerb ausgeschlossen.*

Gegenüber diesen für die Selbstverwaltung äußerst misslichen Konsequenzen der EU-Wettbewerbskonzeption ist zu betonen, dass der EG-Vertrag wie die nunmehr vorgesehene EU-Verfassung zu diesem Ergebnis keineswegs zwingen. Zunächst verdient Beachtung, dass nach Art. 295 EGV (bei dem es bleiben soll) die Eigentumsordnung in den Mitgliedstaaten aufrechterhalten bleibt, so dass es weiterhin Staats- und Kommunalunternehmen geben darf, die sich gleichberechtigt am gewerblichen Leben und am Wettbewerb beteiligen können. Im Wettbewerb darf es irgendeine Form der Diskriminierung öffentlicher Unternehmen ebenso wenig geben wie eine Privilegierung. Allerdings ist für die deutschen kommunalen Unternehmen damit noch nicht viel gewonnen.

Als wichtigste einschlägige Vorschriften werden gemeinhin Art. 86 Abs. 2 und Art. 16 EGV (im Verfassungsentwurf Art. III/55-2 und Art. III/6) betrachtet, wonach Unternehmen, die mit „Dienstleistungen von allgemeinem wirtschaftlichen Interesse“ betraut sind, von den Wettbewerbsvorschriften des Vertrags im erforderlichen Umfang befreit werden *können* und die EU sowie die Mitgliedstaaten für das gute Funktionieren dieser Dienste Sorge tragen. Die EU-Bürger haben nach Art. 36 der EU-Grundrechtscharta ein Recht auf Zugang zu diesen Dienstleistungen. Offen gelassen ist in diesen Vorschriften aber, welcher Art die betrauten Unternehmen sind: öffentliche oder private, große oder kleine, fremde oder eigene. Einen irgendwie gearteten Anspruch kommunaler Unternehmen, vorzugsweise mit solchen Diensten betraut zu werden, gibt es nicht. Art. 86 Abs. 2 EGV regelt auch nicht, ob es Ausschreibungen geben soll oder nicht, lässt also keine Präferenz für das Ausschreibungsverfahren erkennen. Festzuhalten ist immerhin, dass die oben unter I. genannten kommunalen Dienste auch nach Auffassung der EU-Kommission zu den Dienstleistungen von allgemeinem wirtschaftlichen Interesse gehören (über die „Definitionsmacht" im Einzelnen wird noch gestritten), *so dass eine Beauftragung oder Betrauung unter Befreiung von Wettbewerbsvorschriften in Betracht kommt*.

Erforderlich wäre allerdings ein ausdrücklicher Betrauungsakt, woran es bisher in Deutschland noch weitgehend fehlt. Geben müsste es die Betrauung eines Unternehmens mit klar definiertem Inhalt, die einem oder mehreren konkret benannten Unternehmen die Ausübung der Dienstleistung von allgemeinem wirtschaftlichen Interesse als besondere Aufgabe überträgt. Übertriebenen Formalismus erfordert der Betrauungsakt allerdings nicht, wie der EuGH in dem Urteil in Sachen Altmark Trans[3] erneut bestätigt hat. Diesen Standpunkt sollte sich die Kommission zu eigen machen. Es kommen nicht nur Gesetzgebungsakte, sondern auch Verwaltungsakte, Konzessionsverträge und andere Rechtsakte als Mittel der Betrauung in Betracht. Verkehrsunternehmen können beispielsweise in Form einer Genehmigung nach dem PBefG betraut werden. Zu begrüßen ist, dass der EuGH im gleichen Urteil auch festgestellt hat, dass es sich bei Ausgleichszahlungen zur Finanzierung des ÖPNV nicht um Beihilfen im Sinne von Art. 87 EGV handelt, wenn sich diese an einem objektiven Kostenmaßstab („Kosten eines durchschnittlichen, gut geführten Unternehmens") orientieren, somit eine Begünstigung des Unternehmens ausgeschlossen wird.

Ein Vorzug kommunaler Unternehmen gegenüber anderen Institutionen ergibt sich daraus nicht. Ein besseres Ergebnis lässt sich auch nicht aus der Subsidiaritätsklausel (Art. 5 EGV) und der Pflicht zur Beachtung der gemeinsamen Verfassungsüberlieferungen an Mitgliedstaaten durch die EU (Art. 6 Abs. 2 EU-Vertrag) herleiten. Zu den „gemeinsamen" Überlieferungen gehört die besonders ausgeprägte deutsche Selbstverwaltung sicherlich nicht. Bisher gibt es deshalb keinen formalen Anspruch darauf, dass die EU bei der Gesetzgebung, der Rechtsprechung oder dem Vorschriftenvollzug auf die besondere deutsche Selbstverwaltung in dem Sinne Rücksicht nehmen müsse, dass den Gemeinden ihre angestammten Betätigungsfelder unter Ausschluss des Wettbewerbs per Ausschreibung belassen werden müssten.

[3] Rechtssache C-280/00, Altmark Trans GmbH und Regierungspräsidium Magdeburg gegen Nahverkehrsgesellschaft Altmark GmbH.

Allerdings lag es von Anfang an im Sinne der europäischen Verträge, auf die Eigenheiten der Mitgliedstaaten gebührend Rücksicht zu nehmen; lange Zeit wurde auch so verfahren. Inzwischen sieht der noch nicht rechtlich verbindliche, aber doch den Willen der Mitgliedstaaten zum Ausdruck bringende Verfassungsentwurf für die EU in Art. I/5 Abs. 1 ausdrücklich vor: „Die Union achtet die nationale Identität ihrer Mitgliedstaaten, die in deren grundlegender politischer und verfassungsrechtlicher Struktur einschließlich der regionalen und kommunalen Selbstverwaltung zum Ausdruck kommt." Damit ist unmissverständlich klargestellt, und zwar auch wenn der Entwurf als ganzer nicht rechtsverbindlich werden sollte, dass die EU – als Gesetzgeber und als vollziehende Gewalt – die zur nationalen Identität gehörenden Besonderheiten der Mitgliedstaaten zu achten hat, insbesondere die jeweilige regionale und kommunale Selbstverwaltung („autonomy"/„autonomie" im Urtext). *Die EU muss also nicht eine Art europäischen Durchschnitt von kommunaler Selbstverwaltung in Rechnung stellen, sondern sie muss in Bezug auf Deutschland die hier bestehende, stark ausgeprägte gemeindliche Selbstverwaltung achten und sicherstellen, dass diese Selbstverwaltung durch europäisches Handeln nicht angetastet wird.*

Damit muss – und das ist entscheidend – unter Umständen auch das Wettbewerbsprinzip zurücktreten, wenn anders die deutsche kommunale Selbstverwaltung nicht gewahrt werden kann. Wie Art. I der geplanten EU-Verfassung deutlich macht, basiert die Union nunmehr auf einer Reihe gemeinsamer Grundprinzipien, darunter z.B. auch dem Subsidiaritätsprinzip. Der freie Waren- und Dienstleistungsverkehr ist nicht übergeordneter Grundsatz, sondern steht neben den anderen Prinzipien, muss sich also gegebenenfalls Einschränkungen gefallen lassen.

Die konkreten Forderungen an die EU lauten:

Die EU muss die gewachsene deutsche Selbstverwaltung der Städte und Gemeinden respektieren und den Kommunen bei wichtigen örtlichen Dienstleistungen wie z.B. Wasserversorgung, ÖPNV, Entsorgung und ähnlichen Diensten die freie Wahl belassen, ob sie die Dienstleistung mit eigenen Unternehmen selbst erbringen oder ein drittes Unternehmen in Anspruch nehmen wollen. Nur im zweiten Fall kommt eine Ausschreibungspflicht infrage, doch sollte der Gemeinde ermöglicht werden, einen bewährten Partner weiter zu beauftragen. Sucht eine Gemeinde allerdings einen neuen, z.B. möglichst kostengünstigen Partner, dann darf es die Suche eines solchen Partners per Ausschreibung geben.

Das Inhouse-Prinzip darf keinesfalls eingeschränkt, sondern sollte im Gegenteil ausgeweitet werden auf mehrheitlich von der Kommune beherrschte Unternehmen, die überwiegend Dienstleistungen für die Bürger dieser Kommune erbringen. Nur mit einem großzügig interpretierten Inhouse-Prinzip haben die Städte und Gemeinden eine wirkliche Wahl, ob sie die Dienstleistungen selbst erbringen wollen oder nicht.

III. Forderungen an den deutschen Gesetzgeber

Der deutsche Gesetzgeber sollte in erster Linie dafür sorgen, dass die kommunalen Unternehmen ihrer Aufgabe gerecht werden und mit gleichen Chancen und Risiken wie andere Unternehmen am Wettbewerb teilnehmen können. Der Gesetzgeber, insbesondere der Bundesgesetzgeber, sollte die Möglichkeiten prüfen, von Art. 86 Abs. 2 EGV in Bezug auf kommunale Unternehmen künftig mehr Gebrauch zu machen. Besonders sollte der deutsche Gesetzgeber darauf achten, dass er den vom EuGH für eine wirksame Betrauung genannten Kriterien gerecht wird.

Vom Landesgesetzgeber ist in erster Linie zu fordern, das Gemeindewirtschaftsrecht im Sinne größerer Flexibilität der Gemeinden und ihrer Unternehmen zu modernisieren. Was im Einzelnen geschehen sollte, hat der Wissenschaftliche Beirat in einer Stellungnahme vom April/Mai 2001 verdeutlicht.[4] An diesen Forderungen wird festgehalten, und deren wichtigste seien noch einmal in Kurzfassung hervorgehoben:

- Den kommunalen Unternehmen soll eine bewegliche und effiziente Wirtschaftsführung ermöglicht werden.
- Die Gemeinden sollten im Wesentlichen selbst über ihr wirtschaftliches Engagement entscheiden.
- Die bisher in den Gemeindeordnungen enthaltenen Subsidiaritätsklauseln sollten für den Kernbereich der gemeindlichen Tätigkeit (Daseinsvorsorge) entfallen.
- Bei der Bindung der gemeindlichen Wirtschaftsbetätigung an den öffentlichen Zweck sollte es bleiben; dieser soll aber im Kernbereich der gemeindlichen Wirtschaftsbetätigung als gegeben angesehen werden.
- In liberalisierten Märkten darf kommunalen Unternehmen eine Beschränkung ihrer Tätigkeit auf das Gemeindegebiet nicht auferlegt werden.
- Den Gemeinden sollte die Wahl zwischen einer öffentlich-rechtlichen und einer privatrechtlichen Rechtsform offen stehen.

IV. Forderungen an die kommunalen Akteure

An die kommunalen Akteure selbst, also Bürgermeister, zuständige Beigeordnete, Kämmerer und nicht zuletzt die Vorstände der kommunalen Unternehmen, richtet sich die Forderung, alles nur irgend Mögliche für die Beibehaltung kommunaler Dienstleistungen in örtlicher Regie zu tun. Oben unter I. wurden die Gefahren aufgezeigt, die entstehen, wenn Gemeinden auf eigene Leistungserbringung verzichten und das Feld privaten, insbesondere privaten Großunternehmen überlassen. Es ist davor zu warnen, um kurzfristiger Einnahmeerzielung willen beispielsweise Stadt-

werke zu veräußern, weil damit jeder wirtschaftliche Einfluss auf die Art der Leistungserbringung schwindet und insbesondere durch vertragliche Abreden nicht immer wirksam gesichert werden kann. Die örtliche Erbringung kommunaler Dienstleistungen ist von unschätzbarem Wert für die Bürger und sollte deshalb aufrecht erhalten bleiben.

Positionspapier
des Wissenschaftlichen Beirats der Gesellschaft für öffentliche Wirtschaft
zu Public Private Partnership

Adressaten und Zielsetzung

Mit dem vorliegenden Positionspapier sollen die Akteure und Entscheidungsträger in Politik und Verwaltungen der Gebietskörperschaften, aber auch Berater und Finanzierungsträger für die Chancen, Risiken, Anwendungsfelder und Handlungsbedarfe von Public Private Partnership (PPP) sensibilisiert werden. Es geht darum, einerseits PPP und die hiermit verbundenen Potenziale sinnvoll für Innovationen und zur Förderung der Wettbewerbsfähigkeit der deutschen Gebietskörperschaften und Regionen zu nutzen, andererseits aber auch die Grenzen und Probleme von PPP nicht zu verkennen.

1. Ausgangssituation

(1) Die aktuelle – teilweise euphorische – Diskussion um Public Private Partnership vollzieht sich vor dem Hintergrund einer wachsenden Marktorientierung und Hinwendung zum Gewährleistungsstaat für bisher öffentlich wahrgenommene Aufgaben. Die Diskussion ist durch unterschiedliche Interessen und Einflussgrößen geprägt. Dominanter Einfluss für die wachsende Bedeutung von PPP ist die Finanzkrise der Gebietskörperschaften. Offen dabei ist die Frage, inwieweit es sich hierbei um eine dauerhafte neue Form öffentlicher Aufgabenwahrnehmung handelt oder nur um ein Übergangsstadium zur vollständigen Privatisierung. Unabhängig von den unterschiedlichen Einflussgrößen ist unverkennbar, dass PPP für die Erhaltung und Erneuerung der öffentlichen Infrastruktur zunehmend an Bedeutung gewinnt. Die klassischen Formen der Organisation und Finanzierung öffentlicher Aufgaben werden immer weniger realisierbar.

(2) Vor dem Hintergrund der Finanzkrise ist es ein weit verbreitetes Missverständnis, PPP sei ein neues Finanzierungsinstrument, mit dessen Hilfe auf Dauer die öffentlichen Haushalte entlastet werden können. Die von privaten Partnern häufig über komplizierte Vertragsstrukturen eingebrachten Finanzmittel haben in der Regel den Charakter einer Vor- oder Zwischenfinanzierung. PPP ist weder ein Instrument zur Lösung der Finanzprobleme der Gebietskörperschaften, noch kann PPP dazu dienen, die Politik in Deutschland vor einer notwendigen Umorientierung zu entlasten.

2. Inhaltliche Kennzeichnung

(3) PPP ist nicht klar definiert. Es handelt sich um einen unstrukturierten Sammelbegriff für unterschiedliche Formen der Zusammenarbeit von öffentlichen Einheiten mit privaten Wirtschaftssubjekten. Wesentliche Merkmale sind eine längerfristige Zusammenarbeit sowie ein aus der Art der Aufgabenwahrnehmung resultierender Abstimmungsbedarf im Zeitablauf. Von daher umfasst PPP sowohl die

klassische gemischtwirtschaftliche Unternehmung (Organisations-PPP/ Institutionelle PPP) als auch die Einbeziehung privater Unternehmen in zeitlich befristete Projekte und Aufgabenfelder (Projekt-PPP/Vertrags-PPP). Unter PPP können nur solche Kooperationsformen subsumiert werden, bei denen die Leistungen und Gegenleistungen der privaten und öffentlichen Partner nicht bereits mit Einrichtung der PPP klar definiert und festgelegt sind. Klassische Verträge zwischen öffentlichen und privaten Vertragspartnern stellen keine PPP dar. Allerdings ist auch hier eine Abgrenzung nicht immer trennscharf möglich. Soweit erreichbar, sollten die Leistungen und Gegenleistungen der Partner bei Vertragsabschluss klar vorgegeben werden.

(4) Bei der Organisations-PPP/Institutionellen PPP handelt es sich in der Regel um ein unbefristet angelegtes gemeinsames Betreiben eines Unternehmens zwecks einer dauerhaften Wahrnehmung einer bestimmten Aufgabe. Der Kooperations- und Koordinationsbedarf zwischen den Anteilseignern resultiert aus Anpassungsmaßnahmen an geänderte Umweltbedingungen im Zeitablauf, wie sie sich in jedem Unternehmen stellen. Es existiert eine – z.B. durch das GmbH-Gesetz und den Gesellschaftervertrag festgelegte – Kooperationsverfassung. Erfolgspotenziale müssen im Zeitablauf gemeinsam entwickelt und erarbeitet werden. Der Einsatz des öffentlichen Kapitals muss legitimiert und kontrolliert werden.

(5) Bei der Projekt-PPP/Vertrags-PPP geht es um eine Einbeziehung von Privaten in ein abgegrenztes öffentliches Projekt, das sich durchaus über einen längeren Zeitraum (z.B. 30 Jahre) erstrecken kann. Dabei besteht das Problem darin, dass bei Vertragsbeginn nicht sämtliche Leistungen und Kosten sowie Risiken eindeutig geregelt werden können (relationale Verträge). Bereits bei Vertragsabschluss besteht ein für beide Vertragspartner erkennbarer Koordinations- und Kooperationsbedarf während der Vertragslaufzeit. Von daher ist eine Festlegung der Kooperations- und Konfliktlösungsmechanismen bereits bei Vertragsabschluss notwendig.

3. Chancen und Risiken

(6) Die Chancen von PPP liegen darin, dass sich durch die Einbeziehung von Privaten eine bisher öffentlich erstellte Leistung effizienter erstellen lässt. Dies dürfte in der Regel dann der Fall sein, wenn bei einer Vertrags-PPP über den gesamten Lebenszyklus das Projekt geplant, finanziert, betrieben und erfolgsabhängig gesteuert wird. Ein besonderer Vorteil des Lebenszykluskonzepts resultiert daraus, dass sämtliche Kosten für eine bestimmte Leistung über die gesamte Projektlaufzeit erfasst und transparent gemacht werden.

(7) Die Effizienzvorteile Privater bei der Projektplanung und Projektrealisation erfordern nicht zwingend PPP-Konstruktionen. Sie lassen sich generell auch durch das Konzept des Generalunternehmers realisieren. Synergien und die Nutzung privater Kreativität durch PPP können aber besonders dann erreicht werden, wenn auch der Output und damit die Ressourcennutzung als variable Größe einbezogen wird. Dies kann etwa durch funktionale Ausschreibungen und/oder einen wettbewerblichen Dialog zwischen privaten Anbietern und öffentlichen Auftraggebern erreicht werden. Es ist zu vermuten, dass durch PPP leistungsfähigere Nutzungskonzepte etwa für Hochschulen, für Schulen oder für öffentliche

Freizeitanlagen erschlossen werden, die zu einer besseren kapazitätsmäßigen Auslastung und Verwendung der verfügbaren Gebäude und Anlagen führen.

(8) Mit PPP kann ein nicht zu unterschätzendes Innovations- und Managementpotenzial in die öffentlichen Verwaltungen transferiert werden. Zugleich führen PPP zu einer Art Wettbewerbsdruck gegenüber den weiterhin rein öffentlich erstellten Leistungen. PPP erfordert eine Risikoverteilung zwischen den beteiligten Partnern. Allerdings sollte nicht die Diskussion um die Risikoteilung im Vordergrund stehen, sondern die Vermeidung von Risiken. Geboten ist die Implementierung von Risikomanagementinformationssystemen einschließlich von Frühwarnsystemen zur Identifikation, Vermeidung und Handhabung unterschiedlicher Risiken. Die aktuelle Entwicklung ist auf diesem Gebiet noch ausgesprochen defizitär.

(9) Ein gravierendes Problem für erfolgreiche PPP besteht darin, dass die öffentliche Seite ihre Aufmerksamkeit auf die rechtliche Absicherung von PPP konzentrieren muss und weniger die Festlegung und die Kontrolle quantifizierbarer Ziele verfolgen kann. Demgegenüber kann sich der private Partner auf die Erreichung von Gewinn- bzw. Rentabilitätszielen konzentrieren.

(10) Die mit PPP möglicherweise verbundenen langfristig wirksamen Verpflichtungen und Folgewirkungen für die öffentliche Hand sind bei dem derzeitigen Rechnungswesen nicht erkennbar. So kann es sich bei PPP um eine verdeckte Erweiterung der Verschuldung der öffentlichen Gebietskörperschaften handeln. PPP kann den Intentionen der Maastricht-Kriterien zuwider laufen.

(11) Aufgrund der nicht für die gesamte Vertragslaufzeit eindeutig definierten Leistungen, Kosten und Risiken sowie der Komplexität von Vertragswerken ist bereits bei Vertragsabschluss ein systematisches Vertragsmanagement festzulegen. Es muss vermieden werden, dass PPP als komplexe und intransparente Konstrukte in Form vielschichtiger und interdependenter nicht mehr zu handhabender Vertragsverbünde entstehen.

4. Anwendungsfelder

(12) PPP können weitgehend bei allen öffentlichen Aufgabenfeldern zur Anwendung kommen. Die derzeitige Konzentration der Diskussion und praktischen Ausgestaltung von PPP auf öffentliche Bauprojekte (z.B. Autobahn, Schulgebäude, Tunnel, Justizvollzugsanstalten) ist zu eng, einseitig und interessenorientiert ausgerichtet. Potenziale von PPP liegen in gleichem Maße im Gesundheits-, Bildungs-, Sozial- und Kulturbereich. Vor allem sollten PPP-Lösungen für den Hochschulbereich, auf dem Gebiet von Forschung und Entwicklung sowie für E-Government im weitesten Sinne zur Anwendung kommen – Gebiete, die für die zukünftige Wettbewerbs- und Leistungsfähigkeit von entscheidender Bedeutung sind.

(13) Der Grundgedanke von PPP, Kooperationen zur Nutzung der Potenziale in einer Region unabhängig von den jeweiligen Eigentumsverhältnissen zu schaffen, sollte nicht nur auf Unternehmen und öffentliche Einheiten beschränkt werden. Vielmehr ist dieser Ansatz auch auf das bürgerliche Engagement auszudehnen, etwa auf eine Kooperation zwischen Vereinen und öffentlichen Einrichtungen. Erstes anschauliches Beispiel hierfür ist das Betreiben von Schwimmbädern.

5. Handlungsempfehlungen

(14) PPP erfordert unabdingbar vor Vertragsabschluss Transparenz und Festlegung der Zielsetzungen des öffentlichen und privaten Partners. Dabei ist zu beachten, dass der Private ein vergleichsweise operables Zielsystem verfolgt. Die öffentliche Hand sollte möglichst quantitativ und qualitativ die mit der PPP angestrebten Ziele fixieren.

(15) Für komplexe PPP-Konstruktionen sind ein systematisches Vertragscontrolling, ein Risikomanagementsystem und ein Frühwarnsystem einzurichten.

(16) Komplexe PPP-Konstruktionen erfordern mit Vertragsabschluss die Festlegung eines verbindlichen und leistungsfähigen Verfahrens zur Lösung von Konflikten während der Projektlaufzeit.

(17) Haushaltsrecht, Vergaberecht, Steuerrecht, Planungsrecht und Zuwendungsrecht sind an die Funktionsweisen und Erfordernisse von PPP anzupassen.

(18) Die durch das Grünbuch der EU-Kommission zu öffentlich-privaten Partnerschaften (ÖPP) angestoßene Diskussion um die Potenziale von PPP und die Frage eines EU-weiten Regelungsbedarfs sind zu unterstützen und zu fördern. Hierbei ist einerseits der Regelungsbedarf zu klären, andererseits die Institutionalisierung neuer bürokratischer Hemmnisse und Inflexibilitäten durch EU-Regelungen zu verhindern.

(19) Über bisherige Pilotprojekte und das Potenzial von PPP-Lösungen sollten möglichst bald empirische Daten ermittelt werden. Dies gilt insbesondere auch für Wirtschaftlichkeits- und Wirkungsvergleiche unterschiedlicher Formen und Regelungen. Insofern erfordert die PPP-Diskussion und Entwicklung eine fundierte wissenschaftliche Aufarbeitung. Hierfür müssen sowohl auf EU-Ebene als auch auf nationaler Ebene entsprechende Mittel bereit gestellt werden.

Berlin, 29. Juli 2004

Stellungnahme

des Wissenschaftlichen Beirats der Gesellschaft für öffentliche Wirtschaft zum Grünbuch der EU-Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vom 30. April 2004 (KOM [2004] 327)

Vorbemerkung

In Deutschland praktizieren die Gebietskörperschaften sowohl auf staatlicher als auch auf kommunaler Ebene eine Vielzahl sehr unterschiedlicher Formen von ÖPP. Dabei steht die Entwicklung auf diesem Gebiet häufig erst ganz am Anfang. Die Potenziale von ÖPP liegen nicht nur im die aktuelle Diskussion in Deutschland prägenden Bauwesen, sondern in fast allen gesellschaftlichen Bereichen. Hierzu gehören insbesondere Verkehr, Ver- und Entsorgung aber auch Kultur, Bildung, Gesundheit, Sicherheit, Freizeit u.a.m. Vor diesem Hintergrund begrüßt der Wissenschaftliche Beirat die mit dem Grünbuch von der EU-Kommission initiierte Intensivierung der Diskussion zu ÖPP auf nationaler und internationaler Ebene.

Allerdings wird das von der Kommission gewählte Verfahren und hier vor allem der sehr knappe Zeitrahmen (Stellungnahmen bis Ende Juli 2004) weder der von der EU angestrebten Förderung von ÖPP, noch dem Bedarf an fundierter Diskussion und Analyse dieses für die Zukunft ausgesprochen wichtigen Gestaltungsbereichs gerecht. Dieser Aspekt ist deshalb problematisch, weil in der bisherigen Diskussion wesentliche mit ÖPP verbundene ordnungspolitische und allokative Aspekte ausgeklammert worden sind. Der Wissenschaftliche Beirat nimmt nicht im Einzelnen zu den überwiegend auf die praktische Erfahrung ausgerichteten Fragen Stellung, sondern konzentriert sich in einer ersten Reaktion auf einige grundlegende mit dem Grünbuch angesprochene Problemfelder. Die Diskussion wird im Wissenschaftlichen Beirat über den im Grünbuch gesetzten Termin hinaus fortgesetzt; die Kommission wird über die Ergebnisse unterrichtet werden.

1. Differenzierung zwischen vertraglicher ÖPP (klassische öffentliche Auftragsvergabe) und institutioneller ÖPP (klassische gemischtwirtschaftliche Unternehmung)

Bei den öffentlich-privaten Partnerschaften ist, wie dies auch in dem Grünbuch geschieht, zu unterscheiden zwischen vertraglicher ÖPP und institutioneller ÖPP.

Die beiden Kategorien von ÖPP weisen unterschiedliche Merkmale und Problemfelder auf. Die **vertragliche ÖPP** ist ein über den Markt organisiertes Tauschmodell. Der Kooperationsbedarf ergibt sich daraus, dass bei den jeweils zugrunde gelegten Projekten mit dem Vertragsabschluss in der Regel nicht vollständig die Kosten, Leistungen und Risiken der Vertragspartner definiert werden können. Im Zeitablauf bedarf es einer kontinuierlichen Abstimmung, um dieses Problem zu lösen. Dabei spielt bei Großprojekten auch die Komplexität von Vertragsverbünden eine Rolle. Vertragliche ÖPP im Sinne dieses Tauschmodells finden Anwendung bei Beschaffungsvorgängen der öffentlichen Hand. Entsprechend den EU-Vergaberichtlinien handelt es sich hierbei durchweg um die Vergabe ausschreibungspflichtiger öffentlicher Aufträge. Dritte werden mit der Erstellung einzelner Leistungen beauftragt und erhalten hierfür ein entsprechendes Entgelt.

Bei der **institutionellen ÖPP** handelt es sich nicht um ein Tauschmodell, sondern um ein Poolmodell. Der private und der öffentliche Partner bringen in der Regel gemeinsame Ressourcen in eine gemeinsame Kapitalgesellschaft ein. Der Kooperationsbedarf resultiert aus der Steuerung der gepoolten Ressourcen und aus der Verwendung der damit erzielten Ergebnisse. Anders als die vertragliche ÖPP – als Tauschmodell – stellt die institutionelle ÖPP nicht einen Beschaffungsakt dar, sondern eine Gestaltungsmaßnahme zur organisatorischen und ressourcenmäßigen Einbindung eines privaten Partners.

Die Kooperations-, Steuerungs- und Kontrollprobleme sind in beiden Kategorien sehr unterschiedlich.

Berücksichtigt man die Entstehungs- und Funktionszusammenhänge von ÖPP, hauptsächlich auf kommunaler Ebene, so stellt sich in der Tat die in dem Grünbuch aufgeworfene Frage, ob und wann zweckmäßigerweise die Einbindung eines privaten Partners mit seinen Ressourcen öffentlich ausgeschrieben werden soll. Hierbei ist insbesondere zu berücksichtigen, dass institutionelle ÖPP sich gerade nicht nur etwa auf große netzgebundene Industriezweige als private Partner der öffentlichen Hand darstellen. Vielmehr entstehen vor allem auf kommunaler Ebene auch durch spezifische Problemsituationen und informelle Kontakte sukzessive formale institutionelle ÖPP, deren Initiativen nicht selten bei dem privaten Partner liegen. Eine generelle Ausschreibung der Einrichtung institutioneller ÖPP könnte in derartigen Fällen dazu führen, dass entsprechende Initiativen beeinträchtigt werden, d.h. der angestrebten Förderung von institutionellen ÖPP gerade entgegen wirken.

Für die zukünftige Diskussion und Entwicklung ist es notwendig, wesentlich stärker zwischen den einzelnen Kategorien von ÖPP zu unterscheiden und die Entstehungs- und Funktionsbedingungen einzelner ÖPP innerhalb der genannten Kategorien einzubeziehen und zu klären.

2. Wettbewerbsordnung

Die Kommission legt in dem Grünbuch ihren Überlegungen ein punktuelles und statisches Wettbewerbsverständnis zugrunde. Im Wesentlichen geht es dabei um die Beseitigung von Markteintrittsbarrieren. Die Entwicklung des Marktes im Zeitablauf, etwa nach Einrichtung einer institutionellen ÖPP, findet hingegen kaum Beachtung. So weisen die Märkte in den Sektoren der Dienstleistungen von allgemeinem wirtschaftlichen Interesse überwiegend starke Tendenzen zur Oligopolisierung auf. Für die Tätigkeit dieser Oligopole gilt unter Kriterien des Wettbewerbs grundsätzlich das Konzept des funktionsfähigen Wettbewerbs. Allerdings tendieren überregionale Oligopole im Zeitablauf zu regionalen Monopolen, d.h. der Preis ist nach Markteintritt kein Wettbewerbsparameter mehr. Hier stellt sich dann das Problem, dass es innerhalb der Region/Gebietskörperschaft für die öffentliche Hand keinen Regelungsmechanismus zur Vermeidung der mit regionalen Monopolen verbundenen allokativen Ineffizienzen gibt.

Vernachlässigt wird in der Diskussion bisher auch, dass Wettbewerb und Kooperationen zwei Seiten ein und derselben Medaille sind. Dies ist für den privatwirtschaftlichen Bereich hinreichend bekannt und schlägt sich in den so genannten strategischen Allianzen als Kooperationsstrategien nieder, die zunehmend an Bedeutung gewinnen. Der private Akteur sucht sich ganz gezielt für seine strategische Allianz einen Partner, der für die zukünftige Unternehmensentwicklung am geeignetsten erscheint. Häufig handelt es sich hierbei um gewachsene strategische Allianzen. Für den öffentlichen Sektor bedeutet dies, dass ihm eine durchaus gleichartige Vorgehensweise wie dem privatwirtschaftlichen Sektor ermöglicht werden muss.

Zudem ist im Zusammenhang mit der Wettbewerbsordnung und der Bildung großer überregionaler Oligopole zu fragen, inwieweit die Wettbewerbsordnung mit der im Konventsentwurf der europäischen Verfassung explizit enthaltenen Stärkung des Subsidiaritätsprinzips und der Gewährleistung der kommunalen Selbstverwaltung in Einklang steht.

3. ÖPP und generelle Reformstrategien des öffentlichen Sektors

Die Entwicklung und Förderung von ÖPP – hier speziell die institutionelle ÖPP – muss im Gesamtkontext mit den Strategien zur Modernisierung des öffentlichen Sektors gesehen werden. Die derzeitigen, insgesamt positiven Reformprozesse dürfen nicht durch EU-weite Regulierungen unterlaufen werden. Von Bedeutung ist in diesem Zusammenhang insbesondere die Dezentralisierung öffentlicher Aufgaben zwecks Schaffung rechtlich selbstständiger Aufgabenträger, denen die Kosten und Leistungen der Aufgabenwahrnehmung klar zugerechnet werden können. Die Verlagerung von Aufgaben auf dezentrale öffentliche Einheiten sowie die Kooperationen und Zusammenschlüsse auf überwiegend öffentliche Einheiten sollte nicht einer generellen Ausschreibungspflicht unterworfen werden.

4. ÖPP und Maastricht-Kriterien

Vor dem Hintergrund der Finanzkrise ist es ein weit verbreitetes Missverständnis, mit Hilfe von PPP ließen sich die öffentlichen Haushalte auf Dauer entlasten oder möglicherweise sanieren. Die von privaten Partnern häufig in ÖPP eingebrachten Finanzmittel haben in der Regel den Charakter einer Vor- oder Zwischenfinanzierung. Von daher muss in der Diskussion stärker deutlich gemacht werden, dass ÖPP weder ein Instrument zur Lösung der Finanzprobleme und Verschuldung der Gebietskörperschaften in der EU ist, noch ÖPP dazu dienen können, in der EU im allgemeinen und in Deutschland im besonderen die Maastricht-Kriterien zu unterlaufen oder weiter auszudünnen. Im Falle kreditähnlicher Geschäfte von ÖPP ist diesem Sachverhalt im Haushalts- und Rechnungswesen hinreichend transparent Rechnung zu tragen.

5. ÖPP – Zentralisierung und Bürokratisierung

Die bisherige Flexiblität und Vielfalt, mit denen die Gebietskörperschaften ÖPP zur Anwendung bringen können, sollte erhalten und ausgebaut werden. Aus diesem Grund sind anfängliche Bestrebungen auf nationaler Ebene in Deutschland, ein einheitliches Kooperationsrecht zu schaffen, nicht weiter verfolgt worden. Der Wissenschaftliche Beirat sieht von daher in einer einheitlichen EU-weiten ÖPP-Regulierung die Tendenz einer Überregulierung und Bürokratisierung auf diesem Gebiet. Bei dem derzeitigen Erfahrungs- und Diskussionsstand besteht die Gefahr, dass die bisherigen Förderungen und erweiterten Anwendungen von ÖPP, speziell der institutionellen ÖPP, durch ein entsprechendes einheitliches Regulierungswerk eher beeinträchtigt denn ausgeweitet würden.

6. Empirische Datenbasis über Potenziale und Reglungsbedarfe

Über bisherige Erfahrungen und über das Potenzial von ÖPP-Lösungen liegen bisher nur geringe und ausgesprochen zufallsbezogene Informationen vor. Von daher bedarf die ÖPP-Diskussion und Entwicklung einer fundierten wissenschaftlichen Aufarbeitung. Hierfür sollten sowohl auf EU-Ebene als auch auf nationaler Ebene entsprechende Mittel ab sofort bereitgestellt werden.

Stellungnahme der Aktionsgemeinschaft Wirtschaftlicher Mittelstand (AWM) zum Grünbuch der Europäischen Kommission zu Öffentlich-Privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Aktionsgemeinschaft Wirtschaftlicher Mittelstand (AWM), Universitätsstraße 2 – 3a, 10117 Berlin, Tel: 0049.30.2888070, Fax: 0049.30.28880710, mail: info@awm-online.de

Allgemein

Die AWM vertritt als Bundesverband der Dienstleistungswirtschaft die Interessen von 100.000 deutschen mittelständischen Unternehmen, die in 24 Bundesverbänden und 73 Regionalverbänden organisiert sind.

Aus der Sicht des deutschen Mittelstandes müssen bei der Thematik Öffentlich-Private Partnerschaften zwei Teilaspekte betrachtet werden. Einerseits ist es wünschenswert, daß die öffentliche Hand verstärkt auf die Privatwirtschaft setzt, um ihre Aufgaben zu erfüllen. Auf der anderen Seite engagieren sich vielfach kommunale Unternehmen oder Unternehmen, an denen die Kommunen beteiligt sind, auf dem Terrain der Privatwirtschaft und das weit über die Daseinsvorsorge hinaus. Diese Unternehmen sind unter anderem durch bessere Refinanzierungsmöglichkeiten im Vorteil gegenüber der Privatwirtschaft. Zudem haben diese Unternehmen kein Insolvenzrisiko. Die Befürchtung ist, daß sie ihre privatwirtschaftliche Geschäftstätigkeiten noch stärker ausweiten. Dabei besteht in Deutschland grundsätzlich eine Nachrangigkeit von privatwirtschaftlich tätigen Unternehmen der öffentlichen Hand, wohingegen im europäischen Vertrag eine Gleichberechtigung von öffentlichen und privaten Unternehmen festgelegt wurde.

Ein Beispiel für die privatwirtschaftliche Betätigung der öffentlichen Hand in Deutschland ist die Gesellschaft für Entwicklung, Beschaffung und Betrieb mbH (gebb), eine Öffentlich-Privates Partnerschaftsprojekt der Bundeswehr. Die gebb beabsichtigt, daß die von ihr gegründeten Unternehmen ihre Dienstleistungen nicht nur der Bundeswehr sondern auch verstärkt privaten Marktteilnehmern anbieten.

In Deutschland fehlt weitgehend die Möglichkeit für die Privatwirtschaft, um gegen umstrittene kommunalwirtschaftliche Aktivitäten vorzugehen. Über das Wettbewerbsrecht ist dieses nur unter ganz besonderen Vorraussetzungen möglich. Der Bundesgerichtshof hat jedoch eine diesbezügliche Klage gegen die Privatwirtschaft entschieden. Der Weg über das öffentliche Recht war bei gleich gelagerten

Fällen auch nicht erfolgreich. Das hat zur Folge, daß die Kommunen die Vorgaben ihrer Gemeindeordnungen ignorieren können. Vor diesem Hintergrund ist der Mittelstand bei institutionalisierten ÖPP´s sehr skeptisch.

Zu den Fragen

Es wird eine Auswahl aus den von der Kommission gestellten Fragen beantwortet.

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

In Deutschland läßt die Wahlfreiheit der Verwaltung zahlreiche Gestaltungsmöglichkeiten zu. Spezifische Rahmenbedingungen gibt es nicht.

3. Sehen sie in bezug auf diese Aufträge (ÖPP auf Vertragsbasis) neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie.

Es gibt Bereiche in denen eine reine Preis- und Wirtschaftlichkeitsbetrachtung wenig Sinn macht, zum Beispiel wenn verfassungsrechtliche Vorgaben zu berücksichtigen sind. Ein Beispiel ist die Einbeziehung privater Sicherheitsdienste für die Leistungserbringung im Bereich der Sicherheitsgewährleistung.

Ein weiterer Aspekt beim Vergabeverfahren, der aus Sicht des deutschen Mittelstandes problematisch erscheint, ist die Gewährleistung der Chancengleichheit von privatwirtschaftlichen Unternehmen und Unternehmen, an denen die öffentliche Hand beteiligt ist. Es läßt sich nicht unterbinden, daß zwischen der Vergabestelle und dem Unternehmen der Kommune ein Informationsaustausch stattfindet. Zudem ist es auch im Interesse der Kommune, daß ihr eigenes Unternehmen, den Auftrag erhält, weil damit Einnahmen erzielt werden, von denen die Kommune profitiert. Da für diese Unternehmen die Möglichkeit einer Insolvenz nicht berücksichtigt werden muß, können sich die Kommunen wirtschaftlich betätigen, ohne das unternehmerische Risiko zu berücksichtigen. In diesem Zusammenhang spielt auch die sehr schlechte finanzielle Verfassung vieler Kommunen in Deutschland eine wichtige Rolle.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Die Konzessionsvergabe ist ein neues gemeinschaftsrechtliches Institut, das nur rudimentär – etwa bei Baukonzessionen – angesprochen wird. Es ist dringend erforderlich, das Vergaberecht der Konzessionen nicht nur aus Gründen der Rechtsklarheit zu normieren. Denn voraussichtlich wird diese Handlungsform bei einem weiteren Rückzug des Staates von staatlichen Aufgaben eine größere Bedeutung gewinnen. Deshalb sollten die Verfahrensstandards abstrakt gemeinschaftsweit festgelegt werden, zumal auch Beleihungskonzessionen denkbar sind.

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsverfahren der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Verfahren als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Ein einheitliches Regelwerk senkt die Transaktionskosten für Unternehmen, die sich um ÖPP-Projekte in anderen europäischen Ländern bewerben. Hinzu kommt ein Transparenzgewinn. Dadurch steigt die Anzahl der mittelständischen Unternehmen für die es in Frage kommt, sich außerhalb ihres Herkunftslandes wirtschaftlich zu betätigen.

Ein weiterer Vorteil eines einheitlichen Regelwerks ist, das es leichter fällt, Benchmarks in Bezug auf erfolgreiche Projekte zu erarbeiten.

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Vorstoß gegen das Diskriminierungsverbot gewährleistet werden?

Jede ÖPP muß den selben Rechtsregeln unterliegen. Es ist kein Sachgesichtspunkt ersichtlich, weshalb privat initiierte ÖPP unterschiedlich behandelt werden sollen, weil nicht die Initiative für das Rechtsregime maßgeblich sein kann.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, daß ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder daß der Anwendungsbereich erweitert wird?

Die Vergabe von Unteraufträgen ist ein typisches Instrument zur Abarbeitung öffentlicher Aufträge. Da hiermit besondere Risiken für alle Beteiligten verbunden sind, ist eine ausdrückliche Normierung der damit verbundenen Rechtsverhältnisse wünschenswert. Dies ist auch deshalb angebracht, weil Unteraufträge häufig an mittelständische Unternehmen weitergeleitet werden, die gemeinschaftsrechtlich besonders förderungswürdig sind.

Jedoch ist mit einer gemeinschaftsrechtlichen Regelung das Risiko verbunden, daß darüber zusätzliche Bürokratie nach Deutschland hereingetragen wird. Dies muß aus Sicht der kleinen und mittleren Unternehmen abgelehnt werden, weil für diese Unternehmen auf Grund der Größenverhältnisse bürokratische Anforderungen einen sehr viel höheren Aufwand verursachen als bei Großunternehmen.

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Ja, wobei es auch möglich ist, daß die Vergabe von Unteraufträgen in einem allgemeinen Regelwerk zu ÖPP Berücksichtigung finden.

19. Halten sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in bezug auf den Wettbewerb zwischen potentiell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nicht, warum nicht?

Grundsätzlich lehnt die AWM eine Ausweitung der institutionellen Verflechtung der öffentliche Hand mit der Privatwirtschaft aus Wettbewerbserwägungen ab. Insbesondere für mittelständische Unternehmen hat die wirtschaftliche Betätigung der öffentlichen Hand häufig zur Folge, daß diese aus den betroffenen Märkten herausgedrängt werden.

Da in Deutschland die privatwirtschaftliche Betätigung Vorrang vor der Tätigkeit der öffentlichen Hand hat, im Gegensatz zum Europäischen Vertrag, in dem die Gleichberechtigung von öffentlichen und privaten Unternehmen festgelegt ist, lehnt die AWM eine Initiative auf Gemeinschaftsebene ab.

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Es wäre sinnvoll, daß sich die EU auch außerhalb des Vergaberechts verstärkt für ÖPP´s einsetzen und eine Rahmenrichtlinie zu dieser Thematik verabschieden würde. Auf diese Weise könnten nationale, regionale und lokale Bedenken überwunden bzw. gemildert werden. Denn das Rechtsinstitut ÖPP ist noch nicht allgemein bekannt und die Vorteile einer Zusammenarbeit sind noch nicht überzeugend vermittelt worden. Insoweit besteht eine legislative Verantwortung der EU, die ÖPP als Binnenmarktkonzept zu etablieren und besser zu positionieren.

22. Denken Sie daß es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedsstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Angesichts der Neuartigkeit von ÖPP, der rechtlichen Unsicherheit und der fehlenden praktischen Erfahrungen ist es sehr hilfreich, wenn ein Netzwerk aufgebaut wird und ein Gedankenaustausch stattfindet.

Berlin, 30. Juli 2004

DIE DEUTSCHE
BAUINDUSTRIE

Stellungnahme

des Hauptverbandes der Deutschen Bauindustrie

zum Fragenkatalog im Grünbuch

der Kommission der Europäischen Gemeinschaften

zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

(Fertigstellung 29. Juli 2004)

Frage 1:
Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Der Hauptverband sieht im Baubereich vor allem drei **Anwendungsfelder** für ÖPP-Modelle:

- im **Verkehrswegebau**,
- im **öffentlichen Hochbau**,
- beim Bau von **Ver- und Entsorgungseinrichtungen**.

Konzessionsmodelle in dem im ÖPP-Grünbuch verwendeten Sinne gibt es derzeit

- im **Verkehrswegebau** auf der Grundlage des Fernstraßenbauprivatfinanzierungsgesetzes (F-Modell),
- im **öffentlichen Hochbau** im Bereich der Realisierung kommunaler Parkhäuser.

PFI- oder **Betreiber-Modelle** im Sinne des ÖPP-Grünbuchs finden sich

- im **Verkehrswegebau** als Betreibermodelle nach dem privatwirtschaftlichen Ausbauprogramm der Bundesregierung (A-Modell) und als Funktionsbauverträge,

- im **öffentlichen Hochbau** in verschiedenen Vertragsmodellen wie

  - PPP-Erwerbermodell (Mietkaufvertrag)
  - PPP-FMLeasing-Modell (Leasingvertrag),
  - PPP-Vermietungsmodell (Mietvertrag),
  - PPP-Inhabermodell (Nutzungsüberlassungsvertrag),
  - PPP-Contractingmodell.

- im **Umweltschutzbau** (Niedersächsisches Betreibermodell)

Spezifische gesetzliche Regelungen für ÖPP allgemein existieren in Deutschland bisher nicht. Es gelten aber selbstverständlich die allgemeinen Regelungen des Vergaberechts, Zivilrechts, öffentlichen Rechts etc.. Die Vergabe von **Baukonzessionen** ist z.B. in der VOB/A geregelt.

Für das **F-Modell** sind spezifische gesetzliche Rahmenbedingungen im **Fernstraßenbauprivatfinanzierungsgesetz** geschaffen worden. Für das **F-Modell** wie auch für das **A-Modell** gibt es darüber hinaus **Musterkonzessionsverträge** und **Mustervergabebedingungen**.

Eine Analyse des Rechtsrahmens und praxisorientierte Leitlinien für ÖPP-Vergaben im Hochbau gibt auch das Gutachten „PPP im öffentlichen Hochbau“, das von einem Beraterkonsortium um Freshfields Bruckhaus Deringer und PriceWaterhouseCoopers im Auftrag des Bundes, der Bundesländer und der kommunalen Spitzenverbände sowie der Spitzenverbände der Bau- und Kreditwirtschaft erstellt und im September 2003 vorgelegt wurde.

Frage 2:
Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge im Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleich-

zeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Die deutsche Bauindustrie ist mit Blick auf die hohe Komplexität und die hohen Angebotskosten in hohem Maße an einem rechtssicheren Verfahren für die Ausschreibung und Vergabe von ÖPP-Projekten interessiert.

Die Erfahrungen mit ersten ÖPP-Projekten in der Bundesrepublik Deutschland haben gezeigt, dass mit dem Verhandlungsverfahren schon jetzt ein Vergabeverfahren existiert, mit dessen Hilfe Ausschreibung und Vergabe von ÖPP-Projekten rechtssicher und flexibel strukturiert werden können.

Mit dem wettbewerblichen Dialog wird den öffentlichen Auftraggebern nunmehr ein Verfahren an die Hand gegeben, das sich hinsichtlich seiner Verfahrensvoraussetzungen – vorbehaltlich der Klärung der weiter unten aufgeworfenen Fragen – ganz besonders für ÖPP-Projekte eignen könnte, insbesondere wenn es die Gefahr der unzulässigen Auswahl des Vergabeverfahrens und damit die Angreifbarkeit des Vergabeverfahrens vermindert.

Durch ein solches Verfahren könnte das Ziel von ÖPP gefördert werden, innovative und kreative Lösungen unter Beachtung des Bedarfs des Auftraggebers und unter gleichzeitiger Nutzung des Innovationspotentials der beteiligten Unternehmen zu finden.

Zur abschließenden Bewertung des neuen Vergabeverfahrens ergibt sich aus Sicht der Bauindustrie jedoch noch ein erheblicher Aufklärungs- bzw. Präzisierungsbedarf:

1. Anwendungsbereich des wettbewerblichen Dialogs

Für uns ist es nach wie vor fraglich, ob die in Deutschland üblichen ÖPP-Projekte im Verkehrswegebau, öffentlichen Hochbau und Umweltschutzbau die in Präambel 31 der Erwägungsgründe zu der Richtlinie 2004/18/EG niedergelegten Voraussetzungen für die Einleitung eines wettbewerblichen Dialogs erfüllen:

- Was ist unter der **besonderen Komplexität** eines Vorhabens zu verstehen?
- Was ist unter der **objektiven Unmöglichkeit** des öffentlichen Auftraggebers**, die Mittel zu bestimmen**, die seinen Bedürfnissen gerecht werden können, zu verstehen?

- Was ist unter der **objektiven Unmöglichkeit** eines öffentlichen Auftraggebers, zu beurteilen, was der Markt an **technischen bzw. finanziellen/rechtlichen Lösungen** bieten kann, zu verstehen?

Sind die Anforderungen sehr streng i.S. eines „letzten Mittels" auszulegen, reduziert sich damit der Anwendungsbereich des wettbewerblichen Dialogs auf nur ganz wenige ÖPP-Projekte mit außergewöhnlichem Innovationsbedarf. Das wäre angesichts des auch bei ÖPP-Projekten allgemein bestehenden Bedürfnisses nach Flexibilität und Innovationsoffenheit im Vergabeverfahren für die Entwicklung von ÖPP hinderlich.

Der Hauptverband der Deutschen Bauindustrie begrüßt deshalb vor diesem Hintergrund die von der Kommission angekündigte Absicht, den Anwendungsbereich des wettbewerblichen Dialogs durch eine Mitteilung zu präzisieren. Der Hauptverband mahnt dringend an, den Anwendungsbereich des wettbewerblichen Dialogs dabei so weit wie möglich zu fassen, um dieses Verfahren für die Vergabe von ÖPP-Vorhaben offen zu halten.

2. Beschreibung des Verfahrens in Art. 29

Für den Hauptverband ist es von größtem Interesse, dass die EU-Richtlinie mit der Einführung des wettbewerblichen Dialogs ein neues Verfahren für öffentliche Aufträge schafft, die im Wege eines offenen oder nicht offenen Verfahrens nicht vergeben werden können. Dies ist in der Regel bei ÖPP-Projekten der Fall.

Die deutsche Bauindustrie geht davon aus, dass das in Art. 29 implizit enthaltene dreistufige Verfahren

- **Teilnahmewettbewerb** (Abs. 2),
- **Dialogphase** (Abs. 3 bis 5),
- **Angebotsphase** (Abs. 6)

eine geeignete Strukturierung des Vergabeprozesses darstellt.

Voraussetzung dafür ist jedoch, dass die **Dialogphase**

- bereits auf der Grundlage von **Lösungskonzepten im Sinne von indikativen Angeboten** geführt wird,

- in der **bilateralen Erörterung dieser Lösungskonzepte** zwischen dem öffentlichen Auftraggeber und einzelnen Bieter (und nicht der gemeinsamen Diskussion i.S. von Bieterkonferenzen) besteht.

Nach Art. 29 Abs. 6 soll der Auftraggeber nach Abschluss des Dialoges die Teilnehmer auffordern, "auf der Grundlage der eingereichten und in der Dialogphase näher ausgeführten Lösungen ihr endgültiges Angebot einzureichen". Dieser Wortlaut könnte entweder bedeuten, dass

- jeder Bieter sein endgültiges Angebot auf der Basis seines (ggf. während des Dialogs modifizierten) Lösungsansatzes abgeben soll oder aber
- alle Bieter auf der Grundlage der Lösung eines Bieters, die sich als die beste herausgestellt hat, anbieten.

Sollte für die endgültigen Angebote aller Teilnehmer eine Lösung zur Grundlage gemacht werden, ergeben sich u.E. erhebliche Probleme mit dem Geheimnisschutz für den Bieter, der diese Lösung ursprünglich vorgeschlagen hat. U.E. muss sichergestellt werden, dass

- die **Weitergabe von Lösungskonzepten** eines Bieters an konkurrierende Bieter durch den öffentlichen Auftraggeber unterbleibt,
- die **Zustimmung zur Weitergabe von Lösungsvorschlägen** oder vertraulichen Informationen nicht durch generelle Klauseln in den Vergabeunterlagen erzwungen wird.

Der **Schutz geistigen Eigentums** muss über die Dialogphase hinaus auch **für die Angebotsphase** gemäß Abs. 6 gelten. Der Hauptverband ist davon überzeugt, dass der wettbewerbliche Dialog nur dann zu einem erfolgreichen Verfahren entwickelt werden kann, wenn der Schutz geistigen Eigentums sichergestellt ist. Unseres Erachtens liegt das sowohl im Interesse der Bieter, die erhebliche Kosten in die Entwicklung innovativer Konzepte stecken müssen, als auch im Interesse der öffentlichen Auftraggeber, die solche innovativen Lösungskonzepte nur dann erwarten können, wenn der Schutz der Konzepte und Ideen des einzelnen Bieters sichergestellt ist.

Soll aber jeder Bieter auf der Basis seines eigenen Lösungskonzeptes ein endgültiges Angebot erstellen, kann u.U. die Vergleichbarkeit der einzelnen Angebote Probleme bereiten. Von entscheidender Bedeutung ist insofern, dass der Auftraggeber alle Teilnehmer in der gleichen Weise über das Projekt und die politischen, rechtlichen, technischen sowie wirtschaftlichen Rahmenbedingungen informiert und seine **Eckpunkte und Mindest-**

anforderungen („KO-Kriterien“) diskriminierungsfrei festlegt. Mindestanforderungen („KO-Kriterien“) sollten jedoch nur in dem unbedingt erforderlichen Maß gesetzt werden, um dem Innovationspotential der Teilnehmer keine unnötigen Schranken zu setzen. Ein fairer Verfahrensablauf scheint zudem nur denkbar, wenn die Teilnehmer rechtzeitig umfassend und ausführlich über die **Zuschlagskriterien und ihre Gewichtung informiert** werden.

Nach Art. 29 Abs. 8 sollen die Bieter nur optional (nach Wahl des Auftraggebers) eine **Entschädigungszahlung** erhalten. Nach unseren Erfahrungen dürfte das Fehlen einer Entschädigungszahlung jedoch die Motivation der Bieter dämpfen, tatsächlich mit großem Aufwand eine innovative Lösung für ein komplexes Projekt zu entwickeln. Wenn die Bieter zudem fürchten müssen, dass ihr aufwendig erstelltes Lösungskonzept auch den anderen Teilnehmern offengelegt wird, dürfte sich der Kreis der interessierten Unternehmen sehr verengen.

Nach Einreichung der endgültigen Angebote sollen nach Art. 29 Abs. 7 nur noch in engem Rahmen **Änderungen der Angebote** zulässig sein, um eine Verfälschung des Wettbewerbs und die Diskriminierung einzelner Bieter zu verhindern. Allerdings muss nach unserer praktischen Erfahrung auch eine gewisse Flexibilität gewahrt bleiben, um möglicherweise erst in diesem (verbindlicheren) Stadium zu klärende Inhalte (insbes. im Hinblick auf die Finanzierungskonditionen der finanzierenden Banken) einbeziehen zu können. Nach bisheriger Erfahrung sind die Kreditinstitute regelmäßig zu vertretbaren Bedingungen erst in der letzten Phase des Verfahrens bereit, feste Finanzierungskonditionen anzubieten und die für die Fremdkapitalgewinnung notwendigen Prüfungen vorzunehmen. Die Kommission sollte insofern eine möglichst weite Auslegung der noch zulässigen „Feinabstimmungen“ vorziehen, um die Finanzierbarkeit der ÖPP-Vorhaben („Bankability“) nicht in Frage zu stellen und die Transaktionskosten für die Bieter nicht unnötig in die Höhe zu treiben.

Wenn diese Voraussetzungen erfüllt werden, kann sich der Hauptverband der Deutschen Bauindustrie den wettbewerblichen Dialog für ÖPP-Projekte als geeignetes Verfahren vorstellen.

Frage 3:
Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Bei ÖPP-Projekten handelt es sich in der Regel um Aufträge, die Bau-, Liefer- und Dienstleistungskomponenten enthalten. Da insbesondere Baukonzessionen dem Vergaberechtsregime unterliegen, Dienstleistungskonzessionen hingegen nicht, hat die Ermittlung der im konkreten Fall anwendbaren Vorschriften entscheidende Bedeutung.

Präzisierungsbedarf sieht der Hauptverband hier vor allem bezüglich der Kriterien für die **Bestimmung des Schwerpunkts**, da die vom Europäischen Gerichtshof entwickelte Schwerpunkttheorie nicht in allen Fällen zu eindeutigen Lösungen führt.

Der Hauptverband betont jedoch, dass diese Unschärfe bislang in der Praxis nicht zu einer ernsten Behinderung von ÖPP-Projekten geführt hat.

Frage 4:
Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Die Unternehmen der deutschen Bauindustrie haben in den letzten Jahren Erfahrungen mit der Ausschreibung von vier Betreibermodellen nach dem Fernstraßenbauprivatfinanzierungsgesetz sammeln können (s. Anlage).

Die Auswertung der im Rahmen dieser Verfahren gemachten Erfahrungen hat aus Sicht des Hauptverbandes den folgenden Fortschreibungsbedarf für Ausschreibungs- und Vergabebedingungen bei der Vergabe von Konzessionsmodellen ergeben:

1. Die **Qualität der vorgeschalteten Machbarkeitsstudien** sollte verbessert werden, um in den Vergabeunterlagen marktgerechte Projektbedingungen festlegen zu können.

2. Die **beschränkte Ausschreibung/das nicht offene Verfahren** erscheint für Konzessionsmodelle im Fernstraßenbereich (z.B. die sog. F-Modelle) **ungeeignet**, da häufig Verhandlungsbedarf bzgl. der Risikoverteilung besteht (siehe Vergabeverfahren zur Vergabe einer Baukonzession für eine neue Straßenanbindung der Insel Rügen - „Strelasundquerung“). Speziell wenn ein förmliches Verfahren mit Verhandlungsverbot in Kombination mit nicht marktgerechten Anforderungen in der Leistungsbeschreibung (bzgl. der prognostizierten tatsächlichen Nutzung des Bauwerks) auftritt, ist ein Scheitern des Verfahrens sehr wahrscheinlich. Nach unserer Erfahrung wird dann das (vorher-

sehbare) Scheitern von ÖPP-Konzessionsvergaben, die ohne ordnungsgemäße Vorbereitung in Verfahren ohne Verhandlungsmöglichkeiten ausgeschrieben werden, z.T. als Argument gegen die Effizienz und Realisierbarkeit einer ÖPP-Struktur für das betreffende Projekt missbraucht.

3. Auftraggeber sollten **mehr Ideenwettbewerb** zulassen, um das Innovationspotential der freien Wirtschaft effizient nutzen zu können.

4. Die **steuerlichen Rahmenbedingungen** müssen geklärt werden; Doppelbesteuerung sollte vermieden werden.

5. **Planfeststellungsbeschlüsse** sollten, insbesondere mit Blick auf die Einhaltung von Umweltschutzrichtlinien sorgfältiger vorbereitet werden (Beispiel: Bauvorhaben Straßenbrücke „Hochmoselquerung“).

Darüber hinaus neigen einige öffentlichen Auftraggeber im öffentlichen Hochbau dazu, im Interesse einer besseren Vergleichbarkeit der Angebote, die **Abgabe von Nebenangeboten** zu begrenzen oder ganz auszuschließen. Das führt zu einer Einschränkung des Innovationspotentials und der Flexibilität, die für die Erzielung von Effizienzvorteilen durch ÖPP entscheidend sind.

Frage 5:
Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Hinweise auf eine Diskriminierung deutscher Unternehmen im europäischen Binnenmarkt liegen uns bislang nicht vor.

Frage 6:
Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Siehe Antwort auf Frage 7.

Frage 7:

Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Eine eigenständige ÖPP-Vergaberichtlinie ist aus unserer Sicht zum gegenwärtigen Zeitpunkt nicht notwendig.

Frage 8:

Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

vgl. unter Frage 9.

Frage 9:

Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden.

Nach den uns vorliegenden Informationen

- gibt es in Deutschland im Anwendungsbereich der europäischen Vergaberichtlinien keine privat initiierten ÖPP-Projekte,
- haben deutsche Unternehmen an privat initiierten ÖPP-Projekten im EU-Ausland nicht teilgenommen.

Die Mehrzahl der Unternehmen spricht sich eher dafür aus, privat initiierte ÖPP-Projekte genau denselben Vergaberegeln zu unterwerfen wie öffentlich initiierte, d.h. eine ordnungsgemäße Ausschreibung der Leistung durchzuführen. Sie sehen darin einen wirksamen Schutz gegenüber der Manipulation von Vergabeprozessen.

Sollte es dennoch zu privat initiierten ÖPP-Projekten kommen, wie in Spanien und Italien, sprechen wir uns dafür aus, den Initiator im Vergabeverfahren nicht zu bevorteilen, sondern gesondert zu vergüten. Denn durch eine sonstige Bevorzugung des Initiators im Vergabeverfahren würde der Wettbewerb verzerrt. Die übrigen Bieter hätten angesichts des Informationsvorsprungs des Initiators kaum eine echte Chance auf den Zuschlag.

Frage 10:
Welche Erfahrung haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Nach unserer Erfahrung ist gerade bei langjährigen ÖPP i.d.R. eine gewisse **Flexibilität im Hinblick auf nachträgliche Vertragsänderungen** notwendig, da sich während der Vertragslaufzeit nahezu zwingend auch die technischen, wirtschaftlichen und politischen Umstände ändern werden. Um den im Verlauf einer 20-30 jährigen Vertragslaufzeit beinahe zwangsläufig entstehenden Anpassungsbedarf möglichst unproblematisch und in Beachtung der Grundsätze der Transparenz und Gleichbehandlung zu ermöglichen, sollten u.E. bei ÖPP-Projekten regelmäßig Klauseln für Vertragsanpassungen (etwa zur Preisindexierung oder Neufestlegung der erhobenen Gebühren etc.) bereits in den Vergabeunterlagen klar umrissen werden.

In der deutschen Rechtsprechung ist bisher nicht abschließend geklärt, wann Änderungen des Vertragsinhalts während der Vertragslaufzeit ohne Vorliegen einer Anpassungsoption zulässig sind. Zumindest **bei „wesentlichen Änderungen“**, die einem Neuabschluss des Vertrages gleichkommen, soll eine **vergaberechtliche Neuausschreibungspflicht** entstehen. Was “wesentlich“ in diesem Sinne bedeutet, sollte u.E. im Interesse einer höheren Rechtssicherheit gemeinschaftsweit klargestellt werden.

In der Praxis ist damit zu rechnen, dass

- Unternehmen während der Vertragslaufzeit aus dem Vertrag aussteigen bzw. diesen auf ein anderes Unternehmen übertragen werden,
- Unternehmen während der Vertragslaufzeit ihre Struktur bzw. die Aufgabenzuweisung an bestimmte Unternehmensteile ändern und deshalb einen Austausch des ursprünglichen Vertragspartners anstreben,

- sich während der Betriebszeit Umstände, aufgrund der der ursprüngliche Vertragspartner die Qualität des Betriebs nicht mehr sicherstellen kann, ergeben.

Eine **Anpassung des Vertrages** an solche Änderungen der Umstände **durch Austausch des Vertragspartners** sollte u.E. (und auch nach Auffassung der deutschen Rechtsprechung) **ohne eine Pflicht zur Neuausschreibung** zulässig sein, wenn dabei der Vertragsinhalt nicht geändert wird und das neue Unternehmen nachweislich mindestens ebenso geeignet ist wie das ausscheidende. Denn der Auftrag wurde bereits im Rahmen der ursprünglichen Ausschreibung in den Wettbewerb gegeben.

Frage 11:

Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Derartige Fälle sind uns aus dem Bereich unserer Mitglieder nicht bekannt.

Frage 12:

Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

U.E. ist für die Rechtssicherheit der Vergabe von ÖPP-Projekten ganz entscheidend, dass von Anfang an eindeutig klargestellt wird, nach welchen **Zuschlagskriterien** das zu bezuschlagende Angebot ausgewählt wird – und diese (und nur diese) dann auch bei der Wertung verwendet werden. Teilweise ziehen Auftraggeber nach unserer Erfahrung in der Praxis jedoch Kriterien heran, die zuvor nicht bekannt gemacht wurden oder wenden bekannt gemachte Kriterien nicht oder mit einer willkürlichen (Unter- oder Über-)Gewichtung an. U.E. besteht bei fehlender Angabe aussagekräftiger, eindeutiger Zuschlagskriterien sowie deren Gewichtung immer die Gefahr diskriminierender Entscheidungen, da z.B. durch die nachträgliche Gestaltung der Gewichtung die Wertung manipuliert und der Zuschlag an einen bestimmten Bieter erreicht werden kann.

Wir haben die Erfahrung gemacht, dass nach Bekanntgabe des für den Zuschlag vorgesehenen Bieters viele Nachprüfungsverfahren wegen Verdachts auf Nichteinhaltung von Vergabebestimmungen eingeleitet werden. Dem könnte u.U. durch eine **erhöhte Transparenz der Verfahren und der Gründe für die Zuschlagsentscheidung** begegnet werden. Unsere Erfahrung ist: Je transparenter ein Verfahren gestaltet wird, desto eher sind die Bieter bereit, u.U. auf einen Nachprüfungsantrag zu verzichten, da ihnen die Entscheidung nachvollziehbar ist und verständlich dargelegt wurde.

Frage 13:
Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

„Step-in-rights“ werden von den Banken oft zur Voraussetzung der Finanzierung eines ÖPP-Projekts gemacht. Ohne die Einräumung von **Interventionsklauseln** wäre die „Bankability“ vieler Projekte gefährdet.

Wir sind anders als die Kommission nicht der Meinung, dass Interventionsklauseln per se vergaberechtlich problematisch sind. Wie bereits unter Frage 10 dargelegt, halten wir (und die deutsche Rechtsprechung) den Austausch eines Vertragspartners während der Vertragslaufzeit für zulässig – und zwar ohne erneute Ausschreibungspflicht, solange der Inhalt des Vertrages nicht geändert wird und der neu eintretende Partner mindestens ebenso geeignet ist wie der ausscheidende.

Frage 14:
Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Die Regelung des nationalen Vertragsrechts für die Durchführung von ÖPP halten wir für vollkommen ausreichend.

Frage 15:
Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Allgemein wird darüber diskutiert, ob Subunternehmerverträge auf der zweiten Ebene dem Vergaberecht unterliegen. Eine gesetzliche Ausschreibungspflicht für Weiterbeauftragungen trifft nur Auftragnehmer, die selbst öffentliche Auftraggeber sind. Wir meinen jedoch, dass diese Pflicht enden muss, wo die untervergebenen Leistungen bereits Bestandteil der ursprünglichen Ausschreibung waren.

Nach wie vor nicht vollständig geklärt erscheint uns, **welchen Regeln ein Unternehmen bei der Untervergabe unterliegt, das selbst eine Baukonzession erhalten hat (Baukonzessionär) und gleichzeitig in einem Sektorenbereich tätig ist (Sektorenauftraggeber)**. Untervergaben eines Baukonzessionärs an die Mitglieder der Bietergemeinschaft sowie an mit deren Mitgliedern verbundene Unternehmen fallen nach Art. 11 Abs. 4 i.V. 3 Abs. 4 RL 93/37/EWG, 63 Abs. 2 RL 2004/18/EG nicht in den Anwendungsbereich des Vergaberechts, da es sich dabei nicht um Vergaben an „Dritte“ handelt. Sektorenauftraggeber hingegen sind nur dann von der Pflicht zur Ausschreibung von Unteraufträgen befreit, wenn die Voraussetzungen des Art. 13 RL 93/38/EWG, Art. 23 RL 2004/17/EG vorliegen (d.h. Mindestumsatz von 80% mit Leistungen für konzernverbundene Unternehmen). Vor dem Hintergrund der Erwägungen der Kommission in dem Grünbuch zum öffentlichen Auftragswesen von 1996 ist eine Klarstellung bzw. ausdrückliche Regelung wünschenswert, welche der Regelungen nach Auffassung der Kommission vorrangig ist.

Im Zusammenhang mit der Vergabe von Unteraufträgen durch Konzessionäre möchten wir zudem darauf hinweisen, dass uns die benachteiligende Verpflichtung von privaten Baukonzessionären zur Anwendung bestimmter Vergaberechtsvorschriften - im Gegensatz zu privaten Auftragnehmern – nicht nachvollziehbar erscheint. Für ÖPP-Projekte hinderlich erscheint uns insbesondere die in Art. 3 Abs. 2 RL 92/37/EWG, Art. 60 RL 2004/18/EG vorgesehene **Möglichkeit für den Auftraggeber, vom Konzessionär die Ausschreibung von mindestens 30% des Gesamtvolumens der Konzession an Dritte zu fordern**. Dadurch wird u.E. die Finanzierbarkeit und Realisierbarkeit von ÖPP-Konzessionsmodellen erheblich beschränkt. Denn derartige Ausschreibungspflichten erhöhen die Risiken des Konzessionärs, sie erschweren und verteuern die Abwicklung des Projekts und sie belasten den Konzessionär mit z.T. unkalkulierbaren zusätzlichen Insolvenzrisiken Dritter.

Frage 16:

Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, Ihrer Auffassung nach, dass ausführlichere Regelung für die Vergabe von Unteraufträgen eingeführt werden und/oder, dass der Anwendungsbereich erweitert wird?

Der Bereich der Untervergabe sollte nicht zu stark reglementiert werden. Eine Ausdehnung des Anwendungsbereiches des Vergaberechts auf Untervergaben privater ÖPP-Partner wäre u.E. der Entwicklung von ÖPP in Deutschland eher hinderlich als förderlich. Auch die praktische Umsetzbarkeit von Ausschreibungspflichten für private ÖPP-Auftragnehmer erscheint uns überaus zweifelhaft: In der Regel muss sich der Bieter im Rahmen von ÖPP-Ausschreibungen in Deutschland bereits vor Abgabe seines Angebotes auf bestimmte Nachunternehmer festlegen. Eine Ausschreibung der Unteraufträge ist vor Erhalt des Auftrags mangels Verbindlichkeit nicht möglich und nach Erhalt des Auftrages sinnlos, da der Auftragnehmer bereits bestimmte Nachunternehmer mit anbieten musste und angeboten hat. Auch nach der Rechtsprechung des EuGH in Sachen Holst Italia (Urteil vom 2.12.1999, EuZW 2000, 110) kann sich ein Bieter bereits zum Beleg seiner Eignung im Rahmen eines Vergabeverfahrens auf andere Unternehmen (seine Nachunternehmer) berufen, wenn er den Nachweis seines Zugriffs auf diese Nachunternehmer erbringt - eine spätere Ausschreibungspflicht für die Unteraufträge konterkarierte dieses Recht.

Frage 17:

Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Der Hauptverband lehnt, wie bereits dargestellt, eine Überregulierung der Untervergabe ab.

Wir haben uns stattdessen gegenüber dem deutschen Bundesministerium für Verkehr, Bau- und Wohnungswesen (BMVBW) während des Prozesses der Entwicklung von Mustervergabeunterlagen für ÖPP-Vergaben im Verkehrswegebau als Betreibermodelle nach dem privatwirtschaftlichen Ausbauprogramm der Bundesregierung („A-Modelle“) für eine Regelung eingesetzt, nach der Unterauftragnehmer generell keine schlechteren Konditionen erhalten sollten, als die, die im Verhältnis zwischen Auftraggeber und Hauptauftragnehmer vereinbart worden sind. Weitere Reglementierungen der Nachunternehmervergabe in ÖPP-Projekten erscheinen uns nicht notwendig und nicht sinnvoll.

Frage 18:
Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Nach Auffassung des Hauptverbandes sind ÖPP-Projekte auf Vertragsbasis institutionalisierten ÖPP grundsätzlich vorzuziehen.

Den Vorteil sieht die deutschen Bauindustrie vor allem in der klaren Trennung zwischen privaten Auftragnehmern und öffentlichen Auftraggebern. Insbesondere ist u.E. bei ÖPP auf Vertragsbasis eine klare Zuordnung von Verantwortlichkeiten leichter möglich.

Institutionalisierte ÖPP zur Umgehung des Vergaberechts lehnen wir ab. Auch die Errichtung institutionalisierter ÖPP umfasst in der Regel eine Auftragsvergabe; nach der deutschen Rechtsprechung ist zumindest bei Bestehen eines Zusammenhangs zwischen Gesellschaftsgründung und Auftragserteilung der Gesamtvorgang aufgrund einer „wirtschaftlichen Gesamtbetrachtung“ ausschreibungspflichtig.

Frage 19:
Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Formen sollte eine solche Initiative haben? Falls nein, warum nicht?

Vor dem Hintergrund der dargestellten relativ strikten deutschen Rechtsprechung zu Ausschreibungspflichten für institutionalisierte ÖPP aufgrund einer wirtschaftlichen Gesamtbetrachtung stellen öffentliche Auftraggeber in Deutschland nach unserer Erfahrung (inzwischen) auch bei solchen Projekten sicher, dass eine Vergabe im Wettbewerb erfolgt. Eine weitergehende Regulierung erscheint daher nicht notwendig.

Frage 20:
Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

ÖPP-Projekte stoßen in Deutschland nach wie vor auf erhebliche Skepsis, v.a. bei

- kleineren Unternehmen, die sich die Übernahme von ÖPP-Projekten nicht vorstellen können,
- Architekten, die am herkömmlichen Architektenwettbewerb festhalten wollen,
- Gewerkschaften, die eine Gefährdung von Arbeitnehmerrechten vermuten,
- Verwaltungen, die einen Bedeutungsverlust befürchten.

Mit starken Widerständen hat in Deutschland insbesondere die privatwirtschaftliche Realisierung von Verkehrsprojekten zu kämpfen, sofern diese ÖPP-Projekte mit Nutzungsgebühren – insbesondere Pkw-Maut – verbunden sind.

ÖPP-Projekten stehen darüber hinaus in Deutschland

- **gebührenrechlichte** Hemmnisse (z.B. Maut als staatliche Gebühr im Fernstraßenbauprivatfinanzierungsgesetz)
- **steuerrechtliche** Hemmnisse (z.B. umsatzsteuerliche Diskriminierung privater gegenüber staatlichen Realisierungsformen),
- **zuwendungsrechtliche** Hemmnisse,
- **kommunalrechtliche** Hemmnisse (z.B. Veräußerungsverbot für Vermögensgegenstände, die der Staat zur Erfüllung seiner Aufgaben braucht, damit Behinderung wirtschaftlich sinnvoller Sale-and-Leaseback-Lösungen)

entgegen.

Aus Sicht der deutschen Bauindustrie wirken sich vor allem die steuerlichen Hemmnisse dämpfend auf die Verbreitung von ÖPP-Projekten aus. Zur Beseitigung der umsatzsteuerlichen Diskriminierung setzt sich deshalb der Hauptverband für eine vorbehaltslose Prüfung von **Refundsystemen** nach niederländischem oder britischem Muster ein.

Frage 21:

Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Nach unserem Wissen ist es auf den europäischen ÖPP-Märkten im Bereich der Verkehrswege noch nicht zur **Versteigerung von Konzessionen** nach chilenischem Vorbild gekommen. Möglicherweise sollte mit Blick auf die angespannten öffentlichen Finanzen dieser Ansatz auch in Europa erprobt werden.

Frage 22:

Denken Sie, dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedsstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Deutschland ist ein „Spätstarter" im ÖPP-Prozess. Es war deshalb in der Lage, von den ÖPP-Erfahrungen seiner Nachbarstaaten, insbesondere Großbritannien, zu profitieren.

Der Hauptverband spricht sich schon deshalb dafür aus, den Erfahrungsaustausch über ÖPP-Verfahrensweisen zwischen den Mitgliedsstaaten zu intensivieren.

Den Aufbau eines **Netzwerkes**, das die in verschiedenen Mitgliedstaaten existierenden ÖPP-Task Forces und ÖPP-Komptenzzentren in engeren Kontakt bringen und dadurch den Informationsaustausch beleben könnte, halten wir für sinnvoll. Deutschland könnte sich über die seit dem 1. Juli 2004 beim Bundesministerium für Verkehr, Bau- und Wohnungswesen bestehende PPP Task Force des Bundes an diesem Netzwerk beteiligen.

Berlin, 29.07.2004.

27 July 2004

POSITION PAPER

Green Paper of the Commission on public-private partnerships and community law on public contracts and concessions

COM (2004) 327 final

1. General assessment of the Green Paper

Assessing the Green Paper, the BDE assumes that the European Commission does not aim at extending the range of public economy but to set up a framework within which a public-private partnership (PPP) shall be possible in core fields of public administration. The economic fields represented by the BDE are:

- waste management,
- water supply and
- waste water disposal.

They already have a long tradition of the most various shapes of PPPs. Thus in these fields the objective has to be to improve the existing opportunities and to ensure the legal framework. In this respect the field of waste water disposal shows until now the highest number of obstacles.

Under point 17 of the Green Paper the Commission states explicitly not to intend to answer in general the question whether the provision of services by the public authorities should be externalised or not. Accordingly, in Germany the municipal provision for elementary requirements belongs to the essence of the municipal self-administration (Art. 20 German Constitution) and its services are protected by the EC Treaty.

BDE – already on grounds of its statute - stands up for market liberalisation within the above mentioned economic fields. In spite of certain successes over the last few years in this regard, the economic fields represented by us still lag behind the development in other sectors (e. g. telecommunication, energy and gas supply, postal services).

BDE is convinced that important steps regarding market development have been or will soon be taken. First the European Court of Justice (ECJ) has circumscribed the scope for the so called in-house awards. The conclusions resulting from the "Teckal Judgement" must consequently be implemented (see below, under Question 18/19). Hence arises inevitably a broad range of activity for PPPs, too. Secondly equal conditions for all market participants have to be established. We have already set out our opinion on this subject in our position paper on the Green Paper of the European Commission on Services of General Interest of 21 May 2003 (COM (2003) 270).

The question whether such an equal treatment of all market participants requires a revision of national law governing economic activities of local government entities may be left open here. At any rate it is absolutely not acceptable that some companies secure themselves market shares by using aggressively the position they have attained in protected markets in other areas. The compliance with local economic principles (public objective, principle of locality, subsidiarity) has to be absolutely ensured.

Compliance with these principles is particularly important in the interest of the European market. A company shall not be granted an exclusive or special right for the sake of a service of general interest if this service could also be provided without any limitations on the market (Art. 86 (2) EC Treaty). In Germany reality moves progressively away from this common objective and it can be presumed that this happens to the detriment of companies from other Member States, too.

With regard to waste management industry, third party contracts (in terms of the Green Paper: purely contractual PPPs) have been concluded despite the above mentioned reservations, but they do still contain potential for development. The assignment according to § 16 (1) Closed Substance Cycle and Waste Management Act (KrW-/AbfG) is mainly common at district level whereas in the cities - especially in the large ones - third party contracts are still of lesser importance. It can be assumed that public authorities have involved private companies in waste management in approximately 50 % of the cases. However, the waste management market is heavily distorted to the detriment of private companies because they suffer from unequal tax treatment with the effect that these national barriers hinder the set-up of PPPs. The harmonization of turnover tax law would be an important step towards the removal of those barriers.

The creation of mixed entities (in terms of the Green Paper: creation of an ad hoc entity held jointly by the public sector and the private sector) has not progressed that far in the field of waste management. But this field is clearly expanding, take e. g. the creation of mixed entities over the last few weeks in the cities of Berlin and Dresden.

In the water supply and waste water disposal sectors the number of privatisation measures falls far behind the one in the field of waste management where these have taken place to a considerable extent. In our opinion this does have to do with regulation deficits in the water sector. Contrary to the federal KrW-/AbfG there are hardly any provisions in the state water acts mentioning third party contracts, let alone regulating them. By introducing § 18 lit. a (2) lit. a Water Management/Resources Act (WHG) the Federal Government has created the explicit possibility for the federal states to regulate "under which conditions local authorities may revocably entrust a third party with its obligation of water disposal entirely or partially limited in time". According to further provisions these conditions encompass that the third party has to be skilled and reliable in order to ensure the fulfilment of the assigned duties and that there is no predominant public interest standing in the way of assignment.

Except for three federal states (Saxony, Baden-Wuerttemberg, Saxony-Anhalt) state legislators have simply ignored this provision. But even in those federal states that have decided differently there is hardly any disposition of the municipal waste water disposal obligors to develop initiatives.

As private water suppliers and waste water disposal companies are barely involved in the fulfilment of the obligations concerning water management, the corresponding German industry only plays a minor role at international level. Contrary to large foreign company groups, German enterprises cannot refer to domestic reference projects. But these are indispensable in order to tap foreign markets and to enter into competition with other European companies. In the same way European companies from the other 24 Member States do not have veritable chances to provide their services on the German market, because due to the legal situation the German market is fenced off in favour of municipal suppliers.

The forthcoming revision of the state water act in North Rhine-Westphalia (NRW) is a good example for the discriminating legal situation in Germany and its development.

If the revision privileges – as can already been foreseen - the public North Rhine-Westphalian water associations with regard to the assumption of water supply and waste water disposal networks, municipalities will no longer have the chance to opt for private economic solutions to fulfil their commitments. Thus the municipalities will be definitely denied the possibility of choice and the sovereignty to decide upon the form of the municipal water supply and waste water disposal and purification.

In the case of such a privilege the citizen will lose the possibility through the channels of municipal decision-making to decide freely upon his water services. No municipality should be forced to resort to privatisation but should on the other hand have the uncircumcised liberty to choose on its own its partners for the performance of the municipal tasks. The draft by the North Rhine-Westphalian state government restrains this liberty and deprives municipalities of the chance to search on the European market for a company which can render high-quality, ecologically sustainable and economically viable services towards the citizen.

Even more discriminating is the planned § 54 (concretising § 18a WHG) "Obligation of waste water disposal in the regions of waste water disposal associations after assumption" which provides that the assigned tasks have to be carried out by an association undertaking. The explanatory statement of the draft for a "law amending the provisions concerning the rules for water and water association regulation" of 14 May 2004 discriminates all companies that have been charged so far by municipalities and cities with e. g. sewerage cleaning, inspection and rehabilitation by declaring: "This precludes the performance of tasks by third parties".

We would like to question the consistency of the statement that the decision to externalise is solely in the discretion of the authority. In our opinion there are definitely opportunities and necessities at European level to give fresh impetus for a liberalisation in the fields of waste management, waste water disposal and water supply. The issue of the competitiveness of Europe's services industry on the world market requires appropriate decisions.

Having regard to the described specialisation we would like to concentrate on specific questions to clarify our concerns. Our key request will be dealt with under question 20.

2. Particular questions of the Green Paper

Question 2

In our opinion the well-tried structured negotiated procedure suffices to achieve a legally certain and – from a practical perspective - sound award. Thinkable but theoretical approaches like the "competitive dialogue" are not target-orientated for their lack of practical relevance. Restrictive procedures hinder a target-orientated solution in favour of the client, especially regarding complex services, that are very common e. g. in the water and waste management sectors.

In Germany, the fundamental rights of economic operators mentioned in question 2 must firstly be created. These are in particular:

- the principle of subsidiarity und therefore the activities of private households and companies on their own responsibility on the basis of private property (remember: A company shall not be granted an exclusive or special right for the sake of a service of general interest if this service could also be provided without any limitations on the market (Art. 86 (2) EC Treaty).

- the principle of freedom of choice to find among the tenderers for a service of general interest the one, who is capable of performing the service on a long term basis appropriately, effectively, efficiently and geared to the common welfare.

- the equal legal treatment of all market participants in general and particularly with regard to tax and business law

From the perspective of European law, competition is also distorted and the equality of opportunity infringed when a company not bearing the risk of insolvency competes with companies that do have to assume this risk. The ECJ rightly says that the dominant position of municipalities within their domestic scope and their activities beyond this scope violate EC competition law.

Questions 5, 6 and 7

It would be sensible to specify the existing community law regarding public contracts and concessions in so far as we would prefer both means to be submitted to a uniform awarding regime. The demarcation between the two is firstly often doubtful and secondly not necessary.

The conclusion under point 45 is definitely correct, according to which it is crucial for the success of a PPP that the terms of contract for the project are as comprehensive as possible and that the elements applying to the performance are defined optimally. Experience shows that the awarding authorities use more and more professional planning and project developing companies in order to determine precisely the terms of contract. However, there is a certain risk for an undistorted competition resulting from the fact that large and powerful consultancies which are consistently used by various awarding authorities cause a certain standardisation and thus hinder the competition for innovation. We would take for granted that consulting services in the preliminary stages of an award of public service contracts have to be put out for tender too.

If the Commission opted for a new legislative initiative it would be necessary to solve the issue of the legal consequences resulting from so called “de facto awards”. In this regard we take the view that “de facto awards” – i. e. legal acts that have in fact to be put out for tender but where such a procedure has not been abided by - cannot be justified by the principle of *pacta sunt servanda*. Allowing this would “reward” illegal behaviour. The argument that the contracting parties had not known the obligation to invite tenders should not be admissible since authorities have to examine every legal act whether public procurement law applies, possibly by seeking external legal advice.

We think that European rules are also necessary because there is no reason that Member States determine by themselves the legal consequences of “de facto awards”. The question whether time limits for reversed transactions should be established is worth considering. A viable solution is from our point of view to demand reversed transactions only for contracts that do not exist for more than one year.

Questions 15 and 16

In fact it can sometimes be observed that between the contractor and the one who carries out the contract effectively emerge disparities arising from sub-contracting. We do not want to go as far as to call this phenomenon a “particular problem”. Sub-contracting can be regulated sufficiently by the awarding authority in the terms of contract so that grievances can be prevented. Hence we do not see the necessity to introduce elaborate rules for the award of sub-contracts and/or to broaden the scope of the existing legislation.

Questions 18 and 19

We discern a need for action in regard to the creation of partnerships by setting up a joint ad hoc entity of the public and the private sector.

Under point 63 the Green Paper refers rightly to the decision of the ECJ in the Teckal case. In this case the ECJ stated that a contract between legally distinct entities has to be put out to tender in the case “where a contracting authority, such as a local authority, plans to conclude in writing, with an entity which is formally distinct from it and independent of it in regard to decision-making, a contract for pecuniary interest for the supply of products, whether or not that entity is itself a contracting authority”.

The situation is only different “in the case where the local authority exercises over the person concerned a control which is similar to that which it exercises over its own departments and, at the same time, that person carries out the essential part of its activities with the controlling local authority or authorities”. One has to state though that the conditions for this case – a control that is similar to that which the authority exercises over its own departments and a performance of the essential activities with the controlling authority or authorities – are not sufficiently precise. Particularly in the Federal Republic of Germany the interpretation of the aforementioned rules of the ECJ has given rise to a considerable number of (national) litigations. These lawsuits have so far only partially been decided. From our point of view it is desirable to lay down clear legal provisions.

Question 20

In our opinion the establishment of PPPs is significantly hindered by the fact that the public institutions have to face competition only to a limited extent. From our point of view it is necessary to assess any kind of externalisation project from the angle of public procurement law. This also refers especially to cases where the public authority transforms a publicly owned company (ancillary municipal enterprise, owner-operated municipal enterprise) into a private company with a 100 % share of the public institution. The creation of such new public companies changes in any case the efficient provision of services and affects the financing obligation of the inhabitants or users by the means of charges, fees, etc. The change has to prove its worth in a competitive environment. It usually helps not only to improve organisation and manageability of the undertaking but also to make possible its free market behaviour. Thus the public organisation loses its character of a mere provider for elementary requirements that can so far only address customers in its domestic region. Stipulating the application of the public procurement law also on such cases will help improve transparency.

The requirement that PPP-projects have to be put on the market must not be neutralised by the municipal partner excluding de facto competition by inappropriate requirements und stipulations concerning the potential co-shareholder in the framework of the obligatory tender call. Pursuant to the motto: ”...I have tried to but nobody wanted to, so now I’ll take another road…”.

Furthermore it does no longer seem appropriate in view of today's importance of transparency and competition, to conceive it as a pure "act of organisation" when different forms of public companies merge in order to constitute a larger unit (special purpose associations, or similar), even if they remain finally governed by public law. It is unmistakable that such activities do not incite competition but on the contrary restrict it. This problem must be encountered by the general obligation to face the market in the framework of a procurement procedure.

The same thought applies to the re-transformation of PPPs into entities governed purely by public law (particularly re-municipalisation). Consequently there should also be a procurement procedure in order to examine if the contracting parties pursue objectives beyond the most efficient provision of services. As for the rest it is easily possible to regulate social objectives in the framework of PPP-projects if this is intended.

Statement

on the Green Paper
on Public-Private Partnerships and Community Law
on Public Contracts and Concessions
(COM(2004)327) final

presented by
the Commission of the European Communities

"so-called Green Paper on PPP"

prepared by the

Federal Association of the German
Gas and Water Industries (BGW),
Berlin and Brussels

Berlin, 30 July 2004

The water and waste water disposal utilities organised in the Federal Association of the German Gas and Water Industries (BGW) welcome the presentation of the Green Paper on "Public-Private Partnerships and Community Law on Public Contracts and Concessions" (the so-called "Green Paper on PPP") submitted by the European Commission.

BGW would welcome if the representatives of the European Commission and of the European Parliament as well as the representatives of the Federal and Laender Governments were to take account of the following remarks during their upcoming consultations:

Underlying assumptions of the European Commission:

The European Commission stated that cooperative forms of public-private partnerships (PPP) are increasingly used in all European Member States. However, it holds the opinion that there is no sufficient Community legal framework. From BGW's point of view, this does not apply to the areas of water supply and waste water disposal. In Germany, public-private partnerships develop dynamically on the basis of existing EU law. A structural change towards more public-private cooperation, inter-municipal cooperations and the internationalisation of the supply industry with the participation of enterprises from many countries is taking place. Therefore, BGW considers the existing regulations on tendering and competition law as absolutely sufficient. BGW asks the Commission to review what factors prevent similar processes of competition from occurring in other Member States despite the same community legislation.

The Commission also refers to the court rulings of the European Court of Justice on so-called in-house dealings (Teckal decision). Being an integral part of municipal self-government, the activity of public special-purpose associations (Zweckverbände) is excluded from competition. Public procurement law and the court ruling on in-house dealings are therefore not applicable to the establishment and joining of such special-purpose associations (Zweckverbände). Otherwise, the initiative of many municipalities in Germany to render a contribution, by an increased cooperation in associations, for optimising the supply structure, would be made more difficult. As the

European Commission has stated in the case of the Municipality of Hinte (C (2004(1202), public procurement law does not apply to cases where an obligation to carry out a service is transferred from a municipality to a public special-purpose association (Zweckverband) by way of a purely administrative act.

Objectives of the Green Paper:

The European Commission proposes in its Green Paper on PPP that **concession contracts, licence contracts or other exclusive contracts** between municipalities and service providers (so-called service concessions) should be **subject to the law of public contracts.**

It furthermore suggests to make the selection of the **participating private partner** in newly established **mixed-capital entities** subject to the law on public contracts.

Also, the **contracting public authority** which **participates** in a newly established **mixed-capital entity itself**, is to be required to **invite tenders for the award of contracts to this entity**.

Furthermore, the so-called **"competitive dialogue**" is to be developed further as a new variant in the award of contracts, intended to enable, in technically and economically particularly complex infrastructural projects, that the contracting authority develops and outlines, in a joint dialogue with various potential contractors on the part of the enterprises, the conditions and terms for performance of the contract.

The Situation in Germany:

Publicly and privately organised entities are no contrast in Germany. Cooperations under public law as well as public-private partnerships have a decade-long, well-proven tradition in Germany. The vast majority of municipal utilities, for example, operates under private law. The shareholders are the municipalities and to an increasing extent also private enterprises.

In Germany, public construction and service contracts involving a transfer to third parties have been subject to public procurement law for a long time, with the result that in Germany, some 90% of the construction and planning services in the waste water sector are carried out by private third parties.

Service concessions are no public contracts and are therefore not subject to a compulsory public procurement procedure. Such an obligation would be conflicting with property rights regarding the distribution networks and waterworks. The ownership in the networks is regulated in different ways in the individual Member States. In Germany and England, the networks and other facilities are owned by the water supply utilities. In France the networks are normally owned by the municipality to be supplied and are rented by the supply utility. If as a result of public tendering a municipality charges a new service provider with the duty to carry out water services, this company is not allowed to use the networks of the original provider without interfering into the property rights of the latter. The change of a concession holder in the water supply would be linked with the transfer of ownership in the supply networks to the new contracting partner, or at least with the transfer of usufruct. It has to be pointed out that an obligation to tender for concessions would require regulations for the use of facilities – keyword unbundling – as they were necessary for the liberalisation of the energy markets. From BGW's point of view, an obligation to tender for concessions in fact leads to a liberalisation of the water sector, which, however, was rejected both by the European Parliament and by the German Bundestag in their most recent resolutions. BGW supports the positions taken by both Parliaments.

In many places, privately organised water utilities have the permanent right to use the real estate on which the water abstraction facilities (wells) are located. An obligation to tender could mean a separation from the local water resource, since a foreign concession holder would possibly tend to purchase water outside the supply area. This would be incompatible with the principle of local supply stipulated in the federal water act of Germany and would in the long run pave the way for a trade with water which is currently neither supported in Brussels nor in Berlin.

Demands of BGW against this background:

1. Regarding water supply services, **BGW rejects** a compulsory **obligation to tender for service concessions**. As stated above, an opening of the market by a tendering competition would be incompatible with the principles of a countrywide water protection. An obligation to tender could also undermine the local supply

established in the federal water act. The required regulations on third-party access to the networks would mean a liberalisation through the backdoor. Article I-5 of the new European Constitution provides that: "The Union shall respect the national identities of the Member States, inherent in their […] regional and local self-government.“ This means that the municipalities continue to be free to decide whether or not they wish to award a concession to third parties.

2. **BGW rejects an obligation to making the selection** of a **private partner** in mixed entities subject to the **laws of public procurement (tendering)**. If a municipality decides to involve a private partner, it must be free to select such private partner without being obliged to invite tenders for the contribution of private equity. Only if the creation of a mixed-capital entity is linked to the transfer of a task to this entity, the relevant law on public procurement should apply.

3. Regarding newly created mixed-capital entities where the public partner also awards the contract in its capacity as competent public authority, national law already requires a public tendering procedure. The **BGW** supports this position and **opposes any rule that would extend the scope of the national law on public procurement beyond the present level.**

4. **BGW requests that the municipalities' structural options are preserved.** The activity of special-purpose associations (Zweckverbände) is one out of several possibilities of how a municipality can come up to its obligation regarding services of general interest. The foundation and joining of special-purpose associations is an administrative act of inter-municipal cooperation which is not subject to the procurement provisions under European law..

5. **BGW supports** that an **obligation to tender for public contracts** and services (not concessions) is effectively enforced by the transfer of the water supply and waste water disposal task to third parties all over **Europe**.

Further to the underlying assumptions of the European Commission:

European Commission:
There is no sufficient legal framework in the EU for public-private partnerships

BGW:
From BGW's point of view, this does not apply to the areas of water supply and waste water disposal. First of all, it has to be pointed out that the Green Paper on PPP does not only apply to water supply and waste water disposal, but to all infrastructural projects where the public and private sector cooperate. As the European Commission outlined in its recently submitted "White Paper on Services of general economic Interest", a structured debate in view of the water sector is first of all necessary. In BGW's opinion, this also applies to the present Green Paper on PPP.

The questions raised by the Commission for discussion are focussed on whether e.g. concession contracts between municipalities and supply utilities, so-called service concessions, are to be treated like other public contracts. This would mean an obligation to tender for concessions starting at specific threshold values, since other construction and service contracts are subject to the public procurement law and therefore to the obligation to tender.

The European procurement law has so far made a distinction on the one hand between public contracts which are subject to an invitation to tender, and on the other hand service concessions which are not subject to an invitation to tender. This was explained by the fact that in the case of the concession, only the right to an economic activity by a private enterprise is transferred, whereas a public contract, including a remuneration for the private entity, is not present. In the case of a concession, the enterprise also acts at its own economic risk. BGW considers this distinction as adequate and suggests to maintain it. Accordingly, service concessions should not be made subject to the laws of public procurement (tendering).

An obligation to tender for concessions is conflicting with the ownership question regarding the distribution networks and waterworks. The ownership question is regulated in very different ways in the individual Member States. In Germany, the networks and other facilities of the water supply utilities supplying under concession contracts, are normally owned by the enterprises. In France e.g. the networks are normally owned by the municipality to be supplied. If a municipality entrusts another enterprise in an invitation to tender, this other enterprise is not allowed to use the networks of the original provider without interfering into its property rights. The change of a concession holder in the water supply would inevitably be linked with the transfer of ownership in the supply networks to the new contracting partner, or at least with the transfer of usufruct. To determine an adequate fee for the use, the value of the network would have to be calculated, which is a matter of profitability of the supply networks. This depends on the amount of water being supplied to customers. Since common carriage is not possible as far as water supply is concerned a substantial decrease of the amount of water supplied within one supply area lead to the situation that user fees are not covered by the profit of the networks. It has to be pointed out that an obligation to tender for concessions would require regulations for the use of facilities – keyword unbundling – as they were necessary for the liberalisation of the energy markets. From BGW's point of view, an obligation to tender for concessions in fact leads towards a liberalisation of the water sector, which, however, was rejected both by the European Parliament and by the German Bundestag in their most recent resolutions. BGW supports the positions of the two Parliaments.

In many places, the water utilities are the owners of the real estate on which the water abstraction facilities are located. An obligation to tender could in the last consequence also mean a separation from the local water resource, since a foreign concession holder would possibly tend to purchase water outside the supply area and thus fulfil its supply task. This would be incompatible with the principle of local supply stipulated in the federal water act of Germany and would in the long run pave the way for a trade with water which is currently neither supported in Brussels nor in Berlin. Experience also shows that water resources which are no longer used are less protected.

BGW asks the European Commission to review in how far the proposals presented for discussion would only unilaterally lead to changes in some few Member States, whereas the situation in other states, however, would remain unchanged. The objective of any new EU wide provisions should in BGW's opinion be oriented at the objective of ensuring the compliance with the EU Directives for the drinking water quality and the quality of waste water disposal and of guaranteeing an economically and ecologically sustainable supply in the Member States at reasonable prices in the long run. All this has been in principle implemented in Germany. Especially the adherence to the principle of full cost recovery including the costs for the construction and the refinancing of facilities by the water price ensures the sustainable compliance with the standards reached. With a monthly burden of 0.5% of the average income for drinking water and 0.6% for waste water, the burden for the individual consumers is far below the 4% target value of the World Bank despite full cost recovery.

European Commission:

The judgement of ECJ on the so-called in-house dealing (Teckal decision) applies to all public contracts and concessions within the transfer to an independent legal person.

BGW:

The Green Paper reasons with the reference to the court ruling of the European Court of Justice on the so-called in-house dealing (Teckal decision) according to which in the opinion of the European Commission the provisions on public contracts and concessions apply as soon as a contracting public authority decides to transfer a task to a third party (enterprise), i.e. to an independent legal person. It is irrelevant, pursuant to the Green Paper, whether the partner of the contracting public authority (municipality) has public, private or mixed status. For lack of a dominating influence of the municipalities involved, this could mean that the respective shareholders (municipalities) would have to invite tenders, either individually or jointly, for the economic activity of the special-purpose association (Zweckverband) This would counteract the initiative of many municipalities in Germany to render a contribution, by an increased cooperation in associations, for optimising the supply structure. BGW considers this premise as a loss of the municipal executive power as well as of the municipal self-determination safeguarded in the German Constitution as well as in the new EU Constitution.

BGW expressly pleads for a definition of the outline conditions, under which municipalities render services of economic interest, exclusively at national level and not at European level. The long and successful German tradition of inter-municipal cooperation is to be preserved pursuant to Article I-5 of the new EU Constitution and may not be threatened by framework conditions which are placed at European level. The formation of special-purpose associations has proven worthwhile. It is a form of service-rendering by the municipality itself. These account for approx. 20 % of all supply utilities in the water and waste water sector in Germany. In the opinion of the German Bundestag, the support of cooperations is a central element of the modernisation strategy for the water industry in Germany. The above-outlined development would restrict the development of such (inter-municipal) cooperations.

Further to the questions of the Green Paper relevant for the water supply and waste water disposal industry in detail:

Green Paper

1. **What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?**

BGW:

The operator model. The private partner (enterprise) concludes a works contract for pecuniary interest with the municipality. The private partner plans, constructs, finances and operates the facility and becomes the owner of it. The private partner operates the facility on its own account by order of the municipality and in turn is paid an operator consideration from the municipality The municipality remains obliged to the citizens/enterprises to render the distribution service and levies charges. The operating company is in no direct relation to the charge payers. The operator consideration is exclusively paid as a service remuneration by the municipality.

The utility management model. The private partner (enterprise) concludes a business management contract for pecuniary interest with the municipality and performs technical and commercial services for the municipality according to its instructions, in its name and on its account. The private partner is paid a consideration for this service by the municipality. The municipality remains the owner of the facilities and levies charges from the users. The private partner (managing enterprise) is in no direct relation to the users of the supply service.

The concession. The municipality grants the private partner (enterprise) an exclusive right to use public roads for the municipal area. The private partner commits itself to supply the municipality and its residents with the public service at its own risk. The private partner itself concludes contracts with the customers/users and yields capital gains. The private partner pays concession taxes to the municipality from these gains. The amount of these concession taxes is limited by an ordinance. There are direct legal relations between the private partner (enterprise) and the users. The private law is applicable.

The compulsory transfer. Another form to be differentiated from the concession is the compulsory transfer where a complete, even if possibly conditional and limited transfer of the waste disposal obligation to the enterprise takes place which again enters into a performance relation to the citizens.

The cooperation model. In the cooperation model, the municipal task (water supply, amongst other things) is performed by a mixed holding company established jointly by the municipality and private partners where the above-stated models can be implemented. This company, normally having a dominating municipal capital interest, then entrusts a specialised third party with the actual management, taking account of the relevant public procurement law. The third party can also be the private partner which has an interest in the mixed holding company at capital level.

Award of construction and planning contracts to private third parties.

2. **In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at**

the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not??

BGW:

The competitive dialogue as a new form of the tendering procedure cannot be used by water supply utilities. These are sectoral contracting authorities, and the competitive dialogue is not provided in the Sectoral Directive. Even though not all individual questions have been clarified so far, BGW pleads for enabling the competitive dialogue also for water supply utilities as sectoral contracting authorities.

3. **In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.**

BGW:

No.

4. **Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?**

BGW:

BGW sees material deficits in Europe in the application of the existing European legislation. This refers both to the award of concessions and of service contracts; especially the markets in the old EU Member States are hardly or not at all accessible. Concession or service contracts are normally awarded to the respective national enterprises. German supply utilities have made the experience in other Member States that the decision-making processes of municipalities in other Member States are not transparent despite invitations to tender. The information required for an effective participation in a tendering procedure can only be obtained with difficulty and incompletely. For this reason, BGW supports the consistent application of the existing public procurement law in Europe.

5. **Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?**

BGW:
BGW considers that the applicable EU procurement law is sufficiently detailed. It is possible for foreign enterprises to obtain concessions in Germany. The practical experience, however, shows that the difficulties regarding the implementation of the Single Market for the water supply cannot be solved by issuing new rules, but by their practical and concrete implementation in Europe. This especially applies to the presently existing public procurement law.

Regarding the question whether a sufficient actual competition exists, it must first of all be pointed out that in Germany, public entities transfer the execution of a commercial activity both by way of concessions and by contracts on the operation and management to third parties. It turns out that an actual competition takes place and also companies from other Member States are active on the German market. German municipalities have most recently concluded management, operator as well as concession contracts with international enterprises or with enterprises with international interest. Thus, companies from the Netherlands, Belgium, France, Italy and the USA have meanwhile been operating in water supply and waste water disposal.

It is pointed out that in Germany, other forms of competition than in the other EU Member States dominate. On the one hand, industry and trade are entitled to abstract water themselves and thus to satisfy the demand by means of self-supply. This right is used in a considerable scope, with the consequence that the supply of industry accounts for only 5% of the distribution service by water supply utilities. Industry supplies itself by 95%. Furthermore, the competitive environment is marked by the competition for private equity, price control under cartel-law resp. the supervision of local authorities as well as competition for water consuming companies to locate their premises in the area of a given municipality and hence its supply area.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

BGW:

BGW rejects a Community legislative initiative, designed to regulate the procedure for the award of concessions. The general principles of equality of treatment, transparency, proportionality and mutual recognition are binding already today, a further Community legislative initiative would not bring any practical advantages. As outlined above under questions 4 and 5, such a legislative initiative would not be a suitable instrument to increase the functionality of the European Single Market since there is no lack of adequate legal provisions, but of their compliance.

Furthermore, additional Community regulations for the award of service concessions would restrict further the municipalities' freedom to decide which is guaranteed in the German Constitution. Also the subsidiarity principle is a reason against an obligation to tender.

Moreover, the Commission correctly stated in the past that concessions stand out by the fact that in contrast to the public contract, the essential economic risk is borne by the respective enterprise. This means a high risk for the citizens particularly regarding the rendering of services of general interest by an enterprise. Taking such a risk is therefore only possible for the responsible municipality on the basis of particular mutual trust between the municipality and the enterprise. The already existing rules guarantee the required neutrality by the municipality; further regulations are not necessary.

7. **More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPP's, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?**

BGW:

New legislative action is not necessary. The above-mentioned factual difference between public contracts and concessions has to be reflected in a different legal treatment. The present legal situation is adequate.

8. **In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?**

BGW:

Due to the municipal responsibility for water supply and waste water disposal, the initiative for investments normally comes from the municipalities. Private-initiative PPP's are a rare exception. The non-discriminating participation of foreign enterprises in projects is guaranteed in Germany which is proven by many examples.

10. **In contractual PPP's, what is your experience of the phase which follows the selection of the private partner?**

BGW:

This depends on the respective concrete situation.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPP's at Community level? If so, which aspects should be clarified?

BGW:

BGW does not consider it necessary to govern the contractual framework of PPP's at Community level..

15. In the context of PPP's, are you aware of specific problems encountered in relation to subcontracting? Please explain.

BGW:

At times, a construction contract is awarded along with the award of operator contracts (for a definition, see the answer to question 1). The European procurement law should be designed in such a way that these contracts are separately invited for tender and are separately awarded.

16. In your opinion does the phenomenon of contractual PPP's, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field of application in the case of the phenomenon of subcontracting?

BGW:

See answer to question 15.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

BGW:

The existing Community law should be reviewed within the meaning of the answer to question 15.

18. What experience do you have of arranging institutionalised PPP's and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

BGW:

The cooperation model outlined under question 1 has proven worthwhile in the practice. The cooperation between the public sector and private partners at capital level creates a joint loyalty regarding the supply task. Already existing Community regulations are adhered to.

Bundesverband Public Private Partnership
Rentzelstraße 7, 20146 Hamburg

An die
Kommission der Europäischen Gemeinschaften

B-1049 Brüssel

Konsultation „Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen“
C 100 2/005

Sehr geehrte Damen und Herren,
mit großem Interesse haben wir Ihr Grünbuch zur Kenntnis genommen. Die einzelnen aufgeworfenen Fragen bildeten den Gegenstand lebhafter Diskussionen unserer Mitglieder. Gerne möchten wir Ihnen hiermit die vom Bundesverband Public Private Partnership e. V. (BPPP) erarbeiteten Antworten zu den von Ihnen aufgeworfenen Fragen übermitteln. Einer Veröffentlichung unserer Stellungnahme auf der Homepage der Europäischen Kommission stimmen wir zu.
Wir haben uns erlaubt, zunächst den Bundesverband kurz vorzustellen (dazu unter I.). An diese Vorstellung schließt sich eine kurze allgemeine Stellungnahme zum Grünbuch an (dazu unter II.). Die Positionen des BPPP e. V. zu den einzelnen Fragen fügen sich an (dazu unter III.).

Der Vorstand

BPPP
Bundesverband
Public Private Partnership

Stellungnahme des Bundesverbandes
Public Private Partnership e. V.

zum

„Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen“

-C 100 2/005-

I. Der Bundesverband Public Private Partnership

Der BPPP wurde am 4. Nov. 2003 in Hamburg gegründet. Er versteht sich vor dem Hintergrund einer wachsenden aber zugleich sehr heterogenen Landschaft von Kooperationsprojekten zwischen Staat und privatem Sektor als umfassende privat-öffentliche Diskussions- und Gestaltungsplattform. Der Verband konkurriert weder mit den staatlichen PPP-Kompetenzzentren noch mit den privaten Branchenverbänden. Er ist keine klassische Interessenvertretung für eine bestimmte Klientel, sondern versteht sich als multidisziplinäres Forum, in das sich die verschiedenen Interessen einbringen. Es geht vielmehr darum, inwieweit PPP einen Beitrag zum Abbau der derzeitigen Innovations- und Reformdefizite in Deutschland leisten kann. Dabei bedarf es der Entwicklung allseitig akzeptierter Standards für die einzelnen PPP-Anwendungsbereiche. Nur wenn sich privater und öffentlicher Sektor auf Standards für die Vertragsgestaltung und Erfolgsmessung privat-öffentlicher Kooperationen einigen, können PPP-Gestaltungen auch in Deutschland sinnvoll dazu beitragen, die anstehenden Infrastrukturaufgaben zu lösen. Hierzu bedarf es einer fundierten Analyse und Klärung, inwieweit, unter welchen Bedingungen und auf welchen Gebieten PPP eine konstruktive und zukunftsträchtige Problemlösung für dringend gebotene Investitionen in die öffentliche Infrastruktur und für innovative Organisations- und Finanzierungsmodelle zur Überwindung der derzeitigen schwierigen Situation des Gemeinwesens sein kann. Der Verband entfaltet seine Tätigkeit durch Arbeitskreise. Folgende Arbeitskreise wurden eingesetzt und haben ihre Arbeit aufgenommen.

- Potenziale von PPP
- PPP Personalübergänge
- PPP in Forschung und Entwicklung
- PPP im Management von Immobilien
- Verteidigung und Sicherheit
- Infrastruktur

Die wesentlichen Zielsetzungen des Verbandes sind:

- Organisation und Diskussion der Weiterentwicklung von PPP auf nationaler und internationaler Ebene;

- Analyse von Anwendungs- und Effizienzpotenzialen von PPP in Deutschland;
- Auswertung internationaler Erfahrungen und "best practice" von PPP;
- Empfehlungen und Förderung von PPP dort, wo eine öffentlich-private Kooperation einzel und/oder gesamtwirtschaftlich von Vorteil ist;
- Nutzung von Synergieeffekten privater und öffentlicher Kooperation zur Stärkung der Wettbewerbssituation von Regionen;
- Erarbeitung von Standards für die Ausgestaltung von PPP;
- Analyse der Risiken und langfristigen Wirkungen von PPP bezogen auf Haushalte,
- Organisationsstrukturen und Wettbewerb von Gebietskörperschaften;
- Bündelung vorhandener Kompetenzen in Wissenschaft und Praxis auf dem Gebiet von PPP;
- Förderung und Weiterentwicklung des Wissens über PPP verbunden mit einem entsprechenden Transfer in die Praxis.

II. Allgemeine Anmerkungen zum Grünbuch

Die BPPP begrüßt die von der Kommission angestoßene Diskussion zu ÖPP auf nationaler und internationaler Ebene. Die dabei zugrunde gelegte Unterscheidung zwischen vertraglicher und institutioneller ÖPP (letztere sind in Deutschland vor allem die klassischen-gemischtwirtschaftlichen Unternehmen) wird nicht nur für zweckmäßig, sondern auch als geboten erachtet, da beide Formen ganz unterschiedliche Fragestellungen aufwerfen.

In Deutschland praktizieren die Gebietskörperschaften eine Vielzahl unterschiedlicher Formen von ÖPP, die sowohl der vertraglichen Kategorie als auch der institutionellen ÖPP zugeordnet werden können. Dabei zeigt sich, dass die denkbaren Möglichkeiten zur Organisation der Aufgabenwahrnehmung in Gebietskörperschaften in der Regel situationsabhängig sind und damit für jedes einzelne Projekt bewertet werden müssen. Dabei sieht der Bundesverband nicht zwingend als einzige Alternative zu den ÖPP die Vergabe der Durchführung öffentlicher Aufgaben an private Dritte. Vielmehr können auch eigene Einrichtungen und öffentliche Unternehmen diese Aufgabe wahrnehmen. Insbesondere bedarf es der Zulässigkeit ohne Vergabeverfahren von Kooperationsmodellen zwischen öffentlichen Einrichtungen wie etwa Zweckverbänden, die bei der Wahrnehmung öffentlicher Aufgaben in Deutschland eine ganz wesentliche Rolle spielen. Die Einbindung des privaten Sektors muss jedoch in allen Bereichen erwogen und auf ihre Machbarkeit geprüft werden, vgl. § 7 Abs. 1 Satz 2 Bundeshaushaltsordnung.

Nicht selten wird der Eindruck erweckt, mit Hilfe von PPP ließen sich auf Dauer die öffentlichen Haushalte entlasten oder möglicherweise sogar sanieren. Es ist deutlich zu machen, dass die von privaten Partnern häufig in ÖPP eingebrachten Beteiligungen (Finanzmittel) nicht selten den Charakter einer Zwischenfinanzierung haben und damit letztlich die Verschuldung erhöhen. Dieser Sachverhalt und ihre Wirkungen auf die Maastricht-Kriterien sind in die Diskussion um die Funktion und Leistungsfähigkeit von ÖPP mit einzubeziehen

Die bisherige Flexibilität, mit denen die Gebietskörperschaften das Instrument der ÖPP zur Anwendung bringen können, sollte erhalten und möglicherweise erweitert werden. Der BPPP sieht in einer EU-weiten Regulierung, insbesondere mit Vorschriften des Vergaberechts, die Gefahr einer Überregulierung und Bürokratisierung auf diesem Gebiet. Mit einer derartigen Vorgehensweise wird möglicherweise die Tendenz institutionalisiert, anstelle der bisher bestehenden Gestaltungsfreiheiten nur zwischen einer reinen Eigenerstellung oder einer völligen Privatisierung wählen zu können. Bei der Diskussion sind die Regelungen des vorgelegten Entwurfs für eine EU-Verfassung stärker zu berücksichtigen, insbesondere das Subsidiaritätsprinzip und das Prinzip der kommunalen Selbstverwaltung. Hinsichtlich der interkommunalen Zusammenarbeit sollte nicht generell eine Ausschreibungspflicht gefordert werden. Es macht in einer Reihe von Feldern keinen Sinn, Private in derartige Kooperationsprozesse zwingend einzubeziehen

III. Antworten zu den Fragen der Kommission im Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vom 30. April 2004

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

In der Bundesrepublik Deutschland existieren in der Praxis und in der theoretischen Diskussion eine Vielzahl von ÖPP-Modellen, etwa das

- Inhabermodell
- Konzessionsmodell
- Erwerbermodell

- FMLeasingmodell
- Vermietungsmodell
- Contractingmodell
- PFI (Private Finance Initiative)

Die spezifischen nationalen, gesetzlichen Rahmenbedingungen ergeben sich aus Band II Teilband 1 des Gutachtens „PPP im öffentlichen Hochbau“, das auf der Website des Bundesministeriums für Verkehr, Bau- und Wohnungswesen verfügbar ist (www.bmvbw.de). Darüber hinaus haben sich im Abwassersektor zahlreiche Kooperationsmodelle bewährt. Zur Anschauung sei auf die Studie „Der Wassersektor in Deutschland (Ziffer 4.3) verwiesen, die unter www.umweltbundesamt.org/wsektor/wasserdoku/german/start.html verfügbar ist.

In der Bundesrepublik gibt es keine übergreifende ÖPP-Kodifikation. Allerdings existieren in einzelnen Bereichen gesetzliche Regelungen. Zu nennen sind in diesem Kontext z. B. das Fernstraßenbauprivatfinanzierungsgesetz (Bundesgesetzblatt 2003 Teil I, S. 99 ff.) mit Regelungen zu Bau, Erhaltung, Betrieb und Finanzierung von Straßeninfrastrukturprojekten einschließlich der Erhebung einer echten Maut (F-Modell) und das Gesetz über die Verkehrsinfrastrukturgesellschaft (VIFG), der Aufgaben im Zusammenhang mit ÖPP im Verkehrsinfrastrukturbereich zugewiesen sind. Von übergreifendem Interesse ist zudem § 7 der Bundeshaushaltsordnung (BHO), der folgenden Wortlaut hat:

(1) Bei Aufstellung und Ausführung des Haushaltsplans sind die Grundsätze der Wirtschaftlichkeit und Sparsamkeit zu beachten. Diese Grundsätze verpflichten zur Prüfung, inwieweit staatliche Aufgaben oder öffentlichen Zwecken dienende wirtschaftliche Tätigkeiten durch Ausgliederung und Entstaatlichung oder Privatisierung erfüllt werden können.

(2) Für geeignete Maßnahmen von erheblicher finanzieller Bedeutung sind Nutzen-Kosten-Untersuchungen anzustellen. In geeigneten Fällen ist im Rahmen eines Interessenbekundungsverfahrens festzustellen, inwieweit und unter welchen Bedingungen private Lösungen möglich sind.

Derzeit arbeitet die Bundesregierung an einer Änderung dieser Bestimmung, die dem Ziel dient, die Verpflichtung zur Einbeziehung des privaten Sektors verbindlicher festzulegen. Dies wird vom BPPP unterstützt. Nur wenn ernsthaft über alternative Wege nachgedacht wird, besteht die Möglichkeit, die in vielen Bereichen erreichbaren Effizienzvorteile zu nutzen und privates Kapital zur Finanzierung öffentlicher Aufgaben zu mobilisieren. Die in § 7 Abs. 2 BHO und entsprechenden Haushaltsvorschriften auf Landes- oder Kommunalebene angeordnete Prüfpflicht hat sich in Deutschland als hemmend erwiesen. Bevor erste Pilotprojekte angegangen wurden, wurden unzählige und langwierige Studien und Prüfungen durchgeführt. Dabei erwies sich die steuerliche Behandlung als besonders problematisch, da sie Nachteile für eine Aufgabenprivatisierung nach sich zog, obwohl die Steuern der öffentlichen Hand zufließen. Weitere sektorspezifische Regelungen über die Übertragung öffentlicher Aufgaben an Private finden sich beispielsweise in § 16 Abs. 2 Kreislaufwirtschafts- und Abfallgesetz, § 18 a Abs. 2 a Wasserhaushaltsgesetz und §§ 11, 12 Baugesetzbuch.

Der BPPP e. V. ist der Auffassung, dass umfassende spezialgesetzliche Rahmenbedingungen für ÖPPs im Lichte der Vielzahl der betroffenen Rechtsgebiete weder realisierbar noch wünschenswert sind. Sie würden lediglich eine unerwünschte Einschränkung der notwendigen Gestaltungsfreiheit bewirken.

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Nachdem in dem Verfahren nunmehr die Vertraulichkeit des Dialogs gegenüber den Mitbewerbern festgelegt wurde und Angebote nur auf der Basis der im Dialog selbst vorgelegten Vorschläge unterbreitet werden dürfen, konnten die insbesondere von Seiten der Bauwirtschaft erhobenen urheberrechtlichen Bedenken zurückgestellt werden. Es wird insbesondere die Gefahr eines Cherry-Picking gesehen und daher die Notwendigkeit, die Gespräche mit den Mitbewerbern strikt unabhängig voneinander zu führen.

In der Diskussion insbesondere im Rahmen des Arbeitskreises Infrastruktur wurde einhellig die Bürokratisierung des Vergabeprozesses bemängelt. Dies erschwere es auch KMUs, sich an solchen Verfahren zu beteiligen. Wegen der Vielschichtigkeit der im Rahmen von ÖPP-Projekten zu beachtenden Fragen und der äußerst langen Bindungen ist ein flexibles Verfahren erforderlich, das Vertragsverhandlungen mit dem/den Bietern zulässt. Als problematisch wurde mehrfach bemängelt, dass die Richtlinie keine Regelung über die Erstattung von Ausgaben für die Bewerbung enthält. Die Erstellung von Angeboten für ÖPP-Projekte sind sehr zeitraubend und kostspielig.

Darüber hinaus enthält die Regelung eine Reihe von Ungenauigkeiten und unklare Bestimmungen. Insgesamt befürwortet der BPPP, das sich die EU-Kommission dem Thema ÖPP angenommen hat und mit ihrer Initiative einen Beitrag dazu leistet, dieses Instrumentatrium voran zu bringen. Dem in der Vergabekoordinierungsrichtlinie geregelten konkreten Verfahren stehen sie jedoch kritisch gegenüber und sehen in dem flexibleren Verhandlungsverfahren das geeignetere Verfahren für ÖPP-Projekte

3. Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

In diesem Zusammenhang stellt sich die Problematik der interkommunalen Zusammenarbeit. Es gibt im Gemeinschaftsrecht den Ansatz aus wettbewerbsrechtlichen Gründen die Ausschreibungspflicht für die Vergabe von Aufträgen innerhalb der öffentlichen Hand vorzusehen. Diese Frage wird im Rahmen des BPPP unterschiedlich beurteilt. Teilweise wird vorgebracht, dass öffentlich-öffentliche Zusammenarbeit vielfach eine Vorstufe für ÖPP-Modelle darstellt und daher nicht bereits erschwert werden sollte. Zum anderen zeigen interessierte Kreise ein großes Interesse, bereits frühzeitig die Möglichkeit zur Kooperation zu erhalten. Letztlich stellt sich die Frage, wie insoweit sachgerecht differenziert werden kann.

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Der BPPP hat an keinem Verfahren teilgenommen. Es ist weder Aufgabe noch Ziel des Verbandes sich an einem o. g. Verfahren zu beteiligen.
Zahlreiche Mitglieder insbesondere aus dem Arbeitskreis Infrastruktur waren an Ausschreibungen beteiligt, so z.B. für die Projekte Herrentunnel, Warnow-Querung und Strelasundquerung. Die Erfahrungen aus diesen Verfahren lassen sich kaum verallgemeinern, da es sich um Pilotprojekte handelte. Soweit möglich, wurden sie bei der Erarbeitung von Musterunterlagen berücksichtigt. Es wird insbesondere die Notwendigkeit gesehen, die Verfahren zu beschleunigen und weniger aufwendig zu gestalten. In den Verfahren hat sich zum einen gezeigt, dass bei der Auswahl der Projekte die wirtschaftlichen Aspekte stärker zu berücksichtigen sind, und zum anderen, dass vertragliche Verhandlungen unerlässlich sind, um ein wirtschaftlich tragbares und finanzierbares Projekt verwirklichen zu können.
In dem Verfahren des wettbewerblichen Dialogs wird die Gefahr der zunehmenden Bürokratisierung gesehen.

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Der Bundesverband hält das derzeitige Gemeinschaftsrecht für ausreichend, um eine Teilnahme von Gesellschaften aus anderen Staaten zu gewährleisten. Dies belegt die Praxis, wobei bei den einzelnen Projekten oftmals eine Zusammenarbeit zwischen internationalen und lokalen Unternehmen festzustellen ist.
Es macht für einen ausländischen Bieter durchaus Sinn, sich mit einem Partner vor Ort zusammen zu tun, der die nationalen Verhältnisse besser kennt. Mit der Warnow-Querung wurde eines der beiden ersten Mautstraßenprojekte an ein französisches Bauunternehmen vergeben. Auch im Abwasserbereich wurde die Beobachtung gemacht, dass ausländische Sponsoren zum Zuge kommen.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

ÖPP und deren differenzierte Ausprägung lassen nicht immer eine zuverlässige Abgrenzung nach Bereichen, die heute von Richtlinien erfasst sind (z.B. Sektorenrichtlinien) und nicht reglementierten Bereichen zu (Teilbereiche von Konzessionen). Zur Verbesserung der Rechtssicherheit für vergebende Stellen wäre ein einheitliches Verfahren für die Auswahl privater Partner in ÖPP begrüßenswert. Dabei muss sich ein solcher Rechtsrahmen aber auf die technische Durchführung des Verfahrens beschränken, um nicht mögliche Formen und Ausprägungen von ÖPP (sowohl im Bereich kooperativer, als auch im Bereich korporativer ÖPP) zu beschränken.

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Siehe Antwort zu Frage 6

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser

Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

> Im wesentlichen laufen derartige Verfahren transparent und diskriminierungsfrei ab, vgl. auch die Antwort zu Frage 5).

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

> Die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot könnte dadurch gewährleistet werden, dass der Leistungsteil des privaten Initiators bepreist wird, allen Bietern eines solchen Verfahrens in diskriminierungsfreier Weise zur Verfügung gestellt wird. Im Rahmen des ÖPP wird der vorstehende Leistungsteil vergütet.
>
> Ein Anreiz- oder Entschädigungssystems müsste so beschaffen sein, dass es letztlich nicht zur Entstehung einer Initiatorenbranche kommt.

10. Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

> Generell besteht häufig das Problem nicht ausreichender Beschreibungen der geforderten Qualität von Betrieb und Instandhaltung eines Objektes. Fehlt z.B. die Beschreibung des Zustandes, in dem ein Objekt nach dem Betrieb durch den Privaten an die öffentliche Hand zurückgegeben werden soll, so kann der Instandhaltungsaufwand durch unterschiedliche

Bieter sehr unterschiedlich kalkuliert werden, was unmittelbar zu einer Verzerrung der Angebotspreise führt.
Sonstige Fälle, in denen die Ausführungsbedingungen im Zeitverlauf eine diskriminierende Wirkung entfalteten, sind uns nicht bekannt.

Häufig bekommen Nebenangebote den Zuschlag, die in Art und Umfang der Leistung wesentlich von der Ausschreibung abweichen. Das führt dazu, dass die Bieter zunehmend abschätzen müssen, welche Lösung den knappen Finanzmitteln der ausschreibenden Gebietskörperschaft o.ä. vielleicht mehr entgegen kommt, als deren eigenes ursprüngliches Konzept. Sofern von vornherein funktional ausgeschrieben wurde, ist das nicht zu beanstanden, ansonsten führt es aber zu einer Diskriminierung derjenigen, die sich an die Vorgaben der Ausschreibung halten.

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Nein. Der BPPP legt jedoch wert auf die Feststellung, dass die Ausübung von Interventionsrechten wie Step-In-Right zwingend notwendig sind, um ein ÖPP-Projekt durch zu führen. Ansonsten erhält das Projekt keine Finanzierung. Die Durchführung von Vergabeverfahren ist in diesen Situationen nicht praktikabel und widerspricht dem Charakter der Aufgabenprivatisierung.

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Nein. Dennoch wird die Einführung und Evaluierung vertraglicher Standards für ÖPPs für dringend geboten gehalten. Allerdings sollten die vertraglichen Standards weder von der Europäischen Kommission noch von den nationalen Gesetzgebern verabschiedet werden. Vielmehr sind sie von den Beteiligten im Dialog zu erarbeiten. Sie müssen weiterhin flexibel einsetzbar sein.
Der BPPP versteht sich als neutrale Plattform für die Beteiligten bei der gemeinsamen Evaluierung der o.g. vertraglichen Standards.

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Die Unteraufträge sollten ohne neues Vergabeverfahren vergeben werden können. Nur dies entspricht dem Charakter der Aufgabenprivatisierung. In diesem Kontext bereitet die Entscheidung des OLG Düsseldorf vom 30. April 2003, Az. Verg 67/02, Probleme.

Wünschenswert ist eine klare und unmissverständliche Definition des öffentlichen Auftraggeberbegriffs nach § 98 Nr. 2 GWB, die keinerlei Auslegung bedarf, ob und in welchem Umfang ein Auftraggeber als ein „öffentlicher“ im Sinne des GWB anzusehen ist. So empfiehlt sich einer konkretere und substantiellere Umschreibung, wann zu vermuten ist, dass ein öffentlicher Auftraggeber i.S.v. § 98 Nr. 2 GWB vorliegt.

Denkbar wäre etwa eine Formulierung, aus der eindeutig hervorgeht, dass bzw. ob sich das Merkmal der „Nicht-Gewerblichkeit“ auf die juristische Person bzw. die im Allgemeininteresse liegende Aufgabe bezieht.

Des weiteren lassen auch die Tatbestandsmerkmale der „Beteiligung“, der „überwiegenden Finanzierung“ sowie „Aufsicht“ über die Leitung der juristischen Person im Wortlaut des § 98 Nr. 2 GWB weiten Raum zur Auslegung. Denkbar wären hier möglicherweise Formulierungen wie „Von einer überwiegenden Finanzierung ist auszugehen, wenn Stellen, die unter Nummer 1 oder 3 fallen, mindestens x % des Gesellschaftskapitals stellen oder aber einen geldwerten Beitrag zur Unternehmenstätigkeit der Gesellschaft in Höhe von x % beisteuern.“ bzw. „Aufsicht über die Leitung der Gesellschaft wird in den Fällen unwiderleglich vermutet, in denen es den unter Nummer 1 und 3 genanten Stellen möglich ist, Entscheidungen der Gesellschaft auch im Bezug auf öffentliche Aufträge zu beeinflussen.“.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, welche die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Nein, jedenfalls die auf deutscher bzw. nationaler Ebene bestehenden Regelungen werden für ausreichend erachtet. Ein Bedürfnis nach zusätzlichen Regelungen besteht nicht. Wenn bereits bei der Vergabe der Konzession ein aufwendiges Verfahren durchgeführt wurde, besteht kein Anlass noch ein weiteres Verfahren auf der 2. Ebene durchzuführen. Der Bereich der Untervergabe sollte nicht reglementiert werden, da sonst ein Effizienzvorteil bei ÖPP-Projekten gegenüber klassisch ausgeschriebenen Projekten kaum zu realisieren ist.

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Nein, bzw. allenfalls sollte im Wege einer Novellierung die europaweite Vergabe auf der 2. Ebene aus den oben genannten Gründen (vgl. die Antwort zu 16.) abgeschafft werden.

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Bei gemeinsamen Unternehmen ist darauf zu achten, dass der Private die Betriebs- und Geschäftsführung in der Hand hat. Der Entwicklung weiterer ÖPP in den Bereichen Wasser/Abwasser steht immer noch die Ungleichbehandlung bei der Umsatzsteuer entgegen.

Vor dem Hintergrund bestehender Rechtsprechung bergen Umgehungskonstruktionen der öffentlichen Hand ein derart großes Risiko, dass in der Praxis zu einer Minimierung der genannten Risiken führt.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, welche die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Eine umfassende Initiative auf Gemeinschaftsebene, um die Verpflichtungen zu klären oder zu vertiefen, welche die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben, wird nicht für erforderlich gehalten, da nach bestehender Rechtslage die Verpflichtungen hinreichend bestimmt sind.

Allgemein und unabhängig von den in diesem Grünbuch aufgeworfenen Fragen:

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

> Die kameralistische Buchführung der öffentlichen Haushalte behindert die Einrichtung von ÖPP in Deutschland. Anzumerken ist, dass sofern die öffentliche Hand ihre Aufwendungen und Erträge richtig erfassen würde, auch der Wirtschaftlichkeitsvergleich anders ausfallen würde. Hinzu kommt, dass die mittel- und langfristige Wirkung von ÖPP als Zwischenfinanzierungsinstrumente auf die Verschuldung im öffentlichen Haushalts- und Rechnungswesen auszuweisen sind.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

22. Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

> Ja, dies ist dringend geboten. Bisher liegen zuwenig systematische Auswertungen und empirische Analysen zu der ÖPP-Thematik vor. Eine Unterstützung von wissenschaftlichen Studien durch die EU-Kommission ist sehr wünschenswert.

Das Grünbuch der Kommission zu den öffentlich-privaten Partnerschaften trägt einen irreführenden Namen. Es behandelt nicht die grundsätzlichen Fragen der Vor- und Nachteile der Durchführung öffentlich-privater Partnerschaften (ÖPP), sondern deren vergaberechtliche Behandlung. Dabei ist die Tendenz der Kommission unverkennbar, so viele Tatbestände im Zusammenhang mit den öffentlich-privaten Partnerschaften wie möglich als vergaberechtlich relevant zu definieren. Dieses Vorgehen ist voreilig, weil die angekündigte europäische Rahmenrichtlinie über die „Dienstleistungen im allgemeinen Interesse“ (DAI) weiter aussteht. Es müsste zunächst mit dieser Rahmenrichtlinie festgelegt werden, welches die öffentlichen Dienstleistungen sind, die uneingeschränkt staatlicher oder kommunaler Verfügungsgewalt unterliegen. Dann könnten sich auch keine Abgrenzungsschwierigkeiten hinsichtlich der Anwendbarkeit des Vergaberechtes ergeben. Jede Regelung, die vor einer Regelung über die DAI zur vergaberechtlichen Behandlung der öffentlich-privaten Partnerschaften getroffen wird, präjudiziert die weiterhin offene Debatte um die DAI. Um diese sollte sich die Kommission aber nicht weiter drücken.

Der DGB sieht keinen Handlungsbedarf, der über die bereits getroffene Regelung des Vergaberechtes hinaus eine neue grenzüberschreitende Regulierung notwendig machen würde. Die gegenwärtige Rechtslage führt nicht zu Beeinträchtigungen der Effizienz von Dienstleistungen oder der Wettbewerbsfähigkeit. Zudem gelten die allgemeinen Grundsätze des EU-Vertrages durchgängig; sie kommen damit in ausreichender Weise zur Geltung.

Laut eigener Aussage der Europäischen Kommission ist es nicht Aufgabe des Grünbuches, die jeweilige Rolle der öffentlichen und der privaten Partner im Zusammenhang mit ÖPP zu definieren – trotzdem trifft es aber präjudizierende Aussagen in dieser Richtung:

U.a. heisst es: „Der Staat nimmt Abstand von seiner Funktion als direkter Akteur und geht zu Organisation, Regulierung und Controlling über.“ (Nr.3, Seite 3): Wenn solche grundlegenden Aussagen über die Rolle des Staates getroffen werden, müssten sie zumindest von qualitativen Anforderungen an die privaten Akteure begleitet werden, die insbesondere Sozial- und Umweltstandards betreffen.

Die Kommission fordert, dass Bieter nur dann aufgefordert werden dürfen, bestimmte Aspekte ihres Angebotes zu erläutern oder die darin eingegangenen Verpflichtungen zu bestätigen, wenn die wesentlichen Elemente des Angebotes oder der Ausschreibung dadurch nicht verändert werden und der Wettbewerb nicht verfälscht wird oder Diskriminierungen entstehen (Nr. 7. S. 4-5). Auch eine solche Forderung darf nicht ohne die Beachtung ihrer sozialen Auswirkungen gestellt werden. Es kann für die staatliche Stelle gerade von zentraler Bedeutung sein, solche Erläuterungen anzufordern, denn oft verbergen sich hinter dem wirtschaftlich günstigsten Angebot Kalkulationsgrundlagen, bei denen insbesondere Entgelte, Arbeitssicherheit und sonstige Sozialleistungen nach unten gedrückt oder zumindest vernachlässigt werden.

Entsprechend verhält es sich mit dem Interesse der Vergabestelle, Funktionsanforderungen zu stellen (Nr. 25, S.11.): Dazu können auch soziale Anforderungen im weitesten Sinne gehören, die im Text der Kommission bezeichnenderweise nicht erwähnt werden.

Zu den vergaberechtlichen Fragen im engeren Sinne ist folgendes anzumerken:

Die Kommission legt den Anwendungsbereich des bestehenden „Verhandlungsverfahrens“ eindeutig zu eng aus. Mit diesem Verfahren lässt sich die Vergabepraxis gut handhaben, was mit dem von der Kommission offensichtlich favorisierten Verfahren des „wettbewerblichen Dialogs“ wiederum nicht oder nur unzureichend der Fall wäre.

Auch die Ausweitung der Anwendbarkeit des Vergaberechtes auf die Konzessionsvergabe ist aus Sicht des DGB nicht notwendig.

Die von der Kommission gewählte Definition der „inhouse“-Geschäfte präjudiziert bzw. verschiebt die bestehende Definition kommunaler Aufgaben und wird daher vom DGB abgelehnt. Das Subsidiaritätsprinzip ist zu beachten.

Eine mögliche Neuregelung des Vergaberechtes ist ein schlechter Weg, um eine Debatte um öffentlich-private Partnerschaften zu eröffnen. Sie präjudiziert den eigentlich notwendigen Regulierungsbedarf in der immer wieder aufgeschobenen europäischen Debatte um die öffentlichen Güter. Öffentlich-private Partnerschaften als solche können in der Tat eine effiziente Form der Dienstleistungserbringung sein. Wenn man die Durchführung öffentlich-privater Partnerschaften erleichtern will, sollte man die Debatte darüber jedoch mit den grundsätzlichen Fragen über die Aufgaben und Verpflichtungen der öffentlichen und privaten Partner beginnen und sie nicht durch die Frage der Anwendbarkeit des Vergaberechtes präjudizieren.

Stellungnahme zum Grünbuch der Kommission der Europäischen Gemeinschaften zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vom 30. April 2004, KOM (2004) 327 endgültig

A. Allgemeine Anmerkungen

Die Städte, Gemeinden und Landkreise in Deutschland praktizieren öffentlich-private Partnerschaften (ÖPP) in vielfältiger Weise und Ausgestaltung. Dies bezieht sich sowohl auf die im Grünbuch angesprochenen vertraglichen ÖPP (z. B. Finanzierung und Betrieb von Hochbauten) als auch auf die institutionellen ÖPP (z. B. gemischt-wirtschaftliche Versorgungsunternehmen). ÖPP sind eine der denkbaren Möglichkeiten zur Organisation der Aufgabenerfüllung der Kommunen.

Flexibilität und Vielfalt der ÖPP erhalten

Als grundsätzlicher Vorteil erweist sich dabei bisher die Flexibilität, mit der die Kommunen das Instrument der ÖPP nutzen können. Diese muss erhalten bleiben. Eine Überregulierung, insbesondere mit Vorschriften des Vergaberechts, würde die Attraktivität dieser Organisationsform für die Erfüllung kommunaler Aufgaben stark vermindern. Die Folge wäre, dass sich Kommunen strikt entweder für eine reine Eigenerbringung oder für eine völlige Privatisierung entscheiden müssten. Dies bedeutete aber, dass die bisher bestehende Gestaltungsfreiheit der Städte, Gemeinden und Landkreise eingeschränkt und das in vielen Fällen auch sinnvolle Instrument der ÖPP aufgegeben würde.

Wir teilen die Einschätzung der EU-Kommission (Rd.-Nr. 5), dass im Rahmen von ÖPP stets für jedes einzelne Projekt bewertet werden muss, ob diese Art der Partnerschaft mit Privaten einen tatsächlichen Zusatznutzen gegenüber anderen Möglichkeiten kommunaler Aufgabenerfüllung bringt. Einer solchen Bewertung gehen äußerst komplexe Betrachtungen voraus. Ob eine ÖPP für die Kommune sinnvoll ist, hängt z.B. von der Risikoverteilung zwischen öffentlichem und privatem Partner oder den durch das Projekt verursachten Transaktionskosten ab. Ein generelles Urteil über die unterschiedlichen Formen von ÖPP ist zurzeit für den kommunalen Bereich in Deutschland noch schwierig abzugeben.

Im Bereich der vertraglichen ÖPP ist insbesondere auf die Beteiligung Privater an Hochbaumaßnahmen der Städte, Gemeinden und Landkreise hinzuweisen. So haben z.B. einzelne Kommunen die bauliche Erhaltung und den Betrieb ihrer Schulen im Wege der Ausschreibung auf Private übertragen. ÖPP bieten dabei als reine Finanzierungsmethode gegenüber herkömmlichen kommunalen Finanzierungsmethoden keinen Vorteil. Für eine Bewertung muss vielmehr auf die gesamte Nutzungsdauer des Projektes abgestellt werden, Diese umfasst neben der Bau- auch die Betriebsphase. Auf der Basis der Erfahrungen in anderen Mitgliedsstaaten der EU dürfte sich eine positive Bewertung der wirtschaftlichen Möglichkeiten solcher ÖPP ergeben.

Die institutionellen ÖPP haben bei den Kommunen in Deutschland insbesondere durch die Liberalisierung der Energiemärkte eine stärkere Verbreitung erlebt. Viele Kommunen haben Anteile an ihrem Energieversorgungsunternehmen an Private veräußert. Auch hier ist eine abschließende Bewertung dieses Prozesses nicht möglich. Es muss jedoch darauf hingewiesen werden, dass die Kartellbehörden in Deutschland bereits erhebliche Bedenken wegen der vertikalen Verflechtung großer überregionaler Versorgungsunternehmen mit kommunalen örtlichen Energieversorgern angemeldet haben. Es besteht die Gefahr, dass die großen überregionalen Versorger auch durch ihre Beteiligungen an örtlichen Versorgern eine Marktaufteilung verwirklichen, die dem Wettbewerbsgedanken nicht gerecht wird.

Beachtung der Freiheit der Kommunen zur eigenverantwortlichen Aufgabenwahrnehmung und Organisationsgestaltung

Von entscheidender Bedeutung für die weiteren Beurteilungen von ÖPP generell ist aber die Beachtung der mitgliedstaatlichen Organisationsfreiheit sowie hier insbesondere der national wie europarechtlich abgesicherten Selbstverwaltung der Kommunen. National folgt diese Gewährleistung aus der deutschen Verfassung in Art. 28 Abs. 2 GG. Europarechtlich sieht nunmehr der von der Regierungskonferenz einstimmig beschlossene Verfassungsvertrag in Art. I-5 die *Achtung* der nationalen Identität der Mitgliedstaaten, die in deren grundlegender politischer und *verfassungsrechtlicher Struktur einschließlich der regionalen und kommunalen Selbstverwaltung* zum Ausdruck kommt, vor. Zu dem Kernbereich dieser Selbstverwaltungsgarantie und damit zu den Grundlagen der nationalen verfassungsrechtlichen Struktur im Sinne von Art. I-5 Verfassungsvertrag gehört die Kooperations- und Organisationshoheit, die den Kommunen die eigenverantwortliche Entscheidung garantiert, Dienstleistungen und hoheitliche Tätigkeiten selbst zu erledigen, die Erledigung auf Dritte zu übertragen oder – wie hier – für die Aufgabenerfüllung mit Privaten und/oder anderen Trägern der öffentlichen Verwaltung zu kooperieren. Hierbei handelt es sich nicht um Konzessionserteilungen, sondern um die eigenverantwortliche Entscheidung über die Modalitäten der Aufgabenerfüllung.
Ganz überwiegend erfüllen die Städte, Gemeinden und Landkreise in Deutschland ihre Aufgaben selbst oder durch eigene Einrichtungen und Unternehmen. Deshalb trifft das in Rd.-Nr. 3 des Grünbuchs vermittelte Bild, dass die öffentliche Hand Abstand von ihrer Funktion als direkter Akteur nimmt und sich lediglich auf die Organisation, Regulierung und Controlling der Erfüllung ihrer Aufgaben beschränkt für die Kommunen in Deutschland nicht zu. Das dieser Betrachtung seitens der EU-Kommission zugrunde liegende Modell einer bloßen Gewährleistungskommune mag in einzelnen Bereichen diskussionswürdig sein, es ist aber weder Regelfall noch zwingendes Leitbild. Das, wie aufgezeigt, national wie europarechtlich verbürgte Selbstverwaltungsrecht, das den Kernbestand eigener Aufgabenerfüllung schützt, gewährleistet vielmehr, dass Städte, Gemeinden und Landkreise auch zukünftig unabhängig darüber entscheiden können müssen, ob sie eine Aufgabe selbst, durch eigene Unternehmen oder Einrichtungen oder durch private Dritte erfüllen. Die Festlegung auf eine Gewährleisterfunktion wäre eine Neuverteilung der Verantwortung bei öffentlichen Aufgaben der Städte, Gemeinden und Landkreise zwischen diesen und den beauftragten Dritten. Bei dem in Deutschland ganz überwiegend praktizierten Modell der kommunalen Eigenleistung liegt sowohl die Festsetzung der politischen Rahmenbedingungen einer Aufgabe als auch ihre Verwirklichung bei der Kommune. Bei der Gewährleistung würde dies auf die Verantwortung reduziert, politische Vorgaben für die Aufgabenerfüllung zu setzen und deren Umsetzung zu überwachen. Eine solche Neuverteilung kann aber, wenn überhaupt, nur das Ergebnis einer intensiven gesellschaftspolitischen Diskussion in den Mitgliedstaaten bzw. ihren Untergliederungen sein. Eine solche Diskussion betrifft wesentliche Fragen der innerstaatlichen Organisation, der historisch gewachsenen Strukturen und damit auch der Ausgestaltung der gesellschaftlichen Rahmenbedingungen. Die Festlegung, ob sich die öffentliche Hand eher als Gewährleister oder eher als Erbringer öffentlicher Aufgaben sieht oder zu sehen hat, kann daher nicht auf europäischer Ebene getroffen werden.

Vor dem Hintergrund dieser grundsätzlichen Betrachtungen ergeben sich notwendigerweise Auswirkungen zur Einschätzung eines Verfahrensrahmens für die Konzessionsvergabe, zu den Möglichkeiten interkommunaler Zusammenarbeit, auch zu Fragen von Inhouse-Geschäften sowie zu lokalen Dienstleitungen von allgemeinem wirtschaftlichem Interesse:

Kein Verfahrensrahmen für die Vergabe von Dienstleistungskonzessionen erforderlich

Auf Grund der erheblich von der Einschätzung der Kommission, die das Gewährleistungsmodell bereits als in der Praxis vorherrschend ansieht, abweichenden tatsächlichen Organisation der kommunalen Aufgabenerfüllung in Deutschland, die durch die Eigenerfüllung geprägt ist, haben die in dem Grünbuch getroffenen Aussagen und Fragestellungen für die Kommunen in Deutschland eine über den Bereich der ÖPP hinausgehende Bedeutung. Dies betrifft insbesondere die Erteilung von Dienstleistungskonzessionen. Soweit hier eine stärkere, an das bestehende Vergaberecht angelehnte europäische Regelung angedacht ist, hätte dies sowohl Auswirkungen auf die Beauftragung eigener Einrichtungen und Unternehmen durch die Kommunen als auch auf die interkommunale Zusammenarbeit. Die Kommunen wenden sich daher gegen einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe. Dies entspricht sowohl der Haltung der Mehrheit des Rates als auch der des Europäischen Parlaments, die im Rahmen des kürzlich verabschiedeten Legislativpakets zum öffentlichen Auftragswesen gemeinschaftsrechtlicher Regelungen für Dienstleistungskonzessionen abgelehnt haben. Wesentliche Entwicklungen, die einen erneuten Anlauf der EU-Kommission rechtfertigen könnten, sind nicht ersichtlich.

Vertrauensschutz

Soweit die Kommission aber die im Grünbuch dargelegten Überlegungen, einen Verfahrensrahmen für die Konzessionsvergabe vorzuschlagen, weiter verfolgt, dürfen die dort getroffenen Regelungen jedenfalls keine Rückwirkung auf bereits bestehende ÖPP haben. Sollten diese nämlich nicht unter Beachtung der neuen Regeln eingegangen wurden, wäre es anderenfalls notwendig, sie rückabzuwickeln. Dies muss aber aufgrund des damit verbundenen erheblichen rechtlichen und tatsächlichen Aufwands und der finanziellen Risiken für die Beteiligten vermieden werden.

Konkretisierung der Inhouse-Kriterien

Die EU-Kommission sieht die öffentliche Hand als Gewährleister und nicht als Erbringer von öffentlichen Aufgaben an. Daraus ergibt sich für sie automatisch der Ansatz, Dienstleistungsaufträge und Dienstleistungskonzessionen, die sich von den Erstgenannten nur durch die Ausgestaltung der Entgeltregelungen unterscheiden, auf das Verhältnis der Kommunen zu ihren Unternehmen und die interkommunale Zusammenarbeit auszuweiten. Unabhängig von der Frage, inwieweit eine Beauftragung eines kommunalen Unternehmens oder einer kommunalen Einrichtung durch eine Trägerkommune in der jeweiligen Ausgestaltung überhaupt einen Dienstleistungsauftrag bzw. eine Dienstleistungskonzession darstellt, ist hier die Definition der sogenannten Inhouse-Geschäfte für uns von besonderer Bedeutung. Eine Festlegung der Kriterien in der Gestalt, dass ein Inhouse-Verhältnis lediglich bei 100 %igen Tochterunternehmen der Kommunen vorliegt, würde dazu führen, dass institutionelle ÖPP der Kommunen nicht weiter verfolgt werden. Es muss daher eine rechtliche Lösung gefunden werden, die die Beauftragung eines gemischtwirtschaftlichen Unternehmens durch die Kommune ohne Ausschreibung unter bestimmten Voraussetzungen als Inhouse-Geschäft zulässt.

Problematisch erscheint eine solche Absicht der Kommission auch vor dem Hintergrund, dass es in einigen Sektoren der Dienstleistungen von allgemeinem wirtschaftlichem Interesse - insbesondere in den investitionsintensiven Bereichen - außer kommunalen Anbietern, die in ihrer Leistungserbringung auf ihr Territorium begrenzt sind, nur noch einige wenige große, europaweit agierende Unternehmen gibt, die den Markt bestimmen. Bei europaweiten Ausschreibungen sind es insbesondere diese Unternehmen, die sowohl in Bezug auf die Dienstleistungskonzessionen, aber auch im Hinblick auf die Auswahl des privaten Partners die kostengünstigsten Angebote vorlegen können. Der von der Kommission angedachte Verfahrensrahmen für Dienstleistungskonzessionen wird in diesen Sektoren mittelfristig dazu führen, dass es kaum noch kommunale Unternehmen geben wird, sondern lediglich einige wenige private Anbieter. Insbesondere für kleine und mittlere Kommunen bedeutet dies automatisch, dass die Möglichkeit der Einflussnahme auf die Erbringung der Dienstleistung stark eingeschränkt werden wird. Sie stehen einer Marktmacht gegenüber, die ihnen sowohl die Art der Erbringung der Dienstleistungen als auch mittelfristig den Preis diktieren kann.

Keine Beeinträchtigung interkommunaler Zusammenarbeit

Noch drängender ist das Problem bei der interkommunalen Zusammenarbeit. Es muss sichergestellt werden, dass die Regelungen des Vergaberechts und zu Dienstleistungskonzessionen die kommunale Zusammenarbeit nicht beeinträchtigen. Bei den in den Gesetzen der deutschen Bundesländer geregelten Instrumenten dieser Zusammenarbeit handelt es sich entgegen der Auffassung der Europäischen Kommission (vgl. die mit Gründen versehene Stellungnahme vom 30. März 2004 (2000/4433 C(2004)1202)) lediglich um kommunale Organisationsfragen und nicht um die Erteilung einer Dienstleistungskonzession oder einen vergaberelevanten Dienstleistungsauftrag. Kommunale Zweckverbände sind Instrumente bzw. Organisationsformen, die helfen, den eigenen, kommunalen Handlungsspielraum zu sichern, handlungsfähig möglichst effektiv Leistungen zu erbringen, die in Einzelleistung ggf. kostenintensiver wären. Es wird dabei aber keine Leistung am Markt gegen Entgelt eingekauft oder beschafft. Vielmehr geht mit der Gründung eines Zweckverbandes die öffentlich-rechtliche Aufgabe der Kommune auf den Zweckverband kraft Gesetzes, nicht aber durch Rechtsgeschäft über. Es handelt sich um einen Fall unmittelbarer gemeinsamer Aufgabenerledigung durch eine seit jeher praktizierte Rechts- und Organisationsform kommunaler Eigenproduktion. Ein Markt wird nicht betreten.

Lokale Dienstleistungen von allgemeinem wirtschaftlichem Interesse

Insbesondere für die Erbringung der Dienstleistungen von allgemeinem wirtschaftlichen Interesse (DAWI) müssen neben den im Grünbuch angesprochenen Wettbewerbsgrundsätzen die Gemeinwohlverpflichtungen betrachtet werden. Es bedarf daher zum einen der Abwägung der Wettbewerbsgrundsätze mit dem Verfassungsbeschluss zur Beachtung der kommunalen Selbstverwaltung und Subsidiarität; zum anderen greifen auch die im EGV zu DAWI festgelegten Regelungen in Art. 16 und Art. 86,2. In diesem Zusammenhang könnte für die Beauftragung kommunaler Unternehmen und Einrichtungen der kommunalen Zusammenarbeit mit lokalen Dienstleistungen von allgemeinem wirtschaftlichem Interesse, durch die der Binnenmarkt nur unwesentlich beeinträchtigt wird, sollte eine Freistellungsregelung von den Vorschriften für die Vergabe von Dienstleistungsaufträgen und –konzessionen geschaffen werden. Dies entspräche der Lösung, die zurzeit durch den Vorschlag der EU-Kommission für eine Freistellungsentscheidung im Bereich des europäischen Beihilferechts angestrebt wird. Mögliche Kriterien für die Vermutung einer nur unwesentlichen Beeinträchtigung des Binnenmarktes wären in erster Linie der lediglich örtliche Bezug der Dienstleistung, aber auch die öffentliche Rechtsform des beauftragten Unternehmens oder auch Schwellenwerte.

B. zu den Fragen

1. **Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt?
Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?**

In der Bundesrepublik Deutschland sind vielfältige Modelle von ÖPP auf Vertragsbasis bekannt. Neben den klassischen Betreiber- und Betriebsführungsmodellen sowie dem Konzessionsmodell werden Kombinationen aus diesen Modellen gewählt. ÖPP umfasst eine Vielzahl von Formen und Ausgestaltungen. Gemeinsam ist allen, dass es sich um die gemeinschaftliche privat-öffentliche Wahrnehmung öffentlicher Aufgaben handelt. Dabei geht es nicht nur um Investitionen, die derzeit im Vordergrund stehen, sondern auch um die Erbringung von Dienstleistungen.

Hauptmotiv für die Kommunen zur Suche nach Möglichkeiten zur langfristigen Zusammenarbeit mit privaten Investoren ist der Wunsch, durch Effizienzsteigerungen die engen finanziellen Spielräume für Investitionen erweitern zu können. Hierdurch soll die Kluft zwischen wachsendem Erweiterungs-, Ersatz- und Modernisierungsbedarf in der kommunalen Infrastruktur einerseits und den geringer werdenden Ressourcen andererseits verkleinert werden.

Im Bereich der vertraglichen ÖPP hat die Bundesregierung unter Beteiligung interessierter Kreise das Projekt „PPP“ im öffentlichen Hochbau ins Leben gerufen; mit diesem Projekt soll der Gedanke der langfristig angelegten Zusammenarbeit der öffentlichen Hand mit privaten Investoren forciert werden. Nähere Angaben zu diesem Projekt und zu den rechtlichen Rahmenbedingungen für PPP in Deutschland sind unter der Internetadresse www.bmvbw.de/Bauwesen-.346.htm abrufbar. Zeitgleich haben einzelne Kommunen die bauliche Erhaltung und den Betrieb ihrer Schulen im Wege der Ausschreibung auf Private übertragen. Durch die Beurteilung der gesamten Nutzungsdauer eines Projektes, die neben der Bau- auch die Betriebsphase umfasst, dürfte sich auf der Basis der Erfahrungen in anderen Mitgliedsstaaten der EU eine positive Bewertung der wirtschaftlichen Möglichkeiten solcher ÖPP ergeben. Zur Begleitung der ÖPP-Projekte im Hochbau wurde im Rahmen des erwähnten Projekts beim Bundesministerium für Verkehr, Bau- und Wohnungswesen inzwischen eine Task force gegründet. Auch einzelne Länder sind derzeit dabei, entsprechende Task forces einzurichten.

Hinsichtlich der Bewertung der Erfahrungen mit vertraglichen ÖPP verweisen wir auf die Aussagen in Teil A.

Spezifische sondergesetzliche Rahmenbedingungen für derartige Konstruktionen sind in der Bundesrepublik Deutschland nicht vorhanden. Vielmehr können durch in anderen Rechtsgebieten erlassene Rechtsvorschriften, wie Gemeindeordnungen Haushalts- und Vergaberecht zufrieden stellende Lösungen und Regelungen zur Bildung derartiger Konstruktionen abgeleitet werden. Der Erlass spezifischer Rahmenbedingungen für derartige Konstruktionen ist daher nicht erforderlich. Einzelheiten zu den rechtlichen Rahmenbedingungen für vertragliche ÖPP in Deutschland finden sich auf der bereits erwähnten Internetseite www.bmvbw.de/Bauwesen-.346.htm der Bundesregierung.

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge im Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Für den Fall, dass eine Ausschreibungsverpflichtung im Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis besteht, könnte der wettbewerbliche Dialog als Unterfall des Verhandlungsverfahrens ein geeignetes Verfahren darstellen. Er bietet durchaus Vorteile, da mit seiner Hilfe die Kosten und Risiken eines ÖPP–Modelles ausgelotet werden können. Insofern ist die optionale Anwendung zu begrüßen. Allerdings wird sich im Falle der Einführung des wettbewerblichen Dialogs in Deutschland erst noch zeigen müssen, ob dieses Instrument praxistauglich ist. Hier sehen wir gewisse Probleme in Zusammenhang mit der Regelung des Art. 29 Abs. 8 der Richtlinie, wonach die öffentlichen Auftraggeber wegen des aufwendigen Verfahrens Prämien oder Zahlungen an die Teilnehmer am wettbewerblichen Dialog vorsehen können. Setzt sich in der Praxis durch, dass die öffentlichen Auftraggeber diese Zahlungen nicht vorsehen, dann wird der wettbewerbliche Dialog insbesondere für den Mittelstand (KMU) unattraktiv; setzt sich demgegenüber in der Praxis durch, dass die öffentlichen Auftraggeber solche Zahlungen faktisch ausloben müssen, dann dürfte das die Attraktivität des wettbewerblichen Dialogs insbesondere bei kleinen und mittleren öffentlichen Auftraggebern einschränken.

Keinesfalls darf aber eine Verbindung zwischen dem vergaberechtlichen Instrument des wettbewerblichen Dialogs und den Dienstleistungskonzessionen gezogen werden. Nach unserer Auffassung kann das Verhandlungsverfahren - anders als unter Randnummer 24 des Grünbuches dargestellt - sehr wohl angewandt werden, wenn Probleme aufgrund der Tatsache auftreten, dass die rechtliche und finanztechnische Konstruktion sehr komplex ist. Das Verhandlungsverfahren ist ja gerade darauf ausgelegt, mit einer möglichst geringen Anzahl von Bewerbern im Wege des Verhandelns zu einer eindeutigen Leistungsbeschreibung zu gelangen.

3. Sehen Sie in bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen sie!

Nein.

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen, bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Nein.

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergaben sicher zu stellen? Sind sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Das häufige Fehlen von Angeboten aus anderen Mitgliedsländern nicht nur bei ÖPP, sondern im gesamten Vergabebereich, liegt im Regelfall nicht an den Verfahrensweisen oder fehlendem Wettbewerb, sondern an dem mangelnden Interesse der Bieter. Dieses scheint insbesondere für die mittelständische Wirtschaft zu gelten.

In den Fällen der Dienstleistungskonzessionen besteht für Gruppierungen und Gesellschaften aus anderen Staaten effektiv die Möglichkeit, Konzessionär zu werden. Art. 43 ff. EGV sind insoweit hinreichend präzise.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrenrahmens für die Konzessionsvergabe für wünschenswert?

Nein.
Siehe im Übrigen Teil A der Stellungnahme.

7. Allgemeiner gefragt: Wenn sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Nein.
Siehe im Übrigen Teil A der Stellungnahme.

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Objektes ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Nach unserer Erfahrung ist dies im Rahmen der bestehenden Regelungen gewährleistet.
Siehe im Übrigen auch die Antwort zu Frage 5.

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne den Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Die Entwicklung privat initiierter ÖPP würde bei der Erstellung eines einheitlichen Rechtsrahmens und damit bei einer generellen Ausschreibungspflicht in zu starre rechtliche Grundlagen gezwängt. Damit wäre jede private Initiative im Keim erstickt und dieses Instrument wiederum zum Scheitern verurteilt. Im Einzelfall könnte jedoch ein Verhandlungsverfahren als Vergabeart gewählt werden. Zur Entwicklung und Förderung privat initiierter ÖPP bedarf es eines Anreizes der Privatwirtschaft, der ihre Kreativität fördert. Es bleibt deshalb zu überlegen, ob im Wege der Wertung der Angebote diese Kreativität angemessen berücksichtigt werden kann und sollte. Lediglich eine an die Vorstellungen des Urheberrechts angelehnte Entlohnung der Idee dürfte dafür nicht ausreichend sein.

10. Welche Erfahrung haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

In dieser Phase wurden unterschiedliche Erfahrungen gemacht. Das Gelingen der ÖPP auf Vertragsbasis ist von der sorgfältigen Planung und Vorbereitung sowie der vertraglichen Gestaltung abhängig. Zudem ist großer Wert auf einen gerechten Risiko- und Lastenausgleich zu legen. Das Finanzierungs- und Vollzugsrisiko darf nicht einseitig zu Lasten eines Partners geregelt werden. Letztendlich ist immer der Einzelfall zu betrachten und ausschlaggebend. So ist es etwa in den bereits erwähnten Modellen der Schulsanierung im Rahmen vertraglicher ÖPP selbstverständlich, dass das Risiko zukünftig sinkender Schülerzahlen beim Schulträger und damit bei der Kommune anzusiedeln ist; in Anwendungsfällen der ÖPP im Verkehrsbereich, in denen der private Investor den Nutzern der Verkehrsinfrastruktur Entgelte abverlangen darf, ist es demgegenüber selbstverständlich, das Risiko einer mangelnden Inanspruchnahme dieser Infrastruktur dem privaten Investor aufzuerlegen.

Eine einheitliche europäische Regelung zur Risikoverteilung ist nicht erforderlich, wäre angesichts der Bandbreite von ÖPP-Anwendungsfällen auch ausgesprochen kontraproduktiv.

11. **Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen einschließlich der Klausel zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, beschreiben Sie bitte die Art der aufgetretenen Probleme.**

Nein.

12. **Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?**

Nein.

13. **Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?**

Interventionsklauseln sind in der Praxis unverzichtbar. Vertragliche ÖPP leben davon, dass sie bei allen Beteiligten eines Projektes auf breite Akzeptanz stoßen. Voraussetzung dafür ist u. a. das Vertrauen auf die wirtschaftliche Leistungsfähigkeit auch der beteiligten privaten Investoren. So wird von Gegnern vertraglicher ÖPP häufig das Risiko einer Insolvenz des privaten Investors in den Vordergrund gestellt. Dieses Risiko bleibt stets vorhanden, lässt sich aber bezogen auf das konkrete Projekt durch die von der EU-Kommission kritisch betrachteten Interventionsklauseln relativieren. Kann die beteiligte Kommune davon ausgehen, dass eine beteiligte Bank die wirtschaftliche Leistungsfähigkeit eines privaten Investors überwacht und im Falle des Unterschreitens eines gewissen Limits von einer Ersetzungsmöglichkeit Gebrauch machen kann, dann lässt sich dadurch das Funktionieren einer vertraglichen ÖPP über den vorgesehenen Zeitraum sicherstellen. Eine mögliche Insolvenz eines privaten Investors schlägt dann nicht mehr auf das konkrete Modell durch.

Die EU-Kommission wird sich daher überlegen müssen, ob es ihr darum geht, die möglichen Effizienzgewinne, die mit einer stärkeren Verbreitung vertraglicher ÖPP verbunden sein könnten, innerhalb des gemeinsamen Wirtschaftsraumes zu realisieren. Dann wird sie eine vertragliche ÖPP als ein Gesamtwerk betrachten müssen, dessen Entstehung den Grundsätzen der Transparenz und der Gleichbehandlung Rechnung trägt, deren weiteres Schicksal sich dann aber an den Interessenlagen der beteiligten Partner orientieren muss. Schwebt der EU-Kommission demgegenüber vor, eine vertragliche ÖPP im Laufe ihrer Geltungsdauer immer wieder neu den vergaberechtlichen Regelungen zu unterwerfen, wird sie diesen Interessenlagen nicht gerecht und eine Verbreitung der ÖPP eher behindern.

14. **Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?**

Wir halten es nicht für erforderlich, bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene zu regeln. Vielmehr sollte und muss es den Mitgliedstaaten und Vertragspartnern des ÖPP überlassen bleiben, die einzelnen Vertragsanpassungen zu regeln. Jeder Vertrag bedarf zu seiner erfolgreichen Abwicklung auch der Regelung im Einzelfall. Selbstverständlich lassen sich gewisse Vertragsanpassungen vorhersehen und in den Verdingungsunterlagen berücksichtigen. Dennoch brauchen alle Verträge gewisse Spielräume, um bestimmten Entwicklungen, die angesichts der langen Laufzeit solcher Verträge nicht vorhersehbar sind, Rechnung tragen zu können. Man sollte den beteiligten Parteien zutrauen, dass sie diesen Entwicklungen in Kenntnis der Rahmenbedingungen des Einzelfalles und in Wahrung ihrer aufeinander abgestimmten Interessenlagen am besten Rechnung tragen können. Ein schematisches

Verfahren zur Vertragsanpassung widerspricht den Bedürfnissen der Praxis und könnte dazu führen, dass im Ergebnis für eine oder sogar alle Vertragsparteien dass mit ÖPP verbundene Risiko deutlich zunimmt. Es können nicht alle Unwägbarkeiten eines über Jahre hinweg lebenden Projektes bei der Vergabe bereits überschaut werden.

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Nein.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpaketes an einen einzigen privaten Partner impliziert, ihre Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und / oder dass der Anwendungsbereich erweitert wird?

Nein.

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Eine ergänzende Initiative auf Gemeinschaftsebene wird nicht für erforderlich gehalten. Wettbewerb und Engagement leben davon, dass nicht alle Geschäftsvorgänge bei jedermann gleichförmig und für jedermann voraussehbar erfolgen.

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Die Einrichtung der institutionalisierten ÖPP bedarf ebenfalls guter und gründlicher Vorbereitung (s. Antwort zu Frage 10). Hier ist vor allem die sorgfältige Auswahl der Partner ein wichtiges Kriterium. Zudem muss der Vertrag sorgfältig ausgearbeitet werden und auf einen Interessenausgleich zwischen den Partnern Wert gelegt werden. Sind diese Kriterien erfüllt, kann die institutionalisierte ÖPP durchaus erfolgreich sein. Augenmerk ist insbesondere auf die Mehrheitsverhältnisse sowie auf die Möglichkeiten der Einflussnahme zu legen. Auch ohne nationale oder EU-rechtliche Vorgaben haben sich viele erfolgreiche ÖPP entwickelt. Das spricht gegen das Erfordernis eines besonderen gemeinschaftlichen Rechtsrahmens.

Dabei lassen unsere Erfahrungen die Schlussfolgerung zu, dass die bestehenden gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen eingehalten werden.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären und zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potentiell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welchen Aspekt halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Nein.

Aufgrund ihres Organisationsrechts steht es den Kommunen frei, sich zur Erfüllung ihrer Aufgaben der Gestaltungsform der institutionellen ÖPP zu bedienen. Ob die Auswahl der privaten Partner und die Beauftragungen gemischtwirtschaftlicher Unternehmen mit der Erbringung von öffentlichen Dienstleistungen ausschreibungspflichtig sind, hängt unter anderem davon ab, ob es sich um einen öffentlichen Auftrag im Sinne des Vergaberechts handelt. Die Vergaberichtlinien der EU definieren öffentliche Aufträge als entgeltliche Verträge zwischen öffentlichen Auftraggebern und Unternehmern, die Lieferungen sowie Bau- oder Dienstleistungen zum Gegenstand haben. Eine Ausschreibungspflicht besteht für den öffentlichen Auftraggeber, wenn ein Beschaffungsakt vorliegt. Dies ist der Fall, wenn ein Dritter mit der Durchführung einzelner Leistungen beauftragt wird und für diese Leistungen von der öffentlichen Behörde ein Entgelt erhält. Diese Regelungen sind eindeutig und bedürfen keiner weiteren Ergänzung.

Häufig sind es die Privaten, die bestimmte Maßnahmen initiieren. Muss trotz dieser Initiative einzelner privater Unternehmen die Auswahl des Partners ausgeschrieben werden, macht die private Initiative keinen Sinn mehr, so dass mit einem Rückzug der Privaten gerechnet werden kann. Dies dürfte umso eher zutreffen, wenn - wie von der EU-Kommission vorgeschlagen - auch die Vertragsgestaltung gemeinschaftsweiten Regelungen unterzogen werden soll.

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Zum gegenwärtigen Zeitpunkt bestehen keine Hindernisse. Sollte allerdings ein gemeinschaftlicher Rechtsrahmen eingeführt werden, werden die Flexibilität der ÖPP – Modelle behindert und zusätzliche Bürokratie aufgebaut. Das könnte zum Rückgang derartiger Modelle führen.

21. Kennen Sie andere ÖPP – Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Nein.

22. Denken Sie, dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach ihrer derzeitigen Auffassung ein derartiges Netzwerk aufbauen?

Ein Erfahrungsaustausch ist grundsätzlich immer sinnvoll. Wir sind daher gerne bereit, uns an einem solchen Austausch auch auf europäischer Ebene zu beteiligen.

Stellungnahme

des Verbandes der Elektrizitätswirtschaft
– VDEW – e. V.
zum Grünbuch ÖPP und Konzessionen

Frankfurt am Main, 29. Juli 2004

VDEW ist der Spitzenverband der Deutschen Elektrizitätswirtschaft. Er repräsentiert mit seinen 750 Mitgliedern knapp 95 Prozent des gesamten deutschen Strommarktes. Zu seinen Mitgliedern zählen Unternehmen der privaten Wirtschaft, sowie auch gemischtwirtschaftliche und öffentliche – zumeist kommunale – Unternehmen, deren Gemeinsamkeit es ist, die sichere, preiswerte sowie umweltverträgliche Stromversorgung der Verbraucher sicherzustellen.

Die nachfolgende Stellungnahme setzt sich mit der Konzeption des Grünbuchs und ihrer Anwendung auf den Strombereich auseinander. Wegen der im Grünbuch seitens der Kommission gestellten Fragen zu einzelnen Themenkomplexen verweist der VDEW auf das Papier "Antworten des VDEW zum Fragenkatalog des Grünbuchs zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vom 30.04.2004".

1. Vorbemerkung

Am 30.04.2004 hat die EU-Kommission das Grünbuch zu öffentlich-privaten Partnerschaften (ÖPP) und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vorgelegt. Die Grundintentionen des Grünbuchs lassen sich wie folgt zusammenfassen und bewerten:

- Entgegen den geltenden europarechtlichen Bestimmungen soll auch die Vergabe von Dienstleistungskonzessionen künftig einer wie auch immer gearteten Ausschreibungsverpflichtung unterliegen.

- Für institutionalisierte ÖPP soll ein gemeinschaftsweiter Rechtsrahmen gefunden werden, unter dem auch diesbezügliche Projekte ausgeschrieben werden können (müssen).

- Auch die letzten noch verbliebenen Freiräume kommunaler Selbstbestimmung sollen reglementiert und damit die noch bestehenden innovativen Kräfte in das Korsett starrer europarechtlicher Regelungen gepresst werden, um die überbordende Bürokratisierung nochmals qualitativ zu steigern.

- Die im Grünbuch angedachten innovativen Ideen sind fern ab jeder wirtschaftlichen Realität und verursachen außer Kosten keinen Fortschritt in der wirtschaftlichen Entwicklung und Produktivität.

- Es wird vollständig übersehen, dass die Institutionalisierung von ÖPP schon heute im harten Wettbewerb zwischen den Marktteilnehmern erfolgt und keiner „Liberalisierung“ bedarf.

- Die Grundlage vergaberechtlicher Bestimmungen, „Beschaffungen“ der öffentlichen Hand zu regeln, wird vollständig ignoriert und auf Marktsituationen ausgedehnt, in denen die öffentliche Hand als Anbieter und unter keinem Blickwinkel als Nachfrager auftritt.

Die erneute Initiative der EU-Kommission zur Ausweitung der vergaberechtlichen Regelungsbereiche und Regelungstiefen verkennt die tatsächlichen Marktverhältnisse.

Gerade in der Energiewirtschaft hat der Wettbewerb eine Intensität erreicht, dass eine Unterscheidung zwischen Marktteilnehmern, die privat dominiert werden und Marktteilnehmern mit öffentlicher Mehrheitsbeteiligung zwangsläufig zu einer Diskriminierung der mehrheitlich öffentlichen Unternehmen führt. Obwohl beide Marktteilnehmer im Wettbewerb zueinander stehen, sollen sie doch unterschiedlichen Regelungssystemen gehorchen - eine mit dem Liberalisierungs- und Wettbewerbsgedanken schlicht nicht zu vereinbarende Systematik.

2. Anwendungsbereich

Es fällt zunächst schwer, die vom Grünbuch behandelten ÖPP zu isolieren. Die sehr weite Formulierung „ÖPP sind Formen der Zusammenarbeit zwischen öffentlichen Stellen und Privatunternehmen zwecks Finanzierung, Bau, Betrieb oder Unterhalt einer Infrastruktur oder der Bereitstellung einer Dienstleistung“ ist mangels hinreichender Konturen nicht hilfreich für den angestrebten Diskussionsprozess, da sich jede Kommentierung zwangsläufig anhand eigener Auslegungen zum Begriff ÖPP orientieren muss.

3. Kosten-/ Nutzenverhältnis

Das vorgelegte Grünbuch lässt die Aussage vermissen, inwieweit die durch europaweite Ausschreibungen entstehenden Kosten sich zu den Vorteilen verhalten. Man kann wohl davon ausgehen, dass die durch EU-weite Verfahren ausgelösten Bürokratiekosten die generierten Vorteile neutralisieren. Die vor diesem Hintergrund unbedingt erforderliche Begründung der Regelungsnotwendigkeit wird an keiner Stelle erbracht.

4. Der liberalisierte Strommarkt braucht keine ÖPP-Vorschriften

Öffentliche Ausschreibungen können Wettbewerb in Märkte und Marktsegmente tragen, die dem Wettbewerb bislang verschlossen sind. Mit den Binnenmarktrichtlinien von 1996 und 2002 ist der Elektrizitätsmarkt jedoch bereits wirkungsvoll geöffnet worden.

Der Gemeinschaftsgesetzgeber hat sich zur Einführung eines wirkungsvollen Wettbewerbs im Strombereich für einen sektoralen Ansatz entschieden.

Dort, wo Mitgliedstaaten Elektrizitätsunternehmen im allgemeinen wirtschaftlichen Interesse Verpflichtungen auferlegen, stellt Art. 3 Abs. 2 – 4 der Richtlinie 2003/54/EG vom 26. Juni 2003 über gemeinsame Vorschriften für den Elektrizitätsbinnenmarkt und zur Aufhebung der Richtlinie 96/92/EG sicher, dass dies auf nicht-diskriminierende, transparente Weise geschieht. Erläuternd hat die Generaldirektion TREN ihre Sicht der korrekten Handhabung gemeinwirtschaftlicher Verpflichtungen in einem Vermerk vom 16. Januar 2004 niedergelegt.

Es ist daher zu fordern, dass der sektoral geregelte Elektrizitätsbinnenmarkt von einer sektorunspezifischen ÖPP-Regelung ausgenommen wird.

Öffentliche Ausschreibungen können ein wirksames Mittel zur Sicherung des Wettbewerbs sein, insbesondere dann, wenn es Anhaltspunkte hierfür gibt, dass der Wettbewerb bisher nicht funktioniert hat.

In einem Sektor mit funktionierendem Wettbewerb - wie dies in der Stromwirtschaft der Fall ist - und hoher Kundenzufriedenheit (siehe hierzu VDEW-Kundenfokus 2003) würde die Einführung von aufwendigen öffentlichen Ausschreibungen zusätzliche Kosten verursachen, die letztlich der Verbraucher zu tragen hätte.

Der deutsche Strommarkt ist mit dem in Kraft treten des modifizierten Energiewirtschaftsgesetzes am 29. April 1998 insgesamt liberalisiert worden. Neben der stromintensiven Industrie haben auch kleine Gewerbekunden, sowie Haushalte das Recht, ihren Stromversorger frei zu wählen. Von diesem Recht haben in Deutschland eine Vielzahl von Kunden Gebrauch gemacht (vgl. hierzu 3. Benchmarking-Bericht der Europäischen Kommission zur Vollendung des Energiebinnenmarktes vom 01.03.2004).

Die Einführung eines speziellen Vergaberegimes für ÖPP passt jedenfalls für den Stromsektor aus einem weiteren Grund nicht. Der Gemeinschaftsgesetzgeber hat gerade vor kurzem die Weichen dafür gestellt, andere Aktivitäten von Unternehmen der Elektrizitätswirtschaft von der Pflicht zu einer förmlichen Vergabe auszunehmen. Aufgrund des nunmehr bereits seit sechs Jahren fest etablierten Wettbewerbs im Stromsektor, sollen die Stromversorger nach dem Willen des europäischen Richtliniengebers nunmehr von der bestehenden Ausschreibungspflicht für Bau-, Liefer- sowie Dienstleistungsaufträge befreit werden (vgl. Richtlinie 2004/17/EG des Rates sowie des Europäischen Parlaments vom 31. März 2004 zur Koordinierung der Zuschlagserteilung durch Auftraggeber im Bereich der Wasser-, Energie- und Verkehrsversorgung sowie der Postdienste). Eine Gleichstellung mit öffentlichen Auftraggebern erscheint nicht mehr sachgerecht.

5. ÖPP sind kein Königsweg

Im Grünbuch ist eine eindeutige Tendenz festzustellen, die Aufgabenerfüllung durch ÖPP zu bevorzugen, wobei die ordnungspolitische Zielrichtung dieser Präferenz an keiner Stelle erläutert wird. Dabei sollen die Auswahl des privaten Partners bei der Bildung einer institutionalisierten ÖPP sowie die Erteilung von Dienstleistungskonzessionen (ÖPP auf Vertragsbasis) dem Vergaberecht unterworfen werden. Jedoch sind ÖPP kein Königsweg, sondern nur eine von vielen möglichen Organisationsformen.

Vorab muss die ordnungspolitische Grundsatzfrage diskutiert und geklärt werden, ob dieser Ansatz sinnvoll und mit nationalem Verfassungsrecht bzw. mit europäischem Primärrecht vereinbar ist. Das Europäische Parlament jedenfalls hat sich in dem Beschluss vom 14. Januar 2004 zum Grünbuch DAI ausdrücklich zum Selbstbestimmungsrecht der Gemeinden bekannt.

Jede Richtlinie ist unter dem Blickwinkel zu prüfen, ob durch den Regelungsgehalt die Eigentumsordnungen der Mitgliedsstaaten betroffen werden. Durch die Fokussierung auf den Bereich der ÖPP wird der Eindruck erweckt, allein ÖPP sind prädestiniert, Dienstleistungen von allgemeinem (wirtschaftlichen) Interesse adäquat leisten zu können. Eine derartige Zuspitzung missachtet jedoch das Recht öffentlicher Einrichtungen, Aufgaben, Organisation und Finanzierung frei zu wählen. Entsprechend muss eine Auslegung der Vorschläge ergeben, dass der Bereich der öffentlich-öffentlichen Partnerschaften aus dem Anwendungsbereich herausfällt. Die Bildung interkommunaler Zusammenschlüsse muss weiter ohne formalisiertes Ausschreibungsverfahren möglich sein.

6. Sog. "Konzessionsverträge" nach deutschem Recht sind keine Konzessionen

In der deutschen Strom- und Gaswirtschaft gibt es keine "Konzessionen" im Sinne des Grünbuchs.

Die im Grünbuch genannten Beispiele betreffen durchgängig die Einbeziehung Privater in die Erfüllung staatlicher Aufgaben. Welche Tätigkeiten dem jeweiligen Mitgliedstaat zugewiesen sind und welche jedermann für eine privatwirtschaftliche Betätigung offen stehen, bestimmt sich allein nach dem jeweiligen nationalen Recht. Der EG-Vertrag ist wirtschaftspolitisch neutral und überlässt den Mitgliedstaaten die Abgrenzung zwischen dem Bereich öffentlichen Wirtschaftens und privaten Wirtschaftens; die Eigentumsordnungen der Mitgliedstaaten sollen unberührt bleiben (Art. 295 EGV).

In Deutschland steht die Betätigung in der Strom- und Gasversorgung einschl. des Netzbetriebs jedermann im Rahmen der Berufs- und Gewerbefreiheit offen. Zwar ist dazu eine Betriebsaufnahmegenehmigung gem. § 3 EnWG erforderlich. Dadurch wird nicht etwa ein "Recht zur Energieversorgung" einem privaten Unternehmen quasi konstitutiv "verliehen". Denn der Staat hat sich in Deutschland eine energiewirtschaftliche Betätigung nicht zur eigenen Wahrnehmung gesetzlich vorbehalten (wie z. B. teilweise im Bereich der Abfallbeseitigung). Bei der Betriebsaufnahmegenehmigung gem. § 3 EnWG handelt es sich um eine schlichte gewerberechtliche Genehmigung zum Schutz des öffentlichen Interesses und schwächerer Marktpartner. Deshalb kann sich in Deutschland im Bereich der Strom- und Gasversorgung die Frage einer partiellen Privatisierung im Rahmen einer ÖPP nicht stellen.

Auch in den sog. "Konzessionsverträgen" wird kein Recht zur Energieversorgung quasi konstitutiv von der Kommune auf Private übertragen. Dies würde voraussetzen, dass die Tätigkeit als Energieversorger oder Netzbetreiber zuvor per Rechtsvorschrift ausdrücklich allein den Kommunen zugewiesen worden wäre. Eine solche Zuweisung im Sinne staatlicher Wahrnehmungsverantwortung gibt es in Deutschland nicht. In den sog. Konzessionsverträgen im Bereich der Strom- und Gasversorgung geht es in erster Linie um die Einräumung von Nutzungsrechten zur Verlegung von Verteilungsleitungen im öffentlichen Straßengrund, der i. d. R. im privatrechtlichen Eigentum der Kommunen (Gemeinden, u. U. auch Kreise) steht. Ohne solche Grundstücksnutzungsrechte können Letztverbraucher nicht in größerem Umfang an das Strom- und Gasnetz angeschlossen werden, da die öffentlichen Wege praktisch alle Verbrauchsorte im Gemeindegebiet umschließen.

Das Grünbuch verdeutlicht die Bemühungen der Europäischen Kommission, die Ausschreibungspflichten zu erweitern. Letztlich soll ein Ausschreibungszwang für alle, insbesondere kommunalen Infrastrukturbereiche implementiert werden.

Die ÖPP auf Vertragsbasis, die im Grünbuch einen breiten Raum einnehmen, erfassen bei unbefangener Betrachtung sämtliche öffentliche Aufträge, die schon heute dem Vergaberecht unterfallen. Unter letzterem Blickwinkel bleibt für die ÖPP auf Vertragsbasis nur noch ein Regelungsbereich: die Dienstleistungskonzessionen.

Der VDEW sieht gemeinsam mit dem Verband kommunaler Unternehmen – VKU - diesbezüglich aber weder einen konkreten legislatorischen Handlungsbedarf noch erkennt er entsprechende Zuständigkeiten auf europäischer Ebene. Selbst die Kommission erkennt im Übrigen an, dass die Dienstleistungskonzessionen, auch nach den gerade erst verabschiedeten Vergaberichtlinien, nicht ausschreibungspflichtig sind. Deren Einbeziehung war diskutiert und letztlich abgelehnt worden.

In den sog. Konzessionsverträgen im Strom- und Gasbereich wird, anders als in den vom Grünbuch genannten öffentlichen Konzessionierungen, kein Recht zur örtlichen Energieversorgung oder zum örtlichen Verteilungsnetzbetrieb auf einen Privaten übertragen. Diese Tätigkeiten stehen in Deutschland ohnehin privatwirtschaftlicher Betätigung offen, bedürfen keines zusätzlichen Privatisierungsakts.

Auch vergaberechtlich sind die im Grünbuch genannten öffentlichen Konzessionierungen nicht mit den sog. "Konzessionsverträgen" im Strom- und Gasbereich vergleichbar. Denn hier ist die Gemeinde nicht Nachfrager, sondern **Anbieter** (eines Nutzungsrechts an kommunalen Grundstücken). Das Vergaberecht ist aber schon vom Grundansatz her nur anwendbar auf eine **Nachfrage** öffentlicher Hände (nach Gütern, Bau- oder Dienstleistungen), d. h. auf eine öffentliche Bedarfdeckung, wie sie im Bereich der dem Staat gesetzlich zugewiesenen Aufgaben typischerweise entsteht.

Nachfrager ist bei den sog. "Konzessionsverträgen" im Strom- und Gasbereich das **EVU**, das sich die für den örtlichen Strom- oder Gasnetzbetrieb unverzichtbare "Ressource" Wegenutzung beschaffen will. Die Beschaffungstätigkeit der EVU soll aber auf Grund der neuen Sektorenrichtlinie gerade nicht mehr besonderen Ausschreibungsvorschriften unterliegen. Deshalb macht es keinen Sinn, die Wegerechtsbeschaffung der EVU unter diesem Blickwinkel einer besonderen Ausschreibungsregelung zu unterwerfen (zumal je Gemeinde nur ein einziger Wegerechtsanbieter in Betracht kommt, nämlich die Kommune selbst).

Auch deshalb macht die Einbeziehung der sog. Konzessionsverträge der deutschen Strom- und Gaswirtschaft in vergaberechtsähnliche Regelungen, wie sie das Grünbuch für die dort genannten öffentlichen Konzessionierungen intendiert, keinen Sinn.

Auch wenn Gemeinden sich im Rahmen der jeweiligen gemeindewirtschafts-rechtlichen Vorschriften selbst über ein eigenes Stadtwerk als Energieversorger oder auch als Netzbetreiber betätigen, nehmen sie damit keine staatliche Aufgabe wahr, sondern werden wirtschaftlich tätig. Gem. § 3 EnWG steht ihnen eine solche Betätigung in gleicher Weise offen wie Privaten; auch sie benötigen dazu eine Betriebsaufnahmegenehmigung (s. o.), die aber nur aus den in § 3 EnWG genannten Gründen verweigert werden darf (gebundene Erlaubnis).

Obgleich die o.g. Konzessionen im energiewirtschaftlichen Sinne keinen vergaberechtlich zu bewertenden Fall darstellen, werden auch die Leitungs- und Wegerechte in einem transparenten und für alle Marktteilnehmer offenen Verfahren eingeräumt. So regelt § 13 EnWG dass „Gemeinden spätestens zwei Jahre vor Ablauf von Konzessionsverträgen das Vertragsende in geeigneter Form bekannt machen.“ In gleicher Weise wird der Neuabschluss oder eine Verlängerung des gegenständlichen Vertrages gehandhabt. Mit diesem Verfahren, bei denen allen Marktteilnehmern - d.h. gerade auch ausländischen Wettbewerbern - die Möglichkeit der Beteiligung eingeräumt wird, ist eine Diskriminierung bereits systembedingt ausgeschlossen. Außerdem bietet das Verfahren den unabweisbaren Vorteil der Kostengünstigkeit. Vor diesem Hintergrund wird noch deutlicher, dass es keiner gesonderten Regelungen bedarf. Insbesondere mit Blick auf das Subsidiaritätsprinzip ist bereits die Regelungskompetenz zu verneinen.

7. Gesellschafts- und fusionsrechtliche Vorschriften zur Kontrolle institutioneller ÖPP ausreichend

Wenn Kommunen Anteile an einem solchen Stadtwerk veräußern, so unterliegt dies den ganz normalen gesellschafts- und fusionsrechtlichen Vorschriften. Auch hier wird die Gemeinde als **Anbieter** (eines Geschäftsanteils an ihrem Unternehmen) tätig; es geht also nicht um kommunale Bedarfsdeckung. Deshalb sind auch hier vergaberechtliche Grundsätze nicht übertragbar, und solche Veräußerungsfälle sind nicht vergleichbar mit den im Grünbuch genannten Beispielen für eine institutionelle ÖPP.

Es muss gewährleistet sein, dass auf staatlicher wie kommunaler Ebene die Gestaltungsfreiheit bei den ÖPP erhalten bleibt. Eine einheitliche europäische Definition oder eine Standardisierung der Gesellschaftsverträge ist weder erforderlich, noch wäre sie zweckmäßig.

Bei Verkäufen ganzer Unternehmen oder auch von Teilen gelten die einschlägigen gesellschafts- und fusionsrechtlichen Vorschriften, auch wenn der Verkäufer die öffentliche Hand ist. In einem solchen Fall beschafft die öffentliche Hand jedoch keine Leistung für den eigenen Bedarf / für die eigenen Aufgaben, sondern rückt selbst in die Position eines Anbieters. Entsprechend ist eine Subsumtion unter vergaberechtliche Grundsätze nicht möglich und damit auch nicht vergleichbar mit den im Grünbuch skizzierten Szenarien für institutionelle ÖPP. Überdies ist dieser Bereich von starkem europaweitem Wettbewerb geprägt, wie Beteiligungen der EdF bei EnBW, Vattenfall Europe bei HEW/BEWAG oder auch ESSENT bei swb deutlich zeigen.

8. Das Grünbuch lässt Grundprinzipien der Europäischen Union außer Betracht

Bei der mit dem Grünbuch eröffnete Debatte über ÖPP und Konzessionen sollen die Grundprinzipien des EG-Vertrages nicht außer Acht gelassen werden. Gemäß dem Subsidiaritätsprinzip darf die Gemeinschaft nur tätig werden, soweit die Ziele der in Betracht gezogenen Maßnahmen auf Ebene der Mitgliedstaaten nicht ausreichend erreicht werden können (Art. 5 EG-Vertrag). Das Grünbuch legt in nicht ausreichender Weise dar, dass ein Handeln der Gemeinschaft in Bezug auf ÖPP und Konzessionen erforderlich ist, um die Ziele der Gemeinschaft in dieser Hinsicht zu erreichen. Vielmehr müsste zunächst die Umsetzung der jüngsten Richtlinien der EU in Bezug auf die Auftragsvergabe abgewartet werden, deren Umsetzung und praktische Auswirkungen auf den Markt analysiert werden. Aufgrund dieser Feststellungen müsste dann entschieden werden, ob zur Erreichung der Ziele der Gemeinschaft weitere Maßnahmen im Auftragsvergabewesen erforderlich sind. Das auf dem Subsidiaritätsprinzip beruhende Recht der Mitgliedstaaten, über die Form der Erbringung öffentlicher Dienstleistungen zu entscheiden, darf nicht ausgehebelt oder eingeschränkt werden.

Aus dem Subsidiaritätsprinzip folgt auch für die ÖPP auf Vertragsbasis, dass die primärrechtlichen Zuständigkeiten der EU nur dann gegeben sind, wenn eine gemeinschaftsweite Regelung gerechtfertigt und sachlich geboten ist. Das ist dann der Fall, wenn in den Mitgliedsstaaten vorgenommene Maßnahmen zu keiner ausreichenden Entwicklung i.S. der Grundsätze des EG-Vertrages führen. Insbesondere lässt die Abfassung des Grünbuchs zum jetzigen Zeitpunkt den Schluss zu, nicht einmal an den Auswirkungen der Neu-Kodifikationen der Richtlinien 2004/17/EG[1] und 2004/18/EG[2] interessiert zu sein, deren Auswirkungen auf den Wettbewerb und die wirtschaftliche Entwicklung noch abzuwarten bleiben. Diese Vorgehensweise lässt ernsthafte Zweifel an der Konformität des Gründbuchs mit dem Subsidiaritätsprinzip aufkommen.

Diesen Grundsatz hat der Konvent zur Zukunft Europas in seinem Vorschlag für die künftige europäische Verfassung bekräftigt. Für die Regelung innerer Angelegenheiten der Mitgliedstaaten, wie innere Verfasstheit und Organisation, sowie für die Frage, welche Aufgaben die Mitgliedstaaten erfüllen und wie sie dies tun, besteht somit keine Kompetenz der Europäischen Union.

Als weiteres Grundsatz-Prinzip des EG-Vertrages ist die Neutralität der Europäischen Union in Bezug auf die Eigentumsordnung der Mitgliedstaaten zu beachten (Art. 295 EG-Vertrag). Die Europäische Union hat alles zu unterlassen, dass die Eigentumsstrukturen in den einzelnen Mitgliedstaaten in Frage stellen würde. Maßnahmen, die die freie Betätigung von Unternehmen wesentlich einschränken, können zugleich eine Einschränkung des nach dem deutschen Grundgesetz verbriefte Eigentumsgarantie bewirken.

Dies gilt entsprechend Artikel 295 EGV, nach dem die Eigentumsordnung in den verschiedenen Mitgliedstaaten vom EGV unberührt bleibt, insbesondere für die Frage, ob öffentliche Aufgaben in öffentlicher, privater oder gemischtwirtschaftlicher Trägerschaft erfüllt werden.

Wegen des Prinzips der Neutralität der Eigentumsordnungen darf es seitens der europäischen Institutionen keine Präferenz für bestimmte Formen der Trägerschaft geben.

Außerdem soll durch den neuen Verfassungsartikel I-5 auf europäischer Ebene die Wahlfreiheit der Kommunen, abgeleitet aus dem Recht auf Selbstorganisation, festgeschrieben werden. Damit werden die Garantien des Artikels 28 Abs. 2 Grundgesetz auf europäischer Ebene – an höchster Stelle – anerkannt. Vor diesem Hintergrund ist es nicht verständlich, dass die Kommission mit dem vorliegenden Grünbuch versucht, Kompetenzen auf die EU-Ebene hoch zu ziehen und lokale dezentrale Zuständigkeiten einer gemeinschaftsweiten Regelung zu unterwerfen.

[1] Richtlinie 2004/17/EG des Europäischen Parlaments und des Rates vom 31. März 2004 zur Koordinierung der Zuschlagserteilung durch Auftraggeber im Bereich der Wasser-, Energie- und Verkehrsversorgung sowie der Postdienste

[2] Richtlinie 2004/18/EG des Europäischen Parlaments und des Rates vom 31. März 2004 zur Koordinierung der Verfahren zur Vergabe öffentlicher Bauaufträge, Lieferaufträge und Dienstleistungsaufträge

Fazit

Weder aus wirtschaftlicher, aus wettbewerblicher noch aus rechtlicher Sicht ist das Ansinnen des „Gründbuchs zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen“ vertretbar und sinnvoll. Der Erlass einer neuen Richtlinie in einem von Wettbewerb geprägten Wirtschaftsbereich führt zu einer Überregelementierung und zu einer volkswirtschaftlich bedenklichen Zunahme an Bürokratisierung, die ein weiteres ernstes Hemmnis für Wachstum und Entwicklung darstellen würde. Die Ausweitung europäischer Regelungskompetenzen bedeutet einen ernsten Eingriff in die Eigentumsordnungen der Nationalstaaten und findet auch keine - ohnehin nicht zulässige - Rechtfertigung in den Ausnahmebestimmungen zum Subsidiaritätsprinzip. **Das vorgelegte Grünbuch darf auf keinen Fall in einer entsprechenden Richtlinie oder in die Modifizierung bestehender Richtlinien münden.** Jedenfalls ist zu fordern, dass der sektoral geregelte Elektrizitätsbinnenmarkt von einer sektorunspezifischen ÖPP-Regelung ausgenommen wird.

VDEW

Verband der
Elektrizitätswirtschaft e.V.

Antworten des VDEW

zum Fragenkatalog des Grünbuchs zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen
vom 30.04.2004

Frankfurt am Main, 29. Juli 2004

VDEW ist der Spitzenverband der Deutschen Elektrizitätswirtschaft. Er repräsentiert mit seinen 750 Mitgliedern knapp 95 Prozent des gesamten deutschen Strommarktes. Zu seinen Mitgliedern zählen Unternehmen der privaten Wirtschaft, sowie auch gemischtwirtschaftliche und öffentliche – zumeist kommunale – Unternehmen, deren Gemeinsamkeit es ist, die sichere, preiswerte sowie umweltverträgliche Stromversorgung der Verbraucher sicherzustellen.

Allgemein fällt auf, dass das Grünbuch nicht in der gebotenen Offenheit formuliert wird, die eine allgemeine und umfassende Diskussion zu ÖPP ermöglichen würde. Viele der im Grünbuch gestellten Fragen werden mit einer Tendenz gestellt, die ein Ergebnis bereits vorwegnehmen.

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Die deutschen Stromversorger, ob privat, gemeinwirtschaftlich oder öffentlich gehen vielfach Partnerschaften ein, die rein privater Natur sein können aber auch mit Partnern aus der öffentlichen Wirtschaft bzw. mit staatlichen Stellen – zumeist Gemeinde oder Gemeindeverbände abgeschlossen werden können. Die hierfür erforderlichen Verträge werden nach geltendem Energie-, Umwelt- und Kartellrecht unter Wahrung der Verbraucherrechte abgeschlossen. Aufwendige Ausschreibungsverfahren erscheinen wegen hoher Kosten kontraproduktiv.

Das Grünbuch erklärt, dass es für den Begriff der ÖPP – und damit auch für den der ÖPP auf Vertragsbasis - keine gemeinschaftsweit geltende Definition gibt (Rn.1). Auch gäbe es für diese Rechtsfigur kein besonderes System im Gemeinschaftsrecht (Rn. 8). Soweit das Grünbuch selbst „ÖPP auf Vertragsbasis“ als ÖPP definiert, „bei denen die Partnerschaft zwischen öffentlichem und privaten Sektor nur auf vertraglichen Beziehungen basiert“ (Rn. 20), bleibt es sehr allgemein. Vor dem Hintergrund dieser Konturlosigkeit des Begriffs der ÖPP auf Vertragsbasis tut sich der VDEW genau wie VKU schwer, ÖPP auf Vertragsbasis im Sinne des Grünbuchs überhaupt – geschweige denn abschließend – zu benennen.

Das Vorhaben der Kommission, Dienstleistungskonzessionen den Vergaberegeln zu unterwerfen, ist u.a. deshalb verfehlt, weil das Vergaberecht nur auf Beschaffungsvorgänge anwendbar und seiner ratio nach auch nur diesbezüglich sinnvoll ist. Dies erklärt auch die geltende Rechtslage, nach der Dienstleistungskonzessionen nicht dem Vergaberecht unterliegen – übrigens auch nach den neuen EU-Richtlinien zum Vergaberecht (2004/17/EG und 2004/18/EG) nicht.

In Deutschland werden Dienstleistungskonzessionen durch Verträge „vergeben“, wobei die Auswahl des Vertragspartners im pflichtgemäßen Ermessen der jeweiligen öffentlich-rechtlichen Körperschaft steht.

Im Übrigen liegen den hier in Rede stehenden Dienstleistungskonzessionen regelmäßig privatrechtliche Verträge zugrunde, deren Inhalte sich an den einschlägigen Gesetzen messen lassen müssen und gerichtlich überprüfbar sind. Ein Beispiel für eine derartige gesetzliche Regelung stellt § 13 Abs. 2 EnWG dar, wonach die Gemeinden die Neuvergabe von Wegenutzungsverträgen zur Strom- und Gasversorgung 2 Jahre vor Ablauf des Altvertrags öffentlich bekannt machen müssen, § 13 Abs. 3 EnWG. Auf diese Weise wird Transparenz und Gleichbehandlung sichergestellt. Weitere Regelungen ergeben sich aus der Konzessionsabgabenverordung.

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Dieser Aussage ist nicht zuzustimmen. Denn der wettbewerbliche Dialog ist für die Vergabe öffentlicher Aufträge vorgesehen und damit ein Instrument des Vergaberechts. So heißt es in Art. 29 der Vergabe-Richtlinie 2004/18/EG, dass „der öffentliche Auftraggeber“ […] den wettbewerblichen Dialog „[b]ei besonders komplexen Aufträgen“ anwenden kann. Sinn und Zweck des wettbewerblichen Dialogs ist es also bei unübersichtlichen, schwer zu durchdringenden Sachverhalten das Vergabeverfahren zu vereinfachen bzw. überhaupt erst zu ermöglichen (vgl. Grünbuch Rn. 25). Für den Bereich der Dienstleistungskonzessionen gilt, wie bereits zu Frage 1 ausgeführt, dass das Vergaberecht zu Recht nicht anwendbar ist. Insoweit gibt es keine Verbindung zwischen dem vergaberechtlichen Instrument des wettbewerblichen Dialogs und den Dienstleistungskonzessionen.

Im Übrigen sind die Sachverhalte, die den Dienstleistungskonzessionen in den Bereichen, in denen die Unternehmen des VDEW tätig sind, zugrunde liegen, keineswegs derart komplex, wie sie es aber nach der ratio des Art. 29 für die Eröffnung des wettbewerblichen Dialogs sein müssten. Das heißt, die Tatbestandsvoraussetzungen des Art. 29 würden bei den hier in Rede stehenden Sachverhalten nicht erfüllt sein. Dies ist ein weiterer Anhaltspunkt dafür, dass der wettbewerbliche Dialog des Vergaberechts von der Frage der Erteilung von Dienstleistungskonzessionen streng zu trennen ist.

3. Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Die Frage stellt sich in der Elektrizitätswirtschaft aus den unter Frage 2 geführten Gründen nicht.

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

In der Stromwirtschaft bilden die Konzessionsverträge keine "Konzessionen" im herkömmliche Sinne, sondern es geht um privatrechtliche Wegenutzungsrechte. In den in Deutschland üblichen „Konzessionsverträgen“ wird kein Recht zur Energieversorgung vom Staat auf Private übertragen. Vielmehr haben sie die Nutzung öffentlicher Wegerechte zum Gegenstand, für die das Unternehmen nicht ein Entgelt erhält, sondern entrichtet.

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Art. 43 ff. EGV sind hinreichend präzise. Im besonderen Fall der Dienstleistungskonzessionen besteht für Gesellschaften bzw. Gruppierungen aus anderen Staaten effektiv die Möglichkeit, Konzessionär zu werden. Auch im Rahmen des Abschlusses der sog. Stromkonzessionen, bei denen keine klassische Vergabe stattfindet, hat die öffentlich-rechtliche Körperschaft vor Ort die Partner ihrer Konzessionsverträge beispielsweise nach § 13 EnWG in einem transparenten und diskriminierungsfreien Verfahren auszuwählen. Beteiligungen von ausländischen privaten Partnern an Dienstleistungskonzessionen existieren. Soweit unmittelbar keine Konzessionsverträge zwischen ausländischen Unternehmen und deutschen Gebietskörperschaften vorliegen, ist zu bedenken, dass ausländische Unternehmen oftmals mittelbar über institutionalisierte ÖPP an Dienstleistungskonzessionen beteiligt sind. Dies ist dann der Fall, wenn diese an deutschen Unternehmen gesellschaftsrechtlich beteiligt sind, die ihrerseits Dienstleistungskonzessionen - unmittelbar oder mittelbar - innehaben (z. B. EdF/EnBW/Stadtwerke Düsseldorf AG, Vattenfall Europe/HEW/ BEWAG).

Hinsichtlich des tatsächlichen Wettbewerbs gilt: Inwieweit faktisch Gruppierungen aus anderen Staaten Dienstleistungskonzessionen erhalten, ist kein Gradmesser für den tatsächlichen Wettbewerb. Insoweit sind also unternehmenspolitische Entscheidungen für das wettbewerbliche Verhalten der Unternehmen aus anderen Staaten verantwortlich. Der derzeit geltende Rechtsrahmen ermöglicht sowohl die Teilnahme am Wettbewerb als auch den Erhalt der Konzession.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Nein.
Es besteht vielmehr die Gefahr, dass bei der mit dem Grünbuch eröffneten Debatte über ÖPP und Konzessionen die Grundprinzipien des EG-Vertrages außer Acht gelassen werden. Gemäß dem Subsidiaritätsprinzip darf die Gemeinschaft nur tätig werden, soweit die Ziele der in Betracht gezogenen Maßnahmen auf Ebene der Mitgliedstaaten nicht ausreichend erreicht werden können (Art. 5 EG-Vertrag). Das Grünbuch legt in nicht ausreichender Weise dar, dass ein Handeln der Gemeinschaft in Bezug auf ÖPP und Konzessionen erforderlich ist, um die Ziele der Gemeinschaft in dieser Hinsicht zu erreichen. Vielmehr müsste zunächst die Umsetzung der jüngsten Richtlinie der EU in Bezug auf die Auftragsvergabe abgewartet werden. Aufgrund dieser Feststellungen müsste dann entschieden werden, ob zur Erreichung der Ziele der Gemeinschaft weitere Maßnahmen im Auftragsvergabewesen erforderlich sind.

Ein weiterer Grundsatz des EG-Vertrages ist die Neutralität der Europäischen Union in Bezug auf die Eigentumsordnung der Mitgliedstaaten (Art. 295 EG-Vertrag). Die Europäische Union hat alles zu unterlassen, das die Eigentumsstrukturen in den einzelnen Mitgliedstaaten in Frage stellen würde. Maßnahmen, die die freie Betätigung von Unternehmen wesentlich einschränken, können zugleich eine Einschränkung der nach dem deutschen Grundgesetz verbrieften Eigentumsgarantie bewirken.

Eine Ausschreibungsverpflichtung für Dienstleistungskonzessionen würde übrigens bedeuten, dass auch die Konzessionserteilung an institutionalisierte ÖPP auszuschreiben wäre. Auf das Zustandekommen und Weiterbestehen von institutionalisierten ÖPP hätte dies negative Auswirkungen. Es müsste nämlich damit gerechnet werden, dass das Interesse privater Akteure, solche Partnerschaften einzugehen oder aufrecht zu erhalten, wegen der dann fehlenden Investitionssicherheit der privaten Partner stark zurückgehen würde. Dies könnte dann die Fähigkeit der öffentlichen Hand einschränken, die Versorgung mit bisher im Rahmen von institutionalisierten ÖPP erbrachten Dienstleistungen sicherzustellen. Für die privaten Partner könnten sich bereits getätigte Investitionen als Fehlinvestitionen erweisen. In jedem Fall muss daher sichergestellt werden, dass die institutionalisierten ÖPP die Aufträge erhalten können und die Vertragslaufzeiten so bemessen werden, das die Investitionen sich über einen angemessenen Zeitraum amortisieren können.

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Nein.
Objektive Gründe gibt es in dieser Hinsicht gerade nicht. Insbesondere dürfen nicht Dienstleistungskonzessionen – über den Weg der Einstufung als Unterfall der

Konzessionen – einem Vergaberegelwerk unterworfen werden. Die Einbeziehung der Dienstleistungskonzessionen in das Vergaberecht ist in den Gesetzgebungsverfahren zu den Vergaberichtlinien immer wieder diskutiert worden und letztlich mit den besseren und richtigen Gründen abgelehnt worden.

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

In der deutschen Elektrizitätswirtschaft gibt es bereits eine Vielzahl von Partnerschaften mit ausländischen Unternehmen (siehe Grafik).

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Wie in unserer Antwort zu Frage 5 dargelegt, besteht im Bereich der Dienstleistungskonzessionen Wettbewerb in der Form, dass jedes in- und ausländische Unternehmen sich um die Erteilung der lokalen Dienstleistungskonzessionen – wie näher erläutert auch erfolgreich – bemühen kann. Soweit Dienstleistungskonzessionen nur befristet erteilt werden oder werden können, ist – nach Ablauf der jeweiligen Vertragslaufzeit – auch für ausländische Akteure der Zugang zu privat initiierten ÖPP gewährleistet.

Im Übrigen hätte ein Ausschreibungszwang im Fall privat initiierter ÖPP wohl zur Folge, dass die schnellen, innovativen Akteure benachteiligt werden, weil sie in die Reihe der übrigen Bieter eingegliedert würden. Gerade deswegen wird ja auch in der Praxis nach "Belohnungen" gesucht, um das System für die Initiatoren attraktiv zu gestalten (vgl. Grünbuch Rn. 41). Innovationsfreudigkeit und Schnelligkeit sind typische Wettbewerbsmerkmale, die nicht durch eine formalisierte Gleichbehandlung zunichte gemacht werden dürfen. Die Belohnungs-Lösung legt wiederum eine nicht gerechtfertigte Ungleichbehandlung der Akteure nahe, die das System des obligatorischen Vergabeverfahrens im Fall privat initiierter ÖPP letztlich ad absurdum führen würde.

10. Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Grundsätzlich besteht der Eindruck, dass ÖPP, wo sie abgeschlossen wurden, sich bewährt haben. Es ist nicht ersichtlich, dass eine Ausschreibung zu besseren Ergebnissen führen würde.

11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Nein. In den VDEW Mitgliedsunternehmen betreffenden Bereichen der Konzessionsverträge für Strom sind derartige Fälle nicht bekannt. Hier existieren gesetzliche Regelungen, die Rechtssicherheit für alle Beteiligten gewährleisten.

12. Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Nein.

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Nein.

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Der VDEW hält für den ihn betreffenden Bereich die bestehenden primärrechtlichen Regelungen für ausreichend. Insbesondere in Bezug auf die Dienstleistungskonzessionen besteht kein Handlungs- bzw. Klärungsbedarf. (Siehe hierzu die Antworten zu den Fragen 6 u. 7).

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Nein.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eine Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Nein.
Erhält ein Privater den Zuschlag für einen öffentlichen Auftrag und kann er die

Leistungen nicht aus eigener Kraft erbringen, kann schon nach dem heutigen Recht der Auftraggeber die Vergabe von Unteraufträgen an bestimmte Bedingungen knüpfen. Jede zusätzliche Verpflichtung der Vergabestelle, dem privaten Partner Zusagen abzuverlangen, bringt unverhältnismäßigen Aufwand und erhebliche Zeitverzögerung mit sich. Wird eine Dienstleistungskonzession vergeben, ist schon der Hauptauftrag nicht ausschreibungspflichtig. Das gilt dann selbstverständlich auch für die Unteraufträge.

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?.

Nein.
Letztlich würden auf diese Weise – ohne dass dies erforderlich wäre – Märkte bis ins Kleinste durchreguliert. Eigeninitiative und besonderes Engagement würden verhindert.

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht?
Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Auch ohne eine gemeinschaftsrechtliche Initiative haben sich die vielfältigsten Formen institutionalisierter ÖPP entwickelt, von der einfachen Hereinnahme eines privaten Partners bis zur Bildung von Konsortien zur Verfolgung eines gemeinsamen Zwecks. Für diese Formen institutionalisierter ÖPP reichen die nationalen Vorschriften (Zivilrecht, Gesellschaftsrecht, Wettbewerbsrecht) völlig aus. Es ist im Gegenteil zu befürchten, dass eine gemeinschaftsweite Vereinheitlichung der Voraussetzungen für die Bildung institutionalisierter ÖPP diese Vielgestaltigkeit verhindert.
Dass bei der Einrichtung institutionalisierter ÖPP die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge nicht beachtet wurden, konnte nicht beobachtet werden.

Dies gilt nach unseren Erfahrungen auch für die Einhaltung der gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen. Beides belegt die fehlende Erforderlichkeit einer gemeinschaftsrechtlichen Regelung. Vor dem Hintergrund der Vielgestaltigkeit der ÖPP muss befürchtet werden, dass der Versuch für alle denkbaren Konstellationen einheitliche Regelungen zu schaffen nicht gelingt, sondern im Gegenteil für die Bildung und die effiziente Betätigung der ÖPP behindernd wirkt.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht? Allgemein und unabhängig von den in diesem Grünbuch aufgeworfenen Fragen:

Das rasche Anwachsen der Anzahl institutionalisierter ÖPP – auch bei den Mitgliedern des VDEW – belegt, dass es einer Gesetzesinitiative auf EU-Ebene zur Förderung dieses Modells nicht bedarf.

Der VDEW sieht im Übrigen im europäischen Primärrecht auch keinerlei Ermächtigungsgrundlage für generelle europäische Regelungen für institutionalisierte ÖPP.

Auch die Anwendung der Binnenmarkt- und Wettbewerbsregeln darf nicht dazu führen, dass dadurch das auf dem Subsidiaritätsprinzip beruhende Recht der Mitgliedstaaten, über die Form der Erbringung öffentlicher Dienstleistungen zu entscheiden, ausgehebelt oder eingeschränkt wird. Sofern eine Kommune, basierend auf ihrer Organisationshoheit, eine institutionalisierte ÖPP eingeht, ist dies kein Beschaffungsakt. Somit untersteht die Auswahl des privaten Partners nicht dem Vergaberechtsregime. Es muss auch zukünftig gewährleistet sein, dass auf staatlicher wie kommunaler Ebene die Gestaltungsfreiheit bei den ÖPP erhalten bleibt. Eine einheitliche europäische Definition oder eine Standardisierung der Gesellschaftsverträge ist weder erforderlich, noch wäre sie zweckmäßig und handhabbar. Um die Möglichkeit der Aufgabenerledigung im Rahmen von institutionalisierten ÖPP – die sich bei geeigneter Ausgestaltung in vielen Fällen für die Erbringung öffentlicher Dienstleistungen als zweckmäßig und vorteilhaft erwiesen hat – nicht zu gefährden, wäre es hilfreich, wenn der Inhouse-Begriff weiter gefasst würde, z. B. indem institutionalisierte ÖPP darunter fallen, wenn der öffentliche Einfluss innerhalb der institutionalisierten ÖPP überwiegt (Kontrollkriterium) und die ausgeübte Dienstleistung im Wesentlichen zum Nutzen der Bürger in der entsprechenden Gebietskörperschaft erfolgt (Dienstleistungskriterium).

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Wie in der Antwort zu Frage 6 ausgeführt, würde eine Ausschreibungsverpflichtung für Dienstleistungskonzessionen bedeuten, dass auch die Konzessionserteilung an institutionalisierte ÖPP auszuschreiben wäre. Auf das Zustandekommen und Weiterbestehen von institutionalisierten ÖPP hätte dies negative Auswirkungen, weil die Bildung institutionalisierter ÖPP an Sinnhaftigkeit verliert. Dieses Beispiel belegt, dass die Ausdehnung von vergaberechtlichen Vorgaben die Bildung von ÖPP verhindern könnte. Dies könnte sogar zur Konsequenz haben, dass bereits bestehende institutionalisierte ÖPP aufgelöst würden. Am Ende der Entwicklung stünde der reine (teure und ineffiziente) „Ämterstaat“. Auch wirkt die Formalisierung durch Vergabeverfahren eher abschreckend auf die Wirtschaftsteilnehmer. Mit ihr ist zudem regelmäßig eine längere Verfahrensdauer verbunden. Letztlich werden die Handlungsmöglichkeiten auf kommunaler Ebene unangemessen eingeschränkt. Dies alles erscheint wenig förderlich für die Bildung von ÖPP.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Der VDEW kann hierzu keine Angaben machen.

22. Denken Sie, dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Weder aus wirtschaftlicher, aus wettbewerblicher noch aus rechtlicher Sicht ist das Ansinnen des „Gründbuchs zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen“ vertretbar und sinnvoll. Der Erlass einer neuen Richtlinie in einem von Wettbewerb geprägten Wirtschaftsbereich führt zu einer Überregelementierung und zu einer volkswirtschaftlich bedenklichen Zunahme an Bürokratisierung, die ein weiteres ernstes Hemmnis für Wachstum und Entwicklung darstellen würde. Die Ausweitung europäischer Regelungskompetenzen bedeutet einen ernsten Eingriff in die Eigentumsordnungen der Nationalstaaten und findet auch keine - ohnehin nicht zulässige - Rechtfertigung in den Ausnahmebestimmungen zum Subsidiaritätsprinzip. **Das vorgelegte Grünbuch darf auf keinen Fall in einer entsprechenden Richtlinie oder in die Modifizierung bestehender Richtlinien münden.** Wegen der falschen Grundintention des Ansatzes ist auch ein alternierender künftiger Austausch nicht erforderlich und entsprechend abzulehnen.

Grünbuch der EU-Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vom 30. April 2004 (KOM [2004] 327)

Sehr geehrte Damen und Herren,

wir danken Ihnen für die Gelegenheit, zum Grünbuch der EU-Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen Stellung nehmen zu können.

Der Verband Deutscher Verkehrsunternehmen e.V. (VDV) vertritt die Interessen der Unternehmen des öffentlichen Personenverkehrs auf Straße und Schiene sowie des Güterverkehrs mit Schwerpunkt Eisenbahngüterverkehr in Deutschland. Dem VDV gehören zurzeit 540 Verkehrsunternehmen an.

431 Mitgliedsunternehmen betreiben öffentlichen Personenverkehr mit den Betriebszweigen U-Bahn, Stadtbahn, Straßenbahn, Eisenbahn, S-Bahn, Bahnen besonderer Bauart, Obus und Omnibus. Insgesamt wurden die Verkehrsmittel aller VDV-Unternehmen 2003 von rund 9,1 Milliarden Fahrgästen benutzt. Das entspricht einem Anteil von mehr als 90 Prozent am Gesamtmarkt des öffentlichen Personennahverkehrs auf Schiene und Straße in Deutschland.

Bei den Mitgliedsunternehmen mit Güterverkehr handelt es sich um 99 Unternehmen des öffentlichen Verkehrs, 61 Unternehmen betreiben nichtöffentlichen Verkehr (Werkseisenbahnen und Hafeneisenbahnen). Diese Unternehmen befördern rund 530 Millionen Tonnen Güter im Jahr, was einer Leistung von etwa 80 Milliarden Tonnenkilometern entspricht.

Erfreulicherweise hatte der öffentliche Personennahverkehr in den vergangenen Jahrzehnten ein kontinuierliches Fahrgastwachstum zu verzeichnen. Die Erfüllung der Mobilitätsansprüche der Bürgerinnen und Bürger erfordert unbestritten einen leistungsfähigen und attraktiven ÖPNV, um gleichwertige Lebensverhältnisse zu gewährleisten, die Straßen vom motorisierten Individualverkehr zu entlasten, eine lebenswerte Entwicklung des städtischen und ländlichen Raums zu fördern, Ressourcen zu schonen und die Umwelt zu entlasten. Diese öffentliche Daseinsvorsorgeaufgabe erfüllen die deutschen Verkehrsunternehmen mit modernen und innovativen Angeboten, indem sie insbesondere ihre Fahrzeugflotten umfassend modernisieren, Fahrpläne untereinander immer besser verknüpfen, Tarifsysteme vereinfachen und die Fahrgastinformation weiter ausbauen.

Der Genehmigungswettbewerb, aber auch die Verschärfung der dramatischen Situation insbesondere der öffentlichen Haushalte in Städten und Gemeinden, haben Bewegung in die Verkehrsbranche gebracht. Wirtschaftliches Arbeiten und der Wechsel zu individuellen, bedarfsgerechten Bedienungsangeboten sind unabdingbar geworden. Aus diesen Gründen haben Kooperationen und Partnerschaften jeglicher Art bei Verkehrsunternehmen im Personen- und Schienengüterverkehr stark an Bedeutung gewonnen

Der VDV begrüßt grundsätzlich das Ziel der Kommission, Hemmnisse gegenüber öffentlich-privaten Partnerschaften abzubauen. Wir fürchten aber, dass die von der Kommission in Aussicht genommenen Klarstellungen und Regulierungen bewährte und effiziente Gestaltungen im Rahmen der verfassungsrechtlich garantierten kommunalen Organisationshoheit in Deutschland in Frage stellen und unnötige bürokratische Hürden für unternehmerisch und aus Kundensicht sinnvolle Kooperationen im Verkehrsmarkt aufrichten werden.

Das Grünbuch unterstreicht die Bestrebungen der Kommission, Ausschreibungspflichten zu erweitern und insbesondere auf Dienstleistungskonzessionen auszudehnen. Die im Grünbuch vorgesehene tendenzielle Bevorzugung öffentlich-privater Partnerschaften gegenüber anderen Formen der Kooperation lehnen wir ab. Das Grünbuch unterscheidet grundsätzlich nur zwischen zwei Arten von öffentlich-privaten Partnerschaften: Partnerschaften auf Vertragsbasis, bei denen die Partnerschaft zwischen öffentlichem und privatem Sektor nur auf vertraglichen Beziehungen basiert, sowie institutionellen Partnerschaften, bei denen die Zusammenarbeit zwischen öffentlichem und privatem Sektor innerhalb eines eigenständigen Rechtssubjekts erfolgt. Nach dem deutschen Recht stehen jedoch horizontale Kooperationen, kommunale Zweckverbände und Anstalten des öffentlichen Rechts als weitere Alternativen gleichberechtigt neben öffentlich-privaten Partnerschaften. Dies darf nicht in Frage gestellt werden.

Öffentlich-private Partnerschaften und Kooperationen sind im Verkehrssektor – auch ohne eine eigenständige Regulierung auf der Ebene des europäischen Gemeinschaftsrechts – eine seit langer Zeit bewährte Form der Zusammenarbeit öffentlicher und/oder privater Unternehmen zum gegenseitigen Nutzen und damit auch zum Vorteil der Bürgerinnen und Bürger als Nutzer des ÖPNV und von Unternehmen als Nutzer des Schienengüterverkehrs. Gleichwohl sind öffentlich-private Partnerschaften, wie auch die Kommission im Grünbuch unter Ziffer 5 anerkennt, keine Patentlösung und kein Königsweg. Denn die Beteiligung Privater muss nicht zwangsläufig eine positive Auswirkung auf die Qualität der Dienstleistungserbringung haben.

Da das Gemeinschaftsrecht eigentümerneutral ausgestaltet ist, kann das Grünbuch nur so ausgelegt werden, dass auch die wirtschaftliche Betätigung der (kommunalen) Gebietskörperschaften mit einem eigenen Unternehmen unter den Begriff der „öffentlich-privaten Partnerschaften“ im Sinne des Grünbuchs zu subsumieren ist (Ziffer 7: Partnerschaft zur Bereitstellung öffentlicher Dienstleistungen durch Übertragung öffentlicher Dienstleistungen auf öffentliche, private oder gemischtwirtschaftliche Unternehmen). Damit würde auch die Dienstleistungserbringung durch ein eigenes Unternehmen der von der Kommission in Betracht gezogenen Koordinierung zur Einführung der Pflicht einer diskriminierungsfreien wettbewerblichen Vergabe unterliegen.

Die gemeinschaftsrechtlichen Vergaberichtlinien belassen die Entscheidung, eine Dienstleistung selbst zu erbringen oder sie (partnerschaftlich) einem Dritten zu übertragen, bisher den zuständigen Entscheidungsträgern vor Ort. Eine über die Vergaberichtlinien hinausgehende Regulierung von Konzessionen und öffentlich-privaten Partnerschaften ist nicht erforderlich, denn jeder öffentliche Auftraggeber, der die Bereitstellung einer Dienstleistung einem Dritten übertragen will, ist bereits an die Rechtsvorschriften für öffentliche Aufträge und Konzessionen sowie das primäre Gemeinschaftsrecht, insbesondere die Grundsätze der Gleichbehandlung und Transparenz, gebunden.

Deshalb ist es aus Sicht des VDV unabdingbar, dass es auch weiterhin in der Verantwortung der jeweiligen Gebietskörperschaft stehen muss, selbst zu entscheiden, wie und mit wem sie ihre Aufgaben erfüllen und Dienstleistungen für die Bürgerinnen und Bürger erbringen will. Der bestehende Rechtsrahmen für Partnerschaften zwischen öffentlichem und privatem Sektor ist nach unserer Auffassung ausreichend geregelt. Eine weitergehende Regulierung ist nicht erforderlich.

Zu den einzelnen im Grünbuch aufgeworfenen Fragen nehmen wir wie folgt Stellung:

1. *Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?*

Öffentlich-private Partnerschaften und Kooperationen sind auch auf dem Verkehrssektor – ohne eine besondere Regulierung auf der Ebene des europäischen Gemeinschaftsrechts – eine bewährte Möglichkeit der Zusammenarbeit öffentlicher und/oder privater Unternehmen zum gegenseitigen Nutzen und damit auch zum Vorteil der Bürgerinnen und Bürger als Nutzer des Öffentlichen Personennahverkehrs sowie der Unternehmen als Nutzer des Schienengüterverkehrs. Angesichts des zunehmenden Wettbewerbs auch im Öffentlichen Personennahverkehr (ÖPNV) und wegen der Verschärfung der dramatischen Situation insbesondere der öffentlichen Haushalte in Städten und Gemeinden, sind wirtschaftliches Arbeiten und die Orientierung auf marktgerechte Bedienungsangebote im Verkehrssektor unabdingbar geworden.

Aus diesen Gründen haben horizontale Kooperationen und öffentlich-private Partnerschaften jeglicher Art zwischen Verkehrsunternehmen stark an Bedeutung gewonnen und bringen die Chance mit sich, durch Rationalisierung und höhere Effektivität öffentliche Haushalte zu entlasten. Auch haben die deutschen Genehmigungsbehörden den gesetzlichen Auftrag nach § 8 Abs. 3 Satz 1 des Personenbeförderungsgesetzes (PBefG), im Interesse einer ausreichenden Bedienung der Bevölkerung mit ÖPNV-Leistungen sowie einer wirtschaftlichen Verkehrsgestaltung insbesondere für Verkehrskooperationen zu sorgen. Gleiches gilt für die Bildung von Kooperationen im Schienenpersonenverkehr nach § 12 Abs. 7 Satz 1 des Allgemeinen Eisenbahngesetzes (AEG).

Kooperationen sind die typische Organisationsform unternehmerischer Zusammenarbeit. Durch die Bündelung von Kräften und Kompetenzen der Kooperationspartner erweitern sich die Handlungsmöglichkeiten und führen zu einer „Win-Win-Situation" nicht nur der Partner, sondern insbesondere auch der Kunden und der öffentlichen Hand. Verkehrskooperationen i. S. d. § 8 Abs. 3 PBefG bzw. § 12 Abs. 7 AEG können dabei sowohl als vertragliche als auch als institutionalisierte ÖPP ausgestaltet sein.

Die Zusammenarbeit mehrerer Unternehmen umfasst zwangsläufig eine damit verbundene – auch vertraglich festgelegte – Teilung der Aufgabenbewältigung, die zu Synergieeffekten führen soll, aber nicht zwangsläufig einen öffentlichen Auftrag und damit einen Vergabevorgang darstellt. Kooperationen sind deshalb vorteilhaft, weil die eigene Aufgabenerledigung sinnvollerweise durch eine gemeinsame ersetzt wird. Im Vordergrund steht nicht die vergaberechtliche Beauftragung eines Kooperationspartners, sondern die gesetzlich geforderte und vorgesehene Zusammenarbeit zur wirtschaftlichen Verkehrsgestaltung, die sinnvollerweise mit einer Arbeitsteilung verbunden ist. Der Charakter der Aufgabenbewältigung der Versorgung der Bürgerinnen und Bürger und Unternehmen mit Verkehrsdienstleistungen im ÖPNV und Schienengüterverkehr durch die beteiligten Verkehrsunternehmen, auch wenn sie grundsätzlich öffentliche Auftraggeber sind, ändert sich durch die Kooperation nicht.

2. ***Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?***

Das Modell des „wettbewerblichen Dialogs" wurde durch die am 30. April 2004 in Kraft getretenen novellierten gemeinschaftsrechtlichen Vergaberichtlinien eingeführt und bedarf noch seiner Umsetzung in das nationale Recht der EU-Mitgliedstaaten. Daher bestehen auch noch keine Erfahrungen mit dem „wettbewerblichen Dialog", die eine belastbare Aussage, ob sich dieses Modell auch für die Einrichtung einer ÖPP auf Vertragsbasis eignet, zulassen würden.

Soweit bei der Einrichtung einer ÖPP aufgrund der Vergabe öffentlicher Aufträge die vergaberechtlichen Bestimmungen zu beachten sind, kann der „wettbewerbliche Dialog" geeignet sein, gemeinsam Lösungskonzepte für die optimale Aufgabenerfüllung zu erarbeiten. Jedoch besteht die Gefahr, dass derjenige Unternehmer, der sein besonderes „Know how" – möglicherweise mit hohen Kosten verbunden – in den wettbewerblichen Dialog einbringt, nicht den Zuschlag erhält. Ein anderer Bieter würde von der hohen Kompetenz des Unternehmers profitieren, was diesen unter wettbewerblichen Gesichtspunkten von einer weiteren Teilnahme an „wettbewerblichen Dialogen" abhalten könnte.

Bestrebungen, die bestehenden Ausschreibungspflichten noch weiter im Bereich der kommunalen Daseinsvorsorge wie dem ÖPNV zu erweitern, lehnen wir ab. Unter Beachtung der bestehenden vergaberechtlichen Vorschriften muss es auch weiterhin in der Verantwortung einer Gebietskörperschaft stehen, selbst zu entscheiden, wie und mit wem sie ihre Aufgaben erfüllen und Dienstleistungen für die Bürgerinnen und Bürger erbringen will.

3. ***Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!***

Nein. Denn soweit die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis die Anwendung der vergaberechtlichen Bestimmungen bedingt, kann sie auch nicht mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen.

4. ***Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?***

Nein, der VDV selbst hat bisher keine Erfahrungen mit einem Verfahren zur Vergabe einer Konzession gemacht.

5. ***Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?***

Es ist unbestritten, dass auch bei vergaberechtsfreien ÖPP die primärrechtlichen Grundsätze der Nichtdiskriminierung und Transparenz zu beachten sind. Das geltende Gemeinschaftsrecht ist auch präzise genug, um die Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an der Bildung von ÖPP oder an der Vergabe von Konzessionen zu gewährleisten. Probleme hinsichtlich der Teilnahme ausländischer Unternehmen am Wettbewerb sind dem VDV nicht bekannt.

6. ***Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?***

Nein, einen solchen Vorschlag hält der VDV nicht für wünschenswert. Gegenstand von Dienstleistungskonzessionen sind vielfach Dienstleistungen von allgemeinem (wirtschaftlichen) Interesse. Daher muss die wettbewerbliche Vergabe im Ermessen der Gebietskörperschaft stehen, die die Aufgabenverantwortung trägt. Eine stärkere Reglementierung durch einen gemeinschaftlichen Rechtsakt, insbesondere durch eine zwangsweise Unterwerfung unter die vergaberechtlichen Vorschriften, lehnen wir ab.

Ein gemeinschaftlicher Rechtsakt würde Dienstleistungskonzessionen gegen das ausdrückliche Petitum der erst am 30. April 2004 in Kraft getretenen novellierten EU-Vergaberichtlinien (Richtlinie 2004/17/EG, ABl. L 134 vom 30. April 2004; Seite 1; Richtlinie 2004/18/EG, ABl. L 134 vom 30. April 2004, Seite 114), die in ihren Artikeln 18 bzw. 17 Dienstleistungskonzessionen ausdrücklich vom Anwendungsbereich ausnehmen, in den Ausschreibungswettbewerb bringen. Da die Kommission bereits eine umfangreiche und detaillierte „Mitteilung (...) zu Auslegungsfragen im Bereich Konzessionen im Gemeinschaftsrecht (2000/C 121/02)“ veröffentlicht hat (ABl. C 121 vom 29. April 2000, S. 2 ff.), die zu wesentlichen Teilaspekten des Themas klarstellende Interpretationen enthält, kann auch nicht von einer Rechtsunsicherheit gesprochen werden.

7. ***Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?***

Ein neues Gesetzgebungsvorhaben mit der im Grünbuch vorgesehenen tendenziellen Bevorzugung öffentlich-privater Partnerschaften gegenüber anderen Formen der Kooperation lehnen wir ab. Das Grünbuch unterscheidet grundsätzlich nur zwischen zwei Arten von öffentlich-privaten Partnerschaften: Partnerschaften auf Vertragsbasis, bei denen die Partnerschaft zwischen öffentlichem und privatem Sektor nur auf vertraglichen Beziehungen basiert, sowie institutionellen Partnerschaften, bei denen die Zusammenarbeit zwischen öffentlichem und privatem Sektor innerhalb eines eigenständigen Rechtssubjekts erfolgt. Nach dem deutschen Recht stehen jedoch horizontale Kooperationen, kommunale Zweckverbände und Anstalten des öffentlichen Rechts als weitere Alternativen gleichberechtigt neben öffentlich-privaten Partnerschaften. Dies darf nicht in Frage gestellt werden.

Da das Gemeinschaftsrecht eigentümerneutral ausgestaltet ist, kann das Grünbuch nur so ausgelegt werden, dass auch die wirtschaftliche Betätigung der Gebietskörperschaften mit einem eigenen Unternehmen unter den Begriff der „öffentlich-privaten Partnerschaften“ im Sinne des Grünbuchs zu subsumieren ist (Ziffer 7: Partnerschaft zur Bereitstellung öffentlicher Dienstleistungen durch Übertragung öffentlicher Dienstleistungen auf öffentliche, private oder gemischtwirtschaftliche Unternehmen). Damit würde auch die Dienstleistungserbringung durch ein eigenes Unternehmen einem Vergabe-Regelwerk unterliegen.

Die kommunalen Unternehmen unterliegen den überwiegend restriktiven Vorschriften über die wirtschaftliche Betätigung der Gemeinden in den Gemeindeordnungen (Kommunalverfassungen) der deutschen Bundesländer. Blieben diese Vorschriften im Fall der von der Kommission in Betracht gezogenen Koordinierung zur Einführung der Pflicht einer diskriminierungsfreien wettbewerblichen Vergabe unverändert, hätten kommunale Nahverkehrsunternehmen kaum die Chance, sich im Wettbewerb zu behaupten.

Dies folgt vor allem aus dem Örtlichkeitsprinzip, das vielen Gemeindeordnungen immanent ist: Müsste sich das kommunale Nahverkehrsunternehmen auf seinem angestammten Gebiet dem Ausschreibungswettbewerb stellen und verlöre es dabei Leistungen, dürfte es sich nicht wie jedes andere staatliche oder private Verkehrsunternehmen anderswo Kompensation verschaffen. Die Folge wäre eine vom europäischen Gesetzgeber indirekt erzwungene und von den Landesgesetzgebern nicht verhinderte Privatisierung oder Schließung kommunaler Verkehrsunternehmen. Ein solches Szenario hält der VDV für völlig inakzeptabel.

8. ***Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?***

9. ***Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?***

Privat initiierte ÖPP entstehen, indem der Privatsektor selbst die Initiative zu einem ÖPP-Vorhaben ergreift. Dieses Initiativrecht steht nationalen wie ausländischen Akteuren gleichermaßen zur Verfügung, so dass ein diskriminierungsfreier Zugang zu privat initiierten ÖPP aus Sicht des VDV auch ohne einen regulatorischen Eingriff bereits gewährleistet ist.

10. ***Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?***

Der VDV selbst hat bisher noch keine Erfahrungen hinsichtlich der Auswahl eines privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht.

11. ***Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!***

Aus den VDV-Mitgliedsunternehmen sind uns derartige Fälle nicht bekannt. Nahverkehrskooperationen gemäß § 8 Absatz 3 PBefG, die im Interesse einer ausreichenden und leistungsfähigen Bedienung der Bürgerinnen und Bürger mit Nahverkehrsleistungen gebildet werden, unterliegen gemäß § 8 Absatz 3 Satz 9 PBefG gleichwohl der kartellrechtlichen Missbrauchsaufsicht nach dem Gesetz gegen Wettbewerbsbeschränkungen (GWB). Eine diskriminierende Wirkung von Nahverkehrskooperationen kann somit ausgeschlossen werden.

12. ***Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?***

Aus den VDV-Mitgliedsunternehmen sind uns derartige Praktiken oder Mechanismen nicht bekannt.

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Nein. In Bezug auf unsere Branche sehen wir keine Probleme.

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Die bestehenden gemeinschaftsrechtlichen Regelungen sind aus Sicht des VDV ausreichend. Eine weitergehende Regulierung öffentlich-privater Partnerschaften ist nicht erforderlich, denn jeder öffentliche Auftraggeber, der die Bereitstellung einer Dienstleistung einem Dritten übertragen will, ist bereits an die gemeinschaftsrechtlichen Vorschriften gebunden. Es muss auch weiterhin in der eigenen Verantwortung der Gebietskörperschaften stehen zu entscheiden, wie und mit wem sie ihre Aufgaben erfüllen und Dienstleistungen für die Bürgerinnen und Bürger erbringen wollen.

Die Einführung einer generellen Ausschreibungspflicht in Bezug auf die Bildung von ÖPP würde im Übrigen zu einer Bürokratisierung führen, denn Ausschreibungsverfahren sind mit einem administrativen und gegebenenfalls kostenintensiven Aufwand verbunden. Ein starres einheitliches Vergabeverfahren würde den örtlichen und strukturellen Unterschieden insbesondere bei der Erbringung von Dienstleistungen von allgemeinem (wirtschaftlichem) Interesse nicht mehr Rechnung tragen.

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Aus den VDV-Mitgliedsunternehmen sind uns derartige Probleme nicht bekannt.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eine Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Da die Auftraggeber bei der Vergabe öffentlicher Aufträge bereits nach dem zurzeit geltenden Vergaberecht die Vergabe von Unteraufträgen an Bedingungen knüpfen können, ist die weitergehende Einführung ausführlicherer Regeln für die Vergabe von Unteraufträgen nicht erforderlich. Ist der Auftragnehmer selbst Auftraggeber, unterliegen auch die von ihm zu vergebenden Unteraufträge ebenfalls den vergaberechtlichen Bestimmungen. Ist der Hauptauftrag selbst bereits ein vergaberechtsfreier Auftrag, so muss dies selbstverständlich auch für daraus resultierende Unteraufträge gelten.

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Der Auf- und Umbau eines verkehrlich und wirtschaftlich sinnvollen Bedienungsangebots macht Kooperationen notwendig, um die steigenden Mobilitätsansprüche der Bürgerinnen und Bürger an den ÖPNV und der Unternehmen an den Schienengüterverkehr erfüllen zu können. Angesichts der Rahmenbedingungen sind Kooperationen vielerorts der einzige bzw. verkehrlich oder politisch wünschenswerte Weg, um dem Ziel einer wirtschaftlichen Verkehrsbedienung – das auch die gemeinsame europäische Verkehrspolitik verfolgt – gerecht werden zu können.

Auch die Bildung institutionalisierter ÖPP hat im vergangenen Jahrzehnt im Verkehrssektor einen Aufschwung erfahren. Dabei handelt es sich um Partnerschaften sowohl zwischen Verkehrsunternehmen als auch mit Unternehmen aus anderen Dienstleistungsbranchen und der Industrie. Probleme bei der Einhaltung von Rechtsvorschriften sehen wir nicht.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Die nach unserer Kenntnis positiven Erfahrungen mit ÖPP in den VDV-Mitgliedsunternehmen unterstreichen, dass der bestehende Rechtsrahmen für Partnerschaften zwischen öffentlichem und privatem Sektor ausreichend geregelt ist. Eine weitergehende Regulierung ist aus Sicht des VDV nicht erforderlich. Ein Rechtsrahmen auf Gemeinschaftsebene könnte sich aufgrund seiner regulatorischen Wirkungen als Hindernis erweisen, ÖPP überhaupt zu bilden.

Allgemein und unabhängig von den in diesem Grünbuch aufgeworfenen Fragen:

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Die gemeinschaftsrechtlichen Vergaberichtlinien belassen bisher aus gutem Grund die Entscheidung, eine Dienstleistung selbst zu erbringen oder sie (partnerschaftlich) einem Dritten zu übertragen, den Entscheidungsträgern vor Ort. Eine über die Vergaberichtlinien hinausgehende Regulierung von Konzessionen und öffentlich-privaten Partnerschaften ist nicht erforderlich, denn jeder öffentliche Auftraggeber, der die Bereitstellung einer Dienstleistung einem Dritten übertragen will, ist bereits an die Rechtsvorschriften für öffentliche Aufträge und Konzessionen sowie das primäre Gemeinschaftsrecht, insbesondere die Grundsätze der Gleichbehandlung und Transparenz, gebunden.

Es muss auch weiterhin unter Berücksichtigung des Subsidiaritätsprinzips in der Verantwortung der zuständigen Gebietskörperschaft stehen, selbst zu entscheiden, wie und mit wem sie ihre Aufgaben erfüllen und Dienstleistungen für die Bürgerinnen und Bürger erbringen will. Der bestehende Rechtsrahmen für Partnerschaften zwischen öffentlichen und privatem Sektor ist nach unserer Auffassung ausreichend geregelt. Eine weitergehende Regulierung ist nicht erforderlich und könnte abschreckend auf die Wirtschaftsteilnehmer wirken. Eine weitergehende Formalisierung von ÖPP durch eine Änderung der Vergaberichtlinien wäre daher für die Bildung von ÖPP kontraproduktiv.

21. ***Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?***

Dem VDV sind ÖPP-Formen aus Drittländern nicht bekannt.

22. ***Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?***

Der VDV ist gern bereit, sich an einem Diskurs im Hinblick auf den Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung zu beteiligen. Um jedoch einen konstruktiven Gedanken- und Ideenaustausch zu ermöglichen, muss ein derartiges Netzwerk ergebnisoffen ausgestaltet sein und die unterschiedlichen staatsorganisationsrechtlichen Strukturen in den einzelnen EU-Mitgliedstaaten berücksichtigen. Darüber hinaus darf mit keinem Diskurs eine Präjudizwirkung verbunden sein.

Mit freundlichen Grüßen

Rechtsanwalt Reiner Metz
Geschäftsführer ÖPNV

Stellungnahme der deutschen Dienstleistungsgewerkschaft ver.di

zum

Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen – KOM (2004) 327 endgültig vom 30. April 2004

1. Grundsätzliche Bewertung von öffentlich-privaten Partnerschaften (ÖPP) und des Grünbuchs

In Deutschland haben Öffentlich-Rechtliche Partnerschaften (ÖPP), die Zusammenarbeit zwischen öffentlicher Hand und privaten Akteuren, in den vergangenen Jahren stark an Bedeutung gewonnen.

Kommunen wählen in Deutschland in vielen Fällen Öffentlich-private Partnerschaften (ÖPP), um Dienstleistungen im allgemeinen wirtschaftlichen Interesse zu finanzieren (DAWI) , z.B. in den Bereichen Energie, Wasser/Abwasser und Entsorgung und ÖPNV. Dieses geschieht in allen möglichen Vertragsformen. Neben weit verbreiteten Dienstleistungskonzessionen existieren öffentliche Aufträge, z.B. zur Stromversorgung, ebenso wie auch Institutionalisierte ÖPP in den Kommunen. Diese ÖPP sind ein Beitrag zur Sicherung von Arbeitsplätzen in der Region und zur regionalen Wirtschaft.

Eine Forcierung von Öffentlich-privaten Partnerschaften könnte einen neuen Zugang privater Unternehmen zur Erbringung öffentlicher Dienstleistungen bedeuten, was nachhaltige Auswirkungen auf die in diesen Branchen organisierten Beschäftigten hätte. Vor allem die Branchen der Sicherheitsdienste (wie Bewachung) aber auch die Bereiche der Anlagensicherheit, die im öffentlichen Interesse liegen, bis hin zum Bereich des sozialen Wohnungsbaus könnten durch ÖPP enorm profitieren. Allerdings müssten zum Zustandekommen dieser ÖPP Regeln und Maßnahmen ergriffen werden, die keinen Wettbewerb durch Lohn- und Sozialdumping auslösen, sondern vielmehr eine Chance zur Verbesserung der Arbeitsverhältnisse, Entlohnungen und Bedingungen eröffnen.

Das Grünbuch der Europäischen Kommission unterscheidet ÖPP auf Vertragsbasis und institutionalisierte ÖPP. Der Schwerpunkt der Ausgestaltung der Leistungs- und Finanzbeziehungen zwischen der öffentlichen Hand und dem privaten Sektor liegt im Grünbuch bei Vertrags- und Konzessionsmodellen. Eine Begrenzung des Begriffs Doch ÖPP (für die Auswahl der Partner, Vertragsgestaltung, Vergabeverfahren, Wirtschaftlichkeitsuntersuchungen, Beschäftigtenfragen) stelle eine Verkürzung der Thematik dar und ist damit abzulehnen.

Darüber hinaus behandelt das Grünbuch nicht die grundsätzlichen Fragen von Vor- und Nachteilen der Durchführung öffentlich-privater Partnerschaften, sondern lediglich deren vergaberechtliche Behandlung. Dabei wird versucht, so viele Tatbestände wie möglich unter vergaberechtlichen Gesichtspunkten zu erörtern, obwohl eine europäische Rahmenrichtlinie über die Dienstleistungen im allgemeinen Interesse (DAWI) nach wie vor nicht existiert. Statt dessen müsste zunächst europäisch mit einer stärkeren Rahmenrichtlinie festgelegt werden, welches die öffentlichen Dienstleistungen sind, die uneingeschränkt staatlicher oder kommunaler Verfügungsgewalt unterliegen. Dann könnten sich auch keine Abgrenzungsschwierigkeiten hinsichtlich der Anwendbarkeit des Vergaberechts ergeben.

In Deutschland basieren ÖPP bei den Kommunen auf der grundgesetzlich gesicherten Befugnis der kommunalen Selbstverwaltung, über Art und Organisation der Erbringung von DAWI in ihrem Gebiet im Rahmen von Konzessionen frei entscheiden zu können. Sie haben die Wahlfreiheit, eigene Unternehmen zu gründen, mit geeigneten Partner ÖPP durchzuführen oder die DAWI an Private zu vergeben.

Deshalb ist an die im Grünbuch gestellte Leitfrage, ob die Vereinbarung derartiger ÖPP zur Erfüllung einer DAWI im Rahmen von Dienstleistungskonzessionen einen rechtlichen Rahmen seitens der EU erfordere, zu hinterfragen. Dies ist vielmehr im Rahmen des Subsidiaritätsprinzips durch nationale gesetzliche Regelungen zu klären. Es muss im Hinblick auf ÖPP gewährleistet bleiben, dass die Gestaltungsfreiheit der ÖPP der Kommunen und der Einzelstaaten erhalten bleibt. Mit der Entscheidung des Europäischen Gerichtshofes vom 24. Juli 2003 (Rechtssache C-280/00) wurde ein Kostenausgleich für gemeinwirtschaftliche Verpflichtungen ohne vorherige wettbewerbliche Vergabe erlaubt. Wenn somit Kosten für die Erbringung von gemeinwirtschaftlichen Verpflichtungen ausgeglichen werden dürfen, dann ist natürlich auch die Erbringung als solche ohne Ausschreibung erlaubt. Ferner hat das EU-Parlament das „Recht auf Eigenproduktion" der DAWI durch die Kommunen in seiner Resolution von Anfang 2004 bestätigt. Dazu gehört auch, eigenverantwortlich zu entscheiden, ob und mit welchem Partner eine ÖPP eingegangen werden soll und welchen Umfang der Dienstleistungsauftrag haben soll.

Auch der vom EU-Ministerrat im Juni 2004 angenommene Entwurf der Europäischen Verfassung, der den Mitgliedsstaaten zur Ratifizierung vorgelegt wird, bestätigt ausdrücklich die kommunale Entscheidungshoheit im Rahmen des Subsidiaritätsprinzips.

Chancen und Risiken von ÖPP sind abzuwägen

Das zunehmende Interesse an öffentlich-rechtlichen Partnerschaften hat einerseits mit steigender Finanznotlage der öffentlichen Kassen zu tun, es resultiert andererseits aus der Tendenz, bürgerschaftliches Engagement zu mobilisieren und dadurch Infrastrukturleistungen bürgernäher und bedarfsgerechter zu gestalten.

Damit eine solche Partnerschaft zustande kommen kann, bedarf es Anreize in dem spezifischen Projekt, die eine solche Kooperation für beide Seiten vorteilhaft erscheinen lassen: Die zu erwartenden Ergebnisse müssen bei freiwilliger Zusammenarbeit besser sein, als es für jeden Beteiligten allein möglich wäre; damit aber müssen solche Kooperationen als win-win-Situation angelegt sein, sodass die Vorteile des einen nicht zu Lasten des anderen zustande kommen, sondern der beidseitige Effizienzgewinn den Anreiz zur Verfolgung einer gemeinsamen Aufgabe bildet.

Die Funktionslogik von ÖPP besteht also in der erfolgreichen Parallelschaltung der Interessen der beteiligten Akteure, von öffentlichem und privatem Interesse. Diese Zielkomplementarität muss nicht bedeuten, dass die Ziele identisch sind. Es ist ausreichend, wenn die Partner durch die gemeinsame Strategie ihre jeweiligen Zielvorstellungen verfolgen können. Eine weitere Voraussetzung ist die Möglichkeit, Synergieeffekte erzielen zu können. Gegenüber anderen organisatorischen Lösungen wie Privatisierungen oder Betreibermodelle sollen ÖPP den Vorteil haben, dass sie geringere Transaktionskosten mit sich bringen: Die gemeinsame Verantwortung und Interessen der Partner sollten eine gegenseitige Kontrolle der Leistungserbringung unnötig machen. Dafür ist allerdings ein vertrauensvolles Verhältnis zwischen den Partnern notwendig. Dies ist erforderlich, da der Entstehungsprozess eines solchen Projektes regelmäßig eine längere Zeit in Anspruch nimmt und sich auch die Rahmenbedingungen in Form anderer politischer Mehrheiten und einer veränderten Ertragslage der privaten Partner u.a. häufig verändern

Unternehmen haben Interesse an ÖPP wegen

- Renditeerwartungen
- einer Sicherung von Märkten im infrastrukturellen Grundbedarf
- einer Verbesserung der Wettbewerbssituation: Zugriff auf Fördermittel und –programme sowie öffentliche Vorleistungen (z.B. Infrastruktur)
- die Möglichkeit politischer Einflussnahme in den Projekten selbst

Die öffentliche Hand erwartet sich

- die Verbreiterung der finanziellen Basis durch Einbindung privaten Kapitals und der Entlastung der Verwaltung
- die Erschließung neuer Organisationskapazitäten und –potentiale durch die Einbeziehung privater Marktkenntnisse und unternehmerischer Kompetenz sowie
- eine Effizienzsteigerung der Verwaltung

Für beide Partner kann sich die Chance für ein Bündnis gegen Betriebsblindheit ergeben, weil das gemeinsame Interesse an der Durchführung des Projektes die einzelnen Partner zwingt, dem jeweils anderen das eigene Handeln zu erklären und damit die Qualität von Entscheidungen und Aktionen zu erhöhen.

Dies zeigen beispielhaft zwei Projekte in Deutschland:

- ÖPP, wie die Lokale Agenda 21 Berlin-Wedding oder
- der gemeinsame Betrieb von Freibädern durch BügerInnen und den kommunalen Bäderbetrieb in der Stadt Essen

- beide aus bürgerschaftlichem Engagement entstanden, belegen, dass beide Seiten Vorteile erzielen können. ÖPP sind keine erfolgreichen Projekte, wenn das Risiko einseitig auf einen Partner übertragen wird, etwa wenn Ausfallshaftungen des Staates für Risiken vereinbart werden, die im Grunde typisch unternehmerisch zu behandeln sind. Vor diesem Hintergrund ist – worauf das Grünbuch nur am Rande eingeht (vgl. Rn 45) – eine eindeutige und funktionale Aufteilung der Risiken zwischen öffentlichem und privatem Sektor eine Grundbedingung für ein erfolgreiches ÖPP-Modell. Private Partner müssen in der Lage sein, die typisch kommerziellen Risiken (Planungs- und Baukosten, Betriebsrisiko, Nachfragerisiko) zu tragen. Risikoübernahmen der öffentlichen Hand gehen nur zu Lasten der Allgemeinheit, ohne dass ein sichtbarer Effizienzgewinn (z.B. eine bessere Qualität der Dienstleistung) damit vorhanden wäre.

So gibt es auch eine ganze Reihe von ÖPP-Beispielen in Deutschland, wo die Kooperation zu Lasten der öffentlichen Hand gegangen ist: im Zusammenhang mit der Nutzung von Generalunternehmern und von Paketlösungen (z.B. Sanierung Schulgebäude Rostock), bei der Inanspruchnahme unterschiedlicher (öffentlicher!) Finanzierungsformen (zinsgünstige Kredite bei der Sanierung der Schwimmsporthalle Gera), unter Ausblendung einer angemessenen Risikoverteilung (Kreishaus Luckenwalde), durch Erzeugung eines hohen Abstimmungsbedarfs zwischen Verwaltungseinheiten (Neubau Gymnasium Salzhausen), auf Grundlage der Ausgestaltung des Insolvenzrisikos (Neubau einer Integrierten Gesamtschule Peine) oder wegen entstandener Mehrkosten aufgrund politischen Nachsteuerungsbedarfs zu Lasten der öffentlichen Hand.

Auch die Private-Finance-Initiative-Projekte in Großbritannien haben zu einer Reihe negativer Entwicklungen geführt (u.a. keine Innovationen, keine fristgerechte Baufertigstellung, hohes Insolvenzrisiko bei Privaten, überzogene Gewinnerwartungen, Sicherheits- und Gesundheitsmängel bei Schulen, hohe Finanzierungskosten, selten Einsparungen bei Bewirtschaftungskosten).

Dies zeigt, dass Verhandlungsverfahren gegenüber Ausschreibungsverfahren im Vorteil sind – erst recht bei komplexen und langfristigen Formen der Zusammenarbeit.

Um die Risiken zu begrenzen, kommt es sehr auf die Auswahl des geeigneten privaten Partners und auf die vertragliche Ausgestaltung der institutionalisierten PPP an. Es muss eine Vertrauensbasis entstehen können und das Insolvenzrisiko des Mitgesellschafters muss gering sein. Soll eine künftige Abhängigkeit der öffentlichen Hand vom privaten Partner vermieden werden, muss im Konsortialvertrag deren maßgebliche Einflussmöglichkeit sichergestellt werden. Es müssen eindeutige Regelungen getroffen werden, die bei Eintritt eines Risikos die weitere Sicherstellung der Dienstleistung ermöglichen und Gefahren abwenden. Dazu zählen die Unternehmensnachfolge des materiell privaten Partners, der Rückzug eines dritten Kapitalgebers und die damit verbundene Insolvenz des privaten Partners. Bei der Abwägung von Chancen und Risiken spielen neben den nationalen, regionalen und örtlichen Gegebenheiten auch die jeweiligen Sektoren sowie die Art und Höhe der privaten Beteiligung eine erhebliche Rolle.

Eine Zwangsausschreibung für Dienstleistungskonzessionen darf es nicht geben

Das Grünbuch zu öffentlich-privaten Partnerschaften (ÖPP) geht auf die Grundbedingungen für das Funktionieren von ÖPP-Modellen nicht ein, sondern stellt nur deren Möglichkeit in den Raum (vgl. Frage 22). Eine mögliche Neuregelung des Vergaberechts ist ein schlechter Weg, um eine Debatte um öffentlich-private Partnerschaften zu eröffnen. Sie präjudiziert den eigentlich notwendigen Regulierungsbedarf in der aufgeschobenen europäischen Debatte um die öffentlichen Güter. Öffentlich-private Partnerschaften können eine effiziente Form der

Dienstleistungserbringung darstellen, wenn grundsätzliche Fragen über Aufgaben und Verpflichtungen der öffentlichen und privaten Partner eindeutig definiert werden. Das Vergaberecht kann jedoch diese Unsicherheiten des Partnerschaftsverhältnisses und im Verhältnis der Partnerschaft zu weiteren privaten Anbietern nicht auflösen.

So führt die Europäische Kommission an, dass bei der Übertragung einer Dienstleistung an Dritte die Rechtsvorschriften für öffentliche Aufträge und Konzessionen zu beachten sind, auch wenn die betreffende Dienstleistung als Leistung von allgemeinem Interesse eingestuft wird. Es ist aber eine Differenzierung von Dienstleistungen im allgemeinem wirtschaftlichem (DAWI) und Dienstleistungen im allgemeinem nicht-wirtschaftlichem Interesse (DAI) notwendig, da erstere unter Gemeinschaftsregelungen fallen und letztere nicht. Was ist darüber hinaus mit nicht-wirtschaftlichen Tätigkeiten von Einrichtungen wie Gewerkschaften, politischen Parteien, Kirchen und religiösen Gemeinschaften, Verbraucherverbänden, wissenschaftlichen Gesellschaften, Wohlfahrtsverbänden sowie Schutz- und Hilfsorganisationen? Nach der Rechtsprechung des Gerichtshofs unterliegen hoheitliche Tätigkeiten des Staates oder auch Dienstleistungen im Zusammenhang mit nationalen Bildungssystemen oder sozialen Grundversorgungssystemen als nicht-wirtschaftliche Tätigkeit nicht dem gemeinschaftlichen Wettbewerbsrecht. Bei der Kategorisierung einer Tätigkeit als nicht-wirtschaftlich muss sowohl der Inhalt der Leistung als auch die Form der Leistungserbringung berücksichtigt werden.

Es drängt sich der Eindruck auf, dass das Grünbuch im Rahmen der Definition von Dienstleistungskonzessionen für DAWI als ÖPP (auf Vertragsbasis) die Einführung von Zwangsausschreibungen von Dienstleistungskonzessionen für DAWI wie Strom-, Gas-, Wasser/Abwasser- und Entsorgungsdienstleistungen sowie ÖPNV intendiert. Dies wäre ein Paradigmenwechsel „im Handstreich“. Damit könnte eine breite öffentliche Diskussion über diese Frage, wie sie gegebenenfalls im Rahmen der Erarbeitung eines Richtlinienentwurfs zur Regelung der DAWI erfolgen müsste, umgangen werden. Ein derartiges Verfahren ist schon aus Gründen mangelnder Transparenz des demokratischen Entscheidungsprozesses abzulehnen.

ver.di wendet sich generell gegen Ausschreibungsverpflichtungen für Dienstleistungskonzessionen für DAWI im Rahmen der EU. Derartige Verpflichtungen verstoßen gegen das Subsidiaritätsprinzip und die in Deutschland grundgesetzlich geschützte Wahlfreiheit der Kommunen, die Art der Erbringung von DAWI selbst zu bestimmen. ver.di wendet sich deshalb gegen alle Versuche, derartige Regelungen EU-weit zu treffen, sei es in einer ÖPP-Richtlinie, sei es in einer DAWI-Richtlinie, sei es in sektorspezifischen Richtlinien etwa zu Wasser/Abwasser, Entsorgung oder ÖPNV.

Es kann nicht angehen, dass Öffentliche Daseinsvorsorge zukünftig nur noch über ÖPP auf Vertragsbasis ausgeführt werden darf. Das hätte zur Folge, dass öffentliche Dienstleistungen rein betriebswirtschaftlichen Kriterien unterworfen und öffentliche (aber demokratischer Kontrolle unterliegende) Monopole durch private Monopole ersetzt werden. Die Einführung von Zwangsausschreibungen von Dienstleistungskonzessionen würde kommunale Unternehmen, die überwiegend zu den kleinen und mittleren Unternehmen (KMU) zählen, mittelfristig vom Markt verdrängen. Dies beeinträchtigt auch ÖPP, die mit dem kommunalen Unternehmen eingegangen wurden. Eine derartige Oligopolisierung im Bereich der DAWI kann wettbewerbspolitisch nicht gewollt sein. Dies widerspräche der Politik der Kommission, eigentumsneutral die Entwicklung von KMU zu fördern.

Die kommunale Gestaltungsfreiheit muss erhalten bleiben.

Es kann auch nicht sein, dass kommunale Zuständigkeiten für den Wettbewerb aufgebrochen und letzten Endes privatisiert werden und die Gemeinden in eine Gewährleistungsrolle zurückgedrängt werden. Die Regelungshoheit für Dienstleistungskonzessionen darf deshalb nicht auf die europäische Ebene transferiert werden.

Wenn eine Gemeinde, basierend auf ihrer Organisationshoheit, eine institutionalisierte ÖPP eingeht, ist dies kein Beschaffungsakt. Vielmehr existieren in den Kommunen neben reinen Kostengesichtspunkten weitere entscheidungsrelevante Kriterien, wie z.B. qualitative, regionalspezifische und strukturpolitische Aspekte. Die Auswahl des privaten Partners darf deshalb nicht dem EU-Wettbewerbsrecht unterworfen werden. Um die dauerhafte Aufgabenerledigung im Rahmen von ÖPP nicht zu gefährden, muss der Inhouse-Begriff angemessen geregelt werden. Auch hierzu wären im Grünbuch Ausführungen erforderlich gewesen, um zur Rechtssicherheit in den Mitgliedsstaaten beizutragen. Für den Inhouse-Begriff muss ausreichen, dass der öffentliche Einfluss innerhalb der ÖPP überwiegt (Kontrollkriterium) und die ausgeübte Dienstleistung im wesentlichen zum Nutzen der Bürger in der entsprechenden Gebietskörperschaft erfolgt (Dienstleistungskriterium).

Die im Grünbuch vorgetragene Behauptung, dass öffentliche Auftraggeber sich nur von wirtschaftlichen Überlegungen leiten lassen dürfen, relativiert die im EU-Vergaberecht vorgenommene Verankerung der Verfolgung sozialer und ökologischer Ziele im Rahmen der Auftragsvergabe (vgl. Erwägungsgründe 1, 5, 29, 33, 43, 44 und 46 sowie die Artikel 23, 26, 27, 50 und 53 der RL 2004/18/EG). Das gesellschaftliche Interesse an öffentlichen Dienstleistungen konkretisiert sich eben in Qualitäts-, Versorgungs-, sozialen und ökologischen Zielen.

Positiv wird von ver.di die Absicht beurteilt, eine EU-weite Bestandsaufnahme der ÖPP vorzubereiten. Die dadurch mögliche Transparenz des Umgangs mit ÖPP in allen Mitgliedsstaaten kann Hemmnisse für die Bildung von ÖPP aufdecken und damit einen Beitrag zur Angleichung der Wettbewerbsbedingungen in den Mitgliedsstaaten leisten, sowohl für Kommunen als auch für private Partner. Dies kann dazu beitragen, eine „gute Praxis“ für ÖPP europaweit zu definieren. Einer rechtlichen Rahmensetzung hierfür bedarf es allerdings nicht.

2. Zu den einzelnen Fragen des Grünbuchs

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Die Europäische Kommission weist in Rn1 darauf hin, dass es keine gemeinschaftsweit geltende Definition für ÖPP-Modelle gibt. Auch gebe es für diese Rechtsfigur kein besonderes System im Gemeinschaftsrecht (Rn 8). Damit bleibt der Anwendungsbereich des Vergaberechtes unscharf. So ist z.B. fraglich, wie öffentlich geförderte Wohlfahrtsorganisationen, arbeitsmarktpolitische Einrichtungen oder ganz allgemein Subventionen und Förderungen zur Bereitstellung einer Dienstleistung als öffentlich-private Partnerschaft zu verstehen sind. Gleiches gilt für den Kostenausgleich für gemeinwirtschaftliche Verpflichtungen im Sinne der Entscheidung des Europäischen Gerichtshofes (Rechtssache C-280/00).

Das Vorhaben der Europäischen Kommission, Dienstleistungskonzessionen den Vergaberegeln zu unterwerfen, ist deshalb verfehlt, weil das Vergaberecht nur auf Beschaffungsvorgänge angewendet wird und dies bei Dienstleistungskonzessionen nicht der Vertragsgegenstand ist. In Deutschland werden Dienstleistungskonzessionen durch Verträge vergeben, wobei die Auswahl des Vertragspartners im Ermessen der jeweiligen öffentlich-rechtlichen Körperschaft steht. Die privatrechtlichen Verträge müssen sich an einschlägigen Gesetzen messen lassen und sind gerichtlich überprüfbar. Ein Beispiel für eine derartige gesetzliche Regelung stellt § 13 Abs. 2 EnWG dar, wonach die Gemeinden die Neuvergabe von Wegenutzungsverträgen zur Strom- und Gasversorgung 2 Jahre vor Ablauf des Altvertrags öffentlich bekannt machen müssen. Auf diese Weise wird Transparenz und Gleichbehandlung sichergestellt.

2. ***Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?***

Der wettbewerbliche Dialog ist für die Vergabe öffentlicher Aufträge vorgesehen und damit ein Instrument des Vergaberechts. Für den Bereich der Dienstleistungskonzessionen gilt, dass das Vergaberecht nicht anwendbar ist. Also gibt es keine Verbindung zwischen dem vergaberechtlichen Instrument des wettbewerblichen Dialogs und den Dienstleistungskonzessionen.

Der im Grünbuch vorgeschlagene wettbewerbliche Dialog führt zu einer Defensivposition des öffentlichen Verhandlungspartners und ist keine Lösung für Probleme, wie unverbindliche Angebotseinholung, Nachverhandlungen oder

Parameterwechsel je nach Dienstleistung. Es gibt auch andere Möglichkeiten, wie z.B. best value bidding, bei dem der zentrale Parameter nicht der Preis, sondern die Qualität ist.

3. ***Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!***

Bei Dienstleistungskonzessionen ist das Vergaberecht nicht anwendbar. Daher können Konflikte mit dem Gemeinschaftsrecht über öffentliche Aufträge nicht auftreten.

4. ***Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?***

Zu dieser Frage nimmt ver.di keine Stellung.

5. ***Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?***

Art. 43 ff. EGV sind präzise genug, vorausgesetzt, die Europäische Kommission nimmt davon Abstand das Binnenmarktprinzip zu überspannen. Beteiligungen von ausländischen privaten Partnern an Dienstleistungskonzessionen existieren. Ausländische Unternehmen können auch mittelbar an Dienstleistungskonzessionen beteiligt sein, z.B. über gesellschaftsrechtliche Beteiligungen an deutschen Unternehmen. Ebenso haben ausländische Unternehmen sich erfolgreich um öffentliche Aufträge, z.B. zur Stromversorgung kommunaler Einrichtungen beworben.

Bezüglich des tatsächlichen Wettbewerbs kann es unternehmenspolitische Gründe ausländischer Dienstleister geben, sich nicht an der Erbringung von Dienstleistungen im allgemeinen wirtschaftlichen Interesse zu beteiligen. Oder die Gebietskörperschaft entscheidet sich aus sachlichen Gründen (Effektivität, Kundennähe) für einen orts- und sachnäheren Bewerber.

`

6. ***Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?***

Einer europaweiten Ausschreibungspflicht für Dienstleistungskonzessionen steht das Subsidiaritätsprinzip entgegen. Diesen Grundsatz hat der europäische Verfassungsentwurf aufgenommen und bekräftigt. Dienstleistungskonzessionen sollten also nicht stärker reglementiert werden, insbesondere durch vergaberechtliche Vorschriften.

Eine Ausschreibungsverpflichtung für Dienstleistungskonzessionen hätte negative Auswirkungen auf das Zustandekommen und das Weiterbestehen von institutionalisierten ÖPP. Denn auch die Konzessionserteilung an institutionalisierte ÖPP müsste ausgeschrieben werden, und dies bedeutet neue private Partner, deren Investitionssicherheit man nicht einschätzen kann. Die institutionalisierten ÖPP müssen Aufträge erhalten können und die Vertragslaufzeit muss so bemessen sein, dass die Investitionen sich über einen angemessenen Zeitraum amortisieren.

7. ***Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?***

Nein. Wie bereits ausreichend dargelegt, dürfen Dienstleistungskonzessionen und vergaberechtliche Tatbestände nicht vermischt werden.

Ein Ausschreibungszwang für Dienstleistungen im allgemeinen wirtschaftlichen Interesse hätte zur Folge, dass einerseits das Vergabeverfahren zu einem enormen bürokratischen Aufwand führen würde (Zusammenstellung einer ungeheuren Menge an Unterlagen; schwerfälliger, langwieriger Entscheidungsprozess) und andererseits die Organisation von Dienstleistungen im allgemeinen wirtschaftlichen Interesse einem starren, einheitlichen Verfahren unterworfen wird. Dienstleistungen im allgemeinen wirtschaftlichen Interesse sind sowohl örtlich als auch strukturell sehr unterschiedlich. Dienstleistungen im allgemeinen wirtschaftlichen Interesse sollen darüber hinaus nicht nur nach kommerziellen Gesichtspunkten erbracht werden, sondern sowohl Qualitäts- als auch sozialen und ökologischen Standards entsprechen. Eine flächendeckende Versorgung und ein universeller Zugang sind dabei Grundvoraussetzungen.

8. ***Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?***

Siehe Antwort zu Frage 5.

9. ***Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?***

Jedes in- und ausländische Dienstleistungsunternehmen kann sich um die Erteilung einer lokalen Dienstleistungskonzession bemühen. Wenn Dienstleistungskonzessionen befristet erteilt werden, ist nach Ablauf der Vertragslaufzeit auch für ausländische Unternehmen der Zugang zu privat initiierten ÖPP möglich.

Ein Ausschreibungszwang bei privat initiierten ÖPP hätte zur Folge, dass schnelle, innovative Anbieter gleich wie die anderen Bieter behandelt werden.

Innovationsfreudigkeit und Schnelligkeit sind aber Wettbewerbsmerkmale, die gesondert behandelt werden müssen. Eine Belohnungs-Lösung hat aber auch mit Ungleichbehandlung der Wirtschaftsakteure zu tun, und dies ist bei einem obligatorischen Ausschreibungszwang nicht mehr möglich.

10. ***Welche Erfahrungen haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?***

Wie in der Einleitung erwähnt, waren negative Erfahrungen Insolvenz des privaten Partners, Preiserhöhungen bei den Dienstleistungen und Oligopolisierungsbestrebungen der Unternehmen.

11. ***Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme.***

Im Wasser-, Strom-, Gas- und Fernwärmebereich existieren gesetzliche Regelungen, die Rechtssicherheit für alle Beteiligten gewährleisten.

12. ***Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?***

Public Sector Comparator: weitere intelligente Verfahren der Wirtschaftlichkeitsbetrachtung sind in Deutschland noch im Anfangsstadium.

13. ***Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen können?***

Die Grundsätze der Transparenz und Gleichbehandlung müssen auch den anderen Zielen des EGV entsprechen. Art. 16 EGV gibt den Dienstleistungen im allgemeinen wirtschaftlichen Interesse eine besondere Bedeutung, der über dem Grundsatz einer wettbewerbsorientierten Marktwirtschaft steht.

14. ***Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?***

In Bezug auf Dienstleistungskonzessionen besteht kein Handlungs- und Klärungsbedarf.

15. ***Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?***

Bei der Vergabe von Subaufträgen kann bei jeder weiteren Auftragsvergabe ein Kostendruck entstehen, der dazu führt, dass sich Subauftragnehmer über die Einhaltung rechtlicher Bestimmungen (insbesondere Lohn- und Arbeitsbedingungen) hinwegsetzen. Auch wenn das EU-Vergaberecht die Einhaltung ortsüblicher Lohn- und Arbeitsbedingungen vorschreibt, wie bewerten ausländische Unternehmen ortsübliche Tarife und Arbeitsbedingungen (nach dem Unternehmen in der Tarifgemeinschaft oder nach tarifungebundenen Unternehmen)? Je länger die Kette an Subaufträgen, desto intransparenter sind die Rechtskonstruktionen für die Behörden und desto schwieriger werden Kontrolle bzw. Rechtsverfolgung.

16. ***Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?***

Wird eine Dienstleistungskonzession vergeben, ist schon der Hauptauftrag nicht ausschreibungspflichtig. Das gilt dann auch für die Subaufträge. Schon heute kann der Auftraggeber die Vergabe von Subaufträgen nach bestimmten Bedingungen genehmigen. Ausführlicher einheitlicher Regelungen bedarf es deshalb nicht.

17. ***Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?***

Nein. Märkte würden dadurch bürokratisch überreguliert. Eigeninitiative und Engagement würden dadurch verhindert werden.

18. ***Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?***

Es gibt verschiedene Formen des ÖPP, die nicht einheitlich geregelt werden können. Dies würde das Zustandekommen und das Funktionieren der ÖPP eher behindern. Für Handlungsformen von ÖPP kommen gemischt-wirtschaftliche (Kapital-)Gesellschaften ebenso in Betracht wie formlose Zusammenkünfte, Arbeitsgemeinschaften, Vereine, Stiftungen oder längerfristig angelegte Austauschverträge. Eine ÖPP kann durch das Betreiben der öffentlichen Hand, eines privaten Unternehmens oder durch ein bürgerschaftliches Engagement entstehen. Contracting Out sind Formen nicht korporativer Verbundenheit, Private-Finance-Modelle beruhen auf Kooperations- und Konzessionsmodellen mit korporativer Verbundenheit (z.B. Mitgesellschafter einer Besitzgesellschaft).

Die zu erwartenden Ergebnisse müssen bei freiwilliger wechselseitiger Zusammenarbeit besser sein, als es für jeden Beteiligten allein möglich wäre; damit aber müssen solche Kooperationen als win-win-Situation angelegt sein, also nicht die Vorteile eines Beteiligten nur zu Lasten des anderen realisierbar sein lassen, denn der jeweilige Effizienzgewinn bei der Verfolgung einer gemeinsamen Aufgabe bildet den Anreiz zum Interessenkompromiss bzw. der Suche nach Konsens-Lösungen.

Deshalb sind einheitliche Regelungen für ÖPP nicht sinnvoll – vielmehr eine Verbesserung des Rechtsrahmens. Hier sind verschiedene Initiativen von Bund und Ländern zur Schaffung verbesserter Implementierungsvoraussetzungen im Gange.

Auch diese führen zu einer Vereinfachung des rechtlichen Umfeldes im Sinne „Moderner Staat – Moderne Verwaltung“.

Wählen Kommunen Öffentlich-private Partnerschaften zur Erbringung von Dienstleistungen im allgemeinen wirtschaftlichen Interesse – sei es durch Dienstleistungskonzessionen, durch die Vergabe öffentlicher Aufträge oder durch die Einrichtung institutionalisierter ÖPP – werden die gemeinschaftlichen Rechtsvorschriften eingehalten.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmer haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Das rasche Anwachsen der Anzahl institutionalisierter ÖPP belegt, dass es einer Gesetzesinitiative auf EU-Ebene zur Förderung dieses Modells nicht bedarf. Eine politische Entscheidung für eine europäische Investitionsinitiative, z.B. Transeuropäische Netze, auf ÖPP-Basis ist dagegen etwas anderes. Eine europäische Inititative, die zu Überregulierung führt, hindert dagegen die wachsende Zahl institutionalisierter ÖPP in Deutschland. Hinzu kommt, dass im EU-Recht auch keine Ermächtigungsgrundlage für derartige Regelungen vorhanden ist.

Es muss auch zukünftig gewährleistet sein, dass auf staatlicher wie kommunaler Ebene die Gestaltungsfreiheit bei den ÖPP erhalten bleibt. Wir verweisen an dieser Stelle nochmals auf die kommunale Entscheidungshoheit im Rahmen des Subsidiaritätsprinzips. Eine einheitliche europäische Definition oder eine Standardisierung der Gesellschaftsverträge ist weder erforderlich noch zweckmäßig.

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Derzeit sind in Bezug auf Deutschland keine derartigen Maßnahmen und Verfahren erkennbar. Eine Zwangsausschreibung für Dienstleistungskonzessionen könnte allerdings die Einrichtung von ÖPP behindern, denn dann müssten sich auch institutionalisierte ÖPP an dieser Ausschreibung beteiligen. Damit wäre der Anreiz zur Bildung von ÖPP stark eingeschränkt.

Beide Partner (öffentlich Hand, Private) müssen durch eine ÖPP positive Ergebnisse für sich erzielen können. Die Rahmenbedingungen für diese positive Zielerreichung sind zu verbessern und nicht die Möglichkeit über Größe und Preis innovative und qualitätssichernde Mitbewerber aus dem Feld zu schießen. Europa benötigt eine sozial-ökologische Marktwirtschaft. Ein freier Wettbewerb mit Marktversagen kann nicht im Interesse der Allgemeinheit sein – dies müsste Grundlage der europäischen Wettbewerbsphilosophie werden.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Ein positives in der EU, was beispielgebend sein kann, ist das Bürgerbeteiligungs- und Planungsverfahren zur Stadterneuerung „Rahmenplanung Yppenplatz Wien“. Der Yppenplatz in Wien entwickelte sich im Verlauf der 70er und 80er Jahre zum städtischen Problemgebiet. Der stärker werdende Problemdruck und eine Verunsicherung der Bevölkerung durch eine Vielzahl von Projektvorschlägen brachten bei den Bewohnern und Marktleuten vor Ort eine hohe Erwartungshaltung, aber auch Resignation hervor. In dieser Situation entstand das EU-Programm URBAN Wien-Gürtel Plus, das eine Aufwertung des Westgürtelbereiches beabsichtigte. Es sollte ein anderer Planungsansatz durchgeführt werden, von dem man sich eine größere Umsetzungsdynamik erhoffte: Im Rahmen eines kooperativen Planungsverfahrens, in das alle maßgebenden Betroffenen eingebunden waren, sollte ein tragfähiger Konsens in Form eines Rahmenplanes entwickelt werden. In dem Arbeitskreis, „quasi das Parlament des Verfahrens“, saßen neben der Projektleitung Fachleute aus Arbeiter- und Wirtschaftskammer, des URBAN-Büros, Mitglieder der Bürgerinitiative Yppenplatz sowie Anwohner und Geschäftsleute. Neben der Organisationsstruktur wurden folgende Arbeitsgrundsätze für das Verfahren entwickelt:

- Offen und kommunikationsorientiert: die betroffenen Bürger und Gewerbetreibende vor Ort wurden in das Verfahren integriert.
- Fachübergreifende Beratung
- Nutzerorientiert: Das breite Spektrum der Nutzer stand im Mittelpunkt.
- Umsetzungsorientiert: Es sollte Sofortmaßnahmen, längerfristige Projekte und weiterführende Konzepte geben.

Erfolgsfaktoren:

- Zeitdruck und gemeinsamer Wille erzwangen einen straffen Gesprächsstil.
- Es herrschte ein offenes Klima, in dem alle Beteiligten zu Wort kamen.
- Großes Engagement der Bürger und Gewerbetreibenden, die sich konstruktiv einbrachten.
- Die Einhaltung des Zeitplans und die penible Vorbereitung und das detaillierte Verfahrensdesign.

Als problematisch wurde bezeichnet, dass das Verfahren nur zur Entscheidungsvorbereitung diente. Es wurde lokales Expertenwissen mobilisiert, aber nicht zur Legitimation politischer Entscheidungen verwendet.

Diese Erfahrung machte im übrigen auch das von der deutschen Bundesregierung initiierte Projekt „Soziale Stadt“, welches Kooperationsbeziehungen mit dem EU-Projekt Urban hatte. Es gab bei diesem Projekt keine Regelung für eine politische Legitimation der Steuerungsgruppe.

Ver.di möchte in diesem Zusammenhang noch auf zwei positive ÖPP-Projekte in Deutschland hinweisen, die aus bürgerschaftlichem Engagement entstanden sind. Und zwar:

- Lokale Agenda 21 Berlin-Wedding
- Gemeinsamer Betrieb von Freibädern durch BügerInnen und den kommunalen Bäderbetrieb in der Stadt Essen

22. Denken Sie, dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedsstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Der Vorschlag ist sinnvoll, wenn die Vorgehensweise objektiv und vom Ergebnis her offen ist. Folgende Bedingungen sind dabei zu berücksichtigen:

- Gleichberechtigter Zugang und Austausch
- Schutz vor Missbrauchsmöglichkeiten finanzkräftiger Lobbies
- Transparenz.

Abschließende Bemerkung

Das Grünbuch reduziert seine Fragestellungen hauptsächlich auf das Vergaberecht. Wirtschafts- und finanzpolitische Grundsatzfragen mit gesellschaftspolitischen Auswirkungen wurden nicht gestellt. Die vergaberechtliche Analyse versuchte die kommunale, regionale und nationale Gestaltungsfreiheit in Frage zu stellen, obwohl im Europäischen Verfassungsvertrag eine Grundsatzentscheidung für die Subsidiarität gefällt wurde. Damit erfüllt das Grünbuch die Erwartungen für ein besseres Funktionieren von ÖPP in Europa nicht im geringsten. Bevor weitere europäische Rechtsgrundlagen für das Zustandekommen von ÖPP in Europa entstehen, sollte die europäische Rahmenregelung für Dienstleistungen im allgemeinen wirtschaftlichen Interesse umgesetzt sein. Erst dann können neue ordnungsrechtliche Fragestellungen in Angriff genommen werden.

Verband kommunaler Unternehmen e.V.

28. Juli 2004

STELLUNGNAHME

des Verbandes kommunaler Unternehmen e.V. (VKU)

zum Grünbuch der Europäischen Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen - KOM (2004) 327 endgültig - vom 30.04.2004

I. Vorbemerkung

Der Verband kommunaler Unternehmen e.V. (VKU) vertritt, gemeinsam mit dem VKS im VKU, die Interessen der kommunalen Wirtschaft in den Bereichen Energie- und Wasserversorgung sowie Abwasser- und Abfallwirtschaft. Nahezu 1.400 Mitgliedsunternehmen mit einem Gesamtumsatz von rund 50 Milliarden € und 164.000 Beschäftigten sind im VKU organisiert. Das Investitionsvolumen beträgt rund 5,4 Mrd. Euro.[1]

Die kommunalen Unternehmen nehmen Dienstleistungen von allgemeinem Interesse nicht wirtschaftlicher und wirtschaftlicher Art (DAI/DAWI) wahr und erfüllen sie gegenüber Bürgern, Gewerbe und Industrie. Mit Stand Oktober 2003 stellte sich die Struktur der Mitgliedsunternehmen nach Rechtsform folgendermaßen dar: 225 Eigenbetriebe, 48 Zweckverbände, 21 Anstalten öffentlichen Rechts und Körperschaften des öffentlichen Rechts, 49 Aktiengesellschaften, 592 Gesellschaften mit beschränkter Haftung und 36 Sonstige[2].

[1] Die Zahlen bzgl. Umsatz, Beschäftigten und Investitionsvolumen basieren auf den rund 1000 Unternehmen, die vor der Fusion mit den Entsorgungsverbänden im Jahr 2003 Mitglied im VKU waren.

[2] Siehe Fn. 1.

Seit 1998 ist bei den Verbandsmitgliedern der verstärkte Trend zu Kooperationen zu beobachten. Dies trifft insbesondere unter dem Aspekt der so genannten institutionalisierten ÖPP auf einen Großteil der Mitglieder des VKU zu. Freilich ist diese Entwicklung vor allem auf die teils katastrophale Haushalts- und Finanzsituation der Kommunen zurückzuführen. Sicherlich spielt auch die Liberalisierung der kommunalen Infrastrukturdienstleistungen eine Rolle.

II. Grundsätzliche Bewertung des Grünbuchs

1. Als betroffener Verband nimmt der VKU das Grünbuch mit großer Aufmerksamkeit zur Kenntnis. Dieses Grünbuch ist für die kommunale Wirtschaft von höchster Brisanz. Es verdeutlicht die Bestrebungen der EU-Kommission, die Ausschreibungspflichten zu erweitern. Letztlich soll ein Ausschreibungszwang für alle kommunalen Infrastrukturbereiche implementiert werden.

Die ÖPP auf Vertragsbasis, die im Grünbuch einen breiten Raum einnehmen, erfassen bei unbefangener Betrachtung sämtliche öffentliche Aufträge, die schon heute dem Vergaberecht unterfallen. Unter letzterem Blickwinkel bleibt für die ÖPP auf Vertragsbasis nur noch ein Regelungsbereich: die Dienstleistungskonzessionen.

Der VKU sieht diesbezüglich aber **weder einen konkreten legislatorischen Handlungsbedarf noch** erkennt er **entsprechende Zuständigkeiten auf europäischer E-bene**. Selbst die Kommission erkennt im Übrigen an, dass die Dienstleistungskonzessionen, auch nach den gerade erst verabschiedeten Vergaberichtlinien, nicht ausschreibungspflichtig sind. Deren Einbeziehung war diskutiert und letztlich abgelehnt worden.

2. Im Grünbuch ist eine eindeutige Tendenz festzustellen, die Aufgabenerfüllung durch ÖPP zu bevorzugen, wobei die ordnungspolitische Zielrichtung dieser Präferenz an keiner Stelle erläutert wird. Dabei sollen die Auswahl des privaten Partners bei der Bildung einer institutionalisierten ÖPP sowie die Erteilung von Dienstleistungskonzessionen (ÖPP auf Vertragsbasis) dem Vergaberecht unterworfen werden. Jedoch sind ÖPP kein Königsweg, sondern nur eine von vielen möglichen Organisationsformen. Die Beteiligung eines privaten Kapitalgebers etwa hat nicht zwangsläufig eine positive Auswirkung auf die Qualität der Dienstleistungen zur Folge. Alternativen zu den ÖPP sind beispielsweise horizontale Kooperationen, Zweckverbände oder Anstalten des öffentlichen Rechts. Im Rahmen der **kommunalen Selbstverwaltung** steht es in der Verantwortung der Gebietskörperschaft zu entscheiden, in welcher Organisationsform sie ihre Aufgaben wahrnimmt.

Der VKU sieht die Gefahr, dass **kommunale Zuständigkeiten für den Wettbewerb aufgebrochen und** letzten Endes **privatisiert** werden sollen und die **Gemeinden auf eine Gewährleistungsrolle zurückgedrängt** werden. In jedem Fall muss aber die ordnungspolitische Grundsatzfrage diskutiert und geklärt werden, ob dieser Ansatz sinnvoll und mit nationalem Verfassungsrecht bzw. mit europäischem Primärrecht vereinbar ist. Das Europäische Parlament jedenfalls hat sich in der Entschließung vom 14. Januar 2004 zum Grünbuch DAI ausdrücklich zum Selbstbestimmungsrecht der Gemeinden bekannt.

3. Entsprechend dem in Artikel 5 Abs. 2 EGV verankerten **Subsidiaritätsprinzip** wird die Gemeinschaft in den Bereichen, die nicht in ihre ausschließliche Zuständigkeit fallen, nur tätig, sofern und soweit die Ziele der in Betracht gezogenen Maßnahmen auf der Ebene der Mitgliedstaaten nicht ausreichend erreicht werden können. Dieser Grundsatz ist auch in dem Text des Vertrags über eine Verfassung für Europa verankert.[3] Für die Regelung innerer Angelegenheiten der Mitgliedstaaten, wie innere Verfasstheit und Organisation, sowie für die Frage, welche Aufgaben die Mitgliedstaaten erfüllen und wie sie dies tun, besteht somit keine Kompetenz der Europäischen Union. Dies gilt entsprechend Artikel 295 EGV, nach dem die **Eigentumsordnung in den verschiedenen Mitgliedstaaten vom EGV unberührt bleibt**, insbesondere für die Frage, ob öffentliche Aufgaben in öffentlicher, privater oder gemischtwirtschaftlicher Trägerschaft erfüllt werden.

Außerdem soll durch den neuen Verfassungsartikel I-5 auf europäischer Ebene die Wahlfreiheit der Kommunen, abgeleitet aus dem Recht auf Selbstorganisation, festgeschrieben werden. Damit werden die Garantien des Artikels 28 Abs. 2 des deutschen Grundgesetzes auf europäischer Ebene – an höchster Stelle – anerkannt. Vor diesem Hintergrund ist es nicht verständlich, dass die Kommission mit dem vorliegenden Grünbuch versucht, Kompetenzen auf die EU-Ebene hoch zu zonen und lokale Zuständigkeiten einer gemeinschaftsweiten Regelung zu unterwerfen.

[3] Vorläufige konsolidierte Fassung des Vertrags über eine Verfassung für Europa, Art. I-9: Grundprinzipien, Abs. 3, CIG 86/04.

4. Hingewiesen sei in diesem Zusammenhang nochmals auf die Entschließung des Europäischen Parlaments zum Grünbuch „Dienstleistungen von allgemeinem Interesse“ und die dort herausgestellte vorrangige Bedeutung des Subsidiaritätsgrundsatzes, „demzufolge die zuständigen Behörden der Mitgliedstaaten frei über die Wahl der Aufgaben, die Organisation und den Finanzierungsmodus der Dienstleistungen von allgemeinem Interesse und der Dienstleistungen von allgemeinem wirtschaftlichen Interesse entscheiden können“ (Ziffer 18).

Darüber hinaus wird in dieser EP-Entschließung zur Erfüllung des Subsidiaritätsprinzips für die lokalen und regionalen Körperschaften ausdrücklich ein **Recht auf Eigenproduktion** der Dienstleistungen von allgemeinem wirtschaftlichen Interesse anerkannt. Damit verträgt sich aber die Reduzierung auf den Gewährleistungsstaat nicht. Eigenproduktion in diesem Sinne bedeutet die eigene Wahrnehmung einer Aufgabe durch eine Kommune oder aber im Rahmen interkommunaler Zusammenarbeit gemeinsam z.B. durch die Bildung eines Zweckverbandes. Dies impliziert aber auch die Wahlfreiheit zu entscheiden, ob die Gebietskörperschaft dieses Recht auf Eigenproduktion auf eigene Unternehmen überträgt. Diese Wahlfreiheit muss auch weiterhin erhalten bleiben.

5. Unter diesen Aspekten ist auch die Bildung eines **Zweckverbandes** zu würdigen. Der Zweckverband ist als Körperschaft des öffentlichen Rechts organisatorisch und rechtlich verselbständigt. Er verwaltet seine Angelegenheiten im Rahmen der Gesetze unter eigener Verantwortung. Wenn der Zweckverband eine einzelne kommunale Aufgabe übernimmt, geht die kommunale Aufgabe qua Gesetz auf den Zweckverband selbst über. Es wird nicht lediglich die Ausführung der Aufgabe übertragen. Dem regelmäßig vollständigen Aufgabenübergang steht nicht entgegen, dass im Einzelfall Kontroll- oder Überwachungsrechte bei der übertragenden Kommune verbleiben. Derartige Pflichtigkeiten zu Lasten der Kommune können sich nämlich aus außerhalb der Übertragung der Infrastrukturaufgabe angesiedelten rechtlichen Grundlagen ergeben, wie z. B. bei der Wasserversorgung aus wasserrechtlichen Vorschriften und der von der Aufgabenerfüllung zu trennenden Funktion der Kommune als Wasserbehörde.

Diese Rechtsauffassung wird auch vom deutschen Bundesministerium für Wirtschaft und Arbeit geteilt, wie der Bundesminister in einem Brief an die kommunalen Spitzenverbände vom 15. Oktober 2003 verdeutlicht. Danach hat „der Zusammenschluss zu einem kommunalen Zweckverband mit einem öffentlichen Auftrag nichts zu tun“. Ganz ähnlich sieht es der deutsche Bundesrat in seiner Empfehlung zum Grünbuch ÖPP vom 28. Juni 2004.[4]

Das vorliegende Grünbuch behandelt die öffentlich-öffentlichen Partnerschaften (ÖÖP), zu denen auch die Zweckverbände zu zählen sind, nicht. Insofern geht der VKU davon aus, dass die Kommission diese bewusst von dem Adressatenkreis dieses Grünbuchs ausnimmt.

6. Vom Grünbuch wird unter dem Begriff der institutionalisierten ÖPP die gesamte Bandbreite der **gemischtwirtschaftlichen Unternehmen** erfasst. Institutionalisierte ÖPP kommen auf kommunaler Ebene entweder dadurch zu Stande, dass Gemeinden gemeinsam mit privaten Akteuren eine Gesellschaft in Privatrechtsform neu gründen oder dass Gesellschaftsanteile an bestehenden Unternehmen an private Akteure verkauft werden. Die privaten Partner bei institutionalisierten ÖPP variieren erheblich: Bezogen auf die deutschen kommunalen Versorgungsunternehmen ist festzustellen, dass die **privaten Partner selbst Wettbewerber sind, die mit der Beteiligung marktstrategische Ziele verfolgen**.

Für den Bereich der Abfallwirtschaft ist darauf hinzuweisen, dass es durch die Teilliberalisierung schon seit geraumer Zeit zu einer Oligopolisierung auf dem deutschen Markt kommt. Dieser Trend dürfte sich auch europaweit nach dem Verkauf von RWE Umwelt noch verstärken, da dann nur noch wenige Unternehmen der privaten Entsorgungswirtschaft, etwa Rethmann, Cleanaway und Sita, überhaupt noch als ÖPP-Partner in Frage kommen.

7. Das Grünbuch erläutert ausführlich die Chancen von ÖPP. Es gibt aber auch erhebliche **Risiken**. Zwischen den öffentlichen und den privaten Marktteilnehmern besteht ein grundsätzlicher Zieledissens. Die Gebietskörperschaft bzw. deren Unternehmen haben einen öffentlichen Zweck zu erfüllen und gegebenenfalls die Gewinnerwartungen zu reduzieren, falls dies dem öffentlichen Zweck zuwider läuft. Die Privaten sind ausschließlich an einer Gewinnmaximierung (shareholder value) interessiert. **Um die Risiken zu begrenzen, kommt es sehr auf die Auswahl des geeigneten privaten Partners und auf die vertragliche Ausgestaltung der institutionalisierten ÖPP an.** Letztere stellen eine **besondere Form einer auf langfristige partnerschaftliche Zusammenarbeit angelegten ÖPP** dar. Denn gesellschaftsrechtliche Regelungen sind auf

[4] BR-Drs. 408/1/04.

Dauer angelegt. Darüber hinaus muss jeder an einem Gemeinschaftsunternehmen Beteiligte die gemeinsamen Ziele im Auge haben und darf nicht allein die eigenen Interessen in den Vordergrund stellen. Damit eine institutionalisierte ÖPP Erfolg haben kann, muss bei der Auswahl des privaten Partners darauf geachtet werden, dass die **Zielvorstellungen beider Partner so weit wie möglich angenähert werden, dass eine Vertrauensbasis besteht** und dass das Insolvenzrisiko des Mitgesellschafters gering ist. Soll eine künftige Abhängigkeit der Gebietskörperschaft von dem privaten Partner vermieden werden, muss im Konsortialvertrag deren maßgebliche Einflussnahmemöglichkeit sichergestellt werden. Es müssen eindeutige Regelungen getroffen werden, die bei Eintritt eines Risikos die weitere Sicherstellung der Dienstleistung ermöglichen und Gefahren abwenden. Zu diesen Risiken und Gefahren gehört insbesondere die Unternehmensnachfolge des materiell privaten Partners, die im Einzelfall das gesamte ÖPP-Gefüge in Frage stellen kann. Auch der Rückzug eines dritten Kapitalgebers und die damit verbundene Insolvenz des privaten Partners zählen hierzu. Bei der Abwägung von Chancen und Risiken spielen neben den nationalen, regionalen und örtlichen Gegebenheiten auch die jeweiligen Sektoren sowie die Art und Höhe der privaten Beteiligung eine erhebliche Rolle. **Letztlich muss bereits bei der Auswahl des privaten Partners respektiert werden, dass der Schwerpunkt bei einer institutionalisierten ÖPP auf der auf Dauer angelegten partnerschaftlichen Zusammenarbeit mit der Kommune liegt.**

8. Der VKU sieht im europäischen Primärrecht keinerlei Ermächtigungsgrundlage, die institutionalisierten ÖPP einer generellen europäischen Vergaberegelung zu unterwerfen. Aus dem Subsidiaritätsprinzip folgt auch für die ÖPP auf Vertragsbasis, dass die primärrechtlichen Zuständigkeiten der EU nur dann gegeben sind, wenn eine gemeinschaftsweite Regelung sachlich geboten ist. Das hat für die Dienstleistungskonzessionen zur Folge, dass mangels Erforderlichkeit keine gemeinschaftsweite Regelung erlassen werden darf.

Soweit die Binnenmarkt- und Wettbewerbsvorschriften auf ÖPP anwendbar sind, sollten die folgenden Überlegungen und Vorschläge Berücksichtigung finden:

- Die Anwendung der Binnenmarkt- und Wettbewerbsregeln darf nicht dazu führen, dass das auf dem **Subsidiaritätsprinzip** beruhende Recht der Mitgliedstaaten, über die Form der Erbringung öffentlicher Dienstleistungen zu entscheiden, ausgehebelt oder eingeschränkt wird.

- Es muss gewährleistet sein, dass auf staatlicher wie kommunaler Ebene die **Gestaltungsfreiheit** bei den ÖPP erhalten bleibt. Eine einheitliche europäische Definition oder eine Standardisierung der Gesellschaftsverträge ist weder erforderlich, noch wäre sie zweckmäßig.

- Wegen des **Prinzips der Neutralität der Eigentumsordnungen** darf es seitens der europäischen Institutionen keine Präferenz für bestimmte Formen der Trägerschaft geben.

- Die Großzahl der örtlichen Dienstleistungen, die für die Bürger vor Ort angeboten werden, hat einen **minimalen Einfluss auf den Binnenmarkt**. Auch stünden die **Kosten und der Bürokratismus** bei der Anwendung von Vergabevorschriften **in keinem Verhältnis zu etwaigen Vorteilen**. Deshalb dürfen die örtlichen Dienstleistungen nicht unter den Anwendungsbereich europäischer Vergaberegelungen fallen.

- Wenn eine Gemeinde, basierend auf ihrer Organisationshoheit, eine institutionalisierte ÖPP eingeht, ist dies kein Beschaffungsakt. Die Auswahl des privaten Partners darf deshalb nicht einem Vergaberegime unterworfen werden. Um die dauerhafte Aufgabenerledigung im Rahmen von ÖPP nicht zu gefährden, muss der **Inhouse-Begriff angemessen geregelt werden**. Gerade hierzu hätte sich das Grünbuch äußern können und müssen, um zur Rechtssicherheit in den Mitgliedsstaaten für Organisationsakte der Kommunen beizutragen. Für den Inhouse-Begriff muss ausreichen, dass der öffentliche Einfluss innerhalb der ÖPP überwiegt (Kontrollkriterium) und die ausgeübte Dienstleistung im Wesentlichen zum Nutzen der Bürger in der entsprechenden Gebietskörperschaft erfolgt (Dienstleistungskriterium). Die Gemeinde und ihre Unternehmen sind als Konzern zu betrachten. Es kann folglich keinen Unterschied machen, ob die Aufgabe durch das „Rathaus“ oder durch eine verselbständigte Organisationseinheit erfüllt wird. Das gilt jedenfalls so lange, wie ein prägender kommunaler Einfluss festgestellt werden kann.

- Um den **Selbstverwaltungsrechten** Rechnung zu tragen, ist die Anerkennung der Wahlfreiheit erforderlich, öffentliche Dienstleistungen ohne Ausschreibung durch die Verwaltung oder mittels eigener Unternehmen selbst zu erbringen oder Dritte mit der Durchführung zu beauftragen. Die Einführung einer Zwangsausschreibung von Dienstleistungskonzessionen hätte im Übrigen zur Folge, dass die kommunalen Unternehmen, die überwiegend zu den KMU zählen, mittelfristig vom Markt verdrängt würden, da sie im Unterschied zu ihren großen Mitkonkurrenten im Falle des Unterliegens in einem Ausschreibungsverfahren abgewickelt werden müssten. Eine solche Entwicklung hin zur **Oligopolisierung im Bereich der DAWI** kann wettbewerbspolitisch nicht erwünscht sein. Dies widerspräche auch der Politik der Kommission, eigentumsneutral die Entwicklung von KMU zu fördern.

III. Zu den einzelnen Fragen des Grünbuchs

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Das Grünbuch erklärt, dass es für den Begriff der ÖPP – und damit auch für den der ÖPP auf Vertragsbasis - keine gemeinschaftsweit geltende Definition gibt (Rn.1). Auch gebe es für diese Rechtsfigur kein besonderes System im Gemeinschaftsrecht (Rn. 8). Soweit das Grünbuch selbst „ÖPP auf Vertragsbasis“ als ÖPP definiert, „bei denen die Partnerschaft zwischen öffentlichem und privaten Sektor nur auf vertraglichen Beziehungen basiert“ (Rn. 20), bleibt es sehr allgemein. Vor dem Hintergrund dieser Konturlosigkeit des Begriffs der ÖPP auf Vertragsbasis tut sich der VKU schwer, ÖPP auf Vertragsbasis im Sinne des Grünbuchs überhaupt – geschweige denn abschließend – zu benennen.

Von den ÖPP auf Vertragsbasis werden Sachverhalte erfasst, die durch die Vergabe öffentlicher Aufträge (Liefer- und Dienstleistungsaufträge) entstehen und bereits durch die Vergaberichtlinien geregelt sind. Aus Sicht des VKU erscheint die Intention des Grünbuchs klar, Dienstleistungskonzessionen als ÖPP auf Vertragsbasis zu qualifizieren und über deren Einbeziehung in das Vergaberecht die Erteilung von Dienstleistungskonzessionen zu reglementieren, insbesondere zu einer europaweiten Ausschreibungsverpflichtung zu gelangen. Hier sind die Unternehmen des VKU betroffen, weil sie auf der Grundlage eben solcher Dienstleistungskonzessionen beispielsweise die Energieversorgung sicherstellen und damit Dienstleistungen von allgemeinem wirtschaftlichen Interesse (DAWI) erbringen.

Das Vorhaben der Kommission, Dienstleistungskonzessionen den Vergaberegeln zu unterwerfen, ist u.a. deshalb verfehlt, weil das Vergaberecht nur auf Beschaffungsvorgänge anwendbar und seiner Ratio nach auch nur diesbezüglich sinnvoll ist. Dies erklärt auch die geltende Rechtslage, nach der Dienstleistungskonzessionen nicht dem Vergaberecht unterliegen – übrigens auch nach den neuen EU-Richtlinien zum Vergaberecht (2004/17/EG und 2004/18/EG) nicht.

In Deutschland werden Dienstleistungskonzessionen durch Verträge „vergeben“, wobei die Auswahl des Vertragspartners im pflichtgemäßen Ermessen der jeweiligen öffentlich-rechtlichen Körperschaft steht. Diese Form der vertraglichen ÖPP ist bei den Mitgliedsunternehmen des VKU seit langem gebräuchlich. Ergebnis ist die Gewährleistung von DAWI auf technisch hohem, sicherem und preisgünstigem Niveau.

Im Übrigen liegen den hier in Rede stehenden Dienstleistungskonzessionen regelmäßig privatrechtliche Verträge zugrunde, deren Inhalte sich an den einschlägigen Gesetzen messen lassen müssen und gerichtlich überprüfbar sind. Ein Beispiel für eine derartige gesetzliche Regelung stellt § 13 Abs. 2 EnWG dar, wonach die Gemeinden die Neuvergabe von Wegenutzungsverträgen zur Strom- und Gasversorgung 2 Jahre vor Ablauf des Altvertrags öffentlich bekannt machen müssen, § 13 Abs. 3 EnWG. Auf diese Weise wird Transparenz und Gleichbehandlung sichergestellt. Weitere Regelungen ergeben sich aus der Konzessionsabgabenverordung.

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Dieser Aussage ist in Bezug auf die für die Mitgliedsunternehmen des VKU besonders relevanten Dienstleitungskonzessionen nicht zuzustimmen. Denn der wettbewerbliche Dialog ist für die Vergabe öffentlicher Aufträge vorgesehen und damit ein Instrument des Vergaberechts. So heißt es in Art. 29 der Vergabe-Richtlinie 2004/18/EG, dass „der öffentliche Auftraggeber“ […] den wettbewerblichen Dialog „[b]ei besonders komplexen Aufträgen“ anwenden kann. Sinn und Zweck des wettbewerblichen Dialogs ist es also bei unübersichtlichen, schwer zu durchdringenden Sachverhalten das Vergabeverfahren zu vereinfachen bzw. überhaupt erst zu ermöglichen (vgl. Grünbuch Rn. 25). Für den Bereich der Dienstleistungskonzessionen gilt, wie bereits zu Frage 1 ausgeführt, dass das Vergaberecht zu Recht nicht anwendbar ist. Insoweit gibt es keine Verbindung zwischen dem vergaberechtlichen Instrument des wettbewerblichen Dialogs und den Dienstleistungskonzessionen.

Im Übrigen sind die Sachverhalte, die den Dienstleistungskonzessionen in den Bereichen, in denen die Unternehmen des VKU tätig sind, zugrunde liegen, keineswegs derart komplex, wie sie es aber nach der Ratio des Art. 29 für die Eröffnung des wettbewerblichen Dialogs sein müssten. Das heißt, die Tatbestandsvoraussetzungen des Art. 29 würden bei den hier in Rede stehenden Sachverhalten nicht erfüllt sein. Dies ist ein weiterer Anhaltspunkt dafür, dass der wettbewerbliche Dialog des Vergaberechts von der Frage der Erteilung von Dienstleistungskonzessionen streng zu trennen ist.

Die Grundrechte der Wirtschaftsteilnehmer werden dann gewahrt, wenn Normierungen nur dort stattfinden, wo sie Ziel führend sind. Wo eine Übernormierung stattfindet, indem Regeln des Vergaberechts unnötig auf nicht vergaberechtsrelevante Sachverhalte angewendet werden und dadurch die Freiheit der Unternehmen eingeschränkt wird, werden Grundrechte nicht gewahrt, sondern verletzt.

3. Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Nein. Soweit Dienstleistungskonzessionen in Rede stehen, ist das Vergaberecht nicht einschlägig. Daher können Konflikte mit dem Gemeinschaftsrecht über öffentliche Aufträge nicht auftreten.

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Zu dieser Frage nimmt der VKU keine Stellung.

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie

der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Art. 43 ff. EGV sind hinreichend präzise. Im besonderen Fall der Dienstleistungskonzessionen besteht für Gesellschaften bzw. Gruppierungen aus anderen Staaten effektiv die Möglichkeit, Konzessionär zu werden. Auch wenn hier keine klassische Vergabe stattfindet, hat die öffentlich-rechtliche Körperschaft vor Ort die Partner ihrer Konzessionsverträge beispielsweise nach § 13 EnWG in einem transparenten und diskriminierungsfreien Verfahren auszuwählen. Beteiligungen von ausländischen privaten Partnern an Dienstleistungskonzessionen existieren. Soweit unmittelbar keine Konzessionsverträge zwischen ausländischen Unternehmen und deutschen Gebietskörperschaften vorliegen, ist zu bedenken, dass ausländische Unternehmen oftmals mittelbar über institutionalisierte ÖPP an Dienstleistungskonzessionen beteiligt sind. Dies ist dann der Fall, wenn diese an deutschen Unternehmen gesellschaftsrechtlich beteiligt sind, die ihrerseits Dienstleistungskonzessionen - unmittelbar oder mittelbar - innehaben (z. B. EdF/EnBW/Stadtwerke Düsseldorf AG, Vattenfall Europe/HEW/ BEWAG).

Hinsichtlich des tatsächlichen Wettbewerbs gilt: Inwieweit faktisch Gruppierungen aus anderen Staaten Dienstleistungskonzessionen erhalten, ist kein Gradmesser für den tatsächlichen Wettbewerb. Denn zum einen wird oftmals der orts- und sachnähere Bewerber - aus sachlichen Gründen (Effektivität, Kundennähe) – mit der Dienstleistungskonzession bedacht. Zum anderen handelt es sich bei den ausländischen Unternehmen oftmals um so genannte Global Player, die – bislang – noch kein Interesse an den oftmals nicht besonders lukrativen DAWI vor Ort haben. Insoweit sind also unternehmenspolitische Entscheidungen für das wettbewerbliche Verhalten der Unternehmen aus anderen Staaten verantwortlich. Der derzeit geltende Rechtsrahmen ermöglicht sowohl die Teilnahme am Wettbewerb als auch den Erhalt der Konzession.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Nein. Ein Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe, der auch die Dienstleistungskonzessionen erfasst, ist nicht wünschenswert. Soweit es die Dienstleistungskonzessionen anbelangt, gibt es überzeugende Gründe, diese nicht stärker zu reglementieren, also sie insbesondere vergaberechtlichen Vorschriften zu unterwerfen. Wenn die Kommission auf diesem Weg „gemeinschaftsweit tätige Akteure“ fördern möchte (Rn. 31 bis Rn. 35), erzielt sie nicht den erstrebten Wettbewerb, sondern erreicht eine irreversible Oligolpolisierung (siehe zu alledem die Antwort zu Frage 7).

Eine Ausschreibungsverpflichtung für Dienstleistungskonzessionen würde übrigens bedeuten, dass auch die Konzessionserteilung an institutionalisierte ÖPP auszuschreiben wäre. Auf das Zustandekommen und Weiterbestehen von institutionalisierten ÖPP hätte dies negative Auswirkungen. Es müsste nämlich damit gerechnet werden, dass das Interesse privater Akteure, solche Partnerschaften einzugehen oder aufrecht zu erhalten, wegen der dann fehlenden Investitionssicherheit der privaten Partner stark zurückgehen würde. Dies könnte dann die Fähigkeit der öffentlichen Hand einschränken, die Versorgung mit bisher im Rahmen von institutionalisierten ÖPP erbrachten Dienstleistungen sicherzustellen. Für die privaten Partner könnten sich bereits getätigte Investitionen als Fehlinvestitionen erweisen. In jedem Fall muss daher sichergestellt werden, dass die institutionalisierten ÖPP die Aufträge erhalten können und die Vertragslaufzeiten so bemessen werden, das die Investitionen sich über einen angemessenen Zeitraum amortisieren können.

Im Übrigen könnte sich ein Privater ja auch direkt um die Dienstleistungskonzession bemühen und seine finanziellen Möglichkeiten in Gänze auf den Erhalt dieser lokalen Konzession verwenden. Die (vorherige) Investition in eine institutionalisierte ÖPP brächte schließlich diesbezüglich keinen Vorteil. Die von der Kommission vorgeschlagenen Maßnahmen führten vorliegend also - entgegen ihrer Zielsetzung - zu einer Verminderung der Attraktivität von institutionalisierten ÖPP.

Einer europaweiten Ausschreibungspflicht für Dienstleistungskonzessionen dürfte das Subsidiaritätsprinzip entgegenstehen, eine Regelungskompetenz auf europäischer Ebene danach nicht bestehen. Denn entsprechend dem in Artikel 5 Abs. 2 EGV verankerten Subsidiaritätsprinzip wird die Gemeinschaft in den Bereichen, die nicht in ihre ausschließliche Zuständigkeit fallen, nur tätig, sofern und soweit die Ziele der in Betracht gezogenen Maßnahmen auf der Ebene der Mitgliedstaaten nicht ausreichend erreicht werden können. Dieser Grundsatz ist auch in dem Text des Vertrags über eine

Verfassung für Europa verankert.[5] Wie in den Antworten zu den Fragen 1 und 5 dargelegt, erfolgt die Erbringung der DAWI auf technisch hohem, sicherem und preisgünstigem Niveau, wobei auch hinreichender Wettbewerb um die den DAWI zugrunde liegenden Dienstleistungskonzessionen eröffnet ist. Aus Sicht des VKU besteht daher für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Vergabe von Dienstleistungskonzessionen keinerlei Notwendigkeit.

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Nein. Objektive Gründe gibt es in dieser Hinsicht gerade nicht. Insbesondere dürfen nicht Dienstleistungskonzessionen – über den Weg der Einstufung als Unterfall der Konzessionen – einem Vergaberegelwerk unterworfen werden. Die Einbeziehung der Dienstleistungskonzessionen in das Vergaberecht ist in den Gesetzgebungsverfahren zu den Vergaberichtlinien immer wieder diskutiert worden und letztlich mit den besseren und richtigen Gründen abgelehnt worden.

An dieser Stelle gilt es in Erinnerung zu rufen, dass Dienstleistungskonzessionen typischerweise dazu genutzt werden, DAWI zu erbringen. Denn schon praktische Aspekte sprechen gegen eine unbedingte Anwendung eines Ausschreibungsverfahrens bei der DAWI-Vergabe: Nicht nur, dass das Vergabeverfahren zu enormem bürokratischen Aufwand führen (Zusammenstellung einer ungeheuren Menge an Unterlagen, schwerfälliger, langwieriger Entscheidungsablauf) und die Organisation der DAWI einem starren, einheitlichen Verfahren unterworfen würde. Sondern auch, dass eine solche Vereinheitlichung angesichts der vielfältigen, sich sowohl örtlich als auch strukturell stark unterscheidenden Gegebenheiten bei der Durchführung von DAWI gerade nicht geeignet wäre. Denn es handelt sich hier eben nicht um einen bloßen Beschaffungsakt, sondern um die laufende Erbringung ganzer Leistungsbündel. Dies ist der besondere Unterschied zu Leistungen im Rahmen des öffentlichen Beschaffungswesens. Zwar

[5] Vorläufige konsolidierte Fassung des Vertrags über eine Verfassung für Europa, Art. I-9: Grundprinzipien, Abs. 3, CIG 86/04.

bestehen z. B. Bauleistungen auch aus einem komplexen Bündel von Leistungen; sie werden jedoch nur einmalig erbracht; mit der Fertigstellung des Baus sind regelmäßig alle Leistungen endgültig durchgeführt und beendet.

Die Bestrebungen der Kommission in ihrem Grünbuch ÖPP könnten für den vom VKU betreuten Bereich zum Ergebnis haben, dass Aufträge der Gemeinden an ihre Stadtwerke nach einer gewissen Zeit durch Ausschreibung neu vergeben werden müssen. Lokale Unternehmen wären in diesem Verfahren in einer Situation, die man als „win or die“ umschreiben kann. Verliert ein solches kommunales Unternehmen den Wettbewerb um die bislang innegehabte lokale Dienstleistungskonzession, etwa durch Zahlung von strategischen Markteintrittspreisen (Preisdumping) so müsste es liquidiert oder bei einem Mehrspartenunternehmen um die in Rede stehende Sparte verkleinert werden. Hier ist unserer Auffassung nach die durch Art. 295 EGV garantierte Neutralität der Eigentumsordnung beeinträchtigt.

Nach der Übertragung der örtlichen Dienstleistungskonzession an den Gewinner des Ausschreibungswettbewerbs – nach der Kommission insbesondere europaweit tätige Unternehmen – könnte das unterlegene kommunale Unternehmen auch nicht an einem Ausschreibungswettbewerb in einer anderen Stadt teilnehmen. Dem stehen zum einen häufig gemeindewirtschaftsrechtliche Hindernisse entgegen (Beschränkung der Tätigkeiten auf das Gemeindegebiet). Zum anderen fehlt solchen KMU häufig die Größe und die strategische Ausrichtung für ein Tätigwerden außerhalb der eigenen Stadt oder gar in einem anderen Mitgliedstaat der EU. Ein national oder international agierendes Großunternehmen kann dagegen die Niederlage in einem Ausschreibungsverfahren um eine lokale Konzession – regelmäßig auch mehrfach – verkraften. Bei Einführung eines obligatorischen Ausschreibungsverfahrens für lokale Dienstleistungskonzessionen führten diese Umstände mittel- und langfristig zu einer Oligopolisierung des Marktes. Dieses Ergebnis wäre weitgehend irreversibel und hätte mit dem von der Kommission intendierten Wettbewerb nichts mehr zu tun.

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des

ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Wie in unserer Antwort zu Frage 5 dargelegt, besteht im Bereich der Dienstleistungskonzessionen Wettbewerb in der Form, dass jedes in- oder ausländische Unternehmen sich um die Erteilung der lokalen Dienstleistungskonzessionen – wie näher erläutert auch erfolgreich – bemühen kann. Soweit Dienstleistungskonzessionen nur befristet erteilt werden oder werden können, ist – nach Ablauf der jeweiligen Vertragslaufzeit – auch für ausländische Akteure der Zugang zu privat initiierten ÖPP gewährleistet.

Im Übrigen hätte ein Ausschreibungszwang im Fall privat initiierter ÖPP wohl zur Folge, dass die schnellen, innovativen Akteure benachteiligt werden, weil sie in die Reihe der übrigen Bieter eingegliedert würden. Gerade deswegen wird ja auch in der Praxis nach „Belohnungen“ gesucht, um das System für die Initiatoren attraktiv zu gestalten (vgl. Grünbuch Rn. 41). Innovationsfreudigkeit und Schnelligkeit sind typische Wettbewerbsmerkmale, die nicht durch eine formalisierte Gleichbehandlung zunichte gemacht werden dürfen. Die Belohnungs-Lösung legt wiederum eine nicht gerechtfertigte Ungleichbehandlung der Akteure nahe, die das System des obligatorischen Vergabeverfahrens im Fall privat initiierter ÖPP letztlich ad absurdum führen würde.

Außerdem zeigt die Praxis, dass die Innovationsfreudigkeit gerade kein typisches Merkmal der privaten Beteiligung darstellt. Die Innovationen innerhalb der ÖPP werden regelmäßig von dem kommunalen Partner geleistet.

10. Welche Erfahrungen haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Der VKU nimmt zu dieser Frage keine Stellung.

11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme

In den die VKU-Mitgliedsunternehmen betreffenden Bereichen der Konzessionsverträge für Wasser, Strom, Gas, und Fernwärme sind derartige Fälle nicht bekannt. Hier existieren gesetzliche Regelungen, die Rechtssicherheit für alle Beteiligten gewährleisten.

12. Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Derartige Praktiken oder Mechanismen sind dem VKU aus dem Bereich seiner Mitglieder nicht bekannt.

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Diese Problematik ist dem VKU aus dem kommunalen Bereich nicht bekannt. Es ist indessen anzumerken, dass im Bereich der Dienstleistungskonzessionen DAWI erbracht werden, die mitunter einen starken privaten Partner erfordern. Die Grundsätze der Transparenz und der Gleichbehandlung sind auch mit den übrigen Zielen des EGV in Einklang zu bringen. Art. 16 EGV räumt den DAWI auf der Ebene des Primärrechts einen eigenständigen Wert ein, der gegenüber der Grundsatzentscheidung für eine wettbewerbsorientierte Marktwirtschaft zu behaupten ist.[6]

[6] *Geiger*, EUV/EGV, Art. 16 EGV Rn. 4.

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Der VKU hält für den ihn betreffenden Bereich die bestehenden primärrechtlichen Regelungen für ausreichend. Insbesondere in Bezug auf die Dienstleistungskonzessionen besteht kein Handlungs- bzw. Klärungsbedarf. (Siehe hierzu die Antworten zu den Fragen 6 u. 7).

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Dem VKU sind derartige Probleme nicht bekannt.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Nein. Erhält ein Privater den Zuschlag für einen öffentlichen Auftrag und kann er die Leistungen nicht aus eigener Kraft erbringen, kann schon nach dem heutigen Recht der Auftraggeber die Vergabe von Unteraufträgen an bestimmte Bedingungen knüpfen. Jede zusätzliche Verpflichtung der Vergabestelle, dem privaten Partner Zusagen abzuverlangen, bringt unverhältnismäßigen Aufwand und erhebliche Zeitverzögerung mit sich.

Wird eine Dienstleistungskonzession vergeben, ist schon der Hauptauftrag nicht ausschreibungspflichtig. Das gilt dann selbstverständlich auch für die Unteraufträge.

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Nein. Letztlich würden auf diese Weise – ohne dass dies erforderlich wäre – Märkte bis ins Kleinste durchreguliert. Eigeninitiative und besonderes Engagement würden verhindert. Wettbewerb aber lebt gerade auch davon, dass nicht alle Geschäftsvorgänge bei jedermann – gesetzlich normiert – gleichförmig und für jedermann voraussehbar erfolgen.

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Seit den 90er Jahren haben sich im Mitgliederbereich des VKU rund 300 institutionalisierte ÖPP in unterschiedlichsten Formen im Sinne des vorliegenden Grünbuchs gebildet. Auch ohne einen nationalen oder europäischen detaillierten Rechtsrahmen haben sich also viele ÖPP entwickelt. Nach unseren Erfahrungen werden dabei die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten. Beides belegt die fehlende Erforderlichkeit einer gemeinschaftsrechtlichen Regelung. Vor dem Hintergrund der Vielgestaltigkeit der ÖPP muss befürchtet werden, dass der Versuch für alle denkbaren Konstellationen einheitliche Regelungen zu schaffen nicht gelingt, sondern im Gegenteil für die Bildung und die effiziente Betätigung der ÖPP behindernd wirkt.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Das rasche Anwachsen der Anzahl institutionalisierter ÖPP – auch bei den Mitgliedern des VKU – belegt, dass es einer Gesetzesinitiative auf EU-Ebene zur Förderung dieses Modells nicht bedarf.

Der VKU sieht im Übrigen im europäischen Primärrecht auch keinerlei Ermächtigungsgrundlage für generelle europäische Regelungen für institutionalisierte ÖPP. Auch die Anwendung der Binnenmarkt- und Wettbewerbsregeln darf nicht dazu führen, dass dadurch das auf dem Subsidiaritätsprinzip beruhende Recht der Mitgliedstaaten, über die Form der Erbringung öffentlicher Dienstleistungen zu entscheiden, ausgehebelt oder eingeschränkt wird. Sofern eine Kommune, basierend auf ihrer Organisationshoheit, eine institutionalisierte ÖPP eingeht, ist dies kein Beschaffungsakt. Somit untersteht die Auswahl des privaten Partners nicht dem Vergaberechtsregime.

Es muss auch zukünftig gewährleistet sein, dass auf staatlicher wie kommunaler Ebene die Gestaltungsfreiheit bei den ÖPP erhalten bleibt. Eine einheitliche europäische Definition oder eine Standardisierung der Gesellschaftsverträge ist weder erforderlich, noch wäre sie zweckmäßig und handhabbar.

Um die Möglichkeit der Aufgabenerledigung im Rahmen von institutionalisierten ÖPP – die sich bei geeigneter Ausgestaltung in vielen Fällen für die Erbringung öffentlicher Dienstleistungen als zweckmäßig und vorteilhaft erwiesen hat – nicht zu gefährden, wäre es hilfreich, wenn der Inhouse-Begriff weiter gefasst würde, z.B. indem institutionalisierte ÖPP darunter fallen, wenn der öffentliche Einfluss innerhalb der institutionalisierten ÖPP überwiegt (Kontrollkriterium) und die ausgeübte Dienstleistung im Wesentlichen zum Nutzen der Bürger in der entsprechenden Gebietskörperschaft erfolgt (Dienstleistungskriterium).

Allgemein und unabhängig von den in diesem Grünbuchaufgeworfenen Fragen:

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Wie in der Antwort zu Frage 6 ausgeführt, würde eine Ausschreibungsverpflichtung für Dienstleistungskonzessionen bedeuten, dass auch die Konzessionserteilung an institutionalisierte ÖPP auszuschreiben wäre. Auf das Zustandekommen und Weiterbestehen von institutionalisierten ÖPP hätte dies negative Auswirkungen, weil die Bildung institutionalisierter ÖPP an Sinnhaftigkeit verliert. Dieses Beispiel belegt, dass die Ausdehnung von vergaberechtlichen Vorgaben die Bildung von ÖPP verhindern könnte. Dies könnte sogar zur Konsequenz haben, dass bereits bestehende institutionalisierte

ÖPP aufgelöst würden. Am Ende der Entwicklung stünde der reine - teure und ineffiziente - „Ämterstaat“.

Auch wirkt die Formalisierung durch Vergabeverfahren eher abschreckend auf die Wirtschaftsteilnehmer. Mit ihr ist zudem regelmäßig eine längere Verfahrensdauer verbunden. Letztlich werden die Handlungsmöglichkeiten auf kommunaler Ebene unangemessen eingeschränkt. Dies alles erscheint wenig förderlich für die Bildung von ÖPP.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Der VKU kann zu dieser Frage keine belastbaren Ausführungen machen.

22. Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Hiergegen ist nichts einzuwenden. Indessen muss die Vorgehensweise objektiv und vom Ergebnis her offen sein. Die Resultate des Netzwerks dürfen nicht präjudiziert sein und müssen den unterschiedlichen Strukturen in den Mitgliedstaaten Rechnung tragen.

Grünbuch ÖPP - Beantwortung der Fragen der Kommission

Frage 1:

Nach dem u.a. vom Ministerium für Verkehr, Bau- und Wohnungswesen in Auftrag gegebenen Gutachten "PPP im öffentlichen Hochbau" kann davon ausgegangen werden, dass derzeit folgende Vertragsmodelle für ÖPP-Vorhaben in Deutschland existieren bzw. in Frage kommen:

- Erwerbermodell:

Das Erwerbermodell beschreibt eine Vertragsstruktur mit einer Laufzeit von üblicherweise 20 - 30 Jahren, während der ein Gebäude auf dem Grundstück des privaten Auftragnehmers durch diesen errichtet und anschließend dem öffentlichen Auftraggeber zur Nutzung überlassen werden soll. Am Ende der Vertragslaufzeit wird das Eigentum an dem Gebäude auf den öffentlichen Auftraggeber übertragen.

- Leasingmodell:

Das Leasingmodell beschreibt eine dem Erwerbermodell vergleichbare Vertragsstruktur, bei der allerdings im Gegensatz zum Erwerbermodell keine Verpflichtung zur
Übertragung des Gebäudeeigentums auf den Auftraggeber am Ende der Vertragslaufzeit besteht. Dem öffentlichen Auftraggeber wird vielmehr eine Erwerbsoption eingeräumt. Der Preis, zu dem der öffentliche Auftraggeber das Eigentum am Gebäude am Ende der Vertragslaufzeit erwerben kann, wird bereits mit Vertragschluss festgelegt.

- Vermietungsmodell:

Das Vermietungsmodell entspricht weitgehend dem Leasingmodell, einzige Abweichung besteht insofern darin, dass der Auftraggeber das Gebäude nur ausnahmsweise nach Ablauf der Vertragslaufzeit und nur zu einem dann zu ermittelnden Verkehrswert erwerben kann.

- Inhabermodell:

Das Inhabermodell beschreibt eine Vertragsstruktur mit einer Laufzeit von üblicherweise 15 - 20 Jahren, während der ein Gebäude auf dem Grundstück des öffentlichen Auftraggebers für diesen saniert bzw. neu errichtet und anschließend vom privaten Auftragnehmer betrieben werden soll.

- Conctractingmodell

Das Conctractingmodell betrifft Bauarbeiten bzw. betriebswirtschaftliche Optimierungsmaßnahmen an bestimmten technischen Anlagen sowie Anlagenteilen. Während der Laufzeit des Vertrages - regelmäßig 5 - 15 Jahre -

werden durch den privaten Auftragnehmer einzelne Anlagen oder Anlagenteile in einem Gebäude auf dem Grundstück des öffentlichen Auftraggebers eingebaut, gebaut oder optimiert und anschließend betrieben.

- Konzessionsmodell:

Im Rahmen eines Konzessionsvertrages verpflichtet sich der private Auftragnehmer gegenüber dem öffentlichen Auftraggeber, eine bestimmte Leistung entweder in Form der Gebäudeerrichtung (Baukonzession) oder in Form einer Dienstleistung (Dienstleistungskonzession) anstelle des Auftraggebers gegenüber Dritten zu erbringen. Als Spezialfall der vorher genannten Vertragsmodelle wird dem Auftragnehmer durch die Konzession regelmäßig das Recht eingeräumt, die Kosten des Projekts durch ein Entgelt, das von dem Drittnutzer zu entrichten ist, zu refinanzieren.

- Gesellschaftsmodell:

Im Rahmen des Gesellschaftsmodells können sämtliche der o.g. Vertragsmodelle verwirklicht werden. Dies geschieht durch eine Projektgesellschaft, an der sowohl der Auftragnehmer als auch der öffentliche Auftraggeber beteiligt sind. Als Gesellschaftsform kommen insofern sowohl Personen- als auch Kapitalgesellschaften in Betracht.

Frage 2:

Unseres Erachtens eignet sich das Verfahren des wettbewerblichen Dialogs grundsätzlich nicht für die Vergabe öffentlicher Bauaufträge im Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis. Da die Bieter in diesem Verfahren innovative Ansätze in eine offen geführte Diskussion einbringen sollen, besteht die naheliegende Gefahr, dass die Ideen von anderen Wettbewerbern übernommen werden und damit dem ursprünglichen Ideeninhaber Schaden entsteht. Es ist unklar, wie in diesem Verfahren Ideenschutz faktisch durchgesetzt werden soll. Gerade weil es um umfassende Projekte und "ganzheitliche" Lösungsansätze geht, können Mitbewerber ggf. besonders tiefe Einblicke in die jeweiligen Unternehmensstrukturen, Entwicklungspotentiale usw. erhalten. Nach alledem werden im Verfahren des wettbewerblichen Dialogs unseres Erachtens die Geheimhaltungsinteressen der Mitbewerber nicht hinreichend berücksichtigt.

Zudem stehen mit dem Verhandlungsverfahren und ggf. auch dem offenen und nichtoffenen Verfahren hinreichende und in der Praxis bewährte Vergabeverfahren zur Verfügung, mit denen auch ÖPP sachgerecht vergeben werden können.

Frage 3:

Wir sehen derzeit keine anderen Punkte, die bei der Einrichtung einer ÖPP auf Vertragsbasis mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten.

Frage 4:

Der Zentralverband des Deutschen Baugewerbes hat mehrere Verfahren zur Vergabe von Konzessionen initiiert und durch Unterstützung der beteiligten Unternehmen auch in der Abwicklungsphase begleitet. Die Erfahrungen der Unternehmen bzw. des Verbandes waren hierbei grundsätzlich positiv. Bezüglich der Erfahrungen mit einzelnen Projekten erlauben wir uns, auf die beiliegende, von Deutschem Städte- und Gemeindebund und Zentralverband des Deutschen Baugewerbes gemeinsam herausgegebene Dokumentation „Public Private Partnership – Neue Wege in Städten und Gemeinden“ zu verweisen.

Frage 5:

Wir halten das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Unternehmen aus anderen Staaten an den Konzessionsvergaben sicherzustellen. Tatsächlicher Wettbewerb herrscht in dieser Hinsicht u.E. in dem Umfang, in dem er auch im Rahmen sonstiger öffentlicher Ausschreibungen zu
beobachten ist.

Frage 6:

Derzeit ergibt sich aus unserer Sicht kein Bedarf für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe. Ggf. kristallisieren sich aber nach einiger Zeit der Erfahrungen mit Konzessionsverträgen im Bereich ÖPP Probleme heraus, die dann im Rahmen eines derartigen Rechtsaktes zu regeln wären. Vorauseilend sollte u.E. aber, schon im Interesse der Verhinderung der Überregulierung des Bereiches ÖPP, keine Neuregelung auf Gemeinschaftsebene eingeführt werden.

Frage 7:

Nach Verneinung von Frage 6 erübrigt sich die Antwort auf Frage 7.

Frage 8:

Unserer Erfahrung nach ist in Deutschland der Zugang ausländischer Akteure zu privat initiierten ÖPP gewährleistet. In einigen anderen europäischen Ländern bestehen partiell im Hinblick auf die Möglichkeit des Marktzuganges deutscher Unternehmer die selben Probleme wie in den sonstigen Verfahren der öffentlichen Auftragsvergabe.

Frage 9:

Bei privat initiierten ÖPP muss gewährleistet sein, dass der Initiator für die Entwicklung und Vorstellung seiner Idee, die ja im Erfolgsfalle der Vergabestelle als Grundlage für die Ausarbeitung des Konzeptes bzw. der Vergabeunterlagen dient, eine hinreichende Vergütung erhält. Eine solche Sondervergütung ist immer dann notwendig, wenn der Initiator der ÖPP den Zuschlag für das Projekt im späteren Vergabeverfahren letztlich nicht erhält. Um tatsächlich einen Anreiz für die Initiierung von ÖPP zu bieten, darf sich diese Vergütung nicht auf einen reinen Kosten- und Auslagenersatz beschränken. Vielmehr ist zu berücksichtigen, dass die Vergabestelle durch die Initiative des Unternehmens u.U. ein Planungsergebnis erhält, das sie sich anderenfalls gegen Vergütung hätte erstellen lassen müssen. Eine marktgerechte Vergütung ist daher anzustreben. Dahingegen erscheint derzeit nicht ersichtlich, wie der Ansatz umgesetzt werden könnte, dem Initiator im Rahmen des Wettbewerbs um das ausgewählte Projekt bestimmte Vorteile einzuräumen. Solche Vorteile würden letztlich immer in einer Benachteiligung der anderen Wettbewerber resultieren.

Im Übrigen ist zu gewährleisten, dass Verträge im Rahmen von ÖPP, unabhängig davon wer das Vorhaben initiiert hat, stets öffentlich ausgeschrieben werden. In den entsprechenden Verfahren können dann die Grundsätze der Transparenz und der Gleichbehandlung sowie das Diskriminierungsverbot durchgesetzt werden. Insbesondere ist auf mittelstandsfreundliche Ausschreibungen zu achten. Hier ist zu berücksichtigen, dass Innovationen zu einem Großteil aus dem Mittelstand kommen, entsprechende Aktivitäten aber im Zweifel erlahmen würden, sollten die Ideen des Mittelstandes sodann ausschließlich in Großlosvergaben münden.

Frage 10:

Aus Sicht der privaten Partner waren die Erfahrungen in der Phase nach Auftragserteilung durchweg positiv. Wegen näherer Einzelheiten verweisen wir auf die bereits zitierte Dokumentation „Public Private Partnership – Neue Wege in Städten und Gemeinden“.

Frage 11:

Fälle, in denen die Ausführungsbedingungen einschließlich der Klauseln zur Anpassung im Zeitverlauf eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleitungs- oder Niederlassungsfreiheit darstellten, sind uns nicht bekannt.

Frage 12:

Praktiken oder Mechanismen zur Bewertung von Angeboten, die eine diskriminierende Wirkung im Hinblick auf grenzüberschreitende Sachverhalte haben, sind uns nicht bekannt. In sonstigen Bereichen, d.h. bei Inlandssachverhalten, treten diskriminierende Wirkungen zuweilen durch mittelstandsfeindliche Großlosausschreibungen zustande (zu unrühmlicher Bekanntheit gelangte hier z.B. das Projekt der „100 Schulen“ in Offenbach bei Frankfurt am Main).

Frage 13:

Interventionsklauseln führen unseres Erachtens nicht zu einer Verletzung der Grundsätze der Transparenz und der Gleichbehandlung. Zu einem Austausch des Vertragspartners in rechtlicher Hinsicht kommt es, wenn von einem Dritten bzw. dem finanzierenden Institut selbst das Projektmanagement übernommen wird, unseres Erachtens nämlich nicht. Damit erfolgt in diesen Fällen auch kein Austausch der privaten Partner ohne erneuten Wettbewerb.

Frage 14:

Für eine Klärung vertraglicher Rahmenbedingungen für ÖPP auf Gemeinschaftsebene sehen wir, zumindest derzeit, keinen Bedarf. Aufgrund der Vielgestaltigkeit der in Fragen kommenden Verträge und damit der Fülle an unterschiedlichen Regelungen, die das jeweilige Projekt nach sich zieht, kommt hier eine Vereinheitlichung unseres Erachtens nicht in Betracht. Etwas anderes könnte sich dann ergeben, wenn sich nach einer bestimmten Zeit, während der Erfahrungen mit ÖPP gesammelt wurden, vertragliche Probleme herauskristallisieren, die ihren Ursprung im Gemeinschaftsrecht haben. In diesem Falle könnten dann ggf. gemeinschaftsrechtliche Vorgaben erforderlich werden.

Außerhalb des Vertragsrechts könnten ggf. steuerrechtliche Rahmenbedingungen anzupassen bzw. zu verändern sein. In erster Linie wäre hierbei an das gemeinschaftsrechtlich weitgehend harmonisierte Umsatzsteuerrecht zu denken. Sichergestellt sein muss in erster Linie, dass sich die Fälligkeit der Umsatzsteuer bei ÖPP-Projekten, deren Laufzeit sich i.d.R. über einen längeren Zeitraum erstreckt, nicht nach dem Zeitpunkt der Fertigstellung der Bauleistung richtet, sondern nach den jeweiligen Zeitpunkten, in denen dem privaten Partner Erträge aus dem Projekt tatsächlich zufließen.

Frage 15:

Besondere Probleme mit der Vergabe von Unteraufträgen bei ÖPP-Konstruktionen sind uns derzeit nicht bekannt. Generell besteht jedoch die Besorgnis, dass bei der Vergabe von Unteraufträgen die besonderen Belange des Mittelstandes (in Deutschland gesondert normiert in § 97 Abs. 3 GWB) keine ausreichende Berücksichtigung finden könnten.

Frage 16:

Ausführlicherer Regeln für die Vergabe von Unteraufträgen bedarf es u.E. derzeit (noch) nicht. Hier gilt es, Erfahrungen mit weiteren Projekten abzuwarten. In Abhängigkeit davon könnte sich künftig ggf. ein Bedarf zur Anpassung etwa dahingehend ergeben, dass Nachunternehmer durch die Vertragsgestaltung nicht unangemessen benachteiligt werden. .

Frage 17:

Vor dem Hintergrund unserer Einschätzung zu Frage 16 halten wir eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen derzeit für nicht erforderlich.

Frage 18:

Auch die Einrichtung institutionalisierter ÖPP wurde vom Zentralverband des Deutschen Baugewerbes in Einzelfällen mit initiiert und begleitet. Die Erfahrungen mit diesen wenigen Fällen lassen uns nicht zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen nicht eingehalten werden.

Frage 19:

Vor dem Hintergrund unserer Antwort zu Frage 18 halten wir eine Initiative auf Gemeinschaftsebene zur Klärung oder Vertiefung der Verpflichtungen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potentiell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben, für nicht erforderlich. Ausreichend ist hier u.E. die konsequente Anwendung bestehenden Rechts.

Frage 20:

Uns sind derzeit keine Maßnahmen oder Verfahren bekannt, die in der Europäischen Union die Einrichtung von ÖPP verhindern.

Frage 21:

Andere ÖPP-Formen aus Drittländern sind uns nicht bekannt.

Frage 22:

Der Aufbau eines Netzwerkes zum Austausch über Fragen Öffentlich Privater Partnerschaften und bewährter Verfahrensweisen durch die Kommission erachten wir für sinnvoll. Insofern könnte auf die Erfahrungen, die mit der Einrichtung eines entsprechenden Netzwerkes in Deutschland gemacht wurden, zurückgegriffen werden. Hier wurde unter Federführung des

Bundesministeriums für Wirtschaft und Arbeit in den vergangenen Jahren ein solches Netzwerk aufgebaut.

Stellungnahme zum GRÜNBUCH
ZU ÖFFENTLICH-PRIVATEN PARTNERSCHAFTEN UND DEN GEMEINSCHAFTLICHEN RECHTSVORSCHRIFTEN FÜR ÖFFENTLICHE AUFTRÄGE UND KONZESSIONEN

Beantwortung der 22 Fragen zum Grünbuch Öffentlich-private Partnerschaften ÖPP

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Antwort:

a) *ÖPP auf Vertragsbasis werden praktiziert durch Vergabe öffentlicher Aufträge im Bereich der Liefer- und Dienstleistungsaufträge im Rahmen bestehender Vergaberichtlinien. Für Dienstleistungskonzessionen werden privatrechtliche Verträge im Rahmen einschlägiger Gesetze abgeschlossen.*

b) *Die Rahmenbedingungen für derartige Konstruktionen sind völlig ausreichend.*

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf

Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Antwort:
Nein. Die Frage ist wohl bezogen auf Dienstleistungs-Konzessionen. Hier ist das Vergaberecht nicht anwendbar. Für die Vergabe öffentlicher Aufträge ist der wettbewerbliche Dialog bereits vorgesehen und damit ein Instrument des Vergaberechts.

3. Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Antwort:
Nein.

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Antwort:
Keine Stellungnahme

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Antwort:

a) *Ja*
b) *Das geltende Recht ermöglicht eine Teilnahme am Wettbewerb*

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Antwort:
Nein

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Antwort:
Ein neues Gesetzgebungsverfahren der Kommission wird ***nicht*** *für erforderlich gehalten.*
Im übrigen: Nein

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Antwort:

- *a) Ja*
- *b) Alle interessierten Akteure haben hinreichend Gelegenheit sich Kenntnis über Bekanntmachung von ausgeschriebenen ÖPP zu verschaffen.*
- *c) Ja*

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Antwort:
Die Entwicklung privat initiierter ÖPP in der EU ist bereits unter den gegebenen rechtlichen Voraussetzungen gewährleistet.

10. Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Antwort:
Keine Stellungnahme

11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Antwort:
Nein

12. Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Antwort:
Nein

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Antwort:
Nein

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Antwort:
Nein

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Antwort:
Nein

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eine Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Antwort:
Nein

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Antwort:

Nein

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und

Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Antwort:
In Deutschland gibt es bereits einige 100 institutionalisierte ÖPP, insbesondere durch Beteiligung großer Stromkonzerne an Stadtwerke-GmbH's, sowie durch Gründung von GmbH's unter Beteiligung verschiedener Stadtwerke. Hier werden die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten. Weitere gemeinschaftliche Rechtsvorschriften sind nicht erforderlich.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Antwort:
Nein. Die hohe Anzahl bereits gegründeter institutionalisierter ÖPP belegt, dass eine Initiative auf Gemeinschaftsebene nicht erforderlich ist. Für institutionalisierte ÖPP gibt es im europäischen Primärrecht keine Ermächtigung für eine generelle europäische Regelung. Im übrigen sei auf das Subsidiaritätsprinzip verwiesen, das den Mitgliedsstaaten das Recht gibt, über Form und Erbringung öffentlicher Dienstleistungen selbst zu entscheiden. Weitergehende Regelungen auf Gemeinschaftsebene würden dieses Recht verletzen oder einschränken.

Allgemein und unabhängig von den in diesem Grünbuch aufgeworfenen Fragen:
20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Antwort:
Keine
Dort, wo keine Ausschreibungspflicht besteht (z.B. für Dienstleistungskonzessionen) wird geltendes Recht respektiert unter Beachtung des Subsidiaritätsprinzips.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Antwort:

a) *Keine Stellungnahme*
b) *nein*

22. Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Antwort:

a) *Ja, unter der Voraussetzung, dass von vorne herein sowohl Mitgliedsstaaten als auch den Trägern der Daseinsvorsorge (insbesondere den Kommunen) die Wahlfreiheit über Rechtsform und Ausgestaltung von Leistungen im bestehenden Rechtsrahmen eingeräumt wird und keine weitere Ausschreibungspflichten eingeführt werden.*
b) *Unter den Prämissen nach Ziffer a) könnte ein derartiges Netzwerk aufgebaut werden, wobei es keine präjudizierenden Resultate des Netzwerks geben darf und bewährte Strukturen in den Mitgliedsstaaten respektiert, deren Weiterentwicklung gefördert und lokales Handeln von überzogener Anwendung der Prinzipien von Privatisierung und Wettbewerb freigestellt werden.*

30 July 2004

Re: **Consultation on the Green Paper on public-private partnerships (PPP) and Community law on public procurement**

To whom it may concern,

Please find attached comments from the Irish Business and Employers Confederation (IBEC) PPP Council on the above.

IBEC is Ireland’s premier business representative organisation with over 8,000 members. The Confederation provides a comprehensive range of services to the business community and has offices in Dublin, the regions and in Brussels.Further information may be found at: www.ibec.ie.

IBEC's Public Private Partnership Council responds to the need to secure real improvements in public services and to generate investment opportunities for business. The Council consists of members drawn from among financial institutions, legal firms, consultants and contractors with an interest in the PPP process. It liases with the Irish government and agencies in the promotion of PPPs. The group also provides a forum for members who either are promoting specific projects or those providing services to potential investors.

We hope that you find these comments useful in your consultation process. If you have any queries on the submission, please do not hesitate to contact us.

Regards

Erik O Donovan

pp. Mr Jim Barry
Chairman
IBEC PPP Council

IBEC RESPONSE TO THE COMMISSION CONSULTATION ON ITS GREEN PAPER ON PUBLIC PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

Question 1

What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

Broadly speaking contractual PPPs in Ireland include:

(a) design, build and operate ("DBO");
(b) design, build, operate and finance ("DBOF");
(c) build, operate and finance ("BOF");
(d) design, build and finance ("DBF"); and
(e) operation of services related to an asset for not less than 5 years (which may include financing).

There is primary legislation in Ireland in relation to these set ups, being the State Authorities (Public Private Partnership Arrangements) Act, 2002.

Question 2

In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

PPP contracts (and in particular concessions contracts) require a certain element of flexibility if they are to permit the private partner to add value, either in terms of pricing and funding arrangements, technological proposals or legal structure. IBEC would not welcome any procedure that places a constraint on this flexibility.

In relation to the competitive dialogue procedure specifically, we would comment: -

(a) It is difficult to see how it can be determined that the contracting authority is "objectively" unable to define the technical means capable of satisfying their needs or objectives, or the legal and financial make-up of a project;

(b) We see difficulties in the contracting authority conducting a dialogue with the candidates in terms of their ensuring that one tenderer is not given an advantage over another. This is particularly relevant in the case of any dialogue of a technical nature. We feel this is likely to result in an increase in proceedings being taken against contracting authorities.

(c) We are pessimistic as to the level of participation candidates will engage in at the dialogue stage, since they will be concerned to protect their intellectual property rights and any commercially sensitive information. As a result, it is doubtful as to whether a meaningful dialogue can be conducted which will permit the contracting authority identify the solution(s) which are capable of meeting their needs.

(d) The practical implication of Article 29 is that the funders of the candidates would need to partake in the dialogue procedure. This is not provided for in the Directive. In any event, any such participation will increase the bid costs unnecessarily for each of the candidates and in our view may be a barrier to the funding of PPP projects.

With regard to Clause 24 of the Green Paper, we are concerned with the Commission's view that the negotiated procedure will not be permitted in cases where the contracting authority cannot price the contract because of the complexity of the legal and financial package. Particularly in the case of "pilot projects" we do not see how the legal and financial package can be arrived at without negotiation, notwithstanding the existence of the competitive dialogue procedure.

Question 3

In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

No, we do not consider there are other points, which may pose a problem in terms of Community Law on public contracts.

Question 4

Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

(We do not propose to answer this question).

Question 5

Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

In the area of works concessions we consider that the current legal framework is sufficiently detailed to allow the participation of non-national companies or groups. The experience in Ireland is that non-national companies or groups have participated in the procedures for the award of concessions.

Experience on the larger projects in Ireland has indicated that significant marketing is undertaken by the procuring authority in addition to advertising in the European Journal in order specifically to ensure that non-national entities are made aware of the opportunities.

Experience has shown that genuine competition has been achieved within the current PPP framework however additional value for money could be generated for the public sector through allowing greater flexibility on key commercial issues whilst remaining within the boundaries of transparency and fairness.

Question 6

In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

We do not believe that a Community legislative initiative to regulate the procedure for the award of concessions is necessary or desirable.

Question 7

More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

See answer to Question 6. We would be concerned to see the award arrangements for contracts being extended to concessions.

Question 8

In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

See answer to Question 5. There is no experience in Ireland of contracting authorities issuing an invitation to present an initiative.

Question 9

In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

See answer to Question 8.

The best formula to ensure development of PPP's should consider the following:

- Re-imbursement of bid costs to the losing Bidder (s) within EU competitions

- Relaxation of the rules/interpretation of the rules to ensure that proper commercial negotiation can take place in order to drive greater efficiency and value into the process
- Relaxation of the rules to reduce bid costs
- More detailed interpretation of the procurement directives to reduce potential for litigation on results of competition. Fast track process to deal with such litigation
- Relaxation of stability and growth pact rules to allow countries with infrastructural deficit to take greater advantage of potential existing within PPP's

Question 10

In contractual PPPs, what is your experience of the phase, which follows the selection of the private partner?

In Ireland the PPP contracts formulate the conditions and terms for performance over the contract period. The duration of the partner relationship is set out in the contract, which is typically a 20-30 year term. The provisions relating to adjustment/indexation, in our view, identify precisely the circumstances and conditions under which adjustments can be made to the contractual relationship.

Question 11

Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

We are not aware of any such cases.

Question 12

Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

We are not aware of any such practices or mechanisms.

Question 13

Do you share the Commission’s view that certain “step-in” type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other “standard clauses” which are likely to present similar problems?

We would be very concerned about any proposal to regulate funders “step-in” rights. Step-In rights give Senior Lenders an opportunity to revive a project, thus avoiding the disruption of termination. If step-ins were to require a new competition, we are of the view that Senior Lenders would not be willing to wait around while a new operator was being procured.

If legislative proposals were introduced in this area, we believe that Senior Lenders will be even more focussed on the Compensation on Termination provisions in PPP contracts, since they will be more likely to rely on getting their money back under the contract than stepping-in.

We would question the effect on the operation of the project during the intervening period if a new competition was required and question who would fund the cost of the competition (at a point of funding crisis).

It should also be noted that step-in agreements typically provide for a step-out if the effects of the step-in come to an end. We do not see how this could be dealt with in the context of requiring a new competition.

We are not aware of other “standard clauses” that are likely to present a similar problem.

The whole purpose of step in rights is to give the banks a last opportunity to bring the project back on track and the bank to appoint new contractors in order to recover/manage their debt exposure. Forcing a new competition would in all likelihood create a conflict with this purpose.

Question 14

Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

We do not feel there is a need at this stage to clarify the contractual framework of PPPs at Community level.

Question 15

In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

We are not aware of any specific problems and we do not consider that there is a need to clarify or adjust the rules on subcontracting in the context of a PPP.

Question 16

In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

See answer to Question 15.

Question 17

In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

See answer to Question 15.

Question 18

What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

(We do not propose to answer this question).

Question 19

Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

We do not think that such an initiative needs to be taken at Community level.

Question 20

In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

(We do not propose to answer this question).

Question 21

Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

(We do not propose to answer this question).

Question 22

More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

We would welcome a Forum for the exchange of information and experiences, but recognise that the scope of such would be limited by confidentiality obligations. Also, any such Forum would have to rely on the goodwill of participants to feed into the process.

AGI
ASSOCIAZIONE IMPRESE GENERALI

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

Italian legislation recognise and regulate two PPP types.

First option is **concession**[1], which can be settled on two different schemes: i) the ordinary one (UE model) in which the financial revenue of the construction exploitation comes from third parts (users) payment (i.e. tolls); ii) PFI, in which are the same contracting bodies who pay the concessionaire for the use of the infrastructure/building (i.e. hospital, school and so on). According to Concession Green Book indications, Italian law requires that, also in this second case, the exploitation risk remain, at least in part, on the concessionaire.
In both referred schemes, the initiative can start from the public part, by publishing a notice according to concessions rules, or from privates, who can make free proposals in the framework of programmatic instruments adopted from Public Authorities (if it is so, the concession notice is published after the adoption of the proposal to be put it in concurrence for verifing if the market is able to forward better conditions).
To be underlined that concessions awarding procedures are, according to Italian legislation, regulated in the same way EU Directives requires for public works contract, so that, from this point of view, no difference exists.

Second option is **general contracting,** which provides the implementation in the national legal framework of the widest contractual relationship considered under public works directive (execution with whatever means, of a work corresponding to the requirements specified by the contracting authority).
In fact, according to the Italian legislation, the list of tasks attached to General Contractor activity can easily bring this figure to PPP definition, as adopted in the Commission paper COM(2004) 327 final.
In fact, in addition to design and execution, General Contractor has to provide: i) the acquisition of ground area for the construction settlement; ii) the financial resources to cover the total amount or a part (untill the end of 2006 no more than 20%) of the advanced payments; iii) special co-operation in supporting Public Authorities against criminal activities infiltration; (iv) if required, expertise on the construction (subsequent) exploitation phase (which in any case only pertains to contracting authority[2]).

[1] Law n°109/94, artt.2, 19 and 37 bis ss; Dlgs n°190/02, artt. 7 and 8.

[2] The main difference between General Contracting and construction concession is that only in the second case contractors carry the exploitation risk

A third case of PPP is **Global service** which is a not codified contract with special appliance in facility management field, which in any case, according to Italian legislation, entirely falls (as well as **outsourcing**) under services directive previsions (or works Directive if works are relevant more than services).

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

We all know that the final version of competitive dialogue as well as defined in 2004/18/CE directive is the outcome of a long adjustment process which can be considered, at the end, satisfactory. The problem is now how national legislation will apply the rule; in this framework, PPP green paper guide lines will be very helpful. Commission watching in order to avoid violation at national level of the Directives prescriptions true significance is expected.

Crucial is to maintain the option that "at the end of the dialogue, candidates will be invited to submit their final tender on the basis of the solution or solutions identified in the course of the dialogue. These tenders must contain all the elements required and necessary for the performance of the project".

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

Other than selection of high importance is the awarding of the contract; should be granted, at this stage, the possibility for each selected bidders to address the final offer on the same contractual object and technical solution of the other competitors.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

Should be noted, in principle, that Italian contractors meet many difficulties in accessing concession awarding procedures within European Union.
This situation is unsatisfactory, the more in consideration of the fact that Italian market is sensibly more open if compared with different area. This is due to the fact that Italian legislation:
(i) doesn't recognise special legal status to exempt services concessions from ordinary awarding procedures (in fact services concessions are treated or like services contracts, falling under 92/50 CE Directive, or like works concessions);
(ii) treats concessions awarding procedures the same as Directives do for work contracts.
Evidence of what in above is given, for instance, by water market, which in Italy is totally opened to European concurrence, since 1994, trough concessions awarding procedures, the results of which frequently is in favour of no national contractors (standing alone or in groups). Same amount of notices doesn't appear considering the rest of EC countries and this situation should be seriously inspected. The same happens on the electricity market.
In conclusion, what Italian General Contractors think on the subject is that all EC countries has to open in the same way concessions/services market to EU concurrence; the more, even when awarding procedures according to directives rules are/will be published, special care should be take, directly from the Commission, to inspect if the national legislation/local administrative procedures effectively are/remains in line with Directives requirement on the subject.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

Even if Directives legal framework regarding the award of concessions could be ameliorated (as already noted Italian legislation treats concessions awarding procedures the same way EC Directives does for public works contracts) the problem to be considered from the Commission in short term period is the real appliance of existing rules, case by case. This need comes not only considering national previsions implementing EC rules but also single contracting bodies behaviours.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

Before (or in parallel of) planning a new directive, relevant efforts the Commission should devote to guarantee effective application of the ordinary principles of no discrimination and opening of the market, according to existing Directives, as specified in COM (2004) 327 def., point 30.
In this perspective the adoption of a “green paper” containing advises and best practices on PPP is expected; the more Commission control level should be raised, and its offices allowed to make direct intervention at national level by testing contracting authorities/body activity .

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

In principle a new legislative action on PPP should cover concession awarding side; regarding work contracts, correct EC directive 18/2004 implementation at national level is sufficient.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

Considering PPP on private initiative ground, first should be noted that codified procedure on how to manage the awarding of such type of contract/concessions, only in few EC countries exist; as far as Directives are concerned, only “competitive dialogue” can be considered – for the future - as an European answer to such exigency to refer to.

The practical outcome of this situation is that questions on how adequate is the level of advertising concerned when contracting Authorities decide to invite interested contractors to present private initiative only in these cases can be raised; when such codified procedures doesn't exist this kind of arguments cannot be raised because although the problem exists (even more than in the other case), it is no visible.

This relevant argument a part, according to EC rules and principles, the publication of a notice at European level should be done; the problem which still stands is at what stage of the procedure should be better to do so.

According to a point of view, publication could be done once the contracting authority has decided if the proposal (initiative) is acceptable under public interest view; then rise the exigency to put the proposal on the market to verify, from the contracting body/authority if the proposed conditions can be improved.

A different idea is of publishing the notice at an earlier stage of the procedure, for instance when the contracting authority decides to ask the market for a PPP (the model could be the competitive dialogue procedure).

Last approach doesn't solve the problem of how to treat the right of the private sector to make a proposal to a contracting authority and how give to it the right recognition.

In any case should be accepted that one publication (only) at European level of the awarding procedure should be sufficient even if the procedure is settled on different steps.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

Competitive dialogue could be an option.

As an alternative, private sector should be, in principle, free to make proposals on PPP initiative to contracting authorities/bodies; even if only at a preliminary level, proposal should be well defined and complete; as far as the proposal is accepted the contracting authority should put it on the market with an awarding procedure according to EC rules for verifying if economical and/or technical conditions can be improved; special clauses of protection (such as preference) for the “proposer” of the initiative (to guarantee private interest to make proposal) and for contractors taking part to market-verification (such as a “looser fee”) should jointly be adopted to complete the legal framework of the system.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

According to Italian legislation, a formal awarding procedure like EC Directive provides for public works contract applies; at this stage clauses of preference and looser fee also apply.

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

Condition of execution, namely from the technical side, can strongly interfere with the final choice of the contractor.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other "standard clauses" which are likely to present similar problems?

Step in clauses are mostly requested from banks and insurance companies in order to minimise the risk of financial exposures in PPP initiative, where private finance contribution is requested.
In this framework such clauses are, in principle, useful and can be accepted as well as no problems on transparency and/or equal treatment arise; in this sense should be considered that, according to Italian legislation, step in clauses apply only for concessions, to replace by banks contractors, chosen after a formal awarding procedure according to EC Directives, in default.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

Please refer to what has been said in point 8 and 9 on private initiative PPP

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

In this context no particular problems arise.
Of course, as well as it happens for every type of contract, limitations on this side (i.e. in the amount of the subcontract accepted by the client or in subcontractors choice) are not in line with (main) contractors needs.
This approach is (if possible) more relevant when you consider such complex and large tasks(execution with what ever means) committed to a contractor which is the real reason of using PPP by contracting authorities/bodies.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

According to above (point 15) the wideness of tasks committed to contractors assuming PPP requires wider field in which subcontracting has to be admitted.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

Not in principle. The definition of execution whit whatever means which is the legal basis of PPP seems, at least at European level, sufficient to justify the right approach on this issue.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

The Italian legislation impose the publication of a notice for the selection of the private partner in case of institutionalised PPP. Problems can arise only considering the qualification requested to enter this special kind of procedure for

the choice of a partner. At European level (EC Directives) no regulation on this matter exists, but Commission evaluations on the fact that *participation of the contracting body in the mixed entity, which becomes the joint holder of the contract at the end of the selection procedure, does not justify not applying the law on public contracts and concessions* ***when selecting*** *the private partner* have to be shared.
In fact, in many cases institutionalised PPP seems to be finalised more to bypass EC Directives than for searching real alternatives to concessions or (more simple) works contracts. That's the reason why, according to Commission paper *the conditions governing the creation of the entity must be clearly laid down when issuing the call for competition for* ***the tasks*** *which one wishes to entrust to the private partner.* ; in fact when those tasks are the execution (designe and execution or execution by whatever mean) of a public works contract, corresponding Directives should in any case apply.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

Of course such an initiative should be taken. Contracting authorities/bodies purpose of selecting a private partner should be at least published at European level. Qualification requested to bidder for accessing the procedure should be coherent with the tasks to be committed to the private sector: if those task refers to activities falling under works directive, all the contents of this Directive should apply, .

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

The risk of loosing control, specially from contracting authorities, on each (potential) single part of a PPP contract (conception, financing, works execution, supply, management once the project is completed and so on) seems to be the highest barrier, at European and national level, for PPP development.
Another relevant problem depends on the incertitude of the legal framework, which discourage private finance in accessing public works initiative.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of “good practice” in this framework which could serve as a model for the Union? If so, please elaborate.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

Such kind of initiative should be higly welcome.

3. **IL LIBRO VERDE E LE SUE DOMANDE: ANALISI DI DETTAGLIO**

1. PREMESSA

Il presente documento rappresenta il contributo dell'AISCAT – Associazione Italiana delle Società Concessionarie di Autostrade e Trafori – alla consultazione promossa dalla Commissione Europea in materia di Partenariato Pubblico-Privato. Attraverso tale documento, l'Associazione si prefigge lo scopo di portare all'attenzione di codesta Commissione, che ringraziamo per l'opportunità fornitaci, la posizione e l'esperienza del comparto autostradale italiano in concessione riguardo il complesso tema dell'intervento privato nella realizzazione e/o gestione di opere pubbliche, campo nel quale ci auguriamo si possa quanto prima addivenire ad una armonizzazione in ambito europeo al fine di portare uniformità e certezza di regole a tutti gli operatori sia pubblici che privati.

Nel condividere questo obiettivo con la Commissione, l'AISCAT conferma la sua piena disponibilità a contribuire in modo fattivo al dibattito aperto, anche al di là della partecipazione al processo di consultazione in corso.

Consapevole che l'iter appena avviato vedrà una lunga serie di attività successive e che il processo in corso durerà presumibilmente diversi anni, l'AISCAT vuole essere presente, nei modi previsti dalle procedure comunitarie, nei diversi passi che verranno intrapresi, e si rende fin d'ora disponibile a partecipare attivamente a seminari e dibattiti, ulteriori consultazioni che si dovessero aprire sul tema.

Tutto ciò forte di un'esperienza del settore delle autostrade a pedaggio italiane, più appresso descritto nel dettaglio, che è stato precursore delle iniziative di PPP in Europa, considerando che la prima autostrada a pedaggio italiana fu aperta al traffico nel 1925 e che quindi il relativo schema di PPP era stato impostato già diversi anni prima.

Nel fare ciò si intende porsi nel solco tracciato dalla stessa Commissione Europea, Direzione Generale Trasporti ed Energia la quale nella sua comunicazione COM 2003/0132, nella Parte I "Strumenti finanziari e di gestione più efficienti per lo sviluppo della rete Transeuropea di Trasporto", dichiara che "bisogna diffondere le buone pratiche e aggiornare il quadro normativo esistente per rendere più interessanti le formule PPP, in particolare per gli investitori privati........”.

L’AISCAT ritiene infatti assolutamente corretta questa posizione definita dalla Direzione Generale Trasporti ed Energia, che sottolinea come i PPP siano di per sé non un fine, ma un mezzo per coinvolgere capitale privato nell’infrastrutturazione dell’Unione.

2. L'AISCAT, I SUOI MEMBRI, LE CONCESSIONARIE AUTOSTRADALI IN ITALIA

2.1 L'AISCAT ed i suoi membri

L'AISCAT - Associazione Italiana Società Concessionarie di Autostrade e Trafori - è stata costituita nel 1966 con il compito di raccogliere e confrontare le esperienze e le esigenze comuni alle Associate, interessandosi a tutte le problematiche inerenti la programmazione, la costruzione e l'esercizio delle autostrade e trafori in concessione a pedaggio.

L'attenzione dell'AISCAT è da sempre stata indirizzata su due direttrici fondamentali:

- Armonizzazione delle procedure e comportamenti di ciascuna Associata nelle modalità operative del servizio, nei rapporti con gli utilizzatori e con le Amministrazioni Pubbliche di riferimento: il tutto nel rispetto delle singole autonomie decisionali;
- Promozione di posizioni comuni, relativamente ad interessi ed esigenze del settore, e loro conseguente rappresentazione in tutte le sedi competenti, nazionali ed internazionali.

All'Associazione aderiscono, come associate effettive, le società, enti o consorzi titolari di una concessione per la costruzione e/o l'esercizio di autostrade o trafori autostradali a pedaggio in Italia; attualmente, le Associate sono 23 e la loro competenza si estende per circa 5.500 chilometri di rete.

2.2 Le concessioni autostradali in italia

In Italia la concessione di autostrade, quale species del genus concessione di costruzione e gestione di opere pubbliche, venne utilizzata sin dalla realizzazione della prima autostrada – la Milano Laghi – nel 1925, con alcune caratteristiche, tra le quali il pedaggio, fino ad oggi mantenute costanti per le autostrade italiane.

La prima legge generale di riferimento dell'istituto è stata la n. 1137 del 1929, di grande rilievo per aver stabilito che non solo i soggetti pubblici, ma anche i privati potevano essere destinatari della concessione.

Successivamente, su questo terreno normativo di base, sono state adottate parecchie leggi speciali, volte a prevedere e disciplinare fattispecie ad hoc.

Negli anni '50, la Legge n. 463 del 1955 (c.d. "Legge Romita") ha rappresentato il primo momento di programmazione settoriale e di disciplina complessiva della materia autostradale, caratterizzata dalla scelta del metodo concessionale come strumento principale per la costruzione della rete autostradale. Con tale legge, in particolare, si è proceduto alla definizione di una serie di aspetti del rapporto concedente-concessionario la cui determinazione era originariamente rimessa alla autonomia delle parti in sede di convenzione.

Sulla base essenzialmente di tale impianto normativo, tra gli anni 50 e la prima metà degli anni '70, l'Italia ha costruito una rete autostradale a pedaggio tra le più importanti d'Europa. Successivamente, è intervenuto il blocco nella costruzione delle autostrade voluto con la legge n. 287 del 28 aprile 1971.

L'evoluzione della legislazione italiana in materia, secondo uno schema conforme con i principi comunitari è stata rimarcata in particolare con la legge 109/94 (c.d. Legge Merloni) e successive modificazioni – attualmente in vigore -

con la quale viene previsto che l’affidamento dei lavori pubblici in concessione avvenga esclusivamente nel caso in cui questa abbia ad oggetto, oltre alla esecuzione, anche la gestione delle opere e stabilisce che l’unica procedura ammessa è quella della licitazione privata.

Nella fase di transizione tra vecchio e nuovo regime normativo, di estrema importanza per il settore è stata la c.d. Direttiva Costa-Ciampi emanata nel 1998 dal Ministro dei Lavori Pubblici, di concerto con il Ministro del Tesoro, in cui sono stati fissati i criteri ed i principi da seguire in fase di revisione delle concessioni autostradali. Il senso di tale provvedimento è stato quello di sottolineare da un lato la necessità del ricorso per il futuro, a procedure di evidenza pubblica per l’affidamento delle concessioni, e di fissare, dall’altro, i criteri per risolvere le controversie insorte sul pregresso.

3. IL LIBRO VERDE E LE SUE DOMANDE: ANALISI DI DETTAGLIO

1. *Quali tipi di operazioni di PPP puramente contrattuali conoscete? Tali operazioni sono oggetto di una regolamentazione specifica (legislativa o di altro tipo) nel vostro Paese?*

In Italia, il fenomeno di PPP puramente contrattuali è molto diffuso. L' esperienza più importante è certamente quella autostradale, applicazione, diffusa, sia per la lunga pratica che per l'estesa, su tutto il territorio nazionale. Negli ultimi tempi però, soprattutto sotto la spinta delle innovazioni introdotte dalla legge n. 109 del 11 febbraio 1994, come successivamente modificata, il PPP si è andato molto sviluppando. Ciò grazie al fatto che i privati possono non solo suggerire all'amministrazione concedente le opere di PPP da inserire in programma, ma anche rendersi promotori di iniziative per le quali presentano il progetto preliminare e il piano economico finanziario. In questo modo, si solleva l'amministrazione da una serie di adempimenti senza perciò compromettere la concorrenzialità dell'operazione, dal momento che il concedente, dopo aver riconosciuto il pubblico interesse dell'iniziativa, deve scegliere con gara le imprese che, nella successiva fase negoziata, concorreranno con il promotore per l'affidamento della concessione.

Si tratta, tuttavia, di una procedura non certo snella, perché i momenti concorsuali rischiano di moltiplicarsi se già nel momento programmatorio le proposte da inserire in programma riguardanti la stessa opera risultano più di una, ma con caratteristiche diverse.

Meno diffuso è, invece, il PFI. Soltanto recentemente, con la modifica introdotta nella citata legge 109 dalla legge n. 166 del 2002 è stato legislativamente sancita la possibilità di una concessione bilaterale, senza cioè la presenza dell'utente (art. 19, 2-ter). Ma si tratta di istituto la cui utilizzazione è stata finora pressocchè nulla.

Inoltre, accanto alla figura della concessione ad iniziativa del promotore, trattata negli articoli 37-bis e seguenti della legge n. 109/94, il legislatore italiano ha normato (art. 19 e art. 21 Legge 109/94) la concessione ad iniziativa dell'amministrazione, la cui procedura di aggiudicazione è modellata sullo schema della licitazione privata, contrariamente alla Direttiva comunitaria che prevede l'unico obbligo del rispetto di pubblicità e termini,

Quanto ai settori ex esclusi, oggi speciali, la situazione italiana è analoga a quella europea, nel senso cioè che non è disciplinato il modo in cui viene scelto il concessionario. Nella Comunicazione interpretativa del 2000 (par. 3.3), è prospettata però una soluzione che presenta un aspetto problematico, perché non è sempre agevole stabilire quando un ente si possa considerare "operante specificamente in uno dei quattro settori" (Direttiva 93/38) e, conseguentemente stabilire quando, viceversa, si debba applicare la direttiva sui settori "tradizionali", trattandosi di enti non operanti specificatamente nei quattro settori. Sarebbe gradito un chiarimento in questo senso.

2. ***Secondo la Commissione, il recepimento nel diritto nazionale della procedura di dialogo competitivo permetterà alle parti interessate di disporre di una procedura particolarmente adeguata all'aggiudicazione dei contratti qualificati come appalti pubblici in occasione dell'attuazione di un PPP di tipo puramente contrattuale, pur preservando i diritti fondamentali degli operatori economici. Condividete questo punto di vista? Se no, perché?***

La normativa sul dialogo competitivo, di cui all'art. 29 della direttiva 2004/18/CE, è sicuramente importante, perché cerca di dare soluzione al nodo di realizzazione di interventi particolarmente complessi anche allorquando le amministrazioni interessate sono impossibilitate ad individuare i mezzi per soddisfare le proprie esigenze o a valutare ciò che il mercato può offrire.

Si ritiene, però, che sarebbe utile che la Commissione chiarisse meglio sia i presupposti in presenza dei quali è possibile fare ricorso a detta nuova procedura e sia le modalità di svolgimento della procedura stessa, in particolare laddove si ipotizza che essa *" si svolga in fasi successive, in modo da ridurre il numero di soluzioni da discutere*".

Né risulta chiara nei suoi meccanismi operativi la possibilità di pervenire ad una pluralità di offerte, così come non sembra preservare i "diritti d'ingegno" il fatto che le amministrazioni interessate entrino in possesso dell'apporto del privato senza nemmeno prevedere in via generalizzata forme di rimborso dei costi sostenuti per i partecipanti al dialogo.

Nel complesso, peraltro, l'intera procedura potrebbe risultare di difficile attuazione pratica per la parte concernente il divieto di rilevare agli altri partecipanti *"le* ***informazioni riservate*** *comunicate dal candidato partecipante al dialogo…".*

3. ***Per quanto riguarda questi contratti, esistono secondo voi altri punti, oltre a quelli relativi alla scelta della procedura d'aggiudicazione, che potrebbero causare problemi riguardo al diritto comunitario degli appalti pubblici? Se sì, quali e per quali ragioni?***

Si ritiene opportuno segnalare che nell'applicazione in Italia non viene 'utilizzata la procedura negoziata prevista per i casi in cui il bando riguardi : "..lavori la cui natura o i cui imprevisti non consentano una fissazione preliminare e globale dei prezzi". In tali casi, infatti, non si è ritenuto fosse consentito dalle disposizioni comunitarie il ricorso alle procedure derogatorie, ma si è reputato che tali situazioni giustificassero unicamente un compenso c.d. " a misura".

Inoltre è la stessa portata del concetto di "rischio" – diffusamente considerato nell'ambito della Comunicazione interpretativa del 2000 - che sembrerebbe ancora non ben chiara. Basti pensare che le nuove direttive comunitarie di cui al "pacchetto legislativo" non menzionano il rischio nemmeno con riferimento alla gestione.

Per contro In Italia, esso è stato finora connesso strettamente ed unicamente al concetto di "gestione/sfruttamento" di un'opera. E ciò proprio perché il concetto di "rischio" è stato considerato sempre e solo come sommatoria tra "rischio di costruzione" e "rischio della domanda" senza tenere in alcun conto il "rischio della disponibilità", perché non chiaro e, come tale, non considerato.

4. *Avete già organizzato, partecipato, o avuto l'intenzione di organizzare o partecipare ad una procedura d'attribuzione di una concessione nell'Unione? Che esperienza ne avete ricavato?*

Le principali esperienze avute dall'Aiscat in ambito di concessioni europee hanno riguardato i seguenti progetti:

Facenti capo all'associata *Autostrade per l'Italia S.p.A.*

M6 Toll – Gran Bretagna
La Birmingham Northern Relief Road, la prima autostrada a pedaggio in Inghilterra, è stata aggiudicata in concessione alla società Midland Expressway Limited (MEL), partecipata da Autostrade SpA (25%) e dall'australiana Macquire Infrastructure Group (75%).
L'infrastruttura, di 43 km, è entrata in esercizio a dicembre 2003 ed è stata realizzata in project financing, senza beneficiare di fondi o garanzie governative.
La concessione ha una durata di 53 anni; il pedaggio iniziale ed i suoi successivi adeguamenti non sono sottoposti a vincoli.

Esazione del pedaggio - Austria
L'iniziativa consiste nella realizzazione e gestione di un sistema di telepedaggio per gli autoveicoli pesanti su circa 2.000 km di rete viaria in Austria.
La gara, indetta dall'Ente austriaco per la gestione del sistema stradale e autostradale (ASFINAG), è stata aggiudicata alla società EUROPASS (100% Autostrade SpA) nel 2002.
Il sitema di esazione è entrato in esercizio a gennaio 2004: la concessione ha una durata di 10 anni da tale data.
Lo schema di project financing su cui è stato costruito l'intervento prevede un fee annuale corrisposto da Asfinag ad Europass per la realizzazione e gestione del sistema. Il compenso non sarà legato all'andamento del traffico, né verrà indicizzato alle tariffe.

Facenti capo alle Associate *Autostrada Torino-Milano (ASTM)* e *SINA*

A69 – Gran Bretagna
La RoadLink A69 è una delle società interessate dal programma DBFO (Design, Build, Finance & Operate) con cui il governo inglese ha cercato di incrementare il settore privato della gestione dei servizi, tra cui anche quello

delle autostrade e delle strade extraurbane principali, nel caso specifico a fronte della corresponsione di un pagamento, da parte della Highways Agency, in funzione dell'entità del traffico veicolare (cd pedaggio ombra). La A69 è stata data in concessione al Consorzio RoadLink A69 Ltd. (Henry Boot, Impregilo, AWG Project Investment PLC, Pell Frischmann, ASTM – SINA) per un periodo di 30 anni, includendo nella concessione la costruzione di un tratto di tangenziale per una lunghezza di circa 3,6 km (Haltwhistle bypass), il rifacimento di parte della pavimentazione, il rifacimento o la sistemazione di opere esistenti, il miglioramento dell'illuminazione di alcuni punti critici ed altre opere similari. Per dare vita alla Concessione e procedere alla realizzazione delle opere di ammodernamento si è proceduto ad accendere un finanziamento con la Loyds Bank Plc. Al termine della concessione la RoadLink A69 Ltd. Dovrà restituire alla Highways Agency l'autostrada in condizioni già predefinite.

5. ***Ritenete che l'attuale quadro giuridico comunitario sia sufficientemente preciso per garantire la partecipazione concreta ed effettiva di società o gruppi non nazionali alle procedure d'aggiudicazione di concessioni? Secondo voi, in questo contesto è abitualmente garantita una concorrenza reale?***

L'attuale quadro giuridico europeo garantisce dal punto di vista formale l'accesso ai mercati nel rispetto delle condizioni previste dal Trattato.
Nondimeno, la complessità delle normative nazionali, per lo più risultante dalla stratificazione normativa accumulata negli anni, vanifica spesso tale principio, rendendo di fatto non sostanziale il rispetto dello spirito del Trattato. Ancora più "opaca" risulta poi la realtà operativa di quei Paesi che sono tuttora privi di normativa in proposito.

In tale quadro , un importante passo avanti potrebbe essere rappresentato, ad esempio, dalla creazione di una banca dati, accessibile via internet, contenente le normative nazionali (applicabili alle concessioni) di tutti gli Stati membri, normative che andrebbero tradotte in tutte le lingue ufficiali della UE (posto che la traduzione nelle tre sole "lingue di lavoro" europee – inglese, francese, tedesco – non sembra sufficiente a garantire un'adeguata parità di trattamento); laddove un Paese non avesse una normativa specifica sul tema, si dovrebbero in ogni caso fornire informazioni circa le *consuetudini* in esso presenti sull'argomento.
Una simile banca dati, lungi dal costituire la soluzione a tutti i menzionati problemi, avrebbe comunque il considerevole merito di garantire a priori migliori condizioni di accesso al mercato transnazionale delle concessioni, visto che permetterebbe di superare uno dei principali ostacoli – se non il primo – incontrato in queste occasioni dagli operatori del settore, ossia quello della comprensione delle normative straniere.

6. *Pensate che un'iniziativa legislativa comunitaria mirante a regolamentare la procedura d'aggiudicazione di concessioni sia auspicabile?*

L'Italia ha sinora ritenuto necessario regolamentare con legge la procedura di aggiudicazione delle concessioni di lavori pubblici e la figura del promotore, che su tale istituto si innesta.

Ciò ha irrigidito gli interventi delle amministrazioni - dato anche il contenuto specifico delle regole che sono state individuate dal legislatore nazionale - ma ha consentito di trattare in maniera uniforme un istituto che ha avuto una diffusione considerevole nel Paese e che da ultimo, ha registrato una larga diffusione di interventi promossi dai "promotori".

Inoltre, va sottolineato positivamente il fatto che la attivazione del meccanismo del promotore ha consentito di prestare maggiormente attenzione alle esigenze del sistema produttivo e del territorio, spingendo innanzitutto i decisori a compiere, in tempi compatibili con l'economia anzichè con la sola "politica", scelte condivise intorno a esigenze concrete.
Riteniamo che si tratti di un' esperienza di cui potrebbe essere utile tener conto a livello comunitario.
Detto questo, va comunque sottolineato che affrontare il tema delle concessioni senza inquadrarlo nel più vasto ambito dei PPP sarebbe un'operazione incompleta e lascerebbe spazio a incertezze e confusione nell'applicazione delle forme di PPP che non ricadono in questo ambito.
Appare quindi opportuno omogeneizzare a livello europeo i PPP in generale e collocare le concessioni al loro interno.

7. *In maniera più generale, se ritenete che sia necessario che la Commissione proponga una nuova azione legislativa, esistono a vostro parere ragioni oggettive per regolamentare tramite un tale atto tutti i PPP di tipo contrattuale, siano essi qualificabili come appalti pubblici o come concessioni, per sottoporle a identici regimi d'aggiudicazione?*

Sicuramente pratiche e, ancor più, regole omogenee, utilizzate da parte di tutti gli operatori degli Stati membri garantirebbero una concorrenza maggiore di quanto non avvenga oggi.

Tuttavia, si deve osservare che solo una ricognizione dettagliata e completa delle realtà operative praticate nei vari Paesi prima del varo di qualsiasi normativa legislativa potrebbe ridurre le difficoltà di pratiche/regole che comunque andrebbero costruite in maniera armonica e sistematica e sufficientemente chiara.

Inoltre, va tenuto in grande conto che " l'allargamento" ha unito Paesi con tradizioni molto differenti tra loro ed è scontata la problematicità di pervenire nel breve, medio periodo ad una uniformità applicativa da parte di tutti gli operatori in forza delle differenti esperienze, culture e strutture sulle quali poter contare.

Ne consegue una proposta di operare per “passi successivi”, comunque verso un quadro generale che racchiuda all’interno della trattazione dei PPP tutte le fattispecie di interesse, non limitandosi cioè a trattare nel dettaglio solo alcune di esse, tralasciando le altre.

Da notare anche che il concetto di omogeneità non implica automaticamente il ricorso a procedure e scelte identiche indipendentemente dal settore considerato; infatti, il ricorso ai PPP nel caso dell’edilizia pubblica potrebbe richiedere clausole diverse da quelle applicabili ai trasporti, e ciò atteso che il fine da raggiungere è il coinvolgimento dei capitali privati e non una uniformazione forzata delle procedure.
In quest’ottica si potrebbe pertanto pensare all’individuazione di specificità settoriali, che porterebbero ad una normativa differenziata “orizzontalmente”, ma uguale in tutta Europa, invece che “verticalmente” (cioè per Stato Membro come è oggi), così da pervenire a regimi di aggiudicazione omogenei, piuttosto che a “regimi di aggiudicazione identici”.

8. ***In base alla vostra esperienza, l'accesso degli operatori non nazionali alle formule di PPP di iniziativa privata è garantito? In particolare, nei casi in cui le amministrazioni aggiudicatrici invitano a presentare un'iniziativa, tale invito è generalmente oggetto di pubblicità adeguata ad assicurare l'informazione di tutti gli operatori interessati? Viene organizzata una procedura di selezione realmente concorrenziale per garantire l'attuazione del progetto stesso?***

Allo stato attuale, ed in base alle esperienze sinora registrate in Italia, l’accesso al partenariato pubblico-privato da parte di operatori extranazionali risulta garantito, sotto il profilo formale, sia per quanto riguarda le procedure di selezione del contraente privato sia per quanto riguarda le successive procedure di aggiudicazione.

Pur tuttavia, il semplice rispetto delle garanzie formali non sembra sufficiente al raggiungimento di una reale e sostanziale concorrenza, qualora non vengano preventivamente ed a monte chiariti, con esattezza e soprattutto uniformità, i criteri che dovrebbero permettere di arrivare all’adozione di principi quali trasparenza, non discriminazione e parità di trattamento; ci si riferisce ad esempio allo stesso concetto di “pubblicità adeguata” – riportato proprio nella presente domanda – riguardo al quale sarebbe quantomeno auspicabile che venga stabilito, a livello europeo, cosa debba intendersi con il termine “adeguata”.

9. ***Quale sarebbe secondo voi la migliore formula per assicurare lo sviluppo di PPP di iniziativa privata nell'Unione europea pur garantendo il rispetto dei principi di trasparenza, di non discriminazione e di parità di trattamento?***

Premesso che una compiuta risposta a tale domanda potrà, evidentemente, essere formulata solo dopo aver conosciuto gli esiti della presente consultazione, secondo la scrivente è tuttavia opportuno in questa sede portare all'attenzione della Commissione la seguente riflessione:

in una futura, ed eventuale, attività normativa a livello europeo, la regolazione del partenariato dovrebbe essere intesa non come il "fine" ultimo da raggiungere, bensì come il "mezzo" per imprimere una accelerazione nello sviluppo infrastrutturale dei Paesi membri. Perdendo di vista questo aspetto difatti, si rischierebbe di arrivare ad avere una normativa sul PPP magari perfettamente garantista ed inappuntabile dal punto di vista giuridico, ma assolutamente inutile dal lato sostanziale in quanto – ad esempio – giudicata troppo onerosa e vincolante dagli operatori e quindi, di conseguenza, lasciata in disparte.

10. ***Che esperienza avete riguardo alla fase successiva alla selezione del partner privato nelle operazioni di PPP contrattuali?***

Sembrerebbe opportuno che la disciplina della fase esecutiva dei fenomeni di PPP tenesse conto di una caratteristica naturale del rapporto: la durata di tale momento, normalmente diluita in un rilevante arco temporale, cui corrisponde la difficile prevedibilità, al momento dell'instaurarsi del rapporto, delle evoluzioni della realtà e delle precise condizioni e modalità di futuro adeguamento del rapporto contrattuale.

Rilevato che nello stesso Libro Verde si tiene sostanzialmente conto di tale problematica, sembrerebbe opportuno chiarire, al livello comunitario la portata di concetti quali "modifica sostanziale dell'oggetto del contratto", specie se dalla differente valutazione della sostanzialità di una modifica, deve dipendere l'avvio o meno di una nuova procedura concorsuale.

11. ***Siete a conoscenza di casi nei quali le condizioni d'esecuzione – comprese le clausole d'aggiornamento - hanno potuto avere un'incidenza discriminatoria o hanno potuto costituire un ostacolo ingiustificato alla libera prestazione di servizi o alla libertà di stabilimento? Se sì, potete descrivere il tipo di problemi incontrati?***

Non siamo a conoscenza di casi del tipo indicato.

12. ***Siete al corrente di pratiche o di meccanismi di valutazione di offerte con conseguenze discriminatorie?***

Premesso che l'AISCAT, in quanto Associazione di categoria, non partecipa a gare e quindi non entra in diretto contatto con le relative procedure, è doverosa una certa cautela nell'esprimere un giudizio su talune pratiche attualmente invalse a livello nazionale e per le quali si potrebbe formalmente adombrare la non ottemperanza al Diritto Comunitario.
Difatti alcune di esse, e si fa l'esempio della normativa italiana relativa alla figura del "promoter", talvolta oggetto di critica, nella pratica stanno dimostrando notevole efficacia nello stimolare l'ingresso del settore privato nella realizzazione di infrastrutture.
Alcuni esempi nazionali potrebbero pertanto contribuire alla definizione di quelle "specificità settoriali" introdotte in precedenza al punto 7.

13. ***Condividete la constatazione della Commissione secondo la quale alcune operazioni del tipo "step-in" possono porre problemi in termini di trasparenza e di parità di trattamento? Conoscete altre "clausole tipo" la cui attuazione potrebbe causare problemi simili?***

In Italia la normativa vigente prevede il c.d. "subentro", di cui all' art. 37.octies della legge n. 109/94 e s.m.i., grazie al quale viene impedita la risoluzione di un rapporto concessorio allorquando, su designazione dei finanziatori, una nuova società subentra nella concessione e fa cessare entro breve termine le cause di inadempimento, previo assenso da parte del concedente, condizionato al fatto che la società designata abbia caratteristiche tecniche e finanziarie sostanzialmente equivalenti all' originario concessionario.
Manca, però,ancora il decreto ministeriale di fissazione dei criteri e delle modalità attuative delle previsioni della norma stessa.

Peraltro, nel condividere l'auspicio della Commissione per una maggiore trasparenza e parità di trattamento, si deve richiamare l'attenzione sul fatto che il problema resta reale e qualora la soluzione sperimentata a livello italiano non fosse condivisa occorrerebbe comunque trovare positivo sbocco al problema, specie nell' ambito di operazioni complesse come le concessioni di costruzione e gestione.

14. ***Ritenete che sia necessario chiarire a livello comunitario alcuni aspetti attinenti al quadro contrattuale dei PPP? Se sì, su quale(i) aspetto(i) dovrebbe incentrarsi tale chiarificazione?***

Nel raccogliere l'invito della Commissione, si ritiene che sarebbe recepito con grande favore un contributo chiarificatore in ordine a:

- il concetto di "rischio", atteso che le stesse chiarificazioni apportate da parte di Eurostat non possono ritenersi esaustive di una problematica che, quantomeno in Italia, continua ad essere cruciale per la stessa corretta comprensione del concetto di “partenariato pubblico privato” accolto a livello comunitario;

- la specificazione delle modalità applicative della norma di cui all’art. 61 della direttiva 2004/18, concernente la aggiudicazione al concessionario di lavori complementari alla concessione, le cui finalità, peraltro, risultano assolutamente manifeste, ancorché l’aver operato una pedissequa trasposizione dalla normativa sugli appalti nell’ambito delle concessioni non giovi alla chiarezza applicativa;
- la linea di demarcazione tra contributo pubblico ed “aiuto di Stato”, in particolare con riferimento alle garanzie pubbliche offerte al privato;
- la esatta linea di demarcazione tra concessione di lavori e concessione di servizi, atteso che entrambe mutuano la propria definizione dall’appalto, ma la prima è regolamentata dal diritto comunitario, mentre la seconda è retta solamente dai principi del Trattato.
- le ragioni del trattamento penalizzante usato nei confronti dei concessionari che siano anche amministrazioni aggiudicatrici i quali, a differenza dei concessionari privati, sembrerebbero ora dover soggiacere a due livelli di concorsualità (a monte e a valle).

15. *Nel contesto delle operazioni di PPP, siete al corrente di problemi particolari incontrati in materia di subappalto? Quali?*

Il maggior problema che, nel concreto, si pone sull’ argomento scaturisce dalla difficoltà di comprendere, su un piano logico e sistematico, che cosa giustificherebbe un trattamento tanto penalizzante, quale quello vigente, nei confronti del concessionario che risulti anche amministrazione aggiudicatrice.
Infatti, unicamente in questa ipotesi, il diritto comunitario renderebbe obbligatorio un doppio livello di concorsualità. Non si comprenderebbe però come detto concessionario possa operare sul mercato al pari degli altri concessionari privati, se solamente lui risulta gravato da oneri ulteriori rispetto al rischio di gestione che grava su tutti, indistintamente, i concessionari.

Il tenore delle norme vigenti, peraltro, non sembrerebbe giustificare nemmeno l’eccezione cui fa riferimento il Libro Verde, eccezione che non risulta specificata nel pacchetto legislativo, secondo cui la società di progetto che abbia essa stessa lo status di organismo aggiudicatore “ è obbligata ad assegnare i propri contratti o le proprie concessioni nel quadro di un bando di gara, sia che i contratti siano conclusi con i propri azionisti, sia che non lo siano”, salvo un solo caso, ossia : “. quello in cui le prestazioni affidate da una società di progetto ai propri azionisti sono già state oggetto di un bando da parte del partner pubblico, precedentemente alla costituzione della società di progetto”.

16. ***Il fenomeno dei PPP di tipo contrattuale, che implica il trasferimento di un insieme di compiti ad un unico partner privato, giustifica secondo l'introduzione, riguardo al fenomeno dei subappalti, di norme più dettagliate e dal campo d'applicazione più vasto?*** **17.** ***In maniera più generale, ritenete che si dovrebbe prendere un'iniziativa complementare a livello comunitario al fine di chiarire, o sistemare, le norme relative ai subappalti?***

Tutte le forme di partenariato, di tipo contrattuale o istituzionalizzato, sono tra loro accomunate da due elementi, vale a dire una rilevante complessità operativa e l'esigenza del rispetto dei principi fondamentali di trasparenza, parità di trattamento e non discriminazione.
In questo contesto, l'introduzione di eventuali norme più dettagliate e dal campo di applicazione più vasto, finalizzate a regolamentare maggiormente il fenomeno dei subappalti, potrebbe dare risposta positiva ad esigenze di maggior tutela e garanzia dei subappaltatori stessi, ma è dubbio che l'aggravio conseguente favorirebbe una maggiore diffusione dei PPP stessi.

L'esperienza italiana – caratterizzata fino al recente passato da norme particolarmente rigide in proposito, poi modificate in senso meno restrittivo - testimonia proprio l'importanza di trovare il giusto punto di equilibrio tra interessi contrapposti.

18. ***Quale esperienza avete del lancio di operazioni PPP di tipo istituzionalizzato? In particolare, la vostra esperienza vi porta a pensare che il diritto comunitario degli appalti pubblici e delle concessioni sia rispettato nel caso di operazioni PPP istituzionalizzate? Se no, perché?***

Indubbiamente, il silenzio del diritto comunitario in merito alle forme di PPP istituzionalizzato non ha giovato ad un corretto utilizzo degli strumenti stessi.

19. ***Ritenete che debba essere presa un'iniziativa a livello comunitario per chiarire o precisare gli obblighi degli organismi aggiudicatori riguardo alle condizioni che devono regolamentare la concorrenza tra operatori potenzialmente interessati da un progetto di tipo istituzionalizzato? Se sì, su quali punti particolari e sotto quale forma? Se no, perché?***

Per il caso di assunzione di controllo da parte di un'entità pubblica sarebbe quantomeno opportuno un chiarimento per consentire di comprendere come agire a livello operativo per una corretta applicazione del concetto di "influenza certa".

IN MANIERA GENERALE, ED INDIPENDENTEMENTE DAI PROBLEMI SOLLEVATI IN QUESTO DOCUMENTO:

20. *Quali sono le misure o le pratiche che ritenete di ostacolo alla creazione di PPP nell'Unione europea?*

L'esperienza italiana è stata, nel complesso volta ad irrigidire in funzione della trasparenza, la stessa normativa europea. Nel tempo, però, la eccessiva rigidità ha dimostrato, specie in taluni casi, i limiti intrinseci, imponendo correttivi e l'introduzione di norme più flessibili.

D'altro canto, la gestione di un appalto ordinario molto spesso sfocia in un contenzioso copioso; a maggior ragione è difficile immaginare che rispetto ad una concessione di costruzione e gestione o altro contratto di partenariato a lunga durata tutto possa essere preventivato con anticipo di decenni.

21. Conoscete altre forme di PPP sviluppate nei paesi al di fuori dell'Unione? Conoscete esempi di 'buone pratiche 'sviluppate in questo contesto, cui l'Unione potrebbe ispirarsi? Se sì, quali?

La nostra associata *Autostrade per l'Italia* ha avuto modo di partecipare al progetto, realizzato mediante PPP, per la costruzione e gestione dell'autostrada *Dulles Greenway* in USA.
L'infrastruttura, lunga 29,3 km, collega il Dulles International airport alla cittadina di Leesburg in Virginia USA ed è stata aperta al traffico nel settembre 1995.
Il progetto è stato finanziato e realizzato completamente da un raggruppamento di imprese private (TRIP II) a cui ha partecipato Autostrade S.p.A. tramite la sua controllata Autostrade International.
La concessione è stata affidata mediante trattativa diretta dallo Stato della Virginia, tramite l'ente di gestione delle strade Virginia Department of Transportation(VDOT) alla Trip II ed ha la durata di 40 anni più 2,5 anni per la costruzione, che è stata affidata ad un'impresa socia di minoranza di TRIP II.

22. *In termini più generali, e tenuto conto dei considerevoli investimenti necessari in alcuni Stati membri, al fine di realizzare uno sviluppo economico-sociale durevole, pensate che sia utile una riflessione collettiva su tali questioni che prosegua ad intervalli regolari tra gli attori interessati e che permetta uno scambio di 'buone pratiche? Ritenete che la Commissione dovrebbe dare impulso ad una tale rete?*

Per tutte le considerazioni sopra svolte la risposta al quesito della Commissione non può che essere positiva e lo scambio di "buone pratiche" largamente auspicato come strumento che, tra l'altro, consentirebbe di tener conto non solo dei profili problematici di tipo giuridico, ma anche di quelli di natura economica ed istituzionale che nel concreto si pongono per tutti gli operatori.

Note

Re: Green Paper on Public-Private Partnerships and Community law on public contracts and concessions

Following due examination of the text in question, ANCE considers it appropriate to give answers to the questions raised by the Commission, explaining more precisely certain aspects involved in the phenomenon of Public-Private Partnership which are considered particularly important for the building sector.

Regarding the questions raised, hereafter please find the following considerations, concerning specifically the sector of **public works**.

QUESTION NO. 1

The Italian set-up recognises and governs fundamentally two types of PPPs:

- The **concession** of construction and running, in the two different variants: ordinary, in which the public administration issues a call for bids for entrusting the carrying out and running of a work and the concessionaire recovers the funding relative to the work through payments collected from third party users; and the procedure of the promoter *(project financing),* in which initiative for the project is taken by the private promoter, who may be entrusted on a basis of concession with the carrying out and running of the work itself.

- The **General Contractor**, which constitutes implementation of the "execution by any means", foreseen by the Community directives. In fact the services entrusted to the general contractor comprise not only the planning and execution, but also the partial financing of the work and other activities of administrative back-up.

However, in addition to these patterns of award, the Italian legislation in particular sectors, such as that of prison building, foresees further forms of search for a private partner by the adjudicating bodies, which may cause some perplexity. For example, reference could be made to those cases of what is termed financial leasing of real estate "undergoing construction", by means of which a competition is called for determining the "financial lessee" (banks or financial subjects) which then have to see to the carrying out of the work which will be leased to the administration by means of direct and discretionary awarding to the executor subjects in possession of the qualification requirements prescribed for contractors by the rules on public works.

These perplexities pertain to the compatibility of such operations with Community law: in fact, in ANCE's opinion, choice of the executor by the financing lessee adjudicating the competition must respect the rules on competition.

QUESTION NO. 2

As regards competitive dialogue, it is considered that this particular procedure may be used for certain forms of PPP, providing the rules pertaining to advertising are complied with and confidentiality is ensured regarding the solutions provided by the competing firms.

QUESTION NO. 3

As a general rule, no particular problems arise regarding such contracts, apart from choice of the tendering procedure.

QUESTION NO. 4

We are not in a position to answer this question.

QUESTION NO. 5

We consider that the fundamental rules relative to advertising, transparency and non-discrimination are sufficient to guarantee the participation of foreign competitors in the competitions for the awarding of concessions. However, we would stress that particular attention must be paid on the subject of real competition to the need to ensure reciprocity between the member States in the field of treatment of workers.

QUESTION NO. 6

As far as concessions are concerned, we do not consider that a Community legislative initiative is necessary. We would prefer to see the adoption of a new interpretative communication which takes account of the observations made in the Green Paper and which spells out clearly the specificities of the individual procedures.

QUESTION NO. 7

Not applicable, since we gave a negative answer to the previous question.

QUESTION NO. 8

The Italian set-up envisages and lays down a procedure on private initiative, which is that of project financing. The general rule is that the administration makes known the fact that in the framework of approved programming there are works which may be carried out in project financing, by publishing an indicative notice according to the procedures of publication proper to competition announcements. It is considered that such publicising is appropriate for guaranteeing the participation of foreign subjects.

Once more in the phase of choice of who will carry out the project initially proposed by the promoter, the presentation of other offers is ensured, by calling a competition aimed at singling out those subjects due to compete in a subsequent phase with the promoter of the initiative.

With the appropriateness of the procedure foreseen by the Italian legislation for guaranteeing maximum competition continuing to hold good, the Association underlines the importance, if the financing project is to find concrete application in the Italian market, of ensuring that the promoter receives the advantages foreseen by the rules (and in particular the right to adjust his own proposal to that adjudicated as more acceptable by the administration – the so-called right of pre-emption). In this connection, it is considered that guarantee of respect of the rules on competition and equality of treatment of national and foreign competitors derives from the publicising of such advantages, by means of explicit indication in the indicative notice published.

QUESTION NO. 9

In our opinion, the development of private initiative PPPs may be ensured precisely by offering advantages for those taking the initiative, as foreseen by the Italian legislation: in the case of the administration considering the tender of some other competitor more profitable, the right of pre-emption, described heretofore, or alternatively, if the latter should not be exercised, ensuring that the promoter receives remuneration implying partial coverage of the costs sustained in proposing the initiative.

QUESTION NO. 10

We are not in a position to answer this question.

QUESTION NO. 11

We are not aware of cases such as those described in the question.

QUESTION NO. 12

We are not aware of cases such as those described in the question.

QUESTION NO. 13

We are of the opinion that clauses of "step-in" type may be necessary in certain contractual situations encompassed in the phenomenon of the PPPs, without however presenting problems in terms of transparency and equality of treatment. Reference is made to situations in which the financing subject could call for replacement of the concessionaire by a subject taking over from him having equivalent technical financial suitability to that of the previous subject and who guarantees completion of the works. Such a possibility should be permitted in specific cases, such as that of bankruptcy of the awardee subject or serious non-performance of the contract, precisely for the purpose of avoiding rescission of the latter.

QUESTION NO. 14

To our mind a Community intervention, in the form of interpretative communication, aimed at clarifying the nature and definition of the different typologies of contractual PPP would be quite appropriate.

QUESTION NO. 15

As far as we know, subcontracting in the framework of operations of PPP has not given rise to any particular problems.

QUESTION NO. 16

We do not consider it appropriate to foresee any further rules, since discipline relative to concession foresees the faculty for the administration to rule that part of the work should be entrusted to third parties.

QUESTION NO. 17

See the previous point.

QUESTION NO. 18

There have been cases in which a single competitive procedure aims at choice of the private partner, who at the same time is adjudicated the works that the company now being set up will be required to carry out, as its exclusive or main purpose.

In fact, in cases of this kind, the possibility of adjudication of the works is made subordinate to the necessary acquisition of the status of partner of the promoter, which as a rule does not seem to correspond to the interests and operative procedures of enterpreneurs operating in the constructions field.

Secondly, where it is admitted that the same juridical person may at one and the same time assume the role of shareholder of the promoting company and of contractor for the same, in fact this leads to a confusion of roles, with partial identification between promoter and executor, and accordingly between controller and controlled.
Finally, approval of such a methodology may lead to the serious risk of a sort of monopoly on the part of the private partner in all the contracts (or at least a large part of them) that the joint venture, in the course of its activity, will be carrying out.

QUESTION NO. 19

With reference to the hypothesis laid down in the previous paragraph, it would be advisable to clarify by interpretative communication (that is, if such a procedure should be considered expedient, also through a specific Community directive on the institutionalised PPP) that in any case the procedure for choice of the private partner should be kept distinct from the procedures which, downstream, the joint venture will be carrying out for awarding of the works. In other words, it should be clarified that the public subject must carry out a first and autonomous competitive procedure for choice of the private partner, which thereafter, once the joint venture has been set up would lead on to autonomous competition procedures open to all competitors possessing the prescribed requisites, without excluding in advance that the company holding quotas in the joint venture may also take part in such competitions, on an equal footing with the other competitors.

QUESTION NO. 20

We do not consider that there are any barriers to the introduction of PPPs in Europe, however on condition that clear clarification is provided that:

a. the private partner is chosen on the basis of a competitive procedure; and

b. once set up, the mixed company must act in full respect of the procedures ensuring public transparency, and accordingly proceed to contracts downstream of choice of the private subject.

QUESTION NO. 21

We are not in a position to answer this question.

QUESTION NO. 22

Any such initiative could not fail to have our approval.

29 July 2004

LIBRO VERDE

RELATIVO AI PARTENARIATI PUBBLICO PRIVATI
ED AL DIRITTO COMUNITARIO DEGLI APPALTI PUBBLICI E DELLA CONCESSIONI

Osservazioni, proposte e risposte a quesiti

Il presente documento rappresenta il contributo che l'ANCI (Associazione Nazionale dei Comuni Italiani) vuol dare alle procedure di consultazione aperte con la pubblicazione – il 30 Aprile scorso – da parte della Commissione Europea, del **Libro Verde relativo ai partenariati pubblico privati ed al diritto comunitario degli appalti pubblici e della concessioni COM (2004) 327.**

In via preliminare, va detto che l'ANCI apprezza e condivide gli scopi del succitato "Libro Verde" che, nelle intenzioni della Commissione, mirano ad avviare un dibattito sul migliore modo di garantire che i PPP possano svilupparsi in un "*contesto di concorrenza efficace e di chiarezza giuridica"*. Ciò al fine di promuovere e favorire percorsi efficaci di crescita e coesione socio-economica all'interno di ciascun Stato membro. Lo sviluppo di forme di partenariato pubblico privato per la gestione dei servizi pubblici locali, come affermato dalla stessa Commissione, rientra tra i mezzi per favorire tali percorsi. Ciò è ribadito dal Libro Verde sui Servizi d'interesse generale: i servizi pubblici sono fattore di coesione e di avvicinamento dei cittadini,… condizione economica essenziale perchè le imprese possano stabilirsi in ogni territorio dell'U.E.". Il tema dei servizi pubblici locali e le privatizzazioni delle relative gestioni, è allora strettamente connesso alle innovative strategie gestionali ed organizzative che gli Enti Locali pongono in essere per *lo sviluppo e la crescita socio-economica delle Comunità amministrate*, e non solo per fare cassa in "presenza di restrizioni di bilancio e assicurare finanziamenti privati al settore pubblico" come affermato dalla Commissione. Essi riguardano infatti bisogni fondamentali della vita sociale ed economica della collettività che vive in un determinato territorio, con caratteristiche peculiari, diverse e diversificate, risultano indispensabili per garantire condizioni favorevoli e "competitive" per l'insediamento di attività produttive e di fornire una adeguata risposta alle esigenze delle comunità amministrate, ma anche come strumento per consentire di evidenziare e valorizzare le potenzialità inespresse e latenti dei territori. Liberalizzazione del mercato dei servizi nel rispetto della libera concorrenza, valorizzazione e diffusione delle forme di partenariato pubblico-privato, politiche strutturali del settore in grado di favorire la competitività nel mercato, aumento degli investimenti infrastrutturali, sono le strategie di politica economica sostenute dai Comuni e dall'ANCI. E' dunque necessario assicurare agli Enti Locali un'autonomia gestionale e organizzativa che consenta la migliore scelta sulle forme di partenariato pubblico-privato.

In questo, la posizione della Commissione sul partenariato pubblico-privato istituzionalizzato, tra cui rientrano le società miste, sembra *restrittiva* e rischia di creare problemi all'armonizzazione della normativa nazionale sui Servizi Pubblici Locali approvata dal Governo Italiano alla fine dello scorso anno, con quella in fase di elaborazione dalla Commissione.

Va segnalato infatti che la Commissione propone un modello di società mista distante da quello che si è affermato nella prassi e nella normativa del settore vigente nel nostro Paese. In particolare, il modello di società mista ipotizzato dalla Commissione nel ***libro verde*** sembra essere quello di una concessione che assume la forma della società nella quale il partner privato realizza gli incarichi specificati nel bando di gara e il partner pubblico controlla, dall'interno della società, il modo in cui gli incarichi stessi vengono realizzati.

Si riportano di seguito le risposte ad alcuni quesiti di diretto interesse dei Comuni, in particolare i quesiti n. 6, 7, 18 e 19

6. Pensate che un'iniziativa legislativa comunitaria mirante a regolamentare la procedura d'aggiudicazione di concessioni sia auspicabile?

7. In maniera più generale, se ritenete che sia necessario che la Commissione proponga una nuova azione legislativa, esistono a vostro parere ragioni oggettive per regolamentare tramite un tale atto tutti i PPP di tipo contrattuale, siano essi qualificabili come appalti pubblici o come concessioni, per sottoporle a identici regimi d'aggiudicazione?

L’ANCI non è favorevole ad un iniziativa legislativa comunitaria mirante a regolamentare la procedura di aggiudicazione di concessioni, ciò proprio per salvaguardare l’autonomia contrattuale delle parti nelle assunzioni di obblighi e rischi derivanti dal rapporto concessorio e date le specificità delle singole Amministrazioni Locali le cui azioni mirano al soddisfacimento di bisogni diversi e diversificati sul territorio di cittadini e imprese.

18. Quale esperienza avete del lancio di operazioni PPP di tipo istituzionalizzato? In particolare, la vostra esperienza vi porta a pensare che il diritto comunitario degli appalti pubblici e delle concessioni sia rispettato nel caso di operazioni PPP istituzionalizzate? Se no, perché?

19. Ritenete che debba essere presa un'iniziativa a livello comunitario per chiarire o precisare gli obblighi degli organismi aggiudicatori riguardo alle condizioni che devono regolamentare la concorrenza tra operatori potenzialmente interessati da un progetto di tipo istituzionalizzato? Se sì, su quali punti particolari e sotto quale forma? Se no, perché?

La nostra esperienza è rappresentata dalla riforma in materia di servizi pubblici locali approvata negli ultimi mesi dello scorso anno. La riforma assicura alle Amministrazioni Pubbliche e dunque agli Enti Locali un’ampia autonomia in ordine alla scelta delle forme di gestione dei servizi di interesse generale:
La riforma, in particolare, prevede che l’erogazione dei servizi d’interesse generale avvenga con conferimento della titolarità del servizio a :

a) società di capitali individuate con procedura ad evidenza pubblica;

b) a società con capitale misto pubblico-privato nelle quali il socio privato venga scelto con procedura ad evidenza pubblica;

c) a società a capitale interamente pubblico a condizione che gli enti pubblici titolari del capitale sociale esercitino sulla società un controllo analogo a quello esercitato sui propri servizi, e che la società a capitale pubblico realizzi la parte più importante della propria attività con l'Ente e con gli enti pubblici che la controllano.

Nel nostro ordinamento esiste dunque un modello delle società miste che non coincide incide né con quello ipotizzato dalla Commissione né con quello "in house", ma per certi versi, li comprende entrambi. Le società miste previste dall'ordinamento interno condividono con gli organismi in house la possibilità di essere affidatarie dirette degli incarichi ad esse attribuiti, nonché la prevalenza della loro attività a favore dell'ente o degli enti pubblici che le costituiscono.

L'aspetto più interessante è che le società miste previste dall'ordinamento interno condividono con le società miste ipotizzate dalla Commissione la necessità che il socio privato venga scelto mediante una procedura concorrenziale. Pertanto, se è vero che alle società miste previste dall'ordinamento interno gli incarichi sono ad esse affidati direttamente, è del pari vero che il coinvolgimento dei privati nello svolgimento di tali incarichi avviene attraverso una procedura concorrenziale e, quindi, nel rispetto del diritto comunitario degli appalti pubblici e delle concessioni.

La scelta compiuta nel nostro ordinamento – in un contesto che definisca meglio i confini tra l'attività di gestione da un lato e quella di programmazione, regolamentazione e monitoraggio dall'altro – può essere degna di approfondimenti a livello comunitario, nel caso si volesse procedere con un'iniziativa della Commissione in tale materia.

Contributo alla consultazione della UE
"Libro Verde relativo ai partenariati pubblico-privati ed al diritto comunitario degli appalti pubblici e delle concessioni"

Presentato da:

Unioncamere

e

CCIAA di Roma

Documento elaborato da ***AeT* - Ambiente e Territorio,** Azienda Speciale della Camera di Commercio di Roma, in collaborazione con la D.ssa Lidia Zaninotto e il Dr. Federico Merola

1. PREMESSA

Il presente documento rappresenta il contributo dell' Unioncamere - Unione Italiana delle Camere di Commercio, Industria, Artigianato e Agricoltura - alla consultazione promossa dalla Commissione Europea in materia di partenariato pubblico privato.

Attraverso il presente elaborato il sistema camerale italiano si prefigge l'obiettivo di portare all'attenzione della Commissione sia l'esperienza maturata nel ruolo di interprete delle esigenze del mondo produttivo nazionale in campo infrastrutturale, sia la posizione che si va delineando per le Camere di Commercio nazionali quali attori diretti di interventi di partenariato, riconosciuti come tali dalla normativa nazionale.

Inoltre il sistema camerale gestisce il monitoraggio ufficiale delle attività di collaborazione tra pubblica amministrazione e privati, volta alla realizzazione di infrastrutture o allo svolgimento di servizi di interesse pubblico. In particolare, in quest'ultima veste, Unioncamere e Camera di Commercio di Roma hanno promosso l'**Osservatorio Nazionale del Project Financing** *(www.infopieffe.it)*, insieme al Ministero dell'Economia e delle Finanze e all'Unità Tecnica della Finanza di Progetto/Comitato Interministeriale per la Programmazione Economica (CIPE). Conseguentemente, tutti i dati riportati nel presente elaborato costituiscono altrettanti dati ufficiali ricavati dall'Osservatorio.

2. UNIONCAMERE, le CAMERE DI COMMERCIO INDUSTRIA, ARTIGIANATO e AGRICOLTURA ITALIANE

L'Unioncamere è una struttura nata come associazione volontaria delle Camere di Commercio il 9 maggio 1901. Il 31 marzo 1928 è stata sciolta. L'8 maggio 1946 è stata ricostituita.
Questa ha come capisaldi normativi (relativamente alla giurisprudenza italiana):

1. Il D.P.R. 30 giugno 1954, n. 709 con il quale è stata riconosciuta la personalità giuridica di diritto pubblico.
2. Il D.P.R. 31 dicembre 1985, n. 947 che ha approvato il nuovo statuto
3. La L. 11 luglio 1998, n. 266 che ha sottratto l'ente alla disciplina della contrattazione del pubblico impiego posta dalla legge quadro 11 luglio 1980
4. Il D.Lgs. 3 febbraio 1993, n. 29 (art. 73, c. 5) per la disciplina del personale
5. La L.29 dicembre 1993, n. 580 che ridefinito, agli artt. 7 e 22 le funzioni statuarie e le forme di finanziamento dell'Unione
6. Il D.P.C.M. 5 gennaio 1995 che ha approvato il nuovo statuto modificato al fine di armonizzarne le norme alla L.580/1993 e al D.Lgs. 29/1993 con la separazione dei poteri di indirizzo e verifica – posti in capo agli organi collegiali – e quelli riservati alla dirigenza.

In particolare l'art. 7 della L. 580/1993 ha precisato che l'Unioncamere cura e rappresenta gli interessi generali delle Camere di Commercio; promuove, realizza e gestisce, direttamente o per il tramite di proprie aziende speciali, non ché mediante la partecipazione ad organismi anche associativi, ad, enti, a consorzi e a società anche a prevalente capitale privato, servizi ed attività di interesse delle Camere di commercio e delle categorie economiche.
L'Unioncamere inoltre lavora in collaborazione con le organizzazioni imprenditoriali, con numerosi enti ed organismi nazionali ed internazionali attraverso la sede di Bruxelles cura i rapporti del sistema camerale con la Commissione dell'Unione europea e la partecipazione a Eurochambres. Presso l'Unioncamere sono stati costituiti ed operano vari comitati e commissioni per lo studio ed il coordinamento di procedure e di norme.
L'Unioncamere ha sede a Roma, piazza Sallustio, 21.

Attualmente la rete delle 103 Camere di Commercio partecipa con quasi 335 milioni di euro in oltre 600 società italiane che si occupano di infrastrutture, detenendone in media una quota partecipativa del 10%. Questa percentuale media sale al 44% se vengono considerate società riguardanti il sistema fieristico ed espositivo.

3. CONSIDERAZIONI SINTETICHE SUL LIBRO VERDE UE-COM (2004) 327

Prima di procedere alla risposta puntuale dei quesiti posti dalla Commissione sul Documento COM (2004) 327, si ritiene possa essere utile riportare sinteticamente le principali considerazioni svolte in tema di Partenariato Pubblico-Privato e di diritto comunitario degli appalti pubblici e delle concessioni dal sistema delle Camere di Commercio italiane.

1. La prima considerazione attiene alla definizione di "partenariato pubblico privato". Le riflessioni formulate al riguardo dalla Commissione UE nascono indubbiamente da una serie di constatazioni sul come "normalmente" si connota il fenomeno.
   Ma è proprio il concetto di "normalità" che fa sollevare qualche perplessità per la differente tradizione giuridica esistente tra Paesi che si riconoscono nella "common law" e Paesi che si rifanno ad un'impostazione "sistematica " del diritto.
   In altri termini, si ritiene che sarebbe apprezzato uno sforzo per **definire più precisamente i confini del partenariato pubblico privato,** eliminando una serie di dubbi e perplessità che nel dettaglio saranno più oltre evidenziati.
   D'altro canto, solamente una volta definito quanto più esattamente possibile il fenomeno e, dunque, una volta definito "l'oggetto", si potrà passare a riflettere sulle possibili regole applicabili al medesimo, onde garantire uno sviluppo del fenomeno in condizioni di concorrenza effettiva e di chiarezza giuridica, come auspicato dalla Commissione UE.

2. In questo contesto, la seconda considerazione attiene alle “regole” da applicarsi ai PPP, regole che in taluni casi risultano già codificate in maniera rigida, in altri in maniera più blanda, in altri ancora sfuggono ad ogni inquadramento di diritto derivato e, da ultimo, vedono talune fattispecie assoggettate solamente alla base minima di principi derivanti dagli articoli da 43 a 49 del Trattato Cee, con la conseguenza di determinare un’ampia divergenza di approcci sul piano nazionale, come sottolineato dallo stesso Libro Verde.
   Pare logico concludere nel senso che la divergenza di approcci non possa continuare a fare perno sulla differente applicazione dei principi del Trattato e che si renda, quindi, necessaria un’iniziativa che garantisca un approccio giuridicamente più certo ed economicamente più concorrenziale.
   Ma, trattandosi di operazioni che dovranno essere attuate nell’ambito di un’Europa oramai allargata a Paesi tra loro con tradizioni giuridiche, amministrative ed economiche profondamente differenti, detta iniziativa regolamentatrice non potrà che concernere interventi da assumere sulla base di **dati conoscitivi assolutamente completi ed esaustivi dei fenomeni da trattare e delle modalità attuative finora utilizzate**, tenendo conto dei contesti in cui si va ad operare.

3. La terza considerazione di carattere generale è strettamente conseguente a quanto sinora osservato: se una volta conosciuto esattamente il quadro nel quale si va ad operare e definite puntualmente le esigenze da soddisfare si reputerà necessario codificare con un’iniziativa legislativa l’intero fenomeno dei partenariati pubblici privati, **le regole non potranno che essere scarne ed essenziali**. Ciò per poter sollecitare l’interesse dei privati ad agire e per poter essere efficacemente applicate da Paesi tra loro con tradizioni così profondamente diverse. Nel frattempo potrebbe essere oltremodo utile per una reciproca conoscenza e maggiore concorsualità di fatto, procedere alla pubblicazione, nelle lingue dei singoli Paesi, delle regole dirette e indirette che vengono utilizzate per i PPP nelle differenti realtà nazionali.

4. Una migliore apertura alla concorrenza passa per regole essenziali, ma anche per regole scarne, chiare e di facile applicazione.
   Non tutte le norme già vigenti, però, sono di facile applicazione, a cominciare da quelle sul **dialogo competitivo.**
   Del pari, non tutte le norme vigenti sono chiare, atteso che, ad esempio, il concetto di gestione - che differenzia la concessione dall’appalto - è stato collegato, dalla stessa Commissione Ue al **concetto di rischio,** i cui contorni però vengono individuati nel Libro Verde sia in taluni tipi di appalto sia nelle concessioni, con la conseguenza, denunciata dalla stessa Commissione, che procedure avviate come concessioni potrebbero dover essere poi tramutate in procedure di appalto e viceversa.
   Infine, **non tutte le regole vigenti sono scarne**, atteso che sembrano permanere ingiustificate duplicazioni di livelli procedurali, come, ad esempio, nel caso delle **concessioni di lavori attribuite ad organismi**

di diritto pubblico, i quali, pur dopo una competizione per ottenere la concessione, sarebbero chiamati a valle a rispettare integralmente le regole sugli appalti fissate dalla direttiva in luogo delle regole ben più snelle spettanti a tutti gli altri concessionari per i rispettivi appalti.

5. Proprio quest'ultimo esempio evidenzia come si renda necessario indagare ulteriormente anche il fenomeno definito dal Libro Verde come "**partenariato istituzionalizzato**", specie quando a tale realtà si assommano le regole proprie delle concessioni di lavori pubblici riferite a soggetti qualificabili come organismi di diritto pubblico.
   Analogamente dicasi con riferimento all'esigenza di approfondire ulteriormente i risvolti della **fase "gestionale" dei PPP,** che danno vita ai profili più delicati ed ai contrasti più radicali, concernendo rapporti già consolidati e che dovrebbero ulteriormente durare nel tempo.

6. Altra esigenza fortemente sentita **a livello operativo è quella di un ausilio** per comprendere prima, e correttamente applicare poi, concetti elaborati, magari ripetutamente, dalla **giurisprudenza comunitaria**, taluni dei quali continuano però a restare di difficile traduzione pratica a fronte delle singole fattispecie concrete: si pensi all'elaborazione concettuale legata alla "sentenza Tekal" **sugli interventi c.d. "in house**", ovvero al concetto di **"influenza certa"** riferita ai casi di assunzione di controllo da parte di un'entità pubblica ed oggetto di riflessioni nell'ambito dello stesso partenariato "istituzionalizzato" trattato dal Libro Verde. Senza trascurare l'importanza di chiarire concetti quali: "**modifica sostanziale dell'oggetto del contratto**", atteso che dalla differente valutazione della sostanzialità della modifica dipende l'avvio o meno di una nuova procedura concorsuale e, dunque, la legittimità o meno dell'agire del committente.

7. Da ultimo si riconosce che il Libro Verde sui PPP costituisce uno strumento per agevolare l'interpretazione delle norme vigenti. Si rende però necessario indagare ulteriormente i molteplici profili di "**diritto transitorio**" che si pongono specialmente in Paesi, come l'Italia, in cui la tradizione di ricorso alle concessioni è molto radicata e vi sono concessioni operative già da molti anni e che saranno tali ancora per molti anni a venire.

RISPOSTE AI QUESITI SPECIFICI POSTI DALLA COMMISSIONE UE

1. Quali tipi di operazioni di PPP puramente contrattuali conoscete? Tali operazioni sono oggetto di una regolamentazione specifica (legislativa o di altro tipo) nel vostro paese?

Nell'ambito della normativa italiana figura essenzialmente la concessione di lavori pubblici, la quale è disciplinata sia tramite la riproduzione delle regole comunitarie (artt. 2 e 19 della legge n.109/94 e s.m.i.), sia tramite le specifiche regole concernenti la figura del "promotore", di cui agli artt. 37 bis e seguenti della legge n. 109/94 e s.m.i.

A ciò si è recentemente aggiunta la previsione di cui all'art.19, comma 2 ter della legge n.109/94 e s.m.i. con la quale il legislatore si è limitato a prevedere che: "*Le amministrazioni aggiudicatrici possono affidare in concessione opere destinate all'utilizzazione diretta della pubblica amministrazione, in quanto funzionali alla gestione di servizi pubblici, a condizione che resti al concessionario l'alea economico-finanziaria della gestione dell'opera".*

Detta previsione non è stata finora accompagnata da norme di dettaglio e non ha trovato in concreto effettivo utilizzo.

2. Secondo la Commissione, il recepimento nel diritto nazionale della procedura del dialogo competitivo permetterà alle parti interessate di disporre di una procedura particolarmente adeguata all'aggiudicazione dei contratti qualificati come appalti pubblici in occasione dell'attuazione di un PPP di tipo puramente contrattuale, pur preservando i diritti fondamentali degli operatori economici. Condividete questo punto di vista? Se no, perché?

La normativa sul dialogo competitivo, di cui all'art. 29 della direttiva 2004/18/CE, è sicuramente importante, perché mira a trovare una soluzione per la realizzazione di interventi particolarmente complessi anche allorquando le amministrazioni interessate si trovino nell'impossibilità oggettiva di individuare preliminarmente i mezzi per soddisfare le proprie esigenze o di valutare ciò che il mercato può offrire in termini di soluzioni tecniche e/o giuridico-finanziarie.

A tal fine è stata introdotta una procedura specifica che unifica sia la fase di approfondimento, definizione e scelta dell'oggetto contrattuale da parte dell' amministrazione e sia la fase di aggiudicazione all'operatore economico che ha concorso alla definizione del progetto stesso. Si auspica che la struttura di detta procedura possa rivelarsi più efficace e snella di quanto finora perseguibile con un susseguirsi di procedure articolate per fasi, che procedevano dalla puntuale individuazione dei mezzi/soluzioni utilizzabili, alla definizione del progetto prescelto, fino all'individuazione dell'operatore in grado di realizzarlo, ma si conta anche che ciò possa avvenire nel rispetto pieno dei principi comunitari, in primis quello di trasparenza.

Propedeutico, peraltro, a tutto ciò risulta il fatto che sarebbe oltremodo utile che la Commissione provvedesse – anche solamente mediante una comunicazione o altro strumento non normativo – a chiarire meglio i presupposti in presenza dei quali è possibile fare ricorso a detta nuova procedura, onde scongiurare la possibilità che eventuali dubbi sul campo di applicazione comportino l'avvio di ricorsi.

Analogamente dicasi in ordine alle modalità di svolgimento della procedura, laddove si ipotizza che essa "*…si svolga in fasi successive, in modo da ridurre il numero di soluzioni da discutere*". Per Paesi come l'Italia l'applicazione di detta previsione sarebbe risultata, probabilmente, maggiormente chiara e proficua qualora la stessa domanda di invito da parte dei candidati fosse stata accompagnata dalla obbligatoria presentazione di ipotesi di soluzione, in modo da orientare subito l'amministrazione interessata circa i mezzi utilizzabili o le soluzioni possibili presenti sul mercato, da affinare, poi, unitamente ai partecipanti al dialogo stesso.

In tal modo, peraltro, si sarebbe pervenuti, a conclusione del dialogo competitivo, ad un'unica soluzione sulla quale i partecipanti sarebbero stati chiamati a presentare l'offerta finale. Il testo in vigore, invece, ipotizza come possibile risultato del dialogo competitivo anche una pluralità di proposte non omogenee tra loro, rispetto alle quali presentare le offerte finali dei partecipanti.

Proprio questa possibilità appena accennata non risulta in sé chiara nei meccanismi operativi e, ancor più, non sembra preservare i diritti fondamentali degli operatori economici, in primis quelli al riconoscimento dei c.d. "diritti d'ingegno", specie allorquando le amministrazioni interessate non prevedano nemmeno premi o pagamenti in favore dei partecipanti al dialogo competitivo che non dovessero risultare vincitori.

Nel complesso, peraltro, l'intera procedura potrebbe risultare di difficile attuazione pratica per la parte in cui – correttamente – si prevede che "*le amministrazioni non possono rivelare agli altri partecipanti le soluzioni proposte né altre informazioni riservate comunicate dal candidato partecipante al dialogo…".*

Ma l'aspetto forse più delicato della fattispecie del dialogo competitivo, sulla quale occorrerebbe riflettere ulteriormente, in modo da contenere quanto più possibile questa procedura nell'ambito di casi ben definiti è la possibilità di mettere in gara sullo stesso piano idee diverse senza necessariamente creare competizione sulla realizzazione - più o meno efficiente - della soluzione finale prescelta. E' infatti di immediata evidenza che se a gareggiare sono operatori tra loro anche molto diversi, i quali propongono soluzioni difformi nel contenuto, tutto questo non assicura che il portatore della "migliore" soluzione sia anche il soggetto più affidabile ed efficiente per realizzarla.

In definitiva, dunque, o si riescono a definire condizioni obiettive chiare che consentono il dialogo competitivo, oppure si rischia di assecondare il ricorso ad una procedura "opaca", che, in ultima analisi potrebbe anche assecondare l'incapacità di programmazione e controllo sulla progettazione della PA, portando, al limite, operatori meno efficienti di altri all'aggiudicazione di commesse, attraverso la proposta di soluzioni non specularmente confrontabili in termini di costi e qualità con quelle scartate.

Il tutto potrebbe spingere il PPP in un contesto di discrezionalità negativo per il pieno rispetto dei principi di trasparenza e pari opportunità.

3. Per quanto riguarda questi contratti esistono, secondo voi altri punti, oltre a quelli relativi alla scelta della procedura di aggiudicazione, che potrebbero causare problemi riguardo al diritto comunitario degli appalti pubblici? Se sì, quali e per quali ragioni?

Si ritiene opportuno segnalare che l'applicazione in Italia delle direttive previgenti alla n. 18 del 2004 non ha sostanzialmente comportato l'utilizzo della procedura negoziata prevista per i casi in cui il bando riguardi: *"..lavori la cui natura o i cui imprevisti non consentano una fissazione preliminare e globale dei prezzi".*

Un chiarimento comunitario in proposito, ulteriore rispetto a quello già contenuto nel Libro Verde, potrebbe essere oltremodo utile per un maggior ricorso anche in Italia alla procedura negoziata, atteso che per il diritto nazionale e per la cultura giuridica italiana le incertezze che gravano sulla natura e sulla dimensione dei lavori da realizzare, per come illustrati sia pure a titolo di esempio nel Libro Verde stesso, non consentono certamente il ricorso alle procedure derogatorie, ma giustificano unicamente un compenso c.d. "a misura", ossia rapportato alla portata dei lavori realizzati nel concreto, misurati effettivamente al completamento e solo presuntivamente quantificati al momento del lancio della procedura.

D'altro canto, va ricordato che, in applicazione della normativa italiana, nessun appalto pubblico di lavori è stato sinora considerato come riconducibile ad alcuna forma di partenariato pubblico-privato e, pertanto, la ricostruzione operata dalla Commissione - in forza della quale sia le situazioni eccezionali appena sopra richiamate, sia le nuove procedure di appalto dette di "dialogo competitivo" sarebbero, invece, riconducibili ad un partenariato di tipo puramente contrattuale - rischiano di ingenerare incertezze tra gli operatori e paralisi da parte delle amministrazioni aggiudicatici. Ciò non significa, tuttavia, che gli operatori italiani non abbiano un grande interesse a ricorrere alle forme di PPP per come delineate dalla Commissione. Basta considerare che le forme di partenariato riepilogate dalla Commissione sono tutte connotate dalla possibilità - ammessa a livello comunitario ma assolutamente negata a livello nazionale - del ricorso a procedure negoziate con bando o, comunque, a forme di affidamento meramente rispettose dei principi del Trattato di non discriminazione, trasparenza e pubblicità e, come tali, notevolmente più snelle e flessibili.

Peraltro, è la stessa portata del concetto di "rischio" - diffusamente utilizzato nell'ambito della Comunicazione interpretativa del 2000 sulle concessioni - che sembrerebbe assumere differente estensione in Italia, rispetto al resto dell'Europa e, comunque, non ben chiara.

Non a caso, peraltro, le nuove direttive comunitarie n. 17 e n. 18 del 2004 sugli affidamenti nei settori "tradizionali" e nei "settori speciali" non menzionano mai il concetto di rischio, nemmeno con riferimento alla fase della gestione.

Per contro, in Italia, il concetto di rischio è stato finora connesso strettamente ed unicamente al concetto di "gestione/sfruttamento" di un'opera. Ne è conseguito, ad esempio, che il "rischio della costruzione" è connaturato ad ogni appalto pubblico di lavori e persino quando esso è risultato accompagnato dall'assunzione da parte del soggetto privato del "rischio della disponibilità", non ha contribuito a classificare né l'intervento come un partenariato pubblico privato, e nemmeno a computare gli attivi legati all'intervento del privato come "attivi non pubblici" ai fini dell'impatto sul deficit/sull'eccedenza pubblica e sul debito pubblico.

E ciò proprio perché il concetto di rischio è stato considerato sempre come sommatoria tra "rischio di costruzione" e "rischio della domanda", senza tenere in alcun conto il "rischio della disponibilità", perché non chiaro e, come tale, non utilizzabile.

4. Avete già organizzato, o avuto l'intenzione di organizzare o partecipare ad una procedura d'attribuzione di una concessione nell' Unione? Che esperienza ne avete ricavato?

Non sono state ancora sviluppate esperienze in tal senso.

5. Ritenete che l'attuale quadro giuridico comunitario sia sufficientemente preciso per garantire la partecipazione concreta ed effettiva di società o gruppi non nazionali alle procedure di aggiudicazione di concessioni? Secondo voi, in questo contesto è attualmente garantita una concorrenza reale ?

Peraltro, l'esperienza italiana evidenzia anche una presenza del tutto marginale di imprese straniere alle procedure indette in Italia. L'unico caso rilevato sulla base dei dati dell'Osservatorio nazionale sul Partenariato Pubblico Privato riguarda l'aggiudicazione con il sistema del promotore alla società RAPT INTERNATIONAL per la progettazione costruzione e gestione di un sistema di tranvia integrato tra i comuni di Firenze e Scandicci per un valore di circa 252 milioni e mezzo di euro.

Dalle rilevazioni dell'Osservatorio, peraltro, risulta che l'effettuazione della pubblicazione per le aggiudicazioni, ancorché prevista per legge al di sopra di certi importi, avviene soltanto nel 30% dei casi; l'attività di indagine diretta svolta dall'Osservatorio sul campo, consente tuttavia di portare tale percentuale attorno al 60%, ma di alcuni casi aggiudicati non si viene a conoscenza in alcun modo.

6. Pensate che un'iniziativa legislativa comunitaria mirante a regolamentare la procedura d'aggiudicazione di concessioni sia auspicabile?

L'Italia ha regolamentato con legge la procedura di aggiudicazione delle concessioni di lavori pubblici e la figura del promotore, che su tale istituto si innesta. Ciò ha, per un verso indiscutibilmente irrigidito gli interventi delle amministrazioni, dato anche il contenuto specifico delle regole che sono state individuate dal legislatore nazionale, ma, per altro verso, ha altrettanto indiscutibilmente consentito di trattare in maniera uniforme un istituto che nel Paese ha storicamente avuto una diffusione considerevole e che da ultimo, ha registrato un marcato incremento di interventi promossi da "promotori".

Ciò ha consentito la realizzazione e la messa a disposizione dei cittadini di opere che, diversamente, non avrebbero potuto essere realizzate tempestivamente e - fatto da sottolineare molto positivamente - ha spinto i decisori a compiere scelte condivise, intorno ad esigenze concrete, in tempi compatibili con l'economia, laddove in passato venivano tenuti in conto i soli tempi della "politica".

Queste considerazioni, evidentemente, fanno propendere per l'utilità di un'iniziativa comunitaria in materia, non necessariamente a livello normativo, al fine di omogeneizzare nella sostanza gli interventi tra tutti i paesi dell'UE, traendo eventualmente anche insegnamento dai profili che hanno mostrato criticità nell'esperienza normativa italiana.

7. In maniera più generale, se ritenete che sia necessario che la Commissione proponga una nuova azione legislativa, esistono a vostro parere ragioni oggettive per regolamentare tramite un tale atto tutti i tipi di PPP di tipo contrattuale, siano essi qualificabili come appalti pubblici o come concessioni, per sottoporle a identici regimi di aggiudicazione?

Il quesito, nell'associare l'appalto al PPP ripropone essenzialmente l'esigenza, già segnalata precedentemente, di definire esattamente il significato di partenariato pubblico-privato. Ma prescindendo ora da tale aspetto, si è del parere che - sicuramente - pratiche e, ancor più, regole omogenee, utilizzate da parte di tutti gli operatori degli Stati membri garantirebbero una con-correnza maggiore di quanto non avvenga oggi con riferimento a una risorsa particolare e soprattutto scarsa, come il territorio. Lo conferma, d'altro canto l'esperienza maturata nell'Europa a "15", tra la fase di introduzione del diritto comunitario sugli appalti e la realtà attuale. Si ritiene, pertanto, che anche gli operatori italiani potrebbero essere maggiormente avvantaggiati da una realtà più omogenea in un mercato oramai allargato a 25.

Tuttavia, si deve osservare che un'azione legislativa che non fosse preceduta da una ricognizione dettagliata e completa delle realtà operative praticate nei vari Paesi potrebbe accrescere le difficoltà, anziché concorrere a ridurle.

Analogamente dicasi circa un quadro di pratiche/regole che non risultasse costruito in maniera armonica e sistematica o che non risultasse sufficientemente chiaro.

D’altro canto si conviene sul fatto che non sempre risulta facile la traduzione in norme di concetti che possono essere persino ben definiti - come ha dimostrato l’esperienza recente per l’introduzione a livello di direttive comunitarie di concetti oramai acquisiti dalla stessa giurisprudenza comunitaria - la cui utilizzazione può risultare ben precisa con riguardo al singolo caso, ma di difficile trasposizione nel diritto positivo comunitario.

Inoltre, va tenuto in grande conto il fatto che l’allargamento - intervenuto rispetto a Paesi con tradizioni molto differenti da quelle degli Stati membri che sinora hanno costituito l’Europa - sottolinea sia l’importanza dell’adozione di regole omogenee e condivise, sia la problematicità di pervenire ad una uniformità applicativa da parte degli operatori, in forza delle differenti esperienze, culture e strutture sulle quali poter contare.

Ne consegue una proposta di operare per “passi successivi”, muovendo da un approfondimento e un confronto delle conoscenze, ad esempio rendendo disponibili in tutte le lingue i sistemi di regole dei vari Paesi in tema di PPP nonchè dalla diffusione di una cultura della concorrenza sul territorio maggiormente sentita, con riferimento in particolare all’applicazione concreta e diffusa dei principi del Trattato, per passare quindi all’utilizzo di buone pratiche operative ed, eventualmente, in prospettiva pervenire al varo di nuove norme, le quali sicuramente servirebbero a ridurre i costi legati in particolar modo all’attuazione di operazioni a livello transnazionale.

8. In base alla vostra esperienza, l’acceso degli operatori non nazionali alle formule di PPP di iniziativa privata è garantito? In particolare, nei casi in cui le amministrazioni aggiudicatici invitano a presentare un’iniziativa, tale invito è generalmente oggetto di pubblicità adeguata ad assicurare l’informazione di tutti gli operatori interessati? Viene organizzata una procedura di selezione realmente concorrenziale per garantire l’attuazione del progetto stesso?

Le norme impongono la pubblicità a livello comunitario per gli appalti e le concessioni di importo superiori ai 5 milioni di euro. Per importi inferiori, ed è il caso della maggioranza degli avvisi, viene assicurata la pubblicità a livello nazionale: per quanto riguarda la procedura del “promotore” la Tabella 1 evidenzia l’incremento degli avvisi dovuto essenzialmente alle indicazioni inserite relativamente alla pubblicità per la selezione delle proposte nell’ambi-to delle modifiche e integrazioni, apportate nell’agosto 2002, alla L. 109/94.

9. Quale sarebbe secondo voi la migliore formula per assicurare lo sviluppo di PPP di iniziativa privata nell’Unione Europea pur garantendo il rispetto dei principi di trasparenza, di non discriminazione e di parità di trattamento?

L’esperienza italiana sta prestando grande attenzione al fenomeno del PPP. L’introduzione accanto al sistema concessorio classico di una forma “originale” di promotore basata su due fasi: la prima delle quali costituita dall’invito pubblico a presentare progetti che verranno poi selezionati dall'amministrazione committente, individuandone le imprese come promotori e una seconda fase, caratterizzata dalla messa in gara dei progetti selezionati con il diritto di prelazione del promotore. Detta normativa ha modificato il quadro previdente e accresciuto sensibilmente le possibilità di ricorrere allo strumento, che sta tuttora registrando un alto tasso di interesse, ancorché la sua applicazione sembri trovare ancora resistenze.

L'analisi dei dati raccolti dall'Osservatorio Nazionale sul PPP evidenzia, infatti, un trend crescente di avvisi per l'individuazione di soggetti promotori e una relativamente bassa percentuale di opere che vanno in gara. Di contro cresce anche il ricorso alla concessione di costruzione e gestione preferita spesso per la maggiore snellezza procedurale e la maggiore conoscenza già maturata dei relativi meccanismi operativi (vedi Tabella 3 relativa all'andamento dell'anno 2002 rispetto al 2003 e Tabella 4 con i dati più recenti di confronto tra primo semestre 2003 e primo semestre 2004).

In termini più generali, si ritiene che, analogamente a quanto avviene normalmente nei contesti privatistici, un'efficiente fase progettuale si dimostra spesso il miglior presupposto per un corretto processo decisionale e un'efficace fase realizzativa. Non solo: mantenere la fase progettuale e decisionale separata da quella realizzativa, favorisce, di norma, la possibilità di operare in trasparenza e in un contesto di pari opportunità per gli operatori.

Per questo motivo dovrebbe essere incentivata la possibilità per la PA di avvalersi di tutti i supporti esterni idonei ad assisterla nell'ambito dell'intera fase iniziale e di gestione di un PPP, come avviene in ambito privatistico in circostanze simili.

10.Che esperienza avete riguardo alla fase successiva alla selezione del partner privato nelle operazioni di PPP contrattuali?

Per quanto riguarda il "promotore" propriamente detto nel sistema italiano si evidenzia come la procedura di individuazione del promotore e il passaggio alla messa in gara del progetto approvato dall'amministrazione pubblica richieda, come risulta dai dati dell'Osservatorio nazionale sul PPP promosso dal sistema camerale, mediamente 11 mesi. Si riscontra altresì una percentuale intorno al 24% di rimessa in gara del progetto o di esperienze non andate a buon fine.

11.Siete a conoscenza di casi nei quali le condizioni di esecuzione – comprese le clausole d'aggiornamento – hanno potuto avere un'incidenza discriminatoria o hanno potuto costituire un ostacolo ingiustificato alla libera prestazione di servizi o alla libertà di stabilimento ? Se si, potete descrivere il tipo di problemi incontrati ?

Non si hanno esperienze specifiche di condizioni di esecuzione discriminatorie.

Su un piano più generale, si ritiene che occorra, comunque, scongiurare la possibilità che - al contrario di quanto paventato dalla Commissione - si verifichino pratiche discriminatorie nei confronti dei vecchi sottoscrittori di contratti di concessione.

In Italia, infatti, esistono molte concessioni che sono state affidate molti anni fa, ossia in tempi in cui le regole oggi applicabili non erano certo così chiare e indiscusse.

Per tali concessioni non è fuori luogo paventare il pericolo che siano operate letture "retroattive" delle clausole contrattuali e delle condizioni a suo tempo pattuite e ciò alla luce di valutazioni, che solo recentemente sono divenute chiare e oggetto di specifico inserimento nei bandi.

12.*Siete al corrente di pratiche o di meccanismi di valutazione delle offerte con conseguenze discriminatorie?*

I dati dell'Osservatorio Nazionale evidenziano, dopo l'introduzione della normativa sulla prelazione, un'accelerazione delle iniziative sia per la ricerca del soggetto promotore, che, soprattutto, nel successivo passaggio di gara per l'aggiudicazione. Come emerge dai dati, le iniziative avviate sulla base della nuova formula sono aumentate, mentre il ricorso alla procedura della concessione di costruzione e gestione ha registrato un rallentamento. In particolare, dal settembre 2002 allorché le nuove norme sono entrate in vigore, infatti, il ricorso al promotore è cresciuto del 48% contro un calo del 10,6% della concessione (vedi Tabella 1).

La nuova normativa introdotta nel luglio del 2002, fortemente semplificata e affinata nel suo complesso rispetto all'architettura precedente ha, comunque, facilitato la conclusione delle gare sia del promotore che secondo la classica concessione di costruzione e gestione. Il confronto tra i periodi settembre – agosto settembre 2001-2002 e 2002 –2003 evidenziano, infatti, un'accelerazione delle aggiudicazioni di oltre il 200% per il promotore e di una percentuale leggermente al di sotto per le concessioni (vedi Tabella 2).

13 *Condividete la constatazione della Commissione secondo la quale alcune operazioni del tipo "step-in" possono porre problemi in termini di trasparenza e di parità di trattamento? Conoscete altre "clausole tipo" la cui attuazione potrebbe causare problemi simili" ?*

In linea astratta e generale non vi è dubbio che operazioni del tipo "step-in"possono porre problemi in termini di trasparenza e di parità di trattamento. Questo sicuramente accade tutte le volte in cui viene di fatto consentita la sostituzione del partner privato senza che vi sia un processo di selezione analogo a quello che aveva dato luogo alla designazione iniziale.

Peraltro, il rischio che la PA cerchi di sottrarsi in "corso d'opera" o di contratto agli obblighi che ha dovuto rispettare inizialmente potrebbe essere concreto ogni qual volta siffatte clausole lasciassero alla PA un ruolo decisivo in materia. Così come potrebbe diventare concreta, in circostanze di questo tipo, la tentazione di generare stati di "crisi" sull'andamento del contratto per cambiare discrezionalmente la controparte.

Non si può, tuttavia, tacere il fatto che clausole di step-in spesso sono poste a favore di soggetti privati, quali ad esempio, le istituzioni finanziarie che hanno accettato di assumere in proprio taluni rischi sostanziali, liberandone di conseguenza il soggetto pubblico. In queste circostanze, non consentire l'adozione di clausole di "step-in" potrebbe essere controproducente ai fini del ribaltamento dei rischi di mercato su operatori privati.

Saper distinguere diventa, quindi, fondamentale per l'efficacia della regolamentazione di settore e alcuni chiari principi generali dovrebbero essere condivisi.

In particolare:

- In forme di PPP di lungo periodo, la sostituzione della controparte privata anche da parte del soggetto pubblico non può mai essere esclusa del tutto;
- Tale sostituzione, però, non può essere totalmente discrezionale ma rimessa a: oggettive inadempienze contrattuali, conclamata incapacità di rispettare i termini e le condizioni sottoscritte, eventi imprevedibili e, naturalmente, cause di ordine pubblico, sicurezza e salute pubblica;
- Inoltre, qualora l'attribuzione dei rischi sostanziali del progetto, tuttavia, sia effettivamente trasferita su operatori privati, finanziari e non, e nella misura in cui questo avviene, la possibilità di sostituzione deve essere attribuita anche a tali soggetti ai quali, per contro, non si può chiedere che un'eventuale sostituzione del soggetto escluso avvenga secondo procedure e modalità tipiche della PA.

Più difficile da inquadrare è la fattispecie - che saremmo tentati di definire "insidiosa" - della sostituzione del soggetto privato unicamente per generali considerazioni di efficienza nell'eseguire le prestazioni di propria competenza o per l'oggettiva perdita di competitività della propria azione. Nei rapporti di medio-lungo periodo, infatti, non è detto che l'operatore inizialmente più efficiente in generale e/o rispetto allo specifico progetto sia anche quello che costantemente mantiene nel tempo questo vantaggio competitivo rispetto agli altri operatori.

Inoltre, è sempre possibile che il progetto perda valore nelle priorità del partner privato iniziale, che, quindi porrà meno cura e determinazione nello svolgimento dei propri compiti, generando un danno per la PA, i beneficiari dell'opera/servizio e anche per i suoi diretti concorrenti, tenuti fuori da un potenziale progetto in virtù di una sorta di "rendita contrattuale".

Queste osservazioni hanno un risvolto importante: quello per cui ogni disciplina in materia di PPP, tanto più se ribalta costi e rischi di realizzazione di progetti di pubblico interesse su soggetti privati, non può impedire sempre e comunque clausole di step-in a beneficio di soggetti privati. Anzi, al contrario può e deve consentirlo, ma solo a fronte di un'effettiva assunzione di costi e di rischi.

Queste considerazioni richiamano, peraltro, la necessità di rispettare i principi di trasparenza e concorrenza non solo nel momento iniziale dell'aggiudicazione di un progetto, ma anche durante l'intera vita del PPP che lo riguarda. Al contempo, però, evidenziano la difficoltà di conseguire questo obiettivo senza principi chiari e coerenti, volti a limitare la discrezionalità "politica" del pubblico e a delimitare quella eventualmente concessa a soggetti privati, nell'ambito di specifiche fattispecie "di equilibrata convenienza".

Un'ipotesi da non sottovalutare quale possibile soluzione per il perseguimento di questo difficile equilibrio potrebbe essere quella di richiedere che l'esecuzione di un contratto di lungo periodo sia sempre accompagnata da chiari requisiti minimi da soddisfare a carico sia della componente pubblica che privata, sotto il controllo di soggetti pubblici tecnici (e non "politici"), che potrebbero assumere anche un ruolo di arbitratore del contratto (Authority di settore o altri soggetti).

Sul tema va ricordato, comunque, che in Italia la normativa vigente prevede già il c.d. "subentro" (art. 37.octies della legge n.109/94 e s.m.i.), ossia lo strumento grazie al quale viene impedita la risoluzione di un rapporto concessorio allorquando, su designazione dei finanziatori, una nuova società subentra nella concessione e fa cessare entro breve termine le cause di inadempimento, previo assenso da parte del concedente, condizionato al fatto che la società designata abbia caratteristiche tecniche e finanziarie sostanzialmente equivalenti all'originario concessionario.

Tuttavia, manca ancora il decreto ministeriale di fissazione dei criteri e delle modalità attuative delle previsioni della norma in parola, nel cui ambito potrebbe essere introdotto l'obbligo di specificare chiaramente l'eventuale utilizzo della norma da parte della amministrazione aggiudicatrice, qualora il rapporto concessorio venisse risolto.

Una norma di tenore similare, invece, è già operativa in Italia, limitatamente agli appalti di lavori pubblici (art. 10, comma 1-ter della legge n. 109/94 e s.m.i.), per i casi di fallimento o risoluzione del contratto. Ma essa si caratterizza per il fatto che l'amministrazione interpella il soggetto che si è classificato secondo in gara (ed eventualmente anche il terzo), al fine di stipulare un possibile nuovo contratto alle medesime condizioni economiche già proposte dall'interessato in sede di offerta.

Si tratta di una norma sicuramente più trasparente di quella sopra citata - riferita alle concessioni e al promotore - ma il suo meccanismo operativo difficilmente potrebbe essere proficuamente traslato nell'ambito delle concessioni.

Pertanto, nel condividere l'auspicio della Commissione per una maggiore trasparenza e parità di trattamento, si deve richiamare l'attenzione sul fatto che il problema resta reale e la sua soluzione è necessaria, specie nell'ambito di operazioni complesse come le concessioni di costruzione e gestione.

14 Ritenete che sia necessario chiarire a livello comunitario alcuni aspetti attinenti al quadro contrattuale dei PPP ? Se sì, su quale(i) aspetto(i) dovrebbe incentrarsi tale chiarificazione?

La disciplina comunitaria del PPP è in larga parte ispirata alle forme di cooperazione più tradizionali, che sono l'appalto e la concessione.

Il primo affida al privato i rischi inerenti il proprio processo produttivo ma nella sostanza non libera completamente il soggetto pubblico dalle conseguenze economiche negative derivanti dal concretizzarsi di tali rischi.

La concessione ha modalità di applicazione notevolmente diverse e da questo punto di vista si è dimostrata spesso uno strumento valido e flessibile per regolare rapporti contrattuali di lungo periodo, diversi da quelli societari.

In quest'ottica, una disciplina meno articolata favorirebbe la flessibilità negoziale ma, in qualche caso, potrebbe incidere negativamente, ad esempio su principi importanti in un contesto di crescente coinvolgimento privato nei servizi pubblici.

In particolare, potrebbero meritare attenzione e maggiori chiarimenti gli aspetti relativi:

- alla durata del contratto e alle clausole di prolungamento, che dovrebbero essere giustificati in un'ottica di trasparenza iniziale e concorrenza per impedire forme di "rendita contrattuale" a favore dei privati;
- agli aspetti connessi con le posizioni di conflitto di interesse e alla ripartizione dei diversi rischi associati ad un progetto.

Sotto quest'ultimo profilo, un raccordo con i criteri adottati dall'Eurostat e un affinamento ulteriore di questi criteri sarebbe estremamente utile anche ad una più efficiente regolamentazione del PPP.

In particolare, potrebbe essere utile prevedere che il quadro contrattuale di un PPP chiarisca sempre in modo esatto la puntuale ripartizione dei rischi quale elemento economico rilevante ai fini di una corretta comparazione di offerte diverse, facendo riferimento almeno ai principali rischi di un progetto quali il rischio di costruzione (completamento e rispondenza ai requisiti concordati); il rischio di disponibilità (o mancata disponibilità) dell'opera, il rischio di mercato, il rischio finanziario ecc.. Solo l'esatta identificazione e attribuzione di questi rischi consente, infatti, di equiparare offerte che, usualmente, quanto più si complicano nel contenuto, tanto meno sono confrontabili in termini di prezzo.

In ogni caso, si ritiene che sarebbe accolto con grande favore un intervento chiarificatore della Commissione anche in ordine a:

- la linea di demarcazione tra contributo pubblico ed "aiuto di Stato", in particolare con riferimento alle garanzie pubbliche offerte al privato;
- la rilevanza del finanziamento del progetto da parte dei privati nell'ambito del partenariato pubblico privato, considerato che in Italia esiste una figura specifica, quella del general contractor, il quale si connota e si distingue rispetto al normale appaltatore essenzialmente per il fatto che prefinanzia in parte l'opera da realizzare, ma fino a questo momento, in Italia, detta peculiarità non è valsa a connotare il general contractor come un operatore di partenariati pubblici-privati, al punto che esso risulta alternativo rispetto al "promotore" (rispettivamente artt. 9 e 8 del d.l.gvo n. 190/2002);
- l'esatta linea di demarcazione tra concessione di lavori e concessione di servizi, atteso che entrambe mutuano la propria definizione dall'appalto, ma la prima è totalmente regolamentata dal diritto comunitario, mentre la seconda è retta solamente dai principi del Trattato e ciò considerato altresì il fatto che esiste un'area grigia, rappresentata dalla presenza, nella normativa "base" sugli appalti, dell' obbligo di applicare le regole proprie degli appalti di servizi anche relativamente ai lavori "accessori" ad un appalto di servizi;
- la specificazione delle modalità applicative della norma di cui all'art. 61 della direttiva 2004/18, concernente l'aggiudicazione al concessionario di lavori complementari, le cui finalità, peraltro, risultano assolutamente manifeste, ancorché l'aver operato una pedissequa trasposizione dalla normativa sugli appalti a quella sulla concessione comporti la necessità di un'interpretazione che renda concretamente utilizzabile nei confronti del concessionario una previsione che, diversamente, perderebbe di positiva rilevanza;
- le situazioni che nel concreto consentono il legittimo ricorso alle previsioni derogatorie stabilite per i casi "in house", atteso che le elaborazioni giurisprudenziali non risultano di per sé sole sufficientemente chiare per gli stessi operatori del diritto comunitario e che ancora maggiori dubbi sorgono correlando dette disposizioni con quelle sul diritto societario;
- analoga riflessione vale per il caso di "modifica sostanziale dell'oggetto del contratto" che renderebbe obbligatorio il ricorso alla gara, laddove una modifica non rientrante nel concetto di "sostanziale" sarebbe estranea a detto onere.

15. Nel contesto delle operazioni di PPP, siete al corrente di problemi particolari incontrati in materia di subappalto? Quali?

Il maggior problema che, nel concreto, si pone sull'argomento scaturisce dalla difficoltà di comprendere, su un piano logico e sistematico, che cosa giustificherebbe un trattamento così diversificato, quale quello vigente, nei confronti del concessionario che risulti anche amministrazione aggiudicatrice rispetto a chi non può essere considerato tale.

Infatti, non solo la concessione di costruzione e gestione è oggi maggiormente regolamentata rispetto ad altre forme di intervento, ma, addirittura, nel caso di concessionario equiparato ad un organismo di diritto pubblico, la direttiva 2004/18 specifica che esso deve rimettere in gara la totalità delle proprie attività.

Ciò, con la conseguenza, sul piano giuridico e unicamente in questa ipotesi, che il diritto comunitario rende obbligatorio un doppio livello di concorsualità e con l'effetto, sul piano economico, di non consentire di comprendere come detto concessionario possa operare sul mercato al pari degli altri concessionari privati, se solamente lui risulta gravato da oneri ulteriori rispetto al rischio di gestione che grava su tutti, indistintamente, i concessionari.

Il tenore delle norme vigenti, peraltro, non sembrerebbe giustificare nemmeno l'eccezione cui fa riferimento il Libro Verde - ma non le Direttive vigenti, comprese quelle recentissimamente adottate dalla UE - laddove prevede che la società di progetto che abbia essa stessa lo status di organismo aggiudicatore *"…è obbligata ad assegnare i propri contratti o le proprie concessioni nel quadro di un bando di gara, sia che i contratti siano conclusi con i propri azionisti, sia che non lo siano"*, salvo un solo caso, ossia : "…. *quello in cui le prestazioni affidate da una società di progetto ai propri azionisti sono già state oggetto di un bando da parte del partner pubblico, precedentemente alla costituzione della società di progetto".*

16 Il fenomeno dei PPP di tipo contrattuale, che implica il trasferimento di un insieme di compiti ad un unico partner privato, giustifica l'introduzione, riguardo al fenomeno dei subappalti, di norme più dettagliate e dal campo di applicazione più vasto?

17.In maniera più generale, ritenere che si dovrebbe prendere un'iniziativa complementare a livello comunitario al fine di chiarire o sistemare, le norme relative ai subappalti?

Tutte le forme di partenariato, di tipo contrattuale o istituzionalizzato, sono tra loro accomunate da due elementi, vale a dire una rilevante complessità operativa e l'esigenza imprescindibile del rispetto almeno dei principi fondamentali del Trattato, vale a dire trasparenza, parità di trattamento e non discriminazione.

In questo contesto, l'introduzione di eventuali norme più dettagliate e dal campo di applicazione più vasto, finalizzate a regolamentare maggiormente il fenomeno dei subappalti, sicuramente darebbe risposta positiva ad esigenze di maggior tutela e garanzia dei subappaltatori stessi, ma è dubbio che l'aggravio conseguente favorirebbe una maggiore diffusione dei PPP stessi. L'esperienza italiana testimonia proprio l'importanza di trovare il giusto punto di equilibrio tra interessi contrapposti.

18. Quale esperienza avete del lancio di operazioni di PPP di tipo istituzionalizzato? In particolare, la vostra esperienza vi porta a pensare che il diritto comunitario degli appalti pubblici e delle concessioni sia rispettato in caso di operazioni PPP istituzionalizzato? Se no, perché?

Secondo l'Osservatorio Nazionale del PPP promosso dal sistema delle Camere di commercio, i bandi per la ricerca del socio privato di società miste sono stati 140 nel periodo gennaio 2002 - giugno 2004. Gli esiti rilevati soltanto 14, percentuale del 10%, spiegabile anche con la mancanza di importo nella maggior parte dei bandi di questo tipo. Il settore di maggiore interesse risulta quello dei servizi pubblici (40% sul totale) quali acqua, energia, gas, telecomunicazioni e igiene urbana.

19. Ritenete che debba essere presa un'iniziativa a livello comunitario per chiarire o precisare gli obblighi degli organismi aggiudicatori riguardo alle condizioni che devono regolamentare la concorrenza tra operatori potenzialmente interessati da un progetto di tipo istituzionalizzato? Se sì, su quali punti particolari e sotto quale forma? Se no, perché?

Si evidenzia, in primo luogo che sarebbe opportuno che la UE chiarisse specificatamente l'aspetto concernente il caso in cui l'assunzione di controllo da parte di un'entità pubblica ricade nella fattispecie della "influenza certa", per consentire di comprendere come agire a livello operativo correttamente.

Su un piano più generale, poi, va ricordato che, indubbiamente, il silenzio del diritto comunitario in merito alle forme di PPP istituzionalizzato non ha giovato ad un corretto utilizzo degli strumenti stessi.

E' certo, comunque, che le forme di PPP istituzionalizzato offrono spesso buone opportunità ma presentano sicuramente numerosi rischi.

La Joint Venture tra un operatore pubblico e un operatore privato, anche quando la scelta iniziale di quest'ultimo viene fatta attraverso trasparenti procedure di confronto competitivo, concretizza spesso non solo una forma di intervento privato in sfere tradizionalmente pubbliche, ma anche una forma di intervento pubblico in attività private. Molto spesso iniziative realizzate in questo modo denunciano la difficoltà da parte di soggetti pubblici di separare le funzioni di programmazione e controllo della PA da quelle di gestione del processo produttivo, proprie dei soggetti economici privati.

Mentre l'interesse da parte dei privati a queste forme di collaborazione è evidente - e risiede essenzialmente nell'avere al medesimo tavolo decisionale quel soggetto "controparte" che, sotto altri profili, può incidere notevolmente sia sul buon andamento dell'iniziativa e sia anche sul livello di profitto che da essa può derivare - molto spesso l'interesse pubblico non è altrettanto chiaro. In ultima analisi, può ritenersi che il PPP istituzionalizzato presenti il limite di non lasciare la PA in posizione di "terzietà" rispetto al soggetto privato selezionato per l'esecuzione e la gestione di un progetto.

Tutto ciò, senza considerare i molteplici profili di conflitto di interesse che il PPP istituzionalizzato pone:

- tra PA e privato;
- tra privato costruttore e privato gestore;
- tra imprenditori e finanziatori;
- tra PA e queste diverse categorie di protagonisti.

Peraltro, un progetto che può durare dai 15 ai 30 anni dovrebbe sempre mantenere la possibilità di adeguare il proprio generale livello di efficienza alle mutate circostanze, nel rispetto evidentemente dell'equilibrio economico generale concordato in sede di contratto iniziale.

Non di rado, proprio per consentire l'equilibrio tra queste contrapposte ma legittime esigenze, nei vari Paesi sono state istituite o utilizzate specifiche Authority tecniche, pubbliche ma non "politiche", terze rispetto alla PA affidataria del contratto, ma non rispetto agli interessi che la medesima PA aveva inteso soddisfare nell'ambito della realizzazione del progetto. Una soluzione, questa, che rischia però di perdere efficacia nelle forme di PPP istituzionalizzato.

Poiché, tuttavia, è evidente che in molti casi la strada di un PPP istituzionalizzato risulta, almeno nell'ottica della PA, l'unica via praticabile per la realizzazione di determinati progetti con il coinvolgimento dei privati, diventa di immediata evidenza la necessità di regolamentare questa fattispecie, alla stregua di quanto è stato fatto in passato con le figure dell'appalto e della concessione di costruzione e gestione.

In maniera generale, ed indipendentemente dai problemi sollevati in questo documento:

20 Quali sono le misure o le pratiche che ritenete di ostacolo alla creazione di PPP nell' Unione Europea?

L'esperienza italiana ha registrato una prima fase durante la quale il quadro normativo è stato caratterizzato da grande rigidità e vincolismo.

Successivamente, però, il legislatore ha dovuto registrare i limiti della propria posizione ed ha optato per una normativa con un maggior grado di flessibilità.

Pertanto, si ritiene di poter affermare che anche una legislazione non equilibrata costituisce un ostacolo concreto alla creazione di PPP.

21 Conoscete altre forme di PPP sviluppate nei Paesi al di fuori dell'Unione? Conoscete esempi di "buone pratiche" sviluppate in questo contesto, cui l'Unione potrebbe ispirarsi? Se sì, quali?

Data la complessità dei temi in discussione e la scarsa probabilità di arrivare, almeno in alcuni ambiti, a definire in tempi brevi una disciplina coordinata e coerente (si pensi ad es. alle problematiche legate alle forme di PPP istituzionalizzato) la strada della riflessione collettiva su tali questioni, che prosegua ad intervalli regolari tra attori interessati e che permetta uno scambio di "buone pratiche", appare l'unica possibile e dovrebbe, pertanto, essere certamente perseguita dalla Commissione.

A tale scopo l'Osservatorio italiano sul PF si candida quale punto di riferimento permanente per una valutazione e un'analisi dei dati relativi all'Italia e offre da ora la piena disponibilità a partecipare a riunioni, lavori preparatori, tavole rotonde, elaborazione di studi analitici e proposte di disciplina normativa, nei modi e nelle forme che saranno ritenuti maggiormente utili e appropriati dalla Commissione.

22 In termini più generali, e tenuto conto dei considerevoli investimenti necessari in alcuni Stati membri, al fine di realizzare uno sviluppo economico-sociale durevole, pensate che sia utile una riflessione collettiva su tali questioni che prosegua ad intervalli regolari tra gli attori interessati e che permetta uno scambio di "buone pratiche" ? Ritenete che la Commissione dovrebbe dare impulso ad una tale rete?

Per tutte le considerazioni sopra svolte la risposta al quesito della Commissione non può che essere positiva e lo scambio di "buone pratiche" largamente auspicato come strumento che, tra l'altro, consentirebbe di tener conto non solo dei profili problematici di tipo giuridico, ma anche di quelli di natura economica ed istituzionale che nel concreto si pongono per tutti gli operatori nella realtà della Comunità Europea allargata a 25 Paesi, con tradizioni, esperienze e substrati amministrativi e culturali spesso profondamente differenti tra loro.

CONFINDUSTRIA

Osservazioni sul

LIBRO VERDE
Della Commissione Europea
relativo ai partenariati pubblico-privati ed al diritto comunitario degli appalti pubblici e delle concessioni

PREMESSA

La collaborazione tra privati e pubblica amministrazione, volta alla realizzazione di infrastrutture o allo svolgimento di servizi di interesse pubblico, ha da sempre rappresentato uno degli aspetti più problematici da disciplinare, non solo a livello comunitario, ma anche a livello nazionale per le diverse forme che tale collaborazione assume e per gli interessi in gioco.

Il Libro Verde della Commissione UE sul PPP, pertanto, rappresentando un utile strumento di analisi delle situazioni esistenti nei vari Paesi membri, e un primo eventuale passo verso regole condivise a livello comunitario, non può che essere salutato con favore dagli operatori.

Quanto alla nozione di "partenariato pubblico-privato" contenuta nel Libro Verde, deve osservarsi come questa sia molto ampia, riferendosi in generale a forme di cooperazione tra le autorità pubbliche e il mondo delle imprese che mirano a garantire il finanziamento, la costruzione, il rinnovamento, la gestione o la manutenzione di un infrastruttura o la fornitura di un servizio.

E’ sicuramente apprezzabile che la Commissione abbia avviato una ricognizione delle situazioni in essere nei diversi Stati sulle questioni attinenti al PPP con l’obiettivo di delineare, ove risultasse opportuno e/o necessario, un quadro di regole comuni e condivise per la disciplina delle forme di collaborazione tra autorità pubbliche e parti private, volte ad assicurare l'erogazione di servizi pubblici e la realizzazione di opere pubbliche.

Il conseguimento di tale obiettivo agevola anche l'effettiva realizzazione di regole comunitarie fondamentali, che rappresentano una indispensabile condizione per un ordinato sviluppo del mercato interno, come il concreto dispiegarsi del principio di reciprocità che nel campo dei PPP assume un rilievo di particolare importanza, considerata la delicatezza dei profili coinvolti e la esigenza di evitare il manifestarsi di posizioni dominanti contrastanti con la caratteristica di mercato aperto e concorrenziale.

La ricerca di maggiore omogeneità tra le diverse forme di PPP nei Paesi europei, compresi quelli di più recente ingresso nell'UE, non implica necessariamente rigidità di regolamentazione, tramite un eventuale, specifico intervento legislativo, né con riguardo ai tempi di applicazione, per tener conto del diverso punto di partenza dei vari Paesi, né con riguardo alla standardizzazione dei modelli attuativi: il ricorso a procedure e forme di PPP deve infatti potersi adeguare alle diverse esigenze dei settori coinvolti, considerate al riguardo anche le politiche di liberalizzazione perseguite dalla stessa UE in materia di servizi pubblici.

Lo sviluppo di PPP nel caso dell'edilizia pubblica potrebbe infatti richiedere clausole diverse da quelle applicabili, ad esempio, nel campo dei trasporti, fermo restando che qualunque intervento deve essere informato ai principi di trasparenza, di parità di trattamento, di reciprocità concorrenziale e di apertura effettiva dei mercati, con maggiore coinvolgimento dei capitali privati e non deve rappresentare l'occasione per una uniformazione forzata delle procedure.

Sotto tale profilo vanno pertanto individuate le possibili specificità settoriali che porterebbero ad una normativa differenziata "orizzontalmente", ma uguale in tutta Europa, invece che "verticalmente" (cioè per Stato Membro come è oggi), così da pervenire a regimi di aggiudicazione omogenei, piuttosto che a "regimi di aggiudicazione identici".

In questo contesto, si richiama l'attenzione su un **primo aspetto**: con il termine partenariato la Commissione Europea non fa riferimento a ogni generica forma di collaborazione tra soggetto pubblico e soggetti privati, bensì a quelle che presentano particolari caratteristiche, quali:

a) una durata piuttosto lunga;

b) il finanziamento del progetto da parte del settore privato, anche attraverso complesse relazioni tra i diversi soggetti privati impegnati;

c) una distinzione tra il ruolo del soggetto pubblico, cui spetta definire gli obiettivi del progetto, nell'interesse della collettività pubblica, e il ruolo del soggetto privato che deve individuare modalità pratiche per raggiungere gli obiettivi definiti dall'ente (si è detto, infatti, che attraverso le operazioni di PPP muta il ruolo dell'ente pubblico che diventa un mero organizzatore e controllore dell'attività del privato il quale, invece, svolge compiti operativi);

d) una ripartizione dei rischi tra partner pubblico e privato, essendo chiaro per la commissione che non necessariamente deve essere il partner privato ad assumersi tutti i rischi.

Un **secondo aspetto** importante è che, con il Libro Verde, la Commissione non intende arrivare a conclusioni o assumere posizioni, ma soltanto avviare il dibattito sull'applicazione del diritto comunitario degli appalti pubblici e delle concessioni al fenomeno delle PPP.

Nel far ciò la Commissione non manca di ribadire che “il diritto comunitario degli appalti e delle concessioni non si esprime riguardo all'opzione degli Stati se garantire un servizio pubblico attraverso i propri stessi servizi o se affidarli invece a terzi” (punto 17).

In altri termini, secondo la Commissione, il diritto comunitario si mostra sostanzialmente indifferente circa le opzioni organizzative esercitate dalle stesse amministrazioni che sono libere di scegliere se svolgere un lavoro o un servizio in proprio, direttamente o tramite soggetto interno delegato (appalti in house) oppure ricorrendo al mercato (outsourcing), purché tali opzioni siano svolte nel rispetto della disciplina comunitaria.

Tali considerazioni non sono di poco conto ove si tiene presente come, invece, a livello nazionale, non siano mancate sentenze dei supremi giudici amministrativi in cui si è negato che tale libertà organizzativa (nel decidere se provvedere internamente o rivolgersi al mercato) debba sussistere.

Nella prospettiva del Consiglio di Stato, infatti, la disciplina dei servizi pubblici locali non avrebbe solo la funzione di garantire la concorrenza tra le imprese ma anche quella, ben più penetrante, di incidere nelle stesse forme di organizzazione interna degli enti pubblici, costringendoli ad appaltare all'esterno tutte le attività economiche riconducibili ai contratti disciplinati dalle direttive comunitarie, salvo che disposizioni speciali non consentano di derogarvi.

Di fronte alle preoccupazioni da più parti manifestate sulla tendenza alla c.d. “internalizzazione”, il Consiglio di Stato ha rimesso alla Corte di Giustizia dell’UE la questione circa la compatibilità col diritto comunitario - in particolare con la libertà di prestazione di servizi, il divieto di discriminazione e l'obbligo di parità di trattamento, trasparenza e libera concorrenza, di cui agli artt. 12, 45, 46, 49 e 86 del Trattato - dell'affidamento diretto, ossia in deroga alle norme della direttiva 95/50/CE, della gestione di servizi pubblici tramite una società per azioni a capitale interamente pubblico.

Sul punto merita di richiamare la parte dell’ordinanza di rimessione in cui i giudici osservano che "l'affidamento diretto a società per azioni, del tutto autonome salvo l'esercizio dei poteri propri del possessore della maggioranza delle azioni, secondo le norme del diritto commerciale comune, sembra esporre la gestione delle pubbliche risorse a procedure diverse da quelle destinate a garantire la crescita del mercato interno. Si riscontra un impiego sempre più frequente della detta deroga, e ciò comporta la sottrazione di aree assai ampie di attività economiche all'iniziativa imprenditoriale privata, in contrasto con la stessa ragion d'essere dell'Unione Europea” (C.d.S., Sez. V, ordinanza n. 2316 del 22.4.2004).

Sembra pertanto necessario attendere le decisive puntualizzazioni della Corte per stabilire definitivamente quale sia la misura del controllo che determina l'assenza di autonomia del prestatore del servizio e, quindi, la sostanziale identità soggettiva con l'amministrazione che affida il servizio. In altri termini si deve chiarire “quando” si può dire che sussista una reale, e non fittizia, assenza di terzietà tra i due soggetti, che è il presupposto per l'affidamento *in house*.

Un **terzo aspetto** rilevante è che la Commissione distingue tra PPP di tipo contrattuale e PPP di tipo istituzionalizzato, con riferimento al tipo di legami esistenti tra i soggetti.

Rientrano nella prima ipotesi l'appalto, la concessione e le operazioni di PF che nello schema elaborato dal nostro ordinamento sono ricondotte al modello concessorio.

Il termine contrattuale fa riferimento, pertanto, ai legami tra i vari soggetti. Ed infatti i rapporti tra l'amministrazione e il soggetto titolare della gestione sono regolati da un contratto di servizio (che regola appunto il rapporto di concessione) e i rapporti tra il titolare della gestione del servizio e l'utenza sono regolati da un contratto che disciplina l'erogazione individuale del servizio, per il quale l'utente paga la relativa tariffa.

LE PRINCIPALI CRITICITÀ

1. SITUAZIONI DI MERCATO

Nel Libro Verde (capitolo 1.1, paragrafo 3) viene rilevato che l’aumento del ricorso a operazioni di PPP è riconducibile a vari fattori, tra cui le restrizioni di bilancio cui gli Stati membri devono far fronte, che determinerebbero l’opportunità di assicurare il contributo di finanziamenti privati al settore pubblico. Nello stesso paragrafo si valorizza l’idea che i PPP si stiano sviluppando anche per effetto di una evoluzione dello Stato, che passa da un ruolo di operatore diretto ad un ruolo d’organizzatore, di regolatore e di controllore.

Si tratta di una visione teorica che non tiene conto di come, invece, le restrizioni di bilancio inducono gli enti locali (Comuni, ma anche Province e Regioni) a svolgere, in pratica, direttamente o tramite società allo scopo costituite, attività economiche per realizzare utili, eventualmente per limitare le perdite economiche di altre attività connesse[1].

[1] Un esempio chiaro, per i settori rappresentati, è costituito dalla “assimilazione” ai rifiuti domestici o urbani dei rifiuti prodotti dalle utenze commerciali e industriali, che di per sé, secondo costante giurisprudenza, anche della Corte di Giustizia, non rientrano nel “servizio

Queste attività economiche alcune volte rientrano, o vengono considerate, nell'ambito dei **servizi pubblici**, in altri casi si caratterizzano comunque per una posizione "speciale" dell'ente pubblico (ad esempio in quanto proprietario di immobili o terreni che vengono utilizzati nell'attività economica).

I partenariati con il privato cui spesso si ricorre, di tipo istituzionale, sono giustificati e determinati dalla necessità di partecipare dell'esperienza e del know-how produttivo delle imprese private. Gli esempi sono numerosi, e spaziano dalla gestione di musei e mostre – custodia, biglietteria, ristorazione e vendita di souvenir, libri, ecc. – ai servizi di pulizia e di manutenzione di immobili di proprietà o a gestione pubblica (come le scuole di ogni ordine e grado), dalla gestione dei parcheggi auto a pagamento alla gestione di servizi ambientali, anche nel libero mercato e in concorrenza con le imprese private che vi operano[2].

L'ampia discrezionalità con cui determinate attività possono essere considerate di "interesse generale" favorisce in particolare la possibilità di interventi in regime di esclusiva (monopolio) da parte degli enti locali. Si tratta di monopoli che hanno ricadute negative sui costi sostenuti dal sistema industriale e che incidono sulla competitività produttiva dell'area[3], sia nell'ambito del territorio nazionale che nell'ottica della competitività di sistema dell'Unione europea nei confronti delle altre aree dello scenario mondiale.

In questi casi, per lo più, **non** si ha una evoluzione dell'ente pubblico da un ruolo di operatore diretto ad un ruolo d'organizzatore, di regolatore e di controllore, ma **esattamente l'opposto**. Si precisa peraltro che quanto asserito non deve essere letto solo come valutazione negativa: in alcuni casi si individuano effettivamente **nuove aree di mercato**, che vengono gestite in PPP; in altri casi, invece, il soggetto misto nato dal partenariato sostituisce o entra in competizione con gli operatori privati.

pubblico", e, in quanto merci anche suscettibili di valorizzazione, e comunque ai fini dello smaltimento più appropriato, possono liberamente circolare sul territorio, non solo nazionale. Attraverso l'assimilazione, invece, le attività di raccolta e smaltimento dei rifiuti prodotti in ambito industriale e commerciale vengono ricondotte al servizio pubblico in monopolio e, essendo più remunerative – anche per effetto delle maggiori capacità economiche dei soggetti passivi della tassa/tariffa sui rifiuti – consentono di ridurre i costi per le utenze domestiche.

[2] Il recupero e il riciclaggio, ad esempio, per costante giurisprudenza comunitaria sono affidati al libero mercato; peraltro frequentemente vengono realizzati con denaro pubblico e/o in PPP con operatori del settore – pubblici o privati – impianti pubblici che operano in concorrenza con imprese private.

[3] Cfr. Autorità per l'Energia, Relazione 2004.

2. *IN HOUSE PROVIDING*: NECESSITÀ DI UNA DEFINIZIONE CHIARA

Come è stato fatto cenno, il Libro Verde precisa che non intende affrontare il tema della scelta se esternalizzare o meno la gestione dei servizi pubblici. Sulla base dell'esperienza nazionale, il sistema delle imprese associate ritiene, invece, che sarebbe necessario, preventivamente, individuare e delimitare con precisione l'ambito degli affidamenti diretti (*in house providing*), oggi non definiti espressamente nelle norme dell'Unione Europea.

In Italia, sulla questione, è in atto un vivace dibattito, al centro del quale si pone la ormai famosa *sentenza Teckal* del 18 novembre 1999, con la quale la Corte di Giustizia UE ha stabilito che le direttive comunitarie in materia di affidamento di appalti pubblici devono essere applicate ogni qual volta ci si trovi in presenza dell'incontro della volontà di **due persone giuridicamente distinte**.

L'applicazione di dette direttive **può essere esclusa limitatamente alle ipotesi eccezionali** in cui "nel contempo l'ente locale eserciti sulla persona di cui trattasi un controllo analogo a quello esercitato sui propri servizi e questa persona realizzi la parte più importante della propria attività con l'ente o gli enti locali che la controllano" (*sentenza Teckal*, cit., par. 50). In tale ipotesi, in effetti, l'affidamento in questione non rientra nel campo di applicazione delle direttive in materia di appalti, dal momento che **deve essere esclusa la stessa esistenza di un rapporto contrattuale rilevante** ai termini di tali direttive.

La Commissione rileva che l'**ipotesi eccezionale** contemplata dalla *sentenza Teckal* **non può valere** ad escludere in maniera generale dal campo di applicazione delle regole comunitarie in materia di appalti pubblici e di concessioni ogni affidamento di un servizio che venga effettuato da un **ente locale in favore di una società a capitale maggioritariamente o totalmente pubblico**.

Per quanto riguarda in particolare la nozione di "controllo analogo a quello esercitato sui propri servizi" di cui alla giurisprudenza in discorso, **la Commissione sottolinea che affinché tale tipo di controllo sussista non è sufficiente il semplice esercizio degli strumenti di cui dispone il socio di maggioranza secondo le regole proprie del diritto societario**.

Il controllo contemplato dalla *sentenza Teckal* fa infatti riferimento ad un rapporto che determina, da parte dell'amministrazione controllante, un assoluto potere di direzione, coordinamento e supervisione dell'attività del soggetto partecipato, e che riguarda l'insieme dei più importanti atti di gestione del medesimo. In virtù di tale rapporto il soggetto partecipato, **non possedendo alcuna autonomia decisionale in relazione ai più importanti atti di gestione**, si configura come un'entità distinta solo formalmente dall'amministrazione, ma che in concreto continua a costituire parte della stessa. Solo a tali condizioni si può ritenere che fra amministrazione ed aggiudicatario non sussista, agli effetti pratici, un **rapporto dl terzietà** rilevante ai fini dell'**applicazione delle regole comunitarie in materia di appalti pubblici**.

Esistono, dunque, considerevoli limitazioni all'adozione della forma di affidamento *in house*, come pure all'affidamento a Società miste (anche se il socio privato è individuato tramite gara pubblica).

Di tali limitazioni il legislatore italiano non sembra abbia tenuto conto minimamente: con la recente approvazione del DL 269/2003 (che modifica l'art.113 della legge 267/2000) viene infatti introdotta la possibilità di una larga diffusione dell'affidamento diretto nella gestione di servizi pubblici, privilegiando, della sentenza prima citata, più l'angolo della permissività che l'area della applicazione restrittiva.

Sussistono notevoli elementi di indeterminatezza, in particolare sulla natura stessa della "persona" e sul concetto di controllo analogo. Non è infatti chiaro se la natura di una società di capitali sia compatibile con tale definizione, né quali siano le modalità di esercizio di un "controllo analogo".

Per le imprese private vanno delimitati con estrema chiarezza gli elementi oggettivi che caratterizzano l'istituto dell'affidamento *in house*, sancendo la portata eccezionale e assolutamente residuale dello stesso, come d'altronde previsto dalla c.d. clausola di sussidiarietà secondo la quale l'amministrazione è legittimata ad occupare spazi di mercato che altrimenti rimarrebbero aperti all'iniziativa privata solo se si dimostra che l'intervento pubblico sia più efficiente o efficace a realizzare obiettivi di interesse pubblico. In questi casi non si può parlare di impresa, ma di amministrazione, e quindi si accede alla sfera della libertà di autonoma organizzazione.

Parallelamente è opportuno riproporre il tema della c.d. **clausola di reciprocità** in modo che sia sancito l'assoluto divieto di attività extraterritoriale per le società che dovessero gestire il servizio in regime di affidamento diretto.

In ipotesi di affidamento concorsuale, viceversa, sempre con riferimento ai principi di parità di trattamento e non discriminazione e attesa la neutralità della Commissione europea per la proprietà pubblica o privata delle aziende, è necessario prevedere meccanismi di garanzia per le ipotesi in cui l'ente pubblico proprietario o comproprietario della società di gestione sia anche titolare del servizio e quindi ente aggiudicatore.

3. LE SOCIETÀ MISTE: UN CASO DI PPP ISTITUZIONALIZZATO

Il sempre maggiore ricorso a forme di partenariato istituzionalizzato richiederebbe una presa d'iniziativa a livello comunitario per chiarire e precisare gli obblighi degli organismi aggiudicatori nella scelta del partner privato.

In Italia con il citato DL 269/2003 è stata introdotta nell'ordinamento una terza forma di gestione, alternativa all'affidamento concorsuale e all'*in house providing*, con la possibilità di affidare l'esercizio dei servizi pubblici locali a società miste, in cui il partner privato sia scelto con procedura ad evidenza pubblica e con l'obbligo di rinnovare la gara alla scadenza del periodo di affidamento.

Tale previsione richiama l'attenzione su diversi aspetti e, in particolare, pone i seguenti quesiti:

1. Quali procedure seguire per la scelta del partner privato?
2. Quali dovrebbero essere gli elementi sui cui basare la scelta?
3. Qual è la quota minima di partecipazione privata in una società mista e quali poteri il partner privato deve poter esercitare?
4. È corretto e possibile prevedere il periodico rinnovo della gara per la quota privata?
5. In caso affermativo, quali procedure possono garantire l'effettiva concorrenzialità e la contendibilità della quota privata?

3.1. Le procedure

In Italia non esistono norme specifiche sulle procedure da seguire nella scelta del partner privato di una società mista, ad eccezione del caso di società a maggioranza privata (art. 12 della legge 498/92 e DPR 533/96).

In particolare sarebbe necessario esplicitare nella normativa comunitaria la necessità di garantire quanto riportato nel Libro verde al punto 58 dove si afferma che la scelta del partner privato, quando è destinato a svolgere incarichi attribuiti tramite un atto che può essere definito appalto pubblico o concessione, "non può essere basata esclusivamente sulla qualità del suo contributo in capitali o della sua esperienza, ma dovrebbe tener conto delle caratteristiche della sua offerta per quanto riguarda le caratteristiche specifiche da fornire".

Nell'ambito della codifica dei PPP di tipo istituzionalizzato, "che implica la creazione di un'entità ad hoc detenuta congiuntamente dal settore pubblico e dal settore privato"[4], andrebbero pertanto inseriti concetti per finalizzare la scelta del partner privato sulla base di specifici **progetti gestionali**. È proprio la scelta tra le diverse proposte possibili che consentirà all'Ente Pubblico di individuare la soluzione migliore per la gestione del servizio, a tutto vantaggio dei cittadini. Il semplice bandire una gara basata su criteri di scelta puramente legati ad aspetti del tipo "prezzo più alto" di acquisto delle quote, se ha l'obiettivo di massimizzare il prezzo di vendita, nulla porta sotto il profilo di qualità ed efficienza del servizio. Se infatti questo fosse l'unico scopo, non ci sarebbe bisogno di una nuova norma ad

[4] Riferito al caso di creazione di impresa ex novo nel quadro di un'operazione giuridica specifica, non al caso di imprese miste preesistenti che partecipano alle procedure d'aggiudicazione di appalti pubblici o di concessioni. Il carattere misto di un'impresa che partecipa ad una procedura di appalto non implica infatti alcuna deroga alle norme applicabili nel quadro dell'aggiudicazione di un appalto pubblico o di una concessione. Solo qualora l'impresa in oggetto abbia le caratteristiche di un'impresa *in house*, ai sensi della *sentenza Teckal* della Corte di Giustizia, l'amministrazione aggiudicatrice può tralasciare l'applicazione delle norme abituali.

hoc, che sarebbe meramente ripetitiva dei principi immanenti nell’ordinamento che già impongono la cessione di beni da parte dell’Ente Pubblico attraverso gara pubblica.

3.2. I criteri per la scelta del partner privato

La procedura per la scelta del partner privato, che tende a confondersi con quella dell’attribuzione di incarichi, dovrebbe seguire regole analoghe a quelle previste per gli appalti pubblici e le concessioni, concentrandosi sugli aspetti legati all’attribuzione dell’incarico e non limitandosi a quelli in capitale o legati all’esperienza del partner privato. Sostanzialmente il partner privato parteciperebbe ad una procedura per attribuirsi un incarico (l’erogazione di un servizio pubblico, in questo caso) da svolgersi tramite una società mista a prevalente capitale pubblico nella quale dovrebbe quindi assumere un ruolo rilevante. In questo senso il Libro Verde parla espressamente di assunzione del controllo di un’entità pubblica da parte di un operatore privato.

3.3. La quota minima e il ruolo del partner privato

Per assumere tale rilevante ruolo, il partner privato deve poter acquisire una partecipazione azionaria significativa nella società mista. Una partecipazione del 5% senza reali poteri all’interno della società rappresenterebbe, infatti, un aggiramento dell’obbligo di ricorrere a procedure di evidenza pubblica per affidare lo svolgimento del servizio ad un soggetto terzo. Cosa possibile solo nell’ambito dell’*in house providing*, con le limitazioni e l’eccezionalità prima ricordate.

3.4. Il periodico rinnovo della gara

Non è chiaro se possa essere considerata compatibile con il diritto comunitario la previsione di ripetere periodicamente la gara per la scelta del partner privato della società mista. Questa, una volta costituita, diventa un soggetto terzo e come tale, al termine del periodo di affidamento, dovrebbe partecipare alle procedure concorsuali al pari di altri soggetti terzi. In questo senso il Libro Verde ricorda che “l'applicazione del diritto comunitario degli appalti pubblici e delle concessioni non dipende dal carattere pubblico, privato o misto del co-contraente dell'organismo aggiudicatore”. Gli eventuali meccanismi per limitare nel tempo la partecipazione del soggetto privato andrebbero quindi meglio precisati.

3.5. Le procedure da seguire per garantire la contendibilità del mercato

Il Libro Verde sembra indicare come strada da seguire la costituzione di un impresa mista ex novo con una durata limitata all’esecuzione dell’incarico, scaduto il quale si dovrebbe svolgere una nuova gara per scegliere il partner privato di una nuova entità mista. Tale soluzione appare maggiormente coerente con il diritto comunitario, ma andrebbe espressamente prevista.

4. SCELTA DEL PARTNER PRIVATO E AFFIDAMENTO DI LAVORI

Un ulteriore elemento di problematicità giuridico operativa riguarda il particolare profilo dell'affidamento dei lavori eventualmente necessari per l'espletamento del servizio pubblico.

Un primo aspetto da precisare al riguardo afferisce all'individuazione del modello gestionale entro il quale si sviluppa l'intervento da parte dell'Ente aggiudicatore e cioè se si opera all'interno dello schema della concessione di costruzione e gestione, assoggettato alle norme sui lavori pubblici, ovvero all'interno della contigua ma distinta figura della concessione di servizi, cui è annessa la realizzazione di lavori.

Con riferimento a quest'ultima fattispecie si pone la questione se la procedura per la scelta del socio privato va tenuta distinta dalle procedure che, a valle, la società mista espleterà per l'attribuzione dei lavori.

Sarebbe opportuno che la Commissione chiarisse, anche tramite una direttiva comunitaria specifica sul PPP istituzionalizzato, che tale distinzione va operata in qualsiasi caso.

In altri termini, andrebbe chiarito che il soggetto pubblico deve esperire una prima ed autonoma procedura di gara per la scelta del socio privato; successivamente, una volta costituita, la società mista deve dare luogo ad autonome procedure di gara aperte a tutti i concorrenti in possesso dei requisiti prescritti, non escludendosi a priori che a tali gare possa partecipare, in posizione paritaria con gli altri concorrenti, anche l'impresa detentrice delle quote della società mista.

Dunque si ritiene che non vi siano barriere all'introduzione del PPP in Europa, ma a condizione che in modo inequivocabile sia chiaro:

a) che il partner privato va scelto con procedura di gara;

b) che una volta costituita, la società mista deve agire nel pieno rispetto delle procedure ad evidenza pubblica, e perciò procedere ad appalti a valle della scelta del socio privato.

LE RISPOSTE DEL SISTEMA INDUSTRIALE AL LIBRO VERDE

PPP contrattuale

Domanda n. 1

Quali tipi di operazioni di PPP puramente contrattuali conoscete? Tali operazioni sono oggetto di una regolamentazione specifica (legislativa o di altro tipo) nel vostro paese?

Considerato che con l'espressione di PPP contrattuale la Commissione fa riferimento ad ogni tipo di collaborazione pubblico-privato, basata esclusivamente su legami contrattuali tra i vari soggetti, in tale nozione si può fare rientrare anche l'**appalto** che è definito, a livello comunitario appunto, come un "contratto a titolo oneroso tra una amministrazione pubblica e un soggetto privato avente ad oggetto la realizzazione di un opera ovvero la prestazione di forniture o servizi".

L'appalto, a differenza degli altri modelli, è già stato fatto oggetto di specifica regolamentazione attraverso le direttive appalti (da ultimo peraltro riviste con l'adozione della Dir. 2004/18/CE e Dir. 2004/17/CE).

L'ordinamento italiano conosce e disciplina fondamentalmente due tipi di PPP:

❖ la **concessione** di costruzione e gestione, nei **due differenti schemi**:

  ordinario, nel quale l'amministrazione pubblica un bando per l'affidamento della realizzazione e gestione di un'opera ed il concessionario recupera il finanziamento relativo all'opera attraverso i compensi riscossi presso i terzi utenti;

  la procedura del **promotore** (*project financing*), nella quale l'iniziativa del progetto è presa dal privato-promotore, che può vedersi affidare in concessione la realizzazione e gestione dell'opera stessa;

❖ il **contraente generale**, che costituisce l'attuazione dell'**esecuzione con qualsiasi mezzo**, previsto dalle direttive comunitarie. Le prestazioni affidate al contraente generale comprendono, infatti, oltre alla progettazione ed all'esecuzione, anche il finanziamento in parte dell'opera ed altre attività di supporto all'amministrazione.

Si segnala, infine, come accanto al partenariato contrattuale che si sostanzia in "concessioni", si siano verificate, sia a livello centrale (gare indette da Consip S.p.a per le amministrazioni centrali e periferiche) sia a livello territoriale (soprattutto nel settore sanità), gare di appalto basate non sulla prestazione di mezzi, ma con obbligazione di risultato, e con la richiesta da parte dell'ente pubblico committente di una pluralità di servizi (dalle pulizie alle manutenzioni, dalla ristorazione ai servizi di portierato o di lavaggio biancheria ecc.) **da parte di un unico fornitore** cui vengono richieste soprattutto capacità organizzative e finanziarie, piuttosto che requisiti operativi riferiti ai servizi da svolgere (gare c.d. di *facility management* o di *global service*).

Accanto a queste ipotesi, si segnalano casi di procedure di **compravendite di cose future**[5] o di **gare di appalto di locazione finanziaria, riservate a istituti di credito**[6], sul modello PFI inglese, aventi però come oggetto sostanziale – ma non dal punto di vista formale e giuridico – la realizzazione e successiva gestione economica di opere e infrastrutture come carceri o discariche.

Si fa riferimento, a titolo di esempio, a quei casi di c.d. leasing finanziario immobiliare "in costruendo", con i quali è indetta una gara per la ricerca del "locatario finanziario" (banche o soggetti finanziari) che poi dovranno provvedere alla realizzazione dell'opera che sarà locata all'amministrazione tramite affidamento diretto e discrezionale a soggetti esecutori, in possesso dei requisiti di qualificazione prescritti per gli appaltatori dalla disciplina sui lavori pubblici.

Si tratta di affidamenti che possono destare qualche perplessità pur presentando contenuti innovativi e importanti, con significative ricadute sulle quali occorre riflettere, in particolare sotto il **profilo concorrenziale**, cioè dei soggetti partecipanti e dei **requisiti richiesti** che discendono dalla scelta (con contenuti anche discrezionali) dell'oggetto e dello strumento contrattuale da parte della amministrazione committente.

Le perplessità attengono alla compatibilità di simili operazioni con il diritto comunitario: al riguardo si evidenzia che la scelta dell'esecutore, da parte del locatario finanziatore aggiudicatario della gara, deve rispettare le norme sulla concorrenza.

In queste fattispecie si incide quindi alla radice sui contenuti primari della procedura, cioè il mercato cui si riferisce: industriale, finanziario, immobiliare. ecc..

Sempre nelle fattispecie sopra accennate, si pongono anche problemi in merito alle modalità di individuazione dei gestori del processo operativo (di costruzione, di manutenzione e gestione servizi), che non vengono individuati in sede di gara,

[5] Cfr . Delibera Autorità di Vigilanza sui LL.PP., n. 105/2003 sulle "compravendite di cosa futura" utilizzate in luogo del ricorso alle procedure concorsuali di appalto/concessione da parte dell'INAIL, aventi come oggetto sostanziale la costruzione e gestione di strutture ospedaliere.

[6] Si vedano le recenti gare indette dal Ministero della Giustizia, ai sensi della legge n. 14/11/2002, n. 259, art. 6, di conversione del d.l. 201/2002, nelle quali con la formula della locazione finanziaria si intende dare in appalto a banche (la gara è riservata agli istituti finanziari) la costruzione ex novo delle carceri di Varese e Pordenone. Il vincitore finanzierà *in toto* le opere, scegliendo direttamente (cioè, in quanto privato, senza procedura ad evidenza pubblica) sia l'impresa di costruzioni che eseguirà l'opera, ricevendo a consegna lavori e a remunerazione degli stessi un canone per l'utilizzo della struttura da parte dell'amministrazione penitenziaria per un certo numero di anni.

ma sono scelti liberamente – e, nel quadro attuale, legittimamente – dall'affidatario o dal venditore sulla base di scelte fiduciarie.

Chiaramente l'istituto del **sub-appalto**, rispetto al quale la recente direttiva unificata sugli appalti pubblici ha introdotto alcune innovative e condivise affermazioni volte ad assicurare maggiore trasparenza, **non è idoneo a "interpretare"** e disciplinare le fattispecie, ben più complesse, qui accennate.

Dialogo competitivo

Domanda n. 2

Secondo la Commissione, il recepimento nel diritto nazionale della procedura di dialogo competitivo permetterà alle parti interessate di disporre di una procedura particolarmente adeguata all'aggiudicazione dei contratti qualificati come appalti pubblici in occasione dell'attuazione di un PPP di tipo puramente contrattuale, pur preservando i diritti fondamentali degli operatori economici. Condividete questo punto di vista? Se no, perché?

Domanda n. 3

Per quanto riguarda questi contratti, esistono secondo voi altri punti, oltre a quelli relativi alla scelta della procedura d'aggiudicazione, che potrebbero causare problemi riguardo al diritto comunitario degli appalti pubblici? Se sì, quali e per quali ragioni?

Ritentiamo che il dialogo competitivo possa rappresentare un valido strumento per consentire un dialogo/collaborazione tra pubblico e privato nella definizione della migliore soluzione tecnica per il soddisfacimento di esigenze di interesse pubblico (individuato dall'ente appaltante) a condizione che siano definiti alcuni aspetti di questa figura che, come delineata dalle nuove direttive appalti, destano delle perplessità. In particolare si tratta di chiarire meglio i presupposti in presenza dei quali è possibile fare ricorso alla procedura, le modalità di svolgimento della stessa e di definire le norme a tutela della riservatezza dei dati comunicati dai partecipanti al dialogo. È evidente che per incoraggiare effettivamente lo sviluppo di un confronto costruttivo tra operatori privati deve essere assicurato agli stessi la salvaguardia della riservatezza delle loro proposte e soluzioni tecnologiche che spesso prevedono la messa a disposizione del proprio *know-how*. Gli operatori economici presenteranno dunque soluzioni innovative solo qualora venga vietata la divulgazione delle loro proposte ai concorrenti, nonché l'utilizzo a posteriori dei loro contributi in altre procedure di gara, con sanzioni in caso di violazione di suddetti obblighi di riservatezza.

Concessioni

Domanda n. 4

Avete già organizzato, partecipato, o avuto l'intenzione di organizzare o partecipare ad una procedura d'attribuzione di una concessione nell'Unione? Che esperienza ne avete ricavato?

Domanda n. 5

Ritenete che l'attuale quadro giuridico comunitario sia sufficientemente preciso per garantire la partecipazione concreta ed effettiva di società o gruppi non nazionali alle procedure d'aggiudicazione di concessioni? Secondo voi, in questo contesto è abitualmente garantita una concorrenza reale?

Domanda n. 6

Pensate che un'iniziativa legislativa comunitaria mirante a regolamentare la procedura d'aggiudicazione di concessioni sia auspicabile?

Domanda n. 7

In maniera più generale, se ritenete che sia necessario che la Commissione proponga una nuova azione legislativa, esistono a vostro parere ragioni oggettive per regolamentare tramite un tale atto tutti i PPP di tipo contrattuale, siano essi qualificabili come appalti pubblici o come concessioni, per sottoporle a identici regimi di aggiudicazione?

In Italia le regole fondamentali relative a pubblicità, trasparenza e non discriminazione dovrebbero essere sufficienti a garantire la partecipazione di concorrenti stranieri alle gare per l'affidamento delle concessioni, almeno nel campo dei lavori.

Si segnala, tuttavia, la particolare attenzione che deve essere riservata in materia di reale concorrenza alla necessità di assicurare la **reciprocità** tra gli Stati membri, specie in tema di trattamento dei lavoratori.

A livello comunitario, invece, Il quadro giuridico in ordine alle procedure d'attribuzione di concessioni non sembra tale da garantire la partecipazione concreta ed effettiva di società o gruppi di società non nazionali. Non sono previste, infatti, norme comuni vincolanti per tutti gli stati membri, né un coordinamento delle varie legislazioni nazionali che potrebbe in qualche modo offrire delle certezze giuridiche che sono il presupposto per poter sviluppare la concorrenza.

Così, se l'accesso al mercato italiano è possibile, seppur con qualche difficoltà, da parte di operatori non nazionali, risulta, invece, praticamente impossibile che operatori italiani possano/riescano ad entrare su mercati stranieri. Persiste dunque una evidente "asimmetria operativa", che rende improcrastinabile l'individuazione di regole di reciprocità concorrenziale.

Ciò senza contare che, in mancanza di input comunitari, molti Stati, pur avendone la facoltà, non hanno disciplinato la procedura per l'affidamento delle concessioni, con la conseguenza di lasciare libera l'autorità pubblica concedente a dettare norme volta per volta.

Allo stesso modo la legislazione nazionale, pur dettando principi di base, lascia spazio alla discrezionalità dell'amministrazione concedente in ordine a due aspetti fondamentali:

a) l'erogazione eventuale di un contributo;

b) l'ammontare dello stesso.

Più precisamente, la concessione di lavori pubblici (art.19 della legge 109/94 come modificato dalla legge 166/2000) prevede:

a) che è rimessa alla amministrazione concedente la scelta se erogare o meno a favore del concessionario un contributo che va ad aggiungersi ai proventi derivanti dalla gestione dell'opera (mentre l'originaria formulazione dell'art. 19 prevedeva che il concessionario potesse erogare il contributo solo in presenza, nella gestione, di prezzi o tariffe amministrati, controllati o predeterminati);

b) che il soggetto concedente possa erogare a favore del concessionario un contributo che potrebbe anche superare il 50% dell'importo complessivo dell'appalto (limite questo previsto nella originaria formulazione), con la conseguenza che il contributo può in realtà arrivare a coprire la parte prevalente dell'importo, riducendo di molto il rischio di gestione ("il concedente assicura al concessionario il perseguimento dell'equilibrio economico finanziario degli investimenti e della connessa gestione in relazione alla qualità del servizio da prestare, anche mediante un prezzo previsto in sede di gara");

c) che la durata della concessione possa essere superiore ai 30 anni.

Non è espressamente disciplinata, invece, la **concessione di servizi** e, peraltro, non esiste nella nostra legislazione una definizione rigorosa dei servizi pubblici, essendo solo prevista la differenza tra i servizi che la pubblica amministrazione intende assicurare per se stessa e servizi che la stessa amministrazione dovrebbe o potrebbe erogare direttamente all'esterno, a beneficio della collettività indeterminata che ad essa fa riferimento.

Le gare per le concessioni di servizi devono avere per oggetto il confronto tra due o più progetti gestionali. Per la carenza di criteri codificati di valutazione di un progetto gestionale di servizio, le gare attualmente svolte hanno, nella quasi totalità, adottato regole formulate per la valutazione dei cosiddetti "appalti di lavori". Occorrerebbe pertanto che fossero individuati criteri di valutazione specifici.

Alla luce delle considerazioni espresse si ritiene opportuno, oltre che auspicabile un intervento legislativo comunitario volto a regolamentare le concessioni ma senza sottoporre ad identico regime tutti i PPP contrattuali, qualificabili come appalti o come concessione. Per le procedure d'aggiudicazione, ad esempio, già la mera circostanza che nella concessione si preveda comunque un rischio di gestione mancante nell'appalto, giustifica una diversa, seppur simile, regolamentazione.

Project Financing

Domanda n. 8

In base alla vostra esperienza, l'accesso degli operatori non nazionali alle formule di PPP di iniziativa privata è garantito? In particolare, nei casi in cui le amministrazioni aggiudicatici invitano a presentare un'iniziativa, tale invito è generalmente oggetto di pubblicità adeguata ad assicurare l'informazione di tutti gli operatori interessati? Viene organizzata una procedura di selezione realmente concorrenziale per garantire l'attuazione del progetto stesso?

Domanda n. 9

Quale sarebbe secondo voi la migliore formula per assicurare lo sviluppo di PPP di iniziativa privata nell'Unione europea pur garantendo il rispetto dei principi di trasparenza, di non discriminazione e di parità di trattamento?

L'ordinamento italiano conosce e disciplina una procedura ad iniziativa del privato, ed è quella di *project financing*. La norma prevede che l'amministrazione dia conoscenza del fatto che all'interno della programmazione approvata vi sono opere che possono essere realizzate in *project financing*, mediante pubblicazione di un avviso indicativo pubblicato secondo le modalità di pubblicazione proprie dei bandi di gara. Si ritiene che tale pubblicità sia idonea a garantire la partecipazione di soggetti stranieri.

Anche in fase di scelta del realizzatore del progetto inizialmente proposto dal promotore viene assicurata la presentazione di altre offerte, mediante l'indizione di una gara diretta ad individuare i soggetti che dovranno concorrere in una fase successiva con il promotore dell'iniziativa.

Ferma restando l'idoneità della procedura prevista dalla legislazione italiana a garantire la massima concorrenza, si sottolinea l'importanza, affinché il *project financing* possa trovare concreta applicazione nel mercato italiano, di assicurare al promotore i vantaggi previsti dalla normativa (ed in particolare il diritto di adeguare la propria proposta a quella aggiudicata più conveniente dall'amministrazione – c.d. diritto di prelazione).

Al riguardo, si ritiene che la garanzia del rispetto delle regole concorrenziali e della parità di trattamento dei concorrenti nazionali ed esteri derivi dalla pubblicità di tali vantaggi, mediante adeguata esplicitazione nell'avviso indicativo che viene pubblicato.

Sull'inquadramento delle operazioni di PF nel nostro ordinamento e sui limiti che il sistema ancora presenta, si possono fare alcune osservazioni.

La prima è che tali operazioni vengono ricondotte al modello concessorio e, pertanto, al PF si applicano le disposizioni in tema di concessione previste nella legge-quadro.

Ciò premesso, considerate le innovazioni introdotte dalla L. 166/2002 all'istituto della concessione di lavori pubblici, con particolare riferimento all'eliminazione dei vincoli temporali e di contribuzione pubblica precedentemente previsti, nonché all'utilizzo per opere gestite direttamente dalla PA, molte delle operazioni di PF, pur rispondendo formalmente al modello concessorio, hanno minimizzato, e anche perso, la connotazione essenziale legata al rischio di gestione.

La caratteristica dell'istituto è che l'opera realizzata deve essere in grado, tendenzialmente, di autofinanziarsi, ossia di generare un flusso di cassa derivante dalla gestione che consenta di remunerare l'investimento effettuato.

Senza l'alea correlata alla gestione non vi è concessione, ma appalto (nel quale non vi è rischio imprenditoriale circa la copertura dei costi sostenuti in quanto il pagamento del corrispettivo è certo).

Dunque nel caso in cui la contribuzione pubblica sia particolarmente elevata (vi sono bandi in cui la stessa è dell'80% del valore dell'opera o anche superiore), si ha uno sviamento dalla causa tipica e, stante il diritto di prelazione riconosciuto al promotore rispetto a eventuali concorrenti, un ritorno alle vecchie concessioni di lavori pubblici che altro non erano se non appalti affidati a trattativa privata.

Il promotore (privato o anche pubblico) si vede assegnare senza reale concorrenza un'opera che trova in sostanza finanziamento sul bilancio dell'ente: su un piano strettamente civilistico la causa del contratto di concessione subisce una consistente alterazione generando un negozio indiretto la cui liceità e validità sono fortemente in discussione.

Anche su tale aspetto, permane dubbio che sia conciliabile con le regole comunitarie e, pertanto, andrebbe opportunamente sottoposto ad un intervento chiarificatore del legislatore europeo.

Al riguardo va segnalato che l'eventuale regolazione deve rappresentare il mezzo per accelerare il processo d'infrastrutturazione dei Paesi UE, non il fine di una attività normativa garantista ed inappuntabile dal punto di vista giuridico che si rivelasse, in concreto, troppo onerosa e vincolante per gli operatori e, di conseguenza, scarsamente applicata.

La fase successiva alla selezione del partner privato

Domanda n. 10

Che esperienza avete riguardo alla fase successiva alla selezione del partner privato nelle operazioni di PPP contrattuale?

Domanda n. 11

Siete a conoscenza di casi nei quali le condizioni d'esecuzione – comprese le clausole d'aggiornamento – hanno potuto avere un'incidenza discriminatoria o hanno potuto costituire un ostacolo ingiustificato alla libera prestazione di servizi o alla libertà di stabilimento? Se sì, potete descrivere il tipo di problemi incontrati?

Domanda n. 12

Siete al corrente di pratiche o di meccanismi di valutazione di offerte con conseguenze discriminatorie?

Domanda n. 13

Condividete la constatazione della Commissione secondo la quale alcune operazioni del tipo **step-in** ***possono porre problemi in termini di trasparenza e di parità di trattamento? Conoscete altre "clausole tipo" la cui attuazione potrebbe causare problemi simili?***

Domanda n. 14

Ritenete che sia necessario chiarire a livello comunitario alcuni aspetti attinenti al quadro contrattuale dei PPP? Se sì, su quale (i) aspetto (i) dovrebbe incentrarsi tale chiarificazione?

L'esperienza della fase post selezione è caratterizzata dalla notevole carenza di controlli e di richiami – se del caso – al rispetto delle obbligazioni assunte in sede di aggiudicazione della gara.

Elementi vincolanti possono derivare, poi, dal fatto che spesso i concorrenti sono costretti ad accettare in sede di gara, condizioni di esecuzione che possono rivelarsi onerose, non potendo come noto presentare offerte condizionate a pena di esclusione. In particolare si tratta di condizioni relative ai pagamenti dei corrispettivi e prezzi che vengono dilazionati nel tempo, ovvero legati ad eventi senza data certa.

Si ritiene, infine, che clausole del tipo *step-in* possano essere necessarie in alcuni schemi contrattuali rientranti nell'ambito dei PPP, senza tuttavia porsi in contrasto con i principi di trasparenza e parità di trattamento. Si fa riferimento a situazioni in cui il soggetto finanziatore potrebbe chiedere la sostituzione del concessionario mediante indicazione di un soggetto subentrante che abbia idoneità tecnico finanziaria equivalente a quella del precedente soggetto e che garantisca il completamento dei lavori. Tale possibilità dovrebbe essere consentita in casi specifici, quale quello di fallimento del soggetto affidatario o di grave inadempimento del contratto, proprio al fine di evitare la risoluzione dello stesso.

Anche per la disciplina delle condizioni di esecuzione dei PPP e del quadro contrattuale relativo appare opportuno un intervento comunitario, diretto a dare base omogenea di riferimento alle modalità applicative in ambito europeo ed a chiarire la natura e la definizione delle diverse tipologie di PPP contrattuale.

Il subappalto

Domanda n. 15

Nel contesto delle operazioni di PPP, siete al corrente di problemi particolari incontrati in materia di subappalto? Quali?

Domanda n. 16

Il fenomeno dei PPP di tipo contrattuale, che implica il trasferimento di un insieme di compiti ad un unico partner privato, giustifica secondo voi l'introduzione, riguardo al fenomeno dei subappalti, di norme più dettagliate e dal campo d'applicazione più vasto?

Domanda n. 17

In maniera più generale, ritenete che si dovrebbe prendere un'iniziativa complementare a livello comunitario al fine di chiarire, o sistemare, le norme relative ai subappalti?

Anche per questo profilo, nel campo dei lavori, il subappalto nell'ambito di operazioni di PPP non ha dato luogo a particolari problematiche e pertanto non sembra necessaria l'emanazione ulteriore di regole, atteso che la disciplina relativa alla concessione prevede la facoltà per l'amministrazione di imporre che parte dei lavori siano affidati a terzi.

Tuttavia tenuto conto che il legislatore nazionale ha richiamato espressamente la disciplina prevista per il subappalto dei lavori pubblici anche nel caso di forniture e servizi (358/92 e 157/95), e che tale richiamo suscita perplessità in considerazione del fatto che alcune disposizioni chiaramente attagliate allo schema dei lavori pubblici sono difficilmente applicabili *tout court* alle forniture e servizi, sarebbe auspicabile un intervento chiarificatore della Commissione in tema di subappalti.

PPP istituzionalizzato

Domanda n. 18

Quale esperienza avete del lancio di operazioni PPP di tipo istituzionalizzato? In particolare, la vostra esperienza vi porta a pensare che il diritto comunitario degli appalti pubblici e delle concessioni sia rispettato nel caso di operazioni PPP istituzionalizzate? Se no, perché?

Domanda n. 19

Ritenete che debba essere presa un'iniziativa a livello comunitario per chiarire o precisare gli obblighi degli organismi aggiudicatori riguardo alle condizioni che devono regolamentare la concorrenza tra operatori potenzialmente interessati da un progetto di tipo istituzionalizzato? Se sì, su quali punti particolari e sotto quale forma? Se no, perché?

Domanda n. 20

Quali sono le misure o le pratiche che ritenete di ostacolo alla creazione di PPP nell'Unione europea?

Domanda n. 21

Conoscete altre forme di PPP sviluppate nei paesi al di fuori dell'Unione? Conoscete esempi di "buone pratiche" sviluppate in questo contesto, cui l'Unione potrebbe ispirarsi?

Domanda n. 22

In termini più generali, e tenuto conto dei considerevoli investimenti necessari in alcuni Stati membri, al fine di realizzare uno sviluppo economico-sociale durevole, pensate che sia utile una riflessione collettiva su tali questioni che prosegua ad intervalli regolari tra gli attori interessati e che permetta uno scambio di "buone pratiche"? ritenete che la Commissione dovrebbe dare impulso ad una tale rete?

Ai sensi del Libro Verde, le operazioni di PPP di tipo istituzionalizzato implicano la creazione di un'entità detenuta congiuntamente da partner pubblico e da partner privato (costituzione di SpA miste per la gestione dei servizi pubblici) ovvero il passaggio a controllo privato di una impresa pubblica già esistente (privatizzazione di imprese pubbliche che gestiscono servizi pubblici).

Nel nostro ordinamento viene quindi ammesso il modello della SpA mista a condizione che il socio privato venga selezionato con gara.

La scelta di un partner privato destinato a svolgere incarichi nel quadro del funzionamento di un'impresa mista non può essere basata esclusivamente sulla qualità del suo contributo in capitali o della sua esperienza, ma dovrebbe tenere conto delle caratteristiche della sua offerta – che economicamente deve essere la più vantaggiosa – per quanto riguarda le prestazioni specifiche da fornire[7].

La partecipazione dell'organismo aggiudicatore all'impresa mista[8], che al termine della procedura di selezione diventa contitolare del contratto, non giustifica la mancata applicazione del diritto dei contratti e delle concessioni in occasione della selezione del partner privato. L'applicazione del diritto comunitario degli appalti pubblici e delle concessioni non dipende infatti dal carattere pubblico, privato o misto del co-contraente dell'organismo aggiudicatore, ma semplicemente dalla decisione di affidare un compito ad un terzo, ovvero a una persona giuridicamente distinta.

Se l'entità mista funge da organismo aggiudicatore[9], tale funzione implica anche il rispetto del diritto applicabile in materia di appalti pubblici e di concessioni, laddove tale diritto assegni al partner privato dei compiti che l'amministrazione aggiudicatrice non abbia bandito precedentemente alla costituzione dell'impresa mista. Il partner privato non può, infatti, approfittare della propria posizione privilegiata nell'entità mista per riservarsi alcuni compiti senza procedere preliminarmente a un bando.

Si sono riscontrati casi nei quali, con un'unica procedura di gara, si mira alla scelta del partner socio privato, che al tempo stesso diviene aggiudicatario, ad esempio, dei lavori che la costituenda società dovrà eseguire, quale oggetto esclusivo o prevalente.

In casi del genere, di fatto, la possibilità di aggiudicazione dei lavori viene subordinata alla preventiva necessaria acquisizione della posizione di socio della committente, e ciò in linea di massima non sembra rispondere agli interessi ed alle modalità operative delle imprese, in particolare di quelle che operano nel campo delle costruzioni.

In secondo luogo, laddove si ammetta che una stessa persona giuridica possa al tempo stesso assumere il ruolo di azionista della società committente e di appaltatore della medesima, di fatto, si dà luogo ad una commistione di ruoli, con parziale identificazione tra committente ed esecutore, e perciò tra controllore e controllato.

[7] Punto 58, Libro Verde.

[8] Punto 63, Libro Verde.

[9] Punto 64, Libro Verde.

Infine, l'avallare tale metodologia può determinare il serio rischio di una sorta di monopolio da parte del partner privato di tutti gli appalti (o perlomeno di gran parte di questi) che la società mista, nel corso della sua attività, dovrà realizzare.

Sul punto, peraltro, si segnala come sarebbe auspicabile definire se sia consentito o meno alle SpA collocare successivamente le proprie azioni sul mercato.

La cessione delle quote finanziarie dovrebbe essere libera perché ciò rappresenta un modo per finanziare la società, senza però incidere sulla gestione imprenditoriale della SpA che dovrebbe restare immutata.

In altri termini occorre distinguere nettamente il profilo della collocazione delle quote azionarie – che rappresenta un profilo meramente finanziario e che dunque deve essere lasciato libero e consentito in ogni momento della vita della società – ed il profilo della scelta del socio privato, che viceversa, ancorché si sostanzi anch'esso nella sottoscrizione di quote, rappresentando invece la scelta di un socio gestore del servizio, deve restare immutata per tutta la durata del contratto, pena la violazione delle regole concorsuali.

In buona sostanza sarebbe auspicabile un intervento normativo il quale pur senza vietare *tout court* la collocazione di quote sociali sul mercato non permetta che detta collocazione possa risolversi in meccanismo che surrettiziamente consenta l'affidamento di un servizio ad un soggetto che non ha partecipato ad alcuna gara.

Del resto, già la giurisprudenza italiana, in vigenza dell'art. 22 della legge 142/90, aveva chiarito che **la scelta del socio privato non è la scelta di un socio qualsiasi**, ma di chi nella società deve assumere precisi obblighi per la gestione di un pubblico servizio (Consiglio Stato sez. V, 19 febbraio 1998, n. 192).

Quanto invece alla società costituita con capitale pubblico totalitario, trattandosi di un modello mutuato dai principi della nota *sentenza Teckal*, resta comunque da definire chiaramente quale sia la misura del controllo che determina l'assenza di terzietà del soggetto affidatario.

In generale si rilevano, dunque, nodi che meritano soluzione a livello europeo in un quadro di reciprocità tra Paesi membri e di certezza di principi.

Si tratta, almeno in parte, di problematiche da ricondurre alla tematica "servizi pubblici" e "servizi di interesse generale", questioni che non possono essere sempre circoscritte al tema dei partenariati, per lo più derivanti da deroghe al regime ordinario che si consentono nel caso di attività qualificate come servizi di interesse generale[10].

[10] Se è vero che il "carattere misto di una impresa che partecipa ad una procedura di appalto non implica alcuna deroga alle norme applicabili nel quadro di una aggiudicazione di un appalto pubblico o di una concessione" e che "solo qualora l'impresa *in oggetto* (sic !!) abbia le caratteristiche di un'impresa in house … l'amministrazione aggiudicatrice può tralasciare l'applicazione delle norme abituali (nota a piè pagina, Punto n. 51, Libro Verde) è anche vero che occorre verificare, senza eludere il problema, le condizioni per cui lo stesso soggetto-

Tuttavia, si sottolinea come, sia pure in un quadro normativo incerto e fonte di continue perplessità, il modello della società mista abbia una importante funzione di sviluppo per taluni settori d'attività. E' il caso dell'esercizio di servizi di gestione rifiuti urbani e di igiene ambientale nel cui ambito la diffusione della SpA mista ha consentito non solo la creazione di soggetti operativi con un livello dimensionale più adeguato alle esigenze del mercato e del servizio, ma anche il superamento, in molte realtà territoriali, della frammentazione della gestione da parte degli enti locali.

Si tratta di un fenomeno significativo, con una diversa rilevanza a seconda delle regioni, ma da valutare positivamente, soprattutto dove si è proceduto a creare nuove società miste con partner industriali per la gestione integrata dei servizi per ambiti territoriali ottimali.

In altri termini, pur in presenza di condizioni giuridiche connotate da incertezze, e non sempre nella massima trasparenza, la costituzione di società miste ha spesso costituito, nel settore, uno strumento di crescita industriale, sia per le imprese private che per gli enti locali e le popolazioni interessate.

to-impresa ha, eventualmente avvalendosi anche di società di scopo che vantano i requisiti della casa madre, contemporaneamente la gestione a titolo di *in house* e la gestione a seguito di procedura concorrenziale.

Confservizi

Green Paper on Public-Private Partnership and Community Law on Public Contracts and Concessions

Replies, comments and suggestions

On the 30 of April 2004 the European Commission issued the “Green Paper on Public-Private Partnership (PPP) and Community Law on Public Contracts and Concessions COM(2004) 327. This document represents the contribution of Confservizi to the consultation procedure deriving from the Green Paper.

In the framework of PPP the arguments for social cohesion become of strategic importance for all European citizens, and their relevance still increase if we refer to the *Third Report on Economic and Social Cohesion*, issued by the Commission, in which there is argued that “economic growth in the EU has slowed appreciably over the three past years … as a result, unemployment has risen again in many parts of the Union with all the social implication which this entails” (p. v). Moreover, “the challenge for cohesion policy … is to provide effective support for economic restructuring and for the development of innovative capacity in order to arrest declining competitiveness, falling relative levels of income and employment and depopulation” (p. vii). At the same time, “partnership in the design and implementation of programmes has become stronger and more inclusive, involving a range of private sector entities, including the social partners, as well as regional and local authorities”, even if “concerns have grown over … the need to ensure that programmes are flexible enough to adapt to change” (pp. xix-xx). To sum up, EU is facing a difficult economic fluctuations with potentially relevant implications coming from the enlargement, making social cohesion a central problem for citizens and partnership with flexible programmes a strategic instruments to overcome the critical period.

Services of General Interest (SGIs) lie at the heart of such process. It is commonly accepted that the living standards of the population are primarily determined by the functioning of SGIs, and all Member States have their own tradition in organize them in a way that considers the citizens' *desiderata*. Within this framework, the appropriate development of a common framework for SGIs could be useful only if there is the adequate sensibility to a range of different problems, one of which – just one among many different aspects to be considered – is the promotion of the internal market in natural monopoly sectors. Moreover, as the Commission remind in the White Paper on services of general interest COM(2004) 374, article 86 (2) provides: “Undertakings entrusted with the operation of services of general economic interest … shall be subject to the rules contained in this Treaty, in particular to the rules on competition, insofar as the application of such rules does not obstruct the performance, in law or in fact, of the particular tasks assigned to them.”

Another fundamental aspect relates to the definition of public partner in PPP procedures and it is now calling for careful evaluation. With reference to the notion of “contracting body”, the reference made in footnote number 12 of the Green Paper is inappropriate, since it reports a definition – that includes both national, regional and local authorities, and the contracting authorities of the type “public authorities” and “public undertakings” – introduced by the Directives 93/38/EEC and 2004/17/EC that is proper only with reference to the application of that directives, but is not obviously extendable to the notion of public partner in a PPP. This is also confirmed by the recent Resource Book on PPP Case Studies, in which there are described some experiences of PPP involving – as private participants – some enterprises that could be included in the notion of “public undertakings” of the above directives. It is clear and obvious that this legislation should be addressed to monopoly providers and to public administration, but if we consider public enterprises in a very comprehensive definition, including even those operating in competitive markets, there could be the actual possibility of discriminating them in favour of private operators.

Another general question refers to the participation to bidding procedures, in liberalized Member States, of operators coming from Member States that have not yet carried out or initiate liberalization processes. A reciprocity participation *criterium* should be defined to prevent opportunistic policy by Member States and the realization of dominating market position by some operators.

In the remaining part of the document, Confservizi provides for the replies to some of the questions included in the Green Paper. For questions 6th, 7th and 18th, 19th Confservizi provides combined answers.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?
7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

On this subject, we consider that a new Community legislative initiative is not necessary, because of the following arguments:

- the new instruments recently introduced in the new directives (2004/17/EC e 2004/18/EC) contribute to the solution of several problems arising in the award procedures, also with reference to concession;
- the nature of concession consists of the (partial or total) risk transfer from public authorities to private contractors, and the formal agreement by which to shape the risk sharing has to be left to contractual initiatives by parties, due to the enormous difficulties related to classify and examine all the possible risk causes in all different contexts and the possible contractual mechanism to manage them, being a basic condition to give a Community legislation on this subject;
- the difficulties in deeply clarifying the concession object, and the related award *criteria*, on Community basis, since it frequently involves the ability to be responsive to local community *desiderata* that are not easy to manage by contracts;
- the duration of the concession agreement, that has to be determined considering the investment depreciation and remuneration, but it could also involve some renegotiation procedure related to monitoring activities carried out by public authorities, that are quite difficult to regulate on Community basis.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

With reference to question 8, we believe that equality of treatment does not only mean adequate advertising, but it implies other several relevant complication, among which we mention

- the absence of Community definition of the participation criteria of awarding procedure, since it is not really clear the nature of the formal assignment of task that may lead to the exclusion of a bidder from a procedure (the participation criteria should be designed in order to allow the maximum possible number of participants, so it should not be based on the ownership of them)
- the possibility of potential equal knowledge among participants is not only related to procedure advertising, but it relies on the immediate availability of all relevant material concerning the awarding procedures, including public funds' availability and regulation.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

We have always to guarantee the respect of all Treaty principles, but it consists not of including the PPP initiatives only under the ruling on public contracts, since it involves many other relevant aspects. On this subject, an interesting example is the Italian law on Project Financing, concerning the realization of public works through public authorities initiatives in which there is an adequate consideration for private proposals also on the definition of the projects to be realized. There were huge expectations about the effects of this legislation (called Merloni Law), but the final results we have obtained are disappointing, due to the very limited use of these instruments by operators. The main reason is related to a “crowding out normative effect”, consisting of the great attention that the Merloni Law has on the respect of public contracts’ legislation that has lead to neglect the financial complications. To manage similar initiatives the related legislation has to adequately balance many different problems, one of which – but not the only one – is the respect of public procurement legislation.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?
19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

Our more relevant experience is the Italian Reform approved by the end of 2003. The fundamental idea of the reform is to allow to public authorities a range of solutions with respect to the organization of SGIs:

- the public procurement procedure (PP),
- the establishment of a mixed ownership enterprise (MOE) in which the private partner has to be selected through competitive bidding procedures, assuring the complete and rigorous respect of national and community legislations,
- the establishment of a completely public enterprise in which public authorities exercise over it a control which is similar to that which they exercise over their own departments and, at the same time, that enterprise carries out the essential part of its activities with the controlling authorities (in house providing, IHP).

The first option (PP) is a literal application of the community law on public contracts to the concession of SGIs, the third option (IHP) is the acceptance of the commonplace concept elaborated in the Teckal Case by the ECJ, while the second solution (MOE) is more complex, involves more opportunities and risks: it is the new instrument on which our Government invites us to build our new development. The Italian choice to introduce MOE in the national legislation on SGIs, and within the European framework and the Treaty principles, appears very forward looking.

The efficient functioning of MOE asks for a clear and certain legal framework concerning the forms of cooperation between public and private partners, probably identifying this solution with what has been called Institutional Public Private Partnership (IPPP). This solution requires an adequate ruling on:

- the boundaries between the management activities, on one hand, and programming, monitoring and regulating activities on the other hand, providing for a coherent separation of roles and responsibilities among the different subjects involved, with particular attention to the contract administration and the assignment of tasks, that should also introduce rules on risks allocation and management between the service provider (IPPP) and the authority entrusted of controlling (contracting authorities);
- the appropriate degree of flexibility in defining the allocation of management tasks and responsibilities between the partners when the selected private partner does not have the control over the enterprise, because of a minority shareholding participation;

- the selection procedure, that has to be simplified as much as possible, to meet in the short term the requirement and the ever increasing needs and expectations of the citizens;
- the subject-matter of the contract or concession, in order to clarify in advance that the activities carried out by the company are the ones foreseen in the selection procedure;
- the concession duration, that has not to be confused with the duration of the newly established enterprise, in order to clarify *ex ante* that the procedure refers to a service provision for a predetermined and not extendable period of time, unless the repetition of the initial procedure.

Confservizi believes that if there is the necessity for a Commission initiative on this subject, it should be prepared in order to clarify some legal aspects of common interests, as the ones we have just listed.

Rome 30/07/2004

(Parere Federcasa finale.doc- 17/08/04)

Contributo di FEDERCASA

al Libro verde su Public Private Partnership

30 luglio 2004

FEDERCASA, la Federazione italiana per la casa, che rappresenta i 111 operatori pubblici dell'abitazione sociale italiani, che costruiscono e gestiscono alloggi prevalentemente in locazione destinati a famiglie a basso reddito (unità immobiliari gestite oltre 1 milione), partecipa al dibattito sollevato dal Libro verde rispondendo alle domande più pertinenti rispetto al settore dell'abitazione sociale

Premessa

La situazione del settore dell'edilizia sociale pubblica in Italia è oggetto di una serie di fenomeni che influenzano l'oggetto del Libro verde:
- la devoluzione delle competenze al livello regionale e locale, che si accompagna all'esaurimento delle risorse pubbliche per la costruzione di nuovi alloggi (fino al 1998 assicurate da un prelevamento sul monte salari);
- la riorganizzazione regionale degli strumenti, che vede gli organismi in una fase di trasformazione: da soggetti pubblici non economici ed esclusivamente dedicati alla loro missione primaria in direzione dei ceti più deboli a soggetti pubblici cosiddetti "economici", con l'obbligo di bilancio in pareggio e la possibilità di agire anche in altre fasce di mercato (locazione e/o vendita per i ceti medi, studenti, immigrati) e di offrire servizi anche ad altri soggetti pubblici (ad esempio i comuni). A queste trasformazioni si associa sempre più spesso la ricerca di modelli societari "misti" che consentano di associare risorse e *know how* di soggetti privati a quelli degli operatori tradizionali.

Tutti questi fenomeni, è evidente, hanno uno stretto rapporto con l'oggetto della consultazione.

Temi rilevanti per Federcasa

In questo quadro, per quanto riguarda Federcasa, in quanto organismo di rappresentanza degli Enti pubblici che costruiscono e gestiscono gli alloggi di edilizia sociale in Italia, i temi rilevanti per il settore sono i seguenti:

1) evitare la discriminazione di cui sono già stati oggetto alcuni Istituti, nel momento in cui hanno partecipato, come soggetti privati, in virtù della loro trasformazione imprenditoriale a gare per l'affidamento delle concessioni per il servizio di gestione del patrimonio immobiliare dei Comuni o di altri soggetti (Enti previdenziali). Gli ostacoli che si pongono in questo caso sono di due ordini:

- il problema della territorialità (vincolo statutario ancora legato alla concezione degli enti come strutture assistenziali e con attività totalmente priva di lucro);
- il problema dello statuto degli Enti che consente interpretazioni non univoche e sulla quale già si è espresso il Consiglio di Stato con sentenza n. 6275/02 del 28 maggio 2002, escludendo la possibilità dell'Aler di Milano dalla partecipazione alla gara per l'affidamento del servizio di gestione del patrimonio immobiliare del Comune, in quanto considerato, in base al suo statuto, ente strumentale del Comune stesso.

La non discriminazione degli enti pubblici è peraltro espressamente contemplata sia dalle Direttive appalti della UE che da ripetute sentenze che nel definire i vari soggetti pubblici o privati si basano esclusivamente sulla *mission* e mai sullo statuto (di ente pubblico o di società privata, per es.). L'apparente vantaggio derivante agli enti pubblici dalla possibile commistione di attività prive di lucro con attività commerciali è peraltro superata dalla Direttiva "trasparenza", che obbliga alla divisione dei bilanci (Dir CEE 80/723). In questo senso anche un Partenariato Pubblico-Pubblico può rientrare nella classificazione della PPP.

2) Trovare un quadro normativo certo per la creazione da parte degli enti di strutture societarie miste con imprese di costruzione e/o manutenzione, che consentano di fondere il *know how* dei gestori del patrimonio con quello degli imprenditori privati.
Il problema che si pone è multiplo:
- l'inquadramento comunitario della procedura di selezione del partner privato (pubblicità, requisisti, inquadramento del bando nel quadro normativo nazionale e comunitario)
- la durata del rapporto/contratto (pari al servizio messo a gara in caso di partenariato su base contrattuale: ma che succede nel caso di un rapporto su base istituzionale?) ;
- il ruolo del partner privato come esecutore di lavori della società mista;
- la possibilità di individuare i limiti (della possibilità di affidamento) dei lavori in house, attraverso criteri che tengano conto anche della convenienza dell'ente pubblico.

Risposte alle domande del LV

Questi temi comportano la risposta alle seguenti domande del LV:

12. *Siete al corrente di pratiche o di meccanismi di valutazione di offerte con conseguenze discriminatorie?*
La risposta è sì, vedi il caso dell'Aler di Milano citato al punto 1.

14. *Ritenete che sia necessario chiarire a livello comunitario alcuni aspetti attinenti al quadro contrattuale dei PPP? Se sì, su quale(i) aspetto(i) dovrebbe incentrarsi tale chiarificazione?*
Sì, è necessario chiarire, anche in relazione alle evoluzioni delle normative comunitarie su trasparenza ed aiuti di stato, il concetto comunitario di **organismo privato** e di **organismo pubblico** ai fini della non discriminazione nelle gare per l'affidamento di servizi quale quello della gestione del patrimonio di edilizia sociale pubblica

17. *In maniera più generale, ritenete che si dovrebbe prendere un'iniziativa complementare a livello comunitario al fine di chiarire, o sistemare, le norme relative ai subappalti?*
La risposta è No

18. *Quale esperienza avete del lancio di operazioni PPP di tipo istituzionalizzato? In particolare, la vostra esperienza vi porta a pensare che il diritto comunitario degli appalti pubblici e delle concessioni sia rispettato nel caso di operazioni PPP istituzionalizzate? Se no, perché?*
19. *Ritenete che debba essere presa un'iniziativa a livello comunitario per chiarire o precisare gli obblighi degli organismi aggiudicatori riguardo alle condizioni che devono regolamentare la concorrenza tra operatori potenzialmente interessati da un progetto di tipo istituzionalizzato? Se sì, su quali punti particolari e sotto quale forma? Se no, perché?*
Per quanto riguarda l'edilizia residenziale sociale pubblica, alcune normative di riorganizzazione del settore invitano (in alcuni casi obbligano) gli enti pubblici titolari del settore alla costituzione di società miste per lo svolgimento di alcune funzioni (manutenzione, progettazione, costruzione ecc.).
La procedura per la scelta del partner privato mal si inquadra nella procedura comunitaria (in particolare per il settore della manutenzione ordinaria, in Italia, non è rispettata la collocazione della stessa nel settore dei servizi, con la conseguenza dell'apertura di un contenzioso con le associazioni delle imprese di costruzione, che si ritengono potenziali titolari degli incarichi).
Rimane aperto il problema della possibilità di affidamento *in house* dei lavori dell'ente che ha costituito la società alla società stessa, per i periodi successivi alla prima scadenza del contratto messo a gara, nonché del rapporto fra la società ed il socio privato, a sua volta prestatore del servizio in oggetto.
Più che un intervento normativo diretto, sarebbe utile una comunicazione della Commissione tendente a chiarire le "zone grigie" del diritto comunitario.

22. *In termini più generali, e tenuto conto dei considerevoli investimenti necessari in alcuni Stati membri, al fine di realizzare uno sviluppo economico-sociale durevole, pensate che sia utile una riflessione collettiva su tali questioni che prosegua ad intervalli regolari tra gli attori interessati e che permetta uno scambio di 'buone pratiche'? Ritenete che la Commissione dovrebbe dare impulso ad una tale rete?*
La risposta è sì a entrambe le domande.

FISE FEDERAZIONE IMPRESE DI SERVIZI

LIBRO VERDE

RELATIVO AL PARTENARIATO PUBBLICO-PRIVATO ED AL DIRITTO COMUNITARO DEGLI APPALTI PUBBLICI E DELLE CONCESSIONI

FISE – Federazione Imprese di Servizi, è l'Associazione che rappresenta, in ambito Confindustria, una serie di comparti di servizi nei quali le imprese operano in base a contratti pubblici di appalto o di concessione (dai servizi di pulizia/servizi integrati ai servizi postali, anche di trasporto, dalle varie fasi della gestione rifiuti al noleggio autovetture)

FISE non può non apprezzare l'iniziativa assunta dalla Commissione Ue di presentare un Libro Verde sui Partenariati Pubblico - Privati, trattandosi di materia in cui si riscontrano importanti opportunità di sviluppo ma, nel contempo, situazioni che, anche perché innovative, possono determinare conseguenze anomale sotto il profilo della trasparenza e della concorrenza nel mercato interno comunitario.

Il tema, peraltro, è articolato e complesso, vista l'eterogeneità degli istituti giuridici che possono rientrare, secondo la stessa Commissione Ue, nell'ambito dei PPP. Alcuni aspetti trattati, inoltre, appaiono riconducibili a istituti già disciplinati dalle norme comunitarie e nazionali sugli appalti pubblici o dalle normative nazionali in materia di gestione di servizi di interesse generale. Si auspica che tale complessità non sia di per sé ragione precluda gli interventi che dovessero apparire necessari per assicurare le migliori condizioni di trasparenza nel mercato interno.

Da parte FISE si intende puntualizzare principalmente solo gli aspetti di più diretto interesse associativo, sulla base delle esperienze concrete e/o delle analisi effettuate.

IL MERCATO

Nel capitolo 1.1, paragrafo 3, del Libro Verde viene rilevato che l'aumento del ricorso a operazioni di PPP è riconducibile a vari fattori, tra cui **le restrizioni di bilancio** cui gli Stati membri devono far fronte, che determinerebbero l'opportunità di assicurare il contributo di finanziamenti privati al settore pubblico. Nello stesso paragrafo si valorizza l'idea che i PPP si stiano sviluppando anche per effetto di una evoluzione dello Stato, che passa da un ruolo di operatore diretto ad un ruolo d'organizzatore, di regolatore e di controllore.

Si tratta di una visione condivisa sotto il profilo teorico, ma parziale sotto il profilo pratico, non tenendosi conto di come, soprattutto a livello territoriale, le restrizioni di bilancio inducono anche gli enti pubblici (Comuni, ma anche Province e Regioni) a svolgere direttamente o tramite società allo scopo costituite, attività economiche per realizzare utili o limitare le perdite di altre attività collegate[1].

[1] Un esempio chiaro, per i settori rappresentati, è costituito dalla "assimilazione" ai rifiuti domestici o urbani dei rifiuti prodotti dalle utenze commerciali e industriali, che di per sé, secondo costante giurisprudenza, anche della Corte di Giustizia, non rientrano nel "servizio pubblico", e, in quanto merci anche suscettibili di valorizzazione, e comunque ai fini dello smaltimento più appropriato, possono liberamente circolare sul territorio, non solo nazionale. Attraverso

Queste attività economiche alcune volte rientrano, o vengono considerate, nell'ambito dei **servizi pubblici**, in altri casi si caratterizzano comunque per una posizione "speciale" dell'ente pubblico (ad esempio in quanto proprietario di immobili o terreni che vengono utilizzati nell'attività economica).

I partenariati con il privato cui spesso si ricorre, di tipo istituzionale, sono giustificati e determinati dalla necessità di partecipare dell'esperienza e del know-how produttivo delle imprese private. Gli esempi sono numerosi, e spaziano dalla gestione di musei e mostre – custodia, biglietteria, ristorazione e vendita di souvenir, libri, ecc. - alla gestione di centri sportivi; dai servizi di pulizia e manutenzione di immobili di proprietà o a gestione pubblica (come le scuole di ogni ordine e grado) alla gestione dei parcheggi auto a pagamento, fino alla gestione di servizi ambientali, anche nel libero mercato e in concorrenza con le imprese private che vi operano[2].

La ampia discrezionalità con cui determinate attività possono essere considerate di "interesse generale" favorisce in particolare la possibilità di interventi in regime di esclusiva (monopolio) da parte degli enti locali. Si tratta di monopoli che hanno ricadute negative sui costi sostenuti dal sistema industriale e che incidono sulla competitività produttiva dell'area[3], sia nell'ambito del territorio nazionale che nell'ottica della competitività di sistema dell'Unione europea nei confronti delle altre aree dello scenario mondiale.

In questi casi, per lo più, **non** si ha una evoluzione dell'ente pubblico da un ruolo di operatore diretto ad un ruolo d'organizzatore, di regolatore e di controllore, ma **esattamente l'opposto**. Si precisa peraltro che quanto asserito non deve essere letto solo come valutazione negativa: in alcuni casi si individuano effettivamente **nuove aree** di mercato, che vengono gestite in PPP; in altri casi, invece, il soggetto misto nato dal partenariato sostituisce o entra in competizione con gli operatori privati.

Tanto premesso, si articola il documento assumendo a riferimento la interessante e stimolante distinzione operata nel Libro Verde tra PPP di tipo contrattuale e PPP di tipo istituzionalizzato.

A) IL PARTENARIATO CONTRATTUALE

I) Nel Libro Verde vengono fatte rientrare nell'ambito dei partenariati di tipo contrattuale diverse forme di collaborazione tra soggetto pubblico e operatore privato per lo più riconducibili all'istituto della **concessione**.

Alcuni dei servizi rappresentati da FISE, e segnatamente quelli di gestione dei rifiuti domestici o urbani da parte di imprese private, sono tradizionalmente svolti in base a concessioni che, per effetto dell'entrata in vigore nel nostro ordinamento della direttiva n. 92/50 sugli appalti pubblici di servizi e successive modifiche e integrazioni, si sono conformate, nelle diverse fasi procedurali, agli "appalti". Anche le concessioni di costruzione e gestione relative agli impianti di trattamento intermedio o finale dei rifiuti sono di regola affidate nel rispetto delle relative norme comunitarie e nazionali.

l'assimilazione, invece, le attività di raccolta e smaltimento dei rifiuti prodotti in ambito industriale e commerciale vengono ricondotte al servizio pubblico in monopolio e, essendo più remunerative - anche per effetto delle maggiori capacità economiche dei soggetti passivi della tassa/tariffa rifiuti - consentono di ridurre i costi per le utenze domestiche, e quindi del servizio pubblico in senso proprio.

[2] Il recupero e del riciclaggio, ad esempio, per costante giurisprudenza comunitaria sono affidati al libero mercato; peraltro frequentemente vengono costruiti con denaro pubblico e/o in PPP con operatori del settore - pubblici o privati – impianti pubblici che operano in concorrenza con imprese private.

[3] Cfr. **Repubblica**, mercoledì 7 luglio 2004, "Le bollette più care d'Europa – L'Authority: prezzi gas e luce superiori anche del 50%".

Problemi rilevanti si determinano peraltro nel mercato per effetto di contratti o atti amministrativi di affidamento a imprese, anche costituite nella forma della Società per azioni o a responsabilità limitata, a prevalente o totale capitale pubblico, senza alcuna procedura concorrenziale, **ma attraverso l'ingresso nel capitale societario** dell'ente locale che procede all'affidamento, richiamando la nozione di *in-house* per motivare la mancanza di procedura ad evidenza pubblica[4]. Si evidenzia che si tratta di un processo diverso dalla costituzione di una società mista o dalla privatizzazione di una società pubblica. Si fa infatti riferimento a processi in cui la società – per lo più a prevalente capitale pubblico – già esite ed è operativa; l'ente locale, anzichè indire una gara, entra nel capitale sociale con una quota variamente proporzionate e affida il servizio alla società partecipata.

E' un problema ben conosciuto a livello comunitario, che corrisponde a quegli aspetti segnalati in premessa di una crescita dell'intervento diretto degli enti locali in attività economiche, oggetto allo stato anche di alcune cause pendenti presso la Corte di Giustizia, richiamate nello stesso Libro Verde.

II) Vista **la domanda n. 1** posta nel Libro Verde sulle operazioni di PPP puramente contrattuali conosciute, si segnala come accanto al partenariato contrattuale che si sostanzia in "concessioni", si sono verificate, sia a livello centrale (gare c.d. di global service indette da Consip S.p.a per la pulizia e manutenzione degli immobili di amministrazioni centrali e periferiche) sia a livello territoriale (soprattutto nel settore sanità), gare di appalto basate non sulla prestazione di mezzi, ma con obbligazione di risultato, e con la richiesta da parte dell'ente pubblico committente di una pluralità di servizi (dalle pulizie alle manutenzioni, dalla ristorazione ai servizi di portierato o di lavaggio biancheria, ecc.) **da parte di un unico fornitore,** cui vengono richieste soprattutto capacità organizzative e finanziarie, piuttosto che requisiti operativi riferiti ai servizi da svolgere (gare c.d. *di facility management* o di *global service*).

Accanto a queste ipotesi, si segnalano le procedure di **compravendite di cose future**[5] o le gare di appalto **di locazione finanziaria, riservate a istituti di credito,** sul modello PFI inglese, aventi però come oggetto sostanziale – ma non dal punto di vista formale e giuridico – la realizzazione e successiva gestione di opere e infrastrutture come, per esempio, si è verificato per alcuni istituti penitenziari**[6]**.

Si tratta di affidamenti che presentano contenuti innovativi e importanti, con significative ricadute sulle quali occorre riflettere, in particolare sotto il profilo **concorrenziale**, cioè dei soggetti partecipanti e **dei requisiti richiesti** che discendono dalla scelta (con contenuti anche discrezionali) dell'oggetto e dello strumento contrattuale da parte dell'amministrazione committente.

[4] Cfr. anche le direttive Ce nn. 80/723 e 2000/52 sulla trasparenza delle relazioni finanziarie tra gli Stati membri e loro imprese pubbliche; si tratta peraltro di direttive poco "conosciute" e comunque di fatto non sufficienti a evitare che soggetti industriali che operano in monopolio esercitino anche attività in concorrenza sostenendo le attività con le posizioni di vantaggio derivanti dalla posizione di monopolista.

[5] Cfr. **Delibera Autorità di vigilanza LL.PP. n. 105/2003** sulle "compravendite di cosa futura" utilizzate in luogo del ricorsa alle procedure concorsuali di appalto/concessione da parte dell'INAIL, aventi come oggetto sostanziale la costruzione e gestione di strutture ospedaliere.

[6] Si vedano le recenti gare indette dal **Ministero della Giustizia**, ai sensi della legge n. 14/11/2002, n. 259, art. 6, di conversione del D.L. 201/2002, nelle quali con la formula **della locazione finanziaria** si intende dare in appalto a banche (la gara è riservata agli istituti finanziari) la **costruzione ex novo dei carceri** di Varese e Pordenone; il vincitore finanzierà in toto le opere, **scegliendo direttamente** (cioè, in quanto privato, senza procedura ad evidenza pubblica) **l'impresa di costruzioni** che eseguirà l'opera ricevendo a consegna lavori e a remunerazione degli stessi un canone per l'utilizzo della struttura da parte dell'amministrazione penitenziaria per un certo numero di anni.

In queste fattispecie si incide in effetti alla radice sui contenuti primari della procedura, cioè sul mercato e sugli attori cui si riferisce, con rischi rilevanti di distorsioni o di limitazioni concorrenziali (per esempio privilegiando le dimensioni e le capacità finanziarie a scapito delle capacità operative di tipo industriale e produttivo).

Sempre nelle fattispecie sopra accennate, si pongono anche problemi in merito alle modalità di individuazione dei gestori del processo scelti operativo (di costruzione, di manutenzione e gestione servizi), che non vengono individuati in sede di gara, ma sono liberamente – e, nel quadro attuale, legittimamente - dall'affidatario o dal venditore sulla base di scelte fiduciarie.

Chiaramente l'istituto del **sub-appalto,** rispetto al quale la recente direttiva unificata sugli appalti pubblici contiene disposizioni volte ad assicurare trasparenza, **non è idoneo a "interpretare**" e disciplinare le fattispecie, ben più complesse, qui accennate. Il sub appalto di regola ricorre infatti tra imprese che operano nel medesimo campo di attività, costituendo una modalità organizzativa di esecuzione.

B) IL PARTENARIATO ISTITUZIONALIZZATO

E' noto alla Commissione Ue (cfr. il punto 3, par. 53, del Libro Verde) che nella gestione dei rifiuti si ha frequente ricorso a PPP istituzionalizzati, cioè alla costituzione di **società miste**, secondo i modelli puntualmente illustrati nel Libro Verde (paragrafo 55).

Si tratta di questioni ben conosciute da **FISE**, che annovera **fra i propri associati** numerose e importanti società a capitale misto pubblico/privato che operano nel settore della gestione dei rifiuti; si segnala anche di avere aziende associate a capitale misto operanti nel settore delle pulizie e servizi integrati.

Sono noti e ben illustrati nel Libro Verde i molti aspetti problematici che la costituzione e la operatività delle società miste pone sotto il profilo giuridico/formale ai fini del rispetto delle norme europee e nazionali in materia di appalti e concessioni.

Si tratta di problematiche ben note e ampiamente esaminate anche a livello nazionale: a parte la giurisprudenza, si ricordano i diversi importanti e stimolanti interventi dell' Autorità Garante della Concorrenza e del Mercato[7] e dell'Autorità di Vigilanza sui Lavori Pubblici[8].

Certamente alcuni nodi meritano soluzione a livello europeo in un quadro di reciprocità tra Paesi membri e di certezza di principi. Si tratta peraltro, in buona parte, di problematiche

[7] L'Autorità Garante della Concorrenza e del Mercato, in una prima fase, si era posta il problema della concorsualità nella scelta del socio privato, con riferimento alle società a prevalente capitale pubblico, non mettendo in discussione l'affidamento diretto alla società mista (Parere del 20 febbraio 1997); in successivo Parere del 12 novembre 1997 si era posto in luce come l'affidamento diretto è giustificato da un rapporto di strumentalità della società con l'ente beneficiario del servizio e come pertanto appaia opportuno, per evitare che qualunque partecipazione, anche di infimo valore, possa consentire l'affidamento diretto, "far definitivamente e interamente transitare la disciplina delle società miste in quella applicabile a tutte le imprese non legate da rapporti di strumentalità con l'ente locale, prevedendo perciò che la gara avvenga per l'assunzione della gestione del servizio e non per l'individuazione del socio privato". Con Parere del 21 ottobre 1999 vengono mossi ulteriori rilievi critici al modello dalla mista, sottolineandosi come l'oggetto sociale delle società miste titolari dell'affidamento non consenta a queste ultime di svolgere, per conto dell'affidante, attività estranee al nucleo essenziale del servizio pubblico in assenza di meccanismi di gara e come debba essere prevista la revoca dell'affidamento diretto ove l'ente locale non abbia più il controllo della società mista stessa, essendo questa divenuta a prevalente capitale privato o comunque controllata da soci privati.

[8] Si veda per esempio Autorità per la Vigilanza sui Lavori Pubblici, Determinazione del 14 gennaio 2004, n. 1, in materia di promozione della costituzione di una società per azioni per la progettazione e gestione a tariffa o a pedaggio della rete autostradale e di infrastrutture di viabilità a pedaggio nel Lazio, ove si critica la possibilità per il socio privato scelto ad evidenza pubblica di poter eseguire direttamente i lavori, in ragione della natura di organismo di diritto pubblico della stessa società mista.

da ricondurre alla più ampia tematica dei "servizi pubblici" o "servizi di interesse generale", oggetto tra l'altro di recentissimo **Libro Bianco** da parte della stessa Commissione Ue, non sempre essendo questioni che possono essere confinale al solo tema dei partenariati.

In altri termini molti degli aspetti problematici derivano dalle deroghe al regime ordinario che si consentono nel caso di attività che vengono qualificate come servizi di interesse generale[9].

Peraltro nel caso di processi di "privatizzazione", con eventuale collocazione in borsa, di quote azionarie di società in precedenza interamente pubbliche si pone il problema se tali società possano essere esaminate nell'ambito della problematica dei PPP oppure debbano essere semplicemente ricondotte nell'ambito del diritto civile e societario comune. I noti principi comunitari della **irrilevanza della proprietà, pubblica o privata,** ai fini della applicazione delle regole di mercato alle società, richiamati anche dal Libro verde, dovrebbero far ritenere che società quotate in borsa non siano mai da ricondurre all'interno della problematica dei PPP, essendo normali società di diritto comune a tutti gli effetti.

***

In tali sintetiche premesse preme sottolineare come, sia pure in un quadro normativo incerto, il modello della società mista per la gestione di servizi di gestione rifiuti urbani e di igiene ambientale **abbia avuto un importante sviluppo** nel Paese, creando di fatto soggetti operativi con un livello dimensionale più adeguato alle esigenze del mercato e del servizio e consentendo, in molte realtà territoriali, il superamento della frammentazione della gestione da parte degli enti locali.

Si tratta di un fenomeno significativo, con una diversa rilevanza a seconda della regione, ma da valutare nel complesso positivamente, soprattutto dove si è proceduto a creare nuove società miste con partner industriali per la gestione integrata dei servizi per ambiti territoriali ottimali.

Volendo fornire dei dati, da Indagine condotta dall'Associazione sulle Forme di Gestione dei servizi di igiene urbana[10], effettuata intervistando tutti i comuni italiani con popolazione superiore ai 5.000 abitanti e il 10% di quelli con popolazione inferiore, le società miste nel 2002 servivano il 12% degli 8.100 comuni italiani nella raccolta e trasporto, contro il 2,6% del 1998; nelle raccolte differenziate lo sviluppo era ancora più significativo: 12,8% dei comuni italiani nel 2002 contro il 2,3% del 1998.

Sempre da tale Indagine risulta che le società miste crescono nel periodo considerato (1998 – 2002) anche nella proprietà delle discariche (da 1,4 al 5% dei comuni serviti), nella gestione delle discariche (da 2,2, a 7,6%) e nella proprietà e gestione degli inceneritori (da poco sopra il 3% a sopra l'8%).

Una successiva Indagine, condotta nel 2004, sullo stato di attuazione degli Ambiti Territoriali Ottimali nel settore[11], ha confermato tale analisi, consentendo di verificare come in alcune realtà la società mista vada a costituire un soggetto-impresa nuovo, che si sostituisce a forme di gestione non industriale, costituendo una delle modalità con cui si cerca, a livello territoriale, di realizzare economie di scala in un contesto di sviluppo.

[9] Se è vero che il "carattere misto di una impresa che partecipa ad una procedura di appalto non implica alcuna deroga alle norme applicabili nel quadro di una aggiudicazione di un appalto pubblico o di una concessione" e che "solo qualora l'impresa *in oggetto* (sic !!) abbia le caratteristiche di un'impresa in house… l'amministrazione aggiudicatrice può tralasciare l'applicazione delle norme abituali (nota a piè pagina n. 51 del Libro Verde) è anche vero che occorre verificare, senza eludere il problema, le condizioni per cui lo stesso soggetto-impresa ha contemporaneamente, eventualmente avvalendosi anche di società di scopo che vantano i requisiti della casa madre, la gestione a titolo di "in-house" e la gestione a seguito di procedura concorrenziale.

[11] Rapporto "Ambito Territoriale Ottimale – analisi attuazione e prospettive", 2004., scaricabile da < www. Fise.org> .

In altri termini, pur in presenza di condizioni giuridiche connotate da incertezze, e non sempre nella massima trasparenza, la costituzione di società miste ha spesso costituito, nel settore rifiuti urbani, uno strumento di crescita industriale, sia per le imprese private che per gli enti locali e le popolazioni interessate.

Situazioni da tenere distinte dalle denunciate situazioni in cui l'ingresso di un ente locale nel capitale di una società già esistente giustifica l'affidamento diretto da parte dello stesso ente locale, ovvero dal persistere di affidamenti diretti per società di capitale, anche quotate in borsa, grazie alla presenza di soci pubblici (nazionali) nel capitale sociale.

Segnalando come i due Rapporti sopra citati siano scaricabili dal nostro sito (www.fise.org), si unisce comunque sintesi del Rapporto sugli Ambiti territoriali ottimali e la parte relativa alle regioni Emilia – Romagna e Calabria, ritenute indicative di quanto sopra rilevato.

RAPPORTO
Ambito Territoriale Ottimale: analisi, attuazione e prospettive

SINTESI

Premessa

Nel nostro Paese il settore dei rifiuti urbani sta vivendo una fase di trasformazione strutturale; le modifiche del quadro normativo in materia ambientale e le innovazioni della disciplina delle forme di gestione dei servizi pubblici locali hanno senz'altro dato un'importante spinta al riassetto, creando le premesse per uno sviluppo in senso moderno di una politica integrata dei rifiuti, in linea con le direttive europee in materia.

Il processo di industrializzazione dei servizi di igiene urbana va tuttavia dispiegandosi con lentezza – anche rispetto a quanto sta accadendo in altri servizi di pubblica utilità – in quanto trova degli elementi di ostacolo e incertezza in un sistema di gestioni che risulta tutt'oggi fortemente frammentato, oltre che storicamente caratterizzato da assetti monopolisitici.

La realizzazione degli Ambiti Territoriali Ottimali per la gestione dei rifiuti urbani, previsti e disciplinati dalla legislazione di settore, si pone quindi come momento centrale per coniugare l'ottimizzazione qualitativa del processo con la modernizzazione dell'intero comparto. Sviluppo che non può e non deve essere solo dimensionale, ma che deve seguire anche logiche che favoriscano la qualità, la specializzazione di impresa e il confronto concorrenziale, premiando l'economicità, l'efficacia e l'efficienza gestionale degli operatori.

In questo contesto si colloca il Rapporto su "**Ambito Territoriale Ottimale: analisi, attuazione e prospettive",** elaborato da FISE Assoambiente nell'ambito **dell'Osservatorio Servizi Igiene Urbana, costituito tra PadovaFiere e FISE Assoambiente** per elaborare specifici studi e rapporti sul reale andamento del mercato del settore e fornire un supporto conoscitivo a quanti direttamente coinvolti in termini operativi o di regolazione amministrativa e ambientale.

L' Ambito Territoriale Ottimale

Il Rapporto si incentra preliminarmente sulla nozione di Ambito Territoriale Ottimale nell'ordinamento vigente, evidenziando come la Corte di Giustizia delle Comunità europee, la Corte Costituzionale e la magistratura amministrativa abbiano puntualmente ribadito, in più occasioni, che la bacinizzazione - con le conseguenti limitazioni alla circolazione dei rifiuti - **debba propriamente riferirsi ai rifiuti urbani e non alle attività di smaltimento dei rifiuti speciali o alle attività di recupero,** anche in ragione della variabilità della produzione e del mercato.

Il Rapporto evidenzia inoltre che da un lato la normativa ambientale sembra convergere, in termini di obiettivo, verso un unico Ambito Territoriale Ottimale come luogo geografico e sede amministrativa per la gestione unitaria dei rifiuti prodotti su un dato territorio, superando la frammentazione gestionale connessa e conseguente alla privativa comunale e assicurando a livello di bacino l'autosufficienza nello smaltimento; d'altro lato la stessa normativa consente però di **distinguere tra Ambito Ottimale ai fini dello smaltimento finale e Ambito ai fini della raccolta e del trasporto dei rifiuti urbani**. Distinzione formale poi ampiamente sviluppata a livello di legislazione regionale e di piani, dove risultano quasi sempre individuati **sub–bacini**, rispetto al livello provinciale, ai fini della raccolta e trasporto dei rifiuti urbani.

Parallelamente in non poche regioni è individuato, ai fini dello smaltimento finale - soprattutto dove sono previsti o realizzati impianti di termovalorizzazione - un Ambito di dimensioni geografiche superiori a quello provinciale. Esempi evidenti sono la **Lombardia,** che ha fatto coincidere con il territorio della regione l'Ambito Territoriale Ottimale a fini dello smaltimento, ma anche la **Sicilia**, dove sono previsti 27 sub-ambiti per la raccolta e il trasporto e quattro termovalorizzatori in tutto il territorio per servire le 9 province e i 27 subambiti e la **Campania**, dove è implicita la scissione tra soggetto che gestisce gli impianti di trattamento finale e soggetti deputati alla gestione delle fasi a monte.

L'analisi concreta, condotta regione per regione, contenuta nella parte centrale del Rapporto e la teoria economica, esposta nelle conclusioni, convergono quindi nell'attestare che **la fase della raccolta dei rifiuti non è associata alla presenza di rilevanti economie di scala.**

La raccolta dei rifiuti è tuttora un'attività ad elevata intensità di lavoro, anche se l'innovazione tecnologica ha progressivamente aumentato il peso del fattore capitale. In particolare, la dimensione ottimale dell'ambito risulta funzionale ai costi della logistica (centro operativo, stazione di trasferenza, officina, ecc.) e ai costi di spostamento di uomini e mezzi, ed è influenzata essenzialmente dalla densità abitativa. L'ambito ottimale di raccolta dipende, quindi, dalle caratteristiche morfologiche ed urbanistiche del territorio, mentre l'assenza di economie di scala oltre una certa soglia dimensionale giustifica e/o impone di suddividere gli ATO per sub-ambiti territoriali.

Si tratta di un aspetto importante sotto il profilo della **contendibilità**. È evidente che se il dimensionamento del servizio in termini geografici e di abitanti serviti non supera determinate soglie sono di più gli operatori che possono competere. Nelle attività di raccolta, gli investimenti fissi sono principalmente costituiti dall'acquisto degli automezzi, che oltretutto non sono vincolati all'uso in una specifica località e sono pertanto in parte recuperabili (*no sunk cost condition*): si tratta quindi di attività in teoria fortemente contendibili, come attesta la rilevante presenza di imprese private nel mercato. La definizione di Ambiti di dimensioni eccessive avrebbe l'effetto di limitare in senso oligopolistico la concorrenza senza ragioni di ordine né tecnico né economico.

Come evidenziato anche nel capitolo finale del Rapporto, sono diverse invece le caratteristiche del trattamento e dello smaltimento dei rifiuti. Le attività risultano caratterizzate da connotazioni tecnologiche complesse, e presentano delicate implicazioni di natura ambientale.

La fase del trattamento, sia per quanto riguarda gli impianti di incenerimento che gli impianti di produzione di compost e CDR, risulta fortemente capital intensive e presenta economie di scala assai spiccate soprattutto per quanto riguarda la termodistruzione. Anche in relazione alla necessità di assicurare il conferimento dei rifiuti prodotti in misura adeguata alle capacità dell'impianto, il trattamento dei rifiuti si configura come un settore caratterizzato da un limitato numero di operatori più stabili sul territorio, in cui anche la concorrenza deve articolarsi diversamente rispetto alla concorrenza per la raccolta.

La contendibilità del mercato e le forme di gestione

Negli anni più recenti i crescenti vincoli di finanza pubblica e i sempre più complessi problemi di carattere ambientale connessi alla gestione dei rifiuti hanno favorito nel settore delle utilities ambientali il verificarsi di cambiamenti nella struttura dell'offerta.

Gli obiettivi sono stati prevalentemente perseguiti agendo contemporaneamente in due direzioni: da un lato favorendo la progressiva introduzione di una maggiore competizione nelle forme di gestione, al fine di favorire maggiore efficienza, efficacia ed economicità del servizio di igiene urbana e dall'altro promuovendo una parziale/totale privatizzazione delle società pubbliche.

Fino ad oggi questo processo non ha tuttavia prodotto i risultati attesi. **In molte realtà territoriali del nostro Paese non si sono ancora create le condizioni per lo sviluppo di un vero mercato competitivo e di dimensioni industriali**. Il Rapporto mostra, però, un'evoluzione interessante in alcune realtà regionali, dal **Piemonte alla Sicilia**, passando per la **Toscana, l'Emilia Romagna** e la **Calabria**. In queste regioni, con modelli operativi assolutamente diversi, si persegue la separazione tra regolazione e gestione e/o forme di partenariato pubblico/privato in un quadro contrassegnato dal perseguimento di obiettivi di sviluppo industriale anche in termini dimensionali.

E' tuttavia un processo in corso: troppo spesso laddove il servizio veniva gestito in affidamento diretto, si riscontra tutt'oggi una tendenza a confermare gli affidamenti agli operatori pubblici esistenti, senza il ricorso a procedure ad evidenza pubblica, allargando a volte l'area del monopolio all'intero ATO. Anche in realtà regionali dove il processo di costituzione degli ambiti ottimali sembra avanzato (come ad esempio l'**Emilia Romagna**), in effetti questo è da ricondurre più alla concentrazione di imprese pubbliche, cioè a una concentrazione dell'offerta in condizioni di monopolio, che a una concentrazione della domanda.

Cambiamenti sono comunque rilevabili nella struttura degli operatori del mercato e, più in generale, nel rapporto fra pubblico e privato, con la creazione di nuove società miste pubblico-private generalmente di dimensioni piuttosto rilevanti e con la trasformazione delle stesse società ex municipalizzate in società miste, anche con una significativa partecipazione dei privati.

Il Rapporto esamina, **nel secondo capitolo**, le recenti modifiche legislative in **materia di servizi pubblici locali**, introdotte con la manovra finanziaria per il 2004: il processo di industrializzazione del comparto della gestione dei rifiuti urbani, la definizione ed attuazione degli Ambiti Territoriali Ottimali e la disciplina delle forme di gestione dei servizi pubblici locali sono infatti fortemente intrecciati.

In particolare il d.d.l. di delega al Governo per il riordino della legislazione in materia ambientale, il cui testo originario era presentato dall'attuale Esecutivo il 19 ottobre 2001, intende, tra l'altro, concludere il progetto di liberalizzazione delle *local public utilities*, individuando i criteri fondamentali del processo per il settore della gestione dei rifiuti urbani e assimilati, collegando l'affidamento dei servizi tramite gara alla realizzazione degli Ambiti Ottimali ed alla costituzione di un soggetto amministrativo d'Ambito.

La riforma attuata con l'art. 14 del recente decreto legge n. 269 del 30 settembre 2003, convertito con modificazioni in legge 24 novembre 2003, n. 326 e il successivo intervento contenuto nell'art. 4, comma 234, legge 24 dicembre 2003, n. 350 (legge finanziaria 2004) hanno però cambiato la disciplina di riferimento. Mentre la riforma di cui all'art. 35, legge n. 448/2001 a regime prevedeva solo la procedura concorsuale ad evidenza pubblica per l'affidamento dei servizi e, per la gestione degli impianti, anche la forma della società mista a prevalente capitale pubblico, **la riforma attuata con la manovra finanziaria 2003 reintroduce l'affidamento diretto a società strumentali e interamente controllate dagli enti locali,** sia per la gestione dei servizi che per la gestione degli impianti, quale modalità alternativa alla gara; inoltre prevede la possibilità di erogazione del servizio **tramite società a capitale misto pubblico/privato**, mentre la precedente riforma aveva escluso a regime tale opzione per i servizi "a rilevanza industriale", riservandola ai soli servizi privi di rilevanza industriale.

Certamente l'intervento legislativo attuato con la manovra finanziaria per il 2004 sembra ripristinare la situazione giuridica antecedente alla riforma del 2001, ed in particolare il quadro normativo originario come definito dal d.lgs. 267/2000; gli aspetti critici della riforma si sommano poi a ulteriori ragioni di criticità insite nel nostro ordinamento, quali **la privativa per gli assimilati e la mancata definizione di parametri per l'assimilazione, che consentono un ingiustificato dilatarsi della nozione di servizio pubblico,** con le connesse limitazioni alla libera concorrenza e al mercato, con conseguenze spesso negative sotto il profilo dell'efficienza e dell'economicità.

Peraltro non deve sfuggire come la riforma potrebbe avere un impatto sul mercato diverso e più forte di quello che può apparire a prima vista, soprattutto se applicata puntualmente, senza rinvii e proroghe ulteriori. La nozione di "*in-house*", per esempio, non sembra attagliarsi più a molte delle ex aziende speciali, che sempre più spesso si caratterizzano per una autonomia decisionale e per il perseguimento di finalità imprenditoriali di sviluppo industriale anche fuori dal territorio di origine, o in attività diverse dai servizi pubblici.

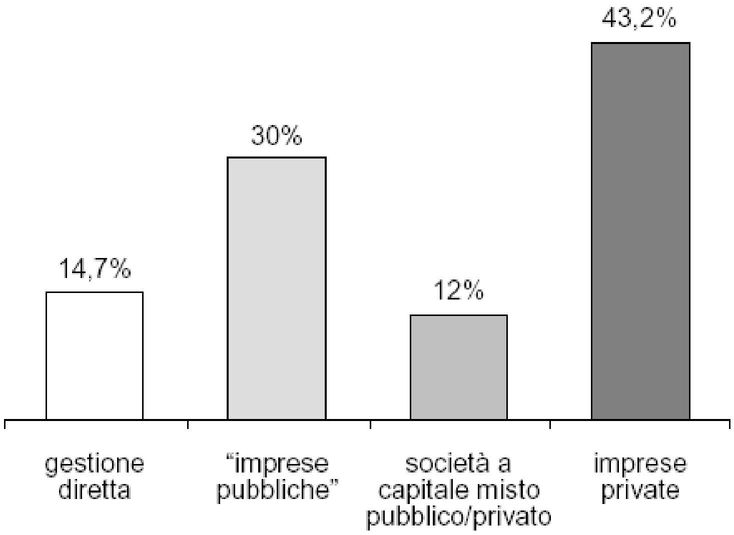
Una corretta applicazione delle norme non dovrebbe consentire che la gestione degli ATO sia affidata con modalità diverse dalla gara, eventualmente effettuata per la scelta del partner operativo.

Il continuo richiamo a nozioni comunitarie operato dal legislatore nazionale in tema di forme di gestione non potrà non determinare un più puntuale recepimento, nel campo dei servizi pubblici locali in genere, dei principi comunitari in materia di aiuti di stato e di trasparenza nelle relazioni finanziarie tra amministrazioni e imprese pubbliche (anche ai fini anche della disciplina della possibilità di operare in concorrenza). La maggiore omogeneità della legislazione nazionale rispetto a quella europea di riferimento costituisce inoltre un elemento di sostegno della legislazione nazionale stessa rispetto a possibili sviluppi a livello di normative regionali, che difficilmente, per questa ragione, potranno metterne in discussione gli aspetti fondanti.

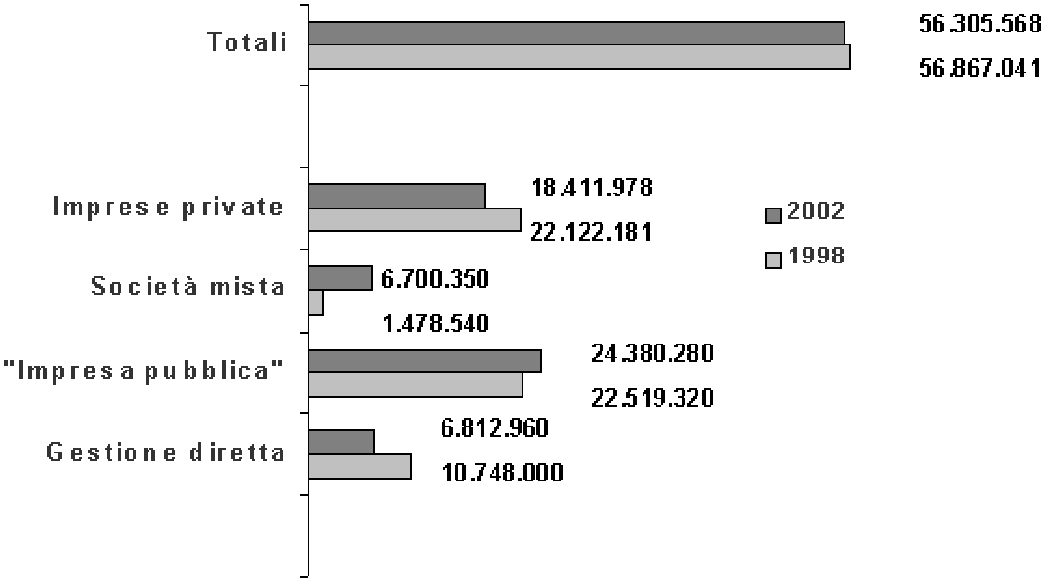
Il quadro delineato dalla riforma, ancorché scarsamente orientato verso il mercato e verso lo sviluppo industriale, dovrebbe quindi positivamente caratterizzarsi per un più alto livello di certezza giuridica, favorendo la possibilità di strategie di impresa più a lungo termine. I principi contenuti nella **"delega ambientale" dovrebbero poi costituire il quadro di riferimento specifico per il processo di industrializzazione e sviluppo dimensionale del comparto**.

L'effettività degli intenti dovrebbe però trovare una sede idonea di garanzia che verifichi l'andamento del mercato e abbia capacità di indirizzo sostenute da strumenti di intervento adeguati. Occorre evitare che la riforma attuata dal legislatore nel 2003 determini, soprattutto in una prima fase, un raffreddamento del processo di crescita del settore e del processo di realizzazione degli Ambiti Territoriali Ottimali, che fisiologicamente implicano un gestore scelto con modalità concorrenziali di dimensione sovracomunale, e quindi terzo rispetto ad ogni ente locale ed alle singole collettività,.

Sotto quest'aspetto emerge dal Rapporto - che riprende l'indagine condotta nella seconda metà del 2002 per conto di FISE Assoambiente da Field Service Italia sulle forme di gestione - **un quadro con una forte presenza di imprese private e a capitale misto,** ma ancora frenato da misure legislative e da dimensioni ad oggi ancora non adeguate a raccogliere appieno la sfida della modernizzazione



Forme di gestione della raccolta e trasporto – percentuali comuni serviti



Forme di gestione della raccolta e trasporto dei rifiuti solidi urbani: Proiezione in relazione al numero di abitanti.

La attuazione degli Ambiti Territoriali Ottimali nelle realtà regionali

La parte centrale del Rapporto è costituita dall'analisi, regione per regione, dello stato di attuazione e realizzazione degli Ambiti Territoriali Ottimali a livello provinciale. L'analisi ha approfondito gli aspetti normativi e di organizzazione dei bacini, evidenziando le diverse modalità attuative caratteristiche, individuate attraverso indagini documentali e/o sui siti di riferimento, sostenute da verifiche con le rappresentanze del sistema confederale e delle amministrazioni locali. Non si escludono scostamenti dovuti a evoluzioni non registrate dalle fonti citate o in esse riportati in modo incompleto. In alcuni casi, per non appesantire l'esposizione, alcuni dati sono stati riassunti.

VALLE D'AOSTA

Piano regionale — Approvato con DCR n. 3188/2003.

Delimitazione degli ATO — È stato realizzato un ATO unico per quanto riguarda lo smaltimento, mentre il territorio regionale è stato suddiviso in nove sottobacini, coincidenti con il territorio delle otto comunità montane e con il territorio del Comune di Aosta, per ciò che riguarda invece le operazioni di raccolta e trasporto.

Stato di attuazione — **Attuato**. Lo smaltimento è assicurato dalla Regione che è proprietaria degli impianti attraverso società a capitale misto partecipata dalla Regione stessa.

PIEMONTE

Normativa regionale	L.R. n. 24/2002
Piano regionale	DCR n. 436-11546 del 30 luglio 1997
Delimitazione degli ATO	Sono stati individuati otto ATO coincidenti con il territorio delle province alcuni dei quali sono suddivisi in bacini e per ogni bacino è prevista la realizzazione di un consorzio obbligatorio dei comuni che vi appartengono. È prevista la scissione dei consorzi presenti che mantengono esclusivamente le funzioni di governo mentre attribuiscono i complessi aziendali aventi ad oggetto l’attività di gestione in capo ad una società di capitali di nuova costituzione.
Piani provinciali	I piani provinciali sono stati tutti approvati dalla Giunta regionale, tranne il Piano di Cuneo.
Stato di attuazione	**In avanzata fase di attuazione**. La legge regionale attuativa dell’art. 35 della legge n. 448/2001 sta promuovendo un’interessante crescita imprenditoriale.

LOMBARDIA

Normativa regionale	L.R. n. 26/2003
Delimitazione degli ATO	La Regione è considerata bacino unico per quanto concerne l’autosufficienza a livello di smaltimento, mentre per l’organizzazione della raccolta e trasporto è suddivisa in 11 ATO coincidenti con il territorio delle province. In alcuni casi sono previsti dei sub-bacini di raccolta.
Piani provinciali	I piani provinciali risultano tutti approvati
Stato di attuazione	La nuova legge regionale è piuttosto recente pertanto il sistema **non risulta ancora implementato**.

TRENTINO ALTO ADIGE

Delimitazione degli ATO	La Regione è suddivisa in due ATO coincidenti con le province autonome. Il territorio di ogni provincia è a sua volta suddiviso in comprensori, enti pubblici intermedi tra provincia e comuni, che spesso non coincidono con i bacini d’utenza della gestione dei rifiuti.
Piani provinciali	I piani provinciali risultano entrambi approvati.
Stato di attuazione	**In corso di attuazione**.

VENETO

Normativa regionale	L.R. 3/2000
Piano regionale	DGR 451/2000
Delimitazione degli ATO	Sono presenti sette ambiti coincidenti con il territorio delle province.
Piani provinciali:	Tutte le province hanno provveduto all'adozione dei Piani che risultano tuttavia non ancora approvati a livello regionale.
Stato di attuazione	**Meramente formale**. Sono presenti enti di bacino a livello subprovinciale costituiti in base al previgente piano regionale.

FRIULI VENEZIA GIULIA

Normativa regionale	L.R. n. 30/1987
Piano regionale	Adottato con DPGR 44/01
Delimitazione degli ATO	Sono stati individuati quattro ATO coincidenti con il territorio delle province. Non sono previsti sub ambiti, tranne per il caso del Bacino 2 – Udinese, dove, secondo le previsioni del Piano, in fase attuativa ed ai soli fini organizzativi, la Provincia stessa provvederà alla individuazione di sub-bacini.
Piani provinciali	Solo la Provincia di Pordenone ha già adottato il Programma attuativo del Piano regionale; le altre province stanno ancora portando avanti l'iter di approvazione.
Stato di attuazione	**In corso di attuazione.**

LIGURIA

Normativa regionale	L.R. n. 18/1999
Piano regionale	Adottato con DCR 17/2000
Delimitazione degli ATO	Sono stati individuati quattro ATO coincidenti con il territorio delle province, le quali possono tuttavia prevedere, attraverso i Piani provinciali, gestioni a livello sub-provinciale, purché, anche in tali ambiti, sia superata la frammentazione della gestione.
Piani provinciali:	Tutti i Piani provinciali di gestione dei rifiuti sono stati adottati
Stato di attuazione	**In corso di attuazione**.

EMILIA ROMAGNA

Normativa regionale	L.R. n. 25/1999, modificata con L.R. n. 1/2003
Delimitazione degli ATO	Il territorio è suddiviso in nove ambiti coincidenti con le province e con l'area metropolitana di Bologna.
Stato di attuazione	**Attuato**. Molto avanzata la realizzazione di gestioni unitarie per ambiti, caratterizzata dalla concentrazione di imprese pubbliche già operanti sul territorio.

TOSCANA

Normativa regionale	L.R. n. 25/1998; attualmente è in discussione un progetto di modifica, rilevante sotto il profilo delle forme di gestione
Piano regionale	DCR n. 88/1998
Delimitazione degli ATO	Sono presenti dieci ATO, per lo più coincidenti con le province.
Piani provinciali:	Tutti adottati, alcuni in fase di modifica.
Stato di attuazione	**Attuato**. Sistema avanzato, con un ridotto numero di gestori, spesso a capitale misto, nel territorio della regione.

UMBRIA

Normativa regionale	L.R. n. 14/2002
Piano regionale	Adottato con DCR 226/2002
Delimitazione degli ATO	Sono stati individuati quattro ATO che non corrispondono al territorio delle province, in quanto, sulla base delle esperienze maturate durante la vigenza del previgente Piano regionale, si è individuata una scala ottimale di gestione di dimensione inferiore al territorio provinciale.
Piani provinciali	Spetta agli ATO predisporre dei Piani di gestione conformi agli indirizzi del D.lgs n. 22/1997 e a quanto stabilito dal Piano regionale.
Stato di attuazione	**In corso di attuazione,** ma sconta una certa carenza di strumenti che ne stimolino l'attuazione

MARCHE

Normativa regionale	L.R. n. 28/1999
Piano regionale	Adottato con DCR 284/99
Delimitazione degli ATO	Sono stati individuati quattro ATO coincidenti con il territorio delle province, i quali vengono a loro volta articolati dai Piani provinciali in Bacini di recupero e smaltimento ed Aree di raccolta.
Piani provinciali	Tutti i Piani provinciali di gestione dei rifiuti sono stati adottati.
Stato di attuazione	**In corso di attuazione**. I consorzi obbligatori sono stati costituti solo a Macerata.

LAZIO

Normativa regionale	L.R. n. 27/1998; Regione in emergenza: stato di emergenza prorogato sino al 31 dicembre 2004, con D.P.C.M. del 23 gennaio 2004.
Piano regionale	Adottato con DCR n. 112/2002; Piano di emergenza del 15 giugno 2003.
Delimitazione degli ATO	Sono stati individuati cinque ATO coincidenti con il territorio delle province. Negli ATO di Roma e Latina sono stati individuati rispettivamente sei e tre sub-bacini.
Piani provinciali:	Tutti approvati tranne quello della Provincia di Frosinone.
Stato di attuazione:	**Meramente formale**

ABRUZZO

Normativa regionale	L.R. n. 83/2000
Piano regionale	Allegato alla L.R. n. 83/2000
Delimitazione degli ATO	Sono stati individuati quattro ATO coincidenti con il territorio delle province. In conseguenza dei tre livelli di governo stabiliti nel Piano regionale (ATO, Bacino di smaltimento, Area di raccolta), sono state previste forme di cooperazione tra i comuni ricadenti in ciascun ATO o in ciascun sub-ambito. I Consorzi presenti ricalcano quelli previsti dalla legge previgente.
Piani provinciali:	Solo le Province di Teramo e Chieti hanno approvato i Piani provinciali.
Stato di attuazione	**Non attuato**; a livello locale persistono situazioni diversificate in quanto alcuni comuni non aderiscono ai consorzi presenti o, pur aderendo, organizzano comunque in maniera autonoma la gestione dei rifiuti

MOLISE

Normativa regionale	L.R. n. 25/2003
Piano regionale	Ancora in vigore la L.R. 8 marzo 1984, n. 6, con la quale la Regione ha approvato il Piano regionale. Il Piano risulta aggiornato con DCR n. 10/2001, recante l'approvazione del Piano di emergenza dei rifiuti urbani nella Regione Molise.
Delimitazione degli ATO	Sono stati individuati tre ATO non coincidenti con il territorio delle province. All'interno di ciascun ATO sono stati individuati sottoambiti di riferimento.
Piani provinciali:	Il Piano provinciale di gestione dei rifiuti della provincia di Isernia risulta in fase di approvazione.
Stato di attuazione	**Non attuato**.

CAMPANIA

Normativa regionale	Regione in emergenza dal 1994 - L.R. n. 10/1993
Piano regionale	Piano del 31/12/1996, aggiornato con ord. 2/5/1997 e modificato sostanzialmente con ord. commissariale 319 del 30/9/2002
Delimitazione degli ATO	Identificati formalmente con il territorio delle province ai fini dello smaltimento e dell'organizzazione amministrativa (due sub-ambiti per Napoli); sono previsti 18 consorzi ex L.R. 10/93; la gestione della raccolta è demandata ai soggetti di cooperazione, mentre la gestione post-racccolta agli EPAR, Ente provinciale d'ambito; per lo smaltimento finale sono previsti termovalorizzatori gestiti da soggetti privati.
Stato di attuazione	**Sostanzialmente paralizzata**, anche per effetto di impugnative giudiziarie, l'efficacia dell'ord. 319; tuttora irrisolto il problema dell'autosufficienza regionale nello smaltimento.

PUGLIA

Normativa regionale	In emergenza dal 1994 – L.R n. 17/93 e 13/96
Piano regionale	Piano 6/3/2001, DPRG n. 41/2001, integrato con decreto n. 269/2002
Delimitazione degli ATO	15, ripartiti per le 5 province; prevista la costituzione di Autorità di bacino
Stato di attuazione	**In corso di attuazione**; a fine 2003 avviate le procedure di gara per buona parte dell'impiantistica finale prevista a superamento del sistema discarica.

BASILICATA

Normativa regionale	L.R. n. 6/2001
Piano regionale	Approvato contestualmente alla legge regionale.
Delimitazione degli ATO	Sono stati individuati due ATO coincidenti con il territorio delle province.le caratteristiche del territorio e la distribuzione della popolazione hanno favorito la suddivisione degli ATO in sub-bacini autosufficienti dal punto di vista dello smaltimento.
Piani provinciali:	Entrambe le province della Basilicata hanno predisposto il Piano provinciale di organizzazione della gestione dei rifiuti.
Stato di attuazione	**Formalmente attuato**, ma gli impianti sono ancora in corso di realizzazione

CALABRIA

Normativa regionale	In emergenza dal 1997
Piano regionale	Approvato nel 2001
Delimitazione degli ATO	5 ATO corrispondenti alle province – 14 sub-bacini, con gestione da parte di società miste di bacino della raccolta differenziata, non esclusa peraltro la gestione integrata.
Stato di attuazione	**In avanzato stato di attuazione**.

SARDEGNA

Piano regionale	Approvato con DGR n. 57/2 del 17 dicembre 1998.
Delimitazione degli ATO	Gli Ambiti coincidono con le province; le modalità organizzative e gestionali di ciascun ATO devono essere esplicate attraverso sub-ambiti; i comuni devono convenzionarsi, per la costituzione di consorzi per la gestione unitaria.
Piani provinciali:	Sono in fase di predisposizione i Piani provinciali di Oristano e Sassari.
Stato di attuazione	**Non attuato**: i servizi consortili coinvolgono solo una piccola parte dei comuni, con una popolazione solo dell’8% su base regionale.

SICILIA

Normativa regionale	In emergenza dal 1999
Piano regionale	Adottato con ord. comm. 1166/2002
Delimitazione degli ATO	In teoria coincidenti con le 9 province – Ai fini dello smaltimento si prevede peraltro una dimensione sovraprovinciale – 4 termovalorizzatori – e ai fini della raccolta sono istituiti 25 (poi divenuti 27) sub-ambiti, con gestione da parte di S.p.A. d’ambito.
Piani provinciali:	Piani predisposti dalle S.p.A. d’ambito nel 2003.
Stato di attuazione	**In corso di attuazione** – le S.p.A. d’ambito sono già costituite.

Emergono anche dal suesposto quadro riassuntivo le interessanti e stimolanti disomogeneità e differenze tra regioni, a riprova di un “federalismo” sostanziale, con valore positivo per gli stimoli che ne derivano, anche se vi sono situazioni di inefficienza che devono essere poi sanate da interventi esterni, come si è verificato nelle regioni dichiarate in **stato di emergenza**.

Tra gli elementi da considerare, lo sviluppo delle società miste, sia con riferimento agli impianti che alla gestione dei servizi; significative in merito esperienze come quelle della **Calabria,** che ha promosso la costituzione di società miste per la gestione delle raccolte differenziate, creando realtà industriali sul territorio prima non esistenti per realizzare attività che non erano effettuate in maniera sufficiente. Da rilevare che le società miste si realizzano nel settore sia come società nuove che per effetto della privatizzazioni di società esistenti, e sono presenti soprattutto nel Centro Italia.

Significativo, sotto altro profilo, quanto si sta verificando in **Piemonte** per effetto del recepimento a livello regionale della riforma contenuta nell’art. 35 della legge n. 48/2001, con una separazione tra funzioni di controllo e regolazione amministrativa rispetto alla gestione operativa, che sta comportando un interessate, anche se non ancora consolidato, sviluppo imprenditoriale.

Peraltro in molte regioni, non solo del Sud e delle Isole, la presenza percentualmente importante di imprese private si accompagna a una persistente frammentazione gestionale. Occorrerà pertanto che i processi di sviluppo non penalizzino l’imprenditoria locale perseguendo logiche di concentrazione che risulterebbero anticoncorrenziali.

Le conclusioni

Conclude il Rapporto un’analisi economica – curata da CLES S.r.l. con la supervisione scientifica del Prof. Paolo Leon - volta ad approfondire le implicazioni degli Ambiti Territoriali Ottimali, valutare le prospettive del mercato ambientale, con riferimento sia alla gestione dei servizi che degli impianti, e delineare linee di indirizzo per gli operatori economici e le amministrazioni interessate.

Emerge, da alcune prime analisi comparate, che la **concorrenza per il mercato**, volta a individuare il gestore, è spesso più efficace ed efficiente di una liberalizzazione totale dei servizi, che possono essere offerti da una pluralità di operatori in concorrenza tra loro nel medesimo ambito.

Da un punto di vista empirico appare quindi opportuno ed economicamente conveniente affidare la raccolta dei rifiuti ad unico operatore per ciascun ambito o sub ambito territoriale al fine di non duplicare i costi del servizio. La gestione dei rifiuti è quindi di fatto un monopolio naturale contendibile e la concorrenza si può sviluppare in linea di massima solo tra soggetti che si contendono l’affidamento del servizio o dei diversi servizi che compongono la attività. E’ quindi corollario che il regolatore disponga di tutte le informazioni necessarie per regolamentare efficacemente il settore, evitando il determinarsi di distorsioni in termini di efficienza allocativa.

L’analisi si conclude individuando o confermando alcuni punti fermi che sono le premesse di nuovi approfondimenti e di nuovi sviluppi:

1. **L'attuazione degli ATO è necessaria**. Pur con tutte le particolarità e i distinguo che si è cercato di evidenziare, l'unico elemento certo è rappresentato proprio dalla opportunità di accelerare il processo di formazione degli ATO, come precondizione necessaria – seppure non sufficiente – allo sviluppo di un mercato più competitivo ed efficiente. Se la possibilità di massimizzare le economie di scala attraverso l'identificazione della "giusta dimensione" degli ATO non è agevole la definizione di ATO adeguati contribuisce comunque ad accrescere l'efficienza del sistema.

2. **Realizzare gli ATO è possibile**. Le leggi e i piani regionali prevedono tutti la costituzione di ATO, ovvero ne delegano la perimetrazione alle Province. I Piani provinciali attribuiscono quasi tutti agli ATO ruoli precisi nel campo delle localizzazione e del dimensionamento degli impianti di smaltimento e in molti casi sono previste anche forme di consorzio obbligatorio dei comuni per effettuare la raccolta o procedere al suo affidamento. Lo scarso grado di attuazione non sembra per lo più imputabile a carenze normative – o di pianificazione – se non per il fatto che le leggi regionali sui rifiuti in genere non prevedono strumenti di enforcement (incentivi o penalizzazioni analoghi a quelli che la legge nazionale prevede per esempio per il conferimento in discarica – con lo scopo di incentivare la RD e gli impianti tecnologici –; oppure poteri sostitutivi in caso di inerzia dei comuni o dei consorzi).

3. **L'attuazione degli ATO non è sufficiente**. La costituzione degli ATO – anche laddove sta avvenendo - non sempre sta portando alla nascita di un sistema realmente competitivo. Per ciò che riguarda i servizi di raccolta e trasporto dei rifiuti sembra riscontrabile una tendenza da parte dei nuovi ATO o sub ATO a confermare l'affidamento diretto alle società pubbliche o miste che erano già in precedenza affidatarie del servizio. Maggiori spazi di mercato per i privati sembrerebbero viceversa aprirsi nel campo della realizzazione e/o gestione degli impianti di trattamento e smaltimento dei rifiuti.

4. **Quello degli ATO non è comunque un mercato unico**. E' opportuno che il concetto di ATO venga chiaramente distinto in due livelli: raccolta - ed eventualmente impianti di trattamento intermedio – e impianti finali (discarica e inceneritori): il primo livello a carattere subprovinciale (in linea di massima); il secondo a carattere provinciale o interprovinciale. Questo permette una razionalizzazione (selezione e/o concentrazione) degli operatori della raccolta a livelli ottimali – o comunque non antieconomici – senza legarla alla disponibilità di impianti tecnologici complessi (inceneritori) o di difficile localizzazione (discariche) che lascerebbero uno spazio eccessivo agli operatori già presenti.

5. **Le soluzioni gestionali vanno ancora "studiate"**. Il D.Lgs. 22/97 e s.m.i. prescrive la costituzione degli ATO e la gestione comune dei rifiuti urbani da parte dei comuni inclusi nel suo perimetro, senza però indicarne le forme. I modelli gestionali presenti nelle diverse realtà territoriali del nostro Paese (gestore unico integrato verticalmente/frammentazione delle gestioni; affidamento della gestione dei servizi ad imprese pubbliche, private o miste) sono pertanto il risultato di scelte in gran parte operate in ciascun contesto regionale e locale e quindi influenzate da fattori di natura politica, sociale ed economica. A ciò si aggiunga il fatto che molte Regioni meridionali (Puglia, Campania, Sicilia, Calabria) ma anche del Centro (Lazio) si trovano attualmente in uno stato di emergenza, che si protrae purtroppo da diversi anni. Appare quindi opportuna una più approfondita analisi comparata dei livelli di produttività, efficacia ed efficienza dei diversi modelli gestionali per evidenziare e/o confermare gli aspetti caratteristici più rilevanti o più complessi.

6. **Quale mercato e con quali regole?** Il criterio del massimo ribasso, frequentemente utilizzato in sede di gara, sembra destinato a privilegiare le imprese meno dotate dal punto di vista delle professionalità, delle attrezzature, e in qualche caso della stessa regolarità. Orientare la selezione verso **l'offerta economica più vantaggiosa** comporta invece una valutazione delle competenze progettuali, tecniche, organizzative e di programmazione delle imprese concorrenti, favorendo le più strutturate e innovative (anche nella raccolta c'è un amplissimo spazio di innovazione, non tanto nei mezzi, quanto nell'impiego di ICT e di sistemi georeferenziati (SIT) nella programmazione dei percorsi di raccolta e nella gestione degli uomini e dei mezzi. Ma soprattutto in questo modo si possono selezionare e stimolare migliori competenze tecniche nella gestione degli impianti.

Lo sviluppo dimensionale delle imprese connesso con la realizzazione degli ATO incrementerà il ricorso a appalti/subappalti da parte del gestore di riferimento: occorrerà introdurre regolazioni e controlli per assicurare trasparenza ed adeguate garanzie ed evitare che venga ribaltato sul subfornitore l'onere di perseguire a tutti i costi il risparmio economico.

Regione Emilia Romagna

La normativa

La Regione Emilia Romagna ha provveduto a dare specifica attuazione alle disposizioni del D.Lgs. n. 22/1997 in materia di Ambiti Territoriali Ottimali, attraverso l'adozione della L.R. n. 25/1999, concernente la "Delimitazione degli ambiti territoriali ottimali e la disciplina delle forme di cooperazione tra gli Enti locali per l'organizzazione del servizio idrico integrato e del servizio di gestione dei rifiuti urbani".

L'articolo 2 di tale legge, recentemente modificata con L.R. n. 1/2003, ha individuato, in corrispondenza con il territorio di ciascuna Provincia e con l'Area metropolitana di Bologna, i seguenti nove ambiti:

- Ambito Territoriale Ottimale di Piacenza
- Ambito Territoriale Ottimale di Parma
- Ambito Territoriale Ottimale di Reggio Emilia
- Ambito Territoriale Ottimale di Modena
- Ambito Territoriale Ottimale di Bologna
- Ambito Territoriale Ottimale di Ferrara
- Ambito Territoriale Ottimale di Ravenna
- Ambito Territoriale Ottimale di Forlì-Cesena
- Ambito Territoriale Ottimale di Rimini

I comuni e le province di ciascun ATO, hanno poi provveduto a costituire una forma di cooperazione per la rappresentanza unitaria degli interessi degli enti locali associati e per l'esercizio unitario di tutte le funzioni amministrative spettanti ai comuni, scegliendo tra le forme della convenzione e quella del consorzio di funzioni. Le forme di cooperazione così definite, l'ultima delle quali costituita già nell'ottobre del 2002, esercitano le proprie funzioni come Agenzia di ambito per i servizi pubblici, avente personalità giuridica di diritto pubblico.

L'Agenzia è dunque il nuovo soggetto pubblico cui compete l'organizzazione, in forma associata, del servizio di gestione dei rifiuti urbani su scala provinciale, al fine di garantirne la gestione unitaria secondo criteri di efficienza, efficacia ed economicità, nel rispetto dell'ambiente e del territorio. All'Agenzia compete l'esercizio unitario delle funzioni amministrative di organizzazione, regolazione e vigilanza di tale servizio pubblico, precedentemente svolte dai singoli comuni, con esclusione di ogni attività di gestione diretta del servizio medesimo. Ad essa spetta inoltre la scelta della forma di gestione e la definizione dei rapporti con i gestori dei servizi anche per quanto attiene alla relativa instaurazione, modifica o cessazione.

Ai sensi dell'art. 16 della L.R. n. 25/1999, al fine di superare la frammentazione delle gestioni e razionalizzare l'organizzazione del servizio, le Agenzie, entro diciotto mesi dalla loro istituzione, devono effettuare le necessarie ricognizioni per individuare le gestioni esistenti che operano in coerenza con le previsioni del Piano provinciale di gestione e che rispondono ai criteri di efficienza, efficacia ed economicità. Le gestioni che non rispondono a tali requisiti e le gestioni dirette devono essere superate attraverso la confluenza in quelle ammesse o attraverso l'individuazione di un nuovo soggetto gestore.

Le Agenzie provvedono successivamente a stipulare, con le gestioni salvaguardate, una convenzione per la gestione del servizio nel periodo di transizione, la quale, a seconda dei parametri fissati dallo stesso articolo, può avere una durata variabile dai tre ai dieci anni. In particolare le convenzioni hanno la durata di cinque anni qualora stipulate con un soggetto derivante dalla fusione di almeno due delle gestioni esistenti e salvaguardate, e di dieci anni qualora stipulate con un gestore che effettui il servizio per almeno il settantacinque per cento della popolazione dell'Ambito. Nei sei mesi antecedenti la scadenza della convenzione l'Agenzia espleta le procedure per l'affidamento del servizio di gestione dei rifiuti urbani ai sensi della normativa vigente.

Queste disposizioni assumono particolare rilievo se si considera che l'Emilia Romagna si caratterizza per la forte presenza di imprenditoria pubblica (di origine municipale, con molti casi di gestione pluriservizio), la quale risulta predominante sia rispetto al privato, sia in riferimento alle gestioni in economia, oramai in progressiva diminuzione. Nel tempo è inoltre cresciuta l'estensione territoriale di impresa e dunque la dimensione dei servizi stessi; tale tendenza si sta ulteriormente sviluppando in questo periodo grazie ad una politica industriale di alleanze e di aggregazione delle imprese.

Tra queste va rammentata in particolare la recente costituzione di Hera Holding S.p.A., dal 1° novembre 2002, frutto dell'unione di 12 imprese[1]. E' interessante poi notare l'evoluzione in corso nel versante ovest della Regione, dove si stanno realizzando accordi e varie forme di alleanze che potrebbero portare nel medio termine anche alla costituzione di un secondo importante polo gestionale di gestione dei rifiuti. Infatti AGAC di Reggio Emilia si è aggiudicata il 40% di Tesa S.p.a., di cui il Comune di Piacenza è il socio di maggioranza (58%).

Come vedremo meglio in seguito tuttavia, non tutte le Agenzie hanno ultimato le ricognizioni, e conseguentemente in alcuni Ambiti Territoriali Ottimali non sono ancora state stipulate le convenzioni per la gestione del servizio relativo ai rifiuti

[1] AMF (Faenza), Ami (Imola), Amia (Rimini), Amir (Rimini), Area (Ravenna), Asc (Cesenatico), Geat (Riccione), Seabo (Bologna), Sis (S. Giovanni in Marignano), Taularia (Imola), Team (Lugo) e Unica (Forlì – Cesena), a cui di recente si è aggiunta l'acquisizione (42%) dell'Agea di Ferrara.
La nuova società e stata suddivisa in cinque società operative:
- Hera Bologna S.r.l.: è la società operativa territoriale che opera nel territorio servito dall'ex Seabo S.p.A. nella Provincia di Bologna. Comuni serviti: 49.
- Hera Ami S.r.l.: è la società operativa nata dalla fusione della Amf (Faenza) e di Ami (Imola). Comuni serviti : 25.
- Hera Ravenna S.r.l.: ricopre il territorio precedentemente servito da Area e Team. Comuni serviti: 12
- Hera Forlì-Cesena S.r.l.:Questa società ricopre il territorio di Unica S.p.A. (nata dalla fusione di Cis, Aura e Amga) e di Asc Cesenatico. Comuni serviti: 30.
- Hera Rimini S.r.l.: sono confluite AMIA S.p.A., AMIR S.p.A., SIS S.p.A. e dal 1° luglio 2003 anche Geat S.p.A. Comuni serviti: 35 (di cui 15 nella provincia di Pesaro-Urbino).

urbani. L'art. 16, L.R. n. 25/1999 prevede comunque che, qualora l'Agenzia non provveda entro diciotto mesi dalla sua istituzione, la Giunta regionale, previa diffida ad adempiere nel termine di trenta giorni, può nominare un commissario ad acta per provvedere agli adempimenti necessari.

In ogni caso, con la stipula della convenzione, l'Agenzia subentra ai comuni nel rapporto con le forme di gestione ed organizza le attività del servizio nel rispetto delle previsioni dei Piani provinciali di gestione dei rifiuti. E' da notare che l'art. 18 bis della L.R. n. 25/1999, prevede la possibilità, per il gestore affidatario, di effettuare il servizio pubblico anche a mezzo di società operative da esso controllate maggioritariamente. In tale caso l'eventuale scelta del socio privato delle società operative è effettuata attraverso procedure ad evidenza pubblica e il rispetto delle clausole della convenzione è garantita da un disciplinare d'obbligo predisposto dall'Agenzia di ambito.

Gli Ambiti Territoriali Ottimali

Piacenza

I 48 comuni e la Provincia di Piacenza si sono costituiti in Consorzio nell'ottobre del 2002, ma l'Agenzia d'ambito non ha ancora ultimato le ricognizioni previste dall'art. 16 della L.R. n. 25/1999. Attualmente la gestione dei servizi di raccolta dei rifiuti urbani e differenziati nell'ATO di Piacenza è dunque realizzata con due modalità principali, rispettivamente in economia ed attraverso una società per azioni a prevalente capitale pubblico.

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
Tesa	S.p.A.	43	258.665	98,2%
In economia		5	4.644	1,8%

Dati Relazione annuale sullo stato dei servizi idrici, di gestione dei rifiuti urbani e sull'attività svolta – Anno 2003 – Autorità regionale per la gestione dei servizi idrici e di gestione dei rifiuti urbani – Regione Emilia Romagna [2]

Tesa S.p.A. è attualmente controllata dal Comune di Piacenza (58% delle azioni) ed è partecipata da AGAC S.p.A (40% delle azioni) e dal Consorzio Ambientale Pedemontano (2% delle azioni). La presenza di TESA S.p.A. nei comuni della Provincia è molto variegata rispetto alla tipologia di servizi offerti. Eccettuato il capoluogo, infatti, ciascun comune ha scelto di stipulare o meno convenzioni per ciascun servizio di raccolta differenziata.

Di conseguenza, TESA S.p.A. svolge in alcuni comuni della Provincia tutti i servizi di raccolta, in altri solo quelli per alcune frazioni. Anche per quanto riguarda le isole ecologiche, in alcuni casi TESA S.p.A. si fa carico dell'intera gestione mentre in altri svolge il solo servizio di svuotamento dei contenitori e trasporto dei materiali.

[2] I dati della presente così come delle successive tabelle sono tratti dalla Relazione annuale sullo stato dei servizi idrici, di gestione dei rifiuti urbani e sull'attività svolta – Anno 2003 – Autorità regionale per la gestione dei servizi idrici e di gestione dei rifiuti urbani – Regione Emilia Romagna. Si richiamano anche gli elaborati dell'Osservatorio sui Servizi Pubblici della Regione.

Parma

La forma di cooperazione scelta dai comuni e dalla Provincia di Parma è il Consorzio, costituito nell'ottobre del 2002. Anche in questo Ambito Territoriale Ottimale sono ancora in corso le ricognizioni per individuare le gestioni esistenti che operano in coerenza con le previsioni del Piano provinciale di gestione e che rispondono ai criteri di efficienza, efficacia ed economicità.

La situazione attuale relativamente al servizio di gestione dei rifiuti urbani è dunque la seguente:

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
AMPS	S.p.A.	25	270.129	70,2%
Oppimitti	S.r.l.	15	46.103	12%
Manutencoop	Soc. Coop.	2	41.230	10,7%
AGAC	S.p.A.	4	25.347	6,6%
Economia	-	1	2.180	0,5%

AMPS S.p.A. è una azienda multiutility, nata come azienda municipalizzata e trasformata in società per azioni nel 1998 e parzialmente privatizzata[3].

Reggio Emilia

Gli Enti locali della Provincia di Reggio Emilia hanno provveduto ad associarsi tramite la forma della Convenzione già nel dicembre del 2001. L'Agenzia d'ambito dell'ATO di Reggio Emilia sta tuttavia ancora ultimando le ricognizioni per il servizio di gestione dei rifiuti urbani. La situazione attuale è dunque la seguente:

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
AGAC	S.p.A.	37	402.561	85,9%
SABAR	S.p.A	8	66.173	14,1%

AGAC Servizi energetici e ambientali è la Società per azioni di proprietà di tutti i 45 Comuni della Provincia di Reggio Emilia. E' stata costituita il 1 febbraio 2001, dalla trasformazione del Consorzio AGAC, ed è operante dal 1974. Serve 41 comuni, 37 della Provincia di Reggio Emilia e 4 della Provincia di Parma.

SABAR S.p.A. invece è l'azienda degli 8 Comuni della Bassa Reggiana che dal 1° ottobre 1994 gestisce i servizi ambientali nel territorio di riferimento.

Modena

Il Consorzio dell'ATO di Modena è stato costituito il 18 marzo del 2003. Dalle ricognizioni effettuate dall'Agenzia d'ambito è emerso che le gestioni effettuate da

[3] L'attuale assetto societario di AMPS S.p.A. vede come azionista di maggioranza il Comune di Parma (64,29%), seguito dalla LDV Holding B.V. (San Paolo IMI – 17,31), dalla Edizioni Holding S.p.A. (Gruppo Benetton – 17,31%) e dal Comune di Noceto (1,03%).

META S.p.A. nel settore del ciclo dei rifiuti urbani presentano i requisiti di salvaguardabilità di cui all'art. 16 della L.R. n. 25/1999.
I comuni che effettuavano una gestione diretta possono dunque affidarle, previo consenso dell'Agenzia, la gestione del ciclo dei rifiuti o suoi segmenti, anche anticipatamente rispetto alla stipula delle relative convenzioni.

META S.p.A. è una società per azioni a prevalente capitale pubblico nata dall'unificazione di due aziende municipalizzate modenesi, l'AMIU che operava nel settore ambientale e l'AMCM attiva nel settore energetico. I suoi principale azionisti sono i Comuni di Modena, Castelfranco, Vignola, Pavullo nel Frignano e Spilamberto, nonché la Carimonte Holding S.p.A. ed altri azionisti privati. AIMAG S.p.A. invece, nata nel 1970 come azienda speciale del Consorzio tra i Comuni di Mirandola, San Felice e Cavezzo, si è trasformata in Società per azioni il 1° gennaio 2001.

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
META	S.p.A.	29	366.822	58,4%
AIMAG	S.p.A.	10	134.472	21,4%
SAT	S.p.A.	5	105.335	16,8%
Sorgea	S.r.l.	1	15.117	2,4%
Economia	-	2	6.434	1,0%

Bologna

I sessanta comuni e la Provincia di Bologna si sono associati tramite Convenzione nel gennaio del 2002. L'Agenzia d'ambito per i servizi pubblici dell'ATO di Bologna ha terminato la ricognizione amministrativa, infrastrutturale, gestionale ed economico-finanziaria del servizio gestione rifiuti urbani ed ha concluso per la salvaguardabilità di HERA S.p.A. La durata della convenzione da stipularsi con tale società non è stata ancora determinata, ma verrà stabilita solo in seguito all'accertamento dei parametri di cui all'art. 16 della L.R. n. 25/1999.

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
Hera	S.p.A	32	719.355	79%
Co.se.a Ambiente	S.p.A.	14	55.169	6,1%
Manutencoop	Soc.Coop. a.r.l.	1	15105	1,6%
Brodolini	S.r.l.	3	29.150	3,2%
Tuttoservizi	S.p.A.	1	3.613	0,4%
CUTI	Soc.Coop. a.r.l.	1	5.177	0,6%
CMV	S.r.l.	1	6.653	0,7%
Economia		7	76.370	8,4%

Hera Bologna S.r.l. è una delle cinque società operative territoriali interamente controllate dalla capogruppo Hera S.p.A., la quale definisce le linee strategiche e coordina le attività operative a livello centrale. Le Società Operative Territoriali, ciascuna nelle aree geografiche di propria competenza, hanno il compito di eseguire le attività operative connesse ai servizi pubblici offerti dal Gruppo HERA.

Il CO.SE.A. Consorzio Servizi Ambientali è un Ente pubblico economico nato nel 1993 dalla trasformazione del "Consorzio per la gestione della discarica controllata dell'Appennino Bolognese", è costituito da 22 comuni associati di cui 7 nella Regione Toscana (Provincia di Pistoia) e 15 nella Regione Emilia-Romagna (Provincia di Bologna). E' strutturato come Ente pubblico a struttura aziendale e si è ormai definitivamente affermato come Consorzio interregionale multiservizi che opera su tutta l'area appenninica posta a cavallo delle due province, quella bolognese e quella pistoiese.

Ferrara

Gli enti locali della provincia di Ferrara si sono associati tramite convenzione nell'aprile del 2002, ma l'Agenzia d'ambito non si è ancora insediata. Non sono di conseguenza iniziate le ricognizioni per verificare le gestioni esistenti che operano in coerenza con le previsioni del Piano provinciale di gestione e che rispondono ai criteri di efficienza, efficacia ed economicità.

La situazione attuale nel territorio dell'ATO di Ferrara è dunque la seguente:

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
AREA	S.p.A.	17	102.255	29,5%
CMV Servizi	Azienda speciale	3	40.114	11,6%
AGEA	S.p.A.	1	131.408	37,9%
Soglia (dal 01.07.01)	Azienda speciale	4	21.716	6,2%
Economia	-	4	51.227	14,8%

Ravenna

I diciotto comuni e la Provincia di Ravenna si sono associati tramite convenzione già nel luglio del 2000. Dalle ricognizioni effettuate dall'Agenzia d'ambito è emerso che tutte le gestioni esistenti risultano salvaguardabili in quanto, almeno il 60% dei parametri relativi alle tre macro aree in cui è stata divisa l'analisi, rientra all'interno dei valori- limite definiti per il riconoscimento della salvaguardia.

Sono state considerate meritevoli di salvaguardia le seguenti gestioni:

- AMF S.p.A.;
- AMI S.p.A.;
- AREA S.p.A.;
- TEAM S.p.A.

L'assemblea ha approvato all'unanimità le "salvaguardie" in data 14 marzo 2002, senza disporre nulla sulla durata delle stesse. Tutte e quattro le società sono confluite in HERA S.p.A, operativa nel settore delle multiutility dal 1° novembre 2002, che è divenuta titolare di tutti i rapporti contrattuali in essere.

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
Hera	S.p.A.	18	356.903	100%

Forlì – Cesena

I trenta comuni e la Provincia di Forlì-Cesena si sono associati tramite convenzione nel novembre del 2000. L’Agenzia d’ambito ha terminato l’istruttoria nel gennaio del 2003, concludendo per la “salvaguardabilità” di HERA S.p.A, la quale ricopre ora il territorio di Unica S.p.A. (nata dalla fusione di Cis, Aura e Amga) e di Asc Cesenatico.

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
Hera	S.p.A.	27	348.895	97,1%
Sogliano Ambiente	S.p.A.	3	10.496	2,9%

Rimini

I venti comuni e la Provincia di Rimini si sono costituiti in consorzio nel settembre del 2000. Le ricognizioni effettuate dall’Agenzia d’ambito hanno rilevato che AMIA S.p.A. e GEAT S.p.A. sono gestioni salvaguardabili, poiché rispondono alle previsioni del piano provinciale di gestione, nonché ai criteri di efficienza, efficacia ed economicità, così come stabilito dall’art. 16 della LR n. 25/1999.

L’Agenzia di ambito ha inoltre rilevato che AMIA S.p.A. effettua il servizio sul 75% della popolazione dell’ambito, ed ha quindi deliberato di concederle la salvaguardia del ciclo integrato rifiuti per la durata di 10 anni a decorrere dalla stipula della convenzione. L’11 marzo 2002, l’Assemblea dell’ATO ha infine deliberato la concessione della salvaguardia per il servizio gestione rifiuti solidi urbani a GEAT S.p.A. per la durata di 3 anni dalla stipula della convenzione. Dal 1° novembre 2002 entrambe le Società sono confluite in HERA S.p.A., che è dunque divenuta titolare di tutti i rapporti contrattuali in essere.

Gestione	Forma giuridica	Numero Comuni serviti	Popolazione servita	Percentuale popolazione
Hera	S.p.A.	20	270.530	100%

Gli impianti

Si riporta qui di seguito, a conclusione dell’analisi dell’organizzazione regionale, la situazione impiantistica esistente in relazione ai diversi ambiti sopra esaminati.

GREEN PAPER
ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

Since 1999, five purely contractual PPP set-ups have been applied in the Netherlands. All of them are in the form of a Design, Build, Finance & Maintain/Operate contract, whereby the private sector is asked to take responsibility for the design, building, maintenance/operation and financing, advance or otherwise.

These contracts do not have any separate legal framework. The five contracts referred to above could be concluded under the existing legislation. A contract whereby the final user compensates the private party (the concession holder) directly for the service to be provided (as in a real toll set-up) did not occur in the Netherlands yet. One of the obstacles for this is that specific legislation has been created in the Netherlands for the levying of toll with restrictions on the collection of toll.

2. In the Commission’s view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

So far the negotiations procedure has proved sufficiently adequate to award concession contracts. If the competitive dialogue procedure would provide more opportunities for companies to have a dialogue with prospective contract-awarding authorities without running the risk of an invalid tendering procedure, this competitive dialogue procedure would be the preferred one, provided that no further requirements are set with respect to the tendering procedure, which is complex enough as it is.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

No.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

Dutch building companies have participated in such procedure. In our opinion, the tendering rules are interpreted by the Tendering Agencies in a stricter manner than necessary to prevent unequal treatment from occurring. As a result, the degree of freedom is limited and it is difficult to translate the wishes of the final user in a correct manner. Particularly, matching the designing party to the final user may be complex due restricted possibilities for consultation. In addition, the procedure's requirements are extensive and the process is time-consuming. Organisation of financing in combination with the tendering procedure causes problems, both regarding the accrual of costs and acquiring sufficient security. These problems occur with the financiers' due diligence. In the current Dutch procedure this expensive procedure is undertaken simultaneously with the negotiating phase, whereas due diligence should actually, according to its nature, be reserved for a phase in which there is no competition any longer.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

Yes, the legal framework is sufficiently detailed. For the time being, language barriers and specific properties (financing structure and size) of the Dutch market do not make it attractive to foreign tenderers. In view of the limited number of projects, competition in the current Dutch market is already rather prominent as far as purely contractual PPP set-ups are concerned.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

No.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

If this would be so, we think that the same regulatory framework may be used for both subcategories of purely contractual PPP set-ups.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

Yes, the finest example is the Zuiderzeelijn project. The government adopts private initiative and then markets it on the market with open competition, and it even arouses enthusiasm among the competition abroad with regard to the project.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

Private initiative will succeed only, if the initiative itself is appreciated. Thus private initiatives must be rewarded, irrespective of whether the party proposing the initiative is going to carry it out. Thus the development of the initiative must be rewarded, and then this initiative may be adopted by the government and be marketed whilst involving the competition.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

Four out of five projects in the Netherlands are now in the phase of execution.

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

No, contracts have provisions to prevent the pushing up of prices. In view of the transfer of the risk to private parties in the PPP set-ups, which is an important motive for the added value of these set-ups, the involvement of other service providers is not desirable. For they will disrupt the balance between the integral service and the distribution of risks. Individual provisions in the contract itself must prevent unfair competition from occurring. Consequently, such provisions are prevailing in the contracts we are cognisant of.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

No.

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other "standard clauses" which are likely to present similar problems?

No, step-in type arrangements are an integral part of the set-up. Without such rights a PPP set-up cannot be structured and PPP set-ups will cease to exist. Step in type arrangements are an indispensable component for effecting the transfer of risks and the linking of performance to financing. Without step-in rights, financiers do not have any guarantee to safeguard their investments and they will cease to invest in PPP projects.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

No.

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

No.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

The concession holder himself must be able to decide whether and how to attract subcontractors. For the contract awarding authority has secured the best contract (party) by integrally contracting out the entire service. Further guidelines will undo this optimum organisation and only be a cause for pushing up costs. The concession holder must not have any obligations at Community level with regard to the subcontracting of components of contractual PPP projects.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

No.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

No specific experience, although we think that European rules on tendering are not/have not been complied with as strictly as in the case of purely contractual PPP set-ups. In view of the fact that, only recently, a number of projects has as yet been put out to tender after intervention of the legal system, it may be assumed that the current regulatory framework provides sufficient handles for guaranteeing the compliance with equal competition.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

If any authority wishes to participate in an institutional PPP, and contributes funds or other means, such set-up must be open to participation on the basis of competition, without any other considerations playing a part. It is, however, very well possible that the current regulatory framework provides sufficient opportunities to do so.

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

None.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of “good practice” in this framework which could serve as a model for the Union? If so, please elaborate.

Apparently, a procedure has been developed in the Unites States whereby private initiatives are encouraged with due observance of competition by limiting the timeframe of the tendering procedure. This enables the private party that takes the initiative to take a lead on the competition where its initiative is concerned (for they have made preparations at their own initiative).

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

Yes, PPP is a continually changing and developing market. Thus, items for consideration may alter as yet.

PKPP/ /KK/2004

European Commission
Consultation on the Green Paper on Public-Private Partnerships and Community Law on Public Procurement
C 100 2/005
B - 1049 Brussels
Belgium

E-mail: Markt-D1-PPP@cec.eu.int

Dear Sir, Dear Madam,

In response to the publication on April 30, 2004 of a European Commission Green Paper on Public-Private Partnerships (PPP) and Community Law on Public Contracts and Concessions (COM (2004) 327 Final), hereby I would like to present the position of the Polish Confederation of Private Employers (PKPP) on the above-mentioned document.

The PKPP welcomes the initiative undertaken by the European Commission, in order to launch a broad discussion about the issue of PPP and the need for further community action in this regard. We believe it is a useful start of a long-term regulatory strategy.

First of all, let us stress that Poland belongs to the group of countries, along Spain, France and Italy, which decided to establish a distinct PPP legislative framework. The PPP Act was adopted by the Polish Government on June 29, 2004 and sent to Parliament for further discussion (please see the draft PPP Act of June 21, 2004 available on PKPP website in Polish version through the following link: http://www.prywatni.pl/upload/plik/rm_projekt_ppp_2243831.pdf). The PKPP believes that its adoption would be particularly useful in the face of the challenge constituted by the absorption of EU Structural Funds and the co-financing of infrastructural projects in Poland.

As long as the EU Commission Green Paper is concerned, here are our general remarks concerning its contents:

- We understand the significance of the new Directive 2004/18/EC on Public Procurement and especially the role of the procedure of "competitive dialogue" (Art. 29) for very complex contracts.

- We believe that community action is necessary in the field of PPP, in order to ensure a full compliance with art. 43 and 49 TEC. Hence, we support the view that the absence of EU rules "may serve as an unjustifiable barrier to the freedom to provide services or freedom of establishment" . It is of great importance that a Directive is proposed, introducing homogeneous rules for the sector of concessions and other forms of PPP, thus guaranteeing an indispensable legal certainty, which is a pre-requisite for the development of trans-European PPP projects. The lack of clear community rules may also lead to increased transaction costs and a sub-optimal allocation of resources throughout the Union. The introduction of a single legal framework could also intensify the absorption of Structural and Cohesion Funds intended for the 10 New Member States of the EU.

- The PKPP believes it is necessary to base the reflection of the Commission on the Eurostat decision of February 11, 2004 (STAT/04/18) regarding the accounting treatment in national accounts of contracts undertaken by government units in the framework of partnerships with non-governmental units. The off-balance sheet classification of such assets, in case the private partner meets the conditions enumerated therein, is crucial in the face of budgetary constraints in most EU countries. It is key to the development of more PPP schemes in Europe.

We hope that this Green Paper will lead in the near future to a concrete Commission Action Plan on PPP.

Sincerely,

By proxy,

Krzysztof Kania

RESPUESTAS DE LA ASOCIACIÓN ESPAÑOLA DE ABASTECIMIENTOS DE AGUA Y SANEAMIENTOS (AEAS) AL LIBRO VERDE DE LA COMISIÓN EUROPEA SOBRE LA COLABORACIÓN PÚBLICO-PRIVADA Y EL DERECHO COMUNITARIO EN MATERIA DE CONTRATACIÓN PÚBLICA Y CONCESIONES. COM (2004) 327 FINAL

INTRODUCCIÓN

La AEAS es una Asociación que agrupa a Organismos públicos, Servicios, Empresas y profesionales interesados en la problemática que plantea el agua y el saneamiento. Constituida en 1973, sus miembros colectivos (Corporaciones locales, empresas mixtas y privadas) suministran agua y prestan servicios de saneamiento a una población Española de más de 31 millones de habitantes. Entre sus fines principales está la colaboración con las administraciones Españolas competentes en la normativa, uso, control y calidad sanitaria del agua, y también con los organismos de la Unión Europea que tengan competencia en esas materias.

La AEAS es miembro de la EUREAU, Unión Europea de Asociaciones Nacionales de Distribuidores de Agua y de Servicios de Saneamiento, de la que son miembros veinte de los Estados miembros de la Unión Europea, de la mayor parte de los Estados candidatos y de todos los Estados de la AELC. En el seno de dicha Asociación, la AEAS ha contribuido de forma activa a las reflexiones y debates de la Unión Europea que inciden de forma directa o indirecta sobre el sector del agua. No obstante, la peculiaridad del mercado español del agua – resultado de las condiciones geográficas, climatológicas y medioambientales particulares del país y de sus tradiciones jurídicas – aconseja su participación directa y constructiva en los procedimientos legislativos de la Unión Europea sobre el sector del agua.

La AEAS comparte mayoritariamente los razonamientos recogidos en el escrito presentado por la EUREAU al Libro Verde sobre Colaboración Publico-Privada (CPP en adelante), pero considera conveniente hacer unas reflexiones complementarias que ayuden a conocer a fondo la realidad y las tradiciones existentes en el sector del agua, antes de llevar a cabo cualquier iniciativa destinada a regular el sector de las concesiones y otras formas de CPP (véase el punto 15 del Libro Verde)

Por ello, se presentan a continuación los comentarios de la AEAS a las preguntas que formula la Comisión Europea en el Libro Verde sobre CPP, precisando que solo se comentan las cuestiones que tienen incidencia sobre el sector del agua, absteniéndose de formular comentarios generales sobre CPP.

LA CPP PURAMENTE CONTRACTUAL Y EL DERECHO COMUNITARIO DE LA CONTRATACIÓN PÚBLICA Y LAS CONCESIONES

1. *¿Qué tipos de operaciones de CPP puramente contractual conoce? ¿Se ha creado en su país algún marco específico (legislativo o de otro tipo) para esta clase de operaciones?*

La colaboración público privada está regulada en España por el Real Decreto Legislativo 2/2000, de 16 junio, que aprueba el Texto Refundido de la Ley de Contratos de las Administraciones Públicas. En concreto, el Real Decreto regula en su Libro Segundo (artículos 120 y siguientes) las diferentes modalidades de contratos que pueden celebrar las entidades o empresas privadas con la Administración Pública.

Esta legislación se refiere tanto a contratos de concesión de obras públicas (que puede incluir la realización de la obra y la explotación de la misma o sólo esta última) como de gestión de servicios públicos. La concesión de obra pública ha sido recientemente regulada mediante al ley 13/2003, de 23 de mayo, que ha incorporado un nuevo título al Libro Segundo de la Ley mencionada antes. Ambas leyes tienen carácter de básicas y por tanto son aplicables a todas las Administraciones Públicas: la estatal, la autonómica y la local. No obstante, en el ámbito de los servicios de titularidad local - como es el caso de los servicios de abastecimiento de agua y saneamiento - debe tenerse también muy en cuenta el Reglamento de Servicios de las Corporaciones Locales (del año 1955, que se encuentra vigente en todo lo que no contradice las normas legales anteriormente citadas), y en su caso las normas reglamentarias aprobadas por las Comunidades Autónomas.

La modalidad de contrato más frecuente en el abastecimiento y saneamiento de poblaciones es el contrato de gestión de servicios públicos, previsto y regulado en los artículos 154 y siguientes del mencionado RDL 2/2000. Según su artículo 156, la contratación de la gestión de los servicios públicos puede adoptar cuatro modalidades distintas:

a. concesión por la que el empresario gestiona el servicio a su propio riesgo y ventura,
b. gestión interesada, en cuya virtud la Administración y el empresario participan en los resultados de la explotación del servicio en la proporción que se establece en el contrato,
c. concierto con persona natural o jurídica que venga realizando prestaciones análogas a las que constituyen el servicio público de que se trate, y
d. sociedad de economía mixta en la que la Administración participa, por sí o por medio de una entidad pública, en concurrencia con personas naturales o jurídicas.

Por lo que se refiere al procedimiento de adjudicación, los contratos de concesión de obra pública y de gestión de servicios públicos se adjudican generalmente por concurso. Puede hacerse también mediante procedimiento negociado, por el que el contrato se adjudica a un empresario justificadamente elegido por la Administración previa consulta y negociación de los términos del contrato con uno o varios empresarios. Este tipo de adjudicación está restringido a casos en que no pueda promoverse concurrencia en la oferta, de imperiosa urgencia, contratos secretos o reservados, de presupuesto de primer establecimiento inferior a 30.000 euros y plazo inferior a cinco años, y los que no lleguen a adjudicarse por falta de licitadores.

La etapa de selección del socio privado

2. *En opinión de la Comisión, la transposición al Derecho nacional del procedimiento de diálogo competitivo permitirá que las partes interesadas dispongan de un procedimiento particularmente adaptado a la adjudicación de contratos calificados de contratos públicos durante la puesta en marcha de una CPP de tipo puramente contractual, al tiempo que se protegen los derechos fundamentales de los operadores económicos. ¿Comparte esta opinión? Si su respuesta es negativa, ¿por qué?*

AEAS no puede aún formular, en estos momentos, su posición sobre el procedimiento “de diálogo competitivo” previsto en la Directiva 2004/18/CE, pero expresa su preocupación ante la aplicación, sin matices, de este procedimiento a algunas fórmulas de la CPP. En este sentido considera que la reflexión y el debate sobre la CPP - y el más amplio sobre los contratos públicos - debería contemplar las ventajas e inconvenientes de la aplicación del procedimiento de “diálogo competitivo” a algunas de las fórmulas de la CPP, en concreto a las concesiones.

No obstante, puede avanzarse que dicho procedimiento debería estar reservado exclusivamente a los casos en que, por la complejidad del propio contrato, el organismo adjudicador no sea objetivamente capaz de definir los medios técnicos o la organización jurídica o financiera de un proyecto.

3. *En lo que se refiere a este tipo de contratos, ¿existen, en su opinión, otros elementos, diferentes de los relativos a la elección del procedimiento de adjudicación, que puedan plantear problemas en relación con el Derecho comunitario en materia de contratación pública? En caso afirmativo, ¿cuáles y por qué motivos?*

   Tal como se ha dicho, la AEAS no puede aportar actualmente una respuesta definitiva respecto a esta cuestión. Insiste en todo caso en la necesidad de llevar a cabo una reflexión exhaustiva sobre la aplicación del procedimiento de “diálogo competitivo” al sector del agua.

Colaboración de tipo puramente contractual: el acto de adjudicación se califica de concesión.

4. *¿Alguna vez ha organizado o deseado organizar un procedimiento de adjudicación de concesión o ha participado o deseado participar en un procedimiento de este tipo en la Unión Europea? ¿Qué experiencia conserva de ello?*

   La AEAS, en tanto que Asociación, no cuenta entre los objetivos que presiden a su actividad, participar en procedimientos de adjudicación de concesión en la Unión Europea. Sin embargo, algunos miembros de la AEAS han participado en procedimientos de adjudicación de contratos públicos en países de la Unión Europea. Considera por ello positivo que la Unión Europea inicie un estudio profundo de las distintas situaciones existentes con el fin de adoptar, en su caso, las iniciativas necesarias para garantizar el cumplimiento de los principios básicos de libre concurrencia, igualdad de trato y no discriminación en los Estados miembros que actualmente no disponen de legislación al respecto. No obstante y para no distorsionar la legislación existente en algunos países como España, Francia o Italia, la normativa a adoptar por la UE debiera ser de mínimos, prácticamente limitada a proclamar los principios básicos antes enunciados.

5. *¿Considera que el marco jurídico comunitario actual es lo suficientemente preciso como para garantizar la participación concreta y real de empresas o agrupaciones no nacionales en los procedimientos de adjudicación de concesiones? ¿Cree que, en general, se garantiza una competencia real en este marco?*

   Cuando una autoridad pública decide confiar la prestación de un servicio a un tercero, está obligada a respetar la normativa en materia de contratación pública y concesiones, aunque se trate de un servicio considerado de interés general. Además, el Parlamento Europeo ha reconocido que el cumplimiento de estas disposiciones legales puede constituir un instrumento eficaz para evitar las trabas indebidas de la competencia (véase el Libro Verde 1.1.7). Sin embargo, la AEAS considera que el actual marco jurídico comunitario no garantiza aún una competencia real entre operadores de diferentes Estados miembros. La Comisión Europea sigue sin tomar una posición clara y definitiva en relación con la situación de desigualdad de condiciones de competencia a las que están sometidas las empresas privadas originarias de Estados que poseen un nivel importante de apertura de su mercado respecto a las empresas públicas originarias de Estados cuyo mercado está cerrado a la competencia.

La AEAS considera que el actual marco jurídico comunitario debe ser perfeccionado en el sentido de garantizar una competencia real entre operadores del sector de diferentes Estados miembros. La AEAS ya trasladó en su momento a la Comisión Europea[1] que resulta imposible hablar de un "mercado del agua" a escala comunitaria. En este sentido, considera que el suministro del agua está estrechamente vinculado a condiciones geográficas y técnicas locales y su reglamentación tiene en cuenta las particularidades y tradiciones jurídicas aplicables en cada uno de los Estados miembros.

6. *¿Cree que es conveniente una iniciativa legislativa comunitaria destinada a regular el procedimiento de adjudicación de concesiones?*

La figura de la concesión administrativa, así como otras diversas formas de asociación entre el sector público y el sector privado, son objeto en España, Francia y otros países, de una detallada regulación, fruto de una larga tradición legislativa, administrativa y de jurisprudencia. Otros Estados miembros de la Unión, por el contrario, desconocen estas figuras o les otorgan una importancia menor.

En el primer grupo de Estados, el marco jurídico aplicable ha alcanzado una complejidad que no es fácilmente reducible a unas normas básicas. Entre otros aspectos, hay que tener en cuenta los siguientes: (i) modalidades de gestión directa e indirecta de los servicios públicos y las características más importantes de cada uno de los sistemas, con especial atención al de la concesión y a la empresa mixta; (ii) necesidad de mantener el equilibrio financiero del contrato; (iii) potestades de la Administración; (iv) derechos y deberes del concesionario; (v) pliegos de condiciones económicas y administrativas; (vi) plazos necesarios para recuperar las inversiones realizadas; (vii) régimen de tarifas; (viii) contratación de la gestión de servicios; (ix) responsabilidades por incumplimiento de obligaciones; (x) reglamentación de los servicios; y (xi) relación contractual con los usuarios.

Cualquier intento armonizador de la Comisión, en definitiva, debe partir de la existencia en algunos países de un régimen tradicional y consolidado. La caracterización de tales regímenes está intrínsecamente ligada a las tradiciones administrativas de cada país, formando un conjunto normativo de gran incidencia en la actividad económica en sectores muy diversos, en la actuación de las Administraciones públicas y en la gestión de servicios básicos.

Por todo ello, la Comisión debe plantearse la necesidad de instaurar un régimen uniforme de estos fenómenos en la UE. En opinión de la AEAS, resultaría más conveniente introducir algunas normas mínimas que elaborar *ex novo* un régimen exhaustivo que substituya o modifique radicalmente las legislaciones nacionales.

[1] Véanse las respuestas presentadas por la AEAS a las preguntas planteadas por la Comisión en el ámbito del Libro Verde sobre los servicios de interés general (COM(2003) 270 final – 15.09.2003

Cualquier iniciativa en este sentido debe ser estudiada con mucho detenimiento, pues se corre el riesgo de obligar a países con una larga tradición en la materia a introducir reformas cuyas consecuencias prácticas pueden acarrear serias dificultades para los operadores económicos que actúan en el sector del agua. En cualquier caso, se sugiere a la Comisión que promueva un estudio para identificar las coincidencias y las disparidades entre las legislaciones nacionales en vigor, de forma que se pudiera:

a. constatar la necesidad real de proceder a una armonización legislativa en el ámbito de la Unión Europea, y
b. en el supuesto de comprobar tal necesidad, construir un modelo legislativo que tenga en cuenta, lo máximo posible, las reglamentaciones nacionales existentes sobre el sector.

Si, finalmente, la Unión Europea opta por aprobar una iniciativa concreta que regule las CPP, la AEAS considera imprescindible que en la misma se incluya una definición precisa de qué es lo que debe entenderse por “tercero”, porque este concepto será el que, en definitiva, va a determinar la aplicación o no del régimen de concesiones públicas u otras fórmulas de CPP. En este sentido, cree que la legislación y jurisprudencia Españolas – en lo referente a la definición de “Tercero” - establece unos criterios que permiten determinar con precisión y claridad la aplicación, en cada caso, de la normativa sobre contratación pública. A efectos de aplicación del régimen de concesiones públicas u otras formas de CPP, la legislación Española considera como terceros (y, por tanto, sus contratos deben someterse a las normas de contratación pública), todas aquellas entidades en las que intervengan personas, privadas o públicas, distintas de la administración contratante. En cambio, no son terceros (y, por tanto, están exoneradas de la aplicación de las reglas de contratación pública) exclusivamente aquellas entidades con capital íntegramente público, creadas para la prestación de un servicio propio de la administración contratante. En este sentido, la AEAS considera que si la Comisión Europea decide aprobar una iniciativa de regulación de la CPP, la legislación Española podrá constituir una buena base de trabajo.

Si, finalmente, la Unión Europea considerase necesario adoptar una iniciativa legislativa específica, la AEAS considera también esencial que se tenga en cuenta que la duración de los contratos de CPP debe ser suficiente para permitir la amortización del capital invertido y para asegurar la eficiencia en la mejora constante de las redes e infraestructuras afectas al servicio. Y todo ello en aras a obtener no sólo una rentabilidad suficiente para el operador privado, sino, sobre todo, para conseguir una mayor eficacia en la propia prestación del servicio público concedido.

Un ejemplo de lo que se acaba de decir, en el sentido de que la duración de los contratos debe ser suficiente, puede encontrarse en la situación existente en España en relación con los contratos de gestión de las instalaciones de depuración de aguas residuales, que, en general, tienen una duración muy breve (incluso de un solo año). Tal brevedad conlleva problemas importantes de gestión del servicio, en primer lugar porque la propia naturaleza de los contratos imposibilita que las empresas que optan a los mismos sean suficientemente sólidas como para garantizar la correcta prestación del servicio; en segundo lugar, porque una perspectiva de negocio tan corta limita sobremanera el interés de la empresa gestora para acometer las necesarias inversiones que reviertan en la eficiencia de la gestión del servicio contratado.

7. *De manera más general, si considera que es necesario que la Comisión proponga una nueva acción legislativa, ¿cree que hay razones objetivas para que en dicho acto se contemplen todas las CPP de tipo contractual, tanto si se consideran contratos públicos como concesiones, para someterlas a regímenes de adjudicación idénticos?*

   Tal como se ha indicado, la AEAS no es partidaria de que se proceda a cualquier iniciativa legislativa a escala comunitaria sin llevar previamente a cabo un estudio exhaustivo sobre sus ventajas, inconvenientes y alcance. En efecto, y a primera vista, hay que tener en cuenta que la CPP obedece a criterios y está destinada a dar una respuesta – al menos en el sector del agua – a situaciones muy complejas en que hay que valorar no solo las responsabilidades compartidas, sino también el riesgo, la inversión, las obligaciones, la duración del contrato y los objetivos a alcanzar.

   Por todo ello, será bienvenida la iniciativa de la Comisión de llevar a cabo una reflexión más profunda en este ámbito sin que ello signifique, a priori, que se pretende uniformizar el régimen jurídico de la CPP con los demás contratos públicos.

Cuestiones específicas relativas a la selección de un operador económico en el marco de una CPP de iniciativa privada

8. *De acuerdo con su experiencia, ¿tienen los operadores no nacionales el acceso garantizado a las fórmulas de CPP de iniciativa privada? En particular, cuando los poderes adjudicadores invitan a presentar una iniciativa, ¿se suele dar una publicidad adecuada a la invitación, de manera que la información llegue a todos los operadores interesados? ¿Se organiza un procedimiento de selección realmente competitivo para la puesta en marcha del proyecto seleccionado?*

   En España no hay experiencia en el ámbito de la organización de una CPP de iniciativa privada. En cualquier caso, la AEAS considera que la legislación española en el ámbito de la CPP ya mencionada ofrece todas las garantías de no discriminación y transparencia necesarias a la participación de operadores no nacionales en procedimientos CPP en España.

9. *¿Cuál sería, en su opinión, la mejor fórmula para el desarrollo de operaciones de CPP de iniciativa privada en la Unión Europea en las que se garantice el respeto de los principios de transparencia, no discriminación e igualdad de trato?*

   De forma complementaria a la respuesta anterior, AEAS no puede aportar su opinión a esta cuestión ya que no posee suficiente información al respecto. No obstante, se considera que sería una buena cuestión para estudiar en el ámbito de la red de expertos nacionales que la Comisión tiene intención de instituir.

10. *¿Cuál es su experiencia en relación con la etapa posterior a la selección del socio privado en las operaciones de CPP contractuales?*

    En la etapa de ejecución del contrato ya concedido, los problemas más usuales que se producen se refieren a los casos en los que el contratista reclama la aplicación del principio de equilibrio económico de la concesión. Por ello, en el hipotético caso de que la UE acabe finalmente adoptando algún instrumento legislativo específico, será conveniente que el mismo previera de forma adecuada las causas y circunstancias en las que procederá la aplicación de aquel principio.

11. *¿Conoce algún caso en el que las condiciones de ejecución (incluidas las cláusulas de adaptación en el tiempo) hayan podido tener efectos discriminatorios o hayan podido constituir un obstáculo injustificado a la libre prestación de servicios o a la libertad de establecimiento? En caso afirmativo, describa el tipo de problemas encontrados.*

12. *¿Conoce alguna práctica o mecanismo de evaluación de ofertas con efectos discriminatorios?*

    Una de estas prácticas podría ser la de valorar criterios de admisión (experiencia, recursos, medios, etc.) una vez esta capacitación ya ha sido demostrada y validada por la propia administración, de tal manera que las ofertas se evalúan en la forma de un concurso de méritos y recursos en lugar de considerarse los aspectos esenciales del mismo (precio, proyecto, calidad, nivel de prestación, mejoras, etc.), en claro detrimento del fin de la licitación y en beneficio de los licitadores establecidos. En España tales situaciones acaban en general siendo controladas y corregidas por los Tribunales de Justicia.

13. *¿Está de acuerdo con la afirmación de la Comisión según la cual determinadas fórmulas de tipo step-in pueden plantear problemas en términos de transparencia e igualdad de trato? ¿Conoce otras «cláusulas tipo» cuya aplicación pueda plantear problemas similares?*

    La AEAS está de acuerdo con la afirmación de la Comisión, aunque considere que no es posible generalizarla. En efecto, determinadas cláusulas contractuales mediante las cuales las instituciones financieras se reservan el derecho de actuar en lugar del gestor del proyecto, o incluso designar un nuevo gestor de proyecto, pueden implicar en la práctica el cambio del socio privado sin convocatoria de concurso.

    En cualquier caso, se considera que hay que analizar con más detenimiento los casos que se hayan podido producir en la Unión Europea al abrigo de dichas cláusulas y, para responder a las inquietudes legítimas de la Comisión, cree que sería deseable que cualquier cambio significativo del contrato en relación con el operador sea sometido a autorización previa de la entidad adjudicadora, cuya resolución, a su vez, solo podrá basarse en motivos relacionados con la gestión del servicio.

14. *¿Considera necesario aclarar a escala comunitaria determinados aspectos correspondientes al marco contractual de las operaciones de CPP? En caso afirmativo, ¿a qué aspecto o aspectos debería referirse dicha aclaración?*

    Véase la respuesta a la pregunta 6.

15. *En el marco de las operaciones de CPP, ¿sabe de algún problema concreto que se haya planteado en materia de subcontratación? Descríbalo.*

    La AEAS no tiene conocimiento de ningún problema concreto.

16. *En su opinión, el fenómeno de las operaciones de CPP de tipo contractual, al implicar el traspaso de un conjunto de tareas a un único socio privado, ¿justifica la introducción de normas más detalladas o la ampliación del ámbito de aplicación en lo que se refiere a la subcontratación?*

    En el contrato de gestión de servicios públicos la legislación española solo contempla la subcontratación de prestaciones accesorias al contrato principal (artículo 170 del RDL 2/2000). En este sentido, la AEAS considera que la introducción de nuevas normas reguladoras armonizadas a nivel comunitario relativas a la subcontratación, debe necesariamente estar precedida de un estudio sobre las normativas nacionales existentes en los Estados miembros en este ámbito.

17. *De manera más general, ¿considera que debería adoptarse una iniciativa complementaria a escala comunitaria para aclarar u organizar las normas relativas a la subcontratación?*

    Véase la respuesta anterior.

LA CPP INSTITUCIONALIZADA Y EL DERECHO COMUNITARIO EN MATERIA DE CONTRATACIÓN PÚBLICA Y CONCESIONES

Toma del control de una entidad pública por parte de un operador privado

18. *¿Cuál es su experiencia en materia de puesta en marcha de operaciones de CPP de tipo institucionalizado? En concreto, ¿su experiencia le lleva a pensar que el Derecho comunitario en materia de contratación pública y concesiones se respeta en el caso de operaciones de CPP institucionalizada? Si su respuesta es negativa, ¿por qué?*

    La CPP de tipo institucionalizado supone la creación de una entidad en que participan, de manera conjunta, el socio público y el privado, sea mediante la creación de una entidad en que participan ambos sectores, sea mediante la entrada de capital privado en una empresa pública preexistente.

    Esta modalidad de prestación de los servicios públicos está perfectamente prevista y regulada en la legislación española prácticamente desde el primer momento en que se empezó a regular la intervención de las entidades privadas en la gestión de los servicios públicos. Tal regulación se encuentra no sólo en la legislación en materia de contratación pública (RDL 2/2000) sino también en el ámbito de los servicios públicos locales (como es el abastecimiento de agua) en la Legislación de régimen local (Ley 7/1985 Reguladora de las Bases de Régimen Local, RDL 781/1986 por el que se aprueban las disposiciones legales vigentes en materia de régimen local, y Decreto de 17 de junio de 1955 por el que se aprueba el Reglamento de Servicios de las Corporaciones Locales). Puede afirmarse que dicha legislación es suficientemente completa como para permitir al órgano contratante seleccionar la oferta más ventajosa y garantizar que dicha selección se realice respetando los principios de no discriminación, transparencia e igualdad.

    En todo caso, la AEAS considera conveniente que una eventual regulación Europea específica de los contratos de concesión bajo esta modalidad, establezca taxativamente que la selección del socio privado debe realizarse mediante un sistema de selección que prime la oferta técnica.

19. *¿Considera que debe tomarse una iniciativa a escala comunitaria para aclarar o precisar las obligaciones de los organismos adjudicadores en cuanto a las condiciones en las que deben ser convocados los operadores potencialmente interesados por un proyecto de tipo institucionalizado? En caso afirmativo, ¿en qué puntos particulares y en qué forma? Si su respuesta es negativa, ¿por qué?*

    En línea con todos los argumentos expuestos hasta ahora, la AEAS cree que antes de proceder a adoptar ninguna iniciativa a escala comunitaria de tipo normativo sería necesario estudiar en detalle las distintas situaciones existentes con el fin de poder garantizar el cumplimiento de los principios básicos de libre concurrencia, igualdad de trato y no discriminación en aquellos Estados miembros que en la actualidad no disponen de legislación al respecto.

    Este estudio debería permitir la adopción posterior de las iniciativas mínimas necesarias para asegurar que estas operaciones se realicen con una mayor transparencia, igualdad y no discriminación en aquellos países donde no existe legislación suficiente al respecto, pero al mismo tiempo respetando y no distorsionando el marco jurídico aplicable en aquellos países que, como España, tienen una larga tradición y experiencia normativa al respecto. Se trataría, como en el caso de la CPP puramente contractual, de medidas limitadas prácticamente a la proclamación de aquellos principios básicos de la contratación pública.

20. *¿Qué medidas o prácticas cree que constituyen obstáculos a la puesta en marcha de operaciones de CPP en el seno de la Unión Europea?*

    Como ya se dijo, la AEAS considera que en lo que respecta el sector del agua a nivel comunitario no se garantiza hoy por hoy la competencia real entre operadores económicos en el acceso a nuevos mercados; la AEAS cree que esto deriva de la naturaleza muy específica del sector del agua.

    Ello no impide que la AEAS invite la Comisión a llevar a cabo una reflexión mas profunda sobre los problemas de competencia que hayan podido ser detectados o que puedan plantearse en la Unión Europea.

21. *¿Conoce otras formas de CPP desarrolladas en terceros países? ¿Conoce ejemplos de «mejores prácticas» desarrolladas en este marco, que puedan servir de inspiración a la Unión? En caso afirmativo, ¿cuáles?*

    La AEAS desconoce otras formulas desarrolladas en países terceros que puedan servir de referencia a la UE.

22. *De forma más general, y teniendo en cuenta la necesidad de importantes inversiones en ciertos Estados miembros a fin de lograr un crecimiento económico social y sostenible, ¿estima que sería útil una reflexión colectiva sobre estas cuestiones, que se llevaría a cabo a*

intervalos regulares entre los sectores concernidos, y que permitiría un intercambio de mejores practicas?, ¿Considera que la Comisión debería propiciar una red de este tipo?

La AEAS es partidaria de llevar a cabo una reflexión colectiva, implicando a todos los operadores y sobre diversas cuestiones en el ámbito del sector del agua a nivel de la Unión Europea y acoge muy favorablemente la idea de la Comisión de crear y animar una red de expertos nacionales representantes de todos los sectores implicados en la prestación de servicios en el ámbito del agua con la finalidad de reflexionar en conjunto tanto sobre la problemática específica del sector como sobre las eventuales soluciones.

La AEAS llama finalmente la atención de la Comisión sobre la necesidad de tener en cuenta, en sus reflexiones, las especificidades del sector del agua, no solo en lo que respecta a la CPP, sino también y de forma más general, en el ámbito de la contratación pública, los servicios de interés general o las condiciones de competencia. En este sentido, se sugiere a la Comisión que impulse la creación de un grupo de trabajo formado por expertos nacionales y representantes de las Asociaciones nacionales del sector del agua, para que asesoren a la Comisión respecto a las iniciativas legislativas u otras que tenga la intención de llevar a cabo y que puedan tener efectos directos o indirectos sobre el sector. El mismo grupo podría encargarse de coordinar el estudio al que se hace referencia a lo largo del escrito que se presenta a la Comisión.

Madrid, 26 de julio de 2004

Asociación Española de Empresas Gestoras de los Servicios de Agua a Poblaciones

Sor Angela de la Cruz, 2 - 13ª - 28020 Madrid · Tel.: 915 700 001 Fax: 915 794 508,
aga@asoaga.com

RESPUESTAS DE LA ASOCIACIÓN ESPAÑOLA DE EMPRESAS GESTORAS DE LOS SERVICIOS DE AGUA A POBLACIONES (AGA) AL LIBRO VERDE DE LA COMISIÓN EUROPEA SOBRE LA COLABORACIÓN PÚBLICO-PRIVADA Y EL DERECHO COMUNITARIO EN MATERIA DE CONTRATACIÓN PÚBLICA Y CONCESIONES. COM (2004) 327 FINAL

INTRODUCCIÓN

La AGA fue creada en 1995 y es una Asociación de ámbito español integrada por entidades mercantiles, consorcios, y otras entidades y organismos públicos que gestionan, total o parcialmente, servicios comprendidos en el ciclo integral del agua.

Considerada por la Administración Pública española como la Asociación Empresarial más representativa del sector del agua, el personal integrado en las organizaciones de sus miembros supone el 40,3% de toda la población ocupada en dicho sector.

Entre los fines de la Asociación cabe destacar algunos, con clara vinculación a los temas suscitados por el Libro Verde sobre la Colaboración Público-Privada (CPP en adelante) a que se refiere este documento, que legitiman a la AGA como parte interesada en el debate:

- El análisis conjunto de los problemas comunes de su actividad económica y la promoción de iniciativas que mejoren los procesos productivos,
- la cooperación con otros grupos sociales en la tutela de los recursos hídricos y del medio ambiente,
- la armonización de los intereses de sus asociados sin coartar la libre competencia,
- el intercambio de informaciones y estudios para que los bienes y servicios se adapten a las necesidades y exigencias de los clientes, y
- la participación en la preparación de la normativa legal que afecte al sector, en especial la referida a recursos hídricos, modos de gestión de los servicios públicos y contratación administrativa.

Por su estrecho contacto con la Asociación Española de Abastecimientos de Agua y Saneamiento (AGA), la AGA ha tenido conocimiento de las respuestas dadas por aquella Asociación a las preguntas planteadas por la Comisión en el citado Libro Verde, que comparte en su totalidad, y reproduce poniéndolas en su propio nombre.

LA CPP PURAMENTE CONTRACTUAL Y EL DERECHO COMUNITARIO DE LA CONTRATACIÓN PÚBLICA Y LAS CONCESIONES

1. *¿Qué tipos de operaciones de CPP puramente contractual conoce? ¿Se ha creado en su país algún marco específico (legislativo o de otro tipo) para esta clase de operaciones?*

La colaboración público privada está regulada en España por el Real Decreto Legislativo 2/2000, de 16 junio, que aprueba el Texto Refundido de la Ley de Contratos de las Administraciones Públicas. En concreto, el Real Decreto regula en su Libro Segundo (artículos 120 y siguientes) las diferentes modalidades de contratos que pueden celebrar las entidades o empresas privadas con la Administración Pública.

Esta legislación se refiere tanto a contratos de concesión de obras públicas (que puede incluir la realización de la obra y la explotación de la misma o sólo esta última) como de gestión de servicios públicos. La concesión de obra pública ha sido recientemente regulada mediante al ley 13/2003, de 23 de mayo, que ha incorporado un nuevo título al Libro Segundo de la Ley mencionada antes. Ambas leyes tienen carácter de básicas y por tanto son aplicables a todas las Administraciones Públicas: la estatal, la autonómica y la local. No obstante, en el ámbito de los servicios de titularidad local - como es el caso de los servicios de abastecimiento de agua y saneamiento - debe tenerse también muy en cuenta el Reglamento de Servicios de las Corporaciones Locales (del año 1955, que se encuentra vigente en todo lo que no contradice las normas legales anteriormente citadas), y en su caso las normas reglamentarias aprobadas por las Comunidades Autónomas.

La modalidad de contrato más frecuente en el abastecimiento y saneamiento de poblaciones es el contrato de gestión de servicios públicos, previsto y regulado en los artículos 154 y siguientes del mencionado RDL 2/2000. Según su artículo 156, la contratación de la gestión de los servicios públicos puede adoptar cuatro modalidades distintas:

a. concesión por la que el empresario gestiona el servicio a su propio riesgo y ventura,
b. gestión interesada, en cuya virtud la Administración y el empresario participan en los resultados de la explotación del servicio en la proporción que se establece en el contrato,
c. concierto con persona natural o jurídica que venga realizando prestaciones análogas a las que constituyen el servicio público de que se trate, y
d. sociedad de economía mixta en la que la Administración participa, por sí o por medio de una entidad pública, en concurrencia con personas naturales o jurídicas.

Por lo que se refiere al procedimiento de adjudicación, los contratos de concesión de obra pública y de gestión de servicios públicos se adjudican generalmente por concurso. Puede hacerse también mediante procedimiento negociado, por el que el contrato se adjudica a un empresario justificadamente elegido por la Administración previa consulta y negociación de los términos del contrato con uno o varios empresarios. Este tipo de adjudicación está restringido a casos en que no pueda promoverse concurrencia en la oferta, de imperiosa urgencia, contratos secretos o reservados, de presupuesto de primer establecimiento inferior a 30.000 euros y plazo inferior a cinco años, y los que no lleguen a adjudicarse por falta de licitadores.

La etapa de selección del socio privado

2. *En opinión de la Comisión, la transposición al Derecho nacional del procedimiento de diálogo competitivo permitirá que las partes interesadas dispongan de un procedimiento particularmente adaptado a la adjudicación de contratos calificados de contratos públicos durante la puesta en marcha de una CPP de tipo puramente contractual, al tiempo que se protegen los derechos fundamentales de los operadores económicos. ¿Comparte esta opinión? Si su respuesta es negativa, ¿por qué?*

AGA no puede aún formular, en estos momentos, su posición sobre el procedimiento “de diálogo competitivo” previsto en la Directiva 2004/18/CE, pero expresa su preocupación ante la aplicación, sin matices, de este procedimiento a algunas fórmulas de la CPP. En este sentido considera que la reflexión y el debate sobre la CPP - y el más amplio sobre los contratos públicos - debería contemplar las ventajas e inconvenientes de la aplicación del procedimiento de "diálogo competitivo" a algunas de las fórmulas de la CPP, en concreto a las concesiones.

No obstante, puede avanzarse que dicho procedimiento debería estar reservado exclusivamente a los casos en que, por la complejidad del propio contrato, el organismo adjudicador no sea objetivamente capaz de definir los medios técnicos o la organización jurídica o financiera de un proyecto.

3. *En lo que se refiere a este tipo de contratos, ¿existen, en su opinión, otros elementos, diferentes de los relativos a la elección del procedimiento de adjudicación, que puedan plantear problemas en relación con el Derecho comunitario en materia de contratación pública? En caso afirmativo, ¿cuáles y por qué motivos?*

   Tal como se ha dicho, la AGA no puede aportar actualmente una respuesta definitiva respecto a esta cuestión. Insiste en todo caso en la necesidad de llevar a cabo una reflexión exhaustiva sobre la aplicación del procedimiento de "diálogo competitivo" al sector del agua.

Colaboración de tipo puramente contractual: el acto de adjudicación se califica de concesión.

4. *¿Alguna vez ha organizado o deseado organizar un procedimiento de adjudicación de concesión o ha participado o deseado participar en un procedimiento de este tipo en la Unión Europea? ¿Qué experiencia conserva de ello?*

   La AGA, en tanto que Asociación, no cuenta entre los objetivos que presiden a su actividad, participar en procedimientos de adjudicación de concesión en la Unión Europea. Sin embargo, algunos miembros de la AGA han participado en procedimientos de adjudicación de contratos públicos en países de la Unión Europea. Considera por ello positivo que la Unión Europea inicie un estudio profundo de las distintas situaciones existentes con el fin de adoptar, en su caso, las iniciativas necesarias para garantizar el cumplimiento de los principios básicos de libre concurrencia, igualdad de trato y no discriminación en los Estados miembros que actualmente no disponen de legislación al respecto. No obstante y para no distorsionar la legislación existente en algunos países como España, Francia o Italia, la normativa a adoptar por la UE debiera ser de mínimos, prácticamente limitada a proclamar los principios básicos antes enunciados.

5. *¿Considera que el marco jurídico comunitario actual es lo suficientemente preciso como para garantizar la participación concreta y real de empresas o agrupaciones no nacionales en los procedimientos de adjudicación de concesiones? ¿Cree que, en general, se garantiza una competencia real en este marco?*

   Cuando una autoridad pública decide confiar la prestación de un servicio a un tercero, está obligada a respetar la normativa en materia de contratación pública y concesiones, aunque se trate de un servicio considerado de interés general. Además, el Parlamento Europeo ha reconocido que el cumplimiento de estas disposiciones legales puede constituir un instrumento eficaz para evitar las trabas indebidas de la competencia (véase el Libro Verde 1.1.7). Sin embargo, la AGA considera que el actual marco jurídico comunitario no garantiza aún una competencia real entre operadores de diferentes Estados miembros. La Comisión Europea sigue sin tomar una posición clara y definitiva en relación con la situación de desigualdad de condiciones de competencia a las que están sometidas las empresas privadas originarias de Estados que poseen un nivel importante de apertura de su mercado respecto a las empresas públicas originarias de Estados cuyo mercado está cerrado a la competencia.

La AGA considera que el actual marco jurídico comunitario debe ser perfeccionado en el sentido de garantizar una competencia real entre operadores del sector de diferentes Estados miembros. La AGA ya trasladó en su momento a la Comisión Europea[1] que resulta imposible hablar de un “mercado del agua” a escala comunitaria. En este sentido, considera que el suministro del agua está estrechamente vinculado a condiciones geográficas y técnicas locales y su reglamentación tiene en cuenta las particularidades y tradiciones jurídicas aplicables en cada uno de los Estados miembros.

6. *¿Cree que es conveniente una iniciativa legislativa comunitaria destinada a regular el procedimiento de adjudicación de concesiones?*

La figura de la concesión administrativa, así como otras diversas formas de asociación entre el sector público y el sector privado, son objeto en España, Francia y otros países, de una detallada regulación, fruto de una larga tradición legislativa, administrativa y de jurisprudencia. Otros Estados miembros de la Unión, por el contrario, desconocen estas figuras o les otorgan una importancia menor.

En el primer grupo de Estados, el marco jurídico aplicable ha alcanzado una complejidad que no es fácilmente reducible a unas normas básicas. Entre otros aspectos, hay que tener en cuenta los siguientes: (i) modalidades de gestión directa e indirecta de los servicios públicos y las características más importantes de cada uno de los sistemas, con especial atención al de la concesión y a la empresa mixta; (ii) necesidad de mantener el equilibrio financiero del contrato; (iii) potestades de la Administración; (iv) derechos y deberes del concesionario; (v) pliegos de condiciones económicas y administrativas; (vi) plazos necesarios para recuperar las inversiones realizadas; (vii) régimen de tarifas; (viii) contratación de la gestión de servicios; (ix) responsabilidades por incumplimiento de obligaciones; (x) reglamentación de los servicios; y (xi) relación contractual con los usuarios.

Cualquier intento armonizador de la Comisión, en definitiva, debe partir de la existencia en algunos países de un régimen tradicional y consolidado. La caracterización de tales regímenes está intrínsecamente ligada a las tradiciones administrativas de cada país, formando un conjunto normativo de gran incidencia en la actividad económica en sectores muy diversos, en la actuación de las Administraciones públicas y en la gestión de servicios básicos.

Por todo ello, la Comisión debe plantearse la necesidad de instaurar un régimen uniforme de estos fenómenos en la UE. En opinión de la AGA, resultaría más conveniente introducir algunas normas mínimas que elaborar *ex novo* un régimen exhaustivo que substituya o modifique radicalmente las legislaciones nacionales.

Cualquier iniciativa en este sentido debe ser estudiada con mucho detenimiento, pues se corre el riesgo de obligar a países con una larga tradición en la materia a introducir reformas cuyas consecuencias prácticas pueden acarrear serias dificultades para los operadores económicos que actúan en el sector del agua. En cualquier caso, se sugiere a la Comisión que promueva

[1] Véanse las respuestas presentadas por la AGA a las preguntas planteadas por la Comisión en el ámbito del Libro Verde sobre los servicios de interés general (COM(2003) 270 final – 15.09.2003

un estudio para identificar las coincidencias y las disparidades entre las legislaciones nacionales en vigor, de forma que se pudiera:

a. constatar la necesidad real de proceder a una armonización legislativa en el ámbito de la Unión Europea, y
b. en el supuesto de comprobar tal necesidad, construir un modelo legislativo que tenga en cuenta, lo máximo posible, las reglamentaciones nacionales existentes sobre el sector.

Si, finalmente, la Unión Europea opta por aprobar una iniciativa concreta que regule las CPP, la AGA considera imprescindible que en la misma se incluya una definición precisa de qué es lo que debe entenderse por “tercero”, porque este concepto será el que, en definitiva, va a determinar la aplicación o no del régimen de concesiones públicas u otras fórmulas de CPP. En este sentido, cree que la legislación y jurisprudencia Españolas – en lo referente a la definición de “Tercero” - establece unos criterios que permiten determinar con precisión y claridad la aplicación, en cada caso, de la normativa sobre contratación pública. A efectos de aplicación del régimen de concesiones públicas u otras formas de CPP, la legislación Española considera como terceros (y, por tanto, sus contratos deben someterse a las normas de contratación pública), todas aquellas entidades en las que intervengan personas, privadas o públicas, distintas de la administración contratante. En cambio, no son terceros (y, por tanto, están exoneradas de la aplicación de las reglas de contratación pública) exclusivamente aquellas entidades con capital íntegramente público, creadas para la prestación de un servicio propio de la administración contratante. En este sentido, la AGA considera que si la Comisión Europea decide aprobar una iniciativa de regulación de la CPP, la legislación Española podrá constituir una buena base de trabajo.

Si, finalmente, la Unión Europea considerase necesario adoptar una iniciativa legislativa específica, la AGA considera también esencial que se tenga en cuenta que la duración de los contratos de CPP debe ser suficiente para permitir la amortización del capital invertido y para asegurar la eficiencia en la mejora constante de las redes e infraestructuras afectas al servicio. Y todo ello en aras a obtener no sólo una rentabilidad suficiente para el operador privado, sino, sobre todo, para conseguir una mayor eficacia en la propia prestación del servicio público concedido.

Un ejemplo de lo que se acaba de decir, en el sentido de que la duración de los contratos debe ser suficiente, puede encontrarse en la situación existente en España en relación con los contratos de gestión de las instalaciones de depuración de aguas residuales, que, en general, tienen una duración muy breve (incluso de un solo año). Tal brevedad conlleva problemas importantes de gestión del servicio, en primer lugar porque la propia naturaleza de los contratos imposibilita que las empresas que optan a los mismos sean suficientemente sólidas como para garantizar la correcta prestación del servicio; en segundo lugar, porque una perspectiva de negocio tan corta limita sobremanera el interés de la empresa gestora para acometer las necesarias inversiones que reviertan en la eficiencia de la gestión del servicio contratado.

7. *De manera más general, si considera que es necesario que la Comisión proponga una nueva acción legislativa, ¿cree que hay razones objetivas para que en dicho acto se contemplen todas las CPP de tipo contractual, tanto si se consideran contratos públicos como concesiones, para someterlas a regímenes de adjudicación idénticos?*

Tal como se ha indicado, la AGA no es partidaria de que se proceda a cualquier iniciativa legislativa a escala comunitaria sin llevar previamente a cabo un estudio exhaustivo sobre sus ventajas, inconvenientes y alcance. En efecto, y a primera vista, hay que tener en cuenta que la CPP obedece a criterios y está destinada a dar una respuesta – al menos en el sector del agua – a situaciones muy complejas en que hay que valorar no solo las responsabilidades compartidas, sino también el riesgo, la inversión, las obligaciones, la duración del contrato y los objetivos a alcanzar.

Por todo ello, será bienvenida la iniciativa de la Comisión de llevar a cabo una reflexión más profunda en este ámbito sin que ello signifique, a priori, que se pretende uniformizar el régimen jurídico de la CPP con los demás contratos públicos.

Cuestiones específicas relativas a la selección de un operador económico en el marco de una CPP de iniciativa privada

8. *De acuerdo con su experiencia, ¿tienen los operadores no nacionales el acceso garantizado a las fórmulas de CPP de iniciativa privada? En particular, cuando los poderes adjudicadores invitan a presentar una iniciativa, ¿se suele dar una publicidad adecuada a la invitación, de manera que la información llegue a todos los operadores interesados? ¿Se organiza un procedimiento de selección realmente competitivo para la puesta en marcha del proyecto seleccionado?*

   En España no hay experiencia en el ámbito de la organización de una CPP de iniciativa privada. En cualquier caso, la AGA considera que la legislación española en el ámbito de la CPP ya mencionada ofrece todas las garantías de no discriminación y transparencia necesarias a la participación de operadores no nacionales en procedimientos CPP en España.

9. *¿Cuál sería, en su opinión, la mejor fórmula para el desarrollo de operaciones de CPP de iniciativa privada en la Unión Europea en las que se garantice el respeto de los principios de transparencia, no discriminación e igualdad de trato?*

   De forma complementaria a la respuesta anterior, AGA no puede aportar su opinión a esta cuestión ya que no posee suficiente información al respecto. No obstante, se considera que sería una buena cuestión para estudiar en el ámbito de la red de expertos nacionales que la Comisión tiene intención de instituir.

10. *¿Cuál es su experiencia en relación con la etapa posterior a la selección del socio privado en las operaciones de CPP contractuales?*

    En la etapa de ejecución del contrato ya concedido, los problemas más usuales que se producen se refieren a los casos en los que el contratista reclama la aplicación del principio de equilibrio económico de la concesión. Por ello, en el hipotético caso de que la UE acabe finalmente adoptando algún instrumento legislativo específico, será conveniente que el mismo previera de forma adecuada las causas y circunstancias en las que procederá la aplicación de aquel principio.

11. *¿Conoce algún caso en el que las condiciones de ejecución (incluidas las cláusulas de adaptación en el tiempo) hayan podido tener efectos discriminatorios o hayan podido constituir un obstáculo injustificado a la libre prestación de servicios o a la libertad de establecimiento? En caso afirmativo, describa el tipo de problemas encontrados.*

12. *¿Conoce alguna práctica o mecanismo de evaluación de ofertas con efectos discriminatorios?*

    Una de estas prácticas podría ser la de valorar criterios de admisión (experiencia, recursos, medios, etc.) una vez esta capacitación ya ha sido demostrada y validada por la propia administración, de tal manera que las ofertas se evalúan en la forma de un concurso de méritos y recursos en lugar de considerarse los aspectos esenciales del mismo (precio, proyecto, calidad, nivel de prestación, mejoras, etc.), en claro detrimento del fin de la licitación y en beneficio de los licitadores establecidos. En España tales situaciones acaban en general siendo controladas y corregidas por los Tribunales de Justicia.

13. *¿Está de acuerdo con la afirmación de la Comisión según la cual determinadas fórmulas de tipo step-in pueden plantear problemas en términos de transparencia e igualdad de trato? ¿Conoce otras «cláusulas tipo» cuya aplicación pueda plantear problemas similares?*

    La AGA está de acuerdo con la afirmación de la Comisión, aunque considere que no es posible generalizarla. En efecto, determinadas cláusulas contractuales mediante las cuales las instituciones financieras se reservan el derecho de actuar en lugar del gestor del proyecto, o incluso designar un nuevo gestor de proyecto, pueden implicar en la práctica el cambio del socio privado sin convocatoria de concurso.

    En cualquier caso, se considera que hay que analizar con más detenimiento los casos que se hayan podido producir en la Unión Europea al abrigo de dichas cláusulas y, para responder a las inquietudes legítimas de la Comisión, cree que sería deseable que cualquier cambio significativo del contrato en relación con el operador sea sometido a autorización previa de la entidad adjudicadora, cuya resolución, a su vez, solo podrá basarse en motivos relacionados con la gestión del servicio.

14. *¿Considera necesario aclarar a escala comunitaria determinados aspectos correspondientes al marco contractual de las operaciones de CPP? En caso afirmativo, ¿a qué aspecto o aspectos debería referirse dicha aclaración?*

    Véase la respuesta a la pregunta 6.

15. *En el marco de las operaciones de CPP, ¿sabe de algún problema concreto que se haya planteado en materia de subcontratación? Descríbalo.*

    La AGA no tiene conocimiento de ningún problema concreto.

16. *En su opinión, el fenómeno de las operaciones de CPP de tipo contractual, al implicar el traspaso de un conjunto de tareas a un único socio privado, ¿justifica la introducción de normas más detalladas o la ampliación del ámbito de aplicación en lo que se refiere a la subcontratación?*

    En el contrato de gestión de servicios públicos la legislación española solo contempla la subcontratación de prestaciones accesorias al contrato principal (artículo 170 del RDL 2/2000). En este sentido, la AGA considera que la introducción de nuevas normas reguladoras armonizadas a nivel comunitario relativas a la subcontratación, debe necesariamente estar precedida de un estudio sobre las normativas nacionales existentes en los Estados miembros en este ámbito.

17. *De manera más general, ¿considera que debería adoptarse una iniciativa complementaria a escala comunitaria para aclarar u organizar las normas relativas a la subcontratación?*

    Véase la respuesta anterior.

LA CPP INSTITUCIONALIZADA Y EL DERECHO COMUNITARIO EN MATERIA DE CONTRATACIÓN PÚBLICA Y CONCESIONES

Toma del control de una entidad pública por parte de un operador privado

18. *¿Cuál es su experiencia en materia de puesta en marcha de operaciones de CPP de tipo institucionalizado? En concreto, ¿su experiencia le lleva a pensar que el Derecho comunitario en materia de contratación pública y concesiones se respeta en el caso de operaciones de CPP institucionalizada? Si su respuesta es negativa, ¿por qué?*

    La CPP de tipo institucionalizado supone la creación de una entidad en que participan, de manera conjunta, el socio público y el privado, sea mediante la creación de una entidad en que participan ambos sectores, sea mediante la entrada de capital privado en una empresa pública preexistente.

    Esta modalidad de prestación de los servicios públicos está perfectamente prevista y regulada en la legislación española prácticamente desde el primer momento en que se empezó a regular la intervención de las entidades privadas en la gestión de los servicios públicos. Tal regulación se encuentra no sólo en la legislación en materia de contratación pública (RDL 2/2000) sino también en el ámbito de los servicios públicos locales (como es el abastecimiento de agua) en la Legislación de régimen local (Ley 7/1985 Reguladora de las Bases de Régimen Local, RDL 781/1986 por el que se aprueban las disposiciones legales vigentes en materia de régimen local, y Decreto de 17 de junio de 1955 por el que se aprueba el Reglamento de Servicios de las Corporaciones Locales). Puede afirmarse que dicha legislación es suficientemente completa como para permitir al órgano contratante seleccionar la oferta más ventajosa y garantizar que dicha selección se realice respetando los principios de no discriminación, transparencia e igualdad.

    En todo caso, la AGA considera conveniente que una eventual regulación Europea específica de los contratos de concesión bajo esta modalidad, establezca taxativamente que la selección del socio privado debe realizarse mediante un sistema de selección que prime la oferta técnica.

19. *¿Considera que debe tomarse una iniciativa a escala comunitaria para aclarar o precisar las obligaciones de los organismos adjudicadores en cuanto a las condiciones en las que deben ser convocados los operadores potencialmente interesados por un proyecto de tipo institucionalizado? En caso afirmativo, ¿en qué puntos particulares y en qué forma? Si su respuesta es negativa, ¿por qué?*

    En línea con todos los argumentos expuestos hasta ahora, la AGA cree que antes de proceder a adoptar ninguna iniciativa a escala comunitaria de tipo normativo sería necesario estudiar en detalle las distintas situaciones existentes con el fin de poder garantizar el cumplimiento de los principios básicos de libre concurrencia, igualdad de trato y no discriminación en aquellos Estados miembros que en la actualidad no disponen de legislación al respecto.

Este estudio debería permitir la adopción posterior de las iniciativas mínimas necesarias para asegurar que estas operaciones se realicen con una mayor transparencia, igualdad y no discriminación en aquellos países donde no existe legislación suficiente al respecto, pero al mismo tiempo respetando y no distorsionando el marco jurídico aplicable en aquellos países que, como España, tienen una larga tradición y experiencia normativa al respecto. Se trataría, como en el caso de la CPP puramente contractual, de medidas limitadas prácticamente a la proclamación de aquellos principios básicos de la contratación pública.

20. *¿Qué medidas o prácticas cree que constituyen obstáculos a la puesta en marcha de operaciones de CPP en el seno de la Unión Europea?*

    Como ya se dijo, la AGA considera que en lo que respecta el sector del agua a nivel comunitario no se garantiza hoy por hoy la competencia real entre operadores económicos en el acceso a nuevos mercados; la AGA cree que esto deriva de la naturaleza muy específica del sector del agua.

    Ello no impide que la AGA invite la Comisión a llevar a cabo una reflexión mas profunda sobre los problemas de competencia que hayan podido ser detectados o que puedan plantearse en la Unión Europea.

21. *¿Conoce otras formas de CPP desarrolladas en terceros países? ¿Conoce ejemplos de «mejores prácticas» desarrolladas en este marco, que puedan servir de inspiración a la Unión? En caso afirmativo, ¿cuáles?*

    La AGA desconoce otras formulas desarrolladas en países terceros que puedan servir de referencia a la UE.

22. *De forma más general, y teniendo en cuenta la necesidad de importantes inversiones en ciertos Estados miembros a fin de lograr un crecimiento económico social y sostenible, ¿estima que sería útil una reflexión colectiva sobre estas cuestiones, que se llevaría a cabo a intervalos regulares entre los sectores concernidos, y que permitiría un intercambio de mejores practicas?, ¿Considera que la Comisión debería propiciar una red de este tipo?*

    La AGA es partidaria de llevar a cabo una reflexión colectiva, implicando a todos los operadores y sobre diversas cuestiones en el ámbito del sector del agua a nivel de la Unión Europea y acoge muy favorablemente la idea de la Comisión de crear y animar una red de expertos nacionales representantes de todos los sectores implicados en la prestación de servicios en el ámbito del agua con la finalidad de reflexionar en conjunto tanto sobre la problemática específica del sector como sobre las eventuales soluciones.

    La AGA llama finalmente la atención de la Comisión sobre la necesidad de tener en cuenta, en sus reflexiones, las especificidades del sector del agua, no solo en lo que respecta a la CPP, sino también y de forma más general, en el ámbito de la contratación pública, los servicios de interés general o las condiciones de competencia. En este sentido, se sugiere a la Comisión que impulse la creación de un grupo de trabajo formado por expertos nacionales y representantes de las Asociaciones nacionales del sector del agua, para que asesoren a la Comisión respecto a las iniciativas legislativas u otras que tenga la intención de llevar a cabo y que puedan tener efectos directos o indirectos sobre el sector. El mismo grupo podría encargarse de coordinar el estudio al que se hace referencia a lo largo del escrito que se presenta a la Comisión.

Madrid, 26 de julio de 2004

Nota: AGA autoriza que su contribución sea introducida en el sitio web del Libro Verde de la Comisión Europea sobre la colaboración público-privada y el derecho comunitario en materia de contratación pública y concesiones.

Colaboración público - privada
Contratación pública
Libro verde sobre la colaboración público - privada y el Derecho comunitario en materia de contratación pública
C- 100 2/2005
B-1049 Bruxelles

Señor encargado de la publicación :

En relación a lo anunciado por la Secretaría General sobre el llamado libro verde CPP, en nombre de los numerosos farmacéuticos integrados en las Asociaciones profesionales : "Asociación para la Mejora del Servicio Farmacéutico", "Asociación Andaluza de farmacéuticos sin farmacia" y de la "Asociación de farmacéuticos en Paro" de Madrid , me permito exponerle a esa Comisión para su consideración , los siguientes puntos que describen **una situación de privilegios económicos en España para las farmacias establecidas que se encubre bajo una injusta forma de "colaboración pública" con la administración del Estado español** ,falseándose a nuestro entender el sentido de una colaboración efectiva para los ciudadanos que , por esa improcedente formalidad , resultan perjudicados.
También en el presente escrito como anexo , se ofrece una solución práctica considerada óptima para el caso , la cual describimos para consideración de la Comisión y naturalmente para que nuestra propuesta , sea apoyada con toda la fuerza posible por la Secretaría General .

Denuncia de la situación actual
Este caso se denuncia para su conocimiento y corrección porque ,con el pretexto de una "colaboración pública" (sui generis), se obtienen e imponen por la fuerza condiciones que **restringen y encarecen el servicio** , **en beneficio del oligopolio farmacéutico de España** , según se explica :

1º En nuestro país se establecen para la dispensación farmacéutica , ***condicionantes excluyentes de servicio*** (haciéndolos pasar por criterios "técnicos") , para vulnerar las reglas de la libre competencia y consolidar los extraordinarios privilegios de los farmacéuticos establecidos .

2º Es la Administración del Estado , por la presión de los intereses establecidos bajo la forma de oligopolio , quien ***estabiliza normativamente (oficialmente)*** esta forma lucrativa de explotación comercial del medicamento **en contra como se verá ,del ciudadano y de las propias instituciones del Estado como es la Seguridad Social** .
La presión del holding farmacéutico es tan grande sobre la Administración española que consigue **articular *leyes de protección para la dispensación oligopólica de los medicamentos bajo la apariencia de tutelarse una finalidad sanitaria*** ; se utiliza para ello sin demostración objetiva , unos "supuestos argumentos técnicos " , de resultado restrictivo **para así impedir la competencia material e intelectual** y, consecuentemente , para privilegio exclusivo de los únicos farmacéuticos establecidos .

3º Por esta estabilización normativa conseguida de la Administración por el oligopolio farmacéutico, se da lugar a una asociación profesional farmacéutica única o holding (la gran patronal única de la dispensación) que maneja totalmente a los Colegios farmacéuticos regionales y a su cúspide : El Consejo General de Colegios regionales , ***acaparándose formalmente de hecho la distribución y dispensación de los medicamentos en exclusiva en todo el Estado español .***

4º Esta verticalidad de dominio total que parte de las oficinas de farmacia existentes y que asciende ante el organismo nacional (Consejo General de Colegios Farmacéuticos) da lugar a estructuras auxiliares de hipercorporativismo comercial : Cooperativas de la distribución mayorista , **de ellos mismos** y un importante banco financiero propio : Bancofar , **con lo que el dominio comercial del sector farmacéutico de distribución y dispensación está totalmente monopolizado y en condiciones de invadir con éxito ,fijando condiciones propias y con total impunidad administrativa , el sector parafarmacéutico , cosmético y de herboristería como de hecho ocurre** .

5º Como resultado: Un sistema de oligopolio único en privilegios económicos con cifras de negocio multimillonarias y consecuentemente de impedimento de establecimiento profesional para decenas de miles de farmacéuticos **y de impedimento de ofertas a la baja en los precios de los medicamentos al propio Estado o a sus instituciones , entre ellas a la Seguridad Social , la principal perjudicada .**

Como se ha conseguido esta inapropiada e insólita situación

Después de un Decreto de la Dictadura del General Franco (1942) que **secuestró la histórica libertad de ejercicio profesional farmacéutico** y dio pie a este monopolio , se viene utilizando por el holding para evitar la liberalización del sector , deformadamente , la figura de, **"empresa al servicio del Estado"** que aunque es un concepto artificioso e impropio se ha aceptado por la Administración , habiéndose conseguido a partir de esta calificación , asentar el oligopolio , privilegios únicos para una farmacia oligopolica extraordinariamente lucrativa que ahora llaman , " modelo mediterráneo".

Bajo la apariencia de que la farmacia es una "empresa privada de utilidad pública" (lo que no es cierto porque **solo puede ser de colaboración administrativa una de sus múltiples actividades comerciales**) se ha conseguido como se dice , una explotación oligopólica de medicamentos y afines , en contra de la deseable pluralidad y competencia .

Interés para su publicación : El libro verde

Se ha analizado la situación y como resultado se demuestra que esta situación de oligopolio , no obedece a criterios técnicos ni mucho menos éticos sino , al fruto de la argucia dialéctica de los interesados para establecer , después de tanto tiempo de elaboración ,un status de privilegios económicos de acuerdo con la Administración que influida , rechaza sistemáticamente cualquier petición de instalación de farmacias para mantener el oligopolio .

Pero como la farmacia en sí no es objeto de intervención electiva sino solo una de sus actividades comerciales , la de suministro al Estado , se ha llegado tras el análisis de la situación , a la siguiente propuesta que se expone para su conocimiento , **ya explicada y sugerida a la Administración española para la liquidación de la actual explotación oligopólica , y para , dar paso a las ventajas de la libre competencia a favor del Estado y por tanto también a favor del ciudadano** .

Esta propuesta que denominamos : **La farmacia como empresa de colaboración estatal**"desearíamos fuese aceptada por la Comisión y desearíamos también que fuese de obligado cumplimiento para los estados miembros) , según:

1. El Estado utilizará dos recursos principales : **Reglamentación y selección** (elección de farmacias) a partir de , **la total libertad de establecimiento farmacéutico** . La selección se hará , solo para ***determinados servicios de dispensación de medicamentos que la justifiquen***.
2. La forma de selección (contratación) será por **publicidad y transparencia *mediante concurso o plural oferta de todos los establecimientos farmacéuticos posibles sin restricción alguna a la participación*** .
3. *La selección de este tipo servicio* ***será temporal*** .
4. *Las farmacia seleccionadas porque ofrezcan las mejores y más económicas dispensaciones adquirirán temporalmente la calificación de* **empresas de colaboración pública o estatal** *,pudiéndose naturalmente producir en el transcurso del tiempo como garantía de efectividad , altas y bajas en esta colaboración con la Administración .*

Entendemos que , es esta la forma eficaz de colaboración con el Estado , quién a partir de este planteamiento , contratará con total garantía el servicio de dispensación de medicamentos a su cargo , destruyéndose la opacidad comercial que rodea al medicamento .
De esta manera ,tras la liquidación del oligopolio , surgirán en España más del doble de establecimientos de los existentes que podrán tomar parte en los concursos (en cada selección periódica) para el suministro de medicamentos con cargo a la Seguridad Social ,lo cual además de un hecho plausible , **significaría la restitución de una libertad secuestrada**.
También de esta forma , se liberan otras distribuciones monopolizados por el holding farmacéutico actual en España (parafarmacia , herboristería ,dietética, etc) .

En el archivo siguiente que se adjunta se describe con un ejemplo como se llevaría a cabo esta mecánica de contratación de la farmacia con el Estado Español ,**lo que puede ser extensivo a cualquier estado miembro de la CE**, para conseguir homogéneamente la clasificación temporal de la farmacia como : "empresa de colaboración estatal".

Se ruega si es posible contestación .

LICITACIÓN DE MEDICAMENTOS CON CARGO A LA S. SOCIAL UN TIPO DE MECANISMO COMO EJEMPLO PARA LA REDACCIÓN DE UN REGLAMENTO DE CONCURSO PARA LA DISPENSACION DE RECETAS CON CARGO A LA SEGURIDAD SOCIAL

Inserción en : Boletín Oficial de la Comunidad Autónoma de ....

Anuncio legal de convocatoria de ofertas de licitación para la dispensación de recetas de la S. Social en las farmacias .

Periodo de suministro a la S. Social : 18 meses (discrecional).

Recepción de ofertas : A partir del dia siguiente a la fecha de publicación de esta convocatoria . Fecha final de recepción 30 días siguientes a la fecha de la publicación de esta convocatoria

Resolución de la licitación a favor de la S. Social :

Mecanismo de adjudicación del suministro a los usuarios de la S. Social y valor del descuento a aplicar sobre los precios de referencia de los medicamentos

CONCURSO PUBLICO

A) Un valor del descuento (%) que se establecerá el límite para acogerse o no a la **selección de farmacias por el Estado** .

Forma de obtener el valor del descuento limitador :

Selección de farmacias por el Estado ,farmacias seleccionadas .

Serían las que ofrecieran a la Seguridad Social iguales o superiores descuentos al valor considerado como **descuento limitador** .

El descuento limitador que marca la selección de farmacias ,sería aquel que corresponde al valor de descuento del **ordinal n** ,en una serie de valores de descuento que se ordenan desde el mayor al menor de los descuentos que presentan las farmacias oferentes .

El ordinal n corresponde al numero de farmacias a seleccionar representa p.e. las tres cuartas partes de las farmacias existentes (este módulo es discrecional) en cada demarcación siempre después de la liberalización de la instalación de los establecimientos farmacéuticos

Resultado de la licitación :
Las farmacias en número de **n ,** cuyas ofertas hayan sido seleccionadas por el anterior regla , obtendrán en su demarcación la acreditación de : Dispensadoras de medicamentos con
cargo a la S. Social durante el periodo de contratación .

B) Discrecional. Cabe la posibilidad , para las farmacias seleccionadas , de que la Administración les mantenga a cada una de ellas el valor del descuento que ha ofertado , pero también cabe , el aplicar (como mejora para sus intereses) el valor mínimo del descuento seleccionado, es decir , el que corresponde al propio descuento limitador .

C) Grandes ciudades . Regirá la convocatoria por distritos o demarcaciones

D) Publicación de los resultados en el propio Boletín Oficial de la C. Autónoma

E) Modelo de participación en el concurso en impreso correspondiente.

UN EJEMPLO PRACTICO DEL MECANISMO DE SELECCIÓN PARA LA ADJUDICACIÓN TRANSPARENTE DE LA DISPENSACIÓN DE RECETAS CON CARGO A LA SEGURIDAD SOCIAL POR CONCURSO .

Ejemplo:

Caso de una ciudad con ocho farmacias (antes de la liberalización tenía 4 ó menos).

Ordinal (discrecional**): Número correspondiente a : p.e. ¾ del total de las farmacias existentes después de la liberalización de establecimiento farmacéutico**

Ordinal **n = 6 , (** 6º)
(serían seis las farmacias que serían seleccionadas, **dos más** que las que existían antes de la liberalización ,por lo tanto mejor servicio que antes)

El resultado de la licitación podría ser el siguiente :

F -1 no oferta reducción , la F -2 un 5 % , la F- 3 un 7´2 % , la F- 4 un 7 ´1 % , la F -5 un 10 , la F- 6 un 7´5 % , la F- 7 un 9 % y la F-8 un 4 %.

Primer paso :
Ordenamiento en función decreciente del valor de los descuentos :
F -5, F -7, F -6 , F -3 , F- 4 , F- 2 , F -8 y F-1

n, da lugar a seis porcentajes de descuento seleccionados , que corresponden a las seis farmacias que son seleccionadas .
Son:

F-5 , F- 7 , F-6 , F-3 F- 4 y F-2 (las seis primeras) .

Segundo paso :

Elección del descuento(s) .
Descuento(s) a aplicar :
Dos modalidades principales entre otras posibles:
a) A cada farmacia de las seis seleccionada como suministradoras , **se le aplicará a la facturación de las recetas con cargo a la Seguridad Social el mismo porcentaje de descuento que ha ofertado** .
o,
b) A cada farmacia de las seis seleccionadas se le aplicará en su facturación de recetas con cargo a la Seguridad Social el valor inferior de los seis descuentos seleccionados ,**el descuento limitador** .
(en el ejemplo el 5 %)

BCCB RESPONSE to the EC GREEN PAPER on PUBLIC-PRIVATE PARTNERSHIPS and COMMUNITY LAW ON PUBLIC CONTRACTS & CONCESSIONS, COM (2004) 327 final

INTRODUCTION to BCCB

The BCCB Project Finance Committee on behalf of the wider membership of BCCB has compiled this response to the EC Green Paper on Public-Private Partnerships And Community Law On Public Contracts & Concessions, COM (2004) 327 - Final. This BCCB committee co-ordinates its activities on PPP very closely with IFSL's PPP Export Group. These two groups represent the private sector in the UK Trade & Investment *Export Advisory Group*. The rotating chairmanship of the UKTI Export Advisory Group is drawn from IFSL and BCCB with BCCB currently providing the chairmanship. The following companies have provided significant input into this paper through the co-ordination of pother members and organisations:

- Vector Management Limited – *BCCB Member firm* – on behalf of BCCB
- International Capital Partnerships Ltd – *IFSL Member firm* – on behalf of IFSL
- Halcrow – *BCCB Member firm* – on behalf of BCCB and IPFA
- WSP International – *BCCB Member fir*m – on behalf of EIC

The BCCB is the major private sector association covering all British exporting consultancy sectors and construction companies working overseas. The Membership includes Plcs, partnerships, SMEs and independent consultants, working across the spectrum of professional expertise from aviation to law, water engineering, healthcare, tourism and transport. BCCB's aim is to promote British expertise internationally and to further the interests of British expertise and construction internationally as a whole.

BCCB is the United Kingdom member of the EIC (European International Contractors).

A BCCB brochure entitled *Public Private Partnerships (PPP), Facilities Management & Outsourcing* which covers the BCCB views on best practice in PPP. It is available on the BCCB web site *bccb.org.uk* and then click *News* and then *Publications*. This brochure forms part of the suite of three documents that comprise a brief guide from UK Trade & Investment entitled *How to Access UK Expertise in Public Private Partnership.* The third element of the guide is the IFSL brochure *Public Private Partnerships: UK Expertise for International markets, 2003.*

INTRODUCTION TO RESPONSE

The Procurement Directives enshrine distinctions in public works and services contracting that are 15 years old and therefore no longer reflect the increasingly sophisticated ways by which the Public Sector does business with the Private Sector[1]. In particular in many States there has been a move away from strict cost-based procurement to *value based transactions.*

[1] In fact the whole distinction and lighter regime applied to "concessions" is a result of successful lobbying by the municipal concession industry. Their arguments at the time were that the "Stadtwerke" system and the privatisation models effectively closed those markets from competition, therefore the municipal concession model should not alone be subject to the full rigors of the Directives.

This distinction is very important. Encapsulated in the phrase "Value for Money" (VFM) this approach unpacks the concept of "economically most advantageous". There are three major strands:

- The public sector client specifies the required output of any works but confides large elements of the design and all the construction to the private partner
- Evaluation concentrates not on the cost of works but on the global cost of financing, amortising and operating the facilities over an extended (even whole-life) term
- Risks are allocated to the party to the contract most capable of containing and managing those risks. Risks have to be evaluated, as competing bidders will adopt different approaches to the risks they are willing to bear. Risk evaluation puts on common economic footing bids that are not like-for like.

In tandem with this change in approach the Public Sector is learning to switch focus from the detail of physical works to the maintainable quality of service that is to flow from any infrastructure-type investment. PPP procurement in particular, embodies this change of philosophy.

The wide-ranging elucidation of the term PPP can be confusing. In the UK model PPP is further advanced in its theory and its practice than in many other countries. The evolution of the UK model recognises that large-scale transfer of risk which is involved in full divestiture, concessions/build-own-operate, build-operate-transfer can be workable where there is a robust off-take arrangement or a clearly evident commercial upside. It also addresses the fact that this can be problematic in some infrastructure sectors where basic commercial viability is difficult to demonstrate.

PPP as a method of providing public services should contain an expectation of service improvement, a commitment to transparency, the dismantling of monopolies and the reform of public services. It permits public authorities to reform public services, dramatically reduce capital expenditure and convert the cost of infrastructure into affordable operating expenditure spread across an appropriate time scale. This innovative approach has ramifications on the way that public services are delivered, with the emphasis being placed on the service outputs required.

The considerable PPP experience accumulated over the past 10 years in many Member States, but especially in the UK demonstrates an economic advantage for the Public Purse of, on average, in excess of 15% . This has been achieved whilst respecting high standards of transparency and impartiality in the selection of the private partner.

Under Directive-inspired legislation, there is a presumption that the eventual arrangement falls into a pre-defined procurement category. Negotiation is only admissible where "the nature of the works or the risks attaching thereto do not permit overall pricing", and competitive dialogue is only permissible where "the contracting body is objectively unable to define the technical means that would best satisfy its needs and objectives, or in cases where it is objectively unable to define the legal and /or financial form of the project".

This is no longer consistent with the perspective of the procuring authorities in many Member States. Current best practice in the UK points to the decision of procurement route coming downstream from an analysis of which method is likely to provide VFM for the Public Purse and then having the safeguards in place to prevent distortion of the competitive process. If the PPP route recommends itself, it is clearly a contractual structure that straddles the historic categories defined in the legislation. It is also clearly imperative, and in both parties interests, for there to be the opportunity for extensive pre-contract discussion/negotiation, especially about risk transfer and pricing if the optimum balance is to be achieved. Negotiation should not however distort the fundamental specifications of output to the advantage of any particular bidder.

Currently, therefore, we are faced with the anomalous situation where the legislation is running behind best economic and good public management practice. To bring the Directives into line may recommend the admission of a new contract-type.

This would be a PPP (defined as a "global" contract encompassing elements of design, works, services and finance over an extended term) which are based on long-term partnership between the public and private sectors, and which would inherit the automatic right to dialogue and negotiation in the procurement process, subject to the Public Authority establishing appropriate safeguards for transparency, impartiality and VFM.

The experience of PPPs is that they have led a very significant increase in cross-border provision in areas that traditionally were dominated by domestic supply. Also PPP has been the engine for very considerable acceleration in infrastructure and public services investment. The evidence is strongly that it is the most economically efficient method. Given the enormous infrastructure deficit facing the New Member States, procurement legislation must be brought into step with the methods that work best.

DETAILED RESPONSES TO SPECIFIC QUESTIONS

1. What types of purely contractual PPP set-ups do you know? Are these set-ups subject to specific supervision (legislative or other) in your country?)

- *Contractual PPPs all share certain key features: output specifications, private sector involvement in the three critical project phases of design (to a greater or lesser degree), construction and operation (always of the technical functions, sometimes of the user-facing aspects of the resulting service) , length of term and ,critically, PRIVATE FINANCE. Design-Build and Design-Build-Operate contracts where payment is made by the authority when costs are incurred or works delivered should be categorized differently.*
- *Otherwise terminology differs (DBFO, DCMF, BOO, BOOT etc…). Mostly these variants boil down to whether the Private contractor has formal ownership (rather than economic responsibility for) the infrastructure at any stage during the infrastructure's working life. The most important and defining characteristic of a PPP is that it is value-based (VFM).*
- *In the UK (as in other countries that have drawn from the UK for their PPP practices) the Public Sector promoter is effectively obliged to observe a highly structured set of procedures, to follow Ministry of Finance standardised contracts, be subject to independent " gateway (good process) reviews" throughout the procurement process, and most importantly carry out a Value for Money benchmarking exercise prior to contract to prove that the PPP solution is economically superior to the public sector alternative.*
- *In the UK The National Audit Office carries out post –contract studies on a selective basis which assess the success and propriety of the PPP procurements. These studies are presented to Parliament (rather than only to the government of the day) and are published.*

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not why not?

- *The competitive dialogue procedures should provide a helpful clarification of the intention of the Procurement Directives and codify practices that have been a feature* *of good UK PPP practice for a number of years. It is however very important that this is used by the Public promoter to bring clarity to the output specifications and not as a means of making the technical solution of any given candidate available to all. Also it is clear that competitive dialogue will rarely obviate the need for negotiation of the contract and technical detail.*

- *Whilst the competitive dialogue allows bidders to optimise their offers in line with the contracting authorities' potential review of the initial project specifications, it creates the threat that entrepreneurial ideas and innovations are circulated to competitors during the tender process, which will deter qualified bidders from competing for PPP projects.*
- *Even with the increasingly rigid application of project frameworks in the UK, which have been published as drafts and have taken account of representations from concession companies, equity investors, lenders and lawyers, it has been found necessary to make changes to accommodate special project characteristics as the projects have moved toward financial close. For all tenderers to fully develop their project and project documentation prior to submission would involve both the tenderers and the public bodies in substantially greater costs and could very well cause the former to withdraw from bidding in PPP projects.*

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so what are these? Please *elaborate*?

- *Cohesion and structural funding should be clearly compatible with PPPs and there should be no presumption that EU–grant aid must imply public ownership of the resulting infrastructure*
- *The Green Paper appears to outlaw the negotiated procedure used in UK – advocating that everything is subject to the Competitive dialogue of Law 2004/18/EC. The use of this procurement approach has Intellectual Property Right issues. The expectation of service improvement and the reform of public services, both essential benefits that should be achieved from the involvement of the private sector will be completely destroyed. The competitive dialogue as currently drafted will result in commercial organisations refusing to invest in innovative design thinking at stage 1. The result is likely to be the loss of any anticipated service improvement, cost benefit through innovation and reform of the provision of public services: it may result in the construction of "big lumps of primitive concrete" everywhere with competition being solely based on who can place concrete cheapest, rather than on who can come up with the cleverest cost saving design approach. The important life-cycle costing will not be adequately managed, and as the initial design and construction costs are generally in the order of 30% of the overall cost of the project throughout its life, the real benefit of the involvement of the private sector will be marginalized. Notwithstanding this engineering concern the bidders bidding costs will increase significantly with this approach.*

– *Apparently the EU can challenge the length of time of the Concession. At the start of a project a conservative view must be taken to attract private finance including downside scenarios and Concession length is often calculated on a pessimistic view. Under the Green Paper it appears that there is the real risk that any project that transpires into something more successful than was initially considered during the feasibility and tendering stages would suffer from the EU interceding and declaring the Concession period too long and ask for it to be reduced. Trying to put together Bankable projects under this threat will be nigh on impossible.*

4. Have you already organised, participated in, or wished to organize or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

– *No comment to make*

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the awards of concessions? In your opinion is genuine competition normally guaranteed in this framework?

– *The Treaty provides adequate provision for non-discriminatory involvement for non-national companies and therefore additional legislation on that particular aspect is unnecessary.*

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions desirable?

– *The most important element of legislation must be to ensure a clear and reliable framework for the protection of investment, particularly in the case where the EU has a direct financial involvement in PPP projects through the structured funds.*

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

– *Where there is significant financial or political engagement by the Public sector to facilitate the creation of infrastructures and the provision of services a consistent set of procurement rules should apply. There is no obvious reason why structuring contractor rewards as a function of usage/user payments should invite a less onerous regime. Concessions should be assimilated to a broader category of PPP contracting.*

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

– *No comment to make.*

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency non-discrimination and equality of treatment?

- *National Authorities should be encouraged to publish clear process guidance/ regulation for private initiative PPPs, which should enshrine the core principles. It is of critical importance that the Private Sector promoter of such schemes should receive a fair economic return on their investment if for any reason other parties are chosen to fulfil the PPP. Evaluation criteria in particular should be explicit. The Commission should have a role in assimilating and disseminating good practice.*

10. In contractual PPPs what is your experience of the phase, which follows the selection of the private partner?

- *Satisfactory and in accordance with contract. Abusive contract extensions have not been a feature of UK PPP contracting*

11. Are you aware of cases in which the conditions of execution including the clauses on adjustments over time may have a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or the freedom of establishment?

- *Mostly the clauses that govern adjustments over time properly protect the interest of the public sector client and are not discriminatory. Indeed in many PPPs the price of ongoing service provision has to be brought in line with the market by regular benchmarking or re-tendering.*

12. Are you aware of any practices or mechanisms for evaluating tenders, which have a discriminatory effect?

- *See comments on sub-contracting below.*

13. Do you share the Commission's view that certain step-in type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other standard clauses, which are likely to present similar problems?

- *Step-in rights are an essential component of the security afforded to the providers of finance. They are a cornerstone of the well-balanced PPP contract and are in the interests of both parties. They are only very rarely exercised and then, in extremis, to prevent the catastrophe of an interruption in core public services. They are envisaged as a temporary crisis measure and most PPP contracts foresee "step-outs" when the problems have been addressed.*

- *PPP development is predicated on the ability to source funding from the global project finance markets and the nascent secondary market for PPP finance. These essential funding sources will disappear or become significantly more expensive if standard protections for the capital providers are withdrawn.*

- *Neither the Public nor Private sector would welcome regulatory intervention on this point, as it would be bound to work against the Public interest.*

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, what aspects should be clarified?

- *PPP contracting (assimilating concession-type structures) should be properly recognised as a contract category for which both the negotiated and competitive dialogues are well adapted. All further clarification should be at national level.*

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting?.

- *In respect of those requirements, which favour sub-contracting to SMEs, in general, normal market mechanisms should be allowed to apply as smaller enterprises will naturally benefit from the increased economic activity engendered by a successful PPP programme.*
- *Procurement legislation should be directed to securing adherence to the open market principle and not confused by micro-economic engineering.*

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a sets of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

- *The procurement competition should be limited to the concession and thereafter the winning concessionaire should be free to deliver the project through the life of the concession on a commercial basis without further reference to applying further EU procurement rules for subcontractors (as proposed in Para 51 & 52).*
- *An important element of successful PPPs is that financial model timing and costing uncertainties are kept to a minimum. At the time of the primary competition for the concession, the bidders cannot carry out EU procurement rules in order to ascertain indicative subcontractor costs to include in their financial model on which they will base their tender offer. If subsequent to award EU procurement rules apply then bidders must include in their programme significant periods of time for procurement activity and safety time margin for legal challenges. If these programme activities are built into the model, the time periods themselves could turn a potentially viable PPP project into a non - viable project.*
- *There must be a balance in the PPP legislation between the need for true competition and the practicalities and potentially project detrimental implications of introducing procurement law beyond the appointment of the concessionaire.*
- *It is recommended that the procurement rules for subcontracting be deleted in the final PPP legislation.*

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

- *No*

18/19 Questions regarding institutional PPPs

- *The points made in the Green Paper are well taken. If a Public Authority intends to be involved as an equity participant in a PPP delivery vehicle, this intention and the full terms of participation should be disclosed to all candidates at the start of procurement.*

20. In your view, which measures or practices act as barriers to the introduction of PPPs within the European Union.

- *At present the processes for the agreement and disbursement of grant aid towards infrastructure development is not easily compatible with proper and robust PPP contracting. As several Member States are perceiving the average 15% advantage (17% in the UK according to HM Treasury) to the Public Purse of the PPP approach,* *this very considerable economic benefit should be extended to all projects that could receive grant assistance.*

- *Technical assistance to the New Member States should be increased significantly to encourage the development of effective national PPP practices and programmes.*

21. Do you know of other forms of PPPs, which have been developed in countries outside the Union? Do you have examples of good practice in this framework, which could serve as a model for the Union? If so please elaborate.

- *The Commission may find some of the project experience and practices in Australia informative.*

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

- *The most productive initiative at the Commission level would be in response to the comments made in14 and 20 above.*
- *There are already PPP networks for the exchange of best practice and much dialogue between actors. A further forum would only be of limited interest. Cataloguing good practice and examples of successful projects would be far more useful. In this respect the Resource Book is an excellent example and is an initiative to be built on. What is required is focused PPP programme development and support, especially for the New Member States. The Commission should act as a catalyst for good and successful PPP contracting which fully respect the Treaty principles, and emulating only the best practices such as those employed in the UK.*
- *Structural and other grant aid should be made fully compatible with PPP contracting.*

Construction Confederation’s submission to the European Commission’s consultation on the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions

Introduction

1.1 The Construction Confederation welcomes the opportunity to respond to the European Commission’s consultation seeking views on the EU Green Paper on Public Private Partnerships (PPPs). Our submission focuses on specific areas of concern to our members.

1.2 The Construction Confederation is the main trade association for building and civil engineering contractors in the UK. We represent over 5,000 contractors, which deliver 75% of the total construction turnover in the UK. Members of the Confederation include leading PPP contractors in the UK.

1.3 Private and public sector collaboration is particularly significant in the UK and is continually evolving. The Private Finance Initiative (PFI) is just one aspect of complex contracting in the UK. As of December 2003, over 400 PFI projects have been completed and are operational. A further 217 are in the pipeline, bringing the combined capital value of these projects to over £56 billion.

1.4 As the UK Government and other EU member states increasingly look to PPPs to improve the quality of public services and infrastructure, the policy and legal framework governing PPP projects in the European Union will be key to their long-term success.

Green Paper

2.1 Definitions

There are many different types of PPPs implemented across the UK (e.g. Private Finance Initiative, Build Operate Transfer, Design Build Finance Operate). The Green Paper recognises the various contractual relationships and attempts to define how each of the existing models fit within the overall definitions of contractual PPP or institutionalised PPP. We support the Commission’s assessment of the PFI model as a purely contractual PPP and understand on the basis of the explanation given in the Green Paper that a UK example of an institutionalised PPP would be the National Air Traffic Services.

2.2 The Confederation encourages the Commission to maintain consistency in using these definitions for public works contracts and concessions and similarly joint ventures between the public and private partners. At the moment, we do not believe further definitions are required. Instead, we consider it more important that member states are given the flexibility to assess the appropriateness of a model for each individual project.

2.3 Internal Market

The Construction Confederation supports the Commission's aim of establishing a fair and transparent EU regulatory framework for procurement and, where appropriate, the removal of unnecessary obstacles to facilitate access to PPP projects across the EU. PPP projects differ from traditional procurement projects, as they often involve a potentially complex contractual structure and are long-term. It is therefore essential that the regulatory framework provides flexibility to deliver such projects whilst also encouraging innovation.

2.4 However, we do not support the view that such a regulatory framework should focus solely on competition. European public procurement rules must deliver fair competition but also ensure value for money.

2.5 EU Public Procurement Directives

The Construction Confederation has closely followed the last four years of negotiation on the public procurement directives, particularly the EU public sector procurement directive. Whilst we recognise that the Commission delayed publication of the Green Paper until after agreement was reached through the conciliation process, we still consider the timing of this Green Paper to be premature. We believe that sufficient time must be given to national authorities to implement the directives and furthermore, allow a period of time for the rules to be operational before considering the deficiency or otherwise of the legislative regime.

2.6 The Confederation strongly believes that at present there is no need for additional legislation in the area of public procurement. The latest negotiations have provided an opportunity to harmonise and update legislation, whilst introducing new procedures, most notably the competitive dialogue procedure, to deal with the evolution of PPPs. We would be very concerned by any further reform proposals, which could threaten to disrupt the legal procurement framework at this time. Instead, the focus should be on ensuring that the new legislation is transposed into clear and workable rules for both the private and public sector.

2.7 Competitive Dialogue

The Construction Confederation hopes that this new procedure will provide the much-needed flexibility for complex procurement projects. We believe that it is a good example of the balance required between competition and value for money. This sort of competitive negotiation process is essential to encourage suppliers to bid and secure a fair and best value outcome. Evidently, commercial confidentiality will be key during the discussion phase with contracting authorities.

2.8 Cross-Border Procurement

As previously mentioned, the Confederation supports the Commission's aim to ensure the legal procurement framework does not result in obstacles, which prevent access to PPP projects across the EU. However, we believe that it is important to recognise that direct cross-border procurement is limited. Bidding for such contracts is more generally undertaken through subsidiaries or through joint ventures, as local knowledge is key. Therefore, we do not consider that large scale legislative reform would dramatically increase cross-border procurement.

Conclusion

3.1 The Construction Confederation recognises that this Green Paper is intended to launch a debate on PPPs and the application of Community law. Nevertheless, we believe that the existing public procurement rules provide sufficient transparency and fair competition and focus should be on implementing the recently agreed directives. At this present time, we do not consider there to be any need for further reform. The Confederation would be willing, however, to assist the Commission in better understanding the operation of PPPs in the UK, if further consultation work is to be carried out.

COSLA

A Response to the European Consultation

“Green Paper on PPPs and the Community Law on Public Contracts and Concessions”

COSLA

Executive Summary

COSLA calls upon the European Commission not to introduce detailed and restrictive legislation at a European level on the area of Public Private Partnerships. Such legislation at a European level would not add value to the PPP process, timeframes or making PPPs an attractive option to either the public or private partner. If the Commission do look to introduce any legislation it is important that this is a wide and flexible framework. PPPs are a fast evolving area and not all member states have substantial experience of working with them. It is very important that the public sector bodies can learn from their own experiences, the experiences of other public sector bodies within their regions and the experiences across member states. Therefore such an exchange or experiences facilitated by the Commission would be very welcomed.

A restrictive framework would not allow the work of PPP to develop or be refined. It is important that PPP contracts learn from advances in technology, good practice, major developments and that these are continuously taken account of. PPPs are still very much a learning process and no one should want legislation to stifle this learning. Perceptions and understanding of PPPs has already changed, for example the perception of risk transfer was initially that the private sector took on all the risk but in practice this has not been the case. This will enable PPPs to be more attractive to both the private sector and to public sector bodies.

Any legislation must allow for each regions public sector bodies to enter into clear, transparent and equitable PPP contracts that can learn from PPP experiences and take advantages of developments and local priorities.

COSLA

Response to European PPP Green Paper

This report summarises COSLA's response to the European Commission's Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions.

COSLA, the Convention of Scottish Local Authorities, is the representative voice of Scottish local government representing around 5 million citizens.

Scotland has a single tier of local government, comprising of 32 councils with populations ranging in size from 20,000 to just over 600,000. The net expenditure of Scotland's councils is around £8.3 billion a year (2003/04) and they employ just under 300,000 staff.

COSLA has seven key objectives including:

- Developing external relationships with bodies such as the Scottish Executive, and the Scottish, UK and European Parliaments;
- Addressing and influencing key constitutional issues for Local Government; and,
- Influencing the development of the public policy framework in line with the political direction set by the political leadership of COSLA.

Scottish Local Authorities have a wealth of experience in undertaking public procuring and in particular with PPPs. This PPP experience is across a number of sectors within Local Government and also of varying degrees of size and service delivery. This report highlights a number of examples and experiences gained by Scottish Local Authorities during recent years. The report brings in evidence and direct input from a wide variety of public sector officers and Local Authorites. COSLA's report includes the views of urban and rural authorities with the officers working on proposed and existing PPPs within Scotland feeding directly into this response.

The European Commission recognised that Public Private Partnerships (PPPs) were becoming a significant option for member states and their regions. While PPPs and Public Finance Initiatives (PFIs) have been operating within the regions of the United Kingdom for a number of years now the numbers of PPPs or PFIs within other member states have not been as great. As member states are beginning to seek to implement PPPs a number of concerns and uncertainties are being experienced. As recourse to address these issues the Commission has prepared the Green Paper, which seeks to establish the legislative position and to build on the experiences of previous and current PPPs within Member States.

The Current Position

PPPs are not currently defined by the Commission but are recognised as a co-operation between the public and private sectors. A PPP is characterised at Commission level as being of a relatively long duration, that funding is normally a combination of private and public funds, that the private sector partner is required to ensure that services or conditions of contract are met and delivered and that the distribution of risks and rewards are an important factor when entering into a PPP agreement.

The Commission currently looks for certain issues to be addressed and met within PPP work; these are transparency, equality and non-discrimination. The public sector can be held accountable to show that the project is undertaken.

Main Areas of Concern

European Legislation A Backward Step

To introduce detailed and restrictive PPP legislation at a Commission level would be detrimental to the good workings of a PPP. Such European legislation would hinder the development and advancement of service delivery through developments in technology, service delivery and learning from the experiences of PPPs across the member states. PPPs are seen as bringing the experience and good practice of the private sector into the public sector. The introduction of too restrictive legislation on PPPs will further hinder the perceived and realisable benefits of public-private working. The private sector are not used to working within the legislative framework of the public sector and this type of legislation at a European level will make PPPs less attractive to the private sector and increase their perceived risk of investing into a PPP.

Local Authority Autonomy

It is for Local Authorities within Scotland to choose whether a PPP is the best recourse to tackling the area of concern. This issue fits with the current requirement for transparency that the Commission seeks. Scotland’s Local Authorities are locally elected and locally accountable and therefore must ensure that their electorate can see that their own authority is delivering best value. Further subjecting PPPs to additional restrictive legislation could potentially damage the delivery of efficient and effective local services to meet local priorities. This must be recognised if the Commission seek to introduce any legislation.

Transfer of Risk and Reward

As highlighted by the green paper one significant area of a PPP is the relationship between risk and reward within the PPP agreement. Often the assumption is that the private sector is the body that is experiencing the majority of the risk and therefore should be rewarded by receiving the majority of the reward. When private sector businesses are costing for a PPP contract the transfer of risk is reflected within the costing work they submit. However, the perceived transfer of risk is not always the reality and a recent study of PPPs within England found that in only eight out of fifty-five PPP ventures did the private sector take the responsibility for the risks that they had costed for. It is important that the legislation does address the issue of risk and responsibility and recognises that previous PPP experiences have found that risk assessments have not been reflective of the actual risk undertaken. Fresh media allegations have arisen that central British Government have subsidised failing PPPs to ensure that PPP projects are attractive to the private sector and the returns achieved by private firms will encourage further private sector bodies to undertake PPP work. Any legislation that the Commission introduce should seek to ensure that the private contractor is accountable for the risk they have costed for. It would be an inappropriate use of the public purse if the public sector faced higher payments due to risk levels and then had to meet the costs resulting from these same risks resulting at a later date.

Learning from Experiences

While COSLA welcomes the Commission’s desire to make far-reaching and encompassing legislation for PPPs across Europe there must be sufficient scope for local flexibility. Not only will this scope allow for local autonomy but more importantly experiences and development within existing PPPs should be able to be recognised in future planning processes and within future PPP contracts. One local authority within Scotland entered into a PPP contract for the building of six secondary schools, during the building process the private contractor went into liquidation. The experiences learnt from this PPP have now been used as a benchmarking tool for all future PPPs within Scotland. It is important that the regions are able to learn from experiences within their member state and across the European Union and that the legislation is able to accommodate the outcomes of these experiences. The desire of the Commission to encourage this sharing of experiences is warmly welcomed.

Continuation of In-House Options

The legislation looks to set out the best possible framework to ensure that the implementation of any PPP project can ensure the three requirements of transparency, equality and non-discrimination. While working to ensure this, it is important that any legislation does not conclude that PPPs always be introduced or that they are always the best value for money. Ensuring that a PPP is undertaken within the constraints of best value should not mean a conclusion that PPPs are the only option and that other options do not represent best value. This becomes more of an issue with institutionalised PPPs where some Local Authorities within Scotland have sought to implement other in-house options than an institutionalised PPP. Scottish Local Authorities have been subject to a best value audit since 1997, therefore if an authority chooses to undertake work outwith a PPP this will be subject to a best value audit and Local Authorities should not have to justify alternative PPP choices to the Commission.

Offering Tenders

It is important that Local Authorities are able to enter into tendering arrangements with as much autonomy as possible. Each PPP is different and addresses a unique situation and issues. Local Authorities, indeed the public sector as a whole, must be able to outline the specific criteria and requirements that they are setting for their proposed PPP. To subject this tendering phase to further legislation will extend the already lengthy timeframe of establishing a PPP contract and create further uncertainties and less service delivery. The tendering process is the riskiest phase for the private firm seeking to enter a PPP contract. The private firm must undertake a significant job of work to cost and promote their tender. In Scotland this is already subject to legislation and has caused some private sector firms to not enter into tender negotiations. Subjecting PPPs to further tendering legislation will reduce the number of private firms who are willing to enter into the tendering process and thus reduce the potential for private sector competition.

The Commission also appear to seek that all PPPs are tendered European wide. It is important that the Commission is clear on what would be deemed a trans-border tender. While respecting internal market procedures there should be no additional pressure placed on public sector bodies. PPPs were advertised as incorporating the benefits of the private sector with the service delivery of the public sector. By ensuring that a local authority tenders in media that can be accessed by all, such as the Official Journal, this would enable enterprising private contractors to seek out potential tenders within the European Union. Within the green paper the Commission is seeking to ensure that best value is delivered within PPP contracts. The Commission should seek to clarify what constitutes value for money whilst ensuring that PPP projects are tendered across member states. It would seem appropriate that a project must be of a significant scope and or size to warrant additional tendering costs.

Competitive Dialogue

The Commission introduced the procedure of competitive dialogue within the area of public procurement and now wish to introduce this into the area of PPPs. The Commission recognise that this will enable public bodies to enter into dialogue with businesses tendering for the PPP contract “in order to identify the solutions best suited to their [the public sector body’s] needs.” The public sector body will then assess tenders on the pre-stated award criteria and then select the private sector business that has been successful. It is important that the selection of the tender is based on this pre-stated but that the Commission recognise that this is not always the cheapest option. Best value does not necessarily mean the lowest price. A clear and transparent pre-stated criteria and an open and transparent tendering process will ensure that public sector bodies achieve a best value PPP that meets the requirements and criteria that they have looked for. The introduction of competitive dialogue recognises the unique and varied nature of each PPP project and the ability of a public sector body to choose the private tender that best meets the needs and requirements of its criteria is paramount to the delivery of a successful PPP.

Secondary Markets and Transparency

An issue that has recently come to light within PPPs in Great Britain is that of “secondary markets.” A secondary market is where the private contractor who entered into the original PPP sells on their share of the PPP contract to another private sector provider. The service is still delivered and the requirements of the contract met but the private company who entered into the original agreement can make sizeable profits without any share of this being passed to the public sector.

It is the area of private sector profits from PPPs that creates the greatest public attention and reaction with a PPP initiative. The Commission should seek to ensure that there is transparency within PPP contracts. While commercial confidentiality is to be maintained it must be recognised that PPPs are publicly accountable contracts and the transparency that the Commission seek on PPPs should be ensured.

Examples of Scottish PPP Experiences

PPPs in Education

Within Scotland the investment requirements in order for authorities to address these needs of school estates are so substantial as to be beyond the normal levels of capital allocations available and there have been three main reasons for implementing PPPs within schools estates.

The first need is that there is a substantial backlog maintenance need within the national school estates. This arises as a result or year on year deterioration of the school stock. Much of Scotland's schools estates were built in the 1960s, or earlier, and this deterioration over 40 or more years has arisen because authorities have not had capital allocations enabling them to address the issue with the level of investment required. This is in keeping with one reason the Commission hold for the rise in PPP projects with the Green paper stating that at a European level, “it was recognised that recourse to PPPs could help to put in place trans-European [projects] which had fallen very much behind schedule, mainly owing to a lack of funding”.

Secondly, falling school rolls or geographical changes in population in most authorities has led to a need for school rationalisations in order to reduce the spare capacities within schools and the stock as a whole or in a particular geographical area. Where this has been the case the options are either to move the two schools into one of the existing schools and refurbish this or to build a new school. Particularly in the latter case substantial investment is required which has increased the use of PPPs.

The third reason is bringing school estates stock into line with 21st Century Educational requirements. These requirements cover a number of aspects that Local Authorities need to address in order to improve the service delivery within education. Areas such as facilities for those with special needs, e-learning and support facilities for pupils/parents have building implications within the general context of making schools “fit for the 21st century”. The costs over the full estate are significant and have added to the pressure for new build or significant adaptation options at cost levels leading to PPP solutions.

Under the section 94 capital consents the capital allocations were such that these issues could not be addressed, as Local Authorities were not able to deliver all their priorities and have sufficient capital to address the priorities outlined above. PPP projects enable these needs to be met, but also enable Local Authorities to benefit from addressing these early rather than facing increased costs due to significant backlogs lasting over a protracted number of years.

PPP projects for refurbishment are generally felt to be less attractive to the private sector. Initially the private sector were attracted by the perceived profits of PPP work and felt that refurbishment PPPs would be as successful as new build work. The risks however with a refurbishment PPP are felt to be significantly greater with an increased likelihood of payments to the PPP contractor being forfeited due to difficulties being encountered as a result of the latent problems in existing buildings.

Due to the experiences of previous private sector contractors within refurbishment PPP projects the private sector now seem to be costing projects accordingly and it is far easier to deliver a PPP project for new build packages than those having significant refurbishment content.

PPPs in Waste

There are a number of concerns expressed by Scottish Local Authorities when addressing the use of PPPs within Waste initiatives. These experiences are very relevant when looking to address the use and effectiveness of PPPs.

Local Authorities have found traditional PPPs to be an inappropriate tool to address the complexity of waste initiatives or the constantly changing variables or the number of inter-related components especially as Scotland is looking to increase the scale and scope of partnership working across public sector bodies. This partnership working causes difficulties with the traditional PPP contract being an agreement between one public sector body and a private contractor with legislation and guidance currently existing for PPPs not having looked to address these issues. The proposal for the ability and opportunity to share experiences and good practice between the regions could prove beneficial.

Developments and new legislation can also result in the initial PPP negotiations and costings needing to be revised, e.g. if an authority wishes to ensure recycling levels of 10% but during negotiations the Scottish Executive set requirements for Local Authorities to have recycling levels of 15%. The complex nature of a waste PPP increases the risk for the private contractor. This has led to a reduced number of potential private contractors and reduced competition; in three recent waste PPP tenders only one has had more than one private contractor submitting a bid.

One Local Authority has taken the step of entering into negotiations with the main bidder but also awarded a reserve bidder during contract negotiations. This reserve bidder takes on the vital role of keeping the pressure of market forces on the main bidder and thus keeping the costs submitted during negotiations down. Without this reserve bidder there would be no need for the main contractor to keep costs down, as they would be in a simulated monopoly.

PPPs and Public Contracts

Prior to the introduction of the new Local Government in Scotland Act the prevailing legislation precluded the private sector partners from accessing public sector contracts for goods and services. The only way that PPP projects could access public contracts was if the public authority retained responsibility for the goods or services required. One example of this situation was for a new extension to a college campus where a Local Authorities contract energy rates were more competitive than the private sector partner could achieve. The college therefore assumed responsibility for the payments so that they could benefit from the public sector contract.

With the new prudential regime in place it is now possible for the PPP partner to access public sector contracts for projects. The basic options now are one, for the public authority to retain responsibility for the loose furniture/equipment; and two, for the PPP partner to have responsibility for the loose items, the difference now being that they have the option either to arrange/access their own contracts or to access the requirements from a suitable public sector contract if this offers Best Value.

One difficulty that has been identified is the common requirement for the PPP projects to want very long guarantee periods (usually 25 to 30 years) for items like loose furniture. The best option for making a contract for furniture for school projects is a framework agreement but the maximum period allowed by the European Union under the public sector directives is 4 years. Even with a call off contract current Commission precedents and legislation do not view anything longer than 5 years favourably as the view held is that long term contracts restrict competition. Again the issue of risk is very prevalent here. The presumption that continuity of supply and even continued existence of the manufacturer can be maintained over the period in question cannot be guaranteed. The changes within the economic climate in a period of this length also mean the potential for further unseen risks.

PPPs Outwith Local Authority Remit

There have been a number of high profile PPP projects within the United Kingdom within the health agenda. These have received significant press attention and aspects of the PPP contract have come under public scrutiny. With both the Belfast Royal Infirmary and the Edinburgh Royal Infirmary the hospital car parks have received adverse public attention. The car park at Belfast Royal infirmary cost roughly £2m to construct and the private contractor receives subsidies from the hospital to keep the cost of parking down. The result is that within five years the cost of construction is fully met and the contractor will make significant returns year on year for the next 15 years. The car park at the Edinburgh Royal Infirmary was charging a higher rate of charges to users than the same firm was charging at Edinburgh Airport. As the new hospital is on the outskirts of Edinburgh there is a monopoly on the parking available to members of the public and therefore no alternative parking within easy access of the hospital.

The Edinburgh Royal Infirmary is a 30-year PPP in which the NHS Trust passed the site of the existing hospital to the private contractor in return for a purpose built hospital on a new site. The contractor therefore received a large area of prime retail site in the heart of Edinburgh and in addition to this owns the asset of the new hospital on the outskirts of the city for which it also receives annual rent of £11m per annum.

Conclusion

PPPs are an option for Local Authorities and the discretion and decision to apply these should remain with the regions and not be dictated by European Legislation. Regions should be able to learn from the experiences of PPPs within their region and member state and also from other European member states. It is important that if there is to be forthcoming legislation that this legislation is relevant and appropriate to PPP work taking place across the various member states. It should not be so restricting that lessons learnt cannot be applied to future PPP work. The Commission recognises that member states have a far greater knowledge of PPP projects and that their experiences are a resource that the Commission wishes to use. By working together the Commission should be able to introduce legislation that is beneficial to the regions and develops the PPP agenda from its current position rather than seeking to establish the current arrangements.

It is very important that the public sector bodies can learn from their own experiences, the experiences of other public sector bodies within their regions and the experiences across member states. Therefore such an exchange or experiences facilitated by the Commission would be very welcomed.

The scope and use of PPPs is very different across member states, their regions and most importantly across each area of the public sector. The issues that are paramount to a PPP for roads will not necessarily be the issues that are paramount for a PPP in education. It is important that legislation or guidelines are therefore enabling rather than restrictive to allow for innovation, advancement and crucially the delivery of the best possible services and public facilities.

Further Information

INTERNATIONAL FINANCIAL SERVICES, LONDON

RESPONSE TO EU GREEN PAPER ON PUBLIC PRIVATE PARTNERSHIPS

LONDON

JULY 2004

INTERNATIONAL FINANCIAL SERVICES, LONDON
RESPONSE TO EU GREEN PAPER ON PUBLIC PRIVATE PARTNERSHIPS

Introduction

This response to the EU Green Paper on Public Private Partnerships has been compiled by members of International Financial Services London working with the British Consultants and Contractors (BCCB) Bureau. These two groups represent the private sector in the UK Trade & Investment *Export Advisory Group*. The rotating chairmanship of the UKTI Export Advisory Group is drawn from IFSL and BCCB with BCCB currently providing the chairmanship. The following companies have provided significant input into this paper through the co-ordination of other members and organisations:

- Vector Management Limited – *BCCB Member firm* – on behalf of BCCB
- International Capital Partnerships Ltd – *IFSL Member firm* – on behalf of IFSL
- Halcrow – *BCCB Member firm* – on behalf of BCCB and IPFA
- WSP International – *BCCB Member fir*m – on behalf of EIC

The document below, from "Introduction to Response" has been agreed with and is basically identical too the BCCB response lodged separately (The introduction has been expanded). We believe it is important to submit two documents, however, as the introduction relating to each organisation explains the different constituencies and experiences of the member organisations.

IFSL

International Financial Services, London is a private sector, not-for-profit membership organisation, funded by its Members, the Bank of England and the Corporation of London (the public authority for London's financial centre). IFSL has 35 years experience of successful promotion of the UK's financial and supporting professional services industry.

While not a UK Government organisation IFSL does have an official role with regard to United Kingdom Trade and Investment (UKTI), the Government's overseas trade promotional arm, as their financial services promotional partner. As such, it is involved in setting UK government Financial Services priority markets and approving British Diplomatic Post's financial services promotional plans.

IFSL role as regards the promotion of PPP

IFSL PPP Export Group

The IFSL PPP Export Group is a UK Government approved contact body for those overseas Governments (at Central, Regional and Municipal level) wishing to learn more of the UK's expertise in Public Private Partnerships. As such, it is responsible for drafting (with the BCCB) the UK Government's international PPP promotional strategy. IFSL formed its PPP Export Group in April 2000 and the group is chaired by Dr. Tim Stone, Global Chairman of PFI/PPP Business at KPMG, probably the foremost expert in the internationalisation of PPP worldwide. Other members of the group include leading practitioners in the banking, legal, advisory, accounting and risk management fields together trade associations and UK government organisations such as Partnerships UK, HM Treasury and the Department of Health. Members of the IFSL group include former members of both the Private Finance Panel and the Treasury Task Force on PPP as well as former civil servants who ran many of the UK's initial PPP projects programmes (e.g. roads and prisons).

Overseas activity

Since the group was formed IFSL has organised over 40 seminars on PPP internationally.

UK activity

In the UK IFSL has organised meetings or visit programmes for well over 100 overseas Government delegations interested in PPP visiting London. In the EU IFSL is currently working particularly closely with the Economic ministry in Latvia, the Finance ministries of Portugal, Czech Republic and Hungary, the Bavarian government and many others. IFSL offers unrivalled access to expert practitioners and relevant UK Government contacts for those overseas governments wishing to find out more about UK experience on PPP. All in all IFSL is currently working with around 40 governments worldwide at central, regional and municipal level on this subject.

Promotional Partner

Some Governments have chosen to formalise their relationship with IFSL by appointing them as promotional partner with the idea of using IFSL's contacts and network to promote their PPP project plans and assist them on their policy thinking. The governments of Mexico, Latvia, and Turkey come into this category.

PPP briefings, seminars and visit programmes

IFSL organises a number of different types of event for overseas government groups at Central, Regional and Municipal levels.

IN THE UK

Roundtable discussions for visiting officials

IFSL arranges for experts to participate in discussions about aspects of PPP. These sessions usually last for several hours and can look at all elements of the PPP process; including the history of the initiative in the UK, policy issues, advantages and disadvantages, finance, risk management and legal aspects etc. Sessions concentrating on one particular sector: such as transport, health, education etc have also been arranged.

Seminar presentations

For a larger audience IFSL arranges for a series of presentations on the various aspects of PPP.

Longer visit programmes

IFSL organises longer programmes in the UK including an introductory seminar, meetings with UK government PPP units, visits to operational PPP projects etc.

Press Briefings

IFSL arranges interviews and visit programmes for foreign journalists wishing to find out more about PPP.

OVERSEAS

Much of the work IFSL does with governments is of the "first contact" type. These are initial discussions with officials or ministers as to what PPP is, how it works and its appropriateness for the country concerned.

Roundtables

These are usually high-level discussions at Ministerial level to enable governments to debate policy and practical issues with UK experts and representatives of UK government departments involved in PPP. Recent examples include meetings with the Finance and Transport Ministers of Denmark, the Finance Ministries of Portugal, Latvia, Lithuania, Czech Republic and Hungary.

Workshops

Detailed one or two day sessions looking at the PPP process organised for a government department or other interested group. IFSL organised a two day PPP roads workshop for the Hungarian Transport and Economy Ministry in Budapest and a two day workshop with the Finance Ministry of Portugal.

Seminars

These are usually aimed at government officials and are either of an introductory nature or concentrate in more detail on one particular sector.

IFSL Supporting Material

The IFSL brochure *Public Private Partnerships: UK expertise for international markets* gives a basic introduction to the concepts and issues involved in PPP. It is available in French, Hungarian, German, Polish, Spanish, and Latvian. This brochure forms part of the suite of three documents that comprise a brief guide from UK Trade & Investment entitled *How to Access UK Expertise in Public Private Partnership.*

The third element of the guide is the BCCB brochure *Public Private Partnerships (PPP), Facilities Management & Outsourcing.*

IFSL has also produced a number of case studies by sector to illustrate some of the issues involved. The IFSL paper *PFI in the UK: Progress and Performance* summarises some of the recent statistical reports on the performance of PPP in the UK.

IFSL GENERAL COMMENTS

IFSL has been working with government organisations in: Denmark, Finland, Estonia, Latvia, Lithuania, Poland, Hungary, Czech Republic, Slovakia, Germany, France, Portugal, Spain, Malta, and Belgium on developing their PPP policies.

PPP is seen as a way to improve the delivery of public services across the Union. It is not in IFSL's view, primarily, an accounting trick to move projects off balance sheet. It is not really about finance. It is a way to reform the delivery of public services to the benefit of the citizen. Recognition of this fundamental tenet from the EU centrally seems not always to be truly appreciated. Every single new EU country is looking to the UK model to reform their infrastructure and public service delivery but the necessary support to implement their plans is currently not available. What is needed, above all, is a recognition from the EU that in order to implement a PPP programme sufficient to *attract significant international investment* there needs to be resources available for countries to draw on to enable them to set up the *institutional infrastructure* necessary to permit them to start a programme. The limited success of PPP in the new EU countries so far is not due to any lack of interest in the process but rather due to the fact they need resources to establish a legal and administrative infrastructure such that they can attract these international investors. The EU could have a significant role here in providing technical advice/resources to assist at the policy stage. This is the single greatest barrier to the spread of PPP in new countries. The increasing interest in PPP from EU countries such as France, Germany and Denmark (as well as the other 80 countries around the world now looking at PPP) is going to make it even more difficult for the new EU countries to attract the funding they need for their PPP programmes and yet, without these programmes the chances of their infrastructure improving *in the long term* are remote. ***Help on getting PPP programmes moving is the one single most useful thing the EU can do.***

Around the world governments are facing the same dilemma. How to meet rising popular expectations and demand for better public services; both for "social" services such as schools, hospitals and prisons and transport and for "infrastructure" services such as roads, bridges, railways and utilities. This is at a time when, increasingly, government deficits have to be kept down. The pressure on public finances is intense, especially in a period of slow economic growth, and depressed tax revenues. It is a dilemma that in the past might have been solved by cutting public spending and, in particular, capital spending. In addition, there is the rising pressure for funds to renew, maintain and operate the existing infrastructure. Competition for such funding is often intense; not just between infrastructure projects but also with the many other demands on public sector finance.

In most administrations the capital, maintenance and operations budgets are separate. In times of fiscal pressure maintenance budgets ("nice to have") are often easy areas to cut to relieve pressure on operational budgets ("must have"). It is a very short-sighted strategy which is, nonetheless, all too common. This is especially true given the short-term planning processes involved in most public sector spending institutions where the tyranny of the annual budget takes precedence over a long-term strategic approach. Very soon there is not only no money available for new infrastructure but there is no money available to maintain existing infrastructure; which then deteriorates even more until it becomes essentially unfit for use, adding pressure to the demands for new infrastructure. This is why the construction, operation and maintenance of infrastructure must be seen as one thing. *To provide funds for the building of new infrastructure without making funds available for its operation and maintenance only delays the problem not solves it.* This, for example, is why it is critical for EU accession countries to look to a PPP solution for their infrastructure needs rather than rely purely on EU handouts. The danger of structural and cohesion type funding is that it enables new infrastructure to be built without the wherewithal to operate and maintain those structures.

INTRODUCTION TO RESPONSE

In the UK, as in many Member States, Government and Public Bodies transact with the Private Sector under normal contract law. Their constraints are a question of competence, which is governed by public law. So long as competence is established, they may opt for the contractual structure that provides best value for the Public Purse. It is essential that any categorisation of contractual form under procurement legislation does not fetter the Public Sector's flexibility in this respect. This consideration in no way conflicts with the overriding obligation to transact fairly and impartially with full regard to open market principles.

The current Procurement Directives enshrine distinctions in public works and services contracting that are 15 years old and therefore no longer reflect the increasingly sophisticated ways by which the Public Sector does business with the Private Sector. In particular in many States there has been a move away from strict cost-based procurement to value based transactions.

This distinction is very important. Encapsulated in the phrase "Value for Money" (VFM) this approach unpacks the concept of "economically most advantageous". There are three major strands:

- The public sector client specifies the required output of any works but confides large elements of the design and all the construction to the private partner
- Evaluation concentrates not on the cost of works but on the global cost of financing, amortising and operating the facilities over an extended (even whole-life) term
- Risks are allocated to the party to the contract most capable of containing and managing those risks. Risks have to be evaluated, as competing bidders

will adopt different approaches to the risks they are willing to bear. Risk evaluation puts on common economic footing bids that are not like-for like.

In tandem with this change in approach the Public Sector is learning to switch focus from the detail of physical works to the maintainable quality of service that is to flow from any infrastructure-type investment. PPP procurement in particular, embodies this change of philosophy.

The wide-ranging elucidation of the term PPP can be confusing. In the UK model PPP is further advanced in its theory and its practice than in many other countries. The evolution of the UK model recognises that large-scale transfer of risk which is involved in full divestiture, concessions/build-own-operate, build-operate-transfer can be workable where there is a robust off-take arrangement or a clearly evident commercial upside. It also addresses the fact that this can be problematic in some infrastructure sectors where basic commercial viability is difficult to demonstrate.

PPP as a method of providing public services should contain an expectation of service improvement, a commitment to transparency, the dismantling of monopolies and the reform of public services. It permits public authorities to reform public services, dramatically reduce capital expenditure and convert the cost of infrastructure into affordable operating expenditure spread across an appropriate time scale. This innovative approach has ramifications on the way that public services are delivered, with the emphasis being placed on the service outputs required.

The considerable PPP experience accumulated over the past 10 years in many Member States, but especially in the UK demonstrates an economic advantage for the Public Purse of, on average, in excess of 15% . This has been achieved whilst respecting high standards of transparency and impartiality in the selection of the private partner.

Under Directive-inspired legislation, there is a presumption that the eventual arrangement falls into a pre-defined procurement category. Negotiation is only admissible where "the nature of the works or the risks attaching thereto do not permit overall pricing", and competitive dialogue is only permissible where "the contracting body is objectively unable to define the technical means that would best satisfy its needs and objectives, or in cases where it is objectively unable to define the legal and /or financial form of the project".

This is no longer consistent with the perspective of the procuring authorities in many Member States. Current best practice in the UK points to the decision of procurement route coming downstream from an analysis of which method is likely to provide VFM for the Public Purse and then having the safeguards in place to prevent distortion of the competitive process. If the PPP route recommends itself, it is clearly a contractual structure that straddles the historic categories defined in the legislation. It is also clearly imperative, and in both parties' interests, for there to be the opportunity for extensive pre-contract discussion/negotiation, especially about risk transfer and pricing if the optimum balance is to be achieved. Negotiation should not however distort the fundamental specifications of output to the advantage of any particular bidder.

Currently, therefore, we are faced with the anomalous situation where the legislation is running behind best economic and good public management practice. To bring the Directives into line may recommend the admission of a new contract-type.

This would be a PPP (defined as a "global" contract encompassing elements of design, works, services and finance over an extended term) which are based on long-term partnership between the public and private sectors, and which would inherit the automatic right to dialogue and negotiation in the procurement process, subject to the Public Authority establishing appropriate safeguards for transparency, impartiality and VFM.

The experience of PPPs is that they have led a very significant increase in cross-border provision in areas that traditionally were dominated by domestic supply. Also PPP has been the engine for very considerable acceleration in infrastructure and public services investment. The evidence is strongly that it is the most economically efficient method. Given the enormous infrastructure deficit facing the New Member States, procurement legislation must be brought into step with the methods that work best.

DETAILED RESPONSES TO SPECIFIC QUESTIONS

1. What types of purely contractual PPP set-ups do you know? Are these set-ups subject to specific supervision (legislative or other) in your country?)

- *Contractual PPPs all share certain key features: output specifications, private sector involvement in the three critical project phases of design (to a greater or lesser degree), construction and operation (always of the technical functions, sometimes of the user-facing aspects of the resulting service), length of term and, critically, PRIVATE FINANCE. Design-Build and Design-Build-Operate contracts where payment is made by the authority when costs are incurred or works delivered should be categorized differently.*
- *Otherwise terminology differs (DBFO, DCMF, BOO, BOOT etc…). Mostly these variants boil down to whether the Private contractor has formal ownership (rather than economic responsibility for) the infrastructure at any stage during the infrastructure's working life. The most important and defining characteristic of a PPP is that it is value-based (VFM).*

In the UK (as in other countries that have drawn from the UK for their PPP practices) the Public Sector promoter is effectively obliged to observe a highly structured set of procedures, to follow Ministry of Finance standardised contracts, be subject to

- *independent " gateway (good process) reviews" throughout the procurement process, and most importantly carry out a Value for*

Money benchmarking exercise prior to contract to prove that the PPP solution is economically superior to the public sector alternative.

- *In the UK the National Audit Office carries out post –contract studies on a selective basis which assess the success and propriety of the PPP procurements. These studies are presented to Parliament (rather than only to the government of the day) and are published.*

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not why not?

- *The competitive dialogue procedures should provide a helpful clarification of the intention of the Procurement Directives and codify practices that have been a feature of good UK PPP practice for a number of years. It is however very important that this is used by the Public promoter to bring clarity to the output specifications and not as a means of making the technical solution of any given candidate available to all. Also it is clear that competitive dialogue will rarely obviate the need for negotiation of the contract and technical detail.*
- *Whilst the competitive dialogue allows bidders to optimise their offers in line with the contracting authorities' potential review of the initial project specifications, it creates the threat that entrepreneurial ideas and innovations are circulated to competitors during the tender process, which will deter qualified bidders from competing for PPP projects.*
- *Even with the increasingly rigid application of project frameworks in the UK, which have been published as drafts and have taken account of representations from concession companies, equity investors, lenders and lawyers, it has been found necessary to make changes to accommodate special project characteristics as the projects have moved toward financial close. For all tenderers to fully develop their project and project documentation prior to submission would involve both the tenderers and the public bodies in substantially greater costs and could very well cause the former to withdraw from bidding in PPP projects.*

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so what are these? Please *elaborate*?

- *Cohesion and structural funding should be clearly compatible with PPPs and there should be no presumption that EU–grant aid must imply public ownership of the resulting infrastructure*

The Green Paper appears to outlaw the negotiated procedure used in UK – advocating that everything is subject to the Competitive dialogue of Law 2004/18/EC. The use of this procurement approach has Intellectual Property Right issues. The expectation of service improvement and the reform of public services, both essential benefits that should be achieved from the involvement of the private sector will be completely

- *destroyed. The competitive dialogue as currently drafted will result in commercial organisations refusing to invest in innovative design thinking at stage 1. The result is likely to be the loss of any anticipated service improvement, cost benefit through innovation and reform of the provision of public services: it may result in the construction of "big lumps of primitive concrete" everywhere with competition being solely based on who can place concrete cheapest, rather than on who can come up with the cleverest cost saving design approach. The important life-cycle costing will not be adequately managed, and as the initial design and construction costs are generally in the order of 30% of the overall cost of the project throughout its life, the real benefit of the involvement of the private sector will be marginalized. Notwithstanding this engineering concern the bidders bidding costs will increase significantly with this approach.*
- **Apparently the EU can challenge the length of time of the Concession. At the start of a project a conservative view must be taken to attract private finance including downside scenarios and Concession length is often calculated on a pessimistic view. Under the Green Paper it appears that there is the real risk that any project that transpires into something more successful than was initially considered during the feasibility and tendering stages would suffer from the EU interceding and declaring the Concession period too long and ask for it to be reduced. Trying to put together Bankable projects under this threat will be nigh on impossible.**

4. Have you already organised, participated in, or wished to organize or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

- *No comment to make*

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the awards of concessions? In your opinion is genuine competition normally guaranteed in this framework?

- *The Treaty provides adequate provision for non-discriminatory involvement for non-national companies and therefore additional legislation on that particular aspect is unnecessary.*

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions desirable?

- ***The most important element of legislation must be to ensure a clear and reliable framework for the protection of investment, particularly in the case where the EU has a direct financial involvement in PPP projects through the structured funds.***

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

Where there is significant financial or political engagement by the Public sector to facilitate the creation of infrastructures and the provision of services a consistent set of procurement rules should apply. There is no obvious reason why structuring

- *contractor rewards as a function of usage/user payments should invite a less onerous regime. Concessions should be assimilated to a broader category of PPP contracting.*

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

- *No comment to make.*

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency non-discrimination and equality of treatment?

- National Authorities should be encouraged to publish clear process guidance/ regulation for private initiative PPPs, which should enshrine the core principles. It is of critical importance that the Private Sector promoter of such schemes should receive a fair economic return on their investment if for any reason other parties are chosen to fulfil the PPP. Evaluation criteria in particular should be explicit. The Commission should have a role in assimilating and disseminating good practice.

10. In contractual PPPs what is your experience of the phase, which follows the selection of the private partner?

- *Satisfactory and in accordance with contract. Abusive contract extensions have not been a feature of UK PPP contracting*

11. Are you aware of cases in which the conditions of execution including the clauses on adjustments over time may have a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or the freedom of establishment?

- *Mostly the clauses that govern adjustments over time properly protect the interest of the public sector client and are not discriminatory. Indeed in many PPPs the price of ongoing service provision has to be brought in line with the market by regular benchmarking or re-tendering.*

12. Are you aware of any practices or mechanisms for evaluating tenders, which have a discriminatory effect?

- *See comments on sub-contracting below.*

13. Do you share the Commission's view that certain step-in type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other standard clauses, which are likely to present similar problems?

- Step-in rights are an essential component of the security afforded to the providers of finance. They are a cornerstone of the well-balanced PPP contract and are in the interests of both parties. They are only very rarely exercised and then, in extremis, to prevent the catastrophe of an interruption in core public services. They are envisaged as a temporary crisis measure and most PPP contracts foresee "step-outs" when the problems have been addressed.

- PPP development is predicated on the ability to source funding from the global project finance markets and the nascent secondary market for PPP finance. These essential funding sources will disappear or become significantly more expensive if standard protections for the capital providers are withdrawn.
- Neither the Public nor Private sector would welcome regulatory intervention on this point, as it would be bound to work against the Public interest.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, what aspects should be clarified?

- *PPP contracting (assimilating concession-type structures) should be properly recognised as a contract category for which both the* *negotiated and competitive dialogues are well adapted. All further clarification should be at national level.*

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting?

- *In respect of those requirements, which favour sub-contracting to SMEs, in general, normal market mechanisms should be allowed to apply as smaller enterprises will naturally benefit from the increased economic activity engendered by a successful PPP programme.*
- *Procurement legislation should be directed to securing adherence to the open market principle and not confused by micro-economic engineering.*

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

- *The procurement competition should be limited to the concession and thereafter the winning concessionaire should be free to deliver the project through the life of the concession on a commercial basis without further reference to applying further EU procurement rules for subcontractors (as proposed in Para 51 & 52).*
- *An important element of successful PPPs is that financial model timing and costing uncertainties are kept to a minimum. At the time of the primary competition for the concession, the bidders cannot carry out EU procurement rules in order to ascertain indicative subcontractor costs to include in their financial model on which they will base their tender offer. If subsequent to award EU procurement rules apply then bidders must include in their programme significant periods of time for procurement activity and safety time margin for legal challenges. If these programme activities are built into the model, the time periods themselves could turn a potentially viable PPP project into a non - viable project.*
- *There must be a balance in the PPP legislation between the need for true competition and the practicalities and potentially project detrimental implications of introducing procurement law beyond the appointment of the concessionaire.*
- *It is recommended that the procurement rules for subcontracting be deleted in the final PPP legislation.*

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

- *No*

18/19 Questions regarding institutional PPPs

- *The points made in the Green Paper are well taken. If a Public Authority intends to be involved as an equity participant in a PPP delivery vehicle, this intention and the full terms of participation should be disclosed to all candidates at the start of procurement.*

20. In your view, which measures or practices act as barriers to the introduction of PPPs within the European Union.

- *At present the processes for the agreement and disbursement of grant aid towards infrastructure development is not easily compatible with proper and robust PPP contracting. As several Member States are perceiving the average 15% advantage (17% in the UK according to HM Treasury) to the Public Purse of the PPP approach, this very considerable economic benefit should be extended to all projects that could receive grant assistance.*
- *Technical assistance to the New Member States should be increased significantly to encourage the development of effective national PPP practices and programmes.*

21. Do you know of other forms of PPPs, which have been developed in countries outside the Union? Do you have examples of good practice in this framework, which could serve as a model for the Union? If so please elaborate.

- *The Commission may find some of the project experience and practices in Australia informative.*

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

- *The most productive initiative at the Commission level would be in response to the comments made in14 and 20 above.*
- *There are already PPP networks for the exchange of best practice and much dialogue between actors. A further forum would only be of limited interest. Cataloguing good practice and examples of successful projects would be far more useful. In this respect the Resource Book is an excellent example and is an initiative to be built on. What is required is focused PPP programme development and support,*

especially for the New Member States. The Commission should act as a catalyst for good and successful PPP contracting which fully respect the Treaty principles, and emulating only the best practices such as those employed in the UK.

- *Structural and other grant aid should be made fully compatible with PPP contracting.*

in Europe and worldwide

EC Green Paper – Procurement and Public Private Partnerships

Initial response of Local Government International Bureau (LGIB), UK.

July 2004

i) The LGIB, in conjunction with the Local Government Association (LGA), is the organisation which represents the views of local authorities in England and Wales on European and International matters.

ii) The current document is an initial response. The final response will be submitted to the Commission once it has received political approval from members of the UK's Local Government Association (LGA).

iii) Attached in annex 1 is the response of the 4Ps, the UK organisation dedicated to supporting local government's involvement with PPPs. We endorse the comments of the 4Ps made in annex 1, which elaborate on some of the points of principle outlined below.

Summary

- We welcome the Green Paper as the launch of an important dialogue on EU procurement rules regarding public-private partnerships (PPPs) and concessions. It is in the interests of local authorities and all other parties to ensure that PPPs are free to develop across the EU under conditions of open competition and greater legal certainty. However, a wider dialogue is needed on PPPs above and beyond the relatively narrow scope of the Green Paper.

- The EU's role in this area should be one of co-ordination rather than legislation, allowing Member States the freedom to organise and finance their own PPP arrangements.

- The experiences of the various PPP agencies and programmes in the UK should be examined and, where appropriate, act as a model for PPP development in other Member States.

- The EU lacks an overall vision for PPPs. Greater coherence on PPP issues is required between different areas of EU competence, particularly state aids, procurement, cohesion and internal market policies.

Response of LGIB

Local government's experience with PPPs

1.0 The Green Paper asks what the experiences have been of working with public-private partnerships. Joint entity or 'institutional' type PPP's are of particular importance to local government in the UK. Many local authorities are directly involved, for example, in joint entities such as urban regeneration companies, waste collection consortia, health trusts, or public safety partnerships etc. Other authorities may have involvement in multi-agency bodies in the areas of social services, leisure or culture.

Specific PFI (private finance initiative) projects have also involved local authorities in improving schools, housing, hospitals, and prisons. In addition, several PFI projects have concentrated on the development of the UK's road infrastructure, such as the new M6 toll motorway in the West Midlands.

2.0 Local authorities' relatively long experience of working in PPP type arrangements over the past decade has therefore meant that there is growing understanding of both the benefits and pitfalls presented by a public-private partnership type approach. Working in conjunction with the private sector has undoubtedly secured new sources of finance and has introduced new skills and management expertise into the delivery of public projects in the UK. Our experiences have shown, for example, that PPPs can provide efficiency savings in the region of 15%, when compared with traditional forms of public procurement[1].

3.0 The UK government has therefore supported PPPs through the creation of specialist agencies. The 4Ps, for example is a national support agency dedicated to helping local government in their project procurement. Partnerships UK is another national body which can provide financial support and become a project partner in large PPPs on behalf of the public sector.

The UK's approach to enhancing local government's involvement with PPPs has been further underlined by the Local Government Act 2003, which gave local authorities new powers to engage with the private and voluntary sector to deliver public services.

4.0 However, there have also been a range of problems with PPPs (a fact which is not explored by the Green Paper). There have been many instances, for example, of rising costs, initial under-estimation by contractors, and contractors suffering financial difficulties (particularly in the construction sector). In addition, projects have also been know to start as traditional concessions but revert to becoming joint entities with the public sector, when the private sector is unable to manage the concession independently. All these problems damage the public interest, and in several cases, have meant that the desired efficiency savings have not been realised.

5.0 We therefore feel a much wider dialogue is needed on PPPs above and beyond the relatively narrow scope of the Green Paper. The Green Paper concentrates specifically on the application of Community law to PPPs, while avoiding the wider issues of the desirability, viability, and effects of PPPs within different Member States. These questions are however central when discussing the need for more Community rules in this area. Such a 'wider' dialogue should go beyond the economic issues and also consider the social and labour market effects of PPPs, including the effect on workforce conditions, workforce morale, and the longer term public interest. The Commission may therefore feel inclined to issue a subsequent communication, which has a far wider focus that than of the current Green Paper.

A flexible legal framework for all Member States which promotes innovation

6.0 As outlined in the Green Paper, LGIB recognises that the current legal framework for the procurement of PPPs and concessions is fragmentary and unclear. National laws based on the Treaty or the specific procurement Directives, are not at present harmonised. The result is that the treatment of

[1] '*Developing PPPs in a new Europe*'. PricewaterhouseCoopers, June 2004.

PPPs and concessions varies widely between Member States. Uncertainty surrounding how EU legislation applies to PPPs also adds to the overall risks, and therefore the costs, associated with PPP projects. There are several cases, for example, where competitors have sort recourse through the European Court of Justice (ECJ) over alleged competition and state aids infringements. In addition, Europe's overall competitiveness is harmed if PPPs are being inefficiently implemented, due to legal uncertainty.

7.0 LGIB would therefore be in favour of some form of harmonisation of practices between Member States, so that all parties can realise the potential offered by PPPs. The rules regarding service concessions in particular need to be defined the bring service concession in line with the legislation regarding works concessions.

8.0 However, outside of service concessions, we would have concerns over a legislative approach[2] towards PPPs in general. Instead, an approach based on the Open Method of Co-ordination (OMC) and the sharing of best practice would be preferable. The Commission's role would therefore be one of facilitating and co-ordinating new, non-legislative, measures across Member States, as necessary to promote PPPs, rather than creating new legislation which may restrict the procurement options available to local authorities. This approach would ensure that flexibility is maintained, and that the widest possible choice of PPP arrangements would continue to be available at the local level.

9.0 In a similar vein, LGIB supports the recommendations in the recent report by the consultancy group PricewaterhouseCoopers[3] which highlights the need for improved understanding and institutional capacity to deliver PPPs across Europe. As part of this process, the Commission should, in addition, be invited to develop a discernable PPP policy for the European Union which provides a common vision of how the public and private sectors can work more closely together. Such a vision should not and would not undermine the right of local authorities to choose if a PPP is in fact the best project solution. It would simply facilitate and promote best practice in PPP operation should that be chosen as the best option.

Specific Issues raised in the Green Paper

- Definition of PPPs

10.0 The Green Paper distinguishes between 'contractual' and 'institutional' PPPs. However, there are several delivery vehicles in operation in the UK which operate a 'hybrid' of both 'contractual' and 'institutional' PPP arrangements. The Commission may therefore consider creating a third category of PPP, a 'hybrid' PPP, to help classify these more complex projects.

- The Negotiated Procedure

11.0 Local government has concerns over the current restrictive use of the 'Negotiated Procedure'. The Negotiated Procedure is in widespread use in PFI and other PPP projects in the UK, yet it is only intended to be used 'exceptionally' according to the Commission. The continued use of the negotiated procedure is especially important given that it is too early to use the new 'Competitive Dialogue' procedure, outlined in the recent legislative package on procurement which has not yet been transposed into national

[2] As does the Commission itself. See the recent speech on PPPs by Frits Bolkenstein, Internal Market Commissioner , '*PPPs, The players have the floor'* 17.05.2004.

[3] '*Developing PPPs in a new Europe'*. PricewaterhouseCoopers, June 2004.

law. A wider use of the Negotiated Procedure than that envisaged by the Commission is therefore likely to continue in the UK to facilitate the development of PPPs.

- Duration of Contracts

12.0 The Commission's intentions as regards limiting contract duration are driven by a desire to open up both concessions and PPPs to competition as soon as a 'reasonable return on invested capital' is achieved by the operator. Framework agreements are normally subject to a four year maximum for example. While we support this aim, many current PPP arrangements in the UK are of significantly longer duration. It is important therefore that future requirements for contract duration are applied only to newly-formed entities. It is also important to ensure that the requirement to frequently introduce competition is duly balanced with the need to provide sufficient incentives to attract the private sector partner in the first instance.

13.0 In addition, if an operator is performing successfully, it may well be in the public interest to allow service delivery to mature and improve over a longer period (such as ten years). Longer contract durations would also allow for greater innovation and experimentation to find the best ways of delivering public services. Shorter-term contracts on the other hand, lead the operator to focus on maximising revenue generation before the next competition. The flexibility to offer longer-term contracts is therefore essential to the success of PPPs as a vehicle, and must remain present in any future revisions of procurement rules.

- **Modifications to contract**

14.0 The Green Paper states that 'substantial modification to the actual subject of the contract, must be considered equivalent to the conclusion of a new contract, requiring a new competition' (paragraph 49). While we sympathise with this general approach, experience in the UK and in France suggests that re-opening negotiations and holding a new competition usually results in a better deal for the original private partner, rather than any improvements to the public interest. Mechanisms to strengthen the position of the public interest in new negotiations should therefore be sought.

- Subcontracting

15.0 In many cases, the 'institutional' PPP or joint entity itself is required to subcontract out elements of work or service delivery to a third party. The Green Paper makes reference (paragraph 51) to the sub-contracting rules. The need to hold a competition when sub-contracting appears to rest on whether the PPP is 'acting in the role of contracting body' or not. The situation is unclear. The PPP may be 'a' contracting body, but it would not be 'the' contracting body or original 'contracting authority'. It is therefore unclear under what conditions sub-contracting would require a competition.

16.0 It might be sensible for the requirement for PPPs to hold competitions when subcontracting, to be proportional to the size of the PPP and/or the size of the contract to be outsourced. Smaller PPPs should not be required to hold open competitions for small-scale subcontracting activities where the administrative burden and costs involved would be too great. The Commission should explore if such thresholds governing the requirement for competition when subcontracting would be helpful in achieving this balance. Alternatively, if the current procurement thresholds are also applicable to subcontracting arrangements, this should be made more explicit.

A State aids regime which supports public sector involvement in PPPs

17.0 A complicated state aids regime, is one further factor which inhibits public sector involvement in PPPs. Even though PPP creation should normally follow EC procurement rules rather than state aid rules, issues surrounding the legitimacy of public support are common. The ECJ 'Altmark' judgement[4] confirmed that compensation provided to companies to support the delivery of public services (whether PPPs or not) is not classed as state aid providing certain conditions are met. The judgement is welcomed by local authorities, but the conditions attached to this judgement are open to interpretation. The Commission has suggested that the judgement won't in fact apply in the majority of cases. The Commission has also published a Decision to exempt smaller amounts of aid to Services of General Economic Interest (SGEIs), and a Framework governing larger amounts of aid. The provisions in these documents are welcome, particularly in terms of exempting smaller amounts of aid from the need to be notified to the Commission.

18.0 The many different instruments and texts now relating to State Aid and SGEIs do not however provide a clear overall picture of the rules affecting the provision and financing of public services. This lack of certainty effects the funding of operators of public services whether they are involved in a PPP or working independently on a contractual basis. Is it recommended therefore, that the Commission 'proof' both their texts relating to state aid for public services to ensure that their application to PPPs is clear and consistent.

PPPs and the proposed Directive on Services the Internal Market

19.0 As with state aid legislation, the Commission's proposed Directive on services in the internal market is not clear on how it applies to PPPs. While it is clear that public services (SGEIs) delivered *directly* by local authorities are exempt from the Directive, services delivered *indirectly* through joint ventures such as PPPs would appear to fall within its scope, and therefore be covered by the problematic 'Country of Origin' principle[5]. To ensure the promotion of PPPs, public services (SGEIs), should be exempt from the Directive whether delivered directly or indirectly. Public authorities should not be subject to a range of extra legal provisions because they have chosen an 'indirect' or PPP type delivery model rather than 'direct' delivery model.

A better integration between European funding and the promotion of PPPs

20.0 Finally, it would also be helpful to have greater clarity around the use of European funding to support PPPs. ERDF (European Regional Development Fund) and ESF (European Social Fund) programmes should, for example, promote the fact that they can be used to help foster PPP development. This approach has proved particularly important when developing the Trans-European Transport Network where TENs monies have, in fact, been used to support the development of PPPs to build transport infrastructure. Other areas of local government's work such regeneration, or environmental/waste partnerships may also benefit from such an approach whereby funding streams are more explicitly 'PPP friendly'.

[4] ECJ 24 July 2003, Case C-280/00

[5] To promote competition in service delivery across the EU, the principle states that those delivering services from a base in another Member State are not subject to any additional regulatory or legal requirements imposed by the 'host' nation.

Conclusion

21.0 When seeking to harmonise PPP and concession procurement practices across Europe, the Commission should consider the benefits of a non-legislative approach based on the 'Open Method of Co-ordination.' Technical co-operation between Member States and the sharing of best practice will form an important part of this approach.

22.0 The experiences of the various PPP agencies and programmes in the UK should be examined and, where appropriate, act as a model for PPP development in other Member States (including the new local authority 'Regional Centres of Procurement Excellence' initiative).

23.0 Greater coherence on PPP issues is required in different areas of EU legislation, and there is a pressing need to launch a wider debate about the consequences of choosing PPPs over traditional methods of public service provision. (It is important for example that PPPs are chosen for the benefits they offer to the public interest and not simply because they allow fiscal investment outside of public guidelines).

24.0 Whilst respecting the rights of Member States to determine their own arrangements, the EU needs an overall policy and vision for PPPs to promote their development across the Union, and raise Europe's competitiveness.

25.0 Local Government International Bureau looks forward to an ongoing dialogue with the Commission and all other parties on these issues.

Annex 1 – 4Ps response.

The 4Ps, is the national support agency dedicated to helping local government in their project procurement and PPP issues.

The table below aims to set out the main areas in which the Green Paper might affect current UK activities on PPPs and PFI. The specific aim of the Green Paper "is to launch a debate on the application of Community law on public contracts and concessions to the PPP phenomenon. Once underway such a debate will concentrate on the rules that should be applied when taking a decision to entrust a mission or task to a third party."

Issue	**Green Paper proposal**
Use of negotiated procedure Paragraphs 24-27	The Commission re-emphasize that the Negotiated Procedure, commonly used in PFI and some other PPPs such as the NHS Local Improvement Finance Trusts ("LIFT") and Building Schools for the Future ("BSF") , should be regarded as exceptional. The grounds for using the procedure set out in the old Directives and current UK regulations ought to be interpreted exceptionally but question is what does this mean? The statement about this in the Green paper is probably the most explicit the Commission has ever been about the use of this procedure. The paragraphs following make it quite clear that the Commission believes the new Competitive Dialogue procedure in the Classical Directive will be the most appropriate procedure for "particularly complex" contracts. However the UK central government view is that "the statements in paragraph 24 of the Green Paper on the use of the negotiated procedure for works contracts reflect the narrow interpretation which the Commission has consistently placed on Article 7(2) of the Works Directive. But the UK view still remains that the provisions in the Works and Services Directives allowing the use of the negotiated procedure may be applied more widely, as indicated in paragraphs 3.2.4 and 3.2.5 of the Treasury Taskforce's guidance note.
Length of contract term Paragraph 46	This relates mainly to long term partnerships such as PFI, LIFT and BSF where the length of term awarded to the private sector partner, together with exclusive rights granted at the same time, introduces some potential conflict with the principles of the internal market and the EU competition provisions. The Commission's previous Interpretive Communication on Concessions said "The principle of proportionality also requires that competition and financial stability be reconciled; the duration of the concession must be set so that it does not limit open competition beyond what

	is required to ensure that the investment is paid off and there is a reasonable return on invested capital whilst maintaining a risk inherent in exploitation by the concessionaire." The Commission is now saying that this rule also applies to PPPs. It is worth noting here that framework agreements are subject to 4 year maximum terms under the new directive. It is not clear whether any changes would be required to long term PPPs to bring them within the Commissions regime here and if so what effect would that have on the commerciality and bankability of such projects Also does the Commission's approach potentially stifle innovation by Contractors and what effect might it have on variant bids for example?
Step in rights Paragraph 48	Commonly in PFI contracts the funders have a right to step in to replace a failing, or ailing, contractor and replace it with another in order to "save" the project. The Commission points out that such provisions may lead to the appointment of a new contractor without the use of a competitive process. However the provisions are intended to preserve the integrity of the Project and prevent the failure of a contractor giving rise to excessive delays and costs to the public sector client. The payments made by the public sector are secured and do not alter notwithstanding that a different legal entity is appointed to the remainder of the contract.
Sub-contracting Paragraph 51 on purely contractual PPPs and paragraph 64 on institutional PPPs.	This remark occurs in the section on purely contractual PPPs but could also be relevant in relation to institutional PPPs (i.e. Joint Venture Companies) , on which see below. It concerns a situation where a project company awards sub-contracts to its own shareholders; "In this respect, the Commission wishes to point out that when the project company is itself in the role of contracting body, it must conclude its contracts or concession contracts in the context of a competition, whether or not these are concluded with its own shareholders." The phrase "contracting body" is not clear; where the Commission wants to talk about entities subject to the public procurement regime it usually uses the phrase "contracting authority" (as in paragraph 24). Normally a PFI SPV would not be considered a contracting authority in this sense. So it is uncertain whether the

	Commission is simply saying that where a project company is a contracting authority (for whatever reason) it must use competitive procedures to appoint its own sub-contractors? Or is it saying that where a project company appoints sub-contractors it must always use a competitive process? In paragraph 64 the Commission raises a similar point in relation to the JV company set up in Institutional PPPs. Two examples where problems might arise here: in the first case the new ALMO companies, which would be classed as contracting authorities, often use services from their shareholder local authorities without competitive tenders. Second most LIFT companies, which will not be contracting authorities, will award at least some contracts to their shareholders without competition.
Institutional PPPs – golden shares Paragraph 62	The Commission recognizes a distinction between purely contractual PPPs, such as PFI, and institutional PPPs where the public and private sector entities join together to create a separate legal entity owned and controlled by each, though not necessarily in equal parts. This 'distinction' misses the fact that many PPPs now being attempted are hybrids between purely contractual PPPs and Joint Venture PPPs and it does not address Joint Ventures underpinned by other arrangements e.g. LIFT, BSF etc. The distinction is unhelpful and unrealistic. A number of issues arise which are specific to joint venture type PPPs; these include: The principles of free movement of capital (Article 56 of the Treaty) prohibit public authorities making their participation in the joint entity contingent on excessive privileges which do not derive from normal company law. This is perhaps unlikely to affect LA participation in LIFT, or BSF for example where the shareholder's agreement entrenches certain rights for minority shareholders, since these are often used commercially by minority shareholders in the private sector, But this is not free from doubt; the Commission ought therefore to clarify that the very existence of Institutional PPPs, as defined in the Green Paper, will not fall foul of the provisions of Article 56.
Use of competition	Para 60/61 discuss processes where the company is set up simultaneously with or after the award of public contracts and mentions number of problems including

Paragraphs 60-64	the fact that the lifetime of the entity may not coincide with the duration of the contract or concession awarded and encourage extension of the task without true competition at time of renewal. The Commission emphasizes that, except in cases which fall within the scope of the Teckal judgement, where a contracting authority assigns a task to a third party JV company, of whatever nature and mixture, it needs to use a competitive procedure where this task does not form part of the original scope of the contract. From Teckal– participation in the contracting entity does not justify not applying the procurement law unless the contracting body exercises control over the third party similar to that which it exercises over its own departments and at the same time that person carries out the essential part of its activities with the controlling local authority. Only entities that fulfil these 2 conditions at the same time can be treated as equivalent to in-house entities. The next paragraph goes on to emphasize that the JV company itself, where it has the "quality of a contracting body", needs to use competitive tenders in awarding its own contracts. Given the potentially ambiguous nature of the Commission's text here, this may have an adverse effect on the practicality of Joint Venture PPPs and discourage the commercial sector from joining public authorities in corporate vehicles

1 INHALT UND ZIEL DES DOKUMENTS:

Die Kommission der Europäischen Gemeinschaften hat am 30.4.2004 ein Grünbuch „Zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen" vorgelegt (KOM [2004] 327 endg). Unter Punkt 4 des Grünbuches ruft die Kommission interessierte Kreise dazu auf, ihre Kommentare zu den in diesem Grünbuch gestellten Fragen zu übermitteln. Diesbezügliche Beiträge sind bis spätestens 30.7.2004 an die Kommission zu richten, und zwar entweder per Post (Kennwort: Konsultation „Grünbuch zur öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften bei öffentlichen Aufträgen und Konzessionen" C100 2/005, B-1049 Brüssel) oder per E-Mail an: MARKT-D1-PPP@cec.eu.int.

Ziel dieses Dokumentes ist es einerseits, aufzuzeigen, welche offenen Frage im Zusammenhang mit PPP-Modellen und vergaberechtlichen Fragestellungen im Grünbuch nicht beantwortet bzw neu aufgeworfen werden, andererseits die Ansätze der Kommission kritisch zu beleuchten. Dies insbesondere auch vor dem Hintergrund der derzeit nicht detailliert geregelten Rechtslage hinsichtlich der vergaberechtlichen Einordnung der sowie diesbezüglicher Vorschriften für PPP-Modelle. Ziele dieses Dokumentes ist auch, durch Aufzeigen praktischer Probleme aus der Sicht eines mit der Konzeptionierung von PPP-Modellen befassten Unternehmens an der Meinungsbildung mitzuwirken.

Die Gliederung des nachfolgenden Dokumentes orientiert sich an den von der Kommission im Rahmen des Grünbuches an interessierte Kreise gestellten Fragen, wobei jedoch nicht zu jeder einzelnen Frage gesondert Stellung genommen wird, sondern vielmehr zu den sich aus den betreffenden Fragen ergebenden „Themenblöcken".

In der deutschsprachigen Fassung des Grünbuches ist nicht von „PPP", sondern von „ÖPP" (öffentlich-private Partnerschaften) die Rede, weshalb – zur terminologischen Übereinstimmung mit dem Grünbuch – in der Folge ebenfalls „ÖPP" verwendet wird.

2 FRAGE 1: SPEZIFISCHE RAHMENBEDINGUNGEN IN ÖSTERREICH FÜR ÖPP AUF VERTRAGSBASIS?

In Österreich bestehen derzeit keine spezifischen Rechtsvorschriften für ÖPP-Modelle auf Vertragsbasis; nur soweit ÖPP-Modelle auf Vertragsbasis vom Vergaberecht erfasst sind, ist das Bundesgesetz über die Vergabe von Aufträgen, BGBl 2002 I/99 (Bundesvergabegesetz 2002 – BVergG) anzuwenden. Spezifische Einzelregelungen können sich – je nach Inhalt des ÖPP-Projektes – lediglich aus einzelnen Vorschriften der Materiengesetze bzw –verordnungen ergeben. Diese Materiengesetze und Verordnungen (zB Regelungen über Kanalgebühren, die Bemautung von Straßen etc.) regeln jedoch nicht Form und Abschluss des ÖPP-Vertrages selbst, sondern stellen allenfalls rechtliche Rahmenbedingungen auf, die im Rahmen der Leistungserbringung bzw Entgelteinhebung zu berücksichtigen sind, und zwar unabhängig davon, ob die Leistung im Rahmen eines ÖPP-Modells erbracht wird oder nicht.

3 FRAGEN 2 UND 3: WAHL DES VERGABEVERFAHRENS UND WETTBEWERBLICHER DIALOG ALS GEEIGNETES VERFAHREN?

Zunächst möchten wir auf rechtliche und praktische Probleme hinweisen, die durch die von der Kommission in Pkt 2.1.1 des Grünbuches vorgenommene Auslegung der Ausnahmeregelung des Art 7 Abs 2 der Baukoordinierungsrichtlinie 93/37/EWG (BKR) bei der Vergabe von ÖPP-Modellen im Wege von Bauaufträgen auf Grundlage des derzeit (und für die absehbare Zukunft) noch geltenden Vergaberechtsrahmens auftreten. Dazu ist festzuhalten, dass die in Rz 24 (Seite 10 des Grünbuches) von der Kommission geäußerte Ansicht, in welchen Sonderfällen die Inanspruchnahme des Verhandlungsverfahrens nach Art 7 Abs 2 BKR zulässig ist, weil es sich „um Arbeiten handelt, die ihrer Natur nach oder wegen der damit verbundenen Risiken eine vorherige globale Preisgestaltung nicht zulassen", sehr eng ist. Zu restriktiv erscheinen insbesondere die in Fußnote 29 angeführten Beispiele von Bauarbeiten in geologisch instabilen oder archäologischen Zonen. Die Kommission ist aber offenbar der Auffassung, dass sonstige Probleme einer vorherigen Preisfestlegung, etwa aufgrund des Umstandes, dass die rechtliche und finanztechnische Konstruktion sehr komplex ist, die Durchführung eines Verhandlungsverfahrens nicht rechtfertigen. Diese Aussage erscheint in der von der Kommission getroffenen allgemeinen Formulierung problematisch: Einerseits ist nicht einsichtig, warum lediglich geologische oder archäologische Risiken zur Unmöglichkeit der Vorgabe eines Entgeltmechanismus durch den Auftraggeber führen sollen. Gerade die Lokalisierung und Zuteilung wirtschaftlicher und rechtlicher Risiken – in ÖPP-Modellen – stellt den Ausschreibungsersteller, aber auch die Bieter, vor erhebliche Schwierigkeiten, wenn nicht das Verhandlungsverfahren gewählt werden kann. Die Erfahrung zeigt nämlich, dass komplexe über längere Zeiträume geschlossene ÖPP-Verträge die Notwendigkeit mit sich bringen, dass über den Vertragsinhalt (auch von Konzessionsverträgen) mit den ausgewählten Bietern verhandelt werden kann. Ohne Verhandlungen ist es nicht möglich, die zahlreichen Risiken, die ein lange Zeit laufendes ÖPP-Modell für beide Vertragsteile mit sich bringt, optimal zu verteilen und damit den volks- und betriebswirtschaftlichen Nutzen eines ÖPP-Modelles nicht zu gefährden. In diesem Zusammenhang ist auch darauf hinzuweisen, dass die Entgeltmechanismen in aller Regel sehr komplex sind und insbesondere auf die jeweilige Risikozuteilung angepasst werden müssen, sodass auch für diesen erheblichen Vertragsaspekt die

Möglichkeit zum Verhandeln gegeben sein muss. De facto hat allerdings die einschränkende Auslegung dieses Ausnahmetatbestandes durch die Kommission zur Konsequenz, dass ÖPP-Projekte in aller Regel nicht als öffentlicher Bauauftrag vergeben werden können. Die einzige dem Auftraggeber verbleibende Möglichkeit zur Vergabe von ÖPP-Projekten, bei denen Bauleistungen den wesentlichen Charakter des Vorhabens ausmachen, besteht daher darin, dass eine Baukonzession gewählt wird, ungeachtet dessen, ob diese Vertragsform auf das in Frage kommende ÖPP-Projekt angewandt werden kann oder nicht (zB aus politischen oder wirtschaftlichen Überlegungen). Zusätzlich besteht hier – wie noch gezeigt wird – für den Auftraggeber (wie auch die Bieter) ein nicht unbeträchtliches Verfahrensrisiko, wenn sich im Laufe des Verfahrens herausstellen sollte, dass sich die zum Zeitpunkt der Verfahrenseinleitung vorgenommene Einordnung des Vertrages auf Grundlage der Verfahrensergebnisse nicht mehr aufrecht erhalten lässt. Die Schwierigkeit der im Vorhinein vorzunehmenden Einordnung des Vertrages beruht ganz wesentlich auf den fehlenden klaren (gemeinschaftsrechtlichen) Kriterien, nach denen Baukonzessionen von Bauaufträgen abzugrenzen sind. Unserer Ansicht nach ist hier der Gemeinschaftsgesetzgeber aufgerufen, klarere Abgrenzungskriterien festzulegen.

Die von der Kommission in Rz 25 auf Seite 10 aufgezeigte Möglichkeit der Durchführung eines „wettbewerblichen Dialogs“ kann diese Notwendigkeit der Durchführung eines Verhandlungsverfahrens für ÖPP-Vorhaben nicht ersetzen: Art 29 Abs 1 der Richtlinie 2004/18/EG stellt es den Mitgliedsstaaten frei, das Verfahren des „wettbewerblichen Dialoges“ einzuführen. Dies zeigt, dass zunächst eine Umsetzung ins innerstaatliche Recht erforderlich ist, damit im Geltungsbereich der vergaberechtlichen Bestimmungen ein derartiges Verfahren gewählt werden kann. In Österreich besteht auf Basis des derzeit geltenden Bundesvergabegesetzes 2002 nicht die Möglichkeit zur Durchführung eines derartigen „wettbewerblichen Dialoges“, sodass – jedenfalls bis zu einer Umsetzung – für sehr komplexe Aufträge, wie dies ÖPP-Modelle in aller Regel sind, zumindest auf das Verhandlungsverfahren zurückgegriffen werden muss. Für ÖPP-Projekte, die in näherer Zukunft abgeschlossen werden sollen, stellt der „wettbewerbliche Dialog“ daher keine Alternative dar, selbst wenn sich der betreffende Mitgliedsstaat für die Einführung dieses Verfahrens entscheiden sollte, zumal davon ausgegangen werden muss, dass eine Umsetzung ins innerstaatliche Recht einen gewissen Zeitraum in Anspruch nehmen wird. Nach den bisher in Österreich erlassenen Übergangsvorschriften im Zusammenhang mit den Novellen vergaberechtlicher Bestimmungen musste stets jene Rechtslage bis zum Abschluss des Vergabeverfahrens angewendet werden, die zum Zeitpunkt der Einleitung des Verfahrens (etwa durch Bekanntmachung des Vorhabens im Amtsblatt) gegolten hat.

Es ist der Kommission allerdings zuzustimmen, dass – sollte dieses Verfahren umgesetzt werden – der „wettbewerbliche Dialog“ in der Zukunft als grundsätzlich geeignetes Verfahren für den Abschluss eines ÖPP auf Vertragsbasis angesehen werden kann. Die Praktikabilität dieses neuen Verfahrens wird ganz entscheidend von der Umsetzung ins österreichische Recht abhängen, insbesondere von der genaueren Verfahrensausgestaltung. (Im Rahmen des „wettbewerblichen Dialogs“ soll es dem Auftraggeber möglich sein, mit den ausgewählten Bewerbern alle Aspekte des Auftrags zu erörtern. Aus unserer Sicht unterscheidet sich diese Phase des Dialogs im Grundsatz nicht von dem bereits jetzt verwendeten zweistufigen Verhandlungsverfahren: Auch im Rahmen eines Verhandlungsverfahrens wird nach Auswahl der am besten geeigneten Bewerber ein „Dialog“ in Form von einer oder mehrerer Verhandlungsrunden geführt. Was im Rahmen des „wettbewerblichen Dialogs“ rechtmäßigerweise erörtert werden darf, darf sich also grundsätzlich nicht von dem unterscheiden, was zum Inhalt von Verhandlungen im Rahmen des Verhandlungsverfahrens gemacht werden kann und darf.)

Die Praxis wird auch noch zeigen, ob es möglich ist, bereits in der Bekanntmachung – also noch vor Beginn der Dialogphase – die Zuschlagskriterien so konkret anzugeben, dass anhand dieser Kriterien die Angebote, welche nach Abschluss der Dialogphase erstattet werden, sachgerecht und hinreichend genau beurteilt werden können. Wie noch unten näher auszuführen sein wird, ist es nämlich sehr leicht vorstellbar, dass im Rahmen der Verhandlungen zu einem ÖPP-Projekt zum Teil nicht unwichtige Aspekte abgeändert werden und die Dialogphase zeigt, dass bestimmte Aspekte für die Entscheidung des Auftraggebers wesentlich sind, weshalb sie im Zuschlagskriteriensystem einen entsprechenden Niederschlag finden sollten, um eine sachgerechte Entscheidung des Auftraggebers zu ermöglichen. Dasselbe gilt für die in Rz 25 genannte Voraussetzung, dass die wesentlichen Elemente des Angebotes oder der Ausschreibung in der Dialogphase nicht verändert werden. Hier kann sich in der Praxis zeigen, dass – dies betrifft vor allem die Risikozuweisungen – es manchmal erforderlich ist, von dem ursprünglichen Konzept auch in wesentlichen Punkten abzugehen, damit überhaupt wirtschaftlich akzeptable Angebote gelegt werden.

4 FRAGEN 4 BIS 7: NEUER RECHTSRAHMEN FÜR KONZESSIONSVERGABEN

Österreich hat mit dem derzeit laufenden Straßenprojekt PPP-Ostregion den ersten Schritt zur Implementierung von ÖPP-Projekten im Straßeninfrastrukturbereich in Österreich gesetzt. Über konkrete Erfahrungen kann aufgrund des derzeitigen

Projektstandes noch nicht berichtet werden, doch sind bestimmte Schwachstellen im Rechtsrahmen bereits jetzt absehbar.

Der Kommission ist zuzustimmen, dass es nicht einfach ist, von Vornherein festzulegen, ob das ausgeschriebene Vorhaben ein öffentlicher (Bau- oder Dienstleistungs) Auftrag oder ein Konzession ist. Zutreffend zeigt die Kommission dabei das Problem auf, dass sich im Laufe des Verfahrens die Einstufung als öffentlicher Auftrag oder Konzession ändern kann und dies zu erheblicher Rechtsunsicherheit sowohl für den Auftraggeber als auch die Bieter führt. Denn es darf nicht übersehen werden, dass die Durchführung eines Verfahrens zur Vergabe eines ÖPP-Vertrages (vor allem, wenn es sich um einen Konzessionsvertrag handelt) auf beiden Seiten erheblichen Zeitaufwand und Kosten verursacht. Insbesondere wenn sich erst zu einem verhältnismäßig späten Verfahrenszeitpunkt zeigt, dass der nunmehr zur Rede stehende Auftrag nicht mehr als Konzession zu beurteilen oder die Einordnung zumindest fraglich ist, wären alle vergangenen Aufwendungen frustriert, wenn sich das Verfahren insgesamt als nicht mehr rechtmäßig darstellen würde.

Um diesem Rechtsrisiko auszuweichen, könnte ein öffentlicher Auftraggeber verleitet sein, von Vornherein die „sichere“ Variante zu wählen und den Auftrag als „klassischen“ öffentlichen Auftrag ausschreiben. Wie aber oben bereits aufgezeigt, wäre es – folgt man der Auffassung der Kommission – öffentlichen Auftraggebern in aller Regel verwehrt, ÖPP-Vorhaben, deren wesentlicher Inhalt Bauleistungen sind, im Wege des Verhandlungsverfahrens zu vergeben. Damit würden jedoch in vielen Fällen volks- und betriebswirtschaftlich wertvolle Optimierungspotenziale verloren gehen. Im Zusammenhang mit dem hier diskutierten Thema ist zunächst aber anzumerken, dass – quasi vorgelagert zum obigen Problemfeld – aus der Sicht der Rechtsanwender nicht hinreichend klar definiert ist, wann überhaupt ein Konzessionsvertrag im vergaberechtlichen Sinn vorliegt. Die Beurteilungskriterien sowohl aus der Rechtsprechung des EuGH (vgl etwa EuGH, Rs C-324/98, Telaustria) aber auch der Mitteilung der Kommission zu Auslegungsfragen im Bereich Konzessionen im Gemeinschaftsrecht, vom 29.4.2000, ABl 2000/C 121/02, lassen einige Fragen offen, deren Klärung für eine rechtssichere Einordnung unter Konzessionen oder öffentliche Aufträge entscheidend ist. Dazu wäre es beispielsweise hilfreich, nähere Definitionen darüber zu treffen, welche konkreten Risiken bzw welches Risikoausmaß für das Vorliegen einer Konzession notwendig ist. Auch wären nähere Vorgaben für die Entgeltkomponente einer Konzession wünschenswert: So ist bislang nicht hinreichend geklärt, ein wie hoher Anteil des Auftragswertes vom Auftraggeber bezahlt werden kann, ohne dass dies einer Konzession entgegen steht. Gem Art 1 Abs 3 und 4 der Richtlinie

2004/18/EG besteht bei Konzessionen die Gegenleistung entweder im Recht zur Nutzung der Leistung oder in diesem Recht zuzüglich der Zahlung eines Preises. Nach herrschender Auffassung ist begriffswesentlich, dass der Auftragnehmer durch die Übernahme des Nutzungsrechtes auch ein Nutzungsrisiko übernehmen muss, damit eine Konzession vorliegt. In diesem Zusammenhang stellt sich die Frage, wie viel Prozent des Auftragswertes (bzw des geplanten Entgeltes) vom Auftraggeber direkt als Preis gezahlt werden können. Unserer Ansicht nach darf dabei nicht die nominelle Nennung eines bestimmten Prozentsatzes ausschlaggebend sein, sondern die Überlegung, ob mit dem vom Konzessionär trotz Zuzahlung eines Preises übernommenen Risiko ein wirtschaftlich bedeutendes Risiko verbunden ist. Mit anderen Worten: Selbst wenn die Zuzahlung des öffentlichen Auftraggebers die rein aus der Nutzung der Leistung erzielten Einnahmen (wesentlich oder deutlich) übersteigt, wäre dieser Umstand für sich allein noch nicht konzessionsschädlich, solange mit dem auf die Nutzung der Leistung entfallenden Entgeltanteil ein wirtschaftliches Risiko verbunden ist, das der Konzessionär zu tragen hat. Es liegt auf der Hand, dass eine Klärung dieser Frage für die Konzeptionierung von ÖPP-Modellen zielführend wäre. Gerade im Zuge der Konzeptionierung und Verhandlungen über ein ÖPP-Modell kann sich nämlich herausstellen, dass es erforderlich ist, dass der Auftraggeber einen bestimmten Prozentsatz der Auftragsleistungen unmittelbar bezahlt, da anderenfalls entweder die Finanzierungskosten oder das Risiko für den privaten Bieter so hoch würden, dass er nicht mehr bereit wäre, zu für den Auftraggeber akzeptablen wirtschaftlichen Konditionen anzubieten. Andererseits wäre es aber dem Auftraggeber nicht immer möglich, gänzlich ohne substanzielle Beteiligung eines privaten Partners das geplante Vorhaben aus budgetären Gründen zum gewünschten Zeitpunkt zu verwirklichen.

Selbige Überlegung gilt entsprechend auch für die Frage, ob die Zusage eines Mindestnutzungsentgeltes, das durch den öffentlichen Auftraggeber garantiert wird, die Einordnung als Konzession verhindert. Unserer Ansicht nach darf auch die Zusage eines Mindestnutzungsentgeltes der Qualifikation des betreffenden Vertrages als Konzessionsvertrag nicht hinderlich sein, solange dadurch nicht jegliches Risiko seitens des Konzessionärs beseitigt wird.

Aus unserer Sicht wäre es – insbesondere für die Möglichkeit, Infrastrukturprojekte im Rahmen von ÖPP abzuwickeln – daher höchst wünschenswert, wenn bereits in naher Zukunft Rechtssicherheit hinsichtlich zweier Aspekte geschaffen wird:

- Es sollte detailliert geklärt werden, wann eine Konzession im Sinne der vergaberechtlichen Vorschriften vorliegt, sodass der Auftraggeber mit ausreichender Sicherheit die richtige Wahl der Verfahrensart treffen kann.
- Darüber hinaus sollte sichergestellt werden, dass ein einmal als Verfahren zur Vergabe einer Konzession begonnenes Vergabeverfahren auch in dem hierfür geltenden Rechtsrahmen zu Ende geführt werden kann, selbst wenn sich im Zuge der Verhandlungen (oder eines „wettbewerblichen Dialoges“) herausstellen sollte, dass – insbesondere aufgrund von erforderlichen Risikoverschiebungen – eine Einstufung des zu vergebenden Vertrages als Konzession nicht mehr gegeben ist. Es sollte – ähnlich wie dies bei der Schätzung des Auftragswertes auch geschieht, die ja letztlich auch im Vorhinein getroffen wird und für die Einordnung unter vergaberechtliche Rahmenbedingungen maßgeblich ist – zulässig sein, ein korrekterweise als Konzessionsvergabeverfahren begonnenes Verfahren jedenfalls nach den hierfür geltenden Rechtsvorschriften zu Ende zu führen. Dabei wird nicht verkannt, dass es möglicherweise erforderlich ist, hierzu entsprechend konkrete Rechtsvorschriften zu erlassen (etwa um Missbrauch und Umgehungen vorzubeugen, vor allem aber, um den Begriff der Konzession klarer zu definieren).

Zu Frage 7 ist anzumerken, dass aus österreichischer Sicht grundsätzlich nichts dagegen spricht, sämtliche ÖPP auf Vertragsbasis in einem solchen allenfalls zu erlassenden Rechtsakt demselben Regelwerk zu unterwerfen, unabhängig davon, ob das Vorhaben als öffentlicher Auftrag oder als Konzession einzustufen ist. Allerdings wäre dann naturgemäß auch eine entsprechend klare Definition von „ÖPP“ erforderlich.

5 FRAGEN 8 UND 9: PRIVAT INITIIERTE ÖPP

Grundsätzlich ist private Initiative für PPP-Projekte zu begrüßen. Das vorliegende Grünbuch geht inhaltlich aber nicht auf die Wettbewerbsgefährdungen ein, die sich aus derartigen privaten Initiativen ergeben können. Als Grundsatz muss – dies nicht zuletzt aufgrund von Art 2 der Richtlinie 2004/18/EG – jedenfalls sichergestellt werden, dass jenes private Unternehmen, von dem das Projekt initiiert wurde, keinen Wettbewerbsvorteil daraus zieht, dass es einen Informationsvorsprung gegenüber den übrigen Interessenten in Bezug auf das konkrete Projekt hat. Dazu ist es erforderlich, dass all jene Informationen, deren einseitige Kenntnis zu einem Wettbewerbsvorsprung führen könnten, auch den übrigen Interessenten offengelegt werden, und zwar so rechtzeitig, dass die übrigen Interessenten diese Informationen bei allfälligen Angeboten (etwa im Rahmen der Risikobewertung und Kalkulation) berücksichtigen können. Auch besteht die Gefahr, dass der öffentliche Auftraggeber verleitet sein könnte, bei der Konzeption des ÖPP-Modells oder der Leistungsbeschreibung nach den Vorgaben und

Vorschlägen des privaten Initiators vorzugehen; es liegt auf der Hand, dass damit ein Risiko hinsichtlich potenziell diskriminierender Anforderungen gegeben ist, zumal private Initiatoren ihren Vorschlag vermutlich zunächst auf ihre eigenen Möglichkeiten und Potenziale optimieren werden. Aus diesem Grund ist etwa im österreichischen Bundesvergabegesetz geregelt, dass Unternehmer, die an der Erarbeitung der Unterlagen für das Vergabeverfahren unmittelbar oder mittelbar beteiligt waren, sowie mit diesen verbundenen Unternehmen, soweit durch ihre Teilnahme ein fairer und lauterer Wettbewerb ausgeschlossen wäre, von der Teilnahme am Vergabeverfahren auszuschließen sind, sofern auf ihre Beteiligung in begründeten Ausnahmefällen nicht verzichtet werden kann (§ 21 Abs 3 BVergG 2002).

Ein möglicher Ansatz, die oben aufgezeigten Problemfelder zu handhaben, findet sich in Art 29 der Richtlinie 2004/18/EG in den Bestimmungen über den „wettbewerblichen Dialog“ (etwa Abs 3, 2. und 3. Satz, Abs 6).

6 FRAGEN 10 BIS 14: ANPASSUNG VON VERTRAGSKLAUSELN

Zutreffend stellt die Kommission dar, dass die Anpassung lang laufender Vertragsbeziehungen im Rahmen eines ÖPP-Projektes an Veränderungen des ökonomischen oder technischen Umfelds sowie an das öffentliche Interesse oftmals auch nach Vertragsabschluss erforderlich ist. Es ist jedoch davon auszugehen, dass – dies liegt bereits im immanenten Interesse der Vertragsparteien – Preisanpassungs- und Revisionsklauseln präzise formuliert sind. Dies betrifft insbesondere die Umstände und Bedingungen, unter den die Vertragsbeziehungen angepasst werden können (vgl Rz 47 des Grünbuches, Seite 16). Problematisch ist allerdings die Anforderung der Kommission, dass diese Klauseln offenbar schon in der Phase der Partnerauswahl ausformuliert sein sollten. Selbst wenn dies möglich ist, hängt die konkret dem Vertragsabschluss zugrunde liegende Preisanpassungsklausel (dies gilt selbstverständlich auch für sonstige Revisionsklauseln) wohl ganz maßgeblich vom konkret ausverhandelten Preismodell und sonstigen konkret ausverhandelten Vertragsbedingungen ab, sodass es nicht zielführend erscheint, wenn diese Klausel ab dem Zeitpunkt des Beginns der Partnerauswahlphase unveränderlich sein müssen. Gerade die Möglichkeit der Preisanpassung oder auch Anpassung sonstiger Vertragsbedingungen im Hinblick auf geänderte Umstände stellt ja einen wesentlichen Faktor der Risikoverteilung zwischen den Vertragspartnern dar. Wenn daher dieser Aspekt der Risikoverteilung mit den Bietern nicht verhandelt werden darf, kann dies zu einer suboptimalen Risikoallokation und damit volkswirtschaftlich zu hohen Kosten des Projektes führen.

Dasselbe gilt für „Interventionsklauseln“: Nur wenn einem Finanzierungsinstitut ausreichende Sicherheit geboten wird, werden die Finanzierungsbedingungen wirtschaftlich vorteilhaft sein. Ein wesentlicher Aspekt dieser Sicherheit ist dabei, dass das Finanzierungsinstitut in Krisenfällen zumindest einen bestimmten Zugriff auf das finanzierte Projekt hat. Bei lang laufenden Projekten mit einem hohen Investitionsvolumen würde daher die Unzulässigkeit von Interventionsklauseln voraussichtlich zu einer Verteuerung der Finanzierungskosten und damit insgesamt zu einem höheren Preis für die zu erbringende Leistung führen.

Dabei wird aber nicht übersehen, dass eine völlig freie Interventionsmöglichkeit bzw eine freie Übertragbarkeit der Kontrolle über das Projekt auch an Dritte zu wettbewerblichen Bedenken führen kann. Es scheint aber nicht erforderlich, dass etwa die Ausübung eines „step-in-right“ dazu führen muss, dass das Projekt einem neuerlichen Bieterwettbewerb unterzogen werden muss; dies insbesondere dann nicht, wenn die „step-in“-Klausel bereits Gegenstand des ursprünglichen Wettbewerbes war, also den interessierten Kreisen bereits ursprünglich bekannt war, dass der Auftraggeber eine Übertragungsmöglichkeit (wenn auch nur in begründeten Einzelfällen) vorgesehen hat bzw akzeptiert hat. Auch darf nicht außer Betracht gelassen werden, dass die Frage des Eintritts in das laufende Projekt wirtschaftlich ähnlich zu betrachten ist wie ein „Verkauf“ des laufenden Projektes. Diese „Verkaufs“-Vereinbarung wird wohl regelmäßig zwischen privatwirtschaftlichen Unternehmen abgeschlossen werden, daher regelmäßig ohnehin unter Wettbewerbsbedingungen zustande kommen. Es erscheint daher nicht zwingend erforderlich, diesen Vorgang einem neuerlichen „Bieterwettbewerb“ nach vergaberechtlichen Gesichtspunkten zu unterziehen.

Etwas zu eng erscheinen die Grenzen, die die Kommission in Rz 49 des Grünbuches, Seite 17, hinsichtlich der Zulässigkeit nachträglicher Vertragsänderungen zieht: Es ist zuzugestehen, dass nachträgliche Änderungen am Maßstab der Gleichbehandlung der Wirtschaftsteilnehmer und des Transparenzgebotes zu prüfen sind. Dabei ist aber wesentlich, dass die in Rede stehenden Vereinbarungen – wie bereits oben angedeutet – oftmals lange Laufzeiten (20 bis 30 Jahre) haben und oft auch in wirtschaftlich oder politisch sensiblen Bereichen angesiedelt sind, die maßgeblichen Änderungen über diesen Zeitraum unterliegen können. Die Zulässigkeit nachträglicher Änderungen an unvorhersehbare Ereignisse oder Gründe der öffentlichen Ordnung, Sicherheit oder Gesundheit zu knüpfen, erscheint daher zu restriktiv. Dies würde unrealistisch hohe Anforderungen an den Projektvertrag stellen; selbst ein sorgfältig erstellter Vertrag wird nicht in allen Fällen sämtliche Eventualitäten und Entwicklungsmöglichkeiten, selbst wenn diese objektiv voraussehbar gewesen wären, über einen 20-30 jährigen Zeitverlauf adäquat abbilden können.

In diesem Licht wäre es auch ausgesprochen problematisch, wenn man jede inhaltliche Änderung in Bezug auf den Vertragsgegenstand dem Abschluss eines neuen Vertrages gleichsetzen würde (Rz 49, letzter Satz des Grünbuches, Seite 17) und damit einen erneuten Aufruf zum Wettbewerb verlangen würde. Dieses Erfordernis eines neuen Aufrufes zum Wettbewerb sollte auf wesentliche Änderungen eingeschränkt werden, sofern solche Änderungen nicht (wie von der Kommission ohnehin angedeutet) aufgrund eines unvorhersehbaren Ereignisses erforderlich werden oder aus Gründen der öffentlichen Ordnung, Sicherheit oder Gesundheit gerechtfertigt sind. Bei der Frage, ob eine Änderung wesentlich ist, müsste dabei der Projektumfang insgesamt, der Projektgegenstand, aber auch die bereits vergangene Projektlaufzeit und die noch verbleibende Restdauer berücksichtigt werden. Denn es ist davon auszugehen, dass eine Änderung in bestimmten Vertragspunkten gegen Ende der Projektlaufzeit auf das Projekt insgesamt wesentlich weniger Auswirkungen hat, als wenn diese Änderung bereits kurze Zeit nach Beginn des Projektes erfolgt wäre. Denn es hätte eine solche Änderung zum konkreten Zeitpunkt – wäre sie schon zum Zeitpunkt des ursprünglichen Bieterwettbewerbs bekannt gewesen – möglicherweise geringere Auswirkungen auf die gelegten Angebote zur Folge gehabt.

Zu Frage 14 ist weiters zu bedenken, dass es schwierig erscheint, vorab und allgemein bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene zu klären, zumal die Erfahrung zeigt, dass ÖPP-Verträge in aller Regel sehr komplexe Vertragswerke sind, die im Detail auf den Einzelfall zugeschnitten sein müssen. Die Vorgabe starrer vertraglicher Rahmenbedingungen würde die Gefahr in sich bergen, dass damit ein für beide Teile optimaler Interessensausgleich verhindert und damit die volkswirtschaftlichen Kosten des Projektes gesteigert werden.

7 FRAGEN 15 BIS 17: UNTERAUFTRÄGE

Zutreffenderweise wird im Grünbuch aufgezeigt, dass der Einsatz von Unterbeauftragten (Subunternehmern) eine Reihe rechtlicher Fragen aufwirft. Besondere Bedeutung bekommt diese Frage neuerlich durch die Tatsache, dass ÖPP-Projekte oftmals über eine lange Zeitspanne laufen. Es kann daher (weder rechtlich noch wirtschaftlich) sichergestellt werden, dass sich Unterbeauftragte über die Laufzeit des Projektes nicht ändern (müssen). Auch würde durch ein striktes Unterbinden von Unteraufträgen ein sich möglicherweise im Zeitablauf ergebendes Optimierungspotenzial von Vornherein ausgeschlossen werden.

Dies führt dazu, dass der öffentliche Auftraggeber von den Bietern zwar verlangen kann, in ihrem Angebot jene Subunternehmer (und deren Leistungsteil) zu benennen, die er bei der Auftragsdurchführung einzusetzen beabsichtigt. Damit ist aber – wie oben aufgezeigt – nicht sichergestellt, dass die Subunternehmer tatsächlich zum Einsatz kommen bzw tatsächlich über die gesamte Projektlaufzeit eingesetzt werden. Dem Wechsel von Subunternehmern kommt daher eine besondere Bedeutung zu, weshalb die Umstände, bei deren Eintritt ein Subunternehmerwechsel zulässig ist, ebenso wie der Modus der Auswahl des Subunternehmers im Vertrag gesondert geregelt werden sollten. Darüber hinaus wäre eine Klarstellung vorteilhaft, dass es zulässig ist, die Anzahl von Subunternehmern bereits im Rahmen des Aufrufes zum Wettbewerb bzw in den Ausschreibungsunterlagen zu beschränken. Begründet liegt der Vorteil darin, dass eine höhere Anzahl von Subunternehmerverhältnissen auch einen höheren Management- und Verwaltungsaufwand seitens des öffentlichen Auftraggebers auslöst. Darüber hinaus hat in den meisten Fällen der öffentliche Auftraggeber mangels direktem Vertragsverhältnis keinen ausreichenden Zugriff auf den Subunternehmer, sodass er diesen nicht hinreichend beeinflussen oder kontrollieren kann. Gerade in jenen Fällen, in denen Subunternehmer wichtige Leistungsteile übernommen haben, kann dies zu Problemen führen, weil (insbesondere im Hinblick auf die Größe und das finanzielle Volumen von ÖPP-Projekten) die vertragliche Haftung des Auftragnehmers zur Sicherstellung der Interessen des Auftraggebers nicht immer ausreicht. Für öffentliche Auftraggeber wäre es daher jedenfalls von Vorteil, wenn klargestellt wird, dass einerseits die Anzahl der einzusetzenden Subunternehmer limitiert werden kann, andererseits für die Bieter verbindlich festgelegt werden darf, dass bestimmte Leistungsteile nicht an Subunternehmer weitergegeben werden dürfen.

8 FRAGEN 18 UND 19: INSTITUTIONALISIERTE ÖPP

Die Kommission hält zutreffend fest, das Wirtschaftsgebilde, auf die die vom Gerichtshof in der Rechtssache Teckal aufgestellten Bedingungen zutreffen, ohne Durchführung eines Vergabeverfahrens Aufträge (d.h. sämtliche Vertragsarten inklusive Konzessionsverträge) erhalten können (siehe Rz 63 des Grünbuchs). Anzumerken ist, dass die vom Gerichtshof postulierten Bedingungen einen gewissen Auslegungsspielraum gewähren. Unserer Ansicht nach dürfen die eine vergabefreie „In-house“-Beauftragung ermöglichenden Bedingungen nicht so restriktiv ausgelegt werden, dass dem „In-house“-Prinzip und den sich daraus ergebenden Gestaltungsmöglichkeiten für öffentliche Auftraggeber jegliche Anwendungsmöglichkeit verschließt. Wir verkennen nicht, dass das „In-house“-Prinzip nicht als Möglichkeit zur Umgehung vergaberechtlicher Bindungen missbraucht werden darf. Allerdings folgt daraus noch nicht, dass schlechthin jede Gründung eines gemeinwirtschaftlichen Gebildes bzw die (nachfolgende) Beauftragung eines gemeinwirtschaftlichen Gebildes mit der Erbringung von bestimmten Leistungen von vergaberechtlicher Relevanz ist. Es wird daher bei den verschiedenen Sachverhaltskonstellationen anhand des Einzelfalles zu prüfen sein, ob ein „Vertrag“ im Sinne des Vergaberechts oder – auf Grundlage der vom Gerichtshof formulierten „In-house“-Bedingungen – ein vergabefreier Vorgang vorliegt.

Hierzu ist weiters zu bemerken, dass – wie die Kommission zutreffend festhält – Privatisierungsvorgänge (verstanden als Übertragung eines Unternehmens bzw von Unternehmensanteilen vom öffentlichen auf den privaten Sektor) grundsätzlich nicht dem Vergaberecht unterliegen, sondern „lediglich“ dem Anwendungsbereich des EG-Vertrags, insbesondere den Grundfreiheiten sowie dem EG-Wettbewerbsrecht (vgl Rz 65ff des Grünbuchs). Um diesen Vorgaben des EG-Vertrags im Rahmen der Anteilsübertragung auf den privaten Sektor genüge zu tun, ist die öffentliche Hand gehalten, ein den Grundsätzen der Nicht-Diskriminierung sowie Transparenz genügendes Verkaufs-Verfahren einzuhalten; soferne solche Privatisierungsvorgänge nicht ohnedies über öffentlich zugängliche Foren (zB Börsen) abgewickelt werden, werden dazu in aller Regel (weniger formalisierte) „Wettbewerbsverfahren“ (oder Bietverfahren) angewendet. Die Abwicklung von Privatisierungsvorgängen über zwar nicht dem Vergaberecht unterliegende, aber den Grundsätzen der Transparenz, Nicht-Diskriminierung und Gleichbehandlung genüge tuende „öffentliche Bietverfahren“ wird nicht zuletzt durch die von der Kommission dargelegte Auffassung gefördert, wonach bei Einhaltung einer solchen Vorgangsweise grundsätzlich davon ausgegangen werden könnte, dass damit keine Gewährung einer verbotenen staatlichen Beihilfe verbunden ist. Unserer Ansicht nach sollen diese Grundsätze aber auch dann gelten, wenn das zu privatisierende Unternehmen bereits vor der Anteilsübertragung mit der Erfüllung bestimmter Aufgaben durch die öffentliche Hand betraut worden ist. Für die Frage der Rechtmäßigkeit der Beauftragung des zu privatisierenden Unternehmens ist der Zeitpunkt maßgebend, in dem die Beauftragung erfolgt ist. Mit anderen Worten: Eine im Einklang mit den vergaberechtlichen Bestimmungen ohne Durchführung einer Ausschreibung durchgeführte Beauftragung eines (gemeinwirtschaftlichen) Gebildes (zB durch zulässige „In-house“-Beauftragung) darf nicht durch die nachfolgende Privatisierung dieses (gemeinwirtschaftlichen) Gebildes unrechtmäßig werden. In einem solchen Fall wäre daher lediglich zu prüfen, ob die für Privatisierungen geltenden gemeinschaftsrechtlichen Vorgaben eingehalten worden sind. Selbst die Nicht-Einhaltung dieser Vorgaben macht aber die zuvor gemeinschaftsrechtskonforme Beauftragung des zu privatisierenden (gemeinwirtschaftlichen) Gebildes nicht unrechtmäßig.

Laga & Philippe

COMMENTS OF AKD PRINSEN VAN WIJMEN and LAGA & PHILIPPE ON: GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACT AND CONCESSIONS

Question 1.
What type of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

It is not always clear and obvious to detect the "theoretical" differences between various types of PPP, being either "purely contractual" or "institutionalised".

Very often there is a combination of a contractual PPP and an institutional PPP: the public authority and the private party (or parties) first sign an agreement in which they agree to form a special purpose vehicle and then they actually form the special purpose vehicle (SPV).

In the Netherlands there is no specific PPP legislation. In Flanders, there is a framework - decree on PPP (july 18th, 2003). In this decree, a definition of PPP-projects is given, being *"projects set up by public and private parties, together and in cooperation, in order to achieve a mutual added value"*. The decree only sets out a few headlines, leaving the actual details of PPP – agreements and SPV's untouched. Essential and most important in the decree is the possibility, given by the decree, to set up PPP concerning public goods (f.i. city halls, public sports centres, rail tracks, roads, etc.).

Question 2.
In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

We share this point of view only partly. Although the competitive dialogue procedure is an interesting addition to the already existing procedure, we notice the following difficulties:

- The role of the private parties is becoming more important. It's a procedure that essentially weighs on the private partners' shoulders. There is a risk that the public sector will think this procedure is a solution for everything and forgets to formulate clearly the goals it wants to achieve. This can finally lead to very unclear discussions and long negotiations, followed by agreements that have very little to do with the starting point.

- A definition or description of "complex projects" seems to be very adequate, since the competitive dialogue, in the perspective of the directive, can not be used in "small" or "easy" PPP's. It seems more obvious to create a general procedural framework that applies on all PPP. Also see question 6.
- It will not be interesting for private parties to propose new methods, solutions or products if there is a greater risk the private party will not gain the deal, for example if there are to many participants.
- Moreover, we doubt whether private parties are prepared to give up know how, if there is a risk that a competitor will run away with the know how.
- The possibility to pay the participants for their efforts in the procedure (Article 29.8 Directive 2004/18/EC) should be used. Otherwise it is doubtful whether private parties will make the effort to seriously participate.

Essential in the whole PPP – approach is the initiating partner, being private or public. Keeping in mind that finally, in order to grant a PPP project, a transparent procedure has to be applied, this leads to an undesirable situation in which a private partner might see the project he willingly suggested or proposed to a public partner go to another competitor together with the attached know how. It seems that the directive does not bring about a solution for these types of situations, since the whole procedure always starts with a public partner perspective. In reality, the initiative often lies with the private partner.

Question 6.
In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

We understand the Commission here questions the opportunity of a generic legislation on concessions-procedures and PPP–procedures. An increased, over detailed legal initiative could endanger the creativity mostly needed in PPP–projects.

However, it would be helpful if the existing rules and principles would be clarified, for example in a Commission's notice: e.g. Commission Guidelines/Notice on transparency, or to answer the question: From what moment on a concession becomes a public contract (nr. 34 Green paper)?

In the case a separate procedure would be created, it should be a simplified / simple PPP – procedure, applicable on all PPP projects, regardless financial impact, technical difficulties, form (purely contractual or institutionalised) etc.

It seems however more adequate to apply the existing negotiation procedures on PPP projects.

Question 13.
Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

These clauses should not be a problem if, except for the contracting private party, none of the other conditions of the contract are changed.

The new contracting private party should either fulfil the criteria for qualitative selection, or in the award procedure and the tender the "step-in" possibility should have been mentioned and e.g. the way to choose the "step-in" party should be laid down.

The step-in procedure can never lead to another agreement with a new private partner. The partner who "steps in", replaces the former partner with all his rights and obligations under the already existing and lasting agreement. When properly stipulated and used, these type of clauses are no threat to an equal competition.

"Step-in" clauses are essential to PPP – projects since they often aim to provide financial backup and support.

Question 14.
Do you think there is a need to clarify certain aspects of the contractual framework of PPP at Community level? If so, which aspects should be clarified?

Yes, see answer to question 6.

Question 19.
Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

Yes, see answer to question 6 and 14.

What can be said for purely contractual PPP can be said for institutional PPP as well, as the last ones are very often based on preceding agreements.

A lot comes down to the definition and qualification of transparency standards.

Question 20.
In your view which measures or practices act as barriers to the introduction of PPP within the European Union?

Most of the remarks made in answer 2 apply here as well. Most important is that the public sector sometimes argues that PPP is a possibility for the private sector to earn money without investing it. The public sector should be aware that the money has to be invested first (either by the private or the public sector or both) before a project can generate profit. Only when a project is likely to be in some way or another profitable for them private parties will be interested to invest.

The public sector should be aware that PPP is only interesting and useful when and if it creates a win-win situation. Private parties will not be interested, if there is no win in it for them. Both private and public parties should have a clear view on the goals they want to achieve. Otherwise there is a risk that the negotiations will lead to a win – lose situation in which case the losing party probably will try to get rid of the contract/partnership at a certain moment or at least is less willing to do its utmost to bring the project to a favourable conclusion. Especially when the private sector has taken the initiative for a certain project there is a risk that the public party does not have a sufficiently clear view on the goals of and risks for the public party.

Some general remarks

- Nr 46 Green paper: How to define “a reasonable return on invested capital”?
- According to the Dutch law of compulsory purchase (the *Onteigeningswet*) the public sector cannot proceed to purchase the land under a compulsory purchase scheme, if the owner is willing and able to build the works the public sector wants. In many cases the land needed for the development is already largely held by a developer or operator that anticipated the compulsory purchase. In those cases the public sector has no other choice than to award the contract to this party, because none of the other possible parties owns the needed land. It should be clarified how to deal with this situation.

26 juillet 2004

Livre vert de la Commission européenne sur les partenariats public-privé et le droit communautaire des marchés publics et des concessions.

CONTRIBUTION DE SUEZ

Le Livre vert publié par la Commission européenne le 30 avril dernier consulte les opérateurs et toutes parties intéressées sur les partenariats public-privé et le droit communautaire des marchés publics et des concessions. Suez salue cette initiative de la Commission. Ainsi que le relève le Livre vert, le terme « partenariat public-privé » n'est en effet pas défini au niveau communautaire. Aussi, Suez appuie la Commission dans son souci d'analyser si le cadre communautaire existant est approprié aux enjeux et aux caractéristiques spécifiques des partenariats public-privé[1].

Suez, entreprise européenne, d'origine franco-belge, partenaire du développement durable, exerce ses activités dans l'énergie, dans les métiers du gaz et de l'électricité (avec notamment les sociétés Electrabel, Distrigaz, Fluxys, Elyo) ainsi que dans l'environnement, dans les métiers de l'eau, de l'assainissement et dans ceux du traitement, du recyclage, du tri et de la valorisation des déchets (avec les sociétés Suez Environnement, Degrémont et Sita). Forte de ses 172 000 collaborateurs, Suez travaille dans plus de 100 pays. Elle a réalisé un chiffre d'affaires de 39,6 milliards d'euros en 2003. 80% de ce chiffre d'affaires est réalisé dans l'Europe des 25, où Suez emploie plus de 130 000 personnes.

Suez dispose d'une forte légitimité à exprimer sa position sur le sujet posé par le Livre vert. Suez possède en effet une expérience séculaire des PPP dont elle pratique les différentes formes depuis 150 ans. Les entreprises du groupe sont, historiquement, nées du développement des PPP. Ces partenariats ont imprégné l'expérience, le savoir-faire et la culture de Suez :

- Suez a été créé pour réaliser le canal de Suez, projet d'aménagement à vocation universelle, dans une logique de PPP puisqu'il s'agissait d'une concession. La Compagnie universelle du Canal de Suez a géré ce canal pendant près d'un siècle,
- la Société Générale de Belgique a été créée en 1822 pour favoriser l'industrie nationale et développer des projets en France et en Chine,
- dans la seconde moitié du XIXème siècle, la société Lyonnaise des Eaux et de l'Eclairage a été créée pour répondre aux besoins de collectivités locales dans les grandes infrastructures de réseaux d'énergie et d'eau. Elle a géré des contrats de concessions de gaz et d'électricité en France jusqu'aux nationalisations de 1945 ; 80% de son chiffre d'affaires était ainsi réalisé dans les domaines de l'électricité et du gaz dans des projets de PPP,
- Sita a été créée en 1919 pour l'enlèvement des déchets à Paris à la demande de la Ville.

[1] cf. point 18 du Livre vert.

Suez soutient également la démarche de la Commission visant à amorcer un débat sur la meilleure façon d'assurer que les PPP « puissent se développer dans un contexte de concurrence efficace et de clarté juridique »[2]. Un tel contexte est nécessaire au développement et à la réalisation de PPP dans l'Union européenne. Les PPP constituent en effet des formules permettant d'engager les investissements d'infrastructures et de services qui sont jugés prioritaires par la puissance publique. Ils facilitent le développement rapide et de bonne qualité des infrastructures et des services d'intérêt général dans les Etats membres. En effet, les PPP conjuguent l'expertise opérationnelle (savoir-faire technique, expérience du terrain, capacité d'innovation, efficacité de gestion, réactivité, adaptabilité, souci du consommateur) et la capacité de financement des entreprises, avec les missions d'organisation, de conception, de régulation et de contrôle que peut assumer la puissance publique, grâce à une claire répartition des rôles.

Les différentes formules de PPP peuvent, en outre, apporter une contribution significative à l'attractivité ainsi qu'à la compétitivité de l'Union européenne. Les besoins en investissements sont considérables : ils concernent à la fois les infrastructures, dont les besoins en investissements de l'UE 15 ont été évalués à 600 milliards d'euros par la Commission[3] pour les grands réseaux de transport et les infrastructures nécessaires à la protection de l'environnement ; les besoins sont également substantiels dans le domaine des services et d'accès aux réseaux. Ceux-ci vont en outre être fortement accrus suite à l'élargissement.
Parallèlement, par sa stabilité politique et économique, et depuis la création de l'euro, l'Union européenne constitue un pôle fortement attractif pour l'épargne mondiale et, de ce fait, une zone d'investissements potentiels importante.

La Commission souligne, à juste titre, que la problématique des PPP se situe en aval du choix économique et organisationnel effectué par une autorité locale ou nationale. En effet, la mise en œuvre d'un PPP constitue une prérogative de l'autorité publique, seule à même de décider du mode d'organisation d'un service ou de gestion d'une infrastructure. Suez souligne qu'il est également essentiel de distinguer les PPP de la notion de privatisation. A la différence des PPP, la privatisation entraîne un transfert définitif de la propriété des actifs alors que les PPP permettent à l'autorité publique d'en demeurer propriétaire et d'assurer ainsi l'orientation stratégique, la régulation et le contrôle du service.

Avant de répondre aux questions posées dans le Livre vert, Suez souhaite appeler l'attention de la Commission sur les principaux éléments suivants.

Afin de garantir le développement des PPP dans un contexte de concurrence efficace et de clarté juridique, il serait souhaitable, dans le respect de la liberté de choix des autorités publiques quant au mode d'organisation des services et dans le respect des principes du traité, que la Commission précise dans une directive, qui serait commune à tous les PPP - contractuels et institutionnels - les principes et éléments suivants :

- la définition des PPP,
- le principe de publicité préalable et de mise en concurrence sur l'attribution du contrat,
- une définition du terme « tiers » qui limite les dérogations au principe de mise en concurrence,
- l'égalité d'accès aux subventions publiques.

[2] cf. point 16 du Livre vert.
[3] cf. Communication de la Commission européenne « une initiative européenne pour la croissance ». Novembre 2003.

1. La définition des PPP

La distinction faite par la Commission entre PPP contractuels et PPP institutionnels est justifiée.
