1	1	The Council and European Parliament to adopt proposals on: the Single European Sky for air traffic control management (this should help to reduce airport delays which currently cost around €3 billion p.a.); and access to port services.	06/2003
1	1	The Council and European Parliament to adopt the second package of measures to revitalise European railways. This includes a number of proposals, particularly on safety, interoperability, the European Railway Agency and freight market opening. It should result in more competition and better quality services for business. The Council and the European Parliament to adopt the proposal on controlled competition for public transport. The Commission will also come forward with proposals for passenger transport market opening to complete the Internal Market in the railway sector.	12/2003
1	1	The Council to give a mandate to the Commission to negotiate an open skies agreement with the United States. The current system, based on bilateral agreements between individual Member States and the US, which the Court of Justice has ruled are incompatible with Community law, places a significant brake on restructuring in the EU air transport industry and hinders the functioning of the Internal Market.	06/2003
2	1	The Council and European Parliament to adopt the "energy package" which will completely open up gas and electricity markets for non-household customers by 2004 and for household customers by 2007. Business, particularly SMEs, and consumers will benefit from lower prices, as their counterparts already do in those Member States which have liberalised autonomously.	06/2003

3	2	A study on the water sector has already been carried out for the Commission by external contractors. The Commission intends to build on this by gathering further information from Member States, industry and consumers. At a later stage and depending on the results of the information gathering exercise, the Commission services could produce a working paper reviewing the legal and administrative situation in the sector, including the competition aspects, in full respect of Treaty guarantees for services of general economic interest and environmental provisions. Interested parties would be invited to comment on this paper. Based on their reactions, the Commission would decide on appropriate follow-up measures. All options will be considered, including possible legislative initiatives. This work will take full account of the Green Paper on Services of General Economic Interest and the Green Paper on Public-Private Partnerships.	12/2004
4	1	The Commission will complete a study assessing, for each Member State, the impact on universal service of full accomplishment of the Internal Market for postal services. Depending on the results of this study, the Commission may make proposals to achieve full market opening. The target date for full market opening is 2009.	12/2006
5	1	The Commission to continue its efforts to clarify the application of the state aid rules to compensation for the costs of providing services of general economic interest, in the light of forthcoming Court decisions. These will decide whether compensation paid providers of services of general economic interest should be treated as state aid.	12/2003
6	1	The Commission to issue a Green Paper on public-private partnerships, which should trigger a wide-ranging debate on the best ways of ensuring that partnerships for major projects can be undertaken in conditions of effective competition and full clarity under procurement rules. Subject to the results of the consultation, the Commission will propose (legislative or non-legislative) initiatives to enhance legal certainty and remove unjustified obstacles to public-private partnerships.	12/2003

4. REDUCING THE IMPACT OF TAX OBSTACLES

ACTION	TYPE	DESCRIPTION	TIMING
1	1	The Commission to propose revisions of the Parent/Subsidy Directive. The main aim of the Directive is to eliminate double taxation within the EU by permitting dividends to be paid between certain groups of companies (subject to certain conditions) without deduction of withholding tax. Revision will focus on extending the scope of the Directive so that more companies can avail of its provisions thus paving the way towards reducing double taxation risks and compliance costs.	06/2003
1	1	The Commission to propose a revision of the Merger Directive. Currently, this Directive helps companies to organise their operations on a cross-border basis by deferring payment of certain tax charges subject to certain conditions. As more and more companies re-organise their activities (on a cross-border basis) to increase efficiency and to take advantage of Internal Market trading opportunities, the scope of the provisions of the Directive need to be extended.	06/2003
1	1	The Commission to issue a Communication setting out the results of its technical discussions with Member States and stakeholders concerning different options for providing companies with a consolidated tax base for their EU-wide activities. A consolidated tax base would *inter alia* reduce compliance costs and simplify existing complexities. The Communication will report on progress on two issues in particular: the “Home State Taxation” pilot scheme for SMEs; and the possible use of International Accounting Standards as a starting point for a common EU tax base.	12/2003
2	1	The Commission to issue a Communication setting out further steps to modernise and simplify the VAT system. A crucial point to be developed in the Communication will relate to a modification of the rules governing the place of supply of services, whereby the reverse charge mechanism would become the general rule for trade between taxable persons established in different Member States.	12/2003

2	2	The Commission is actively considering making a proposal to introduce a single place of compliance for all businesses trading in Member States where they have no establishment. Such an initiative would decrease the administrative cost of VAT for companies. It would benefit SMEs in particular. This will be one of the initiatives announced in the Communication on VAT (see above). A consultation of European companies is on-going on this issue on the web-site “Your Voice in Europe.” Discussions with tax administrations are also being carried out.	12/2004
3	2	The Commission to present legislative proposals to remove the obstacles to the free movement of cars in the Internal Market.	12/2004
4	1	The Commission to publish a Communication on the effect of the case law of the ECJ on the various types of dividend taxation systems. An analysis of ECJ case law will help towards the design of non-discriminatory dividend taxation systems and allow the Commission to take action, possibly through infringement proceedings, to ensure non-discriminatory tax treatment of cross-border dividends.	12/2003

5. EXPANDING PROCUREMENT OPPORTUNITIES

ACTION	TYPE	DESCRIPTION	TIMING
1	1	The Council and European Parliament should adopt the legislative procurement package in both the classic and utilities sectors. The legislative package has two broad objectives. The first is to simplify and clarify the existing Community Directives, and the second is to adapt them to modern administrative needs in a changing economic environment. The three existing Directives are being consolidated into one measure which also contains a number of provisions facilitating the use, by public authorities, of information technologies in public procurement.	12/2003
1	3	The Member States to implement the public procurement package by the agreed deadline and, while doing so, streamline/simplify their own legislation and standardise their procedures. They should report on progress to the Commission.	06/2005
2	2	The Commission to propose amendments to strengthen the Procurement Remedies Directive, possibly including the strengthening of the powers of national surveillance authorities on which it will conduct a prior consultation.	12/2004
3	3	The Member States should strengthen administrative co-operation in order to resolve cross-border procurement problems, notably through the further development of the fledgling European Public Procurement Network (EPPN) established on the initiative of the Danish authorities. The network needs to be expanded to all existing and new Member States. Member States should ensure that the EPPN is sufficiently well funded so as to be able to meet its ambitions.	06/2004
3	3	The Member States should stimulate and develop procurement training (possibly using the Internet), particularly to raise the awareness of European rules amongst procurement officials at all levels of government. Best practices could be exchanged through the EPPN.	12/2004

4	2	The Commission to develop an Action Plan on e-procurement with a view to allowing a substantial part of procurement to be carried out electronically by 2006. The first step will be to translate the legal provisions of the public procurement package into functional requirements. The Commission will also give mandates to European standards organisations, where necessary, to develop technical standards for e-procurement.	06/2004
5	1	The Commission to publish an interpretive Communication setting out the implications of recent Court judgements regarding the scope of Article 296 of the Treaty (which concerns exceptions for essential security interests of Member States).	12/2003
5	2	The Commission to publish a Green Paper looking at any further initiatives in European defence procurement.	12/2004

6. IMPROVING CONDITIONS FOR BUSINESS

ACTION	TYPE	DESCRIPTION	TIMING
1	1	The Council to adopt the Regulation on the Community Patent (based on the political agreement reached in the Competitiveness Council of March 2003).	06/2003
1	1	The Council to adopt the proposal to create a Community Patent Court and to take the necessary steps to allow the European Union to accede to the European Patent Convention.	12/2006
2	1	The Council and European Parliament to adopt the Directive on the enforcement of intellectual property rights which will bolster the fight against counterfeiting and piracy.	12/2003
2	1	The Council and European Parliament to adopt the Directive on the patentability of computer-implemented inventions which will stimulate innovation and benefit both software developers and suppliers as well as the users of patentable technology.	12/2003
3	2	The Commission to adopt a Communication on the management of copyright and related rights in the Internal Market which will identify the measures necessary to create a more favourable environment for the cross-border marketing and licensing of these rights.	09/2004
4	1	The Council to adopt the proposed reform of the merger regime to ensure the continuing effectiveness of merger control in the context of globalisation and enlargement. The reform proposal focuses on a revision of the turnover thresholds and jurisdictional and procedural issues.	06/2004
4	1	The Commission to adopt a new block exemption Regulation to facilitate technology transfer agreements between companies.	06/2004
4	3	The Member States to continue their efforts to further reduce the total amount of **state aid** while re-directing aid towards horizontal objectives of Community interest, such as the environment, research and development and SMEs. The Commission will continue to monitor and publish results in the State Aid Scoreboard.	ongoing

5	1	Legal endorsement of existing International Accounting Standards (IAS), provided that, for some of them, the appropriate modifications are made. A recently adopted Regulation requires all EU-listed companies to prepare their consolidated accounts in accordance with IAS from 2005. IAS are established by the International Accounting Standards Board (IASB), an independent international accounting standard-setting organisation. To ensure appropriate political oversight, the IAS Regulation establishes a new EU mechanism to endorse IAS for use within the EU. Decisions will be taken by the Commission on the basis of the opinion of the Accounting Regulatory Committee – which is composed of representatives of the Member States – and considering the advice of the European Financial Reporting Advisory Group - which is composed of accounting experts from the private sector in several Member States.	09/2003
5	1	Legal endorsement of new IAS	ongoing
5	2	The Commission to offer a platform (or forum) to Member States to allow them to discuss ways of facilitating the uptake of IAS by non-listed companies, including SMEs (e.g. by uncoupling tax reporting and financial reporting in respect of individual accounts).	06/2004
5	1	The Commission to issue a Communication setting out priorities for 2003 and beyond aimed at improving the quality of statutory audit in the EU.	06/2003
5	1	The Commission to make a proposal to modernise the 8th Company Law Directive (access to and regulation of the audit profession).	12/2003
5	1	The Commission to set up a European co-ordination mechanism for public oversight of the audit profession. This will aim to ensure proper oversight of the audit profession at national level and appropriate co-ordination at EU level.	03/2004
5	2	Adoption of International Standards on Auditing for all audits conducted in respect of EU companies. Auditing standards are crucial to providing high quality audits. At present there are no agreed auditing standards in the EU. There is general agreement that any initiative in the field of standards should be based on the International Standards on Auditing (ISA). Over the next two years, the Commission and Member States will work towards the creation of a supervisory framework based on the ISA.	03/2005

6	1	The Council and European Parliament to adopt the Take-over bids Directive which will help business development and restructuring while maintaining essential protection for shareholders.	12/2003
6	1	The Commission to propose a 10th Company Law Directive on cross-border mergers and a 14th Company Law Directive on cross-border transfers of the registered office.	12/2003
7	2	The Commission is undertaking a feasibility study in order to assess the practical need for and possible obstacles associated with the creation of a European Private Company Statute. This legal form would serve the needs of SMES carrying out business in more than one Member State. If the results of the study are positive, the Commission will propose a Regulation.	12/2006

7. MEETING THE DEMOGRAPHIC CHALLENGE

ACTION	TYPE	DESCRIPTION	TIMING
1	3	The Member States to implement and enforce the Pension Funds Directive which proposes a prudential framework to provide security of pensions and a high level of protection for future pensioners. It will also provide institutions with the flexibility to develop effective investment policies.	06/2005
2	2	The Commission to examine the desirability of proposing a Directive on portability of occupational pensions, subject to the outcome of the second stage of the consultation of the Social Partners which is about to be launched.	06/2004
3	1	The Commission to continue its action to tackle tax discrimination against pension funds established in other Member States. The Commission will vigorously pursue any cases which come to its attention and ensure that the relevant ECJ jurisprudence is complied with throughout the EU.	ongoing
3	3	Prior to the entery into force of the Pension Funds Directive, the Member States to adjust their national rules to ensure non-discriminatory treatment of pension funds established in other Member States.	06/2005
4	1	The Commission to ensure full compliance with the jurisprudence of the Court of Justice, in order to realise the potential of the Internal Market in helping to tackle the challenge faced by Member States' Health Systems. In this connection, discussions with Member States have been launched, including through the High Level Reflection Group on Patient Mobility. As a basis for these discussions, the Commission will present the results of its consultation process on patient mobility.	12/2003

8. SIMPLIFYING THE REGULATORY ENVIRONMENT

ACTION	TYPE	DESCRIPTION	TIMING
1	2	The Commission to develop a coherent approach to the question of legislative technique and the choice of legal instrument in the Internal Market. This concerns issues such as when to rely on mutual recognition, the "New Approach", co-regulation or voluntary agreements; the level of harmonisation and the possible insertion of Internal Market clauses; and when Regulations should be given priority. The Commission will consult Council, the European Parliament, industry and other stakeholders. The approach to be adopted could be set out in a short Commission Communication under the Commission's Governance Initiative/Better Regulation Initiative.	06/2004
2	1	The Commission to draw up an "Internal Market compatibility test" following consultations with the European Parliament and Member States. The test would act as guidance for national legislators at all levels of government to ensure that their actions do not inadvertently impinge on the free movement principles of the Treaty. This test could be endorsed by means of a Council resolution. The Commission also recommends that Member States involve non-nationals more in the development of any measures and that, once measures have been adopted, they should be made easily available to non-nationals (e.g. by putting them online).	03/2004
3	1	The Commission to set up a web-site where interested parties can report on particularly complex rules or rules which may fail the "Internal Market compatibility test".	09/2003
3	1	The (Competitiveness) Council is invited to to establish a working group on "better regulation." This group could draw up national simplification plans, which would mirror activity at Community level.	06/2003

4	2	Commission to develop with the Member States indicators to measure progress towards a higher quality regulatory framework for the Internal Market, particularly, but not exclusively, as a result of the Commission's Better Regulation Action Plan of June 2002. These indicators should consist of both input indicators (e.g. have the announced measures been taken on time?) and impact indicators (e.g. have they resulted in lower administrative burdens?). The results of the Commission's project on Indicators of Regulatory Quality, undertaken in the framework of the Multi-annual Programme for Enterprise and Entrepreneurship, will provide a basis for this work.	06/2004

9. ENFORCING THE RULES

ACTION	TYPE	DESCRIPTION	TIMING
1	3	The Member States to commit themselves to setting and respecting more ambitious transposition targets at each Spring European Council. In response to a request from the European Parliament, the Commission will undertake a feasibility study to examine whether it is methodologically and practically possible to put a figure on the cost of late transposition. Existing instruments, such as the Inter-active Policy Making feedback mechanism, can also be used to gauge the costs to business of both late transposition and misapplication of EU Directives.	03/2004
2	2	The Commission to issue a Recommendation setting out "best practices" to speed up and improve the quality of transposition of Internal Market Directives. These could include: a) ensuring that the expertise of officials' built up during negotiations can be fully used during the transposition phase; b) planning ahead by developing transposition "time tables" (i.e. with target dates for first draft implementing text, envisaged date for approval by the competent minister(s), starting date of the parliamentary process, etc.); c) limiting the transposition to what is absolutely necessary without adding other elements which only complicate the law or its implementation (this is usually referred to as "gold plating"); d) urgent intervention by the "state" in cases where deadlines risk being missed (i.e. because of delays at regional/provincial level in federal/decentralised Member States); e) regular submission of transposition progress reports to national and regional parliaments to keep up the pressure.	03/2004
2	1	The Commission will regularly identify those Directives which should be subject to "preventive dialogue" – i.e. ongoing dialogue between the Commission and the Member States, starting immediately after the Directive is adopted, with the aim of ensuring better and faster transposition. The Directives chosen will be measures of particular economic importance and/or those which by their nature may be more difficult to transpose. In addition, the Commission will: a) systematically write to all Member States one month after the adoption of a Directive to inquire *inter alia* about	09/2003

		their planning schedules; b) organise bilateral meetings with Member States to discuss any transposition problems; c) whenever appropriate, raise transposition at expert meetings with a view to detecting problems at an early stage; d) prepare guidance to assist the Member States in the transposition of particularly complex pieces of legislation.	
2	1	The Commission to produce statistics on the average time taken to implement Directives, which it will report on regularly in the Internal Market Scoreboard.	06/2003
3	2	The Commission to propose a legal instrument to make certain implementation aspects, such as electronic notification of implementing measures and the use of concordance tables, mandatory. This will help to improve the transparency and efficiency of the checking of conformity.	09/2004
4	2	The Commission proposes that a standard or a transposition period should be set within the Inter-Institutional Agreement on Better Regulation, from which departures are only permitted if this can be justified by the complexity of the measure. The Commission will also seek the views of the Member States and the European Parliament on: a) the inclusion of standard sanctions clauses in Directives (i.e. a clause to provide for effective, proportionate and dissuasive sanctions in case of violations of the obligations flowing from the Directive); and b) a standard clause to provide a stronger legal base for the promotion of active administrative co-operation.	12/2004
5	3	Member States to maximise their efforts to reduce the number of their infringements by at least 50% by 2006. This can be achieved by a combination of early settlement of disputes, the use of alternatives to formal infringement proceedings (e.g. SOLVIT) and preventive action. This needs to be implemented progressively on a year by year basis. The Commission will report on progress made by existing Member States in the Internal Market Scoreboard. The Commission would welcome it if this "infringements reduction" target were confirmed by the Spring European Council alongside the transposition targets.	12/2006

6	1	The Commission to publish the results of a study on the different options for improving the enforcement of Internal Market law. This study will look, *inter alia,* at the desirability and feasibility of designating some kind of a mechanism in each of the Member States which would help to ensure the correct application of Internal Market legislation and the relevant Treaty articles.	12/2004
7	1	The Commission to set up a special section on the home page of the EUROPA web site setting out the various procedures available to citizens and businesses seeking to defend their rights under Community legislation (including the SOLVIT network and, as a last resort, infringement procedures). In all cases, estimations of the time and costs involved will be provided.	12/2003
8	1	The Commission to propose a Regulation on co-operation between national authorities responsible for the enforcement of consumer protection laws. These authorities should be given a minimum of common investigation and enforcement powers. The Regulation will provide for a framework of mutual assistance rights and obligations for enforcement authorities to use when dealing with rogue traders committing cross-border infringements.	06/2003

10. PROVIDING MORE AND BETTER INFORMATION

ACTION	TYPE	DESCRIPTION	TIMING
1	3	Member States to produce national plans to raise general awareness of Internal Market opportunities among their own citizens and businesses.	03/2004
1	2	The Commission to organise discussions on the preparation and implementation of national plans in the Internal Market Advisory Committee (IMAC) meeting at Director General level to ensure that there is adequate commitment at the highest level.	12/2003
1	2	The Commission to monitor the implementation of national plans and to report on it in the Internal Market Scoreboard.	12/2004
2	1	The Commission to review its overall Communication Strategy, taking account of needs in the new Member States.	12/2005
3	2	The Commission to improve the Dialogue web-sites to provide better access to practical information.	03/2004
3	2	The Commission to extend the Citizens Signpost Service to the new Member States.	06/2004
3	2	The Commission to extend progressively the Dialogue with Citizens and Business to new Member States.	12/2005
3	3	Member States to adopt a more pro-active approach and take full responsibility for the quality of the national-level information made available through the Dialogue.	12/2003
4	2	The Commission to set up a top-class information portal bringing together the Dialogue and the Signpost Service with other related initiatives, such as SOLVIT, European Consumer Centres, Fin-Net and EEJ-Net.	12/2004
5	2	The Commission to create a new Internal Market portal bringing together information about policy and legislative developments relating to the Internal Market, irrespective of the Commission department responsible.	12/2005
6	2	The Commission and Member States to extend the Euroguichet network (the European Consumer Centres). The aim is to have at least one European Consumer Centre in all Member States.	12/2004

GETTING THE BEST OUT OF THE ENLARGED INTERNAL MARKET

ACTION	TYPE	DESCRIPTION	TIMING
1	1	The Commission to produce a comprehensive monitoring report on each Accession Country six months before accession. These reports will focus, *inter alia*, on the capacity of the country concerned to implement all commitments and requirements arising from accession negotiations. The conclusions of the reports will identify any problem areas, delays and remedial action which needs to be taken.	12/2003
2	1	The Commission to make it possible for Accession Countries to notify their implementing measures before accession by establishing a system for prior notification.	06/2003
2	1	The Commission to negotiate a series of bilateral agreements with Accession Countries to facilitate the notification of their draft technical measures within the scope of Directive 98/34/EC. Proposed technical measures will be examined by the Commission and Accession Countries will be notified as to whether such measures conform to Community rules.	12/2003
3	3	The Accession Countries to produce screening reports of their legislation in the light of Articles 28, 43 and 49 of the Treaty - free movement of goods, right of establishment and the free provision of services. These reports will help to establish if there are any potential obstacles to the full implementation of these articles and, where necessary, will propose the removal of these obstacles.	06/2004
4	1	Extension, implementation and conclusion of PECAs (Protocols to the Europe Agreements on Conformity Assessment and Acceptance of Industrial Products) with Accession Countries. PECA agreements are a particular form of mutual recognition based on the adoption of Community legislation on industrial products and the creation of the appropriate administrative infrastructure in Accession Countries. This facilitates trade between these countries and the EU. PECA agreements are already in force with four Accession Countries. Two others have signed agreements and negotiations are underway with a further three.	12/2003

4	1	Conclusion of PECAs with Romania and Bulgaria. PECA negotiations with Romania and Bulgaria will continue with the aim of concluding and implementing agreements covering the maximum number of sectors well in advance of the expected accession date of 2007.	06/2006
5	3	The Accession Countries and the Member States to report back to the Commission on the specific steps which they have taken to inform competent authorities and enforcement officials of the consequences arising from the full implementation of the Internal Market following enlargement.	06/2004
6	1	The Commission to set up a database to facilitate targeted exchanges for Candidate Countries' Internal Market officials.	06/2004

BUILDING THE INTERNAL MARKET IN AN INTERNATIONAL CONTEXT

ACTION	TYPE	DESCRIPTION	TIMING
1	2	The Commission to work towards the conclusion of new agreements with the "new neighbours." Negotiation of these agreements can only begin once these countries have made sufficient progress in terms of legislative approximation and the development of enforcement capacity. Annual action plans will therefore be developed for each country. These plans will contain benchmarks which will be used to determine whether or not the country concerned has implemented the plan satisfactorily.	ongoing
2	2	The Commission to work towards regulatory convergence between the EU and international bodies in the automotive sector. In parallel with the codification of the three EU framework Directives in the automotive sector, the Commission to continue to be involved in codification exercises of UN/ECE Regulations. EU Directives should increasingly make use of the technical prescriptions included in the UN/ECE Regulations.	ongoing
3	2	The Commission to assess the desirability of extending regulatory dialogues to other policy areas and countries and to report on the outcome of this review to the Council and European Parliament.	12/2004
4	1	The Commission to publish a Communication on "the role of customs at the external frontier." This will focus on ways of ensuring protection against unsafe products and the merits of introducing a modern risk-based customs control system. The latter would involve agreeing, with Member States, the priorities to be pursued by customs services and the means of addressing the related risks and would be supported by the computerised exchange of information between customs services.	06/2003
4	1	The Commission to publish a Communication on "a simple and paperless environment for customs and trade." The main thrust here is to make it possible for businesses to use the proposed computerised information exchange system thereby reducing their costs and accelerating customs procedures.	06/2003

Draft Commission interpretative communication on concessions under Community law on public contracts

Official Journal C 094 , 07/04/1999 P. 0004 - 0013

Haut

Managed by the Publications Office

IP/99/130

Brussels, 24 February 1999

Public contracts: Commission launches consultation round on concessions

The European Commission has decided to launch a round of consultations on how the Single Market rules should be applied to partnerships involving public bodies and the private sector and in particular concessions. The consultation will be based on a draft interpretative communication which seeks to explain how the principles of the EU Treaty concerning such issues as non-discrimination, freedom of establishment and freedom to provideservices, and the Directives on public contracts, should be applied to concession and similar forms of public/private partenariats. In March 1999, following consultations with all the interested parties, the Commission will adopt the final version of the interpretative communication, which will be published in the Official Journal.

Mr Mario Monti, the Member of the Commission responsible for the Single Market, has said: "Cooperation between the public and private sectors is growing in all the Member States, because it can be a very effective response to the need for public investment. It is essential, however, to provide a framework for public/private partnerships in the context of the Single Market which is transparent and open to competition."

Concessions and other similar forms of public/private cooperation are of considerable economic importance, with a total value almost equal to that of more conventional public contracts (11% of the European Union's GDP). It is therefore appropriate to examine the extent to which Community businesses can benefit from free access to these types of contract and to check that Community law is being implemented in full by Member States as regards the attribution of these contracts.

The draft interpretative communication which the Commission is submitting for consultation is in two parts. The first defines the general problems associated with concessions and analogous forms of public/private partnership. The second part deals with the relevant rules.

Definition of "concession"

The Commission notes that the manner in which public authorities invite the private sector to perform public services varies from one Member State to another. Nevertheless, the key criterion for distinguishing between a concession and other forms of public/private partnership is the exploitation risks.

The draft communication therefore addresses situations in which a public authority entrusts a third party (by means of a contract or a unilateral measure which has the consent of that party) with the overall or partial management of works or services which are normally the authority's responsibility and for which the third party in essence assumes the operating risk. The activities in question must be economic ones (e.g. the operation of motorways or the supply of water). We are not concerned here with situations in which a public body entrusts a third party with work which is part of a public service function (e.g. notarial services, as in some Member States) or grants an authorisation or licence to perform an economic activity (e.g. the running of dispensing chemists or petrol stations, as in some Member States).

Rules applying to concessions

Differences in definition aside, public contracts, concessions and similar forms of public-private partnership all concern the performance of economic activities and are consequently subject to the same rules of the Treaty and the principles which emerge from the case law of the Court of Justice, such as non-discrimination on grounds of nationality, freedom to provide services, freedom of establishment, transparency, mutual recognition and proportionality.

The principle of equal treatment implies, among other things, that all bidders are familiar with the rules of the game, and that the rules apply equally to all. As regards transparency, the Commission notes that in Member States there are often rules or administrative practices which ensure a certain degree of transparency in the attribution of concessions.

The principle of proportionality means that any measure chosen by the awarding authority must be necessary and appropriate for the attainment of its goals. Finally, the principle of mutual recognition implies that Member State where the service will be provided must recognise the technical specifications and controls undertaken in another Member State.

Apart from the rules and principles contained in the Treaty and case law, the draft points out the relevant provisions of the Directives, especially the Directive on public works contracts (Directive 93/37/EC). It also states that the consequences of the application of Treaty rules for concessions in special sectors, such as energy and transport, are subject to the same rules as other concessions.

The communication is the first in a series of measures implementing the action plan which the Commission outlined in its communication on public contracts of 11 March 1998 (IP/98/233). It will be published in the Official Journal and on the Commission's Europa website, as of 26 February, at the following address: http://simap.eu.int

Communication on the results of the consultation launched by the Green Paper on Defence Procurement and on the future Commission initiatives

Following the public debate on the Green Paper on defence procurement (see below), the Commission adopted on 6 December 2005 the Communication on the results of the consultation.

The contributions all welcomed the Green Paper and supported the objective of the Commission to contribute to overcoming market fragmentation and to increasing intra-European competition.

A majority considered useful an Interpretative Communication clarifying the existing law and in particular the principles governing the use of the derogation in Article 296.

A majority of stakeholders found that a defence directive, providing new and more flexible rules for the procurement of arms munitions and war material not concerning essential security interests, would also be useful.

This Communication therefore presents the future Commission initiatives.

The Commission will adopt in 2006 an “Interpretative Communication on the application of Article 296 of the Treaty in the field of defence procurement.”

The Commission considers that a directive coordinating national procedures for the procurement of defence goods (arms, munitions and war material) and services, would also be an appropriate instrument. In accordance with the principle of better regulation, such a directive will be subject to the results of the relevant impact assessments, which will be completed in 2006, prior to the presentation of a possible proposal.

Green Paper on defence procurement

1. The context

The Green Paper on Defence Procurement forms part of the European Commission's initiative to provide a contribution to the progressive establishment of a European Defence Equipment Market.

It is one of the seven initiatives [1] announced in the Communication "Towards a European Union defence equipment policy", adopted by the European Commission on 11th March 2003 (COM (2003) 113 final). The purpose of these initiatives is to reinforce the industrial and technological base of European defence and to improve the quality of public expenditure on defence equipment.

One of these initiatives is the launch of a debate on the desirability of adapting the rules for awarding defence contracts in Europe in order to permit a greater opening-up of these markets between the Member States, in a way consistent with the special nature of the sector.

The fragmentation of national markets, partly caused by the lack of a single regulatory framework, increasingly compromises the competitiveness of the European industrial base and the establishment of a European Defence Equipment Market.

2. The state of defence markets

Defence markets remain very fragmented between the Member States, which at the moment raises many difficulties, for:

- the competitiveness of European industries, which is particularly affected by the limited size of the national markets in Europe, often insufficient to absorb the increase in the Research and Development costs of new programmes,
- the armed forces of the Member States: the lack of effectiveness of acquisition systems and procedures make the necessary modernisation of their equipment too expensive,
- the European taxpayer who pays the high price of limited scale of production.

The debate on adapting the acquisition rules has to take account of the specific characteristics that distinguish defence procurement from other procurement:

- as a customer, sponsor and regulator, the state plays a leading role, because of the very nature of the products, which are often very sensitive and connected with sovereignty and national security,
- given the political and strategic importance of weapon systems, security of supply and confidentiality play a much more important role than in civil markets,
- Added to this, the complexity of defence programmes, the high development costs, the long lifetime of many programmes, and the major commercial risks involved.

Article 296 of the EC Treaty and the Directives on public procurement, allow Member States to derogate from rules on public procurement, according to conditions defined in this legislation, as clarified by the Court of Justice. In practice, however, most national authorities make extensive use of exemptions. Consequently, the majority of defence contracts are awarded according to strictly national rules, which differ from one Member State to another and are very diverse, in particular as far as publication and the openness of competition are concerned. This lack of homogeneity constitutes a major obstacle for non-national suppliers and limits the opening-up of markets. Intergovernmental attempts to remedy these obstacles have not yielded satisfactory results as they are not legally binding.

3. The objectives of the Green Paper

By means of this Green Paper, the Commission aimed to contribute to the debate on the advisability of adapting the European regulatory framework for the procurement of defence equipment in order to contribute to facilitating the industrial production and make public expenditure more effective. The Green Paper opened a debate on the opportunity of undertaking a Community action to solve the difficulties identified.

4. The preparatory phase

The Commission already worked closely with stakeholders in preparing the Green Paper, from January to April 2004.

A working party of national technical experts designated by the ministries concerned, and a group of industry representatives met in January, March and April 2004. These work sessions aimed in particular to collect technical information necessary for the development of the Green Paper, to determine the expectations of the various parties concerned and to provide the Commission information.

Report on public consultation

On 23 September 2004, the Commission launched a public consultation and invited all interested parties to send their observations on the questions raised in the current Green Paper.

During the six-months consultation period, a series of bilateral meetings, seminars and working group meetings were held which allowed the Commission to explain its initiative and to gain a clearer idea of stakeholders' interests and concerns. At the end of the consultation, the Commission had received 40 contributions from 16 Member States, Institutions and industry. Given the sensitivity of the issue and the relatively small number of actors involved, the Commission considers this to be a good level of participation.

Contributions to the Green Paper consultation authorised for publication

- Member states and third countries
- Undertakings and professional organisations
- Experts, think tanks and other organisations and individuals
- Agencies of the Council
- European Economic and Social Committee

COMMISSION OF THE EUROPEAN COMMUNITIES

Brussels, 06 December 2005
COM(2005)626

COMMUNICATION FROM THE COMMISSION

to the Council and the European Parliament on the results of the consultation launched by the Green Paper on Defence Procurement and on the future Commission initiatives

COMMUNICATION FROM THE COMMISSION

to the Council and the European Parliament on the results of the consultation launched by the Green Paper on Defence Procurement and on the future Commission initiatives

The purpose of this Communication from the Commission is to report on the contributions by stakeholders to the consultation launched by the Green Paper on defence procurement[1]. Commission also presents the actions it intends to take as a follow-up to the Green Paper.

I. BACKGROUND

1. Political context

In connection with the development of the European Security and Defence Policy (ESDP), Member States have started to use the European Union as a framework to improve the coordination of military capabilities, achieve better cost-effectiveness of defence expenditure and enhance the competitiveness of the European industrial and technological base in the area of defence. The establishment of the European Defence Agency (EDA) in July 2004 was an important step towards achieving these objectives.

In March 2003, in parallel with the Member States' efforts, the European Commission launched an initiative towards a common European Defence Equipment Market (EDEM)[2], which included a number of actions in areas where the Community has competence (for example procurement, intra-Community transfers, standardisation, research).

The activities in the field of defence procurement are thus part of an overall initiative, being carried out at both Community and intergovernmental level.

2. Defence market characteristics

Defence equipment markets are specific markets.

Member States' combined defence budgets are worth about EUR169 billion, which includes around EUR82 billion for procurement. 85% of defence spending and 90% of the EU's industrial capabilities are concentrated in the six major arms-producing countries[3].

Defence markets cover a broad spectrum of products and services, ranging from non-war material, such as office material and catering, to weapon system and highly sensitive material, such as encryption equipment or nuclear, biological and chemical equipment (NBC). Many weapon systems are complex and integrate sophisticated technologies. Developed for the specific demands of a very small number of customers, they often have long development and life cycles and high non-recurring costs. This, in turn, makes it necessary for governments of producing countries to bear an important part of research and development costs. The sensitivity of defence equipment for Member States' security interests can vary depending on

[1] COM (2004) 608, 23 September 2004

[2] Communication of the Commission "Towards an EU Defence Equipment Policy", 11 March 2003.

[3] UK, FR, DE, IT, ES, SV

political and military circumstances. In general, however, its sensitivity is proportional to its technological complexity and strategic importance.

Due to the specificities of many defence products, governments play a predominant role both as customers and regulators. At the same time, they maintain a traditionally close relationship with their suppliers, with confidentiality and security of supply being particularly important features.

Since the organisation and operation of defence markets are closely related to the security and defence policy of Member States, defence markets in the EU remain fragmented at the national level. Fragmentation is in fact the main feature of both Europe's demand side (25 national customers) and its regulatory framework (25 different sets of rules and procedures).

3. The legal framework on defence procurement and its application

Public procurement law, and especially its application, is also an important feature of the market fragmentation in Europe. The Green Paper and the present Communication are focused on this particular aspect of the problem.

According to existing EU law, defence contracts fall under internal market rules. Thus, Directive 2004/18/EC[4] for public procurement of goods, works and services ("the PP Directive") applies to public contracts awarded by contracting authorities in the field of defence, subject to Art. 296 of the Treaty ("Article 296"[5]). The latter allows Member States to derogate from Community rules for the procurement of arms, munitions and war material if Member States' essential security interests are concerned. By contrast, the contracts for the procurement of items other than arms, munitions and war material, as well as for arms, munitions and war material not concerning essential security interests, are covered by Community rules.

However, since the concept of essential security interests is rather vague, implementation of Article 296 has been always very difficult. Under paragraph 2 of that article, a list of arms, munitions and war material covered in principle by the derogation was adopted by the Council in 1958. However, this list is rather generic, and it is therefore not always clear which rules should apply to which defence contracts.

At one end of the spectrum, non-war material is not included in the list based on Article 296 and (normally) does not concern essential security interests; as a result, the PP Directive applies. At the other end, highly sensitive defence equipment is included in the list of 1958 and clearly concerns essential security interests; in these cases, the use of Article 296 is legitimate. However, Member States also procure equipment which has the specific features

[4] Directive 2004/18/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts. As from 31 January 2006 this Directive will replace Directives 92/50/EEC, 93/36/EEC and 93/98/EEC. The exception concerning Article 296 will remain unchanged in substance.

[5] According to paragraph 1 of that Article:*"(a) no Member State shall be obliged to supply information the disclosure of which it considers contrary to the essential interests of its security; b) any Member State may take such measures as it considers necessary for the protection of the essential interests of its security which are connected with the production of or trade in arms, munitions and war material; such measures shall not adversely affect the conditions of competition in the common market regarding products which are not intended for specifically military purposes."*

of defence material but which is not (necessarily) essential for their security interests. This category forms a major "grey area" where the use of Article 296 is less clear.

In practice, most Member States make almost automatic use of the possibility of exempting nearly all defence procurement contracts from Community rules, often without taking into account the conditions defined by the Treaty and the Court for the use of Article 296[6]. The rate of publication by Ministries of Defence amounts to only 10%, while the average publication rate of central governments is about 20% (25% excluding defence)[7]. As a consequence, most defence contracts are awarded on the basis of national procurement rules, which have widely differing selection criteria, advertising procedures, etc. Member States do this partly because they consider the PP Directive not always suited to the procurement of defence material.

It is generally acknowledged that the fragmentation of national procurement rules and their practical application have the effect of limiting transparency and competition on defence markets. This, in turn, has brought negative consequences for the efficiency of public spending, for Member States' military capabilities and, finally, for the competitiveness of Europe's Defence Industrial and Technological Base (EDITB).

The Green Paper sought to identify options for action at the Community level in order to improve this situation.

4. The Green Paper

From January to April 2004, the Commission organised several workshops with government experts and industry representatives in order to collect technical information for the preparation of the Green Paper and to determine the expectations of the various parties concerned.

On 23 September 2004, the Commission adopted the Green Paper and launched the public consultation, inviting all interested parties to comment on how to improve the EU Defence Procurement Regulation. The Green Paper put forward proposals for those parts of the market which are not covered by Article 296 and thus come under Community rules.

The Commission suggested two possible Community initiatives:

- An interpretative communication, clarifying the existing law and in particular the principles governing the use of the derogation in Article 296.

- A directive providing new, more flexible rules for the procurement of arms, munitions and war material not concerning essential security interests. These new rules should take into account all the specificities of such defence contracts.

The two solutions were presented as not being mutually exclusive. Moreover, the Commission has made it clear that, in every possible scenario, Member States would always have the right to invoke Article 296, provided that the conditions established in the Treaty (and confirmed by the case law of the ECJ) are strictly met.

[6] See *Johnston*, case 222/84; *Commission v. Spain*, case C-414/97

[7] Source : TED data base

At the same time, the two options would only concern defence procurement by national authorities inside the European internal market. Arms trade with third countries would continue to be governed by WTO rules, and in particular by Article XXIII of the Government Procurement Agreement (GPA), which allows Members to derogate from the Agreement itself, when essential security interests are at stake.

II. THE RESULTS OF THE CONSULTATION

1. Participation

During the six-months consultation period, a series of bilateral meetings, seminars and working group meetings were held which allowed the Commission to explain its initiative and to gain a clearer idea of stakeholders' interests and concerns. At the end of the consultation, the Commission had received 40 contributions from 16 Member States, Institutions and industry[8]. Given the sensitivity of the issue and the relatively small number of actors involved, the Commission considers this to be a good level of participation.

2. Opinions

The contributions all welcomed the Green Paper and supported the objective of the Commission to contribute to overcoming market fragmentation and to increasing intra-European competition via an appropriate set of rules for defence procurement.

The vast majority of stakeholders shared the Commission's assessment of the Green Paper. They acknowledged the widespread misinterpretation of Article 296 and considered the existing PP Directive often ill-suited for defence procurement, despite the recent adaptations. The main obstacles mentioned were the following:

- open tendering procedures based on publication in the Official Journal of the European Union are not compatible with confidentiality requirements;

- the use of negotiated procedure - which is the only appropriate procedure - is too restricted and not properly defined;

- the selection criteria are based solely on technical, economical and financial aspects, and key conditions for selecting tenderers in the defence sector - such as security of supply, confidentiality and urgency - are missing;

- the rules on technical specifications, time limits and follow-up contracts are inappropriate.

Almost all stakeholders supported a Community initiative in the field of defence procurement and ruled out the "no action" option. As for the instruments presented as possible solutions, stakeholders expressed a variety of opinions:

2.1 Interpretative Communication

[8] All the contributions received are published in their original language, see http://www.europa.eu.int/comm/internal_market/publicprocurement/dpp_en.htm

(1) **A majority considered an Interpretative Communication to be useful. The arguments put forward in favour of an interpretative communication are as follows:**

- As a non-legislative measure, it could be prepared quickly;

- By spelling out in detail the principles defined by the Court for the use of Article 296, it could reduce the risk of legal misinterpretation and thus ensure better application of existing law by Member States (and more regular use of tendering procedures);

- Absent any further legislative action, the Commission would have a clearer and stronger legal basis for applying procurement rules.

(2) **Only a minority of stakeholders were sceptical about or opposed to a communication. The arguments against a communication are the following:**

- As it would do nothing to change the existing legal framework, it would not contribute to a more homogeneous regulatory framework.

- The principles defined by the Treaty and the relevant case law are sufficiently clear and should be well-known to all stakeholders; additional clarification is therefore unnecessary.

- A communication would clarify only how Article 296 is to be used, but it would not be able to specify for which contracts, since it could neither clarify the concept of essential security interests nor elaborate on the list of 1958 (both of these actions fall under the Member States' prerogatives). The uncertainty about the scope of Article 296 would thus remain.

- The decision on whether or not defence contracts concern essential security interests is a political rather than a legal one. A purely legalistic and rigid approach to a problem of political definition might create even greater confusion and increase the number of legal disputes on the borderline of Article 296.

- An Interpretative Communication would not dispel Member States' reluctance to use the existing PP Directive for defence procurement. Its impact in terms of transparency and competition would therefore be limited mainly to non-war material. This might generate some cost savings at the margins of defence markets, but would miss the main target of the initiative (i.e. to enhance the cost-effectiveness of defence markets and the competitiveness of the EDITB).

2.2 Defence Directive

The general picture with regard to a defence directive is more complex:

(1) **A majority of stakeholders found that a defence directive would be useful. Its main advantages would be the following:**

- By coordinating national rules in certain parts of the defence markets, a directive would contribute to a more homogeneous regulatory framework in the EU;

- As it is legally binding, a directive would have the capacity to enhance transparency, non-discrimination and equal treatment in certain parts of the defence market.

- It could offer new, more flexible and more suitable rules for procurement of defence contracts, which are not covered by Article 296 and for which the existing Directive may be too rigid and inappropriate.

- It could take into account the specific features of defence contracts which are not addressed or not adequately dealt with by the current PP Directive, such as:

  - An appropriate centralised system of publication;

  - General use of the negotiated procedure (which would allow contracting authorities, after a call for tenders, to consult and negotiate contract terms with the selected companies);

  - Scope for contracting authorities to use the negotiated procedure without prior publication of a tender notice in certain defined cases, such as urgency for military purposes;

  - New specific selection criteria to be applied in assessing tenders, such as confidentiality and security of supply;

  - Clauses to ensure adequate competition throughout the supply chain, in particular to improve market access for SMEs;

  - Clauses to harmonise offset practices.

- A Directive would not remove the difficulty of defining the borderline of Article 296, but it could be flexible enough to become a credible alternative to national procedures. In this case, the Directive could defuse the issue of choosing between Community rules and Article 296.

(2) **Among those who find the Directive useful, however, there are varying opinions as regards timing and conditions:**

- some stakeholders suggested that the work should be started;

- others favoured waiting to see whether or not the clarification of current legislation is sufficient;

- some argued that political and economic conditions in other areas (for example, the structure of the industrial base, or the mentality of buyers) must be met in order to create a level playing field for non-national suppliers before starting work on a directive;

- others argued that work on the directive could serve as a catalyst for reforms in these related areas.

(3) **Only a few stakeholders were explicitly against a directive, and put forward widely differing arguments:**

- As a legislative measure, it is unlikely to be achieved quickly;

- The existing Directive is sufficiently flexible and there is therefore no necessity for a new legislative instrument that would add extra regulation;

- It would have only a limited impact, either because it would take too long to be developed and implemented, or because it would not apply to high-value contracts (which usually concern essential security interests and would therefore remain covered by the Article 296 derogation);

- It would create three separate procurement processes with new boundaries between the various market segments. This could involve a limitation of the right to use Article 296 and make it difficult to demarcate the respective scope of the civil and the defence Directives.

To sum up, even if it is very difficult to draw a general conclusion or a single general trend, it does appear that a majority of stakeholders are in favour of an interpretative communication, and not against a directive. There is some disagreement about the timing of the latter.

Preferences for an interpretative communication or a directive, also as far as timing is concerned, do not follow the traditional dividing lines between big and small, producing and non-producing Member States. The same is true for industry, with differences being seen between European and national associations and between defence industry associations and non-defence industry association. The European Parliament expressed clear support for a comprehensive approach combining an interpretative communication and a new directive adapted to the specificities of defence (combined with the development of an intergovernmental code of conduct - see below).

All stakeholders asked the Commission to be closely associated with and to participate actively in the development and implementation of the solutions they support.

3. Broadening of the debate

During the consultation period, several stakeholders put forward options beyond those mentioned in the Green Paper.

- Many saw a need for greater transparency and competition, including in the area covered by Article 296. Partly as a response to this, Ministries of Defence mandated the European Defence Agency (EDA) to explore the possibilities of drawing up an intergovernmental Code of Conduct to foster intra-European competition in this area of the market too. Such a Code would be a political but not a legally binding instrument, which would complement Community instruments and pursue the same objective in a different segment of the defence market. It could also include a notification system on the use of Article 296.

- Others considered an intergovernmental instrument as an interim solution/intermediate step on the way to a Community directive. Although the two instruments would cover different market segments, it would be advisable, from this point of view, to foster the convergence of national procurement policies before coordinating national procurement rules.

- Some, however, believe that an intergovernmental instrument of this kind can be an alternative to Community initiatives. From this point of view, a directive would only be acceptable if the Code proved ineffective.

In addition, almost all stakeholders underlined that procurement was just one aspect of an EDEM construction. They highlighted the necessity for any Community initiatives in the field of procurement law to be accompanied by actions in other areas; this was seen as a necessary precondition for an efficient internal defence market and for the creation of a level playing field for industry. In this context, stakeholders mentioned arrangements for security of supply, transfers and transits, harmonisation of export policies, state aid, offset practice and the full privatisation of all European defence firms.

Stakeholders also expressed their concerns about the conditions of access to the EU market, particularly in view of the unbalanced situation with certain third countries. They expected all measures taken at EU level to favour reciprocal access, in particular with the US, and stressed the need to strengthen the competitiveness of EU industries on world markets.

III. COMMISSION ASSESSMENT AND FUTURE INITIATIVES

The whole consultation process shows that the current legislative framework on defence procurement is not functioning properly, in practice, for the different reasons listed above. The appropriate initiatives therefore have to be taken, in order to improve a situation which is almost unanimously regarded as unsatisfactory. The Commission is ready to play its role in pursuit of this objective.

(1) On one hand, the dividing line between defence acquisitions concerning essential security interests according to Article 296 and defence acquisitions which do not concern essential security interests is not clear, or at least is not perceived in the same way by all Member States. As a consequence, the application of the derogation remains problematic.

The Commission will therefore adopt in 2006 an “Interpretative Communication on the application of Article 296 of the Treaty in the field of defence procurement.” This Communication will recall the principles governing the use of the derogation, in the light of the case law of the Court of Justice, and will clarify the criteria on the basis of which Member States have to decide when the conditions for the application of the derogation are met and when they are not.

While providing additional legal certainty and guidance for Member States, an Interpretative Communication will not alter the current legal framework. It will simply clarify the existing one, with the objective of making its implementation more uniform.

In line with the principle of better regulation, the Interpretative Communication will be accompanied by a proportionate impact assessment, aimed at verifying whether it is actually likely to bring benefits.

As the Interpretative Communication will also concern issues related to free movement of goods, it could have further consequences e.g. on intra-EU transfers for defence goods. This will be duly taken into account in the drafting of such Communication.

(2) On the other hand, a simple clarification may be insufficient. The consultation also confirmed that the current PP Directive, even in its revised version, may be ill-suited to many defence contracts, since it does not take into account some special features of those contracts.

The Commission therefore considers that a directive coordinating national procedures for the procurement of defence goods (arms, munitions and war material) and services, would be the appropriate instrument to improve the situation described. This directive could take into account all the specific needs of defence procurement, and offer new, more flexible rules for defence procurement, to be followed in cases where the derogation in Article 296 does not apply.

In accordance with the principle of better regulation, such a directive will also be subject to the results of the relevant impact assessments, which will be completed in 2006, prior to the presentation of a possible proposal.

The Commission will also follow with great interest the development of the Code of Conduct under preparation by the EDA. This code, voluntary and non binding would aim at increasing transparency and competition also in a different segment of the market, since it would apply in cases where the conditions for the application of Articles 296 are met. This kind of intergovernmental initiative would usefully complement the initiatives taken at Community level.

IP/05/1534

Brussels, 6 December 2005

Public procurement: new Commission initiatives on more open and efficient defence procurement

The European Commission has outlined its proposals for future initiatives to improve cross-border competition in defence procurement. In 2006, the Commission will adopt an 'Interpretative Communication' clarifying when Member States can derogate from EU law requiring competitive procurement with regard to supplies, works and services intended for specifically military purposes and crucial to essential security interests. In parallel, preliminary work will begin towards a possible Directive that would coordinate procedures for defence procurement in cases where the derogation under Article 296 EC is not applicable or a Member State chooses not to take advantage of it. These initiatives are based on the results of the consultation launched in September 2004 by the Green Paper on how to open defence public procurement to greater transparency and efficiency, compatible with the specific features of this sector (see IP/04/1133). They follow the recent supportive opinion issued by the European Parliament (see Wuermeling report).

Internal Market and Services Commissioner Charlie McCreevy said: "The response to the consultation is clear . Action to clarify and improve EU law on defence procurement is imperative. We must now put our foot on the gas . The future of Europe’s defence industry is at stake. To deliver real benefits we are almost certainly going to have to go beyond a code of conduct and an interpretative communication"

Proposed initiatives

Pending the outcome of an extended impact assessment on a Directive, in 2006 the Commission will adopt an 'Interpretative Communication' on the application of Article 296. This will be a non-legislative measure that reduces the risk of legal misinterpretation and thus ensures better application of existing law by Member States. It will recall the principles governing the use of the derogation in the light of European Court of Justice case law, and will clarify the criteria on the basis of which Member States have to prove when the conditions for the application of the derogation are met.

However, this Communication is unlikely to be sufficient to resolve the inadequacy of the existing public procurement Directive with regard to the specific features of defence procurement. Therefore the option of a specific Directive will now be vigorously pursued. . In line with the principle of Better Regulation, any proposed Directive will be accompanied by an impact assessment which will assess its possible costs and benefits.

Results of the consultation

The Commission received 40 responses to the Green Paper consultation: from institutions (the European Parliament), industry and 16 Member States. All respondents welcomed the Green Paper and supported the Commission's objective of overcoming market fragmentation and increasing intra-European competition through an appropriate set of rules for defence procurement.

European Defence Equipment Market (EDEM)

The development of the EDEM is even more important given the advances in European Security and Defence Policy and the creation of the European Defence Agency (EDA). The work of the EDA and the Commission initiative concern two different segments of the defence market. The two initiatives are complementary and the Commission and the EDA cooperate closely.

The contributions to the consultation are available at:
http://europa.eu.int/comm/internal_market/publicprocurement/dpp_en.htm

Frequently asked questions - New Commission initiatives on more open and efficient defence procurement

(see also IP/05/1534)

What are the benefits of creating a European Defence Equipment Market (EDEM)?

A European Defence Equipment Market (EDEM) would complement work currently being carried out by Member States under the European Security and Defence Policy (ESDP). The first step under the ESDP is for Member States to identify the military capacities that will be necessary in the future. The second step is for Member States to work together to meet that need, by building an EDEM.

Competition within the EU, competitiveness of European industry and efficiency of public spending could all be improved. Current fragmented national markets are no longer sustainable, given the budgetary situation in Member States, continuing increases in research and development costs for major defence programmes and the competitive advantages currently enjoyed by non-European industries. This is why EU-level initiatives on the regulation of defence procurement markets are needed.

Why are there special EU rules for the defence procurement market?

Public procurement Directives are applicable in principle to all sectors, including defence. However, certain defence products are very specific in nature. Defence industries are strategic and governments play a crucial role as customers, sponsors and regulators. Given the political and military sensitivity of defence systems, secrecy, confidentiality and security of supply are particularly important.

Exceptions to general public procurement rules are therefore provided for in the EC Treaty, as it is not always possible to use for defence contracts the procedures set down in the Directives - for example, open tendering processes based on publication in the Official Journal of the European Union.

What is defence procurement as an estimated proportion of EU GDP?

According to Eurostat estimates, total defence expenditure by the 25 EU Member States in 2003 represented € 169 billion (1.7% GDP) which included € 82 billion on defence procurement (0.8% GDP), of which € 30 billion on defence equipment (0.3% GDP).

Which Member States have the largest defence industries?

The most important arms-producing countries with the highest turnover in the EU are: UK, France, Germany, Italy, Sweden and Spain. They represent approximately 90% of defence equipment production in the EU-25. These countries also represent 80% of EU defence procurement expenditure.

The four largest producers - UK, France, Germany and Italy - represent approximately 80% of defence equipment expenditure.

Are defence markets completely closed?

Member States' combined military expenditure is considerable but it remains mainly split into national markets.

Some progress has been made as a result of the increase in European armaments cooperation. However, even in that context, cross-border procurement remains limited mainly by the principle of "juste retour" which means that work is split up between suppliers based on national industrial policy criteria.

As far as national procurement decisions are concerned, the degree of openness of defence markets varies greatly between Member States. Since information on defence markets is fragmented and incomplete, it is not possible to present a comprehensive picture. In general, countries which do not themselves produce military supplies on a large scale naturally have more open defence markets than those that do. In general, however, the share of contracts awarded by competitive procedure is still low and national suppliers still tend to be awarded most of the contracts.

Why is it necessary to intervene in defence markets? Is there a need to resolve a critical situation in this sector?

The contributions to the Green Paper from stakeholders express concern about the critical situation of defence markets. The lack of transparency and competition in Member States' procurement practices hinders the competitiveness of European industry and increases the cost of military equipment. This is no longer sustainable for public spending and also for the quality of equipment needed for European Security and Defence Policy efforts.

The absence of a European market is disadvantageous for all stakeholders: governments pay extra costs for a non-competitive market; armed forces may not get the best equipment; and industries pay extra overhead costs (if they participate in foreign bids), suffer from short production runs (if they stick to their home markets) and see their competitiveness compromised (in both cases).

Does the Commission want to abolish the derogation of article 296 in the long term?

No. Article 296, according to which MS can derogate from the application of Treaty rules for defence products concerning their "essential security interests", will remain fully applicable when the conditions of its application are met, regardless of the outcome of this debate.

What would be the impact of more open defence procurement in terms of competitiveness?

As the Commission indicated in its March 2003 Communication "Towards an EU defence equipment market" (see IP/03/355), the EU needs a competitive Defence Technological and Industrial Base (DTIB) to realise the full potential of the ESDP. Such a competitive base, given the large size of the sector, is also crucial to economic growth and to the overall competitiveness of the European economy and will be a factor in achieving the goals set out in the Lisbon strategy.

The currently fragmented regulatory framework often makes it difficult for companies to adjust to the different national approaches within the EU.

What are the advantages of more open defence procurement?

The advantages of a more open European defence market, adapted to the specific nature of the sector, are generally acknowledged. It would allow companies, especially SMEs, to tender more easily in other EU Member States and thus widen their access to business opportunities within a much larger “home” market. Longer production runs would allow economies of scale. This, in turn, would help to reduce costs and lead to lower prices. The final beneficiary of that would be the taxpayer. Everybody in Europe should in the end also benefit from the greater economic prosperity created by the improved global competitiveness of European industry, especially given the growing dual use potential of technologies (military and civilian). A more open market would also boost industrial restructuring across national boundaries to reduce duplication.

What was the objective of the Green Paper?

In September 2004 the Commission issued a Green Paper to consult stakeholders on possible Community initiatives to improve transparency and competition in this field, without putting into question the article 296 derogation. The objective was to assess whether it was necessary to:

- clarify (with an Interpretative Communication) the current regulation in order to help Member States to distinguish between defence contracts to which Internal Market rules apply and those for which a derogation under Article 296 is justified;

- improve the existing regulation, by introducing more appropriate and flexible rules, better suited to the specificities of the sector (via a new specific Directive).

How will an Interpretative Communication address the special nature of defence procurement markets?

The Green Paper has opened a debate on how to improve cross-border competition in certain types of defence procurement. The Interpretative Communication will help Member States to establish when defence contracts can derogate from Internal Market rules and therefore from the current Directives, on the basis of essential security interests and according to the conditions of application of article 296 of the EC Treaty.

The interpretation of the article 296 derogation is different in various Member States. This situation has resulted in the fragmentation of the defence equipment market. The existing legal framework is not satisfactory and creates legal uncertainty. An Interpretative Communication will help to clarify the situation.

What will be the impact of the Interpretative Communication?

An Interpretative Communication interprets existing law and is adopted by the Commission under its own responsibility. The proposed Interpretative Communication will therefore take into account the existing legal framework, plus recent developments in the relevant case law of the Court of Justice, and clarify that legal framework by announcing the way the Commission would interpret and apply it in the future.

As regards its content, the Interpretative Communication will provide criteria to be used in order to help Member States to establish more clearly when the conditions for the application of article 296 – allowing for defence contracts to derogate from general public procurement law – are met and when they are not. In the latter case, normal procurement rules will be applicable.

Would a possible new Directive represent an additional regulatory layer?

No. Legislation on defence procurement already exists: public procurement Directives already apply to defence contracts when they are not covered by article 296. A new defence Directive would replace the existing Directives, considered by stakeholders to be ill-suited to this market, in order to take into account the specific nature of the defence sector. This would mean more flexible and better adapted rules.

What would be the impact of a Directive?

A Directive would be adopted by the Council and European Parliament and would constitute new law to be applied throughout the EU. The derogation provided for in article 296 would remain fully applicable, according to the same conditions as today. But a Directive could establish specific and more appropriate (i.e. more flexible) rules for the award of contracts which are not covered by the derogation, and which today should be awarded on the basis of the existing public procurement Directives. It could also improve the classification of contracts, on the basis of different possibilities on which the Green Paper aims to stimulate discussion: a general definition of the categories of military equipment covered by the Directive and/or a list of such categories.

If there were to be a Directive along the lines identified in the Green Paper, how would it differ from the existing general public procurement Directives?

The potential advantage of a new Directive is precisely that it would take into account the specific nature of the defence sector and introduce greater flexibility suitable for that sector. Transparency and non-discrimination would remain the cornerstone of the new regime, just as they are the basis for the general procurement Directives. But a special set of rules to be defined with Member States could be envisaged including:

wider information on the relevant defence contracts through a centralised system of publication

general use of the negotiated procedure (which would allow contracting authorities, after a call for tenders, to consult and negotiate contract terms with the selected companies)

scope for contracting authorities to use the negotiated procedure without the prior publication of a tender notice, in certain defined cases

new specific selection criteria to be applied in assessing tenders, such as confidentiality and security of supply.

What is the relationship between the Commission and the European Defence Agency?

The EDA is an agency of the Council. The EDA tasks cover mainly the development of military capabilities and armaments, which are areas for which Member States are solely responsible. But the EDA also has roles - in research and technology, the defence industry and markets - which interact with Commission competences. The Joint Action establishing the EDA indicates that the agency “should fulfil its missions in full respect of the competences of the European Community”.

As far as market issues are concerned, but also on other issues, the Commission and EDA work in close cooperation.

What is the relationship between the Commission initiative and the Code of conduct which has been adopted by the European Defence Agency?

The initiatives of the Commission in the field of defence procurement come under the 'first pillar' of the EU's competence and concern defence contracts which are to be procured under EC Treaty rules pertaining to the Internal Market. In contrast, the EDA's Code of Conduct, which is voluntary and non binding, comes under the 'intergovernmental pillar' and concerns another segment of the defence market, namely contracts which can derogate from EC Treaty rules pertaining to the Internal Market when the conditions for the application of article 296 ("essential security interests") are met. These two initiatives are therefore complementary and can be carried out in parallel.

What would be the impact on the transatlantic defence market of more open defence procurement at EU level, especially via a possible Directive?

The possible EU initiatives referred to in the Green Paper would aim to foster intra-European rather than international competition. International trade markets will remain governed by WTO rules which provide under article 23 of the Government Procurement Agreement that defence products are excluded. In consequence, Member States will still have the possibility, as is the case today, to buy their defence equipment from tenderers – such as US companies - not established in the EU, EU, or to decline to do so.

CONSULTATION ARRANGEMENTS 12

INTRODUCTION

This Green Paper is one of the measures announced by the European Commission in its Communication "Towards a European Union defence equipment policy", adopted on 11 March 2003[1]. Through these measures, the Commission intends to contribute to the gradual creation of a European defence equipment market (EDEM) which is more transparent and open between Member States and which, whilst respecting the sector's specific nature, would increase economic efficiency.

Moving towards a truly European market is crucial for strengthening the competitiveness of European industry, improving the allocation of defence resources and supporting the development of the Union's military capabilities under the European Security and Defence Policy (ESDP).

The establishment of the European Defence Agency with its responsibilities in the field of defence capabilities, research, acquisition and armaments, makes the development of such a market even more important.

Creating an EDEM would require a set of complementary initiatives, including the establishment of an appropriate regulatory framework for the procurement of defence equipment. The opening up of defence markets, which are currently fragmented along national lines, would increase the commercial opportunities for European companies in the sector, including SMEs, and contribute to their growth and increase their competitiveness.

The purpose of this Green Paper is to develop the debate on these issues, bearing in mind the principle of subsidiarity[2]. For this purpose the Commission set up two working parties consisting of representatives of the Member States and European industry to contribute to the preparatory stages of the Green Paper.

In the first part, the Green Paper identifies the reasons for specific action by giving a summary of the current state of defence procurement markets, their numerous special characteristics and the existing regulatory framework. In the second part, on the basis of this analysis, it considers possible lines of action.

I. REASONS FOR ACTION IN THE FIELD OF DEFENCE PROCUREMENT

Defence expenditure constitutes a large part of Member States' public spending, to the order of €160 billion for the 25 Member States, one fifth of which is used for the procurement of military equipment (acquisition plus research and development)[3].

Defence procurement is currently characterised by the fragmentation of markets along purely national lines (point 1), by the specific features which distinguish it from other types of public procurement (point 2) and by a complex legal framework (point 3).

[2] Work of the Council Working Party on Armaments Policy (POLARM), the Western European Armaments Group (WEAG), and the *Agency Establishment Team* responsible for establishing the European Defence Agency.

[3] Sources: NATO (North Atlantic Treaty Organisation) and SIPRI (*Stockholm International Peace Research Institute*) 2002.

1. FRAGMENTED DEFENCE MARKETS

Although Member States' combined military expenditure is considerable, it remains split into national markets. This fragmentation poses a major problem for all Member States with defence industries. Following budgetary reductions and the restructuring of the armed forces, the size of national markets – including those of the large states – is no longer sufficient to allow for production volumes that can offset the high R&D costs of arms systems. This situation, along with the fragmentation of R&D spending in Europe, increases the cost to the taxpayer and damages both the competitiveness of the European defence industry and its ability to meet the requirements of the ESDP. Given the growing dual use potential of technologies (military and civilian), the global competitiveness of European industry is also affected.

Some progress has been made in the last ten years, particularly as a result of the increase in European armaments cooperation and an initial opening-up of national markets to European competition. These initiatives have had modest success, but have not resulted in the creation of a European defence market. As regards cooperative programmes, the still frequent use of the principle of fair return on investment ("juste retour") generally limits any opening-up to the participating countries and implies a distribution of work based on purely national industrial policy criteria. As for national procurement, the share of contracts awarded by competitive procedure is still low. Irrespective of the procedures used, national suppliers are still generally awarded most of the contracts.

2. SPECIFIC FEATURES OF DEFENCE MARKETS

Defence markets have particular characteristics because of the very nature of military products and related services. These characteristics are not only economic and technological; they are also related to the security and defence policies of each Member State[4]. Defence industries are therefore of a strategic nature and have special relations with the state.

2.1 Dominant role of the state

Following privatisations and efforts to optimise procurement policies in recent years, the role of the state has been reduced, but it still remains dominant. As sole clients, states determine demand for products on the basis of military needs linked to their strategic objectives and thus define the size of the market. They participate, to varying degrees depending on the country, in the financing of R&D, thus influencing the technological know-how and long-term competitiveness of industry. As regulators, they control the arms trade by means of the licences which exporters must have, including for the delivery of equipment within the European Union, and the granting of authorisations to tender for contracts. State control also extends to industrial restructuring, although to a more limited degree, and even to the level of shareholding.

2.2 Security of supply and confidentiality requirements

The nature of defence requires sources of supply to be guaranteed for the entire duration of an arms programme from the time the equipment is designed until it is withdrawn from service,

[4] See the document of the POLARM Working Party of the Council, annexed to communication COM(1997) 583 of 4.12.1997.

at times of peace and at times of war. States may, therefore, see fit to set up special supply guarantees. The maintenance of a purely national industrial capacity for defence may seem a reliable way of being able to respond to strategic interests and emergency situations (military operations).

The nature of defence may also require states to have equipment that guarantees the technological superiority of their military forces. This superiority depends, in particular, on the confidentiality of programmes and their technical specifications. The obligation to protect this confidential information means companies must have special national security clearances.

2.3 Complexity of arms acquisition programmes

Arms development programmes are complex. Since production volumes are limited and the risk of commercial failure high, state support is required. Equipment often consists of new systems which incorporate both military and civilian technologies. It has also a long life cycle: the time between the expression of an operational need and the end of a system's life may be as long as 50 years. The quality/price ratio and risk management must be guaranteed throughout this period. States must, therefore, have access to adequate industrial and technological capacity throughout the life cycle of a system and maintain lasting, reliable relations with suppliers.

In addition to this, "off-the-shelf[5]" arms purchases are often subject to offset arrangements. This allows the purchasing country to require a return on investment that may exceed 100% of the value of the contract. Such offsets may be direct, in the form of orders for local companies or transfers of know-how and technology related to the original contract. Offsets may also be indirect and concern industrial sectors other than the one covered by the contract in question, even non-military ones.

3. LIMITS TO THE EXISTING LEGAL FRAMEWORK

3.1 Community exemption system

The special nature of the defence sector has been recognised ever since the establishment of the Community through an exemption system laid down in Article 296 EC of the Treaty. According to paragraph 1 of that Article:

"*(a)* *no Member State shall be obliged to supply information the disclosure of which it considers contrary to the essential interests of its security;*

[5] Finished equipment already developed and available for purchase.

(b) *any Member State may take such measures as it considers necessary for the protection of the essential interests of its security which are connected with the production of or trade in arms, munitions and war material; such measures shall not adversely affect the conditions of competition in the common market regarding products which are not intended for specifically military purposes."*[6]

Given its wide scope, this article may also apply to public procurement.

As recently clarified in Article 10 of Directive 2004/18/EC, Community rules on public procurement apply to contracts awarded by the awarding authority in the field of defence, subject to Article 296 EC of the Treaty. Consequently, Community rules also apply in principle to the defence sector, but Member States may derogate from them in the circumstances and subject to the conditions set out in the Treaty. In any event, the possibility of a derogation provided for under Article 296 EC cannot apply either to civilian goods or to those not intended for specific military purposes, even if they are purchased by national defence ministries.

The Case Law of the Court has interpreted the conditions of use of this derogation restrictively, stating that[7] :

– its use does not constitute a general, automatic exemption, but should be justified case by case. States thus have the possibility of secrecy regarding information which would undermine their security and the option of invoking an exemption to internal market rules for the arms trade. They are also obliged to assess whether or not each individual contract is covered by the derogation;

– use by states of national derogation measures is justified only if it is necessary for achieving the objective of safeguarding the essential security interests invoked;

– burden of proof lies with a Member State that intends to make use of the derogation;

– such proof is to be supplied, if necessary, to the national courts or, where appropriate, the Court of Justice, to which the Commission may refer the matter in the performance of its duties as guardian of the Treaty.

As a general rule, Member States may, therefore, derogate from the rules of the Treaty and Community directives, but only in well defined circumstances. Nevertheless, several difficulties of implementation arise:

– in the absence of a precise interpretation of these provisions, there is quasi-systematic use of the derogation in the area of public procurement. Despite the Court's clarifications, the low number of publications in the Official Journal of the European Union appears to imply that some Member States believe they can apply the derogation automatically;

[6] In accordance with paragraph 2 of this Article, a list of products to which the provisions of paragraph 1 apply was adopted by the Council in 1958.

[7] See among others: Johnston judgment, Case 222/84, Commission v. Spain judgment, Case C-414/97. Although the latter concerned VAT, it is applicable to public procurement.

– since the concept of essential interests of security is not defined either in Community Law or in the Case Law of the Court of Justice, in practice states allow themselves wide discretion in determining which contracts could damage them;

– the list drawn up in 1958[8] is not an appropriate reference for defining the scope of Article 296 EC, since it has never been officially published or revised since then.

Defence procurement is still, therefore, to a large extent covered by purely national legislation.

3.2 Differing national legislation

For defence procurement most national legislation provides for exemptions to the application of public procurement rules, with differing degrees of transparency. This constitutes a potential difficulty for non-national suppliers.

- The **publication of contract notice**, if it happens at all, is in special national publications, the content, frequency and method of dissemination of which vary from state to state.

- The potential for **non-publication** provided for in national legislation is vast and differs depending on the country.

- **Technical specifications** are often very detailed and based on widely differing standards.

- The **criteria for selecting** suppliers take into account, in some states, the ability of offering industrial offsets, and for most states, confidentiality and security of supply, the definition of which remains vague and the assessment of which does not take account of the same requirements, sometimes referring to the origin of the product or the nationality of the supplier.

- **Tendering** is mainly through negotiated procedures which do not all follow the same rules, particularly as regards the extent of the negotiations and the possibilities for changing the subject of the contract.

- In the **award** of contracts priority is given to best value for money. However, in some states security of supply and offsets are again taken into account at this stage.

Because of these obstacles some Member States have undertaken, under an inter-governmental political agreement of the Western European Armaments Group (WEAG)[9], to harmonise the content and publication of their national gazettes and to follow more open tendering rules. Although based on relevant principles, this system has produced limited results regarding both transparency and competition, because it is not legally binding.

[8] See Footnote 6.

[9] The 16 member countries, including 14 EU Member States (BE, DK, DE, EL, ES, FR, IT, LU, NL, PT, UK, AT, FI, SE), adopted guidelines on open competition in 1990 and updated them in 1999.

3.3 Special procedures for cooperation programmes

Alongside national systems, *ad hoc* rules laid down in intergovernmental agreements are used for purchases related to joint arms programmes[10]. Generally speaking, because of the heavy investment agreed by the countries participating in these programmes, it is the principle of fair industrial return ("juste retour") that determines who is awarded the contract.

To offset the high costs resulting from this practice, the transnational agency OCCAR[11] was set up in 1996 and given legal personality in 2000. Its contractual rules are more competition-based and provide for replacing the system of a "juste retour" per programme by an "overall juste retour" covering several years and several programmes. However, the success of this system will depend on the number of new programmes managed by OCCAR.

Since these efforts have failed to achieve satisfactory results, the Member States recently created a European Defence Agency under the authority of the Council within the single institutional framework of the European Union, which will have the remit, among other things, to contribute, in consultation with the Commission, to the setting up of a competitive European defence market[12].

II. DEFINING ACTION AT EU LEVEL – ISSUES FOR CONSIDERATION

The above considerations relating to defence procurement show that a number of obstacles limit the access of European industries to Member States' defence markets and hence restrict their growth opportunities.

The Commission therefore proposes pursuing the debate on the case or Community action in the field of defence procurement. So far the Commission has identified two possible instruments, one limited to clarifying the existing legal framework (point 1) and the other aimed at establishing specific rules in the field of defence, taking into account the sector's characteristics (point 2).

These instruments would not prejudice any complementary measures taken by the Member States in the appropriate fora. Indeed, they could not provide exhaustive answers to all the specific aspects of defence markets. This is the case in particular for security of supply, a concept bound to change with the growing convergence of national security interests in the context of European foreign, security and defence policy. The gradual development of a common approach in this field could facilitate application of Community instruments. Equally, these instruments would constitute a useful tool for the success of cooperation between Member States.

[10] These contracts are usually awarded by ad hoc agencies or NATO agencies acting on behalf of the states participating in the programmes in question.

[11] Joint Organisation for Armaments Cooperation; open - subject to certain conditions - to all the Member States; at present only five states belong to it (DE, BE, FR, IT, UK).

[12] Joint action to set up a European Defence Agency (EDA) adopted by the Council on 12 July 2004.

1. CLARIFICATION OF THE EU'S EXISTING LEGAL FRAMEWORK

The legal framework could be clarified by a non-legislative instrument, such as an interpretative Communication from the Commission. This instrument would aim to explain existing Community legislation in order to facilitate application by the competent authorities and to improve the operators' understanding of it. An interpretative Communication could be adopted relatively quickly. By its very nature it could only confirm existing law.

The Commission would give a further explanation of the principles defined by the Court on the interpretation of Article 296 EC, in particular their application to public procurement, to make it easier, in practice, to distinguish between contracts covered by the exemption and those which are not. As regards the latter, the normal rules - public procurement directives- would remain applicable.

The Communication would not be legally binding as such, but it would explain the principles and rules which are. Consequently, the Commission would be obliged to abide by this interpretation in the performance of its functions as guardian of the Treaty. The Commission would also have to draw all the operational conclusions resulting from the adoption of such a clarification of existing law.

Questions

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

2. Are there other aspects of the Community system in question that should be clarified?

2. SUPPLEMENTING THE EU'S LEGAL FRAMEWORK WITH A SPECIAL INSTRUMENT

2.1. Objectives

The EU's legal framework could be supplemented by a new specific legal instrument for defence procurement (goods, services and work), such as a directive to coordinate the procedures for awarding such contracts[13]. The directive would establish a special set of rules for contracts falling within the scope *ratione materiae* of Article 296 EC, but for which use of the derogation is not justified (conditions defined by the case law of the Court). It would apply to defence procurement currently falling within the scope of existing directives but it would contain rules better suited to their specific nature.

[13] This would be a similar approach to that taken in 1990 to accommodate the specific nature of procurement in the water, energy and transport sectors, by means of a special directive (which became 93/38 and was amended by Directive 2004/17/EC of 31 March 2004).

It would pursue three main objectives:

- greater legal certainty, since it would improve the classification of contracts: (a) those covered by current directives; (b) those covered by the new directive; and (c) those excluded from any Community rules;
- more information at Community level on the contracts in question, and therefore greater opening of the markets, which would allow European defence industries to participate equally in calls for tender in all the Member States;
- the introduction of the necessary flexibility for the award of these contracts by the creation of a body of rules suited to the specific features of such contracts.

Such an instrument could also serve as a reference point should a Member State decide not to make use of the Article 296 EC derogation even when it would have been entitled to do so.

2.2 Content

- The **field of application** could be determined on the basis of a general definition of the category of military equipment covered and/or a list. The list could be that of 1958 or another more accurate, updated list such as that of the Code of Conduct on arms exports[14].
- There would be a provision modelled on directives in other sectors stating that the directive would not prejudice the possibility of invoking Article 296 EC under the conditions defined by the Court. It would also identify cases in which the conditions for application of the **exemption** were clearly fulfilled (e.g. nuclear equipment).
- The **awarding authorities** would be the ministries of defence and agencies acting on their behalf and other ministries buying military equipment. Application of the directive to other bodies, such as the new Defence Agency, would have to be determined by the appropriate fora.
- Implementation of the directive would not prejudice the possibility of exemptions conferred on the Member States under **WTO** agreements such as the Government Procurement Agreement.
- The **procedures** should ensure observance of the principles of transparency and non-discrimination, bearing in mind the specific characteristics of these contracts. The rule could be general use of the negotiated procedure with prior publication of a contract notice. Use of an unpublished negotiated procedure could be envisaged in certain cases determined on the basis of exemptions laid down in existing directives and, where appropriate, other cases based on national legislation.
- **Publication** could be through a centralised system at Community level using a harmonised publication bulletin. The subject of the contract could be described in terms of technical performance in order to prevent potential discrimination between suppliers.

[14] Annexed to the Council Declaration of 5 June 1998 (8675/2/98, CSFP) which sets up a mechanism for transparency of arms export policies.

- The **selection criteria** approved should ensure non-discrimination and equal treatment of companies and take account of the specific features of defence contracts, such as confidentiality, security of supply. They should also take into consideration the clearance necessary under defence secrecy rules.

- The **award** of the contract would take place on the basis of defined criteria. This would require a discussion on the gradual elimination of practices such as direct and indirect offsets.

Questions

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

9. Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

11. How do you think offset practices should be handled?

CONSULTATION ARRANGEMENTS

This Green Paper is the start of an official consultation process lasting four months from the date of publication. It will be managed by the Internal Market Directorate-General of the Commission.

Green Paper

Consultation process

End of consultation: four months from the date of publication of the Green Paper

The parties concerned are invited to send their answers to the questions asked and any comments or suggestions to the following address:

Brussels, 23rd September 2004

Public procurement: Commission consults on more open and efficient defence procurement

The European Commission has published a consultative Green Paper on how to improve cross-border competition in certain types of defence procurement in a way consistent with the special nature of the sector. EU law (Article 296 EC) does not require competition in procuring supplies, works and services intended for specifically military purposes and crucial to national security. However, the Commission wants to help Member States to get better value in the €30 billion plus EU market for defence procurement and to help EU defence industries to be more competitive, by providing guidance on how EC Treaty exceptions and requirements should be interpreted.

Internal Market Commissioner Frits Bolkestein said: "This is a win-win-win situation: more efficient defence procurement, new opportunities for SMEs and more competitive EU industry. Defence cannot be lumped in under general procurement rules. But contracts for supplies such as boots and food often do not raise national security issues. With the exception of obviously sensitive areas, this is probably true of much other military equipment. We are exploring how to extend the benefits of more open procurement to those contracts."

The Green Paper assesses how the Commission might clarify in a Communication the criteria to establish when procurement of military equipment, services and works can be exempted from competitive procurement requirements and when they cannot. It would take into account the existing legal framework and case law.

The Green Paper also asks whether the Commission should propose a Directive coordinating procedures for defence procurement, in cases where the exemption under Article 296 EC is not applicable or a Member State chooses not to take advantage of it. For such contracts, it would introduce new, flexible, EU-wide rules in line with the special nature of the sector;

The Commission has worked closely with Member States and industry to prepare the Green Paper, announced in the March 2003 Communication "Towards an EU defence equipment market" (see IP/03/355).

Background

The development of a European defence market is even more important given advances in European Security and Defence Policy (ESDP) and the recent creation of the European Defence Agency. Currently, procurement for multinational defence programmes is often carved up along national lines. For national procurement, contracts are usually handed to national suppliers.

Article 296 of the EC Treaty stipulates that a Member State may take such measures "as it considers necessary for the protection of the essential interests of its security". But Article 296 EC also states that measures connected with the production or trade of arms, munitions and war material must not adversely affect competition in the market for "products not intended for specifically military purposes."

According to European Court of Justice case law, Article 296 EC does not permit automatic exemption for all defence procurement. But in practice, most national authorities make extensive use of the exemption. Contract notices are published, if at all, only at national level, technical specifications are based on differing standards and criteria for awarding contracts are vague.

The Green Paper is available at:

http://europa.eu.int/comm/internal_market/consultations/index_en.htm

Interested parties are invited to respond by 31st January 2005.

Attention: Internal Market DG Consultation "Green Paper on defence procurement"

EUROPEAN COMMISSION 2004 GREEN PAPER ON DEFENCE PROCUREMENT

I welcome the opportunity provided by the Green Paper on Defence Procurement (Brussels, 23.09.2004, COM (2004) 608 final) to offer a viewpoint from the Australian Defence Materiel Organisation (DMO).

The DMO is responsible for the acquisition and sustainment of defence equipment used by the Australian Defence Force (ADF). The DMO currently expends about A$3 billion annually on acquiring new military equipment and a similar amount on the sustainment of equipment already in service.

The DMO has a strong and enduring relationship with a number of EU Member States on matters of Defence Procurement. We have, or will be acquiring substantial amounts of European military hardware including air-to-air refuelling aircraft (France, Spain, UK and Germany), the two types of Eurocopter (France), electronic warfare equipment (Germany) and possibly military vehicles (various European companies). The willingness of European defence companies and European government agencies to engage with the Australian government and industry on defence procurement matters has been a major factor in the success of a number of European bids.

The Australian defence market also offers significant opportunity to European companies, both through direct investments in Australian industry and in the supply of defence equipment. Through their Australian subsidiaries, European companies such as Thales, SAAB and BAE Systems, have established a sound reputation in Australia, underpinning a strong sales effort into the Australian defence market.

For its part Australian defence industries have benefited from defence exports into Europe. Australian niche defence technologies have formed part of the military inventory of a number of European countries, and Australian-made defence equipment is currently being evaluated by EU Member States for their respective defence forces. However we note that the defence trade balance over the last five years and anticipated for the next few years has substantially been in favour of Europe.

Against this background the DMO supports the overall framework of the paper namely a European defence market that it transparent, open and economically efficient. However we would be concerned if the Green Paper's focus on EU Member States alone could unintentionally disadvantage Europe's traditional defence allies and trading partners, such as Australia, through the possible imposition of restrictions on non-European access to the European market. Australian defence decisions are made on a value for money basis, which should encourage mutually open markets.

I look forward to the continued strong and mutually beneficial relationship between Australia and the European Union in defence industrial matters and to continued fair and open access to each of our defence markets.

Yours faithfully

Steve Gumley.

Betrifft: Grünbuch „Beschaffung von Verteidigungsgütern“; Stellungnahme der Republik Österreich

Die Republik Österreich erlaubt sich zum Grünbuch der Kommission „Beschaffung von Verteidigungsgütern“, KOM(2004) 608 endg. vom 23.9.2004 wie folgt Stellung zu nehmen:

1. Einleitende Bemerkungen zu den Ausführungen:

Auf Seite 11 des Grünbuches ist festgehalten, dass eine „Richtlinie … einen besonderen Rechtsrahmen schaffen [würde], der bei Verträgen Anwendung findet, die *ratione materiae* in den Anwendungsbereich des Artikel 296 EG-Vertrag fallen …“. Diese missverständliche Passage wurde zwischenzeitig von Vertretern der Kommission mehrfach dahingehend kommentiert, dass damit zum Ausdruck gebracht werde, dass der Anwendungsbereich des Art. 296 EG durch eine derartige Richtlinie nicht berührt werden würde. Die Richtlinie solle vielmehr allein jenen Bereich regeln, der bereits bisher dem Gemeinschaftsrecht (und damit auch der nunmehr geltenden einschlägigen Vergaberichtlinie 2004/18/EG) unterliegt.

Die nachfolgenden Ausführungen der Republik Österreich basieren auf dem soeben dargelegten Ausgangspunkt, wonach eine allfällige Richtlinie allein jene Beschaffungen zum Gegenstand hätte, die bereits derzeit dem Vergaberegime unterliegen.

2. Zu einzelnen Aussagen im Grünbuch

Auf Seite 8 des Grünbuches hält die Kommission fest, dass die „Liste von 1958 … keine geeignete Bezugsbasis für die Einschränkung des Anwendungsbereichs des Artikels 296 EG-Vertrag [ist], da sie weder jemals offiziell veröffentlicht noch aktualisiert wurde." Die Republik Österreich teilt diese Aussage aus folgenden Gründen nicht: Es ist einerseits darauf hinzuweisen, dass die Relevanz der genannten Liste **primärrechtlich** (!) verankert wurde (vgl. Art. 296 Abs. 2 EG). Insofern stellt sie gerade im Hinblick auf die Auslegung des Art. 296 Abs. 1 EG einen wesentlichen Auslegungshinweis dar, der nicht ignoriert werden kann. Darüber hinaus ist es aus rechtlichen Gründen verfehlt, aus der mangelnden Aktualisierung einer Liste auf deren Eignung bzw. Nicht-Eignung als Bezugsbasis zu schließen. Letztlich ist es ferner auch kein rechtliches Argument, dass diese Liste niemals „offiziell veröffentlicht" wurde. Die Republik Österreich weist darauf hin, dass auch der Beschluss 1/80 des Assoziationsrates EWG - Türkei niemals „offiziell veröffentlicht" wurde und trotzdem gemäß der Rechtsprechung des EuGH (vgl. dazu Rs C-192/89, *Sevince*, Slg 1990, I-03461) unmittelbar anzuwenden ist!

Zum Fragenkatalog der Kommission:

Frage 1: *Glauben Sie, dass es nützlich/notwendig/ausreichend ist, den derzeitigen Rechtsrahmen gemäß den dargelegten Modalitäten zu erläutern?*

Nach Ansicht der Republik Österreich wäre es sehr zu begrüßen, den bestehenden Rechtsrahmens durch eine Mitteilung der Kommission näher zu erläutern. Wie die Kommission ausführt, sollten darin die vom Europäischen Gerichtshof dargelegten Prinzipien in Zusammenhang mit Artikel 296 EG-Vertrag aber auch die bestehenden Gemeinschaftsvorschriften (insbes. daher die Richtlinie 2004/18/EG) behandelt werden, um ihre Anwendung durch die zuständigen Behörden zu erleichtern und sie für die betroffenen Wirtschaftsteilnehmer verständlicher zu machen. Im Rahmen dieses Ansatzes sollten nach Auffassung der Republik Österreich verschiedene Probleme/Konzepte/Begriffe im Zusammenhang mit der Beschaffung von

Verteidigungsgütern näher erläutert werden: dazu zählen etwa die „Versorgungssicherheit“, „Geheimhaltungserfordernisse“, „Wahrung der wesentlichen Interessen der Staatssicherheit“, zulässige Technische Spezifikationen iZm Verteidigungsgütern, Behandlung von F&E, Veränderung des Auftragsgegenstandes bei langen Vertragslaufzeiten und anderes mehr.

Die Republik Österreich weist jedoch darauf hin, dass dieses rechtlich nicht verbindliche Instrument aus ihrer Sicht durchaus nützlich und notwendig ist, für die zukünftige Entwicklung eines Europäischen Verteidigungsmarktes und die Transparenz der Beschaffungen jedoch als nicht ausreichend erachtet wird.

Es ist evident, dass durch dieses Instrumentarium kurzfristig Rechtsklarheit über die Position der Kommission gewonnen werden könnte. Gleichzeitig ist aber auch evident, dass eine Auslegende Mitteilung für sich genommen keine Harmonisierung der unterschiedlichen Regelungen auf nationaler Ebene bewirken könnte. Nach Aussage der Kommission (S. 8 des Grünbuches) stellen aber gerade die nicht homogenen nationalen Gesetzgebungen auf diesem Gebiet ein Problem für ausländische Unternehmen dar.

Frage 2: *Gibt es andere Aspekte des einschlägigen Gemeinschaftsrechts, die einer Erläuterung bedürfen?*

Der Republik Österreich sind – sofern der Themenbereich der Auslegenden Mitteilung weit genug gezogen wird und die Auslegende Mitteilung somit alle im Zusammenhang mit der Beschaffung von Verteidigungsgütern auftretenden Fragen behandelt - derzeit keine anderen aktuellen Aspekte des einschlägigen Gemeinschaftsrechtes bekannt, die einer Erläuterung bedürften.

Sollte sich hingegen die Mitteilung auf die Auslegung des Art. 296 EG beschränken und lediglich den Versuch einer Abgrenzung zwischen den dem Gemeinschaftsrecht unterliegenden und den dem Gemeinschaftsrecht nicht unterliegenden Aufträgen beinhalten, so wären insbesondere folgende zusätzliche Aspekte klärungsbedürftig: Wahl des Vergabeverfahrens, die Berücksichtigung der „Versorgungssicherheit“ im Vergabeprozess (als Eignungs-/Auswahl-/Zuschlagskriterium), die mögliche Berücksichtigung eines „Geheimhaltungserfordernisses“, Auslegung des Begriffes

„Wahrung der wesentlichen Interessen der Staatssicherheit“, zulässige Technische Spezifikationen iZm Verteidigungsgütern, Behandlung von F&E - Aspekten im Vergabeprozess, Veränderung des Auftragsgegenstandes bei langen Vertragslaufzeiten, Off-sets und anderes mehr.

Frage 3: *Erscheinen Ihnen die Bestimmungen der bestehenden Richtlinien den Besonderheiten der Verteidigungsaufträge angemessen/nicht angemessen? Erläutern Sie warum.*

Die Bestimmungen der bestehenden Gemeinschaftsrichtlinien sind den Besonderheiten der Verteidigungsaufträge nicht angemessen. Insbesondere die Tatbestände für die zulässige Inanspruchnahme des Verhandlungsverfahrens sind für Beschaffungen im Verteidigungsbereich nicht adäquat festgelegt. Auch die Bestimmungen über Eignungs- und Auswahlkriterien, die Regelungen über Technische Spezifikationen und die Fristenbestimmungen sind nicht den Besonderheiten für Beschaffungen im sicherheitsrelevanten Bereich entsprechend festgelegt.

So ist etwa nicht festgelegt, dass im Falle einer (spezifischen, jedoch keinen Mitgliedstaat der Gemeinschaft betreffenden) Sicherheitskrise das Verhandlungsverfahren ohne vorherige Bekanntmachung für die Beschaffung von für den Einsatz erforderlichen Materials zulässig wäre (z.B. kurzfristige Beschaffungen für Polizeieinheiten/Streitkräfte für Einsätze außerhalb Europas). Die Regeln über Technischen Spezifikationen erlauben nur ausnahmsweise eine produktbezogene Ausschreibung: bei Nachfolgebeschaffungen (Rüstungsprogramme, langfristige Rüstungsgüter wie Panzer, Fluggerät usw.) ist es aber in der Regel so, dass nur ein Anbieter in der Lage ist, den Beschaffungsbedarf so zu erfüllen, dass die Einsatzbereitschaft der Armee/der Sicherheitskräfte gewährleistet ist. Die Regeln über die Transparenz im Vergabeverfahren berücksichtigen nicht die Sensibilität und das Geheimhaltungserfordernis im Verteidigungsbereich.

Daneben sind auch die Publikationserfordernisse (s. dazu insbes. die Anhänge) und die Rechtsschutzinstrumente (d.h. der Beurteilungsmaßstab) der Richtlinien mit einer im Bereich der Rüstungs- und Verteidigungsindustrie unbedingt erforderlichen und unabdingbaren Vertraulichkeit schwer in Einklang zu bringen.

Frage 4: *Wäre eine spezifische Richtlinie sinnvoll/notwendig, um einen europäischen Markt für Verteidigungsgüter zu schaffen und die rüstungsindustrielle und –technologische Basis Europas zu stärken?*

Der gemeinschaftliche Rechtsrahmen sollte aus der Sicht der Republik Österreich durch ein spezifisches Instrument, wie etwa eine „Richtlinie zur Koordinierung der Verfahren zur Auftragsvergabe im sicherheitsrelevanten Bereich und bei der Beschaffung von Verteidigungsgütern“ ergänzt werden. Durch diese (verbindlichen) Regelungen (die die Berufung auf den Ausnahmetatbestand des Art. 296 EG wohl erschweren würde), würde unbestreitbar – zumindest im Bereich der nicht-sensiblen Rüstungsgüter - die Transparenz und der Wettbewerb gesteigert werden. Da in diesem Bereich nach Aussage der Kommission die Ausnahmeregelung des Art. 296 EG derzeit des öfteren ungerechtfertigt in Anspruch genommen wird, würde eine Richtlinie unbestreitbar den Europäischen Markt für Verteidigungsgüter stärken. Evident ist aber auch, dass dies nicht gleichzeitig auch zu einer Stärkung des Europäischen Marktes hinsichtlich jener Verteidigungsgüter führt, für die die Ausnahme des Art. 296 EG legitimer Weise in Anspruch genommen wird. Die Impulse für den Europäischen Markt für Verteidigungsgüter hängen daher unmittelbar davon ab, wie weit die Ausnahme des Art. 296 EG reicht.

Zusätzlich sollte von Seiten der Kommission auch die Erarbeitung einer aktualisierten „Artikel 296er - Liste“ angestrebt werden.

Frage 5: *Sollte die mögliche Richtlinie auch auf Beschaffungen anderer Einrichtungen, wie beispielsweise die Europäische Verteidigungsagentur, Anwendung finden?*

Die Europäische Verteidigungsagentur (EDA) hat ihre Tätigkeit bereits aufgenommen. Insbesondere im derzeitigen „Anlaufstadium“ der EDA muss aus der Sicht der Republik Österreich insbesondere darauf geachtet werden, dass es im Zusammenhang mit der vorliegenden Aktivität der Kommission mit der Intention der Schaffung eines offenen und transparenten Verteidigungsmarkt zu keinem präjudiziellen Vorgriff auf die Tätigkeiten der EDA kommt.

Aus diesem Grund wäre jedenfalls zu untersuchen, ob – und gegebenenfalls welche – Auswirkungen eine Richtlinie auf das Tätigkeitsfeld der EDA hätte. Sofern man zu dem

Ergebnis käme, dass die EDA sich in einer mit einem Mitgliedstaat vergleichbaren Position befindet, so spräche nach Auffassung der Republik Österreich nichts dagegen auch die Beschaffungen der EDA der zukünftigen Richtlinie zu unterwerfen (die ökonomische Argumentation wäre ja ident). Die Richtlinie könnte allerdings nur insoweit Anwendung finden, als die EDA Beschaffungen von Rüstungsgütern tätigt, die in den Anwendungsbereich des Gemeinschaftsrechtes fallen. Sofern die EDA Beschaffungen im Anwendungsbereich des Art. 296 EG tätigen würde, wären diese Beschaffungen – wie bei Mitgliedstaaten – ausgenommen.

In diesem Zusammenhang wären aber auch noch folgende Probleme/Fragen zu klären: Bei welcher Rechtschutzinstanz wären die Rechte nach der Richtlinie 89/665/EWG bei Beschaffungen der EDA geltend zu machen? Wie wäre das Verhältnis der Richtlinie zu Beschaffungen von anderen Organisationen gestaltet (z.B. OCCAR)? Wie wäre ein Gleichklang mit (allenfalls bestehenden) anderen internationalen Verpflichtungen gewährleistet (z.B. Beschaffungen gemäß NATO-Regeln)? Wäre ein differenziertes Regime (z.B. gemeinsame EDA Beschaffungen für neutrale Staaten und NATO-Mitglieder) sachgerecht?

Frage 6: *Verfahren: Erscheint Ihnen das Verhandlungsverfahren mit vorheriger Bekanntmachung den Besonderheiten der Verteidigungssaufträge angemessen? In welchen Fällen sollte der Rückgriff auf Verhandlungsverfahren ohne Bekanntmachung möglich sein?*

Das „Verhandlungsverfahren mit Bekanntmachung“ als Standardverfahren wird von der Republik Österreich im Zusammenhang mit Verteidigungsaufträgen als angemessen und zielführend erachtet.

Darüber hinaus sollte aber das „Verhandlungsverfahren ohne Bekanntmachung“ über die in den allgemeinen Richtlinien vorgesehenen Fälle hinaus zulässig sein. Dies sollte zumindest aus folgenden Gründen möglich sein: Geheimhaltung, bei Nachfolgeaufträgen (Vertragsadaptionen) im Zusammenhang mit langfristigen Kooperationsverhältnissen, bei Nachfolgeaufträgen nach einer F&E – Beauftragung.

Frage 7: *Anwendungsbereich: Wie könnte der Anwendungsbereich am besten definiert werden? Eine allgemeine Definition, und wenn ja, welche? Eine neue Liste und wenn ja, welche? Eine Kombination aus Definition und Liste?*

Aus der Sicht der Republik Österreich erscheint eine Kombination aus einer allgemeinen Definition in Verbindung mit einer demonstrativen Liste am erfolgversprechendsten. Dadurch würde einerseits die erforderliche Flexibilität für zukünftige Entwicklungen gewährleistet (allgemeine Definition) als auch transparent gemacht werden, welche Güter (zu einem bestimmten Zeitpunkt) nach Ansicht des Gemeinschaftsgesetzgebers diese Kriterien erfüllen würden. Diese Liste könnte die Basis für eine intrasystematische Interpretation betreffend den sachlichen Anwendungsbereich der Richtlinie darstellen (d.h. sie würde eine Auslegungshilfe hinsichtlich jener Güter bzw. Dienstleistungen bieten, die dem Vergaberegime unterliegen sollen).

Frage 8: *Ausnahmen: Wäre es Ihrer Meinung nach sinnvoll/notwendig, eine Kategorie von Gütern zu definieren, die nicht unter die Richtlinie fallen?*

Nach Ansicht der Republik Österreich wäre es notwendig, Kategorien von Gütern zu definieren, die nicht in das Richtlinienregime fallen. Basis dafür sollte eine aktualisierte Neuauflage der Artikel 296er – Liste sein, die dann einer intrasystematischen Interpretation hinsichtlich jener Güter (insbes. für zukünftige neue, derzeit noch nicht absehbare Waffensysteme) und Dienstleistungen zugänglich wäre, die jedenfalls nicht der Richtlinie unterliegen sollten. Als Beispiel könnte die Aufnahme der Beschaffung von Waffen auf der Basis von Nukleartechnologie dienen, die auch (im Wege der intrasystematischen Fortentwicklung) die Beschaffung von Waffen auf der Basis von Fusionstechnologie umfassen würde.

Für diese Kategorie der so genannten „echten Ausnahmen“ könnten darüber hinaus noch die spezifischen Voraussetzungen für die Inanspruchnahme der Ausnahme dargelegt werden.

Frage 9: *Veröffentlichung: Erscheint Ihnen ein zentrales Bekanntmachungssystem geeignet und wenn ja, unter welchen Modalitäten?*

Ein zentrales europäisches Bekanntmachungsmedium – etwa analog dem „Amtsblatt der Europäischen Gemeinschaften“ – wird durchaus als geeignet für Veröffentlichungen im Rahmen eines – anhand der künftigen Richtlinie noch zu definierenden –

Beschaffungsverfahrens angesehen. Dieses Medium sollte als vollelektronisches Publikationsmedium (Datenbank) ausgestaltet sein.

Es müsste in diesem Zusammenhang dafür Vorsorge getroffen werden, dass keine generelle Veröffentlichungsverpflichtung besteht, sondern im Einzelfall über die Veröffentlichung zu entscheiden ist. In diesem Zusammenhang wären insbesondere Geheimhaltungsinteressen zu berücksichtigen.

Frage 10: *Auswahlkriterien: Welche Kriterien sollten Ihrer Meinung nach neben den in den aktuellen Richtlinien vorgesehenen Kriterien berücksichtigt werden, um den Besonderheiten des Verteidigungsbereichs Rechnung zu tragen? Die Vertraulichkeit, die Versorgungssicherheit, etc.? Wie sollen diese definiert werden?*

Als Kriterien, die in einem eigenen Abschnitt der noch zu schaffenden Richtlinie zu definieren wären, sollten jedenfalls Bereiche wie

- Vertraulichkeit,
- Versorgungssicherheit und
- Referenzwerte (etwa in Sinne eines Benchmarking zur Einführung bei anderen Armeen)

normiert werden.

Als (erste) Arbeitsdefinition könnte etwa für den Bereich der Versorgungssicherheit folgender Wortlaut dienen:

> *„Versorgungssicherheit ist die einseitige und unbedingt abgegebene Garantie des Unternehmens, auf Ersuchen des Auftraggebers diesem die in einem Vertrag festgelegte Leistung jederzeit bzw. für einen bestimmten, im Vertrag fixierten Zeitraum zu erbringen, wobei gegen das Ersuchen des Auftraggebers keine Einrede des Unternehmens zulässig ist.“*

Hinsichtlich der Definition der „Vertraulichkeit“ wird auf einschlägige Definitionen in den Mitgliedstaaten verwiesen, die ihrerseits auf internationalen Dokumenten beruhen (z. B: LOI). Diese Definitionen wurden der Kommission bereits im Rahmen der Vorarbeiten zum Grünbuch zur Verfügung gestellt. Es wird daher davon Abstand genommen, die einschlägigen Unterlagen nochmals zu übermitteln.

Frage 11: *Wie sollte Ihrer Meinung nach die Praxis der Kompensationsgeschäfte behandelt werden?*

Dieser Bereich ist aus Sicht der Republik Österreich besonders sensibel und relevant, da Kompensationsgeschäfte für Staaten mit einem sehr kleinen Verteidigungsetat – wie etwa auch Österreich – eine Möglichkeit darstellen, notwendige Rüstungsbeschaffungen auf nationaler Ebene auch politisch durchsetzen und auch (budgetär) finanzieren zu können.

Österreich hat sich in den letzten Jahren an keinem Großprojekt im Bereich der europäischen Rüstungskooperation beteiligt, weshalb aus österreichischer Sicht (als derzeit ausschließlicher „Käuferstaat") nur die Variante „Offsets/Kompensationsgeschäfte" in Betracht kommt. [Für Teilnehmerstaaten an Rüstungskooperationsprogrammen kann demgegenüber das „Just Retour-Prinzip/Prinzip einer angemessenen Rendite" zum Tragen kommen.]

Aus den oben erwähnten Gründen ist es für die Republik Österreich unabdingbar, dass diese beiden Möglichkeiten der Kompensationsmaßnahmen im Rahmen von Großprojekten der Rüstungskooperation auch in Zukunft erhalten bleiben. Dies auch vor dem Hintergrund, dass derartige Kompensationsmaßnahmen eine weltweit gängige Praxis darstellen und eine einseitige Abschaffung zum Nachteil der Gemeinschaft und ihrer Mitgliedstaaten gereichen würde.

Die Republik Österreich verweist abschließend noch auf ihre Stellungnahmen im Rahmen der Vorbereitung des Grünbuches und ersucht die Verspätung der Stellungnahme zu entschuldigen.

c/o European Commission, Internal Market DG
Consultation „Green Paper on defence procurement"

Ave de Cortenbergh 100 (1/100)
1049 Brussels

Dear colleagues,

You will find attached the Czech position to the „Green Paper on defence procurement". The position was addopted by the Parliament of the Czech Republic in January 27, 2005.

This document was sent to your e-mail address: MARKT-D2-DPP@cec.eu.int.

Yours sincerely,

Madejova Jarmila
Jarmila Madejova
Defence Advisor

Annex: 1

MoD ARMAMENTS DIVISION
GREEN PAPER – DEFENCE PROCUREMENT

Position of the Czech Republic

Czech Republic welcomes steps leading to increased transparency and effectiveness of defence market within the EU. Therefore, we support initiatives designed to help in solving problematic issues. From our viewpoint, the Green Paper – Defence Procurement contains a high-quality analysis of the current status and identifies major shortfalls in the European defence procurement area.

The second part of the document offers two possible solutions to existing shortfalls for a discussion. It is proposed, as a minimum option, (1) to pursue clarification and single interpretation of the existing EU legal framework, or (2) supplement the EU legal framework with a specific legal instrument specifically regulating European defence procurement.

Czech Republic supports issuance of an interpretative communication by the European Commission, which would clarify the existing legal framework of the Communities, i.e. especially "across-the-board" interpretation of Art. 296 EC Treaty and its application to EU's secondary legal acts and in national legislations. It cannot be ruled out that it will be useful in the future to support development of a new legal instrument.

The issues of armaments and making the European Defence industry and market more effective closely relate to the required defence capabilities. The EU Military Staff, together with the nascent European Defence Agency (EDA), will share the work to define the capabilities. European Defence Agency, parameters of which are yet to be specified, will then take over the full responsibility for armaments issues, issues of the Defence Technology Industrial Base (DTIB) and those of the European Defence Equipment Market (EDEM). We believe that development of a new legal instrument should be initiated by EU Member States, for example in relation with EDA.

One of the main reasons for fragmentation of defence equipment market, in the Czech Republic's opinion, is the fact that individual EU States make use of their own funds for defence development. Such investments are closely scrutinized by tax payers of each country and it is critical that each state make sure at least part of the investments returns in the form of national suppliers' share in contracts at hand.

Replies.

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

Interpretation of the existing legal framework appears to be too loose, despite taking into account the clarification by the Court. Therefore, we regard the offered approach of "interpretative communication from the Commission" as useful for interpretation of the framework.

2. Are there any other aspects of the Community system in question that should be clarified?

An interpretative communication by the Commission would, in the Czech Republic's opinion, do away with the indefinite interpretation of key terms, such as "essential security interests of Member States", "necessary" measures to protect the "essential interests", "specifically military purposes" e.t.c. Such interpretative guideline should also reflect the decision of the European Court on this area.

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

In the Czech Republic's opinion, the existing rules of Community law focus on interpretation, observing and control of free trade, while defence contracts are not

specifically addressed. Despite that, the Czech Republic considers it necessary to unambiguously define (and restrict to the greatest extent) possible exemptions from the existing legal framework. To define unambiguously, under what circumstances a contract can be awarded to national suppliers, or possibly specify what type of weight criterion may be accounted in favour of national suppliers and to what extent. There are numerous sectors, where the vehicle of non-competitive bidding may be used, for example in areas of unique technology and the like.

4. Would a specific directive be a useful/necessary tool for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

The current status that enables a loose interpretation of the Agreement for establishment of special regime for defence procurements is not satisfactory. However, it does not positively imply an urgent need to establish a new legal instrument that would regulate defence trade rules within the EU. As pointed out in answers to the previous questions, an interpretative communication by the Commission would currently be appropriate and sufficient. Nevertheless, it is not unlikely in the long-term that there will be the need to establish a legal instrument, which would shape defence trade in Europe towards European defence equipment market (EDEM). This instrument should cover supranational practices only, binding for all European States without exemption and thereby it would help reduce the prevailing fragmentation of defence markets.

5. What is your opinion regarding the use of a possible directive for purchases by other bodies such as the European Defence Agency?

The Czech Republic is of the opinion, that the possible legal instrument should also regulate acquisitions performed by other entities. Consequently, this legal instrument should also apply to those entities. Czech Republic is not convinced that EDA, in its current set-up, is fully qualified for acquisition of defence equipment, including the life cycle support and the security of supply.

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without prior publication be allowed?

Contractors/manufacturers are the primary carriers of know-how. Therefore, consultations with them are desirable to the effect of precise definition of projects, development of marketing analyses, or projecting focus for research and development, life cycle costs analyses, tender specifications and the like. In this respect, it is necessary to consult already before an order is publicised. Good information is critical during the developing stage of a tender, as submitting of bids and bids assessment can be carried out under stricter conditions including public bidding publication. All situations should allow for using consultations without a public bidding publication. Similarly, we are of the opinion that it is necessary to consult without publication in case the bidding applies to classified technology (NBC Defence). The whole order should be capped with a resulting protocol on a single carrier, solver and subsequently a supplier of such order.

The Czech Republic is of the opinion that the negotiated procedure with prior publication accommodates the specifics of defence procurements.

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

The Czech Republic is of the opinion, that the scope of application is to be defined through a combination of definition and a list.

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

The Czech Republic regards as useful to set up a database of materials, which would be unambiguously excluded from application of the legal instrument. In our opinion, this is particularly the question of the category of nuclear items, chemical weapons and arms components, cryptographic equipment and equipment that requires certain level of classification as well as unique patented items (e.g. nanotextiles), which may be abused for launching terrorist attacks (for example production of substances, which will not be effectively stopped even by nanotextiles).

9. Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

The Czech Republic regards a centralised publication system as a critical requirement (perhaps on special website) while maintaining the set rules and principles and without exemptions for any items, cases or States. Such system of publication system should allow for a transparent presenting and assessment of bids, including announcement of the winning bid and filing of possible appeals. The centralised publication system should have a standard format and firmly set criteria and principles.

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supplies, etc.? And how should they be defined?

In the Czech Republic, the selection criteria are subject to the terms of public tenders. It is possible to develop an universal list of criteria applicable to certain domain of acquired equipment, although such criteria may vary case by case.

Confidentiality is definitely one of the key requirements. A bidder may prove it with valid certificate issued by National Security Agency of the company's domicile. The required level of security clearance may vary, but the system is ready for operational issuance of NATO certificates. This system can be adopted.

Other selection criteria:

Stability of supplies of spares and services after guarantee period within life-cycle;
Guarantee of supplies under state of emergency;
Delivery price and life cycle cost;
Quantity of subcontractors.

11. How do you think offset practices should be handled?

The Czech Republic regards offsets as an important tool, which furnishes know-how and allows access to advanced technology. The Government of the Czech Republic recently specified conditions for implementation of offset conditions into international tenders - indeed for the whole spectrum of acquired materials, not only for defence equipment. Offset policy is also an instrument for maintaining or increasing rate of employment.

It is not likely that other states would abandon application of offset policy.

As a regulation of compensations, it is possible to stipulate minimum and maximum criteria for compensations, or possibly regulate areas where compensations could be provided. At the same time, the Commission could actively observe regions in individual Members States, industrial and other sectors and help to direct compensations into such sectors. The envisaged legal instrument could incorporate a standard form of basic offset agreement.

Kommissionens grønbog om offentlige indkøb af forsvarsmateriel (KOM(2004) 608 endelig)

Den 28. oktober 2004 publicerede Kommissionen sin grønbog om offentlige indkøb af forsvarsmateriel, KOM(2004) 608 endelig. Formålet med grønbogen er at iværksætte en debat om, hvorvidt og i givet fald i hvilken form der skal ske en fællesskabsindsats for at sikre, at der skabes klare retlige rammer for offentlige indkøb af forsvarsmateriel.

I grønbogens første del belyser Kommissionen de forhold, der kan begrunde et behov for iværksættelse af specifikke foranstaltninger på området for offentlige indkøb af forsvarsmateriel. Her analyserer Kommissionen markedet for forsvarsmateriel, dets specifikke forhold samt den eksisterende lovgivning for offentlige indkøb.

På baggrund af denne analyse opstiller Kommissionen i grønbogens anden del to løsningsmodeller, som skal sikre at de retlige rammer for offentlige indkøb af forsvarsmateriel klargøres. Derudover indeholder denne del en række spørgsmål, som Kommissionen ønsker besvaret.

Økonomi- og Erhvervsministeriet har på vegne af den danske regering følgende kommentarer til grønbogen:

Fra dansk side kan man tilslutte sig, at der skabes størst mulig klarhed over de retlige rammer for offentlige indkøb af forsvarsmateriel, således at der sikres et mere gennemsigtigt og åbent fælleseuropæisk marked til gavn for den europæiske industris konkurrenceevne.

Offentlige indkøb på forsvarsområdet er i udgangspunktet omfattet af det eksisterende udbudsdirektiv for offentlige kontrakter (2004/18/EF). Alene forsvarskontrakter, der falder ind under EF-traktatens artikel 296 er undtaget fra udbudspligten efter direktivet. Den eksisterende fællesskabslovgivning indeholder således de nødvendige rammer og instrumenter for gennemførelse af udbud af forsvarskontrakter. Hertil kommer, at udbudsreglerne, efter den for nylig gennemførte revision af direktiverne, er kendetegnet ved større fleksibilitet. De nye moderne og mere fleksible regler giver efter dansk opfattelse i tilstrækkelig grad mulighed for at tage højde for de specifikke forhold, der karakteriserer forsvarskontrakterne.

Der er således ikke i udgangspunktet behov for ny regulering på dette område. Der kan derimod være behov for, at Kommissionen bidrager til at tydeliggøre retstilstanden.

Fra dansk side finder man, at den fornødne klarhed over de retlige rammer for offentlige indkøb af forsvarsmateriel bør opnås ved udstedelse af en fortolkningsmeddelelse. Denne type meddelelser har tidligere haft god effekt på forståelsen af komplicerede områder (fx vedrørende sociale- og miljøhensyn) og kan på samme måde være nyttig på området for forsvarskontrakter. Udstedelse af en fortolkningsmeddelelse kombineret en effektiv håndhævelse af de eksisterende regler må således efter dansk opfattelse være første skridt til at sikre en effektiv åbning af markedet for forsvarsindkøb samt bedre og mere lige konkurrencevilkår for EU's forsvarsindustri. Fra dansk side finder man det væsentligt, at udarbejdelsen af en fortolkningsmeddelelse gives høj prioritet med henblik på hurtig udstedelse.

Man er dog tillige åben for en drøftelse af behovet for at indføre særlige regler for indkøb på forsvarsområdet, såfremt udviklingen viser, at indførelse af sådanne sektorregler vil være det bedste instrument til at sikre et bedre fungerende og åbent marked for forsvarskontrakter.

Hvad angår indholdet af en fortolkningsmeddelelse bør Kommissionen bidrage til at afklare anvendelsesområdet for undtagelsesbestemmelsen i EF-traktatens artikel 296, således at det bliver lettere i praksis at skelne mellem kontrakter, der er omfattet af undtagelsen og kontrakter, der ikke er. Denne afklaring kan ske ved, at Kommissionen redegør for de principper, som EF-Domstolen har lagt til grund ved fortolkningen af EF-traktatens artikel 296, herunder hvordan de anvendes på offentlige indkøb.

Fra dansk side lægger man vægt på, at de kategorier af forsvarskontrakter, der er undtaget fra udbudspligten efter udbudsdirektivet, begrænses mest muligt. Undtagelsesbestemmelsen i artikel 296 bør derfor fortolkes restriktivt, således at der sker størst mulig konkurrenceudsættelse af offentlige kontrakter på forsvarsområdet.

I forbindelse med afgrænsningen af anvendelsesområdet for artikel 296 bør Kommissionen endvidere søge at afklare begrebet "væsentlige sikkerhedsinteresser". En fast og ensartet fortolkning af begrebet er en væsentlig forudsætning for, at artikel 296 anvendes på samme måde i alle medlemsstater. Herved hindres, at artikel 296 systematisk bringes i anvendelse på alle forsvarskontrakter og derved misbruges.

Fra dansk side finder man det desuden hensigtsmæssigt, at Kommissionen i fortolkningsmeddelelsen redegør nærmere for, hvilke muligheder ordregivere har for på de forskellige trin i udbudsprocessen at tage højde for de specifikke forhold omkring forsvarskontrakter. Som eksempel kan nævnes mulighederne for i forbindelse med udvælgelsen at tage sikkerhedspolitiske hensyn, såsom fortrolighed, forsyningssikkerhed i hele produktets levetid og kvalitetssikring.

Endvidere kan det være nyttigt at sætte særlig fokus på rammerne for at anvende udbud efter forhandling. I den forbindelse bemærkes, at man fra dansk side lægger vægt på, at der i forbindelse med udbud af forsvarskontrakter sikres størst mulig gennemsigtighed. Udgangspunktet bør derfor være, at anvendelsen af udbud efter forhandling fortsat er begrænset til kun at gælde i undtagelsestilfælde.

Endeligt skal den danske regering bemærke, at man generelt er af den opfattelse, at systemet med kompensation(modydelser) for forsvarskontrakter ikke harmonerer med EU's konkurrencepolitik, og ikke medvirker til fri bevægelighed af varer og tjenesteydelser inden for det indre marked. Den danske regering mener derfor principielt, at kompensationssystemet på sigt bør afvikles, forudsat at dette sker samtidigt i alle medlemslande.

Imidlertid er det den danske opfattelse, at denne afvikling ikke kan ske øjeblikkeligt. Fra dansk side finder man det derfor vigtigt, at så længe der findes kompensationsmuligheder, bør reglerne herom være så klare og gennemskuelige som muligt. Herved sikres, at medlemsstaternes administration bliver mere ensartet og gennemsigtig, at konkurrencen ikke forvrides, og at små lande ikke stilles ringere end EU-lande med stor og tung forsvarsindustri.

Kommissionen bør desuden tage højde for, at anskaffelse af forsvarsmateriel tillige foregår på det globale marked, hvorfor afskaffelsen af kompensationskøb inden for EU alene vil være til skade for den europæiske forsvarsindustri. Kommissionen bør derfor overveje, hvordan det kan sikres, at kompensationsforpligtelserne på det globale marked afvikles samtidigt med eventuel afskaffelse af kompensationssystemet inden for EU.

Efter dansk opfattelse er der behov for, at Kommissionen foretager en analyse af medlemsstaternes administration af kompensationsområdet, og også på dette område præsenterer en grønbog med henblik på fremsættelse af forslag til, hvordan området bør administreres.

Med venlig hilsen

Bendt Bendtsen

Consultation "Green Paper, Defence Procurement (COM (2004)608 final)

FINNISH REPLY IN CONSULTATION PROCESS

Dear Sirs,

We have the pleasure in enclosing the comments of Finland.

Finland considers the on-going dialogue necessary to explore the regulatory aspects of the defence procurement. Finland shares the opinion that the European defence industrial base has to be improved. There should be more co-operation in the defence market, and the procurement practises should be made more efficient and transparent.

Finland considers that improving the current defence procurement practises in Europe is an important step to develop the European Security and Defence Policy. This means added transparency and consistency in the member states' application of article 296, and also, if and when agreed, also more open procedures within procurements under the article 296.

Finland is in support of gradual and reciprocal measures to open defence markets within Europe and to improve the efficiency of the European defence market. In the long term Finland supports the creation of European Defence Equipment Market.
Also creating a more common understanding of the application of article 296 is necessary both for the industries and procurement authorities.

Considering regulatory alternatives and the development of regulations, in our opinion it is necessary to take duly into account the specificity of the defence procurements, and also the differing premises of the various member states. There are member states that belong to a military alliance, while others have stayed militarily non-aligned. For Finland, the defence solution is credible defence, as quite recently stated in the Government White book to Finnish Parliament: Defence and Security Policy 2004 (6/2004).

Finnish defence solution is based on credible national defence. One component of the Finnish defence solution is material preparedness, requiring certain national defence industrial know how and industrial capacity. However, the defence solution has not meant a closure of the Finnish defence market. The Finnish defence market has been fairly open for foreign bidders, save in those defence procurements where essential defence imperatives have required a domestic procurement solution (article 296). Currently, Finland is active in the European defence materiel co-operation in European Defence Agency and shares its goals.

The invocation of article 296 into procurements of defence varies between the member states. In our opinion guidance towards correct application should be formulated carefully and constructively, not jeopardizing the aims for more European co-operation in the defence materiel arena. Therefore, eventual common regulation, legally binding or merely interpreting the current law, should be developed in very close co-operation with the member states, commission, industry and other stakeholders.
The expanding security needs within Europe might also call for clarification to define the optimal procurement procedures for these procurements.

The newly established European Defence Agency could be used as a tool to collect data and build up the required measures and practises (we also takes note of the initiatives within the European Defence Agency to launch timely work towards more common guidelines that would be applicable to defence procurement within article 296 of the Treaty).

In spite of the already fairly open Finish defence market, certain national defence prerequisites must be taken into account. As a non-aligned nation we place a strong emphasis on the aspect of security of supply and security of delivery. It is foreseen, that the new European constitutional treaty and the increasing European co-operation in the field of armaments will positively impact the security of supply at the European level. Finland, however, sees it problematic that security of supply measures at the European union level are currently at their early stage. Finnish national security of supply measures can be reconsidered in due time, providing that European improvements in this area reach an acceptable level (the term security of supply is understood in a wide meaning i.e. the Finnish law on security of supply seeks to guarantee, in times or crisis, the essential economic functions of national economy and defence industry and livelihood of the citizens, and therefore defence security of supply is only one area of the general security of supply of Finnish society).

These prerequisites play a vital role and impact the point of view of Finland in the article 296 application and eventual opening up of further product categories, and may also influence the point of view regarding the procurement procedures in an eventual directive regulation (for instance, the off-centre geographical position of Finland far away from European industrial centres cause the necessity of certain products and services to be available from industry/servicesupplier with an in-country presence in the Finnish territory. This could also require certain adjustments in the procurement procedures in an eventual regulation).

For the same military preparedness and security of supply reasons, Finland also considers it essential to maintain the industrial participation (especially direct programme related industrial participation) in connection of her major defence procurements from foreign suppliers.

The Finnish Government reply has been prepared within the Ministry of Defence, with written statements from relevant stakeholders and views on the matter obtained from the Finnish Parliament.

We also propose that an impact assessment would be made in due course on the commission proposals.

Finland would also like to be able to include eventual further views at a later stage.

Finland would like to propose active co-operation in this matter with commission and other stakeholders.

In addition to the above, we have the pleasure in enclosing the reply to the requested specific questions (Annex 1).

MINISTER OF DEFENCE Seppo Kääriäinen

Senior Government Secretary Jouko Tuloisela

ANNEX 1

Question 1: Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

It is possible that in the short term a renewed interpretation of the article 296 could be of assistance to guide the practises towards a more common application within the member states. The specificity of the defence procurement and the varying premises of the member states should be taken into account in connection of the formulation of an eventual interpretative communication. It is recommended that member states would be given the possibility to participate into the development of such an interpretation.

As already proposed, one alternative would be to establish a common approach on the application of the art. 296 by the defence authorities themselves. European Defence Agency could be used as a catalyst in this.

In the procurements by the defence authorities in Finland, the application of art. 296 has been quite well established and clear. The application of article 296 is governed by Finnish national legislation including the relevant application guidelines by the defence authorities. In the Finnish system the application whether a procurement will be deemed a procurement of defence goods or services shall be decided by the Ministry of Defence of Finland. The Ministry has defined the product list in 1995, taking into account the military list from the year 1958, which was also compared with the applicable export licensing lists (when the procurement is under art.296, a separate decree is used).

Finnish final position in comparison of the various regulatory alternatives can only be made when the concrete proposals are at hand.

Question 2: Are there other aspects of the Community system in question that should be clarified?

Being general in its nature, the article 296 has sometimes caused uncertainty of the application of the European union regulation into various activities in the field of defence.

Question 3: Do you consider the rules of existing directives suited/unsuited for the specific characteristics of defence contracts? Please give your reasons.

The new and improved procurement directives, with their quite innovative and improved methods, are currently being incorporated into Finnish national legislation and entering into force next year. Therefore it is premature to draw conclusions on how well the new directives would be suited for procurements close to art. 296. Evidently, certain amendments would still have to be made before these new directives could optimally suit defence procurements and the related security of supply considerations.

Question 4: Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

Finland favours gradual and reciprocal measures in development of the regulation.
The Finnish interim position rather prefers a more flexible regulatory mechanism. A directive could possibly be suitable only in the long term. On the other hand the preparation of a directive would possibly duly take into account smaller nations needs and be more reciprocal. A special directive could be considered if and where other regulatory measures have not been sufficient, or in the case that reciprocity has not been reached.
A directive would also require a clear group of products for its coverage.
However, a special directive may not be ruled out, but would entail a long process.

Question 5: What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

In our opinion this cannot be ruled out. The applicability of a directive would have to be considered taking into account the nature of the procurements in question. In our understanding the agency already nowadays applies public procurement directives in their day-to day operations (furnishing, cleaning, computers, etc.) It is not out of question that the agency, in rather short term, could serve as a "laboratory" of this kind of directive.
(The expanding security needs in Europe might also require a set of rules better applicable to these type of procurements).

Question 6: Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific need of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

The proposed method is considered suitable. Also the possibility for direct non-public procurement is necessary, for instance in procurements from other governments (there is also an increasing amount of second-hand procurements between governments, where publicity might not serve its purpose), or procurements that are secret.

Question 7: Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

In the Finnish view the best choice would be a general definition assisted with a non-exhaustive, renewable list.

Question 8:Exemptions. Do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

It is very difficult to evaluate this without knowing the products that the directive would cover. Each member state is ultimately vested with the authority to apply article 296 if the member states essential security needs so require. For Finland, the credible defence solution and security of supply requirements are factors that shall be taken into account in this respect.
Finland has attempted to bring security of supply aspects into wider European discussion. Security of supply elements should in the Finnish view be included in the European union policy. At the same time, Finland has defined her national security of supply objectives.
Procurements relating to security, intelligence, command and control and cryptography would have to be excluded (list non-exhaustive).

Question 9: Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

Finnish Defence Forces publish an electronic defence bulletin. It would presumably be a fairly simple task to incorporate the member states' electronic bulletins into a centralised databank or bulletin.

Question 10: Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

In public procurement directives it is normally not possible to require or prefer a solution that is linked to the geographical location of the supplier or the service provider. However, for security of supply reasons, and taking into account the Finnish geographic position, a requirement for products and services to be available in the Finnish territory might be required. This kind of an in-territory requirement would possibly mean a higher price and industrial setting-up, but would not necessarily be discriminatory, while all bidders would have the same requirement (see also the remarks on the question 11., offset.)

Certain additional requirements for bidders are often necessary. Quality control requirements, security/secrecy and special data-protection levels may be named as examples. Bidders might in certain cases be required to sign secrecy/non-disclosure agreements prior to being able to take part in bidding.

Question 11. How do you think offset practises should be handled?

Taking into account the closed defence market, offset is used in connection of major defence procurements also by Finland (especially direct participation to the programmes for the security of supply and military preparedness needs). The threshold is currently 10 million Euros. The placing of the obligation is based on the requirement set by the Finnish Parliament when authorizing the funds for defence materiel procurements.

Such an obligation would not be distortive (in a procurement from several foreign candidates the same offset rules are applied for all). Placing a direct offset obligation in a program may mean a deviation from the most effective industrial/economical solution. Buyers electing to use direct offset will pay a higher premium, but on the other hand might gain security of supply or other advantages like technology transfer programmes.

There is scope for certain streamlining of the offset rules in Europe. Also, in view of collaborative defence programmes, adjustments to the rules may be necessary.

Paris, le 25 novembre 2004

Monsieur le Directeur général,

La Commission européenne a publié, le 24 septembre dernier, un Livre vert concernant les marchés publics de la défense. Ce document invite toutes les parties intéressées à transmettre leurs observations concernant les onze questions posées avant le 23 janvier 2005.

La Délégation de l'Assemblée nationale pour l'Union européenne a souhaité participer à ce débat. Au cours d'une réunion tenue ce matin, j'ai présenté à mes collègues les réponses que la Délégation pouvait envisager de donner aux questions formulées dans le Livre vert. Les propositions finalement retenues ont été consignées dans un document séparé.

Le document vous est déjà parvenu par la voie électronique, avec l'indication que nous vous donnions notre accord pour que cette contribution soit placée sur le site web du Livre vert.

Vous voudrez bien en trouver aujourd'hui ci-joint la version papier.

Je vous prie de croire, Monsieur le Directeur général, à l'assurance de ma haute considération, et cordiale

Pierre LEQUILLER

DÉLÉGATION
POUR L'UNION EUROPÉENNE

Le Président

Réponses aux questions du Livre vert

Question 1. Estimez-vous utile/nécessaire/suffisant d'expliciter le cadre réglementaire actuel selon les modalités présentées [communication interprétative] ?

Comme le précise le Livre vert lui-même, une communication interprétative ne peut par définition ajouter au droit existant. L'instrument juridique proposé serait donc loin de présenter nécessairement toutes les caractéristiques d'une clarification, puisqu'il se superposerait aux arrêts de la Cour de justice pour en proposer une interprétation non dépourvue d'autorité, mais sans valeur décisive.

Nul n'est censé ignorer la loi et la jurisprudence de la Cour de justice est par elle-même assez claire pour des spécialistes. Or le droit des marchés publics de la défense ne concerne que des professionnels. Qu'une communication interprétative puisse être adoptée plus rapidement qu'une directive ne paraît pas en soi un argument suffisant pour rendre nécessaire sa publication.

Question 2. Y a-t-il d'autres aspects du régime communautaire en question qui mériteraient d'être clarifiés ?

Il est possible de formuler les mêmes réserves sur cette question.

Question 3. Les règles des directives existantes vous paraissent-elles adaptées/inadaptées aux spécificités des marchés de défense ? Précisez pourquoi.

Les règles de la concurrence ne sont pas applicables telles quelles aux marchés publics de défense pour deux raisons.

D'abord, même si la sécurité des approvisionnements et le secret des informations sont trop souvent invoqués dans le secteur, ce sont, pour certains types de contrats, des exigences compréhensibles qu'il faut respecter, ce qui suppose des aménagements de la réglementation de la concurrence.

En second lieu, les dispositions du droit européen en matière de contrôle des concentrations paraissent inadaptées au secteur. Certes, les grands groupes européens ne doivent pas se soustraire aux dispositions anti-trust. Mais la position relativement avantageuse d'une entreprise sur un segment du marché mondial n'empêche pas nécessairement qu'elle reste de manière générale la proie de la concurrence. Si l'intention est de créer une base industrielle solide, il faudrait que la réglementation communautaire, pour définir un abus de position dominante dans le secteur, prenne non seulement en compte le marché européen, relativement étroit, mais l'ensemble du marché mondial. La Commission et la Cour de Luxembourg suivent déjà des analyses similaires dans le domaine de l'aéronautique civile.

Question 4. Une directive spécifique serait-elle un instrument utile/nécessaire pour mettre en place un marché européen des équipements de défense et renforcer la base industrielle et technologique de défense européenne ?

L'adoption d'une directive spécifique paraît à la Délégation pour l'Union européenne de l'Assemblée nationale un instrument indispensable pour en finir avec le cloisonnement excessif des marchés nationaux de la défense en Europe. Le morcellement de la demande et la multiplicité des canaux qu'elle emprunte se sont révélés jusqu'à présent un obstacle considérable au développement d'une industrie européenne à la hauteur du potentiel économique de l'Union européenne. La Délégation pour l'Union européenne estime qu'une directive spécifique, rédigée dans le respect de l'article 296, est une condition *sine qua non* au renforcement de la base industrielle et technologique de défense européenne.

Question 5. Quelle est votre opinion concernant l'utilisation de cette éventuelle directive pour les acquisitions effectuées par d'autres organismes, tels que l'Agence européenne de défense ?

Il apparaît que cette directive devrait par définition s'appliquer à un organisme comme l'Agence européenne de défense. Si elle vaut pour les États membres, elle doit en effet s'appliquer *a fortiori* aux organismes communautaires. Quant à savoir de quels crédits disposera éventuellement l'Agence pour passer ses propres marchés, c'est cependant une autre question.

Question 6. Procédures : la procédure négociée avec publicité préalable vous semble-t-elle être adaptée aux spécificités des marchés de défense ? Quelles sont les situations qui devraient permettre le recours à la procédure négociée sans publicité ?

Il est opportun d'ouvrir au maximum la palette des procédures définies par le droit européen, pour dissuader les États de ne suivre que les leurs. La procédure négociée avec publicité préalable apparaît une bonne procédure de droit commun pour les marchés de défense, dans la mesure où elle allie à l'ouverture de la transaction la possibilité d'exercer une certaine liberté d'appréciation dans le choix de ses fournisseurs.

Seuls des secteurs très sensibles comme l'électronique de renseignement devraient pouvoir permettre le recours à la procédure négociée sans publicité.

Question 7. Champ d'application : quel serait le moyen le plus approprié pour définir le champ d'application ? Une définition générique et dans ce cas laquelle ? Une nouvelle liste et dans ce cas laquelle ? Une utilisation combinée d'une définition et d'une liste ?

La technique de la liste a déjà fait la démonstration de ses limites. La liste adoptée en 1958 n'a jamais été révisée depuis cette date, malgré les évolutions considérables du matériel militaire. En renvoyant la définition de son champ d'application à une annexe, la directive courrait le risque de se voir vidée de sa substance, à force de négociations ne parvenant pas à aller au-delà du plus petit dénominateur commun. Les progrès rapides de la technologie auraient au demeurant tôt fait de rendre caducs les compromis obtenus.

L'utilisation combinée d'une liste et d'une définition paraît une technique législative non moins contestable. Si la liste retenue doit rester ouverte, le juge peut la compléter ultérieurement par analogie avec les matériels expressément visés. Sous une apparence pratique et concrète, la liste propose donc en fait une définition abstraite dont les contours ne seront tracés par le juge qu'au fil du temps. Une définition générique serait un instrument plus stable, qui paraît beaucoup plus recommandable. Cette réserve étant formulée du point de vue de la technique législative, il appartient autrement aux gouvernements de fixer entre eux la teneur de la définition.

Question 8. Exemptions : la définition d'une catégorie de biens qui seraient exclus de manière manifeste de la directive vous semble-t-elle nécessaire ?

Définir des exemptions paraît de prime abord un moyen d'apporter certaines garanties aux États. Si la définition générique évoquée sous la question 7 est suffisamment précise, elle tracera cependant par défaut les contours des matériels qui seront hors de son champ d'application. En voulant les définir pour eux-mêmes, une directive européenne finirait ainsi par proposer deux interprétations possibles d'une même ligne de démarcation, ce qui paraît au mieux superflu et au pire inopportun.

Question 9. Publication : un système centralisé de publication vous semblerait-il approprié ? Si oui, selon quelles modalités ?

La nécessite d'un système centralisé de publication s'impose avec la force de l'évidence. En pratique, les avis de passation des marchés pourraient être simplement publiés au *Journal officiel de l'Union européenne.*

Question 10. Critères de sélection : quels critères vous sembleraient devoir être pris en compte en plus de ceux déjà prévus dans les directives actuelles afin de tenir compte des particularités du secteur de la défense ? La confidentialité, la sécurité des approvisionnements, etc. ? Et de quelle manière les définir ?

L'application de la réglementation nouvelle ferait naître plusieurs sous-catégories de marchés, notamment pour les procédures avec ou sans publicité. Pour chaque sous-secteur, un critère unique aisément contrôlable devrait être retenu, qui corresponde à la nature de la sous-catégorie définie, par exemple la confidentialité de l'information pour les procédures sans publicité.

Il appartient aux gouvernements des États membres de définir ces critères de telle manière qu'un contrôle juridictionnel sur leur application soit possible, y compris en mettant à la charge des acquéreurs de prouver que les informations à fournir en cas de publicité des avis auraient été confidentielles.

Question 11. Comment considérez-vous devoir être traitée la pratique des compensations ?

Les compensations sont un moyen de paiement supplémentaire, qui consiste à faire construire sur le territoire de l'État acquéreur une partie de la commande qu'il a passée, ou à y développer une production industrielle d'un volume équivalent. Les considérations qui favorisent cette pratique ne sont pas exclusivement économiques, mais sont principalement des préoccupations immédiates d'emploi et de politique industrielle nationale.

Dans cette mesure, elles faussent souvent le libre exercice de leur décision économique par les gouvernements. Telle quelle, la pratique des compensations perpétue ainsi le cloisonnement de la production et l'éparpillement industriel, ce qui justifierait à tout le moins un encadrement juridique en cette matière.

Note à la Commission européenne

Objet : Livre vert sur les marchés publics de la défense

Les autorités françaises se félicitent de la parution du Livre vert sur les marchés publics de la défense et remercient la Commission pour la qualité du travail d'analyse contenu dans ce document.

Ce Livre vert constitue une base de réflexion utile pour améliorer l'efficacité économique de la dépense de défense en renforçant la base industrielle et technologique de défense (BITD) et sa compétitivité. Cette réflexion ne peut toutefois être dissociée de l'ensemble des questions soulevées dans la Communication « Vers une politique de l'Union européenne en matière d'équipements de défense » du 11 mars 2003, telles que la souveraineté des Etats, la sécurité d'approvisionnement et la sécurité de défense.

Tout en s'inscrivant dans le cadre de la consolidation du marché intérieur, cette initiative devrait aussi contribuer aux objectifs de la Politique européenne de sécurité et de défense (PESD).

Il est en effet certain que des pratiques d'acquisition plus harmonisées, plus transparentes et plus ouvertes sont souhaitables. Il convient néanmoins de garder à l'esprit les spécificités des besoins de défense et de souveraineté . L'équilibre des compétences entre l'Union européenne et les Etats membres en matière de sécurité, tel qu'il résulte du traité instituant la Communauté européenne et du traité sur l'Union européenne, doit être respecté.

La définition d'un cadre adapté, harmonisant les pratiques légitimes des Etats en matière de marchés publics de défense, doit être envisagée en tenant compte des spécificités de ce secteur. Il pourrait être étendu à l'acquisition de l'ensemble des biens concourant à la sécurité et à la souveraineté de l'Union européenne et de ses Etats membres, y compris dans le domaine spatial.

L'adoption d'une communication interprétative sur l'article 296 du traité instituant la Communauté européenne n'apporterait aucun élément nouveau permettant d'atteindre l'objectif visé qui est d'accroître l'efficacité des dépenses de défense et de renforcer la BITD européenne.

L'adoption d'une directive ne permettrait d'atteindre l'objectif visé d'une amélioration de l'efficacité économique de la dépense de défense qu'à condition qu'elle soit précédée d'une convergence préalable des politiques d'acquisition des Etats. Cette convergence ne peut être obtenue qu'à travers un instrument de nature politique.

En conséquence, et parce qu'elle appelle de ses vœux une politique globale, cohérente et déterminée de tous les acteurs européens, la France estime préférable, dans un premier temps, de faire porter l'effort sur un outil intergouvernemental et expérimental de rationalisation du marché. A cet effet, un code de conduite pourrait être conçu et mis en œuvre dans le cadre de l'Agence européenne de défense (AED) avec l'appui des Etats membres et de la Commission. Il ouvrirait la voie, sur des bases réalistes, à une convergence des pratiques d'acquisition, qui pourraient dès lors permettre d'envisager la mise en place de futurs instruments juridiques, sans préjudice de l'article 296 CE. Les principes directeurs du code de conduite tel que proposé par la France sont exposés en annexe.

La France poursuit toutefois sa réflexion et reste ouverte à toute proposition qui tiendrait compte de ses observations dans les réponses au Livre vert que les autorités françaises ont l'honneur de présenter à la Commission.

Elle souhaite par ailleurs que sur ce sujet, l'Agence se positionne comme un forum privilégié d'échanges entre les Etats membres et les autres institutions de l'Union.

♦ ♦ ♦

- **Question 1 : Estimez-vous utile/nécessaire/suffisant d'expliciter le cadre réglementaire actuel selon les modalités présentées ?**

Le cadre réglementaire actuel comprend :

- en droit communautaire, la directive générale marchés publics (directive 2004/18/CE[1]) et les dispositions de l'article 296 du traité instituant la Communauté européenne ;

- en droit français, le code des marchés publics transposant la directive ci-dessus et un décret spécifique à la défense, organisant le recours national à l'article 296 CE.

Les autorités françaises partagent en bonne part le constat préalable de la Commission (point I du Livre vert). La réglementation mériterait d'être adaptée du fait des spécificités propres au secteur de la défense qui ne sont pas prises en compte dans la législation communautaire actuelle.

Elles seraient favorables, sur le principe, à une action qui décloisonnerait les marchés nationaux et renforcerait la base industrielle et technologique de défense européenne.

Une communication interprétative ne pourrait avoir pour seul objet que de formaliser et de préciser les principes dégagés par la jurisprudence de la Cour de justice des Communautés européennes sur l'interprétation de l'article 296 CE. Un tel outil, qui ne ferait que reprendre le droit existant sans accroître l'efficacité des dépenses de défense et renforcer la BITD, n'est pas adapté à l'objectif recherché.

La France soutient dès lors l'élaboration d'un ou plusieurs instruments de l'Union européenne dans le cadre juridique adapté, prenant en compte les spécificités du secteur de l'armement. Il pourrait s'agir, dans un premier temps, d'un instrument expérimental (par exemple, un code de conduite comme cela a été fait pour les exportations d'armement).

A cet égard, l'AED qui réunit les Etats membres, avec la participation de la Commission, constitue une enceinte privilégiée pour son élaboration. Elle peut, avec la Commission, contribuer à l'atteinte de l'objectif visé d'améliorer l'efficacité économique de la dépense de défense.

- **Question 2 : Y a-t-il d'autres aspects du régime communautaire en question qui mériteraient d'être clarifiés ?**

De façon générale, il convient de noter que le cadre juridique dans lequel s'exerce l'activité de production et de commerce des matériels de guerre est plus vaste que le seul sujet des marchés publics. Il constitue un ensemble dont la cohésion ne peut être obtenue par une communication interprétative isolée sur les marchés publics.

- **Question 3 : Les règles des directives existantes vous paraissent-elles adaptées/inadaptées aux spécificités des marchés de défense ? Préciser pourquoi.**

[1] Cf. article 10 de la directive 2004/18/CE du Parlement européen et du Conseil du 31 mars 2004 relative à la coordination des procédures de passation des marchés publics de travaux, de fournitures et de services, JO L 134, 30 avril 2004.

Les règles de la nouvelle directive 2004/18/CE du Parlement européen et du Conseil du 31 mars 2004 présentent aujourd'hui des avancées intéressantes par rapport aux trois anciennes directives Travaux, Fournitures et Services.

Il faut notamment citer :

- la possibilité de recourir dans certains cas à la procédure flexible qu'est le dialogue compétitif. Celui-ci permet de prendre en compte la réalisation de projets particulièrement complexes (article 29 de la directive 2004/18/CE) ;
- la possibilité d'établir les spécifications techniques en termes de performances et d'exigences fonctionnelles (article 23 de la directive 2004/18/CE).

Cependant, cette directive reste largement inadaptée pour les marchés de défense.

En effet, outre les éléments précédemment explicités dans le Livre vert, on peut mentionner notamment les points suivants :

1. Elle ne prend pas en compte la complexité des acquisitions de défense, qui, s'étendant sur de longues durées, doivent intégrer tant l'évolutivité des besoins que celle des technologies, particulièrement dans le domaine de l'information, des communications ou des composants électroniques ;

2. Elle ne prévoit que des cas trop restrictifs justifiant le recours à la procédure négociée, avec ou sans publication d'un avis de marché. Aussi, elle ne permet pas toujours de répondre aux objectifs fixés, à savoir principalement : la maîtrise des coûts, des délais, l'atteinte des performances spécifiées, le respect de la confidentialité, et une meilleure prise en compte des contraintes industrielles liées aux achats de défense ;

3. Elle ne permet pas de répondre à la difficulté qu'ont les prescripteurs à déterminer à l'avance avec exactitude les besoins, en particulier pour les marchés de maintien en condition opérationnelle.

Ainsi, pour donner quelques exemples concrets :

- il n'est pas prévu de phases pour les marchés de fournitures et services mettant en œuvre des technologies évolutives ; le système des phases permet de définir en cours de marché de nouveaux moyens à mettre en œuvre ou des objectifs à définir pour la phase suivante en vue de réaliser l'opération ;
- il n'est pas prévu de recours exclusif à des composants ou sous-systèmes de même origine que ceux retenus lors de la qualification du matériel principal, alors que la sécurité d'emploi ou le souci d'éviter des adaptations coûteuses le justifieraient ;
- il n'est pas prévu d'exigences en matière de mise en concurrence des sous-traitants et de vérification des conditions dans lesquelles ceux-ci sont choisis par le titulaire du marché ;
- il n'est pas prévu de part provisionnelle de prestations pour les marchés de fournitures et de services ayant pour objet des prestations complexes et pouvant présenter des aléas techniques importants.

Par ailleurs, se pose un problème d'équilibre dans nos rapports avec certains pays tiers.

Dans le cadre de l'Organisation mondiale du commerce (OMC), l'accord sur les marchés publics (AMP) exclut les matériels de guerre. Les Etats tiers imposent donc en toute légalité aux entreprises européennes des conditions d'accès à leurs marchés qui vont bien au-delà d'une exigence d'établissement, alors que la directive 2004/18/CE ne permet d'imposer aucune condition d'accès au marché européen, pas même une exigence d'établissement. Ces disparités entraînent des distorsions de concurrence au détriment des entreprises européennes.

- **Question 4 : Une directive spécifique serait t-elle un instrument utile/nécessaire pour mettre en place un marché européen des équipements de défense (EDEM) et renforcer la BITDE ?**

La réponse à cette question est largement fonction du contenu possible de cet instrument, ainsi que des délais nécessaires à son adoption.

L'EDEM et le renforcement de la BITD européenne doivent donner à l'Union et à ses Etats membres la faculté d'acquérir de façon autonome, aujourd'hui et dans un avenir prévisible, au meilleur prix, les équipements nécessaires à l'exercice de leur sécurité et de leur souveraineté, et incorporant la technologie souhaitée (mesurée relativement à celle de pays tiers).

Une directive qui fournirait des procédures adaptées aux spécificités tant techniques que de souveraineté des achats de défense, sans préjudice de l'article 296 TCE, apporterait une dose de transparence et d'ouverture des marchés propre à améliorer l'efficacité des dépenses de défense. Le mouvement de concentration observé dans le secteur de l'industrie européenne de défense milite d'ailleurs pour que des règles plus formalisées de relation clients-fournisseurs se mettent en place au niveau européen.

Elle faciliterait également l'amélioration de la compétitivité des industriels européens dans le secteur des armements, et plus généralement dans les secteurs de la sécurité et de la défense.

Il conviendrait cependant qu'elle ne se traduise pas par une situation déséquilibrée de nos entreprises sur le marché mondial.

Pour autant, la détermination précise des critères permettant de recourir à telle où telle procédure adaptée est sans doute une gageure dans l'état actuel de fragmentation du marché, et de différences entre les politiques étrangères et de sécurité des Etats.

De ce fait, un projet trop ambitieux pourrait ne pas déboucher, ou à une date incompatible avec ses objectifs. A contrario, s'il se limitait à fixer isolément des règles suffisamment souples pour que l'appréciation souveraine des Etats puisse encore largement s'exercer, son efficacité en serait fort amoindrie.

C'est pourquoi une directive spécifique ne peut être envisagée qu'à condition que de façon préalable et coordonnée, des avancées significatives soient également recherchées par d'autres moyens, dont certains relèvent de la compétence de la Communauté, et d'autres de l'Union européenne et de ses Etats membres.

C'est dans cet esprit que les propositions françaises incluent la mise en place d'un outil expérimental, sous la forme d'un code de conduite, permettant d'aborder les questions complexes relatives aux acquisitions de défense et de faire partager les méthodes et solutions employées, en vue de définir un instrument réglementaire européen.

- **Question 5 : Quelle est votre opinion concernant l'utilisation de cette éventuelle directive pour les acquisitions effectuées par d'autres organismes, tels l'Agence européenne de défense ?**

La question de l'utilisation d'une directive communautaire pour les acquisitions effectuées par d'autres organismes ne s'est pas posée jusqu'à présent. En effet, les organisations intergouvernementales

comme l'Organisation conjointe de coopération en matière d'armement (OCCAR), créées en dehors du cadre de l'Union européenne, ne sont pas soumises au droit communautaire.
Quant à l'Agence européenne de défense, elle n'entre pas dans le champ défini par la directive marchés publics.

Le droit existant (directive 2004/18/CE) ne permettrait au demeurant pas de répondre aux spécificités de certains marchés passés par l'Agence. Si une directive adaptée devait être finalement adoptée, il appartiendrait aux Etats participant à l'Agence de se prononcer en fonction de son contenu sur l'opportunité d'appliquer tout ou partie de ses dispositions à ses opérations d'acquisition.

- **Question 6 : Procédures : la procédure négociée avec publicité préalable vous semble-t-elle être adaptée aux spécificités des marchés de défense ? Quelles sont les situations qui devraient permettre le recours à la procédure négociée sans publicité ?**

La procédure négociée s'avère la seule procédure véritablement adaptée aux spécificités des marchés de la défense. En effet, elle permet une meilleure prise en compte, selon les cas, d'un ou de plusieurs des paramètres suivants : montant, durée d'exécution, complexité technique ou juridique, techniques mal maîtrisées, urgence opérationnelle, offres insuffisantes en nombre et qualité pour garantir le jeu normal de la concurrence, aléas sur les coûts ou sur le volume des besoins, existence de droits de propriété intellectuelle et savoir faire, sécurité des approvisionnements.

Dans le cadre de cette procédure, la publicité et la concurrence doivent rester le principe général.

La procédure négociée sans publicité mais avec concurrence s'avère nécessaire par exemple lorsque la protection du secret ou des contraintes particulières de sécurité sont en cause.

La procédure négociée sans publicité et sans concurrence doit également être autorisée, notamment quand la protection des droits de propriété intellectuelle l'exige ou lorsque le marché ne peut être attribué à un autre prestataire que le titulaire pour des raisons tenant à des nécessités techniques, à des investissements préalables importants, à des installations spéciales, à la sécurité des approvisionnements, à un savoir-faire particulier ou à la nécessité de développer une technologie innovante à l'origine de laquelle se trouve ce prestataire.

- **Question 7 : Champ d'application : quel serait le moyen le plus approprié pour définir le champ d'application ?**
  - Une définition générique et dans ce cas laquelle ?
  - Une nouvelle liste et dans ce cas laquelle ?
  - Une utilisation combinée d'une définition et d'une liste ?

Si l'élaboration d'un instrument juridique était envisagée, la question de la définition de son champ d'application serait déterminante.

Les spécificités des marchés de défense et de souveraineté ne résultent pas des seules caractéristiques des matériels sur lesquels ils portent. Le champ d'application de cette directive ne devrait donc pas être défini *ratione materiae*, ni renvoyer par exemple à une liste de matériels.

L'application d'un éventuel instrument spécifique sera par ailleurs sans préjudice de la possibilité pour les Etats d'invoquer, dans les conditions prévues, l'article 296 CE.

Sous réserve de son contenu, la France estime donc souhaitable que les dispositions spécifiques qu'il prévoirait puissent s'appliquer à l'ensemble des achats répondant à une finalité de sécurité, de défense ou de souveraineté.

- **Question 8: Exemptions : la définition d'une catégorie de biens qui seraient exclus de manière manifeste de la directive vous semble-t-elle utile/nécessaire ?**

Des exemptions ne sont ni utiles ni nécessaires dans la mesure où la directive ne saurait restreindre les cas d'invocation de l'article 296 CE.

- **Question 9 : Publication : un système centralisé de publication vous semblerait-il approprié ? Si oui, selon quelles modalités ?**

Un système centralisé de publication, permettrait une meilleure transparence et une meilleure accessibilité aux marchés de défense à l'échelle de l'Union européenne. Cela éviterait des distorsions dans l'application des règles de publicité entre les pays. Il convient à cet égard d'assurer l'égalité de traitement entre soumissionnaires.

Il semble qu'une transmission des avis de publicité par voie électronique soit la meilleure solution pour permettre, notamment, une réduction des délais en matière de procédure. La mise en place d'un site électronique central au sein du réseau composé des sites nationaux existants mérite d'être considérée.

A cet égard, la France a mis en place un Portail de l'armement qui permet une publication des avis de publicité sur le site Internet «www.ixarm.com ».

- **Question 10 : Critères de sélection : quels critères vous sembleraient devoir être pris en compte en plus de ceux déjà prévus dans les directives actuelles afin de tenir compte des particularités du secteur de la défense ? la confidentialité, la sécurité des approvisionnement, etc. Et de quelle manière les définir ?**

Les spécificités dérivant de la nature des biens (armement) ou de la finalité de sécurité et de souveraineté de leur acquisition sont essentiellement les suivantes :

- Sécurité d'approvisionnement : l'Etat acheteur doit veiller d'abord à ce que pendant toute la durée d'exécution du contrat (quelquefois très longue), mais aussi souvent pendant la durée d'utilisation des équipements, non seulement le co-contractant aura la capacité technique de satisfaire son besoin, mais aussi que l'interférence politique d'un pays tiers ne mettra pas en péril cette capacité. Cela peut nécessiter de favoriser le développement maîtrisé de technologies jugées stratégiques et le maintien des capacités industrielles indispensables. Il est à noter que cette sécurité d'approvisionnement peut être également nécessaire pour assurer la liberté de la politique d'exportation d'un équipement intégrant des composants importés.

- Secret et confidentialité : pour l'Etat, cette exigence intervient au niveau de l'expression du besoin (afin d'éviter de dévoiler à l'adversaire potentiel une éventuelle faiblesse, ou pour garantir sa supériorité future), et dans la conduite du marché, pour protéger les informations relatives au niveau technique ou technico-opérationnel atteint.

- Caractère impératif de la satisfaction du besoin : dans certains cas, l'Etat acheteur peut vouloir refuser tout risque de défaillance d'un candidat retenu, et donc réaliser une sélection si rigoureuse des soumissionnaires qu'elle paraisse porter atteinte au jeu normal de la concurrence.

- Recherche de la supériorité technologique : idéalement, l'armement acquis doit permettre d'obtenir la supériorité sur un adversaire potentiel ; c'est donc un besoin essentiellement relatif, qui doit tenir compte de l'état de l'art et d'une estimation du progrès technologique, au regard des moyens financiers éventuellement disponibles. Le besoin final ne peut donc souvent résulter que d'un dialogue approfondi avec les fournisseurs potentiels, tout en étant fortement contraint par des préoccupations opérationnelles.

Une directive adaptée pourrait se fixer l'objectif raisonnable de fournir un éventail de procédures en mesure de répondre à des spécificités prises parmi celles figurant sur une liste inspirée des considérations ci-dessus. A cet effet, l'expérience acquise par la mise en œuvre du code de conduite expérimental relatif aux acquisitions d'armement serait précieuse.

En revanche, il paraît irréaliste qu'elle puisse à ce stade déterminer les conditions concrètes, répondant à toutes les situations possibles, autorisant un acheteur à retenir telle ou telle de ces procédures, au-delà de l'obligation de proportionnalité des moyens à l'objectif recherché.

- **Question 11 : Comment considérez-vous devoir être traitée la question des compensations ?**

Les compensations, comme c'est souvent le cas, conduisent à accroître les duplications au sein d'une BITD européenne déjà à l'évidence sur-capacitaire. Elles vont ainsi à l'encontre de l'objectif visé d'améliorer sur un plan global l'efficacité économique de la dépense de défense en Europe et la compétitivité de son industrie, et ne constituent donc pas un mécanisme à encourager.

Cependant, dans de nombreux cas, elles sont présentées comme la moins mauvaise solution disponible pour garantir une certaine sécurité d'approvisionnement nationale, ou pour légitimer une dépense de défense, en terme d'emploi et d'activité économique.

Même s'il s'agit fréquemment d'un leurre, ces motivations sont légitimes et nécessitent que des mécanismes alternatifs y apportant une réponse soient adoptés avant toute mesure contraignante.

Un appui de la Communauté, dans le cadre de sa politique structurelle et de compétitivité industrielle, s'appuyant sur les enseignements du code de conduite évoqué plus haut, pourrait être utile dans cette phase de transition. A cet égard, des mesures propres au soutien des PME mériteraient d'être considérées.

ANNEXE

Propositions d'éléments constitutifs d'un code de conduite

Ce code, qui serait mis en œuvre par l'Agence européenne de défense, est un outil expérimental qui rechercherait les objectifs suivants :

- augmenter globalement l'efficacité de la dépense de défense relative à l'acquisition d'équipement de défense,
- contribuer au renforcement de la BITD européenne et de sa compétitivité.

Pour remplir ces objectifs, il viserait, tout en satisfaisant aux obligations de confidentialité, à :

- inciter au décloisonnement des marchés,
- inciter à promouvoir des solutions européennes,
- se donner des garanties mutuelles de sécurité d'approvisionnement et de libre accès aux technologies critiques,

L'identification des difficultés par l'expérience acquise et la convergence des pratiques des Etats parties prenantes au code devraient permettre d'envisager à terme la définition d'un instrument réglementaire européen. Au nombre des difficultés, l'exclusion des matériels de guerre de l'accord sur les marchés publics dans le cadre de l'OMC permet à chaque Etat de prendre des mesures particulières d'accès à son marché et de commerce de ces matériels. La disparité de ces mesures entraîne des distorsions de concurrence particulièrement au détriment des sociétés européennes, qui se voient par ailleurs restreindre l'accès au marché de certains Etats tiers à l'Union européenne.

Il pourrait être établi selon les principes et modalités suivants :

Principes généraux

1. Le code rassemble tous les Etats membres de l'Agence, hormis ceux qui déclarent ne pas en faire partie (régime opt out),
2. Les Etats signataires conviennent du domaine, expérimental, d'application du code,
3. Les Etats signataires mènent leur processus d'acquisition et leur politique d'exportation des matériels de guerre selon leur droit positif et s'engagent à le faire évoluer à la lumière de l'expérience acquise, dans les limites du droit communautaire et en particulier de l'exception prévue par l'article 296 CE,
4. L'Agence recherche selon des modalités à définir les conditions d'un partenariat avec la Commission pour exploiter les données recueillies dans le cadre de ce code de conduite,
5. Les Etats signataires s'engagent à autoriser la fourniture d'articles et services de défense à tout Etat partie prenante à ce code qui en exprimerait la demande auprès de ses fournisseurs pour répondre aux besoins de ses forces, dans les limites de son domaine d'application.

Principe de liberté d'accès

1. Dans le domaine considéré, les Etats conviennent que tous leurs appels à propositions ouverts à la compétition le sont aux fournisseurs établis dans les Etats signataires, et reconnus comme membres de l'EDEM,
2. La compétition est recherchée tout au long de la chaîne contractuelle, et notamment, en ce qui concerne la sous-traitance, suivant les modalités définies dans un plan d'acquisition qui est partie intégrante du contrat avec le maître d'œuvre,
3. Les Etats signataires s'engagent à mettre à court terme leur droit positif en accord avec ces principes.

Principe de transparence et d'égalité de traitement

1. Les Etats signataires, informent l'Agence du déroulement de leurs procédures d'acquisition. et de leurs résultats,
2. Les Etats signataires facilitent l'accès à leur réglementation nationale et à la compréhension de leurs processus d'acquisition, en particulier par la communication à l'Agence, pour diffusion, de leurs référentiels réglementaires, de la description de leurs procédures de passation des marchés et ainsi que des voies de recours,
3. La sélection doit être menée sur la base de critères d'admissibilité clairement définis et communiqués par avance aux soumissionnaires, en particulier ceux relatifs à la satisfaction de la sécurité d'approvisionnement.

Principe de justification

1. Au delà d'un seuil à définir, les Etats indiquent à l'Agence après passation du marché les raisons ayant présidé au choix de la procédure retenue,
2. Dans les cas particuliers suivants, les Etats s'engagent à justifier auprès de l'Agence leurs choix :
   - d'absence de mise en concurrence,
   - de limitation à certains fournisseurs par suite d'impératifs de sécurité nationale,
   - de recours aux compensations.
3. Le chef de l'Agence peut demander des explications complémentaires sur les justifications fournies par un Etat membre.

Principe d'évaluation

L'Agence publie de manière régulière des statistiques commentées concernant les données recueillies, en nombre et en montants :

- actes passés dans l'EDEM et ceux passés hors EDEM,
- actes ayant fait l'objet d'une publication par rapport au total des acquisitions.

Stellungnahme der Regierung der Bundesrepublik Deutschland zu dem Grünbuch über die Beschaffung von Verteidigungsgütern

Die Regierung der Bundesrepublik Deutschland beehrt sich, zu dem Grünbuch der Europäischen Kommission über die Beschaffung von Verteidigungsgütern wie folgt Stellung zu nehmen:

A. Grundsätzliches

Die Bundesregierung begrüßt die Initiative der Kommission, einen transparenteren, effektiveren und offeneren europäischen Rüstungsmarkt zu schaffen mit dem Ziel der Stärkung der europäischen wehrtechnischen Industrien. Die Bundesregierung teilt die Darstellung im Grünbuch, dass die Beschaffungsmärkte für Verteidigungsgüter gegenwärtig weitgehend national definiert sind, weil der Staat überwiegend der einzige Nachfrager nach Verteidigungsgütern ist. Ebenso teilt die Bundesregierung die Aussage im Grünbuch, dass aufgrund der begrenzten Verteidigungshaushalte vieler Mitgliedsstaaten auf den nationalen Märkten einzeln keine kostendeckenden Produktionsmengen mehr zu erreichen sind. Dies erhöht den Druck auf die wehrtechnischen Unternehmen. Auch die Anwendung der Ausnahmeregelung des Art. 296 EG-Vertrag durch die EU-Mitgliedsstaaten erfolgt zu unterschiedlich. Dies führt auch aus Sicht der Bundesregierung zu Wettbewerbsverzerrungen.

Die Bundesrepublik Deutschland beschafft ihren Rüstungsbedarf sowohl unterhalb als auch oberhalb der maßgeblichen Schwellenwerte grundsätzlich nach den für alle Güter und Dienstleistungen geltenden Regeln des Vergaberechts. Eine Berufung auf Art. 296 EG-Vertrag erfolgt lediglich im Rahmen der sicherheitspolitisch begründeten Ausnahmefälle und stellt auch statistisch eine Ausnahme dar.

In dem Grünbuch schlägt die Kommission zwei Möglichkeiten vor, um das vorgegebene Ziel zu erreichen:

1. die Erarbeitung einer Auslegenden Mitteilung
2. den Erlass einer spezifischen Richtlinie für die Fälle, in denen eine Berufung auf Artikel 296 EG-Vertrag nicht zulässig ist und die die Besonderheiten des Rüstungsmarktes berücksichtigt.

...

Zu diesen beiden Vorschlägen, in deren Verfolgung sich die Initiative der Kommission nach Ansicht der Bundesregierung aber nicht erschöpfen sollte, nimmt die Bundesregierung wie folgt Stellung:

Eine **Auslegende Mitteilung** kann den Mitgliedstaaten die wesentlichen Rechtsgrundlagen einer Anwendung des Art. 296 EG-Vertrag nur erläutern. Sie wird daher an den jetzigen Verhältnissen im Kern nichts ändern. Allerdings könnten die in einer Auslegenden Mitteilung durch die Kommission interpretierten und aufgeführten Fälle oder sogar Urteile des EuGH zu weiteren Fragen und Unsicherheiten bei den Mitgliedstaaten führen, ohne dass sich in einem überschaubaren Zeitraum an dem eigentlichen Anwendungsproblem des Art. 296 EG-Vertrag etwas ändert. Um tatsächlich Klarheit über den Anwendungsbereich des Art. 296 EG-Vertrag zu bekommen, wäre es notwendig, dass sich die Mitgliedstaaten auf eine klare Definition derjenigen Güter einigen, die unter die Ausnahmeregelung fallen, bzw. klare Abgrenzungskriterien formulieren. Insofern würde eine Auslegende Mitteilung nicht nur Probleme lösen, sondern auch neue Probleme aufwerfen.

Bei der vorgeschlagenen **Richtlinie** denkt die Kommission nicht an eine Regelung, die den Bereich des Art. 296 EG-Vertrag abdeckt, sondern vielmehr an ein neues Regelungsinstrument, das speziell auf Verteidigungsaufträge (Liefer-, Dienstleistungs- und Bauaufträge) zugeschnitten ist. Damit wäre nur der Teil (wenn auch kein unbedeutender) des europäischen Rüstungsmarktes betroffen, bei dem die Ausnahme des Art. 296 EG-Vertrag ohnehin nicht greift. Grundsätzlich steht die Bundesregierung dem Erlass sektorspezifischer Richtlinien ablehnend gegenüber. Sie führen langfristig zu einer Zersplitterung des Rechtes des öffentlichen Auftragswesens. Dort wo die Ausnahmeregelung des Art. 296 EG-Vertrags nicht eingreift, sollte aus Sicht der Bundesregierung nach den allgemeinen vergaberechtlichen Bestimmungen beschafft werden. Die in der Bundesrepublik Deutschland bei der Beschaffung von Rüstungsgütern geübte Praxis zeigt, dass dies auch möglich ist. Um eine solche verteidigungsspezifische Richtlinie zu erarbeiten, bedarf es nach Ansicht der Bundesregierung zudem eines Zeitraumes von mehreren Jahren.

Problematisch stellt sich eine Richtlinie insbesondere vor dem Hintergrund der gegenwärtig existierenden unterschiedlichen Marktbedingungen in den Mitgliedstaaten dar.

Voraussetzung für einen durch eine Richtlinie zu regelnden Rüstungsmarkt wäre nach Ansicht der Bundesregierung nämlich, dass zunächst die notwendigen rechtlichen und tatsächlichen Vor-

...

aussetzungen für einen unter gleichen Wettbewerbsbedingungen agierenden europäischen Rüstungsmarkt geschaffen werden. Dies könnte nach Auffassung der Bundesregierung durch ein „Aktionsprogramm für den Rüstungsmarkt“, ähnlich dem „Programm zur Binnenmarktvollendung 1993“, geschehen. Ein solches Aktionsprogramm sollte zum Ziel haben, dass die auf dem europäischen Rüstungsmarkt bestehenden ungleichen Wettbewerbsbedingungen u.a. durch folgende Maßnahmen beseitigt werden:

- Privatisierung der wehrtechnischen Industrien

  Beseitigung der Wettbewerbsverzerrungen zwischen staatlichen/staatlich beeinflussten und privaten wehrtechnischen Unternehmen durch Überführung der Verteidigungsindustrien in den Mitgliedstaaten in private Strukturen und möglichst vollständige Ablösung von staatlichem Einfluss.

- Harmonisierung der Rüstungsexportgenehmigungspraktiken der Mitgliedsstaaten

  Wettbewerbsverzerrungen entstehen auch durch die unterschiedliche Auslegung der Mitgliedsstaaten des EU Code of Conduct von 1988 beim Export von wehrtechnischem Gerät. Daher ist ein einheitliches und verlässliches Vorgehen der Mitgliedsstaaten beim Rüstungsexport anzustreben. Die Überlegungen der LoI-Nationen zu einer genehmigungs-freien Zone für innergemeinschaftlichen Transfer von Rüstungsgütern könnten als hilfreiches Beispiel dienen.

  Für die deutsche wehrtechnische Industrie ist es von Bedeutung – auf der Basis der Politischen Grundsätze der Bundesregierung für den Export von Kriegswaffen und sonstigen Rüstungsgütern – ein gewisses Maß an Planungssicherheit über mögliche Rüstungsexporte zu haben.

- Kontrolle des Verbots unzulässiger Beihilfen im Rüstungsbereich

  In einem gemeinsamen europäischen Rüstungsmarkt haben Beihilfen anwehrtechnische Unternehmen zum Verlustausgleich keinen Platz, da dies zu nicht hinnehmbaren Wettbewerbsvorteilen gegenüber privat organisierten Betrieben führt.

- Keine Kompensationsgeschäfte

  Die Bundesregierung lehnt aus grundsätzlichen Erwägungen Kompensationsgeschäfte ab, weil sie den Wettbewerb erschweren, Beschaffungen verteuern und generell gegen die Grundsätze einer freien Marktwirtschaft verstoßen.

- Einrichtung eines zentralen Bekanntmachungssystems für alle von den Mitgliedsstaaten beabsichtigten Rüstungsvorhaben ab einem bestimmten Schwellenwert
  Der Vorschlag im Grünbuch zur Bekanntmachung der Beschaffungen von Rüstungsgütern in einem vereinheitlichten Mitteilungsblatt wird von der Bundesregierung befürwortet. Mit dem von der WEAG praktizierten ähnlichen Verfahren wurden positive Erfahrungen gemacht.

- Einbeziehung wehrtechnischer Forschung & Entwicklung in die EU-Forschungsförderungsprogramme
  Zur Zeit liegt der Schwerpunkt der EU-Sicherheitsforschung auf Dual-Use-Gütern und im IT-Bereich. Die Bundesregierung würde es in diesem Zusammenhang begrüßen, wenn in den Forschungsförderungsprogrammen der Europäischen Union auch Maßnahmen der wehrtechnischen Forschung und Entwicklung berücksichtigt würden.

Als **Ergebnis** ist festzustellen:

Solange gleiche Teilnahmebedingungen für alle Marktteilnehmer nicht erreicht sind, könnte – trotz der angeführten Bedenken- eine rechtsunverbindliche Auslegende Mitteilung, welche über eine Situationsbeschreibung der derzeitigen Beschaffungspraxis der Mitgliedsstaaten hinausgeht und die Voraussetzungen, unter denen die Berufung auf Art. 296 EG-Vertrag angebracht ist, konkretisiert, eine sinnvolle Maßnahme zur Verfolgung des angestrebten Ziels eines transparenteren und offeneren europäischen Rüstungsmarktes sein. Erst wenn die Ausgangsbedingungen für alle Teilnehmer am europäischen Rüstungsmarkt weitgehend gleich und damit fair sind, könnte darüber nachgedacht werden, ob eine Richtlinie den geeigneten Rechtsrahmen für die Einhaltung der entsprechenden Regeln und Verfahren bilden könnte.

B. Beantwortung der Fragen

1. *Glauben Sie, dass es nützlich/notwendig/ausreichend ist, den derzeitigen Rechtsrahmen gemäß den dargelegten Modalitäten zu erläutern?*

Bis eine Harmonisierung der Teilnahmebedingungen für den europäischen Rüstungsmarkt erreicht ist und alle Marktteilnehmer gleiche Bedingungen vorfinden, kann das Instrument der

Auslegenden Mitteilung einen Kompromiss darstellen. Eine Auslegende Mitteilung sollte allerdings über eine aktuelle Situationsbeschreibung und Darstellung der Rechtsprechung des EuGH hinausgehen und auch die unterschiedliche Handhabung der Auslegung des Art. 296 EG-Vertrag in den Mitgliedsstaaten sowie die daraus resultierenden Schwierigkeiten darstellen.

2. *Gibt es andere Aspekte des einschlägigen Gemeinschaftsrechts, die einer Erläuterung bedürfen?*

Die Bundesregierung sieht derzeit keine solchen anderen Aspekte.

3. *Erscheinen Ihnen Bestimmungen der bestehenden Richtlinien den Besonderheiten der Verteidigungsaufträge angemessen/nicht angemessen? Erläutern Sie, warum.*

Die Bundesregierung ist der Auffassung, dass die bestehenden Richtlinien für die Besonderheiten der Verteidigungsaufträge hinreichenden Raum lassen, da in Fällen nationaler Sicherheitsinteressen der Rückgriff auf die Ausnahmeregelung des Art 296 EG-Vertrag möglich ist.

4. *Wäre eine spezifische Richtlinie sinnvoll/notwendig, um einen europäischen Markt für Verteidigungsgüter zu schaffen und die rüstungsindustrielle und –technologische Basis Europas zu stärken?*

Zum jetzigen Zeitpunkt befürwortet die Bundesregierung keine spezifische Richtlinie. Eine solche Richtlinie könnte überhaupt erst dann erst sinnvoll sein, wenn nach Schaffung gleicher Teilnahmebedingungen für alle Marktteilnehmer am Rüstungsmarkt ein tatsächliches Regelungsbedürfnis bestünde. Nach den Ausführungen der Kommission im Grünbuch ist noch unklar, welchen Anwendungsbereich eine solche Richtlinie überhaupt hätte.
Die Formulierung, sie solle für Verträge gelten, die „rationae materiae in den Anwendungsbereich des Art. 296 EG-Vertrag fallen, für die aber die Inanspruchnahme der Ausnahmeregelung nicht gerechtfertigt ist“, ist zu unbestimmt. Eine besondere Richtlinie für Rüstungsgüter würde allenfalls dann Sinn machen, wenn sie einen einheitlichen, eindeutig bestimmbaren Anwendungsbereich hätte, wofür jedoch zunächst eine Angleichung der Wettbewerbsbedingungen, wie oben unter A dargestellt, erforderlich ist. Die Bundesregierung geht davon aus, dass dies Anstrengungen voraussetzt, die einen erheblichen Zeitraum in Anspruch nehmen werden und deren Erfolg im Moment noch nicht absehbar ist.

. . .

Die Fragen **5. – 10.** stehen im Zusammenhang mit einer spezifischen Richtlinie. Da die Bundesregierung eine solche zur Zeit nicht befürwortet, erübrigt sich die Beantwortung dieser Fragen.

11. *Wie sollte Ihrer Meinung nach die Praxis der Kompensationsgeschäfte behandelt werden?*

Wie bereits dargestellt, lehnt die Bundesregierung aus wettbewerbspolitischen Erwägungen Kompensationsgeschäfte grundsätzlich ab. Sie ist der Auffassung, dass Kompensationsgeschäfte gegen die in den vergaberechtlichen Richtlinien niedergelegten Prinzipien und Regeln verstoßen und daher im Binnenhandel zwischen den Mitgliedsstaaten kein Platz dafür ist.
Die Bundesregierung regt daher an, dass die Kommission solche Geschäfte auf ihre Vereinbarkeit mit dem Vergaberecht hin überprüft und hierzu in der Auslegenden Mitteilung ebenfalls Stellung nimmt.

Executive Summary
# of the Greek contribution to the Commission
Green Paper on Defence Procurement

Hellas supports in principle the European Commission's initiative to promote actions with the scope to increase the transparency and the economic efficiency of this specific sector of defence procurements. Of course, the need for supplement the EU's legal framework with a special instrument for defence procurement, the principle of fair return on investment ("juste retour"), the state shareholding to the industrial restructuring, the re-interpretation of the Art.296 of the EC Treaty and the appliance of the member-states to its derogations, are items that should further examined, considering that any initiative taken by the Commission or the EDA in this particular field, should be without prejudice to the competency of member-states upon defence acquisitions and that will not affect the member-state's national security, giving the right to fluctuate in exceptional cases from the Green Paper orientations.

As the Minister of National Defence of the Hellenic Republic pointed out, in his letter (dated 11 Jan 05) concerning the creation of the European Defence Equipment Market, Hellas is favoring a holistic approach, which will offer the necessary political, legal and technical guarantees, and contribute to member-states efforts to coordinate the procedures for awarding defence contracts, under a clear, trustworthy and transparent way, while respecting their national specificities.

Hellas believes that the explanation of the existing legal framework, through an interpretative communication, might be useful but also insufficient. Moreover, it hides the risk to create uncertainties/confusions between the supply and the demand side in a very sensitive field as the defence procurements are. Hellas considers that the rules of existing directives are in general suited to the specific characteristics of defence contracts, taking into account that the specificities and sovereignty needs-related to the national defence and security-are preserved and the balance of these prerogatives-set by the European or Community treaties-is not affected. From the Hellenic point of view, a new specific directive could only apply to the smaller part of EDEM, where exemptions of art.296 do not apply. We should also keep in mind that the provisions of this specific article are still remaining in the new Constitution of the EU.

Moreover, we are not of the opinion that, at this stage, a new specific directive could strengthen the industrial and technological base of European Defence. We mention that for the small-medium countries, the consolidation of the defence industries is a paramount priority, before they deal with the challenge of the international competition. In this environment, we should identify the role of Small Medium Enterprises (SMEs) with an essential contribution to the manufacture of dual-use and military products for defence and security users, and helping them by means and measures to face successfully the vulnerabilities and the competition.

Following the above and recognizing that the drafting and the endorsement of a new specific directive by the Commission and Member-States needs time, we conclude that this exercise has to considered in the future, based mainly in the Member-States political will, while pending consensus among them on a number of sensitive issues responding to the defence specificities. Although Hellas is not in favor of an interpretative communication and/or a specific directive at this stage, it could participate to the discussions for a "general definition for the field of application and for the list of the need of military goods that need to be excluded".

Finally as the offset practices as concern, we would like to reiterate our position that Hellas is in favor of a possible reorientation of offsets economic logic towards a collaborative industrial approach, which would respond to a number of important challenges, such as:

-Improvement of the Security of Supply (SoS) through a systematization of the existing interdependencies. Security of Supply cannot only be solved through commercial arrangements; it also requires a strong political cornerstone.

-Identification of role of Small-Medium Enterprises and their armor by vulnerabilities of the new environment, which will increase competitiveness into the European defence industrial sector.

European Commission – DG Internal Market
Consultation "Green Paper on Defence Public Procurement"

C100 01/100
1049. Bruxelles

Bruxelles, le 26 janvier 2005

Monsieur, Madame,

Nous avons l'honneur de vous envoyer la réponse de la République de Hongrie concernante les questions formulées dans le « Green Book on Defence Procurement » .

Veuillez agréer, Monsieur, Madame, l'expression de mes sentiments les plus distingués.

Banai

Annexe: réponse

Answers of the Republic of Hungary to the questions formulated in the "Green Book on Defence Procurement" of the European Commission

1. It is necessary to interpret the existing regulation (Article 296 of the Treaty, Directive 2004/18/EC) in the field of defence procurement, with special regard to defining the concept of "essential national security interest".

2. It is necessary to clarify the relation of the defence procurement regulation of the EU to that of NATO.

3-4-5. The existing Community public procurement directives have no specific rules pertaining to defence procurement, only general rules that apply for defence procurement as well, in case it does not come under the scope of exceptions defined in Article 296. The specific features of defence procurement are regulated by nations. These rules are to be observed in the sphere of defence procurement for national objectives.

We consider it important to introduce a few, professionally sound, specific rules in the field of defence procurement, which would allow for more flexible procedures. This could take the form of a directive on defence procurement, but also the modification of existing directives. Public procurement done by the European Defence Agency will be regulated by rules made by the Steering Board, without prejudice to relevant Community rules. Thus Community rules will apply to EDA procurement.

6. If essential national security interests exclude the application of the negotiation procedure with prior publication, the exception rule says that the national regulation is to be applied, not the Community regulation. These cases of the present regulation fall under points (1) e)-k) of para 56 of the Government Decree 228/2004 (VII. 30.). Nationally a yearly average of 30-35 % of the procurements falling under this Government Decree are made using the negotiation procedure with prior publication. For the publication of these procurement tenders the national regulation, in line with the Community regulation, should be used.

7-8. The field where the regulation for defence procurement applies should be defined both by a general definition and a list. The 1958 list about the application of Article 296 of the Treaty, mentioned by the Green Paper, should serve as a starting point. It is also necessary to define those products for which the present regulation of procurement cannot be applied.

9. A unified system has to be used for publication, in order to satisfy the requirements of transparency and publicity. The question is whether the publication of defence procurement tenders can also be made through the existing central publication system of the EU.

We continue to think it is important to emphasize that in certain cases the essential security interests of the state can justify using procurement procedures that are not public.

10. The Treaty, the Directive mentioned and our national regulation all contain the Community principle of national treatment. We do not consider it a limitation of competition that the reliability of the sub-contractor and having a security clearance are among the conditions for

participation, as this can be justified by the essential national security interests of the state. Defining the conditions of participation should remain a national authority.

11. Some forms of offset practices, which generally characterize the practice of defence procurements (as covert state subvention) probably distort the market. It might be considered to analyse these phenomena in detail, and to scrutinize the possibilities of regulating it at the Community level.

IT Considerations on the Green PAPER on Defence Procurement

1. Introduction

The progressive building of a more effective and comprehensive ESDP, shows inter alia the need to consolidating a long term convergence on military doctrines, capabilities (leading to common requirements, projects and eventually programs), planning among the MS.
One of the useful tools towards the achievement of this ultimate and desired goal relates to the on-going progress focusing on the most appropriate ways and conditions to create a more competitive EDEM, to better operate in the international framework, taking into account its specificities, national security interests, safeguarding and reinforcing the European defence industries.
The goal of a more transparent and open European defence market among Member States, aimed at increasing economic efficiency in the industrial sector as well as ensuring a better allocation of the limited budget resources available in the EU, has to be seen in the frame of the process of political, economical, financial and legal integration presently ongoing within the EU.

The defence industrial sector is reacting to this new scenario mainly by a series of mergers and acquisitions in order to better face an increasing competition. This process was monitored, and in some cases promoted, by National Governments.

According to the Green Paper, the next step of this evolutionary process appears to fall within the responsibility of the Governments, consisting specifically in a revision of the procurement approach that would guarantee moving from many separate national defence markets towards the integration into a single European Defence market.

The document under review, prepared by the DG Internal Market, provides an analysis of the current scenario of the EU defence market as well as some possible options for the future, to be agreed by MS.

2. Analysis of the GREEN PAPER scenario

The scenario outlined in the paper is characterised by the following concepts:

- Member States' combined MoD expenditure constitutes a large part of Member States public spending;
- such expenditure remains split into national markets;
- the shrinking size of national markets is no longer sufficient to allow for production volumes that can offset the high costs of R, T&D;
- this situation impacts negatively even the civilian sector, given the growing dual use potential of technologies;
- the various initiatives undertaken to this day have had a various range of successes.

With regard to the above the following comments are provided:

- as far as the demand of military goods is concerned, the progressive convergence of the national defence markets is directly tied to the progressive harmonization of the foreign policies of the MS. Such different policies determine a situation in which each member state has different requirements in terms of military forces and systems. Consequently the demand of military goods within the EU is fragmented by national needs and requirements of systems which, as similar as they might be, may still have unique technical specifications tailored for the specific national requirement. In order to accompany the process aimed at developing a better level of cooperation some EU MS have created the inter-governmental organization OCCAR and subsequently the Council established the European Defence Agency. The role of these bodies is to support the process of harmonization of the defence needs and requirements of the Member States in order to reach as much as possible a unified demand of defence goods within the EU. This is going to be a lengthy process and it is too early to reach a conclusions on their success;
- besides the implications of NATO membership for a large number of them, many the EU Member States, in pursuing their foreign policies, rely to a different degree on national industrial basis, not dependent on other nations, able to guarantee the supply of defence goods, even in times of crisis. The process of mergers and acquisitions in the defence industrial sector, still under way at different pace among sectors and the EU Member States, creates an unbalanced situation related to

defence industries that may encourage dominant positions which would be detrimental to the creation of an open market.

In order to appropriately deal with such an issue, some EU Member States have agreed, under the LoI, to a set of measures, including the principle of security of supply, consisting in a commitment to support the performance of contracts by the respective industries with respect the other signatories. The extension of the application of these principles is instrumental to a successful EDEM.

- the statement that "*although Member States combined military expenditure is considerable, it remains split into national markets*" does not seem to recognise that all procurement for civil use goods falls under the normal EU directives procurement rules and, on such basis, it is accomplished by open competition and not limited to national markets. Furthermore the statement does not take into account the considerable amount and volume of the existing cooperative initiatives among EU MS, which increasingly catalyze public investments and priorities, with positive effects on industrial consolidation and integration, in a more coherent playing field.
- an effective reform of the defence procurement system would require also a harmonization of the EU rules and regulations governing issues such as the transit of defence materials within the Union, the technical regulations, security of supply ed the EU Code of Conduct for military exports.

3. Defining action at EU level

The document suggests two alternatives as a possible means towards an evolution of the present situation, and more specifically:

- an interpretative communication from the Commission, giving an explanation of the principles for the interpretation of Article 296 EC, to distinguish between contracts covered by the exemption and those which are not:
- a new directive, establishing a special set of rules for the military market.

With regard to the above, we provide the following comments:

- any development of the Green Paper should take into account that the defense industry has a specific significance for Nations, relating to the control of sensible technologies, safeguarding the manufacturing capacities of systems, since they represent essential elements to satisfy National Security needs.

- within EU there is a inhomogeneous and unbalanced situation relating to the defense industries, partly due to historical reasons and to different allocation of national resources. This situation may determine the creation of dominant positions which, at the time of the opening of the market, would be an obstacle to competition and actually hamper the creation of an EDEM.
- the interpretative communication is not able to solve an issue which may seem of a procurement/contractual nature but in truth is of a political nature. It would increase conflicts between the national procurement agencies, industry and the European Commission while bringing no positive effect on the opening of the markets;
- the Directive option which, in compliance with EU principles, cannot rule on the area covered by article 296, could be a viable solution but it should be harmonized with EDA's intergovernmental activities in the field of EDEM;
- OCCAR rules and regulations should be appropriately taken into account for further work in this domain;
- programs managed by NATO Agencies, should not fall under the EC Directive, mainly because the commitment to NATO by the NATO Member Countries is autonomous from the EU procurement regulations, which are obviously not applicable to non-EU NATO Members. Furthermore NATO Programs foresee an R, T&D phase for which further considerations apply;
- a special regime should also be foreseen for R, T&D contracts. These contracts are usually awarded to companies possessing the required know-how and expertise in a specific field with the aim of furthering such expertise towards the development of a new process/item/tool to be used for further development or for production. In these cases, in order to accomplish successfully the scope of the contract, the contractor has to possess a given level of technology, determined by the bidder, which is often of a proprietary nature. In such a case a procurement approach involving competition does not appear compatible with the purpose of R, T&D;
- Security of Supply, Security of Information and Urgency are key points in defence procurement and must be completely covered by any new regulation. Specifically the concept of urgency can be linked to situations of crisis in order to allow specific procedures for such occurrences;

- one more specificity of the Defence market that has to be considered in drafting the relevant rules and regulations is the concept of Standardization/Commonality of the logistic life cycle. This means that since each system has its own logistic support, the fielding of more than one system for similar requirements doubles the logistic support in terms of spares, training, personnel and, of course, cost. Any new regulation should allow procurement of equipment/systems, already fielded, for similar requirements, even relative to different branches of the Administration, without competition;
- the various proposals highlighted in the document concerning the procedures to be used for procurement could all be considered, taking into consideration the progress of the ESDP process with regard to the establishment of a common defence policy;
- the so called "Homeland Security" systems' and materials' specificity should also be recognized. when appropriate, together with the defence once, in drafting a procurement directive;
- although the offset practices are still a common feature to be taken into account, they should evolve without having a negative impact on the opening of the defence market. Therefore a common reflection must be developed in the appropriate fora, including the drafting of a directive as well as in the transatlantic dialogue.

Questions

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

   With regard to the explanation of the existing legal framework, the interpretative communication is not able to solve an issue which may seem of a procurement/contractual nature but in truth is of a political nature. It would increase conflicts between the national procurement agencies, industry and the European Commission while bringing no positive effect on the opening of the markets.

   As stated in the introduction, a reference to the ESDP process is also useful with regard to the establishment of a common defence policy.

2. Are there other aspects of the Community system in question that should be clarified?

   As stated in the introduction, all procurement for civil use goods falls under the normal EU directives procurement rules and, on such basis, it is accomplished by open competition and not limited to national markets. Moreover an effective reform of the defence procurement system would require also a harmonization of the EU rules and regulations governing issues such as the transit of defence materials within the European Union, the technical regulations, security of supply and the EU Code of Conduct for military exports.

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

   The current Directives regulating the public sector do not suit the specificities and requirements of the defence market. In fact the exceptions in the Directives pertaining to the public procurement do not cover all the foreseeable cases in defence/dual use procurement that may require exceptions to the standard open competition procedures.

4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

   The Directive option which, in compliance with EU principles, cannot rule on the field of application of article 296, could be a viable solution to be harmonized with EDA's intergovernmental activities in the EDEM.

   The implementation of the directive has to be performed avoiding that, within EU, a inhomogeneous and unbalanced situation related to the defense industries could encourage dominant industrial positions which, marketing a more open market, would be an obstacle to competition and actually hamper the creation of an EDEM.

5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

   The principles of a possible "non art. 296 area" directive could be applied to programs managed by the EDA and other bodies.

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situation should use of the negotiated procedure without publication be allowed?

   The negotiated procedure with prior publication is suitable for the specific needs of defence procurement together with a set of exceptions allowing negotiation without publication in predetermined cases.

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

   In the "non art. 296 area", a specific list and a definition would be the most appropriate approach.

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

   A new directive should recognize the specificity of goods and services, characterized by a particular national security connotation (e.g. homeland security). and not covered by art. 296.

9. Publication: do you think a centralized publication system would be appropriate, if so, how should it function?

   Yes, a centralized publication system is necessary.

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

    Confidentiality and Security of Supply are relevant as selection criteria. With regard to the reform of the procurement approach, other aspects require special attention. As stated in the introduction, programs managed by NATO Agencies should also not fall under the EC Directive, mainly because the commitment to NATO by the NATO Member Countries is autonomous from the EU procurement regulations, which are obviously not applicable to non-EU NATO Members. Furthermore a special regime should also be foreseen for R, T&D contracts. In these cases the contractor has to possess a given level of technology, determined by the bidder, which is often of a proprietary nature. In such a case a procurement approach involving competition does not appear compatible with the purpose of R, T&D;

    Security of Supply, Security of Information and Urgency are key points in defence procurement and they have to be completely covered by any new regulation.

One more peculiarity of the defence market that has to be considered in drafting the relevant rules and regulations is the concept of the Standardization/Commonality for the Logistic life cycle. Since each system has its own logistic support, the fielding of different systems for similar requirements doubles the cost. The new directive should allow procurement of systems, already fielded, for similar requirements, even relative to different governmental branches, forgoing competition.

11.How do you think offset practices should be handled?

Although the offset practices are still a common feature to be taken into account, they should evolve without having a negative impact on the opening of the defence market. Therefore a common reflection must be developed in the appropriate fora, including the drafting of a directive as well as in the transatlantic dialogue.

Questions

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

   In our opinion it would be ***sufficient*** *to explain the existing legal framework through an interpretative communication of the Commission*.

2. Are there other aspects of the Community system in question that should be clarified?

   It is important that communication accepted by Commission would allow to make distinctions between the contracts covered by the exemption and those which are not. The best way would be to distinguish procurements with the applied exeptions according the detailed list.

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

   The existing directives are unsuited to the specific characteristics of defence contracts, related to the security interests.

4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

   It is difficult to decide in advance if specific directive would be a useful instrument for creating a European defence equipment market and strengthening the industrial and technological base. In any case, it is not unique. Well prepared interpretative communication could reach the same goals.

5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

   If specific directive would be accepted, it should be applied to such organizations like European defence agency as well.

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

Negotiated procedure with prior publication is suitable for the specific needs of defence procurement. Only in some cases (e.g. in procurement of standard goods) practice of costs questioning could be used as well.

Procurement procedures without prior publication could be used in the following cases:

a) Low value procurements;
b) When the procured goods can be supplied only by specific supplier and without other alternative;
c) When procurement must be accomplished very promptly due to the unforeseen circumstances, which by no means depend on the purchasing organization;
d) When purchasing organization according to the former procurement contract from the supplier had bought goods and determined that it is purposeful to by additional goods from the same supplier, if the former procurements were effective, the prices and other conditions will not change, alternative procurement is unacceptable;
e) When used military equipment is procured;
f) When procurements are not related with classified information

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

Combined use of definition and list would be the most appropriate way of defining the field of application.

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

Yes, that would be purposeful.

9. Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

Yes, centralized publication system would be appropriate. It could be implemented the same way as publication system about public procurements.

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

Confidentiality and security could be the foreseen section criteria.

11. How do you think offset practices should be handled?

Offset practices should be handled to the national law regulation field.

COM (2004)608 DEF.

GROENBOEK

OVERHEIDSOPDRACHTEN OP DEFENSIEGEBIED

(REACTIE NEDERLAND)

DEEL I: ALGEMEEN

1. De Nederlandse overheid hecht veel belang aan de geleidelijke totstandkoming van een transparante en voor alle lidstaten toegankelijke Europese markt voor defensiematerieel en is, mede gezien vanuit de positie van de Nederlandse defensiegerelateerde industrie, voorstander van verdere liberalisering van de Europese markt voor defensiegoederen. De komst van het Groenboek wordt door de Nederlandse overheid dan ook verwelkomd en de initiatieven die de Commissie met het Groenboek over overheidsopdrachten op defensiegebied tracht te bereiken worden ondersteund.

2. De Nederlandse overheid onderschrijft de analyse van de Commissie over de redenen die ten grondslag liggen aan het op nationaal niveau afschermen van defensiemarkten en is het met de Commissie eens dat voor het tot stand brengen van een Europese markt voor defensiematerieel aanvullende initiatieven moeten worden genomen. De defensiemarkt onderscheidt zich immers van andere markten doordat veel defensie-industrieën in beginsel de eigen nationale overheid als enige klant hebben. Voorts moeten bij de uitvoering van defensieopdrachten vaak bijzondere veiligheidsmaatregelen in acht worden genomen en hebben militaire projecten vaak een vertrouwelijk karakter. Defensieopdrachten worden bovendien gekenmerkt door lange looptijden en bijzondere selectiecriteria die onder meer samenhangen met zekerheid van bevoorrading (*'security of supply'*).

3. Met het Groenboek heeft de Commissie een tweetal voorstellen aangedragen, namelijk het verduidelijken van de huidige communautaire wet- en regelgeving door middel van een interpretatieve mededeling en het uitwerken van een specifieke op de kenmerken van de defensiesector toegesneden richtlijn. De Nederlandse overheid onderkent dat zowel een interpretatieve mededeling als - voor de langere termijn - een specifieke richtlijn een bijdrage kunnen leveren aan de geleidelijke totstandkoming van een transparante en voor alle lidstaten toegankelijke Europese markt voor defensiematerieel. In deze reactie zal hierop verder worden ingegaan.

4. De Nederlandse overheid wil alvast wel benadrukken dat met de voorstellen van de Commissie alleen niet een transparante en open Europese defensiemarkt zal worden bereikt. Ook

voor andere verstorende effecten op de marktwerking, zoals onder meer het onderscheid tussen staats- en private ondernemingen, marktafschermende maatregelen zoals nationale preferentiestelling, compensatie, staatssteun en wapenexportbeleid, zal de Commissie met aanvullende voorstellen moeten komen. Wil een Europese defensiemarkt op termijn daadwerkelijk tot stand komen dan dient bij de lidstaten de bereidheid te bestaan ook deze effecten op politiek niveau te bespreken en vervolgens de daaruit voortvloeiende consequenties te aanvaarden. Zo niet, dan zullen de uitkomsten van de discussie die de Commissie met het Groenboek tracht te bereiken naar verwachting niet verder reiken dan de beperkte resultaten die na jarenlang overleg op dat gebied binnen onder meer WEAG, Occar en LOI zijn bereikt.

5. Daarnaast zal ook de Europese defensie-industrie tot verdere herstructurering moeten overgaan. In zijn geheel is deze industrie nog steeds te nationaal georiënteerd, die afgezet tegen een Europese markt nog te sterk is gefragmenteerd en waarin duplicaties optreden op het gebied van ontwerp-, ontwikkel- en productiecapaciteiten. Hierdoor kan moeilijk in concurrentie worden getreden met onder andere de Verenigde Staten en landen in het verre oosten. Op dit moment is in Europa slechts sprake van een verzameling van nationale defensie technologische industriële bases (DTIB) en is allerminst duidelijk hoe deze nationale DTIB's in een gemeenschappelijke Europese DTIB moeten integreren.

6. Hoewel het primaat voor de totstandkoming van een gezonde Europese DTIB bij de industrie zelf ligt, zullen de grote Europese landen, waarin het merendeel van de Europese systeembouwers van de defensie-industrie is gevestigd, bij het hervormingsproces een doorslaggevende rol spelen. Voor de kleinere Europese landen is van belang dat de positie van bedrijven, die zich technologisch onderscheiden met sub-systemen en componenten en behorend tot het midden- en kleinbedrijf[1] (MKB), hierin zal worden zeker gesteld. Tevens is aandacht nodig voor een concurrerende inschakeling van deze bedrijven in de 'supply chain'. Dit kan onder meer worden bereikt als leveranciers van hoofdwapensystemen voor de gehele logistieke keten opdrachten in concurrentie aanbesteden bij defensie gerelateerde industrieën.

7. Gezien de omvang en samenstelling van de Nederlandse defensie-industrie zal Nederland slechts een beperkte rol spelen in de ontwikkelingen die zich op Europees niveau voordoen. Nederland kent, met uitzondering van de marinebouw, geen leveranciers van hoofdwapensystemen en slechts een beperkt aantal bedrijven dat in staat is zelf kleinere wapensystemen te ontwikkelen. Waarschijnlijk zullen de meeste defensie gerelateerde bedrijven een rol spelen als gespecialiseerde toeleverancier bij grote multinationale ondernemingen. Het beleid van de Nederlandse overheid voor de nationale defensie gerelateerde industrie heeft dan ook tot doel een Europese DTIB tot stand te brengen, waarbij ontwikkelings - en productieopdrachten worden gegund via het marktmechanisme dat wordt gekenmerkt door een *"level playing field".* Dat betekent echter niet dat hierdoor alleen maar sprake zal zijn van *"buy European"*. Behoud van materieelverwervingsvrijheid is voor Nederland een essentiële randvoorwaarde van een *"level playing field"*. Ook zullen transatlantische

[1] "Small and medium enterprises" (SME's)

samenwerkingsverbanden en leveringsrelaties nodig zijn voor de ontwikkeling van het modernste defensiematerieel.

8. Een competitieve omgeving is noodzakelijk voor het verbeteren van de kwaliteit van de Europese defensie-industrie en leidt tot een open en transparante defensiemarkt. Militaire aanschaffingen geschieden op onvolmaakte markten waar de mechanismen van de vrije markt niet of slechts gedeeltelijk werken. Een belangrijke oorzaak hiervoor is terug te vinden in de wijze hoe lidstaten met artikel 296 EG-verdrag omgaan. Vele lidstaten beschermen de nationale defensie-industrie door grensoverschrijdende concurrentie (*'cross-border competition'*) te limiteren met een beroep op dat artikel.

9. Het Groenboek stelt artikel 296 EG-verdrag niet inhoudelijk ter discussie. Pogingen hiertoe in het verleden hebben (nog) niet tot resultaten geleid. Volgens de Nederlandse overheid zijn het in veel gevallen vooral nationaal economische belangen die hieraan ten grondslag liggen. Dit kan er toe leiden dat lidstaten defensie-opdrachten uitsluitend of voornamelijk plaatsen bij de eigen nationale industrie. Daarnaast is van invloed het blijven bevorderen van de betrokkenheid van de nationale industrieën bij opdrachten die bij buitenlandse leveranciers worden geplaatst door middel van het compensatie-instrument. Voor vele bedrijven is compensatie een noodzakelijk instrument om op de internationale markt orders te kunnen verwerven. Buitenlandse leveranciers worden verplicht gesteld tegenorders te plaatsen bij het nationale bedrijfsleven. Compensatie is niet toegestaan bij aanschaffingen die volgens de Europese aanbestedingsrichtlijnen worden aanbesteed, maar wel als artikel 296 EG-verdrag kan worden ingeroepen. Lidstaten worden hierdoor in de verleiding gebracht aanschaffingen eerder onder artikel 296 EG-verdrag te brengen. Hoe om te gaan met de nationale preferentiestelling en het compensatie-instrument zal dan ook prominenter op de politieke agenda van de lidstaten moeten worden geplaatst.

10. Het eventueel wegvallen van het compensatie-instrument zal tot gevolg hebben dat voor vele bedrijven defensieorders deels of volledig zullen verdwijnen. Uit signalen van de markt kan echter worden opgemaakt dat voor een ander deel van het bedrijfsleven, en mede afhankelijk van het soort project, een verschuiving van compensatie naar participatie een verbetering zou zijn. Bij participatie worden bedrijven vanaf de ontwikkelingsfase bij het project betrokken.

11. De Nederlandse overheid is van mening dat voor het openen van de Europese defensiemarkt voor industrieën uit zowel de Europese lidstaten als daarbuiten er sprake moet zijn van een Europees en - indien mogelijk - een wereldwijd *"level playing field"*. Nederland is gebaat bij een zo ongehinderd mogelijke toegang tot andere markten (waaronder die van de Verenigde Staten). In dit licht streeft de Nederlandse overheid in Europees verband naar open concurrentie zowel bij aanbestedingen als in de 'supply chain'. Dit zal vervolgens leiden tot het overbodig worden en het afschaffen van het compensatiebeleid bij militaire aanschaffingen.

12. Volgens de Nederlandse overheid bestaat er bij vele lidstaten, waaronder Nederland, de behoefte aan een meer uniforme en consequente toepassing van artikel 296 EG-verdrag. Mede op grond van bestaande analyses en op basis van de uitspraken van het Europese Hof van Justitie

zou de Commissie met een interpretatieve mededeling de randvoorwaarden kunnen aangeven voor een beroep op artikel 296 EG-verdrag. Ook zou hierin een uitwerking van het nationale veiligheidsbelang kunnen worden opgenomen. De aanwezigheid van een nationaal veiligheidsbelang is immers één van de criteria voor een beroep op artikel 296 EG-verdrag. Zolang de Commissie niet schriftelijk vastlegt wat onder dergelijke veiligheidsoverwegingen moet worden verstaan, blijft de discrepantie in interpretatie van lidstaten van deze veiligheidsoverwegingen bestaan. Hierdoor kunnen zich dus ook in de toekomst situaties voordoen dat lidstaten economische belangen aanmerken als bescherming van de wezenlijke belangen van de nationale veiligheid. Het creëren van een Europese defensiemarkt houdt daarom ook het harmoniseren van essentiële veiligheidsoverwegingen van de lidstaten in.

13. Vooral ook de nieuwe lidstaten hebben herhaaldelijk aangegeven behoefte te hebben aan duidelijkheid over artikel 296 EG-verdrag. Hoewel een interpretatieve mededeling niet juridisch bindend is en ook andere aspecten niet inhoudelijk zal kunnen veranderen, zoals bijvoorbeeld de bij artikel 296 EG-verdrag behorende lijst uit 1958, zal volgens de Nederlandse overheid hieruit op termijn toch een zekere gedragslijn en toetsingskader kunnen worden afgeleid. Naar verwachting zal het aantal aanbestedingen volgens de reguliere Europese aanbestedingsrichtlijnen hierdoor kunnen toenemen.

14. Evenals in de ‘oude’ aanbestedingsrichtlijnen blijft in de nieuwe richtlijn 2004/18/EG[2] de hoofdregel dat ook overheidsopdrachten op defensiegebied aanbestedingsplichtig zijn. Defensieopdrachten die onder artikel 296 EG-verdrag vallen blijven in theorie de uitzondering op de regel. In de Nederlandse Defensienota van 2000 is onder meer vermeld dat het ministerie van Defensie een strikte toepassing van de Europese aanbestedingsregels voorstaat. Dit betekent dat civiele- en ‘dual-use’- goederen met in achtneming van deze regelgeving worden aanbesteed. Van ‘dual-use’ wordt gesproken indien het goederen en technologie betreffen die in beginsel voor de civiele markt zijn ontworpen, maar die ook kunnen worden gebruikt voor militaire applicaties, dan wel voor de productie van wapens. Civiele aanschaffingen betreffen producten en diensten die verkrijgbaar zijn op open, transparante markten waar de principes van de vrije markt gelden.

15. Uit het Groenboek kan worden opgemaakt dat de Commissie zelf twijfelt of de reguliere aanbestedingsrichtlijnen in voldoende mate tegemoet komen aan de specifieke kenmerken van de defensiemarkt. Aan de lidstaten wordt immers de vraag voorgelegd of er behoefte bestaat aan een nieuwe aanbestedingsrichtlijn die meer met deze kenmerken rekening zal houden. Naast flexibelere procedures en bijzondere selectiecriteria zouden onderwerpen zoals zekerheid van bevoorrading *(‘security of supply’)*, grensoverschrijdende overdrachten en exporten *(‘intra-community transfers and exports’)* etc. hierin kunnen worden geadresseerd. Vanwege de bijzondere situatie bij de ontwikkeling en productie van defensie-materieel, namelijk het beperkte aantal producten en afnemers, zijn voorts specifieke bepalingen nodig voor concurrentiestelling bij toeleveranciers.

[2] Artikel 10 van de richtlijn 2004/18/EG (PB 31 maart 2004) betreffende de coördinatie van de procedures voor het plaatsen van overheidsopdrachten voor werken, leveringen diensten.

16. De Nederlandse overheid staat niet afwijzend tegen een dergelijke richtlijn, waarin tevens minder stringente procedures worden voorgesteld, maar is niet overtuigd dat alle verstorende effecten op de marktwerking bij defensieopdrachten met alleen een specifieke defensierichtlijn kunnen worden weggenomen. Met een defensierichtlijn zal meer rekening kunnen worden gehouden met de specifieke kenmerken van de defensiemarkt, maar hiervoor is dan wel vereist dat consensus wordt bereikt tussen alle lidstaten over een aantal politiek gevoelige onderwerpen, zoals *'security of supply'*, compensatie en open concurrentie in de *'supply chain'*.

17. Het proces dat uiteindelijk zal moeten leiden tot een aanbestedingsrichtlijn voor defensieopdrachten zou mogelijk als aanjager kunnen gaan dienen voor het tussen de lidstaten bespreekbaar maken van alle overige verstorende effecten op het tot stand brengen van een Europese defensiemarkt.

DEEL II: BEANTWOORDING VRAGEN

Vraag 1.
Zou een toelichting op de bestaande wet- en regelgeving in de voorgestelde vorm volgens u nuttig/noodzakelijk/afdoende zijn?

Met een interpretatieve mededeling over de bestaande rechtsregels, waaronder artikel 296 EG-verdrag kan een uniforme en consequente toepassing van deze regels worden nagestreefd. Op grond van bestaande analyses en op basis van de uitspraken van het Europese Hof van Justitie kunnen hiermee voor de lidstaten de randvoorwaarden worden aangegeven voor het inroepen van artikel 296 EG-verdrag. Conclusie: nuttig maar niet afdoende.

Gezien het specifieke karakter van defensieopdrachten is wel van belang dat de lidstaten bij het opstellen van deze mededeling intensief worden betrokken. Nederland is bereid hieraan een positieve bijdrage te leveren.

Vraag 2.
Zijn er andere aspecten in de desbetreffende regelingen van de Gemeenschap die volgens u nader moeten worden toegelicht?

De mogelijkheden en onmogelijkheden van steunverlening aan nationale industrieën en –instituten zouden nader kunnen worden toegelicht.

Vraag 3.
Zijn de voorschriften van de bestaande richtlijnen volgens u toegesneden/niet toegesneden op het specifieke karakter van overheidsopdrachten op defensiegebied? Gelieve uw antwoord toe te lichten.

De bestaande aanbestedingsrichtlijnen zijn niet in alle gevallen afdoende toegesneden op het specifieke karakter van defensieopdrachten. Zo wordt onvoldoende rekening gehouden met nieuwe technologische ontwikkelingsprogramma's en de hieruit opeenvolgende contractsluitingen waarvoor niet altijd een volledige concurrentiestelling kan worden doorgevoerd, de lange doorlooptijden van defensieprojecten, vertrouwelijkheid en essentiële veiligheidsoverwegingen die vaak zijn verbonden aan defensiematerieel en defensieprogramma's, het hoge technologische karakter en de vaak politiek gevoelige aspecten die aan het nemen van gunningsbeslissingen zijn verbonden. Daarnaast houden de huidige richtlijnen geen rekening met de structuur van de defensiemarkt waardoor de toepassing ervan geen additionele concurrentie zal meebrengen. Dit zal moeten worden geregeld door concurrentie in de ‘supply chain’ mogelijk te maken. Verder ontbreken specifieke selectiecriteria, die samenhangen met onder andere ‘security of supply’, en (spoed) procedures.

Vraag 4.
Is een specifieke richtlijn volgens u een nuttig/noodzakelijk instrument voor de totstandbrenging van een Europese markt voor defensiematerieel en de versterking van de industriële en technologische basis voor de defensie in Europa?

Het is een nuttig instrument, voorzover het ten opzichte van de huidige klassieke aanbestedingsrichtlijnen in voldoende mate tegemoet komt aan de specifieke kenmerken van de defensiemarkt. Voor een groot aantal onderwerpen is wel vereist dat politieke consensus tussen de lidstaten wordt bereikt. Bovendien is voor het versterken van de DTIB een specifieke richtlijn alleen niet voldoende. Ook voor andere knelpunten, zoals het onderscheid tussen staats- en private ondernemingen, nationale preferentiestelling, compensatie, staatssteun en wapenexportbeleid, zal de Commissie met aanvullende voorstellen moeten komen die vervolgens door lidstaten op politiek niveau worden besproken.

Vraag 5.
Bent u van mening dat een dergelijke richtlijn ook van toepassing moet zijn op aanschaffingen van andere organisaties, zoals het Europees Defensie Agentschap?

In beginsel zou een dergelijke richtlijn ook voor het EDA van toepassing kunnen zijn, hoewel de lidstaten bij de oprichting van het EDA hebben afgesproken dat verwervingsactiviteiten die door andere instanties, zoals OCCAR, worden verricht niet zullen worden gedupliceerd. Het toepassingsbereik van een dergelijke richtlijn zal voor het EDA hierdoor beperkt zijn.

De reguliere aanbestedingsrichtlijnen zijn voor OCCAR niet van toepassing op grond van de uitzonderingsbepaling dat andere procedureregels gelden die worden geplaatst volgens de specifieke procedure van een internationale organisatie. Tegen het eventueel ook op OCCAR van toepassing verklaren van een specifieke defensierichtlijn bestaat in beginsel geen bezwaar, maar dit zal op gespannen voet kunnen staan met voornoemde uitzonderingsbepaling.

Vraag 6.
Procedures: zijn onderhandelingsprocedures met voorafgaande bekendmaking van een aankondiging van een opdracht volgens u toegesneden op het specifieke karakter van overheidsopdrachten op defensiegebied? In wat voor situaties kan volgens u gebruik worden gemaakt van onderhandelingsprocedures zonder voorafgaande bekendmaking van een aankondiging van opdracht?

De omstandigheden waaronder de onderhandelingsprocedures met voorafgaande bekendmaking kunnen worden ingeroepen zijn niet in voldoende mate toegesneden op het specifieke karakter van defensieopdrachten. De recent in de richtlijn EG/2004/18 geïntroduceerde 'competitieve dialoog' zal in een aantal gevallen hieraan tegemoet kunnen komen.

In aanvulling op de omstandigheden die reeds in de aanbestedingsrichtlijnen zijn genoemd zou voorts gebruik moeten worden gemaakt van de onderhandelingsprocedure zonder voorafgaande bekendmaking, indien sprake is van essentiële nationale veiligheidsbelangen of indien de specifieke kenmerken van defensieopdrachten dit verder met zich meebrengen.

Vraag 7.
Werkingssfeer: welk middel lijkt u het meest geschikt om de werkingssfeer van de richtlijn vast te leggen? Is dat volgens u een algemene definitie en zo ja hoe moet die definitie er dan uitzien? Moet er met een nieuwe lijst worden gewerkt en zo ja met wat voor lijst. Of moet er volgens u worden gekozen voor een combinatie van een definitie en een lijst?

Een algemene definitie kan als nadeel hebben dat de uitleg hiervan voor meerdere interpretaties vatbaar is. Daarom zal een definitie moeten worden aangevuld met een productenlijst. Een dergelijke lijst dient dan ook als uitgangspunt te worden genomen. Dit betekent wel dat procedures moeten worden opgesteld voor het up-to-date houden en evalueren van deze lijst.

De lijst van 1958 kan nog steeds als basis worden gebruikt. Wel zou deze lijst kunnen worden geëvalueerd. Het voorstel uit het Groenboek om eventueel andere lijsten te introduceren, zoals de "wapenexportlijst", is te voorbarig, omdat op voorhand niet duidelijk is of de uitgangspunten die aan deze lijst ten grondslag liggen ook voor defensieaanschaffingen geschikt zouden zijn.

Een optie zou ook kunnen zijn om eerst alle bestaande lijsten met elkaar te vergelijken en de voor- en nadelen tegen elkaar af te wegen. Vervolgens kan in overleg met de lidstaten worden bezien of een reeds bestaande lijst kan worden gebruikt of dat de voorkeur toch uitgaat naar een "nieuwe" lijst die mede gebaseerd is op de producten uit de reeds bestaande lijsten. De lidstaten dienen in het laatste geval hierbij wel intensief te worden betrokken.

Vraag 8.

Vrijstellingen: is het volgens u nuttig/noodzakelijk om een categorie producten vast te stellen die onmiskenbaar niet onder de richtlijn valt?

Indien al wordt gekozen voor één lijst van producten waarmee de werkingssfeer van artikel 296 EG-verdrag wordt beperkt dan is het niet opportuun om daarnaast nog een lijst in te voeren van categorieën die onmiskenbaar niet onder de richtlijn vallen.

Vraag 9.

Bekendmaking: is een centraal bekendmakingssyteem volgens u op zijn plaats? Zo ja, wat voor modaliteiten moet dat systeem volgens u krijgen?

Een centraal en geharmoniseerd systeem heeft de voorkeur. Echter, eerst moet de haalbaarheid worden onderzocht of aansluiting kan worden gevonden bij reeds bestaande publicatiemogelijkheden.

Vraag 10.

Selectiecriteria: met welke criteria moet volgens u gezien de bijzondere kenmerken van de defensiesector naast de criteria uit de huidige richtlijnen ook nog rekening worden gehouden? Met vertrouwelijkheid, levenszekerheid, enz.? En hoe moeten die criteria volgens u worden gedefinieerd?

De criteria in de klassieke aanbestedingsrichtlijnen zouden in beginsel als uitgangspunt kunnen dienen, met dien verstande dat bij de nadere invulling hiervan meer rekening zal moeten worden gehouden met de specifieke kenmerken van defensieopdrachten. Zo zouden de selectiecriteria bijvoorbeeld op een aantal punten verder moeten worden opgerekt, waarbij rekening moet worden gehouden met security of supply en de lange doorlooptijd van defensiecontracten. Het afgeven van een verklaring over de behaalde omzet zal in dat geval betrekking moeten kunnen hebben op meerdere jaren dan de voorgeschreven 3 jaren volgens de huidige aanbestedingsrichtlijnen.

De wijze van definiëren zal in overleg met de lidstaten tot stand moeten worden gebracht.

Vraag 11.

Hoe moet volgens u worden omgegaan met de gewoonte om met compensaties te werken?

Voor het openen van de Europese markt voor industrieën uit zowel de Europese lidstaten als daarbuiten zal er eerst sprake moeten zijn van een Europees en - indien mogelijk - een wereldwijd *"level playing field"*, niet alleen op systeem-niveau maar zeker ook in de 'supply chain'. Ook Nederland is gebaat bij een zo ongehinderd mogelijke toegang tot andere markten (waaronder die van de VS). Compensatie kan "value for money" tegenhouden en leidt tot inefficiënte industrieën. Mede in dit licht en afhankelijk daarvan streeft de Nederlandse overheid in Europees verband naar afschaffing van het compensatiebeleid bij militaire aanschaffingen.

NORWEGIAN COMMENTS - THE GREEN PAPER ON DEFENCE PROCUREMENT COM (2004) 608 FINAL

Norway welcomes the public consultation on the Defence Procurement Green Paper. The issues that are raised in the Green Paper are of great importance. Please find our comments to the Commissions questions below.

Executive summary

Norway is generally positive towards the initiative from the EU that aims to establish a more transparent and open European defence market. In order to achieve this objective, it is imperative to provide better guidance to the legal framework and how exemptions from the Treaty and the procurement directive should be interpreted and enforced. This challenge should primarily be solved with an interpretive document, but Norway does not rule out the need for more suitable regulation of the procurement procedures for procuring defence equipment. In this respect, it should be acknowledged that it is more the rule than the exception, that procurement of defence equipment and R&D services relies on compound national long-term security and defence interest and faces more complex strategic considerations than other public procurements.

Any possible new directive should take into account that the achievement of comprehensive transparency and non-distortion of competition also depends on state financing/aid programs of national defence industries. In this connection, we have some concerns if the immediate effect is that countries with small and relatively transparent economies will pay the costs of being exposed to greater competition and a more transparent regime. Thus, it is our opinion that the suggested adjustments in the European defence market presupposes that certain elements are in place in order to provide smaller players with a chance to obtain a fair market access. A new directive that provides some temporary solutions, in terms of national discretion, should be considered when countries with larger industries have an unbalanced advantage at the expense of the smaller countries.

Furthermore, with reference to the statement in the Green Paper that national suppliers are generally awarded most of the defence contracts, it should be noted that these findings are not applicable for Norwegian procurements of defence equipment. Only 45% of Norwegian defence procurements are awarded Norwegian industry. The remaining 55% is awarded foreign industry. In addition, almost all Norwegian procurements of defence equipment are in some way published and awarded by competitive procedure.

Questions

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

An interpretive document that elaborates Article 296 EC, is necessary to clarify the existing legal framework and helpful in order to achieve a more homogeneous national practice within the European Economic Area (EEA).

In the area of procurement of defence equipment, the correlation between Article 296 EC and Article 14 ("Secret contracts and contracts requiring special security measures") of the new directive for the Classical sector also needs to be elaborated. A paper that contributes to a better understanding of the consequences for procurements in accordance to these two different regimes will be of significant practical value for achieving a more harmonized European practice for these procurements.

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

Both current directives and the new directive for the Classical Sector maintain a high threshold for applying procurement procedures that include dialogue at all stages in the process.

However, procurements of defence equipment are often complex in nature not only due to technical requirements, but also Member States' current security policy and long-term strategies affect the procurement process. For instance, may even procurements of "off - the- shelf" products require that both supplier and the procuring entity obtain final approval from appropriate officials, in order to award the contract. Such approvals may include a concrete assessment of political and security issues at the time of award of the contract, and vary from contract to contract. Under such circumstances the Classical Directives, will not provide for the needed dialogue between the supplier and the contracting authority, since appropriate measures only can be identified in the award phase and will vary from supplier to supplier.

Likewise, procurements of "off-the-shelf" military equipment may raise logistical and strategic challenges that are particular to the military field, which need to be addressed and negotiated for each supplier individually. Such factors may affect the terms for the award of the contract. The need for a pre-award dialogue is therefore greater in this field than for ordinary procurements.

4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

After an interpretive document is developed, it is reasonable to work out a specific directive for defence equipment. However, it is important that a new directive does not favour large suppliers within the European defence equipment market at the expense of smaller suppliers from other countries. A new directive should ensure small suppliers an appropriate position within and reasonable access to the European defence equipment market.

Norway welcomes better institutionalised collaboration between the EU Member States, like the collaboration in the Western European Armaments Group (WEAG). An institutionalised collaboration that adopts legally binding principles may augment both transparency and competition within the defence market. In this relation, Norway, as an EEA Member State, emphasises the importance of having a close collaboration with the new European Defence Agency (EDA) that presumably will make valuable contributions to the shaping and practicing of the EEA Member States' defence policy.

In our opinion, a specific directive alone will not be sufficient to achieve the objectives set described in the Green Paper, and thereby increase economic efficiency. However, a specific directive may be an effective step in the right direction, as long as the EU Member States agree upon a common European Union defence equipment policy and create incentives in this direction.

5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

It is our presupposition that other bodies, such as the EDA, should follow the same directive as the EU Member States.

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

With regard to the first part of the question, we believe that the negotiated procedure with prior publication is the appropriate procedure for the majority of military equipments procurements. Therefore this procedure should be optional. The Utility Directive (2004/17/EC) may be a useful model for establishing such legal framework. A possibility to establish a multi- use qualification list should also be considered.

Standard Publication Forms must also take into account the needs for different confidentiality levels required in many defence procurements.

With regard to the second part of the question, we believe that a specific directive should give a greater opportunity to use negotiated procedure without publication in specific situations, such as complementary and supplementary procurements, purchase of spare parts, related R&D services, etc. In addition, it is our comprehension that the procedure of direct procurements should be an opportunity in sole supplier situations.

Norwegian defence procurements are mainly awarded on strictly competitive bases. However, optimal competition for certain procurements is not always a question of publication or unlimited number of contenders. In some programmes it may be sufficient to restrict invitation to the appropriate number of contenders (both domestic and foreign) to a competition.

In very few cases, it may be necessary to place a contract directly to one supplier. Such an approach will mainly be used in a sole supplier situation, or where vital national defence interests are affected. For example where the procurement is connected to Electronic Warfare Systems, these systems require interoperability and have to incorporate highly sensitive defence intelligence information.

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

There is a need for clarity; however, a new list will probably be unsuitable since it may be difficult to keep it up to date. In our opinion, the field of application of defence procurements in a specific directive outside the scope of Article 296 EC is best defined by a general definition.

In addition to a general definition the directive may state specific criteria and guidelines on how the criteria are to be interpreted. The use of specific criteria will give Member States a possibility of discernment.

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

We think it will be useful to define categories of defence products that are excluded. A list of categorically excluded products will provide further clarification.

However, it may be difficult to define a category of products, such as a certain technology, that is important of national security interests for all Member States and therefore should be excluded categorically. The considerations of national importance of products may vary within the different member states. A category of products that are excluded will still contribute to a clarification and a better understanding of the interpretation of Article 296.

9. Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

A centralised publication system may contribute to a transparent and efficient procurement process, and may be founded on and develop the publication rules of the WEAG.

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

It is reasonable that a directive provides possibilities for the Member States to define selection criteria that relate to special national conditions dependent on security needs and strategy. A possibility to operate with additional criteria that allow for special national conditions should be added to the criteria that are already laid down in existing directives.

Given the complexity of arms procurements, with focus on quality, security of delivery and long term perspective, we suggest that the Commission also considers the possibility of using relevant selection criteria as criteria in the process of award, in addition to common criteria such as price, technological solution, and other award criteria.

11. How do you think offset practices should be handled?

The practice of offset is relevant to Norway, where almost 55 % of the defence procurements are awarded foreign industry.

Norway regards offset as an important tool to allow the Norwegian defence industry to access foreign markets, which otherwise would be closed. In "closed" markets, offset becomes an important tool to secure vital defence industry development and engagement. However, Norway normally declines requirements for offset when we participate in international armaments cooperation where the authorities and industry from the participating parties all contribute in a rough accordance with their investment. This has been successful in several projects.

Norway does not oppose the abolishment of offset as such, provided that other countries do the same. In this context, countries with small defence industry will be particularly exposed when implementing non-offsets policy. Our concern is that the practise of offset and "juste retour" varies from country to country, and countries that do not have offset requirements have similar mechanisms that favour their national industries. For example, some countries operate with requirement for "national content" in addition to having defined certain market areas that are exclusive to national suppliers. It is our opinion that such arrangements also must be set-aside in order to achieve a transparent and well functioning market. The practice of offset should therefore be subject to a closer and periodic evaluation.

POLISH POSITION

on the European Commission proposals formulated in the Green Paper
on Defence Procurement.

I. GENERAL REMARKS:

1. Poland shares the view that the present situation on the European Defence Equipment Market demands initiatives on the community level in order to overcome its fragmentation and increase competitiveness. Taking into consideration the EDEM specific character, initiatives undertaken by the European Commission should be of evolutionary character and should be implemented gradually.

2. Two options proposed by the Commission in the Green Paper on Defence Procurement are of the complementary character and do not exclude each other. It allows for their progressive realisation. First option postulates are to be realised at the introductory phase. The elaboration of the Interpretative Communicate on art. 296 of the EC Treaty does not create a new law but contributes to the unification of its implementation by the Member States.

3. As the art. 296 of the EC has essential meaning from the national security interests point of view, the Commission's interpretative communicate should not undermine its provisions. Nevertheless, it ought to define clearly the scope of possible derogation based on the cited article, in the light of European Court of Justice judgements.

4. After issuing interpretative communication, the Commission should evaluate its influence on practices used by the Member States in the area of defence procurement. The elaboration of a specific directive on defence procurement should be regarded as one of the possible future actions on the community level. The directive should include the level of readiness of the Member States to its implementation as well as avoid creation of the "Europe of two speeds".

5. Keeping in mind that one of the principal goals of these initiatives is increasing the competitiveness on defence market, there is a necessity for parallel to other regulations state aid for defence industry companies (e.g. through financing research and development programmes). The solutions cannot deteriorate the position of enterprises from countries where defence industry is supported by the state on lower level.

6. Initiatives undertaken on the community level should include promotion of multinational programmes in the context of creating co-operative ties serving as an element of building EDEM.

7. Superiority of national security interests over the creation of the common market, which is reflected by the art.296 of the EC, implies that actions (both homogenous interpretative communication and these of regulatory character)

taken by the community must reflect EDEM characteristics, like ensuring the security of supplies (in the whole chain) or possible necessity of short-term purchases in emergency situations.

8. Transparency in the field of defence procurement will be limited by the national information security demands.

II. SPECIFIC ANSWERS:

1. *Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?*

The explanation of existing legal framework in the area of defence procurement is necessary. Interpretative communication should precisely define the conditions necessary to apply a derogation on the basis of art. 296 of the EC and make wide use of European Court of Justice judgements.

At present, the elaboration of interpretative communication is sufficient. Further work on the specific directive should be undertaken after the period necessary for the evaluation of the communication influence on practices used by the Member States.

Interpretative communicate should also include products and services procured by the final deliverer on the basis of contracts with his subcontractors. All the actions undertaken on the community level should be aimed at stimulating development of small and medium enterprises and not to favour the big multinational companies tending to monopolise the market.

2. *Are there other aspects of the Community system in question that should be clarified?*

The following aspects should be considered during discussion on new initiatives:

- state aid for defence industry companies and its influence on competition in this sector, as well as methodology of evaluation of the state aid influence on public tender offers;
- necessity to ensure the security of supply and growing mutual interdependence between the Member States in this regard;
- possibility to make exemptions for urgent purchases in emergency situations;
- security of information connected to national security.

The elaboration of interpretative communicate should be combined with the publication of a compendium of national regulations concerning the defence procurement in force in particular Member States. The compendium should indicate the way for abroad companies to present their offer in tenders on defence equipment together with other specific requirements like offset, certification and licensing, etc.

3. *Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.*

   There is a lack of clear definition of national security interest in the Community law. In the context of defence procurement, such definition may allow to precise the border between state procurement with and without making recourse to art. 296 of the EC. Drawing such border should include the type and designation of the purchased goods, but also its possible applications and recipients (including civilian institutions). In the light of terrorist threats, the definition of national security interest should not be based solely on its military aspects.

   General character of existing law provisions is conducive to its free interpretation and facilitates building of national closed and fragmented markets.

4. *Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?*

   The specific directive would be a useful tool for the creation of EDEM. Nevertheless, it should be undertaken in the second phase to facilitate making use of the experience gathered by the Commission after the publication of the interpretative communicate.

   As the market is not only the recipient, the directive is to include the necessary regulations concerning the producer, ex. making use (at various levels of production) of state aid and its influence over the competitiveness of a given firm, implementation of the community rules at all levels of the production chain (including contracts for subcontractor) and the equation of competitive possibilities of small and medium enterprises.

5. *What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?*

   The directive should be used in the realisation of all orders in the field of international programmes in the UE, including those realised by The European Defence Agency.

6. *Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should the use of the negotiated procedure without publication be allowed?*

   The negotiated procedure with prior publication suitable for the specific needs of defence procurement.

The negotiated procedures without publication should be permitted but limited to strictly defined situations which derive from the necessity to undertake the action of an emergency interventional purchase or the need of information protection.

7. *Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?*

   The scope of application should be defined by the appropriation and purpose of the purchase (defining national security interest) combined with the list of products. It is possible to create two lists – the first one containing products believed by all countries to **be** important for national security, and the second one – containing products which **may be** important for national security, but their purchase with the use of exclusion in accordance to the art. 296 of the EC should be reasonable. The list from 1958 or the compilation of existing national lists together with the list from 1958, can serve as the basis for their evaluation.

   On the one hand, describing the scope of application of the directive only on the base of the definition may raise the possibilities of its free interpretation. On the other, a very detailed definition would require its systematic verification because of the dynamic development of technology.

8. *Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?*

   Defining a category of products that would be excluded from the directive would be necessary. The basis for such an exclusion should be defined in detail and derive from the strategic interest of national security.

9. *Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?*

   The construction of a centralised publication system is a means which permits an access to the orders, but most of all, is a condition to clarity guarantee in the field of application of the directive. This system may be a part of, already functioning in the UE, system of public orders.

10. *Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?*

    Among the criteria illustrating the specific character of the orders from the defence sector, there are:

    - security of the delivery during the whole product's "cycle of life" (in the whole chain of supply);

    - the demands of information protection;

- reliability of the contractor in the future perspective;
- fulfilment of high quality demands;
- the need of unification of the armament and military equipment.

11. *How do you think offset practices should be handled?*

The offset practices are one of the instruments allowing Poland upgrading the technological level of own industry and its gradual accommodating to the conditions of the European market. In a further perspective, there is a possibility of reducing its employment, especially in the frames of the European market. One of means to achieve it is to promote cooperation between the institutions of defence industry from “old” and “new” countries in the UE. The creation of such technological cooperation between the producers from the UE may result in the creation of capital and proprietary relationships. Such a process is a desired action in the direction of enlarging productivity which would mean enlarging the competitiveness of European defence industry and creating an economic base for the common European defence market. The directive concerning orders in the defence field should unify not only the rules of its application but also the definition of the offset itself which would be accepted by the Member States.

PORTUGUESE COMENTS ON THE GREEN PAPER "DEFENSE PROCUREMENT"

Ref:Brussels, 23.09.2004. COM(2004)608 final

Question 1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

1. It would be useful and necessary but not sufficient. The development of an interpretative communication, as a first step, would increase harmonization of rules and procedures and so increasing the necessary transparency and competitiveness, among the Member-States, within the Defence area.
   The use of the same tools, clearly identified, would decisively lead to a better cooperation environment, in order to achieve the final goal, i.e. the implementation of a common directive, legally binding to all States.

Question 2. Are there other aspects of the Community system in question that should be clarified?

2. The definition of the goals to be achieved through an European Security and Defence Policy, to be translated in a common directive must include not only a clear set of rules and procedures, but also a definitive distinction among equipments, services or public works to be considered as Defence "items", plus a list of categories not to be considered under its "umbrella".

Question 3. Do you consider the rules of existing suited/unsuited to the specific characteristics of defence contracts? Pleas give your reasons

3. The rules of existing directives must be seen as unsuited, otherwise the Green Paper would make no sense. We consider that the European Defence and Equipment Market (EDEM) does not exist yet. We do have a fragmented market or a group of markets, whereby nations act, under national interests, not linked by integrated strategic behaviours.

Question 4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

4. Yes. The implementation of a specific directive would contribute decisively for the creation of an EDEM and the strengthening of the industrial and technological base of the Member-States. Common rules and procedures are basic tools to increase cooperation, transparency and competitiveness.

Question 5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency (EDA)?

5. The EDA must be regarded as the leading body to develop the arrangements to achieve an EDEM. On the other hand, EDA must not jeopardize experience and know how already achieved through others international *fora.*

Question 6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? Inwhat situations should use of the negotiated procedure without publication be allowed?

6. It is suitable for the specific needs of defence procurement, under a regular political environment. Should those conditions evolve to a scenario of crisis or calamity, then the non-publication is justified. Also strategic R&D programs could be considered for non-publication.

Question 7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A combination of a definition and a list?

7. The combination of a clear definition together with updated list of equipments to be considered and to be excluded is the best path to define the field of application. As a first step, the development of an interpretative communication is considered necessary to create the conditions to achieve an agreement through a common directive.

Question 8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

8. As mentioned above, no doubt about it. Clear definitions, easily understood by all, are a basic principle to "invite" Member-States to their acceptance and compliance.

Question 9. Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

9. Yes. EDA official bulletin/website or other specific websites are good choices.

Question 10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc? And how should they be defined?

10. Apart from those already listed in the existing directives, we consider that the security of supply criteria is the most important to be retained. We define it as the assurance that the procurement of Defence related equipment (acquisition and life cycle support) does not depend on political, security or economical factors that might impact, at any stage, the delivery of equipments already under contract. Additionally, the non-disclosure of customer's specific requirements must be observed.

Question 11. How do you think offsets practices should be handled?

11. In general, as they are now. In a "closed environment" whereby few nations rule 90% of the Defence related transactions, offsets are, for the vast majority of the European countries, paramount to help developing their own Defence industries and to gain know-how.

MINISTERIO
DE DEFENSA

SECRETARÍA DE ESTADO DE DEFENSA

DIRECCIÓN GENERAL DE ARMAMENTO Y MATERIAL

SUBDIRECCIÓN GENERAL DE RELACIONES INTERNACIONALES

SPANISH MINISTRY OF DEFENCE ANSWERS TO

GREEN PAPER. DEFENCE PROCUREMENT

Brussels, 19.7.2004

Com(2004) 608 FINAL

Madrid, 14th of March 2005

PREAMBLE

The Spanish Ministry of Defence welcomes the Commission Green Paper on Defence Procurement, that is instrumental in the development of the Commission Communication 2003, 113 final (11MAR03) on European Defence-Industrial and Market Issues.

As it is shown in the Commission Communication, the “Industrial and Market Issues” embrace different linked topics, which need a holistic approach. In this sense, the Green Paper raises the conditions of procurement as a necessary step to reach the opening up of European Defence Market (EDEM).

European Defence Technological Industrial Base (EDTIB) is a main topic related to EDEM, and inseparable from it as the offer side of EDEM. It is not possible to avoid the offer side when considering a realistic approach to EDEM.

This Defence Technological Industrial Base has wide implications in the Internal Market -First Pillar- of the European Union.

On the other hand, Defence Policies of the Member States have a much wider scope than the European Security and Defence Policy (PESD), which is the mission assigned to the European Defence Agency (EDA) (Article 2 of the Council Joint Action 2004/551/CFSP, on the establishment of the EDA).

Based on the previous premises, the Spanish Ministry of Defence expects a collaborative initiative of the Commission, EU Member States and EDA on EDTIB, aiming at the creation of a non-protected European-wide open market, internationally competitive and geographically balanced, as a main tool towards a widening and higher integration of the Second Pillar of the European Union.

Spanish Ministry of Defence supports the implementation of the Green Paper initiative in an Interpretative Communication of the European Commission. From the Spanish Ministry of Defence there are important reasons to adopt this option:

- Regulations affecting the defence procurement are disperse, and there is not a similar degree of fulfilment by each Member State. A clear scenario for everyone will help to know the real need of a new regulation to add to the populated collection of European directives.

- Procurement is just one aspect of the complex scheme where the defence procurement is carried out. Complex due to the different institutional actors involved (European Commission, Council-EUMC-EDA, Member States), and varied interests affected (industries with any degree of relation with defence/dual use, R+T community, international organizations related to defence).

- The Defence Procurement -as well as the Defence Exports and all aspects of Defence Policy- touches the core attributions of the State, and by this reason, it’s closely related with the Foreign Affairs of the Member States.

The Green Paper Questionnaire, attached below, was answered with the previous rationale.

SPANISH MOD ANSWERS

THE ANSWERS TO THE QUESTIONNAIRE MUST BE READ ON THE BACKGROUND THAT SPAIN SUPPORTS THE INTERPRETATIVE COMMUNICATION OPTION

1.- Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

The regulations affecting the defence market in the European Union are disperse. It is obvious that a clarification is necessary and, as a consequence, useful.
After taking place a clarification of the existing legal framework, we will be able to state if a new directive is necessary or not.
Working in a clearer legal scenario will help us to make up our mind about the necessity of a new regulation, or not.
If the result is affirmative, and a new regulation issued by the Commission is needed, the lacks of the current legal framework will be focussed, and the scope and range proposed for the new legal tool will be much more precise.
Due to the reasons above, Spain supports an interpretative communication as first approach to this subject.

2.- Are there other aspects of the Community system in question that should be clarified?

As the Green Paper points out, defence systems have long lasting life cycles. An important part of the procurement is related to in service support, with a lot of know-how transfer. Maybe, this is a good occasion to clarify the EU legal framework in relation with transfer of technology for defence services.

3.- Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

From the Spanish point of view, it's clear that for the procurement out of the 296 exception -this means: inside the internal market- the existing directives are too rigid and a more flexible approach is required.
For those cases in which the 296 exception is in force, the instrument to be applied must be well adapted to the specificities of the national defence procedures. In the case of Spain, the existing EU instruments are applied in a way that becomes a useful tool for SP defence contracts.
The defence policies are national policies as is well known. A small part of them are agreed under the ESDP (art. 17 par. 2 EU Treaty) and, as a consequence, it is difficult to formulate a general statement embracing the 25 Member States.

4.- Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

From the Spanish point of view, the European integrated defence market will be achieved as a result of the integration of the European defence industries, and this latter event will be the output of a process of integration of Member States defence policies. A directive will help to clarify procedures, but not to integrate the defence market; mainly due to pure economic criteria are not most weighted ones in defence procurement (security of information, security of supply…), even when they are very important.

5.- What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

In the case of European Defence Agency (EDA), the Joint Action 2004/551/CFSP foresees in the point 3.2.3 that the EDA will manage specific programmes through OCCAR or other programme management arrangements, so in most of the cases the procurement will be regulated by an international treaty and derived agreements. As a consequence of the previous, a careful evaluation of the utility of such a directive should be done.
If the implemented option were a Directive, the range of application should embrace all the agents operating in the EDEM (also International Organizations). In other case, the “regulatory framework” raised by the Green Book will not be a well-adjusted tool for creating an EDEM.

6.- Procedures: Do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situation should use of the negotiated procedure without publication be allowed?

The negotiated procedure with prior publication is well suited to defence procurement. The use of the negotiated procedure without prior publication is the main option where the defence interest is closer to the security of information, or to the security of supply, or just in complex cases when a tested reliable contractor is required.

7.- Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

The List written in 1958 has already been included in the Treaty for the Constitution for Europe, so it has to be considered. A definition, taking into account the planned use and the circumstances of the procurement for defence and complementing the List, looks the best solution.

8.- Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

With the rationale of question 7, the exclusions should be those included in the 1958 list (article 296 ECT, Treaty for European Constitution III-436).

9.- Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

Yes, it would be a good option. There is a variety of technical options for this. An electronic contracting tool would be very useful. Anyone accessible for all possible suppliers is a good solution, if it doesn't raise a more complex bureaucracy or makes the terms for contracting longer.

10.- Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc? And how should they be defined?

Security of information, security of supply and the related export procedures are important criteria for procurement, which were carefully studied in other European fora. If it is done, the treatment of these subjects must be coherent with the outputs reached in those fora.
As told before, the overall defence policy is not an EU policy. So the defence procurement will not be tied to the European sphere. As a consequence, the criteria used to select the contractors must not constitute an excuse for an European-wide protected market for defence products and services.

11.- How do you think offset practices should be handled?

Offset –considered as the industrial participation linked to defence procurement- is a tool to guarantee security of supply of technologies and services along the life cycle of the purchased system (maintenance, technical support for operation…), as well as some parts, as a consequence of the former.
From this point of view, it is a defence service acquired with the defence products in the contract, or in a different contract related to a principal one.
The mutual industrial relations, that appear as a consequence of the industrial participation, create the necessary conditions to cooperate in the process of consolidation of European DTIB.
At the same time, Defence Companies gain mutual access to markets, cooperating to get a competitive EDEM.

Finansdepartementet

Rättssekretariatet

Europeiska kommissionen
GD Inre marknad
Konsultation – ”Grönbok om
försvarsupphandlingar”
B-1049 Bryssel

Den svenska regeringens synpunkter på Europeiska kommissionens grönbok om försvarsupphandlingar (KOM (2004) 608 slutlig)

Europeiska kommissionen presenterade den 23 september 2004 en grönbok om försvarsupphandling. Genom grönboken avser kommissionen att bidra till en stegvis uppbyggnad av en europeisk marknad för förvarsmateriel (*European Defence Eqiupment Market*, EDEM) med mer insyn och större öppenhet mellan medlemsstaterna.

Allmänt

Den svenska regeringen välkomnar kommissionens initiativ att söka bidra till utvecklingen av en europeisk marknad för försvarsmateriel.

Regeringen konstaterar att kommissionen i grönboken inte föreslår någon ändring av medlemsstaternas möjlighet att göra undantag från gemenskapsrätten med stöd av artikel 296 i EG-fördraget. Svaren på frågorna nedan är avgivna under den förutsättningen att medlemsstaternas möjlighet att göra sådana undantag kommer att vidmakthållas oavsett vilken av de i grönboken angivna handlingslinjerna som kommer att väljas. Om och när åtgärder vidtas för att utveckla möjliga handlingslinjer enligt grönboken förutsätts att medlemsstaterna ges möjlighet att bidra till processen.

Regeringen anser att frågan om uppbyggnad av EDEM kräver ytterligare åtgärder på andra viktiga områden än dem som anges i grönboken, såsom ökad konsolidering på köparsidan. Detta bredare synsätt måste iakttas vid bedömningen av vilka åtgärder som är de mest angelägna.

Regeringen stöder uppfattningen att EU:s försvarsbyrå (*European Defence Agency*, EDA), såsom ansvarig för frågor om försvarsresurser, forskning, anskaffning och försvarsmateriel, ges en aktiv roll i skapandet av EDEM.

Vidare vill Sveriges regering framhålla betydelsen av att undvika åtgärder som hindrar möjligheter till samarbete länder emellan, inklusive samarbete med tredje länder. Det finns också anledning att resa frågan om en definition av omfattningen av ”försvar” i förhållande till det bredare begreppet ”säkerhet” med hänsyn till den ökade betydelse EU och dess medlemsstater lagt på säkerhet.

Svar på grönbokens frågor
1) Är det lämpligt/nödvändigt/tillräckligt att förtydliga den rättsliga ramen på det sätt som beskrivs i grönboken?

Ett tolkningsdokument såsom det beskrivs i grönboken skulle kunna bidra till att förtydliga den rättsliga ramen för de upphandlande myndigheterna och för leverantörerna. Ett förtydligande kan åstadkomma en mer harmoniserad tillämpning av artikel 296 i EG-fördraget.

Enbart ett tolkningsdokument är dock troligen inte ett tillräckligt medel att uppnå de syften som grönboken anger. Som angetts ovan torde upprättandet av EDEM kräva andra kompletterande åtgärder än dem som berörs i grönboken. Vidare bör de ökande problemen med att dra en tydlig gräns mellan frågor som rör försvar å ena sidan och frågor som rör säkerhet å andra sidan uppmärksammas. Den svenska regeringen anser att det är nödvändigt att EDA involveras i frågan.

2) Finns det andra delar av gemenskapssystemet på det här området som skulle behöva klarläggas?

Frågor där ett förtydligande av den rättsliga ramen skulle kunna bidra till utvecklingen av EDEM:

- tillämpningen av rättsmedelsdirektivet (89/665/EEG) för försvarsupphandlingar,
- effektivisering av mellanstatliga transferregler för dokument, komponenter och produkter,
- konsekvenser av olikheter i marknadsförutsättningar (statligt ägda vs privata försvarsmaterielföretag),
- exportpolicies,
- möjligheter till ökad standardisering.

3) Är bestämmelserna i de befintliga direktiven lämpliga eller olämpliga med hänsyn till försvarsupphandlingarnas särdrag? Precisera varför.

Direktivens bestämmelser är inte lämpliga, eftersom de inte i tillräcklig grad tar hänsyn till försvarsmaterielupphandlingarnas särdrag och inte heller medger nödvändig flexibilitet.

4) Är ett specifikt direktiv lämpligt/nödvändigt för att upprätta en europeisk försvarsmaterielsmarknad och stärka den industriella och tekniska basen för EU:s försvar?

Ett särskilt direktiv som samordnar upphandlingsförfarandena på försvarsmaterielmarknaden och är anpassat till försvarsmaterielupphandlingarnas särdrag kan vara en lämplig åtgärd för att främja en öppnare europeisk marknad för försvarsmateriel.

En förutsättning för att ett eventuellt direktiv skall få effekt är att den rättsliga regleringen tillämpas på ett enhetligt och transparent sätt av medlemsstaterna. Efterlevnaden av reglerna måste kunna följas upp effektivt.

5) Vad anser ni om att tillämpa ett sådant direktiv på anskaffningar som görs av andra organ, som t.ex. EDA?

Lika regler för anskaffning bör gälla för nationella anskaffningsorganisationer såväl som för eventuella sådana inom EU:s ram.

6) Förfaranden: Är förhandlat förfarande efter publicering lämpligt med hänsyn till försvarsupphandlingarnas särdrag? I vilka situationer bör man kunna tillämpa ett förhandlat förfarande utan föregående publicering?

Förhandlat förfarande efter publicering bör kunna användas fritt som standardförfarande som alternativ till öppet och selektivt förfarande. Försvarsmaterielsystem kan innehålla mycket komplicerad materiel med stort utvecklingsinnehåll och olika möjliga alternativa lösningar. Förhandlat förfarande skapar utrymme för en utvecklad, kostnadseffektiv upphandling i samband med att krav ställs på materielens sammantagna funktion vid upphandlingar i motsats till krav på kvalitet hos enskilda produkter/komponenter. Mer övergripande funktionskrav på materielen motiverar således kravet på förhandlat förfarande.

Förhandlat förfarande utan föregående publicering bör lämpligen kunna användas i de undantagsfall som anges i direktivet om offentlig upphandling samt, beroende på omständigheterna, i vissa andra undantagsfall.

7) Tillämpningsområde: Hur kan man bäst definiera tillämpningsområdet? Skall det vara en allmän definition, och hur skall den i så fall se ut? En ny förteckning, och vad skall den i så fall innehålla? En kombination av en definition och en förteckning?

En beskrivning av tillämpningsområdet bör innehålla såväl definitioner som en exemplifierande förteckning. Förteckningen måste uppdateras löpande. Det bör inte bara vara typen av produkt som är bestämmande. Det bör övervägas om också upphandlingens syfte skulle kunna vara styrande för tillämpningen av direktivet.

8) Undantag: Är det lämpligt/nödvändigt att definiera en varukategori som uttryckligen undantas från direktivet?

Det är inte nödvändigt att definiera en sådan varukategori, eftersom det faller inom medlemsstaternas kompetens att undanta upphandlingar med hänvisning till artikel 296.

9) Offentliggörande: Är det lämpligt att ha ett centraliserat system för offentliggöranden? Om ja, hur skall den se ut?

För största möjliga öppenhet bör ett centraliserat system för offentliggöranden upprättas.

10) Urvalskriterier: Utöver de kriterier som redan föreskrivs i direktiven om offentlig upphandling, vilka ytterligare kriterier bör tas med för att beakta försvarets särskilda ställning? Sekretess, tryggad försörjning etc ? Hur skall de definieras?

Utöver de kriterier som föreskrivs i direktiven om offentlig upphandling bör sekretess och leveranssäkerhet tas med som godtagbara kriterier.

11) Hur bör sedvanan med att begära kompensationer hanteras?

Krav på motköp eller andra kompensationsåtaganden kan fördröja en effektiv arbetsfördelning och därmed bidra till att bevara en fragmenterad marknad. Emellertid kan sådana krav på kompensationer, för det enskilda köparlandet, bidra till bl.a. teknologiöverföring. Det ökande inslaget av gemensamma materielprojekt innebär dock i sig färre tillfällen att begära kompensationsåtaganden. En harmonisering mellan medlemsstaterna i hur krav på kompensationsåtaganden tillämpas bör eftersträvas.

Det skulle kunna övervägas att på sikt avskaffa sedvanan att begära kompensationer. Detta behöver emellertid studeras närmare.

Med vänliga hälsningar

Reply to the European Commission

GREEN PAPER ON DEFENCE PROCUREMENT

1. I am writing in response to the Green Paper on Defence Procurement that was published by the Commission on 23 September 2004.

2. The British Government would like to start by welcoming this important initiative. As the Commission indicates in its paper, there is considerable fragmentation of defence markets within the Union. This hampers the global competitiveness of European defence industry and puts at risk our ability to meet cost-effectively the capability requirements of the European Security and Defence Policy. We consider that improving the transparency and openness of defence procurement in Europe will be a significant step towards both improving the defence capabilities of the Member States and, by providing industry with better access to the overall European defence market, potentially achieving better value for money for taxpayers. The need for action to improve EU public procurement, including in the defence sector, was also clearly highlighted in the recent report to the UK Government by Alan Wood of Siemens plc entitled "*Investigating UK Business Experiences of Competing for Public Contracts in Other EU Countries.*" (the Wood Review). We therefore believe that this initiative provides a good opportunity to debate the means by which the European Union might improve the effectiveness of the defence equipment market in Europe.

3. As the Commission acknowledges, defence has a number of unique characteristics that need to be taken fully into account when developing any new proposal to improve the defence equipment market. In this regard, the UK Government notes that the Commission has no plans to alter the exemption from the EC public procurement rules afforded by Article 296 of the Treaty of the European Community (TEC). Equally, while Member States continue to have full responsibility for all EU defence and security policy issues (and I note that the Commission accepts this), we believe that there may be merit in examining in due course the range of dual-use goods that could be more widely competed within Europe. We similarly believe that this could be achieved without adverse effect on Member States' national security.

4. The Commission offered two suggestions to help us with this aim. First, the issue of an Interpretative Communication which would seek to clarify the EU's existing legal framework and, secondly, the development of a Directive which might co-ordinate procedures for defence procurement in cases where exemptions are not applicable, and in lieu of (or complement) the existing EC Public Procurement Regulations. We note that such a Directive would be tailored to the specific nature of the defence procurement sector.

5. Before setting out views on the Commission's ideas, it is perhaps appropriate to remind ourselves that the regulatory mechanisms relating to defence procurement are already in place. Essentially, defence procurement is covered by the EC Public Procurement Regulations unless exempted by application of Article 296 TEC. Moreover, the EU Council's list of items defining the scope of Article 296 TEC (the "1958 list") continues to provide, in our view, a reasonably good benchmark as to what constitutes warlike defence goods. As such, it could be argued that there is little need to take any formal action. Nevertheless, it is apparent that there are different views on the application of Article 296 TEC, and that the defence equipment market in Europe is not as open and transparent as it could be, and as it needs to be, if Europe is to succeed in enhancing its military capability.

6. In the circumstances, therefore, the UK considers that our attention should be focussed primarily on examining the prospect of enhancing the effectiveness of the existing mechanisms rather than developing new measures. In this respect, we think that the use of an Interpretative Communication might be useful in highlighting the current Community legal framework relevant to defence procurement. Such a communication could have a role in ensuring a more consistent application of existing EC legislation by Member States. It could also enhance the ability of the Commission to monitor those procurements that have been exempted from the public procurement rules through the application of Article 296 TEC. Indeed, we suggest that this role is given a much higher profile than it has in the past, noting that the Commission already has the ability to perform a monitoring and examination function through Article 298 TEC. This function could be aided by the Commission having sight of the information that we envisage Member States providing in response to the reporting requirements under the proposed voluntary Code of Conduct for goods exempted under Article 296. This concept is covered in more detail in paragraph 9. In line with the need for streamlined procedures, and the aim to eliminate unnecessary bureaucracy, we would not support the Commission developing its own reporting process in this regard. Given the inevitable linkage and

possible overlap with the European Defence Agency, and the need for carefully thought through proposals, we strongly urge that the Member States are directly and inclusively involved in the preparation of any Interpretative Communication.

7. From the foregoing, it follows that we have less appetite for a new directive covering defence procurement, even one that does not cover those items exempted by Article 296 TEC. Clearly, we would be opposed to any regulation that impinges upon the use of Article 296 TEC (or that seeks to regulate it), and where it affects matters within the competence of Member States.

8. While we can understand the potential benefits of new regulation outside of Article 296 TEC, not least that it might develop specific and perhaps more flexible rules, we perceive that the drawbacks would more than offset this. In particular, the creation of a new directive might mean that Member States' defence procurement organisations would have to have a detailed knowledge of at least three separate procurement processes and make assessments, on each occasion, as to which process to apply. We do not believe that this supports our aim to make defence markets ever more efficient and effective. Additionally, a new directive would inevitably require the negotiation of and agreement to an additional boundary between those goods falling under the scope of the more general public rules and the new directive. This, and the attendant need to develop the scope of the directive between the Member States, is unlikely to be achieved quickly. Accordingly, the UK does not favour the development of a new directive at this stage.

9. In parallel with the Green Paper's examination of the defence equipment market outside of Article 296 TEC, the UK has been considering what improvements could be made to the marketplace for goods that are covered by this Article. In this regard, the UK has proposed a voluntary Code of Conduct, which we have circulated to other EU Member States and relevant international organisations; a copy was passed informally to the Commission in November 2004. We envisage that the Code would require Member States to commit to the principles of transparency and openness, to accept and apply a set of rules to improve market access, and to create a level playing field for competition. Member States would need to endorse fully the Code and its aims from the outset, and be prepared to accept oversight of their equipment procurement decisions by an independent third party. This role, which would include implementing the Code and developing a rigorous and effective reporting and monitoring system, might usefully be undertaken by the European Defence Agency. We believe that this approach, which could feasibly be implemented in a relatively short timescale, is a pragmatic step forward to improving the

current conditions of the marketplace for goods that are exempt from the EC Public Procurement Regulations. I have included with this letter a further copy of our non-paper, which sets out these ideas in more detail. If the concept proves to be acceptable to the EU Member States, we would see the Code being developed during the course of 2005. Again, should the European Defence Agency be tasked to take this work forward, we would envisage close consultation with the Commission.

10. In sum, we need to ensure that we all work towards improving the transparency of the European defence equipment market, and the creation of a level-playing field for those competing for defence contracts across Europe.

11. We consider that the most appropriate course of action to achieve this aim is to enhance the effectiveness of existing mechanisms in the field. This could include an Interpretative Communication prepared in conjunction with Member States. This could work in tandem, and potentially to good effect, with the concept of a Code of Conduct covering defence goods procured under Article 296 TEC. We do not consider that there is a need, at this stage, for a specific defence directive. However, we do accept that there might be a need to consider a directive in the future should the necessary improvements in the markets not transpire.

12. Finally, the Green Paper set out eleven specific questions on the use and applicability of an Interpretative Communication and a Directive. Our detailed response to these questions, which build on the themes explored in this letter, is attached.

13. I am copying this letter to the Permanent Representatives of the EU Member States and to the Head of the European Defence Agency.

EUROPEAN COMMISSION GREEN PAPER - QUESTIONS

Q1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

A1. An Interpretative Communication might help to outline the existing Community legal framework relevant to defence procurement. Such a communication would need to take into account those European Court of Justice judgements that relate to the interpretation of Article 296 of the European Community Treaty (TEC) where these can be shown to be relevant to defence procurement. In confirming existing Community law, and clarifying the use of Article 296, a communication could have the effect of leading to a more consistent application of legislation by Member States and assist the Commission's ability to monitor procurement under Article 298 TEC. Given the unique nature of defence procurement, Member States must be afforded the opportunity to contribute fully to the development of such an interpretation. The UK would be happy to contribute positively towards this process .

During the Green Paper's preparatory stages, the Commission mentioned the idea of Member States notifying the Commission on the occasions that Article 296 TEC was invoked for the procurement of defence goods. Such a process would provide the Commission with greater visibility and, in tandem with an Interpretative Communication, would strengthen the Commission's monitoring role under Article 298. However, we would need to ensure that it worked seamlessly, and with no added bureaucracy, with any complementary measures that might be developed by the Member States to monitor more closely those procurements that fall under Article 296 TEC. In this respect, we refer to the UK's proposal to develop a Code of Conduct, which would voluntarily require Member States to publish widely defence procurement opportunities, and subsequently report their observance of the Code's criteria to an independent body. We believe that the European Defence Agency (EDA) should take an active part in this process in conjunction with the notification system for the Commission.

Q2. Are there other aspects of the Community system in question that should be clarified?

A2. We are not aware of any other aspects of the Community system that needs to be clarified.

Q3. Do you consider the rules of existing Directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

A3. The existing Public Procurement Directives, including the new Consolidated Directive (2004/18/EC), covering supplies, services and works, are, for the most part, suitable for defence contracting. Nevertheless, these directives are not particularly suited for use on major new technology development programmes, which are commonplace within defence procurement, and which are often contracted for in successive stages. The requirement under the existing directives to undertake in most cases a full re-competition at each stage would be a significant impediment to the successful and timely completion of the programme to the extent that it might become non-viable. However, this limitation is mitigated by the fact that, in the main, these types of procurement are usually undertaken for equipment that falls properly under Article 296 TEC.

Q4. Would a specific Directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

A4. The UK agrees that there is a fundamental need to improve the transparency and openness of the Europe defence equipment market. We therefore consider that measures that help to open up the European defence equipment market, and improve the competitiveness and efficiency of European defence industry, have the potential to bring significant benefit.

With regard to a possible new directive, we welcome the Commission's confirmation that any proposals would not affect the exemptions provided for under Article 296 TEC, and that this exemption would remain fully applicable according to the conditions of today. We believe that a new directive that has been specifically tuned to the needs of defence procurement might introduce regulations that are better suited to the characteristics of the market. Nevertheless, it is clear that this domain is already regulated by the current EC Public Procurement Regulations, and that these rules are generally satisfactory for the procurement of goods not covered by Article 296 TEC. In addition, by definition, a new directive would create a new series of regulations for, and new boundaries within, the defence equipment market. We believe that this is unlikely to be conducive to greater efficiency, even if we were able clearly to define the line between the existing public procurement rules and the defence procurement directive and which itself is likely to be extremely difficult and subjective.

In the circumstances, therefore, the UK considers that it would be preferable to gauge the affect of an IC on the procurement patterns of the Member States before launching the development of a directive. In this respect, we believe that there is scope for an IC, as already described, in tandem with a Code of Conduct for those procurements falling under Article 296 TEC, to provide a greater degree of coherence and transparency to the European defence equipment market.

We recognise, of course, the possibility that these initial measures may not provide all of the results that we are looking for. Should this transpire, then the UK would not rule out the need to develop a new directive in the longer term.

Q5. What is your opinion regarding the use of a possible Directive for purchases by other bodies, such as the EDA?

A5. The scope of procurement activities by the EDA will be a matter for the Member States involved with the organisation, although it has already been established that the Agency will not replicate procurement management services provided by others, such as OCCAR. The scope for using any new directive might therefore be limited. Nevertheless, we would have no objection to its use by the EDA, should it be decided, more widely, to develop a directive.

As OCCAR is an international organisation run under the OCCAR Convention, it has the ability to develop its own processes and rules, and it has done this based on an amalgam of best practice from the OCCAR Member States. Again, in general terms, we would not object in principle to OCCAR following any defence directive. However, it should be stressed that OCCAR's mandate is to manage co-operative programmes, and that, by their nature, they are all (and are likely to be) goods that fall properly within the scope of Article 296.

Q6. Procedures: Do you believe the Negotiated Procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the Negotiated Procedure without publication be allowed?

A6. In general, both the existing Negotiated Procedure and the Competitive Dialogue Procedure (as outlined in Article 29 of Directive 2004/18/EC dated 30 April 2004 and due for implementation in the Member States by 31 January 2006) are suitable for the needs of defence procurement.

Use of the Negotiated Procedure without publication should be allowed in those cases already provided for in the existing Directives and additionally where the retention of capabilities within the national industrial base is essential for national security reasons, or which are militarily essential to retain.

Q7. Scope: What would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

A7. We consider that the 1958 List of military equipment covered by Article 296 of the European Community Treaty provides a reasonably satisfactory definition of general scope and that accordingly it is still suitable for use. Nevertheless, there are certain areas within the list that might benefit from further clarification in due course. However, in view of the diverse defence equipment market (eg ostensibly simple goods such as paint can be rendered strategically important once it has camouflage properties), such work would need to be undertaken carefully. Consequently, we do not feel that it would be appropriate for an IC to deal with this area of work in detail; not least because of the amount of time that it might take to make any changes to the list. In the same vein, and because it seems that the 1958 list has been taken as the benchmark by many countries, we do not believe that a general definition would add anything to the process.

Q8. Exemptions: Do you think it would be useful/necessary to define a category of products that would be excluded categorically from the Directive?

A8. The exemptions permitted under the WEAG arrangements might be suitable for use in this context. The full range of exemptions under the WEAG arrangements is as follows:

- Requirements already subject to the EC Supplies and Services Directives;
- Nuclear weapons and nuclear propulsion systems;
- Warships (excluding their systems);
- Toxic and radioactive agents;
- Cryptographic equipment;
- Requirements covered by Memoranda of Understanding whose provisions do not provide for publication of such requirements;
- Emergency requirements;
- National security;
- National imperative.

It should be noted that this list of exemptions should not prejudice Member States' ability to exempt certain procurements from the EC Public Procurement Regulations by the application of Article 296 TEC and the 1958 list.

Q9. Publication: Do you think a centralised publication system would be appropriate, and, if so, how should it function?

A9. We would not object, in principle, to the use of a centralised publication system in the specific context of a directive for defence procurement should one be developed. However, given the relative maturity of our current publication system, we would not wish to subscribe to a central system in the absence of such a directive.

Our current process is based on contracting out the production and publication of the Ministry of Defence Defence Contracts Bulletin. This commercial contract has several more years to run, and would need to come to a natural close before the UK Ministry of Defence could sign up to any centralised system.

In terms of the method of publication, we have found that the Defence Contracts Bulletin is optimised by making it available in hard copy, on CD-ROM, and on the Internet. We would not wish any centralised procedure to be more bureaucratic or less efficient than this system.

Q10. Selection criteria: What criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc? And how should they be defined?

A10. Confidentiality is an important criterion in that, for contracts involving secret matter, potential suppliers must possess, and be able to demonstrate that they possess, the necessary accreditation and approval to handle such material before being invited to tender or awarded a contract.

Security of supply is also important and we would wish to see it provided for in the selection criteria. It is the ability to guarantee and to be guaranteed the supply of goods or services that are critical to military operations to prosecute a Government's foreign and security policy. It is particularly important where legitimate defence interests require the maintenance of a strategic defence capability within the national industrial base, where competition is lacking or where suppliers are constrained by stringent export controls.

We would also wish to see provision made for the selection of the supply chain to be taken into account in selection criteria, where this is judged to be a material matter in assessing value for money and fairness in the competition. In exceptional circumstances, suppliers may be required to establish a sub-contract competition for specified capabilities and the contracting authority will require sufficient insight into the procedures being used, to be satisfied that a fair competition will be conducted.

Q11. How do you think that offsets should be handled?

A11. There are many different views towards the importance of offset. Nevertheless, it is universally agreed that the use of offset does influence the market and, in many cases this is to the detriment of efficiency and cost effectiveness. The objective should be to abandon the use of offset, at least within Europe and with European suppliers, as a means to satisfy national workshare demands. However, we recognise that this would be difficult to achieve now, in advance of an effective European Defence Equipment Market (EDEM). In the circumstances, therefore, the UK considers that it is likely that the existing arrangements will continue to prevail in the near to medium terms, but that work to re-examine this, in the light of progress with the EDEM, should take place at the appropriate time. We also recognise that, notwithstanding our view that offsets should be abandoned once demonstrable mutual access to markets has been achieved, it may still be necessary to allow offset to be used by European Government's in contracting with non-

European suppliers based in countries which have policies that have the effect of restricting access to their defence equipment market.

A EUROPEAN DEFENCE EQUIPMENT MARKET (EDEM) - A NON-PAPER BY THE UNITED KINGDOM

Introduction

1. The European Commission's communication on defence equipment policy issued in March 2003[1] set out its interest in creating a more efficient defence market in Europe. This led, *inter alia*, to the Commission's consultative Green Paper[2] on Defence Procurement published in September 2004, which has the aim of opening the debate on the desirability of adapting the rules for awarding defence contracts in Europe in order to open up the market to all Member States. As part of this debate, the paper assesses how the Commission might clarify in a Communication the existing legal framework and case law surrounding defence procurement. It also poses the question as to whether the Commission should propose a Directive to co-ordinate defence procurement procedures in cases where Article 296 of the Treaty is not applicable. The Commission envisages that such a proposal, if implemented, would be linked with new, flexible EU-wide regulations, which would take into account the specific nature of the defence sector. The consultative process with Member States and other interested bodies is currently underway.

2. At the same time, the European Defence Agency (EDA) is in the process of being established, with the aim of being operational by the end of 2004. The EDA aims to develop defence capabilities in the field of crisis management, to promote and enhance European armaments co-operation, strengthen the European defence industrial and technological base and create a competitive European defence equipment market (EDEM).

3. The UK supports these initiatives. They have the potential to deliver improvements in co-operative practices, reduce market distortions, which is a key aim of the UK's Defence Industrial Policy, and produce greater market access and improve transparency. This paper does not address the specific ideas raised in the Green Paper. Rather, it considers the relative merits of the various ways of creating a viable EDEM, focussing particularly on the options of a fully regulated market and a non-regulated marketplace, and exploring possible means of implementing the latter approach. It is intended as a contribution to the wider debate opened by the publication of the Green Paper. But this is not to ignore, or discount the potential benefits of, other options that may exist between the two ends of the regulated/non-regulated spectrum.

A European Defence Equipment Market

4. Currently we do not have an EDEM. We simply have a group of national markets that do not have any policies that govern behaviours between them (with the exception of some provisions of the Letter of Intent (LoI) Framework Agreement that recognise certain interdependencies). In creating an EDEM we need to consider the various ways of constructing a market and, in particular, decide whether a set of regulatory procedures, enforced under Community law, is preferable to voluntary or self-regulation by Member States.

[1] "Towards a European Union Defence Equipment Policy" COM(2003) 113 dated 11 March 2003

[2] Green Paper on Defence Procurement issued on 23 September 2004

What Type of Market?

5. As set out in the Green Paper, a fully regulated market could comprise of a body of regulations, perhaps based on specific Defence Procurement Directives, agreed by Member States and applied by the European Commission. This approach would lay down certain common mandatory procedures and rules, the application of which would necessarily enjoy some national discretion (e.g. national contracting terms) and some exclusions (e.g. nuclear or black programmes). It might have a number of other consequences, for instance, modifying the 1958 list of military equipment that is annexed to Article 296.

6. The regulated approach has a number of attractions. First, through the use of European law, it would enhance transparency, non-discrimination and equal treatment, and offer the potential to create a level playing field for defence companies competing for business within the wider EU. It might also encourage the harmonisation of procurement practices and contract terms, where this is beneficial, which may provide the conditions for more effective equipment co-operation within the EDEM.

7. But a fully regulated marketplace also has a number of disadvantages. In particular, it would require the negotiation and agreement, by the 25 Member States, of a series of binding rules and procedures. Such negotiations would, by dint of their subject matter, be complex and protracted and, in view of previous reluctance by Member States to follow Community regulation in this area, may not succeed in developing truly useful improvements to defence procurement practice. Previous experience indicates that regulation would take at least seven years to implement. Such an approach would not therefore enhance near or medium term improvements to the efficiency of the European defence equipment market.

8. An alternative is to use a non-regulated marketplace. But this approach does not mean that we continue with existing practice and procedure: there is plenty of evidence to show that there is a stark need for Europe to improve significantly its efforts to set up a clear and European-wide defence market. Against this background, a non-regulated marketplace would require Member States to commit to the concept of transparency and openness, and to accept and apply, *voluntarily,* a set of rules to improve market access and create a level playing field for competition. Member States would also need to accept oversight of their equipment procurement decisions by an independent third party. The EDA seems well placed to undertake this work.

9. Under a non-regulated EDEM, Member States would open the generality of their procurements above certain thresholds to international competition. They would then report to the nominated independent body promptly after announcement of contractor selection on the management of each competition and the selection criteria employed. The nominated body would be entitled to express a view as to whether the letter and spirit of the market rules had been respected, and to publish periodic reports on behaviours exhibited. Although the non-regulated approach has no effect in law, nor gives any entitlement to appeal by unsuccessful bidders, it would encourage good practice amongst the Member States through publication and peer pressure.

10. The non-regulated option offers many of the benefits of a regulated market. It has the potential to increase transparency, open up national markets, and create more efficient defence markets. Moreover, it also offers the advantage of significantly earlier implementation and, by dispensing with need for Commission regulations, avoids the potential for confrontation over Commission competence in the area of defence procurement (although as the Green Paper suggests there may still need to be discussion about the precise scope of Community and Member State competence). In terms of

disadvantages, the non-regulated approach might risk non-compliance, if it is ineffectively introduced and monitored. The challenge will therefore be in ensuring that all Member States robustly support the scheme from the outset, and that they recognise the possibility of having to turn to regulation should the non-regulated approach prove unsuccessful.

11. The UK believes that a non-regulated EDEM offers a pragmatic, practical and relatively swift first step towards delivering the sought after improvements to transparency and market access. Successful governance could be achieved through a voluntary Code of Conduct agreed by Member States. Such a code is analogous to the EU Code of Conduct on Arms Exports, where Member States have agreed a set of criteria to which they each intend to adhere in the award of export licences. Each country publicly reports on its observance of the criteria. But, there is nothing that legally binds them to follow the criteria, and they may give reasons as to why, in particular cases, they have elected to depart from them.

Code of Conduct on Defence Procurement - What Might it Look Like?

12. The EDEM would comprise those Member States that agree to abide by its guiding rules and principles, as set out in the voluntary Code. It is envisaged that the Code might be drawn up by the Member States, in conjunction with the EDA, and that its subsequent implementation and use could be monitored by the nominated body, again the EDA appears well placed to do this. The Code would cover:

a. Market Scope: Member States will be expected to exercise responsible discretion as to what is included in the voluntary market. It should cover all defence equipment, except that which Member States exclude on specific national security grounds, and of course, those goods already covered by the EC Public Procurement Regulations. But this should not be based on political convenience. Programmes excluded for national security reasons (such as nuclear and very highly classified programmes, etc) might be generically listed for monitoring purposes, summarising the amount of national expenditure, and whether it is related to R&D or production. Other than for those programmes in the categories above, which would be the subject of blanket exemption from the Code, an intention not to apply the Code of Conduct to a defence equipment procurement should be a matter for consultation orchestrated through the EDA.

b. The Scope of International Competition: In line with existing WEAG rules, a minimum requirement would be that invitations to tender for business should be made available to industry in the EDEM nations. More importantly, equality of information for all potential industrial participants must be ensured in the EDEM perimeter, and proposals from all such participants must be considered eligible and treated fairly. These conditions must apply throughout the supply chain, unless the customer State specifies that, for national security reasons, it requires a specific sub-system to be delivered nationally. Again, this should be the subject of consultation or a letter of explanation.

It should be a matter for each customer State to decide whether it wishes to invite tenders from companies outside of the EDEM or the EU. However, to enable monitoring of procurement process, Member States should report such decisions.

Notions of *juste retour* and offset have no place in an efficient internal market. However, in defence markets worldwide, there is an important link between defence investment and national economic return: in some countries this can be characterised as protectionism favouring national industry and technology. In the UK, the mechanism is offset-based. The UK welcomes imported technology solutions providing that new development and product build might be conducted indigenously, and encourages overseas companies to invest in the UK to form part of the national competitive industrial base and/or deliver the offset obligations of the parent company. The UK's market model is therefore founded more on economic considerations than on factors relating to the Defence Technological Industrial Base (DTIB) (see "Security of Supply" below). However, it will be important to recognise that these elements are not entirely separable in the context of EDEM. For example, dismantling economic barriers to cross-border competition would stimulate a rationalisation of the supply base. This has effects on the DTIB that would require responsible management. For instance, the de-localisation within EDEM of certain activities from the territory of one customer State should not then cause that State to favour acquisition of comparable products from a non-EDEM based supplier who is offering in-country offset.

c. Security of Supply: The UK believes that the principal objective of defence equipment procurement should be the supply of the best military capability. Although security of supply is a key issue, the UK does not consider it essential that a single country needs to develop and sustain within its borders all of the technologies needed for the delivery of military capability. Indeed, for each country to do so is in contrast to the growing recognition that European industry needs to rationalise to compete in the global market. Moreover, industry is already rationalising to the extent that multi-national companies (which have footprints stretching over many countries) are becoming ever more commonplace. In such circumstances, it now seems inappropriate for Member States to insist on ownership of a company being a relevant consideration in procurement decisions. Rather, we should develop specific agreements with the companies concerned that satisfactorily assure security of supply for the customer State.

d. State Aid: State aid prevents the level playing field necessary for an effective marketplace. Currently, it is possible for Member States to use Article 296 to allow levels of State Aid in the defence sector that might not otherwise be permissible. We therefore believe that the Code of Conduct should include an undertaking that Member States should report all instances of State Aid that come under the scope of Article 296, setting out their reasons for so doing in a letter of explanation submitted to fellow Member States through the independent body monitoring the Code. However, this arrangement is not intended to alter the basis of funding for defence research, which is permitted at rates higher than international trade agreements in the civil sector would otherwise allow.

e. DTIB: The creation of an effective EDEM could prompt further rationalisation of industrial capacity and hence specialisation of the industrial capability in any one nation. Although the capabilities within Europe's borders might not decrease, and arguably could increase due to greater pooling of demand, it is likely that it would be necessary to develop a defence industrial policy to take into account the changing dynamic. This fresh focus on the European DTIB would again appear to fall to the Agency, following on from its task "*to identify ... policies and measures aimed at strengthening the European defence and technological base*".

Conclusion

13. The creation of an effective EDEM will deliver significant benefits to Member States and European defence capability and presents the opportunity to develop further the global competitiveness of the European defence industry. It should be taken forward as a matter of priority. Although the use of centrally developed regulation offers certain

benefits, this approach is hampered by its complex legal characteristics, and the time it would take to negotiate and implement, at which time changed circumstance might render the regulations less beneficial. Accordingly, a less radical but more pragmatic approach is recommended, based on the creation of a voluntary Code of Conduct. This form of internal governance would be designed to stimulate cross-border competition and trade. By using reporting arrangements developed by the Member States and the EDA, and by using an independent body, such as the EDA, in a monitoring and guarding role, a non-regulated approach could provide a good first, and relatively swift, step towards the opening up of the defence equipment market in Europe.

14. We recommend that the work to develop such arrangements should be taken forward by the EDA, consulting with the Member States.

AMCHAM EU
AMERICAN CHAMBER OF COMMERCE
TO THE EUROPEAN UNION

February 22nd, 2005

Position paper response to the European Commission's Green Paper on Defence Procurement

Executive Summary

In response to the September 23rd European Commission's Green Paper on Defence Procurement from the Directorate-General Internal Market, the American Chamber of Commerce to the European Union submits the following comments for your consideration:

- AmCham EU welcomes the European Commission's initiatives in clarifying the EU's defence procurement rules and recognising, for example, that many dual use items and technologies may no longer be entitled to the protection from competition afforded by Article 296.

- However, AmCham EU highlights that the Green Paper does not attempt to place the trends in the European defence industry and the European defence equipment market in the broader context of the global market for defence.

- Given the increasingly integrated and globalised nature of the defence industry, AmCham EU believes that it is would be beneficial to develop European standards and technologies related to transatlantic or global standards. Such an approach would make European industry more efficient and globally competitive.

- As it is widely recognised that European industry needs better access to the U.S. technology base and to the U.S. market, AmCham EU stresses that Europe's own market must therefore remain open to participation by the global defence industry if European firms are themselves to increase their competitiveness.

- AmCham EU considers that interim steps of "consolidating Europe first" may, in fact, impede the adjustments required for Europe's industries to attain and maintain their global roles. Indeed, the defence market is global, not regional, and efforts to improve market efficiency must take this reality into account.

Background

The European Commission has published a Green Paper on Defence Procurement as part of an ongoing effort by the Commission to encourage creation of what is termed a "European Defence Equipment Market". The paper explicitly recognises that the current European defence marketplace is highly fragmented on both the supply and demand sides. Procurement decisions remain the prerogatives of national governments. Defence industries are widely distributed and often protected or subsidized by governments. The result is overcapacity and an inability to achieve efficient rates of production.

The reduction in total defence expenditures following the end of the Cold War, combined with the fragmentation of the European market, have made it difficult for European defence industries to invest in new technologies and to maintain viable production rates. Economies of scale are virtually impossible to achieve at the national level, and European multilateral or cooperative programs have so far not been especially numerous or notably successful.

That the European defence market has been slow to adapt to changed market conditions can be attributed to several unique aspects of defence markets, as recognised in the Green Paper: the dominant role of the state as customer, source of research funds, and sometimes as owner; the special needs for classified information and security of supply; the long product life cycle of defence equipment. These unique features have exempted the defence sector from the rules governing open competition, procurement, and state aid in the EU. These exemptions are codified in Article 296 EC of the Treaty. These exemptions create a number of legal uncertainties for suppliers in contrast to common EU standards. Among other questions, the Green Paper asks whether the EU should clarify or modify its legal framework with an aim toward clarifying exemptions and procedures under Article 296. An interpretive Communication or an EU Directive on procedures are two options identified.

Discussion

The aim of the Green Paper is to encourage the creation of a "European" market for defence equipment, ostensibly to create more efficient spending and to make European industry more competitive. Implicitly, the assumption is that the problems of overcapacity and fragmentation in industry will be overcome if national barriers to competition are removed and markets are "opened" to competition – at least a limited type of Europe-wide competition. Inevitably, this will mean that the industry reorganises itself around a small number of first-tier prime contractors that are globally competitive and supported by a broad network of second- and third-tier suppliers. Reference in the Green Paper to the benefits to SME's of market "opening" can be interpreted to mean that suppliers will have access to a broader range of opportunities with prime contractors, although this is not stated explicitly.

The Green Paper does not attempt to place the trends in the European defence industry and the European defence equipment market in the broader context of the global market for defence. At a time when globalization and the internationalization of many key defence programs are important characteristics of the global market, this omission is notable. The assumption appears to be that the European marketplace can be "opened" within Europe and consolidated on a Europe-only basis without regard to these larger trends.

AmCham EU Comments

The fundamental objective of creating a more unified defence equipment market should be to provide better value for money for the governments that purchase the equipment. Reducing national barriers or consolidating industry are means to this end, not ends in themselves. If the European industry is to be able to supply the leading edge capabilities required, it must be able to draw from and access the international marketplace and to develop and maintain the capacity to be globally competitive.

The absence of harmonised operational military requirements and a cooperative (or centralised) procurement authority currently present obstacles to efficient military procurement. In the absence of these conditions, "opening up of defence markets" and breaking down national barriers to procurement are likely to remain empty goals. If the decision making responsibility remains at the national level, only a process of harmonising requirements (and agreeing on common standards) can produce cross-national efficiencies. This harmonisation process could occur in the European Defence Agency or it could occur through NATO consultative processes or some other mechanism, but it should be explicitly addressed as a first step toward a more unified market. The Green Paper's impact and authoritativeness could be enhanced by addressing this point in detail.

European militaries are adapting to the changing strategic environment of the 21st century. Many countries are giving up some of their traditional military missions. Many explicitly accept in their military strategies that territorial Defence is no longer the primary military mission of the armed forces. As forces shift to more deployable and sustainable configurations, in virtually all cases it is assumed that the forces will be operating with coalition partners, whether of the European Union's Battle Groups or the NATO Response Force. These military requirements place an even higher premium on the ability to operate with other allied forces and to have compatible doctrine, technologies, and logistics. The more demanding the military task, the greater the importance of interoperability. While this argues for a more integrated European approach to defence equipment, it also argues for transatlantic involvement and global competitiveness for European industry.

Given the increasingly integrated and globalised nature of the defence industry, it is not feasible to develop European standards and technologies unrelated to transatlantic or global standards. Such an approach would not make European industry more efficient or globally competitive. Since the United States spends more on defence research and development and procurement than all of Europe, European industry needs access to the U.S. technology base and to the U.S. market. Transatlantic industrial cooperation and transatlantic programs that include U.S. and European partners will increase the capabilities of European industry and can be important contributors to the health of the defence industry on both sides of the Atlantic. Europe's own market must therefore remain open to participation by the global defence industry if European firms are themselves to become or remain competitive.

Many of the key technologies for future military capabilities are already being developed with the participation of transatlantic industrial teams. It is neither conceptually nor empirically necessary for a period of European consolidation to occur prior to the opening of the marketplace to global participation. Indeed, events in the global marketplace are moving faster than high-level policy in this regard, in order to deliver the high-performance network-enabled systems required by government customers. Customers should and will demand competitive prices and the best globally available technology in addressing the national and international security requirements of the twenty-first century.

No amount of codification of procurement rules, market restructuring, or industry consolidation can, in the long run, overcome inadequacies of the resource base. The defence industry needs programs and funding to survive and prosper. While greater efficiencies in spending and regulatory clarity could certainly help and would be welcome, the absolute level of military spending in Europe today is not sufficient to meet the identified and agreed military needs. Reforms of procedures will not, by themselves, assure a robust defence technology base in the future at current levels of funding.

Clarifying the EU's defence procurement rules and recognizing, for example, that many dual use items and technologies may no longer be entitled to the protection from competition afforded by Article 296, are initiatives to be welcomed and supported. Indeed, all defence equipment suppliers would benefit from EU defence procurement rules based on more consistency between EU Member States (easier to make investment decisions) and more transparency (better legal clarity). By themselves, however, these initiatives will not address the underlying causes of insufficient investment and inefficient procurement that characterize the market today. A move to an open and globally competitive marketplace, where European industry takes its rightful place as part of a global industry, must be the objective. Interim steps of "consolidating Europe first" are not necessary and may, in fact, impede the adjustments required for Europe's industries to attain and maintain their global roles.

* * *

The American Chamber of Commerce to the European Union (AmCham EU) is the voice of companies of American parentage committed to Europe towards the institutions and governments of the European Union. It aims to ensure an optimum business and investment climate in Europe. AmCham EU facilitates the resolution of EU – US issues that impact business and plays a role in creating better understanding of EU and US positions on business matters. Total US investment in Europe amounts to $850 billion, and currently supports over 3.5 million jobs.

Ladies and Gentlemen,

Please find attached the Response of the AeroSpace and Defence Industries Association of Europe (ASD) to the analysis, suggestions and questions that you have presented in your « Green Paper on Defence Procurement » (COM(2004) 608 final, Brussels 19.7.2004).

The issues that you raise are fundamental to the health and competitiveness of the industry in Europe. They are therefore an important ingredient for building European capabilities commensurate with the overall objectives of the European Security and Defence Policy.

Our industry will continue to support the consultation process that you have started. We also anticipate that the European Union Member States will want to play a strong role in the required transformation process, the implementation of which will require concerted political determination.

It is in this latter context that, while our membership collectively supports initiation of early and concrete action to achieve a rapid improvement in defence market conditions, a minority view has been expressed by part of our German membership favouring a prior political initiative to address the most blatant distortions, before any new regulatory reform[1].

Our Response is focussed on making early and substantive progress. Time is of the essence, and we consider that the advent of the European Defence Agency offers a new opportunity and potentially new means to address relatively quickly the challenge of improving procurement practice within the Art 296 exemption. We consider that this opportunity, which is not explored in the Green Paper, needs to be given proper weight in future deliberations.

[1] BDI Position Paper, transmitted independently

Our detailed argumentation and proposals, together with answers to the specific questions posed in the Green Paper, are set out in the enclosed Response. We are of course at your disposal for further explanation and study of particular issues.

Sincerely yours,

Roger W Hawksworth

RESPONSE TO THE EUROPEAN COMMISSION'S GREEN PAPER ON DEFENCE PROCUREMENT

Executive Summary

(1) ASD welcomes the initiative taken by the Commission in publishing this Green Paper, making a case for a new approach to regulating defence procurement in the European Union. The creation of a European Defence Equipment Market (EDEM) is an overarching objective which industry fully shares. We agree that this will strengthen the competitiveness of the European industry and believe that it would offer wider economic and military benefits. Indeed, the elimination of obstacles that limit the access of European industries to Member States' defence markets at all levels of the supply chain is overdue and now a matter of urgency. Time to implementation is therefore a critical factor.

(2) This objective should apply across the full range of defence supply (with certain exceptions only for equipment of the highest military sensitivity). The objective therefore relates to both that area of the market which is subject to the Art 296 exemption and that which is not. While industry recognises that there are difficulties of interpretation of Art 296 in the field of defence procurement, it does not consider their resolution needs to be a near-term priority for public policy - especially if the process of re-interpretation distracts from what should be the primary objective of policy, which is the early creation of a competitive EDEM in the high value and high technology part of the market that lives, under any reasonable definition, within the Art 296 exemption.

(3) We have welcomed the creation of the European Defence Agency, and we attach very high importance to its task to create a well functioning and efficient EDEM. We note that, as an inter-governmental body, it is the only Community institution able to address both the introduction of new market disciplines within the Art 296 exemption and the consolidation of demand.

(4) We have given serious consideration to the proposal for a Defence Directive. Our conclusions are, first, that a Defence Directive is not sufficient to the tasks of regulating the whole market and of catalysing greater consolidation of demand; and second, that the time required for its preparation is well beyond that which industry would wish to see in the context of the wider market; but, third, that a Directive would have a place in the structure of market regulation in the medium term and that work on its preparation could usefully now be started.

(5) The sequencing and interaction of new measures to improve the performance of EU defence markets is critical to success and will require a pragmatic approach. Our recommendation is that the focus of near term efforts should be devoted to the preparation and implementation of a EDEM Code of Conduct, under European Defence Agency supervision, benefiting as appropriate from the Commission's experience in market regulation, covering the *de facto* Art 296 exemption area of the market. In view of its voluntary and non-legally binding nature, we anticipate that this can be prepared much more quickly than a Directive. We consider that this approach should produce the greatest material benefit in the shortest available timeframe.

(6) However, a Code does not offer a complete solution in two important respects: it is not legally binding and it does not clarify the interpretation of Art 296. Industry would therefore see opportunity for action in the medium term, and in the light of the performance of the Code, to agree on a consensual basis between Member States and the Community institutions both a new understanding of Art 296 as it applies to defence procurement and a Defence Directive on the lines described in Section II.2 of the Green Paper, operating outside the area covered by the Art 296 exemption as then defined.

(7) We consider this proposal to offer a pragmatic, sequential and coherent way forward that can secure the principal economic and military benefits from improved defence procurement procedures in a timely and comprehensive manner.

RESPONSE TO THE EUROPEAN COMMISSION'S GREEN PAPER ON DEFENCE PROCUREMENT

(1) ASD welcomes the initiative taken by the Commission in publishing this Green Paper, making a case for a new approach to regulating defence procurement in the European Union. We were pleased to work with the Commission in the industry working party during the preparatory stage of the Green Paper.

(2) Our commentary and response below broadly follow the structure of the Green Paper. We conclude with a proposal for action. Our answers to the specific questions posed in the Paper are given in Annex A.

Introduction

(3) The creation of a European Defence Equipment Market (EDEM) is an overarching objective which industry fully shares. We agree that this will strengthen the competitiveness of the European industry and believe that it would offer wider economic benefits and support a more efficient build-up of military capabilities.

(4) We have welcomed, and have indeed over many years pressed for, the creation of the European Defence Agency. All its missions are important, and we attach very high importance to its task to create a well functioning and efficient European Defence Equipment Market.

I. Reasons for Action in the Field of Defence Procurement

I.1 Fragmented Defence Markets

We share the Green Paper's analysis in this Section.

We would, however, note the following additional points:

a) (5) The market and the industrial and technology base it supports are not uniform across the Union. If the average of EU Member States' equipment procurement spending as a proportion of their total defence expenditures is in the order of 20%, the corresponding figure for the highest spending Member States is around 50%. Furthermore, over 75% of defence procurement expenditure in the EU, and over 90% of defence research and development expenditure, is concentrated in the six Member State signatories of the Framework Agreement (Letter of Intent) Treaty – DE, ES, FR, IT, SE, UK. Despite these disparities, European defence industries are able to produce advanced technology and competitive products as demonstrated by several export successes.

b) (6) The European Defence Market suffers from a lack of reciprocity with the US Defence Market. The sheer size of the US market creates economies of scale and supports much higher levels of equipment spend and of R&T, which is critical to the long term. Moreover, in general, the practical barriers to entry for EU-owned and controlled firms seeking to enter the US market are structurally much higher than for US-owned and controlled firms seeking to sell their goods to countries within the EU.

c) (7) Inter-governmental collaborative defence programmes have been in existence for forty years. While the management of these programmes may not have been fully optimal in an economic sense, they have served to reduce the fragmentation of demand and have generally delivered to the participant governments lower prices than could have been obtained (or even afforded) nationally. In many cases, they have also enabled Europe to maintain and develop indigenous technological capabilities and products which otherwise would have been bought 'off the shelf' from elsewhere. It is important to note that these benefits are at root the result of political will, rather than the product of market mechanisms or regulation; and that, both now and for a foreseeable future, it is inter-governmental co-operation that can deliver these benefits.

d) (8) Fragmented demand has other consequences on the industrial supply base. It is notable that defence industrial consolidation across national borders in Europe has occurred primarily in the air, electronics and guided weapons sectors which have pioneered co-operative activity; it has been less in evidence in the land and naval sectors where political constraints and lack of market incentives have made the restructuring process more difficult to engage.

e) (9) Fragmented demand carries costs for industry. Responding separately to near-identical requirements in different Member States is costly, and impacts European industry competitiveness not only in Europe, but also when competing for third countries' requirements. However, that is a fact of a market that is composed of nation states who generally procure defence equipment on an individual basis; market regulation alone does not, of itself, change that fact.

I.2 Specific Features of Defence Markets

Again, we share the Green Paper's observations and would add the following points:

f) (10) The inter-governmental Framework Agreement, embodied in a Treaty between the six "LOI nations" identified above, addressed on a legally binding basis a number of the issues touched upon in the Green Paper. While the Agreement seeks expressly to facilitate the restructuring and operation of the European Defence Industry, a number of its provisions are of direct relevance to the market – in particular those concerning security of supply, the transmission of classified information between governments and industry, and treatment of commercially sensitive information. Additionally the Agreement makes provisions for the management of export licences. While industry does not consider the Framework Agreement to offer comprehensive solutions to these matters, and its application is in any case limited to six Member

States only, it highlights the fact that these actual or potential restraints to cross-border free trade in defence equipment and technology can only be resolved at the inter-governmental level. We note that the Council Joint Action of 5 July 2004 invites the European Defence Agency to pursue an EU-wide application of the relevant rules of the Framework Agreement.

g) (11) To the extent that Member States wish to preserve and develop competitive and indigenous industrial capability in Europe in support of ESDP, this is a national or inter-governmental matter, action on which can be orchestrated through the European Defence Agency.

h) (12) The introduction to the Green Paper makes general reference to "a set of complementary initiatives" (in addition to the regulatory framework). We would consider that the subject matter of the Framework Agreement should form part of those initiatives, and that further attention would need to be given to policies and instruments in relation to defence trade and exports, the treatment of offsets as well as national policies towards investment in high technology and knowledge-based employment. Such policies are an inherent part of defence procurement practices in national markets.

I.3 Limits to the Existing Legal Framework

(13) We note the Commission's legal analysis in Section 3.1. We query the argument that the list drawn up in 1958 is now an inappropriate reference for defining the scope of Article 296EC. We would incline to the view that, having been agreed in Council, the list is the only valid and available reference.

(14) We recognise the Green Paper's descriptions of differing national procedures and of procedures for co-operative programmes in Sections 3.2 and 3.3.

(15) Regarding the observation (3.2) on the WEAG initiative to harmonise tendering procedures, we agree that this has produced limited results. We would not, however, agree that the cause of this outcome lies only in the non-binding nature of the political agreement. WEAG had neither the organisational infrastructure nor the political visibility and authority to coax and secure voluntary enforcement. These deficiencies, along with others in the WEAG, have been recognised by Member States. We believe they can in large part be overcome through the creation of the European Defence Agency.

II Defining Action at EU level

Objectives and Priorities

(16) Industry fully shares the Commission's objective of eliminating obstacles that limit the access of European industries to Member States' defence markets. Indeed, industry considers that achieving this objective is overdue and now a matter of urgency. Time to implementation is therefore a critical factor.

(17) Industry also considers that the objective should apply to all levels of contracting – from prime contracts through sub-system contracts to component suppliers – and hence throughout the industrial supply chain. Where regulatory instruments available to public authorities will not suffice to attain this objective, industry is willing and has previously expressed its position to complement the action by a "supply chain Code of Practice"[1]. Furthermore, it should apply across the full range of defence supply (with certain exceptions only for equipment of the highest military sensitivity). The objective therefore relates to both that area of the market which is subject to the Article 296 exemption and that which is not. However, we would draw attention to the fact that the high value part of the defence market falls inside the area which, under any reasonable definition of the scope of Art 296, is covered by the exemption. We therefore consider that this is the priority area for action.

(18) The ability to guarantee security of supply is an important condition for opening national Member State defence markets. A voluntarist industrial policy, strongly supported by all Member States, aiming at reinforcing the European Defence Technological and Industrial Base (DTIB) is therefore a correlated requirement.

(19) We do, of course, recognise that there is a boundary issue in relation to the Art 296 exemption. While it is not for industry to enter a jurisdictional debate to which it is not party, we would stress our concern that resolution of jurisdictional issues should be achieved in a non-conflictual way. New uncertainty about jurisdiction, or an environment in which jurisdiction is developed by reference to the Court, would be damaging to efforts to improve market mechanisms in the area covered by the Art 296 exemption.

An Interpretative Communication

(20) We are, therefore, highly sceptical as to the value and appropriateness of an Interpretative Communication. In an environment where:

- Member States are accorded certain rights under the Treaty;
- Council has agreed a list of military equipments covered by Art 296;
- case law is sparse in relation to the issue of defence procurement itself (as opposed to ancillary issues); and
- a Joint Action has just created the European Defence Agency with a mandate to create a competitive EDEM,

we are concerned that focussing on a legalistic interpretation of the boundary would prove conflictual and ultimately unproductive. As described below, we believe that there is a better and progressive approach to resolving the boundary issue while at the same time improving market procedures inter-governmentally in the area covered by the Art 296 exemption. In so doing, action would concentrate on the high value end of the market and the fundamental

[1] EDIG proposed Code of Practice for Supply Chain, October 2002, produced for POLARM, and the UK's Code of Practice (Annex B to MOD/Industry Commercial Policy Group Code of Practice, [http://www.ams.mod.uk/ams/content/docs/toolkit/buttons/modind/cpg/guidelines/no5_defence_acquisition.htm] are relevant examples.

issues that affect the European Defence Technological and Industrial Base (DTIB) and the longer term prosecution of ESDP.

Demand-side Consolidation

(21) The Green Paper focuses on the issue of market regulation, and hence on mechanisms to achieve a proper interaction of supply and demand. But while this can remove fragmentation of procedure, it does not reduce fragmentation of demand. Yet, as suggested at point (c) above, harmonisation and consolidation of demand is a major driver of market efficiency. Open publication of invitations to tender by individual Member States and transparent procedures would be highly beneficial, but they can be substantially more beneficial if they reflect the demand of Member States acting in concert, so enlarging the volume of demand with all the associated economic and operational benefits.

This can only be catalysed in an inter-governmental forum. This task would fall naturally to the European Defence Agency.

An Inter-Governmental Approach

(22) Although the Green Paper is not explicit on the point, we understand and assume that, in the discussion of a possible new Defence Directive, it is not the Commission's intention that this should apply to the area covered by the Art 296 exemption (however that may be defined). Yet, as argued above, this is the priority area for action; and, again, the European Defence Agency is the proper forum to take forward the EDEM agenda.

(23) Industry therefore sees great potential in the Agency acting both to better harness demand and to develop and supervise new rules to deliver best practice in procurement procedures and behaviours in Member States. Industry would favour the introduction of a voluntary inter-governmental Code of Conduct to achieve these ends, and believes that, with goodwill from Member States and the Commission, this could be put in place in a relatively short time frame – certainly more quickly than a new Directive.

(24) We consider that the experience of the Code of Conduct on Arms Exports is instructive. This Code is not binding upon Member States and so has no legal force. But, by having Member States sign up to its principles and obligations, with arrangements for reporting on performance under the supervision of the Council, and other reporting arrangements put in place nationally by Member States, the Code has achieved a new discipline at European level in an area of genuine political and economic sensitivity.

(25) We consider that comparable success could be achieved by assigning to the European Defence Agency, acting under the authority of Defence Ministers and the Council, responsibility for :

- drafting a Code of Conduct for EDEM, in those areas covered by the Art 296 exemption, that reflect best market practice, benefiting as appropriate from the Commission's experience in market regulation
- supervising its implementation – desirably including rights to interrogate Member States about their performance against the Code and rights to report on performance and compliance
- initiating and supervising active procedures that would assist in the co-ordination of Member States' demand for common or near-common equipments and services

(26) The EDEM Code of Conduct should lay down principles and requirements for implementation by participating Member States in areas such as :

- policy concerning access to and publication of information
- policy in regard to cross-border competition at prime and sub-contract levels
- nature and general principles of technical standards called for in a competitive tender
- handling of secrecy / classification / confidentiality issues
- criteria for contractor eligibility and selection (including security of supply)
- the need for a level playing field and the avoidance of abusive state supports that could distort competition
- award procedures

Scope

(27) We recognise that this approach still begs the question as to the scope of the Art 296 exemption. In our view, if Member States endorse an approach on these lines, the issue of scope becomes secondary in the near term to the main thrust of the policy to introduce better defence procurement practice right across the board. The public policy objectives of greater transparency and openness in procedures, and of opportunity and competitiveness for the industrial base, would be met.

(28) To ensure early implementation of a Code of Conduct, it would in our view be impractical and unfruitful to enter the complex and lengthy process of redefining, on a consensual basis, the ambit of the Article 296 exemption. Such process is not required to implement a Code of Conduct which could operate for the time being in that area of the market that is treated *de facto* as falling within the Art 296 exemption.

A Defence Directive

(29) All this said, we recognise the potential benefits, as described in Section II.2.1 (Objectives) of the Green Paper, of introducing a Directive to regulate those defence goods and services which may be finally judged not to fall within the exemption. We further recognise that a Directive would have legally binding force that is not available in a Code of Conduct, and that it would be open to Member States to use its provisions if they so wished for procurement of articles falling within Art 296.

(30) The problem to be solved is one of timing. The prerequisites for introducing a Directive are substantial, including definition in binding legal terms of its scope of application with respect to both the Article 296 exemption and the EU Public Procurement Directive, an impact assessment, and agreement on the handling of a set of highly complex policy issues (eg security of supply; a regime for industrial offsets). This imposes a substantial time penalty. We do not consider that the benefits accruing from a Directive applicable outside the area of the Art 296 exemption are sufficient or timely enough to justify its being the first priority for public policy. However, recognising these time factors and the benefit that a legally enforceable regime could bring in the area not covered by the Art 296 exemption, we would support the initiation of work to prepare the ground for introduction of a Defence Directive, providing this does not distract from the priority task of putting in place an Inter-governmental Code of Conduct.

(31) We would observe also that a number of the specific issues relating to defence markets will be common to procurements falling both within and outside the exemption. There would clearly be benefit in developing a common intellectual approach to these issues between the Commission, the Agency and Member States for both regimes.

III Conclusions and Proposal

(32) Industry is fully supportive of introducing common disciplines and best practice in Member States' defence procurement activities, which also need to take into account the specific features of defence markets identified in the Green Paper. Industry is also keen to encourage greater consolidation of demand between Member States, such that suppliers and customers can each secure scale benefits.

(33) For this and many other reasons, we have welcomed the creation of the European Defence Agency; and we have welcomed its missions to develop a competitive EDEM. Within the area of the Art 296 exemption, the Agency, working inter-governmentally, is the only Community institution that is able to address both the introduction of new market disciplines and to catalyse a consolidation of demand. At the same time, it can pursue its mission to strengthen Europe's Defence Technology and Industrial Base in order to master at European level strategic key technologies.

(34) While industry recognises that there are difficulties of interpretation of Art 296 in the field of defence procurement, it does not consider their resolution needs to be a near-term priority for public policy - especially if the process of re-interpretation distracts from what should be the primary objective of policy, which is the early creation of a competitive EDEM in the high value and high technology part of the market that lives within the Art 296 exemption. Indeed, under both the Interpretative Communication and Directive proposals, the possible tensions and disagreements that might arise from an attempt now to re-interpret Art 296 could be seriously damaging to this objective.

(35) We have given serious consideration to the proposal for a Defence Directive. Our conclusions are, first, that a Defence Directive is not sufficient to the tasks of regulating the

whole market and of catalysing greater consolidation of demand; and second, that the time required for its preparation is well beyond that which industry would wish to see in the context of the wider market; but, third, that a Directive would have a place in the structure of market regulation in the medium term and that work on its preparation could usefully now be started.

(36) The sequencing and interaction of new measures to improve the performance of EU defence markets is critical to success and will require a pragmatic approach. Our recommendation is that the focus of near term efforts should be devoted to the preparation and implementation of a EDEM Code of Conduct, under European Defence Agency supervision, benefiting as appropriate from the Commission's experience in market regulation, covering the *de facto* Art 296 exemption area of the market. In view of its voluntary and non-legally binding nature, we anticipate that this can be prepared much more quickly than a Directive. We consider that this approach should produce the greatest material benefit in the shortest available timeframe.

(37) However, we recognise that while a Code's coverage of defence markets can be wide, it does not offer a complete solution in two important respects: it is not legally binding and it does not clarify the interpretation of Art 296. Industry would therefore see opportunity for action in the medium term, and in the light of the performance of the Code, to agree on a consensual basis between Member States and the Community institutions both a new understanding of Art 296 as it applies to defence procurement and a Defence Directive on the lines described in Section II.2 of the Green Paper.

(38) Finally, we note that it would also be open to Member States in the fullness of time to convert the Code into a legally binding inter-governmental agreement, operating within a redefined *de jure* Art 296 exemption

(39) We consider this proposal to offer a pragmatic, sequential and coherent way forward that can secure the principal economic and military benefits from improved defence procurement procedures in a timely and comprehensive manner.

21st January 2005

ANNEX A

Green Paper on Defence Procurement

These answers to the specific questions raised in the Green Paper should be read in conjunction with ASD's "Response to the European Commission's Green Paper on Defence Procurement", to which they are appended.

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented (i.e. via an interpretative communication from the Commission)

As explained in our Response, we are highly sceptical as to the value and appropriateness of an Interpretative Communication.

- An Interpretative Communication is adopted by the Commission without the involvement of any other body within the EU, in particular Member States and the newly created European Defence Agency.
- An Interpretative Communication is bound by existing texts and case law, which is sparse in relation to defence procurement. It would not be able to address properly the dynamics of the new market and industrial environment heralded by the creation of the Agency.
- Furthermore, apart from the possible derogation provided for under article 296, the existing public procurement framework is not suited to the specificities of the defence market.
- In conclusion, under present circumstances, an Interpretative Communication would be neither useful nor sufficient; nor would it be timely. Any issues concerning the scope of application of the Art 296 exemption should be addressed by all interested parties in the context of a wider policy approach to defence markets, as recommended in our Response.

2. Are there other aspects of the Community system in question that should be clarified?

Not by an Interpretative Communication at this stage.

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

The rules of existing directives are unsuited to the characteristics of defence contracts since they do not provide for, *inter alia*, the need to maintain a permanent security of supply and to procure technical superiority for our armed forces. Nor do they offer Member States the means to take the necessary measures in order to strengthen a European DTIB, which should master critical identified key technologies, to secure permanent access, when required, to state of the art technical-operational capabilities and technologies.

Furthermore, the specificities of the market, discussed in Part 2 of the Green Paper, are such that the customer/supplier relationship in this domain is not the same as that in a purely civil single market, the customer(s) being, at the same time, the regulator.
Additionally, the corresponding remedy directive would need to be revisited to take into account the specificities of the Defence market.

4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technical base of European defence?

Our Response recognises that a Directive could be a useful instrument but, for the reasons set out in the Response (see Section "A Defence Directive" on p.6) and because the high technology and defence-specific market essentially falls within the Art 296 exemption, a Directive would have little impact on the industrial and technical base for European defence. It would also have little direct impact on fragmentation of demand. Our Response has therefore argued that priority should be given to implementing a voluntary Code of Conduct under the supervision of the Agency but benefiting from the Commission's experience as appropriate. In particular, we consider it important to develop a common intellectual framework on issues specific to defence markets. The preparation and implementation of a Code should in itself facilitate the process of developing a specific directive.

5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

Much of the work of the EDA will fall within the Art 296 exemption, for which it will need to develop its own rules very soon: It cannot afford to wait for the implementation of a specific directive. If in due course a directive is introduced, the rules governing its use would naturally apply to procurements falling outside the exemption by the Agency and other European defence procurement bodies.

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

Due to the complexity of certain defence programmes, flexibility in the use of the award procedures is welcome and competitive dialogue or negotiated procedures are the most appropriate solutions. But it is mandatory that the negotiation process be strictly governed, in order to avoid endless "Best And Final Offer" requests.
Negotiated procedure without prior publication should be allowed in a certain number of situations, such as:

- emergency requirements
- research, development and procurement in the most highly classified (black) technologies that need to be protected

Additionally and non-exhaustively, non-publication may be allowed in certain other closely specified circumstances relating to:

- Utilisation of specific large private sector investments
- special facilities to be used
- follow-on equipment orders where a change of supplier would cause non-compliance with the original equipments (or compliance at an excessive cost of use or maintenance)
- need to use a specific know-how (IPRs) ,

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list ? If so , what? A combination of a definition and a list?

The scope of application for a specific directive would fall between, on one hand, procurements falling within the scope of the Art 296 exemption and, on the other, procurements covered by standard public procurement directives. Industry is not a party to these definitions, but we consider that, schematically, a body of proof, combining several criteria, is relevant to defining the field of application of defence-specific rules and regulations:

- a general definition, describing the main specificities of defence equipment and services;
- existing lists (up-dated) such as the Munitions list or Wassenaar Arrangement list, or national ones;
- end-use (military purpose)

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

Generally, we consider this issue needs to be addressed by the Member States and institutions concerned by Art 296. More specifically, European co-operative programmes run under intergovernmental structures may need to be the subject of a derogation.

9. Publication: do you think a centralized publication system would be appropriate, and, if so, how should it function?

Publication under a directive could certainly help to foster intra-European competition. It should be dedicated to defence activities, and offer a solution to the translation problems that potential bidders are confronted with when they try to have access to the national publication sites. (Centralized publication would also be a key element of a Code of Conduct as described in our Response).

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of

the defence sector? Confidentiality, security of supply, etc? And how should they be defined?

Looking across the totality of Defence markets (within and without Art. 296), various features of the defence sector justify the use of specific criteria, firstly for eligibility and secondly for selection.

For eligibility we can foresee:

- capability to manage confidential information and to handle classified materials
- capability to work with some specific technical standards and/or technologies
- ownership and/or control of IPRs
- etc.

For selection:

- contribution to the strengthening of European DTIB , especially the mastering by Europe of critical identified key technologies
- the type of technology to be used,
- appropriate security of supply for the product or technology concerned for national needs and exports
- etc.

11. How do you think offset practices should be handled?

Again looking across the totality of the defence market, this very complex subject cannot be addressed without reference to the openness of national markets outside the EU and to international practice where, generally, direct or indirect offset is required or encouraged by customer governments. While this practice continues, a number of factors need to be taken into account, among which:

- It would be inequitable for EU customer governments not to require suppliers from non-EU countries themselves practising offset to provide appropriate local content in the execution of defence contracts. In the context of a Directive, it would seem impracticable on first analysis to establish one offset regime for competitive procurements where non-EU companies were involved and another regime for exclusively intra-European competition. Consequently, therefore, a single regime permitting offset would need to be established. (In any event, a system which permitted offset proposals from non-EU suppliers but disallowed them from EU suppliers would distort competition and disadvantage European industry.)

- Sophisticated defence goods, which as discussed in our Response would generally be covered by the Art 296 exemption, have high technology content and high value-added. In the case of procurement from a supplier based in another EU or non-EU country, direct offset (eg through sub-contracting) is attractive to the EU customer government and hence a tool of competition for suppliers. To the extent that this maintains a competent, competitive and diversified indigenous supplier base in Europe, in particular among SMEs, this may be considered an asset, although it may in some circumstances also be a cause of over-capacity.
- Additionally, and certainly within the Art 296 exemption, military and industrial considerations relating to technology transfer may have a legitimate bearing on offset requirements.
- Different factors may apply to indirect offset practices, but these also have to be addressed in the wider international context.
- Any offset regime regulated by a Directive should provide for transparency of rules and their application.

Position Paper

Public Procurement / Defence Industry

Date
9 Dezember 2004

BDI Position Paper

on the Green Paper of the European Commission on Defence Procurement

BDI welcomes the European Commission initiative to continue the debate on the step-by-step establishment of a more transparent and open European market for defence equipment with concrete proposals for its implementation.

The Commission is right to say that efforts made in this direction so far, such as the WEAG Agreement, the establishment of OCCAR and the LoI Framework Agreement recently signed by the six largest arms-procuring Member States, have not led to a comprehensive cross-border opening up of the defence equipment market within the Union. We also share the urgency with which the Commission views the need to overcome the still existing national fragmentation through cooperation programmes, to create an internationally competitive European defence market, strengthen the European industrial and technological defence base, increase the interoperability of the armed forces, and therefore enable better use to be made of the budgets that the EU Member States provide for defence tasks.

However, we do think that the Commission proposals would result in the second step being taken before the vital first. The procurement of defence equipment, as is repeatedly emphasised in the Green Paper, has a number of special features. There is no arms "market" with free competition and numerous buyers, but a buyer structure which is defined by the monopolies of national contracting authorities. The special feature on the supply side, which is only implied in the Green Paper, is the division between private sector industries on the one hand, and state-owned or state-influenced defence industries on the other. The arms procurement is also subject to political influences through the national parliaments on contract award decisions, and through the governments on the authorisation of arms exports. The obstacles that arise through this cannot be effectively countered by the Commission proposals for an Interpretative Communication on the existing regulatory framework, especially Art. 296 EC Treaty, and/or specific directives.

In the opinion of BDI, the first step must be a political show of strength on the part of the Member States. A guiding example of the sort of action necessary could be the programme initiated in the mid 80s to open up the civil markets for the "1993 Completion of the Internal Market," in order to create a "Completion of the Internal Market for Defence Equipment." Whether it is on the basis of such a programme or in a different binding way, the necessary preconditions must be created to open up the defence equipment market for competitive contract awards. To achieve this, the absolute priority is to:

- Remove the distortions to competition between state-run or state-influenced and private sector defence companies by privatising all defence industries in the Community and separating them from any kind of staff control;

- Abolish competition distortions due to differences in export opportunities by harmonising the arms export authorisation practice of all EU Member States; this cannot be achieved through the current EU Code of Conduct on Arms Exports;
- Break down the obstacles for the exchange of all arms-related documents, components and products within the Community;
- Apply and monitor the ban on impermissible subsidies in the arms sector;
- Ban on compensation deals (juste retour, offset).

These measures can only – we repeat – be achieved through concerted political action. If the Member States are not willing to take such steps, this is a clear signal that secondary measures such as the Interpretative Communication and/or specific directives proposed by the Commission will achieve no more fundamental changes than the prior initiatives named above (WEAG, OCCAR, LoI). These fundamental changes include – both part and consequence of the political show of strength – the recognition by the Member States of the "single source" principle related to the surrender of redundant capacities, and the willingness to also purchase defence equipment directly from foreign or transnational corporations, as well as the willingness to accept changes in the ownership structures of defence companies. Here, the issue must also be clarified how companies can effectively respond if violations of a cross-border competitive award of contract arises.

Further elements that could be helpful in the establishment of a European defence market, and which could be incorporated into the suggested "Completion Programme of the Internal Market for Defence Equipment" or implemented as individual measures are for example:

- Incorporation of defence R&D in the EU Research Promotion Programs or – much more effective still – drawing up a defence research promotion program with corresponding funds;
- Call for European standards for defence equipment, also through the provision of funds;
- Establishment of a centralised publication system as already addressed in the Green Paper, for all defence contract awards planned by the Member States above a certain threshold value;
- Support of all efforts to build up the European Defence Agency into an authority that provides support in the initiation and implementation of pan-European defence projects;
- Establishment of a high-profile panel composed of representatives from the Commission, the European Parliament, the Member States and the defence industry with the aim of promoting the development of a European defence equipment market through political initiatives.

An issue which has so far not been addressed, but would be vital for an internationally competitive European defence market, is an initiative on the part of the Commission and the Member States to achieve unlimited reciprocity in opening up the markets for arms in transatlantic trade. The creation of a two-way street of free mutual competitive access to arms contracts has been discussed for years with the USA, but nothing has been achieved in this direction so far. The US arms industry, with the political support of the US Government, has made several attempts to get a foothold in the European market, some of which have been successful. But what is lacking is a corresponding sustained European advance to break down the legislative, administrative and factual barriers that are blocking the competitive opening up of the US arms market for European companies.

BDI is well aware that this position paper demands resolutions from the Member States and much commitment on the part of the Commission to leap over what are admittedly high hurdles. But we are confident that the measures we have outlined are those which the Community of EU States must finally decide upon to make the competitive European defence market a reality, and not just the stuff of interesting debates that ultimately effect no real change, a category in which we would include a debate on the scope of application of the procurement directives and Art. 296 of the EC Treaty.

In the opinion of BDI answering the list of questions does, at present, not help in achieving the goals. As long as the basic conditions have not been established the questions posed here cannot be usefully discussed.

In response to the Commission's publication on 23 September 2004 of its Green Paper on defence procurement, we are passing on to you the comments of the Belgian Security & Defence Industry (BSDI), the association of the Defence related industry in Belgium.

Introduction

Our association helped to draw up the memorandum you were sent by the European association ASD (Aerospace and Defence Industries Association of Europe) on 21 January 2005. Our association believes that a Commission Directive setting out rules applying to defence contracts would not resolve key issues such as Harmonisation of Demand, handle European Cooperation, Security of Supply and involvement of industries from small and medium sized countries (SMCs). Faced with this situation, our association fully supports the ASD's initiative proposing to start with a Code of Conduct.

However, BSDI hereby wishes to bring to the attention of the Commission and the major industrial actors, the specific characteristics of a defence related industry in a small EU Member State.

Specific characteristics and recommendations

1. The Belgian defence industry primarily consists of small and medium sized enterprises (SMEs), some of which enter into direct negotiations with ministries of defence, though most of them are second or third-level suppliers for prime contractors. Furthermore, Belgian companies cannot benefit from the knock-on effect of having a large national prime contractor unlike their counterparts in other European countries.

2. Very broad competition between European companies to join the network of prime contractors' suppliers should lead to the establishment of a basket of companies, which are more competent and more competitive. Belgian industry has restructured its industrial capacity and developed know-how that is now recognised as centres of excellence. These niches ought to be known by the major integrators so that all the EU Member States can help to meet the needs of a more open and transparent European Defence Market.
   The European preference does imply participation by all.

3. If the Belgian industry is to gain a foothold in this market, it must:

   a. Have access to information on future national procurement and co-operative programmes involving EU Member States.
      In this respect a transparent and uniform system of publishing defence procurement opportunities should be created and coordinated either by the EDA or by the Commission.

   b. Have access to future projects right from the earliest possible stage so that it can play a part in the definition of the specifications phase of the projects.

   c. Have simple, but efficient procedures for ensuring the intra-community transits and transfers of articles and related services delivered to European main integrators. A solution to these problems has been sought for nearly 10 years by UNICE and the members of the Letter of Intent (LOI) group.

4. Our industry recognises the key role played by the six LOI countries bearing in mind their defence budget and the large amount of money they invest in Research and Development.
   The inclusion of our Defence related industry in the supply chain of the major players and/or integrators remains a concern. In this connection, we believe that the supply chain Code of Practice, proposed by EDIG in October 2002, and examined by the

POLARM working group, ought to be 'revisited' and incorporated into the Code of Conduct proposed by ASD.

5. Industrial participation – we prefer this term to 'offset' – has played a significant role in maintaining and developing Belgian industry's technological know-how. It constitutes a crucial lever for the introduction of our Belgian companies in the European Defence Business and particularly in co-operative programmes. We believe this policy must continue to prevail until such time as a genuine, effective European Defence Equipment Market has been set up within the Union. That tool would enable to maintain, in Europe, diversified, competent and competitive suppliers, particularly companies situated in small and medium sized countries.

6. The legislation on defence market used by the US Department of Defence includes the "Small Business Act ". This law governs the participation of American SMEs in defence procurement. Today, the implementation of that policy is still proving extremely successful. The Commission should draw some inspiration from that efficient tool to set up a flexible arrangement that could be benefit to all SMEs in Europe.

Re: **CEN response to the EC Green Paper on Defence Procurement**

Dear Sir or Madam,

We noted with interest the document COM (2004) 608 final dated 2004-07-19. We see it as an important initiative on the way to the realisation of the European Defence Equipment Market.

CEN is convinced that Standardization can contribute in supporting the process and rules for awarding defence contracts in Europe and the opening of this Market. Standardization was mentioned as one of the initiatives announced in the Communication “Towards a European Union defence equipment Policy” (March 2003).

At this stage, CEN does not wish to comment on details of the paper but we wish to highlight CEN’s contribution to solve one of the mentioned difficulties, namely that “technical specifications are often very detailed and based on widely differing standards” *(see item 3.2 on page 8 of the COM)*.

CEN has established a technical-strategic forum on “Standardisation for Defence Procurement” in the form of a Working Group of the Technical Board (CEN/BT/WG 125). In BT/WG 125 we enjoy a wide membership: WEAG (Western European Armaments Group) and Defence Ministries (MoD), CEN National Members, NATO Standardisation Agency, ASD (Industry), CENELEC and ETSI.

Experts meet in the CEN Workshop 10 (WS 10) for preparing, with financial support from the Commission (DG ENTR), an Agreement on a “Standardisation for Defence Procurement - European Handbook”. This CEN Workshop that started in May 2002, gathers 110 experts from 10 different countries, with a representation of 60% industry - 40% MoD. The “Handbook” (to be first delivered in 2005) will recommend, extracted from relevant national, European, NATO or world wide standards, those standards which are considered most useful.

Further can be mentioned the CEN Workshop on “Network Enabled Abilities”, which will provide both military and civilian applications.

We would like to reiterate that representatives of interested DGs of the Commission are most welcome to participate in the meetings of these bodies.

Yours sincerely,

G. MICHAUD	J-M. BARDOT	R. RUSSELL
CEN	EADS	BAE Systems
Acting Secretary General	Chairman CEN WS 10	Chairman CEN BT/WG 125

Subject: Consultation on EC Green Paper on Defence Procurement

The Confederation of Danish Industries, DI, and the Danish Defence & Aerospace Industries Association in Denmark, FAD, established under the DI, appreciate the initiative of the European Commission to further the establishment of a European Defence Equipment Market highlighting the specific features of defence procurement and proposing mechanisms to enhance the effort. We also appreciate the opportunity for interested parties to comment on the Green Paper and the proposed way forward.

We anticipate that the European Commission will receive numerous comments and much additional information during the consultation process, among others from the UNICE, Union of Industrial and Employers' Confederation of Europe. We support the draft version of UNICE comments, which has been made available to us in advance.

Thus we choose not to elaborate on the in depth information already included in the Green paper, but we should like to add comments that we find of particular importance from a Danish standpoint.

Several attempts have been initiated over time to harmonise defence equipment requirements, as yet with little progress, the processes still being a national prerogative. As long as nations within the community maintain sovereignty in safeguarding national interests, military as well as industrial, initiatives to change become mainly theoretical efforts.

The restructuring and consolidation of the European defence and aerospace industry has progressed fairly rapidly primarily at main contractor level within the past decade with a view to limiting duplication and enhancing the competitiveness of the European defence technological industrial base. These efforts have been mainly market driven and not necessarily the result of political will.

Still, the driving mechanisms for the defence markets are the customer requirements, i.e. the defence equipment requirements of the national armed forces, as yet on a national basis. The defence equipment procurement procedures for each nation in the Community differ greatly, including the funding mechanisms for research and technology development and the national focus on maintaining defence industrial capabilities in country. Security of supply is another feature adding to the specificities of the defence market.

The focus of the Green Paper seems to be on defence procurements that are not covered by Article 296 EC, in which case Community rules on public procurement apply.

In order to achieve progress and efficiency in the opening of the defence equipment market and full and open competition it will be necessary to take all contracts for defence equipment into consideration, i.e. contracts not covered by Article 296 EC, contracts that fall under the Article 296 and even contracts covered by the exemption from Article 296. This effectively means that Member States will have to commit to the process by abolishing national exemptions of Community rules, i.e. abolishing the Article 296 EC of the Treaty.

Additionally competition at all levels in the supply chain should be ensured, i.e. at prime as well as at subcontracting level. One single Community instrument may not be sufficient to achieve this goal.

If all issues within the area of defence equipment procurements are not included in the process of opening the market for defence equipment any effort including the proposed Community instruments will only be of a limited and provisional nature.

The same applies concerning the implementation of any instrument that is not legally binding. Any measure on a non binding character, i.e. an interpretative document or a Code of Conduct, may contribute to converging the behaviour of the nations, but is not likely to lead to true and open competition for all defence contracts at all levels. As long as recourse to exemptions under Article 296 concerning security of supply and maintenance of national competencies prevail an efficient European Defence Equipment Market will not become a reality.

The creation of a European Defence Equipment Market is not only dependant on opening to competition but also on harmonising military requirements and procurement schedules in order to achieve the economic efficiency and benefits from larger production volumes. It is obvious that the process calls for commitment from Member States and political will and power and thus will be a lengthy process.

In the short term various measures may be proposed to create greater transparency concerning defence equipment procurements. But there is a risk that such efforts may diverge attention from the real issues, i.e. the long term goals of abolishing Article 296 and the opening of the national markets on a reciprocal basis.

The above comments are in essence a response to the various questions raised by the Commission under the consultation process. One question remains that require specific attention, i.e. the handling of offset practices.

Some might be tempted to exercise efforts by introducing changes on some of the areas that are specific to the defence sector in order to show some progress in the short term. One such area might be proposing abolishing Member States' demand for offset in connection with defence equipment procurements. This would, however, effectively leave Member States without large defence contractors in the position that large investments/tax payers money is spent on defence procurements without the benefits to the national economy of having the national industry become involved in the international defence industry cooperation where offset agreements may serve as an entry as long as open competition is not introduced.

← Concordu PB

The offset issue cannot be addressed in isolation from the entire defence equipment process. Member States apply different guidelines concerning offset agreements or Industrial Cooperation Agreements, and offset is often considered an obstacle that may lead to duplication and inefficiencies. If handled in a professional manner offset agreements or Industrial Cooperation Agreements serve as a mechanism to involve small and medium size enterprises, SMEs, in the supply chain. SMEs in the defence related area represent innovative, flexible, cost efficient and competitive assets in the supply chain, most often offering outstanding and competitive solutions in high technology niche areas. The nature of SMEs, however, necessitates cooperation with the large defence contractors, and as long as defence procurements are not open to competition offset agreements or Industrial Cooperation Agreements may serve the purpose of an entry into the defence cooperation.

The smaller nations of the Community consider offset agreements or Industrial Cooperation Agreements of utmost importance under the present circumstances in order to achieve balance and to maintain some development and production capabilities in country as long as defence equipment procurements are not open to competition at all levels.

Referring to the above comments concerning the introduction of Community instruments for defence equipment procurements the majority of

SMEs would not benefit from non binding instruments, if prime contractors do not open up to competition.

Lastly a next step in considerations concerning the opening of the defence equipment market will be to include discussions on reciprocity in the Transatlantic defence cooperation and access to the US defence equipment market. This subject is not within the scope of the European Commission's Green Paper on Defence Procurement, but certainly a subject of much attention within the European defence industry.

We support the continued efforts in creating transparency and competition in defence equipment procurements and are available for further comments in the future.

Yours faithfully,

Jørgen K. Hansen
Deputy Director General, DI

Ena Bjerregaard
Director, Defence & Aerospace Industries
Association in Denmark, FAD

CONSULTATION ON THE
EUROPEAN GREEN PAPER ON
DEFENCE PROCUREMENT

INPUT BY THE DEFENCE MANUFACTURERS ASSOCIATION (DMA)
OF THE UNITED KINGDOM

JANUARY 2005

INTRODUCTION

The DMA welcomes consultation on the European Commission's Green Paper on Defence Procurement. The DMA represents some 420 companies in the UK Defence Industry. Its membership ranges from prime contractors to SMEs, at all levels in the defence supply chain in the UK, and includes manufacturers and service providers active in air, land and maritime defence environments. All members are UK based, but not necessarily UK owned. The DMA is a member of ASD.

THE UK DEFENCE INDUSTRY

The UK Defence Industry is, arguably, the largest in Europe and certainly amongst the most efficient. It is wholly privately owned and includes large manufacturing and service sectors. Some 60% of its business is with the UK MoD and 40% with export customers globally. The export figure gives the UK Industry an annual average of 20% to 25% available market share (excluding NATO), which is certainly the largest of any EU nation. It benefits from the fact the UK MoD devotes a larger proportion of its overall Defence Budget to procurement than most of its European partners.

The Industry has strong links with some of its EU partner Industries through collaborative projects and industrial mergers and acquisitions. It maintains equally strong links with US Industry, reinforced by the reality of a greater degree of defence research, peacetime military and joint operational cooperation between the UK and the US than with its EU partners. Further, whilst, as the Green Paper notes, the US defense market is hard to penetrate, the UK does secure a 50% share of what the US does import. Excluding its involvement in collaborative projects, the UK Defence Industry exports more goods and services to the US than to Europe.

In our view the UK already has the most open defence market in Europe. Open, international, competitive procurement is the main instrument of UK MoD defence acquisition policy. All opportunities are widely advertised. "Value for money" is the key criteria in procurement decisions and processes are relatively transparent. The MoD also makes considerable use of innovative procurement techniques such as Private Finance Initiatives (PFI), Leasing, Public Private Partnerships (PPP) and, increasingly, is outsourcing support activities to Industry, even on operations.

All these factors have led to significant flexibility in and globalisation of the UK Industry. Thales of France has become the second largest defence contractor in the UK, largely through acquisitions. European joint venture defence contractors (EADS, MBDA, AgustaWestland, etc) have a large UK presence. US major primes (Lockheed Martin, Boeing, Raytheon, Halliburton, etc) are also strongly established in the UK – largely by inward investment rather than acquisition. UK companies invest heavily in the US. UK owned BAE Systems is the fourth largest defence contractor in the US. The UK is a large importer of US defence equipment, but its Industry supply chain benefits significantly from the offset opportunities that are thus created. All the UK's incoming defence offset arrangements must be defence related and UK offset thresholds are only £10m for US companies compared to a much more favourable £50m for French and German companies. These factors help the UK to penetrate the US market.

REACTIONS TO THE GREEN PAPER

It follows from the above that the DMA welcomes the Commission's wish, as expressed in the Green Paper, to improve the transparency and openness of defence procurement in the European Union. We believe that the UK's MoD is already well advanced in implementing the procurement arrangements that the Commission advocates. The current competitiveness of the UK Industry suggests that this is, in large part, due to these arrangements. The competitiveness of Defence Industries, EU wide, could therefore benefit from them being more widely applied. Certainly, UK Industry believes it would benefit from a "levelling of the playing field" in what it sees as an unbalanced European market at present. It would welcome reciprocal levels of access.

A particular concern for the UK, and, presumably the Commission, is that any changes that are implemented do not jeopardise existing links between the UK and US Defense Industries. If defence market access within the EU is to be widened then it must be made available to all EU based and registered companies irrespective of their ultimate ownership. For the UK particularly, this must include those that are US owned.

PROPOSED ACTIONS

Clarification of the existing legal frame work would be useful though would probably, of itself, be insufficient to alter the behaviour of all States in the practical implementation of their procurement policies.

A Directive, would be more effective, however, we recognise that it is likely to be more difficult to achieve and secure agreement upon in the short term.

We believe it is reasonable for national Governments to take into account issues related to confidentiality, security of supply and requirements specific to the needs of their own Armed Forces, their size, operational doctrine, structures, levels of training, etc, when making acquisitions. UK Industry is comfortable with this so long as it is applied reasonably, is fair, open and such influences are made clear at the beginning of the procurement process. Thus clarification of (by means of a Communication), reinforced by a Code of Conduct related to, procurement under A296 would be appropriate. For other procurement we favour a Directive.

We offer a final comment related to privatisation. Competition decisions are more likely to be distorted when customer Governments are themselves owners, part owners or shareholders in bidding companies. There are also particular difficulties for private companies when considering cross border joint ventures, mergers or acquisitions with companies part owned by Government. The Commission should, therefore, encourage and incentivise full privatisation of the Defence Industry in Europe in whatever way it can.

SUMMARY

The DMA welcomes the Commission's initiative on EU Defence procurement. There are particular circumstances related to the UK Defence Industry arising from the UK's open market, the UK MoD's procurement policies, its wholly private and global structure and its particular relationship with the US.

We would be pleased to see an early emphasis of the current legal framework for procurement within the terms of A296, ideally supplemented by a Code of Conduct and, most importantly, increased transparency. Cover by a Directive is appropriate for all other defence procurements and would be an acceptable, long term aspiration for items covered by A296.

Antworten auf die Fragen des Grünbuches

Frage 1:

Glauben Sie, dass es nützlich/notwendig/ausreichend ist, den derzeitigen Rechtsrahmen gemäß den dargelegten Modalitäten zu erläutern?

Antwort:
Die Erläuterung des derzeitigen Rechtsrahmens ist auf keinen Fall ausreichend, da die ersatzlose Streichung des Artikels 296 unverzichtbar für die von der Kommission aufgelisteten Probleme ist. Solange jedoch die ersatzlose Streichung des Artikels 296 politisch nicht durchsetzbar ist, wäre die vorgeschlagene Erläuterung sinnvoll und notwendig.

Frage 2:

Gibt es andere Aspekte des einschlägigen Gemeinschaftsrechts, die einer Erläuterung bedürfen?

Antwort:
Wir möchten darauf hinweisen, dass unter die neue Vergaberichtlinie grundsätzlich alle Rüstungsgüter fallen, auch die des Artikels 296, der ja keine Bereichsausnahme, sondern nur in einem Einzelfall anwendbarer Rechtfertigungstatbestand ist. Nur wenn und soweit dessen Voraussetzungen gegeben sind (die Nichtanwendung der Richtlinie eine verhältnismäßige Maßnahme zum Schutz von Sicherheitsinteressen ist), sind Abweichungen von der Vergaberichtlinie zulässig. Im Übrigen sollte darauf hingewiesen werden, dass auch das primäre Gemeinschaftsrecht grundsätzlich für die Vergabe von Rüstungsgütern Anwendung findet, insbesondere auch jene, die unter Artikel 296 fallen. Das bedeutet, dass vor allem die Grundfreiheiten der Unternehmen und das Beihilferecht betroffen sind, deren Beeinträchtigung nach Artikel 296 wiederum nur im Einzelfall gerechtfertigt ist.

Frage 3:

Erscheinen Ihnen die Bestimmungen der bestehenden Richtlinien den Besonderheiten der Verteidigungsaufträge angemessen/nicht angemessen? Erläutern Sie warum.

Antwort:
„Wesentliche Sicherheitsinteressen“ für Verteidigungsaufträge innerhalb Europas sind heute aufgrund von Nato, GASP und ESVP nicht mehr begründbar und deshalb nicht angemessen. Dies gilt nicht nur für Stiefel- und Bauaufträge, sondern auch für Elektronik, Avionik und andere sicherheitsrelevante Higtech-Güter. Auch auf anderen strategischen Märkten, wie z.B. für Energie oder Wasser, gibt es schließlich „Besonderheiten“ und das Problem der „Versorgungssicherheit“, ohne dass diese Märkte deshalb von der Binnenmarktliberalisierung ausgenommen werden. Die Grundsätze des europäischen Vergaberechts lassen sich daher auch auf den Verteidigungssektor anwenden. Die bereits bestehenden und allgemein geltenden Ausnahmeklauseln für den Geheimschutz und den Schutz der nationalen Sicherheit genügen auch für den Rüstungssektor.

Frage 4:

Wäre eine spezifische Richtlinie sinnvoll/notwendig, um einen europäischen Markt für Verteidigungsgüter zu schaffen und die rüstungsindustrielle und technologische Basis Europas zu stärken?

Antwort:
Eine spezifische Richtlinie kann das Ziel, einen europäischen Markt für Verteidigungsgüter zu schaffen, nicht erreichen, solange der Artikel 296 Bestand hat. Sie wäre nur als Notbehelf sinnvoll, um den systematischen Missbrauch zu unterbinden. Sie wäre ein kleiner Schritt in die richtige Richtung. Allerdings wäre hierfür eher eine Verordnung notwendig, die jedoch bei den Mitgliedsstaaten kaum durchsetzbar scheint. Richtlinien können bei ihrer Umsetzung in nationales Recht lange verzögert werden. Dennoch würde eine eigene Richtlinie u.U. mit der bisherigen Praxis der weitgehenden Ignorierung des Gemeinschaftsrechts brechen und wäre insoweit zu begrüßen. Die Gefahr besteht allerdings darin, dass sich die Mitgliedsstaaten hier auf ein Harmonisierungsniveau einigen, das weit hinter dem im übrigen Vergaberecht zurückbleibt und auch die Vorgaben des Primärrechts in Vergessenheit geraten ließe. Zudem würden Abgrenzungsprobleme geschaffen, welche Güter unter welche Richtlinie fallen.

Frage 5:

Sollte die mögliche Richtlinie auch Beschaffung und andere Einrichtungen, wie z.B. die europäische Verteidigungsagentur, Anwendung finden?

Antwort:
Dies wäre wünschenswert. Gerade wenn man die europäische Verteidigungsagentur im Nachlass der ersten Säule der Union, also der intergouvernmentalen Zusammenarbeit verortet, muss es Ziel sein, auch die Agentur an die Standards des Gemeinschaftsrechts zu binden.

Frage 6:

Verfahren: Erscheint Ihnen das Verhandlungsverfahren mit vorheriger Bekanntmachung den Besonderheiten der Verteidigungsaufträge angemessen? In welchen Fällen sollte der Rückgriff auf Verhandlungsverfahren ohne Bekanntmachung möglich sein?

Antwort:
Eine vorherige Bekantmachung erscheint uns den Besonderheiten der Verteidigungsaufträge generell angemessen, Gründe für Ausnahmen sehen wir nicht. Regelmäßig sind Rüstungsprojekte als solche nicht geheim (sondern in parlamentarischen Gremien in aller Öffentlichkeit beschlossen), so dass Geheimschutz den Verzicht auf eine vorherige Bekanntmachung nicht rechtfertigen kann.

Frage 7:

Anwendungsbereich: Wie könnte der Anwendungsbereich am ehesten definiert werden? Eine allgemeine Definition, und wenn ja, welche? Eine neue Liste, und wenn ja, welche? Eine Kombination aus Definition und Liste?

Antwort:
Einer Definition sollte eine Liste mit beispielhaften Fällen angefügt werden. Die bestehende Liste zu Artikel 296 ist in der Weite der Formulierungen ein Gewinn gegenüber einer Definition. Eine Liste müsste also sehr viel konkreter sein, und der Druck auf die Mitgliedsstaaten, die Liste aktuell zu halten, erhöht werden. Dies könnte erreicht werden, indem man die Regel aufstellt, dass alle nicht gelisteten Güter der allgemeinen Vergaberichtlinie unterliegen. Eine Definition sollte an der speziellen Konzeption des Gutes für den militärischen Bereich anknüpfen, um Dual-Use-Güter auszuschließen. Hierbei sollten unwesentliche Veränderungen eines Dual-Use-Gutes außer Betracht bleiben.

Frage 8:

Ausnahmen: Wäre es Ihrer Meinung nach sinnvoll/notwendig, eine Kategorie von Gütern zu definieren, die nicht unter die Richtlinie fallen?

Antwort:
Es wäre sinnvoll, in Ergänzung zur Definition des Anwendungsbereiches auch Kategorien für Güter zu definieren, die nicht unter die Richtlinie fallen. Man sollte drei Güterklassen auseinanderhalten: Güter, die unter das allgemeine Vergaberecht fallen (insbesondere Dual-Use-Güter), klassische Rüstungsgüter, die unter die spezielle Richtlinie fallen, letztlich solche, die gar nicht erfasst werden sollten: Atomwaffen etwa. Wichtig wäre eine Normierung, wonach nicht gelistete/nicht unter die Definitionen fallende Güter der allgemeinen Vergaberichtlinien unterliegen.

Frage 9:

Veröffentlichung: Erscheint Ihnen ein zentrales Bekanntmachungssystem geeignet, und wenn ja, unter welchen Modalitäten?

Antwort:
Ein zentrales Bekanntmachungssystem halten wir für notwendig, um Transparenz herzustellen. Die Erfahrungen bei der IEPG sprechen jedoch auch für die Notwendigkeit einer verbindlichen Rechtsgrundlage mit Sanktionsmechanismus.

Frage 10:

Auswahlkriterien: Welche Kriterien sollten Ihrer Meinung nach neben den in den aktuellen Richtlinien vorgesehenen Kriterien berücksichtigt werden, um den Besonderheiten des Verteidigungsbereichs Rechnung zu tragen? Die Vertraulichkeit, die Versorgungssicherheit usw.? Wie sollen diese definiert werden?

Antwort:
Das Kriterium Vertraulichkeit sollte auf Ebene der Vergabeentscheidung selbst keine Rolle mehr spielen; vielmehr sollten jene Anbieter, die die Standards nicht erfüllen, bereits nicht zum Vergabeverfahren zugelassen werden. Ihre Ablehnung sollte begründungspflichtig und gerichtlich kontrollierbar sein. Die Versorgungssicherheit ist ein leistungsspezifisches Auswahlkriterium unter anderen, es sollte nicht in der Richtlinie überbetont werden, da in den meisten Fällen eine nationale Vergabe kaum sicheren Zugang zu den Gütern/Ersatzteilen verspricht als eine europäische, da erstens die Mitgliedsstaaten Rüstungsexporte untereinander zum Eigenbedarf regelmäßig nicht verhindern, zweitens durch zunehmende internationale Verflechtung sowohl auf Anbieter- als auch auf Abnehmerseite rüstungstechnologische Autarkie unvorstellbar ist.

Frage 11:

Wie sollte Ihrer Meinung nach die Praxis der Kompensationsgeschäfte behandelt werden?

Antwort:
Kompensationsgeschäfte innerhalb Europas sollten im Rüstungsbereich eben so wenig angewendet werden wie im zivilen Sektor. Für den Import von automobilen oder zivilen Hightech-Gütern werden auch keine Kompensationen gefordert. Schon jetzt sind Off-Set-Praktiken und Juste-Retour-Prinzip gemeinschaftsrechtlich bedenklich, weil die hierdurch beabsichtigte finanzielle Entlastung der Mitgliedsstaaten (bzw. der Verteidigungshaushalte) kein wesentliches Sicherheitsinteresse nach Artikel 296 der europäischen Verfassung ist.

European Commission – DG Internal Market
Consultation "Green Paper on Defence Public Procurement"
Ave de Gortenbergh C100 (01/100)
B-1049 BRUSSEL

Subject	Reference	Date
Green Paper	JJ55D1	9 March 2005

Dear Sir,

It is our pleasure to forward the position of the defence related industry in The Netherlands concerning the EU Green Paper on Defence Procurement. The defence related industry in The Netherlands welcomes the initiative of the Commission. The importance of this paper has been well understood and as member of ASD we support the response of ASD sent to you by letter of 21st January 2005. We feel, however, that the specific interest of industries in small and medium sized countries need more emphasis. Measures to create a level playing field for all companies in the supply chain have to be an integral part of new procedures.

In the Green Paper the European Commission is pointing at the still existing nationalism and protectionism. In fact, industries in the smaller countries have no free access to the defence markets in Europe, which are currently fragmented along national lines. One of the biggest hurdles to be taken by industries in the supply chain is crossing national borders. For a true European Defence Equipment Market (EDEM) it is essential to also open the possibility to include competitive companies within smaller countries in the supply chain of defence programs in Europe. Such industries should get a fair chance to link as a subcontractor with prime companies/system integrators all over Europe. The result will be that the best innovative and competitive technology and other vendor items will be included and that the client will get the lowest price for the best there is in Europe.

We believe that binding legal rules in a European Directive are needed to achieve a true EDEM. For this reason the industry in The Netherlands is in favor of a Directive as described in the Green Paper. In addition to this directive we support the proposal of ASD to initiate a Code of Conduct. However, our support to the ASD proposal for a Code of Conduct is based on the inclusion and implementation of a Code of best practice for the supply chain. The MOD/Industry policy group in the UK published such a code. It is our proposal to include the substance of this MOD/Industry paper in the Directive as well as the Code of Conduct.

EDA is probably in the best position to come forward with the Code of Conduct, including a Code of best practice for the supply chain, since they will have to operate on the defence market according European rules. For the detailed answers to your questions we refer to the ASD response. We are at your disposal for any further explanation you may wish.

Kind regards,
Association NIID

Contribution au Livre vert sur les marchés publics de la défense

Dans le domaine textile & habillement, les marchés publics concernent les entreprises qui fournissent des vêtements (uniformes, équipements de protection) pour les personnels de la Défense, les grands corps de l'Etat et les entreprises publiques (Armée, Police, Pompiers, Collectivités locales, Transports…) et représentent à eux seuls avant élargissement plus de 100 000 emplois en Europe et 5 millions d'utilisateurs dans les services civils et militaires. Les marchés publics textile dans le secteur de la Défense représentent une part significative pour laquelle toute une catégorie de produits peut être considérée comme des produits sensibles dont le savoir-faire technologique doit être protégé en Europe.

PROMPTEX est composé des Fédérations professionnelles nationales du secteur textile et habillement regroupant ainsi les industriels de « l'amont » (producteurs de matières premières : fibres, tissus…) et de « l'aval » (fournisseurs d'articles textiles confectionnés pour l'habillement et l'équipement) :

- **AESMIDE** (Asociación de Empresas Contratistas con las Administraciones Públicas de España)/ Espagne
- **APITMA** (Asociaçao Portuguesà dos Industriais Textois para os Mercados Administrativos) /Portugal
- **FEBELTEX** (Fédération du Textile Belge) /Belgique
- **FACIM** (Fédération Nationale des fabricants de fournitures administratives civiles et militaires) /France

La Commission part du constat que le niveau des échanges intra-communautaires d'équipements de défense est étonnamment faible par rapport aux acquisitions totales des Etats membres. Ce secteur présente certes des particularités par rapport aux marchés publics lato sensu, en ce sens que la confidentialité des informations militaires sensibles est vitale pour les intérêts nationaux, et donc pour les intérêts de la Communauté (article 296 TCE[1]). La Commission reconnaît dès lors que cette particularité peut être une source de contraintes au niveau de la concurrence et pour les relations entre consommateurs et fournisseurs, qui sont plus étroitement liés que d'ordinaire. Cependant, la pratique a conduit dans certains Etats à une interprétation extensive de la dérogation prévue à l'article 296 du TCE.

Les marchés défense du secteur textile et habillement doivent en principe être soumis aux règles de la directive 2004/18/CE qui doit être transposée dans les Etats membres. **Cependant, une certaine catégorie d'articles spécifiques dits de protection contre les matériels de guerre ou encore qui concerne la protection individuelle des forces armées devrait bénéficier de règles plus adéquates**. En ce sens, PROMPTEX soutient cette initiative lancée par la Commission européenne afin de construire un véritable marché de la défense et est favorable à la mise en place d'une directive dans le secteur de la défense prenant en compte les spécificités du secteur textile&habillement.

[1] *« Tout Etat membre peut prendre les mesures qu'il estime nécessaire à la protection des intérêts essentiels de sa sécurité et qui se rapportent à production ou au commerce d'armes, de munitions et de matériel de guerre. »*

1) **Estimez-vous utile/nécessaire/suffisant d'expliciter le cadre réglementaire actuel selon les modalités présentées ?**

La pratique qui découle du régime dérogatoire actuel n'a pas permis d'assurer l'objectif de la protection des intérêts essentiels de la sécurité des Etats en ce que cette pratique est devenue dans certains pays la règle.

Le recours général et non justifié aux dérogations de l'article 296 pénalise certaines entreprises européennes qui ne peuvent donc pas soumissionner dans d'autres pays européens qui recourent abusivement à cette dérogation en y incluant tous types d'articles qui devraient en principe relever des règles générales sur les marchés publics. (Cas des textiles courant) Il n'y a pas d'homogénéité des pratiques.

Certains Etats ont cependant appliqué cette possibilité de déroger, par exemple la France, en annexant au code des marchés un décret défense. (n° 2004-16 du 7 janvier 2004)

- Celui-ci prévoit en-effet de déroger aux règles sur les marchés publics pour *« les marchés de fournitures et de services qui ont pour objet la conception, l'essai, l'expérimentation, la réalisation, l'acquisition, le maintien en condition opérationnelle, l'utilisation ou la destruction des armes, munitions et matériels de guerre* »
- Ce décret n'a, à notre avis pas été assez loin car il aurait été souhaitable d'inclure dans la dérogation certains matériels propres à la protection de l'individu.

Une clarification à l'échelon européen est donc nécessaire pour définir ce qu'on entend par « *production d'armes, de munitions et de matériel de guerre ».* La catégorie matériel de guerre doit s'entendre aussi dans le sens de la protection de l'individu.

Il conviendrait, en tout état de cause, d'utiliser davantage la possibilité de dérogation offerte par cette disposition pour éviter, dans toute la mesure du possible, le recours abusif à des entreprises qui sous-traitent totalement dans des pays situés hors U.E. afin de préserver au mieux les critères essentiels tels que les délais de livraison, la sécurité des approvisionnements et la transparence de la fabrication des produits.

La possibilité de dérogation de l'article 296 TCE devrait pouvoir jouer pour les biens destinés à un usage militaire dans les conditions définies par la jurisprudence et, dans les cas où le recours à l'exception ne serait pas justifié, la directive s'appliquerait. [1]

- Une liste pourrait définir précisément ces biens.
- Une communication de la Commission pourrait rappeler les conditions d'application de la jurisprudence donnant aux pouvoirs adjudicateurs des éléments définissant la notion de protection des intérêts essentiels.

Les produits destinés aux forces armées qui ne sont pas à usage militaire, seraient couverts, par la directive marchés publics classique. (Articles textiles courants…)

[1] Une communication Commission 14 décembre 1997 proposait déjà une distinction entre 3 catégories de produits : produits à usage militaire hautement sensibles (article 296 TCE) / produits destinés aux forces armées et à usage militaire mais ne constituant pas des équipements de défense hautement sensibles (un ensemble de règles assez souples pourrait être défini) / produits destinés aux forces armées mais pas à usage militaire (directive marchés publics)

2) **Y a t-il d'autres aspects du régime communautaire en question qui mériteraient d'être clarifiés ?**

Concernant cette question, les éléments qui nous semblent les plus importants pour notre secteur ont été cités à la question précédente.

3) **Les règles des directives existantes vous paraissent-elles adaptées/inadaptées aux spécificités des marchés de défense ? Précisez-pourquoi.**

Les règles des directives existantes **ne sont pas adaptées à certains types de matériel et notamment certains articles textiles qui sont des articles de protection contre les matériels de guerre tels que les *casques de protection balistique, gilets pare-balles, tenues NBC…*** requérant une technologie particulière ne devant pas être diffusée sur le net.

On peut en effet aujourd'hui imaginer les risques pour la sécurité des forces armées de rendre accessible à un autre Etat les spécifications techniques d'un produit, lui donnant ainsi la possibilité de calibrer son arme de guerre à un niveau supérieur aux standards de protection des individus. Ceci est encore plus vrai aujourd'hui au moment où les risques ont évolué et deviennent chimiques, bactériologiques…

4) **Une directive spécifique serait-elle un instrument utile/nécessaire pour mettre en place un marché européen des équipements de défense et renforcer la base industrielle et technologique européenne ?**

Une directive spécifique nous paraît utile à la mise en place d'un marché européen et ferait naître ainsi des conditions de concurrence plus efficaces, plus adaptées et plus transparentes.

Les articles cités au point 3) (*casques de protection balistique, gilets pare-balles, tenues NBC)* pourraient rentrer dans le champ d'application d'une directive spécifique au secteur de la défense si la protection des intérêts essentiels des Etats ne justifie pas le recours à la dérogation de l'article 296 TCE.

Afin de vérifier que de tels produits destinés aux forces de défense et de sécurité sont effectivement à usage militaire, les pouvoirs adjudicateurs pourraient utiliser des critères objectifs, tels que l'existence de notices spécifiques élaborées par les services techniques acheteurs, ou l'emploi exigé de matériaux dotés de qualités particulières (par exemple, résistance au feu, protection balistique, protection NBC (nucléaire-biologique-chimique) ou articles à réflectance infra-rouge spécifique.

Une telle directive ne serait en effet utile que si elle insiste sur les critères clefs pour ces marchés européens des équipements de défense : la sécurité des approvisionnements, du service après vente, des délais de livraison, et de la transparence du recours éventuel à des sous-traitants.
Dans l'hypothèse de sous-traitants situés dans des pays hors U.E, les offres devraient être, soit écartées, soit affectées de coefficients de pondération négatifs, dès lors que la sécurité des approvisionnements, des délais de livraison et du service après-vente ne sont pas garantis.

5) **Quelle est votre opinion concernant l'utilisation de cette éventuelle directive pour les acquisitions effectuées par d'autres organismes, tel que l'Agence européenne de défense ?**

Concernant cette question, la faible quantité d'articles issus des fabricants entrant dans le champ d'application ne permet pas d'apporter de réponse concrète.

6) **Procédures : la procédure négociée avec publicité préalable vous semble-t-elle être adaptée aux spécificités des marchés de défense ? Quelles sont les situations qui devraient permettre le recours à la procédure négociée sans publicité ?**

La procédure négociée avec publicité préalable nous semble effectivement être une solution adaptée à la spécificité des articles textile & habillement ainsi cités. (cf. Question 3)

L'absence de publicité devrait être limitée au cas d'urgence, de recherche, d'essai dont la diffusion technologique doit être limitée.

7) **Champ d'application : quel serait le moyen le plus approprié pour définir le champ d'application ? Une définition générique et dans ce cas laquelle ? Une utilisation combinée d'une définition et d'une liste.**

Le moyen qui nous semble le plus approprié serait d'établir une liste qui viendrait compléter une définition générique qui pourrait porter sur le cadre suivant « *les marchés publics portant sur les armes, munitions, matériels de protection et de guerre* » qui « *sont des produits destinés aux forces armées à usage militaire* ».

Un matériel qui protège l'individu a droit au même niveau d'exigences qu'un matériel offensif. « *les articles textiles de protection individuelle contre les matériels de guerre* » devrait donc présenter une garantie adaptée.

- Par exemple, les tenues de protection étanches et filtrantes aux agents toxiques de guerre et industrielle qui sont essentielles à la protection de l'individu devraient être adaptées au niveau des standards du matériel de l'agresseur.

La catégorie de matériel militaire couvert par la directive mériterait d'être plus précise que la liste de 1958 qui donne une liste des armes, munitions et matériels de guerre. Elle concerne plus spécifiquement l'armement et non les articles de protection contre les matériels de guerre.
Celle-ci mériterait d'être complétée mais sur cette base on peut estimer :

- que, s'appliquant en outre, au matériel de protection contre les agents toxiques ou radioactifs (point 7.c), il conviendrait de considérer que, le matériel de protection aux armes à feu portatives et automatiques, le matériel de conduite de tir à usage militaire (point 1 et 5), soit également pris en considération et ce au même titre que la protection NBC. Il s'agirait en l'espèce de matériel tels que : le camouflage, réflectance infra-rouge…
- qu'un éclairage technique serait utile à la définition du point 13 (« autres équipements et matériels »)

Une disposition prévoyant que la directive ne préjugerait pas de la possibilité d'invoquer l'article 296 CE sous les conditions définies par la Cour serait conforme au Traité.

8) **Exemptions : la définition d'une catégorie de biens qui seraient exclus de manière manifeste de la directive vous semble-t-elle utile/nécessaire ?**

La définition d'une catégorie de biens exclus de manière manifeste de la directive (cas du nucléaire) peut être utile et éviter ainsi toutes les interprétations auxquelles a conduit l'article 296 TCE.

9) **Publication : un système centralisé de publication vous semblerait-il approprié ? Si oui, selon quelles modalités ?**

Un système centralisé de publications serait approprié avec un bulletin de publication harmonisé. La possibilité de définir l'objet du marché en termes de performances techniques en vue d'éviter une discrimination potentielle des fournisseurs est également intéressante.

10) **Critères de sélection : quels critères vous sembleraient devoir être pris en compte en plus de ceux déjà prévus dans les directives actuelles afin de tenir compte des particularités du secteur de la défense ? La confidentialité, la sécurité des approvisionnements, ect. ? Et de quelle manière les définir ?**

Dans ce contexte, il est essentiel, pour les marchés publics passés dans le secteur de la sécurité défense, de prendre tout particulièrement en considération **des critères tels que les délais de livraison, la sécurité des approvisionnements et la transparence absolue du recours éventuel à des sous-traitants.**

Plusieurs événements nous rappellent qu'un soumissionnaire qui ferait réaliser son produit textile dans un Etat non membre de la Communauté européenne, pourrait voir ses approvisionnements cesser du jour au lendemain dans le cas où le lieu de fabrication se situerait dans un pays ennemi potentiel.

« *Bundeswehr lässt Kampfanzüge in Jugoslavien nähen* »

Il est apparu qu'en 1998 des uniformes de combat pour l'armée allemande étaient fabriqués en Serbie. En effet, une entreprise allemande, qui devait livrer l'habillement militaire à la suite d'un marché public, aurait chargé une société yougoslave de cette production en qualité de sous-traitant. Si aucune disposition légale ne fut violée en cette occasion, plusieurs voix se sont élevées, à juste titre, pour critiquer les contradictions des autorités allemandes, qui, d'une part, étaient prêtes à s'engager dans une action militaire sous l'égide de l'OTAN contre le Président serbe M. Milosevic, tout en appuyant, d'autre part, le régime de celui-ci par le versement d'importantes sommes d'argent dans le cadre de marchés publics dans un secteur aussi sensible que l'habillement des troupes militaires.

Après cet incident, le service d'approvisionnement de l'armée fédérale allemande a été invité à ne plus passer aucune commande impliquant des firmes serbes. De plus, les autorités devraient veiller, de manière plus générale, à signaler tous contrats faisant intervenir des acteurs en dehors de la zone OTAN.

(Source : Süddeutsche Zeitung, 3 mars 1998, « Serben stellen Uniformen für die Bundeswehr her »; Der Spiegel 37/1998 : « Bundeswehr- Anrüchiges Geschäft ».)

Dans ce domaine spécifique, il est donc essentiel que les pouvoirs adjudicateurs vérifient les indications des soumissionnaires concernant la fabrication des matières, et tout particulièrement le lieu de cette fabrication.

Il est conseillé de limiter les soumissionnaires à ceux déjà inscrits sur des listes officielles de fournisseurs agréés et, avant d'admettre des nouveaux candidats fournisseurs, d'exiger d'eux la fourniture d'échantillons significatifs et des indications très précises concernant les lieux de fabrication éventuels de leurs matières ainsi que la mise aux normes exigées dans les procédures d'agrément, de leur outil de production.

11) Comment considérez-vous devoir être traitée la pratique des compensations

Concernant cette question, la faible quantité d'articles issus des fabricants entrant dans le champ d'application ne permet pas d'apporter de réponse concrète.

Simmons & Simmons

Defence Procurement Green Paper

January 2005 www.simmons-simmons.com

Simmons & Simmons organised a defence sector meeting to discuss the Green Paper on 13 January 2005. In attendance were representatives from EU governments and the defence industry, including legal and financial advisors. The themes emerging from the meeting are set out in this response.

Article 296 EC Treaty

Whilst respecting the fundamental EC Treaty principles and acknowledging that the derogations from such principles are to be construed narrowly, there is a continuing conviction that Member States legitimately retain a considerable degree of competence in the area of defence procurement given the need to maintain control over highly sensitive confidential information, ensure security of supply and, in certain instances, to ensure that certain strategic skills and competencies are retained within national boundaries. There is clear support for encouraging the development of a European defence equipment market, but some doubt that a revision of the procurement regime in relation to defence, and in particular the introduction of a Directive applicable specifically to defence procurement, is likely, on its own, to make a significant contribution to that goal.

Nevertheless, there is scope for an instrument to clarify the applicability of Article 296. Greater intervention on the part of the Commission would also be helpful to prevent clear abuses of the Treaty derogations.

The Current Procurement Regime

There is a view that the current procurement Directives do not cater for some of the more complex types of defence procurement. The new public sector Directive may be insufficiently flexible in this respect. In particular, there is an increasing number of innovative "partnering" contracts which involve industry working closely with national defence ministries to achieve, adapt and improve solutions on a long-term basis. These are generally considered not suitable for award on the basis of the evaluation of bids against a defined specification.

Much of the more complex defence procurement consists of finding a solution to a given requirement. This may involve comparing quite different products and technologies. It is generally the case, therefore, that Member States need for strategic reasons to retain the ability to enter into negotiations with potential suppliers directly in order to explore how their respective technologies and products may be used to provide a solution to the security need. There is also quite legitimate concern on the part of industry in such circumstances that their valuable IP rights cannot be expropriated and shared with their competitors. The above does not of course preclude a contract being advertised, but it does suggest that the negotiated procedure must be available for this type of procurement.

New Directive

There was clear consensus that the Commission's review of defence procurement should not result in the existing rules becoming more difficult to apply, nor in their simply being supplemented with a third tier of regulation, adding complexity. This is seen as a particular risk in the event of the introduction of a new Directive dealing exclusively with defence procurement since, as the Commission acknowledges, it is unlikely to provide exhaustive answers to all the specific aspects of the defence markets. There are already difficult issues in reconciling the procurement Directives (in particular following the Telaustria judgment of the European Court of Justice) with Article 296 jurisprudence. The addition of a new legal instrument which sits alongside the procurement Directives and which applies to certain defence contracts and not others, would be likely to lead to less rather than greater clarity.

Importantly, the particular concerns of Members States in this area, and in particular security of supply and respect for their national defence interests, are inherently matters which do not permit detailed definition and are constantly evolving, which the Commission acknowledges. Attempting to define or circumscribe these issues in a Directive risks either being simply inappropriate to the sector, or at the very least inflexible to developments and changing requirements.

Given the legitimate interests that Member States have in this sphere, it is almost certainly the case that any new Directive will have to permit governments a reasonable margin of appreciation in relation to many aspects of procurement. This, and other practical obstacles which may be expected to affect the timetable for passing a new Directive mean that it cannot be seen as a timely solution to current problems.

There was support for the introduction of, at most, a non-binding measure, along the lines of a voluntary code of conduct under the auspices of the EDA, which would provide a suitable framework within which an appropriate approach to defence procurement could be refined over time. Alongside an interpretative Communication, it would permit Member States to work together to develop an appropriate framework of binding rules, respecting the principles of the Treaty and also Member States' retained authority in this area and allowing industry and government to adapt to a more open regime. It would also be more flexible in the context of a constantly evolving market place and changing requirements of Member States in this sensitive area.

F +44 (0)20 7628 2070

www.simmons-simmons.com
www.elexica.com

The code of conduct would set out principles of best practice. Such principles might include that defence contracts be advertised (whether or not in the OJEU) except where Article 296 applies (there is consensus that advertising promotes transparency and, therefore, competition) and a reporting requirement, where Member States notify the use of Article 296 to each other and the Commission (to attempt to combat systematic reliance). It might also usefully establish a basic procedure to be followed, respecting the basic EC Treaty principles of transparency and non-discrimination save in exceptional, appropriate circumstances.

A review of the operation of such a code over the next few years would be useful in informing the debate as to whether a new, specific legal instrument is in fact required and, if so, the appropriate boundaries of such a Directive.

Interpretative Communication

A Communication setting out the ECJ's jurisprudence in relation to Article 296 and thus clarifying the scope of that derogation could yield more positive results. The function of the communication should be limited to clarification, and not seek to narrow or circumscribe the reasonable application of Article 296. Member States' involvement in the preparation of such a Communication will be crucial to its utility in practice. It is also more likely to be achievable in a reasonable timeframe.

Alongside this, however, it is agreed that it is important, if the full benefit of any Communication is to be realised, for the Commission to be seen to be enforcing the strict and legitimate use of Article 296 against those Member States who have perhaps sought to rely on it as a matter of course as an exemption for all defence-related contracts. Centralised enforcement is particularly important in view of the very small number of procurement law challenges brought by disappointed bidders, particularly in the defence sector, which suggests that few contractors are prepared to risk their relationship with national defence ministries (who will be their largest customers in most cases) in any but the most flagrant cases.

Whilst it is acknowledged that any communication would not be binding as a matter of law, it is hoped that the Commission's reliance upon it in infringement proceedings against Member States before the ECJ, may result in Court endorsement of the principles it contains (which should not be controversial) and that this would thereby lend the Communication additional weight.

The contribution of Snecma and Sagem to the European Commission's Green Book on Defense procurement[1]

1 Introduction

1.1.1 Snecma and Sagem welcome the publication of the European Commission's Green Book on Defense acquisitions within the Union and between its member States. The analysis it puts forward is relevant. It recognizes the central role of public authorities, the need for sustainable procurement security, as well as the necessary confidentiality and the complexity of the programs that lead to long-term relations between public authorities and their suppliers.

1.1.2 Most of the parties involved in the debate on the Green Book have noted that public defense purchases today, in Europe, are the responsibility of the member States. They have therefore proposed various mechanisms designed to improve the coordination of government policies. According to this approach, the member States will voluntarily comply with a Code of conduct, under the aegis of the European Defense Agency.

1.1.3 Snecma and Sagem support this proposal, which is notably that of the Aerospace & Defense Industries Association of Europe (ASD) which has our full support and backing.

1.1.4 Over and above the requisite convergence between government policies, we wish to discuss in this paper the progress that can be made, in parallel, at the level of the European Union (i.e. the Council, Commission and Parliament).

2 The Defense market in Europe

2.1 A major characteristic: the monopoly of Public authorities.

2.1.1 In Europe, only public authorities are responsible for guaranteeing the safety of citizens. To do so, it has the monopoly on the use of force. Within this framework, it must prepare to apply the law (police force assignments) or to manage external crises (defense missions), and must provide itself with the means to prevail should these occur. These missions require on-going research into operational and technological superiority that prevent any third parties from jeopardizing that superiority. For the public customer, this results in monopolistic and secrecy requirements backed by specific legislation, as well as democratic control of the use that the public authorities make of that monopoly.

2.1.2 This context is therefore radically different from that of the other public markets (including product and service markets such as energy and transport). The industrial and R&T activities involved in defense are completely subordinated to the needs, budgets and command of the public authorities. In this respect, it is worth noting that the four types of circulation in the Single Market (goods, services, people and capital) are generally subject to prior explicit authorization from the public authorities.

The creation of a European defense policy and the gradual abolition of internal borders will no doubt never lead to a laissez-faire policy with regard to the circulation of defense-related goods, services, capital or personnel.

[1] Com (2004) 608 final

2.1.3 We are delighted to note that the Green Book recognizes the need for specific legislation, which cannot be a modified version of the general legislation applicable to the civilian Single Market.

2.2 Public space markets and public security markets.

2.2.1 By and large, space activities in Europe reply to the same criteria as those applicable to the defense sector: Public financing, public monopoly of the circulation of goods and services, non-disclosure of military technologies (missiles, satellites), and security of supply to prevent being subservient to the demands of non-European powers. However, there is a common executive body, which is not yet part of the Union. This body, the European Space Agency, functions within the framework of specific rules which are neither national laws (under TEU art. 296), nor European laws. The discussions on the future legislative framework for actions by the Union must take into account the needs of the European Space Agency (ESA).

2.2.2 The future security R&T program controlled by the European Commission also replies to the same criteria. Unlike the civilian section of the RDFP, it should not be a question of subsidizing industry but of carrying out a public technology acquisition policy, in the interest of our fellow-citizens. The priorities are defined by the public authorities and the circulation of the results is under their full control. There is no contradiction in the fact that the acquisition is carried out by the Commission and that the future use of the technologies acquired is the responsibility of the member States or their agencies, nor does that change anything about the principle. It will require a suitable legislative framework, at a European and not a national level, which today has yet to exist.

2.3 The logical consequence: a fragmented situation.

2.3.1 The operational and technological superiority sought by the public authorities in defense, security and space depends to a large extent on the industrial base as well as the research and testing facilities on which they can safely rely. There is no public procurement in the Defense sector which can act independently of the strategy of suppliers, their qualities, their capacity to guarantee the security of supply for the customer, the technologies they control, and former public investments in R&T.

2.3.2 In the past, the specific characteristics of Defense markets have resulted in the creation of national scientific, technological and industrial means among the leading military powers. Other States, which have not had the opportunity to acquire the financial and industrial wherewithal for such a policy, have been led to rely on allied countries to satisfy their requirements in terms of Defense systems. The result is that the range of Defense industries within Europe is fragmented, as is public demand.

2.3.3 In the field of public defense procurement, we support the findings in the Green Book concerning the consequences of the fragmentation of demand in Europe between twenty-five customers and the interior barriers to competition. The civilian markets in open competitions account for 74% of the sales turnover of Sagem and Snecma. Within the bounds of the European Union, heightened competition between European suppliers will be of benefit to public customers and to competitive industrialists.

2.3.4 The legislative framework for public defense and security procurement in Europe is also fragmented:

- Each member State has its own legislation, which is not subordinated to the legislation of the Union (exemption under TEU art. 296).
- OCCAR and ESA operate in accordance with rules which are enacted neither at the national level (under art. 296), nor at the Community level. In legal terms, these agencies are "elsewhere”.
- Dual industries are subject to Community legislation, particularly in terms of competition. The existing legislation does not take into account the specific needs of the

defense sector (confidentiality, monopoly of the customer, security of supply for the customer).

- Acquisitions by and/or on behalf of the European Defense Agency, technology acquisitions in particular, will take place within a legislative framework that is at present poorly defined. In any event, the European Financial Regulation for acquisitions such as office furniture appears inappropriate to us.
- Technology acquisitions by the Commission within the framework of the future security program will be carried out on the basis of a specific legislative environment that has yet to be constructed.

2.3.5 We find that the internal borders of the Union are, in terms of defense and security, less permeable than the external borders.

Independent of the national legislations under art. 296, in our opinion it is therefore necessary to construct a European legislative framework to take joint action (not national). This framework must be consistent, effective and legally established.

3 Three findings; three proposals:

Thirty years ago, the founders of the Europe space effort understood that member States should not be forced to give up their space policies but rather should supplement them. Common European activities have enabled us to obtain results which no State alone could have attained. The States that wished to do so, have continued to implement national space policies.

3.1.1 Similarly, we feel that the European defense policy will be built neither against, nor in place of individual State policies, but will add to them.

From this point of view, the Green Book puts forward proposals to put an end to the abuses committed by certain States under cover of article 296, proposals associated with possible outlooks for a European legislative framework specific to the defense sector. In political terms, the association is not very productive and we suggest the two action plans be disconnected, although both are equally necessary:

- To fight against manifest abusive use of article 296, without calling its principle into question, while at the same time reconciling national acquisition practices through a code of conduct, in accordance with the proposals of the ASD, which we helped draw up.
- Independently of national legislation which will continue to function under article 296, to create a Community legislative framework suitable for joint action.

3.1.2 Europe has ascertained, and it must be accepted as a political fact, that executive power, in terms of common defense, cannot (yet) be exerted by the Commission. As a matter of fact, its High Representative, until the next Constitution, is placed under the authority of the Council alone. The same applies to the European Defense Agency, which is a body of the common defense executive. At the level of the legislative initiative on the other hand, the Commission has the central role. It seems to us that the future action plan must take this into account. The Commission could take legislative initiatives, i.e. make proposals to the Council and Parliament.

3.1.3 The Single market in the civilian sector was not built with only one legislative instrument. In our opinion, it is unlikely that the future legislative framework for common industrial defense projects will consist of only one European law. We ought more to consider a series of laws. Some could be subject to quick consensus while others will require years of negotiations. The Commission would have everything to gain in calling upon the existing skills within OCCAR, EDA, ESA and the officers in charge of the security R&T program in the DG Enterprise to examine the legislative tools that these bodies will need in order to carry out their assignments with legal surety within the Union. The ASD, our industrial association, holds itself at the disposal of the public authorities to contribute towards this work.

POSITION PAPER UNICE THE VOICE OF BUSINESS IN EUROPE POSITION PAPER

30th March 2005

UNICE COMMENTS ON THE EUROPEAN COMMISSION'S GREEN PAPER ON DEFENCE PROCUREMENT

On 23rd September 2004, the European Commission adopted a Green Paper on Defence Procurement. The purpose of this Green Paper in the Commission's own words is "to develop the debate on these issues"[1].

UNICE is the leading independent organisation representing European business. We speak for more than 20 million companies, the vast majority of which are small and medium-sized. Altogether, these companies provide employment for more than 110 million people and have a total turnover of around €18,000 billion. UNICE's constituents are the major value drivers in the European economy. When commenting on this Green Paper UNICE is focusing its comments on what primarily and generally directly affects its constituents, and thus the European economy, the most.

UNICE welcomes this European Commission initiative. As the Green Paper states "Defence expenditure constitutes a large part of Member States' public spending, to the order of €160 billion for the 25 Member States, one fifth of which is used for the procurement of military equipment (acquisition plus research and development)"[2]. It is our hope that this Commission initiative will contribute positively to the establishment of a more transparent and open European market that caters to this segment of Member States' public spending.

SPECIFIC COMMENTS ON THE DETAILS OF THE GREEN PAPER

UNICE has a number of comments regarding the Commission Green Paper. The first of these comments is that European business and industry acknowledges the extreme complexity of the issue. It is not for nothing that this significant area of Member States' public spending has remained distinct from other normal procurement. The special qualities and considerations which arise when this issue is discussed guarantee complexity, warrants caution and requires prudence in approach and clarity in purpose.

With regard to the two instruments outlined, UNICE would like to state the following.

Clarification of the legal framework by a "non-legislative instrument, such as an interpretative Communication"[3] could be helpful in establishing the boundaries of *Article 296* (of the EC Treaty) exemption. Such clarification could seek to establish what constitutes 'provisions / materials / supplies' to which *Article 296* applies. It should seek to establish the boundaries of the exemption, explicitly where it was intended to apply and to close the loophole whereby 'provisions / materials / supplies' that cannot seriously be justified as "necessary for the protection of the essential interests of its security"[4] are still exempted with reference to *Article 296* in some Member States. Such an interpretative communication must be prepared by the

[1] Green Paper on Defence Procurement, European Commission, Brussels, 23 September 2004, Page 3.
[2] *Ibid*. page 4.
[3] *Ibid*. page 10.
[4] EC Treaty, article 296, paragraph 1, section b.

Commission in close cooperation with EU Member States (and non-Member States to whom this would apply[5]). Without this, the goals of such an interpretative communication cannot be achieved and Europe will be no closer to achieving change in this important sector.

UNICE is not convinced that the second option put forward in the Green Paper (that the EU's legal framework "be supplemented by a new specific legal instrument for defence procurement, such as a directive"[6]) has been shown to be the right way to proceed. As far as European industry and business is concerned, legislation which applies to provisions that do not fall under the scope of *Article 296* already exists (i.e. the recently restructured Public Procurement rules that currently apply to the classical sector – 2004/18/EC – the "New Classical Directive").

The New Classical Directive simplifies the way procurement is conducted and introduces new elements (competitive dialogue, negotiation with or without a call for tender, frameworks, confidentiality) which help to make procurement more flexible and in tune with modern requirements. These are the rules to which non-*Article 296* defence related procurement should be subject.

It must fall on the Commission and Member States to ensure that the public authorities and the industries and sectors which are active in procuring and supplying military related 'provisions / materials / supplies' are made aware of the scope of current procurement legislation and how it can be applied to non-*Article 296* provisions. A good way of doing this would be to include clarification of the possibilities which the New Classical Directive provides in the proposed interpretative communication.

It is possible that at some future date cases (which have not as yet been identified) might arise relating to 'provisions / materials / supplies' that might no longer fall under *Article 296* but which may perhaps require some form of specific legal instrument to coordinate procedures for the award of contracts. To head off further difficulties from this possible development we believe that the European Commission, the defence sector and wider industry should enter into a dialogue to determine the as yet un-identified specificities in the defence markets which might fall outside the *Article 296* exemption and the extent to which these are already taken care of by the New Classical Directive.

This debate should test in detail how well the New Classical Directive can respond to defence-specific factors such as military security of supply, international trade restrictions, absence of defence from international trade restrictions, absence of defence from international trade agreements and NATO standards. UNICE would welcome involvement in any legislative adapations of the New Classical Directive which may become necessary as a result of these discussions.

SPECIFIC COMMENTS ON *ARTICLE 296* AND RELATED ISSUES

The most problematic aspect of defence procurement is of course related to the procurement of weapon systems, materiel and services to which *Article 296* genuinely applies. Rules for procurement in this sphere do not exist due to the exemption which *Article 296* provides. We are aware that there is support in the European defence industry for dealing with this issue in the short term through a voluntary intergovernmental 'code of conduct' under the auspices of the European Defence Agency. We hope that approach proves fruitful, but we also

[5] The EEA Member States' Norway, Iceland and Liechtenstein.

[6] Green Paper on Defence Procurement, European Commission, Brussels, 23 September 2004, Page 11.

recognise that it will be a lengthy, difficult and time consuming process to achieve the desired results and see them properly implemented. This will however, in all likelihood, be true whatever option is chosen. A step by step approach to political and industrial cohesion in this field therefore seems most likely to succeed.

European industry believes that the ultimate goal of the current debate should be to see an internationally competitive European defence industry; for that, a competitive European market is a necessary prerequisite. To achieve this all Member States must be serious in wanting to reach a consensus and demonstrate a willingness to open up the areas potentially covered by *Article 296*. It is obvious that a genuine debate on *Article 296* cannot limit itself just to procurement related aspects. It will also have to deal with related issues that currently have a great impact on defence procurement such as:

- ❑ Differing national security and defence policies;
- ❑ The distortion of competition that exists between public and private defence industries;
- ❑ The dominant role of the state in this sector;
- ❑ The distortion of competition that exists in exports markets;
- ❑ Obstacles to the exchange of arms-related documents, components and products within the Community;
- ❑ Discriminatory state aid and subsidies, and;
- ❑ Lack of harmonisation of military requirements and procurement schedules.

It would be prudent that in the debate due consideration be also given to additional elements which could prove significant to the eventual outcome such as:

- ❑ How to ensure genuine consultation between the various stakeholders (i.e. the Commission, the European Parliament, Member States' and the defence industry);
- ❑ Support for the European Defence Agency;
- ❑ The establishment of a centralised publication system as already addressed in the Green Paper, for all defence contract awards planned by the Member States above a certain threshold value;
- ❑ European standards for defence equipment;
- ❑ Defence related R&D;
- ❑ How to ensure the continued existence of healthy defence industries in smaller Member States;
- ❑ How to improve the position of SMEs active in the defence equipment market, and;
- ❑ How to foster transparency in public procurement procedures.

These issues must be dealt with if a genuine defence procurement industry in Europe which can compete globally, is to be created.

Therefore, in the opinion of UNICE answering the list of questions does, at present, not help in achieving the aforementioned goals. As long as the basic conditions have not been established the questions posed by the Commission cannot be usefully discussed.

A submission on behalf of Brethren in Britain

in response to the

Commission Green Paper on Defence Procurement

1st February 2005

EU DEFENCE PROCUREMENT

Introduction

We are believers on the Lord Jesus Christ and well known to the UK government as taking a keen interest in Government affairs at national and European Union level.

We are thankful for the Commissions' recognition of the subsidiarity principle early in the Green Paper. We respectfully draw the Commission's attention to the fact that we have come to the conclusion, based on Holy Scripture, that the sovereignty of nations states is inviolable, national defence being probably the single most important feature of this principle. It is for this reason we have stressed below the issue of subsidiarity. This submission is based on the Commission commitment to its relations with civil society.

The Internal Market.

We are in full support of the principles of the Internal Market and appreciate the benefits which it has brought to industry right across the European Union. The harmonisation of technical standards required by the Single Market and the introduction of the Single Currency has brought substantial benefits to the prosperity of businesses across the EU.

However, it must be recognised that every industry has its own specific characteristics and constraints in respect of its needs. It is likely that any Member State which has a defence industry will wish to confine the award of defence contracts to its own defence contractors, based on security of confidentiality, the sensitivity of the issue of national defence and the promotion of national employment. It is for this reason that we consider that the principle of **subsidiarity** should be prominent in all considerations.

The European market in defence procurement is very considerable although restricted to a relatively small number of Member States. Even though this may be considered to be fragmentary, in terms of national prosperity it is significant. Defence contracts, once placed, contribute to national GDP and maintains an essential pool of skilled labour and therefore maintains employment levels.

We do not agree that the "gradual creation of a European defence equipment market......would increase economic efficiency."

National defence.

Economic efficiency would be at the expense of national prosperity. Cross-border co-operation within the industry may be acceptable in limited circumstances but sensitive defence technology must remain the preserve of the Member State. In proposing a convergence programme for harmonisation of defence equipment, the Commission should focus on standard equipment and maintain Members States integrity in respect of their individual requiements. Every nation has its own responsibility for its specific defence needs and the necessary capabilities required to protect its citizens and to defend itself and hence its borders from violation from aggressors

We do not agree with the budgetary reductions and the reduction of the armed forces which is taking place at present in the UK. Defence capability is one of the last areas of sovereignty remaining and lies at the very core of our national identity.

(2)

Green Paper Questions

Answers/observations.

1) We agree that the existing legal framework should be strengthened, but it would only be effective if defined by clear and unequivocal definitions, with particular emphasis on

1) the **subsidiarity** principle
2) derogation as provided for by Article 296 (EC)
3) the provisions of Article 297 (EC) should be strengthened to protect Member States vital defence and internal security interests.

2) It is essential to clarify provisions of confidentiality in communications in order to provide unambiguous guidance to Member States.

3) We agree with the ECJ judgement (Case C-414-97). However the need for case by case consideration leads to uncertainty and variation of interpretation by Member States with the consequences that the derogations provided may be circumvented. This kind of uncertainty is clearly illustrated in the Code of Conduct on Arms Export.

Differing national legislation may be seen to be a problem, but we consider that it is justified on the principle of **subsidiarity**, especially if it protects national defence industries from being lost due to fragmentation of work on innovative defence technology from standard equipment which may provided the main earnings of the defence contractors.

4) We consider a specific directive would be useful, provided it did not prejudice Member States from determining their own requirements. Particular attention would have to be paid to Article 297 (EC)

5) It is imperative that there are clear rules governing the purchases of defence material by bodies other than Member States,providing they are not more advantageous, but simply complement the overall market, and do not distract from each Member State's responsibility at home and abroad.

6) Negotiated procedure with prior publication may be suited standard equipment purchases and would promote an open market within the constraints imposed by the need for confidentiality and national security. However, where there is the potential for national defence procurement programmes to include high security technology from third countries such as the USA,it is imperative that adequate protection is given to these suppliers by withholding publication

7) A combination of a definition and a list.

8) The definition of excluded products within the directive is essential. At present, there is too much scope for mis-application of the existing arrangements.(eg. The Code of Conduct and The Arms Embargo on China).

9) How wise is a centralised publication system within the context of national and EU security?

10) The selection criteria must take adequate account of the suppliers ability to
1) maintain confidentiality,
2) security of supply and long term back-up,
3)

11) No comment

GREEN PAPER ON DEFENCE PROCUREMENT

Submission to DG Internal Markets

By Tony Edwards
Visiting Professor, Royal Military College of Science
Chairman of The Air League
Former Head of UK Defence Exports (DESO)

1. Background

If the EU is to develop an effective Foreign Policy it must at the same time develop supportive and compatible Defence, Defence Industrial and Procurement Policies. In effect, the investment in research and technology, technology demonstrators and defence equipment programmes today will determine directly Europe's options for Foreign Policy tomorrow.

2. Current situation

The end of the cold war resulted in European countries taking a 'peace dividend' which affected both armed forces and funding for defence related R&T investment. The 'peace divided' has hastened the inevitable process of industrial consolidation in Europe and the USA. US R&T investment has resulted in a situation where US equipment, at the top end, is now barely compatible with European equipment, leading to interoperability issues.

The US spends roughly twice as much on Defence as Europe with only half the number of troops. In other words the US invests at least four times as much per troop as Europe and the technology/capability gap is widening. EU regulations already, in theory, allow for Europe-wide R&T and Defence Equipment programmes. However, in practice, key countries regularly exploit the exemptions to pursue ‘national’ interests. The tragic result is a plethora of expensive, untimely and wasteful programmes (e.g. three European third generation fighter aircraft: Swedish Gripen; French Rafale and Anglo/German/ Italian/ Spanish Eurofighter together with imports by the UK and The Netherlands, etc of the US JSF!) The European taxpayer is being served badly.

3. National Strategies

The test of a strategy is what interested observers think it is.

The European situation can be understood by examining only two countries: France and the UK. France has pursued a consistent national Defence Industrial policy since WWII and to a very large extent, has ‘gone it alone’ with only occasional assistance from the UK and US in terms of technology and equipment. By so doing, France is now the leader in Europe in terms of Defence and Aerospace industrial capability. This has been achieved by exploiting the various exemptions to EU Regulations necessary to protect and nurture the national Defence and Aerospace industry. One of the keys has been the intelligent exploitation of dual-use technologies by the French Government in collaboration with EADS (effectively French controlled), Airbus, Snecma and Thales.

At the same time, the UK without an explicit, effective and funded Defence Industrial Policy and Strategy has relinquished its lead, first to the US and latterly to France. It will be recalled that in the 1940s/50s the UK led the world in virtually all important defence and aerospace technologies. But since 1957 (no more manned aircraft) and the sixties (cancellation of TSR2, HS681, P1154 and the pulling out of the Airbus programme by the UK Government) the UK has 'shared' its technologies and funding with various partners. The UK has opened up its defence equipment market to the whole world (JSF's from the US to uniforms from The PRC) while relentlessly pursuing a procurement policy based on the belief that value for money only comes from competition. (The only nation in the world to do so).

In this environment, UK-owned companies have chosen to sell themselves to the highest bidders (usually US, French, German or Canadian). At the same time the UK Government has relinquished its grip on the industry and has abdicated to market forces. The UK maintains its capability to project power by an extraordinary reliance on the US for technology, equipment, support and intelligence.

4. Implications for EU Defence Procurement

Ironically, the acceptance of a single regulatory framework will prove to be easier for France than the UK. For the former, it will involve a natural evolution of its current policy and strategy but on an EU-wide basis. The French Government can be counted on to work closely with the industries of Europe once French leadership is accepted. However, acceptance will be a major problem for the UK. It will entail letting go of the various strands of the 'special' relationship with the US, and acceptance of the EU supporting its evolving Foreign Policy with European defence equipment procured through French companies symbiotically linked to the French Government.

A window is opening up for such a transition because the UK is becoming increasingly disenchanted with its treatment by the US post Gulf War II, especially related to technology transfer. The UK Government is already retaliating (from a weak position) with a series of actions unfriendly to the US. At the same time George W Bush MkII probably would welcome the emergence of a stronger European partner capable of supporting his global imperialistic ambitions.

5. Conclusion

If the EU is to develop a credible Foreign Policy it will need supportive Defence, Defence Industrial and Technology policies and strategies. The funds required are at least double the current EU-wide spending in order to achieve and maintain a rough equivalence in capability with the US. The key will be persuading the UK to let go of its special relationship wit the US and instead accept French leadership of the European-wide Defence and Aerospace Industries. The UK Government has three options: *a)* accept the French-led EU alternative described above, *b*) increase the current MoD budget by at least 25-30% in order to continue muddling through by riding both horses (Atlantic and Europe) or *c*) rely almost entirely on US technology and equipment and thereby accept that UK Foreign Policy becomes synonymous with that of the US.

The desirability of adapting the rules for awarding defence contracts in Europe depends directly on the desirability, or otherwise, of a European Foreign Policy.

GREEN PAPER ON DEFENCE PROCUREMENT

Contribution to the Consultation process for the establishment of a European Defence Equipment Market

Dr. Aris GEORGOPOULOS, Lecturer in Law, School University of Dundee

N.B.: All the questions of the Green Paper are addressed in detail in my **Doctoral Thesis** entitled ***European Defence Procurement Integration: Proposals for Action Within the European Union*** and submitted at the University of Nottingham, January 2004. Moreover a number of forthcoming articles of the author deal with specific matters raised by the Green Paper.

(Any information provided here can be made public, attributed to the author)

1. Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

[This question is dealt in considerable depth and length by the author in the article **“Defence Procurement Regulation and EU Law” forthcoming in *European Law Review***]

The presented interpretation of Article 296 EC is **partially** correct.

It is true that Article 296 EC does not introduce an *ipso jure* exemption for armaments trade.

Nevertheless Article 296 (1b) EC ***is not*** subjected to the **classic proportionality** test (i.e. examination of the **suitability** and **necessity** of the national measure) like other Treaty exemptions. In other words the Court **does not examine whether there is a *less***

restrictive measure to address the proclaimed aim i.e. the protection of the essential interest of National security.

The opposite hypothesis would mean that **the intensity of scrutiny** under Article 296 EC would be the same as Article 30 EC. What would be the ***effet utile*** of Article 296 in that case?

The Court in C-222/84 Johnston ruled that Treat exemptions, including should be interpreted strictly.

However this does not mean that the Court equalised the scrutiny of Article 296 EC with that of the other Treaty exemption. The meaning of *Johnston* is that Treaty exemptions should be interpreted restrictively **within the teleological boundaries of each provision.** In the case of Article 296 EC it is undeniable that the Community Legislator intended a far **more relaxed scrutiny** than in the case of the other Treaty exemptions. This is supported by

a) the *ratio legis* of Article 296 and the “vote of confidence” it received in all amendments of the Treaties

b) its position in the systematic economy of the Treaty, namely in under the *General and Final Provisions*

c) its wording [every Member State may take such measures as *it* [Member State] considers necessary.

So what is the meaning of the narrow construction of Article 296 EC?

I believe that the wide margin of discretion, which was awarded purposefully by the Community Legislator to the Member States **is not unconditional**. The discretion surpasses its teleological boundaries, and therefore is unjustified, when the national decision or measure is ***manifestly unsuitable*** for attaining the aim of protection of the essential interests of security.

That was the case in C-414/97 *Commission v. Spain* where the Court found that: “24… the Spanish Government has not established that the *abolition of the exemption* from the VAT on imports and acquisitions of armaments,…, constituted a measure which could *undermine the protection* of the essential interests of security …".

N.B. An example of a measure that is ***manifestly unsuitable*** for the protection of the essential interests of security is the ***indirect offsets*** or in other words industrial compensations that are **not related to the defence sector**. (That would be the case of the obligation of the foreign defence company to purchase **"civil"** products or services from domestic companies).

2. Are there other aspects of the Community system in question that should be clarified?

The answer to this question is found in the previous discussion, namely the ***manifest unsuitability test*** as opposed to the proportionality test**.**

The following brief presentation highlights the differences between the scrutiny of the Court under Article 30 EC and Article 296 (1b) EC:

- *Article 30 EC (proportionality test):*

1. Examination of the *suitability* of the national measure.
2. Examination of the *necessity* of the national measure (The Court asks this question: Is there a *less restrictive measure* to the internal market that could address the same aim?)
3. Balance of interests between the aim of the smooth functioning of the internal market and the aims of the national measure.

- *Article 296 (1b) EC (manifest unsuitability test)*

1. Examination as to whether the national measure is ***manifestly unsuitable*** for the achievement of the proclaimed aim of the protection of the essential interests of security.

It is important to underline that the manifest unsuitability test is *negative* in nature. The Court does not examine the suitability of the measure but whether it is manifestly unsuitable. This is the essence of *Commission v. Spain (*see the negative construction of the conclusion of the Court in paragraph 24 mentioned above under the answer to the Question 1).

As already mentioned the most obvious example of a manifestly unsuitable measure for the protection of the essential interests of security is the ***indirect offsets*** **(as opposed to the *direct offsets*).**

3. Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

I think that the new rules on *framework agreements* can prove a useful tool in an open European defence procurement market for addressing the requirement for *security of supplies.* The defence contracting authority could diversify the risk by concluding a framework agreement with more than one economic operators especially in areas where the need for security of supply is deemed fundamental. (It should be mentioned however that the guarantee of security of supply often lies beyond the sphere of influence of the defence contractor since the export licences are controlled by the Home State (as correctly suggested by the Green Paper p. 5)

In addition the *negotiating procedure with prior publication* and the *competitive dialogue* could be useful ***provided that they become the ordinary procedures*** (not extraordinary as they are under the European public procurement rules).

4. Would a specific directive be a useful/necessary instrument for creating a European defence equipment market and strengthening the industrial and technological base of European defence?

In principle the answer is affirmative. The adoption of a directive that would eventually lead to the creation of an European Defence procurement market would have many beneficial effects.

First of all it would create a “home” market for the European Defence companies, a “critical mass” that would enable them to compete on better terms with their competitors from USA, Japan, Russia, etc.

This in turn would have beneficial effects on the competitiveness of the European Defence Industrial Base and thus support the *credibility of the ESDP*.

In addition it would iron out differences in the regulation of defence procurement procedures in the various Member States which constitutes a *serious source of discrepancies*. I think that as opposed to the public procurement market, which is characterised by an unlimited number of contracting authorities and economic operators, the defence procurement market has *a limited number of buyers and suppliers* –at least at the prime contractor level-. Thus the establishment of a standardised set of rules will be even more useful than in the case of civil procurement.

BUT

The previous assertions are based on a **necessary condition:** Member States **must be in favour of such development**. The current circumstances are more auspicious than the ones a decade ago. Nevertheless the consent of the Member States for the regulation of defence procurement by a first pillar instrument is far from assured.

5. What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency?

In an ideal world the answer would be affirmative. But in the case of European Defence Market Integration **a sense of realism is necessary**.

The subordination of the European Defence Agency under the Second Pillar is not fortuitous. Member States clearly want the regulation of defence collaborative projects to remain outside the first pillar.

The coverage of defence collaborative by the directive would have the following result. Based on the principle of non discrimination defence companies from Member States that do not participate in a defence collaborative project -namely they do not share the financial risks and burdens - would be able to take part on an equal footing in the award procedures with defence companies of the participating Member States.

Although that this would be a welcome development it would be unrealistic to expect the Member States involved in such projects -especially some of the large country producers to agree.

In addition not only would such a clause be unrealistic but also ***detrimental*** to what could be called as **"substantial integration".** Collaborative projects as opposed to off-the-self procurement have the following important characteristics.

Firstly they involve the harmonisation of underlying key factors of defence production such as operational requirements and specifications. Thus while harmonisation ***in off-the-shelf pr*****ocurement** refers to the procedures **"How and what defence equipment Member States buy"**-, ***collaborative projects*** focus on an earlier stage namely the one before the production of defence equipment **–"What defence equipment Europe produces"**. Thus collaborative projects seem to have a more far-reaching impact to European defence procurement integration.

In addition they involve approximation of procurement cycles and concentration of financial resources in defence R&D thus evading unnecessary duplication and leading to better planning of defence spending. Moreover such combined efforts promote innovation.

Therefore it seems that collaborative projects are a form of integration that should be encouraged. The application of the directive to collaborative projects **at this point** would only minimise the incentives for Member States to participate.

6. Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

In the answer to question 2 I mentioned that the inclusion of the negotiated procedure with prior publication as a regular procedure in a Defence Procurement Directive would be positive.

Concerning the **conditions for the negotiation without prior publication** the following remarks are relevant:

A) It is submitted that the first of these grounds should be **extreme urgency**. If the acquisition of some defence equipment is so urgent that observance of the publicity requirement was potentially detrimental the security of a Member State, then it would seem appropriate for the contracting authority to be able to deviate from standard procedures.

This is more likely to occur in the case of **spare parts**, **subsystems** or other disposable supplies rather than in the case of large integrated systems. This is because in the case of the latter –even if we assume that there is a urgent need not previously foreseen in the formulation of the medium term procurement programme- it is almost impossible to satisfy the urgent need immediately.[1]

The question as to whether the unforeseeable events that caused the extreme urgency should not be attributable to the contracting authority is a difficult one. Once again it seems to be a matter of how much Member States are prepared to bind themselves. In any

[1] The delivery period of major defence equipment can stretch up to five or more years after the conclusion of the contract. This period could be reduced but it could hardly ever involve the immediate satisfaction of the need by the supplier. In the hypothetical case whrere there is an urgent need for the purchase of 40 fighting aircraft, even if there is an immediate order placed with a specific supplier, without any administrative delay –publication of the notice, screening of the suppliers, evaluation of the tenders etc.- it is highly unlikely that the supplier would be able to address this urgent need.

case **it seems unrealistic to suggest** that if the events which led to the extreme urgency are attributable to the contracting authority –bad planning, miscalculation of available spare parts- the latter should ignore the urgency and proceed by carrying out the acquisition on the basis of the open or restricted procedure. Defence procurement is already **a quite sensitive field** and probably such rules would make the regime look cumbersome, inflexible let alone unrealistic. It is suggested that it would be better to include a **reference in the explanatory memorandum of the directive that contracting authorities should try to ensure that the events leading to extreme urgency are not attributable to them.**

B) The second ground allowing for the use of the negotiated without publication of a notice is the case of **additional** defence supplies or services contracts. In particular additional supplies would be permitted under this procedure **if the acquisition of other equipment would involve disproportionate technical or financial difficulties** with regard to maintenance or operation.

For example a Member State wants to purchase 15 third generation fighting aircraft in order to replace some of its existing seventy strong fleet –losses because of accidents- or to increase the percentage of the operational ones –because a significant number of the existing ones are frequently grounded for maintenance. Assuming that the existing fleet comprises only one type of aircraft *it would be technically and financially disproportionate* to introduce a new type for the purposes mentioned above. New spare parts, the need for engineering personnel to specialise in the new aircraft, building new hangars, costs for training pilots, costs for new simulation equipment and most importantly the fact that pilots would not be able to immediately maximise benefits in operational terms from the acquisition of the new planes due to the transitional "acquaintance" period are some of the potential difficulties. **Thus it becomes clear that best solution from a technical, financial and operational point of view is to purchase the aircraft from the original supplier.**

Furthermore additional supplies could be justified under the negotiated procedure without prior publication of a notice **if they are the result of an option clause** stipulated in the original contract. Moreover it is suggested the use of this procedure on the ground of additional defence supplies or services contracts should be subject to the following **two conditions**. Firstly the additional contracts should take place within maximum **three years starting from date of the conclusion of the original contract**. Secondly the value of the additional contract **should not exceed 50 percent of the value of the original contract.**

C) The third ground for use of the negotiated procedure without publication is the so called sole-sourcing ground. This ground is used when the required supply or service can be only provided **by a specific economic operator**. The existence of a specific supplier or service provider **is to be judged at European level**.

7. Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

The directive should cover supplies and services contracts of conventional defence equipment. Thus contracts concerning cryptographic, nuclear, biological and chemical weapons should be excluded from the application of the regime.

In order to further clarify the field of application of the directive *ratione materiae* it is suggested that the latter should provide in an **annex an indicative list** with the equipment and services falling in its realm**. A second annex** should include the equipment and services that do not fall within the directive's sphere of application.

A) The first list is intended to have a similar function with the earlier list drawn by the Council with regard to defence equipment that fall under Article 296 (1b) EC. Furthermore it will clarify the indicative character of the list in order to accommodate future technological advances in defence equipment. Likewise it will update the content of the earlier list which was obviously unable to anticipate all technological developments that occurred in the field of defence the last fifty years. Finally as opposed to the **previous list will be formally published**. Publicity, apart from other positive effects, will also have a symbolic value since it will show that light is being shed to a heretofore –sometimes without intelligible reasons- secretive field.

b) The **second list** will provide for a **negative circumscription** of the directive's field of application thus enhancing legal certainty. Apart from stipulating that cryptographic, nuclear, biological and chemical weapons are not covered by this directive, it will also make explicit that dual use goods do not fall under the latter since they fall under the **regular public procurement regime**. This will formalise an existing reality in EC law deriving from the jurisprudence of ECJ.

In addition the Directive should stipulate that covered supplies and services contracts should exceed the threshold of **€ 10 million**. Contracts below this threshold would fall outside the field of application of the new regime.

The threshold of € 1 million currently stipulated in the Coherent Policy Document (CPD) of EDEM (in the framework of WEAG) is very low for defence procurement. In this respect it should be mentioned as an illustration that the prices of a third generation aircraft (let alone the latest fourth generation), an Early Warning Airborne System and a tank are approx. € 35 million, € 130 million and € 9 million respectively.

This effectively means that the framework directive even in the case of the € 10 million threshold will cover all major defence procurement projects. These are the projects, which attract the interest from suppliers established in other Member States. Therefore it is submitted that the opening of the European Defence market should focus on them rather than unduly burden the procurement of smaller projects.

8. Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

This is the purpose of the second list mentioned above (also this is the rationale of the € 10 million threshold.

9. Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

A centralised publication system is essential for the success of the Directive. Such a system should employ all the latest technological developments to ensure security of information. End users namely defence companies, should have the first saying into the technical details of the latter.

10. Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

The award criteria should reflect the principle objectives of the whole regime namely, **value for money** and the **furtherance of the European Defence Industrial Base (EDITB)**.

The most advantageous offer criterion should be analysed further to sub-criteria. The indicative list of sub-criteria should incorporate (in addition to the ones of the existing directives) additional such as the ***interoperability*** with existing equipment and ***security of supply.***

A) The criterion of interoperability is not difficult to determine since it is based on actual facts (i.e additional costs for altering existing infrastructure, training of personnel, technical interoperability with other systems of equipment etc.)

B) The criterion of security of supply is much more difficult to evaluate because as previously mentioned does not lie entirely within the sphere of influence of the company. Thus it should be limited into the investigation of the ability of the company to deliver the goods or services *assuming that external factors are in place* (the existence of an export licence).

If a company is able to provide hard evidence namely the export license and other guarantees from the home state, as part of the offer should be favourably evaluated. It seems that in this sense national companies would have always a natural advantage over foreign companies. Thus it should be made clear that the criterion of security of supply should not have a disproportionate weight of significance in comparison with other sub-criteria.

C) The question that arises is whether ***offsets*** can be included as a criterion for the evaluation of the most economically advantageous tender. (See also next question).

Prima facie the answer should be negative. It seems hardly compatible on the one hand to advocate the principle of non-discrimination as one of the Directive's main principles and on the other to use offsets as a factor for the award of defence procurement contracts.

Although prima facie offsets as sub-criterion seem incongruous with the directive, it is suggested that a closer observation may reveal a different image.

Offsets are a *lesser trade barrier* than for instance *direct allocation to national champions* through set aside mechanisms or preferential clauses for national industry when for example national suppliers are given a preferential margin over equivalent foreign offers. Likewise some forms of offsets *have less impact on trade than others*. By the same token the weighting of the offset proposal is important in this respect; the lower the weighting of a factor in the evaluation of a tender the less its importance.

Even considered in the light of Article 30 EC it seems that if assumed that the maintenance of a minimum defence industrial capability is a plausible public interest objective[2] [3] a mild form of offsets could qualify as the less detrimental measure for the pursuance of this objective. The position that state aids could provide a less detrimental measure to common market is not entirely accurate. Offsets have a quality that the typical state aids lack. This quality is the establishment of links between enterprises of different Member States, which could potentially result to more integration in the supply side.

Last but not least it should also be remembered that the success of the proposal for a Defence Procurement Directive depends on convincing Member States including the

[2] Along the lines of C 72/83 *Campus Oil v. Minister for Industry and Energy* [1984] ECR 2727.

[3] This seems to be acknowledged by the Green Paper as well p. 5.

smaller ones, which use more often offsets as a tool than the large country producers. It appears therefore appropriate, as a matter of **political realism**, not to exclude the possibility for a form of offsets (I suggest as an optional sub-criterion, See question 11 below for further analysis) under the new regime at least in the beginning and **for a specified period**.

11. How do you think offset practices should be handled?

(The recommendations for the treatment of offsets is analysed in detail in a forthcoming article of the author).

I believe that in the event of the adoption of a public Procurement Directive offsets practices should be treated as follows:

It should be clarified that the offset regime will apply only to **direct offsets**, namely offsets relating to defence production, and **not to indirect offsets** –namely the ones that refer to civil and dual use sectors.

As mentioned already under question 10, offsets could be included **in a mild form** as an award **sub-criterion** for a specified period of **maximum ten years** from the beginning of the implementation of the directive. This period seems appropriate because it coincides with the time needed for the implementation of two medium term defence procurement programmes (approximately five years each), which gives enough time to Member States to prioritise the defence industrial areas that they want to promote for the protection of their essential security interests.

It is suggested accordingly that offsets could be included as an ***optional*** award sub-criterion in the sense that foreign defence contractors **would not be obliged** to submit an offer for offsets.

In addition the offset sub-criterion will be taken into account in the evaluation phase **only if two or more bids are considered *comparable***. Likewise -two or more- bids will be deemed comparable if **their scores lie within a margin of ten percent between each other**. The point of reference for the calculation of this ten percent margin will be the bid with the highest score. In such a case the score of the offset offer will be added to the general score of the respective bid.

Furthermore it is submitted that the **relative value** attributed to the offset sub-criterion should be set at around **ten** to **fifteen percent** of the total value of the award criteria. The rationale behind this suggestion is to ensure that a balance is maintained between the inclusion of offsets in the procurement process and the observance of the value for money objective. It is believed that the aforementioned percentage achieves this balance by not unduly undermining the primary objective, which necessitates that the acquisition of equipment and services meets in the best way the needs of the contracting authority.

Moreover the contractor will have the obligation to fulfil his offset commitment –if he included an offer for offsets- even if the offset offer was not eventually used as an award criterion –because the bids were not comparable.

N.B. In addition the proposed offset regime foresees a **ceiling –**a maximum volume of offsets- and the requirement for Member States to draft an offset plan which will correspond to their national medium term procurement program. The plan would set the wider parameters in which offsets will be performed over the aforementioned period.

Ceilings are a method used in the state aid regime to control aids and balance the latter with the respect of the common market. It is suggested that in the case of the proposed regime the offset ceiling should be **equal to thirty percent** of the allocated budget of the medium-term defence procurement programme. For example if the allocated budget is € 12 billion then a volume of offset transactions of up to € 3.6 billion could be concluded over the same period –the period of the medium term defence procurement plan.

It should be pointed out that the thirty percent offset ceiling does not mean that this is the maximum offset volume for each individual defence contract. The aforementioned percentage rather focuses on the ***overall volume of offsets over a period of time***.

Thus if a Member State decides to concentrate its offset efforts on a particular segment of the defence market it may do so by negotiating offset transactions which represent more than thirty percent return of the value of the specific main defence contract as long as the overall return (namely the sum of all offset transactions over the specified period) does not exceed thirty percent of the allocated defence procurement budget.

For example if a government allocates € 12 billion to the defence procurement budget (for a period of five years), it can negotiate offset transactions of up to € 3.6 billion (thirty percent). Assuming that the government decides to focus the offset efforts on the area of aerospace, it may negotiate, in the framework of the acquisition of 100 new fighting aircraft (cost € 3 billion), offset transactions of € 1.5 billion (fifty percent). However the total volume of all concluded offset transactions during the aforementioned five-year period should not exceed € 3.6 billion (thirty percent of the overall defence procurement budget).

This necessarily means that in such a case Member **states should prioritise the industrial segments** that they want to promote.

It should be mentioned that the offset ceiling of thirty percent was thought appropriate because a lower ceiling would castrate any meaningful use of the mechanism for the rationalisation of domestic defence industries, while a higher one would overlook the fact that the ceiling would not cover offsets of collaborative projects –since they would fall outside the coverage of the proposed regime.

~~Dear Mr. Bassi,~~ Cher ami,

Following the publication of the Green Paper on defence procurement, the European Union Institute for Security Studies has set up a Task Force of independent experts to explore possibilities to move towards the establishment of a European defence equipment market.

One of the tasks of the group has been to prepare answers and comments to the questions the Commission has put forward in its Green Paper. Attached you will find the results of this work. You are free to make this contribution publicly available.

The EUISS will soon publish the final report of its Task Force with a more detailed analysis of the current debate on defence market reforms.

Yours sincerely,

Nicole GNESOTTO

CONTRIBUTION TO THE CONSULTATION "GREEN PAPER ON DEFENCE PROCUREMENT"

ANSWERS AND COMMENTS
MADE BY THE EUISS TASK FORCE ON THE
ESTABLISHMENT OF A EUROPEAN DEFENCE EQUIPMENT MARKET

FEBRUARY 2005

MEMBERS OF THE TASK FORCE:

ANDREW JAMES, Senior Lecturer, Policy Research in Engineering, Science and Technology (PREST), University of Manchester, Manchester

THIERRY KIRAT, Chargé de Recherche, CNRS, IRIS-CREDEP, Université de Paris Dauphine, Paris

MARTIN LUNDMARK, Researcher, Swedish Defence Research Agency (FOI), Stockholm

MICHELE NONES, Vice-President, Istituto Affari Internazionali (IAI), Rome

JOACHIM ROHDE, Deputy Head of Research Unit, European and Atlantic Security, Stiftung Wissenschaft und Politik (SWP), Berlin

CHAIRMAN AND RAPPORTEUR:

BURKARD SCHMITT, Assistant Director, EUISS, Paris

EUISS, 43 Avenue Président Wilson, 75775 Paris Cedex 16, www.iss-eu.org

Question 1

Do you think it would be useful/necessary/sufficient to explain the existing legal framework in the way presented?

According to the Green Paper, an Interpretative Communication would give further clarification of the principles defined by the Court on the interpretation of Article 296 TEC. These principles are:

- Derogation from Internal Market rules is only justified if it is necessary for safeguarding the essential security interests invoked;
- Member states have to assess case-by-case whether each individual contract is covered by the exemption or not;
- The burden of proof that essential security interests necessitate derogation from the rules of the Internal Market lies with member states;
- Such proof is to be supplied, if necessary, to national courts or, where appropriate, the ECJ.

These principles are fairly simple, understandable and (hopefully) known to all relevant stakeholders. Further explanation seems therefore at first glance not to be necessary.

In practice, however, member states have often interpreted the possibility to derogate as an automatism. From that perspective, an explanation of the principles governing the use of Article 296 makes sense. Besides, the Communication would commit the Commission to ensuring that member states use Article 296 according to the interpretation given in that document. Provided the Commission sticks to this commitment, an Interpretative Communication could be useful for limiting misuse of Article 296.

At the same time, however, an Interpretative Communication would have a number of important shortcomings and weaknesses:

1. It would clarify *how* to use Article 296, but not for *which* contracts. It can neither render the list attached to Article 296 more precise nor clarify the concept of essential security interests (which justifies exemptions), because both are member states' prerogatives. It seems doubtful, therefore, that a Communication would actually facilitate the application of the existing Community legislation.
2. As a non-legislative measure, a Communication would, by definition, neither change the current Community law nor harmonise national defence procurement rules for contracts covered by Article 296. It would thus not contribute to rationalising Europe's fragmented regulatory framework.
3. A Communication would enhance transparency and competition mainly for non-warlike items (such as boots). Since this segment lies at the periphery of defence markets and clearly outside the scope of Article 296, a less lenient Commission could certainly ensure that the use of civil directives became the rule. This would result in better value for money, but it is unclear how great cost-savings would actually be.

4. For less sensitive warlike items which do not concern essential security interests (such as rifles), competition may increase as well, but only to a limited extent and with potentially problematic side effects. In this market segment, implementation of European law would probably be difficult, since the concept of essential security interests remains vague. Faced with a choice between the use of Article 296 or civil directives, which are generally considered ill-suited to defence contracts, member states may well try to interpret Article 296 as broadly as possible. In this case, a more proactive Commission policy would certainly increase the number of legal disputes.

5. The impact on high-value market segments (sensitive items and complex systems) would be close to zero. Member states may be more often obliged to justify the use of Article 296, but it is difficult to conceive many cases where the EC or the ECJ would not accept such justification.

6. Given its limitation to market segments at the lower end of the technological spectrum, an Interpretative Communication would contribute little to the competitiveness of European defence industries. Nor would it foster armaments cooperation (which normally takes place at the higher end of the spectrum).

For all these reasons, an Interpretative Communication seems insufficient.

Question 2

Are there other aspects of the Community system in question that should be clarified?

The opening up of national defence markets will only lead to fair competition if national and non-national suppliers operate under the same conditions. This necessitates not merely the coordination of procurement rules, but also the establishment common regimes for security of supply, transit, transfer, exports and state aid.

In this context, the clarification of the existing legal framework for state aid would be an important first step towards establishing the level playing field that is necessary for an effective marketplace. However, we recognise that this does not fall within the competences of DG Internal Market and cannot therefore be addressed in an Interpretative Communication on procurement law.

Question 3

Do you consider the rules of existing directives suited/unsuited to the specific characteristics of defence contracts? Please give your reasons.

The answer to this question depends on the definition of "defence contracts". Defence contract-awarding authorities can apply existing directives perfectly well for the procurement of civil goods and services, and probably also for the procurement of most equipment which is not exclusively military in nature (dual-use), provided the latter does not concern member states' essential security interests.

Existing directives, by contrast, seem ill-suited to the procurement of arms, munitions and war material. They have been developed for civil procurement and are therefore not adapted to the specificities of such equipment.

Many military systems, for example, are too complex to allow detailed technical specifications to be defined from the outset as the basis for open or selective tendering procedures. The necessary "translation" of a functional requirement into a system specification requires competitive dialogue and the negotiated procedure as standard award procedures. The civil directives, by contrast, allow these procedures to be followed only in exceptional cases. Another example is the long in-service life of many defence systems, which implies specific arrangements on modernisation and logistical support. Again, civil directives do not foresee appropriate rules for these cases. At the same time, they lack sufficient provisions for confidentiality and security of supply, which are crucial elements of defence procurement.

These examples are, of course, not exhaustive, but they illustrate that a directive for defence would probably differ considerably from the existing directives. The latter can serve as a useful basis for the former, but many provisions need to be adapted and complemented to become applicable to defence.

In general, a Defence directive should be inspired by a different philosophy than the civil directive and follow a sector-specific approach to achieve its objectives. The challenge would be to strike an appropriate balance between transparency and competition, on the one hand, and flexibility, on the other. Where this balance would lie is mainly a question of political goals. However, to be suitable for *all* warlike material outside the scope of Article 296, and to serve even as a "reference point should a Member State decide not to make use of Article 296 derogation even when it is entitled to" (as stated in the Green Paper), a defence directive would have to allow for a considerable degree of flexibility.

Question 4

Would a specific directive be a useful/necessary instrument for creating a European defence equipment market (EDEM) and strengthening the industrial and technological base of European defence (EDITB)?

An EDEM would consist of common sets of rules and regulations in areas such as competition, transfers, transits, exports and procurement. A directive would coordinate procedures for the award of contracts in certain segments of the defence market. In consequence, it would be a – albeit modest and limited – contribution to a more homogeneous regulatory framework in Europe and thus a useful and necessary step towards an EDEM.

It is generally recognised that the existing Community exemption system, based on Article 296, suffers from implementation problems and is frequently misused. It is also accepted that the current fragmentation of defence procurement law in Europe creates inefficiencies, lacks transparency and hinders intra-European competition. For industry, it is an obstacle to access to other European markets and leads to considerable overhead costs, which are particularly difficult to bear for SME. A defence directive has the potential to alleviate this situation at least partly.

However, its impact would differ greatly between the various market segments. Since it would neither replace Article 296 nor limit member states' right to invoke exemption for contracts which concern their essential security interests, most sensitive and complex systems would remain outside the scope of the directive. Although member states could make use of it on a voluntary basis, probably very little would change precisely in those market segments that represent the highest value.

Since the notion of "essential security interests" remains vague, it would still be difficult to draw the borderline between contracts covered by Article 296 and those which are not. A defence directive would not do away with this problem of definitions, but it could help to reduce its negative effects. Moreover, it has the potential to enhance competition for defence contracts which do not concern member states' essential security interests:

- In cases where the use of Article 296 is controversial, it would become easier for member states not to invoke the exemption (and thus avoid legal disputes) if a directive with rules adapted to the specificities of defence procurement were at their disposal.
- At the same time, the very existence of a "credible alternative" to national procedures could make it more difficult for member states to justify the use of Article 296. This effect would be helpful in opening up, at least partially, certain segments of the defence market.

The extent to which this would strengthen the EDITB is difficult to foresee. The directive might not concern the high technology end of the spectrum, but it could have a positive effect on market segments and industry sectors lower down the technology spectrum, where competition and consolidation are probably even more urgent.

However, how beneficial a directive would be in terms of competitiveness depends to a considerable degree on the extent to which member states use it for borderline Article 296 contracts. The more they accept a directive as an appropriate tool for fostering competition and cost-effectiveness, the greater its importance for the competitiveness of industry will be. In this respect, one should not forget that openness vis-à-vis a Community directive would probably increase once the latter has been established and "tested" in reality.

It is clear, however, that both fair competition and the strengthening of the EDITB necessitate more that just the coordination of defence procurement rules. The absence of common regimes for security of supply, transit, transfer and exports, for example, discriminates against non-national defence suppliers and thus represents an important obstacle to fair intra-European competition. The same is true of certain practices with regard to state aid. Moreover, Europe's regulatory framework lags behind new security and technology trends, which blur the dividing line between military and non-military security applications. Last but not least, the competitiveness of industry depends mainly on whether member states manage to coordinate their requirements more efficiently and cooperate better than in the past.

All this does not mean that a defence procurement directive would not help, but it should be regarded as one element of a comprehensive approach to establishing an EDEM and serve as a catalyst for reform in related areas.

Question 5

What is your opinion regarding the use of a possible directive for purchases by other bodies, such as the European Defence Agency (EDA)?

International procurement agencies, whether they are programme-specific (like NATO Agencies) or permanent structures (such as OCCAR), are international organisations or their subsidiary bodies. As such, they are exempt from existing Community directives.[1]

A directive could in theory specify that, for its purpose, organisations whose members are exclusively EU members (like OCCAR) are not considered to be *international* organisations (and would thus have to apply it). From a legal point of view, this would be consistent with the idea of the EU as a homogeneous juridical space.

However, international agencies are set up to manage complex systems which in any case would remain covered by Article 296. On this basis, they would still be able to use their own rules and regulations. At the same time, they should also be permitted to use the directive on an ad hoc basis. Participating member states would then decide for each programme (and each procurement phase) whether they want the agency concerned to apply the directive or not.

The situation is different in the case of the European Defence Agency (EDA), which is – in contrast to OCCAR – not established on the basis of an international treaty. However, whether a defence directive would be applicable to EDA is a theoretical question, since the latter is not conceived as a procurement agency. At least for the time being, EDA has only a small operational budget to fund feasibility studies, which are pre-competitive research activities and should not come under the directive in any case. This may change with the integration of other bodies (WEAO and OCCAR) into EDA, following which, member states participating in a project should again have the possibility to decide on an ad hoc basis whether they want to apply the directive.

[1] See Article 15 of the Directive 2004/18/EC.

Question 6

Procedures: do you believe the negotiated procedure with prior publication to be suitable for the specific needs of defence procurement? In what situations should use of the negotiated procedure without publication be allowed?

The negotiated procedure with publication offers a high degree of flexibility and therefore seems well suited to the specificities of the defence sector. At the same time, it guarantees a certain level of transparency and improves market access for non-national suppliers. This may be less relevant for complex systems where only a few companies in Europe have the necessary (system integration) capability, but it could foster competition in other areas further down the technology spectrum where even SME can act as contractors. Publication can also help SME – and even civil companies – to get in due time the necessary information to access defence-related service markets (repair, maintenance).

The negotiated procedure without publication is the procedure that entails the lowest level of competition and transparency. It should therefore only be allowed in certain well-defined cases where the nature of the contract de facto excludes competition.

Such cases could be:

- Pure research in support of the EDITB;
- Additional deliveries by the original supplier (without time limits);
- Only one possible provider (for technical, financial or IPR reasons, including, for example, follow-on contracts for production after the research phase of a project, upgrades, etc.);
- Emergency cases (extreme urgency in times of humanitarian, political or military crisis);
- ...
- ...

It should be noted that many of these circumstances only apply to sensitive contracts, which would remain covered by Article 296 and fall beyond the scope of the directive. However, in order to allow the voluntary use of the directive for these kinds of contracts, these provisions should be included.

Question 7

Scope: what would be the most appropriate way of defining the field of application? A general definition? If so, what? A new list? If so, what? A combination of a definition and a list?

The scope of the Directive would fall between the area covered by Article 296, on the one hand, and the area that comes under normal public procurement directives, on the other. It would thus cover warlike items (arms, munitions and war material) which do *not* concern member states' essential security interests.

In theory, a list would be the best instrument to define precisely which items come under the directive. However, covering warlike items, the scope of the directive would in any case have Article 296 as its reference point. Drawing up a list for the directive without revising the one annexed to Article 296 would thus mean having two lists, both covering arms, munitions and war material. The two may differ with regard to the level of detail, but they would inevitably overlap in many areas. This, in turn, could create even more problems of interpretation and implementation.

A revision of the 1958 list, however, is no solution either. First, it would involve politically difficult negotiations. In particular, an attempt to render the list more precise could provoke member states into including as many items as possible in order to maintain the possibility of invoking Article 296. The consequence would be an awkward and time-consuming exercise whose outcome would be doubtful.

Second, establishing precise lists means deciding beforehand for which items which procedures are to be used. This, in turn, would probably lead to a rigid implementation of procurement law. For at least two reasons, it seems more appropriate to give member states flexibility as to whether they prefer to invoke Article 296 or use the directive:

a) Whether a defence item is essential for a nation's security interests depends not only on its complexity and sensitivity, but also – and even mainly – on specific circumstances. Member states should be able to change their procurement practices according to these circumstances.
b) Member states should also be able to apply the directive on a voluntary basis to contracts for which they could theoretically invoke Article 296. This possibility, which is mentioned in the Green Paper, is more than a theoretical option. Depending on the way they tailor contracts to procurement projects, member states may, for example, choose Article 296 to develop and produce a complex system, but use the directive for follow-up contracts, such as those for supply of non-specific spare parts, repair and maintenance services, management of logistics systems, provision of training facilities and services, etc. With the appropriate research funding and IPR arrangements in place, they could even use Article 296 specifically for the development phase and the directive for the production phase.

For all these reasons, to define the directive's scope a general definition seems more appropriate than a list. Such a definition could simply state that:

This directive applies to arms, munitions and war material (plus the related services), for which member states do not invoke an exemption from Community rules according to Article 296 and the principles defined by the European Court of Justice.

Such a definition would draw a distinction vis-à-vis the field of application of civil directives (arms, munitions and war material), protect – and qualify – member states' ability to invoke Article 296, and allow voluntary application of the directive for contracts covered by the exemption.

However, if member states insist, for political reasons, on a list that defines the scope of the directive, they should at least avoid drawing up a new one – which would certainly be a complicated and time-consuming exercise – and use the existing list of the EU Code on Arms exports instead.

The challenge would be different if the directive were also to become applicable to the procurement of non-military security items. In principle, such an extension of the directive's scope would make sense:

- In today's threat environment, the dividing line between external and internal security is becoming blurred, and non-military security (e.g. protection against bio-terrorism) can be as sensitive as defence.
- Military and non-military security applications increasingly draw on the same technology base, and there is an intense technology transfer across the two sectors.
- Internal security represents a growing market, and many defence companies also have important activities in the field of non-military security.

Today, member states can use Article 296 (1a) to exempt non-military security items from the rules of the Internal Market if their essential security interests are concerned. Moreover, the civil directives contain escape clauses allowing the use of national procedures for this kind of procurement. However, not unlike defence, there is no community instrument adapted to the specificities of sensitive security items, which again hinders intra-European competition in an increasingly important market. The defence directive could fill this gap.

The challenge here would be to distinguish between security items for which the use of the defence directive is justified, and those which should still be subject to the civil directive. The crucial borderline for the directive's application to security items is thus (in contrast to defence) the one at the lower end of the scope. At the same time, the conceptual complexity of internal security, the strong dual-use character of these technologies and the great variety of awarding authorities make this borderline particularly difficult to draw.

To cope with these problems, the directive's field of application should be defined with a maximum of flexibility for defence, but with a maximum of precision for internal security (if the latter is to be included). Consequently, a specific list would be – at best – an option for defence items, but probably a "must" for security items. However, establishing such a list could again be a difficult task. The inclusion of security items into the directive's scope should therefore not be a prerequisite for its application to defence.

Question 8

Exemptions: do you think it would be useful/necessary to define a category of products that would be excluded categorically from the directive?

For reasons similar to those indicated above (Question 7), it seems politically wise not to exclude certain categories from the directive's field of application. The most obvious items to exclude would be highly sensitive ones (NBC, cryptology), but since Article 296 (plus the annexed list) remains in place, member states would in any case be able to use national procedures for this category. Exclusion of complex and sensitive systems is already more complicated, since it would raise problems of definition and limit member states' flexibility to choose between national and Community procurement procedures. For all other categories, automatic exemption should be out of the question, since it would completely deprive the directive of its sense.

Question 9

Publication: do you think a centralised publication system would be appropriate, and, if so, how should it function?

A centralised publication system would be crucial for the directive to achieve its objective of enhancing transparency and competition. It could be a specific defence publication system or a supplement of the Official Journal. In particular to satisfy the needs of SME, it must be easily accessible (electronically) and offer a solution to the EU's language diversity.

Question 10

Selection criteria: what criteria do you think should be taken into account in addition to those already laid down in existing directives to take account of the specific features of the defence sector? Confidentiality, security of supply, etc.? And how should they be defined?

Security of supply and confidentiality are the only selection criteria which should be added to those already mentioned in the civil Directives.

At the contract level, for the supplier security of supply mainly implies two commitments: (a) to give priority to the needs of the customer and/or to accelerate production in times of crisis; (b) to inform the customer in time if a change in its situation (ownership, restructuring, abandonment of production, etc.) could have an impact on supply. These commitments have then to be underpinned by an arrangement between the supplier and its national authorities. The security of supply criteria used for the directive should combine all these elements.

At the same time, the directive should be accompanied by an intergovernmental arrangement in which member states undertake not to hinder the supply of defence articles and services to other member states, whenever one of them requests it in order to meet the needs of its armed forces.

The second selection criteria, confidentiality, means the proven capacity of companies to handle classified information. To make it applicable for a defence directive implies that all member states mutually recognize security certifications issued by national authorities to defence companies established on their territory. This should be no problem for NATO countries, which have standardised procedures and criteria for these certifications. For non-NATO member states, ad hoc arrangements would be necessary (along the lines of the Swedish case in the LoI).

Question 11

How do you think offset practices should be handled?

The directive's provisions for offsets must aim at greater transparency and fair treatment of European suppliers, in particular vis-à-vis competitors from third countries.

In general, it should allow for direct offsets (activities related to the initial procurement contract, such as technology transfer and subcontracting), but prohibit indirect offsets, which often lack transparency and can even lead to distortion of civil markets.

At the same time, the defence directive should (like directive 2004/17/EC coordinating the procurement procedures of entities operating in the water, energy, transport and postal services sectors) include a third country clause (for tenders comprising products originating in third countries). That Article would apply to tenders covering products originating in third countries with which the Community has not concluded an agreement ensuring comparable and effective access for Community undertakings to the markets of those third countries. Any tender submitted for the award of a contract may be rejected where the proportion of the products originating in third countries exceeds 50 % of the total value of the products constituting the tender.

DECISION No. 2005/02/EDA

OF 2 MARCH 2005

OF THE EDA STEERING BOARD IN NADS FORMATION ON

EDA INPUT TO THE COMMISSION'S CONSULTATION PROCESS ON THE GREEN PAPER

EDA welcomes the efforts of the Commission through their Green Paper on Defence Procurement. It identifies a number of important reasons for the creation of a European Defence Equipment Market (EDEM). In the more recent words of Commissioner Verheugen, "We must also accept that in the long run, competitiveness cannot be served by protectionism. What was true in so many other sectors of the economy, is also true of the European defence industry whose long-term survival will not be served by systematic recourse Article 296 of the EC Treaty: a consolidation and restructuring both on the supply and on the demand side are necessary in Europe".

The Green Paper also illustrates the limits of the existing legal framework. The Green Paper suggests two community instruments: an interpretative Communication and a Directive. They should not be considered mutually exclusive but rather deemed useful in a wider context of a sequence of workstrands towards a competitive EDEM.

- An interpretative Communication might help clarify in what circumstances the Commission would consider Article 296 to be legitimately invoked, and thereby assist MS in their judgements in this regard, without prejudice to their prerogatives under the Treaty, in particular in relation to the protection of the essential interests of their security. In the case that the Commission pursue such a Communication, the EDA would stand ready to offer its advice, working in partnership with the Commission as directed by the Steering Board in November 2004.

- A Directive would, as a binding Community instrument, ensure transparency, non-discrimination and equal treatment. The suggestion of such an instrument acknowledges in itself the specific elements of the defence market. A Directive, as a legal instrument, requires thorough knowledge about the nature of the market, including the segment where article 296 applies. According to EDA's judgement, this knowledge does currently not exist due to the lack of transparency in the practices of MS. A Directive should, therefore, be seen as a longer term solution to establish a level playing field for fair competition in areas where Article 296 does not apply. Nevertheless, this should not prevent work on a Directive being initiated shortly.

- Meanwhile, the EDA will explore the possibilities for a voluntary regime covering procurements where Article 296 applies. Along this way, practical and gradual progress towards a more competitive EDEM may already be made. This approach may also include steps towards strengthening the market position of SMEs as particularly innovative parts of defence industry. This intergovernmental work might well pave the way for the above-mentioned longer-term solution provided by a Directive.

EDA stands ready to continue working in partnership with the Commission on common efforts to support the creation of an internationally competitive EDEM, including the strengthening of a European DTIB.

European Economic and Social Committee

INT/252
Procurement and Defence

Brussels, 9 February 2005

OPINION

of the

European Economic and Social Committee

on the

Green Paper – Defence procurement
COM(2004) 608 final

On 23 September 2004 the Commission decided to consult the European Economic and Social Committee, under Article 262 of the Treaty establishing the European Community, on the

Green paper – Defence procurement
(COM(2004) 608 final).

The European Economic and Social Committee instructed its Section for the Single Market, Production and Consumption to prepare its work on this subject.

In view of the urgent nature of the work, the EESC appointed **Mr Wilkinson** as rapporteur-general at its 414th plenary session (meeting of 9 February 2005). At this same meeting the EESC adopted the following opinion, by 96 votes with 9 abstentions:

*

* *

1. Introduction

1.1 The Green Paper on Defence Procurement (COM(2004) 608 final) is one of the measures foreseen in the Communication "Towards a European Union defence equipment policy" which was adopted in March 2003, and on which the Committee commented in September 2003[1].

1.2 "European Defence Equipment Market (EDEM)", is in reality only a part of the internal market covering a specific sector. The Green Paper seeks to contribute towards the creation over time of an internal market for EU defence equipment that is more open and transparent, while respecting the specific nature of the sector. This should lead to a stronger and more competitive defence industry, increased cost effectiveness and support for the development of the military capabilities of the EU in the European Security and Defence Policy (ESDP) field, within the context of the Common Security and Foreign Policy (CSFP).

1.3 On 12 July 2004 the Council agreed the establishment of the European Defence Agency (EDA) which is designed "to support the Member States (MS) in their effort to improve European defence capabilities in the field of crisis management and to sustain ESDP as it stands now and develops in the future". This Agency has now started work. The EDA’s functions[2] all relate to improving Europe’s defence performance by promoting coherence in place of the current fragmentation.

1.4 "Defence performance" involves ensuring the availability of the capabilities needed to match the tasks envisaged, and the doctrine to undertake these tasks, in a cost effective way. This will include ensuring the maximum possible interoperability. At present the 25 MS together spend about €160 billion each year on defence, with about 20% of this used in the equipment procurement process (including research and development, acquisition and support)[3].

2. General comments

2.1 The matters covered in this Green Paper relate to the way in which improvements may be made to the system of defence equipment procurement in the 25 Member States (MS). Significant progress will only be possible when the other elements of "defence performance" (see paragraph 1.4 above) are clear[4]. Of particular concern to industry is the need for very clear guidance, harmonised requirements and continuity. Nonetheless the initiative is welcomed by the Committee as it can be treated as a discrete part of the process of starting to establish a more viable ESDP in a transparent and competitive market.

2.2 The leading role foreseen by the EDA is welcomed. There will be a need for clear agreement on the respective roles of EDA and others at present involved in the defence equipment field[5] and EESC would expect a reduction in their separate roles as progress allows. However, the lessons learnt from the experience of OCCAR[6] (which handles actual project management, including the key question of contract law) should be studied before changes are made.

2.3 We welcome the recognition that the starting points (and the procedures used) for each MS in the defence procurement process are very different and that changes are likely to be made at different speeds. We agree that it will be helpful to establish a more common basis for defence procurement and that this can be done relatively quickly given the agreement and the cooperation of all MS.

2.4 EESC agrees that there is a need to reduce fragmentation of the defence equipment market and to increase its competitiveness and transparency as prerequisites for maintaining and strengthening a viable EU defence industry and for contributing to more cost effectiveness in procuring and managing appropriate defence capabilities.

2.5 The analysis of the specific features of defence equipment markets given in paragraph 2 of the Green Paper is a good basis for consideration of the market and indicates some of the difficulties faced.

2.6 However, EESC would stress that any restructuring of defence industries must primarily be a matter for the industries concerned, taking account of market realities[7]. A good reason for this is that most significant companies are trans national, even though their customers are national. Moreover, MS have different industrial strategies, of which the defence industries are only a part.

2.7 Industry (in the defence sector as elsewhere) has to avoid too many regulatory procedures if it is to function efficiently and to provide cost effective and economical results.

3. Specific comments

3.1 It is necessary to clarify exactly what parts of the defence equipment procurement process are expected to be covered by the rules agreed. As well as the acquisition of such equipment there will be research and development, maintenance, repair, modification and training aspects, which are included in the cost of "ownership", to consider; these are normally far more costly over time than the acquisition.

3.2 *Article 296*

3.2.1 EESC agrees that exemptions to the EU rules on public procurement granted by virtue of Article 296 of the EU Treaty will continue to be needed to allow MS to derogate on the grounds of protecting their essential security interests.

3.2.2 The Commission should give an indication of the value of the equipments for which this derogation has been used over a period of, 5 years (and show it as a percentage of the total amount spent on defence equipment in the EU). They would then have a benchmark to help in measuring progress.

3.2.3 The problem is that the use of such derogation has, for some MS, become almost the rule rather than the exception and this is clearly not compatible with the single market. EESC supports the Commission's view that this should change. The challenge will be to use Article 296 in conformity with decisions in past cases[8] while retaining its possibility as a derogation from standard rules for public procurement. MS must be prepared to justify (legally if need be) derogations that they do make. The benefits of greater competition and greater transparency should be stressed in the discussion.

3.2.4 The list of products produced in 1958 under Article 296.2 which suggests the scope of Article 296.1 is not working and is likely to remain of no real value as a useful way of ensuring the proper use of the security derogation. Each case must continue to be treated on its merits since even basic equipment[9] will fall within the scope for derogations in some cases. Further, lists are not likely to keep pace with new developments.

3.2.5 There is thus no easy solution to defining which equipments and which services related to them could be covered under Article 296. As a first step there is a need to clarify the EU's existing legal framework through an "interpretative communication" to improve understanding and to facilitate better and more consistent application.

3.2.6 As well as procurement any such communication will have implications for several other aspects; State aid and (possibly) services of general interest are among these and need to be taken into consideration.

3.2.7 We believe that the "negociated procedure" with prior notification should be suitable for the specific needs of defence equipment where the "open" and the "restricted" methods are not suitable. However, this view may need to be reconsidered after experience has been gained of working with the "interpretative communication".

3.2.8 There is a view that a communication can only be an interim measure until a specific directive (or other specific legal instrument) has been drawn up. EESC's view is that after such an "interpretative communication" has been produced and agreed the need for a legislative instrument can be considered in the light of its effect. We would welcome early action to produce the communication.

3.2.9 There is a further possibility, not mentioned in the Green Paper, of establishing a "code of conduct" to be used by participating MS as another means of establishing an EDEM. Since the area is one within the responsibility of MS this could be considered, presumably using EDA as a facilitator. It might be difficult to monitor and enforce such a code and the Internal market aspects would still need to be included.

3.3 ***Publication of calls for tender***

3.3.1 The need to consider further the system and format for calls for tender is not convincing. If defence equipment is to be treated as just another part of the internal market in principle (although it has greater possibilities for derogations) it will presumably be dealt with in the same way as other tenders. This will entail different systems and problems, such as language, that are found elsewhere. The grounds for a centralised publication system are weak.

3.3.2 The potential problem areas are confidentiality and offset, which are more likely to arise for defence equipment than for other equipments and services, and security of supply, where it will be hard to change suppliers or contractors once a contract has been let. These are all areas where the MS concerned should be responsible, although some general guidance from the Commission may be helpful.

3.4 ***Dual use***

3.4.1 It is often difficult in today's industry to classify companies as being "defence equipment manufacturers". Much equipment is now "dual use" and the percentage is increasing. This is welcome from several points of view; for example, economies of scale can lead to more competitive pricing and security of supply can be easier to guarantee.

3.4.2 Also the efforts put into RTD for such equipment has a value to other (civil) purposes. It is therefore important that resources put into defence RTD is not subject to a regime that is too inflexible.

3.4.3 We remain concerned that there is much to be done to maximise the value of the coordination and focus that are needed in the defence equipment area, as we pointed out in our earlier paper on defence equipment[10].

3.5 ***European Defence Agency (EDA)***

3.5.1 We welcome the establishment of the EDA and recognise that it can play a leading role in the field of defence equipment. We note that it is still building up the resources required to fulfil its agreed roles.

3.5.2 It will be important for EDA to ensure that EU doctrine and capabilities take NATO's role, doctrine and capabilities fully into account by maximising interoperability and by minimising any differences. It is not yet clear how EDA could add value by becoming directly involved in procurement but its expertise in the field of defence equipment should leave it in a good position to suggest how national rules can be better harmonised.

3.5.3 It will also be valuable in getting agreement to the financial aspects of equipment cooperation where necessary. A significant area of potential difficulty is sharing the costs and benefits of RTD in defence related areas and in separating the defence and the general aspects in so doing.

3.5.4 EDA should also be helpful in moving towards the approximation of national licencing systems when defence equipments are transferred between Member States. At present the national procedures are both varied and burdensome. It could also help in getting agreement to the way in which offset arrangements are handled since these will remain a feature of procurement in the future.

3.5.5 EDA may find it possible to get some agreement on national industrial policies as far as defence equipment is concerned and to define the elements that constitute "strategic equipment" whose provision the EU would wish to be capable of providing to reduce dependence on third countries; this would be most valuable.

3.5.6 EDA may also be able to encourage MS to consider such innovative methods of acquisition as pooling, leasing and specialisation to meet capability needs.

3.5.7 Since ESDP will only become effective if the MS show the necessary strong political will to provide and to maintain the necessary capabilities to meet agreed EU tasks, EDA should also play a role in encouraging MS to do this.

4. **Conclusions**

4.1 Defence equipment is only one requirement for a viable "defence performance". For industry to play its part fully it will need clear guidance, harmonised requirements and continuity. It must also have primary responsibility for necessary restructuring. Industry also needs to avoid over burdensome regulatory procedures.

4.2 It must be made very clear what parts of the defence equipment procurement process will be covered by the rules agreed.

4.3 Article 296 of the Treaty will continue to be required. To ensure that progress in avoiding its too frequent use the Commission needs to establish a benchmark though examining current performance. It is not practicable to maintain any list of equipments and procedures to which Article 296 can be applied.

4.4 As a first step the Commission should produce as soon as possible an "interpretative communication" on Article 296. Only after experience has been gained with this communication will it be possible to decide whether a legal instrument is also required.

4.5 "Dual use" equipment is increasingly common and this trend is welcome, not least because of the potential for civil use of RTD which applies to military equipment.

4.6 The important role foreseen for the European Defence Agency (EDA) is welcome; it will need to be clear what part all the agencies now involved are to play.

4.7 Among the important roles for EDA in this area are:

- Ensuring coordination with NATO requirements
- Helping to negotiate all the necessary financial aspects
- Helping to harmonise existing national procedures
- Suggesting innovative ways of providing necessary capabilities
- Encouraging the maintenance of the necessary political will.

Brussels, 9 February 2005.

The President of the European Economic and Social Committee	The Secretary-General of the European Economic and Social Committee
Anne-Marie Sigmund	**Patrick Venturini**

[1] OJEC C10/1 of 14.1.2004

[2] EDA has four agreed functions; defence capabilities development, armaments cooperation, the European defence technological and industrial base and defence equipment market and research and technology.

[3] As we commented in our opinion on COM(2003) 113 final, this combined EU spending is about 40% that of the US, yet only produces about 10% of the operational capabilities.

[4] For example, the Committee notes the recent (September 2004) statement by the head of the EDA that EU forces are not well adapted to the modern world and its conflicts and threats; he spoke of the need to acquire more high technology equipment.

[5] Such as OCCAR, Western European Armemnets group (WEAG) and Letter of Intent (LoI) countries.

[6] OCCAR is a joint organisation for armaments cooperation to which 5 MS currently belong.

[7] However, because of the specific nature of defence markets and because of the need to manage payments as part of national financial arrangements, MS will inevitably play a role in facilitating the development of defence equipment.

[8] The decisions in the ‘Bremen case’ (1999/763/63(OJ L 301/8 of 24 November 1999) and the "Koninklijke Schelde Groep" (OJ L14/56 of 21 January 2003) are examples of the current lack of clarity.

[9] We should note that even apparently simple equipment such as clothing can involve advanced technology.

[10] See paragraph 5 of the opinion refered to at footnote 1.

4.2. The external dimension
4.2.1 Export policy
4.2.2 Export controls on dual-use goods and technologies
4.2.3 Import duties on military equipment
4.2.4 Commercial relations with third countries

5. **Conclusions**

Annex
Statistical tables
List of European mergers in defence-related industry

1. Introduction

The defence-related industries are facing an economic and political context which is changing completely and calls for responses going beyond the national level.

The end of the cold war, considerably reducing the security risk to Europe, has made it possible to cut military budgets and step up the moves to convert the industries concerned. The need for the defence-related industries to scale down their activities substantially has had a significant direct impact, both on employment in this sector which has fallen by 37% from 1.6 million to 1 million since 1984, particularly hitting certain regions, and also on the manufacturing base and innovation capacity of European industry as a whole. Over this period the economic problems have persisted, if not worsened; they stem not only from the cuts in military expenditure but also from the fiercer international competition and, above all, from the anachronic fragmentation of the defence markets in Europe.

A change of attitude in favour of action by the Union is therefore emerging. On the one hand, the crisis in the industry has prompted industrialists and industrial policymakers in the Member States to encourage the Union, particularly the Commission, to assume its responsibilities. On the other, the measures taken on the Western European Union (WEU) and on the second pillar of the Maastricht Treaty have opened up paths for establishing a European armaments policy. In particular, on 30 June 1995 an informal group of EU/WEU experts produced a report setting out options, suggestions and recommendations for such a European armaments policy. In July 1995, Coreper set up an ad hoc interdisciplinary working party to identify areas for action by the Union. To this end, it will have to make recommendations on the follow-up within the Community framework or under the common foreign and security policy (CFSP) and, should the need arise, suggest specific measures without prejudice to the Commission's powers under the Treaty establishing the European Community. This communication is a contribution to this work.

The causes of the difficulties facing the defence-related industries are partly economic and partly political. Consequently, both these aspects must be taken into account when analysing the problems specific to these industries and when formulating possible European action.

However, although a global approach to this subject is clearly important, the establishment of a European security and defence identity is nevertheless a long-term process. On the other hand, the state of health of the defence-related industries is such that unless action is taken in time, there is a danger that whole sectors of the economy involved in defence-related activities could disappear, with further massive job losses, particularly considering the fiercer international competition.
This urgently calls for an appropriate European response.
Moreover, the introduction of mechanisms based on economic efficiency, particularly in procurement policies, will allow more rational use of budgetary resources, yielding very substantial savings.This will entail significant savings for the tax payer.According to a study these savings could vary between 5 to 11 billion ECUS a year.

Setting out from this need for action, this communication places the emphasis on action based on the existing Community instruments and, hence, concerning fields in which the European Community has powers and experience of its own. These means of action could possibly be used in combination with the CFSP. Consequently, they could be implemented in the short term as an initial response to the problems facing the defence-related industries and as a first contribution towards the process of building a European security and defence identity.

The approach followed by the Commission is based on the principles set out in its communication on "An industrial competitiveness policy for the European Union" (COM (94) 319, 14 September 1994).

2. The challenges

In the years ahead the European Union must meet a series of challenges with a view to establishing a European security and defence identity and maintaining a competitive technology and industrial base. The survival of these industries depends on this capacity to put in place a consistent strategy to respond to these challenges.

2.1. Economic and industrial challenges

2.1.1. Industrial structure and trends

The annual output of defence equipment in the European Union is currently worth an estimated ECU 50 billion which is about 3 percent of total industrial output. It is somewhat less than half the US defence industrial output. A growing number of defence-related technologies, components and services have both civilian and military applications. This development has made it increasingly difficult to define the boundaries of "defence-related industry" and has made the isolation of defence from civil industry increasingly untenable. The mix between civilian and defence-oriented activities varies from company to company and from industry to industry. In the European aerospace industry, for instance, defence activities account for about 40 percent of turnover.

The development and production of defence equipment currently directly occupy about 600 000 people in the EU. Another 400 000 jobs are generated indirectly in supplier and service industries.

About 70 percent of defence sales come from the aerospace and electronics industries. However, much of the value-added behind the weapon systems and other defence equipment originates in companies which supply components and subsystems and which are in many cases SMEs.

About 90% of the EU total production of defence equipment is concentrated in some Member States: France, the United Kingdom, Germany, Italy and Sweden.

A substantial part of the European defence industry is public or quasi-public, most notably in France, Italy and Spain (although the degree of state control varies).

The domestic demand for European defence equipment has been falling since 1987 when most EU Member States started to reduce their defence budgets. Total military expenditure fell by 5.3 percent in real terms between 1985 and 1994 as indicated in Table 1 in the annex, whereas the procurement of major weapons fell by 28.5 percent in real terms in the same period as indicated by Chart 1 in the annex. However, EU imports of major conventional weapons from third countries have not declined correspondingly.

The declining demand, particularly from developing countries, has practically halved the global arms market over the last decade according to SIPRI statistics.[1] European industry has maintained a share of one fifth of the world export market of major conventional weapons between the 1984-1988 period and 1993, but the absolute amount has been halved in real terms as indicated by Chart 2 in the annex. Compared to the United States, however, the European Union has been losing ground.

2.1.2. Restructuring and competitiveness

Industrial restructuring is expected to continue with significant capacity reductions though many companies have already taken far-reaching steps.

Restructuring

Conversion of military into civilian-oriented production "at factory level" is not considered a feasible strategy by most companies. Apart from the huge investment costs and difficulties of access for newcomers to established civilian markets, conversion is hindered by the difference between, on the one side, production of defence goods which is driven by technology and government specifications and, on the other side, civilian markets which are mainly driven by price with marketing playing a major role. However, conversion in the sense of redeploying a company's R&D base from defence-oriented work to a technically related field has proved practicable for a number of companies with established non-defence activities.

Some of the overall capacity reduction has occurred through outright liquidation of defence-oriented activities in companies which have chosen either to concentrate on what they define as their core activities or to expand the civilian sides of their businesses.

More often, however, the rationalization of the European defence industrial base has involved some form of inter-company arrangement. Mergers and take-overs have so far mainly taken place within national borders since the obstacles to cross-border acquisitions in the field of defence are still considerable. In the EU examples of national

[1] The arms trade statistics compiled and published by SIPRI (Stockholm International Peace Research Institute) are partly estimated since the official data do not provide a comprehensive picture.

consolidation of defence-related industries through mergers are numerous.[2] Cross-border acquisitions, like GIAT Industrie's take-over of the Belgian small-arms producer FN Herstal in 1991, remain exceptional.

In recent years the consolidation of the defence-related industry has advanced much faster in the United States than in Europe. Following some "mega mergers" and take-overs, the average size, as measured by arms sales, of the ten largest US defence-related companies is now twice that of the ten largest EU defence-related companies.[3]

Most of the consolidation which has reduced overheads costs, excess manufacturing and engineering capacity has taken place within national borders. The economic gains from further national consolidation are diminishing and appear now to be much smaller than the potential gains from cross-border industrial integration.

Competitiveness

In assessing the overall international competitiveness of the European defence-related industry, export performance, company profitability and technological capabilities might provide some indications about the competitive position of the industry and its constituent parts, but it only makes sense to speak about competitiveness for those companies and products which are actually exposed to international competition.

Compared to the US industry, the EU industry has lost ground and is now exporting less than half as much as the US industry. Many of the shifts in relative export performances are linked to international political events, like the end of East-West confrontation, the Gulf War of 1990/91 and the break-up of the Soviet Union. Changes in national arms export policies, including export subsidies, have undoubtedly also played a role. In this context, the US industry had, thanks also to the political influence exercised to benefit it, started to improve its export performance vis-à-vis the EU industry under the relatively stable international political conditions of the 1980s.

The abovementioned factors also suggest that part of the shift is due to changes in the underlying competitive positions, including the significant depreciation of the US dollar against European currencies since 1985, that put a heavy burden on the competitiveness

[2] - In the UK, a large part of the industry is now grouped around British Aerospace and GEC and further concentration has taken place (the take-over of VSEL - a Barrow-based submarine maker/shipbuilding company - by GEC).

- In Germany Daimler Benz Aerospace plays a key role.
- In Italy the scene is dominated by Finmeccanica.
- In France the national consolidation is more evenly spread between the companies

[3] Illustrative examples of the US restructuring and consolidation process are :

- Lockheed's acquisition of General Dynamics' fighter aircraft division in 1993
- Northrop's takeover of Grumman in 1994
- the agreed merger between Lockheed and Martin Marietta in 1994, followed by the acquisition of Loral in 1996
- the recent talks between Boeing and McDonnel Douglas on a possible merger of their civil and defence activities (1995).

of European defence-related companies. The G7 summit in Halifax pointed out the risks that such fluctuations pose to sustainable, non-inflationary growth and the continued expansion of international trade. The EU and US are therefore encouraged to work more actively and address the imbalance of the US dollar versus EU currencies. The conclusions of the recent transatlantic business dialogue held in Seville stressed the importance of fostering better monetary stability.

The strong competitive position of US industry vis-à-vis European industry is best illustrated with figures on defence equipment imports by individual EU Member States, i.e. inclusive of intra-EU trade: 75% of imported major conventional weapons came from the United States in the 1988-92 period. The worsening in the competitive position of the European defence-related industry results also from the bilateral EU-US trade balance for major conventional weapons that was 10/1 in favour of the United States in the 1988-92 period (see Table 4 in the annex).

But export performance cannot provide a complete picture of international competitiveness, particularly in a field where trade and procurement decisions are rarely taken on commercial and economic grounds alone. From a company perspective the important test of competitiveness is profitability.

For the European defence-related companies the picture is mixed in this respect. Quite a few of the large arms-producing companies have lost money in recent years on their defence-oriented activities, some of them over a considerable number of years. Other companies have continued to operate profitably in the defence field and have been rather successful on export markets.

Assessing European industry's technological strengths and weaknesses in the field of defence is also difficult and somewhat subjective. The US Department of Defence has tried to compare US and European capabilities regarding 20 so-called critical technologies. The DoD believes that European industry does not "significantly lead" the United States in any of the sectors but is "capable of making major contributions" in seven sectors.[4]

On an overall industry level the aforementioned trade figures give a strong indication that the European defence-related industry has experienced a worsening of its competitive position vis-à-vis the US industry since the 1980s. For comparable equipment, produced with economies of scale, the US industry tends to have better price competitiveness than the European industry due to a domestic market more than twice the combined size of the markets in the EU Member States and about seven times the largest national European market. This structural advantage of the US industry increases with reductions in overall demand and with technological advances and also with the persistence in the fragmentation of the EU market.

[4] Machine intelligence and robotics, simulation and modelling, weapon system environment, air-breathing propulsion, high-energy density materials, composite materials, and biotechnology. The 20 critical technologies are listed in Table 5 in the Annex.

2.1.3. Market fragmentation and barriers to cross-border integration

Market fragmentation

Since competitive strength is related to the ability to exploit economies of scale, the competitive position of the European defence-related industry, as described above, can partly be explained by the fragmented state of the European market for defence equipment. This fragmentation reflects the widespread and long-standing practice of Member States to favour national suppliers or, should these be lacking, suppliers from NATO countries, in their procurement of defence equipment.

A real European market for defence equipment hardly exists as intra-European trade amounted only to 3-4% of total procurement of major conventional weapons by EU Member States in the 1988-92 period. However, for components and sub-systems the market is more international.

Market fragmentation has generated a number of competitive disadvantages for the defence-related industry in the European Union:

- It has prevented the full exploitation of economies of scale in the production of armaments. The limited size of national orders has made the economic viability of many projects dependent on uncertain export contracts.
- The lack of serious competition for many domestic defence contracts has given rise to inefficiencies in the development and production of weapon systems. This is particularly the case when contracts are awarded on a cost-plus basis - a contract form which, however, is increasingly being phased out.
- In international cooperative programmes, which are more and more necessary for technological and economic reasons, inefficient work-sharing and "juste retour" between countries and their respective "domestic suppliers" have contributed to overcapacities and caused additional costs and have not allowed the integration of national industries on the basis of comparative advantage.

Cross-border industrial integration

Various forms of cross-border industrial cooperation have existed for decades in the defence field: companies from different countries engage in project-specific collaboration and cooperative joint-ventures and, to a lesser extent, strategic alliances (including full-function joint subsidiaries). Collaborative armaments programmes are now the most common way of addressing the prohibitive costs of purely national approaches to the development and production of large complex weapon systems in Europe. The largest European collaborative armaments project is the Eurofighter 2000 in which the major aerospace companies from the UK, Germany, Italy and Spain participate. Another key cooperative venture is developing a new-technology European military transport aircraft for the 21st century within the EUROFLAG consortium. Five countries are currently participating in the Future Large Aircraft programme.

Cross-border joint ventures are another form of industrial cooperation which has become more common in the European defence-related industry since the 1980s. Notable examples of strategic alliances are the relationship between Aérospatiale and Daimler-Benz Aerospace for the development, production and marketing of helicopters (Eurocopter)[5] and the planned establishment of ESI (European Satellites Industry) and EMI (European Missiles Industry) in the field of missiles and satellites or the recent acquisition by Thomson of a 25% stake in the Spanish manufacturer of defence-related electronics Indra.

Joint ventures are typically industry-led, but established with the consent of the governments of the home countries of the companies involved. They may be an effective mechanism for combining the diverse technological capabilities of different companies, but they are less efficient in bringing down development and production costs and in enhancing the overall operational performance of the products. International collaboration with the United States or other third countries is usually a consequence of "off-set" agreements in purchasing contracts with non-producer countries.

The ability of defence-related companies in the EU to rationalize and consolidate their businesses through mergers or sales across borders is restricted by at least five factors:

- Cross-border restructuring of the defence-related industry requires, in most cases, the consent of governments. This is unlikely to be obtained when it is perceived that the national security of supply for crucial defence equipment would be compromised by cross-border rationalization which would reduce the national defence industrial base significantly or make it very specialized.

- The relations between the government and defence-related companies differ considerably between Member States. In some countries a significant part of the industry is owned or controlled by the state, in others there is more distance between them. This disparity is a barrier to cross-border industrial integration which goes further than joint ventures. This situation not only creates distortions at the export level but also affects the development of intra-European policies, particularly industrial cooperation.

- The arms export policies, including arms export control policies, of Member States differ considerably. The attractiveness of a company as cooperation partner depends, among other things, on its ability to gain export licences from its home government.

- Another obstacle is the difference in national requirements regarding defence equipment, including the timing of orders and the strategic concepts for which the equipment is required. Only a joint definition of operational requirements would completely abolish this hindrance to defence industrial integration.

[5] Euromissile was the first significant joint-venture-like cooperative arrangement in this field. It was set up in 1972 by Aérospatiale and MBB (now part of Deutsche Aerospace).

- Finally, there is a lack of transnational legal structures (such as the European Company Statute) and of recognition of transnational partnerships as eligible for funding under national research budgets.

2.1.4. Technological synergies between civil and defence activities

The action by the European Union to facilitate integration of defence-related industrial activities will have to take account not only of the specific nature of the armaments sector but also of its essential and ever closer links with the civil sector (dual-use technologies, components, products and production installations) in order to encourage the development of technological and industrial synergies between these two sectors at European level.

Traditionally it has been argued that defence R&D generates externalities in the form of innovations for the benefit of the civilian side of the economy (the "spin-off" effect). Since the 1960s, however, the relationship between defence and civil activities has changed: the defence-related industry is increasingly relying on the technological dynamism of the civil sector by making more use of the technologies, components and products of civil origin (the "spin-in" effect). With defence R&D and production making up a smaller and smaller part of high technology activity, technological performance is coming to depend increasingly on firms' success in managing the interface between civil and defence technology. They have to become more adept at assimilating civil hardware and software into defence equipment, at organizing R&D programmes around dual-use technologies and at transmitting knowledge and expertise across the civil-defence divide.

Defence-related companies which operate in both civil and defence markets have an interest and important role to play in exploiting civil-defence synergies. A growing number of them are doing so, overcoming the separation between their civil and defence activities; but still too often, such separation remains an impediment to synergies in companies which have entered into European strategic alliances for their civilian activities but not yet for their defence-related activities. Furthermore, inter-firm synergies need also to be encouraged within and across borders.

The promotion of a dual-use approach has been, for several years, a major objective of US research and defence procurement policies, and is leading to a more integrated defence-civil technology and industrial base. The overall European defence R&D effort, which accounts for only one third of that in the US, is decreasing and comparatively more fragmented. It is therefore essential, if Europe is to preserve a technology base and a research capability (particularly its teams of researchers) which are competitive and sufficiently autonomous, that not only the efficiency of its defence R&D efforts is improved through more systematic cooperation and greater interdependency, but also that it derives maximum benefits from its civil R&D efforts through increased civil-defence synergies.

Action is being taken, to different extents in different Member States, to promote technological synergies between civil and defence activities. This needs to be pursued and strengthened, including at the European level, to optimize the overall use of R&D

resources and to facilitate the restructuring or diversification of defence-related industries. One good example of such convergence is space-related activities. One good example of such convergence are space-related activities. The space industry displays a great degree of common ground between military and civil applications. In that respect, the US industry has long benefited from defence programmes as a springboard into commercial applications in space. The desirable synergies, which are of great importance to Europe, will be identified in a forthcoming communication on space.

2. 2. Political and security challenges

2.2.1. The European security and defence identity

The changes in the international context and the strategic prospects opened up by the end of the cold war call for a review of all the leading players' security policies. A process of restructuring defence has started at both national and multilateral levels. In the long term, this process should ensure better use of security resources and a parallel massive reduction in defence budgets.

Europe's security depends on western European countries' capacity to form a centre of stability and integration. On the one hand, the spread of economic well-being and the gradual admission into the European Union of all European countries which wish to join are key ingredients of stability through integration. On the other, the progress made by the Union towards establishing a fully fledged common foreign and security policy is the second keystone for such a centre of stability. Deepening of the European Union, to include a defence policy in the long term, is therefore a priority. Close cooperation on armaments is a key factor in defence policy. The Union must not only implement a common foreign and security policy but also develop an armaments policy, all the more so since some of the Member States are amongst the largest producers, exporters and buyers of defence-related products.

In this context, Community instruments, adjusted if need be, could be used in respect of the defence-related industries. These instruments could, in particular, be adapted in the light of the security needs and of the political guidelines to be defined within the framework of the CFSP.
One positive development is that the end of the cold war has made it possible to cut defence budgets. However, in the long run the need for the defence-related industries substantially to scale down their activities, though the efforts for reconversion toward civil activities, had directs effects on unemployment losses especially in some regions.And if the required adjustments for the restructuring are not put in place, other consequences could manifest themselves in the long run in the form of impowerishment of the production base and the innovation capability of the european industry.

Maintenance and reinforcement of the sufficiently autonomous, competitive industrial and technology base which Europe needs in order to implement its common defence policy inevitably entails integration of the defence-related industries. This rationalization will allow more efficient cooperation for both the development and the production of military hardware. European undertakings will become all the more efficient and competitive if they develop synergies, cooperation and even restructuring on the single market.

The EU must foster the development of its own base for the technologies and products essential for defence in Europe. Consequently, it must endeavour to secure comparable, effective access to markets in third countries, which would reduce the one-way dependence on the third countries.

Completion of a European market in defence-related products should improve the efficiency of this sector and, consequently, cut costs for purchasers. Defence authorities' budgets will therefore benefit. However, they must ensure that the market offers them products in line with the duties assigned to their armed forces.

Increasingly, Europe will have to develop its operational capacity to prevent and manage conflicts. As provided for in the WEU's June 1992 Petersberg Declaration, in addition to its contribution to common defence in accordance with the NATO and WEU Treaties the WEU's tasks consist of keeping and restoring the peace, evacuations and humanitarian aid operations. These call on the European and national organizations concerned to plan and develop the appropriate equipment.

The long process of building a European security and defence identity has already begun. The Treaty on European Union and its annexed Declaration on Western European Union provide a means of taking account, at European level, of the political and security constraints which must shape all action on the defence-related industries. To this end, one important point to note is that the CFSP already provides a framework and instruments which could contribute to defining the context and priorities for such action. The WEU is developing its own resources with the objective of giving Europe's defence effective operational capacity. It is therefore essential to ensure a degree of parallelism between the EU's and the WEU's work.

2.2.2 The Intergovernmental Conference

The Intergovernmental Conference starting at the end of March 1996 will discuss, *inter alia,* developments concerning common security and defence policies, including the armaments aspects. Certainly, this does not necessarily mean waiting to implement the conclusions of the IGC before taking European action on the defence industry. On the contrary, it will be easier for the IGC to take decisions if the parties involved in the industry are cooperating already and the public authorities have already taken specific action for this sector at European level. In particular, it will be easier for the IGC to provide the means for a European armaments policy if an efficient industry meeting Europe's security needs has been maintained in the meantime. The Westendorp report which has received strong support among Member States, asserts that the Conference should consider how to encourage the development of European operational capabilities, how to promote closer European cooperation in the field of armaments and how to ensure greater coherence of action in the military field with the political, economic or humanitarian aspects of European crisis management.

3. The players and means of action

3.1 The European Union: promotion of the synergies between its various means of action

On the armaments market, supply and demand follow special rules dictated by the exclusive role of the public authorities, which are guided largely by security and foreign policy imperatives. This implies that armament issues could be discussed within the EU's CFSP bodies. However, the economic dimension of armament issues inevitably entails interaction with the EC Treaty. In this context, either the rules already in force, particularly on the single European market, must be taken as the basis for drafting rules specifically for the armaments sector or the existing rules must be applied, taking full account, however, of the specific nature of the sector. Completion of such a single market for armaments will create, in the perspective of the eventual framing of a common defence policy, interdependence between Member States for supplies of defence equipment. This will facilitate security of supply of such equipment between Member States under market conditions.

Although a European market in defence-related products could be established by applying the relevant rules of the EC Treaty and of Title V of the Treaty on European Union, it must also be acknowledged that a single European market implies that it must have its own identity vis-à-vis third countries. This would be created by establishing specific rules concerning the customs union, commercial policy and access to public contracts. In particular, it must be stressed that with this defence-products market with its own identity the European Union would be in a better position to secure comparable, effective access for its products to markets in third countries under mutually advantage conditions. In this connection, once normal conditions have been restored within the Customs Union, transatlantic trade must be developed on the basis of reciprocal liberalization with the objective of strengthening transatlantic cooperation on armaments, including on export limits on "inhuman" weapons (antipersonnel mines). Establishment of such a balanced relationship also implies establishing mechanisms for evaluating the volume of trade and enforcing effective and comparable access to markets in practice, where necessary.

3.1.1 Instruments available within the EC framework

First, the Community authorities have a range of instruments concerning the industrial aspects of armaments. Second and above all, the Community framework offers the possibility of applying binding rules taking account of the specific nature of the sector and guaranteeing legal certainty for all involved and fair conditions throughout the Community market.

In view of the importance of these instruments, this communication places the accent on the means of action available to the European Community which can be implemented in the short term. For this reason, a more detailed analysis of this potential is set out in Chapter 4, taking account of the specific nature of the sector.

These considerations will undoubtedly be an extremely important factor in ensuring that, in contrast to past practice, the Member States no longer interpret the exemptions authorized by Article 223 of the EC Treaty so broadly. In particular, hitherto Article 223 of the EC Treaty has placed limits on the Community framework by allowing exemptions from the provisions of the Treaty for "the production of or trade in arms, munitions and war material". This exemption applies only under particular circumstances and conditions since the same article adds that the national measures on the subject must be "necessary for the protection of the essential interests of the security" of the Member State and must "not adversely affect the conditions of competition in the common market regarding products which are not intended for specifically military purposes." Article 225 lays down, in particular, procedures for the Court of Justice to monitor the national measures taken under Article 223. Moreover, Article 223 states that the national exemptions may apply solely to the products on the list to be established by the Council in 1958. This list was adopted by the Council on 15 April 1958 and has never been changed since. Consequently, Article 223 gives the Member States no exclusive general powers. Instead, it gives them the possibility of invoking an exemption to the discipline imposed by the Treaty under the conditions described above and under the supervision of the Courts.

Hitherto, however, some Member States have interpreted this Article broadly and divergently, accentuating the fragmentation of the European defence market. Exemptions have been applied to a wider range of products without reference to the 1958 list. The Commission has never exercised its powers to take the initiative to amend the list of products. Moreover, many Member States have seen Article 223 as embodying a general principle that all areas concerning national security are not covered by the Treaties. The Commission has always contested this approach, an attitude confirmed by two recent Court of Justice judgments. In cases C-70/94 and C-83/94 the Court gave its ruling on the Community's exclusive powers under Article 113 of the Treaty and dual-use goods. In particular, it found that since full responsibility for commercial policy was transferred to the Community, national commercial policy measures are therefore permissible only if they are specifically authorized by the Community and that a product cannot fall outside the scope of the common commercial policy on the grounds that it is of a strategic nature. On this basis, Article 11 of Regulation (EEC) No 2603/69 establishing common rules for exports allows Member States to adopt national restrictive measures to avoid the "risk of a serious disturbance to foreign relations or to peaceful coexistence of nations which may affect the security of a Member State". Moreover "a measure ... whose effect is to prevent or restrict the export of certain products cannot be treated as falling outside the scope of the common commercial policy on the grounds that it has foreign policy and security objectives."

3.1.2 Instruments available under the common foreign and security policy

The Treaty on European Union created a new situation by introducing a common foreign and security policy (CFSP) which "shall include all questions related to the security of the Union, including the eventual drafting of a common defence policy, which might in time lead to a common defence".

Security is a general concept. It therefore also includes issues relating to armaments. At the same time the Maastricht Treaty introduced the concept of important interests which the Member States have in common. In particular, the Union is gradually implementing joint action in areas where the Member States have important interests in common. In the case of security, these important common interests were identified in preparation for the entry into force of the Treaty on European Union (see the conclusions adopted by the European Council in Copenhagen on the preparatory work on security). This notion of common security interests will make it easier to decide the conditions for implementing the action necessary in the armaments sector within the framework of the CFSP.

In the "Declaration on non-proliferation and arms exports" adopted by the European Council in June 1991 and supplemented in June 1992, the Heads of State and Government expressed the desire for a common approach leading to a harmonization of national policies on arms exports, based on the eight criteria agreed on arms export policies.

At the Maastricht European Council they identified areas where common action could be taken as part of the future common foreign and security policy. These include the economic aspects of security, in particular control of the transfer of military technology to third countries and control of arms exports.

In 1995 the EU took joint action, based on Article J.3 of the Treaty on European Union, inter alia on extension of the Non-proliferation Treaty and on anti-personnel mines. The latter, in particular, included a ban on exports of mines from the Union, based on humanitarian as well as foreign and security policy concerns.

The existing legislation together with the objectives of the CFSP therefore lay the foundation for the EU to evolve a policy and action making the most appropriate use of the instruments available under the Community framework and under the CFSP to the benefit of the defence-related industries.

The European Union has a single institutional framework which ensures the consistency and continuity of the activities carried out in order to attain its objectives while complying with and building on the existing Community legislation. In particular, the Union ensures the consistency of its external activities as a whole in the context of its external relations, security, economic and development policies. The Council and the Commission are responsible for ensuring this consistency. They ensure implementation of these policies, each acting in accordance with its respective powers (Article C of the Treaty on European Union). In an economic area without internal frontiers and with common security interests, consistency demands that the Union institutions implement policies ensuring greater combination of the powers of the institutions in connection with the various pillars of the Union.

3.2. Closer cooperation between the WEU and EU

3.2.1 Relations between the EU and WEU

In the Declaration on Western European Union, as annexed to the Treaty on European Union, the WEU Member States agreed on the need to develop a genuine European security and defence identity and a greater European responsibility on defence matters. The WEU would be developed as the defence component of the European Union and as a means to strengthen the European pillar of the Atlantic Alliance.

At their meeting in Bonn in December 1992 the Ministers of Defence of the 13 countries then in the Independent European Programme Group (IEPG) set up in 1976 decided to transfer the Group's functions to the WEU, in accordance with the objectives set in Maastricht.

The Western European Armaments Group (WEAG), formerly the IEPG, bringing together 13 countries, including 2 non-EU members, was thus set up and attached to the WEU as the body responsible for cooperation on armaments issues within the WEU. The objectives of the WEAG are to open up the national defence markets to competition, to reinforce Europe's technological and industrial base in the defence sector and to bring about closer cooperation on research and development. At the meeting of the WEU Council in Noordwijk on 14 November 1994, the Ministers of Defence from the WEAG countries noted the establishment of an armaments secretariat within the WEU.

As its operational role develops the WEU/WEAG will probably take on activities in fields where the EU is active on the basis of the Community policies. Given that the EU and the WEU/WEAG have common political objectives, where their activities cover the same fields there are clear advantages to be gained from mutual information and closer cooperation, particularly in terms of efficiency, costs and consistency.

Closer cooperation between the EU institutions and the WEAG would be facilitated by building bridges between the European institutions dealing with defence markets. Such synergies and bridges could be established rapidly and pragmatically on the basis of the Treaty of Rome or of Title V (for example, by extending the existing information and consultation procedures between the WEU and the Commission).

3.2.2 European Armaments Agency

The Declaration on Western European Union annexed to the Treaty on European Union provided for enhanced cooperation between the Member States concerned in the field of armaments with the aim of creating a European Armaments Agency. Despite the considerable progress made with defining the Agency's tasks and statutes, the groundwork has revealed that big differences still remain on the principles and priorities of the Agency's activities.

The WEAG's decision establishing the Agency has therefore been delayed. Against this background, the Commission should consider its possible contribution to establishing this Agency and to defining its tasks and carrying out its activities.

In addition, France and Germany have decided to set up a joint armaments structure in 1996 to allow more rational cooperation and contribute towards establishing an efficient and appropriate industrial and technological base. The Ministers of these two countries declared that this move is part of the process of establishing the common security policy provided for in the Maastricht Treaty and, in particular, marks a constructive step towards establishment of the European Armaments Agency.

The Maastricht Treaty stipulates that the WEU "as the defence component of the European Union will formulate common European defence policy and carry forward its concrete implementation through the further development of its own operational role." To this end, for interoperability and cost reasons and in order to fulfil the common security objectives/tasks, increasingly the equipment requirements of the forces participating in the WEU will in turn become common. Definition by the WEU of European forces' operational requirements will mark a decisive step for European armaments policy. In particular, largely common demand for armaments from WEU states would put the EU in a position to define more closely the rules governing the internal market, imports and supplies of military equipment. Here too cooperation between the EU and the WEU is essential.

4. Contribution of the Community instruments and activities of relevance to the defence-related industry

4.1. Internal market and technological base

4.1.1 Public procurement

The Commission is convinced that important benefits could be derived by the defence community from applying procurement procedures largely inspired by those applied in the EU's civil sector.
It recognizes that the specific character of the defence sector, which involves essential national security interests, which may vary among Member States, may require some adjustments to the procedures which are enshrined in the Community's procurement directives. However, it is important that the main features of those rules are applied as uniformally as possible.

Indeed, the procurement regime, which exists in the Community is based mainly on the following principles: a generally applicable non-discrimination and equal treatment principle, competitive tendering, open and transparent procedures based on objective selection and award criteria and an enforcement structure consisting of legal remedies for aggrieved suppliers and an independent enforcement authority which has investigative powers and can seek corrective measures.

According to a study carried out in 1992 for the Commission into the "Cost of non-Europe in Defence Procurement[6]",defence procurement amounted, in 1990 in the EU to about 65 to 70 billion ECU a year. Efficient purchasing in this sector could result in savings of between 5 to 11 billion ECU per year thereby avoiding the substantial duplication of industrial capabilities in aircraft, helicopters, missiles, tanks and warships in the sector.

These principles have been further developed by the Council in six directives which lay down detailed provisions on procurement of goods, services and public works by public authorities and utilities and minimum requirements as to legal remedies. These detailed rules only apply above certain monetary thresholds. It is important to keep in mind, however, that the abovementioned principles apply to all contracts, regardless of their value. Applying a similar legal environment to the defence sector would enable Member States to take full advantage of the savings delivered by efficient procurement procedures, while being reassured that their partners abide by the same rules and are submitted to the same discipline.

Although the main core of the Community's procurement regime should therefore be applied to the defence sector as well, certain adjustments need to be made in order to take into account the specificity of that sector. The main issues in this regard are the need to ensure the confidentiality of information "the disclosure of which Member States consider contrary to their essential security interests", and the need to maintain guaranteed sources of supply.

The Community's procurement directives provide for three different types of purchasing procedures, i.e. open, restricted or negotiated. Although utilities can freely choose between these three alternatives, public authorities should normally opt for open procedures, unless there are important justifications to use one of the others. The Commission could well imagine that for certain strictly limited defence purchases, public authorities will consider bids only from companies which have been selected beforehand on the basis of *objective criteria* as willing and able to maintain the confidentiality of sensitive information. It is important to ensure, of course, that this selection process is not used as a disguised means of arbitrarily eliminating certain suppliers.

With regard to the necessity to maintain guaranteed sources of supply, especially in times of international tension or war, the Commission feels that the current regime offers sufficient possibilities to take this element into account. First of all the purchasing entity could select suppliers on the basis of their ability to ensure supply under virtually all circumstances. Furthermore they could conclude multilateral contracts, i.e. contracts concluded with several suppliers for one type of product or service. In such a case a hierarchical order would be established between the various suppliers. If supplier one is not able to provide the product within a given time-period the product would be purchased from the next company in line and so on.

[6] In 1990 defence procurement amounted in the EU to about 65 to 70 billion ECU per year within which expenditure on Article 223 items was estimated at ECU 40 billion.

If a Member State feels that its needs can be fully met by a offer from a non-EU company which makes the best offer for that Member State's money there does not seem to be a compelling reason for the Community to require this Member State to select an offer which satisfies its needs less well for the sole reason that it is presented by a Community supplier. This does not mean, of course, that the third-country supplier will be able to claim any rights to even being considered as a possible supplier. At this stage, the Commission considers that it would be preferable only to apply these rights, including legal remedies, to Community suppliers.

The Commission intends further to explore these ideas, as well as others which may be presented, with the other institutions and with representatives of the Member States, taking into due account the objective of enhancing in a dynamic way the competitiveness of the European defence-related industry. If this leads to legislative measures, it is obvious that these will have to be binding on all Member States.

However, in order to allow Member States some flexibility in extreme cases involving national security, a safeguard clause should be included in those measures. This clause could be used on condition that other Member States and the Commission are informed immediately after the decision to procure without following the common rules. Sufficiently detailed reasons should be given.

4.1.2 Intra-Community trade

The internal market does not only constitute a trade area favouring greater competitiveness, but also provides the environment for stronger cooperation amongst European industries. By facilitating intra-Community trade, the completion of a "European defence market" should facilitate both cooperation and integration in the European defence-related industry.

Regarding the EU framework, the gradual opening of intra-European borders requires a minimum standard of competition policy and in the long term harmonized export rules. Furthermore, it implies especially, whenever possible, the simplification and rationalization of controls on intra-Community trade carried out by States. In view of this objective and in order to coordinate the methods of control and ensure more transparent results, certain Community instruments should be put in place, based on administrative cooperation.

The need to simplify the national control procedures concerning the movement of defence products applies even more when the trade concerned by these controls takes place within the framework of industrial cooperation agreements. However, the principle of mutual recognition recognized in the framework of the EC Treaty could be used as a basis for technical specifications used for the construction of defence-related products, either in an intergovernmental framework, or through a Commission initiative.

At the end of the day, trade within Europe will not only contribute to eliminating distortions of competition, but also facilitate industrial cooperation and integration, whilst still assuring the necessary provisions for the national security of Member States.

4.1.3 Research and technological development (RTD) activities

Although they are focused on civil objectives, Community research programmes, like civil research activities at national level, are increasingly of interest for the defence technology base because of (1) the overlapping and converging technology needs of the civil and defence sectors in a wide range of areas (dual-use technologies) and (2) the leading role taken by the civilian markets in the development of a growing number of these dual-use technologies.

As the competitiveness of the Community industry is a primary objective of Community RTD policy, Community programmes support research in a wide range of dual-use technological areas (production technologies, advanced materials, information technologies, communications technologies, telematics, aeronautics, energy storage and conversion, etc.).

It has been estimated that technological areas of potential dual-use interest account for as much as one third (i.e. about 1 billion ECU per year) of the overall Community research budget. It is therefore not surprising that a number of companies and research organizations known to be active in the defence sector participate in Community programmes and that some Member States are encouraging them to do so. Some of these companies are also being consulted in the framework of the Commission's Task Forces to improve the links between research and industry (e.g. aeronautics).

Community RTD programmes can contribute to the technology base of the defence-related industry in several ways : (1) by strengthening the overall European research infrastructure and scientific base; (2) by supporting R&D projects leading, after further development, to commercial products, processes, standards or improved quality assurance which can also be used in the defence sector; (3) by supporting R&D projects on generic technologies which can lead, after further development, to either civil or defence-specific applications. Furthermore, Community programmes can also support research by defence related organizations to develop civil applications of their defence technologies.

With the growing importance of trans-European R&D cooperation in both civil and defence sectors, it is now appropriate to consider how, and to what extent increased civil-defence synergies can be promoted at the European level with the aim of optimizing the overall use of R&D efforts.
The Commission considers that, while maintaining the civil orientation of Community research programmes, appropriate steps to start addressing these issues should be :

- to establish cooperation links between EC and WEAG research programmes to avoid duplications, to ensure complementarity, and to facilitate optimal use of research results;

- to identify, in cooperation with the WEAG and industry, key dual-use technological areas where European capabilities are weak or not sufficiently autonomous and should be strengthened;

- to determine, on the basis of the experience and knowledge from the above action, whether, how and to what extent dual-use considerations should be taken into account in the preparation of the future Community programmes (Fifth Framework Programme).

4.1.4 Standardization and technical harmonization

Standardization has been transformed in recent years from a marginal policy area to one which is attracting priority attention within European industry as a means of reducing costs and promoting industrial competitiveness. It is recognized to be of strategic importance for the efficiency of the internal market.
Union-wide standardization policies are relevant to the defence-related industry in such key areas as information technology, telecommunications, power supply, laser technology, new materials, aerospace and quality systems and conformity assessment. In many of these areas, civil standardization activity is proceeding faster than similar work organized for purely military purposes and civil standards are becoming more widely used in defence procurement.

Hence, further convergence of civil and military use of standardization, in order to maximize economic benefits and to minimize duplication of effort and the waste of scarce technical expertise, should be one of the main objectives of EU policy in respect of the defence-related industry.

Greater use by the military of the existing standardization mechanisms and company accreditation at international and European level will combine the advantages of lower costs of procurement, greater competition in supply and, in some cases, shorter lead-times in the development of standards.

Although the scope for the use of civil standardization will remain limited or even non-existent in some security-sensitive areas, such as weaponry, in other areas standardization can provide a common basis from which additional, non-standard, requirements may be developed by the military, if necessary. Unnecessary overlap between civil and military standardization work should be avoided for reasons of industrial efficiency and budgetary savings.

In order to promote civil/military convergence in this field, the Commission considers that the following steps would be helpful:

- the conclusion of cooperative arrangements between the European standardization organizations and NATO standardization experts in order to identify areas of common interest of overlap in their current activity, perhaps by means of a joint report;

- identification by the defence authorities within the EU of standardization work already planned in the civil field that could also be of interest to the military, with the possibility of Community support, where appropriate, by standardization mandates;

- the establishment of a system for regular information exchange between NATO with the European standardization bodies in order to minimize the risk of duplication of work in the future.

Examples of such initiatives which have already been launched include developments in the field of CALS (Continuous Acquisition and Life cycle Support) where cooperation between civil and military structures is about to be implemented.
Recent discussions between the European Commission and the European aeronautics industry have taken place to bring about closer integration between military and civil standards.
NATO has also shown interest by setting up a new standardization organization (NSO).
These initiatives would not affect the continued commitment of the Community to ensure that European standardization is based on international standards wherever possible.

4.1.5 Competition policy

In the light of the emergence of a Community market for the defence industry, resulting from common defence programmes, from European alliances and from necessary restructuring, there is a place for the Community competition policy. It can facilitate, thanks to a clear framework and quick decisions, the concentrations and cooperations between companies which do not call into question effective competition. Moreover, rigorous control of State aids will make it possible to distinguish between aid necessary for restructuring, since it accelerates change, encourages research, development and innovation and reduces the social consequences of reorganization, and aid used for defensive reasons that certain Member States might be inclined to use to avoid the necessary structural changes and transfer the production and employment adjustment costs onto other Member States. The control of aid should also provide a means to make sure, in a more effective manner than today, that aid granted to the defence-related industry is not also used by certain companies to subsidize civil production.
In a sector such as the defence-related industry, the introduction of effective competition should therefore result in considerable productivity gains, in the form of cost reductions and increased innovation which could only improve the industry's exporting capacity.

The Commission considers that the legal basis for the Community's competition policy could be used and provide an adequate framework for competition matters relating to the European defence-related industry.

However, the application of competition law to the defence-related industry must take into consideration the specific features of this industry. It must also be consistent with the objectives of other Community policies, be receptive to information and comments from Member States' Ministries of Defence (MODs) in their capacity as main clients of the defence-related industry and allow Member States to take appropriate measures in order to protect national security in addition to those measures which might be taken by the Commission to maintain and develop effective competition. Competition policy in the defence-related industry should be implemented progressively, in fields such as State aids, agreements and concerted practices since, up to the present date, the Commission has adopted a careful approach to exercising its competence in these fields. Finally, it is evident that the Commission will take into consideration, in the operation of its competition policy for the defence-related industry, the manner in which in particular governments of third countries which produce armaments formulate and apply competition law to their own industry.

So far the Commission has approved/notified concentrations (see table in Annex) of defence industries on the following lines:

- For the moment, geographic markets for defence products and services tend to remain national where a domestic supplier exists because MODs still tend to have strong preferences for national suppliers. However, where there is no domestic supplier, then subject to other barriers such as export restrictions and national preferences, suppliers of defence products and services compete with each other world-wide. Consequently, dominant positions by European defence-related companies at world level are not likely to be observed, given the weight of US competitors in this area. Likewise, when the geographic market is national, a dominant position, if any, is normally not strengthened, given that there is no addition of market share, except when the merger concerns two national suppliers.

- When assessing the market position of a firm in the defence industry, account must be taken of the bargaining power of its main clients: the Ministries of Defence (MODs) of the States concerned. MODs generally formulate the operational requirements and technical specifications of armaments. Also, as a consequence of the reduction in national defence budgets, MODs tend to require higher technical specifications with lower levels of manpower and lower overall costs and to be reluctant to bear the risks associated with R&D.

- The Commission considered the general views of the MODs concerned as relevant for the assessment of the operation.

The extent to which a common market for defence equipment is achieved is crucial to evaluate the effects of the merger policy on the conditions of competition. As far as national markets remain, further concentration may aggravate monopolistic inefficiencies that can extend into civilian areas of business. On the other hand, if progress towards a common market for defence equipment is achieved, and provided that conditions of competition are preserved, business consolidation may contribute favourably to European competitiveness on a global market.

Finally the Merger Regulation allows Member States to take appropriate measures to protect public security [7].This clause which reaffirms Member States' ability either to prohibit a concentration or to make it subject to additional conditions and requirements compatible with Community law, has been used once by a Member State [8].

As regards agreements and State aids, the Commission has always approved the notified operations. The Commission is conscious that cooperation programmes are necessary in the defence-related industry, in view of the size of certain projects which require substantial financing and multiple skills. As far as financing of military R&D by Member States is required, the Commission takes account of the particularities of defence-related activities, namely a high technology base of production, high costs and a very long development cycle, which, to a large degree, require public financing. Concerning aid for rescuing and restructuring firms in difficulty, great attention should be given in particular to social and regional policy considerations.

4.1.6 Structural Funds

A study carried out in 1992 for the Commission on the economic and social impact of reductions in defence spending and military forces on the regions of the Community showed that about half of the regions in which defence-related activity is concentrated are not eligible for assistance under the Structural Funds instruments (Objective 1, 2 or 5(b) regions). Following the revision of the Structural Fund Regulations in 1993, a number of these areas (in UK, France and Italy) were integrated into Objective 2 regions. As a result more than half the defence-dependent areas are now in assisted areas. It is, however, important to note that even in assisted areas, Structural Fund aid is not available for investment in the defence-related industry itself. The role of the Structural Funds is therefore limited to providing general economic development assistance (including aid for conversion) through the Community Support Frameworks in place in the assisted regions and to the KONVER initiative.

In this context, Objective 4 of the European Social Fund and the related Community Initiative ADAPT have established a horizontal approach (i.e without a priori reference to specific industries or sectors) to structural change and its effects on the workforce.Incertain circumstances, assistance is available for measures which help the adaptation of workers threatened with unployment due to industrial change and change in production systems (especially within small and medium size enterprises).Particular emphasis is placed on the anticipation of labour market trends and improving qualifications and employment opportunities for the workers in question.

[7] Cf. Art. 21(3) of the Regulation

[8] See point 321 of the XXIIIrd Report on Competition Policy

In response to calls from the European Parliament, the Commission adopted Perifra 1 (1991) and Perifra II (1992). These special measures included support for demonstration projects which could serve as models for the conversion of military installations. In conformity with the position taken by the Parliament, the KONVER Community Initiative was adopted in 1993 to assist regions weakened by the decline of defence industries and installations. The annual programme introduced in 1993 has been extended on a multiannual basis up to the end of 1997.
The purpose of KONVER is to provide support for economic diversification in areas heavily dependent on defence-related activities through the encouragement of commercially viable activities not related to defence.
Eligible areas can be located anywhere in the EU, although at least 50% of the 1994-97 KONVER budget must be spent in ERDF assisted areas (Objective 1, 2 or 5(b)). The eligible areas are small geographical regions in which actual or announced defence-related job losses total 1.000 or more since 1990. Other areas heavily dependent on defence can also be accepted as eligible regions taking into account their high unemployment rates, poor environmental conditions, or isolation/remote location.
A full range of conversion measures including the financing of both tangible and intangible investment in alternative economic activities, the modernization of infrastructure in relation to the economic regeneration strategy of the area concerned, and measures in favour of the environment and tourism can be financed through KONVER. The budget for the programme is ECU 130 million for 1993 and ECU 500 million for the period 1994-97. A reserve of ECU 245 million to support product innovation, the development of environmental technologies and SMEs was allocated to the KONVER initiative on 4 October 1995. KONVER was also extended until the end of 1999. Loans from the European Investment Bank are also available.

Also, the possibility and detailed ruled for financing from other EU resources could be examined in the light of the priorities of the armament policy.

4.2. The external dimension

4.2.1 Export policy

In the European Union, national policies on arms exports have traditionally differed considerably, ranging from nearly total ban to a voluntaristic approach, where arms export is considered vital not only for strategic and political reasons but also for reducing unit costs and maintaining a broad defence industrial and technological base at the national level. Not less importantly, assessments of the risk of exports to certain destinations, linked to foreign policy considerations, have traditionally been made on a national basis. The ensuing differences between Member States are not without cost : national concerns about either a too restrictive or too liberal approach of one or more other Member States on arms exports in general, or in regard to specific destinations, have not favoured intra-European industrial cooperation or integration. Differences in export policy thus also impede the development of intra-European policies. As a consequence the development of common policies inside the European Union in order to secure the industrial basis of the sector should be complemented by a corresponding level of harmonization of national export policies and export-control systems.

The European Council has taken a first step towards a common approach on arms exports, by adopting, in June 1991 (Luxembourg) and June 1992 (Lisbon) (in the annex), eight criteria which Member States interpret when deciding on issuing a licence for a specific export. Exchanges of information on the concrete application of the criteria are being conducted between Member States, with a view to harmonizing their interpretation.

Given the difficulties in developping a common basis for the harmonization of arms export policies a gradual process should be pursued following a two steps approach. In a first stage, regular exchange of information between Member States on arms exports (type and quantity of exported material, destination, end-use) should be pursued. In the case of cooperation programmes, which should be encouraged, progress could be achieved on the basis of current experiences, namely by following the principles according to which export rules of the country where the prime contractor is located apply.
In a second stage the establishment should be pursued of an operational system aimed at eliminating the distorsions between the various national treatments. The drafting of such a system should, for it to become effective, take into account the modalities, principles, scope and the possible needs for improvement, based on the experience gained with the establishment of the export control regime on dual-use goods and technologies (see below).

4.2.2 Export controls on dual-use goods and technologies

To resolve one of the most difficult problems hindering the completion of the internal market, i.e. the problem of controls on intra-Community trade in dual-use goods, the Council agreed, after two years of intensive discussions on a Commission proposal, to establish a Community export control system. It is based on two legal instruments, viz. an Article 113 Regulation[9] and a Joint Action under the Common Foreign and Security Policy[10], which together form an integrated system. Both texts were formally adopted by the Council on 19 December 1994 and apply from 1 July 1995.

The objective of the integrated system is to ensure that effective controls, based on common standards, are applied by all Member States on exports of controlled goods from the Community.

[9] Council Regulation (EC) No 3381/94 of 19 December 1994 setting up a Community regime for the control of exports of dual-use goods, as amended by Council Regulation (EC) No 837/95 of 10 April 1995, OJ L 367 of 31 December 1994 and OJ L 90 of 21 April 1995.

[10] Council Decision 94/942/CFSP of 19 December 1994 on the joint action adopted by the Council on the basis of Article J.3 of the Treaty on European Union concerning the control of exports of dual-use goods, as amended by Council Decision 95/127/CFSP of 10 April 1995 and by Council Decision 95/128/CFSP of 10 April 1995, OJ L 367 of 31 December 1994 and OJ L 90 of 21 April 1995.

Two key features of the integrated system are:

- a common list of dual-use goods and technologies subject to export control by all Member States as well as a list of destination countries;
- common criteria to be applied by all Member States when determining whether or not to authorize exports from the Community.

This system is part of the effort of the international community to reinforce and coordinate export controls over sensitive items. In particular, 28 countries, among which all EU Member States, agreed in December 1995 on the establishment of the "Wassenaar arrangement". This arrangement succeeds the COCOM regime as regards export controls for arms and dual-use goods. There are obvious links between this arrangement and the EU system, which will call for an adaptation of the EU common list of dual-use goods.

In such a sensitive and complex area where internal market, trade, foreign and security policy interests converge, the common export control system cannot be applied overnight. Consequently, a transitional period is foreseen to ensure that the system works effectively. It will be used to strengthen, where necessary, the control systems of Member States and to reinforce administrative cooperation between the competent authorities.
The new system provides for a clear identification (and a common list) of dual-use goods and technologies and serves as a basis for the reduction, and ultimate elimination, of policy differences between Member States.The fact that an export licence issued by one Member State is presently valid throughout the Union, facilitates joint export projects between companies established in the Community.

The creation of a common regime for dual-use export controls is an important improvement in the regulatory framework for the European defence-related industry which will facilitate structural adjustments thereby increasing companies' competitiveness.Therefore the whole system has to be implemented effectively. When making new proposals for a common regime, the Commission will take into account the ruling of the European Court of Justice in case C-83/94 that dual-use goods fall within the scope of the common commercial policy defined by Article 113.

4.2.3 Import duties on military equipment

The common customs tariff provides for the application of customs duties to most military or dual-use civil and military equipment imported from third countries. Only certain products benefit from specific exemptions, generally as a result of GATT negotiations. Individual exemptions from duties have also been granted under preferential arrangements with certain third countries, such as the members of EFTA. However, other military equipment, and dual-use products are in principle subject to customs duties, although the level of those duties has been lowered considerably in the course of multilateral trade negotiations.

It is against this background that the Commission submitted a proposal to the Council in 1988 for a regulation temporarily suspending import duties on certain weapons and military equipment [11]. The aim was a uniform Community response to national defence

[11] COM(88)502 final - OJ C 265, 12.10.1988. p.9.

procurement requirements which had hitherto resulted in certain Member States unilaterally granting exemptions from custom duties. The Commission considered then, and still does, that the tariff arrangements for imported products, even military or dual-use equipment, are the sole responsibility of the Community and that Article 28 of the Treaty therefore constitutes the only permissible legal basis for granting autonomous suspensions. In this respect, the existence of differing national approaches, apart from not being founded in Community law, is incompatible with the very principles of the Customs Union and the Internal Market.

The scope of the proposal for a regulation was defined with the aim of establishing a balance between the desire to facilitate access by national armed forces to the most technologically advanced equipment and the need to take account of the interests of the Community arms industry. It therefore covers equipment which is military "by nature", and parts thereof. During discussions in the Council, a number of Member States asked for the list to be extended to certain equipment which would necessarily imply not only verifying that importation of this dual-use equipment with duties suspended is not likely to disturb the balance mentioned above but also defining what is meant by "military use" in their regard.

These discussions could be resumed within the overall context of this communication in order to establish a list of products benefiting from duty suspensions which is most suited to the various objectives of a European defence policy. This will also contribute, as proposed by the Commission since 1988, to resolve outstanding difficulties, referred to above.

4.2.4 Trade relations

The development of a European defence equipment market, to the extent that it would lead to greater self-sufficiency in different market segments, has potentially far-reaching implications for relations with third countries, and particularly with the United States, which is the main third-country supplier of arms to the European Union Member States.
Exploitation of the Community dimension in defence procurement does not imply unilateral opening at Community level of the defence market to third-country suppliers.
Because of the exceptions in the multilateral trade regime, including the Government Procurement Agreement (GPA) concluded in the framework of the WTO, competitive tendering does not yet apply to purchases of defence-related material by our trading partners. Every Member State will remain free to consider if bids received from non-EU firms should be examined.
Negotiations should be undertaken in order to lay down the conditions under which third-country suppliers could enjoy, in relation to public procurement and other market access issues, the same rights as Community suppliers in the armament sector, based on comparable and effective access to the markets of those countries for EU suppliers, whilst respecting each party's security interests.

5. Conclusions:

The Commission notes that matters concerning the production of and trade in armaments are linked to defence and foreign-policy considerations of Member States and to progress in the development of a European security and defence identity. On the other hand securing a competitive European defence-related industry is also a precondition for a European security and defence identity.

There is therefore an urgent need for recognition of the state of health of the defence-related industry since, if this is not followed by tangible action, there is a danger of aggravation of the situation, leading to massive job losses and the disappearance of technological skills, with serious repercussions in the civil sector.

Numerous questions, particularly concerning the demand side (for example, harmonization of operational requirements) can only be discussed within the framework of the preparations for a European security and defence identity. In the short term, however, the CFSP provides mechanisms and procedures which could smooth the way for urgent measures.

Many other questions, particularly with an impact on the competitiveness of businesses, can be answered within the European Community framework.

In fact a coherent range of Community instruments is available for the establishment of unified markets and competitive industries. The specificity of this industry can be taken into account adequately when implementing the current instruments.
The action proposed in this document could usefully be complemented by measures in the framework of the Western European Union, in particular the establishment of a European Armaments Agency referred to in the WEU Declaration of 10 December 1991.

The Council is requested to give its opinion on the foregoing analysis and on the suggestions concerning the contribution by the Community instruments.

In the light of the Council's work, the Commission plans to take the appropriate action in the form of specific proposals or other suitable measures.

COMMUNICATION FROM THE COMMISSION

TO THE COUNCIL, THE EUROPEAN PARLIAMENT,
THE ECONOMIC AND SOCIAL COMMITTEE
AND THE COMMITTEE OF THE REGIONS

IMPLEMENTING EUROPEAN UNION STRATEGY ON DEFENCE-RELATED INDUSTRIES

IMPLEMENTING EUROPEAN UNION STRATEGY ON DEFENCE-RELATED INDUSTRIES

SUMMARY

The need to implement a European Union strategy to keep up with the major changes in the European defence-related industries is becoming more pressing every day. The industrial and technological base of defence are both precious in terms of economic development and indispensable for weapons capabilities. Despite the urgent warning and call for action issued by the Commission in its Communication of January 1996 on the defence-related industry, the situation in the sector has deteriorated since then. Employment in the industry fell by 13% between 1993 and 1995. In 1995 the value of European Union imports of defence-related products from the United States was six times the value of its exports of the same category, whereas in 1990 the ratio was five to one, and in 1985, four to one. In 1996 it took eight European defence undertakings to achieve sales worth $60 billion, while the three biggest American undertakings alone achieved sales of $90 billion. This trend is even more worrying when one considers how it compromises the political objectives formally enshrined in the Treaty on European Union concerning the "eventual framing of a common defence policy". The essential responsibility for restructuring the defence industry lies with the Member States. However, their cooperation within the framework of the Union is important and the purpose of the Commission's initiatives is to facilitate the development of such cooperation.

An integrated European market for defence products must be set up using a combination of all the instruments at the Union's disposal: Community and Common Foreign and Security Policy legislative and non-legislative instruments. The Commission proposes a global approach to implementing this strategy:

- *a proposal for a Common Position on drawing up a European armaments policy. The Commission calls on the Council to adopt the proposed CFSP Common Position in order to open up the debate on the major issues relating to such a policy and promote the Member States' commitment to its establishment. The areas specifically covered by the proposal are intracommunity transfers, public procurement and common customs arrangements.*

- *an Action Plan for the defence-related industries. The Plan put forward by the Commission describes the areas in which immediate EU action seems necessary. The Commission will take appropriate steps to develop more detailed versions of the measures outlined in the Plan.*

The speed and scale of current change make it imperative for the Union to initiate practical action on this matter in 1998.

1. THE CONTEXT

In the last few years the European defence-related industry has been undergoing restructuring, shaped notably by the new security environment and international competition. The process involves, *inter alia*, shedding jobs and reducing production capacity. National frameworks no longer have the capacity to achieve the scale of restructuring needed. A European framework is now essential to provide adequate solutions, but it has not yet evolved into a source of rules governing a European market for armaments. Similarly, the objective of gradually defining a European defence policy is accepted, but the first steps towards a common defence initiative have not yet produced any list of specific European needs regarding defence equipment.

The essential responsibility for the restructuring process lies with the Member States because of the nature of the sector. However, cooperation between them at European level seems important for the success of this process. The purpose of the Commission's initiatives is to facilitate the development of such cooperation.

The process of restructuring and consolidating the European defence-related industry, which should be carried out on a European scale, cannot progress satisfactorily unless market barriers are lifted and a clear, reliable political and institutional frame of reference is provided. The European Union must take the necessary steps to establish this regulatory framework. The urgent need for such action is still greater given the fact that the European industry's biggest competitor, the United States industry, has achieved a much greater level of consolidation with the open and practical support of the Administration. The US industry's success in exporting arms to international markets is closely linked to the size of the American undertakings and their special relationship with government. The Commission Communication on the aerospace industry[1], which highlights the striking difference between the situations on either side of the Atlantic, calls for a reaction at Community level and contains some valuable suggestions on this matter which are equally applicable to other sections of the defence-related industry.

The Union accepted the need to adopt a strategy in this area as far back as the summer of 1995, when the Council established a working party on European arms policy with a mandate to put forward specific measures for areas within the Union's jurisdiction; these recommendations could be formulated as Community or CFSP measures. After two years of work, although the group has been unable to formulate any recommendations, it has made useful progress in defining the special characteristics of this sector and identifying areas in which action should be taken as a priority.

The Treaty of Amsterdam sets the course for the development of an armaments policy. Article J.7.1 stipulates that "The progressive framing of a common defence policy will be supported, as Member States consider appropriate, by cooperation between them in the field of armaments." The Declaration on Western European Union, which will be annexed to the Amsterdam Treaty and was adopted by the WEU Council of Ministers on 22 July 1997, provides for armaments cooperation between the EU and WEU "in the context of rationalisation of the European armaments market and the establishment of a European Armaments Agency."

The imminent establishment within the WEU of the Joint Organization for Armaments Cooperation (OCCAR), which will have important responsibilities in the management of joint armaments programmes, is an essential step towards setting up the European Armaments Agency. The latter body, which will have extensive responsibilities for all factors affecting the definition and organization of demand for armaments products, will facilitate the restructuring and consolidation of the European defence industry. Commission initiatives are also contributing to this process by helping to create a suitable environment for setting up the Agency sooner rather than later. In the interests of economic efficiency, the creation of a European market for defence products and the

[1] COM(97) 466.

establishment of the Agency should not be treated as unconnected. Complementary rules of operation should be developed for the market and the Agency so that a homogeneous overall framework can be established. The establishment of OCCAR and the preparation for setting up the European Armaments Agency must take full account of EU *acquis*. This, together with the development of a European armaments policy, means that more effective links will have to be established between Union institutions and the Western European Armaments Group (WEAG).

As far back as January 1996 the Commission presented a Communication on the challenges facing the European defence-related industry in which it outlined the action the Union should take. The strategy indicated in this document was approved by Parliament which, in June 1997 adopted a detailed resolution on EU initiatives. The Economic and Social Committee also approved the communication. The Commission has built up close links with the defence-related industry and through meetings and discussions with its representatives it has identified the most important areas in which action should be taken in the short and medium term.

It has to be said that since the Communication was adopted in January 1996 the situation of the defence industry has deteriorated still further. The warning then issued by the Commission did not trigger action at Community level. According to BICC (Bonn International Center for Conversion) data for 1997, employment in the defence-related industry fell by 13% between 1993 and 1995. US Arms Control & Disarmament Agency statistics show that in 1995 the value of European Union imports of defence-related products from the United States was six times the value of its exports in the same category; in 1990 the ratio was five to one; in 1985 four to one. In 1996, thanks to consolidation, the three biggest American defence undertakings achieved sales of more than $90 billion, while it took the eight biggest European undertakings to achieve a total of $60 billion in sales. These figures should be considered in the light of the fact that there is a single internal market for American companies which is considerably bigger than all the Member States' markets put together. Since 1990 the market for defence products has fallen significantly in the Member States because of the end of the Cold War. The United States, faced with a similar decline, reacted to the new situation by restructuring its defence-related industry. The European market is still too fragmented and the level of intracommunity trade in defence equipment is astoundingly low compared to total procurement by the Member States.

This downward trend in the industrial base is all the more worrying if one considers how it compromises the objectives formally adopted by the Member States. The Amsterdam Treaty, which was finalised at the Amsterdam European Council in June 1997 and signed on 2 October, provides for the first time (in the first subparagraph of Article J.7.1) that "the common foreign and security policy shall include all questions relating to the security of the Union, including the progressive framing of a common defence policy ... which might lead to a common defence, should the European Council so decide." The Atlantic Alliance, at its ministerial meeting in June 1996 and at the Madrid Summit in July 1997, stressed the emergence within the Alliance of a European security and defence identity and set out a number of guidelines to further this process. But there can be no European defence policy or identity without a healthy and competitive European technological and industrial base.

2. EUROPEAN UNION STRATEGY

The need to implement a European Union strategy to keep up with the major changes in the European defence-related industries is becoming more pressing every day. The most important undertakings in the sector and the association representing them at European level are calling for action by EU institutions. The defence-related industry and the context in which it operates are changing fast, although not so fast as its American counterpart. The factors driving this change are still at work. The Commission Communication on the European aerospace industry[2] stresses the importance of these changes in the United States and the need for drastic action in Europe. It is not possible for the aerospace industry of any single Member State alone to maintain adequate performance and competitiveness. It is vital to consolidate the industry's non-military and military activities at European level. The same applies other defence-related sectors. There, too, change within the industry must be accompanied by public measures at European level. The industry needs a reliable and transparent frame of political and legal reference and it needs it soon.

The Commission Communication of January 1996[3] gave rise to a widespread debate, a key product of which was the Parliament resolution adopted in May 1997 which strongly endorsed the Commission's ideas. The Council's working party on European armaments policy ("Polarm") has reviewed the positions of the Member States and found a number of points of convergence:

Firstly, the Union must maintain the industrial and technological base of its defence-related industry. This base, which increasingly involves dual-use products, is valuable for economic development and indispensable for a weapons capability. The reasons for maintaining it therefore relate to establishing a European defence identity and to competitiveness and jobs in crucial manufacturing sectors.

Secondly, the Union is one of the preferred frameworks for action in this area. It complements others such as the national frameworks and those of the defence organisations to which most Member States belong. The Community framework has proved its efficacy in setting up European markets for non-defence products; Union instruments can now also serve the same purpose for defence products. This kind of market would be of great benefit to the defence industry. The Union should therefore apply a combination of its legislative, non-legislative, first pillar and second pillar instruments.

Thirdly, the different strategies afforded by these instruments need to be combined because of the particular nature of the defence industry, namely that it is both a major means of production and essential to foreign and security policy. Any action by the European Union has to take this dual nature into account, if necessary by adapting the resources within the Community's jurisdiction.

[2] Presented in September 1997.

[3] COM (96) 10: The challenges facing the European defence-related industry, a contribution for action at European level

In conclusion: Action should be taken at once, without waiting for a new institutional context to be established, in areas in which it is urgently needed to protect the defence sector's technological and industrial base.

3. COMMISSION INITIATIVES

The Commission proposes a global approach to implementing EU strategy:

- **A proposal for a Common Position on drawing up a European armaments policy.** The Commission herewith sends to the Counci! a draft Common Position adopted under Article J.2 of the Treaty on European Union. This form of CFSP instrument has been used because of the foreign policy and defence dimensions of any European Union measures on arms. Following work done earlier by the Council, the Common Position proposed by the Commission sets out a number of principles and indicates where the first steps should be taken. The areas specifically covered by the proposal are intracommunity transfers, public procurement and common customs arrangements. The Council has already done work on them, specifically in connection with armaments. Furthermore, their advantage is that EU measures could be based on a substantial *acquis communautaire* in these areas. This proposal for a Common Position should open up the debate on the major issues relating to European armaments by directly involving policy-makers in the decision-making at the appropriate levels. It is intended to promote Member States' political commitment to the progressive establishment of a genuine European armaments policy.
- **An Action Plan for the defence-related industries.** The Commission has drawn up a list of areas in which it considers EU action necessary and specifies what measures should be taken at once to ensure progress towards a true European market for defence products. Some of these measures require legislation while others could be adopted under instruments already available to the Union. The Action Plan has been drafted for the attention of the EU institutions and the Member States, but also for the European defence industry. The Commission will take the necessary steps to develop more detailed versions of the measures outlined in the Plan.

In the Commission's view the Council should adopt a position on EU strategy on the defence-related industries as a matter of urgency. The proposed measures would provide a framework and a programme for initiatives at European level. The speed and scale of current change make it imperative for the Union to initiate practical action on this matter in 1998.

CONCLUSIONS

- *The Council is asked to adopt the proposal set out in Annex I.*
- *The Commission calls on the Council to take note of the Action Plan attached as Annex II. The Commission will take the appropriate initiatives following the procedures provided for by the Treaty in close collaboration with the relevant authorities in the Member States.*
- *The Commission calls on the European defence-related industries and other parties concerned to cooperate in the implementation of the Action Plan.*

ANNEX I

DRAFT COMMON POSITION

ON FRAMING A EUROPEAN ARMAMENTS POLICY

adopted on the basis of Article J.2 of the Treaty on European Union

THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on European Union, and in particular Article J.2 thereof,

Whereas drawing up a European armaments policy based on the existence of a competitive technological and industrial base is an essential precondition for the development of a European defence identity within the framework of the Common Foreign and Security Policy;

Whereas specific measures, including measures on armaments, must be taken to follow up on the political commitment to the progressive framing of a defence identity which was reaffirmed by the Amsterdam European Council of 16 and 17 June 1997;

Whereas the Declaration by Western European Union on the role of WEU and its relations with the European Union, adopted on 22 July 1997, and in particular paragraph 7 thereof, provides for greater cooperation between these two organisations;

Whereas Community policies and instruments can make an important contribution to developing a European armaments policy;

Whereas the Commission Communications of January 1996 on the defence-related industries and of September 1997 on the European aerospace industry, which focus on the urgent need to restructure the industries at European level and promote synergy between military and non-military production and trade, demonstrate the necessity of taking action at European level, in particular through the Community;

Whereas it is necessary to protect the industrial and technological defence base and promote the competitiveness of the European industry;

Whereas the defence industry is an important source of employment in some regions;

Whereas the Council has named intracommunity transfers and public procurement as priority areas for EU action;

Whereas in is in the interests of the European Union and the Community that certain imports of arms and equipment for the European armed forces should benefit from exemption from customs duties and a list of equipments suitable for exemption from such duties is therefore needed;

Whereas, in accordance with Article 223(2) of the Treaty the Council has drawn up a list of products to which the provisions of Article 223(1)(b) apply,

HAS ADOPTED THIS COMMON POSITION:

Article 1

For the purposes of this Common Position account shall be taken of the specific features of the armaments sector as defined in the annexed document.

Article 2

The Council considers that developing an effective European armaments policy entails using CFSP and Community instruments.

Article 3

The Council notes that European armaments policy is linked to Community policies, in particular on industry, trade, customs, the regions, competition, innovation and research.

Article 4

The Council notes that the Commission has presented an Action Plan for the defence-related industries calling for the application of a number of Community instruments and that the Commission will take the appropriate initiatives to ensure that it is implemented. The Council declares its intention of using the Plan to further develop a European armaments policy.

Article 5

In accordance with Article M of the Treaty on European Union, the following measures will be adopted as soon as possible following the appropriate procedures:

1. *Movement of goods*

- a simplified system applicable to intracommunity transfers including export and re-export guarantees, and monitoring and surveillance mechanisms;
- binding principles, rules and mechanisms on transparency and non-discrimination in respect of procurement, taking current Community public procurement rules as a guiding principle.

2. *Customs*

The Council undertakes to draw up, before 31 December 1998, a list of products which could be exempt from the common customs tariff in the light of the defence needs of the Member States and the desirability of encouraging the development of a European armaments policy.

Taking account of this list Commission will, where appropriate, make appropriate proposals for exemptions based on the Treaty establishing the European Community.

Article 6

This Common Position shall be reviewed 18 months after its adoption.

Article 7

This Common Position shall enter into force on the day of its adoption.
This Common Position shall be published in the Official Journal of the European Communities.

Definition of specific characteristics of the defence-related sector

(Text drafted by the working party on European armaments policy and approved by the Coreper on 10 December 1996)

1. Any definition of the characteristics specific to the defence-related sector must begin with the current circumstances in which the sector finds itself. There are a number of political and economic factors which have specific relevance for this sector. On the political side, there is the impact of the end of the Cold War and the changes that have resulted in the international climate in which foreign, security and defence policy is formulated and conducted. There is also the development of the EU's Common Foreign and Security Policy (CFSP), which "shall include all questions related to the security of the Union, including the eventual framing of a common defence policy, which might in time lead to a common defence". The EU's Intergovernmental Conference is currently reviewing the CFSP provisions of the Treaty on European Union. At its meeting in Berlin in June 1996, the NATO Ministerial Council agreed to develop the European security and defence identity within NATO, and the WEU and NATO are currently working on the implementation of the inter-related aspects of the decisions taken in Berlin.

2. On the economic side, the domestic demand for European defence equipment has been falling since 1987 and the global arms market has practically halved in the last decade. This reduction in the national defence budgets of European countries has implications for the survival of an independent industrial and technological defence base. Employment in this sector has fallen by 37% since 1984 (from 1.6 million to 1 million). This has hit certain regions in particular and has implications for the manufacturing base and innovation capacity of European industry as a whole. The market remains fragmented - in the 1988-92 period, intra-European trade amounted to 3-4% of total procurement. The lack of competition and impossibility of fully exploiting economies of scale has worsened the competitive position of the European industry vis-à-vis the US since the 1980s. The consolidation of defence-related industry has advanced much more in the US than in Europe, due to, inter alia, less fragmented market conditions in the US, an insufficient degree of harmonisation of European operational requirements and the various security imperatives in Europe.

3. The specific characteristics of the armaments sector, which have been acknowledged since the foundation of the Community, are taken into account by the provisions of Article 223 of the Treaty.

4. The defence-related industry is a strategic industry, the products of which can be crucial to national defence. Unlike in other industries, where economic considerations are the determining factor, security and defence policy, to varying degrees, also dictates national armaments policy. Political, strategic and security considerations accordingly come into play in determining the conditions within which the industry operates and the demand for its products.

5. 90% of the production of EU defence equipment is concentrated in some Member States: France, UK, Germany, Italy and Sweden.

6. Since governments are the only customers, and in some cases a major owner of defence industries, the market differs from most other sectors of the economy. Also, relations between the government and defence-related companies differ considerably between Member States, for example the extent of State ownership, the extent of funding for R&D, etc. The role of governments explains many of the characteristics of this sector and has a major influence on the way it is built up and restructured. At the same time, the industry itself has a specific role and responsibilities in this regard.

The following considerations arise in the context of the role of governments :

- in the first place, the production and trade of armaments are subject to governmental authorisation ;
- secondly, governments being the sole customers, they are therefore alone in defining operational requirements and technical specifications. As sole customers, governments determine demand for the industry's products ;
- furthermore, long-term demand cannot be forecast with certainty, since it is dependent on the evolution of threats, which influences the assessment of needs and budget planning;
- in addition, the quality-price relationship is not the sole criterion which determines procurement policy. Offset (compensation), including industrial co-operation agreements, as well as strategic political, economic and security considerations can also be a factor ;
- finally, national defence interests require guaranteed sources of supply. The requirement for security of supply goes beyond the normal customer supplier relationship. In certain areas, some Member States consider an indigenous capability essential for their national interest. This should not, however, prevent governments from purchasing from an external supplier.

7. The long-term technological value of the industry is important. This includes the maintenance of both technological and industrial capabilities. Defence programmes can be spread out over 20-30 years, and, following lengthy development programmes, equipment can have an in-service life of as much as 30 years or more.

8. Confidentiality regarding sensitive military information is crucial to national interests. This can lead to constraints on competition and to relationships between customer and supplier which are more close-knit than usual.

9. Many products in the armament sector carry disproportionately high Research & Development costs. High standards are required, as technological advances are necessary to national defence. However, returns on this investment are uncertain. Mass production, which might offset high R+D costs, is rare in comparison with civil industry. The need for confidentiality can preclude the wide circulation of technological developments and the financial benefits of such a circulation. There will always be a need for one-off products, which it may be uneconomical to produce. Numbers of programmes are limited and R+D teams sometimes cannot be supported by purely commercial means during intervals between programmes. Commercial organisations driven by market-t forces could not be expected to make the necessary investment in R+D and government support could be therefore required.

10. Some defence-related technologies can have both civil aid military applications. However, there is an increasing synergy between civil and military technologies in some areas and the above characteristics of purely military programmes may not apply to all defence-related or dual-use domains.

11. The exports of this sector are subject to government authorisation. Arms export policies, including export control policies of Member States, differ. The European Council has adopted Common Criteria to be applied to arms exports.

Conclusions and recommendations

12. It was concluded that the analyses contained in this paper of characteristics specific to the defence-related sector is a useful contribution to the ongoing consideration of items on the agenda of the Ad Hoc Working Party on European Armaments Policy, and will be taken into account as appropriate, inter alia, in the deepening discussions on "the simplification of controls governing intra-EU transfers of armaments and other defence related products" and "procurement policy". It is recommended that in accordance with its mandate the Ad Hoc Working Party should keep the item "definition of characteristics specific to the defence-related sector" on its agenda, with a view to further developing its analyses in the light of future developments.

VI. Timetable 10

I. INTRODUCTION

The Treaty on European Union as well as the new Amsterdam Treaty offer a context for action in the area of defence-related industries by calling for enhanced co-operation between the European Union and the Western European Union. For this co-operation, the European Commission could offer its experience and legal and administrative structures in support of this new relationship.

The necessary urgent restructuring of the defence industries in Europe, which are still nationally based, requires that a European dimension is provided to this industry and to the market, demand and supply sides, in which it operates.

As far as the demand side is concerned, the role of Member States, the WEU and other multilateral organisations is particularly important in areas such as the harmonisation in time and content of operational requirements and the creation of a European Armament Agency to run programmes with a European dimension.

As far as the supply side is concerned, intense discussions, during the recent months, between the Commission and industry have been useful in identifying industry's requirements to establish a strong, integrated and competitive European Defence Technological and Industrial Base.

This Action Plan takes into account the issues raised by industry that fall within the competence of the European Union. It will be implemented according to the Timetable provided in chapter VI.

Some of these actions were also drawn up together with a Common Position, under Article J.2 of the Common and Foreign Security Policy (CFSP).

II. DEFENCE INDUSTRY RESTRUCTURING

In response to declining demand and increasing competition a restructuring process has started among the European defence industries. So far the restructuring has mainly taken place on a national level, but the need to pursue these efforts at a European level is pressing.

The European industry must be allowed to carry out the necessary restructuring process, co-operate or merge activities where they are similar or complementary and improve its competitive position. Whilst industry must lead this process, the Member States and European Institutions and Organisations must strive to establish the necessary framework to allow for the proper functioning of the European defence-related equipment market. When creating this framework the European industry's position in the global arena must be taken into account.

III. THE EUROPEAN DEFENCE TECHNOLOGICAL AND INDUSTRIAL BASE

The defence technological and industrial base, including technological know-how, R&D facilities, a skilled work-force, manufacturing facilities and a marketing and export capacity, is a vital strategic asset for Europe and needs therefore to be consolidated and preserved. Some very important reasons for this are:

- It is a pre-requisite for the establishment of a genuine European Security and Defence Identity;
- It is a necessity for the preservation and the development of an important technological and industrial base which is of importance both for military and civil purposes;
- It is an important factor for employment, particularly in specific European regions, and for many SME's.

The situation as it is today, with European companies fragmented into too many and too small national suppliers, is no longer sustainable. The consequences of the present structure are for example:

- Costly research and development of similar technologies and systems by national suppliers;
- Too small batches of systems and therefore inadequate economies of scale.

IV. OBJECTIVES FOR AN ACTION PLAN

The main objectives of the Action Plan are therefore to establish the necessary conditions to:

- strengthen the competitiveness of the European defence industry;
- preserve the Defence Technological and Industrial Base;
- favour the integration of European Defence Technological and Industrial Base in the general economy to avoid duplication of efforts between the civil and the military areas;
- create the necessary preconditions for a European Security and Defence Identity.

V. ACTIONS

A timetable for the actions proposed below can be found in chapter VI. The timetable shows that the Commission will work in parallel with actions to be implemented in the short term and actions that will be implemented in the medium term.

V.1 Simplification of Intra-community transfers

National procedures relating to intra-Community transfers of defence related products are burdensome and time consuming. A simplification of these procedures could increase the competitiveness of the European defence industry and lighten the administrative tasks and reduce costs.

The simplification objective cannot be obtained without a significant commitment by Member States. It also supposes the establishment of confidence mechanisms between the Member States. The Commission will therefore propose to put in place a simplified licensing system applicable to the shipment of defence related products within the European Community. This system shall comprise guaranties for exports and re-exports as well as mechanisms for control and surveillance.

V.2 European Company Statute

The creation of a European Company Statute which would help the creation and management of companies with a European dimension will facilitate the necessary restructuring of this industry. The Commission will continue its efforts to create such a legal framework.

The report of the "Davignon Group" on the European Company Statute opens new perspectives for political agreement on employee involvement in the European Company in the months ahead. If this hurdle can be overcome it could lead the way to the adoption of the Statute as one of the priority measures foreseen in the Single Market Action Plan agreed at the Amsterdam European Council of the European Union. It is therefore important to obtain a favourable Council decision on this subject as soon as possible.

V.3 Public procurement

The concrete system of rules that will apply to procurement of defence equipment will impact substantially on the way a competitive Defence Technological and Industrial Base will be set up.

This framework should make provision for competitive tendering whenever feasible.

Furthermore, it must favour the maintenance and development of the fundamental industrial capabilities and key technologies at European level. In addition, these rules must guarantee the security of the necessary supply, while enabling a progressive elimination of over-capacity.

To this end, taking into account the need to build broad support in this matter, it is necessary to establish an appropriate set of principles, rules and mechanisms on procurement by the defence sector. In order to take into account the specificities of the defence sector, and in particular the need for confidentiality and security of supplies, an appropriate level of flexibility should be envisaged where necessary.

For this purpose, materials for the defence sector could be divided into three categories:

- Products intended for the armed forces but not for military use therefore not covered by Article 223 EC nor by Article 2 of the directive 93/36 (markets declared secret, protection of vital interests, national security, etc). As these products are already subject to the Community public procurement rules, the Commission will specify, where appropriate, in the most suitable form the conditions for the application of these rules;
- Products intended for the armed forces and for military use, but not constituting " highly sensitive defence equipments ". The Commission could work out a fairly flexible set of rules, while respecting the principles of transparency and non-discrimination, inspired by the existing Community public procurement rules;

- Highly sensitive equipments covered by the scope of Article 223 EC. These products could be exempted from the rules referred to above when safety or the protection of vital national interests of the country in question so require. A notification mechanism for this purpose should be foreseen in order to ensure a degree of control and transparency.

V.4 RTD (Research and Technological Development)

The level of research and development costs in relation to turnover is in general much higher in the military field than in the civil field. Technology plays a vital role for the competitiveness in these industries.

Increasing integration of civil and military research activities within company's is a reality in the United States, in particular in certain sectors of the defence-related industry such as aeronautics or space. The Commission, for example, highlighted this phenomenon in its analysis of the merger between Boeing and McDonnell Douglas.

It is therefore desirable that the European firms as well as Member States draw the conclusions from this development as regards the restructuring of these industries, the merging of research teams, and the impact of certain military purchases on the civil technological capacity.

The Community's Framework Programme for Research and Technological Development[4], is aimed solely at civil objectives. Some of the technological areas covered (e.g. materials, Information and Communication Technologies - ICT) have a multiple use dimension: the development of these technologies can contribute to the improvement of the defence technological base and the competitivness of this industry.

The Commission also considers that the complementarity between national and European research programmes should be reinforced to avoid a wasteful duplication of effort.

V.5 Standardisation

Setting up a European defence equipment market and consolidating Europe's defence industrial base will call for an effort to rationalise the sets of standards currently being used by the defence ministries of the Member States.

With increasing use being made of dual-use technologies in the military systems, the current trend is to make as much use as possible of civil standards.

The on-going replacement of military standards by civil standards in the US should be considered so as to avoid that the European industry finding itself at a disadvantage.

It is with the purpose of promoting the use of international industrial standards that the Commission is proposing to take into account the experience gathered in the field of standardisation by the Community.

[4] The Commission adopted, on 9 April 1997, its proposal for the Fifth Framework Programme (COM(97)142).

Therefore, the Commission will pursue the following actions:

- inviting the industrial circles concerned to get together to draw up a work programme for identifying a homogeneous system of standards for defence equipment programmes;
- assessing different ways and means of setting up a system of regular exchange of information between NATO and the European standardisation bodies, so as to reduce as far as possible the risk of duplication of efforts in the future;
- providing support at Community level to the standardisation organisations concerned that have agreed on the need to act. For this support, careful consideration will be devoted to taking account of the particular characteristics of the industrial sectors concerned (aeronautics, space, electronics, mechanics...) and the "defence" specificity of the topics covered.

V.6 Customs duties

Common tariffs for imported products is a basic principle of the Customs Union and the Single Market.

Article 28 of the Treaty therefore constitutes the only permissible legal basis for granting autonomous suspensions. In this respect, the existence of differing national approaches for tariff arrangements for imports of military or dual-use equipment generates unequal treatment of operators and for this reason common rules on the tariff arrangements for such equipment need to be established.

Therefore:

- legislative initiatives should be taken to harmonise tariff arrangements with a view to achieve equal treatment of operators throughout the Community;
- the Commission proposal from 1988, for temporary suspension of import duties on certain weapons and military equipments, should be reviewed and adopted;

V.7 Innovation, transfer of technology and SME's

In the Commission's Green Paper on Innovation dated December 1995 the potential for civilian use of defence technologies is acknowledged. General policies to promote technology transfer can facilitate the civilian exploitation of defence technologies; and should also involve SMEs because of their interest and role in this process.

In this context, the Commission will support initiatives for the purpose of disseminating ideas, technologies and best practices. In particular, the Commission will continue to support the following activities:

- the organisation of partnering events between suppliers (e.g. INTERPRISE) and between suppliers and research institutes;
- the organisation of partnering events between main contractors and suppliers (e.g. IBEX).

V.8 Competition policy

The emergence of a Community market for the defence industry, resulting from common programmes, from necessary restructuring and European alliances, and from common rules on public procurement requires that the Community's competition policy examines in an appropriate way all competition issues within the defence industry.

The process of restructuring the European industry, in particular the defence industry and related industries, has given rise and will continue to give rise to an increasing number of mergers and co-operations between companies within the European Union. Such a development must be welcomed as being in line with the requirements of dynamic competition and capable of increasing the competitiveness of the European industry, in particular the defence industry, insofar as it does not result in lasting damage to competition. This is why Community competition policy and in particular the Community Merger Control Regulation provides for a clear framework and quick decisions, so as to facilitate those concentrations and co-operations between companies which do not call into question effective competition. Moreover, Community control of State aids in all industrial sectors, including those of the defence sector, makes it possible to distinguish between those aids necessary for restructuring - to the extent they accelerate change, encourage research, development and innovation and reduce the social consequences of reorganisation - and for the preservation of adequate security of supply, and those aids granted for by Member States for the mere protection of their national companies which do not promote the overall competitiveness of the sector.

In this respect, it is important to recognise the specificity of the defence-related industry in the application of Community competition policy, in particular as regards the geographical scope of the market. Whilst this scope may be kept limited by public procurement rules and administrative procedures, competition may increasingly take place for certain products, at European or even world wide scale. In this context, the Commission will take into account the manner in which, in particular, governments of third countries which produce armaments formulate and apply competition law to their own industry.

V.9 Exports

Dual-use goods and technologies

A common regime for dual-use exports controls was adopted by the Council in December 1994, on a proposal from the Commission. It is based on two legal instruments, an article 113 Regulation (No 3381/94) and a Joint Action under the Common Foreign and Security Policy (94/942/CFSP) which together form an integrated system. This regime reflects the international arrangements to prevent proliferation of weapons of mass destruction.

For dual-use goods, industry and administrations are invited to provide evidence if they face disadvantages under European export control compared to US and Japanese controls. The Commission will work to balance the situation and create a level playing field in this area if such a need exists.

The Commission will draw a report on the application of the Dual-use regulation and possible proposals to strengthen and improve the current system particularly taking into account the ruling of the European Court of Justice in cases C-70/94 and C-83/94 that states that dual-use goods fall within the scope of the common commercial policy defined by Article 113.

Conventional armaments

Increasing industrial co-operation in the form of transnational co-operations and mergers is necessary to achieve an efficient industry structure. It is therefore urgent to eliminate limits to such co-operations arising from differing export policies.

In this respect it should be recalled that political guidelines already exist, notably in the form of 8 criteria adopted by the European Councils in Luxembourg (June 1991) and Lisbon (June 1992) to guide Member States in their decisions concerning arms exports.

Given the difficulties in developing a common basis for harmonisation of arms export policies, a gradual process should be pursued. First, the exchange of information on the application of the 8 criteria within the Council should be intensified.

Secondly, the adoption by Member States in the EU framework of a code of conduct concerning arms exports, which the incoming UK Presidency has indicated to be a priority, would be an important development.

The resolution adopted by the European Parliament in may 1997 in support of the Commission communication on defence industry invites the Commission to present a White Paper on the subject of arms export policy. The Commission intends to prepare such a White Paper formulating possible options for progress toward a common arms export policy, which could contribute to the establishment of an effective code of conduct.

In the case of co-operation programmes further progress could be achieved on the basis of some experiences, namely by following the principle whereby will apply the export rules of the country where the prime contractor is established or where the final assembly and the physical export takes place.

V.10 Structural funds

In Agenda 2000, (EU-Bulletin Supplement 5/97) the Commission proposes a reform for the Structural Funds in the light of the new financial perspective (period 2000-2006):

Three Objectives are foreseen under the new Structural Funds framework. In addition to Objective 1 which concerns the development and structural adjustment of regions lagging behind, a redefined Objective 2 will be created for other regions with structural problems. These are areas undergoing economic change (in industry or services), declining rural areas, crisis-hit areas dependent on the fishing industry or urban areas in difficulty. A limited number of significant areas should be identified in order to facilitate an integrated strategy for economic diversification. Objective 3 will concern the strategy for human resources outside these regions.

In Agenda 2000, the Commission does not foresee the continuation of a number of specific Community initiatives, including the one related to the reconversion of areas dependent on the defence, since these objectives could already be integrated in the aforementioned programmes as such.

Possible needs for diversification and conversion within the defence-related industry will therefore have to be properly considered when considering the new programmes for the next programming period. The new programmes supporting Objective 2 regions should focus on economic reconversion and diversification, including in regions heavily dependent on a single declining economic sector. For this reason specific attention should be given to SME's and innovation, professional education, local development, environmental protection and the fight against social exclusion. In this context, regional reconversion linked to the defence industry may also be the subject of actions aimed at the economic and social reconversion of regions covered by Objective 2. A similar approach may be followed in the regions covered by Objective 1. Further, Objective 3 could possibly contribute in the context of the adaptation of workers to industrial change.

V.11 Taxation

Indirect taxation

In July 1996 the Commission published its suggested programme for a "common system" of VAT for the European Community (EC), COM 328(96) Final. To achieve this, the new system's essential characteristics must ensure that:

- No distinction shall be made between domestic and intra-EC transactions;
- All transactions shall be taxed in the EC on the basis of the origin principle, and;
- A new mechanism to decide the place of supply of goods and services needs to be established;
- The VAT rates shall be simplified.

The Commission believes that the new system will benefit also to the defence industry. The Commission will in parallel secure a fuller implementation of the eighth directive.

Direct taxation

As part of its new global approach to taxation, the Commission adopted in November 1997 a Communication outlining a tax package on which it invited Member states to reach a political agreement. Part of this package is a request to Member states to make a political commitment to work towards the early adoption of a Directive to eliminate withholding taxes on interest and royalty payments between companies. Such a directive would eliminate an important barrier to transfers of capital and technology between companies, as these withholding taxes create obstacles for economic operators: they can involve time consuming formalities, result in cash flow losses, and sometimes lead to double taxation.

The Commission's new proposal for a directive on interest and royalties can be expected in early 1998.

V.12 Principles for market access

Based on principles of comparable and effective access to markets, the Community should seek to remove obstacles to European exporters, including Customs duties.

In the case of the US (with which the EU trade balance is in the ratio of 1 to 6) the issue might be raised , if European and American industries so decide, in the Transatlantic Business Dialogue or in the context of the New Transatlantic Agenda (the chapter on the new Transatlantic Marketplace).

V.13 Benchmarking

In line with the Commission's industrial policy to promote benchmarking as a tool for increasing the competitiveness of European industry and spreading best practice, the Commission will consult industry and other relevant actors for a benchmarking exercise in certain areas of interest to the competitiveness of defence-related industries. Such an exercise could for example look at issues such as best practice for the utilisation of synergies between civil and military information technologies, best practice for the integration of civil and military standards or best practice concerning multilateral projects.

V.14 Enlargement

The Commission will launch a study in order to better assess the situation of defence industries in the CEEC. The outcome of this study together with other relevant informations should be used as a basis for further analysing and reflecting upon the following topics:

- the potential of the defence and industrial base of Central and Eastern European countries and its impact on European industry.
- the relevance for and the best ways of promoting industrial co-operation.

VI. TIMETABLE FOR MAJOR ACTIONS PRESENTED IN THE ACTION PLAN (SUMMARY)

Area	Action	Timing
V.1 Intra-Community transfers	The Commission shall propose a simplified licensing regime	1998
V.2 European Company Statute	Council decision	1998
V.3 Public procurement	Proposal of rules for procurement in the defence sector	1998-1999
V.4 RTD	Establishment of complementarity between national and European research programmes	1998-1999
V.5 Standardisation	Finalisation of study. Draw up a work programme to identify homogeneous system of standards for defence equipment programming.	Second semester 1998 End 1998
V.6 Customs duties	Commission propose legislative initiatives to harmonise tariff arrangements within the Community Review and adopt Commission proposal from 1988 on temporary suspensions on import duties	End 1998 End 1998
V.7 Innovation, transfer of technology and SME's	Continue to support initiatives such as : INTERPRISE, IBEX	Ongoing
V.8 Competition policy	Take into account specificities of the defence-related industry in Competition assessments	Ongoing
V.9 Exports – Dual-use goods and technologies – Conventional armaments	– Report on the application of the Dual-use regulation – White paper – Proposal for a code of conduct	First semester 1998 First semester 1998 In accordance with White Paper
V.10 Structural funds	– Proposal for a general reform of cohesion policy according to Agenda 2000 – Negotiation of these proposals in the Council and in Parliament as well as consultation of the other institutions and bodies – Implementation of the new regulation/framework	First semester 1998 2nd semester 1998 Between end of 1998 to end of 1999
V.11 Indirect Taxation Direct Taxation	Pursue Council discussions Propose directive on interest and royalties	Ongoing Early 1998
V.12 Principles for market access	Issue to be raised in the context of the the TABD if EU and US industries so decide or in the New Transatlantic Agenda	During 1998-1999
V.13 Benchmarking	The Commission will consult industry and other relevant actors on a benchmarking exercise in the defence-related industry.	1998-2000
V.14 Enlargement	– Finalisation of Study – Industrial impact assessment	End 1998 1998-2000

ISSN 0254-1475

4.2 Security of supply 18

4.3 Defence trade issues.. 18

5. Conclusion 19

EXECUTIVE SUMMARY

In 1996 and 1997 the Commission produced two Communications to encourage industrial restructuring and greater efficiency in the European Defence Equipment Market. Some of these ideas came to fruition. But Member States did not act in a number of essential areas – feeling, perhaps, that the proposals were before their time. Following a period of transformation in this sector and in the institutional framework of the EU, including the beginnings of a real European Security and Defence Policy (ESDP) the European Parliament, in a Resolution of 10 April 2002, invited the Commission to present a new Communication.

These issues have been brought into sharper focus by the Convention on the future of Europe. A working group on defence has made substantive recommendations which will be the subject of further work over the coming months.

Strengthening the industrial and market situation of European defence companies will greatly improve the EU's ability to fulfil the Petersberg tasks in the accomplishment of ESDP. It will also benefit collective defence by strengthening Europe's contribution to NATO.

Whatever the long-term prospects for a full common European defence equipment policy, the Commission is determined to make progress at once wherever this may be possible. The present Communication therefore proposes action in the following fields:

- Standardisation: Stakeholders recognise the need for harmonised European approach to defence standardisation. The Commission is working on this issue with CEN to assist co-operation between Ministries of Defence and industry to develop, by the end of 2004, a handbook cataloguing standards commonly used for defence procurement.

- Monitoring of defence related industries: Stakeholders need a clearer picture of the defence industrial and economical landscape in Europe. To achieve this, the Communication proposes to launch a monitoring activity on defence-related industries.

- Intra-community transfers: It has long been argued that a simplified European licence system could help to reduce the heavy administrative procedures, which impede the circulation of components of defence equipment between EU countries. The Commission proposes to launch an impact assessment study in 2003 and, depending on its results, start elaborating at the end of 2004 the appropriate legal instrument.

- Competition: Competition improves market efficiency and protects innovation. Consequently, and without excluding the possibility of exceptions consistent with the Treaty, the Commission intends to continue its reflection on the application of competition rules in the defence sector.

- Procurement rules: Harmonised procurement rules for defence equipment would also increase market efficiency. On this basis, a reflection on how to optimise defence procurement at national and EU levels should be initiated in the EU. The end goal would be to have a single set of rules for procuring defence equipment in Europe. There have been several important Court judgements in recent years that are relevant to this work - especially in helping to define the scope of Article 296. The

Commission will issue an Interpretative Communication by the end of 2003 on the implications of these judgements. In parallel, it will work on a Green Paper which might be issued in 2004 as a basis for discussion with stakeholders.

- Export control of dual use goods: International export control regimes exist – but in most cases, the EC is not a member. The consequence is that Member States often adopt uncoordinated positions, which may unnecessarily limit export opportunities for EU civil industries and may affect the functioning of the internal market after enlargement. The Communication proposes to raise this issue in relevant Council bodies.

- Research: The Communication proposes to consult Member States and industry in 2003 to identify common needs and to establish a security-related research agenda. In this respect, the Commission intends to launch a pilot project.

The Commission has followed the debate on a possible EU Defence Equipment Framework overseen by an Agency (or Agencies). Such a framework could help to co-ordinate national collaborative programmes and provide a basis for drawing in Member States, which are not presently engaged. Until now, Member States have chosen to conduct most of this work outside the EC Treaty, but there may also be a place for certain Community instruments and mechanisms.

INTRODUCTION

In 1996 and 1997 the European Commission produced two Communications[1] on defence-related industries to encourage restructuring and the setting up of an efficient European defence equipment market. Concrete proposals and actions followed with respect to some of these issues. However, as regards the most essential reforms, Member states considered action on the European level premature.

Following a period of considerable change in the industrial armaments sector and in the institutional framework of the EU, including developments in ESDP, the European Parliament, in a Resolution of 10 April 2002, invited the Commission to address the issue of armaments in a new Communication.

In autumn 2002 the Convention on the Future of Europe set up a working group on defence chaired by the European Commissioner, Michel Barnier. The working party's report[2] stressed that the credibility of European defence policy depends on the existence and development of a European capacity and a strengthening of the industrial and technological base of the defence sector.

Taken together, EU Member States spend less than half of what the U.S. spends on defence[3]. The total US budget comes to an annual $390 billion, compared to a cumulative budget of €160 billion for EU Member States together. For many years, defence investment in Europe has been significantly smaller than in the USA in procurement (€40bn per annum in Europe compared to $100bn in USA) and in research (€10bn in Europe compared to $50bn in USA). But apart from absolute levels of spending which are necessarily a function of their respective objectives, Europe yield much less in terms of operational capabilities. The real military capability of EU Member States is estimated at about 10 per cent of that in the US[4]. This issue has repercussions for the transatlantic relationship. A reinforced European defence and technological industrial base can provide an important contribution to collective security in the context of NATO and other partnerships. Taxpayers should get the most out of the investment they make in security. There is ample evidence that this is not the case at present and that a European defence equipment market would bring significant savings in costs. It is crucial for both civil and defence sectors of the economy that we create an environment in which European companies can give better value for money. That is why the Commission wishes to set the questions of arms trade and production in their industrial context. The scope of concern encompasses all industrial activity in Europe related to components, which may end up in civil and/or military products.

Cost efficiency of defence spending, the maintenance of a competitive defence and technological industrial base, better access for EU manufactured goods to third markets, ethics and fairness in the arms trade, security of supply, and also the need to respect Member States prerogatives in this sensitive area are all important considerations when defining an EU armaments[5] policy.

[5] For the purpose of this Communication synonymous with defence equipment policy.

On the military side, the efficiency of multinational corps such as Eurocorps, Eurofor, and Euromarfor requires the highest degree of interoperability of their armaments. To achieve this in a cost-effective way, the solution would be to equip the national units that make up these forces increasingly with the same equipment.

On the industrial side, the survival of a European defence industrial base able to support the ESDP will depend on successful national and trans-European consolidation of the industry as well as transatlantic partnerships between companies. The currently fragmented legal and regulatory framework places limits on the adjustment capabilities of companies or pushes them towards strategies and alliances which put the Union in a disadvantageous position. Failure to safeguard a competitive defence industrial base, and the loss of autonomous design and innovation capabilities, limits available choice and is bound to lead in the long run to higher procurement costs.

For all these reasons, there is a strong case for a more co-ordinated EU defence equipment policy. Just as the ESDP complements, national defence policies and NATO, an EU Defence Equipment Policy would complement corresponding national policies.

One key contribution that the Commission can make in this field is in seeking to improve the quality of the EU regulatory framework governing the treatment of armaments in Europe. This is the purpose of the present communication.

European defence industries compete on a global market. The Commission acknowledges the need to address at a later stage some particular issues such as the improvement of the functioning of the existing Code of Conduct on Arms and wider opening of third country markets to European defence products.

1. RECENT DEVELOPMENTS STRENGTHEN THE CASE FOR A EUROPEAN DEFENCE EQUIPEMENT POLICY

1.1 Recent developments inside and outside the EU

The 1999 European Councils of Cologne and Helsinki gave new impetus to European security and defence policy through the definition of a headline goal to be achieved by 2003; and with the creation of new EU structures such as the Political and Security Committee, the EU Military Committee and the EU Military Staff. The European Capability Action Plan (ECAP), which seeks to fill EU capability shortfalls, is likely to include off-the-shelf procurement and collaborative programmes as well as defence research and technology measures.

A close co-operation is being established with NATO to enable the EU to have assured access to NATO planning assets for ESDP operations. Extensive consultations are taking place in this context in order to ensure maximum compatibility of EU and NATO concepts for this purpose.

Meanwhile, outside the EU institutional framework there has been further substantial restructuring of defence-related industries. Companies – faced by ever-stronger competition, notably from the US – are crying out for a more open and efficient market to improve the competitiveness of the European defence technological and industrial base. Groups of Member States have responded to the new challenges by entering into ad hoc agreements such as the Letter of Intent (LoI)[6] and its Framework Agreement which aim to facilitate industrial restructuring; and the “Joint Armaments co-operation organisation” known as OCCAr (*Organisme Conjoint de Coopération en matière d’Armement*)[7], which aims to improve the management of co-operative armament programmes.

These various initiatives in the field of European armaments trade and production need to be underpinned by a more coherent overall framework in order to bring more legal certainty and attract participation by a larger number of Member States.

The recent adoption of Council regulation (EC) No 150/2003[8] suspending import duties on certain weapons and military equipment constitutes a step forward towards setting up a European Defence Market.

These objectives have been brought into even sharper focus by the Convention on the future of Europe. One of its working groups had a fundamental debate on defence, and made substantive recommendations[9] which will be the subject of further scrutiny and debate in the course of the Convention’s deliberations over the coming months.

1.2 European Armaments and industrial policies

There is an intrinsic unity of purpose in the European Union’s internal policy, including the Lisbon targets, and external goals to which all policies and instruments must contribute. The Commission considers that the dynamism of industry is essential for Europe to be able to sustain and increase its prosperity while meeting its wider social, environmental and international ambitions[10]. One of the aims of its Communication of 11 December 2002 on Industrial Policy in an Enlarged Europe is to place industry back on the policy agenda. A key message is that Industrial 7Policy, while being horizontal in nature, needs to take into account the specific characteristics and needs of every individual sector. In that context, the STAR 21 report published in July 2002 contained an in-depth analysis of the situation and challenges facing Europe’s aerospace sector with particular emphasis on the need to address the defence dimension. A similar exercise concerning maritime industries (LeaderSHIP 2015) was launched in January 2003.

In that spirit and with a view to the Spring European Council on 21 March 2003, proposals were made by the Commission and also by Member States on structural reform and modernisation in Europe with a view to strengthening economic competitiveness and guaranteeing employment opportunities for all. *Inter alia*, measures were proposed to lift barriers regarding market and competition conditions, to rapidly conclude legislation on the internal market which is currently being reviewed, with a view to obtaining results that truly open up the markets, to enhance research results and to establish clearer links between research institutes and business creation.

[6] The Letter of Intent and its Framework Agreement include six countries namely: France, Germany, Italy, Spain, Sweden, and the United Kingdom. Its aims at facilitating the industrial restructuring process.

[7] The OCCAr includes four countries, namely: France, Germany, Italy, and the United Kingdom. This international organisation aims at improving the management of co-operative programs.

[8] A Council Regulation on the basis of Art. 26 TEC was adopted in January 2003 suspending import duties on certain weapons and military equipment OJ n° L25 of 30.1.2003, p. 1.

[9] Final report of Working Group VIII - Defence of 16 December 2002; CONV 461/02

[10] COM (2002) 714 on Industrial Policy in an Enlarged Europe dated 11 December 2002.

Failure to enhance the contribution of Community policies, especially on trade, development, internal market, research, and competition policy will result in sub-optimal solutions in terms of the effectiveness of the ESDP. In turn failure to develop a European dimension to the defence equipment market, and to invest in research, is certain to have a negative effect on the competitiveness of high technology enterprises. Knowledge and innovation are essential elements in enabling those enterprises to compete and to co-operate on an equal footing with international competitors such as U.S. companies which themselves enjoy a far higher level of backing of their governments.

Although some EU companies are world-class innovators, a low share of European patent and R&D activity vis-à-vis the EU's main competitors means that, overall, Europe's innovative performance remains too weak. These facts lie behind the less encouraging competitiveness performance of the EU in some of the highest value added segments of the economy. Different measures of comparative advantage reveal that the EU tends to specialise in medium-high technology and mature capital-intensive industries. If it is essential to keep the strengths in these sectors, which represent a higher share of total output and employment, the EU should seek to improve its position in enabling technologies such as ICT, electronics, biotechnology or nano-technology, where it often lags behind its main competitors. Technology-driven industries are not only a source of knowledge and technological spill over throughout the economy, they are also the ones which exhibit greater productivity growth. The European industry's relative weakness in these fields as well as their low share in the economy weigh on the overall growth and productivity performance of the EU.

The reality is that a major contribution to security and defence systems now comes from industries and SMEs developing their products and services primarily for civil applications.

The defence-related industries could benefit from the approach proposed in the EU industrial policy communication.

1.3 European armaments policy and the Treaty provisions

Questions of trade and production of armaments lie at the intersection of defence and industrial policies. In the past, it has proved difficult to reconcile industrial and defence imperatives. The European armaments industry has suffered as a consequence. A more appropriate framework needs to be defined..

Over the years wide application of Art. 296 ECT [11] has led to fragmentation of markets and industries at national level. However, it should be possible to improve the situation within the provision of the current Treaties. With sufficient will, it should be possible to frame a common set of rules on defence equipment, which will take due account of the specificities of armaments thereby progressively limiting recourse to Article 296. Some of the rules required

[11] TEC article 296 :
1. The provisions of this Treaty shall not preclude the application of the following rules:
(a) no Member State shall be obliged to supply information the disclosure of which it considers contrary to the essential interests of its security;
(b) any Member State may take such measures as it considers necessary for the protection of the essential interests of its security which are connected with the production of or trade in arms, munitions and war material; such measures shall not adversely affect the conditions of competition in the common market regarding products which are not intended for specifically military purposes.
2. The Council may, acting unanimously on a proposal from the Commission, make changes to the list, which it drew up on 15 April 1958, of the products to which the provisions of paragraph 1(b) apply.

may either fall under pillar one (the EC treaty) or pillar two (Common Foreign and Security Policy) of the EU treaty[12].

2. Objectives of a European Defence equipement Policy

Armament policy issues[13] can be conveniently grouped under four headings:

(1) Defence equipment demand: harmonisation of the military and other security-related requirements as well as the planning and procurement of defence-related equipment.

(2) Defence equipment supply: completion of the industrial consolidation process (primarily the responsibility of industries themselves); supportive policies and actions by the Commission and Member States towards the creation and maintenance of a competitive industrial structure in Europe.

(3) Defence equipment market: an appropriate regulatory framework addressing internal and external aspects; appropriate rules for cost-efficient procurement of goods and services both by member states defence procurement Agencies and by any future European Agency(ies); and economically efficient export controls. All this needs to be developed while preserving ethical standards and promoting reciprocal market access.

(4) Research: co-operation and coherence of defence-related research at European level; exploitation of civil-military synergies.

Community action is most likely to be able to add value in the third and fourth areas above.

[12] TEU Article 17
1. The common foreign and security policy shall include all questions relating to the security of the Union, including the progressive framing of a common defence policy, which might lead to a common defence, should the European Council so decide. It shall in that case recommend to the Member States the adoption of such a decision in accordance with their respective constitutional requirements.
The policy of the Union in accordance with this Article shall not prejudice the specific character of the security and defence policy of certain Member States and shall respect the obligations of certain Member States, which see their common defence realised in the North Atlantic Treaty Organisation (NATO), under the North Atlantic Treaty and be compatible with the common security and defence policy established within that framework.
The progressive framing of a common defence policy will be supported, as Member States consider appropriate, by co-operation between them in the field of armaments.
2. Questions referred to in this Article shall include humanitarian and rescue tasks, peacekeeping tasks and tasks of combat forces in crisis management, including peacemaking.
3. Decisions having defence implications dealt with under this Article shall be taken without prejudice to the policies and obligations referred to in paragraph 1, second subparagraph.
4. The provisions of this Article shall not prevent the development of closer co-operation between two or more Member States on a bilateral level, in the framework of the Western European Union (WEU) and NATO, provided such co-operation does not run counter to or impede that provided for in this title.
5. With a view to furthering the objectives of this Article, the provisions of this Article will be reviewed in accordance with Article 48.

[13] These were already addressed in the Commission's 1997 Communication on armaments which findings and recommendations are still valid.

2.1 Defence equipment demand

New common security risks will increasingly be dealt with by multinational coalitions, requiring interoperability between national forces.

In the ESDP context, in consistency with NATO, there is also an urgent need to enhance the harmonisation of defence equipment requirements. To be beneficial in economic terms, this should be translated into common defence equipment programmes with common technical characteristics and seamless procurement schedules. The number of defence equipment programmes and subsequent procurements that could be undertaken jointly by the largest possible number of Member States should be increased.

That process should help to deliver economies of scale in production and savings from increased bargaining power in acquisition leading to reduced costs, in addition to the advantages which arise from increased interoperability. More predictability and consistency at European level on planning and acquisition would enable industry to anticipate and better adjust its production capability.

Given the long lifetime of defence equipment, harmonisation of the planning and procurement of equipment will also depend on an improvement in the current European Capabilities Action Plan (ECAP) which should help to bring a longer-term perspective.

Overall guidance, monitoring of progress and matching financing methods to ECAP proposals will require the active involvement of both the European Council and Defence Ministers in order to maintain impetus and to provide the necessary political authority to ensure rapid decisions.

2.2 Defence equipment supply

As noted above, there has been steady consolidation in defence-related industries in recent years. This is especially so in aerospace which, in the course of its rationalisation, has reinforced its European dimension. There have not yet been comparable levels of rationalisation of land-based systems and naval shipyards. Major consolidation in these sectors is now required in order to maintain Europe’s capacity in areas, where Europe has traditionally been strong and technologically advanced.

Enlargement will bring special challenges in that the defence industries in the new Member States are for the most part loss-making. Restructuring and rationalisation are necessary to bring them to viability. This process could be facilitated by social and regional policies using the Community Structural Funds in accordance with existing modalities.

The need to share the huge development costs of new systems, and to gain insight into essential technologies, has driven European and American firms into partnerships, such as the Lockheed Martin-led Joint Strike Fighter, now renamed F-35: the biggest defence programme in history, worth $200bn over the next 30 years. It is a programme that is likely to dominate defence industrial relations across the Atlantic for many years to come. The project offers participating countries the prospect of work for their local industry in advanced aerospace technology. Four EU member states have signed up to participate in the programme and committed around €4bn to it. The Pentagon has ordered 2900 aircraft. To illustrate the gap in transatlantic purchasing power, the largest European order amounts to only 150 aircraft.

However, in the meantime, three fighter jets are currently produced in Europe: the Eurofighter, which is a joint venture between Germany, Italy, Spain and the UK; the French Rafale; and the Swedish-British Gripen.

Such European projects do have certain advantages. They can also enter service more quickly than the F-35, as Rafale and Gripen are already in service, and Eurofighter is scheduled to arrive in 2003.

Such choices on key defence equipment programmes may have negative industrial policy consequences regarding the ability of Europe to sustain a competitive and indigenous fighter jet industry. This is likely to have an impact on civil business and commercial transport aircraft industries.

The results for European firms are very variable. Non-US firms are generally treated less favourably when they seek to supply or partner US firms in supplying to US procurement agencies. Firms from Europe also have to adopt special local arrangements in order to observe rules on ownership of defence firms in the United States. And even where European firms, or in some cases their governments, have invested heavily in new weapons systems to be developed in the US, their level of access to the key design and development phases is rarely satisfactory. In addition to the potential loss of the ability to keep companies with prime contracting status within the EU, the future of thousands of SMEs' throughout Europe which are directly or indirectly linked to these contractors will be adversely affected.

There is a danger that European industry could be reduced to the status of sub-supplier to prime US contractors, while the key know-how is reserved for US firms.

Decisions on restructuring in Europe will be taken in the first place by firms themselves as a function of market realities, including the interests of their shareholders. But there are limits to what companies alone can deliver in terms of further efficiency as long as the framework in which they operate remains unchanged. The interests of security of supply mean that Member States individually and collectively have a clear interest in a competitive industrial structure for the needs of national armed services and ESDP. Public interest also requires us to take account of the important spin off effects in terms of civil applications of these high tech industries.

2.3. Regulating the EU defence equipment market

European defence-related industries are currently at a critical stage in their development, and decisions taken now can be expected to determine their future prospects and strengths for decades to come. A further complication is that many of the same companies are involved in producing for both the civil and defence markets, which are governed by two separate regulatory frameworks.

It is vital to reduce the handicap of European companies vis-à-vis their competitors, in particular from the US, arising from the fact that the regulations governing defence-related activities are not homogeneous at EU level but fragmented at national level. As regards market access outside the EU, the fact that problems are normally dealt with at the level of individual Member States means an important loss of negotiating strength. The collective inability of European firms and their governments fully to exploit the weight of the Union, which comes from acting together, can only be to the detriment of European industry.

To overcome these problems Member States should aim to create a genuine European Defence Equipment Market. This would be in line with the objective already set by Member States which are members of Western European Armaments Group – WEAG[14.] In practice, the absence of binding commitments has weakened the achievement of this objective. That deficiency could be remedied by an EU framework of rules bringing legal certainty and uniform implementation of legislation. Such a framework could also pave the way for the involvement of a larger number of Member States.

2.4. Research

European Armament Organisation (WEAO)[15] has any responsibility for managing cooperative defence-related research programmes but it handles only 2.5% of European investment in this area. Neither OCCAR or the LoI cover research at present.

European countries invest four to five times less than the US, and this gap is accentuated by the and fragmentation and compartmentalisation of European research. This allows the Americans to impose quality standards that Europeans often find hard to meet because of the failure to invest in certain key technologies.

In Europe there is a fairly strict divide between civil and military research. Technology transfers from the civilian sector to the defence sector remain low while there are significant transfer from European defence research to civilian activities. We need to multiply such synergies by creating a snowball effect that will strengthen European industrial competitiveness and help achieve the goal laid down by the Barcelona European Council of March 2002, namely 3% of GDP devoted to financing research by 2010.[16]

Defence-related research plays a major role in innovation in the US; it benefits the whole of industry, including the civilian sector. This interpenetration of defence and civilian research has benefited both the American arms industry and civilian users in terms of market access and costs. Note that the US military's procurement of advanced technology, whereby it shoulders the risk and the costs of demonstration and depreciation, has also benefited American suppliers and facilitated the integration of such technologies into civilian applications: the internet, the "Windows-icons-pointer" interface, the RISC microprocessor (found today in mobile telephones) and GPS (Global Positioning System) are all systems that were originally financed by American military research, notably through DARPA (Defence Advanced Research Project Agency).

3. Proposals for Action

Developing an EU defence equipment policy will be a long-term process involving many different stakeholders. The present Communication focuses on a number of specific measures, which the Commission believes can make a contribution to achieving broader EU objectives. The proposed measures are intended to encourage industrial restructuring and consolidation,

[14] Their Defence Ministers have already approved a set of principles laid down in the Coherent Policy Document (CPD) in 1990 and in an updated CPD in 1999 aimed at making their armaments activities WEAG-wide.

[15] The WEAO has 19 members (European members of NATO): Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Spain, Sweden, Turkey, United Kingdom. The Netherlands took over the chair on 1 January 2003 for two years.

[16] COM(2002) 499 final.

to promote the establishment of a European defence equipment market and to enhance competitiveness of the European industry, and to achieve broader socio-economic objectives.

3.1 Towards a European defence equipment market.

3.1.1. Standardisation

While work on standardisation of defence equipment is largely a technical matter, it is an important precondition for the opening-up of national markets and the gradual establishment of a single European market. Both manufacturers and public authorities (Ministries of Defence) will benefit from a common reference regarding standards elaborated in consistency with NATO works. It will help to enhance cost efficiency and interoperability. That necessity has been recognised by all those stakeholders who are participating on a voluntary basis in the development of a “Defence Standardisation Handbook”. It will contain references to standards and standard-like specifications commonly used to support defence procurement contracts as well as guidelines on the optimum selection of such standards.

The action currently under way with the participation of the MoDs and industry and with the assistance of CEN is funded under the framework contract for standardisation of 1998. The Commission will ensure that the European Handbook is ready in its initial phase by the end of 2003 and in a first operational version around the end of 2004.

The next phase should be to give formal status to the Handbook so that, once approved in terms of content, its use will be systematic in defence procurement contracts. The Commission would then propose appropriate complementary measures to ensure the upkeep of the Handbook and its use.

3.1.2. Monitoring of defence-related industries

In accordance with the Community's task to ensure the conditions for competitiveness of industry (Art. 130 TEC), the Commission should keep the situation under permanent review in all industrial sectors. In order to monitor the economic situation of the defence industrial base at EU level (including new Member States), including its ability to support the supply requirements of ESDP, the Union needs regular access to the relevant data. Levels of competitiveness and design expertise, geographic distribution of expertise, R&D investment, etc. need to be known and measured in order to allow benchmarking and to contribute to the development of relevant policies. Moreover, producers need a better knowledge of the market conditions in which restructuring can take place.

For this purpose, it is proposed that a monitoring activity be launched on defence-related industries using data available in EUROSTAT and in the European Statistical System (ESS) as well as other relevant sources of information, including industrial associations, while respecting existing rules of confidentiality.

3.1.3. Intra-Community transfers

The Commission is all too aware that intra-Community transfers of defence equipment are time-consuming and involve a lot of red tape because of the number of national procedures. These procedures take the form of individual licences for firms, import/export licences, checks on delivery and in some cases end user certificates. What is more, these procedures apply equally to transfers of defence equipment to Member States as to exports to non-member countries. One of the reasons for these complications is the desire of Member States to control the final destination of defence equipment, especially in the case of non-member countries.

The Commission has therefore tried, working with national experts to identify possible ways of simplifying intra-Community transfers of defence-related goods. For example, one possible way would be to align national licensing systems by adopting the principle of a global authorisation that would apply to intergovernmental programmes and industrial cooperation programmes.

An impact analysis is thus needed to establish the value added of any Community-level legislative initiative. This would also be an opportunity to draw lessons from the transfer arrangements for military equipment for the armed forces under the relevant NATO agreements. In the light of its findings the Commission will propose an appropriate legislative instrument (Regulation of Directive). Work on this will start at the end of 2004.

3.1.4. Competition policy

Competition policy is an essential element of the common market and does not represent an obstacle to technological change or a hindrance to private initiative. Moreover, it must ensure that changes brought about by market forces, such as through mergers and acquisitions, do not lead to the creation or strengthening of dominant positions, but result instead in benefits in terms of innovation and value for money.

Insofar as purely military mergers have been notified to the Commission under the EC Merger Control Regulation (ECMR), the Commission has not objected to such operations. Recently however, complex cross-border mergers have occurred, which call for a thorough assessment of their overall impact on competition, notably with respect to dual-use or civil products. Both industry and governments would appreciate greater clarity. Producers need a stable and transparent framework in which restructuring can take place. Equally, the interests of other market participants, and in particular customers, competitors and subcontractors from other Member States, also need to be taken into account.

Due to its specificities and in particular to the close relationship with public authorities, the defence sector may benefit, directly or indirectly, from public support constituting State aid. Under the provisions of Art 296 TEC, to the extent that the companies concerned produce only military equipment, Article 87 TEC concerning State aids control has not so far been applied. Neither has there has been any notification of such aid based on the argument that it contributed to the "execution of an important project of common European interest" as set out by Article 87(3)(b) TEC. Public financial support for defence production should in any case not alter competitive conditions in the common market of goods, which do not have a specific military purpose. This aspect is of particular relevance when the companies in question manufacture both strictly military and non-military products. It is necessary in particular to ensure that there is no cross-subsidisation between these two activities. Aid to non-specifically military products falls within the ambit of the standard provisions regarding State Aid.

The Commission intends to continue its reflection on the application of competition rules in the defence sector taking due account of the specificities of this field and the provisions of article 296 ECT.

3.1.5. Spending better in defence procurement

Removing inefficiencies in the European defence equipment markets would bring benefits from increased competition, from international trade, less duplication in R&D and both economies of scale and learning effects in manufacturing.

Further opening of defence procurement at EU level will ensure that all companies would be dealing with the same interfaces and processes for developing, delivering and supporting equipment as well as bidding for contracts. EU Member States that are also members of WEAG have already endorsed this approach and attempted to open their respective markets by establishing national procurement focal points and by publishing their defence procurement needs in national “Official Journals”. However, the lack of any binding commitment has weakened that effort.

A first step towards harmonising public procurement rules should be to look into the various practices and develop a common approach.

On this basis, a reflection on how to optimise defence procurement at national and EU levels should be initiated in the EU. This would concern products procured by Ministries of Defence in the Member States, or by any European Agency that might be created in the future. The end goal would be to have a single set of rules for procuring defence equipment in Europe.

There have been several important Court judgements in recent years that are relevant to this work - especially in helping to define the scope of Article 296. The Commission will issue an Interpretative Communication by the end of 2003 on the implications of these judgements.

In parallel, it will work on a Green Paper which might be issued in 2004 as a basis for discussion with stakeholders. The aim would be to seek an agreement on procurement rules to apply to defence goods depending on the level of sensitivity of the equipment.

With the creation of a European defence equipment market operating on the basis of fair competition among European companies, offsets (ie practices involving industrial compensation required as a condition for purchases of defence equipment and/or services) would no longer be required. However, due to existing contractual obligations, transitional arrangements would need to be put in place. The above-mentioned Green Paper will also address the issue of offsets in both its intra-EU and external dimensions.

3.1.6. Export Control of dual-use goods and technologies.

Dual-use items are goods, software and technologies likely to have both civilian and military uses[17]. Member States control exports of these items and participate individually in a number of informal (politically, but not legally binding) international export control regimes[18].

[17] Definition taken from EC regulation n° 1334/2000 of June 22, 2000.

[18] The Australia Group controls exports and transhipments that could result in proliferation of chemical and biological weapons.
The Missile Technology Control Regime aims at preventing proliferation of unmanned delivery systems for weapons of mass destruction by controlling exports of missiles and related technologies.
The Nuclear Suppliers' Group controls transfers of nuclear-related dual-use equipment, material and technology in order to prevent civilian nuclear trade from contributing to nuclear weapons acquisition.
The Wassenaar Arrangement controls transfers of conventional weapons and sensitive dual-use goods and technologies, primarily electronic products defined widely. "

The Community Regulation (1334/2000) based on the Article 133 TEC, while supporting the principle of the free circulation of goods inside the EU, provides for legally binding common principles and rules for the national implementation and enforcement of dual-use export controls by Member States. There is a strict link with the export control regimes, as the Regulation comprises a common list of items subject to control, which is directly derived from the consensus decisions taken in the regimes.

Due to differences in the implementation of dual-use export control commitments by the countries participating in the export control regimes (not to mention those countries which are not part of the regimes), great care must be taken to prevent civil industrial sectors such as nuclear, chemical, biological, pharmaceutical, space and aeronautics, information technologies, which are potentially affected by the controls, from being constrained unnecessarily or unequally.

The Community, by transposing in legal terms the decisions taken by the Member States in the export control regimes, imposes export control restrictions on European industries. The Commission is not a member (with the exception of the Australia Group) of the regimes. There is a need for greater Commission involvement in order more effectively to make more effective co-ordination of Member States' positions in the various regimes and to represent Community interests. In particular, the Commission, while supporting the central objective of the security of EU citizens, would also look at the functioning of the single market and the economic interests of a variety of civil industrial sectors.

While the EC imposes export controls on dual use items for security purposes and in accordance with decisions taken in export control fora, consideration should be given to their impact on the competitiveness of the EU defence and dual use industries. There is a need to ensure that all these aspects will be adequately addressed in the perspective of enlargement to ensure that both the dual use single market and the Community Export control regime are not adversely affected.

The Commission will bring up the issue of how to achieve these aims with Member States in the relevant Council working bodies, including the particular challenges stemming from enlargement.

3.2. Towards a more coherent European advanced security research effort

The Commission has had a great deal of experience in managing Community research programmes and coordinating national research activities and programmes. It is willing to offer its expertise for an initiative to promote cooperation on advanced research in the field of global security".

The setting-up of the European Research Area demonstrated that the Union and the Member States would derive greater benefits from national research programmes if they were better coordinated, something which is also true of advanced security-related research. By harnessing efforts at European level with an eye to medium to long-term requirements, advanced technologies that are crucial for Europe could be better developed and a real European value-added gained.

To this end, and as suggested by Parliament in its resolution of 10 April 2002, the Commission will ask national administrations, industry and research institutions with extensive activity in this area to identify in the course of this year an European agenda for advanced research relating to global security and the most appropriate ways of tackling it jointly.

To prepare for the implementation of this advanced research agenda, the Commission intends to launch a preparatory project that it would implement with the Member States and industry to implement some specific aspects that would be particularly useful in carrying out Petersberg tasks. This preliminary operation lasting no longer than three years would constitute a pilot phase for acquiring the experience for evaluating the conditions and arrangements needed for effective cooperation between national research programmes in the field of global security. It will cover just a few carefully selected subjects of advanced technology together with specific accompanying measures.

4. THEMES FOR FURTHER REFLECTION FOR THE EU AND MEMBER STATES

4.1 EU Defence Equipment Agency proposals

Article 17 of the Treaty on European Union provides that "the progressive framing of a common defence policy will be supported, as Member States consider appropriate, by cooperation between them in the field of armaments." The possibility of creating a European Armaments Agency is foreseen in the declaration on WEU annexed to the Treaties of Maastricht and Amsterdam. The defence working group of the Convention included in its recommendations the creation of an agency on an intergovernmental basis, which would deal with armaments and strategic research and could also contribute to ensuring that capabilities are improved. This proposal has been supported by the Franco-British declaration issued in the context of the summit which was held in *Le Touquet* on 4 February 2003.

Various Member States have already established joint procurement and research initiatives such as OCCAr, the LoI and WEAO. Any EU initiative should build on this base. We should seek to create an EU Defence Equipment Framework, including:

– collaborative programmes on the basis of OCCAr, progressively associating countries that wish to join in such co-operation in accordance with OCCAr rules (ie abandoning “juste-retour”) ;

– research and technology: The Europa MoU agreed within the Western Europe Armament Organisation framework includes a number of valuable ideas that could be further explored ; in a longer term the EU should consider the creation of a European DARPA (Defence Advance Research Project Agency);

– off-the-shelf procurement. This issue is not currently addressed at a European level. It is time that it was.

Any Agency (or Agencies) established to oversee such an EU Framework should reflect Member States' political choice that much of this work should continue to be conducted outside the current EC Treaty. It would be sensible nevertheless to draw upon Community mechanisms and instruments where Member States agree that the Community has a contribution to make (for example where the work touches on market mechanisms; or where it may be possible to build, in the research area, on experience with the civil Framework Programmes). In the longer run, too, Member States may decide to develop some central financial mechanism to ensure that Member States with disproportionately small national defence budgets nevertheless contribute their fair share to EU capacities.

An additional advantage of an EU Defence Equipment Framework of this kind is that it could, in some cases, would reinforce EU's position when negotiating commercial agreements, thereby strengthening the EU's hand.

4.2 Security of supply

Until recently the issue of security of supply has been addressed primarily by Member States individually. The process of consolidation in the defence field, which is necessary for Europe to maintain a competitive industrial base, is likely to lead to increased sectoral concentration. Governments will be required to accept the loss of some domestic capabilities, to procure directly from foreign or trans-national companies, and to allow changes to the ownership of defence companies. Mutual dependency between nations for the supply of certain armament materials already exists. Some countries buy entire systems from foreign firms, and even where a nation procures from national suppliers, most complex equipment includes some components from non-domestic sources.

By moving towards an EU-wide approach to security of supply Governments could:

- avoid keeping non competitive excess capacity by placing work with national companies,

- be able to allow trans-national mergers involving a change of ownership,

- facilitate trans-national movement and transfers of personnel working on classified matters,

- allow the trans-national transfer of goods and technology.

Such an approach would, *de facto,* help to diversify sources of supply and thereby reduce dependency on any single supplier, such as the United States.

EU progress in this field should build on work already undertaken in other forums such as LoI, NATO and WEAG.

4.3 Defence trade issues

A wider opening of foreign markets, especially the US, to European defence products is a major objective as it is essential for the EU defence industries to maintain and further develop their design expertise and competence in the most advanced technologies. If this does not happen, most of the national European markets will remain open to US manufacturers, while the US market will remain closed, except for a few European-owned but US-based companies.

Greater credibility in this area could be achieved by consolidating national defence markets and exploiting the potential of the combined EU defence procurement budget (national and EU level). This process would create greater negotiating capital for the purpose of working towards enhanced reciprocity and achieving a more level playing field for European companies seeking access to US markets.

Further work is needed on the some these aspects. The Commission will revert to this at a later stage.

On the question of ethics in arms trade, the Council adopted in 1998 the EU code of conduct on arms exports. This Code of Conduct is a politically binding instrument that seeks to create "high common standards" for Member States to use when making arms export decisions and to increase transparency on conventional arms exports. It also has a specific operative mechanism designed to discourage individual Member States from undercutting sales denied by other EU states. A common list of military goods to which the Code applies has been agreed and serves as a guideline; Member States are free to use their own lists.

A first step towards a practical solution to streamlining export decisions regarding the products of multinational companies has been made by the six signatory nations of the Letter of Intent (LoI). The ideas developed there should serve as a basis for future EU rules. In particular, a decision to export outside the European Union should take account of the need for prior consultation with the Member States involved in authorisations while recognising the political responsibility of the final exporting state.

5. CONCLUSION

This Communication is intended as a further contribution to greater efficiency in the defence equipment industry, which is both an objective in itself and an important challenge if the Union is to develop a successful ESDP. The Commission proposes to:

- provide the necessary financial resources to ensure that the European Standardisation Handbook is ready by 2004 and then propose appropriate complementary measures to ensure the upkeep of this Handbook and its use;

- launch a monitoring activity on defence-related industries using data available in EUROSTAT and in the European Statistical System framework; as well as other relevant sources of information, while respecting existing rules of confidentiality.

- launch an impact assessment study in 2003 and, depending on its results, start elaborating at the end of 2004 the appropriate legal instrument to facilitate intra-Community transfer of defence equipment.

- continue its reflection the application of competition rules in the defence sector taking due account of the specificities of this field and the provisions of article 296 ECT.

- initiate a reflection on how to optimise defence procurement at national and EU levels. Given the important Court judgements in recent years, especially in helping to define the scope of Article 296, the Commission will issue an Interpretative Communication by the end of 2003 on the implications of these judgements. In parallel, it will work on a Green Paper, which might be issued in 2004 as a basis for discussion with stakeholders.

- bring up, in the relevant Council working bodies, the issue of the Commission's involvement in export controls regimes.

- launch a preparatory action for advanced research in the field of global security with a view to implementing with the Member States and industry specific practical aspects that would be useful for carrying out Petersberg tasks in particular;

- to pursue work on a possible EU Defence Equipment Framework overseen by an Agency (or Agencies). This framework will pull together national initiatives - especially in collaborative programmes in Research and development, and in off-the-shelf procurement. It will encourage more Member States to join such programmes and it will enable the EU to draw, where appropriate, on Community mechanisms and instruments.

Political conclusions drawn from the public consultation – the PPP Communication

Following the public debate on the PPP Green Paper (see below), the Commission adopted on 15 November 2005 the Communication on PPPs and Community Law on Public Procurement and Concessions. This Communication presents policy options with a view to ensuring effective competition for PPPs without unduly limiting the flexibility needed to design innovative and often complex projects.

What are the preferred policy options following the PPP Green Paper consultation?

Concessions

Having carefully considered all arguments and the factual information submitted in the course of the consultation, it would currently appear that a legislative initiative is the preferable option as regards concessions. However, before formally proposing legislation further in-depth analysis will need to be undertaken in accordance with the principles of “Better Regulation”.

Institutionalised PPPs

Many respondents to the PPP Green Paper asked how EU rules should apply to the choice of private partners in “institutionalised PPPs”, i.e. public service undertakings held jointly by both a public and a private partner. Overall, it appears at present that an Interpretative Communication would be better suited to this demand than fully-fledged legislation.

It is envisaged to prepare the interpretative document on PPPs in the course of 2006. In

2006, the Commission services will also conduct an in-depth analysis of the impacts of a possible legislative initiative on concessions. The final decision whether or not to take this latter measure, and on its concrete shape, depends on the result of this impact assessment.

Presentation of the Green Paper

The term public-private partnership ("PPP") is not defined at Community level. In general, the term refers to forms of cooperation between public authorities and the world of business which aim to ensure the funding, construction, renovation, management or maintenance of an infrastructure or the provision of a service.

This Green Paper analyses the phenomenon of PPPs with regard to Community law on public procurement and concessions. Under Community law, there is no specific system governing PPPs. PPPs that qualify as "public contracts" under the Directives coordinating procedures for the award of public contracts must comply with the detailed provisions of those Directives. PPPs qualifying as "works concessions" are covered only by a few scattered provisions of secondary legislation and PPPs qualifying as "service concessions" are not covered by the "public contracts" Directives at all. Nevertheless, all contracts in which a public body awards work involving an economic activity to a third party, whether covered by secondary legislation or not, must be examined in the light of the rules and principles of the EC Treaty including in particular the principles of transparency, equal treatment, proportionality and mutual recognition.

The aim of the Green Paper is to explore how procurement law applies to the different forms of PPP developing in the Member States, in order to assess whether there is a need to clarify, complement or improve the current legal framework at the European level.

It therefore describes the ways in which the rules and the principles deriving from Community law on public contracts and concessions are applied when a private partner is being selected, and for the subsequent duration of the contract, in the context of different types of PPP. The Green Paper also asks a set of questions intended to find out more about how these rules and principles work in practice, so that the Commission can determine whether they are sufficiently clear and suitable for the requirements and characteristics of PPPs.

Report on public consultation

On 30 April 2004, the Commission launched a public consultation inviting interested parties to send their observations on the questions raised in the Green Paper. The consultation was officially closed on 30 July 2004 although the Commission continued to receive contributions throughout autumn 2004. In total the Commission received 195 replies to the list of questions set out in the PPP Green Paper. Governments or individual ministries from Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Lithuania, the Netherlands, Poland, Portugal, Slovakia, Spain, Sweden and the United Kingdom, 15 other public authorities from these Member States, 111 associations with private and/or public entities as their members, 38 enterprises and 13 individuals contributed in writing to the consultation.

Both the European Economic and Social Committee and the Committee of the Regions adopted opinions on the PPP Green Paper.

The objective of the report on the outcome of the public consultation on the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions is to reflect the ideas, opinions and suggestions made in the contributions. It tries to identify, as objectively as possible, the main trends, views and concerns set out in the contributions.

COMMUNICATION FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT, THE COUNCIL, THE EUROPEAN ECONOMIC AND SOCIAL COMMITTEE AND THE COMMITTEE OF THE REGIONS

on Public-Private Partnerships and Community Law on Public Procurement and Concessions

(Text with EEA relevance)

1. INTRODUCTION

Public authorities at all levels are increasingly interested in co-operating with the private sector when ensuring the provision of an infrastructure or a service. The interest in such co-operation, commonly referred to as Public-Private Partnerships (PPPs), is partly due to the benefit public authorities could have from the know-how of the private sector, in particular in order to increase efficiency, partly this interest is due to public budget constraints. However, PPPs are not a miracle solution: for each project it is necessary to assess whether partnership really adds value to the specific service or public works in question, compared with other options such as concluding a more traditional contract.

Community law is neutral as regards whether public authorities choose to provide an economic activity themselves or to entrust it to a third party. If public authorities decide, however, to involve third parties in conducting an activity, Community law on public procurement and concessions may come into play.

The main purpose of Community law on public procurement and concessions is to create an Internal Market in which the free movement of goods and services and the right of establishment as well as the fundamental principles of equal treatment, transparency and mutual recognition are safeguarded and value for money obtained when public authorities buy products or mandate third parties with performing services or works. In view of the increasing importance of PPPs it was considered necessary to explore the extent to which existing Community rules adequately implement these objectives when it comes to awarding PPP contracts or concessions. This should enable the Commission to assess whether there is a need to clarify, complement or improve the current legal framework at European level. To this end, the Commission adopted the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions[1] on 30 April 2004.

The debate launched by the Green Paper met with considerable interest and was generally welcomed. The Commission received close to 200 contributions from a wide variety of respondents, including many of the Member States. Both the European Economic and Social Committee[2] and the Committee of the Regions[3]

[1] COM(2004) 327 final, 30.4.2004.

[2] Opinion on the Green Paper on public-private partnerships and Community law on public contracts and concessions, Brussels, 27-28 October 2004, CESE 1440/2004.

adopted opinions on the Green Paper. In May 2005 a report analysing all contributions submitted in the course of the public consultation was published.[4]

This Communication presents the policy options following the consultation, with a view to ensuring effective competition for PPPs without unduly limiting the flexibility needed to design innovative and often complex projects. Stating its policy preferences at this stage is in line with the Commission's commitment to public accountability and to transparency in exercising its right of initiative, which is a basic principle of "Better Regulation for Growth and Jobs in the European Union".[5]

While this Communication seeks to draw policy conclusions from the PPP Green Paper consultation, the choice of options it sets out has to be seen in a wider context, including conclusions drawn from judgments of the European Court of Justice, experience with procedures the Commission launched under Article 226 EC Treaty against Member States and bilateral contacts with stakeholders.

While the consultation provided both factual information on practical experiences with PPPs and stakeholders' opinions on preferred policy options, it is no substitute for in-depth analysis of the impacts of such policies. Consequently, the final decision on possible legislative initiatives for clarifying, complementing or improving Community law on public procurement and concessions will be subject to impact assessment as required under "Better Regulation" principles.

2. KEY ISSUES FOR POSSIBLE FOLLOW-UP

2.1. Issues requiring follow-up at EC level

The PPP Green Paper covered a range of subjects related to PPPs and Community law on public contracts and concessions. The responses from stakeholders participating in the consultation suggest that only a few of these subjects require follow-up initiatives at EC level. These include, in particular:

- the award of concessions (questions 4 to 6 of the Green Paper – chapter 3 of this Communication) and

- the establishment of undertakings held jointly by both a public and a private partner in order to perform public services (Institutionalised PPPs – IPPPs) (questions 18 and 19 of the Green Paper – chapter 4 of this Communication).

[4] SEC(2005) 629, 3.5.2005. This report and most of the contributions sent to the Commission are available on the Commission's website at: http://europa.eu.int/comm/internal_market/publicprocurement/ppp_en.htm.

[5] See Communications from the Commission, European Governance: Better lawmaking, COM(2002) 275 final, 5.6.2002, and Better Regulation for Growth and Jobs in the European Union, COM(2005)97 final, 16.3.2005.

On both issues clear majorities of stakeholders asked for EC initiatives providing more legal certainty. Separate sections of this Communication present the appropriate follow-up measures.

2.2. The Competitive Dialogue: the Commission will provide clarification

One issue which met with considerable stakeholder interest was the Competitive Dialogue, a new award procedure specifically designed for complex public contracts, introduced by Directive 2004/18/EC. Few stakeholders contested the importance of this procedure. Many respondents to the consultation asked for full protection of intellectual property and for limiting resources bidders have to invest in this procedure.

The Commission is confident that practical experience with this procedure, not yet implemented in most of the Member States[6], will dissipate these concerns. As requested by a number of stakeholders, clarification of the provisions governing the Competitive Dialogue will be provided by means of an explanatory document which will be made accessible on the Commission's website.[7]

2.3. Issues where no separate EC initiative is proposed at this stage

2.3.1. No new legislation covering all contractual PPPs

All PPP set-ups qualify – in as far as they fall within the ambit of the EC Treaty – as public contracts or concessions. However, as differing rules apply to the award of public contracts and concessions, there is no uniform award procedure in EC law specifically designed for PPPs.

Against this background, the Commission asked stakeholders whether they would welcome new legislation covering all contractual PPPs, irrespective of whether they qualify as public contracts or concessions, making them subject to identical award arrangements (question 7 of the Green Paper).

The consultation revealed significant stakeholder opposition to a regulatory regime covering all contractual PPPs, irrespective of whether these are designated as contracts or concessions. Therefore, the Commission does not envisage making them subject to identical award arrangements.

2.3.2. No Community action on other specific aspects of PPPs

With regard to the issue of PPPs where the initiative comes from the private sector (question 9 of the Green Paper) the responses did not indicate any current need to take measures at EC level to foster such schemes.

There was no support either for Community initiatives clarifying the contractual framework of PPPs at Community level (question 14 of the Green Paper) or clarifying or adjusting the rules on subcontracting (question 17 of the Green Paper).

[6] Member States need to bring into force the laws, regulations and administrative provisions necessary to comply with this Directive no later than 31 January 2006.

[7] http://europa.eu.int/comm/internal_market/publicprocurement/index_en.htm

2.4. Continuation of debate on PPPs at EC level

This Communication does, however, not aim to conclude the debate on PPPs and Community law on public procurement and concessions. Experience with PPPs is steadily increasing. All players, including the national authorities and the Commission, are continuously learning from practical experiences with applying EC law to such partnerships. While this process should not prevent the Commission from taking initiatives to address any shortcomings of the existing legal framework perceived today, discussions between Commission departments and stakeholders involved in the development of PPPs need to continue at all levels and the planned impact assessment will attempt to take this continuing dialogue into account.[8]

These discussions will continue in existing Committees at Commission level, where public procurement experts[9] and Member States'[10] representatives[11] meet, through participation in conferences on PPPs and public procurement and by means of direct contacts between Commission officials and PPP experts. In addition, there appears to be a general consensus among national PPP Task Forces that infrastructure development could be further improved if the public sector had a more effective means of sharing existing experiences in PPP policy, programme development and project implementation. The Task Forces are therefore giving consideration, in association with the European Investment Bank, to establishing a European PPP Expertise Centre. The Commission would in principle welcome such an initiative.

3. CONCESSIONS

3.1. Background

A key feature of concessions is the right of the concessionaire to exploit the construction or service granted as a consideration for having erected the construction or delivered the service. The main difference to public procurement is the risk inherent in such exploitation which the concessionaire, usually providing the funding of at least parts of the relevant projects, has to bear. Such private capital involvement is considered to be one of the key incentives for public authorities to enter into PPPs. In spite of their practical importance, only few provisions of secondary Community legislation coordinate the award procedures for works concessions. For their part, the rules governing the award of service concessions apply only by reference to the principles resulting from Articles 43 and 49 of the EC Treaty, in particular the principles of transparency, equality of treatment, proportionality and mutual recognition. Against this background, the Green Paper (question 6) asked whether in the view of stakeholders a Community legislative initiative designed to regulate the procedure for awarding concessions was desirable.

[8] In this context, particular consideration should be given to questions relating to PPPs established to build and operate cross-border infrastructures.

[9] Advisory Committee on the Opening-up of Public Procurement set up under Commission Decision 87/305/EEC.

[10] In accordance with the arrangements for the interim period, the Committees not only include Member State representatives but also observers from the Acceding States (Bulgaria and Romania).

[11] Advisory Committee for Public Works Contracts set up under Council Decision 71/306/EEC.

The great majority of stakeholders participating in the consultation confirmed the demand for greater legal certainty as regards the Community rules governing the award of concessions. Opinions on how to provide such legal certainty – via legislation or a non-binding, interpretative instrument – were, however, divided.

3.2. Options to provide legal certainty on concessions

The consultation showed the demand for a stable, consistent legal environment for the award of concessions at EU level, in particular to reduce transaction costs (by decreasing legal risks) and more generally to enhance competition. Many stakeholders argued that increasing legal certainty and effective competition in the area of concessions would be a practical way of promoting PPPs, thereby increasing the contribution that private project financing can make in times of tight public budgets. Private stakeholders particularly underlined that only EU level action could provide such legal certainty avoiding at the same time the problems posed by the patchwork of national legislation, especially with regard to the new Member States which need private finance most. There are basically two ways to meet this demand: (1) non-binding guidance, in particular in the form of an Interpretative Communication, and (2) legislation spelling out the obligations emanating from general EC Treaty principles.

Interpretative Communication

The Commission has already (in April 2000) adopted an Interpretative Communication on Concessions under Community Law which explains the scope and content of the EC Treaty principles applicable to the award of concessions. Many stakeholders argued that an Interpretative Communication was a quick and effective tool to provide clarification. However, comments made by key stakeholders in the course of the debate indicate that the existing Interpretative Communication on concessions has failed to spell out in a sufficiently clear manner the implications of EC Treaty principles for the award of concessions. Contributions from several important stakeholders were – surprisingly – still based on the assumption that existing EC law obligations do not require the award of concessions to be opened up to competition, in particular by enabling all undertakings to express their interest in obtaining concessions.

Other stakeholders considered an Interpretative Communication to be an ideal instrument to provide a clearer delimitation between public procurement contracts and concessions. However, the scope for certainty provided by an Interpretative Communication is limited, as it merely construes existing law. In many cases a lack of precision in the law can hardly be overcome by means of interpretation. It therefore seems likely that – while providing some added value – an update of the April 2000 Interpretative Communication on concessions would probably fall short of meeting the request for more legal certainty.

Legislative initiative

The reported misunderstandings regarding the scope and content of Community law obligations for contracting authorities who award concessions confirm the view of stakeholders that the general EC Treaty principles, even clarified by an interpretative document from the Commission, do not provide enough legal certainty. They are considered to leave too much discretion to contracting authorities and cannot therefore guarantee equal treatment of European companies throughout the EU. Indeed, both legal practice and doctrine show that – in spite of clarification provided by the European Court of Justice[12] – the requirements of the EC Treaty are understood in different ways. It was reported that this created particular difficulties for bidders bringing a case against the award of concessions for review by national courts. Clearly, this situation could discourage firms from bidding for concessions and might diminish competition for PPPs and ultimately jeopardise their success.

On a more general note, it is difficult to understand why service concessions which are often used for complex and high value projects are entirely excluded from EC secondary legislation. Some arguments explaining this lack of detailed award procedures at EC level have been submitted in the course of the PPP Green Paper consultation. They include the flexibility supposedly needed in the area of concessions and the subsidiarity principle. These arguments against a binding Community initiative in this area are, however, unconvincing: adopting Community legislation on the award of concessions does not imply that public authorities should lack flexibility when choosing a private partner for PPPs. A legislative initiative on the award of concessions needs to take the possible complexity of concessions and the need for negotiations between the contracting authority and the bidders into account. Against this background, it is difficult to see why spelling out the rules applicable to the award of concessions would *per se* unduly limit the flexibility of contracting authorities when awarding service concessions. Likewise, the precise content of such initiative should determine whether or not it is compliant or non-compliant with the subsidiarity principle. There is no reason to consider such an initiative *per se* as being non-compliant with this principle.

Having carefully considered all arguments and the factual information submitted in the course of the PPP Green Paper consultation, it would currently appear that a legislative initiative is the preferable option as regards concessions. However, as mentioned above, before formally proposing legislation further in-depth analysis will need to be undertaken in accordance with the principles of "Better Regulation", in order (1) to determine whether indeed a Community initiative to regulate procedures for awarding concessions is necessary, (2) if so, to shape such an initiative, and (3) to better understand its possible impact.

3.3. Content of a possible Community initiative on concessions

As explained above, the general principles derived from the EC Treaty may need to be clearly spelt out by means of Community legislation on the award of concessions. The legislation which should cover both works and service concessions would

[12] Case C-324/98 *Telaustria* [2000] ECR I-10475, Case C-231/03 *Coname* [2005] not yet published in the ECR.

provide a clear delineation between concessions and public procurement contracts. It would require adequate advertising of the intention to award a concession and fix the rules governing the selection of concessionaires on the basis of objective, non-discriminatory criteria. More generally, the rules should aim at applying the principle of equality of treatment of all participants to the award of concessions. Also, problems relating to the long duration of concessions, such as the need for their adaptation over time, as well as questions on PPPs established to build and operate cross-border infrastructures might be dealt with by such initiative.

One consequence of such legislation on concessions would be a qualitative leap in the protection of bidders in most of the Member States, as concessions, once they are covered by Community secondary legislation, would fall within the scope of the Community Directives on review procedures for the award of public procurement contracts, which provide for more effective and adequate remedies than the basic principles of jurisdictional protection developed by the European Court of Justice.

It is not possible to give details on the content of a potential Community initiative on concessions at this stage. The existence and shape of such rules depends on further research the Commission needs to undertake in the course of a full impact assessment. It is therefore premature to express an opinion on the overall scope of such rules, including the definition of threshold values above which such rules would apply. In any case, such initiative would not aim at amending existing sector-specific Community regulation covering the award of concessions in the respective sectors.

4. INSTITUTIONALISED PPPS

4.1. Preferred approach

The public consultation on the PPP Green Paper expressed the need to clarify how EC public procurement rules apply to the establishment of undertakings held jointly by both a public and a private partner in order to perform public services (institutionalised PPPs – IPPPs). Some stakeholders said that such clarification was needed as a matter of urgency. It was reported that public authorities abstain from entering into innovative IPPPs, in order to avoid the risk of establishing IPPPs which later on might turn out to be non-compliant with EC law. Only few stakeholders argued, however, that legal certainty in this area needed to be provided by means of a legally binding instrument.

At the moment, in the area of IPPPs it seems that an Interpretative Communication may be the best way to encourage effective competition and to provide legal certainty. First of all, in contrast to concessions, there has so far been no experience with an Interpretative Communication explaining how to apply public procurement rules to the establishment of IPPPs. Furthermore, in most Member States the establishment of public-private entities to perform services of general economic interest is a rather new, innovative concept. A non-binding initiative in this area would provide the required guidance without stifling innovation. In addition, a quick response to perceived uncertainties appears to be particularly important as regards IPPPs.

Overall, it appears at present that an Interpretative Communication would be better suited to this demand than fully-fledged legislation. However, should future analysis demonstrate that – as in the case of concessions – an Interpretative Communication is insufficient to safeguard the proper application of EC law, the adoption of a legislative proposal remains an option.

4.2. Content of a possible Interpretative Communication on institutionalised PPPs

An Interpretative Communication on IPPPs and Community public procurement law should, above all, clarify the application of public procurement rules (1) to the establishment of mixed capital entities the objective of which is to perform services of general (economic) interest and (2) to the participation of private firms in existing public companies which perform such tasks. In this context, any future Communication should in particular outline ways of establishing IPPPs ensuring that the accompanying award of tasks is EC law compatible.[13]

In the context of IPPPs the PPP Green Paper discussed in-house relations.[14] It was stressed that as a rule Community law on public contracts and concessions applies when a contracting body decides to entrust a task to a third party, i.e. a person legally distinct from it. It is established case law[15] of the European Court of Justice that the position can be otherwise only where (1) the local authority exercises over the person concerned a control which is similar to that which it exercises over its own departments and, at the same time, (2) that person carries out the essential part of its activities with the controlling local authority or authorities. In its judgment of 11 January 2005 in the *Stadt Halle*[16] case, the European Court of Justice supplemented this definition of "in-house relations" by stating that the public award procedures laid down by the Public Procurement Directives must – if the other conditions for their application are met – always be applied where a contracting authority intends to conclude a contract for pecuniary interest with a company legally distinct from it, in whose capital it has a holding together with at least one private undertaking.

In particular, public sector stakeholders, including some Member State governments, called for a widening of the in-house concept, which in their view is understood too narrowly by the Court. However, there does not appear to be any compelling evidence at present to suggest that the quality of public services could be improved or prices be reduced, if private undertakings – via IPPPs – obtain public service missions without a preceding competitive award procedure. Furthermore, it is difficult to see how privileged treatment of IPPPs vis-à-vis their private competitors could comply with the equal treatment obligation derived from the EC Treaty.

Contributions to the PPP Green Paper and discussions with stakeholders in the context of this public consultation as well as experiences in the context of Article 226 EC Treaty procedures have shown that clarification is also needed in order to identify to what extent Community law applies to the delegation of tasks to

[13] Such Communication would more specifically examine closely the issues highlighted in paragraphs 58 to 69 of the PPP Green Paper.

[14] Paragraph 63 of the PPP Green Paper.

[15] Judgment of 18 November 1999 in Case C-107/98 *Teckal* [1999] ECR I-08121, paragraph 50.

[16] Case C-26/03 [2005], paragraph 52, not yet published in the ECR.

public bodies, and which forms of co-operation remain outside the scope of internal market provisions. Just recently, the European Court of Justice[17] made it clear that relations between public authorities, their public bodies and, in a general manner, non-commercial bodies governed by public law could not *a priori* be excluded from public procurement law. Clearly, further clarification on this issue could form part of an Interpretative Communication on IPPPs.

5. NEXT STEPS

Further analysis needs to be undertaken on the measures discussed in the present Communication, in particular the legislative instrument on concessions and the interpretative document on IPPPs. Focused stakeholder consultation will be part of this work.

It is envisaged to prepare the interpretative document on IPPPs in the course of 2006.

In 2006, the Commission services will also conduct an in-depth analysis of the impacts of a possible legislative initiative on concessions. The final decision whether or not to take this measure, and on its concrete shape, depends on the result of this impact assessment.

IP/05/1440

Brussels, 17 November 2005

Public procurement: Commission proposes clarification of EU rules on public-private partnerships

The European Commission has published a Communication with new policy options on Public-Private Partnerships (PPPs). The Communication follows a major public consultation which was launched by the PPP Green Paper in April 2004 (IP/04/593). The Commission will clarify how EU rules should apply to the choice of private partners in "institutionalised PPPs", which are public-service undertakings held jointly by both a public and a private partner. The Commission will also assess whether to propose a legislative initiative on concessions, to clarify both the term 'concessions' and the rules applicable to their award.

Internal Market and Services Commissioner Charlie McCreevy said: *"PPPs are vital to investment in Europe's infrastructure and public services. But to reap the full benefits of these partnerships and ensure value for money for taxpayers, we need transparency and fair competition in the selection of private partners. The goal towards which we strive is to provide transparent and non-discriminatory conditions that will enable private entities to contribute to setting up infrastructures and provide services throughout the EU in a way that delivers best value for taxpayers. We have now listened to all the views expressed during the consultation, which show a strong demand for further Commission action."*

A key aim of the 2004 consultation was to find out how the rules and principles work in practice and to see if they are clear enough and if they suit the challenges and characteristics of PPPs. The options are presented with a view to ensuring effective competition for PPPs without unduly limiting the flexibility needed to design innovative and often complex projects.

Institutionalised PPPs

Many respondents to the PPP Green Paper asked how EU rules should apply to the choice of private partners in "institutionalised PPPs" (IPPPs), which are public-service undertakings held jointly by both a public and a private partner. Overall, it appears at present that an Interpretative Communication would be better suited to this demand than fully-fledged legislation. This Interpretative Communication should be published during 2006.

Concessions

A clear majority of participants in the consultation supported an EU initiative, legislative or non-legislative, on concessions, in order to clarify both the term 'concessions' and the rules applicable to their award. Having carefully considered all arguments and the factual information provided by stakeholders it appears that a legislative initiative is at present the preferable option.

However, the final decision on whether or not to take such a measure, and on its concrete shape, depends on further in-depth analysis, including an Impact Assessment, which will be carried out in 2006.

Background

Public-private partnerships (PPPs) are forms of cooperation between public authorities and businesses, which aim to carry out infrastructure projects or providing services for the public. These arrangements which typically involve complex legal and financial arrangements involving private operators and public authorities have been developed in several areas of the public sector and are widely used within the EU, in particular in transport, public health, public safety, waste management and water distribution.

The full text of the proposals is available at:
http://europa.eu.int/comm/internal_market/publicprocurement/ppp_en.htm

MEMO/05/431

Brussels, 17 November 2005

Frequently Asked Questions (FAQs) on public procurement: Commission proposes clarification of EU rules on public-private partnerships

What are public-private partnerships (PPPs)?

Public-private partnerships (PPPs) are forms of cooperation between public authorities and businesses, with the aim of carrying out infrastructure projects or providing services for the public. These arrangements, which typically involve complex legal and financial arrangements, have been developed in several areas of the public sector and are widely used within the EU, in particular in the areas of transport, public health, public safety, waste management and water distribution.

What prompted the Commission to launch this initiative?

Public authorities at all levels are increasingly interested in co-operating with the private sector when ensuring the provision of an infrastructure or a service. In view of the importance of PPPs it was considered necessary to explore how procurement law applies to the different forms of PPP developing in the Member States, in order to assess whether there is a need to clarify, complement or improve the current legal framework at the European level.

To this end, the Commission adopted the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions on 30 April 2004 (IP/04/593). The public consultation launched by this Green Paper showed, however, that fair competition is not guaranteed throughout the EU at present. The PPP Communication presents policy options to address problems related to Community legislation on public procurement and concessions.

How does EU law on public procurement and concessions apply at present to the choice of private partners for PPPs?

Under EU law, there is no specific system governing the choice of private partners for PPPs.

PPPs that qualify as "public contracts" under the Directives coordinating procedures for the award of public contracts must comply with the detailed provisions of those Directives. PPPs qualifying as "works concessions" are covered only by a few scattered provisions of secondary legislation and PPPs qualifying as "service concessions" are not covered by the "public contracts" Directives at all.

Nevertheless, all contracts in which a public body awards work involving an economic activity to a third party, whether covered by secondary legislation or not, must be examined in the light of the rules and principles of the EC Treaty, in particular transparency, equal treatment, proportionality and mutual recognition.

What are concessions?

A key feature of concessions is the right of the concessionaire to exploit the construction or service granted as a reward for having erected the construction or delivered the service. The main difference from public contracts is the risk inherent in such exploitation which the concessionaire, usually providing the funding of at least parts of the relevant projects, has to bear. Such private capital involvement is considered to be one of the key incentives for public authorities to enter into PPPs.

What are Institutionalised PPPs?

Institutionalised PPPs are public-service undertakings held jointly by both a public and a private partner.

What was the result of the PPP Green Paper consultation?

In total the Commission received 195 substantial replies to the list of questions set out in the PPP Green Paper. Written contributions were received from governments or individual ministries from Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Lithuania, the Netherlands, Poland, Portugal, Slovakia, Spain, Sweden and the United Kingdom; 15 other public authorities from these Member States; 111 associations with private and/or public entities as their members; and 38 enterprises.

Both the European Economic and Social Committee and the Committee of the Regions adopted opinions on the PPP Green Paper.

In May 2005 the Commission published a report on the outcome of this consultation (IP/05/555). Key results from the consultation:

- A clear majority supported an EU initiative, legislative or non-legislative, on concessions (which are currently not subject to the detailed EU public procurement rules), in order to clarify both the term ‘concessions’ and the rules applicable to their award.
- Many respondents asked how EU rules should apply to the choice of private partners in “institutionalised PPPs” (i.e. public-service undertakings held jointly by both a public and a private partner).

What does the Commission propose to make the choice of private partners for PPPs more transparent and competitive?

For **Institutionalised PPPs** the Commission envisages the adoption of an Interpretative Communication aimed at clarifying the application of public procurement rules (1) to the establishment of mixed capital entities whose objective is to perform services of general (economic) interest and (2) to the participation of private firms in existing public companies that perform such tasks. The Commission aims to prepare this interpretative document on Institutionalised PPPs in the course of 2006.

From existing information, in particular the PPP Green Paper consultation, it appears that a legislative initiative on the **award of concessions** is at present the preferable option. However, the final decision on whether or not to take such a measure, and on its concrete shape, depends on further in-depth analysis, including an Impact Assessment, which will be carried out in 2006.

What would be the content of a possible legislative initiative on concessions?

The general EC Treaty principles applying to the award of concessions may need to be clearly spelt out.

In particular, this would require:

- formulating an obligation for the adequate advertising of the intention to award a concession;
- fixing rules governing the selection of concessionaires on the basis of objective, non-discriminatory criteria;
- concretising the principle of equality of treatment of all participants to the award of concessions.

Does the PPP initiative aim to liberalise or privatise services of general economic interest?

No, the PPP initiative does not aim to liberalise or privatise services of general economic interest. It remains the competence of national authorities to decide whether private parties are entrusted with the performance of services of general economic interest or not.

However, when a public authority decides to award the management of a service to a third party, it is bound to comply with the rules on public contracts and concessions.

Will the definition of in-house relations be modified by the PPP initiative?

EU law on public contracts and concessions applies when a contracting body entrusts a task to a third party, unless the relation between the two is so close that the latter is equivalent to an ‘in-house’ entity.

Today, the in-house definition is determined by case law of the European Court of Justice (ECJ). According to the *Stadt Halle* jurisprudence of the ECJ the Public Procurement Directives apply whenever a contracting authority intends to conclude a contract with a company, the capital of which is at least partly held by private undertakings.

There is no compelling evidence at present to suggest that the quality of public services could be improved or prices be reduced, if private undertakings obtain public-service missions without a preceding competitive award procedure. Thus, the Commission does not intend to change the “in-house” concept as understood by the ECJ.

To what extent are co-operations between municipalities covered by public procurement law? Will the PPP initiative change anything in this respect?

When a municipality awards certain services to another public entity against remuneration, this is in principle a service procured in the market. The contracted public entity is in competition with private enterprises and possibly also with other public entities offering the same service.

Conversely, public procurement law is not of application if the competence for a given service is transferred from one public body to another.

The Interpretative Communication on Institutionalised PPPs will aim to clarify to what extent Community law applies to the attribution of tasks to public bodies, and which forms of co-operation remain outside the scope of internal market provisions.

Would a legislative initiative on PPPs at EU level not just add to the multitude of rules which might constitute an obstacle for the smooth development of PPPs?

The PPP Green Paper consultation showed the demand for a stable, consistent legal environment for the award of concessions at EU level, in particular to enhance legal certainty. However, the Commission will intervene and propose legislative measures in this area only when an Impact Assessment shows that the benefits outweigh the potential drawbacks of such an initiative. In any case, future legislation should provide sufficient flexibility for the award of complex PPPs.

COMMISSION OF THE EUROPEAN COMMUNITIES

Brussels, 30.4.2004
COM(2004) 327 final

GREEN PAPER

ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

(presented by the Commission)

TABLE OF CONTENTS

1. The development of the public-private partnership: findings and challenges............ 3

1.1. The "public-private partnership" phenomenon.. 3

3.1. Partnership involving the creation of an ad hoc entity held jointly by the public sector and the private sector. 18

3.2. Control of a public entity by a private operator 20

4. Final remarks.. 22

1. DEVELOPMENT OF THE PUBLIC-PRIVATE PARTNERSHIP: FACTS AND CHALLENGES

1.1. The “public-private partnership” phenomenon

1. The term public-private partnership ("PPP") is not defined at Community level. In general, the term refers to forms of cooperation between public authorities and the world of business which aim to ensure the funding, construction, renovation, management or maintenance of an infrastructure or the provision of a service.

2. The following elements normally characterise PPPs:

- The relatively long duration of the relationship, involving cooperation between the public partner and the private partner on different aspects of a planned project.

- The method of funding the project, in part from the private sector, sometimes by means of complex arrangements between the various players. Nonetheless, public funds - in some cases rather substantial - may be added to the private funds.

- The important role of the economic operator, who participates at different stages in the project (design, completion, implementation, funding). The public partner concentrates primarily on defining the objectives to be attained in terms of public interest, quality of services provided and pricing policy, and it takes responsibility for monitoring compliance with these objectives.

- The distribution of risks between the public partner and the private partner, to whom the risks generally borne by the public sector are transferred. However, a PPP does not necessarily mean that the private partner assumes all the risks, or even the major share of the risks linked to the project. The precise distribution of risk is determined case by case, according to the respective ability of the parties concerned to assess, control and cope with this risk.

3. During the last decade, the PPP phenomenon developed in many fields falling within the scope of the public sector. Various factors explain the increased recourse to PPPs. In view of the budget constraints confronting Member States, it meets a need for private funding for the public sector. Another explanation is the desire to benefit more in public life from the know-how and working methods of the private sector. The development of the PPP is also part of the more general change in the role of the State in the economy, moving from a role of direct operator to one of organiser, regulator and controller.

4. The public authorities of Member States often have recourse to PPP arrangements to undertake infrastructure projects, in particular in sectors such as transport, public health, education and national security. At European level, it was recognised that recourse to PPPs could help to put in place trans-European transport networks, which had fallen very much behind schedule, mainly owing to a lack of funding.[1] As part of the Initiative for Growth, the Council has approved a series of measures designed to

[1] See Communication from the Commission of 23 April 2003 "Developing the trans-European transport network: innovative funding solutions - interoperability of electronic toll collection systems", COM (2003) 132, and the Report of the high-level group on the trans-European transport network of 27 June 2003.

increase investment in the infrastructure of the trans-European transport network and also in the fields of innovation, research and development, mainly through forms of PPPs.[2]

5. However, while it is true that cooperation between the public and private sectors can offer micro-economic benefits permitting execution of a project that provides value for money and meets public interest objectives, recourse to PPPs cannot be presented as a miracle solution for a public sector facing budget constraints.[3] Experience shows that, for each project, it is necessary to assess whether the partnership option offers real value added compared with other options, such as the conclusion of a more traditional contract.[4]

6. The Commission also notes with interest that some Member States and accession countries have created tools to coordinate and promote PPPs, aimed, *inter alia*, at disseminating "good practice" for PPPs at national or at European level. These tools aim to make related expertise mutually available (for example the Tasks forces in the United Kingdom or in Italy) and thus advise users about the different forms of PPP and their stages, such as initial conception, how to choose a private partner, the best allocation of risks, the choice of contractual clauses or even the integration of community financing.

7. Public authorities have also set up partnership structures with the private sector to administer public services, particularly at local level. Public services concerned with waste management or water or energy distribution are thus increasingly being entrusted to businesses, which can be public, private, or a combination thereof. The Green Paper on services of general interest points out in this context that when a public authority decides to award the management of a service to a third party, it is bound to comply with the rules on public contracts and concessions, even if this service is deemed to be of general interest.[5] The European Parliament also recognised that compliance with these rules can be "an effective instrument for preventing restrictions of competition, while at the same time permitting State authorities themselves to define and monitor the conditions regarding quality, availability and environmental requirements."[6]

[2] Conclusions of the Presidency, Brussels European Council, 12 December 2003.

[3] Eurostat, the Statistical Office of the European Communities, has on the 11th of February 2004 (cf. press release STAT/04/18) taken a decision on the accounting treatment in national accounts of contracts undertaken by government units in the framework of partnerships with non-government units. The decision specifies the impact on government deficit/surplus and debt. Eurostat recommends that the assets involved in a public-private partnership should be classified as non-government assets, and therefore recorded off balance sheet for government, if both of the following conditions are met: 1. the private partner bears the construction risk, and 2. the private partner bears at least one of either availability or demand risk.

[6] Resolution of the European Parliament on the Green Paper on services of general interest, adopted on 14 January 2004.

1.2 The challenge for the Internal Market: to facilitate the development of PPPs under conditions of effective competition and legal clarity.

8. This Green Paper discusses the phenomenon of PPPs from the perspective of Community legislation on public contracts and concessions. Community law does not lay down any special rules covering the phenomenon of PPPs. It nonetheless remains true that any act, whether it be contractual or unilateral, whereby a public entity entrusts the provision of an economic activity to a third party must be examined in the light of the rules and principles resulting from the Treaty, particularly as regards the principles of freedom of establishment and freedom to provide services (Articles 43 and 49 of the EC Treaty)7, which encompass in particular the principles of transparency, equality of treatment, proportionality and mutual recognition.[8] Moreover, detailed provisions apply in the cases covered by the Directives relating to the coordination of procedures for the award of public contracts.[9] [10] These Directives are thus "essentially aimed at protecting the interests of traders established in a Member State who wish to offer goods or services to contracting authorities established in another Member State and, to that end, to avoid both the risk of preference being given to national tenderers or applicants whenever a contract is awarded by the contracting authorities and the possibility that a body governed by public law may choose to be guided by considerations other than economic ones."[11] However, the application of the detailed provisions of these Directives is circumscribed by certain assumptions and mainly concerns the award of contracts.

9. The rules applicable to the selection of a private partner derive firstly from the definition of the contractual relationship which that party enters into with a

[7] The rules on the internal market, including the rules and principles governing public contracts and concessions, apply to any economic activity, i.e. any activity which consists in providing services, goods, or carrying out works in a market, even if these services, goods or works are intended to provide a "public service', as defined by a Member State.

[8] See Interpretive Communication of the Commission on concessions in Community law, OJ C 121, 29 April 2000.

[9] i.e. Directives 92/50/EEC, 93/36/EEC, 93/37/EEC, 93/38/EEC, relating to the coordination of procedures for the award respectively of public service contracts, public supply contracts, public works contracts, and contracts in the water, energy, transport and telecommunications sectors. These Directives will be replaced by Directive 2004/18/EC of the European Parliament and of Council of 31 March 2004 relating to the coordination of procedures for the award of public works, supply and services contracts, and Directive 2004/17/EC of the European Parliament and of the Council of of 31 March 2004 relating to the coordination of procedures for the award of contracts in the water, energy, transport and postal services sectors, which will be published in the near future in the OJ. The [provisional] version of the new Directives may be consulted at the website http://www.europarl.eu.int/code/concluded/default_2003_en.htm.

[10] Moreover, in certain sectors, and particularly the transport sector, the organisation of a PPP may be subject to specific sectoral legislation. See Regulation (EEC) No 2408/92 of the Council on access of Community air carriers to intra-Community air routes, Council Regulation (EEC) No 3577/92 applying the principle of freedom to provide services to maritime transport within Member States, Council Regulation (EEC) No 1191/69 on action by Member States concerning the obligations inherent in the concept of a public service in transport by rail, road and inland waterway, as amended by Regulation (EEC) No 1893/91, and the amended proposal for a Regulation of the European Parliament and of the Council on action by Member States concerning public service requirements and the award of public service contracts in passenger transport by rail, road and inland waterway (COM(2002) 107 final).

[11] Joint cases C-285/99 and C-286/99, *Impresa Lombardini v. ANAS*, Judgment of 27 November 2001, paragraph 36 and, to that effect case C-380/98, *University of Cambridge*, ECR I-8035 and case C-19/00, *SIAC construction*, ECR I-7725.

contracting body.[12] Under Community secondary legislation, any contract for pecuniary interest concluded in writing between a contracting body and an operator, which have as their object the execution of works, the execution of a work or provision of a service, is designated as a "public works or public services contract". The concept of "concession" is defined as a contract of the same type as a public contract except for the fact that the consideration for the works to be carried out or the services to be provided consists either solely in the right to exploit the construction or service, or in this right together with payment.

10. The assessment of the elements in these definitions must, in the view of the Court, be made in such a way as to ensure that the Directive is not deprived of practical effect.[13] For example, the formalism attached to the concept of contract under national law cannot be advanced to deprive the Directives of their practical effect. Similarly, the pecuniary nature of the contract in question does not necessarily imply the direct payment of a price by the public partner, but may derive from any other form of economic consideration received by the private partner.

11. The contracts denoted as public works or public services contracts, defined as having priority,[14] are subject to the detailed provisions of Community Directives. The concessions of so-called "non-priority" works and public services contracts are governed only by some sparse provisions of secondary legislation. Lastly, some projects, and in particular services concessions, fall completely outside the scope of secondary legislation. The same is true of any assignment awarded in the form of a unilateral act.

12. The legislative framework governing the choice of private partner has thus been the subject of Community coordination at several levels and degrees of intensity, with a wide variety of approaches persisting at national level, even though any project involving the award of tasks to a third party is governed by a minimum base of principles deriving from Articles 43 to 49 of the EC Treaty.

13. The Commission has already taken initiatives under public procurement law to deal with the PPP phenomenon. In 2000 it published an Interpretive Communication on concessions and Community public procurement law,[15] in which it defined, on the basis of the rules and principles derived from the Treaty and applicable secondary legislation, the outlines of the concept of concession in Community law and the obligations incumbent on the public authorities when selecting the economic operators to whom the concessions are granted. In addition, the new Directives of the European Parliament and the Council designed to modernise and simplify the Community legislative framework, establish an innovative award procedure, designed principally to meet the specific features of the award of "particularly

[12] In PPPs, the public partners are primarily national, regional or local authorities. They may also be public law bodies created to fulfil general interest tasks under State control, or certain network system operators. To simplify matters, the term "contracting body" will be used in this document to designate all of these agencies. Thus this term covers "contracting authorities" within the meaning of Directives 92/50/EEC, 93/36/EEC, 93/37/EEC and 2004/18/EC and the contracting entities of the type "public authorities" and "public undertakings" within the meaning of Directives 93/38/EEC and 2004/17/EC.

[13] Judgment of the Court of 12 July 2001, Case C-399/98, *Scala*, ECR I-5409, see in particular points 53 to 55.

[14] i.e. those listed in Annex IA of Directive 92/50/EEC or Annex XVIA of Directive 93/38/EEC.

[15] Interpretative Communication on concessions under Community law, OJ C 121, 29 April 2000.

complex contracts", and thereby certain forms of PPPs. This new procedure, designated as "competitive dialogue", allows the public authorities to hold discussions with the applicant businesses in order to identify the solutions best suited to their needs.

14. The fact remains that many representatives of interested groups consider that the Community rules applicable to the choice of businesses called on to cooperate with a public authority under of a PPP, and their impact on the contractual relationships governing the execution of the partnership, are insufficiently clear and lack homogeneity between the different Member States. Such a situation can create a degree of uncertainty for Community players that is likely to represent a genuine obstacle to the creation or success of PPPs, to the detriment of the financing of major infrastructure projects and the development of quality public services.

15. The European Parliament invited the Commission to examine the possibility of adopting a draft Directive aimed at introducing homogeneous rules for the sector of concessions and other forms of PPPs.[16] The Economic and Social Committee also considered that such a legislative initiative was called for.[17]

16. In the context of its Strategy for the internal market 2003-2006,[18] the Commission announced that it would publish a Green Paper on PPPs and Community law on public procurement and concessions, in order to launch a debate on the best way to ensure that PPPs can develop in a context of effective competition and legal clarity. The publication of a Green Paper is also one of the actions planned under the European Initiative for Growth.[19] Lastly, it responds to certain requests made in the course of the public consultation on the Green Paper on services of general interest.[20]

1.3. Specific aim and plan of this Green Paper

17. The aim of this Green Paper is to launch a debate on the application of Community law on public contracts and concessions to the PPP phenomenon. Once underway such a debate will concentrate on the rules that should be applied when taking a decision to entrust a mission or task to a third party. This takes place downstream of the economic and organisational choice made by a local or national authority, and can in no way be perceived as attempting to make a value judgement regarding the decision to externalise the management of public services or not; this decision remains squarely within the competence of public authorities. Indeed, Community law on public contracts and concessions is neutral as regards the choice exercised by Member States to provide a public service themselves or to entrust it to a third party.

18. Put more clearly, this Green Paper aims to show the extent to which Community rules apply to the phase of selection of the private partner and to the subsequent

[16] Opinion of the European Parliament (first reading) on the proposal of the Commission, COM (2000) 275, 10.05.2002.

[18] Strategy for the internal market, Priorities 2003-2006, COM (2003) 238 final.

[19] Communication from the Commission "A European initiative for growth: Investing in networks and knowledge for growth and jobs", COM (2003) 690 final, 11 November 2003. This report was approved by the Brussels European Council on 12 December 2003.

[20] See Report on the results of the consultation on the Green Paper on general interest services. See above, footnote 5.

phase, with a view to identifying any uncertainties, and to analyse the extent to which the Community framework is suited to the imperatives and specific characteristics of PPPs. Avenues of consideration for possible Community intervention will be outlined. Since the aim of this Green Paper is to launch a consultation, no option for Community intervention has been decided on in advance. Indeed, a wide variety of instruments are available to make PPPs more open to competition in a transparent legal environment, i.e. legislative instruments, interpretative communications, actions to improve the coordination of national practice or the exchange of good practice between Member States.

19. Thus, while this Paper focuses on issues covered by the law on public contracts and concessions, it should be noted that the Commission has already adopted measures, in certain fields, designed to remove barriers to PPPs. Thus, there has already been clarification of the rules on the treatment in the national accounts of contracts entered into by public entities under partnerships with private entities.[21] Note also that the adoption of the statute for a European company will facilitate trans-European PPPs.[22]

20. As part of the analysis of this Green Paper, it is proposed to make a distinction between:

- PPPs of a purely contractual nature, in which the partnership between the public and the private sector is based solely on contractual links, and

- PPPs of an institutional nature, involving cooperation between the public and the private sector within a distinct entity.

This distinction is based on the observation that the diversity of PPP practices encountered in the Member States can be traced to two major models. Each of these raise specific questions regarding the application of Community law on public contracts and concessions, and merit separate study, as undertaken in the following chapters.[23]

2. PURELY CONTRACTUAL PPPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

21. The term "purely contractual PPP" refers to a partnership based solely on contractual links between the different players. It covers a variety of set-ups where one or more tasks of a greater or lesser magnitude are assigned to the private partner, and which can include the design, funding, execution, renovation or exploitation of a work or service.

[21] See above, footnote 3.

[22] Council Regulation (EC) No 2157/2001, 8 October 2001.

[23] The distinction thus made does not take account of the legal interpretations made under national law and in no way prejudges the interpretation in Community law of these types of set-ups or contracts. The sole purpose of the analysis which follows is to make a distinction between the set-ups generally termed PPPs, in order to decide, in a second phase, which rules of Community law on public contracts and concessions should apply to them.

22. In this context, one of the best-known models, often referred to as the "concessive model",[24] is characterised by the direct link that exists between the private partner and the final user: the private partner provides a service to the public, "in place of", though under the control of, the public partner. Another feature is the method of remuneration for the joint contractor, which consists of charges levied on the users of the service, if necessary supplemented by subsidies from the public authorities.

23. In other types of set-up, the private partner is called on to carry out and administer an infrastructure for the public authority (for example, a school, a hospital, a penitential centre, a transport infrastructure). The most typical example of this model is the PFI set-up.[25] In this model, the remuneration for the private partner does not take the form of charges paid by the users of the works or of the service, but of regular payments by the public partner. These payments may be fixed, but may also be calculated in a variable manner, on the basis, for example, of the availability of the works or the related services, or even the level of use of the works. [26]

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

2.1. Phase of selection of the private partner

2.1.1. Purely contractual partnership: act of award designated as a "public contract"

24. The arrangements applicable to the award of public works contracts or public services contracts defined as having priority[27] result from the provisions of the Community Directives laying down detailed rules particularly relating to advertising and participation. When the public authority is a contracting authority acting under the "classical" Directives,[28] it must normally have recourse to the open or restricted procedure to choose its private partner. By way of exception, and under certain conditions, recourse to the negotiated procedure is sometimes possible. In this context, the Commission wishes to point out that the derogation under Article 7(2) of Directive 93/37/EEC, which provides for recourse to negotiated procedure in the case of a contract when "the nature of the works or the risks attaching thereto do not permit prior overall pricing", is of limited scope. This derogation is to cover solely the exceptional situations in which there is uncertainty *a priori* regarding the nature or scope of the work to be carried out, but is not to cover situations in which the uncertainties result from other causes, such as the difficulty of prior pricing owing to the complexity of the legal and financial package put in place.[29]

[24] It should be noted that the interpretation given by national law or by the parties has no impact on the legal interpretation of these contracts for the purposes of the application of a Community law on public contracts and concessions.

[25] The term PFI refers to "Private Finance Initiative", a programme of the British Government permitting the modernisation of the public infrastructure through recourse to private funding. The same model is used in other Member States, sometimes with major variants. For example, the PFI model inspired the development of the "Betreibermodell" in Germany.

[26] See the case of "virtual tolls", used in the context of motorway projects, particularly in the United Kingdom, Portugal, Spain and Finland.

[27] i.e. those listed in Annex IA of Directive 92/50/EEC and Annex XVIA of Directive 93/38/EEC.

[28] i.e. Directives 93/37/EEC, 92/50/EEC and 2004/18/EC.

[29] For example, it may apply when the works are to be carried out in a geologically unstable or archaeological terrain and for this reason the extent of the necessary work is not known when launching

25. Since the adoption of Directive 2004/18/EC, a new procedure known as "competitive dialogue" may apply when awarding particularly complex contracts.[30] The competitive dialogue procedure is launched in cases where the contracting body is objectively unable to define the technical means that would best satisfy its needs and objectives, or in cases where it is objectively unable to define the legal and/or financial form of a project. This new procedure will allow the contracting bodies to open a dialogue with the candidates for the purpose of identifying solutions capable of meeting these needs. At the end of this dialogue, the candidates will be invited to submit their final tender on the basis of the solution or solutions identified in the course of the dialogue. These tenders must contain all the elements required and necessary for the performance of the project. The contracting authorities must assess the tenders on the basis of the pre-stated award criteria. The tenderer who has submitted the most economically advantageous tender may be asked to clarify aspects of it or confirm commitments featuring therein, provided this will not have the effect of altering fundamental elements in the tender or invitation to tender, of falsifying competition or of leading to discrimination.

26. The competitive dialogue procedure should provide the necessary flexibility in the discussions with the candidates on all aspects of the contract during the set-up phase, while ensuring that these discussions are conducted in compliance with the principles of transparency and equality of treatment, and do not endanger the rights which the Treaty confers on economic operators. It is underpinned by the belief that structured selection methods should be protected in all circumstances, as these contribute to the objectivity and integrity of the procedure leading to the selection of an operator. This in turn guarantees the sound use of public funds, reduces the risk of practices that lack transparency and strengthens the legal certainty necessary for such projects.

27. In addition, note that the new Directives emphasise the benefit to the contracting bodies of formulating the technical specifications in terms of either performance or functional requirements. New provisions will thus give the contracting bodies more scope to take account of innovative solutions during the award phase, irrespective of the procedure adopted.[31]

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

the tender procedure. A similar derogation is provided for in Article 11(2) of Directive 92/50, and in Article 30(1)(b) of Directive 2004/18/EC.

[30] Article 29 of Directive 2004/18/EC.

[31] Article 23 of Directive 2004/18/EC and Article 34 of Directive 2004/17/EC.

2.1.2. *Purely contractual partnership: act of award designated as a "concession"*

28. There are few provisions of secondary legislation which coordinate the procedures for the award of contracts designated as concession contracts in Community law. In the case of works concessions, there are only certain advertising obligations, intended to ensure prior competition by interested operators, and an obligation regarding the minimum time-limit for the receipt of applications.[32] The contracting bodies are then free to decide how to select the private partner, although in so doing they must nonetheless guarantee full compliance with the principles and rules resulting from the Treaty.

29. For their part, the rules governing the award of services concessions apply only by reference to the principles resulting from Articles 43 and 49 of the Treaty, in particular the principles of transparency, equality of treatment, proportionality and mutual recognition.[33] In its *Telaustria* Judgment, the Court stated in this respect that "*[the] obligation of transparency which is imposed on the contracting authority consists in ensuring, for the benefit of any potential tenderer, a degree of advertising sufficient to enable the services market to be opened up to competition and the impartiality of procurement procedures to be reviewed*".[34]

30. The Commission considers that the rules resulting from the relevant provisions of the Treaty can be summed up in the following obligations: fixing of the rules applicable to the selection of the private partner, adequate advertising of the intention to award a concession and of the rules governing the selection in order to be able to monitor impartiality throughout the procedure, introduction of genuine competition between operators with a potential interest and/or who can guarantee completion of the tasks in question, compliance with the principle of equality of treatment of all participants throughout the procedure, selection on the basis of objective, non-discriminatory criteria.

31. Thus the Community law applicable to the award of concessions is derived primarily from general obligations which involve no coordination of the legislation of Member States. In addition, and although the Member States are free to do so, very few have opted to adopt national laws to lay down general and detailed rules governing the award of works or services concessions.[35] Thus, the rules applicable to the selection of a concessionaire by a contracting body are, for the most part, drawn up on a case-by-case basis.

32. This situation may present problems for Community operators. The lack of coordination of national legislation could in fact be an obstacle to the genuine

[32] See Article 3(1) of Directive 93/37/EEC, and Articles 56 to 59 of Directive 2004/18/EC.

[33] Although the Commission had proposed that services concessions be included in Directive 92/50/EEC, in the course of the legislative process the Council decided to exclude them from the scope of that Directive.

[34] Case C-324/98. See also ruling of 30 May 2002, Case C-358/00, *Deutsche Bibliothek,* ECR. I-4685. These principles are also applicable to other State acts entrusting an economic service to a third party, as for example the contracts excluded from the scope of the Directives owing to the fact that they have a value below the threshold values laid down in the secondary legislation (Order of the Court of 3 December 2001, Case C-59/00, *Vestergaard*, ECR. I-9505), or so-called non-priority services.

[35] Spain (law of 23 May 2003 on works concessions), Italy (Merloni law of 1994, as amended) and France (Sapin law of 1993) have nonetheless adopted such legislation.

opening up of such projects in the Community, particularly when they are organised at transnational level. The legal uncertainty linked to the absence of clear and coordinated rules might in addition lead to an increase in the costs of organising such projects.

33. Moreover, some persons have claimed that the objectives of the internal market might not be achieved in certain situations, owing to a lack of effective competition on the market. In this context the Commission wishes to recall that the "public contracts" Directives aim not only to ensure transparency of procedures and equality of treatment for economic operators, but also require that a minimum number of candidates be invited to participate in the procedures, whether these be open, restricted, negotiated, or competitive dialogue procedures.[36] There is a need to assess whether the effective application of these provisions is sufficient, or whether other measures are needed to facilitate the emergence of a more competitive environment.

34. The Commission has also observed, in the context of infringement procedures already investigated, that it is not always easy to determine from the outset if the contract which is the subject-matter of the procedure is a public contract or a concession. Indeed, in the case of contracts designated as concessions when the procedure is launched, the distribution of risks and benefits may be the subject of negotiations throughout the procedure. It may occur that, following these negotiations, the contract in question must in the end by redefined as a "public contract", resulting often in a calling into question of the legality of the award procedure selected by the contracting body. According to the views expressed by the parties concerned, this situation creates a degree of legal uncertainty which is very damaging to the development of such projects.

35. In this context, the Commission could envisage proposing legislative action designed to coordinate the procedures for the award of concessions in the European Union, such new legislation being added to the existing texts on the award of public contracts. In that case it would be necessary to lay down the detailed provisions applicable to the award of concessions.

36. Also, there are grounds to examine if there are objective reasons for making the award of concessions and the award of other contractual PPPs subject to different sets of provisions. In this context, it should be noted that it is the criterion of the right of exploitation and its corollary, the transfer of the risks inherent in the exploitation, which distinguish public contracts from concessions. If it is confirmed that legal uncertainty, linked to the difficulty of identifying a priori the distribution of the risks of exploitation between the partners, arises frequently when awarding certain purely contractual PPPs, the Commission might consider making the award of all contractual PPPs, whether designated as public contracts or concessions, subject to identical award rules.

[36] Article 19 of Directive 93/36/EEC, Article 22 of Directive 93/37/EEC, Article 27 of Directive 92/50/EEC and Article 31 of Directive 93/38/EEC. See also Article 44 of Directive 2004/18/EC and Article 54 of Directive 2004/17/EC.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?
5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?
6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?
7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

2.2. Specific questions relating to the selection of an economic operator in the framework of a private initiative PPP

37. Certain practices where the private sector has the opportunity to take the initiative in a PPP project have recently been developed in some Member States.[37] In arrangements of this type, the economic operators formulate a detailed proposal for a project, generally in the field of construction and infrastructure management, in some cases at the invitation of the public authority.

38. Such practices make it possible to sound out at an early stage the willingness of economic operators to invest in certain projects. They also encourage them to develop or apply innovate technical solutions, suited to the particular needs of the contracting body.

39. The fact that a public utility project originates in a private initiative does not change the nature of the contracts concluded between the contracting bodies and the economic operators. Where these contracts concern services covered by secondary legislation and are concluded for pecuniary interest, they must be designated either as a contract or a concession and adhere to the resulting award rules.

40. It is therefore necessary to ensure that the procedures applied in this context do not end up depriving European economic operators of the rights to which the Community legislation on public contracts and concessions entitles them. In particular, and at the very least, the Commission is of the view that all European operators must be guaranteed access to such projects, primarily through adequate advertising of the invitation to formulate a project. Subsequently, if the public authority wishes to implement a given project, it must organise a call for competition addressed to all the economic operators who are potentially interested in developing the selected project, providing full guarantees of the impartiality of the selection process.

[37] In certain Member States, the private initiative is subject to specific supervision (see in Italy the Merloni law of 18 November 1998 and, in Spain, the regulation on local authority services of 1955 and the law 13/2003 on works concessions of 23 May 2003). In other Member States, the private initiative PPP is also emerging in practice.

41. To make the system attractive, the Member States have sometimes tried to provide certain incentives for first movers. The option of compensating the initiator of the project – for example, paying him for his initiative outside of the subsequent call for competition procedure – has been used. The possibility was also envisaged of awarding the first mover certain advantages in the context of the call for competition designed to develop the selected project. Such solutions merit close consideration, to ensure that these competitive advantages awarded to the project mover do not breach the equality of treatment of candidates.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?
9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

2.3. The phase following the selection of the private partner

42. Community secondary legislation on public contracts and concessions mainly concerns the phase of award of a contract. Secondary legislation does not cover comprehensively the phase following selection of the private partner. However, and the principle of equality of treatment and the principle of transparency resulting from the Treaty generally rule out any intervention of the public partner after selection of a private partner, in so far as any such intervention might call into question the principle of equality of treatment between economic operators.[38]

43. The often complex nature of the arrangements in question, the time which may elapse between the selection of the private partner and the signing of the contract, the relatively long duration of the projects and, lastly, the frequent recourse to sub-contracting mechanisms, sometimes complicate the application of these rules and principles. Two aspects are covered below: the contractual framework of the PPP and sub-contracting.

2.3.1. The contractual framework of the project

44. The contractual provisions governing the phase of implementation of the PPPs are primarily those of national law. However, contractual clauses must also comply with the relevant Community rules, and in particular the principles of equality of treatment and transparency. This implies in particular that the descriptive documents must formulate clearly the conditions and terms for performance of the contract so that the various candidates for the partnership can interpret them in the same manner and take them into account when preparing their tenders. In addition, these terms and conditions of performance must not have any direct or indirect discriminatory impact or serve as an unjustifiable barrier to the freedom to provide services or freedom of establishment.[39]

[38] See Case C-87/94, *Commission v. Belgique* (*Bus Wallons),* Judgment of 25 April 1994, point 54. See also Case C-243/89, *Commission v. Danemark (Bridge on the Storebaelt),* Judgment of 22 June 1992.

[39] Case C-19/00, *SIAC Constructions*, Judgment of 18 October 2001, points 41-45; Case C-31/87, *Gebroeders Beentjes v. Pays-Bas*, Judgment of 20 September 1988, points 29-37. See also Article 26 of Directive 2000/18/EC and Article 38 of Directive 2000/17/EC.

45. The success of a PPP depends to a large extent on a comprehensive contractual framework for the project, and on the optimum definition of the elements which will govern its implementation. In this context, the appropriate assessment and optimum distribution of the risks between the public and the private sectors, according to their respective ability to assume these risks, is crucial. Also important are mechanisms to evaluate the performance of the titular holder of the PPP on a regular basis. In this context, the principle of transparency requires that the elements employed to assess and distribute the risks, and to evaluate the performance, be communicated in the descriptive documents, so that tenderers can take them into account when preparing their tenders.

46. In addition, the period during which the private partner will undertake the performance of a work or a service must be fixed in terms of the need to guarantee the economic and financial stability of a project. In particular, the duration of the partner relationship must be set so that it does not limit open competition beyond what is required to ensure that the investment is paid off and there is a reasonable return on invested capital. An excessive duration is likely to be censured on the basis of the principles governing the internal market[40] or the provisions of the Treaty governing competition.[41] Similarly, the principle of transparency requires that the elements employed to establish the duration be communicated in the descriptive documents so that tenderers can take them into account when preparing their tenders.

47. Since they concern a service spread out in time, PPP relationships must be able to evolve in line with changes in the macro-economic or technological environment, and in line with general interest requirements. In general, Community public contract law does not reject such a possibility, as long as this is done in compliance with the principles of equality of treatment and transparency. Thus, the descriptive documents transmitted to the tenderers or candidates during the selection procedure may provide for automatic adjustment clauses, such as price-indexing clauses, or stipulate the circumstances under which the rates charged may be revised. They can also stipulate review clauses on condition that these identify precisely the circumstances and conditions under which adjustments could be made to the contractual relationship. However, such clauses must always be sufficiently clear to allow the economic operators to interpret them in the same manner during the partner-selection phase.

48. In certain projects, the financial institutions reserve the right to replace the project manager, or to appoint a new manager, if the financial flows generated by the project fall below a certain level. The implementation of such clauses, which fall within the category of so-called "step-in" clauses, may result in changing the private partner of the contracting body without a call for competition. Consequently, to guarantee the compatibility of such projects with Community law on public contracts and concessions, special attention must be paid to this aspect.

49. In general, changes made in the course of the execution of a PPP, if not covered in the contract documents, usually have the effect of calling into question the principle of equality of treatment of economic operators.[42] Such unregulated modifications are

[40] See Interpretative Communication on concessions, in particular point 3.1.3.

[41] Articles 81, 82 and 86 (2) of the EC Treaty.

[42] See Case C-337/98, *Commission v. France*, Judgment of 5 October 2000, points 44 ff. Community law also rejects any changes made during the phase of drawing up the contract, after the final selection of the successful tenderer. In this respect the new provisions governing competitive dialogue stipulate that

therefore acceptable only if they are made necessary by an unforeseen circumstance, or if they are justified on grounds of public policy, public security or public health.[43] In addition, any substantial modification relating to the actual subject-matter of the contract must be considered equivalent to the conclusion of a new contract, requiring a new competition.[44]

50. Lastly, it should be pointed out that secondary legislation lays down the exceptional situations in which additional works or services not included in the project initially considered or in the initial contract may be awarded directly, without a call for competition.[45] The interpretation of these exceptions must be restrictive. For example, they do not refer to the extension of the period of an already existing motorway concession, in order to cover the cost of works to complete a new section. Thus, the practice of combining "profitable" and "non-profitable" activities awarded to a single concessionaire must not lead to a situation where a new activity is awarded to an existing concessionaire without competition.

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment.? Do you know of other "standard clauses" which are likely to present similar problems?

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

the successful tenderer may only "clarify aspects of the tender or confirm commitments contained in the tender, provided this does not have the effect of modifying substantial aspects of the tender or of the call for tender or does not risk distorting competition or causing discrimination".

[43] Article 46 of the Treaty.

[44] Case C-337/98, *Commission v. France*, Judgment of 5 October 2000, points 44 ff. The Interpretative Communication on concessions states in this context that the extension of an existing concession beyond the period originally laid down must be considered equivalent to granting a new concession to the same concessionaire.

[45] See Article 11 (3)(e) of Directive 92/50/EEC, Article 7 (3)(d) of Directive 93/37/EEC and Article 20 (2)(f) of Directive 93/38/EEC. The new Directive 2004/18/EC provides for a similar exception for works concessions, see Article 61.

2.3.2. *Sub-contracting of certain tasks*

51. It is the Commission's experience that the application of subcontracting rules sometimes gives rise to uncertainties or queries in the context of PPP arrangements. Certain parties have claimed, for example, that the contractual relations between the project company, which becomes the holder of the contract or the concession, and its shareholders, raise a certain number of legal issues. In this respect, the Commission wishes to point out that when the project company is itself in the role of contracting body, it must conclude its contracts or concession contracts in the context of a competition, whether or not these are concluded with its own shareholders. The only case where this does not apply is when the services entrusted by a project company to its shareholders have already been the subject of a competition by the public partner prior to the formation of the company undertaking the project.[46] However, when this company is not in the role of contracting body, it is in principle free to conclude contracts with third parties, whether these be its own shareholders or not. By way of exception, when the project company is a "works concessionaire", certain publicity requirements apply to the award of works contracts exceeding a threshold of EUR 5 million, with the exception of contracts concluded with businesses that have formed a group in order to win the concession, or their affiliated companies.[47]

52. In principle, private partners are free to subcontract part or all of a public contract or a concession. However, it should be pointed out that, in the case of the award of public contracts, tenderers may be asked to indicate in their tenders the share of the contract which they intend to subcontract to third parties.[48] In the case of public works concessions where the value exceeds EUR 5 million, the contracting body may require the concessionaire to award contracts representing a minimum of 30% of the total value of the work for which the concession contract is to be awarded to third parties.[49]

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

[46] Article 13 of Directive 93/38/EEC provides for a derogation when the sub-contracting contracts for services are awarded by a network systems operator acting as contracting entity to an affiliated enterprise. Article 23 of Directive 2004/17/EC extends this exception to sub-contracting contracts covering supplies or works.

[47] Article 3 (4) of Directive 93/37/EEC and Articles 63 to 65 of Directive 2004/18/EC. In the latter articles the above-mentioned threshold is fixed at EUR 6 242 000.

[48] Article 17 of Directive 93/36/EEC, Article 20 of Directive 93/37/EEC, Article 25 of Directive 92/50, Article 27 of Directive 93/38. See also Article 25 of Directive 2004/18/EC and Article 37 of Directive 2004/17/EC.

[49] Article 3(2) of Directive 93/37/EEC. See also Article 60 of Directive 2004/18/EC.

3. INSTITUTIONALISED PPPS AND THE COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

53. Within the meaning of this Green Paper, institutionalised PPPs involve the establishment of an entity held jointly by the public partner and the private partner.[50] The joint entity thus has the task of ensuring the delivery of a work or service for the benefit of the public. In the Member States, public authorities sometimes have recourse to such structures, in particular for to administer public services at local level (for example, for water supply services or waste collection services).

54. Direct cooperation between the public partner and the private partner in a forum with a legal personality allows the public partner, through its presence in the body of shareholders and in the decision-making bodies of the joint entity, to retain a relatively high degree of control over the development of the projects, which it can adapt over time in the light of circumstances. It also allows the public partner to develop its own experience of running the service in question, while having recourse to the support of a private partner.

55. An institutionalised PPP can be put in place, either by creating an entity held jointly by the public sector and the private sector (3.1), or by the private sector taking control of an existing public undertaking (3.2).

56. The discussion below focuses solely on issues concerning the law on public contracts and concessions applicable to institutionalised PPPs. For a more general discussion of the impact of this law when setting up and executing such PPPs, please refer to the preceding chapters.

3.1. Partnership involving the creation of an ad hoc entity held jointly by the public sector and the private sector.[51]

57. The law on public contracts and concessions does not of itself apply to the transaction creating a mixed-capital entity. However, when such a transaction is accompanied by the award of tasks through an act which can be designated as a public contract, or even a concession, it is important that there be compliance with the rules and principles arising from this law (the general principles of the Treaty or, in certain cases, the provisions of the Directives).[52]

58. The selection of a private partner called on to undertake such tasks while functioning as part of a mixed entity can therefore not be based exclusively on the quality of its capital contribution or its experience, but should also take account of the

[50] The Member States use different terminology and schemes in this context (for example, the Kooperationsmodell, joint PPPs, Joint Ventures).

[51] The question being dealt with here is the creation of *ex novo* entities in the context of a specific legal arrangement. However, the case of pre-existing mixed entities participating in the procedures for the award of public contracts or concessions will not be dealt with specifically, because this latter hypothesis does not give rise to much comment in terms of the applicable Community law. The mixed character of an entity participating in a tendering procedure does not in fact involve any derogation from the rules applicable to the award of a public contract or a concession. Only in the case where the entity in question meets the characteristics of an 'in house' entity, within the meaning of the *Teckal Case* Law of the Court of Justice, is the contracting authority entitled not to apply the usual rules.

[52] Note that the principles governing the law on public contracts and concessions apply also when a task is awarded in the form of a unilateral act (e.g. a legislative or regulatory act).

characteristics of its offer – the most economically advantageous – in terms of the specific services to be provided. Thus, in the absence of clear and objective criteria allowing the contracting authority to select the most economically advantageous offer, the capital transaction could constitute a breach of the law on public contracts and concessions.

59. In this context, the transaction involving the creation of such an entity does not generally present a problem in terms of the applicable Community law when it constitutes a means of executing the task entrusted under a contract to a private partner. However, the conditions governing the creation of the entity must be clearly laid down when issuing the call for competition for the tasks which one wishes to entrust to the private partner.[53]

60. However, the Commission has noted that, in certain Member States, national legislation allows the mixed entities, in which the participation by the public sector involves the contracting body, to participate in a procedure for the award of a public contract or concession even when these entities are only in the course of being incorporated. In this hypothesis, the entity will be definitively incorporated only after the contract has actually been awarded to it. In other Member States, a practice has developed which tends to confuse the phase of incorporating the entity and the phase of allocating the tasks. Thus the purpose of the procedure launched by the contracting authority is to create a mixed entity to which certain tasks are entrusted.

61. Such formulae do not appear to offer satisfactory solutions in terms of the provisions applicable to public contracts and concessions.[54] In the first case, there is a risk that the effective competition will be distorted by a privileged position of the company being incorporated, and consequently of the private partner participating in this company. In the second case, the specific procedure for selecting the private partner also poses many problems. The contracting authorities encounter certain difficulties in defining the subject-matter of the contract or concession in a sufficiently clear and precise manner in this context, as they are obliged to do. The Commission has frequently noted that the tasks entrusted to the partnership structure are not clearly defined and that, in certain cases, they even fall outside any contractual framework. This raises problems not only with regard to the principles of transparency and equality of treatment, but even risks prejudicing the general interest objectives which the public authority wishes to attain. It is also evident that the lifetime of the created entity does not generally coincide with the duration of the contract or concession awarded, and this appears to encourage the extension of the task entrusted to this entity without a true competition at the time of this renewal. Sometimes this results in a situation where the tasks are awarded *de facto* for an unlimited period.

62. In addition, it should be pointed out that the joint creation of such entities must respect the principle of non-discrimination in respect of nationality in general and the

[53] Also, these conditions must not discriminate against or constitute an unjustified barrier to the freedom to provide services or to freedom of establishment, or be disproportionate to the desired objective.

[54] When planning and arranging such transactions, the test involving the use of the standard forms - which include the elements indispensable for a well-informed competition, - also demonstrate how difficult it can be to find an adequate form of advertising to award tasks falling within the scope of the law on public contracts or concessions.

free circulation of capital in particular.[55] Thus, for example, the public authorities cannot normally make their position as shareholder in such an entity contingent on excessive privileges which do not derive from a normal application of company law.[56]

63. The Commission also wishes to point out that the participation of the contracting body in the mixed entity, which becomes the joint holder of the contract at the end of the selection procedure, does not justify not applying the law on public contracts and concessions when selecting the private partner. The application of Community law on public contracts and concessions is not contingent on the public, private or mixed character of the joint contractor of the contracting body. As the Court of Justice confirmed in the *Teckal* case, this law is applicable when a contracting body decides to entrust a task to a third party, i.e. a person legally distinct from it. The position can be otherwise only in the case where the local authority exercises over the person concerned a control which is similar to that which it exercises over its own departments and, at the same time, that person carries out *the essential part of its activities* with the controlling local authority or authorities.[57] Only entities that fulfil these two conditions at the same time may be treated as equivalent to "in-house" entities in relation to the contracting body and have tasks entrusted to them without a competitive procedure.[58]

64. Lastly, it should be pointed out that if the mixed entity has the quality of a contracting body this quality also requires it to comply with the law applicable to public contracts and concessions when it is awarding tasks to the private partner which have not been the subject of a call for competition by the contracting authority ahead of the incorporation of the mixed entity. Thus, the private partner should not profit from its privileged position in the mixed entity to reserve for itself certain tasks without a prior call for competition.

3.2. Control of a public entity by a private operator

65. The establishment of an institutionalised PPP may also lead to a change in the body of shareholders of a public entity. In this context, it should first be emphasised that the changeover of a company from the public sector to the private sector is an economic and political decision which, as such, falls within the sole competence of the Member States.[59]

[55] Participation in a new undertaking with a view to establishing lasting economic links is covered by the provisions of Article 56 relating to the free movement of capital. See Annex I of Directive 88/361/EEC, adopted in the context of the former Article 67, which lists the types of operations which must be considered as movements of capital.

[56] See Judgments of the Court of 4 June 2002, Case C-367/98, *Commission v. Portugal*, ECR I-4731; Case C-483/99, *Commission v. France*, ECR I-4781; and Judgments of 13 May 2003, Case C-463/00, *Commission v. Spain,* ECR. I-4581; Case C-98/01, *Commission v. United Kingdom,* Rec. I-4641. On the possible justifications in this framework, see Judgment of the Court of 4 June 2002, Case C-503/99, *Commission v. Belgium*, ECR I-4809.

[57] Case C-107/98, *Teckal*, Judgment of 18 November 1999, point 50.

[58] The Court of Justice has been asked to make three preliminary rulings (Cases C-26/03, C-231/03 and C-458/03) designed to obtain additional clarification on the scope of the criteria which can establish the existence of an "in house" type relationship.

[59] This follows from the neutrality principle of the Treaty in relation to ownership rules, recognised by Article 295 of the Treaty.

66. It should also be pointed out that Community law on public contracts is not as such intended to apply to transactions involving simple capital injections by an investor in an enterprise, whether this latter be in the public or the private sector. Such transactions fall under the scope of the provisions of the Treaty on the free movement of capital[60], implying in particular that the national measures regulating them must not constitute barriers to investment from other Member States.[61]

67. On the other hand, the provisions on freedom of establishment within the meaning of Article 43 of the Treaty must be applied when a public authority decides, by means of a capital transaction, to cede to a third party a holding conferring a definite influence in a public entity providing economic services normally falling within the responsibility of the State.[62]

68. In particular, when the public authorities grant an economic operator a definite influence in a business under a transaction involving a capital transfer, and when this transaction has the effect of entrusting to this operator tasks falling within the scope of the law on public contracts which had been previously exercised, directly or indirectly, by the public authorities, the provisions on freedom of establishment require compliance with the principles of transparency and equality of treatment, in order to ensure that every potential operator has equal access to performing those activities which had hitherto been reserved.

69. In addition, good practice recommends ensuring that such a capital transaction does not in reality conceal the award to a private partner of contracts which might be termed public contracts, even concessions. This is the case in particular when, before the capital transaction, the entity in question is awarded, directly and without competition, specific tasks, with a view to making the capital transaction attractive.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

In general and independently of the questions raised in this document:

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

[60] Article 56 ff. of the EC Treaty.

[61] See Communication of the Commission on certain legal aspects concerning intra-EU investment OJ No C 220, 19 July 1997, p.15.

[62] See, on these lines, the Judgment of the Court of 13 April 2000, Case C-251/98, *Baars*, ECR I-2787

4. FINAL REMARKS

70. The Commission invites all interested parties to send their comments on the questions set out in this Green Paper. The replies, comments and suggestions may be sent by mail to the following address:

European Commission
Consultation "Green Paper on PPPs and the Community law on public contracts and concessions"
C 100 2/005
B-1049 Brussels

or by electronic mail to the following address:

MARKT-D1-PPP@cec.eu.int

Comments should reach the Commission by **30 July 2004** at the latest. For the information of interested parties, contributions received by electronic mail, with the name and address of the originators, will be posted at the site *http://europa.eu.int/comm/internal_market*, provided that the authors in question have not expressly objected to such publication.

71. On the basis of the contributions received, *inter alia*, the Commission plans to draw conclusions and, where appropriate, to submit concrete follow-up initiatives.

Public procurement: the Commission launches a debate on applying Community law to public-private partnerships

On the basis of a Green Paper, the European Commission has launched a debate on the desirability of adapting the Community rules on public procurement and concessions to accommodate the development of public-private partnerships (PPPs). The main objective is to see whether it is necessary to improve the current rules in order to ensure that economic operators have access to PPPs under conditions of legal clarity and real competition. Over the last ten years PPPs have been developing in several member states. They are now used in many areas of the public sector. The choice of a private partner by a public authority must be made in accordance with Community rules on the awarding of public contracts. However, there is no specific system under Community law for PPPs and the Community rules on awarding public contracts are applied to PPPs with differing degrees of intensity. The Green Paper sets out the scope of Community rules, with a view to identifying any uncertainties and assessing to what extent Community intervention might be necessary. The full text of the Green Paper is available at the following address: http://europa.eu.int/comm/internal_market/ppp

Internal Market Commissioner Frits Bolkestein said: "PPPs are booming. They can be an important tool for improving the quality of public services and supporting growth in Europe. The EU needs a suitable regulatory framework for developing these partnerships in order to apply transparency and fair competition for the benefit of the taxpayer. There is a lot at stake, and I call upon all interested parties to respond to this consultation – we will listen to what you have to say."

Under Community law there is no specific legal system governing the many different possible forms of PPPs. Contracts for these partnerships signed by public authorities with private companies are not, in general, covered by the EC Treaty rules on the single market. In certain cases, they can be subject to the detailed provisions of the Directives on public procurement. However, other cases and in particular certain "concessions" are not covered. The Community legal framework is thus the subject of more or less intensive Community coordination at several levels. It is necessary to ensure that this legal framework does not form an obstacle to economic operators' access to the different types of PPPs.

To this end, the Green Paper sets out the way in which the rules and principles deriving from Community law on public contracts and concessions apply when a private partner is selected, and then for the duration of the contract, in the context of different PPP arrangements. The Green Paper also asks a set of questions intended to find out more about how these rules and principles work in practice, so that the Commission can determine whether they are sufficiently clear and suit the challenges and characteristics of PPPs.

The Green Paper addresses various topics directly linked to the public procurement aspect of PPPs, in particular:

- the framework for the procedures for selecting a private partner, and in particular the advantages in this context of the competitive dialogue procedure introduced by the new Directive on public procurement (see IP/04/150), which allows public authorities to hold discussions with applicant businesses in order to identify the solutions best suited to their needs;
- setting up of PPPs on the initiative of the private sector;
- the contractual framework and contract amendments during the life of a PPP;
- subcontracting.

In this regard, the Green Paper addresses both PPPs created on the basis of purely contractual links ("contractual PPPs") and arrangements involving the joint participation of a public partner and a private partner in a mixed-capital legal entity ("institutional PPPs").

The Green Paper is one of the priorities identified by the Commission in its internal market strategy for 2003-2006 (see IP/03/645 and MEMO/03/100) and contributes to the measures planned as part of the initiative on growth in Europe (see IP/03/1521).

On the basis of the Green Paper the Commission is launching a public consultation in which it seeks comments from all interested parties. The consultation period will end on 30 July 2004. On the basis of the contributions received, the Commission intends to draw conclusions and, where appropriate, submit concrete initiatives.

Interested parties are invited to send their replies to the questions set out in the Green Paper or any additional comments by mail to the following address:

Or by e-mail to the following address:

MARKT-D1-PPP@cec.eu.int

To keep interested parties informed, contributions received by e-mail and details of the senders will be put on the Green Paper website (available at http://europa.eu.int/comm/internal_market/ppp), provided that the senders concerned have not expressed any objections to publication.

Background

Public private partnerships (PPPs) are forms of cooperation between public authorities and the world of business which aim to meet needs in the general interest. They result in the setting up of complex legal and financial arrangements involving private operators and public authorities carrying out infrastructure projects or services of use to the public. These partnerships have been developed in several areas of the public sector and are widely used within the EU to ensure the provision of services, in particular in the areas of transport, public health, education, public safety, waste management and water distribution.

Various factors explain the increased recourse to PPPs. In view of the budget constraints confronting Member States, it meets a need for private funding for the public sector. Another explanation is the desire to benefit more in public life from the know-how and working methods of the private sector. The development of PPPs is also part of the more general change in the role of the state in the economy which is moving from a role of direct operator to one of organiser, regulator and controller.

4.4.2.1. General remarks ... 20

4.4.2.2. Duration of PPPs ... 21

4.4.2.3. Adjustments to long-term PPPs over time 21

4.4.3. Views on potentially discriminatory effects of practices for evaluating tenders 22

4.4.4. Step-in arrangements: considered to be indispensable for the financing of PPPs 23

4.4.5. No need for clarification of certain aspects of the contractual framework of PPPs at EC level 24

4.5. Subcontracting 25

4.5.1. Perceived problems in relation to subcontracting 25

4.5.1.1. Overview 25

4.5.1.2. Problems related to control over the performance of public services 25

4.5.1.3. Problems related to the position of subcontractors 25

4.5.1.4. Uncertainties with regard to the applicable EC law 26

4.5.1.5. Other problems related to subcontracting 26

4.5.2. Clear opposition to more detailed rules for subcontracting 26

4.5.2.1. Arguments against an extension of tendering rules for subcontracting 27

4.5.2.2. Proposals for more detailed rules on subcontracting 28

4.5.3. Majority of stakeholders against a supplementary initiative at Community level to clarify or adjust the rules on subcontracting 29

4.6. Institutionalised PPPs 30

4.6.1. Views on the compliance of arrangements for institutionalised PPPs with Community law on public contracts and concessions 30

4.6.2. Diverging opinions on the form, rather than on the general necessity, of a Community initiative on institutionalised PPPs 31

4.6.2.1. Overview 32

4.6.2.2. Views in favour of a Community initiative on IPPPs 32

4.6.2.3. Views opposing a Community initiative on IPPPs 34

4.7. Measures and practices perceived as barriers to the introduction of PPPs 34

4.8. The need for collective consideration at Community level with regard to PPPs 35

4.8.1. Views on the possible scope of collective consideration at Community level 36

4.8.2. Views on the form of a collective consideration of PPPs at Community level 36

4.8.3. Arguments against collective consideration at Community level 37

1. INTRODUCTION

On 30 April 2004 the Commission adopted the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions[1] (the PPP Green Paper). The aim of the PPP Green Paper was to launch a debate to find out whether the Community needs to intervene to give economic operators in the Member States better access to the various forms of public private partnership under conditions of legal certainty and effective competition. It therefore describes how the rules and principles deriving from Community law on public contracts and concessions apply when a private partner is being selected, and for the duration of the contract, for different types of PPP. The Green Paper also asks a set of questions about how these rules and principles work in practice, so that the Commission can determine whether they are sufficiently clear and suited to the requirements and features of PPPs. The Commission invited all interested parties to send their comments on the 22 questions either by mail or by electronic mail by 30 July 2004.

In line with the Commission's general principles and standards for consulting interested parties,[2] this report analyses the contributions received from Member States, public authorities, European and national associations, public and private enterprises and individuals.

The objective of the report is to reflect the ideas, opinions and suggestions made. It tries to identify, as objectively as possible, the main trends, views and concerns set out in the contributions. In addition, for the sake of transparency, all contributions sent electronically and with no objection to their publication have been published in full on the website of the Directorate-General for the Internal Market and Services (DG MARKT).[3]

The report is structured as follows: this introduction (1) is followed by some general observations on the consultation (2), an executive summary (3), and the detailed analysis of the comments received (4). The structure of the detailed analysis follows the order of the questions set out in the PPP Green Paper. Due to the particularly technical nature of the comments on question 1 ("What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision [legislative or other] in your country?") and question 21 ("Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of 'good practice' in this framework which could serve as a model for the Union? If so, please elaborate.") they have not been included in this report, but will be analysed at a later stage on the DG MARKT website.

It did not appear desirable to indicate the exact number of "votes" of stakeholders in favour or against one or the other position. On the one hand contributions were not always easily and on all issues attributable to one or the other position. On the other

[1] COM(2004) 327, 30.4.2004.

[2] Towards a reinforced culture of consultation and dialogue – General principles and minimum standards for consultation of interested parties by the Commission, Communication from the Commission, COM(2002) 704, 11.12.2002.

[3] http://europa.eu.int/comm/internal_market/publicprocurement/ppp_en.htm.

hand the indication of exact numbers could even be misleading, as some enterprises from the same sector and sharing the same interest submitted each a nearly identical position, rather than sending just one coordinated contribution via their association as most other enterprises did. Questions on how to count such contributions do not need to be accentuated if only general trends are indicated.

The report does not aim to draw political conclusions from the consultation process as such. The Commission intends to present its conclusions in the second half of 2005.

2. GENERAL OBSERVATIONS ON THE CONSULTATION

In total the Commission received 195 replies to the list of questions set out in the PPP Green Paper. Governments or individual ministries from Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Lithuania, the Netherlands, Poland, Portugal, Slovakia, Spain, Sweden and the United Kingdom, 15 other public authorities from these Member States, 111 associations with private and/or public entities as their members, 38 enterprises and 13 individuals contributed in writing to the consultation. No contribution – either from State authorities or from private entities – was received from Cyprus, Estonia, Greece, Hungary, Latvia, Luxemburg, Malta or Slovenia. The strong representation of contributions from Germany, France, UK, Austria and Italy is notable. A large number of European associations contributed to the significant overall participation of stakeholders in this consultation.

Both the European Economic and Social Committee[4] and the Committee of the Regions[5] adopted opinions on the PPP Green Paper. The European Parliament has not yet given an opinion on the PPP Green Paper.

The Commission also received 3 300 standard letters or short notes from individuals, mostly of German origin. These letters expressed concern about any move to liberalise the provision of water.

3. EXECUTIVE SUMMARY

3.1. Horizontal PPP initiative

A slight majority of contributors are explicitly opposed to a horizontal PPP initiative at Community level. In contrast to this, **many stakeholders express support for a horizontal PPP initiative**, be it in the form of a binding or a non-binding instrument. Such an initiative is proposed to cover at least the following issues: generally applicable procedural rules, a clear definition of PPPs, general principles and compulsory advance publication of invitations to tender.

[4] Opinion on the Green Paper on public-private partnerships and Community law on public contracts and concessions, Brussels, 27-28 October 2004, CESE 1440/2004.

[5] Opinion of the Committee of the Regions of 17 November 2004 on the Green Paper on public-private partnerships and Community law on public contracts and concessions (COM(2004) 327 final), ECOS-037.

3.2. Selection of the private partner

Many contributors consider that the transposition of the new procurement procedure known as **competitive dialogue** into national law will provide interested parties with a procedure which is particularly well suited to awarding contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. However, a large majority of stakeholders point to practical problems with applying this procedure and ask the Commission to provide clarification.

In spite of the positive overall perception of the existing Community legal framework, **a clear majority** of stakeholders **favour some sort of Community initiative in the area of concessions,** clarifying definitions and core principles of the award procedure. The number of stakeholders in favour of legislation on this issue approximately equals the number of stakeholders in favour of some sort of guidelines on the rules applicable to awarding concessions.

The great **majority** of stakeholders **believe** that **non-national operators are guaranteed access to private initiative PPP schemes** and that advertising is adequate to inform all interested operators about such schemes. A large number of stakeholders, however, argue in favour of **some sort of encouragement for private initiative PPPs**.

3.3. The contractual framework for PPPs

Few stakeholders report conditions of execution having a discriminatory effect or forming an unjustified barrier to the freedom to provide services or the freedom of establishment. Not many more contributors cite **examples of discriminatory effects of practices for evaluating tenders**. Consequently, the **great majority** of contributors **do not support an EC initiative on the contractual framework for PPPs**.

3.4. Subcontracting

A **significant majority** of stakeholders **do not perceive problems in relation to subcontracting** and **argue against new initiatives in this area.** Conversely, a large number of contributions report problems in relation to subcontracting, including the reduced control public authorities exercise over subcontractors, the difficult position subcontractors have vis-à-vis the main contractors and uncertainties as to which EC rules apply.

3.5. Institutionalised PPPs

There is no agreement on **whether or not Community law on public contracts and concessions is actually complied with** when undertakings are set up jointly by public and private companies to carry out infrastructure projects or to perform public services (institutionalised PPPs – IPPPs). A substantial number of contributions deplore the **lack of legal certainty at EC level** regarding relations between contracting authorities and other parties which are so close that they are treated as relations between entities not legally distinct from each other ("**in-house relations**").

A **clear majority of contributions argue in favour of taking the initiative at Community level** to clarify or define the obligations of contracting bodies regarding the conditions for a call for competition between operators potentially interested in an institutionalised project. A majority of those contributions that favour a Community initiative would prefer the Commission – at least as a first step – to provide guidelines or some other form of clarification on the application of existing public procurement rules to the establishment of IPPPs. Other contributors who favour a Community initiative argue that legislative measures at EC level would be the appropriate response to perceived difficulties in this area.

3.6. Perceived barriers to the introduction of PPPs

Various stakeholders consider the **existence of too many and too strict rules to be an obstacle** to the development of PPPs. In particular, contributors from the public side, but also various private undertakings and associations, complain that EC, national and local rules applicable to PPPs limit the flexibility needed to set up such projects. Another major issue which many stakeholders suspect impedes the development of PPPs concerns EU co-financing under EC regional policy.

3.7. Collective consideration

Stakeholders express **nearly unanimous support for a collective consideration of PPP issues at EC level**. According to a large number of contributions the objective of such collective consideration should be to exchange best practice. To this end the majority of contributions argue in favour of establishing a European PPP agency, a centre of excellence/resources and documentation centre or an observatory. Most of the contributors to the consultation expect the Commission to take such an initiative.

Views of stakeholders on key topics	
• **Horizontal PPP Initiative**	**Slight majority** explicitly **opposed** to a horizontal PPP initiative at EC level.
• **Concessions**	**Clear majority in favour** of an EC initiative on the award of concessions, clarifying definitions and applicable Community rules. **No consensus** on the form of such an initiative.
• **Institutionalised PPPs**	**Clear majority in favour** of an EC initiative on institutionalised PPPs clarifying applicable Community rules and the scope of the in-house exemption. **No consensus** on the form of such an initiative.

4. THE MAIN RESULTS OF THE PUBLIC CONSULTATION

4.1. The suitability of the Competitive Dialogue procedure for the selection of private partners for PPPs

Question 2 of the PPP Green Paper

Question

In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

Main views of stakeholders

- **Many contributors consider the Competitive Dialogue to be well adapted to the award of contracts designated as public contracts.**
- **A large majority of stakeholders report problems with applying the procedure in practice, in particular as regards its scope, its complexity, its cost implications and the need to keep intellectual property confidential.**
- **Most of the contributors ask the Commission to provide clarification on various aspects of the Competitive Dialogue.**

4.1.1. Scope of Competitive Dialogue

Some contributors argue for a limitation, some for an extension of the scope of application of the Competitive Dialogue procedure. A considerable number of contributors stress that the procedure does not apply to awarding service concessions; a few others say that it is not applicable to PPPs, including institutionalised PPPs, either. The reason most often given is that the Competitive Dialogue is not flexible enough. Conversely, one stakeholder considers the Competitive Dialogue to be particularly well suited to PPPs which are not complex, while two participants in the consultation specifically ask for the Competitive Dialogue to be applied to setting up institutionalised PPPs.

Many contributors are uncertain about the scope of the Competitive Dialogue; some miss a clear delineation of the boundary between this procedure and the negotiated procedure. One law firm considers that the contracting authority enjoys too much discretion in interpreting the criteria which determine whether the Competitive Dialogue applies.

4.1.2. Concerns about protection of confidentiality

The majority of the contributors express concern that participants in the Competitive Dialogue could potentially gain access to confidential data. These contributors point out that under Article 29(6), first subparagraph, of Directive 2004/18/EC on the coordination of procedures for the award of public works contracts, contracting authorities shall ask the participants to the dialogue to submit their final tenders on the basis of the solution or solutions presented and specified during the dialogue. It is claimed that this might lead to the unauthorized transfer of intellectual property, including innovative ideas, from one bidder to his or her competitors. The perceived consequences of this practice include a loss of improvements to public services and of benefits through innovation. Many of the contributors are also concerned that contracting authorities might unduly profit from know-how; unsuccessful bidders are not compensated.

4.1.3. Perceived lack of flexibility of Competitive Dialogue

Various contributors appreciate the structure of the Competitive Dialogue, in particular the fact that a procedure in stages has been introduced and that all aspects of the project are potentially open to discussion in the course of the first stage. One contributor expects that the introduction of the Competitive Dialogue will increase the number of PPPs set up in his country of origin.

Conversely, many contributors complain that the Competitive Dialogue does not provide the degree of flexibility required to negotiate large, complex projects. The Competitive dialogue is perceived as a particularly costly procedure for bidders. Some stakeholders see the cost as being so high as to impede fair competition, as only a small number of competitors – excluding SMEs – can afford it.

In this context, contributors are particularly concerned about the provision in the second subparagraph of Article 29(6) of Directive 2004/18/EC that tenders may – subsequent to their submission as “final” – (only) be clarified, specified and fine-tuned, without changes to their basic features. This might require bidders to finalise many details of the bid before submitting it as the final tender, thus before the respective bidder can be certain of winning the contract. Under the Competitive Dialogue procedure, losing bidders would therefore incur the full cost of employing advisers to negotiate almost fully the terms of a complicated contract to the stage at which it can be signed. Issues such as staff transfer and preparation of the financial and legal documentation would also have to be decided before submission of the final tender, which entails considerable investment for bidders. Another argument against working out the full proposal before being sure of winning the contract is – according to various contributions – that banks are reluctant to carry out a full due diligence exercise until their client has secured the contract.

Against this background, the respective contributors stress the need to grant bidders scope to modify the final tender after the contract is awarded. If the Competitive Dialogue does not allow that flexibility, it cannot – according to these stakeholders – be considered well suited to complex PPPs and this might discourage prospective bidders from participating in such procedures. One stakeholder adds that “clarifications” made after the selection of the preferred bidder need to be made transparent, in order to avoid abuse. Another warns against allowing solutions which deviate from the essential requirements of the invitation to tender.

In order to reduce the cost of the Competitive Dialogue, a number of stakeholders argue in favour of keeping the procedure as short and effective as possible. To this end, two contributors contend that public administrations need to clearly disclose their needs at the outset of the procedure, to impose reasonable deadlines for the different stages of the procedure and to limit the number of candidates for the phase after the dialogue to two.

While certain stakeholders consider that contracting authorities need to be able to define the technical specifications in a way that secures the comparability of bids, others recognise that it is difficult for contracting authorities to specify all their needs and requirements in the initial contract notice, as they will most probably become aware of other needs and requirements in the course of the dialogue. More generally, several contributors expect that contracting authorities will tend to leave the definition of the requirements of the project to private operators and thereby gradually lose the ability to administer large projects. In this context, one contributor stresses that bidders might be deterred from participating in a procurement procedure if contracting authorities give the impression of opening a procurement procedure without really knowing what they want.

4.1.4. *Plea for compensation of non-successful bidders*

Many stakeholders argue in favour of a mechanism to compensate bidders who made it to the last round without ultimately being selected. These stakeholders contend that there is otherwise little incentive for potential bidders to develop (costly) technical innovations at the risk of their being disclosed to competitors. One stakeholder from the public sector argues that a requirement to compensate unsuccessful bidders would make the Competitive Dialogue less attractive for small and medium-sized public authorities.

4.1.5. *Guidance on applying the Competitive Dialogue is needed*

A substantial number of stakeholders argue in favour of adopting a guidance paper on the application of the Competitive Dialogue. One issue which contributors consider worth clarifying is whether the submission of final tenders referred to in Article 29(6) of Directive 2004/18/EC should be based on the solutions presented individually by each bidder – which is, for reasons of confidentiality, explicitly preferred by some contributors – or on a solution proposed by one bidder – which is preferred by those who advocate the comparability of the proposals, in order to ensure equal treatment of bidders. In the view of various contributors, other issues requiring clarification include the scope of the Competitive Dialogue, the need to compensate unsuccessful bidders, the need to continue with the Competitive Dialogue even if, after the procedure has started, it turns out that the project in question qualifies as a concession, the extent of the protection of confidentiality, and certain terms set out in Article 29 of Directive 2004/18/EC, such as “economically most advantageous offer” and “basic features of the tender”.

4.1.6. *Views on the application of the negotiated procedure*

In requesting flexible application of the rules governing the Competitive Dialogue, various contributors criticise the Commission for interpreting the scope of the negotiated procedure too restrictively. The Commission’s position is thought not to deliver benefits in terms of transparency, openness or minimising barriers to trade. Easier recourse to the negotiated procedure is – according to various contributors – necessary, as the assignment of economic and legal risks linked to PPP models requires intensive negotiation during all phases of the procedure. Along these lines, many stakeholders question the need for the Competitive Dialogue, which is thought not to provide any added value compared to the negotiated procedure.

4.2. The selection of private partners for contractual partnerships

4.2.1. Problems related to contractual PPPs in terms of Community law on public contracts

Question 3 of the PPP Green Paper

Question

In the case of such contracts [meant are the purely contractual PPPs mentioned in Question 2]*, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.*

Main views of stakeholders

- **The main points considered to pose problems in terms of Community law on public contracts include the difficulty of distinguishing between the various types of public contracts and concessions and the related uncertainty as to the appropriate public procurement procedure.**

Various stakeholders point to the difficulty of distinguishing clearly between the various types of public contracts and concessions under EC public procurement law, and the related uncertainty as to the choice of the appropriate public procurement procedure, as key problems of current PPP practice.

Some contributions raise the problem of accuracy: inaccurate bids might unfairly favour certain bidders. Two situations are cited. One is where participants in PPP procurement procedures calculate their bids improperly. In many cases this wins them the contract, but subsequently requires a renegotiation of the terms. Stakeholders raising this problem argue that “creditworthiness” should be an important selection criterion, to ensure that private partners are able to stick to the price they initially offered. The other situation is where (over-) optimistic assumptions are made about certain factual developments, so that the price initially indicated by the respective operator is lower than that of his competitors. Again, if such assumptions turn out to be incorrect in the course of the performance of the contract, it must be renegotiated – and the public authority and competitors have lost out. One stakeholder cites estimates of the frequency of traffic in a given area affecting the profitability of a motorway as an example. To avoid such problems, it is proposed that contracting authorities provide reference estimates for factual developments relevant to the PPP.

Another point which two contributors raise is the de facto exclusion of SMEs from the bidding process for PPPs. The more contracting authorities combine individual small or medium-sized projects into single large projects, the more difficult it is for SMEs to win such contracts or concessions. The Competitive Dialogue,[6] with its financial ramifications for bidders, is specifically mentioned as being disadvantageous to SMEs in this respect.

[6] Article 29 of Directive 2004/18/EC.

An issue raised by a substantial number of stakeholders in the context of the procurement procedure for PPPs is the change of bidding groups (i.e. consortia established for the purpose of PPP award procedures, often in the form of so-called Special Purpose Vehicles – SPVs) in the course of the procurement procedure. These stakeholders favour flexibility in this area and ask for clarification of the law at EC level.

One stakeholder refers to legal uncertainties regarding the participation of consultancies in public procurement procedures, in the event that they assisted the public side in preparing such procedures. Another stakeholder complains that contracting authorities regularly ask just one consultancy for advice on preparing procurement procedures. It is argued that this situation leads to a degree of standardisation of invitations to tender which is considered detrimental to innovation and competition. In the view of this stakeholder, assisting public authorities in preparing invitations to tender should in any case be a publicly procured service as well.

Other contributors are of the opinion that contracting authorities should embark on a real dialogue with bidders, which includes providing proper answers to questions put by bidders in the course of the procedure. One contributor argues that when contracting authorities decide to withdraw an invitation to tender they need to give good, clear reasons for this decision.

4.2.2. The need for legislative initiatives at EC level on the award of concessions

4.2.2.1. Practical experience with award procedures for concessions

Questions 4 and 5 of the PPP Green Paper

Question

Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

Main views of stakeholders

- **Many stakeholders contend that the Community legal framework is sufficiently detailed in the sense of question 5.**
- **Problems encountered in the course of award procedures for concessions include a lack of legal certainty, in particular as regards deciding whether a given contract qualifies as a public contract or a concession, discrimination against concession models by Community regional policy and the competitive advantages of national companies.**

While many stakeholders consider the Community legal framework sufficiently detailed to allow non-national companies to participate effectively in procedures for awarding concessions, and a substantial number of contributions describe their practical experience in this field as positive, various other contributors point to problems encountered. These problems include a lack of legal certainty due to non-standardised public procurement procedures, confusion about which EU rules apply, in particular whether a given contract qualifies as a public contract or a concession, discrimination against concession models by Community regional policy and the competitive advantages of national companies.

In the view of many contributors, the perceived competitive advantages of national companies are not necessarily due to discriminatory national rules, but rather result from the facts on the ground, such as national companies' better knowledge of specific local conditions, including the national legal provisions, and language problems. Many contributors explain that large international companies make up for such disadvantages by establishing national subsidiaries.

4.2.2.2. General support for an EC initiative on concessions

Questions 6 and 7 of the PPP Green Paper

Question

In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

Main views of stakeholders

- **A clear majority of stakeholders favour a Community initiative in the area of concessions. Views are divided on the form of such an initiative.**
- **A Community initiative in this area should, above all, provide more clarity as regards the award procedure. However, there is broad agreement that public contracts or concessions should not be subject to identical award arrangements.**
- **A key argument against any initiative on concessions is the perceived need for flexibility in award procedures.**
- **Many stakeholders are in favour, but a slight majority are against a horizontal PPP initiative.**

General views on the necessity and possible shape of an EC initiative on concessions

A clear majority of stakeholders are in favour of a Community initiative on concessions. Overall, the number of stakeholders in favour of legislation approximately equals the number of stakeholders in favour of some sort of guidelines on the rules applying to procedures for awarding concessions. A majority of contributors, however, do not see any objective grounds for new legislative action to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements.

Views in favour of a guidance document on the award of concessions

A large number of contributors say that guidance on concessions should primarily focus on the definition of concessions, clearly delineating these arrangements from public contracts. This initiative should, in particular, clarify which and to what extent risks have to be assigned to the private partner, to justify treating the respective arrangement as a concession. Clarification is also requested on how to apply the basic EC Treaty principles, in particular transparency, when awarding concessions.

Other contributors argue that the new Public Procurement Directives[7] have just been adopted, but not yet implemented by the Member States. Until those Directives are fully implemented, they consider any Community initiative going beyond a guidance document to be premature. They argue that before tackling such a binding Community initiative, the Commission should update its Interpretative Communication on Concessions under Community Law[8] of April 2000, on the basis of experience gained in this area. Another contributor favours a guidance document and questions whether detailed EC legislation is appropriate to change anti-competitive behaviour by public authorities.

One contributor submits that an initiative on concessions should consist in exchanging best practice, rather than drafting rigid legislation.

A considerable number of stakeholders advocate a non-legislative initiative at Community level to provide more clarity on public procurement issues in relation to PPPs in general. One suggestion is to present the different types of PPPs and explain which public procurement procedure is best suited to each of these types. Other demands for clarification cover the definition of PPPs, including the distinction between works concessions and works contracts, and the formulation of general principles applicable to tendering for PPPs. As regards the difficulty of deciding at the outset whether the contract is a public contract or a concession[9], one contributor suggests that, where there is any doubt, the transaction should be treated as a service contract if there is a reasonable chance that it will be so defined later on. Another contributor recommends sticking to the initial qualification even if – in the course of the procedure – it turns out to be inappropriate.

Considerable support for legislation on the EC concession award regime

Most of the stakeholders who argue in favour of a legislative initiative cite the need for legal certainty at EC level for the award of concessions. Uncertain rules are said to impede the protection of private investment and increase consulting and legal advice costs for undertakings. Other stakeholders contend that the provision of a common set of EC rules on this subject would create a level playing field for all competitors, thereby safeguarding the Internal Market, and eventually enhance (transnational) competition and cross-border tendering. A group of contributors say that the general EC Treaty principles do not provide enough legal certainty: they

[7] Directive 2004/17/EC coordinating the procurement procedures of entities operating in the water, energy, transport and postal services sectors (OJ L 134, 30.4.2004, p.1) and Directive 2004/18/EC on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts (OJ L 134, 30.4.2004, p.114).

[8] OJ C 121, 29.4.2000, p.2.

[9] Point 34 of the Green Paper.

leave too much discretion to contracting authorities and cannot therefore guarantee equal treatment of European companies throughout the EU.

Another key argument in favour of EC legislation is the need to increase transparency. According to one contributor, most problems with PPPs concern the choice of the private partner and consequently one risk to such projects would be reduced if specific PPP public procurement rules at EC level were introduced. In addition, the fact that major concessions in water supply or toll roads are not subject to strict procurement rules is seen as a serious anomaly of EC public procurement law.

As to the content of a legislative EC initiative on concessions, some contributors say that it should at least clearly define the various types of concessions and provide a legal framework for the award procedure for concessions. Some contributions submit that a legislative initiative on concessions should be part of a general legislative initiative on PPPs, which should cover the obligation to open a competitive procedure for the award of a contract, including its proper publication, the definition of "in-house" and the guarantee of equal access to subsidies. The analysis of the large number of contributions from stakeholders who are in favour of a legislative Community initiative on PPPs in principle shows, however, that few are actually in favour of aligning the procedures for contracts and concessions.

On the form of possible legislation, one stakeholder says that a legislative PPP initiative should merely consist in amending Directive 2004/18/EC, rather than "inventing" an entirely new initiative. According to various stakeholders, any EC initiative on the award of concessions should leave sufficient flexibility for projects to evolve into different structures and allow for fundamental differences between projects in different industry sectors. Other stakeholders stress that national experience needs to be analysed carefully before any legislation is drafted in this area.

Many stakeholders are in favour but a slight majority of stakeholders are against a horizontal PPP initiative

Many stakeholders express support for a horizontal PPP initiative, be it in the form of a binding or a non-binding instrument. Such an initiative is proposed to cover at least the following issues: generally applicable procedural rules, a clear definition of PPPs, general principles and compulsory advance publication of invitations to tender. The reasons given for such a horizontal initiative include the need to increase legal certainty, make procedures transparent, save time and money and more generally to encourage competition.

Many contributors are explicitly opposed to such an initiative. They argue that PPPs and public contracts are too different from each other to be subject to the same rules, that setting up PPPs remains a matter for the Member States, that overregulation impedes rather than promotes PPPs and that there has not been thorough analysis nor sufficient experience, in particular with the implementation of the new Public Procurement Directives. Stakeholders supporting these arguments refer, however, to the possibility of revisiting this question once sufficient analysis and experience has been built up.

Views against any EC initiative on concessions

Many contributors opposing any EC initiative on concessions argue that concessions are a special case. They say that such arrangements assign considerable risks to the private party in terms of services of general economic interest. Public authorities awarding concessions therefore need to have full confidence in their private partner. Against this background, they find it difficult to choose the right partner on the basis of a formal procurement procedure and more particularly on the basis of economic criteria.

In this context, some contributors say that when adopting the new Public Procurement Directives the EC legislator explicitly excluded concessions (partly as regards works concessions; entirely as regards service concessions) from the scope of these Directives. There is – according to these contributors – no new evidence to challenge that decision. In addition, many contributors invoke the subsidiarity principle as an argument against a legislative initiative on concessions; several others say the application of the EC Treaty principles is sufficient to ensure competition in this area.

Some of the contributors opposing a new Community initiative on concessions express concern that overregulation, in particular introducing rigid procedures, leads to high procedural costs and a loss of the flexibility needed to negotiate concessions, that it impedes the innovative development of PPPs and generally discourages private operators from entering into PPPs. In addition, many of those contributors who are opposed to aligning award arrangements for public contracts and concessions consider it impossible to define a single procurement concept to suit all PPPs. It is stressed several times that concessions and public contracts are quite different concepts.

Two contributions from the public side say that the award of concessions on the basis of competitive procedures would lead to a “win or die” situation for small public companies which have been specifically established to perform services of general economic interest. If such undertakings lose a competition they may not be able to participate in competitions outside their geographical area of competence – due to national legal restrictions, but also due to their specific competence – whereas large international enterprises could – according to this opinion – more easily withstand failure to obtain one or more small or medium-sized local service concessions. Consequently, according to these stakeholders, submitting the award of public services to competitive tendering procedures leads in the long run to the disappearance of small and medium public enterprises and thus contributes to a non-reversible “oligopolisation” of the market.

4.3. Private initiative PPPs

4.3.1. Accessibility of private initiative PPP schemes to non-national operators

Question 8 of the PPP Green Paper

Question
In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?
Main views of stakeholders • **Broad agreement exists that non-national operators are guaranteed access to private initiative PPP schemes and that adequate advertising is provided to inform all interested operators about such schemes.**

A large majority of stakeholders believe that non-national operators are guaranteed access to private initiative PPP schemes and that adequate advertising is provided to inform all interested operators about such schemes. Some contributors argue that the problem of access to private initiatives for non-national operators is not a real one, as normally non-national operators are not interested in such projects: two contributors explain that usually enterprises operate abroad through local subsidiaries. Some contributors claim that private initiative projects are extremely rare in the water sector. One large association contends that there are no examples of private PPP initiatives in Germany.

On a more general note, some contributors say that private initiative PPPs tend to be less rigorously scrutinised and are not subject to the same degree of competition as ordinary tenders, which they say favours corruption and causes high costs.

4.3.2. Proposals on the best formula to encourage private initiative PPPs in the European Union

Question 9 of the PPP Green Paper

Question
In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?
Main views of stakeholders • **There is no agreement on the need to encourage private initiative PPPs.** • **Those stakeholders who favour such encouragement advocate financial incentives or the granting of a "right of first refusal" to those who launch private initiatives.**

A large number of stakeholders recognise the need for some sort of encouragement for private initiative PPPs; most of them present ideas. Conversely, a substantial number of contributors explain that the application of existing EC rules, in particular the EC Treaty principles, provides sufficient encouragement for operators to embark on private initiative PPPs. Many stakeholders acknowledge that any measure encouraging private initiative PPPs needs to strike a balance: motivating operators to invest in such initiatives, while not distorting fair competition. Some stakeholders believe, however, that encouraging private initiative PPPs necessarily conflicts with the principles of transparency and equal treatment.

The majority of those contributors who express themselves in favour of some sort of encouragement for private initiative PPPs consider financial compensation as the appropriate instrument to promote such initiatives, in particular as this incentive appears to be the least damaging to competition. Some argue that such financial compensation should only be granted if, at the end of the procurement procedure launched subsequent to the private initiative, the operator concerned does not obtain the contract or the concession. Such compensation should at least cover the development costs of the project.

A substantial number of contributors consider granting a "right of first refusal" as the most pertinent way of encouraging private initiative PPPs. This would require the contracting authority to offer the contract or concession first to the private initiator. Several contributors add that if the initiator does not take up the offer, he should be granted financial compensation for his work. Other stakeholders argue that granting the "right of first refusal", rather than financial compensation, renders private initiatives more attractive as operators usually initiate PPPs in order to obtain a PPP contract or concession. Other advantages proposed by various contributors include setting relatively short time limits for competitors to respond to the tender, granting the private initiator an exclusive right to a negotiated procedure and introducing a fast-track process to deal with litigation initiated by competitors of the first mover, if the latter wins the contract. According to a large number of contributions the protection of the initiator's intellectual property is a key issue in promoting private PPP initiatives. One contributor suggests awarding part of the overall PPP contract/concession directly to the private initiator. Another stakeholder deplores the fact that most of the really innovative proposals come from medium-sized companies, who – due to their structure – have hardly any chance of winning a PPP competition.

Other contributors express the opinion that tackling overregulation and amending existing national stipulations which impede private initiatives would substantially encourage them. In this context, two contributors cite existing national provisions which exclude from the tendering procedure companies that have – however indirectly – contributed to preparing the specifications of the invitation for tender. One stakeholder draws a parallel between a private PPP initiator and an operator who assists the respective contracting authority in drawing up the specifications for a tendering procedure.

A substantial number of stakeholders explicitly refer to the Italian *Merloni Law*[10] as an example of a specific procedure for unsolicited PPP proposals. The incentive of giving the private initiator the "right of first refusal" and the right to have his costs repaid if the project is awarded to a competitor are considered to be key elements of this Italian law. Another concrete proposal to encourage private initiative PPPs is to

[10] Framework law No 109/94 (G.U. No 41, 19.2.1992) modified by Law No 166/2002 (G.U. No 181, 3.8.2002).

launch a formal public procurement procedure based on a private initiative proposal and to exclude the initiating private party from the procedure. If no better solution comes up in the course of the procurement procedure, the contract should be awarded to the initiating party. If a better solution than the initial proposal comes up, the initiating party should be compensated.

Referring to the trade-off between providing incentives for private initiative PPPs and encouraging competition, one contributor suggests that – subsequent to a private PPP initiative – public authorities should be entitled to award the contract to the private initiator without launching a formal procurement procedure if they expect that – due to the intellectual property rights of the private initiator – competition would produce limited benefits only; conversely, if greater benefits could be expected from competition, a proper public procurement procedure should be carried out.

One stakeholder argues that PPPs should in any case be initiated by the public side and follow a regular public procurement procedure. If the contracting authority is interested in exploring the interest of private parties in the envisaged PPP or in obtaining ideas on alternative solutions for a project before formulating the technical annex to the invitation for tenders, it can undertake "market research" or hold an "ideas competition", which follows precise rules to ensure adequate transparency and equal treatment.

As regards the method of promoting private initiatives, various contributors are opposed to the legislative route. Some fear that new legislation might constrain the establishment of PPPs. Conversely, a substantial number of stakeholders prefer PPP legislation or at least guidance on this issue. In addition to encouraging private initiatives, the legal framework would have to ensure transparency, non-discrimination and equal treatment. Other instruments to promote private initiative PPP schemes mentioned in the consultation included the provision of guidance, the exchange of best practice and the creation of a task force on this subject at EC level.

Some stakeholders argue that private initiative PPPs are attractive enough under existing rules, citing the Competitive Dialogue procedure as particularly suited to encouraging innovative thinking. The know-how acquired in the course of preparing the initiative puts the private initiator in an advantageous position vis-à-vis his competitors. Thus, any additional advantage granted to the respective operator could seriously distort competition. Along these lines, a number of stakeholders argue that the competitive advantage of operators initiating a PPP needs to be "neutralised", for example by making the studies and analysis done by the operator available to competitors.

4.4. The contractual framework for PPPs

4.4.1. Experience with and recommendations for the phase following the selection of private partners

Question 10 of the PPP Green Paper

In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

Various contributions stress that contracting authorities must prepare the contract well, in order to avoid problems in the phase following the selection of the private partner. The scope of the project, the performance expected from the private contractor and the clauses on adaptation over time should in particular be precisely defined. One stakeholder cites cases in which risk could not be clearly allocated to the private partner because the technical and organisational framework was not clear enough. Another recommends defining precisely the condition in which state property used by the PPP contractor has to be returned. Otherwise, bidders that do not maintain such property properly can offer lower prices than their competitors.

One public body cites negative experiences following selection of the private partner, including the insolvency of the private party, price increases for the services performed by the partner and an oligopolisation of the relevant market. One Member State Government cites good experiences following the award of the project when both the construction and maintenance of a building were contracted to one and the same company.

One stakeholder considers regular reviews of the PPP contract essential.

4.4.2. Conditions of execution – not considered to exhibit discriminatory effects

Question 11 of the PPP Green Paper

Question

Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or the freedom of establishment? If so, can you describe the type of problems encountered?

Main views of stakeholders

- **Few stakeholders are aware of cases where the conditions of execution – including the clauses on adjustments over time – had a discriminatory effect or represented an unjustified barrier to the freedom to provide services or freedom of establishment.**
- **There is broad consensus that the duration of the contract is not a source of discrimination in current PPP practice and that adjustments to long-term PPPs over time are needed.**
- **Those contributors who perceive discriminatory effects complain in particular about the different treatment of public and private companies.**

4.4.2.1. General remarks

Few stakeholders are aware of cases where the conditions of execution – including the clauses on adjustments over time – have had a discriminatory effect or represented an unjustified barrier to the freedom to provide services or freedom of establishment. Those contributors who perceive discriminatory effects complain in particular about the different treatment of public and private companies (preferential tax treatment and the lack of insolvency risk of public undertakings). One stakeholder cites "evergreen" clauses (i.e. requiring the private contractor to keep the technical standard of a project at the state of the art) and automatic renewal clauses as problematic.

4.4.2.2. Duration of PPPs

The general perception of contributors is that the term of the contract is not a source of discrimination in current PPP practice, as long as it is clearly spelt out in the descriptive documents. Various stakeholders contend that an extension of the contract which is not provided for in the initial contract requires a new public procurement procedure.

Several contributors comment on the statement in the PPP Green Paper that the duration of the partner relationship must be set so that it does not limit open competition beyond what is required to ensure that the investment is recouped and there is a reasonable return on invested capital.[11] It is argued that the term of the contract should be principally determined by the life of the infrastructure assets, rather than by the amortisation of a project. Other issues to be considered when deciding on a reasonable term for a PPP are – according to some stakeholders – technical continuity, security of supply, optimisation of maintenance and renovation of infrastructure. It is also contended that training personnel requires a certain length of time, to enable the private contractor to fully benefit from his investment in such training. In addition, frequent competition procedures resulting from short-term PPP contracts or concessions are thought to increase the overall costs of a PPP. One stakeholder says that in many cases it is in the public interest to allow service delivery to mature and improve over a longer period, to ensure greater innovation and experimentation to find the best ways of delivering public services. Shorter-term contracts, on the other hand, might encourage the operator to focus on maximising revenue generation before the next competition.

One contributor suggests that it is in any case difficult to set criteria for an acceptable term for PPP projects. Another warns against limiting the length of PPP contracts, which might decrease private interest in such contracts. Conversely, some contributors share the Commission’s concern regarding the effects of long-term contracts on competition and equality of treatment.

4.4.2.3. Adjustments to long-term PPPs over time

An overwhelming majority of contributors to the consultation acknowledges the need for adjustments to long-term PPPs over time. It is considered crucial that the initial PPP contracts provide for a certain degree of flexibility. Various contributors say that public services, in particular, need to be adjusted regularly to the changing needs of consumers and public authorities. Thus, PPP contracts should have some scope for adjustment. Furthermore, such provisions in the initial contract are considered unproblematic as they are laid down under conditions of full competition.

Various stakeholders say a new public procurement procedure is needed if the overall object of the contract changes. Other stakeholders report that in practice abuses such as unwarranted adjustments of PPP contracts are rare and do not justify regulatory action. One contributor refers to experience suggesting that reopening negotiations due to substantial modifications of a contract usually results in a better

[11] Point 46 of the Green Paper.

deal for the original private partner, rather than an improvement in the public interest.

Some stakeholders argue that adjustments to the PPP contract or concession should be allowed, even if they are not provided for in the initial contract or concession. They argue that not all needs for future adjustment of a contract can be foreseen when it is concluded and only practical experience with performance of the contract show whether and where adjustments over time are necessary.

A number of contributors express an interest in EC rules providing clarification on the types of changes in the course of the execution of a PPP which are compatible with EU law.

Among those contributors who criticise the adjustment of PPP contracts and concessions over time, several say that readjustment clauses can have discriminatory effects. As an example they cite the case of exaggerated traffic forecasts in the initial bid making it at first sight economically advantageous. If the public authority agrees to the bidder's subsequent request to readjust the contract, this might discriminate against competitors who based their initial bids on more realistic estimates. Along the same lines, another contributor points out that many bidders tend to assume time limits for completion of the project which turn out to be unrealistic. Subsequent amendment of the contract, leading to an extension of the time limits for completion, would be unfair to those competitors who did not obtain the contract because they were more realistic in their estimates.

4.4.3. Views on potentially discriminatory effects of practices for evaluating tenders

Question 12 of the PPP Green Paper

Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

Not many of the contributors are aware of discriminatory practices for evaluating tenders. Some contributors point out that if discrimination occurs, national legislation, rather than EC rules, should address such grievances.

One contributor says that complex selection criteria for evaluating tenders make it easier for contracting authorities to discriminate. Other contributors say there is a risk of discrimination if invitations to tender do not contain all the details of the award criteria or are in other respects not precise enough. Some stakeholders cite cases of evaluation practices with potential discriminatory effects where qualification criteria are used as award criteria and where evidence for quality and competence has to be given in the form of references, proofs of financial standing and experience: they say this favours established bidders.

Another contributor reports cases where evaluation criteria were set which had not been made clear in advance or where over- or underproportional weight was given to known criteria. Other issues raised in this context are amendments to technical requirements or to evaluation criteria made during the tender procedure, the evaluation of subjective award criteria by "experts" who do not know the subject well enough and ratings being given in the course of an evaluation without proper (or any) justification.

One stakeholder refers to the public sector comparator as a useful method of evaluating bids.

4.4.4. *Step-in arrangements: considered to be indispensable for the financing of PPPs*

Question 13 of the PPP Green Paper

Question

Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

Main views of stakeholders

- **There is broad consensus that step-in clauses are of crucial importance for the financing of PPPs without raising particular procurement problems.**

Few contributors consider "step-in" type arrangements to present a problem in terms of transparency and equality of treatment. No other standard clauses are considered likely to present similar problems.

Nearly all stakeholders who express an opinion on this issue explain that step-in clauses are of crucial importance for the financing of PPPs without raising particular procurement problems, as these clauses allow the parties to avert termination of the PPP contract or concession if the private PPP contractor is in breach of the contract. One stakeholder explains that step-in rights are particularly important to safeguard the investment of banks, when the operator is a Special Purpose Vehicle (SPV: a consortium established for the purpose of PPP award procedures) and the value of the bank's investment thus depends primarily on the income stream from that project.

Step-in clauses are considered a substitute for other, more expensive forms of guarantee, such as personal or collateral securities. Thus, they make the overall project cheaper. Apart from this, step-in clauses are considered to be advantageous to contracting authorities as the stepping-in lender could revive the project and therefore avoid disruption of the service.

Some stakeholders point to the alternative scenario to stepping-in by the financial lenders: the potentially badly performing project would have to be put out to tender again and it might be difficult to find someone who is interested. Furthermore, a new public procurement procedure is considered to be time-consuming, and time is particularly tight for projects which are already in a critical condition.

Conversely, the risk of financial parties misusing such clauses is considered to be low, particularly as actual recourse to step-in clauses – often viewed as a temporary crisis measure – is extremely rare in practice. Nevertheless, some stakeholders insist that clear procedures for stepping-in have to be set out in the initial contract, to ensure adequate transparency and to give local authority the possibility of keeping control over a private party stepping into the contract. It is reported that usually step-in clauses are supplemented by a direct agreement between the contracting authority and the lenders. Various stakeholders say that one of the reasons for step-in clauses not presenting a problem in terms of transparency and equality of treatment is the fact that they are concluded under full competition.

Some stakeholders fear that if the EC legislator questions the current form of step-in clauses, this might have negative impacts on the future financing of PPP projects.

On a more general note, some contributors say that cession clauses in PPP contracts should be allowed. Such clauses reflect a balance between the public interest in correct performance and the private interest in being able to treat the PPP contract as an asset, which should in principle be transferable to third parties. Against this background, public authorities should – according to two contributors – be allowed to object to cessions, but need to back any such objection with objective reasons. These principles, according to another stakeholder, should not only apply to a change in the public authority's contract partner, but also to a change in the principal shareholder of the contract partner. One public procurement expert adds that there is no reason for a new public procurement procedure in cases of a change in ownership on the private contractor's side. According to this view, the purpose of public procurement regulation is not to safeguard the authority's freedom of choice, but to limit the authority's freedom to choose its contracting partners to prevent discrimination. This objective is not in any way prejudiced by a decision by a private contracting partner to assign the contract for commercial reasons.

4.4.5. No need for clarification of certain aspects of the contractual framework of PPPs at EC level

Question 14 of the PPP Green Paper

Question *Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?*
Main views of stakeholders • **A large majority of stakeholders say that an EC initiative on the contractual framework of PPPs is not needed. A considerable number of stakeholders ask, however, for some sort of clarification in this area.**

A large majority of contributors express themselves against any EC initiative on the contractual framework for PPPs, arguing that on the one hand this area falls within national competence for contract law and that on the other hand new EC rules might complicate existing public procurement procedures and thus lead to more bureaucracy.

A considerable number of stakeholders are, however, in favour of some sort of clarification at EC level in this area. Issues which – according to these stakeholders – require clarification are the extent of the rights and obligations of the contractual partners, the requirement that contracting authorities compare the advantages of private and public performance, the standardisation of contracts and the procedures for regulating conflicts. An argument in favour of such an initiative is – according to one contributor – the possible reduction of sometimes prohibitively high transaction costs.

Many stakeholders believe, however, that the relevant clarifications should be provided at national, rather than at EC level. One stresses that the introduction and assessment of contractual standards for PPPs is an issue for private parties.

4.5. Subcontracting

4.5.1. Perceived problems in relation to subcontracting

Question 15 of the PPP Green Paper

Question *In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.*
Main views of stakeholders • **A significant majority of stakeholders do not perceive problems in relation to subcontracting.** • **Problems reported by many other contributors relate to the supposedly weak position of subcontractors and uncertainties regarding the applicable EC law.**

4.5.1.1. Overview

A significant majority of stakeholders do not perceive problems in relation to subcontracting. Among the large number of contributions reporting problems in this area, one group of stakeholders expresses a certain scepticism towards subcontracting in general, another group welcomes the possibility of subcontracting, but complains about the limiting factors. Issues raised by contributors who are rather sceptical about the current practice of subcontracting in the Member States include the reduced control that public authorities can exercise over subcontractors, the difficult position of subcontractors vis-à-vis the main contractors and uncertainties with regard to the applicable EC law.

4.5.1.2. Problems related to control over the performance of public services

In principle, public services are the responsibility of public authorities. Therefore, in the view of various stakeholders, public authorities have to retain a certain level of control over the actors delivering such services. In the view of these stakeholders, subcontracting limits this control. For example, if public services are subcontracted the contracting authorities might have difficulty contacting the undertaking actually performing the service. This is thought to lead to delays, which might affect the quality of the respective service. One stakeholder therefore suggests setting out clearly in the contractual framework when and under what conditions subcontracting is permitted. This suggestion is supported by another stakeholder who believes that – as a basic principle – the concessionaire needs to perform the public service himself and subcontracting should therefore be considered an exception to this rule, requiring special consideration in the initial contract.

4.5.1.3. Problems related to the position of subcontractors

Some stakeholders point to the pressure various contractors allegedly exert on their subcontractors. According to them, subcontractors have to accept low prices and/or inadequate social rules. In the view of another stakeholder this risks leading to a degradation of the quality of public services.

One association points to the specific problems architects encounter when they obtain subcontracts in the course of a PPP. The association fears that subcontracting dis-empowers architects from influencing how the construction in question is carried out, which might have negative impacts on the final product.

One contributor is concerned about the poor capacity of subcontractors to cover all risks linked to their work, while another warns that, if the global contractor passes all risks to subcontractors, he may have no incentive to manage all the issues arising effectively himself.

4.5.1.4. Uncertainties with regard to the applicable EC law

A number of stakeholders are concerned about the lack of clarity of rules governing subcontracting at EC level as the rules vary depending on whether the underlying legal arrangement is defined as a public contract or a concession and whether the specific Public Procurement Directives apply. Consequently, stakeholders ask for a clearer distinction between contracts and concessions and between the scope of Directive 2004/17/EC and Directive 2004/18/EC. Reportedly, these uncertainties have caused confusion in practice, which is considered not to be sustainable on a commercial basis. One contributor complains about the lack of a clear definition of subcontracting at EC level and – due to different interpretations of EC law – the heterogeneity of contractual clauses applied in the Member States.

4.5.1.5. Other problems related to subcontracting

One contributor highlights the problem of "secondary markets", where a private contractor who entered into the original PPP sells on his share of the PPP contract to another private sector provider. While in these cases the service is still delivered and the requirements of the contract met, the private company that entered into the original agreement can make sizeable profits. There is criticism that none of this additional profit is passed to the public sector.

Another contributor says that – contrary to the ECJ judgment C-314/01[12] – Member States prohibit the transfer of the actual performance from the winner of the competition to a third party.

Some contributors are discontent with the "double tendering" requirement in the case of public contracts awarded to companies which are partly owned by the public sector. As these companies risk being considered contracting authorities, they are subject to tendering procedures in relation to their downstream contracts. This is considered to constitute a competitive disadvantage vis-à-vis their private competitors.

4.5.2. Clear opposition to more detailed rules for subcontracting

Question 16 of the PPP Green Paper

[12] ECJ, C-314/01, ECR 2004, not yet published. In paragraph 46 of this judgment the ECJ states that a tenderer claiming to have at its disposal the technical and economic capacities of third parties on which it intends to rely if the contract is awarded to it may be excluded only if it fails to demonstrate that those capacities are in fact available to it.

Question

In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

Main views of stakeholders

- **There is broad consensus against new initiatives in the area of subcontracting, in particular as regards the potential extension of tendering requirements to such contracts.**
- **A substantial number of stakeholders consider additional rules in this area useful, in particular to guarantee fair competition.**

4.5.2.1. Arguments against an extension of tendering rules for subcontracting

An overwhelming majority of contributors argue against new initiatives in the area of subcontracting, in particular as regards the potential extension of tendering requirements to such contracts.

Most of those who oppose rules extending tendering requirements to the conclusion of subcontracts argue that PPPs are characterised by the transfer of risks to one private party. They contend that this private party needs to have full flexibility when fulfilling the contract, in particular when managing the risks assumed as part of the contractual obligations. Rules limiting the main contractor's ability to choose his subcontractors would limit this flexibility unhelpfully, for example by preventing him from cooperating with undertakings with which he has long–standing, smoothly running relations.

This is, however, not the only perceived PPP-specific problem in relation to extending public tendering requirements to the selection of subcontractors. In the case of many PPP procurement procedures bidding consortia – usually referred to as Special Purpose Vehicles (SPV) – are established. A substantial number of contributors consider that the opportunity for members of these consortia to obtain parts of the awarded contract directly is the driving force behind their establishment. These stakeholders believe that introducing an obligatory tendering procedure for subcontracting would have adverse effects on the formation of such consortia and PPPs more generally. One stakeholder summarises these adverse effects as follows: "To introduce rigidity into the subcontract level would decrease the ability of the SPV and its principal subcontractors to manage their risks, potentially increase costs or reduce the level of risk transfer to the private sector and add to the cost and duration of the procurement process."

Other consequences to PPPs of introducing a formal tendering procedure for subcontractors, according to many stakeholders, include delays, higher costs and reduced efficiency. One stakeholder explains that bidders need to include considerable time for procurement activity in their schedules plus a safety margin for legal challenges if procurement rules apply subsequent to the award of a PPP contract or concession. This could – according to this stakeholder – turn a potentially viable PPP project into a non-viable project.

It is also argued that imposing downstream competition would be contrary to the spirit of PPPs leading to a mere set of subcontracts, and that even upstream competition would be distorted as the candidates, faced with the unknown quantity of their subcontractors' future competitive bidding procedures, could not submit their best prices. Many other contributors state that the introduction of a rigid tendering regime downstream of the award of the PPP does not provide any advantages for the public authority compared to the status quo. They argue that public authorities can obtain sufficient control over subcontractors by requiring bidders to indicate their proposed subcontractors in the course of the initial PPP competition. Consequently, the choice of subcontractors would be part of the competition for the initial PPP contract or concession, making downstream competitive tendering redundant. Along these lines, one stakeholder insists that the initial contract should clearly spell out the conditions for changing subcontractors. Another contributor adds that if the contracting authority is dissatisfied with the performance of subcontractors, it has recourse to the payment and termination rights set out in the contract with the main contractor.

Some contributors consider Article 60 of Directive 2004/18/EC, which sets out specific requirements for works concessionaires in relation to subcontracting, as an example of unduly limiting the main contractor's flexibility in choosing subcontractors. This provision is considered to jeopardise the financial viability of PPP concession models, and the scope for setting up such concessions. One contributor criticises it as being at odds with the general lack of regulation of subcontracting pursuant to the award of public contracts.

Another stakeholder argues that the introduction of new tendering rules for subcontracting would not be in line with the existing system of public procurement at EC level as set out in Article 32(2)(c) of Directive 92/50/EC[13] and construed by the ECJ in case C-176/98[14]. This holds that a service provider which does not itself fulfil the minimum conditions required for participation in the procedure for the award of a public service contract is entitled to rely, vis-à-vis the contracting authority, on the standing of third parties upon whose resources it proposes to draw if it is awarded the contract. Such reliance on third parties would – according to this stakeholder – be impossible if subcontractors could only be selected subsequent to a separate formal tendering procedure.

4.5.2.2. Proposals for more detailed rules on subcontracting

A substantial number of stakeholders consider that existing public procurement rules do not provide sufficient guarantee of fair competition in subcontracting and therefore advocate obligatory tendering in this respect. Other advocates of obligatory tendering argue that large sums of public money are involved in PPPs and that the subcontractors usually assume public duties which should – on principle – be performed by the main contractor himself.

[13] Directive 92/50/EC relating to the coordination of procedures for the award of public service contracts. This stipulation corresponds to Article 48(2)(b) of Directive 2004/18/EC.

[14] C-176/98, *Holst Italia SpA v. Commune di Cagliari*, Judgment of 2 December 1999, paragraph 27.

Other stakeholders in favour of more detailed rules say that contracting authorities need to maintain control over subcontracting, implying a right to be informed of the identity of subcontractors and the opportunity to object to the subcontractor.

One stakeholder explains that unless subcontracting is subject to a formal tendering procedure, small and medium-sized enterprises will not take any part in PPPs. Some argue that the subcontracting of substantial parts of the project should in any case be limited, to prevent the whole contract being transferred to subcontractors.

Other stakeholders stress the need for new rules, to avoid undue lowering of social standards when the main contractor awards subcontracts. Such rules should at least prevent the conditions of the contract between the main contractor and the subcontractors from falling below the standard set between the contracting authority and the main contractor. Other rules on subcontracting proposed by stakeholders entail a compulsory minimum share of subcontracts being awarded to SMEs or local companies. Conversely, one stakeholder insists that the choice of SMEs should always be guided by economic, rather than regulatory, obligations.

4.5.3. Majority of stakeholders against a supplementary initiative at Community level to clarify or adjust the rules on subcontracting

Question 17 of the PPP Green Paper

Question *In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?*
Main views of stakeholders • **There is no agreement on the need for supplementary initiatives in this area.**

A large number of contributors contest the need for clarification on subcontracting. Many other stakeholders disagree and ask for clarification on various issues.

Areas of clarification identified by contributors are the definition of the terms “bodies governed by public law” in the sense of Article 1(9) of Directive 2004/18/EC and “subcontracting”, the provision for contracting authorities to require or forbid subcontracting or to limit the number of subcontractors in the invitation for tenders and the delimitation of the scope of Directives 2004/17/EC and 2004/18/EC. The latter refers to the specific subcontracting rules for works concessionaires under Title III of Directive 2004/18/EC and the different rules applicable to subcontracting to related/affiliated undertakings (Article 63(2) of Directive 2004/18/EC and Article 23 of Directive 2004/17/EC).

Another contributor asks for more clarity regarding the application of EC tendering requirements when contracts are subcontracted to sister companies or affiliated companies that are part of the consortium which won the main contract.

4.6. Institutionalised PPPs

4.6.1. *Views on the compliance of arrangements for institutionalised PPPs with Community law on public contracts and concessions*

Question 18 of the PPP Green Paper

Question

What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

Main views of stakeholders

- **There is no agreement on whether or not current institutionalised PPP practice in the Member States actually complies with Community law on public contracts and concessions.**
- **Public authorities, public companies and associations of public bodies from various Member States tend to assess compliance fairly positively.**
- **Many contributors from the private sector perceive current compliance with Community law on public contracts and concessions as deficient in certain respects, pointing to circumvention of public procurement law and distortions of competition.**

In general, the contributions reflect the divergences between the different national legal traditions and practices as regards undertakings set up jointly by public and private companies to provide infrastructure projects or to perform public services (institutionalised PPPs – IPPPs). While some Member States have had recourse to IPPPs since the beginning of the 20th century, the concept is rather new in other Member States. Depending on their national traditions, some Member States have a quite comprehensive legislative framework in place. It appears from the contributions that, in practice, important fields of application for IPPPs include the water, environment, energy and transport sectors.

There is no agreement on whether or not current IPPP practice in the Member States complies with Community law on public contracts and concessions. Public authorities, public companies and associations of public bodies from various Member States tend to assess compliance fairly positively. Conversely, many contributors from the private sector perceive current compliance with Community law on public contracts and concessions as deficient in certain respects.

The main deficiencies perceived include the circumvention of public procurement law and distortions of competition.

As regards circumvention of public procurement rules, some stakeholders contend that in certain Member States public procurement procedures aimed initially at concluding contractual PPPs finally result in the conclusion of IPPPs with actors who did not participate in the original public procurement procedure. This practice, it is argued, allows the contracting authorities to profit unduly from technical solutions identified in the original tendering procedure.

Distortion of competition is argued to arise in particular from the participation of IPPP-entities in award procedures. It is argued that the public IPPP partner has, firstly, preferential access to information relevant to the proposed project and, secondly, an advantageous cost structure – compared to all private competitors – due to its use of public goods without a payment corresponding to economic reality. In line with this complaint, one contributor reports potential conflicts of interest regarding public authorities acting at the same time both as contracting authorities and as partners of IPPPs.

Independent of their opinion on the compliance of current IPPP practice with the EC Public Procurement Directives, a substantial number of contributors deplore the lack of legal certainty at EC level regarding relations between contracting authorities and other parties which are so close that – in public procurement terms – they are not considered distinct from each other ("in-house relations").[15] Some contributors perceive the lack of clarity on this issue as a source of abuse by public authorities; one contributor believes that this prevents public authorities from embarking on such arrangements at all.

Another contributor argues that the restrictive jurisprudence of the ECJ on in-house relations limited attempts by public authorities to circumvent public procurement law by this means.

Various contributors do not consider IPPPs any different from contractual PPPs from a public procurement perspective. Consequently, these contributions consider the distinction between these two models made in the PPP Green Paper to be artificial. One of these contributions concedes, however, that opening the capital of existing public companies to the private sector might pose certain problems which could justify specific measures.

There is no consensus as to whether public procurement law or other issues, for example free movement of capital, constitute the main legal problems in relation to IPPPs. Various contributors argue that the creation of mixed public private companies has nothing to do with EC public procurement law at all, because it falls within the area of administrative organisation, which is not a matter for the European Union to regulate.

4.6.2. *Diverging opinions on the form, rather than on the general necessity, of a Community initiative on institutionalised PPPs*

Question 19 of the PPP Green Paper

Question *Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?*
Main views of stakeholders

[15] Case C-107/98, *Teckal*, Judgment of 18 November 1999, point 50. The ECJ judgment in case C-26/03, *Stadt Hall*e, Judgment of 11 January 2005, was released after this consultation.

- **A clear majority of contributions favour an EC initiative on institutionalised PPPs, primarily to provide clarification on applying existing public procurement rules to setting up such PPPs.**
- **In particular, there are calls to clarify the definition of in-house relations at EC level.**
- **A majority of contributors favour guidelines or an interpretative communication, rather than legislation, as an appropriate form of clarification on IPPPs.**
- **Many contributors are opposed to any initiative on IPPPs at EC level.**

4.6.2.1. Overview

A clear majority of contributions favour an initiative at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project. Some contributions even stress the urgency of an EC initiative in this area. A majority of those contributors favouring a Community initiative would prefer the Commission – at least as a first step – to provide guidelines or other forms of clarification on the application of existing public procurement rules to the establishment of IPPPs. Other contributors in favour of a Community initiative argue that EC legislation would be the appropriate response to perceived difficulties in this area. Conversely, a large number of contributions contest the need for any Community initiative in the area of IPPPs.

4.6.2.2. Views in favour of a Community initiative on IPPPs

Reasons given for a Community initiative on IPPPs

The main reason for requesting a Community initiative on IPPPs is the perceived lack of clarity of the rules governing in-house relations and – this is stressed in particular by contributors from the public side – the restrictive construction of the in-house exemption from public procurement law given in the judgment of the European Court of Justice in the "Teckal" case. Two contributors argue that the EC legislator has to take action, rather than leaving it to the ECJ to settle the issues, as the ECJ is considered not to be in a position to provide the necessary clarity. Another, more general justification for a Community initiative in the area of IPPPs is – according to various contributions – the need for transparent and competitive selection of private partners for these projects. One contribution argues that a Community initiative is needed because the variety of different national approaches on this issue distorts the Internal Market .

With regard to the need for a Community initiative in the area of IPPPs, certain contributions distinguish between cases where mixed capital entities are jointly established by public and private entities and cases where the shares of public companies are opened to private capital. Some contributors say that while, for the first category of IPPPs, concrete clarification at EC level is necessary, the second category of IPPPs should be the subject of an exchange of best practice or a reflection group. Another contributor, however, considers that specifically for the second category of IPPPs clarification has to be provided by means of a regulation.

Form of a Community initiative on IPPPs

A majority of those contributors who are in favour of a Community initiative opt for the adoption of guidelines or an interpretative communication, rather than legislative initiatives, for the following reasons: the expected loss of flexibility hindering the smooth development of innovative IPPPs due to the rigidity of legislation, the lack of sufficient experience as yet to adopt legislation valid for many years, the difficulty of providing clarity by means of legislation, which itself requires interpretation, and the urgency of clarification on this matter, which cannot be catered for by a (usually lengthy) legislative procedure.

Some stakeholders argue that an interpretative communication could pave the way for the subsequent adoption of EC legislation. Whatever the case, guidelines or an interpretative communication must deal with concrete cases to be of real value to practitioners.

Only a minority of contributors advocate specific EC legislation on IPPPs, for example in the form of a proper PPP Directive. According to one stakeholder, only EC legislation could harmonise existing national measures, which risk distorting the common market.

Possible content of a Community initiative on IPPPs

As regards the content of an EC initiative on IPPPs, various public contributors call upon the EC legislator to define "in-house" more broadly than the ECJ did. Other contributors from the public side explain that the correct understanding of "in-house" should allow municipalities to entrust tasks considered to be a local public service to inter-communal structures without obliging them to call for tenders. According to one contribution, a broader interpretation of the in-house criterion would imply that ownership by the relevant contracting authority of a 50% capital share in the IPPP entity would qualify as control over that undertaking. Several contributors argue in favour of drafting "de-minimis rules" for the application of public procurement provisions to local PPPs. Others request the EC legislator to respect the subsidiarity principle when clarifying the notion of "in-house".

One contribution asks for clarification of the application of public procurement rules to IPPPs in general. Various other contributions highlight the need to require publication of public authorities' intention to choose a private partner for an IPPP. Some contributions favour a clearer definition of the status of the IPPP entity, others wish to see public authorities required to justify their recourse to IPPPs. A number of contributions demand equal access to subsidies and more generally the application of the EC Treaty principles to setting up IPPPs. Several contributions oppose compulsory "double tendering" for IPPPs – i.e. tendering to select a private partner for an IPPP followed by tendering for the award of a specific task.

Various contributions highlight the need to clarify the application to IPPPs of EC law principles other than those concerning the choice of a private partner. State aid rules and the free movement of capital (Article 56 of the EC Treaty) are mentioned several times in this context.

4.6.2.3. Views opposing a Community initiative on IPPPs

A large number of contributors argue against any Community initiative on IPPPs.

Some contributors consider an EC initiative redundant on the grounds that the existing public procurement rules provide sufficient clarity on setting up IPPPs. Conversely, some others believe that public procurement rules do not apply to IPPPs and therefore do not require clarification. Various contributors explain that under the subsidiarity principle the Community does not have a legal basis for such an initiative. Two contributors submit that IPPPs often originate from private initiatives. If, however, private participation in an IPPP was subject to prior competition, there would be less incentive for private parties to initiate IPPPs. Furthermore, a group of contributors argue that the existence of several hundred IPPPs in Germany proves, from a German perspective, that an EC initiative in this area is not needed. Some contributors say that no additional initiative should be taken in the energy sector, which is considered to be already overregulated.

The arguments made against an EC initiative on IPPPs are also procedural. So, for example, various contributors refer to the inappropriate timing of taking an initiative in this area now: prior to any Community initiative, the so-called Legislative Package[16] needs to be well implemented in the Member States. Others are of the opinion that national IPPP practices (including economic and social aspects) need to be thoroughly assessed before a decision on an EC initiative in the IPPP area can be taken.

4.7. Measures and practices perceived as barriers to the introduction of PPPs

Question 20 of the PPP Green Paper

Question
In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?
Main views of stakeholders
• **The existence of too many and too strict rules is considered an obstacle to the development of PPPs by a clear majority of contributors.**

A clear majority of those contributors who comment on measures or practices perceived as barriers to the introduction of PPPs say that too many and too strict rules hamper the development of PPPs. In particular, contributors from the public side (but also various private undertakings and associations) complain that EC, national and local rules on PPPs limit the flexibility they say is needed to set up such projects. The restricted recourse to the negotiated procedure is cited as one example of rules adversely affecting PPPs. National tax legislation is also singled out by several stakeholders as being detrimental to the formation of PPPs. A considerable

[16] Directive 2004/17/EC coordinating the procurement procedures of entities operating in the water, energy, transport and postal services sectors and Directive 2004/18/EC on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts.

number of contributors say that this perceived plethora of rules applicable to PPPs results in high transaction costs. They argue that these costs may discourage public authorities from launching PPP projects and private parties from participating in competitions for the award of PPPs.

A substantial number of stakeholders consider that the lack of legal clarity and common rules for the formation and performance of PPPs across all Member States jeopardises their potential success. Many stakeholders say that uncertainty about future EC legislation on PPPs, possibly including the adoption of more rigid rules, adversely affects the setting up of such projects. A number of stakeholders who complain that the rules on PPPs are unclear conclude that a regulatory framework for PPPs needs to be established at EC level. In this context some stakeholders are particularly concerned about the lack of proper review mechanisms for disputes arising when PPPs are awarded or when public procurement rules are entirely ignored by contracting authorities. Another example of rules not defined clearly enough are those relating to in-house constellations. Divergences between national rules on PPP are also cited as barriers to the introduction of such projects.

In relation to the establishment of PPPs, several stakeholders complain of undue privileges being granted to public companies to the detriment of their private competitors. According to some contributors, such discriminatory practices include different tax provisions, allegedly unduly favouring public undertakings, unequal access to subsidies and the recourse to in-house constellations referred to above.

Other major issues which many stakeholders suspect impede the development of PPPs include EU co-financing as part of the EC Regional Policy and, to a lesser extent, state aid rules. The perceived incompatibility of Cohesion and Structural Funding with PPPs, and more particularly the presumption that EU grant aid must imply public ownership of the infrastructure resulting from a PPP, appears to be a problem which goes beyond the water sector. In general, the application of Regional Policy to PPPs is considered to require clarification. Various other contributors ask for clarification of the relationship between state aid rules and the EC Public Procurement Directives.

Many stakeholders cite lack of experience, the slow liberalisation of certain sectors and – more generally – the absence of strong political will at all levels to promote PPPs as barriers to their development.

4.8. The need for collective consideration at Community level with regard to PPPs

Question 22 of the PPP Green Paper

Question

More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

Main views of stakeholders

- **There is broad support for some sort of collective consideration of PPP issues at EC**

level.

- **No agreement exists on the content and form of such an initiative.**

4.8.1. Views on the possible scope of collective consideration at Community level

A large number of contributors favouring a collective consideration of PPP issues at EC level advocate the exchange of best practice, although some stress that one also needs to learn from bad experiences. Some contributors consider the Resource Book on PPP case studies released by the Directorate-General for Regional Policy in June 2004[17] as a good example of a European initiative promoting the exchange of experience with regard to PPPs.

A substantial number of contributors expect this collective consideration to result in clarification of applicable Community rules and the establishment of guidelines. Some contributors contend that clarification on PPPs should not be limited to legal issues. Others express their interest in standardised rules or model invitations to tender based on experience to date. Other suggestions on the scope of collective consideration of PPPs include European-wide dissemination of PPP information, promotion of "scientific assessments", coordination of existing national networks, training and certification of "PPP mediators" and the resolution of potential conflicts between EC and national law on PPP-related issues. One contributor from the public sector believes that such collective consideration should ensure a level playing field between public and private operators as regards PPP know-how, from which small contracting authorities, in particular, could benefit.

Another contributor suggests that a collective consideration of such matters should include the monitoring of transparency, non-discrimination and more generally the proper functioning of PPPs in the Member States. Another important topic is setting up a benchmarking exercise, one contributor adds.

A substantial number of contributors are of the opinion that the result of such collective consideration should be left open and in no case prejudge the question of whether Community legislation on PPPs is appropriate, while two stakeholders suggest that the collective consideration should contribute to the preparation of an EC initiative on PPPs.

4.8.2. Views on the form of a collective consideration of PPPs at Community level

Compared to the opinions on the possible scope of a collective consideration of PPPs at EC level, the contributions on its form are less varied. The majority of contributions argue in favour of establishing a permanent PPP unit, which might take the form of a European PPP agency, a centre of excellence/resource and documentation centre or an observatory. At least for the observatory some contributors argue that it should be independent. One contributor recommends that a High Level Group should supervise and coordinate the work of the PPP unit.

[17] Published on the website: http://europa.eu.int/comm/regional_policy/sources/docgener/guides/pppguide.htm.

A substantial number of other contributors vote for less institutionalised models, in particular arguing that a permanent structure would add to existing bureaucracy. Their preferred option is a Task Force. One stakeholder favours opening a dialogue between the Commission and interested parties. Another recommends building the collective consideration on existing fora such as the Advisory Committee for Public Works Contracts.[18]

One contributor stresses that any collective consideration of these issues needs to be transparent.

If a collective consideration of PPPs were to be established at EC level, the large majority of contributions leave no doubt that this would be the task of the European Commission. Some contributors state that a European Commission initiative could be limited to promoting successful national PPP networks.

4.8.3. Arguments against collective consideration at Community level

Few contributors argue against any collective consideration of PPP aspects at EC level. Those that do cite the existence of a European Platform already dealing with issues such as PPPs, making a parallel discussion forum redundant, the need to deal first with the PPP-related issues highlighted in the "Report of the High Level Group on the Trans-European Network Group"[19] and concern that collective consideration at EC level might lead to Community legislation on PPPs, thereby fostering an approach to this subject which the stakeholder concerned considers to be inappropriate.

Some contributors' support for collective consideration of PPP issues at EC level is conditional upon the participation of specific stakeholders such as representatives of local and regional government, civil society and employees.

[18] See Council Decision 71/306/EEC setting up an Advisory Committee for Public Works Contracts (OJ L 185, 16.8.1971, p.15).

Public procurement: consultation shows need for clarification of EU rules on public-private partnerships

The European Commission has published a report on the results of a consultation on public-private partnerships (PPPs) that was launched in April 2004 (IP/04/593). The aim of the consultation was to help assess if there is a need to improve EU law in this area. A majority of stakeholders asked for clarification of EU public procurement rules that apply to the selection of private partners for PPPs. Opinion was divided on the form and the precise content of the EU initiatives required. The report is available at: http://europa.eu.int/comm/internal_market/ppp

Internal Market and Services Commissioner Charlie McCreevy said: "The number of responses received confirms the growing importance of public-private-partnerships. PPPs are now widely used in large infrastructure projects and public services, and can make a major contribution to the growth of the EU economy. The Commission needs to ensure that the selection of private partners is transparent and that there is fair competition, not least because it is those principles which ensure value for money for taxpayers. The consultation revealed many arguments both for and against EU initiatives in this area. We will consider all these views and report on possible next steps before the end of 2005."

Responses

The Commission received 195 contributions from: public authorities, including 16 Member State governments; associations of private and/or public entities; private and public enterprises; and individuals. A high proportion of contributions came from Germany, France, UK, Austria and Italy.

A clear majority supported an EU initiative, legislative or non-legislative, on concessions that are currently not subject to the detailed EU public procurement rules, in order to clarify both the term 'concessions' and the rules applicable to their award.

Many respondents asked how EU rules should apply to the choice of private partners in "institutionalised PPPs", which are public service undertakings held jointly by both a public and a private partner.

In particular, respondents asked about the difference between 'in-house' and third-party entities. EU law on public contracts and concessions applies when a contracting body entrusts a task to a third party, unless the relation between the two is so close that the latter is equivalent to an 'in-house' entity. In general, public-sector respondents argued for widening the definition of 'in-house', while the private sector wished to maintain its limited scope as confirmed by the European Court of Justice (Stadt Halle C-26/03).

Next steps

The Commission plans a Communication before the end of 2005. Possible measures to increase fair competition include legislation, interpretative communications, initiatives to improve the coordination of national practice and exchange of good practice between Member States. The Communication will indicate the Commission's preferences.

Background

Public-private partnerships (PPPs) are forms of cooperation between public authorities and businesses to meet needs in the general interest. They involve complex legal and financial arrangements for carrying out infrastructure projects or providing services for the public. These partnerships are widely used within the EU, in particular in transport, public health, education, public safety, waste management and water distribution.

Betrifft: Grünbuch PPP;
Stellungnahme der Republik Österreich

Zum Grünbuch der Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen vom 30. April 2004, KOM(2004) 327, wird nach Konsultation der betroffenen Kreise folgende Stellungnahme seitens der Republik Österreich abgegeben:

I. Einleitende Bemerkung zur Terminologie:

Es wird darauf hingewiesen, dass die im Grünbuch verwendete Bezeichnung „ÖPP“ in Österreich unüblich ist; es wird daher im Folgenden die auch international übliche Abkürzung „PPP“ verwendet.

Es darf in diesem Zusammenhang darauf hingewiesen werden, dass der Begriff PPP lediglich Public Private Partnerships, d.h. Partnerschaften bzw. Kooperationen zwischen dem öffentlichen und dem privaten Sektor, nicht aber Public Public Partnerships, d.h. Kooperationen zwischen verschiedenen Akteuren des öffentlichen Sektors (etwa mehrerer Gemeinden oder einer Gemeinde mit einem ausgegliederten Rechtsträger, der selbst öffentlicher Auftraggeber ist) erfasst. Da Public Public Partnerships rein sprachlich von der Abkürzung PPP umfasst sein könnten, soll daher hiermit klargestellt werden, dass nur Kooperationen zwischen der öffentlichen Hand einerseits und privaten Partnern andererseits vom Begriff „PPP“ und von der vorliegenden Stellungnahme erfasst sind.

II. Allgemeines zu PPP:

Public Private Partnership (PPP) ist in Österreich als Begriff positiv-rechtlich nicht verankert. Auch eine von rechtlichen Definitionen unabhängige Begriffsbestimmung durch die Lehre gestaltet sich schwierig, weil PPP einen – noch dazu aus dem angloamerikanischen Rechtskreis stammenden – Sammelbegriff für eine Vielzahl möglicher Kooperationsformen zwischen der öffentlichen Hand und dem privaten Sektor darstellt und sich nicht etwa in einer bestimmten Vertrags- oder Gesellschaftsform erschöpft.

Eine **Arbeitsdefinition** von PPP könnte folgende Formulierung darstellen: PPP ist eine auf Dauer angelegte Kooperation von öffentlicher Hand und privater Wirtschaft bei der Planung, der Erstellung, der Finanzierung, dem Betreiben oder der Verwertung von (bislang) öffentlichen Aufgaben mit angemessener Verteilung der Risken und Verantwortlichkeiten.

PPP als Begriff ist auch dem Vergaberecht unbekannt, sodass die übliche Typologie der einschlägigen Rechtsnormen (Bau-, Liefer-, und Dienstleistungsauftrag sowie Bau- und Dienstleistungskonzessionen) zur Anwendung gelangt (d.h. eine Zuordnung zu den von den Richtlinien definierten „Vertragstypen“ erfolgen muss).

Die Situation der öffentlichen Haushalte erschwert den Gebietskörperschaften oft die Erbringung qualitativ hochwertiger und preislich wettbewerbsgerechter Infrastruktur-Dienstleistungen. PPP als neue, innovative Form der Zusammenarbeit zwischen Verwaltungen und Wirtschaft stellen eine Möglichkeit dar, die öffentlichen Verwaltungen bei der Lösung ihrer Aufgaben zu unterstützen. Die öffentliche Hand sucht vor allem Finanzierungspartner für Bauleistungen und Betreiber öffentlicher Einrichtungen. Public-Private-Partnerships ermöglichen jedoch neben der Erschließung neuer Finanzierungsmöglichkeiten auch den Zugang zu operativem und strategischem Know-how, Managementfähigkeiten und Erfahrungen der Privatwirtschaft für die Öffentliche Hand, um die Effizienz und Effektivität der Verwaltung zu erhöhen und somit die Leistungserbringung zu verbessern. Schließlich können PPP zur Verwirklichung eines konkreten Bürokratieabbaus und der Verwaltungsmodernisierung beitragen.

Insbesondere in Großbritannien sind Public Private Partnership-Projekte seit längerem ein bekanntes Modell, um die Strukturen des öffentlichen Sektors mit dem Know-how der Wirtschaft zum gegenseitigen Nutzen zu verbinden. Das britische Instrument „Private Finance Initiative“ (PFI), die vorherrschende Form von PPP, wurde bereits 1992 unter der konservativen Regierung Major geschaffen, um zusätzliche öffentliche Investitionen mit Hilfe privaten Kapitals zu ermöglichen. Das Instrument wurde von der folgenden Labour-Regierung übernommen.

In Europa nehmen neben Großbritannien die Niederlande und Irland eine Vorreiterrolle ein. In Deutschland setzen sich Public Private Partnerships erst allmählich durch, in letzter Zeit ist allerdings eine dynamische Entwicklung zu beobachten. In Österreich sind die praktischen Erfahrungen auf diesem Gebiet noch geringer. Gleichzeitig rückt PPP wegen des sonst schwer zu deckenden staatlichen Bedarfs an Investitionen auch hierzulande zunehmend in das Zentrum des Interesses.

In Großbritannien gelangte ein durch die Treasury Taskforce (Arbeitsgruppe des Finanzministeriums) in Auftrag gegebenes Gutachten zu durchschnittlichen geschätzten Einsparungen von 17%. Untersuchungen in Deutschland zu Einsparpotenzialen bei PPP zeigen, dass im Vergleich zur herkömmlichen Realisierung öffentlicher Infrastrukturprojekte 10 bis 20% eingespart werden können. Zugleich besteht ein großes beschäftigungspolitisches Interesse, da durch die Mobilisierung privaten Kapitals der Ausbau öffentlicher Infrastrukturen gesichert oder gar beschleunigt werden kann.

Internationale Erfahrungen zeigen, dass PPP in vielen Bereichen öffentlicher Leistungserbringung sinnvoll sein können. Beispiele für PPP-Modelle sind zahlreich; sie sind vor allem in Versorgungsbereichen zu finden, die hohe Infrastrukturaufwendungen erfordern, insbesondere im Verkehrsinfrastrukturbereich, für Schulen, Hochschulen, Krankenhäuser, Altersheime, Justizanstalten, Messegelände, Sportstätten etc.

PPP gewinnen aber erst dann an strategischer Relevanz, wenn sie mehr sind als finanzielle Notlösungen in Zeiten knapper Kassen. Sie müssen sich für den Staat gleichermaßen wie für die Wirtschaft lohnen. Ziel ist eine „win-win-Situation“ für beide, nicht nur in finanzieller Hinsicht, sondern zum Beispiel auch hinsichtlich der Bündelung von Wissen und dem Austausch von Kenntnissen und Erfahrungen. Das partnerschaftliche Miteinander von öffentlicher Hand und Privaten bietet die Möglichkeit, die spezifischen Kompetenzen der Projektpartner zu nutzen. Das Zusammenfließen öffentlicher und privater Beiträge soll Synergieeffekte bewirken. Basis und wesentliche Voraussetzung für ein funktionierendes PPP-Projekt ist die faire Verteilung von Risiken und Kosten auf die Partner. Nur wenn der private Investor positive Renditeerwartungen hat, wird er eine Verbindung mit dem öffentlich-rechtlichen Partner eingehen (Refinanzierbarkeit der eingesetzten Mittel). Erfolgreiche PPP-Projekte zeichnen sich durch möglichst weitgehende Anreize an die beteiligten Privaten, effizient und effektiv zu produzieren, sowie durch eine optimale Risikoverteilung zwischen privaten und öffentlichen Partnern nach dem Prinzip der Beherrschbarkeit der Risken aus.

III. Allgemeine Bemerkungen zum Grünbuch:

In dem Grünbuch beleuchtet die Kommission zum einen den geltenden (Vergabe-) Rechtsrahmen für die Beauftragung Privater im Rahmen von PPP-Modellen. Darüber hinaus enthält es einen umfassenden Fragenkatalog über die in den Mitgliedsstaaten bestehenden Formen von PPP, bereits bestehende nationale Regelungen sowie über praktische Erfahrungen mit PPP. Mit der letztgenannten Fragenkategorie verfolgt die Kommission das Ziel, eine eindeutige Antwort von Politik, Wirtschaft und Auftraggebern zu bekommen, ob die gemeinschaftlichen Vergaberegeln ausreichen, einen diskriminierungsfreien Zugang aller interessierten Wirtschaftsteilnehmer zu PPP zu gewährleisten (Ziffern 24-41) oder ob gemeinschaftliche Maßnahmen (auslegende Mitteilungen, Rechtsakt) ergriffen werden sollen.

Ein Teil der Ausführungen und Fragen bezieht sich auch auf die Phase nach der Vergabe einer Konzession oder eines öffentlichen Auftrags im Rahmen eines PPP („Ausführungsphase“). Auch hierzu wird gefragt, ob hierfür ein Rechtsrahmen geschaffen werden sollte, um die „Gleichbehandlung“ der Wirtschaftsteilnehmer zu sichern (Ziffer 42 ff). Die Kommission legt zum einen in allgemeiner Form dar, wie eine Leistungsbeschreibung in den Vergabeunterlagen transparent, nicht-diskriminierend und wettbewerbsoffen abzufassen ist und unter welchen Voraussetzungen nachträgliche Vertragsanpassungen zulässig sein könnten. Zum anderen fragt die Kommission, ob zusätzliche Regelungen für die Vergabe von Unteraufträgen nötig sind.

Das **Grünbuch** ist **über weite Strecken nicht ergebnisoffen**. Insbesondere zu Konzessionsvergaben bringt die Kommission – durch den Hinweis auf nicht näher spezifizierte Rechtsverstöße – relativ klar zum Ausdruck, dass sie entweder neue Spezialvergaberegeln oder die Unterwerfung unter das geltende Vergaberecht für angezeigt hält. Dieser grundsätzliche Ansatz eines Konsultationsverfahrens **steht** jedoch **mit den Grundsätzen** der Strategie einer „**Besseren Gesetzgebung**“ **in Widerspruch** (vgl. dazu die Aussagen der Kommission u.a. in der Mitteilung „Action Plan „Symplifying and improving the regulatory environment“, KOM(2002)278, hinsichtlich der genauen Evaluierung allfälliger Alternativen zu Gesetzgebungsvorhaben).

Nach Ansicht der Republik Österreich wäre ein **Rechtsakt** zur Regelung von PPP (bzw. Konzessionen) **nicht zweckmäßig und wird daher abgelehnt**. Das Grünbuch selbst zeigt, dass der heute schon bestehende Rechtsrahmen einen Großteil aller Fragen, die PPP-Konstruktionen aufwerfen können, abdeckt. Auch dort, wo die sekundärrechtlichen Vorschriften nicht zum Tragen kommen, gewährleisten die primärrechtlichen Grundsätze (insb. Nichtdiskriminierung, Transparenz, Verhältnismäßigkeit, gegenseitige Anerkennung) in ihrer vom EuGH entwickelten Ausprägung angemessene und mit den Grundsätzen des Binnenmarktes vereinbare Beteiligungsmöglichkeit für Wirtschaftsteilnehmer aus allen Mitgliedstaaten.

Der große Vorteil von PPP liegt in der Flexibilität, die eine Anpassung des Vertrages auf den Einzelfall und im spezifischen Interesse der jeweiligen öffentlichen und privaten Partner ermöglicht. Eine weitgehende **Harmonisierung bzw. „Koordinierung" hätte zwangsläufig eine Einschränkung dieser Flexibilität zur Folge** und **würde das Entwickeln zweckmäßiger innovativer Lösungsmodelle erschweren**, was wiederum zu einer Zurückdrängung dieser nützlichen Form der Zusammenarbeit führen würde. Auf Grund der vielfältigen immer neuen Erscheinungsformen und der notwendigen projektspezifischen „Maßschneiderung" von PPP wäre deren abschließende Regelung wohl auch gar nicht möglich.

In diesem Zusammenhang wird auch darauf hingewiesen, dass die wirtschaftliche und organisatorische Entscheidung, **ob** bestimmte Dienst- oder Bauleistungen selbst erbracht oder an Dritte **ausgelagert** werden sollen, jedenfalls **Sache der Mitgliedsstaaten** (bzw. der einzelnen öffentlichen Auftraggeber) ist und bleiben muss (hinsichtlich Dienstleistungen von allgemeinem Interesse vgl. dazu das Weißbuch der EK zu Dienstleistungen von allgemeinem Interesse, Pkt. 4.3.). Dies sollte zweifelsfrei klargestellt werden.

Auslegende Mitteilungen zu einzelnen Problemfeldern, wie etwa zum wettbewerblichen Dialog, werden jedoch als **zweckmäßig** erachtet (siehe dazu näher bei der Beantwortung der einzelnen Fragen). Wesentlich ist jedoch auch hier, dass diesbezügliche Klarstellungen nicht zu einer restriktiveren Anwendung des gemeinschaftsrechtlichen Rechtsrahmens führen und die erforderliche Flexibilität bei der Vergabe von PPPs gewahrt bleibt.

Hinzuweisen ist ferner darauf, dass die Aussage der Kommission in Fußnote 52 (*„Es sei daran erinnert, dass die Grundsätze der Rechtsvorschriften über die Vergabe von öffentlichen Aufträgen und von Konzessionen ebenfalls gelten, wenn die Vergabe eines*

Auftrags durch eine einseitige Maßnahme erfolgt (beispielsweise einen öffentlichen Rechtsakt)“) verfehlt ist. Wie Erwägungsgrund 8 der RL 92/50/EWG hervorhebt, unterliegen Auftragsvergaben nur dann dem Vergaberegime der Richtlinien wenn sie auf der Grundlage von „Aufträgen“ erfolgt. „Andere Grundlagen …, wie etwa Gesetz oder Verordnungen … werden nicht erfasst.“ Die Aussage im Grünbuch ist daher dahingehend zu korrigieren, dass *wenn die Vergabe eines Auftrags durch eine einseitige Maßnahme erfolgt (beispielsweise einen öffentlichen Rechtsakt) erfolgt, die Grundsätze des primären Gemeinschaftsrechts ebenfalls gelten.* In diesem Zusammenhang wird darauf hingewiesen, dass auch Rz 11 des Grünbuches missverständlich formuliert ist.

IV. Zu den einzelnen Fragen:

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

Es gibt in Österreich keine spezifischen gesetzlichen Regelungen für PPP auf Vertragsbasis. Sie können auf Grundlage der allgemeinen zivil- und haushaltsrechtlichen Normen unter Beachtung allenfalls anwendbarer vergabe-, beihilfen-, gesellschafts-, steuer-, verfassungs- und arbeitsrechtlicher Regelungen und des gemeinschaftsrechtlichen Rechtsrahmens errichtet werden.

In Österreich kommen PPP-Modelle in zunehmendem Maße vor allem im Bereich Verkehr und Infrastruktur zum Einsatz.

Ungeachtet der Tatsache, dass für jedes PPP ein Bündel von speziell auf das jeweilige Projekt zugeschnittenen Verträgen zu erstellen ist, lassen sich die in Österreich bisher praktizierten PPP-Modelle folgenden Kategorien zuordnen (wobei letztere nach der Einteilung der Kommission kein PPP auf Vertragsbasis, sondern ein Modell einer institutionalisierten PPP ist):

- **Betreibermodell**: Ein Privater übernimmt die Planung, Errichtung und Finanzierung eines Betriebes bzw. einer Anlage und schließt mit der öffentlichen Hand einen (langfristigen) Errichtungs- und Betreibervertrag. Die öffentliche Hand leistet ein entsprechendes Entgelt. („Öffentliche Hand bestellt und zahlt.“)
- **Konzessionsmodell**: Die öffentliche Hand erteilt dem privaten Partner eine Konzession für den Bau einer Anlage oder die Erbringung einer Dienstleistung.

Der private Konzessionär betreibt die Anlage bzw. erbringt die Dienstleistung an Stelle der öffentlichen Hand und hebt dafür von Dritten Entgelt ein.

- **Kooperationsmodell**: Öffentliche Hand und privater Partner beteiligen sich als Gesellschafter an einer eigens gegründeten Projekt-/Kooperationsgesellschaft, die etwa mit der öffentlichen Hand eine Ver-/Entsorgungsauftrag und mit dem privaten Partner einen Betriebsführungsvertrag schließt. Vielfach werden auch getrennte Besitz- und Betriebsgesellschaften eingerichtet.

Genannt werden auch Betriebsführungs-, Belehnungs-, Verfügbarkeits-, Contracting- und Finanzierungsmodelle sowie direkte und indirekte Nutzerfinanzierungsmodelle.

Es wird darauf hingewiesen, dass in der Praxis zwei identisch umgesetzte Modelle meist nicht zu finden sind und viele PPP-Projekte Elemente mehrerer Grundmodelle vereinen.

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

In Rz 24 des Grünbuches wird zunächst ausgeführt, dass gemäß der Baukoordinierungsrichtlinie, der Dienstleistungsrichtlinie sowie der neuen „klassischen" RL 2004/18/EG die Durchführung eines Verhandlungsverfahrens (u.a.) dann zulässig ist, wenn es sich „um Arbeiten handelt, die ihrer Natur nach oder wegen der damit verbundenen Risiken eine vorherige globale Preisgestaltung nicht zulassen". Die Interpretation der Kommission, wonach diese Ausnahmeregelung ausschließlich für Sonderfälle gelte, in denen die Art oder der Umfang der Arbeiten von vornherein unwägbar ist, und insbesondere nicht für Fälle gedacht sei, in denen andere Unwägbarkeiten aufträten, etwa Probleme mit der vorherigen Preisfestlegung auf Grund der Tatsache, dass die rechtliche und finanztechnische Konstruktion sehr komplex ist, erscheint in dieser Allgemeinheit problematisch und unzutreffend. (Abgesehen davon ist das Extrembeispiel der Arbeiten in einer geologisch instabilen oder archäologischen Zone schlecht geeignet, ein durchschnittliches Verhandlungsverfahren zu begründen, da in solchen Fällen das Ausmaß der notwendigen Arbeiten oft nicht bloß nach Beginn des Vergabeverfahrens, sondern erst nach Beginn der Arbeiten selbst nach und nach bekannt wird.)

Gerade die Lokalisierung und Zuteilung wirtschaftlicher und rechtlicher Risken in PPP-Modellen stellt den öffentlichen Auftraggeber, aber auch die Bieter, vor erhebliche Schwierigkeiten, wenn nicht das Verhandlungsverfahren gewählt werden kann. Die Erfahrung zeigt nämlich, dass komplexe, über längere Zeiträume geschlossene PPP-Verträge die Notwendigkeit mit sich bringen, dass über den Vertragsinhalt mit den ausgewählten Bietern verhandelt werden kann. Ohne Verhandlungen ist es nicht möglich, die zahlreichen Risken, die ein lange Zeit laufendes PPP-Modell für beide Vertragsteile mit sich bringt, optimal zu verteilen und damit den volks- und betriebswirtschaftlichen Nutzen eines PPP-Modelles nicht zu gefährden. In diesem Zusammenhang ist auch darauf hinzuweisen, dass die Entgeltmechanismen in aller Regel sehr komplex sind und insbesondere an die jeweilige Risikozuteilung angepasst werden müssen. Nach Ansicht der Republik Österreich können daher bei einem komplexen PPP-Projekt durchaus die Voraussetzungen für die Anwendung des Verhandlungsverfahrens mit vorheriger Bekanntmachung vorliegen (dies muss freilich für jeden Einzelfall geprüft werden). Dies ist insbesondere in jenen Fällen von Bedeutung, in denen das Verfahren des wettbewerblichen Dialogs noch nicht ins nationale Recht umgesetzt oder zwar bereits umgesetzt, nicht aber das bestgeeignete Verfahren für die Vergabe eines konkreten Auftrags ist.

Zur Frage der Kommission: Grundsätzlich scheint das Verfahren des wettbewerblichen Dialogs durchaus geeignet, ein PPP-Projekt auf Vertragsbasis zu vergeben. Die Bestimmung des Art. 29 der RL 2004/18/EG birgt jedoch eine Reihe möglicher Probleme (hingewiesen wird darauf, dass die nachfolgende Auflistung der Probleme keineswegs erschöpfend ist):

Unklarheiten bestehen etwa bereits hinsichtlich der Beurteilung, ob der Anwendungsbereich des Art. 29 eröffnet ist. Fraglich ist nämlich, ob auf „objektive“ oder „subjektive“ Umstände abzustellen ist (ersteres legt die Definition „besonders komplex“ in Art. 1 (11) lit c nahe, letzteres Erwägungsgrund 31 (arg „anzulasten“) und Art. 29 Abs. 1 („falls seines Erachtens“). Ein Abstellen auf „rein objektive“ Umstände („ist der Auftraggeber in der Lage die Konditionen festzulegen“) wäre bei einer strikten Lesart problematisch, denn daraus könnte abgeleitet werden, dass der Auftraggeber jede nur erdenkliche Anstrengung zu unternehmen hat, um die Konditionen festzulegen. Dies würde im Endeffekt bedeuten, dass z.B. der Auftraggeber gezwungen wäre, in völlig unwirtschaftlicher Weise eine Vielzahl von externen Beratern (Sachverständigen) zu beschäftigen, die letztlich alle erdenklichen Varianten ausloten und bewerten müssten, damit der Auftraggeber die für ihn „beste“ Ausschreibungskondition eruieren kann (arg: „objektiv ist die Festlegung der Konditionen möglich“, ob der damit verbundene Aufwand in einer wirtschaftlichen Relation zum geschätzten Auftragswert steht, ist nicht erheblich). Die Republik Österreich geht jedoch davon aus, dass auch in diesem Fall die Bestimmung so zu verstehen ist, dass eine (objektiv nachprüfbare) wirtschaftliche Unverhältnismäßigkeit für die Festlegung der rechtlichen/finanziellen/technischen Konditionen als „objektiv unmöglich“ im Sinne des Art. 1 Abs. 11 lit. c gilt.

Unklar ist auch wie die gemäß Anhang VII zwingend (!) vorgeschriebenen Informationen für Bekanntmachungen (insbes. Z 6 Hinweis auf Optionen, Lose, Losgrößen bei Bauaufträgen, Einordnung des Lieferauftrages als Kauf, Leasing usw., Optionen bei Lieferungen und Dienstleistungen; Z 7, Z 9 und andere mehr) bereitgestellt werden können, da gemäß der Definition der wettbewerbliche Dialog nur dann zulässig ist, wenn man gerade nicht weiß, ob man Optionen braucht (diese sinnvoll sind), ob ein Kauf besser als ein Leasing ist usw. Hier wäre eine Klarstellung dringend angebracht, welche Informationen zwingend anzugeben sind bzw. ob die Informationen nur „gegebenenfalls“ (wenn der Auftraggeber zumindest das schon weiß) anzugeben sind.

Es wird sich erst in der Praxis zeigen, ob es möglich ist, bereits in der Bekanntmachung – also noch vor der Dialogphase und zu einem Zeitpunkt, zu dem die Art der Umsetzung der Leistung noch nicht feststeht – die Zuschlagskriterien so konkret anzugeben, dass anhand dieser Kriterien die Angebote, welche nach Abschluss der Dialogphase erstattet werden, sachgerecht und hinreichend genau beurteilt werden können. So ist es durchaus vorstellbar, dass im Rahmen der Verhandlungen zu einem PPP-Projekt zum Teil nicht unwichtige Aspekte abgeändert werden und die Dialogphase zeigt, dass bestimmte Aspekte für die Entscheidung des Auftraggebers wesentlich sind, die in den Zuschlagskriterien noch nicht berücksichtigt wurden. Auch ist es in einem flexiblen Verfahren mit einer definitionsgemäß erst am Ende möglichen Beschreibung der Leistung schwierig, die Vergleichbarkeit der Angebote sicherzustellen.

Weiters besteht die Gefahr, dass der öffentliche Auftraggeber nach der „Rosinenmethode“ die am Markt verfügbare beste Lösung ermittelt und damit substantielles Know-how eines (oder mehrerer) Marktteilnehmer an sich zieht, um die so ermittelte Ideallösung in der anschließenden Angebotsphase der billigsten Realisierung zuzuführen (ob die in Art. 29 Abs. 3 3.UA getroffene „Lösung“ in der Praxis anwendbar ist, wird erst die Erfahrung zeigen). Diese Frage nach den geistigen Eigentumsrechten der Bieter steht wiederum in einem Spannungsverhältnis zum Ziel des effizienten Mitteleinsatzes der öffentlichen Hand. So scheint fraglich, ob die (teilweise sicherlich notwendige) Abgeltung von Konzepten/Lösungsvorschlägen nicht zum Zug gekommener Bewerber das Verfahren des wettbewerblichen Dialogs für die Auftraggeber wirtschaftlich erscheinen lässt. Es stellt sich in diesem Zusammenhang auch die Frage, ob und in welchem Umfang Auftraggeber schon vorab (z.B. in der

Bekanntmachung) die Zustimmung der Bieter zur Weitergabe von Informationen verlangen können.

Bei manchen begutachtenden Stellen in Österreich hat sich der Eindruck ergeben, dass Art. 29 Abs. 6 nach der Dialogphase auf ein offenes Verfahren hinzielt (arg.: „Einladung zur Legung eines *endgültigen* Angebots“). Die Republik Österreich geht jedoch davon aus, dass nach der Dialogphase jedenfalls Verhandlungen zulässig sind (so auch das Verständnis im Rat bei der Diskussion der Bestimmung). In diesem Zusammenhang sei auch darauf hingewiesen, dass die Richtlinie nicht regelt, in welchem Detaillierungsgrad über verschiedene Lösungen Dialog geführt werden kann bzw. soll (oder gar muss).

Gemäß Art. 29 Abs. 4 der RL kann der Auftraggeber einzelne Lösungen ausscheiden. Nicht völlig klar ist nach dem Richtlinientext, ob mit dem Ausscheiden der Lösung auch ein Ausscheiden des die Lösung anbietenden Bieters verbunden ist bzw. sein muss oder ob der entsprechende Bieter weiter am Dialog und der anschließenden Vergabe des Vorhabens und zwar hinsichtlich anderer Lösungen teilnehmen kann.

Weiters stellt sich die Frage, bis zu welcher Grenze „Nachverhandlungen“ gemäß Art. 29 Abs. 7 2. Unterabsatz zulässig sind (insbesondere worauf sich diese „Erläuterungen und Klarstellungen“ beziehen dürfen und wie andere Bieter davon – zur Wahrung ihrer Rechte – ausreichend Kenntnis erlangen).

3. Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Nach Konsultation der betroffenen Akteure scheinen grundsätzlich (zu den Ausnahmen s.o. bzw. unten) keine unüberbrückbaren Hindernisse für die Vergabe und Durchführung von PPP-Projekten zu bestehen.

Probleme könnten allerdings im Zusammenhang mit den Zuschlagskriterien auftreten. So ist eine sinnvolle Festlegung von Zuschlagskriterien ohne Kenntnis der verschiedenen (erst in der Dialogphase präsentierten) Lösungsansätze und der gebotenen Risikoverteilung schwierig bzw. nur äußerst rudimentär möglich (siehe dazu auch schon oben zu Frage 2). Mangels konkreter Abgrenzungskriterien ist weiters die erforderliche Abgrenzung zwischen Bau- und Dienstleistungsaufträgen einerseits und Bau- und Dienstleistungskonzessionen andererseits problematisch (siehe dazu noch näher unten zu Frage 4).

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Der Kommission ist zuzustimmen, dass es nicht einfach ist, von Vornherein festzulegen, ob das ausgeschriebene Vorhaben ein öffentlicher (Bau- oder Dienstleistungs) Auftrag oder eine Konzession ist. Zutreffend zeigt die Kommission dabei das Problem auf, dass sich im Laufe des Verfahrens die Einstufung als öffentlicher Auftrag oder Konzession ändern kann und dies zu erheblicher Rechtsunsicherheit sowohl für den Auftraggeber als auch die Bieter führt. Denn es darf nicht übersehen werden, dass die Durchführung eines Verfahrens zur Vergabe eines PPP-Projektes auf beiden Seiten erheblichen Zeitaufwand und Kosten verursacht. Insbesondere wenn sich erst zu einem verhältnismäßig späten Verfahrenszeitpunkt zeigt, dass der nunmehr in Rede stehende Auftrag nicht mehr als Konzession zu beurteilen oder die Einordnung zumindest fraglich ist, wären alle vergangenen Aufwendungen frustriert, wenn sich das Verfahren insgesamt als nicht mehr rechtmäßig darstellen würde.

Um diesem Rechtsrisiko auszuweichen, könnte ein öffentlicher Auftraggeber verleitet sein, von Vornherein die „sichere“ Variante zu wählen und den Auftrag als „klassischen“ öffentlichen Auftrag ausschreiben. Wie aber oben bereits aufgezeigt, wäre es diesfalls – folgt man der Auffassung der Kommission – öffentlichen Auftraggebern in aller Regel verwehrt, PPP-Vorhaben im Wege des Verhandlungsverfahrens zu vergeben. Damit würden jedoch in vielen Fällen volks- und betriebswirtschaftlich wertvolle Optimierungspotentiale verloren gehen.

Der **Vorschlag der Kommission**, dieses Problem durch **einheitliche Regelungen für alle PPP-Projekte** zu lösen, ist nach Ansicht der Republik Österreich jedoch **kein geeignetes Mittel**. Die Abgrenzungsfragen zwischen Auftrag und Konzession würden diesfalls lediglich durch – noch weniger geklärte und äußert schwierige – Abgrenzungsfragen zwischen PPP-Projekt und „normalem“ Auftrag bzw. Konzession ersetzt. So scheint es denkbar schwierig, etwa eine „normale“ Dienstleistungskonzession von einem PPP-Projekt in Form einer Dienstleistungskonzession durch klare Merkmale zu unterscheiden (ein bloßes Abstellen auf die Vertragsdauer wäre wohl zu wenig und würde der besonderen Natur von PPP nicht gerecht werden; beim Aspekt der Risikoverteilung sind jedoch Unterschiede nicht ohne weiteres ersichtlich).

Möglicherweise kann dieses Problem bereits durch die Umsetzung des wettbewerblichen Dialogs entschärft werden. Damit wäre zumindest sichergestellt, dass die – zu Beginn des Vergabeverfahrens häufig nicht abschätzbare – Frage der Risikoverteilung nicht notwendigerweise zu einem Wechsel des bei der Auswahl des Vertragspartners anzuwendenden Verfahrens führt.

Sollten nach Auffassung der Kommission nach Durchführung des gegenständlichen Konsultationsverfahrens Unklarheiten etwa zur Frage der Abgrenzung zwischen Konzessionen und Aufträgen bestehen, so wäre die Klärung der Fragen durch eine Auslegende Mitteilung zweckmäßig. Hilfreich könnte eine Klarstellung sein, welche konkreten Risken bzw. welches Ausmaß an Risikotragung der private Partner übernehmen muss, damit eine Konzession vorliegt, bzw. wie hoch der vom Auftraggeber bezahlte Anteil des Auftragswertes sein kann, ohne dass dies einer Konzession entgegen steht. (Möglich wäre auch – vergleichbar mit der Mitteilung der EUROSTAT zur Behandlung öffentlich-privater Partnerschaften vom 11. Februar 2004, wonach Vermögenswerte, die Gegenstand eines PPP sind, nicht als Vermögenswerte des Staates zu klassifizieren sind, wenn der private Partner das Baurisiko und mindestens entweder das Ausfallsrisiko oder das Nachfragerisiko trägt – klarzustellen, wie die am Markt gegenwärtig üblichsten PPP Modelle vergaberechtlich einzustufen sind; auch wenn ein konkretes PPP-Projekt vom „gängigen Modell“ abweicht, könnte dies zumindest einen Anhaltspunkt darstellen.)

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Bereits aus den Grundsätzen des EG-Vertrages ergibt sich eine weitgehende Verpflichtung, Unternehmen aus allen Mitgliedstaaten bei Konzessionsvergaben zuzulassen. Für Baukonzessionen enthält die RL 93/37/EWG bzw. die RL 2004/18/EG darüber hinaus spezifische Vorschriften, die den Wettbewerb innerhalb der Gemeinschaft sicherstellen sollen. Nach Auffassung der Republik Österreich ist daher bereits durch das geltende anwendbare Recht ein zwischenstaatlicher bzw. innergemeinschaftlicher Wettbewerb sichergestellt. Dies haben auch die im Zuge der Konsultationen zum vorliegenden Grünbuch befassten Auftraggeber, Unternehmen und Interessensverbände mehrheitlich bestätigt.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Bereits aus der Beantwortung der Frage 5 ergibt sich, dass ein **gemeinschaftlicher Rechtsakt zur Festlegung eines Verfahrensrahmens für die Vergabe von Konzessionen entbehrlich** ist **und** von der Republik Österreich **abgelehnt** wird.

Es wird weiters darauf hingewiesen, dass sich der Gemeinschaftsgesetzgeber bewusst dafür entschieden hat, Konzessionen einem weniger strengen Vergaberegime zu unterwerfen (Baukonzessionen) bzw. vom Anwendungsbereich des sekundärrechtlichen Vergaberegimes überhaupt auszuschließen (Dienstleistungskonzessionen). Diese bewusste Entscheidung hat der europäische Gesetzgeber erst kürzlich bei der Erlassung des Legislativpakets, welches die diesbezügliche Rechtslage im Wesentlichen unverändert lässt, bestätigt. Der Gemeinschaftsgesetzgeber hat mit dieser Entscheidung der Tatsache Rechnung getragen, dass der Begriff „Konzession“ eine Vielfalt von unterschiedlichen, sich stets weiterentwickelnden Fällen umfasst (vgl. auch die Mitteilung der Kommission zu Auslegungsfragen im Bereich Konzessionen im Gemeinschaftsrecht) und bei der Vergabe von Konzessionen daher eine größere Flexibilität als bei der Vergabe von klassischen öffentlichen Aufträgen erforderlich ist. Weiters muss berücksichtigt werden, dass ein Konzessionär nicht nur eine Leistung im öffentlichen Interesse erbringt, sondern – anders als ein Auftragnehmer, der nur das kalkulatorische Risiko trägt – auch das wirtschaftliche Risiko der Leistungserbringung trägt. Bei der Beurteilung der Notwendigkeit von Regelungen muss deshalb sowohl dem Auftraggeber (bei der Auswahl des Partners) als auch dem Auftragnehmer (für die Ausführung der Leistung) ein größerer Handlungsspielraum zugestanden werden. Es ist nicht ersichtlich, warum diese (richtige) Entscheidung des europäischen Gesetzgebers aus Anlass der Diskussion von PPP revidiert werden sollte.

Ein gemeinschaftsrechtlicher **Rechtsakt** zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe ist daher **nicht erforderlich**.

Allenfalls könnte in einer Auslegenden Mitteilung Fragen im Zusammenhang mit Konzessionsvergaben klargestellt werden (vgl. auch schon oben zu Frage 4). Allfällige bestehende Probleme im Zusammenhang mit Konzessionsvergaben sollten aber nicht als Vorwand für die vollständige „Verrechtlichung“ der Konzessionsvergabe bzw. ihre Einbeziehung in das (diesbezüglich völlig ungeeignete) allgemeine Vergaberegime dienen.

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben as öffentliche Aufträge oder als Konzessionen einzustufen sind?

Hiezu wird zunächst auf die Antwort zu Frage 6 verwiesen. Danach ist ein neues **Gesetzgebungsvorhaben** der Kommission **nicht erforderlich**.

Im Hinblick auf den Vorschlag der Kommission, die Vergabe von Aufträgen und Konzessionen im Rahmen von PPP-Projekten einem einheitlichen Regime zu unterwerfen, darf – wie bereits oben ausgeführt – nicht übersehen werden, dass die reine Erbringung einer Leistung im Auftrag sich von einer Erbringung der Leistung im Rahmen einer Konzession deutlich unterscheidet. Trägt ein Auftragnehmer lediglich das kalkulatorische Risiko, so ist ein Konzessionär doch dem wirtschaftlichen Risiko der gesamten Leistungserbringung ausgesetzt. Dieser Unterschied sollte auch (weiterhin) im Hinblick auf Überlegung zur Gestaltung des gemeinschaftsrechtlichen Rahmens beachtet werden.

Besondere Vorschriften nur für PPP würden im Übrigen eine entsprechende Definition von PPP voraussetzen. Angesichts der bestehenden großen Auffassungsunterschiede über den Begriff PPP und mangels konkreter Abgrenzungskriterien zu „normalen" Aufträgen oder Konzessionen (siehe dazu auch schon oben zu Frage 4) wären Sonderregelungen für PPP nach Ansicht der Republik Österreich äußerst problematisch und dem Ziel einer für alle Rechtsanwender klaren Rechtslage nicht dienlich. Darüber hinaus ist zu bemerken, dass der bestehende vergaberechtliche Rahmen nicht verlassen werden sollte. Eine Gesetzgebung ausschließlich für PPP, die ein eigenes Vergaberegime neben dem bestehenden errichtet, wäre überschießend und für die Praxis erschwerend.

Allenfalls könnte in einer auslegenden Mitteilung der gemeinschaftsrechtliche Rahmen von PPP-Projekten geklärt werden. Dabei stellen sich neben dem Vergaberecht auch zahlreiche weitere komplexe rechtliche Fragen, wie etwa Aspekte des Wettbewerbs- und des Beihilfenrechts. Eine diesbezügliche Klarstellung darf jedoch nicht zu einer (weiteren) Einschränkung der Handlungsfreiheit der betroffenen Akteure führen.

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle

interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?
9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Zu „privat initiierten“ PPP wird zunächst grundsätzlich darauf hingewiesen, dass es selbstverständlich immer möglich ist, dass private Unternehmer mit einer Idee für ein bestimmtes gemeinsamen Vorhaben an einen öffentlichen Auftraggeber herantreten und somit selbst die Initiative zu einem PPP-Vorhaben ergreifen. Die Entscheidung, ein solches Vorhaben auch tatsächlich durchzuführen, muss freilich bei der öffentlichen Hand verbleiben, da nur sie die Disposition über die Notwendigkeiten der Hereinnahme privaten Kapitals oder privaten Wissens treffen kann.

Auch „privat initiierte“ PPP sind ihrem tatsächlichen Inhalt nach (derzeitig geltenden Recht) entweder als öffentlicher Auftrag oder als Dienstleistungs- bzw. Baukonzession zu qualifizieren. Entsprechend muss die Vergabe des Vorhabens im Wege öffentlicher Bekanntmachung, in einem fairen und angemessen transparenten Verfahren unter Beachtung der Grundsätze des EG-Vertrages, insbesondere des Grundsatzes der Nicht-Diskriminierung, erfolgen. Dabei ist der Wissensvorsprung des privaten „Initiators“ auszugleichen und allen am Vergabeverfahren beteiligten Unternehmen der gleiche Wissensstand verfügbar zu machen (und nicht etwa umgekehrt ein initiativer Bewerber auf Grund des durch seine Initiative erarbeiteten Wissensvorsprungs vom Vergabeverfahren auszuscheiden; letzteres verlangt auch § 21 Abs. 3 des österreichischen Bundesvergabegesetzes (BVergG) nur, wenn ansonsten ein fairer und lauterer Wettbewerb ausgeschlossen wäre, vgl. hiezu ausführlich die Erläuterungen zum BVergG AB 1118 XXI.GP, 29).

An dieser Stelle wird auch auf das oben zu Frage 2 betreffend den wettbewerblichen Dialog erwähnte Problem der Aufwandsabgeltung hingewiesen. Eine getrennte Honorierung für ein in privater Initiative erarbeitetes Konzept wäre – losgelöst vom Vergabeverfahren – grundsätzlich denkbar. Dies dürfte jedoch die öffentliche Hand nicht zu unvorhergesehenen und unkontrollierbaren Ausgaben verpflichten. Es sollte dabei weiters nicht vergessen werden, dass ein solcher Vorschlag eines privaten Unternehmens bis zu einem gewissen Grad der – im Wirtschaftsleben zweifellos notwendigen – Geschäftsanbahnung dient und die Kosten seiner Erstellung daher Teil des unternehmerischen Risikos darstellen.

Eine unterschiedliche Behandlung von „öffentlich initiierten“ und „privat initiierten“ PPP ist jedenfalls abzulehnen.

10. Welche Erfahrungen haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?
11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!
12. Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Es sind aus der vergaberechtlichen Rechtsprechung in Österreich Fälle bekannt, in denen sich öffentliche Auftraggeber unzulässiger oder diskriminierender Praktiken bei der Vergabe von Aufträgen bedient haben. Es wird diesbezüglich jedoch auf die funktionierenden Rechtsschutzmechanismen verwiesen, die im Falle gemeinschaftswidriger Praktiken einen raschen und wirksamen Rechtsschutz im Sinne der gemeinschaftsrechtlichen Vorgaben und unter Beachtung des Effizienz- und des Äquivalenzgrundsatzes gewährleisten. Einschlägige Erkenntnisse der Vergabekontrollorgane können unter http://www.ris.bka.gv.at/verg/ abgerufen werden.

An dieser Stelle darf zu den Ausführungen der Kommission in Rz 46 zur zulässigen Laufzeit von Verträgen folgendes ausgeführt werden:

Die EG-Vergaberichtlinien enthalten in den Bestimmungen über die Berechnung des Auftragswertes Verweise auf Verträge mit unbestimmter Laufzeit bzw. auf Daueraufträge (vgl. Art. 7 Abs. 5 und 6 der RL 92/50/EWG und Art. 5 Abs. 2 der RL 93/36). Daraus lässt sich schließen, dass die Vergabe von **längerfristigen oder auch unbefristeten Aufträgen grundsätzlich zulässig** ist. Den vergaberechtlichen Vorschriften lassen sich auch sonst keine Anhaltspunkte für eine nur beschränkte Zulässigkeit der Vergabe von längerfristigen oder unbefristeten Aufträgen entnehmen. Aus diesem Grund ist die **Aussage in Rz 46 des Grünbuches**, wonach eine „übermäßig lange Laufzeit“ auf Grund der für den Binnenmarkt geltenden Grundsätze oder der wettbewerbsrechtlichen Bestimmungen des EG-Vertrags verboten sein dürfte, in dieser Allgemeinheit **nicht zutreffend**. Ebenso ist bei der Festlegung der angemessenen Vertragslaufzeit eine ausschließliche Orientierung an der Amortisierung der Investitionen und einer Verzinsung des eingesetzten Kapitals zu eng, da diesfalls andere berechtigte Interessen, wie etwa technische Kontinuität oder die Aufrechterhaltung der Versorgungssicherheit, nicht berücksichtigt werden können.

Zutreffend ist allerdings, dass das Transparenzgebot verlangt, eine vorherige Festlegung der Laufzeit, sofern dies möglich ist, in den Vergabeunterlagen zu veröffentlichen.

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

In den Rz 47ff behandelt die Kommission die Frage der Zulässigkeit von Vertragsanpassungen ohne erneute Bekanntmachung der Vergabe des PPP-Projektes.

Nach Ansicht der Republik Österreich sind Vertragsanpassungen und –änderungen während der Laufzeit von PPP-Projekten nicht anders zu beurteilen als nachträgliche Vertragsanpassungen bei sonstigen (komplexen) Aufträgen und mit den bestehenden Mitteln des Vergaberechts lösbar:

Es ist zunächst **nicht zutreffend**, dass, wie von der Kommission in Rz 49 ausgeführt, „**jede inhaltliche Änderung**“ in Bezug auf den Vertragsgegenstand dem Abschluss eines neuen Vertrags gleichzusetzen ist, was wiederum einen erneuten Aufruf zum Wettbewerb impliziert. Vielmehr kann ein neuer Auftrag und damit eine erneute Verpflichtung zur Bekanntmachung nur dann angenommen werden, wenn der bestehende Vertrag in wesentlichen Punkten geändert wird. Nur eine wesentliche Vertragsänderung (eine solche wird etwa bei einer Änderung des Preises, der Laufzeit oder einer Ausweitung der ausgeschriebenen Menge anzunehmen sein) ist als Abschluss eines neuen Vertrags (nach dem österreichischen Zivilrecht: als Novation im Sinne des § 1376 ABGB) und somit grundsätzlich als ausschreibungspflichtiger Vorgang zu werten (vgl. auch EuGH vom 5. Oktober 2000, Rs. C-337/98, Kommission gegen Französische Republik, Rz 44ff, wo der Gerichtshof bei der Beurteilung der Frage, ob die Änderung eines bestehenden Vertragsentwurfs durch nachfolgende Vertragsverhandlungen eine Ausschreibungspflicht auslöst, auf den Willen der Parteien zur Neuverhandlung wesentlicher Vertragsbestimmungen abstellt). Im Übrigen folgt dies **auch aus den Aussagen der Kommission selbst**, die in ihrer **Stellungnahme** in der **anhängigen Rs. 50/03, Simrad** et al, Rz 8, darauf abstellt, dass ein neuer Vertrag nur dann angenommen werden kann, ***„wenn sich der Auftragsgegenstand wesentlich ändert, sodass eigentlich ein ‚Aliud’, etwas anderes, beschafft werden soll***“.

Unwesentliche, geringfügige Eingriffe durch die Vertragsparteien begründen hingegen keine Ausschreibungspflicht, weil sie bei (fast) jeder langfristigen Vertragsabwicklung zur Anpassung an geänderte (ökonomisch, technische, gesetzliche) Rahmenbedingungen oder praktische Parteienbedürfnisse erforderlich sind (vgl. auch Heid, Eingriff in Altverträge mit komplexem Leistungsbild, RPA 2003, 318; vgl. im Übrigen auch die Kommission im ggstdl. Grünbuch, Rz 47: *„müssen sich die ÖPP-Beziehungen weiterentwickeln, um sich an Veränderungen des makroökonomischen oder technischen Umfelds sowie an das öffentliche Interesse anzupassen*“). Bei der Beurteilung der Wesentlichkeit der Vertragsanpassung ist auf alle Umstände des betroffenen Auftrags bzw. Projektes, wie etwa auf den Projektumfang, den Projektgegenstand, die bereits vergangene Projektlaufzeit sowie die noch verbleibende Restdauer des Projektes, Bedacht zu nehmen.

Auch wesentliche Änderungen eines bestehenden Vertrages können jedoch zulässig sein, wenn sie vom vertraglichen Konzept umfasst sind, das bereits Gegenstand einer rechtsgültigen Ausschreibung war. Dabei müssen die Umstände und Bedingungen, unter denen die Vertragsbeziehungen angepasst werden können, präzise im Vertrag dargelegt sein (zB Preis- oder Gebührenanpassungsklauseln). Diese Vertragsmodifikationen führen dann nicht zu einer neuen Ausschreibungspflicht, wenn sie unmittelbar auf einer entsprechenden Änderungsklausel im Vertrag beruhen und von dieser gedeckt sind, die Vertragsänderung daher ohne übereinstimmende Willenserklärung der Vertragspartner zustande kommt. Dies ist etwa bei der vertraglichen Indexierung der Vergütung der Fall. Findet die Vertragsanpassung keine vollständige Deckung in einer bestehenden Revisionsklausel, ist eine übereinstimmende Willenserklärung der Vertragspartner notwendig und es kommt in der Regel zu einem neuen Vertragsabschluss, welcher entsprechend der vergaberechtlichen Regelungen ausgeschrieben werden muss (vgl. Heid, Eingriff in Altverträge mit komplexem Leistungsbild, RPA 2003, 318, welcher so zwischen „derivativer“ und „originärer“ Vertragsanpassung unterscheidet).

Es ist nicht auszuschließen, dass bestimmte Preisanpassungs- oder Revisionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können. So dürfen sie nicht so weitgehende Gestaltungsmöglichkeiten eröffnen, dass ein fairer Bieterwettbewerb gefährdet ist. Es kann allerdings nur im **konkreten Einzelfall** beurteilt werden, ob eine bestimmte Vertragsklausel zu weit gefasst und daher geeignet ist, die Grundsätze des EG-Vertrags zu unterlaufen. Grundsätzlich wird davon auszugehen sein, dass eine präzise Formulierung von Preisanpassungs- und Revisionsklauseln bereits im immanenten Interesse der Vertragsparteien liegt.

Allerdings wird selbst ein sorgfältig erstellter Vertrag nicht in allen Fällen sämtliche Eventualitäten und Entwicklungsmöglichkeiten über einen 20-30jährigen Zeitverlauf adäquat abbilden können. Es sind daher – wie von der Kommission ausgeführt – auch solche (wesentlichen, nicht durch die Vertragsunterlagen gedeckte) Änderungen zulässig, die durch ein unvorhergesehenes Ereignis erforderlich werden oder aus Gründen der öffentlichen Ordnung, Sicherheit oder Gesundheit gerechtfertigt sind.

Zusammenfassend gilt nach Ansicht der Republik Österreich daher Folgendes: Unwesentliche, geringfügige Änderungen eines bestehende Vertrages sind jedenfalls zulässig und begründen keine erneute Ausschreibungsverpflichtung. Wesentliche Änderungen sind hingegen ohne erneutes Ausschreibungsverfahren nur dann zulässig, wenn sie bereits in der Ausschreibung bzw. im Vertrag unter präzise definierten und im Einklang mit den Grundsätzen der Gleichbehandlung und der Transparenz stehenden Bedingungen vorgesehen sind oder durch ein unvorhergesehenes Ereignis erforderlich werden oder aus Gründen der öffentlichen Ordnung, Sicherheit oder Gesundheit gerechtfertigt sind.

Diese Überlegungen **gelten auch für Änderungen in der Person des privaten Partners**: Eine Änderung in der Person des privaten Partners stellt eine wesentliche Änderung des Vertrags dar und muss daher – außer uU in den Fällen der Gesamtrechtsnachfolge – grundsätzlich zu einem erneuten Aufruf zum Wettbewerb führen. Anders ist der Fall dann, wenn bereits in den Ausschreibungsunterlagen bzw. im Vertrag klargestellt war, dass ein bestimmter Dritter unter klar festgelegten (nicht-diskriminierenden) Voraussetzungen in den Vertrag eintreten kann. Diesfalls ist der Wechsel des Vertragspartners – nicht zuletzt auch im Hinblick auf die notwendigen Sicherheiten des Finanzierungspartners in PPP-Projekten – zulässig. Ebenso muss es möglich sein, dass unter bestimmten (im Vertrag genau definierten) Voraussetzungen dem privaten Partner der Auftrag entzogen wird und die Leistungen von der öffentlichen Hand selbst durchgeführt werden.

Zurückzuweisen ist in diesem Zusammenhang die Ansicht der Kommission, dass auch eine **Änderung in der Person des Projektmanagers zum Abschluss eines neuen Vertrages führt** (vgl. Rz 48 des Grünbuches). Der Austausch des Geschäftsführers bzw. Projektmanagers des Konzessionärs oder der Betreiberfirma ist eine Sache der internen Organisation der Vertragspartner und muss ohne neuerliche Ausschreibung des Projekts möglich sein, sofern die ordnungsgemäße Leistungserfüllung gewährleistet ist.

Die Frage, zu welchem Zeitpunkt solche Revisionsklauseln ausformuliert vorliegen müssen, wird maßgeblich von der (zulässigen) Verfahrensart abhängen, insbesondere davon, ob das Verhandlungsverfahren bzw. künftig auch das Verfahren des wettbewerblichen Dialogs gewählt werden kann. Problematisch könnte in diesem Zusammenhang nach Angabe einiger öffentlicher Auftraggeber sein, dass Revisionsklauseln nach Ansicht der Kommission schon in der Phase der Partnerauswahl ausformuliert sein müssen. Die konkret dem Vertragsabschluss zugrunde liegenden Preisanpassungs- oder sonstige Revisionsklauseln hängen teilweise maßgeblich vom konkret ausverhandelten Preismodell und sonstigen konkret ausverhandelten Vertragsbedingungen ab, sodass es nicht zielführend erscheint, wenn diese Klauseln ab dem Zeitpunkt der Bekanntmachung unveränderlich sein müssen. Gerade die Möglichkeit der Preisanpassung oder auch Anpassung sonstiger Vertragsbedingungen im Hinblick auf geänderte Umstände stellt einen wesentlichen Faktor der Risikoverteilung zwischen den Vertragsparteien dar. Wenn dieser Aspekt der Risikoverteilung mit den Bietern nicht verhandelt werden darf, kann dies zu einer suboptimalen Risikoallokation und damit volkswirtschaftlich hohen Kosten des Projektes führen.

Insbesondere in einem Verfahren des wettbewerblichen Dialogs können zweifellos nicht dieselben Anforderungen an die Ausschreibungsunterlagen gestellt werden wie z.B. in einem offenen Verfahren, bei dem die Ausschreibungsunterlagen so ausgestaltet sein müssen, dass sie Grundlage des Leistungsvertrages werden können. Insbesondere werden bestimmte Festlegungen, die erst im Laufe des Vergabeverfahrens im Zusammenwirken zwischen öffentlicher Hand und privatem Unternehmer entwickelt werden, nicht im Vorhinein für alle Bieter in gleicher Art vorgegeben werden können. Dazu zählen unter Umständen auch Festlegungen über die begleitende Kontrolle oder Revisions- und Interventionsklauseln.

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Die Phase nach der Auswahl des privaten Partners ist nicht mehr Gegenstand des Vergaberechts, sondern des (innerstaatlichen) Privatrechts. Auf die diesbezügliche Kompetenzbeschränkung des Art. 295 EGV wird verwiesen (zur Reichweite der Bestimmung vgl. Bär-Bouyssière in von der Groeben/Schwarze, Art. 295 Rz 7ff).

Notwendig ist daher eine klare Trennung zwischen dem Verfahren, das zum Vertragsabschluss führt (dazu gehören etwa auch die Regelungen über notwendige

Angaben in den Ausschreibungsunterlagen über den Inhalt des Vertrags, nicht aber die Festlegung der Vertragsbestandteile selbst), und den Regelungen über den Vertragsinhalt. Während das Verfahren grundsätzlich den Bestimmungen des Gemeinschaftsrechts unterliegt, ist eine (allfällige) Regelung des Vertragsinhaltes Sache der Mitgliedstaaten. In Bezug auf den Vertragsinhalt ist lediglich zu garantieren, dass – unbeschadet der derzeit bestehenden Ausnahmen vom Anwendungsbereich des Vergaberechts – Verträge über neue, bisher nicht vergebene Leistungen nicht ohne Durchführung eines neuerlichen Wettbewerbs geschlossen werden (vgl. dazu bereits die Ausführungen zu Frage 13). Hiefür bietet jedoch das bestehende Gemeinschaftsrecht bereits hinlänglichen Beurteilungsmaßstab und ausreichenden Schutz für potentielle Bieter.

Ein **gemeinschaftsrechtliches Gesetzesvorhaben zur Klärung bestimmter Aspekte der vertraglichen Rahmenbedingung für PPP** wird daher **von der Republik Österreich abgelehnt**.

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Nach Ansicht der Republik Österreich bestehen keine besonderen Probleme bei der Vergabe von Unteraufträgen im Zusammenhang mit PPP-Projekten.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, Ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?
17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Nach Ansicht der Republik Österreich ist eine **ergänzende Initiative** zur ausführlicheren Regelung der Vergabe von Unteraufträgen **nicht erforderlich**; ebenso wenig wird eine Umgestaltung der bestehenden Regeln im Hinblick auf PPP für zweckmäßig erachtet.

Es ist nicht klar, was die Kommission mit der Frage nach der Erweiterung des Anwendungsbereiches (wovon? Im Hinblick worauf?) in Frage 16 bezweckt. Sollte damit die Erweiterung des Anwendungsbereiches der Vergaberichtlinien gemeint sein, darf lediglich darauf hingewiesen werden, dass deren Anwendungsbereich bereits zufrieden stellend und ausreichend deutlich normiert ist.

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentlichen Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Zur Einrichtung institutionalisierter PPP ist zunächst zu bemerken, dass – wie die Kommission zutreffend festhält – die Gründung einer Gesellschaft durch öffentliche und private Partner sowie Privatisierungsvorgänge (verstanden als Veräußerung von Unternehmensanteilen vom öffentlichen an den privaten Sektor) grundsätzlich nicht dem Vergaberecht unterliegen, sondern allein die Bestimmungen des EG-Vertrags (insbesondere das Beihilfenrecht) zu beachten sind. Dies gilt nach Ansicht der Republik Österreich auch, wenn das zu privatisierende Unternehmen bereits vor der Anteilsübertragung mit der Erfüllung bestimmter Aufgaben durch die öffentliche Hand betraut worden ist. Die **Anwendbarkeit** des vergaberechtlichen Sekundärrechts wäre lediglich dann **zu bejahen, wenn** die Betrauung eines Unternehmens mit bestimmten Aufgaben (im Einklang mit den vergaberechtlichen Bestimmungen ohne Durchführung einer Ausschreibung, etwa durch zulässige In-house-Beauftragung) in Verbindung mit einer nachfolgenden Beteiligung eines privaten Partners in der **Absicht** getätigt wurde, das Vergaberecht **zu umgehen**. Ein Indiz dafür wäre, wenn dem in Rede stehenden Wirtschaftsgebilde unmittelbar vor der Kapitalübertragung ohne Wettbewerb besondere Aufgaben übertragen werden (vgl. auch Rz 69). Hinzuweisen ist auch hier, dass eine Einzelfallbetrachtung erforderlich ist. Erfolgt nämlich der Anteilsverkauf (objektiv nachprüfbar) deswegen, weil das Unternehmen unvorhersehbar in Liquiditätsprobleme geraten ist und allein ein Anteilsverkauf diese beseitigen würde, so stellt der Anteilsverkauf wohl keine Umgehung dar, selbst wenn ein enger zeitlicher Konnex mit einer Aufgabenübertragung prima facie besteht.

In Rz 63 hält die Kommission zutreffend fest, dass Wirtschaftsgebilde, auf die die vom Gerichtshof in der Rs. Teckal aufgestellten Bedingungen zutreffen, ohne Durchführung eines Vergabeverfahrens Aufträge bzw. Konzessionen erhalten können (sogenannte „In-House-Vergabe“). Nach der Rechtsprechung des EuGH liegt nur dann ein Vertrag im Sinne der Vergaberichtlinien vor, wenn sich der Vertragspartner formal vom Auftraggeber unterscheidet und ihm gegenüber eigene Entscheidungsgewalt besitzt. Es liegt daher kein vergaberechtlich relevanter Vorgang vor, wenn der Auftraggeber über die fragliche Person (= den Vertragspartner) eine Kontrolle ausübt wie über ihre eigenen Dienststellen und wenn diese Person zugleich ihre Tätigkeit im Wesentlichen für die Gebietskörperschaft oder die Gebietskörperschaften verrichtet, die ihre Anteile innehaben (vgl. Rs C-107/98, Teckal, Rz 50f). Bei der Beurteilung, ob diese Voraussetzungen vorliegen, ist stets eine Einzelfallbetrachtung unter Abwägung aller (rechtlichen und faktischen) Umstände erforderlich. Die Frage hängt nicht zuletzt von der Ausgestaltung des nationalen Rechts in Bezug auf die gewählte Gesellschaftsform, aber auch von der individuellen Ausgestaltung des Gesellschaftsverhältnisses ab.

Das Kriterium „Kontrolle wie über eine eigene Dienststelle“ verlangt nach Ansicht der Republik Österreich keine idente, sondern eine mit der verwaltungsinternen Kontrolle vergleichbare Beherrschung (vgl. dazu die unterschiedlichen Sprachfassungen der diesbezüglichen Passage des Urteils C-107/98 und die Ausführungen der Republik Österreich im Verfahren C-26/03). Bei der Beurteilung dieser Voraussetzung ist eine Gesamtbetrachtung aller einschlägigen gesetzlichen Regelungen und Umstände (z.B. vertragliche Nebenabreden, Satzungen) vorzunehmen. Falls sich daraus ergibt, dass der Vertragspartner einer Kontrolle untersteht, die es dem Auftraggeber ermöglicht, alle Entscheidungen des Vertragspartners in jedem Fall zu beeinflussen, dann ist dieser qualifizierte Kontrolltatbestand nach Ansicht der Republik Österreich erfüllt. „Kontrolle“ im Sinne des zitierten Erkenntnisses „Teckal“ bedeutet nach Ansicht der Republik Österreich eine „umfassende Kontrollmöglichkeit“, denn auch in der öffentlichen Verwaltung, auf die die Formulierung des Erkenntnisses „Teckal“ abzielt (argumentum: „Dienststelle“), ist es regelmäßig so, dass die „Unterbehörde“ selbständig Entscheidungen treffen kann, die „Oberbehörde“ aber das Recht hat, diese Entscheidungen jederzeit abzuändern bzw. das Recht und die Möglichkeit hat, die Entscheidung in einer bestimmten Angelegenheit „an sich zu ziehen“. Insofern muss daher eine umfassende und unbeschränkte Einflussmöglichkeit auf strategische Zielstellungen wie auch alle Einzelentscheidungen bei der Leitung einer Gesellschaft gewährleistet sein. Dies kann etwa auch durch ein umfassendes Weisungsrecht bezüglich aller Entscheidungen des Rechtsträgers verwirklicht sein (vgl. etwa § 20 Abs. 1 des österreichischen GmbHG: „*Die Geschäftsführer sind der Gesellschaft gegenüber verpflichtet, alle Beschränkungen einzuhalten, die in dem Gesellschaftsvertrage, durch Beschluss der Gesellschafter oder in einer für die Geschäftsführer verbindlichen Anordnung des Aufsichtsrates für den Umfang ihrer Befugnis, die Gesellschaft zu vertreten, festgesetzt sind.*“).

Für eine solche umfassende Kontrollmöglichkeit ist es jedoch **nicht** zwingend **erforderlich**, dass der Auftraggeber 100%iger Eigentümer der betreffenden Einrichtung ist. Es steht daher einer „In-house-Konstruktion“ auch nicht entgegen, wenn ein privates Unternehmen an der betroffenen (beherrschten) Person beteiligt ist. Ausschlaggebend ist vielmehr die oben erläuterte qualifizierte Kontrollmöglichkeit (bei Beurteilung dieser Frage werden freilich die Beteilungsverhältnisse - in Verbindung mit den jeweiligen

Mehrheitserfordernissen - eine zentrale Rolle spielen) sowie die Frage, ob die so beherrschte Gesellschaft „im wesentlichen“ für den Auftraggeber tätig ist. Zu letzterem erlaubt sich die Republik Österreich lediglich darauf hinzuweisen, dass ihrer Ansicht nach ein systemimmanenter Rückgriff auf die 80%-Klausel des Art. 13 Abs. 1 der Sektorenrichtlinie nahe liegt.

Es darf in diesem Zusammenhang auch darauf hingewiesen werden, das ein Sachverhalt, auf den die vom EuGH in der Rs. Teckal aufgestellten Voraussetzungen zutreffen, auch **nicht** den primärrechtlichen Vorgaben des Diskriminierungsverbotes oder der Transparenzverpflichtung unterliegt (es liegt keine dem Gemeinschaftsrecht unterliegende wirtschaftliche Tätigkeit vor, vgl. etwa EuGI in der Rs T-77/92, *Parker,* Slg 1994, II-549, Rz 57 mit Hinweis auf die Urteile des Gerichtshofes vom 14.7.1972 in der Rs 48/69, *ICI/Kommission*, Slg. 1972, 619, Rz 136 bis 141, und vom 6.3.1974 in den Rs 6/73 und 7/73, *Istituto Chemioterapico Italiano und Commercial Solvents/Kommission*, Slg. 1974, 223, Rz 41, sowie Rs C-73/95 P, *Viho/Kommission*, Slg 1996, I-5457, Rz 15ff).

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potentiell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmen haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Nach Ansicht der Republik Österreich ist **keine Initiative auf Gemeinschaftsebene erforderlich**, um die Verpflichtungen der Auftraggeber im Hinblick auf institutionalisierte PPP zu klären. Wenn es sich um eine vergaberechtlich relevante Auftragsvergabe handelt, wird das einzuhaltende Verfahren ohnehin in den bestehenden Richtlinien ausreichend geklärt. Eine bloße Unternehmensgründung bzw. –veräußerung hingegen wird in der Regel nach den Bestimmungen des Beihilfenrechts zu beurteilen sein. Die Verpflichtungen des Auftraggebers in Bezug auf den Wettbewerb können daher nur im jeweiligen Einzelfall festgestellt werden.

Allenfalls könnte in einer **Auslegenden Mitteilung** präzisiert werden, wann bzw. unter welchen Umständen und bei welchem zeitlichen Konnex nach Ansicht der Kommission bei einer (in-house) Beauftragung eines Wirtschaftskörpers mit nachfolgender (Teil-)Privatisierung Indizien für eine Umgehung des Vergaberechts vorliegen und damit die Anwendbarkeit der Vergaberichtlinien nach Auffassung der Kommission gegeben ist.

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Rechtssicherheit und Klarheit in Verbindung mit der notwendigen Flexibilität sind wesentlich für die Verbreitung von PPP. Neben dem Vergaberecht stellen sich weitere komplexe Fragen, insbesondere im Beihilfenrecht. Problematisch könnte eine allfällige Überreglementierung und eine Überspannung des Transparenzgebotes sein. Durch – wie von der Kommission angedacht – weitere, zusätzliche Regelungen besteht die Gefahr, dass die Gestaltungsfreiheit sowohl des Auftraggebers als auch des privaten Partners zu sehr beeinträchtigt wird und daher die Realisierung von Projekten und die Erbringung von Dienstleistungen im Rahmen von PPP unattraktiv werden.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?
22. Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verhaltensweisen auszutauschen? Sollte die Kommission noch Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Ein **Informationsaustausch** im Rahmen eines informellen Netzwerkes ist **sehr zu begrüßen**. Es könnten **insbesondere „best practices“, Musterausschreibungen oder Musterverträge ausgetauscht** werden.

Betrifft
Grünbuch PPP (Öffentlich-private Partnerschaften) der Kommission zu gemeinschaftliche Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Zum letzten Schreiben vom 18. Mai 2004, VST-4763/18, und den im Grünbuch aufgeworfenen Fragen, teilt das Amt der NÖ Landesregierung mit:

Zu Frage 1:
Die Kläranlage Waidhofen an der Thaya wurde (nach einem 2-stufigen Vergabeverfahren) von einem privaten Konsortium errichtet und wird von diesem Konsortium betrieben, die Gemeinde zahlt dafür ein jährliches Entgelt. Spezifische Rahmenbedingungen für solche Konstruktionen sind nicht bekannt.

PPP´s auf Vertragsbasis sind in folgenden Bereichen bekannt: Errichtung und Betrieb von Klär- und Wasserversorgungsanlagen, Hausmüllabholung, Altpapierrecycling.

Zu Frage 2:
Da der wettbewerbliche Dialog ein neues Vergabeverfahren ist, kann über seine Anwendung in der Praxis noch nicht viel ausgesagt werden. Er scheint aber bei der Vergabe von
ÖPP-Modellen durchaus zielführend. Dies deshalb, da in Österreich noch nicht viel Erfahrungen mit ÖPP vorliegen und durch den Dialog mit den Bietern die Auswirkungen von Auftraggeber-Wünschen abgeschätzt werden können.

Zu Frage 5 und 6:
Aus Sicht der öffentlichen Aufraggeber sollte von einem weiteren gemeinschaftlichen Rechtsakt Abstand genommen werden. Für einen konkreten Auftraggeber wird eine Konzessions-Vergabe ein seltener oder gar einmaliger Akt sein. Es wäre zu befürchten, dass deshalb bei einem umfangreicheren Regelwerk kleinere Mängel passieren, so dass vielleicht aus formalen Gründen jene Vergabe, die den Intentionen des Auftraggebers am besten entspricht, nicht durchgeführt werden kann.
Die in Ziffer 32 geäußerte Befürchtung, dass die derzeitige Situation kostentreibend wirkt, kann nicht geteilt werden. Es steht schließlich jedem Auftraggeber frei, unabhängig von Vorschriften oder Schwellenwerten, ein europaweites Verfahren durchzuführen.

Zu Frage 7 in Verbindung mit Ziffer 34:
Das Problem einer Umstufung kann dadurch umgangen werden, dass ein gewähltes Verfahren als rechtmäßig anerkannt wird, wenn es von vornherein nach bestem Wissen eingestuft wurde (vergleiche auch klassische Vergaben, bei denen die Einhaltung der Schwellwerte nach dem geschätzten Auftragswert und nicht nach tatsächlicher Auftragshöhe erfolgt.)

Zu Frage 8:
Wenn eine Vergabestelle zur Initiative aufruft, liegt nach unserem Sprachgefühl keine privat initiierte ÖPP mehr vor, sondern hat die Vergabestelle bereits ein Vergabeverfahren gestartet.
Wenn eine Vergabestelle auf private Initiative hin ein Vergabeverfahren durchführt sollte dem Initiator jedenfalls ein gewisser Startvorteil eingeräumt werden können.

Zu Frage 13:
Wenn die Interventionsklausel bedeutet, dass der private Partner ohne Wettbewerb durch einen anderen ersetzt wird, erscheint dies tatsächlich problematisch.
Kein Problem wäre es allerdings, wenn unter bestimmten Voraussetzungen (Cash Flow, wirtschaftliche Leistungsfähigkeit etc.) dem privaten Partner der Auftrag entzogen wird und von der öffentlichen Hand selbst die Leistungen durchgeführt werden (oder durch ein neues Vergabeverfahren ein neuer Partner gesucht wird). Dies wird sogar sinnvoll sein, wenn die Qualität der Leistung oder die Erhaltung der Substanz oder Lebensdauer einer Anlage gefährdet erscheinen.

Zu Frage 14:
Eine Klärung von vertraglichen Randbedingungen erscheint nicht erforderlich, vielmehr sollte die Flexibilität des Marktes in dieser Hinsicht nicht eingeschränkt werden.

Zu Frage 18:
In Niederösterreich ist uns Bereich der Siedlungswasserwirtschaft 1 institutionalisierte ÖPP bekannt und wurde dabei der private Partner unserer Ansicht nach durch ein rechtskonformes Vergabeverfahren ermittelt.

Es sollte auch die Rolle der Unabhängigen Verwaltungssenate beachtet werden.

Der Unabhängige Verwaltungssenat im Land NÖ hat die Aufgaben der Nachprüfungsbehörde auf Grund des NÖ Vergabe-Nachprüfungsgesetzes. Bei Einlangen von Anträgen ist daher zu prüfen, ob es sich um eine Vergabe im öffentlich-rechtlichen Bereich handelt und damit die Anwendbarkeit des NÖ Vergabe-Nachprüfungsgesetzes gegeben ist. Diese Prüfung erfolgt im Einzelfall und nur so weit, bis die zu lösende Frage (Anwendbarkeit des Gesetzes und damit Zuständigkeit des Unabhängigen Verwaltungssenates im Land NÖ) einwandfrei beantwortet werden kann. Eine darüber hinausgehende Überprüfung von rechtlichen Konstruktionen der Antragsteller, der Antragsgegner oder allfälliger Mitbeteiligter erfolgt nicht.

Zu dem im Grünbuch aufgeworfenen Fragen wird allgemein die Ansicht vertreten, dass auf Grund der bisherigen Erfahrungen des Unabhängigen Verwaltungssenates im Land NÖ die bisherigen Regelungen ausreichend erscheinen, und kein Handlungsbedarf für die Schaffung zusätzlicher Normen, weder auf europäischer noch auf nationaler Ebene, gesehen wird.

Betrifft
Grünbuch PPP (Öffentlich-private Partnerschaften) der Kommission zu gemeinschaftliche Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Ergänzend zum Schreiben vom 23. Juni 2004 zur Zahl VST-4763/18 übermittelt das Bundesland Niederösterreich noch eine Stellungnahme der Abteilung Finanzen zu folgenden Fragen:

Zu Frage 1

Der Abteilung Finanzen sind in der Theorie folgende Formen von ÖPP auf Vertragsbasis bekannt:

- **Betriebsführungsmodell**
- **Betriebsüberlassungsmodell**
- **Kooperationsmodell**
- **Konzessionsmodell**
- **Betreibermodell**

Hingegen sind der Abteilung Finanzen keinerlei spezifische gesetzliche oder andere Rahmenbedingungen für derartige Konstruktionen bekannt.

Zu Frage 2

Für die Abteilung Finanzen ist kein wesentlicher Unterschied zwischen dem Verfahren des "wettbewerblichen Dialogs" und dem bei der Vergabe geistig-schöpferischer Dienstleistungen üblicherweise angewendeten Verhandlungsverfahren mit vorheriger Bekanntmachung ("zweistufiges Vergabeverfahren") erkennbar.

Sollte diese Ansicht der Abteilung Finanzen zutreffen, wären mit diesem Verfahren des "wettbewerblichen Dialogs" keine bedeutenden Verbesserungen gegenüber der derzeitigen Rechtslage verbunden.

Zu Frage 4

Die Abteilung Finanzen hat bisher an vier Verfahren zur Vergabe einer Konzession in der Europäischen Union teilgenommen. Die dabei gewonnenen Erfahrungen lassen sich dahingehend zusammenfassen, dass die Vorbereitung der Ausschreibung sowie die Verhandlungen mit den Interessenten äußerst umfangreich und mühsam sind, dass dafür nach Zuschlagserteilung die Auftragsabwicklung rasch, flexibel und unbürokratisch abläuft, wobei allerdings die Eingriffs- und Steuerungsmöglichkeiten des öffentlichen Auftraggebers stark eingeschränkt sind.

Zu Frage 5

Die Abteilung Finanzen vertritt die Ansicht, dass mit dem bestehenden Verhandlungsverfahren mit vorheriger Bekanntmachung ("zweistufiges Vergabeverfahren") eine ausreichende gemeinschaftsrechtliche Grundlage für die Abwicklung von Konzessionsvergabeverfahren besteht.

Die bisherige Erfahrung hat gezeigt, dass insofern kein tatsächlicher Wettbewerb herrscht, als sich ausschließlich österreichische Unternehmen um Konzessionsvergaben beworben haben. Der Grund dafür dürfte darin liegen, dass die derartigen Vergaben zugrunde liegenden Strukturen sehr komplex sind, weshalb nur solche nichtösterreichischen Unternehmen teilgenommen haben, die über Tochterunternehmen im Inland verfügen.

Zu Frage 6

Ein Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe erscheint nur dann wünschenswert, wenn damit eine Vereinfachung und Beschleunigung im Vergleich zum bisher praktizierten Verhandlungsverfahren mit vorheriger Bekanntmachung ("zweistufiges Vergabeverfahren") verbunden ist.

Zu Frage 7

Eine Gleichbehandlung in rechtlicher Hinsicht von Verfahren zur Vergabe öffentlicher Aufträge und von Verfahren zur Vergabe von Konzessionen wird dezidiert abgelehnt!

Die derzeit lediglich eingeschränkte Regelung der Vergabe von Konzessionen im Gemeinschaftsrecht (vgl. RNr. 28 bis 30) sollte keinesfalls verschärft werden!

Zu Frage 8

Die Abteilung Finanzen verfügt noch nicht über Erfahrungen mit privat initiierten ÖPP.

Es wird allerdings davon ausgegangen, dass entsprechend der geltenden Rechtslage dann, wenn das von Privaten initiierte Projekt tatsächlich umgesetzt werden soll, zumindest ein Verhandlungsverfahren mit vorheriger Bekanntmachung ("zweistufiges Vergabeverfahren") durchzuführen ist.

Zu Frage 10

Die Abteilung Finanzen hat erst an einer ÖPP auf Vertragsbasis mitgewirkt. Der Zeitraum seit der Auswahl des privaten Partners ist jedoch zu kurz, um ausreichende Erfahrungen gemacht zu haben. Jedenfalls wurde ein externes Unternehmen beauftragt, die Übereinstimmung des Umfangs und der Qualität der vom privaten Partner erbrachten mit den ausgeschriebenen Leistungen laufend zu überwachen.

Zu Frage 13

Es ist nicht auszuschließen, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können.

Andererseits erscheint es selbstverständlich, dass dann, wenn der Auftragnehmer das Projekt insbesondere in wirtschaftlicher Hinsicht nicht ausreichend betreibt, der Auftraggeber, der das Projekt letztlich zu finanzieren, zumindest aber zu verantworten hat, die Initiative wieder an sich reißt, um drohenden Schaden abzuwenden.

Es wird also jeweils im Einzelfall zu beurteilen sein, ob eine Interventionsklausel zu weit gefasst und damit geeignet ist, die Grundsätze der Transparenz und der Gleichbehandlung zu unterlaufen, oder nicht.

Zu Frage 14

Die bisherige Erfahrung hat gezeigt, dass mit dem bestehenden gemeinschaftsrechtlichen und nationalrechtlichen Instrumentarium durchaus das Auslangen gefunden werden kann.

Zu Frage 16

Die Abteilung Finanzen geht im Gegensatz zur Fragestellung davon aus, dass bei Vorliegen einer ÖPP, bei der der private Partner im Wege eines offenen Verfahrens, eines nicht offenen Verfahrens mit vorheriger Bekanntmachung oder eines

Verhandlungsverfahrens mit vorheriger Bekanntmachung ermittelt wurde, dieser bei der Vergabe von Unteraufträgen nicht mehr dem Vergaberegime unterliegt, da die erforderliche Transparenz und Gleichbehandlung bereits durch das o. g. Vergabeverfahren gewährleistet wurden. Gerade eben dadurch wird die durch ÖPP bezweckte rasche, flexible und unbürokratische Abwicklung sichergestellt.

Die Einführung oder Ausweitung von Regeln für die Vergabe von Unteraufträgen bei ÖPP wird daher abgelehnt.

Zu Frage 17

Es wird auf die Ausführungen zu Frage 16 verwiesen.

Zu Frage 18

Die Abteilung Finanzen hat bisher an drei institutionalisierten ÖPP mitgewirkt. In allen drei Fällen erfolgte die Gründung eines gemeinsamen Ad-hoc-Wirtschaftsgebildes erst nach der Auftragsvergabe. In beiden Fällen wurden die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen eingehalten.

Zu Frage 19

Die Verpflichtungen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben, sind nach Ansicht der Abteilung Finanzen bereits ausreichend geklärt.

Zu Frage 20

Die Probleme bei ÖPP liegen nach den Erfahrungen der Abteilung Finanzen nicht oder nur zu einem äußerst geringen Teil auf rechtlicher Ebene. Diese sind vielmehr zum einen faktischer, zum anderen fiskalischer Natur.

In faktischer Hinsicht ist festzustellen, dass weder die öffentlichen noch die privaten Partner viele Erfahrungen in diesem Bereich haben. Es existieren daher keine Schematismen, vielmehr muss "das Rad ständig neu erfunden" werden. Von großer Bedeutung und Wirkung wäre daher v. a. ein institutionalisierter Erfahrungsaustausch zwischen allen Interessierten.

In fiskalischer Hinsicht ist festzustellen, dass ÖPP hinsichtlich des Erfolgs der öffentlichen Haushalte nur dann vorteilhaft sind, wenn sich das Projekt mindestens zur Hälfte aus Zahlungen Dritter finanziert. Dementsprechend sind öffentliche Auftraggeber in Fällen, in denen durch das Projekt keine Einnahmen lukriert werden können, nicht bereit, sich der nicht unbeträchtlichen Mühe der Einrichtung einer ÖPP zu unterziehen, weil sie dadurch ebenso wenig positive Effekte auf ihren Haushalt, i. e. Reduktion des öffentlichen Defizits oder des öffentlichen Schuldenstands, generieren können, wie wenn sie die Leistung selbst erbringen.

Zu Frage 22

Unter Hinweis auf die Ausführungen zu Frage 20 wird noch einmal betont, dass nach Ansicht der Abteilung Finanzen dasjenige Mittel, das den Erfolg von ÖPP am meisten zu fördern in der Lage wäre, der Austausch von Erfahrungen und bewährten Verfahrensweisen ("best practice"), Musterausschreibungen, Musterverträgen etc. zwischen allen Interessierten wäre. Der Aufbau eines derartigen Netzwerks durch die Europäische Kommission wird daher unbedingt befürwortet.

EU; Öffentliches Auftragswesen; Grünbuch PPP; Stellungnahme
(Zu GZ BKA-671.801/0022-V/A/8/2004
und zu VST-4763/18 vom 18. Mai 2004)

Sehr geehrte Damen und Herren!

Zum Grünbuch zu öffentlich privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen KOM(2004)327 endgültig vom 30. April 2004 ist aus Sicht des Amtes der Oö. Landesregierung Folgendes zu bemerken:

1. Allgemeines:

1.1 Das Vorhaben der Kommission, das Phänomen der durch öffentlich-private Partnerschaften verwirklichten Projekte einer umfassenden und systematischen Diskussion zu unterziehen, der Versuch, die einzelnen Erscheinungsformen solcher Kooperationen systematisch mit den vergaberechtlichen Instrumentarien zu erfassen und die Ankündigung, das Ergebnis der öffentlichen Konsultation über das Grünbuch zur Grundlage von Entscheidungen über allenfalls zu ergreifende gesetzgeberische Initiativen zu machen, sind aus unserer Sicht grundsätzlich begrüßenswert. Es scheint daher nicht zielführend, das Grünbuch bzw. schon die Tatsache seiner Veröffentlichung undifferenziert zu kritisieren. Ebenso halten wir es für unzulässig, in der Diskussion über das Grünbuch eine Verbindung zur parallel laufenden Diskussion über die wettbewerbsrechtliche Behandlung von "Leistungen der Daseinsvorsorge" und zu Überlegungen hinsichtlich der Liberalisierung bestimmter (leitungsgebundener) Wirtschaftssektoren (vgl. die diesbezüglichen Überlegungen betreffend den Wassersektor) herzustellen. Oberösterreich befürwortet eine durchaus kritische, aber sachliche und auf die konkreten Inhalte des Grünbuches bezogene gesamtösterreichische Position bzw. gemeinsame Länderstellungnahme.

1.2 Über weite Strecken stellt das Grünbuch eine brauchbare Zusammenfassung des Standes der Judikatur und der Lehre zum PPP-Phänomen dar. In einigen Punkten, auf die nachstehend gesondert einzugehen ist, geht die Kommission jedoch - und zwar regelmäßig zum Nachteil des öffentlichen Auftraggebers bzw. der öffentlichen Hand - über die allgemein akzeptierten Auffassungen über die rechtliche Beurteilung öffentlich-privater Partnerschaften hinaus. Überhaupt vermittelt das Grünbuch den Eindruck, dass das Bedürfnis der Gebietskörperschaften nach wirtschaftlichen und praktikablen Modellen für die Erfüllung bestimmter Gemeinwohlaufgaben für die Kommission beim Verfassen der Mitteilung nicht von prioritärer Bedeutung gewesen sein dürfte. In diese Richtung deutet auch die Formulierung eines Großteils der Fragen, mit denen versucht wird, den Konsultationsprozess zu strukturieren.

1.3 Wir halten den von der Kommission zur Diskussion gestellten Richtlinienvorschlag zur einheitlichen Regulierung von Konzessionen und anderen Formen von PPP nicht für zweckmäßig. Das Grünbuch selbst zeigt, dass der heute schon bestehende Rechtsrahmen einen Großteil aller Fragen, die PPP-Konstruktionen aufwerfen können, abdeckt. Auch dort, wo die vergaberechtlichen Vorschriften nicht zum Tragen kommen, gewährleisten die primärrechtlichen Grundsätze (Nichtdiskriminierung bzw. Transparenz, Verhältnismäßigkeit, gegenseitige Anerkennung) in ihrer vom EuGH entwickelten Ausprägung angemessene und mit den Grundsätzen des Binnenmarktes vereinbare Beteiligungsmöglichkeiten für Wirtschaftsteilnehmer aus allen Mitgliedsstaaten. Eine weitgehende Harmonisierung bzw. "Koordinierung" dieses bis jetzt nur primärrechtlich geregelten Bereiches hätte zwangsläufig eine weitere Einschränkung der

Dispositionsfreiheit der öffentlichen Hand zur Folge und würde das Entwickeln zweckmäßiger innovativer Lösungsmodelle erschweren.

2. Zu den einzelnen Inhalten des Grünbuches:

2.1 PPP auf Vertragsbasis:

Bei der Definition des "Konzessionsmodells" in Rn 22 werden "Beihilfen der öffentlichen Stellen" als möglicher Bestandteil der Vergütung des Auftragnehmers bezeichnet. Wenn damit gemeint ist, dass die öffentliche Hand die Differenz zwischen ("sozialverträglich" gestalteten) Gebühren und einer marktgerechten Vergütung für den Auftragnehmer trägt, kann es sich dabei nicht um Beihilfen im Sinne der Art. 87 ff EGV handeln. Die Verwendung des Wortes "Beihilfe" im gegebenen Zusammenhang ist verwirrend und sollte vermieden werden.

Falls tatsächlich bei der Vergabe von Konzessionen Probleme für gemeinschaftsweit tätige Akteure auftreten und Rechtsunsicherheit herrscht, wie in Rn 32 behauptet, liegt dies wohl weniger am Fehlen einschlägiger Rechtsvorschriften als vielmehr an der mangelnden Beachtung der in Rn 30 ausgeführten primärrechtlichen Grundsätze. Für die Kommission sollte daher nicht die Erlassung einschlägiger Koordinierungsmaßnahmen, sondern die Überwachung der Einhaltung des von Gerichtshof aufgestellten Transparenzgebotes Priorität haben. Falls tatsächlich in Einzelfällen ein Problem bei der Abgrenzung zwischen öffentlichen Aufträgen und Konzessionen bestehen sollte, wäre dieses durch die Schaffung eines entsprechenden und in der Praxis handhabbaren Unterscheidungskriteriums im Rahmen der bestehenden Richtlinien zu lösen und soll nicht als Vorwand für die vollständige "Verrechtlichtung" der Konzessionsvergabe bzw. ihre Einbeziehung in das allgemeine Vergaberegime dienen.

Das in Rn 37 ff behandelte Phänomen der in privater Initiative entwickelten PPP-Modelle wird sich in den (in der Praxis gar nicht so seltenen) Fällen, in denen der private Partner ohne Aufforderung durch den öffentlichen Partner aktiv wird, nur schwer in den Griff bekommen lassen. Eine vom Sekundärrecht ausgesprochene deutliche Verpflichtung, ein in privater Initiative fertig entwickeltes PPP-Modell einem nachträglichen Wettbewerb auszusetzen (anders scheint die geforderte Teilnahmemöglichkeit anderer Interessenten nicht realisierbar) hätte wohl unweigerlich das Erlahmen jeden Interesses an der Suche nach innovativen Lösungen auf Seiten der privaten Interessenten zur Folge.

Mit Nachdruck ist der Aussage hinsichtlich der möglichen Laufzeit entsprechender vertraglicher Vereinbarungen in Rn 46 entgegenzutreten. Die Aussage, die höchstmögliche Laufzeit orientiere sich an der Amortisierung der Investitionen und einer angemessenen Verzinsung des eingesetzten Kapitals lässt die berechtigten Interessen des öffentlichen Partners wie Planungssicherheit oder Versorgungssicherheit vollkommen außer Betracht. Überdies mutet die Auffassung, durch eine im freien Wettbewerb zustande gekommene vertragliche Vereinbarung werde der freie Wettbewerb eingeschränkt, eigenartig an. Unverständlich ist auch im gegebenen Zusammenhang die Zitierung der Art. 81, 82 und 86 Abs. 2 EGV: Es ist nicht erkennbar, wie durch eine lang angelegte partnerschaftliche Beziehung eine der Formen des wettbewerbsbeschränkenden Verhaltens des Art. 81 verwirklicht sein könnte, die Verwirklichung des Tatbestandes des Art. 82 ist allenfalls in wenigen Einzelfällen denkbar und welcher eigenständige Gehalt im gegebenen Zusammenhang dem Art. 86 Abs. 2 zukommen soll, bleibt überhaupt im Dunkeln. Diesem Punkt ist aus unserer Sicht größte Aufmerksamkeit zu widmen, weil die Gefahr besteht, dass analoge Überlegungen zur Laufzeit vertraglicher Vereinbarungen auch im Bereich des "normalen" Vergaberechts angestellt werden.

2.2 **Institutionalisierte PPP:**

Bis auf weiteres sollte von Österreich die im Fall "Müllabfuhr Mödling" eingenommen Haltung, die versucht, möglichst viele Erscheinungsformen des "Gesellschaftsmodells" als In-House-Vergabe darzustellen, beibehalten werden.

Mit freundlichen Grüßen!

MD-VD - 378-8/04 Wien, 23. Juni 2004

EU;
Daseinsvorsorge;
Grünbuch zu öffentlichen-privaten Partnerschaften und den gemeinsamen Rechtsvorschriften für öffentliche Aufträge und Konzessionen, KOM(2004)327;
Stellungnahme

zu VST-4763/18

An die
Verbindungsstelle der Bundesländer
beim Amt der NÖ Landesregierung

Unter Bezugnahme auf das do. Schreiben vom 18. Mai 2004 teilt das Amt der Wiener Landesregierung Folgendes mit:

1. Allgemeines

Öffentlich-Private Partnerschaften (ÖPP) sind Modelle, die es der öffentlichen Hand vielfach ermöglichen, dauerhafte Lösungen zu vernünftigen Preisen anzubieten und dabei von privatem Know-how bzw. gegebenenfalls von privaten Finanzierungen zu profitieren. Die Beteiligung der öffentlichen Gebietskörperschaften garantiert die Nachhaltigkeit und Dauerhaftigkeit der Leistung, die Qualität und die Flexibilität gegenüber den Wünschen und Bedürfnissen der Bürgerinnen und Bürger. Das Amt der Wiener Landesregierung anerkennt die Rolle von ÖPP`s als mögliches Finanzierungsmodell für den Erhalt und den Ausbau notwendiger Infrastrukturmaßnahmen. Dies trifft insbesondere auf die neuen EU-Mitgliedstaaten zu.

Nach Ansicht des Amtes der Wiener Landesregierung ist der Inhalt des gegenständlichen Grünbuches jedoch enttäuschend, weil es sich im Wesentlichen nur mit der ohnehin bekannten vergaberechtlichen Problematik von ÖPP beschäftigt, andere Themenbereiche (wie etwa das Beihilfenrecht oder gesellschaftsrechtliche Aspekte) aber völlig ausklammert.

An Stelle von Lösungsansätzen für die schon auf Grund der bestehenden gemeinschaftsrechtlichen Vorgaben (insbesondere das Vergaberecht, das Beihilfenrecht sowie die vom EuGH und der EK aus dem Primärrecht abgeleiteten Grundsätze der Transparenz, Verhältnismäßigkeit, Gleichbehandlung und gegenseitigen Anerkennung) reichlich komplizierte Gründung von ÖPP werden nur Überlegungen zur Schaffung weiterer Regelungen angestellt. Es ist zu befürchten, dass Überreglementierungen in diesem Bereich zu einer Hemmung der Entwicklung verschiedener Formen wirtschaftlichen Handelns im Europäischen Wirtschaftsraum und so zu einem Wettbewerbsnachteil Europas gegenüber den wachsenden Märkten in Asien und Amerika führen könnten. Auf Grund der vielfältigen immer neuen Erscheinungsformen von ÖPP wäre deren abschließende Regelung wohl auch nicht möglich.

Die Betrauung von Unternehmen mit der Erbringung von Dienstleistungen von öffentlichen Dienstleistungen wie Abfallwirtschaft, Wasserversorgung oder Energieversorgung (s. Rz 7) stellt, wenn das betraute Unternehmen im Eigentum der jeweiligen Gebietskörperschaft steht, eine In-house-Vergabe dar. In diesem Fall sollten die Vergaberegeln nicht herangezogen werden.

2. Zum Vorschlag einer Richtlinie für ÖPP

Öffentlich- private Partnerschaften basieren auf einem Vertrauensverhältnis, auf einer Teilung der Ressourcen, der Risken und des Profits. Der Rechtsrahmen der EU sollte sich gegenüber diesen Realitäten positiv verhalten und keine Trennungen oder Grenzen schaffen. Der Mehrwert einer eigenen Richtlinie für ÖPP ist nicht erkennbar. Diese würde vielmehr zu einer Abgrenzungsproblematik zu den bestehenden Vergaberegeln führen.

Das Amt der Wiener Landesregierung spricht sich daher nachdrücklich gegen eine eigene Richtlinie für ÖPP aus.

3. Zur vorgeschlagenen Unterscheidung der ÖPP

Zur Gliederung des Grünbuchs ist zu sagen, dass die Unterscheidung zwischen ÖPP auf Vertragsbasis und institutionalisierten ÖPP dem österreichischen Rechtssystem fremd ist, weil in der Regel auch die Zusammenarbeit zwischen öffentlichem und privatem Sektor innerhalb eines Rechtssubjekts auf einem Vertrag (Gesellschaftsvertrag) beruht. Die Schaffung von ÖPP mit einem hoheitlichen Akt (Bescheid, Gesetz) dürfte hingegen eher unüblich sein.

4. Zur Auswahl des privaten Partners/Frage der Konzessionen

Im Kapitel 2.1. „Auswahl des privaten Partners“ findet sich eine für die Praxis nützliche (wenngleich restriktive) Auslegung des Ausnahmetatbestandes für ein Verhandlungsverfahren mit vorheriger Bekanntmachung betreffend Arbeiten, die eine globale Preisgestaltung nicht zulassen.

Das in Art. 29 der Richtlinie 2004/18/EG normierte neue Verfahren des wettbewerblichen Dialogs (Rz. 25) muss sich erst in der Praxis bewähren; entscheidend für das Gelingen eines solchen Verfahrens wird sein, inwieweit die Teilnehmer bereit sind, einander für die Ausarbeitung der endgültigen Angebote die eigenen Lösungsvorschläge zur Verfügung zu stellen.

Zur Vergabe von Dienstleistungskonzessionen (Punkt 2.1.2., Rz 28) ist zu sagen, dass die EK durch die Forderung von Auswahl- und Zuschlagskriterien über den vom EuGH entwickelten Transparenzgrundsatz (wobei in der Lehre durchaus umstritten ist, ob dieser Grundsatz überhaupt aus dem Primärrecht ableitbar ist) hinausgehende Anforderungen an die Auswahl des Konzessionärs stellt, die dieses Verfahren in die Nähe einer Auftragsvergabe gemäß den Vergaberichtlinien rücken.

Nach Ansicht des Amtes der Wiener Landesregierung soll aber zur Förderung rasch umsetzbarer flexibler Modelle von ÖPP die im Vergleich zu einem reglementierten Vergabeverfahren weniger förmliche Vergabe von Konzessionen weiterhin möglich sein.

Das Amt der Wiener Landesregierung spricht sich daher gegen eine Unterwerfung der Konzessionen unter die Regelungen für öffentliche Aufträge aus.

Die Schaffung einer eigenen Richtlinie zur Festlegung ausführlicher Bestimmungen für Konzessionen wird ebenfalls abgelehnt, da mit der angestrebten Vereinheitlichung der Vorgangsweise der öffentlichen Stellen bei der Vergabe von Konzessionen wohl die Schaffung eines engeren rechtlichen Korsetts für diese bislang noch relativ flexible Form wirtschaftlichen Handelns verbunden wäre.

5. Zur Phase nach der Auswahl eines privaten Partners

Die Phase nach der Auswahl eines privaten Partners (Kapitel 2.3.) ist nicht mehr Gegenstand des Vergaberechts sondern des (innerstaatlichen) Vertragsrechts, wobei der EK darin zuzustimmen ist, dass den Teilnehmern an einem Vergabeverfahren schon in den Ausschreibungsunterlagen die wesentlichen Vertragsbestandteile bekannt gegeben werden müssen. Auch dass die „zur Leistungsbeurteilung erforderlichen Elemente“ (geforderte Eignungsnachweise, zwingende Anforderungen an die Leistung, Zuschlagskriterien) in den Vergabeunterlagen veröffentlicht werden müssen, ist geltendes Recht. Die EK sollte jedoch näher darlegen, wie die Festlegung und Bewertung von „zur Risikoteilung erforderlichen Elementen“ erfolgen soll. Es stellt sich die Frage, ob es sich hier um eine neue - in den Vergaberichtlinien nicht vorgesehene - Kategorie von Kriterien handelt.

Eine zeitliche Befristung von ÖPP (Rz 46) ist nur dort möglich, wo eine Kooperation zur Umsetzung eines bestimmten Projektes eingegangen wird. Es gibt aber auch Fälle, in denen nur langfristig angelegte ÖPP wirtschaftlich sinnvoll sind (etwa bei Beteiligungen Privater an öffentlichen Unternehmen). Eine zeitliche Beschränkung der Zusammenarbeit mit einem privaten Partner würde überdies lang andauernde Kooperationen, wie sie im Infrastrukturbereich auftreten können, erschweren oder verhindern. Da die Auswahl des privaten Partners in der Regel ja bereits mittels einer Interessentensuche erfolgt ist, ist dem Transparenzgrundsatz hinreichend Genüge getan. Eine generelle Befristung von ÖPP wird vom Amt der Wiener Landesregierung daher abgelehnt.

Interessant ist die Forderung der EK nach „Revisionsklauseln“ (Rz 47) zur nachträglichen Vertragsanpassung. Nach den derzeit geltenden Vergaberechtsgrundsätzen sind lediglich automatische Anpassungen des Preises auf Grund einer Indexklausel oder die Verlängerung eines Vertrages auf Grund einer schon im Vergabeverfahren festgesetzten und wertmäßig in die Auftragssumme eingerechneten Option des Auftraggebers zulässig. Jede andere „Anpassung“ stellt einen neuen Vertragsabschluss dar, der einer Ausschreibung bedarf. Eine allfällig weniger strenge Handhabung durch die EK wird vom Amt der Wiener Landesregierung begrüßt. Allerdings scheinen die Ausführungen zu Rz 49 dem zu widersprechen. Es sollte daher klargestellt werden, welchen Inhalts und wie weitgehend solche Revisionsklauseln sein könnten.

In Rz 51 wäre klarzustellen, dass die „Projektgesellschaft“ bei der Vergabe von Aufträgen nur dann die Bestimmungen der Vergaberichtlinien einzuhalten hat, wenn sie selbst ein öffentlicher Auftraggeber ist oder namens eines solchen tätig wird.

6. Zur Einrichtung einer Partnerschaft durch die Gründung eines gemeinsamen Ad-hoc-Wirtschaftsgebildes des öffentlichen und privaten Sektors

Nicht nachvollziehbar sind für das Amt der Wiener Landesregierung die Ausführungen der EK zur „Einrichtung einer Partnerschaft durch die Gründung eines gemeinsamen Ad-hoc-Wirtschaftsgebildes des öffentlichen und privaten Sektors“ (Kapitel 3.1.). Die Gründung einer Gesellschaft durch einen öffentlichen und einen privaten Partner ist nach österreichischem Recht kein vergaberechtlicher Vorgang. Davon zu unterscheiden sind die Fragen, ob der öffentliche Auftraggeber diese Gesellschaft „freihändig“ beauftragen darf (dies ist nur bei Vorliegen aller Voraussetzungen für eine „Quasi-Inhouse-Vergabe“ der Fall) und ob die Gesellschaft selbst öffentlicher Auftraggeber ist.

Dem Transparenzgrundsatz wäre durch eine internationale Bekanntmachung der Suche von Projektpartnern Genüge getan. Dabei müsste es aber der „öffentlichen Hand“ überlassen sein, anhand welcher Kriterien (z. B. lediglich zwecks Beistellung von Kapital oder zwecks Zur-Verfügung-Stellung qualifizierten Personals) sie ihre Partner auswählt. Mit Vergaberecht hat aber nach Ansicht des Amtes der Wiener Landesregierung auch dieser Vorgang nichts zu tun, da in diesem Stadium kein Austausch von Leistung und Entgelt erfolgt.

Konstruktionen wie in Rz 60 ff. (betreffend gesamtwirtschaftliche Gebilde unter Beteiligung des öffentlichen Sektors als Auftraggeber) dargestellt gibt es, soweit dem Amt der Wiener Landesregierung bekannt, in Österreich nicht und wären wohl schon aus zivil- und gesellschaftsrechtlichen Gründen nicht möglich.

Zu Rz 64 (betreffend die Rolle gesamtwirtschaftlicher Gebilde als Vergabestelle) gelten die Ausführungen zu Rz 51 sinngemäß.

7. Zur Übernahme der Kontrolle über ein öffentliches Unternehmen durch einen privaten Akteur

Zu Rz 66 wird der Vollständigkeit halber angemerkt, dass ein Vorgang, bei dem die „öffentliche Hand“ einem Unternehmen Kapital zufließen lässt, aus beihilfenrechtlicher Sicht relevant sein kann.

Die Ausführungen zu Rz 68 bedeuten im Ergebnis, dass nach Ansicht der EK auch die Suche nach Teilhabern an öffentlichen Unternehmen im Wege einer internationalen Interessentensuche erfolgen müsste.

8. Conclusio

Zusammenfassend ist zu dem Grünbuch der Eindruck entstanden, dass es keinerlei Hilfestellung sondern nur zusätzliche Erschwernisse für die Gründung von ÖPP in Aussicht stellt, die die Wettbewerbsfähigkeit des Europäischen Wirtschaftsraumes nicht erhöhen sondern ernsthaft gefährden könnten.

Zu den einzelnen Fragen

Zu 1:

Da ÖPP ein Sammelbegriff für alle Formen der Kooperation der „öffentlichen Hand“ mit privaten Partnern ist, können nur einige typische Erscheinungsformen von ÖPP genannt werden:

1. Kooperationsmodell:

Beim Kooperationsmodell gründen ein öffentlicher Auftraggeber und ein privater Partner in der Regel eine Gesellschaft, an der die öffentliche Hand beteiligt ist. Besonders häufig werden Projekte etwa in den Bereichen Abwasser- oder Biotechnologie in dieser Form abgewickelt.

2. Organisationsprivatisierung:

Darunter versteht man die Ausgliederung durch Gründung einer Gesellschaft, die von der Gebietskörperschaft beherrscht ist.

3. Betreibermodell:

Beim Betreibermodell werden beispielsweise die Planung, die Errichtung, der Betrieb und die Finanzierung einer öffentlichen Einrichtung auf einen privaten Partner übertragen. Dabei kann es sich um eine Baukonzession oder um einen Bauauftrag handeln.

4. Leasinggeschäfte:

Bei beweglichen Gegenständen kann die Finanzierungsfunktion im Vordergrund stehen (z. B. „Sale and lease back-Verträge“) - dann handelt es sich um Finanzdienstleistungen - oder es handelt sich um den Erwerb von Gebrauchsrechten an diesen Gegenständen - dann liegt ein Lieferauftrag vor.

Bei unbeweglichen Gegenständen liegt ein Bauauftrag (Errichtung eines Bauwerks durch Dritte) vor, wenn ein Bauträger oder Leasingunternehmen ein Bauwerk nach genauen Vorgaben durch den Auftraggeber gegen Entgelt errichtet; wenn bloß bestehende Gebäude oder Räume gemietet oder geleast werden, handelt es sich hingegen in der Regel um einen (nicht dem Vergaberecht unterliegenden) zivilrechtlichen Vorgang (Bestandsvertrag).

Zunehmender Beliebtheit erfreuen sich sog. „Contracting“-Modelle, die den Zweck haben, durch bestimmte Maßnahmen Betriebskosten von Gebäuden zu sparen. Je nach Lage des Falles und des Ausmaßes des Entgeltsrisikos des Unternehmers kann es sich um Bauaufträge, Baukonzessionen oder Dienstleistungsaufträge handeln.

Immer häufiger werden in ganz Europa verschiedene Formen der einverständlichen Verwaltung:

Ein Beispiel wäre z. B. die Gewährung von Gebührenermäßigungen für private Projektwerber, wenn sie im Allgemeininteresse gelegene Leistungen erbringen.

Ob ein öffentlicher Auftrag vorliegt, hängt vom wahren wirtschaftlichen Gehalts des betreffenden Rechtsgeschäftes ab.

Zu 2:

Grundsätzlich ja, allerdings wird auf die oben geäußerten Bedenken (mögliche Eingriffe in Werkschutz- und Urheberrechte) verwiesen.

Grundsätzlich könnte das Verfahren des wettbewerblichen Dialogs im Rahmen der Auswahl des privaten Partners gewährleisten, dass öffentliche Auftraggeber bestmöglich von den Ideen und Projektvorschlägen der Privaten profitieren.

Zu 3:

Neben vergaberechtlichen sind auch steuer-, gesellschafts-, vertrags-, beihilfen- und allenfalls förderungsrechtliche Aspekte zu beachten; in wie weit einzelne Vorschriften zueinander in Konflikt stehen muss im Einzelfall geprüft werden (erfahrungsgemäß stehen allerdings die EG-Förderungslinien häufig mit den EG-Vergaberichtlinien in einem Spannungsverhältnis).

Zu 5:

Ja, das bestehende Vergaberecht ist ausreichend.

Zu 6:

Nein.

Zu 7:

Nein.

Zu 8:

Ja, es erfolgen regelmäßig internationale Bekanntmachungen.

Zu 9:

Schaffung günstiger wirtschaftlicher und rechtlicher Rahmenbedingungen (z.B. steuerliche Anreize, Möglichkeit rascher, unbürokratischer und flexibler Lösungen); den primärrechtlichen Grundsätzen könnte durch weit gehende Bekanntmachungspflichten entsprochen werden.
nicht gut.

Zu 10:

Keine Besonderen.

Zu 11:

Nein.

Zu 12:

Nein.

Zu 13:

Zur Beantwortung dieser Frage wären Informationen darüber erforderlich, was die EK unter „Interventionsklauseln“ konkret versteht.

Zu 14:

Nein, Vertragsrecht ist innerstaatliches Recht und soll es auch bleiben. Eine Harmonisierung dieser Regeln auf europäischer Ebene nur für ÖPP erscheint nicht zweckdienlich.

Zu 15:

Ausreichende Transparenz für die Vergabestellen, fehlende Vertragsbeziehung des öffentlichen Partners zum Subauftragnehmer, datenschutzrechtliche Probleme, Probleme bei Nichterbringung einer Leistung durch den Unterauftragsdienstleister (schwierige Durchsetzung, Ersatzvornahme).

Zu 16:

Nein.

Zu 17:

Nein.

Zu 19:

Allenfalls könnte eine Plattform zwecks internationalen Erfahrungsaustauschs eingerichtet werden; in diesem Rahmen sollten nicht nur Verpflichtungen der Auftraggeber erörtert sondern konstruktive Lösungsansätze erarbeitet werden. Austausch von Best- Practice-Projekten.

Zu 20:

Tendenz zur Überreglementierung und Überspannung des Transparenzgebotes, Vergaberecht, Beihilfenrecht.

Zu 21:

Nein.

Zu 22:

Ja. (siehe Beantwortung der Frage 19)

Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Geschäftszahl Präs.II-1441/534
Innsbruck, 23.06.2004

Zu Zlen. VST-4763/16 vom 7.5.2004 und VST-4763/18 vom 18.5.2004

Mit den angeführten Schreiben wurden die Länder ersucht, eine auf das Grundsätzliche beschränkte Stellungnahme zu den im Grünbuch aufgeworfenen Fragen zu erstatten. Dazu wird mitgeteilt, dass seitens des Landes Tirol kein Bedarf an einer gemeinschaftsweit einheitlichen Regelung von Konzessionen und anderen Formen von öffentlich-privaten Partnerschaften gesehen wird.

Es wird nämlich davon ausgegangen, dass das derzeit geltende Gemeinschaftsrecht dafür ausreicht, die effektive Teilnahme von Interessenten aus anderen Mitgliedstaaten am Konzessionsverfahren sicherzustellen. Dies gilt insbesondere auch für den Bereich privat initiierter Partnerschaften, wo allerdings die aufgrund des gemeinschaftsrechtlichen Transparenz- und des Gleichbehandlungsgebotes sowie des Diskriminierungsverbotes geboten scheinende Bekanntmachung der privaten Initiative an alle interessierten Kreise das Risiko mit sich bringt, dass vom Initiator verschiedene Akteure dessen Ideen aufgreifen und im Endeffekt den wirtschaftlichen Vorteil daraus ziehen. Geht die Initiative für eine öffentlich-private Partnerschaft hingegen von der Verwaltung aus, so werden ohnedies regelmäßig Vergabeverfahren durchzuführen sein.

Abschließend wird bemerkt, dass für eine fundierte Beantwortung der im Grünbuch aufgeworfenen Fragen ha. die erforderlichen praktischen Erfahrungen mit öffentlich-privaten Partnerschaften fehlen.

Betreff: Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinsamen Rechtsvorschriften für öffentliche Aufträge und Konzessionen; Stellungnahme
Bezug: VST-4763/16 vom 7.5.2004 und VST-4763/18 vom 18.5.2004

Sehr geehrte Damen und Herren,

zu den im Grünbuch der Europäischen Kommission zu öffentlich-privaten Partnerschaften (ÖPP) und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen aufgeworfenen Fragen wird von Seiten des Landes Vorarlberg wie folgt Stellung genommen:

Frage Nr 1:
Im Sozialbereich spielen ÖPP eine Rolle. Es gibt hier verschiedene verschiedene Arten von Verträgen und Vereinbarungen, die keine Entgeltvereinbarung enthalten. Es sind dies zB

- formale Rahmenvereinbarungen,
- vertragliche Abwicklungsregelungen,
- Abwicklungsregelungen auf der Basis und im Rahmen von Entgeltanerkennungen (zT mit ergänzenden „Spielregeln“ über Konzepte und Abwicklungen etc),
- Förderungsregelungen bzw -programme auf Basis von Leistungskonzepten,
- Informelle bzw mündliche Vereinbarungen.

Abgesehen von den Vorschriften über die Auftragsvergaben sind keine spezifischen Rahmenbedingungen für ÖPP auf Vertragsbasis bekannt.

Frage Nr 2:
Es wird davon ausgegangen, dass sich der wettbewerbliche Dialog für die Auftragsvergabe im Zusammenhang mit der Errichtung einer ÖPP eignet. Es müssen jedoch die praktischen Erfahrungen abgewartet werden. Mit einer Ausweitung der Anbieterlandschaft – gerade im Sozialbereich – wird gerechnet.

Frage Nr 3:
Probleme werden im Zusammenhang mit den Zuschlagskriterien gesehen. Diese Kriterien müssen vorab festgelegt werden. Gerade bei komplexen Leistungen kann der Auftraggeber oft erst im Laufe des Vergabeverfahrens erkennen, welche Vor- und Nachteile die Lösungsansätze der einzelnen Bieter haben. Eine sinnvolle Festlegung von Zuschlagskriterien ohne Kenntnis der Lösungsansätze ist nur schwer möglich.

Ein weiteres Problem wird darin gesehen, dass bereits im Rahmen des Vergabeverfahrens eine starke Mitwirkung der in Frage kommenden Unternehmer gefordert ist. Diese sind aber zu einer Mitwirkung nur bereit, wenn sie auch damit rechnen können, den Auftrag oder eine Entschädigung für die Erarbeitung eines Lösungsansatzes zu erhalten.

Fragen Nr 4 bis 7:
Ein neuer gemeinschaftlicher Rechtsakt zur einheitlichen Regulierung von Konzessionen und anderen Formen von ÖPP wird nicht für wünschenswert erachtet. Die bei der Vergabe von Konzessionen gemäß EGV zu beachtenden Grundsätze der Transparenz, Gleichbehandlung, Verhältnismäßigkeit und gegenseitigen Anerkennung genügen, um eine effektive Teilnahme von Gesellschaften und Gruppierungen aus anderen Staaten zu gewährleisten.

Fragen Nr 8 und 9:
Es liegen ho wenig Erfahrung im Zusammenhang mit privat initiierten ÖPP vor. Allerdings dürfte die Bereitschaft eines Privaten, eine Initiative zu ergreifen, auch davon abhängen, ob er später mit einer Auftragserteilung rechnen kann.

Der Zugang ausländischer Akteure zu privat initiierten ÖPP ist nach ho Ansicht gewährleistet. ZB können im Sozialbereich in jenen Fällen, wo die Verwaltung auf private Initiativen „reagiert“, auch ausländische Akteure Vorschläge machen und Partner werden, wenn sie die für diesen sozialen Leistungsbereich durch Richtlinien, Verordnungen der Gesetze festgelegten speziellen Anforderungen erfüllen (Basisversorgung im Nahraum, Vereinbarung mit den örtlich zuständigen Gemeinden, Bürgerbeteiligung bzw -selbstorganisation, Nachhaltigkeit, Verlässlichkeit, Kooperation etc). Beispiele bestehen im Pflegeheimbereich. In jene Fällen, wo die Verwaltung „agiert“ (Probleme und Aufgaben selbst beschreibt) werden ohnedies Vergabeverfahren durchgeführt.

Fragen Nr 10 bis 14:
Nach ho Erfahrungen können Änderungen nach der Auswahl des privaten Partners nicht gänzlich vermieden werden. Geringfügige inhaltliche Änderungen in Bezug auf den Vertragsgegenstand sollten daher zulässig sein.

Eine Klärung bestimmter Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene wird nicht als notwendig angesehen und abgelehnt.

Fragen Nr 15 bis 17:
Im Zusammenhang mit ÖPP-Konstruktionen sind keine besonderen Probleme mit der Vergabe von Unteraufträgen bekannt. Ausführlichere Regelungen über die Vergabe von Unteraufträgen oder eine Umgestaltung dieser Regeln im Zusammenhang mit ÖPP werden nicht für erforderlich gehalten.

Fragen Nr 18 bis 22:
Eine über das vorliegende Grünbuch hinausgehende Initiative auf Gemeinschaftsebene wird als nicht erforderlich erachtet, zumal auch keine die Einrichtung von ÖPP behindernden Maßnahmen oder Verfahren bekannt sind.

Allenfalls könnte der Austausch bewährter Verfahrensweise zwischen den Mitgliedstaaten überlegt werden. Zu denken wäre hier aber nicht an Verfahren der offenen Koordinierung, sondern an die Einrichtung von Netzwerken auf verschiedenen Ebenen.

Unabhängig von den vorliegenden Fragen wird noch auf Folgendes hingewiesen:

Gerade für im Sozialbereich tätige gemeinnützige Träger, die keine Erwerbszwecke verfolgen und auch gesellschaftspolitischen Aufgaben nachkommen, ist die Öffnung für den Wettbewerb problematisch. Es ist fraglich, ob diese weiterhin ihre Aufgaben wahrnehmen können, wenn sie nun mit Wirtschaftsbetrieben konkurrieren sollen. Die ÖPP im Sozialbereich haben maßgeblich an der nachhaltigen sozialen und gesellschaftlichen Entwicklung des Landes Vorarlberg beigetragen. Diese Leistungen können weder genau definiert noch abgegolten werden, da Unternehmen im herkömmlichen Sinne keine vergleichbaren Leistungen anbieten. Der Sonderstellung des Sozialbereichs trägt die Europäische Kommission auch dadurch Rechnung, dass sie in ihrem Weißbuch zu Dienstleistungen von allgemeinem Interesse ankündigt, für den Gesundheits- und Sozialbereich eine eigene Mitteilung vorzulegen, wo sie diesen im Detail untersuchen will. Aufgrund des engen Zusammenhanges der im Grünbuch und der in der angekündigten Mitteilung behandelten Fragen, sollte der Gesundheits- und Sozialbereich vom gegenständlichen Konsultationsprozess ausgespart bleiben und im Hinblick auf alle gemeinschaftsrechtlich relevanten Fragen in der Mitteilung behandelt werden.

In der Randnummer 64 des Grünbuches wird daran erinnert, dass ein gemischtwirtschaftliches Gebilde in seiner Rolle als Vergabestelle auch dazu verpflichtet ist, die Rechtsvorschriften für öffentliche Aufträge und Konzessionen einzuhalten. Nach ho Meinung kann das nur gelten, wenn das gemischtwirtschaftliche Gebilde selbst öffentlicher Auftraggeber im Sinne der Vergaberichtlinien ist. Das muss nicht bei jeder Beteiligung des Staates der Fall sein.

Es wird gebeten, die gegenständliche Stellungnahme dem BKA-VD (zu Schreiben BKA-671.801/0022-V/A/8/2004) im Hinblick auf die Erstellung einer österreichischen Stellungnahme zum Grünbuch weiterzuleiten bzw diese in einer allfälligen Länderstellungnahme zu berücksichtigen.

Mit freundlichen Grüßen

Für die Vorarlberger Landesregierung
im Auftrag

Dr Martina Büchel-Germann

Livre vert de la Commission européenne sur les partenariats public – privé et le droit communautaire des marchés publics et des concessions (Doc. COM (2004) 327 final)

Avis de la Belgique et réponses aux questions posées

Considérations générales

1. Les autorités belges apprécient l'analyse de la Commission consacrée , dans le présent Livre vert, aux formes de coopération entre le secteur public et le secteur privé, lesquelles se sont particulièrement développées au cours des dernières décennies, dans le but de rencontrer au mieux les besoins collectifs en permettant aux autorités publiques de bénéficier, à cette fin, du financement et du savoir-faire du secteur privé.

   Face à cette évolution, la préoccupation exprimée par la Commission, préoccupation fondamentale et légitime partagée par les autorités belges, est d'assurer que ce développement se fasse dans le respect des règles et principes découlant du Traité : transparence, égalité de traitement, proportionnalité, reconnaissance mutuelle, ainsi que le respect du droit communautaire des marchés publics et des concessions, dont, s'il échet, le respect des dispositions applicables aux procédures de passation des marchés publics.

2. Ainsi qu'il l'a déjà été souligné, les conventions P.P.P. qui résultent de « montages » contractuels ont des formes diversifiées et plurielles, en fonction du but poursuivi et des engagements des partenaires.

   Cependant, certaines caractéristiques communes se dégagent des conventions P.P.P. :

   - objectif commun d'intérêt général ;

   - globalité des contrats, c'est-à-dire qu'un seul contrat porte le plus souvent sur des marchés de travaux, de fournitures et de services ; ainsi en est-il lorsqu'un marché couvre à la fois la conception, le financement, la réalisation, l'exploitation et la maintenance ;

   - combinaison de deux ou trois catégories de prestations (travaux, fournitures et/ou services) ;

   - longue durée;

   - appel à la créativité et à l'innovation ;

   - financement, au moins partiellement, par le secteur privé et partage, même de manière inégale, des risques, responsabilités et avantages.

3. La directive 2004/18/CE du 31 mars 2004 apporte certaines réponses aux difficultés rencontrées pour la passation de marchés publics relatifs à des marchés complexes :

   3.1. Une nouvelle procédure de passation supplémentaire dite de *« dialogue compétitif »*, adaptée à des *« projets particulièrement complexes portant sur des solutions techniques et/ou des solutions financières/juridiques »* (considérant 31 de la dite directive).
   Cette nouvelle procédure semble être parfaitement adaptée à des marchés publics devant conduire à un partenariat public-privé.

   3.2. Le considérant 8 précise la possibilité pour l'autorité publique de recourir à un dialogue technique préalable

   « Avant le lancement d'une procédure de passation d'un marché, les pouvoirs « adjudicateurs peuvent, en recourant à un dialogue technique, solliciter ou accepter « un avis pouvant être utilisé pour l'établissement du cahier des charges, à condition « que cet avis n'ait pas pour effet d'empêcher la concurrence. »

   Un tel dialogue technique peut porter sur des éléments de participation, p. ex. d'ordre financier, qui seront destinés à être inclus dans le cahier des charges.

4. La directive 2004/17/CE du 31 mars 2004 n'envisage pas de nouvelle procédure, car la procédure négociée avec publicité constitue une procédure commune applicable à tous les marchés couverts par cette directive, pouvant dès lors être utilisée pour les P.P.P. concernés.

   On notera également le considérant n° 15 nouveau, relatif à la possibilité d'un « dialogue technique » préalable, identique à celui du considérant n° 8 de la directive 2004/18/CE.

5. Les concessions de travaux publics ont été couvertes avec des règles appropriées dans la directive 93/37/CE du 14 juin 1993 portant coordination des procédures de passation des marchés publics de travaux, alors qu'elles ne l'étaient pas auparavant, étant exclues de la directive 71/305/CEE.

   La directive 2004/18/CE n'apporte aucune modification de ces dispositions, considérées par tous les Etats membres comme satisfaisantes.

6. Les concessions de services publics, dont la définition a été précisée dans les directives, ne sont pas spécifiquement soumises à des procédures de passation.

   Néanmoins, leur attribution doit respecter les principes généraux de transparence, d'égalité de traitement et de proportionnalité.

Selon la jurisprudence de la Cour de Justice (TELEAUSTRIA), l'obligation de transparence qui incombe au pouvoir adjudicateur consiste à garantir un degré de publicité adéquat permettant une ouverture du marché des services à la concurrence.

7. Etant donné que les nouvelles directives ont été mises en vigueur il y a cinq mois seulement et qu'elles ne sont pas encore transposées dans la plupart des Etats membres, ceux-ci ayant 21 mois pour le faire, les autorités belges sont d'avis qu'il est prématuré de modifier en quoi que ce soit, en ce qui concerne les P.P.P. relatifs à des marchés publics, les dispositions législatives contenues dans les directives 2004/18/CE et 2004/17/CE. Une telle nécessité ne pourrait être établie aussi longtemps que les dispositions nouvelles de ces directives, rappelées ci-dessus, n'auront pas été expérimentées et qu'une évaluation objective de leur utilisation, voire de la mesure de leurs succès ou de leurs échecs.

   Le monde économique craint en effet une multiplication de règles de procédure qui seraient la source de contraintes supplémentaires de nature à constituer des entraves nouvelles à des coopérations entre secteur public et secteur privé, dont les objectifs restent la satisfaction de besoins d'intérêt général.

8. Par ailleurs, des clarifications et des précisions sur la portée et l'interprétation à donner aux textes existants par rapport aux partenariats P.P.P., dont l'objet est soit couvert, soit non couvert par les directives relatives aux procédures de passation des marchés publics, seront particulièrement appréciées par les autorités belges.

*

*   *

1. Quels types de montages de P.P.P. purement contractuel connaissez-vous ? Ces montages font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays ?

La législation belge sur les marchés publics (loi du 24 décembre 1993 et ses arrêtés d'exécution) connaissent des dispositions particulières pour :

1. Les marchés de concession de travaux publics et les marchés de travaux passés au nom des concessionnaires de travaux publics. Ces dispositions constituent la transposition de celles de la directive 93/37/CE afférentes aux concessions de travaux publics.

2. Les marchés de promotion.

   Au sens de la loi, un marché de promotion est un marché de travaux ou de fournitures portant à la fois sur le financement et l'exécution de travaux ou de fournitures ainsi que, le cas échéant, sur l'étude de ceux-ci ou sur toute prestation de services relative à ceux-ci.

Des dispositions réglementaires obligent à préciser : le contenu du cahier des charges, les obligations du pouvoir adjudicateur, celles du promoteur et les clauses d'exécution du marché.

La formule de la promotion permet, non seulement de satisfaire les besoins du pouvoir adjudicateur lui-même, mais aussi ceux de tiers, lorsqu'elle conduit à ériger des ouvrages destinés à des tiers, par exemple des logements sociaux destinés à des personnes à revenus modestes, ou bien des bâtiments industriels pour favoriser le développement économique.

3. De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un P.P.P. de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ? Si non, pourquoi ?

La procédure de dialogue compétitif, telle que prévue dans la directive 2004/18/CE , apparaît tout-à-fait appropriée pour la mise au point de contrat P.P.P. de type contractuel. Cette nouvelle procédure pourra s'avérer souple et efficace dans les cas d'espèce. la Belgique partage donc l'avis de la Commission sur ce point.

Néanmoins, le recours à une procédure négociée avec publicité en application de l'article 30, § 1er, de la directive 2004/18/ CE :
« dans des cas exceptionnels, lorsqu'il s'agit de travaux, de fournitures ou de services dont la « nature ou les aléas ne permettent pas une fixation préalable et globale des prix »
ne doit pas être exclu pour la passation de contrats P.P.P., lorsque l'utilisation de ce type de procédure peut être justifiée.

En outre, l'article 30, § 1er, a) permet de recourir également à une procédure négociée, soit avec publicité préalable, soit sans publicité selon le cas, lorsque, en réponse à une procédure de dialogue compétitif, seules des offres irrégulières ou inacceptables ont été déposées.

4. En ce qui concerne ces contrats, existe-t-il selon vous des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics ? Si oui, lesquels et pour quelles raisons ?

La réponse est négative.

Aucun point particulier susceptible de poser problème au regard du droit communautaire des marchés publics, tel qu'il existe à l'heure présente, n'a été signalé aux autorités.

4. Avez-vous déjà organisé, participé, ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ? Quelle expérience en avez-vous ?

Les concessions de travaux sont passées par les pouvoirs adjudicateurs concernés selon les procédures prévues dans les dispositions législatives et réglementaires rappelées ci-avant et conformes à la directive 93/37/CEE.

En ce qui concerne les concessions de service, on peut citer, à titre d'exemple, l'octroi d'une concession de service ayant pour objet le développement et l'exploitation touristique d'un site de la bataille de Waterloo, à une société française après mise en concurrence internationale.

5. Estimez-vous que le cadre juridique communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non-nationaux aux procédures de passation de concessions ? Une concurrence réelle est-elle, selon vous, habituellement assurée dans ce cadre ?

En ce qui concerne les concessions de travaux publics et les concessions de services publics, leur attribution doit nécessairement se faire dans le respect du principe du Traité.

Pour les concessions de travaux, étant donné le niveau élevé des dépenses publiques qui leur sont affectées, leur durée, leur importance dans la vie économique et dans des infrastructures, parfois internationales, le législateur européen a, en 1993, établi des règles de procédures pour leur mise en concurrence au niveau national et européen, pour les marchés supérieurs au seuil établi pour les marchés publics de travaux.

En ce qui concerne les concessions de service public, le cadre juridique au sujet de leur mise en concurrence a été nettement déterminé par la jurisprudence de la Cour de Justice.

6. Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation de concession, est souhaitable ?

La réponse est négative.

Une modification des règles actuelles pour les concessions de travaux publics n'apparaît pas justifiée, ni nécessaire ; selon leur contenu, elles risqueraient d'avoir un impact négatif sur l'avenir des partenariats recherchés.

7. De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il à votre avis des raisons objectives de viser dans cet acte tous les P.P.P. de type contractuel, qu'ils soient qualifiés de marchés publics ou de concessions, pour les soumettre à des régimes de passation identique ?

Une uniformisation des procédures de passation pour tous les PPP de type contractuel est à rejeter, étant donné la multiplicité de types de partenariats possibles entre, d'une part, des autorités publiques et, d'autres part, des personnes privées, les unes et les autres recherchant à satisfaire des besoins d'intérêt général dans le cadre d'une convention mutuellement satisfaisante fondée sur la liberté des contrats.

Une semblable réglementation risque d'avoir pour conséquence de corseter tout développement des Partenariats Public – Privé, pourtant indispensables dans le contexte économique et social de la société actuelle.

8. Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de P.P.P. d'initiative privée est-il assuré ? En particulier, lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate permettant l'information de tous les opérateurs intéressés ?
   Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer La mise en œuvre du projet retenu ?

Certaines réglementations nationales d'Etats membres donnent au secteur privé l'opportunité de prendre l'initiative d'une opération P.P.P. et offrent certaines incitations aux preneurs d'initiatives.

Ces incitations peuvent être de nature à octroyer des avantages aux preneurs d'initiatives.

De telles dispositions n'existent pas en Belgique.

Il serait utile pour les Etats membres de connaître la position de la Commission européenne sur ces réglementations.

9. Quelles serait selon vous la meilleure formule pour assurer le développement des P.P.P. D'initiative privée dans l'Union européenne tout en assurant le respect des principes de transparence, de non discrimination et d'égalité de traitement ?

Cette question est liée à la précédente. Sa réponse est liée à une analyse des résultats des réglementations nationales existant dans quelques Etats membres pour encourager ces formules de P.P.P. d'initiative privée.

Cependant, si l'initiative privée peut être stimulée, elle ne peut s'épanouir que dans l'hypothèse où des règles strictes et contraignantes ne constituent pas des obstacles nouveaux .

Il serait regrettable de constater que des initiatives privées innovantes d'entreprises européennes s'orientent à l'avenir vers des marchés hors C.E.E. plutôt que sur le marché intérieur CE.

10. Quelle expérience avez-vous de la phase postérieure à la sélection du partenaire privé dans les opérations de P.P.P. contractuels ?

11. Avez-vous connaissance de cas dans lesquels les conditions d'exécution – y compris les clauses d'adaptation dans le temps – ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d'établissement ? Si oui, pouvez-vous décrire le type de problèmes rencontrés ?

12. Avez-vous connaissance de pratiques ou de mécanismes d'évaluation d'offres ayant des incidences discriminatoires ?

13. Partagez-vous le constat de la Commission selon lequel certains montages du type « step-in » peuvent poser problème en termes de transparence et d'égalité de traitement ? Connaissez-vous d'autres « clauses types » dont la mise en œuvre est susceptible de poser des problèmes similaires ?

14. Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects Relevant du cadre contractuel des P.P.P. ? Si oui, sur quel(s) aspect (s) devrait porter cette
Clarification ?

Ces questions s'adressent essentiellement aux opérateurs économiques qui auraient constaté ou auraient été victimes de discriminations dans les situations évoquées.

15. Dans le contexte des opérations de P.P.P., avez-vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

16. Le phénomène des P.P.P. de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie-t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mises en place en ce qui concerne le phénomène de sous-traitance ?

17. De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier, ou d'aménager, les règles relatives à la sous-traitance ?

La réponse à ces trois questions est négative.

18. Quelle expérience avez-vous de la mise en place d'opérations de P.P.P. de type institutionnalisé ? En particulier, votre expérience vous conduit-elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de P.P.P. institutionnalisé ? Si non, pourquoi ?

19. Estimez-vous qu'une initiative doit être prise au niveau communautaire en vue de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui, sur quels points particuliers et sous quelle forme ? Si non, pourquoi ?

Au sens du Livre vert, les P.P.P. institutionnalisés résultent de la mise en place d'une entité détenue conjointement par le partenaire public et le partenaire privé. La Commission note que dans les Etats membres, des terminologies et schémas différents sont utilisés dans ces formes d'associations.

On se trouve devant des personnes morales distinctes, ayant une personnalité juridique propre choisie dans le cadre législatif existant : société anonyme, société coopérative, société en participation, association sans but lucratif, groupement d'intérêt économique.

Leur activité peut être de nature industrielle ou commerciale et les apports respectifs des associés peuvent être d'importances différentes.

On ne peut assimiler la constitution de telles entreprises mixtes à des « montages » qui seraient spécifiques à des opérations relatives à l'un ou l'autre marché des autorités concernées.

Ce sont des formes d'associations choisies par une autorité publique, dans un intérêt général public, et ce, en vertu de la liberté d'association, ce qui leur permet de bénéficier, entre autres, d'appuis financiers stables et du partage des risques.

De l'avis des autorités belges, la constitution de sociétés mixtes P.P.P. ne relève pas du droit communautaire des marchés publics et des concessions. Les règles du Traité relatives au droit d'établissement, à la libre circulation des capitaux, à la non-discrimination en raison de la nationalité se doivent néanmoins d'être respectées dans tous les cas.

Dès lors, les autorités belges n'estiment pas nécessaire une initiative communautaire législative dans ce cadre.

De façon générale et indépendamment des questions soulevées dans ce document :

20. Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des P.P.P. au sein de l'Union européenne ?

Nous n'avons pas identifié de telles mesures.

21. Connaissez –vous d'autres formes de P.P.P. développées dans les pays en dehors de l'Union ? Connaissez-vous des exemples de « bonnes pratiques » développées dans ce cadre, dont l'Union pourrait s'inspirer ? Si oui, lesquelles ?

Non.

22. De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin de poursuivre un développement économique social et durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés, et qui permettrait un échange des meilleures pratiques ? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?

Les autorités belges accueillent favorablement cette suggestion.

Proposed contribution to the European Commission's consultation on the

Public Private Partnership Green Paper

October 2004, Dublin

CECODHAS, the European Liaison Committee on Social Housing is very pleased that the green paper on Public Private Partnerships has been published. CECODHAS's members have built 25 million housing units in the enlarged Europe and manage around 15 million units. Developing such partnerships is desirable for our sector. Nevertheless, our members wish to alert the European Commission to the following points that need clarification and probably require legislation.

Legal clarification of the rules surrounding public procurement, especially for services of general economic interest (PPPs), must be carried out at the same rate as clarification of the legal security of these same SGEIs. Thinking on PPPs is moving faster than that on SGEIs/SGIs and is seeking to circumvent the problem of State aid and approvals. This can greatly disturb activities (not to mention the problems related to the services directive).

- It is not possible to discriminate between those involved according to their legal status. Social housing enterprises, non-profit-making enterprises, cooperatives and public bodies must be allowed to take part in public private partnerships on the same basis as private enterprises. Currently there are many barriers preventing social housing operators from taking part in PPPs and, therefore, from having access to an alternative source of financing to the public social housing budget. In public private partnerships, public procurement is carried out by private enterprises (with their equity capital), but a public operator may also respond to a public procurement using its own funds. The Treaty imposes non-discrimination between operators over their legal status. However, the Green Paper on PPPs does not take differences between operators into account in these proposals (for example, in standard contracts and negotiation and selection procedures). (Answers to questions 12, 14 and 19).

- The PPP phenomenon may lead to positive external effects for social housing if it can be fully involved in the negotiation phases in these new partnership schemes based on service performance. For this to happen, and in the same way as it does for the EIB's financing policies, social housing must be included in a global PPP urban development programme in which those involved in social housing can intervene as advisers, experts or inspectors of the implementation of long-term partnerships. This can be based on article 34 of directive 2004/18/EC and the terms and conditions for the negotiation phases that remain undecided but are subject to the rules and principles of the EC Treaty.

- Finally, thinking on urban production must be refined around the economic concept of externalities if we wish social housing to be an enduring market. We will then be able to envisage public private partnerships supplementing State aid. This will not happen until we have exchanged experiences of global urban development on these same external effects (urban renewal) on a European scale. For this, it is necessary to leave a flexible framework for "institutional PPPs" and to make the SGEIs/SGIs that are being negotiated in these PPPs more secure. (19).

GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

FORUM OPINION

Rapporteur: Ms Cristina Piai

Introduction

The Green Paper on public-private partnerships (PPPs) is one of the priorities identified in the EC Internal Market strategy for 2003-2006 and contributes to the measures planned as part of the initiative for growth in Europe. The declared aim of the Commission is to launch a public consultation through a wide ranging debate in order to check whether the EU has to intervene to ensure that the economic operators in the Member States have better access to the available opportunities of public private partnership in a situation of legal certainty and effective competition.

The Green Paper does not suggest any particular option or set of options for Community intervention, but put forward a wide set of instruments and tools available for improving the opening of PPPs operations to competition:

- Community legislative instruments;
- Interpretative communications;
- Evaluation tools aimed at better coordination of national practice;
- Exchange of best practice among Member States.

1. Purpose of the Green Paper

PPPs are cooperation forms between public authorities and the private sector aiming at ensuring that infrastructure projects can be carried out and/or that public services can be provided. They represent an important tool for improving the quality of public services and supporting growth in Europe. Over the last ten years these forms of partnership have been developed in several Member States and are now used in many areas of the public sector. The Commission sees it as the outmost importance that the choice of a private partner by a public authority is made according with Community rules on the awarding of public contracts.

The Green Paper analyses the phenomenon of PPPs with regard to Community law on public procurement and concessions setting out the scope of Community rules with a view to identifying possible uncertainties. The **main objective of the document** is to see whether it is necessary to improve the current rules, and assessing to what extent EU intervention might be necessary in order to ensure that:

- Economic operators have access to PPPs under conditions of legal clarity and real competition;

- The legal framework does not form an obstacle to economic operators' access to the different types of PPPs.

Under Community law, there is no specific legal system governing the many different possible forms of PPP. Contracts for these partnerships signed by public authorities with private companies are not, in general, covered by the EC Treaty (Art. 43 and 49) rules on the single market. In certain cases, they can be subject to the detailed provisions of the Directives on public procurement. However, other cases and in particular certain *concessions* are not covered. The Community legal framework is thus the subject of more or less intensive Community coordination at several levels.

The Green Paper sets out the way in which the rules and principles deriving from Community law on public contracts and concessions apply when a private partner is selected, and then for the duration of the contract, in the context of different PPP arrangements. Moreover the document addresses various topics directly linked to the public procurement aspect of PPPs, in particular:

- The framework for the procedures for selecting a private partner, in particular the advantages of the *competitive dialogue procedure* introduced by the new Directive on public procurement, which allows public authorities to hold discussions with applicant businesses in order to identify the solutions best suited to their needs;
- Setting up of PPPs on the initiative of the private sector;
- The contractual framework and contract amendments during the life of a PPP;
- Subcontracting.

In this regard, the Green Paper addresses both PPPs created on the basis of **purely contractual links** and arrangements involving the joint participation of a public partner and a private partner in a **mixed-capital legal entity**.

The Green Paper also asks a set of questions intended to find out more about how these rules and principles work in practice, so that the Commission can determine whether they are sufficiently clear and suit the challenges and characteristics of PPPs.

2. Key elements of the Forum Opinion

The development of the PPP is regarded by the Commission as part of the more general change in the role of the State in the economy, moving from a role of direct operator to one of organiser, regulator and controller. On the one hand, there are Member States with a strong tradition of autoproduction, and this tradition seems to be guaranteed under Art. I. 5 of the Constitutional Treaty. In general, the term “Public-Private Partnership” refers to forms of cooperation between public authorities and the world of business which aim to ensure the funding, construction, renovation, management or maintenance of an infrastructure or the provision of a service.

Since the term is not defined at Community level, the Forum analysed the elements characterising PPPs, as stated in the Green Paper. It examined closely not only the perspective of Community legislation, but also other important aspects related to the budget constraints of Member States and the need for private funding for the public sector. Elements, that characterise PPPs, are:

- The relatively long **duration** of the relationship, involving cooperation between the public partner and the private partner on different aspects of a planned project.
- The method of **funding the project**, in part from the private sector, sometimes by means of complex arrangements between the various players. Nonetheless, public funds - in some cases rather substantial - may be added to the private funds.

- The important **role of the economic operator**, who participates at different stages in the project (design, completion, implementation, funding). The public partner concentrates primarily on defining the objectives to be attained in terms of public interest, quality of services provided and pricing policy, and it takes responsibility for monitoring compliance with these objectives.
- The **distribution of risks between the public partner and the private partner**, to whom parts of the risks generally borne by the public sector might be transferred. However, a PPP does not necessarily mean that the private partner assumes all the risks, or even the major share of the risks linked to the project. The precise distribution of risk is determined case by case, according to the respective ability of the parties concerned to assess, control and cope with this risk.

In reviewing the various EU outputs on PPPs - the White Paper on Growth (1993), the Van Miert Report (2003), the Eurostat Proposal on Accounting Treatment of PPPs (2004), the new Procurement Directives with the introduction of competitive dialogue (2004) - the following themes tend to recur:

- The need for an appropriate and consistent legislative framework;
- The relation between the public procurement rules and PPPs;
- The interaction of PPPs with competition policy;
- The need to develop new financing instruments;
- Identifying ways of providing support at EU level;
- The identification of appropriate PPP projects;
- The development of institutional capacity in the public sector.

The Green Paper therefore presents many elements that may be object of thought as far as the topic of PPP is concerned, and in particular, besides subdividing the PPP operations in the two macro categories (contractual and institutional nature, par. 20):

- It introduces the evaluation mechanism which resorts to the instrument of the *Public Sector Comparator* analysis model that allows to simulate the cost of an infrastructural investment, be it implemented in PPP form or on the basis of a traditional work on contract (par. 5);
- It states that whatever act, both contractual and unilateral, through which a public enterprise entrusts the professional services of an economic activity to a third party must be examined in the light of the rules and principles resulting from the Treaty (par. 8);
- It introduces the notion of "*adjudicating organism*". In the document the word is employed to designate all of the organisms up to scratch to adjudicate public works on contract (national, regional or local entities, public law organisms created to carry out missions of general interest and under state control, enterprises which manage cluster industries: the term includes, therefore, the adjudicating administrations and the adjudicating entities (public authorities and public enterprises)) (par. 9);
- It holds the view that the formalism existing about the notion of contract in the national law cannot represent a valid argument to make directives lose their useful effect. Moreover the onerous character of a contract does not compulsorily imply the direct payment of a price on behalf of the public subject, but can derive from any other form of economic compensation received by the private partner (par. 10).

3. Recommendations from the Forum

Since at European level it was recognised that Governments have limited financial resources to devote to increased capital expenditure and improved public services, and face restrictions on their ability to raise debt, the development of PPPs is an approach which some countries have taken to procuring public infrastructure and services.

The state of PPP development and national legislative framework vary widely between Member States, but PPPs are established as one of the tools which are available to governments, regional or local entities even if these tools are often complex procedures longer than traditional projects, considering also that transactions costs, for both the public and private sector, tend to be higher.

The majority of EU actions in PPPs have taken place within Trans-European Transport Networks (TENs). The EU is promoting PPPs for supporting networks' building. TENs is an EU initiative with its own budget where EU institutions have specific interests. However even acknowledging that PPPs could help to put in place TENs, till now the Programme has been quite unsuccessful lagging very much behind schedule, basically because lack of funding.

The Forum considers strategic to investigate, discuss and assess whether the PPPs tool offers to both partners real European added-value compared with other options, which for instance meet public interest objectives for the public and value for money for the private sector.

It is not only a matter of improving the legislative framework but, among other possibilities, a clear definition of the role of the economic operator, especially in allocating the risks. Since PPPs are hard to be defined and they vary greatly across Europe, a purely legislative approach from the Commission is not sufficient. The Forum suggests a provision of EU guidelines to the Member States on PPPs since there are significant levels of uncertainty on how EU legislation applies to PPP. This uncertainty adds to the overall financial risks of undertaking such projects. The risks apply to both the public and private sectors, and inevitably result in higher costs.

If on one hand the EU wants to encourage a larger use of private funding, on the other the uncertainty on how to procure such projects, the additional complexity of combining PPP and grant funded project requirements, and the lack of precedents have made governments suspicious and prudent of such innovative tool.

The Forum emphasizes the need for better sharing of knowledge and experience between different sectors of the public and private sectors. This will help to ensure efficiency in the development of PPP approaches, processes and consistency in procurement. The Commission must play an important role in the development and procurement of PPPs, acting as a catalyst to support its vision for PPPs, adopting a structured, comprehensive approach to its development and assisting especially New Member States in fully exploiting this alternative approach to procurement, essential for tackling infrastructure challenges across Europe.

Initiatives, such as the **"Guidelines for the Development of Successful PPPs"** and the **"Resource Book"** adopted by the Commission (developed by DG Regional Policy) acknowledge the importance of financing environmental and transport infrastructure, attracting interest in PPPs in an enlarged Union. These initiatives are very useful as working tools for the identification, preparation and implementation of PPP projects within the general context of partnership between private funds with grant financing, especially considering EU grants.

Initiatives on normative framework must be implemented in close contact with a profound analysis of the many critical issues affecting successful PPP projects. This can represent a tool for assisting public sector decision makers in evaluating investments in public infrastructures taking into account the opportunity of matching public grants with private funds, and EIB and EBRD loans. Co-financing requirements together with the debt restrictions faced by the Members States, mean that some governments will resort to private co-financing support in order to make full use of the EU funds available.

To improve the understanding of PPPs, including the chances and possible risks, and to develop them within the EU, the Forum suggests setting up a PPP High Level Group at European level, including the Social Partners, as well as a joint Task Force between DG Internal Market, DG Regio, DG Energy and Transport:

- to clearly assess how its directives, regulations and legislation interact with PPP procurements;
- to coordinate activities related to PPPs and assess the impacts which EU actions have on their development;
- to disseminate the knowledge about PPPs EU policy and best practice;
- to assist Member States in combining EU funding with private sector finance and PPPs;
- to help Member States implementing pilot projects with practical guidelines.

VIHREÄ KIRJA JULKISEN JA YKSITYISEN SEKTORIN YHTEISTYÖSOPIMUKSISTA SEKÄ JULKISIA HANKINTOJA JA KÄYTTÖOIKEUSSOPIMUKSIA KOSKEVASTA YHTEISÖN OIKEUDESTA

Julkisen ja yksityisen sektorin yhteistyösopimuksia, julkisia hankintoja ja käyttöoikeussopimuksia koskeva julkinen kuuleminen on ajankohtainen ja tarpeellinen. Pidämme myönteisenä komission asiaa koskevaa aloitetta kartoittaa julkisen ja yksityisen sektorin yhteistyöjärjestelyjä sekä käsityksiä erityisen yhteisölainsäädännön tarpeellisuudesta.

Julkisia hankintoja tullaan tekemään ja julkisia palveluita järjestämään yhä enenevin määrin erilaisin julkisen ja yksityisen sektorin yhteistyöjärjestelyin. Yhteistyö- ja kumppanuussopimukset voivat mahdollistaa julkisten viranomaisten keskittymisen ydintoimintoihinsa sekä edistää yksityisen sektorin hyvien toimintamallien ja innovaatioiden käyttöönottoa sekä uusia rahoitusmalleja. Parhaimmillaan yhteistyöjärjestelyt antavat uusia mahdollisuuksia yritystoiminnalle, edistävät elinkeinopolitiikkaa sekä parantavat työllisyyttä.

Ns. elinkaari- ja kumppanuusmallit kannustavat jatkuvaan kehitystyöhön ja uuden teknologian käyttöönottoon pitkällä aikajänteellä, koska palvelujen laadusta ja niiden tuottamiseen tarvittavasta varustuksesta on niiden toimittaja vastuussa koko pitkän sopimuskauden ajan. Pitkäjänteinen, sisäänrakennettu kehitystyön motivointi kumppanuushankkeissa lisää muutoin alhaista tuottavuutta ja kilpailukykyä palvelusektorilla, jolla on merkittävä vaikutus hyvinvoinnin ja elintason kohoamiseen palvelusektorin edustaessa yli kahta kolmasosaa bruttokansantuotteesta. Tätä tavoitetta tukee myös kumppanuushankkeissa palvelusektorin avaaminen kilpailulle ja uudelle yritystoiminnalle, mihin Suomen hallitus on sitoutunut uudessa hallitusohjelmassaan.

Kumppanuushankkeita vihreän kirjan tarkoittamassa muodossa on verrattain vähän Euroopan Unionin jäsenmaissa. Niiden potentiaali on kuitenkin suuri ja merkitys huomattava Euroopan kilpailukyvyn kehittämiselle, olisi tärkeää kaikin tavoin pyrkiä varmistamaan Euroopan laajuisten markkinoiden muodostuminen kumppanuushankkeille. Sirpaloituneet, pienet kansalliset markkinat eivät takaa riittäviä kehityspanostuksia eri toimijoilta eivätkä edistä tarvittavan osaamisen ja sitä kautta tehokkuuden ja tuottavuuden leviämistä yli Euroopan

Yhteistyöjärjestelyihin liittyy kuitenkin myös monia avoimia periaatteellisia sekä käytännön toteuttamiseen liittyviä kysymyksiä, jotka edellyttävät arvokeskustelua sekä myös lainsäädäntöjen yhteensovittamista.

Tärkeää on, ettei yhteisö- tai kansallinen lainsäädäntö aseta esteitä yhteistyöjärjestelyjen käytölle. Julkisen ja yksityisen sektorin yhteistyötä koskeva yhteisön sääntely on tällä hetkellä hajanaista ja tulkinnanvaraista. Yhteistyön järjestämisen tavasta riippuen sovellettavaksi voi tulla kansallisten säädösten lisäksi julkisia hankintoja koskeva lainsäädäntö, valtiontukia koskeva lainsäädäntö tai perustamissopimuksesta johdetut periaatteet sekä sitä koskeva oikeuskäytäntö. Sovellettaviksi voivat tulla myös yleishyödyllisiä palveluja, yleisiin taloudellisiin tarkoituksiin liittyviä palveluja sekä palvelujen sisämarkkinadirektiiviä koskevissa aloitteissa esitetyt yhteisölainsäädännön tulkinnat. Erityistä huomiota tulisikin kiinnittää näiden eri aloitteiden valmistelun ja soveltamisen yhteensovittamiseen ristiriitaisuuksien ja tulkinnanvaraisuuksien välttämiseksi.

Julkisen ja yksityisen sektorin yhteistyömuotojen yleistyessä on tärkeää selventää yhteisölainsäädännön soveltumista sekä saavuttaa yhteinen näkemys käytännön toimintavelvoitteista ja varmistaa näin säännösten yhteneväistä noudattamista jäsenvaltioissa. Vaikka yhteisön erityislainsäädännön laatiminen lisäisikin oikeudellista varmuutta, käsityksemme mukaan edellytyksiä kumppanuutta koskevan erityissääntelyn laatimiseen ei ainakaan tässä vaiheessa ole. Kumppanuudessa kysymys on monitahoisesta, sisällöltään vaihtelevasta ja kehittyvästä ilmiöstä, jonka yksityiskohtainen ja kattava sääteleminen ei ole näkemyksemme mukaan tarkoituksenmukaista eikä tällä hetkellä mahdollistakaan. Keskustelun jatkaminen, tulkintaohjeiden antaminen, mallisopimusten laatiminen sekä hyvien käytäntöjen vaihtaminen esimerkiksi asiantuntijaverkostoilla on kuitenkin kannatettavaa. Erityistä huomiota toivomme kiinnitettävän perustamissopimuksesta johdettujen toimintavelvoitteiden selventämiseen, sillä tulkinnanvaraisuuden on todettu aiheuttavan oikeudellista epävarmuutta, johtavan epäyhtenäisiin soveltamiskäytäntöihin sekä muodostavan jopa esteen yhteistyöjärjestelyjen käytölle.

Sitä vastoin toivottavaa olisi, että komissio tekisi aloitteen in house-järjestelyjä koskevaksi lainsäädännöksi. In house-ongelmatiikkaan otetaan Vihreässä kirjassa hyvin yleisellä tasolla kantaa. Myöskään uudet hankintadirektiivit eivät anna vastauksia siihen, missä laajuudessa hankintaviranomaiset voivat tehdä hankintoja ilman kilpailuttamista yksiköiltä, jotka ne omistavat kokonaan tai yhdessä muiden viranomaisten taikka yksityisen tai kolmannen sektorin toimijoiden kanssa. Koska kysymystä koskeva oikeuskäytäntö on myös tulkinnanvaraista ja tapauskohtaista, asiasta säätäminen olisi tärkeää. Selkeiden oikeusohjeiden puuttuminen on omiaan estämään tarkoituksenmukaisten rakenteellisten yhteistyöjärjestelyjen toteuttamista sekä johtamaan epäyhteneväisiin käytäntöihin.

Jos julkisen ja yksityisen sektorin yhteistyöjärjestelyjä koskevan yhteisön erityislainsäädännön laatimiseen päädyttäisiin, tulisi säännösten kattaa laajasti erilaiset yhteistyöjärjestelyt. Säännösten tulisi olla myös joustavia ja väljiä, jotta sääntely ei jäykistäisi mahdollisuuksia erilaisiin sopimusjärjestelyihin.

Vihreässä kirjassa esitetty kumppanuuden käsite on oikeansuuntainen. Kumppanuudella tarkoitetaan julkisviranomaisen ja yritysmaailman yhteistyömuotoja, joiden tarkoituksena on jonkin infrastruktuurin rahoittaminen, rakentaminen, uudistaminen, hallinnointi tai huolto taikka jonkin palvelun toimittaminen. Kumppanuuden käsite mahdollistaa erilaisia toteuttamistapoja, joista vihreässä kirjassa käsitellään sopimusperusteista kumppanuutta ja rakenteellista kumppanuutta. Julkisen ja yksityisen sektorin yhteistyömuodot voivat kuitenkin toteutua myös muilla tavoilla, kuten muodostamalla julkisten ja yksityisten toimijoiden verkostoja hoitamaan julkisia tehtäviä. Tällaisia verkostoja, joiden muodollinen organisoituminen ja alueellinen laajuus voivat vaihdella huomattavasti, käytetään Suomessa muun muassa työllisyyden edistämisessä sekä sosiaalialan osaamisen edistämisessä. Julkisia palvelutehtäviä voidaan antaa myös yleishyödyllisille yhteisöille ilman taloudellista kompensaatiota hankintaviranomaiselta tai palvelujen käyttäjiltä, jolloin julkisten hankintojen sääntely ei tule sovellettavaksi. Myös eräät valtionavuin kokonaan rahoitettavat tai yhdessä yksityisellä rahoituksella toimivat yhteisöt toteuttavat yleisen edun mukaisia tehtäviä. Julkisen ja yksityisen sektorin yhteistoimintaa tapahtuu myös erilaisissa yhteisrahoitteisissa tutkimus- ja kehittämishankkeissa. Olisi suotavaa, että tällaisten yhteistoimintamuotojen suhdetta nyt käsillä olevaan aloitteeseen tutkittaisiin myös. Vihreän kirjan ulkopuolella ovat myös julkisten yksiköiden yhteistyötä koskevat kysymykset, jotka ovat Suomessa myös ajankohtaisia ja tärkeitä. Toivottavaa olisi, että myös nämä kysymykset otettaisiin jatkossa tarkastelun kohteiksi.

Sopimusperusteinen kumppanuus voi toteutua julkisena hankintasopimuksena, jolloin sovellettavaksi tulee julkisia hankintoja koskeva sääntely. Käyttöoikeussopimukset ovat puolestaan käyttöoikeusurakoita lukuun ottamatta julkisten hankintojen sääntelyn ulkopuolella, jolloin sovellettaviksi tulevat perustamissopimuksen periaatteet ja niistä johdetut toimintavelvoitteet. Rakenteellisella kumppanuudella tarkoitetaan julkisen ja yksityisen sektorin yhteisesti hallinnoimien yksiköiden perustamista tai julkisten yksiköiden siirtämistä yksityisen toimijan valvontaan. Näitä järjestelyjä ei koske erityinen yhteisötason sääntely, vaan myös niiden toteuttamisessa on noudatettava perustamissopimuksen periaatteita ja niistä johdettuja toimintavelvoitteita. Vihreässä kirjassa esitetyt tulkinnat kumppanin valinnassa noudatettavasta sääntelystä kattaa tietyt kumppanuuden muodot, mutta jättää avoimeksi muissa järjestelyissä noudatettavan säännöstön. Ongelmallisia ovat jo tällä hetkellä erot julkisten hankintojen sääntelyn soveltamisalassa olevien sopimusten myöntämismenettelyissä verrattuna niiden soveltamisalan ulkopuolella oleviin sopimuksiin tai järjestelyihin. Lainsäädäntöä ei koeta neutraaliksi, sillä julkisten hankintojen yksityiskohtaisen ja jäykän sääntelyn soveltamisen välttämiseksi saatetaan käyttää hankintasääntelyn soveltamisalan ulkopuolella olevia järjestelyjä.

Lopuksi haluaisimme kiinnittää vielä huomiota henkilöstön asemaan liittyviin kysymyksiin sopimusperusteisessa ja rakenteellisessa kumppanuudessa. Kumppanin kilpailuttaminen ja henkilöstön siirtymiseen liittyvät kysymykset ovat nousseet esille erityisesti tilanteissa, joissa viranomainen siirtyy hankkimaan palveluja organisaationsa ulkopuolelta aiemmin omana työnä toteutetun palvelun sijaan ja edellyttää palvelusta vastanneen henkilöstön siirtyvän palveluntarjoajan palvelukseen. Kysymys voi tulla ajankohtaiseksi myös ulkoistettaessa palvelutuotantoa perustamalla yksin tai muiden toimijoiden kanssa yhteisyritys. Ongelmallisiksi näissä tilanteissa ovat osoittautuneet liikkeenluovutusta sekä julkisuutta koskevien säännösten soveltuvuus sekä tarjouspyyntöjen laatimiseen liittyvät käytännön ongelmat.

Ohessa yksityiskohtaiset vastauksemme vihreässä kirjassa esitettyihin kysymyksiin:

***Kysymys 1**. Millaisia puhtaasti sopimusperusteisia julkisen ja yksityisen sektorin kumppanuusjärjestelyitä tiedätte? Kuuluvatko järjestelyt maassanne lainsäädännöllisen tai*

muun erityissäännöstön piiriin?

Suomessa ei ole erityislainsäädäntöä julkisen ja yksityisen sektorin kumppanuusjärjestelyistä.

Yksityisen ja julkisen sektorin yhteistyöjärjestelyjä toteutetaan monin eri tavoin. Varsinaisen hankintalainsäädännön alaan kuuluvien sopimusten lisäksi yhteistyö voi perustua esimerkiksi yhteisöille myönnettäviin avustuksiin ja niiden ehtoina oleviin palveluvelvoitteisiin.

Esimerkkejä eräiden hallinnonalojen sopimusperusteisista yhteistyöjärjestelyistä:

Liikenneala

Sopimusperusteista kumppanuutta julkisen ja yksityisen välillä on kokeiltu mm. rakennushankkeiden ja väylähankkeiden toteutuksessa. Merkittävimmät hankkeet ovat liikenteen infrastruktuurihankkeita kuten Jävenpää-Lahti- ja Muurla-Lohja-moottoriteiden rakentaminen.

Puolustusala

Puolustushallinnon alalla sopimusperusteisia kumppanuushankkeita on edistetty erityisellä ohjelmalla, jonka tavoitteena on aluksi selvittää kumppanuuden toimintamalleja ja kerätä tietoa järjestelyjen eduista ja haitoista. Keskeistä kumppanuusohjelmassa on sellaisten yhteistyösuhteiden rakentaminen, jotka toimivat myös valmiuden kohottamisen eri vaiheissa. Puolustushallinnon kumppanuushankkeissa turvallisuusseikat ovat keskeisiä, sillä kumppani toimii usein puolustushallinnon tiloissa ja saa yksityiskohtaisia maanpuolustukseen liittyviä tietoja. Siten hankkeissa on korostunut tarve pitkäaikaiseen yhteistyöhön.

Kumppanuusohjelman kehittämisalueina ovat ruokahuolto, vaatetushuolto, terveydenhuolto, tietohallinto, korjaamopalvelut, kuljetuspalvelut sekä taloushallinto. Suurin osa kumppanuushankkeista selvittää mahdollisuuksia siirtää aiemmin omana toimintana toteutettuja tehtäviä yksityisen sektorin vastuulle sekä hyödyntää yksityisellä sektorilla kehitettyjä toimintamalleja, innovatiivisuutta ja joustoa

Osa puolustushallinnon kumppanuushankkeista kohdistuu palveluun, joka jää Amsterdamin sopimuksen 296 artiklan nojalla Euroopan yhteisön sääntelyn ulkopuolelle.

Kunnat

Kunnilla on ollut kumppanuushankkeita, jotka ovat usein liittyneet rakentamiseen ja kiinteistöhuoltoon. Tällaisia hankkeita ovat mm. Espoon kaupungin Kuninkaantien lukiohanke, Kilon sosiaali- ja terveysaseman rakentaminen ja kiinteistöhuolto sekä Turun, Mäntsälän ja Mikkelin kompostointilaitosten rakentamis- ja jätteiden käsittelyhankkeet.

Sopimusperusteisia kumppanuushankkeita on toteutettu kokeilumielessä myös huolto- ja ravintolapalveluissa.

Kuntasektorilla sopimusperusteista yhteistyötä on tehty myös sosiaali- ja terveysaloilla. Suomessa sosiaali- ja terveyspalveluita tuotetaan noin 80 prosenttia kuntien ja kuntayhtymien omana työnä ja noin 20 yksityisten palveluntarjoajien toimesta.

Sosiaaliala

Lakisääteistä työeläke- ja tapaturmavakuutuslainsäädäntöä toimeenpanevat vakuutusyhtiöt ja muut laitokset sekä työttömyyskassat ja sairauskassat ovat yksityisoikeudellisia toimijoita, jotka hoitavat lakisääteistä julkista tehtävää ja tietyissä tilanteissa käyttävät myös julkista valtaa. Esimerkiksi työeläkevakuuttajat ovat tehneet sopimusperusteisesti yhteistyötä viranomaisten kanssa muun muassa toteuttamalla sähköisiä julkisia verkkopalveluita. Sopimusperusteista yhteistyötä on tehty myös valtakunnallisen työtapaturmaohjelman (2001-2005) yhteydessä siten, että työmarkkinaosapuolten perustama työturvallisuuskeskus vastaa tarpeellisen henkilökunnan palkkauksesta ja ohjelman mukaisista toimenpiteistä julkisen osapuolen rahoituksella ja sen valvonnassa.

Sosiaalialan osaamiskeskuksista annetun lain (1230/2001) mukaiset sosiaalialan osaamiskeskukset muodostavat koko maan kattavan alueellisen yhteistyörakenteen sosiaalialan perus- ja erityisosaamisen edistämiseksi sekä sosiaalialan alueellista yhteistyötä edellyttävien erityisosaamista vaativien erityispalveluiden ja asiantuntijapalveluiden toteuttamiseksi. Osaamiskeskusten toimintaan on kuntien ja kuntayhtymien ohella pyritty saamaan mukaan alueellisia viranomaisia ja oppilaitoksia, mutta myös järjestöjen ja yksityisten edustajia. Osaamiskeskustoiminnan oikeudelliselle muodolle ei ole asetettu tarkkoja edellytyksiä, vaan osaamiskeskukset on eräillä alueilla muodostettu osakeyhtiöiksi, mutta toisilla alueilla yhteistyö perustuu sopimukseen.

Työhallinto

Euroopan sosiaalirahastosta maksettavien tukien välittäminen ei-julkisille yhteisöille toteutetaan yleishyödyllisten välittäjäorganisaatioiden avulla. Tavoitteena on saada kansalais- ja vapaaehtoisjärjestöjen, paikallisten toimijoiden sekä perinteisen projektitoiminnan ulkopuolelta tulevia toimijoita mukaan tukitoimintaan.

Paikallisissa työllisyyskumppanuuksissa yhdistetään paikallisten yksityisten, julkisen ja kolmannen sektorin toimijoiden asiantuntemusta ja kokemusta sekä hyödynnetään paikallista aloitteellisuutta ja mahdollisuuksia pitkäaikaistyöttömien ja muiden vaikeasti työllistyvien työllistämisessä sekä syrjäytymisen ehkäisemisessä. Toiminta perustuu eri yhteistyötahojen väliseen sopimukseen.

Ympäristöala

Ympäristön- ja luonnonsuojelun alalla esimerkkihankkeena voidaan mainita Repoveden kansallispuiston perustaminen, joka toteutettiin yhteistyössä suuren metsäyhtiön kanssa.

Kysymys 2. ***Komissio katsoo, että kilpailukeskeisen neuvottelumenettelyn siirtäminen kansalliseen lainsäädäntöön antaa kysymykseen tuleville osapuolille mahdollisuuden käyttää menettelyä, joka soveltuu mahdollisimman hyvin julkisiksi hankintasopimuksiksi katsottavien sopimusten tekoon***

puhtaasti sopimusperusteista julkisen ja yksityisensektorin kumppanuutta toteutettaessa, ja samalla turvata taloudellisten toimijoidenperusoikeudet. Oletteko samaa mieltä? Ellette ole, minkä vuoksi?

Yleisesti ottaen kilpailullista neuvottelumenettelyä pidetään käyttökelpoisena menettelynä kumppanin valinnassa silloin, kun kysymyksessä on sopimusperusteinen, julkisen hankintasopimuksen muodossa toteutettava kumppanuusjärjestely. Mahdollisuus neuvottelujen käymiseen tarjousmenettelyn aikana tuo tarvittavaa joustavuutta hankintamenettelyyn. Toisaalta avoimuuteen ja yhdenvertaiseen kohteluun liittyvät vaatimukset turvaavat osaltaan yritysten etuja. Uusi menettely, joka ei edellytä etukäteen valmisteltua tarkkaa tarjouspyyntöä, mahdollistaa myös entistä paremmin innovatiivisten ratkaisujen huomioimisen.

Ongelmalliseksi kuitenkin on nähty liikesalaisuuksien ja luottamuksellisuuden suojaan liittyvät kysymykset erityisesti tietotekniikka- ja suunnittelupalvelujen hankinnoissa. Menettelyn pelätään johtavan käytäntöihin, joissa aiemmin korvausta vastaan tehtävä määrittelytyö teetetään yrityksillä tarjousmenettelyn aikana ilman korvausta. Nämä uhkat voivat johtaa laadultaan heikkoihin ratkaisuehdotuksiin tai jopa yritysten haluttomuuteen osallistua hankintamenettelyihin.

Kysymys 3.** **Liittyykö kyseisiin sopimuksiin (sopimusperusteinen kumppanuus) nähdäksenne muita kuin hankintamenettelyn valintaa koskevia kohtia, jotka voivat aiheuttaa ongelmia julkisia hankintoja koskevaan yhteisön lainsäädäntöön nähden? Jos liittyy, mitä kohtia ja mistä syistä?

Joissakin tapauksissa julkisia hankintoja koskevien menettelytapasäännösten soveltuminen sopimusperusteisiin kumppanuuksiin on koettu epäselväksi. Tulkintaongelmia on aiheuttanut esimerkiksi kilpailuttamisvelvoitteen sisältö silloin, kun kysymyksessä on sekamuotoinen sopimus (mixed contract), jolloin sopimuksen pääasiallinen tarkoitus tai taloudellinen painopiste ei ole julkisessa hankinnassa. Ongelmalliseksi on koettu myös säännösten soveltuminen pitkäaikaisilla vuokrasopimuksilla toteutettaviin toimitilahankintoihin sekä käyttöoikeusurakan ja käyttöoikeussopimuksen välinen rajanveto rakentamista ja kiinteistöpalveluja koskevissa sopimuksissa.

Hankinnoissa, joissa neuvottelumenettelyä ei voida soveltaa, ongelmalliseksi voi muodostua hankinnan kohteen, keskeisten kumppanuuteen liittyvien sopimusehtojen sekä tarjoajien kelpoisuusehtojen sitova määrittely tarjouspyynnössä. Hankintamenettelyn aikana hankintayksiköllä on rajoitetut mahdollisuudet huomioida yritysten aloitteita ja ehdotuksia, tehdä tarjouspyyntöön muutoksia sekä neuvotella kumppanuussopimuksen sisältöön liittyvistä seikoista. Lisäksi hankintamenettelyn keskeyttämistä koskevan tiukan oikeuskäytännön on katsottu vähentävän joustavuutta ja mahdollisuuksia ottaa huomioon innovatiivisia ratkaisuja.

Epävarmuuden sopimuskausien sallitusta enimmäiskestosta on pelätty johtavan kestoltaan epätarkoituksenmukaisten yhteistyösopimusten solmimiseen tai jopa rajoittavan yhteistyösopimusten tekemistä. Kumppanuussopimuksella haetaan yleensä pitkäaikaista yhteistyösuhdetta, toisaalta julkisten hankintojen sääntely edellyttää melko tiheää uudelleenkilpailuttamista. Sopimuskausien tulisi voida olla riittävän pitkiä, jotta kumppanuussopimuksista voidaan tehdä tarkoituksenmukaisia, pitkäjänteisiä ja liiketaloudellisesti kannattavia. Tiheä kilpailuttaminen merkitsee myös hankintayksikön kasvavia prosessikustannuksia ja hankinnan kokonaistehokkuuden laskua.

Komissio katsoo sopimussuhteen aikana sopimukseen tehtävien olennaisten lisäysten tai muutosten vaarantavan useimmiten taloudellisten toimijoiden yhdenvertaista kohtelua ja niiden tekemisen edellyttävän uutta kilpailumenettelyä. Näkemys on tasapuolisuusvaatimuksen kannalta ymmärrettävä, mutta saattaa aiheuttaa merkittäviä ongelmia pitkäkestoisille kumppanuuksille. Kumppanuussopimuksessa kysymys on usein uusien toimintamallien kokeilemisesta, jolloin yhteistyösopimus hakee muotoaan pitemmän ajan kuluessa. Pitkien sopimusten voimassaoloaikana osapuolten tarpeet, riskinsietokyky, organisaatio tai asema voivat muuttua merkittävästi. Sopimukseen voi vaikuttaa myös lainsäädännöllisiä tai taloudellisia tekijöitä, jotka ovat osapuolten vaikutusmahdollisuuksien ulkopuolella. Tiukka uudelleenkilpailuttamisvelvoite voi haitata ja jopa estää toiminnan järkevää ja tarkoituksenmukaista kehittämistä sekä nostaa yhteistyösopimusten kustannuksia yksityisen sektorin riskien kasvaessa. Uudelleenkilpailuttaminen voi johtaa myös taloudellisesti ongelmallisiin tilanteisiin, joissa aiemman kumppanin tekeminen investointien lunastamisesta tulisi sopia. Sopimuksen tarkastelun sopimussuhteen aikana tulisi mielestämme olla mahdollista, jos se ei merkitse olennaisia muutoksia esim. osapuolten riskinjakoon.

Siltä osin, kun kysymyksessä on hankintadirektiivien soveltamisalan ulkopuolella oleva sopimus, perustamissopimuksista johdettavien yhteisöoikeudellisten kilpailuttamisvelvollisuuksien normiperusta ja toimintavelvoitteiden sisältö on koettu tulkinnalliseksi ja epäselväksi.

***Kysymys 4.* Oletteko jo järjestäneet tai halunneet järjestää käyttöoikeussopimuksen myöntämismenettelyn tai osallistuneet tai halunneet osallistua sellaiseen unionin piirissä? Millaisia kokemuksia olette saanut?**

Järvenpää-Lahti- ja Lohja-Muurla -moottoriteiden suunnittelua, rakentamista, rahoitusta ja kunnossapitoa koskevat sopimukset on toteutettu nk. varjotullisopimuksena, jossa valtio korvaa hankkeen kustannuksia tien käytön perusteella. Sopimuskaudet ovat 15- ja 25-vuotisia. Suomessa ei ole otettu käyttöön alueellisia tietulleja, jolloin yhtiö saisi rahoituksensa suoraan käyttäjiltä.

Tiealan hankkeiden toteuttamisessa ongelmalliseksi ei niinkään ole koettu julkisten hankintojen lainsäädäntöä vaan muun lainsäädännön soveltamiseen, kuten verolainsäädäntöön sekä valtiontalouteen ja sen ohjaukseen liittyvät kysymykset.

Sosiaali- ja terveyspalveluissa ei ole käytetty käyttöoikeussopimuksia. Sosiaali- ja terveyssektorilla ne voisivat kuitenkin soveltua pitkäaikaisten rakennus- ja laiteinvestointien rahoitukseen.

***Kysymys 5.* Katsotteko, että yhteisön nykyinen oikeudellinen kehys on kyllin selkeä, jotta muut kuin kansalliset yhtiöt tai ryhmittymät voivat osallistua konkreettisesti ja täysipainoisesti käyttöoikeussopimusten myöntämismenettelyihin? Voidaanko todelliset kilpailuolot tällöin mielestänne yleensä taata?**

Suomessa ei ole havaittu ongelmia eikä esteitä sille, että muut kuin kansalliset ryhmittyvät voivat osallistua käyttöoikeussopimusten myöntämismenettelyihin. Ulkomaiset yritykset ja konsortiot tai Suomeen etabloituneet tarjoajat ovat osallistuneet aktiivisesti esimerkiksi tiehankkeiden tarjouskilpailuihin.

Kysymys 6. ***Pidättekö toivottavana, että yhteisö tekee säädösaloitteen, jolla pyrittäisiin sääntelemään käyttöoikeussopimusten myöntämismenettelyä?***

Tässä vaiheessa emme katso säädösaloitteita tarpeelliseksi. Sitä vastoin kannatamme hyvien toimintatapojen levittämistä sekä keskustelua aiheesta. Sääntelytarvetta tulisi arvioida uudelleen saavutettujen kokemusten perusteella tai jos riittävän selkeää ja käytännön tarpeita vastaavaa yhtenäistä ohjausta ei muuten pystytä toteuttamaan.

Kysymys 7. ***Jos katsotte yleisemmin, että komission on tarpeen ehdottaa uutta säädöstä, onko mielestänne objektiivisia syitä siihen, että säädös koskisi kaikkia sopimusperusteisia julkisen ja yksityisen sektorin kumppanuuksia siitä riippumatta, onko ne luokiteltu hankintasopimuksiksi vai käyttöoikeussopimuksiksi, ja että ne saatettaisiin siten yhtenäisen myöntämissäännöstön alaisiksi?***

Emme kannata tässä vaiheessa erityisen säädösaloitteen tekemistä. Sitä vastoin tulkintaohjeiden laatiminen ja hyvien toimintatapojen levittäminen on kannatettavaa.

Kysymys 8. ***Onko saamienne kokemusten mukaan voitu varmistaa muiden kuin kansallisten toimijoiden mahdollisuus päästä mukaan yksityiseen aloitteeseen perustuviin julkisen ja yksityisen sektorin kumppanuusmalleihin? Erityisesti jos hankintaviranomaiset ovat esittäneet aloitetta koskevan suunnittelupyynnön, onko pyyntö yleensä ilmoitettu asiamukaisella tavalla, jotta kaikki asiasta kiinnostuneet toimijat ovat saaneet siitä tiedon? Onko hyväksytyn hankkeen toteuttamiseksi käynnistetty todelliseen kilpailuun perustuva valintamenettely?***

Suomessa ei ole olemassa mitään erityisiä järjestelmiä niitä tilanteita varten, jolloin direktiivin 92/50/ETY soveltamisalaan kuuluvassa asiassa aloite kumppanuudesta on tullut yksityiseltä sektorilta. Tehdyn aloitteen kiinnostaessa hankintayksikköä, sen tulee kilpailuttaa kumppani julkisten hankintojen menettelytapasäännösten mukaisesti. Käytännössä kilpailuttamisvelvoitteen on kuitenkin katsottu rajoittavan innovatiivisuutta ja halua ideoiden esittämiselle julkisille yksiköille.

Erityisesti työvoimakoulutuksen sekä tutkimus- ja kehityshankkeiden kohdalla viranomaiset usein kehottavat julkisesti aloitteiden tekemiseen. Pyynnöt julkaistaan EY:n virallisessa lehdessä, hankintojen kuuluessa hankintadirektiivien soveltamisalaan ja internetissä sekä ammattilehdissä tai kansallisessa laajalevikkisessä lehdessä hankintojen ollessa vain kansallisen sääntelyn piirissä. Saaduista aloitteista valitaan ne, jotka tullaan toteuttamaan. Menettely on avoin ja mahdollistaa markkinoillepääsyn, mutta ongelmallinen hankintasäädösten noudattamisen kannalta. Olisi suotavaa, että julkisten hankintojen sääntelyssä huomioitaisiin tarpeet ideoiden ja innovaatioiden houkuttelemiseen markkinoilta.

Kysymys 9. ***Mikä olisi mielestänne paras tapa kehittää yksityiseen aloitteellisuuteen perustuvia julkisen ja yksityisen sektorin yhteistyösopimuksia Euroopan unionissa ja samalla taata avoimuuden, syrjimättömyyden ja yhdenvertaisen kohtelun periaatteiden noudattaminen?***

Ensisijainen tapa tulisi olla lainsäädäntöön liittyvien tulkinnallisten epävarmuustekijöiden poistaminen. Menettelytapasäännösten joustavuuteen tulisi kiinnittää erityistä huomiota syrjimättömyyden periaatteita unohtamatta.

Avoimuuden edistämiseksi tulisi hankintaviranomaisia kannustaa yhteistyösopimusten solmimista koskevien aikeiden julkiseen ilmoitteluun esim. internetissä. Yritysten tiedonsaantia edistäisi erityisesti erityisen sähköisen kanavan perustaminen vapaaehtoista ilmoittelua varten tai vähintään tiedottaminen kansallisista ilmoituskanavista. Suomessa hankintalainsäädännön uudistamisen yhteydessä tullaan kansallisen sääntelyn piirissä olevia hankintoja koskevia ilmoitusvelvoitteita lisäämään ja kannustamaan ilmoitusten julkaisemiseen nimenomaisella internet-sivustolla.

Käytännön esimerkkinä yksityisen sektorin aloitteiden huomioimisesta voidaan mainita tiehallinnon viranomaisten käymät vuoropuhelut yleisistä alan kehittämiseen liittyvistä kysymyksistä alan toimijoiden kanssa. Mikäli näissä vuoropuheluissa tai erityisen aloitteen kautta tulisi esille jokin erityinen kumppanuuteen perustuva hankintakohde, viranomainen kilpailuttaisi tällaisen hankkeen hankintasäädöksiä noudattaen ja ei-kansallisilla toimijoilla olisi yhdenvertainen mahdollisuus osallistua kilpailuun. Myös muilla aloilla ostaja- ja myyjäpuoli käyvät epävirallista vuoropuhelua alan kehitysnäkymistä keskustelutilaisuuksissa, seminaareissa ja koulutustilaisuuksissa.

Ks. myös edellinen vastaus.

Kysymys 10. ***Mitä kokemuksia teillä on yksityisen kumppanin valinnan jälkeisestä vaiheesta sopimusperusteisissa julkisen ja yksityisen sektorin kumppanuusjärjestelyissä?***

Erityisiä ongelmia ei ole ilmennyt. Huomiota tulisi kiinnittää kuitenkin sopimusten tarjousten- ja tarjouspyynnönmukaisuuteen. Erityisesti osapuolten riskinjakoa koskevien ehtojen muuttaminen vaarantaa valintamenettelyn tasapuolisuutta.

Ks. myös vastaukset kysymyksiin 3 ja 11 sopimussuhteen pituudesta sekä sopimusmuutoksista.

Kysymys 11. ***Onko tiedossanne tapauksia, joissa täytäntöönpanoehdot – myös keston mukauttamista koskevat lausekkeet – olisivat aiheuttaneet syrjintää tai muodostaneet aiheettoman esteen vapaalle palvelujen tarjonnalle tai sijoittumisvapaudelle? Jos on, voisitteko selvittää, millaisia ongelmia on ilmennyt?***

Kumppanuussopimusten kestoon liittyvien rajoitusten pelätään lähinnä rajoittavan tarkoituksenmukaisten sopimusten tekemistä ja vähentävän yritysten halua kumppanuussopimuksiin. Lähtökohtana on, ettei sopimuksen kesto saa estää vapaata kilpailua. Toisaalta kesto ei saa myöskään muodostaa sopimuksesta kannattamatonta yksityiselle tai julkiselle sektorille. Tämän vuoksi kumppanuussopimusten kestoa harkittaessa tulee kiinnittää huomiota hankeen laajuuteen sekä erityisesti siihen tehtyihin yksityisen sektorin investointeihin. Jotta hanke muodostuisi sekä julkiselle että yksityiselle sektorille kannattavaksi, on hankkeeseen sijoitettavat investoinnit voitava kattaa taloudellisesti kannattavalla tavalla ja aikataulussa.

Vaikka käytännön tapauksia sopimusehdoista johtuvasta syrjinnästä ei ole tullut tietoomme, voi pitkäkestoisten sopimusten kilpailuttamiseen liittyä ongelmia, kuten aiemman sopimusosapuolen ylivertainen asema kilpailutilanteessa sekä pienten yritysten huonommat mahdollisuudet päästä markkinoille. Toisaalta pitkäkestoiset sopimukset houkuttelevat ulkomaisia yrityksiä lyhyitä sopimuksia paremmin markkinoille ja edistävät siten sijoittumista.

***Kysymys 12.** Onko tiedossanne tarjousten arviointia koskevia syrjintää aiheuttavia toimintatapoja tai järjestelyitä?*

Ei

***Kysymys 13.** Oletteko yhtä mieltä komission toteamuksesta, että tietyt "step in" -tyyppiset järjestelyt voivat aiheuttaa ongelmia avoimuuden ja yhdenmukaisen kohtelun kannalta? Onko tiedossanne muita lauseketyyppejä, joiden täytäntöönpano voi aiheuttaa vastaavia ongelmia?*

Step-in –ehdot herättävät kysymyksiä kilpailuttamisvelvoitteen sekä avoimuuden ja tarjoajien tasapuolisen kohtelun vaatimusten täyttymisestä. Ehdon käytön rajoittaminen voi toisaalta vähentää rahoituslaitosten kiinnostusta järjestelyihin. Tiealalla step in- ehtoja on muotoiltu siten, että sijaantulijan on otettava sopimus vastattavakseen ilman olennaisia muutoksia sillä uhalla, että sijaantulija muuten menettää oikeutensa ja hankkeen jatkaja haetaan uudella julkisella kilpailulla.

***Kysymys 14.** Katsotteko, että yhteisön tasolla on tarpeen selkeyttää tiettyjä julkisen ja yksityisen sektorin yhteistyösopimuksiin liittyviä sopimusnäkökohtia? Jos katsotte, mikä näkökohta tai mitä näkökohtia olisi selkeytettävä?*

Julkisen ja yksityisen sektorin sopimusperusteiset kumppanuudet ovat hyvin moninaisia ja vaihtelevia Kumppanuudessa noudatettavat sopimusehdot ja tarjouspyynnössä asetetut muut vaatimukset riippuvat hyvin pitkälti toteutettavana olevan kumppanuuden laajuudesta, laadusta sekä hankkeeseen liittyvien riskien jaosta ja arvioinnista sekä osapuolten riskinkantokyvystä. Tästä johtuen kumppanuutta koskevien yksityiskohtaisesti määriteltyjen sopimusehtojen/sääntöjen määritteleminen ja niitä koskevan sääntelyn antaminen ei ole tarkoituksenmukaista.

Kannatamme mallisopimusten ja ohjeistuksen laatimista käyttäen hyväksi soveltuvin osin esimerkiksi UNCITRALin, muiden kansainvälisten järjestöjen tai jäsenmaiden jo tekemää työtä.

***Kysymys 15.** Onko tiedossanne julkisen ja yksityisen sektorin kumppanuusjärjestelyjen yhteydessä ilmenneitä erityisongelmia alihankinnan alalla? Millaisia?*

Ei

***Kysymys 16.** Jos sopimusperusteinen julkisen ja yksityisen sektorin kumppanuus edellyttää jonkin tehtäväkokonaisuuden teettämistä yhdellä yksityisellä kumppanilla, onko tällöin mielestänne perusteltua, että alihankintojen osalta annetaan yksityiskohtaisempia sääntöjä ja/tai laajennetaan niiden soveltamisalaa?*

Pääsääntöisesti emme katso olevan tarvetta lisäsääntelyyn. Nykyisin käyttöoikeusurakoihin liittyvä mahdollisuus vaatia tietyn prosenttiosuuden antamista alihankintoina aliurakoitsijoille on riittävä.

Toisaalta tarjouksissa esitettyjen alihankkijoiden vaihtuminen sopimussuhteen aikana voi aiheuttaa tarjoajien tasapuolisen kohtelun kannalta. Emme kuitenkaan näe mahdollisuuksia ratkaista ongelmaa sääntelyn keinoin.

Kysymys 17. Katsotteko yleisemmin, että yhteisön tasolla olisi tehtävä täydentävä aloite alihankintoja koskevien sääntöjen selkeyttämiseksi tai tarkistamiseksi?

Pääsääntöisesti ei.

Kysymys 18. Mitä kokemuksia teillä on rakenteellisten julkisen ja yksityisen sektorinkumppanuusjärjestelyiden toteuttamisesta? Voitteko kokemuksenne perusteella ajatella, että julkisia hankintoja ja käyttöoikeussopimuksia koskevaa yhteisön lainsäädäntöä on noudatettu rakenteellisten julkisen ja yksityisen sektorin kumppanuusjärjestelyissä? Ellette voi, miksi?

Rakenteellinen kumppanuusjärjestely on verohallinnon atk-palvelujen tuottamiseen perustetusta julkisen ja yksityisen yhdessä omistamasta osakeyhtiömuotoisen yrityksen perustaminen. Yhtiökumppani ja palvelusopimus kilpailutettiin avoimella menettelyllä julkisten hankintojen direktiivien mukaisesti.

Kuntien rakenteellisista yhteistyöjärjestelyistä mainittakoon kuntien ja yksityisen sektorin toimijoiden yhteisyritykset elinkeinopolitiikan edistämisessä sekä jätehuollon, logistiikan sekä kiinteistöhuoltopalvelujen tarjoamisessa. Myös matkailun edistämiseen on perustettu alueellisia yrityksiä, joiden taustaorganisaatioihin (esim. järjestö) ovat vapaita liittymään alan yksityiset toimijat.

Julkisten hankintojen lainsäädännön soveltamisongelmat liittyvät pääasiassa in house-järjestelyihin, joiden sääntelemättömyys on koettu yhteisyritystilanteissa ongelmalliseksi jouduttaessa arvioimaan omistavan tahon (sidostahona olevan hankintaviranomaisen) ja yhteisyrityksen välisiä sopimusoikeudellisia toimia ja hankintoja. Hankintadirektiivit eivät anna vastauksia siitä, miten tällaisiin rakenteellisiin järjestelyihin tulisi suhtautua silloin, kun julkinen organisaatio tekee hankintoja sekaomisteiselta organisaatiolta.

Rakenteellisessa kumppanuussopimuksissa ongelmalliseksi on koettu myös sopimuksen kestoa koskeva oikeudellinen epävarmuus. Yhteisyrityksiä ja palveluhankintoja koskevien sopimusten tulisi voida olla riittävän pitkäkestoisia mm. toiminnan pitkäjänteisen suunnittelun, liiketaloudellisen kannattavuuden sekä henkilöstön asemaan liittyvien kysymysten vuoksi. Käytännöt näyttävät vaihtelevan EU:n jäsenvaltioissa, eräissä jäsenmaissa rakenteellisia kumppanuuksia on tehty jopa 20-30 vuoden sopimuksin.

Kysymys 19. Katsotteko, että yhteisön tasolla on tehtävä aloite hankintaviranomaisten velvollisuuksien selkeyttämiseksi tai täsmentämiseksi niiden ehtojen osalta, joilla rakenteellisen kumppanuustyypin hankkeesta mahdollisesti kiinnostuneita toimijoita kilpailutetaan? Jos katsotte, mihin kohtiin erityisesti ja millaisiin muotoiluihin toivotte kiinnitettävän huomiota? Jos ette, miksi?

Pidämme tärkeänä in house-järjestelyjä koskevan lainsäädäntöaloitteen tekemistä.

Erityisten menettelysääntöjen laatimiselle rakenteellisista kumppanuusjärjestelyistä ei ole tarvetta tässä vaiheessa. Kannatamme kuitenkin ohjeiden laatimista ja hyviä käytäntöjä koskevien näkemysten vaihtoa.

Kysymys 20. ***Minkä toimien tai toimintatapojen katsotte haittaavan julkisen ja yksityisen sektorin yhteistyösopimuksien toteuttamista Euroopan unionissa?***

Julkisen ja yksityisen sektorin kumppanuudessa on kysymys verraten uudesta toimintatavasta. Sääntelyn tulkinnanvaraisuuden lisäksi osaltaan myös kokemusten puuttuminen on vaikuttanut ongelmatilanteiden syntymiseen.

Yhtenä merkittävänä yhteistyösopimusten toteutumista haittaavana tekijänä on koettu sopimusperusteisen ja rakenteellisen kumppanuuden sopimuskauden kestoon liittyvää epävarmuutta. Ks. myös vastaus kysymykseen 3.

.

Kysymys 21. ***Tunnetteko unionin ulkopuolisissa maissa kehitettyjä muunlaisia julkisen ja yksityisen sektorin kumppanuuksia? Tiedättekö esimerkkejä tällöin kehitetyistä hyvistä toimintatavoista, joista unioni voisi ottaa vaarin? Jos tiedätte, mitä?***

Tutustumisen arvoisia ovat kansainvälisten organisaatioiden työ yhteistyöjärjestelyjen käytön edistämiseksi sekä mallisääntelyn saavuttamiseksi. Esimerkkeinä Maailmanpankin Private Participation in Infrastructure-projektin sekä Public-Private Infrastructure Advisory Facility-ohjelman tulokset, UNCITRALin mallilainsäädännöt, Euroopan Talouskomission Public-Private Partnership Alliance Program.

Yhdysvalloissa ja Kanadassa on toteutettu lukuisia julkisen ja yksityisen sektorin yhteistyöhankkeita, joihin tutustuminen voisi tuoda lisätietoa hyvistä käytännöistä.

Kysymys 22. ***Yleisemmin ja ottaen huomioon tietyissä jäsenvaltioissa sosiaalisen ja kestävän taloudellisen kehityksen aikaansaamiseksi vaadittavat huomattavat investoinnit, katsotteko, että olisi hyödyllistä käsitellä näitä kysymyksiä säännöllisin väliajoin yhdessä asianosaisten toimijoiden kesken samalla varmistaen parhaiten toimintatapojen vaihtamisen? Katsotteko, että komission tulisi perustaa tällainen verkosto?***

Pidämme verkoston perustamista kannatettavana.

Ylijohtajan sijaisena
Hallitusneuvos Elise Pekkala

Hallitussihteeri Eija Kontuniemi

CAISSE DES DÉPÔTS ET CONSIGNATIONS

DIRECTION DES FINANCEMENTS DECENTRALISES

Département « Investissements et Participations »

NOTE

OBJET : Réponse au Livre vert de la Commission sur les partenariats publics-privés et le droit communautaire des marchés publics et des concessions

Le Livre vert sur les partenariats publics-privés et le droit communautaire des marchés publics et des concessions a pour objet de lancer une réflexion sur l'application du droit communautaire – essentiellement le droit des marchés sous l'angle du respect de la transparence des procédures- à ces formes récentes de contrats que sont les PPP, ainsi que , plus largement aux concessions.

Pour ce faire, la Commission s'est livrée à un travail de synthèse sur l'état actuel de la question, sans pour autant préjuger de la suite qui y sera donnée : en effet, s'il apparaît , au terme de la consultation, qu'il faut à la fois clarifier et sécuriser l'environnement juridique de ces contrats, un ensemble d'instruments *ad hoc* pourront être mis en place : directive, communication interprétative ou recommandation sur une meilleure coordination des pratiques nationales ou échange organisé de bonnes pratiques entre les Etats membres.

1 - Sur le cadre législatif au niveau européen

Si l'unification au niveau communautaire des procédures de passation ou des règles d'exécution est souhaitable afin de garantir la concurrence et l'égalité de traitement entre les candidats, il semble que c'est avant tout un souci de simplification qui doit guider l'action de la Commission en la matière. Il apparaît en effet que la multiplication des procédures de passation existantes en matière de marchés publics ou de concessions rend le choix et la conduite de celles-ci complexes, en particulier pour les collectivités territoriales sur des projets de taille moyenne. La Commission devrait ainsi veiller , sous couvert d'unification des procédures, à ne pas en alourdir pour autant le dispositif, sous

peine d'en compromettre la pertinence et de freiner à la fois les acteurs publics et privés-financiers et industriels- dans ces opérations complexes.
Plutôt qu'une nouvelle directive, c'est une éventuelle adaptation des directives existantes qui est attendue, accompagnée d'une communication interprétative donnant une cohérence au champ général de la commande publique.

2 - Sur le rôle des institutions financière publiques

L'expérience acquise par la Caisse des dépôts et consignations depuis de nombreuses années aux côtés des collectivités territoriales et de l'Etat, qui lui permet de faciliter la réalisation de projets innovants et de jouer un rôle essentiel en matière d'aménagement du territoire et de grands projets structurants, lui fait estimer qu'il existe un besoin de sécurité, notamment juridique des partenaires financiers et industriels..

Par ailleurs, le rôle confié par l'Etat français à la Caisse dans l'élaboration d'un cadre juridique adapté aux PPP : analyse juridique et financière de huit projets pilotes allant de grands projets d'infrastructures à la rénovation d'ensembles immobiliers universitaires ou hospitaliers (à cet égard, voir annexe n°4) montre le caractère fondamental de l'action de la Caisse dans le développement des PPP en France.

La légitimité de l'intervention d'entités financières publiques en accompagnement du développement des PPP est d'ailleurs soulignée par une décision du 26 novembre 2003 du Conseil de l'union Européenne, qui invite la Banque Européenne d'Investissement à intervenir de manière spécifique afin de faciliter un « démarrage rapide » des projets de PPP, au travers notamment de financements et instruments financiers propres à exercer « un effet de levier sur les capitaux privés ».

Dans cette perspective, la CDC, la KfW et San Paolo IMI se sont associées dans le cadre d'un Fonds d'investissement dédié au financement de projets de PPP en Europe, en particulier des fonds infrastructures TEN. La Cassa di Depositi e Prestiti, réformée en 2003 afin notamment de soutenir le démarrage des PPP en Italie, devrait se montrer intéressée par ce fonds. La Commission européenne y participe également, selon un montant fixé par la BEI. Elle démontre ainsi le caractère irremplaçable d'institutions financières publiques aux côtés des acteurs financiers et industriels traditionnels, dans le respect des règles de concurrence nationales et communautaires.

L'action de la Caisse des dépôts et consignations dans le cadre des PPP français vise principalement à contribuer, comme investisseur avisé de long terme, à la structuration d'un marché nouveau, sur lequel les acteurs peuvent avoir une visibilité réduite les dissuadant de se positionner

3 - Sur la définition du PPP

Il est patent que le développement du PPP au cours de la dernière décennie s'est fait en-dehors de toute définition au niveau communautaire. Sans pour autant en donner une, le Livre vert identifie quelques éléments constitutifs- longue durée par nature, mode de financement mixte, rôle du partenaire public centré sur la définition des objectifs, la qualité du service offert et le contrôle du respect de ces objectifs par l'opérateur économique, répartition précise des risques au cas par cas- qui n'appellent pas de commentaire particulier.

On soulignera toutefois que le dernier élément implique une diversité de situations résultant de la seule négociation contractuelle et qu'il s'accorde difficilement avec un cadre réglementaire trop contraignant, lorsque l'on sait par ailleurs que l'expérience britannique de la PFI montre la difficulté de cette phase de négociation afin d'aboutir à l'allocation optimale des risques.

Si la Commission devait légiférer sur cette forme particulière de contrats, cette spécificité devrait être prise en compte. En effet, si une définition des principes de base applicables aux PPP européens peut sembler souhaitable, elle ne devrait pas pour autant porter atteinte à la nécessaire liberté contractuelle dans ce type de montages, seule à même d'en garantir à la fois l'optimisation et l'adéquation aux conditions du marché- en particulier financier- qui sont appelées par nature à varier dans le temps et en fonction de chaque type de PPP.

4 - Sur les PPP « contractuels »

La Commission distingue en effet deux types de PPP, le PPP contractuel se fondant uniquement sur des liens contractuels entre les différents acteurs, le PPP institutionnalisé impliquant une coopération entre le secteur public et le secteur privé au sein d'une même entité. On soulignera toutefois que, dans certains cas, les deux formes pourront se conjuguer, la législation de certains Etats membres autorisant la prise de participations d'entreprises publiques locales par exemple au capital de sociétés de projet, elles-mêmes titulaires d'un contrat de PPP.

La Commission considère que les PPP prendront soit la forme d'un marché public, soit la forme d'une concession, la distinction entre les deux se faisant en fonction du mode de rémunération de l'opérateur : en concession , le partenaire privé se rémunère partiellement ou totalement sur l'usager, en marché public, la rémunération fait l'objet de paiements réguliers de la part de la puissance publique.

En l'état actuel de la législation communautaire, la passation des marchés publics est clairement encadrée, la procédure pouvant être , sous certaines conditions celle du dialogue compétitif. L'article 1-11c de la directive Marchés en date du 31 mars 2004 précise que l'on peut recourir au dialogue compétitif lorsque le marché est « particulièrement complexe », la personne publique n'étant pas en mesure de définir les moyens techniques pouvant répondre à ses besoins ou d'établir le montage juridique et/ou financier du projet.

En revanche, le choix du cocontractant est libre en concession, sous réserve du respect des principes posés par le Traité, notamment celui de non-discrimination, synonyme de transparence dans la procédure de passation, impliquant un certain degré de publicité.

Le Livre vert estime que la procédure du dialogue compétitif est particulièrement bien adaptée à la passation des PPP qui sont des marchés publics au sens communautaire. La Caisse des dépôts partage cette appréciation en insistant pour que soient clarifiées et sécurisées les conditions de recours à cette forme de mise en concurrence (sur ce point voir annexe n°1)

De même, la commission constatant qu'il n'est pas toujours aisé de déterminer dès l'origine si le contrat est un marché public ou une concession, la répartition des risques pouvant évoluer et influer sur la qualification, elle en déduit que l'adoption d'une législation destinée à encadrer et coordonner les procédures de passation des concessions pourrait être nécessaire. Il paraît important tout à la fois de garder sa spécificité à la concession (dont le contrat doit laisser une large place à la négociation) et de définir un tronc commun de procédures valable quelle que soit la forme contractuelle qui sera in fine retenue (sur ce point, voir annexe n°2)

De même, concernant la préoccupation de la Commission sur les clauses de « step-in » par lesquelles les institutions financières se réservent le droit de se substituer au gestionnaire du projet, voir annexe n° 3.

Dans cette perspective, afin d'assurer la nécessaire « bancabilité » des PPP, la France a prévu dans l'ordonnance du 17 juin 2004 sur les contrats de partenariat une disposition facilitant le financement de la société de projet par la cession, sous certaines conditions, de créances futures et certaines détenues sur la personne publique.

5 - Sur les PPP institutionnalisés

Le Traité institue les principes d'autonomie institutionnelle des Etats et des collectivités locales et de neutralité vis à vis du régime de la propriété, que le Livre vert d'ailleurs rappelle : en conséquence, la création d'une société d'économie mixte ou d'une personne morale dédiée relève d'un choix d'organisation qui appartient aux seuls Etats membres.

La longue expérience de la Caisse des dépôts, ainsi que sa mission statutaire d'accompagnement des collectivités territoriales dans leur développement, l'ont conduite à prendre des participations au capital de plus de cinq cent sociétés d'économie mixte. En effet, ce type de PPP institutionnalisé est la forme la plus souvent choisie par les collectivités territoriales pour des opérations de taille moyenne.

Le nécessaire respect de la concurrence et des principes fondamentaux du droit de la commande publique peuvent servir à protéger les collectivités dans la conclusion de PPP institutionnalisés avec des partenaires privés mieux rodés qu'elles aux lois du marché. Pour autant, une réglementation assimilant la création d'une entité au capital mixte à un marché public ou à une concession ou imposant à la personne publique de soumettre sa création à des procédures de mise en concurrence et au critère de l'offre économiquement la plus avantageuse peut se révéler inadapté.

Le contrat de société ne peut en aucun cas être assimilé à un marché public ou à une concession, rendant inopérant le critère de l'offre économiquement la plus avantageuse, un tel contrat de société impliquant par nature l'*affectio societatis* et la contribution aux pertes, notions qui sont étrangères aux marchés publics et aux concessions. L'étude des PPP institutionnalisés devrait donc faire l'objet d'une réflexion ad hoc ultérieure.

Le seul cas où un rapprochement entre ces deux formes de PPP contractuel et institutionnel est envisageable est celui de la création d'une SEM monoprojet à la seule fin de répondre à une consultation lancée par la collectivité publique actionnaire de la SEM. Dans ce cas, la décision de recourir à une SEM pourrait être laisse à la seule initiative de la collectivité publique, la mise en concurrence portant en une seule fois sur le choix et les modalités d'association du partenaire privé de la collectivité publique.

Annexe 1 Livre Vert PPP- PPP contractuel : le dialogue compétitif

1) Cadre actuel en marché public et concession

Le Livre vert estime que la procédure du dialogue compétitif est particulièrement bien adaptée à la passation des PPP, qui sont dans la majorité des cas qualifiés de marchés publics au sens communautaire.

En l'état actuel de la législation communautaire, la **passation des marchés publics est clairement encadrée**, la procédure pouvant être sous certaines conditions celle du dialogue compétitif. L'article 1-11c de la directive Marchés en date du 31 mars 2004 précise que l'on **peut recourir au dialogue compétitif lorsque le marché est « particulièrement complexe »**, la personne publique n'étant pas en mesure de définir les moyens techniques pouvant répondre à ses besoins ou d'établir le montage juridique et/ou financier du projet.

En revanche, le **choix du cocontractant est libre en concession**, sous réserve du respect des principes posés par le Traité et notamment la jurisprudence *Telaustria*, en particulier le principe de non-discrimination. Les conventions se mettent au point selon un processus itératif d'échanges et de discussions entre l'entité publique et chacun des candidats (processus de « libre négociation »).

2) Pour les contrats de partenariat : une procédure parfaitement adaptée, sous quelques réserves

- La **notion de « particulièrement complexe » est susceptible d'interprétations diverses**, notamment par le juge communautaire. La complexité du projet étant la principale condition à l'ouverture de la procédure du dialogue compétitif, il serait **souhaitable de pouvoir cerner au mieux cette notion** : le fait que celle-ci puisse faire l'objet d'une interprétation contraire par un juge engendre une incertitude juridique de nature à dissuader les investisseurs financiers et les opérateurs privés de se mobiliser, compromettant ainsi la possibilité de recourir au financement privé pour certains projets d'intérêt communautaire. Or la préoccupation de « bancabilité » des opérations de PPP – faisant appel à une structuration financière complexe- auprès des investisseurs financiers internationaux est une condition nécessaire au développement réussi des PPP.

- Il conviendrait de **s'assurer que les textes et formulaires européens relatifs à la passation de marchés soient adaptés**. La dichotomie habituelle entre marchés de services et marchés de travaux peut en effet s'avérer délicate, voire inopérante, dans le cadre de contrats de partenariat.

- Il serait également judicieux de préciser les éléments de **pondération des critères d'attribution**. Comment peut-on vouloir les définir préalablement au dialogue alors que les solutions les plus satisfaisantes ne peuvent apparaître qu'au cours de celui-ci, et que le lancement d'une procédure s'effectue sur la base d'un programme fonctionnel et non pas en fonction d'un cahier des charges définitivement élaboré ?

- Comment rédiger l'expression finale du besoin de la personne publique sans pour autant dévoiler les idées proposées par les entreprises ? Il devrait être clairement dit que le **dialogue doit se poursuivre avec chacun des candidats *sur la base des solutions de ce candidat***.

- Préciser les **modalités d'évolutivité des contrats**, par définition de longue durée. Car ces contrats, doivent pouvoir s'adapter à l'évolution des besoins, obligation renforcée par le fait qu'il s'agit de contrats globaux embrassant des métiers très divers mais néanmoins interdépendants pendant la durée du contrat.

→ La réponse à ces questions ne nécessite pas a priori une refonte des textes en vigueur, mais plutôt des **précisions sur la conduite du dialogue compétitif**, en veillant à ce que l'interprétation des exigences du Traité en la matière garantisse la nécessaire flexibilité des procédures.

Annexe 2 Livre Vert PPP – PPP contractuel :
Pour un tronc commun de procédure

La Commission, constatant qu'il n'est pas toujours aisé de déterminer dès l'origine si le contrat est un marché public ou une concession, la répartition des risques pouvant évoluer et influer sur la qualification, en déduit que l'adoption d'une législation destinée à encadrer et coordonner les procédures de passation des concessions pourrait être nécessaire. **Elle envisage même de soumettre la passation de tous les contrats de PPP, que ce soient des marchés publics ou des concessions, à un régime de procédure identique**.

1) Les conditions pouvant faire d'un tronc commun de procédure un véritable atout

*Remarque préliminaire : les montages en PPP « institutionnels » obéissent à une logique et à des déterminations radicalement différentes de celle des PPP contractuels. Dans un **cadre plus restreint**, la réflexion communautaire devrait prioritairement s'attacher à détailler les particularités propres des PPP contractuels, de type marché ou concession.*

L'unification au niveau communautaire des procédures de passation ou des règles d'exécution est souhaitable afin de garantir la concurrence et l'égalité de traitement entre les candidats, d'apporter plus de sécurité juridique évitant tout risque de requalification, et enfin dans un **souci de simplification**. Il apparaît en effet que la multiplication des procédures de passation existantes en matière de marchés publics ou de concessions rend le choix et la conduite de celles-ci complexes, en particulier pour les collectivités territoriales sur des projets de taille moyenne.

Mais la Commission devrait ainsi veiller, sous couvert d'unification des procédures, à ne pas en alourdir pour autant le dispositif, sous peine d'en compromettre la pertinence et de freiner à la fois les acteurs publics et privés dans ces opérations complexes. De plus, **si une définition des principes de base applicables aux PPP européens peut sembler souhaitable, elle ne devrait pas pour autant porter atteinte à la nécessaire liberté contractuelle dans ce type de montages**, seule à même d'en garantir à la fois l'optimisation et l'adéquation aux conditions du marché- en particulier financier- qui sont appelées par nature à varier dans le temps et en fonction de chaque type de PPP.

2) Quelques pistes pour un tronc commun de procédure

On pourrait comme le suggère la Commission envisager un tronc commun de procédure jusqu'à la détermination claire et sûre du type de contrat à passer, ce qui permettrait à la fois de gagner du temps en ne contraignant pas les pouvoirs adjudicateurs à relancer une procédure s'ils s'étaient engagés dans une mauvaise voie, et à sécuriser tous les partenaires sur la qualification retenue. Il conviendrait seulement de recadrer quelques éléments :

- la Commission pourrait souhaiter étendre le domaine du dialogue compétitif des marchés complexes aux concessions, ce qui remettrait en cause notre procédure de délégation de service public (DSP) et emporterait de nombreux effets négatifs ;
- il pourrait être suggéré au contraire de s'inspirer de la procédure de DSP : elle est plus formalisée que celle de la concession de travaux prévue par la directive mais laisse une place importante à la négociation. Elle permettrait de tenir compte des points communs aux PPP « marchés » et « concessions » relevés ci-dessus.

Avant de déterminer une procédure, il faudrait au préalable **aborder des questions de fond** :

- la frontière adoptée par la Commission entre marché et concession, suivant que le paiement est assuré par la personne publique ou l'usager, est-elle suffisante pour traiter les PPP sans les amoindrir (cf. l'expérience des *shadow toll*) ?
- le critère du risque pris par l'opérateur dans la durée ne serait-il pas plus pertinent (risque de fréquentation pour les DSP, risque de performance pour le PPP) ? Ce risque pris par l'opérateur semblant d'ailleurs justifier une certaine souplesse dans la procédure de passation du contrat.

→ Facteur de lisibilité et de sécurité juridique, **un tronc commun de procédure applicable à tous les PPP européens et respectueux d'une réelle liberté contractuelle semble souhaitable**. Une telle synthèse nécessitera au préalable des précisions et ajustements concernant notamment les critères de qualification, champs d'application et procédures respectifs des Marchés publics, DSP et PPP.

Annexe n°3 Livre Vert PPP – PPP contractuel : les clauses de *step-in*

1) les clauses de step-in, une nécessité pour la bancabilité des projets en PPP

Les clauses de « step-in », par lesquelles les institutions financières se réservent le droit de se substituer au gestionnaire du projet, sont devenues aujourd'hui **des standards sur les marchés financiers internationaux** –bien qu'à ce jour aucune clause de ce type n'ait encore donné lieu à exécution en France. Leur absence dans les contrats de PPP en Europe aurait pour conséquence un renchérissement du financement privé et donc par ricochet soit l'augmentation du coût *in fine* supporté par la collectivité publique, soit l'impossibilité pratique de réaliser certains projets au moyen d'un préfinancement privé.

Dans cette perspective, afin d'assurer la nécessaire « bancabilité » des PPP, la France a prévu dans l'ordonnance du 17 juin 2004 sur les contrats de partenariat une disposition facilitant, sous certaines conditions, le financement de la société de projet par la **cession de créances futures et certaines** détenues sur la personne publique.

Les clauses de step-in ne semblent pas poser par elles-mêmes de problèmes en terme de transparence et d'égalité de traitement. De même que le champ des adaptations prévisibles à l'origine du contrat, elles doivent en tout cas être clairement décrites dans les contrats. Il convient de rappeler que plus qu'un *candidat* c'est une *offre* qui a été choisie par l'autorité compétente, offre qui doit être réalisée même si le concessionnaire connaît des modifications de son capital.

Plus largement, la question des clauses de step-in permet de s'interroger sur la cessibilité des contrats. S'il peut certes sembler justifié de limiter ou encadrer l'exercice d'un tel droit par les financiers au cas de défaillance structurelle de la société de projet, un tel dispositif, dans la mesure où il ne s'agit pas de remettre en cause substantiellement les termes du contrat de PPP initial, **s'inscrit dans la logique de la nécessaire adaptation d'un contrat de longue durée aux évolutions inévitables sur de telles périodes**.

2) Un mécanisme à recadrer dans le contexte plus large de la cession de contrat

Dans ce domaine, il faut prendre en compte **deux aspects** : d'une part la légitime préoccupation de l'autorité publique que le contrat cédé continuera à être correctement exécuté par le cessionnaire et, d'autre part, le caractère patrimonial d'un contrat pour son titulaire à combiner avec les exigences du droit de la concurrence.

- Sur le premier aspect, il est incontestable que la substitution d'un titulaire à un autre dans ses droits et obligations n'est pas, pour l'autorité adjudicatrice, un évènement négligeable qui puisse lui être imposé sans qu'elle puisse s'exprimer. La collectivité publique peut refuser un transfert vers un concessionnaire qui ne présenterait pas toutes les garanties nécessaires, mais elle ne doit le faire que pour un motif légitime.

- Sur le second aspect, il faut refuser le principe d'interdiction de toute cessibilité du contrat. De tels contrats concrétisent en effet le droit obtenu par les entreprises d'exercer une activité économique et constituent un de leurs principaux actifs. Il serait préjudiciable à l'équilibre macro-économique des Etats membres que des dispositions excessives sur la non cessibilité des contrats entravent des opérations de cession de branches d'activité, voire des opérations d'évolution du contrôle du capital des sociétés.

Dès lors que le dispositif contractuel qui a motivé le choix d'un partenaire privé déterminé suite à la phase de dialogue compétitif n'est pas substantiellement remis en cause, son remplacement en cours d'exécution du contrat par un autre partenaire ayant accepté ledit dispositif contractuel et doté d'une capacité technique et financière comparable ne porte **atteinte ni à la transparence des procédures ni à l'égalité de traitement des candidats**.

→ Les clauses de « step-in », qui relèvent de la volonté des prêteurs de limiter leurs risques, apparaissent aujourd'hui **indispensables à la mise en œuvre de nombre de PPP**. Elles réduisent de fait le coût du financement et donnent une chance à la poursuite du contrat.

Annexe 4 Livre vert PPP : Synthèse des projets-pilotes étudiés par la CDC

Champ du projet	**Intitulé du projet**	**Coûts de réalisation provisionnels**
	Immobilier public	
Domaine hospitalier	Centre hospitalier universitaire de Caen	100 M€
Domaine universitaire	Université Toulouse II le Mirail	250 M€
Domaine culturel	Musée de l'air et de l'espace du Bourget	100 M€
	Infrastructures	
Transport collectif péri-urbain	Tramway rapide Leslys à Lyon	80 M€
Liaison ferroviaire TGV	Ligne à Grande Vitesse Sud Europe Atlantique	3 Md€
Autoroute urbaine	Liaison autoroutière A4-A86	660 M€
Ouvrage d'art	Pont levant sur la Garonne à Bordeaux	120 M€
	Environnement	
Traitement des déchets	Incinérateur d'ordures ménagères de Tours	120 M€

RÉPUBLIQUE FRANÇAISE

NOTE DES AUTORITES FRANCAISES

Objet : Note des Autorités françaises en réponse au livre vert de la Commission sur les partenariats publics-privés et le droit communautaire des marchés publics et des concessions.

Les autorités françaises se félicitent de la parution du Livre vert sur les partenariats public-privé (PPP) et remercient la Commission pour la qualité du travail de réflexion et d'analyse contenu dans ce document dont elles estiment qu'il constitue une base appropriée pour lancer le débat sur l'établissement d'un cadre communautaire apte à clarifier et sécuriser les conditions d'établissement et de passation de ces partenariats.

Dans ce domaine, les autorités françaises considèrent en effet qu'il existe au sein du marché intérieur une indétermination, fortement nuisible au besoin de visibilité et de sécurité qu'expriment certaines parties susceptibles d'être concernées par toute la gamme des montages en PPP, qui interviennent par définition dans des domaines marqués par la complexité des projets et l'importance des engagements financiers.

Pour autant, il est clair que l'encadrement requis, s'il doit parvenir à l'établissement d'une conception homogène des PPP au sein de l'Union européenne, doit impérativement éviter l'écueil de l'amalgame et la tentation de l'uniformisation. Comme le Livre vert le souligne à juste titre, la problématique des PPP met en jeu, au-delà de caractéristiques de base communes, des modes d'organisation et des finalités très divers, qui appellent chacune une prise en compte appropriée. Or, de fait, les différentes modes de mise en œuvre des PPP (marchés et concessions pour l'essentiel) sont assujettis de façon très inégale au droit communautaire, et les pratiques nationales s'avèrent fort diverses.

En conséquence, les autorités françaises estiment que la priorité que l'action communautaire doit s'assigner en matière de PPP concerne tout d'abord la clarification de cette notion même. Elle doit également d'une part préciser divers éléments de la réglementation afférente aux marchés publics pour y intégrer les éléments aptes à rendre compte des spécificités des PPP, et d'autre part préparer un encadrement ad hoc clarifiant et précisant les règles applicables aux PPP dans le domaine des concessions, en prenant pleinement en considération les spécificités et les contraintes propres à chacune de ces deux catégories. De l'avis des autorités françaises, l'essentiel de ces clarifications ne nécessiterait pas de modification de texte sauf éventuellement pour assurer le recours à la procédure négociée en matière de PPP prenant la forme d'une concession.

C'est dans cette perspective que les autorités françaises ont l'honneur de présenter à la Commission leurs réponses aux questions posées par le Livre vert. Ces réponses ne suivront pas systématiquement l'ordre des questions posées par la Commission. En effet, les réponses à ces questions supposent, pour la plupart d'entre elles, une expérience concrète de la mise en œuvre de PPP : si cette expérience existe bien évidemment dans le droit français de la commande publique, il n'y a pas eu, en revanche, de modèle unique couvrant toutes les formes de PPP existant en France. Les éléments qui suivent se proposent en conséquence de synthétiser la conception française des PPP en se fondant sur les grandes catégories identifiées par le Livre vert.

*

*   *

1. Sur la définition des PPP.

Les autorités françaises souscrivent, d'une façon générale, à l'analyse de la Commission identifiant les quatre éléments caractéristiques de la notion de PPP indiqués dans le Livre vert (durée longue, mode de financement mixte, rôle important de l'opérateur économique et examen approfondi de l'allocation des risques, qui peut aller d'un simple partage jusqu'à un véritable transfert). Ces éléments constituent effectivement les paramètres centraux permettant de mettre en évidence la particularité des PPP au sein des divers dispositifs associant les actions privées et publiques.

A cet égard, il doit être noté que, dans la perspective de parvenir à une caractérisation complète des PPP, un autre paramètre devrait être ajouté.

Le caractère essentiellement contractuel du PPP devrait être davantage mis en exergue. En effet, les autorités françaises estiment que seuls les contrats associant des partenaires publics et privés relèvent de la problématique des PPP ; les autres schémas identifiés par le Livre vert (v. ci-après) participent d'une autre logique. Il convient également de souligner la nécessité de faire participer le cocontractant à la définition fine du contrat par une procédure permettant un dialogue approfondi. De l'avis des autorités françaises, le fait que le contenu précis et détaillé du contrat résulte de la collaboration étroite, et sur une longue durée, des différents partenaires constitue un élément-clé permettant de cerner l'originalité de ces partenariats.

Toutefois, au-delà du constat que le "phénomène PPP" rassemble des caractéristiques originales dans ses différentes composantes et modalités de mise en œuvre, les autorités françaises ne peuvent approuver sans réserve la déclinaison opérée par le Livre vert en ce qui concerne les différentes formes juridiques de PPP qu'il identifie. Elles soulignent l'importance cruciale qu'elles attachent à ce que la réglementation communautaire tienne pleinement compte de la diversité essentielle des situations et des cas de figure que ces partenariats recouvrent en réalité. En particulier, elles estiment que la mise en place d'un cadre juridique général et uniforme pour l'ensemble des PPP contractuels, toutes catégories confondues (PPP contractuel/marché public, PPP contractuel/concession) apparaît difficile, et serait en toute hypothèse inopportune dans la mesure où ces différentes catégories de PPP obéissent chacune à des finalités propres qu'il importe de préserver.

S'agissant des montages et structures identifiés sous l'appellation "PPP institutionnels", elles estiment qu'ils ne sont pas à proprement parler des PPP n'étant pas de nature contractuelle. Ils obéissent à une logique et à des déterminations radicalement différentes de celles des PPP, et devraient faire l'objet d'une réflexion communautaire autonome prenant en compte la totalité des paramètres pertinents, tels l'autonomie institutionnelle et la neutralité du Traité en matière de régime de la propriété.

Au total, de l'avis des autorités françaises, la réflexion communautaire devra prioritairement s'attacher à respecter les particularités propres des PPP/marchés d'une part, et des PPP/concessions d'autre part.

Ces différents points sont explicités ci-après.

2. Sur les règles applicables aux PPP de type purement contractuels.

En conséquence des éléments de définition exposés au point 1, les autorités françaises précisent que seuls ces partenariats constituent de véritables PPP. Il n'y a donc pas lieu de distinguer entre des PPP "purement" contractuels et des PPP qui ne seraient que partiellement, ou pas du tout, contractuels.

Suivant une approche classique, la Commission considère qu'au delà de la diversité des montages, ces PPP prennent soit la forme d'un marché public, soit la forme d'une concession. Elle rappelle que la distinction entre ces deux types de contrats se fait en fonction du mode de rémunération de l'opérateur. Si la contre-prestation reçue par le partenaire privé consiste partiellement ou totalement en des redevances perçues sur les usagers du service, il s'agira d'une concession. Si elle prend une autre forme (paiements réguliers fixes ou variables, ou toute forme de rémunération atypique), l'opération sera qualifiée de marché public.

L'enjeu de cette distinction est de taille, puisque les directives communautaires encadrent strictement la procédure de passation des marchés publics. En revanche, le choix du cocontractant est libre pour les contrats de concession, à condition que soient respectées les règles du traité, et en particulier le principe de non-discrimination, qui implique notamment pour les pouvoir adjudicateurs une obligation de transparence, qui requiert un certain degré de publicité.

Dès lors que la distinction marchés publics/concessions apparaît apte à recouvrir, en droit communautaire, la totalité des cas de figure et des formes que peuvent revêtir les PPP, les autorités françaises estiment que la réflexion communautaire en la matière ne doit pas s'attacher à poser une réglementation nouvelle et autonome de ces partenariats, mais bien plutôt à compléter et clarifier le cadre juridique applicable à chacune de leurs deux composantes.

1. Quels types de montages de PPP purement contractuel connaissez-vous ? Font-ils l'objet d'un encadrement spécifique (législatif ou autre) dans votre pays ?

La mise sur pied de montages favorisant le recours aux opérateurs privés constitue un objectif important pour les autorités françaises. D'ores et déjà, le modèle de la concession de travaux et de services fondé sur un paiement par l'usager accompagné souvent d'une subvention publique d'équilibre, chaque fois que nécessaire, est d'usage à la fois fréquent et ancien. Son encadrement en France par la loi du 29 janvier 1993 (loi Sapin) permet de satisfaire aux principes de la mise en concurrence tout en permettant les apports d'une libre négociation. Par exemple, les concessions autoroutières font ainsi l'objet d'un appel public à concurrence suivi d'un examen par une commission consultative interministérielle des candidatures puis des offres, en termes de qualité de réalisation et d'exploitation, et en termes financiers et juridiques ; l'ensemble du contrat étant ensuite négocié avec le candidat retenu. Ce dispositif a donc permis de solidifier, en droit interne, les principes généraux du droit communautaire appliqués à certaines formes de commande publique – telles que les concessions de service en particulier.

Toutefois, plusieurs projets ont fait, ou font l'objet d'études pour déterminer les conditions de mise en place d'un nouveau partenariat, mais jusqu'à une date récente, l'inadaptation des dispositions juridiques existantes a constitué un frein à ces initiatives. Plusieurs textes ont été adoptés à cet égard : la loi n° 2002-1094 du 29 août 2002 d'orientation et de programmation pour la sécurité intérieure ; la loi n° 2002-1138 du 9 septembre 2002 d'orientation et de programmation pour la justice ; la loi n° 2003-73 du 27 janvier 2003 relative à la programmation militaire ; l'ordonnance n° 2003-850 du 4 septembre 2003 portant simplification de l'organisation et du fonctionnement du système de santé. La récente ordonnance n° 2004-559 du 17 juin 2004 sur les contrats de partenariats pose les règles non sectorielles permettant de mener à bien ces projets.

2.1. S'agissant des PPP prenant la forme d'un marché public.

Si l'attribution des marchés publics ne peut s'opérer qu'à titre exceptionnel dans le cadre d'une procédure négociée, la directive 2004/18/CEE a ouvert la possibilité d'instaurer un dialogue avec les candidats pour définir les conditions des marchés particulièrement complexes.

Cette procédure, dite de « dialogue compétitif », semble être parfaitement adaptée à la passation de ceux des PPP qui sont des marchés publics au sens communautaire, sous les cinq réserves suivantes.

La première est d'être assuré que les conditions de recours à la procédure ne seront pas interprétées trop restrictivement par les acteurs économiques (ce qui serait source d'insécurité juridique), et seront considérées de façon souple par les services de la Commission, notamment le caractère de complexité du projet envisagé. En effet, le contentieux du contrat est extrêmement sensible au respect des procédures de passation des contrats administratifs. La complexité du projet étant la condition principale d'entrée dans le dialogue compétitif, il conviendrait pour sécuriser ce type de contrat de définir le mieux possible cette notion. Il serait en effet préjudiciable au développement des contrats de partenariat que leur existence soit menacée du simple fait qu'un juge communautaire ou national aura estimé que le projet objet du contrat n'était pas véritablement « complexe ».

La deuxième est qu'il conviendrait de s'assurer que les textes et formulaires européens relatifs à la passation de marchés soient adaptés et éventuellement simplifiés. La dichotomie habituelle entre marchés de services et marchés de travaux peut en effet s'avérer délicate dans le cadre des contrats de partenariat, pour lesquels la distinction entre les deux notions n'est pas toujours aisée.

La troisième est la difficulté d'envisager pratiquement la pondération des critères d'attribution, ainsi que l'exige la directive ; des précisions sur ce point seraient les bienvenues. Principalement, comment concilier le fait que les critères d'attribution doivent être définis préalablement au dialogue et le fait que les solutions satisfaisantes pour la personne publique peuvent n'apparaître qu'au cours du dialogue ?

La quatrième est liée à la difficulté prévisible, à l'issue de la première phase de discussion séparée avec les entreprises, pour rédiger l'expression finale du besoin de la personne publique sans pour autant dévoiler les idées proposées par les entreprises dans cette première phase. Il importe que la procédure maintienne une concurrence réelle mais non artificielle entre les candidats participant au dialogue, ce qui peut conduire éventuellement à achever ce dernier avec un seul candidat. Il est par ailleurs impératif, compte tenu de ce que sont les contrats de PPP, qu'ils puissent être négociés véritablement dans tous leurs termes lors de cette procédure.

Enfin, la dernière réserve concerne l'évolutivité des contrats. En effet ces contrats, par définition de longue durée, doivent pouvoir aisément s'adapter à l'évolution des besoins, obligation particulièrement impérieuse s'agissant de contrats globaux qui embrassent des métiers très différents, mais interdépendants pendant la vie du contrat.

En conclusion de ce chapitre, les autorités françaises estiment que la réponse à toutes ces questions n'implique pas nécessairement *a priori* une refonte ni même une modification des textes en vigueur, mais plutôt des précisions et des clarifications sur la conduite du dialogue compétitif dans le domaine de la commande publique. Elles invitent ainsi la Commission à examiner la possibilité de préparer des lignes directrices sur ce sujet, en veillant à ce que l'interprétation des exigences du Traité en la matière garantisse la nécessaire flexibilité des procédures. Il serait en effet fortement inopportun que le dialogue compétitif devienne une sous-catégorie de l'appel d'offres, ce qui priverait largement de son intérêt le recours à cette nouvelle procédure.

2. De l'avis de la Commission, la transposition en droit national de la procédure de dialogue compétitif permettra aux parties concernées de disposer d'une procédure particulièrement adaptée à la passation des contrats qualifiés de marchés publics lors de la mise en place d'un PPP de type purement contractuel, tout en préservant les droits fondamentaux des opérateurs économiques. Partagez-vous ce point de vue ?

S'agissant du dialogue compétitif, il est prématuré de se prononcer sur son adaptation aux projets de PPP du fait d'un retour sur expériences quasi-inexistant. Néanmoins, cette procédure soulève d'ores et déjà plusieurs interrogations sur les conditions de sa mise en œuvre.

Il convient en effet d'appeler l'attention sur les difficultés susceptibles d'être générées par l'obligation d'élaborer, à l'issue d'un dialogue, une spécification fondée sur les propositions émises par les candidats et à partir de laquelle va s'effectuer la mise en concurrence. La procédure doit maintenir une concurrence réelle et non artificielle entre les candidats participant au dialogue, ce qui peut conduire éventuellement à achever ce dernier avec un seul candidat. En outre, les contrats de PPP doivent pouvoir être négociés véritablement dans tous leurs termes lors de cette procédure.

S'agissant des PPP, la problématique identifiée ci-avant est d'autant plus sensible que, du fait de la complexité de ces projets, la solution proposée par les candidats pour les montages technique, juridique et financier constituera un élément déterminant du choix du futur titulaire.

3. En ce qui concerne ces contrats existe-t-il selon vous des points autres que ceux relatifs au choix de la procédure d'adjudication, susceptibles de poser problème au regard du droit communautaire des marchés publics ? Si oui lesquels et pour quelles raisons ?

Les autorités françaises n'ont pas identifié d'autres points susceptibles de poser problème au regard du droit communautaire des marchés publics, mais soulignent qu'il convient, pour favoriser le développement de ce type de montage, qu'aucune mesure ne limite :

- la possibilité d'une évolution du prix de règlement du marché en fonction du niveau des **revenus tiers** perçus par le titulaire, le cas échéant, du fait de l'exploitation de l'ouvrage ou de l'équipement objet du PPP ;
- le **paiement différé** de l'investissement réalisé par l'opérateur économique privé ;
- la prise en compte de la nécessaire **évolutivité** du contrat compte tenu de sa durée ;
- la possibilité de passer un **marché global** incluant l'ensemble des besoins de la personne publique.

2.2. S'agissant des PPP prenant la forme d'une concession.

Après avoir souligné le caractère lacunaire de la réglementation communautaire en matière de concessions, la Commission s'interroge sur l'opportunité d'homogénéiser certaines règles régissant les PPP contractuels, et notamment de soumettre leur passation à un régime identique, qu'ils soient qualifiés de marchés publics ou de concessions.

Les autorités françaises ne peuvent souscrire totalement à l'approche "horizontale" des partenariats retenue par la Commission dans le Livre vert. Elles estiment qu'il n'est ni possible, ni souhaitable, de traiter en bloc les partenariats contractuels en appliquant un régime quasi-uniforme, fondé sur le dialogue compétitif, aux partenariats constitués en la forme de marchés publics et aux partenariats sous forme de concession. Ces deux catégories présentent en effet des différences essentielles dans leurs finalités et leurs modes d'exécution qui doivent être pleinement prises en compte par la réglementation communautaire.

La concession correspond en France, depuis plus d'un siècle, à un mode d'exécution du service public connu sous le nom de "gestion déléguée", consistant en la dévolution directe, par voie contractuelle, d'une activité d'intérêt général à un prestataire extérieur à l'administration. La caractéristique essentielle de la concession réside dans la prise en charge de la mission d'intérêt général, et des risques d'exploitation y afférents, par le cocontractant en lieu et place de la personne publique concédante.

Ainsi définie, la concession a vocation à s'appliquer à une très grande variété de missions de service public, et peut concerner indifféremment des services publics administratifs (c'est-à-dire, le plus souvent, des activités de nature non économique : il en va par exemple ainsi des caisses primaires de sécurité sociale, des ordres professionnels, des fédérations sportives ou encore des sociétés de chasse), ou des services publics industriels économiques, qui eux relèvent pleinement de la catégorie des services d'intérêt économique général (SIEG) et sont soumis aux dispositions de la loi du 29 janvier 1993 (dite "loi Sapin").

A des degrés divers, le régime juridique de la concession emporte application d'un régime juridique spécifique, dans lequel le concessionnaire est à la fois assujetti à des obligations exorbitantes du droit commun et titulaire, de façon très variable selon les cas, de prérogatives de puissance publique telles que par exemple le droit d'expropriation ou le droit de percevoir une rémunération auprès des usagers.

En tant que mode de gestion du service public, la concession participe de l'exercice direct des responsabilités de l'Etat. A ce titre, elle présente une différence radicale avec les marchés publics qui, quel que soit leur degré de complexité et de sophistication, s'analysent en fin de compte comme l'achat par la personne publique d'un bien ou d'un service. Il s'agit là d'une particularité de la concession de service public en droit français qui ne se retrouve que très partiellement dans la notion communautaire de concession de services ou de travaux.

Il en résulte, à raison même des caractéristiques propres de la concession, que la dévolution d'une mission de service public ne peut obéir intégralement aux mêmes règles que la commande publique, notamment sa procédure de dialogue compétitif. De l’avis des autorités françaises, il conviendrait de réserver la procédure du dialogue compétitif aux seuls cas pour lesquels elle a été conçue, c’est-à-dire ceux où la personne publique estime nécessaire le concours de partenaires privés pour définir avec elle les solutions appropriées à ses besoins. La procédure négociée doit en revanche demeurer la règle dans le cas des concessions, pour lesquelles la discussion des termes du contrat est prédominante par rapport à la définition des solutions à mettre en œuvre, dès lors que dans la plupart des cas la personne publique est en mesure de définir elle-même les moyens propres à répondre à ses besoins.

De plus, le dialogue compétitif propose une procédure qui est pratiquement l’inverse de celle rappelée en réponse à la question 1 à propos des concessions : alors que l’attribution d’une concession débute par un examen sur pièces des candidatures et des offres et se termine par une négociation approfondie de tous les termes du contrat, le dialogue compétitif procède à l’inverse et se termine par un examen sur pièces des offres finales sous forme d’un appel d’offres restreint. Cette rigidité finale, bien que tempérée par la possibilité pour le pouvoir adjudicateur de demander des « précisions, clarifications, perfectionnements ou compléments » après remise des offres est inadaptée à l’élaboration détaillée et partagée des termes d’une concession.

La nécessité d'une certaine liberté de choix du prestataire ne signifie évidemment pas que l'attribution de concessions doive s'opérer de façon arbitraire et discriminatoire : cette liberté doit au contraire s'exercer dans le cadre de principes clairs garantissant un degré approprié de transparence, d'ouverture et de non-discrimination dans la sélection du concessionnaire, ainsi que la Cour l'a rappelé dans sa jurisprudence Telaustria[1].

[1] Dans l’arrêt rendu le 7 décembre 2000 dans l’affaire « Telaustria » (C-324/98), la Cour a estimé que les entités adjudicatrices concluant des contrats de concessions de services : « sont *tenues de respecter les règles fondamentales du traité en général et le principe de non-discrimination en raison de la nationalité en particulier, ce principe impliquant, notamment, une obligation de transparence qui permet au pouvoir adjudicateur de s'assurer que ledit principe est respecté.* (...) *Cette obligation de transparence qui incombe au pouvoir adjudicateur consiste à garantir, en faveur de tout soumissionnaire potentiel, un degré de publicité adéquat permettant une ouverture du marché des services à la concurrence ainsi que le contrôle de l'impartialité des procédures d'adjudication ».*

Tel est l'objet des dispositions de la loi "Sapin" qui organisent, ainsi que le relève le Livre vert, les procédures de publicité préalable et d'appel à candidatures pour l'attribution des délégations de service public, en parfaite cohérence avec les principes édictés par la Cour et les dispositions concernant les concessions de travaux contenues dans la directive du 31 mars 2004.

Les autorités françaises partagent pleinement le souci exprimé par la Commission de préciser le cadre juridique, au sein du marché intérieur, en matière de réglementation des concessions, et plus particulièrement des concessions de services. En effet, le droit communautaire dérivé ne contient actuellement que des règles applicables aux concessions de travaux passées dans les secteurs classiques. Les concessions de services passées dans les secteurs classiques, ainsi que les concessions de travaux ou de services passées dans les secteurs spéciaux n'entrent pas dans le champ d'application des directives marchés. Le régime de passation de ces concessions reste néanmoins soumis aux principes issus directement du traité (égalité de traitement, transparence, proportionnalité, reconnaissance mutuelle) tels qu'interprétés par la Cour de justice, notamment dans l'arrêt Telaustria.

Toutefois, l'application des règles et grands principes du traité ne permet ni d'établir des règles d'octroi univoques, ni de garantir leur application uniforme, en particulier en ce qui concerne les modalités de la publicité préalable au choix du prestataire.

Ainsi par exemple, la jurisprudence « Telaustria », relative à l'interprétation des exigences de transparence issues du principe d'égalité de traitement, peut laisser place à une grande marge d'interprétation de la part des pouvoirs adjudicateurs de l'ensemble des Etats membres, notamment quant au niveau de publicité adéquat, à la nécessité ou non de procéder à une publication ou encore sur le choix du support de publication.

Il est indispensable de favoriser un rapprochement et une cohérence des pratiques des Etats membres et de préciser les exigences du droit communautaire en la matière. Les autorités françaises invitent en conséquence la Commission à retenir, dans son analyse des PPP, une approche conservant pleinement la différenciation des marchés publics et des concessions, et à veiller à ne pas étendre aux concessions des principes de dévolution qui ne présentent de pertinence que pour les seuls marchés publics.

L'initiative communautaire en la matière, si elle venait à être regardée comme nécessaire, devrait apporter les garanties exigées par la Cour, tant en ce qui concerne les modalités de publicité (seuil, support) que les informations nécessaires pour permettre aux délégataires potentiels de décider s'ils souhaitent participer à la procédure de sélection (objet de la délégation, étendue des prestations, critères de sélection). De l'avis des autorités françaises, il serait souhaitable que la Commission examine la possibilité de publier sur ce sujet des lignes directrices, sans préjudice, le cas échéant, du besoin d'un texte normatif de droit dérivé.

Les autorités françaises rappellent à cet égard à la Commission qu'elles avaient proposé, à l'occasion de la négociation du paquet législatif marchés publics, lors de la réunion du Groupe marchés publics des 4 et 5 octobre 2001, d'étendre aux concessions de services les règles applicables aux concessions de travaux. Une telle solution permettrait de répondre de façon satisfaisante à la double exigence de clarification du cadre juridique applicable à ces concessions, et de maintenir l'utilisation indispensable d'une procédure négociée.

En toute hypothèse, la réflexion communautaire sur les concessions ne devrait pas viser à développer une réglementation applicable aux secteurs faisant déjà l'objet d'une politique d'harmonisation.

Ainsi par exemple, les secteurs de l'électricité et du gaz, régis par des directives communautaires spécifiques, sont investis de fortes obligations de service public en contrepartie de la reconnaissance de droits exclusif et spéciaux. Il serait donc inopportun de leur appliquer des règles qui viendraient interférer de façon négative avec la réglementation sectorielle en vigueur, laquelle est elle-même en cours d'évolution[2].

4. Avez vous déjà organisé, participé ou souhaité organiser ou participer à une procédure d'attribution de concession au sein de l'Union ? Quelle expérience en avez vous ?

[2] Si la fourniture est ouverte à la concurrence, en matière gazière par exemple, la directive 2003/55/CE du 26 juin 2003 n'impose pas une mise en concurrence du mode de dévolution du contrat de concession pour l'établissement, la gestion et l'exploitation du réseau que ce soit de transport, de stockage ou de distribution – article 7 et 11 -. Ainsi est-il indiqué à l'article 11 que *« Les Etats membres désignent, ou demandent aux entreprises propriétaires ou responsable de réseaux de distribution de désigner, pour une durée à déterminer pour les Etats membres en fonction de considération d'efficacité et d'équilibre économique, un ou plusieurs gestionnaires de réseau de distribution.* » Cette directive prévoit donc que l'Etat désigne de façon formelle les gestionnaires de réseaux et n'impose pas de mise en concurrence des opérateurs dans ce cadre.

Dans le domaine des infrastructures de transports, la France a été à l'initiative (ou co-initiative) de plusieurs concessions, du tunnel sous la Manche au viaduc de Millau en passant par la liaison ferroviaire Perpignan-Figueras. Dans le seul domaine autoroutier et depuis 1993, une quinzaine d'avis ont été publiés par le gouvernement français pour une dizaine d'opérations différentes.

Dans chaque cas, la publicité organisée a été la plus large possible ce qui a notamment permis l'entrée de nouveaux opérateurs. Des entreprises européennes se portent désormais candidates dans divers groupements ; il en a été ainsi par exemple dans les trois dernières consultations lancées en 2003 (liaison A19, Artenay-Courtenay ; A41, Annecy-Genève et A65, Bordeaux-Pau).

La liaison Perpignan-Figueras a permis à l'Espagne et à la France d'inaugurer dans le domaine ferroviaire, une formule de concession inspirée des concessions autoroutières.

5. Estimez-vous que le cadre communautaire actuel est suffisamment précis pour assurer la participation concrète et effective de sociétés ou groupements non nationaux aux procédures de passation des concessions ? Une concurrence réelle est elle habituellement assurée dans ce cadre ?

Le cadre communautaire actuel est, d'une façon générale, insuffisamment précis pour garantir une pleine transparence et une concurrence loyale dans la conclusion des concessions, et particulièrement en raison de l'incertitude entourant l'attribution des concessions de services. En revanche, pour les concessions de travaux le cadre communautaire semble satisfaisant.

6. Pensez-vous qu'une initiative législative communautaire, visant à encadrer la procédure de passation des concessions est souhaitable ?

Les règles d'attribution des concessions de services devraient être clarifiées et précisées, notamment à la lumière de la jurisprudence "Telaustria". De l'avis des autorités françaises, il serait souhaitable que la Commission examine la possibilité de publier sur ce sujet des lignes directrices, sans préjudice, le cas échéant, du besoin d'un texte normatif de droit dérivé. L'initiative communautaire en la matière, si elle venait à être regardée comme nécessaire, devrait apporter les garanties exigées par la Cour, tant en ce qui concerne les modalités de publicité (seuil, support) que les informations nécessaires pour permettre aux délégataires potentiels de décider s'ils souhaitent participer à la procédure de sélection (objet de la délégation, étendue des prestations, critères de sélection).

En tout état de cause, il conviendra de veiller à la nécessaire cohérence entre le dispositif général des concessions et d'autres initiatives communautaires particulières telles la réflexion sur les SIEG (Livre vert sur les services d'intérêt général, COM (2003) 270 final), le projet de directive dit « Eurovignette » ou le projet de règlement relatif à l'action des Etats membres en matière d'exigence de service public et à l'attribution de contrat de services public dans le domaine des transports de voyageurs par chemin de fer, par route et par voie navigable.

7. De manière plus générale, si vous estimez qu'il est nécessaire que la Commission propose une nouvelle action législative, existerait-il des raisons objectives de viser dans cet acte tous les PPP de type contractuel, qu'ils soient qualifiés de marché public ou de concessions, pour les soumettre à des régimes de passation identiques ?

En toute hypothèse, il sera impératif de respecter les particularités et les caractéristiques respectives des concessions et des marchés publics, ce qui exclut toute uniformisation des règles et des procédures.

2.3. S'agissant des PPP d'initiative privée.

De par leurs finalités et leurs caractéristiques, les PPP suscitent, de façon légitime, des initiatives et des projets innovants de la part des acteurs privés. Cette dynamique novatrice doit être préservée dans le cadre communautaire applicable aux partenariats, tout en garantissant le maintien du libre choix de la personne publique pour donner ou non suite aux projets, en fonction de l'appréciation qu'elle porte sur la dimension d'intérêt général qu'ils présentent.

La prise en compte de l'initiative privée soulève néanmoins une interrogation sur la contradiction apparente qui peut être relevée entre d'une part l'objectif d'inciter les acteurs privés à présenter des projets innovants, et d'autre part la mise en concurrence qui peut aboutir à priver l'auteur du bénéfice de son projet. S'il ne saurait évidemment être question de reconnaître à l'auteur d'un projet un véritable "droit" à la conclusion du contrat, il convient néanmoins de conserver en la matière une approche pragmatique apte à préserver un minimum d'équité.

C'est ainsi que l'ordonnance française du 17 juin 2004 sur les contrats de partenariat autorise expressément dans son article 10 la saisine de la personne publique d'un projet sur l'initiative d'une personne privée. En ce cas, la personne publique reste libre d'y donner suite ou non, la personne privée étant autorisée à participer à la procédure de passation du contrat dans la première hypothèse. Il n'y a pas d'indemnisation obligatoire pour l'apporteur de projet, mais rien n'interdit non plus à la personne publique d'indemniser l'auteur du projet.

8. Selon votre expérience, l'accès des opérateurs non-nationaux aux formules de PPP d'initiative privée est-il assuré ? En particulier lorsqu'il existe une invitation des pouvoirs adjudicateurs à présenter une initiative, cette invitation fait-elle généralement l'objet d'une publicité adéquate pour permettre l'information de tous les opérateurs intéressés ? Une procédure de sélection véritablement concurrentielle est-elle organisée pour assurer la mise en œuvre du projet retenu ?

Le principe de toute mise en concurrence conduit à ce qu'elle soit précédée d'une publicité à laquelle ont accès l'ensemble des opérateurs, nationaux ou non nationaux. Tel est l'objectif poursuivi par l'ordonnance française du 17 juin 2004.

9. Quelle serait selon vous la meilleure formule pour assurer le développement des PPP d'initiative privée dans l'UE tout en assurant le respect des principes de transparence, de non-discrimination et d'égalité de traitement ?

De l'avis des autorités françaises, la principale difficulté réside dans la contradiction existant entre d'une part l'encouragement des initiatives privées, et d'autre part la mise en concurrence systématique qui fait perdre à l'auteur l'avantage de son initiative. La solution trouvée dans l'article 10 de l'ordonnance sur les contrats de partenariat apparaît à cet égard équilibrée.

10. Quelle expérience avez vous de la phase postérieure à la sélection du partenaire privé dans les opérations de PPP contractuels ?

Dans les contrats qui peuvent s'assimiler à des PPP contractuels, il importe d'organiser l'évolutivité de ces contrats. En effet ces contrats, par définition de longue durée, doivent pouvoir aisément s'adapter à l'évolution des besoins, obligation particulièrement impérieuse s'agissant de contrats globaux qui embrassent des métiers très différents, mais interdépendants pendant la vie du contrat.

En matière autoroutière, les clauses des cahiers des charges ont été récemment modernisées et renforcées sur les points suivants :
- contractualisation d'objectifs de qualité d'exploitation, d'entretien et de maintenance par période de 4 ans ;
- missions de dépannage sur le réseau ;
- obligation de fournir aux usagers une information routière en temps réel aussi fiable que possible ;
- obligation réciproque d'échange d'informations routières ;
- échanges de coordination entre gestionnaires de réseaux et autorités publiques en matière de gestion globale du trafic et d'assistance aux usagers en cas de crise ;
- modernisation du dispositif de pénalités et autres mesures coercitives (formalisation d'une procédure contradictoire) ;
- compte-rendu annuel d'exécution de la concession par le concessionnaire.

Cet exemple témoigne parmi d'autres de la nécessaire évolution des contrats au cours de leur durée. L'évolutivité des concessions constitue l'une des caractéristiques principales qui distinguent profondément celles-ci des marchés publics.

11. Avez vous connaissance de cas dans lesquels les conditions d'exécution, y compris les clauses d'adaptation dans le temps, ont pu avoir une incidence discriminatoire ou ont pu constituer une entrave injustifiée à la libre prestation de services ou à la liberté d'établissement ? Si oui, pouvez vous décrire le type de problèmes rencontrés ?

Non.

12. Avez vous connaissance de pratiques ou de mécanismes d'évaluation des offres ayant des incidences discriminatoires ?

Non.

13. Partagez-vous le constat de la Commission selon lequel certains montages du type « step-in » peuvent poser problème en terme de transparence et d'égalité de traitement ? Connaissez-vous d'autres clauses types dont la mise en œuvre est susceptible de poser de problèmes similaires ?

Les clauses de substitution sont la contrepartie des risques pris par les prêteurs dans le financement des projets. Elles sont et doivent demeurer de nature contractuelle. Elles doivent en outre s'accompagner d'une approbation du partenaire public.

14. Estimez-vous qu'il est nécessaire de clarifier au niveau communautaire certains aspects relevant du cadre contractuel des PPP ? Si oui, sur quels aspects devrait porter cette clarification ?

Hormis les questions relatives, en amont, à l'attribution des concessions (v. question 6), il ne paraît pas nécessaire d'encadrer plus avant, au plan communautaire, le régime des contrats de PPP.

En revanche, les autorités françaises soulignent l'intérêt qu'elles attacheraient à l'ouverture d'un dialogue entre les Etats membres permettant l'échange de bonnes pratiques en la matière.

2.4. S'agissant de la question de la sous-traitance

Il ressort d'une étude publiée par la Commission en mai 2004 que la valeur médiane d'un marché public attribué aux PME est de 249 000 euros alors que pour les grandes entreprises, elle est de 453 000 euros.

Il est d'ores et déjà certain que les marchés dévolus selon la procédure de partenariat public privé excluent les PME de la mise en concurrence du fait notamment de l'importance du marché, l'obligation de financement d'investissements lourds, la mise en pratique de procédures complexes…

Or, dans son considérant 32, la directive 2004/18/CE affirme le principe d'accès des PME à la commande publique : « afin de favoriser l'accès des petites et moyennes entreprises aux marchés publics, il convient de prévoir des dispositions en matière de sous-traitance ».

Les autorités françaises expriment toutefois des doutes sur l'opportunité et la pertinence d'un encadrement réglementaire poussé en matière de sous-traitance. Il s'agit en effet d'une matière mettant en cause des relations de nature purement privée et commerciale, qui ne donne *a priori* pas lieu à un besoin d'encadrement autre que celui apporté par les règles de droit commun.

Certes, un minimum de principes peut s'avérer nécessaire, compte tenu des spécificités propres des PPP qui peuvent rendre difficile l'accès direct des petites et moyennes entreprises à ces contrats. Lors de la concertation et du débat précédant l'adoption de l'ordonnance du 17 juin 2004, il est apparu nécessaire d'apporter une réponse concrète aux inquiétudes exprimées par les PME. C'est ainsi que l'ordonnance prévoit trois dispositions : parmi les critères d'attributions figure la part d'exécution du contrat que le candidat s'engage à confier à des petites et moyennes entreprises et à des artisans ; l'interdiction de la sous-traitance totale ; l'obligation faite au titulaire du contrat de constituer une caution garantissant le paiement des sous-traitants dans un délai maximal et l'obligation de prévoir les modalités de contrôle par la personne publique des conditions dans lesquelles le cocontractant fait appel aux sous-traitants.

Ces trois éléments sont requis pour apporter un minimum de garanties au bon accomplissement du contrat. S'il serait opportun que des principes de ce type trouvent à s'appliquer pour l'ensemble des contrats de partenariats conclus au sein du marché intérieur, il n'apparaît en revanche pas utile d'envisager de réglementer au-delà de ces aspects une matière qui relève essentiellement de relations commerciales.

15. Dans le contexte des PPP avez vous connaissance de problèmes particuliers rencontrés en matière de sous-traitance ? Lesquels ?

Non.

16. Le phénomène des PPP de type contractuel, impliquant le transfert d'un ensemble de tâches à un unique partenaire privé, justifie t-il selon vous que des règles plus détaillées et/ou d'un champ d'application plus large soient mises en place en ce qui concerne le phénomène de sous-traitance ?

Les autorités françaises considèrent qu'en la matière le principe de la liberté contractuelle doit s'appliquer dans le cadre des législations nationales.

17. De manière plus générale, estimez-vous qu'une initiative complémentaire devrait être prise au niveau communautaire en vue de clarifier ou d'aménager les règles relatives à la sous-traitance ?

Non.

3. Sur les PPP de type institutionnalisé.

Les développements que la Commission consacre à cette forme de PPP sont très succincts et mériteraient très certainement d'être quelque peu explicités. Il semble en effet que ces développements n'échappent pas à une certaine confusion entre les PPP et les notions de privatisation et d'externalisation.

La création d'une entité au capital mixte ou la prise de contrôle d'une entreprise privée dans une structure publique ne sont en aucune façon assimilables à un marché public ou à une concession et ne peuvent donc par conséquent être soumises aux règles de la commande publique (à l'exception du cas ou la création de l'entité est une modalité d'exercice de l'opération et a été prévue lors de la mise en concurrence).

En outre, aux yeux des autorités françaises, la mise en œuvre d'un PPP doit nécessairement se faire par contrat. La notion de PPP est en effet consubstantielle à la notion de contrat et à la négociation contractuelle, s'agissant notamment de la répartition des risques entre les différents acteurs.

La création d'une personne morale *ad hoc*, qu'elle prenne la forme d'une société d'économie mixte ou toute autre forme juridique, la répartition des capitaux publics et privés dans une telle entité, ou l'externalisation d'une activité particulière constituent des choix d'organisation qui correspondent aux prérogatives des Etats membres, conformément aux principes d'autonomie institutionnelle des Etats et de neutralité du Traité vis à vis du régime de propriété, dont le Livre vert reconnaît du reste lui-même l'applicabilité.

Bien évidemment, il ne saurait être question d'admettre la légitimité d'entités créées spécifiquement pour contourner le principe d'égalité d'accès aux contrats ; pour autant, il ne saurait davantage être question d'empêcher des personnes publiques et privées de conjuguer leurs initiatives et leurs capitaux pour construire un projet. La dimension publique des sociétés d'économie mixte, qui sont de vraies entreprises, ne constitue nullement un obstacle au jeu d'une concurrence équitable. En particulier, il doit être clair que la légitimité des sociétés créées pour porter un projet spécifique postérieurement à une procédure ouverte, transparente et non-discriminatoire ne saurait être remise en question.

Il s'agit d'une question difficile qui, de l'avis des autorités françaises, doit être examinée dans une réflexion *ad hoc* excédant le cadre du droit des concessions et de la commande publique. Elles invitent en conséquence la Commission à réserver ces problématiques pour des débats ultérieurs.

18. Quelle expérience avez vous de la mise en place d'opérations de PPP de type institutionnalisé ? En particulier votre expérience vous conduit elle à penser que le droit communautaire des marchés publics et des concessions est respecté dans le cas de montages de PPP institutionnalisé ? Si non, pourquoi ?

Les autorités françaises considèrent qu'il n'y a pas lieu d'inclure les montages de type institutionnalisé dans une réflexion communautaire sur les PPP, et qu'il convient impérativement d'éviter tout amalgame entre ces montages et les problématiques afférentes aux contrats de PPP.

19. Estimez-vous qu'une initiative doit être prise au niveau communautaire en vu de clarifier ou de préciser les obligations des organismes adjudicateurs quant aux conditions dans lesquelles doivent être mis en concurrence les opérateurs potentiellement intéressés par un projet de type institutionnalisé ? Si oui sur quels points particuliers et sous quelle forme ? Si non, pourquoi ?

Une initiative particulière apparaît prématurée. En toute hypothèse, une éventuelle réflexion en la matière ne devrait en aucun cas s'inscrire dans le cadre des travaux actuels sur les PPP.

20. Quelles sont les mesures ou les pratiques que vous estimez constitutives d'entraves à la mise en place des PPP au sein de l'UE ?

Le manque de recul dans ce domaine ne permet pas aux autorités françaises d'identifier à ce stade des mesures ou pratiques constitutives d'entraves à la mise en place des PPP au sein de l'UE.

21. Connaissez-vous d'autres formes de PPP développés dans les pays hors de l'Union ? Connaissez-vous des exemples de bonnes pratiques développées dans ce cadre, dont l'UE pourrait s'inspirer ? Si oui lesquelles ?

Non.

22. De façon plus générale, et compte tenu des besoins importants d'investissements nécessaires dans certains Etats membres, afin d'en poursuivre un développement économique, social et durable, estimez-vous utile une réflexion collective sur ces questions qui se poursuivrait à des intervalles réguliers entre les acteurs concernés ; et qui permettrait un échange des meilleures pratiques ? Est-ce que vous considérez que la Commission devrait animer un tel réseau ?

Les autorités françaises sont favorables à la poursuite d'une réflexion communautaire sur ces questions, animée par la Commission et visant à favoriser l'échange de bonnes pratiques.

Stellungnahme der Regierung der Bundesrepublik Deutschland zu dem Grünbuch der EU-Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

I. Vorbemerkung:

Die Bundesregierung begrüßt die Initiative der Kommission, den Begriff „öffentlich-private Partnerschaft (ÖPP)“ zu klären und eine Kategorisierung der verschiedenen Kooperationsformen vorzunehmen, die unter den Begriff „ÖPP“ zu fassen sind. Denn die „öffentlich-private Partnerschaft (ÖPP)“, mehr noch die Abkürzung des englischsprachigen „public-private partnership (PPP)“, ist ein schillernder Begriff, der in den unterschiedlichsten Zusammenhängen verwendet wird und unterschiedlichste Inhalte transportiert.

Die Bundesregierung hofft, dass die Kommission in der Frage, ob und wie „ÖPP“ in Zukunft auf gemeinschaftsrechtlicher Ebene unter dem Blickwinkel des Vergaberechts behandelt werden, tatsächlich – wie mehrfach betont – ergebnisoffen ist. Das Grünbuch erweckt allerdings an vielen Stellen nicht diesen Anschein; vielfach entsteht der Eindruck, dass ein gemeinschaftliches Regelungsbedürfnis für Dienstleistungskonzessionen und „ÖPP“ begründet werden soll. Außerdem enthält das Grünbuch viele Aussagen, die sich in den Fragen nicht widerspiegeln. Die Bundesregierung wird daher im Folgenden nicht nur die Fragen der Kommission beantworten, sondern auch zu diesen Aussagen Stellung nehmen.

Um sich ein möglichst breites Bild zu machen, hat die Bundesregierung im Vorfeld dieser Stellungnahme Länder, kommunale Spitzenverbände, Wirtschaftsverbände und sonstige interessierte Kreise konsultiert. Sie hat schriftliche Stellungnahmen eingeholt und die Länder und Verbände zu Anhörungen eingeladen. Die vorliegende Stellungnahme stellt die Ansicht der Bundesregierung dar, berücksichtigt aber auch viele Punkte, die im Rahmen der Konsultationen vorgetragen wurden.

Die besondere Form der Zusammenarbeit zwischen Staat und Bürgern wurde in Deutschland erst in den letzten Jahren verstärkt Gegenstand der politischen Diskussion. Dem Thema „ÖPP" kommt in der Bundesrepublik Deutschland ein hoher politischer Stellenwert zu. Das Bundesministerium für Verkehr, Bau- und Wohnungswesen hat im Jahr 2002 einen Lenkungsausschuss gebildet, dem Vertreter der öffentlichen Auftraggeber (Bund, Länder und Kommunen) und der Bau- und Finanzwirtschaft angehören, um Impulse zur Verbesserung der ÖPP-Rahmenbedingungen zu geben und das Entstehen eines ÖPP-Kompetenznetzwerks in Deutschland zu fördern. Der Lenkungsausschuss hat im Jahr 2003 ein Gutachten zu „PPP im öffentlichen Hochbau" beauftragt. Gegenstand dieses Gutachtens ist ein Leitfaden zum ÖPP-Verfahren, eine Untersuchung der rechtlichen Rahmenbedingungen im Vergaberecht, Haushaltsrecht, Steuerrecht, Kommunalrecht und Zuwendungsrecht, ein Standard für Wirtschaftlichkeitsuntersuchungen, eine empirische Untersuchung von internationalen und 46 deutschen Projekten mit ÖPP-Elementen sowie ein Konzept für ein föderales Kompetenzzentrum. Das Gutachten ist auf der Homepage des Bundesministeriums für Verkehr, Bau- und Wohnungswesen (www.bmvbw.de) im Internet abrufbar.

Zurzeit wird – als Vorstufe eines föderalen Kompetenznetzwerks – in Kooperation mit dem Lenkungsausschuss beim Bundesministerium für Verkehr, Bau- und Wohnungswesen eine Task Force eingerichtet, die Pilotprojekte betreuen, Grundsatz- und Koordinierungsarbeiten sowie Öffentlichkeitsarbeit und Wissenstransfer übernehmen soll.

II. Anmerkungen zu den einzelnen Themenbereichen des Grünbuchs sowie den Fragen der Kommission

1. Definition des Begriffs „öffentlich – private Partnerschaft"

Die Kommission definiert den Begriff der öffentlich-privaten Partnerschaft als eine langfristig angelegte Form der Zusammenarbeit zwischen einer öffentlichen Stelle und einem Privatunternehmen (vgl. Rz. 1 ff. des Grünbuchs). An anderer Stelle betont sie jedoch, dass die Geltung des Gemeinschaftsrechts über öffentliche Aufträge und Konzessionen nicht davon abhängt, ob der Vertragspartner des öffentlichen Auftraggebers öffentlichen oder privaten

Status hat (vgl. Rz. 63 des Grünbuchs). Für die Bundesregierung stellt sich daher die Frage, ob die Kommission ihre Äußerungen auch auf öffentlich-öffentliche Partnerschaften und damit z.B. Formen der interkommunalen Zusammenarbeit bezogen wissen will.

Eine Ausdehnung des Vergaberechts auf solche Kooperationen lehnt die Bundesregierung strikt ab. Hierbei handelt es sich nicht um öffentliche Aufträge im Sinne des Vergaberechts, sondern um Formen staatlicher Aufgabenorganisation.

Dies folgt auch aus der kommunalverfassungsrechtlichen Selbstverwaltungsgarantie. Diese ist in Artikel 28 der Verfassung der Bundesrepublik Deutschland verankert und integraler Bestandteil der deutschen Staatsorganisation. Das Recht auf kommunale Selbstverwaltung ermöglicht es Kommunen und anderen Gebietskörperschaften, alle Angelegenheiten der örtlichen Gemeinschaft im Rahmen der Gesetze in eigener Verantwortung zu regeln. Entsprechende Gewährleistungen enthalten auch die Verfassungen der einzelnen Bundesländer. Sie vermitteln nicht nur eine institutionelle Garantie der Gemeinden im staatlichen Verwaltungsaufbau, sondern beinhalten auch ein subjektives und damit einklagbares Recht der Gemeinden auf eigenverantwortliche Wahrnehmung ihrer Angelegenheiten.

Das Recht auf kommunale Selbstverwaltung wird auch auf europäischer Ebene garantiert. Bereits die auf Initiative des Europarates zurückgehende Europäische Charta der kommunalen Selbstverwaltung von 1988 trug ihm Rechnung. Auch in der gerade beschlossenen europäischen Verfassung erfolgt eine ausdrückliche Anerkennung der regionalen und kommunalen Selbstverwaltung sowie der Unantastbarkeit der staatsorganisationsrechtlichen Strukturen. In Artikel 5 Absatz 1 heißt es:

> *„Die Union achtet die nationale Identität ihrer Mitgliedstaaten, die in deren grundlegender politischer und verfassungsrechtlicher Struktur einschließlich der regionalen und kommunalen Selbstverwaltung zum Ausdruck kommt. Sie achtet die grundlegenden Funktionen des Staates, insbesondere der territorialen Unversehrtheit, die Aufrechterhaltung der öffentlichen Ordnung und den Schutz der inneren Sicherheit.“*

Die Erwähnung in der europäischen Verfassung dokumentiert den hohen Stellenwert der kommunalen Selbstverwaltungsgarantie auch auf europäischer Ebene.

Aufgrund der kommunalen Selbstverwaltungsrechtsgarantie haben Kommunen das Recht zu entscheiden, wie sie ihre Aufgaben wahrnehmen, ob sie diese selbst oder durch private Dritte oder in Zusammenarbeit mit anderen Kommunen z.B. durch die Gründung oder den Beitritt zu einem sog. Zweckverband erledigen möchte.

Eine solche öffentlich-öffentliche Partnerschaft unterliegt dem Vergaberecht nicht. Denn hierbei handelt es sich nicht um den Einkauf einer Leistung am Markt. Der Markt ist erst dann betroffen, wenn die öffentliche Hand die Entscheidung getroffen hat, dass die Leistung von einem Dritten erbracht werden soll. Ein Dritter ist im Fall der Aufgabenwahrnehmung durch Zweckverbände aber nicht beteiligt. Es wird lediglich eine Aufgabe innerhalb des Staatsaufbaus verlagert. Gleiches gilt für die Aufgabenorganisation auf anderen Ebenen des Staates, d.h. auf der Ebene des Bundes oder Länder, wenn die Aufgabe weiterhin vom Staat wahrgenommen wird, sei es auch durch eine formal andere juristische Person.

Die Betrachtungsweise der Kommission, dass Dritter auch eine andere Gebietskörperschaft ist und – sobald die Aufgabe auf eine von dem eigentlichen Auftraggeber verschiedene juristische Person übertragen wird – der Markt berührt ist und damit der Wettbewerb eröffnet werden muss, greift zu kurz und ist aus der Sicht der Bundesregierung zu formalistisch. Denn dies führt zu einer unterschiedlichen Behandlung von zentralistisch organisierten Staaten, bei denen Aufgaben von unterschiedlichen Dienststellen, aber innerhalb einer juristischen Person wahrgenommen werden, und Staaten mit einer kleinteiligeren und verzweigteren staatsorganisationsrechtlichen Struktur. Es kann aber nicht von der verfassungsrechtlichen Organisation eines Staates abhängen, ob auf bestimmte Vorgänge Vergaberecht Anwendung findet oder nicht. Insofern greift die formale Betrachtungsweise der Kommission auf unzulässige Weise in das nun auch ausdrücklich verfassungsrechtlich garantierte Staatsorganisationsrecht der Mitgliedstaaten ein.

Würde den deutschen Städten, Gemeinden und Landkreisen durch das Vergaberecht die Möglichkeit genommen, Aufgaben in Kooperation mit anderen Gebietskörperschaften durchzuführen, wären sie in ihrer Aufgabenwahrnehmung beschnitten und letztlich auf eine reine Gewährleistungsrolle zurückgedrängt. Es ist eine Frage der politischen Entscheidung eines jeden Mitgliedstaates, ob und inwieweit er sich in bestimmten Aufgabenfeldern auf die Gewährleistungsrolle zurückzieht. Eine vergaberechtliche Frage ist dies jedenfalls nicht.

Frage 1a: Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt?

1. Die verschiedenen Modelle von ÖPP auf Vertragsbasis können grob in Betreiber-, Konzessions- und Betriebsführungsmodelle (vgl. unten unter a) bis c)) unterteilt werden, wobei diese Begriffszuordnung sehr pauschal ist und den komplexen Vertragsmodellen häufig nicht gerecht wird. Innerhalb dieser ÖPP-Formen haben sich insbesondere in den Bereichen Fernstraßenbau und öffentlicher Hochbau, in denen in Deutschland bislang die meisten Erfahrungen mit ÖPP gemacht wurden, zahlreiche Vertragstypen herausgebildet.

   Neben den ÖPP-Modellen auf Vertragsbasis gibt es sog. Gesellschafts- bzw. Kooperationsmodelle, bei denen es sich in der Terminologie des Grünbuchs um institutionalisierte ÖPP (vgl. unten unter 8.) handelt. Hierbei werden öffentliche Aufgaben (z.B. Finanzierung und Durchführung eines Infrastrukturprojekts) auf eine Objektgesellschaft übertragen, an der die öffentliche Hand (zumeist mehrheitlich) neben einem oder mehreren privaten Unternehmen beteiligt ist. Organisatorisch erfolgt bei den Kooperationsmodellen, die sich insbesondere im Bereich der Wasserversorgung bzw. der Abwasserentsorgung Anwendung finden, zumeist eine Aufspaltung in die "Besitzgesellschaft", die das Eigentum an den Anlagen hält und mehrheitlich der öffentlichen Hand gehört, und eine "Betriebsgesellschaft", welche die Anlagen von der Besitzgesellschaft mietet oder pachtet und eigenverantwortlich führt.

   a) Betreibermodell allgemein:

      Bei Betreibermodellen verpflichtet sich ein privater Investor gegen Entgelt gegenüber der öffentlichen Hand, eine Infrastrukturanlage zu planen, zu bauen, zu finanzieren und zu betreiben. Nach außen tritt der Betreiber regelmäßig nicht als selbständiger Rechtsträger in Erscheinung. Die öffentliche Hand bleibt gegenüber der Öffentlichkeit verpflichtet, die in Frage stehende Versorgungsleistung zu erbringen. Hierfür erhebt sie Gebühren. Die Betreibermodelle unterscheiden sich daher von der Konzession dadurch, dass die öffentliche Hand und nicht der Nutzer den Betreiber vergütet.

b) Konzessionsmodell:

Beim Konzessionsmodell verpflichtet sich der Auftragnehmer, eine bestimmte Leistung auf eigenes wirtschaftliches Risiko unmittelbar an den Bürger zu erbringen. Im Gegenzug erhält er das Recht, seine Kosten über Entgelte oder Gebühren von Nutzern zu finanzieren. Er steht in unmittelbarer vertraglicher Beziehung zu den Nutzern. Die Berechtigung zur Entgelt- oder Gebührenerhebung wird durch Verleihung der Berechtigung zur Erhebung einer Gebühr oder durch eine Tarifgenehmigung zur Erhebung eines privatrechtlichen Entgelts übertragen. Gegenstand einer Konzession kann sowohl eine Bau- wie auch eine Lieferleistung sein.

c) Betriebsführungsmodell:

Anders als bei den Betreiber- und Konzessionsmodellen überträgt die öffentliche Verwaltung beim Betriebsführungsmodell lediglich die Betriebsführung einem privaten Unternehmen, das hierfür ein Entgelt erhält.

2. Zu den vertraglichen Modellen in den unterschiedlichen Anwendungsbereichen von ÖPP:

a) Bereich Bundesfernstraßenbau

Im Bereich des Bundesfernstraßenbaus werden überwiegend zwei Formen von sog. Betreibermodellen angewendet:

aa) Betreibermodell für den mehrstreifigen Autobahnausbau (**A-Modell**)
bb) Betreibermodell gemäß Fernstraßenbauprivatfinanzierungsgesetz (**F-Modell**)

Obwohl diese Modelle als Betreibermodelle bezeichnet werden, haben sie auch Konzessionselemente. Die Modelle haben folgende Gemeinsamkeiten:

- Die Infrastrukturverantwortung des Bundes und der Länder bleibt durch die Betreibermodelle unberührt. Dies wird auch dadurch deutlich, dass Voraussetzung für den Bau einer Bundesfernstraße (weiterhin) deren Berücksichtigung im Bedarfsplan Straße des Bundes ist.

- Die Betreibermodell-Projekte kann der Bund nur im Einvernehmen mit den Ländern durchführen. Darüber hinaus umfassen sie nur einen begrenzten Anteil des Gesamtnetzes der Bundesfernstraßen. Der Fortbestand der Auftragsverwaltung nach Art. 90 Abs. 2 Grundgesetz ist somit gewährleistet.

- Die Verträge sind zeitlich befristet.

aa) Betreibermodell für den mehrstreifigen Autobahnausbau (**A-Modell**)

Die Einführung der streckenbezogenen Gebühr für schwere Lkw (≥ 12 t zulässiges Gesamtgewicht) auf Autobahnen ermöglicht ein Betreibermodell für den mehrstreifigen Autobahnausbau (A-Modell) mit folgenden Merkmalen:

- Der Anbau zusätzlicher Fahrstreifen, die Erhaltung und der Betrieb aller Fahrstreifen sowie die Finanzierung werden an einen privaten Betreiber übertragen.
- Das Gebührenaufkommen der schweren Lkw im auszubauenden Streckenabschnitt während des Betreiberzeitraumes wird für die Refinanzierung des privaten Betreibers vorgesehen.

- Die durch die Nutzung der Pkw/leichte Lkw entstehenden Infrastrukturkosten werden in Form einer Anschubfinanzierung (ca. 50 % der sonst üblichen Baukosten) aus dem Straßenbauhaushalt aufgebracht.

Bei diesem Modell handelt es sich um eine Aufgabenprivatisierung, bei der jedoch nur der Vollzug von Aufgaben auf einen Privaten übertragen wird. Für die vertragliche Umsetzung sind besondere gesetzliche Regelungen nicht erforderlich.

Das Modell ist unabhängig von den Betreibermodellen nach dem Fernstraßenbauprivatfinanzierungsgesetz (FStrPrivFinG) (F-Modell, vgl. unten unter bb)) und nur von der Einführung der streckenbezogenen Lkw-Gebühr auf Autobahnen abhängig. Voraussetzung ist die Zustimmung der jeweiligen Landesregierung sowie die Abstimmung mit dem Bundesministerium der Finanzen.

bb) Betreibermodell im Rahmen des Fernstraßenbauprivatfinanzierungsgesetzes (**F-Modell**)

Seit September 1994 sind mit dem FStrPrivFinG die rechtlichen Voraussetzungen zur Anwendung des Betreibermodells im Bundesfernstraßenbau gegeben. Danach können der Bau, die Erhaltung, der Betrieb und die Finanzierung von Bundesfernstraßen Privaten zur Ausführung übertragen werden. Zur Refinanzierung erhalten diese das Recht zur Erhebung von Mautgebühren.

Dieses Betreibermodell ist derzeit gesetzlich beschränkt auf

- Brücken, Tunnel und Gebirgspässe im Zuge von Bundesautobahnen und Bundesstraßen,
- mehrstreifige Bundesstraßen mit getrennten Fahrbahnen für den Richtungsverkehr mit Kraftfahrzeugen.

Die Zahl der nach dem Gesetz realisierbaren Maßnahmen (insbesondere Brücken- und Tunnelbauten) ist begrenzt, da sich nur bestimmte Vorhaben für eine Privatfinanzierung mit Refinanzierung durch Mautgebühren eignen. Ursächlich hierfür ist insbesondere die Lage der Projekte im Netz (z.B. innerorts oder Ortsumgehung mit guten Umfahrungsmöglichkeiten) sowie spezifische Projektsituationen, wie z.B. hohe Baukosten bei gleichzeitig relativ geringem Verkehrsaufkommen. Aus diesem Grunde kann zur Herstellung der erforderlichen privatwirtschaftlichen Rentabilität eine staatliche Anschubfinanzierung zu den Baukosten berücksichtigt werden, sofern das Projekt zum Zeitpunkt der Realisierung in den „Vordringlichen Bedarf“ des Bedarfplanes eingestuft ist.

cc) Neben den Betreibermodellen gibt es im Bereich des Fernstraßenbaus sog. „**Funktionsbauverträge**“. Hier handelt es sich um Bauverträge, bei denen die Anforderungen an den Straßenoberbau funktional beschrieben werden, Neben der eigentlichen Bauleistung übernimmt das private Unternehmen über einen vorgegebenen Zeitraum von 20 - 30 Jahren die bauliche Erhaltung, wobei die qualitativen Anforderungen anhand funktionaler Kriterien überprüft werden. Die Vergütung erfolgt aus dem Bundeshaushalt.

b) Öffentlicher Hochbau

Bund, Länder und Kommunen verfügen im Hochbau über mehrjährige Erfahrungen mit alternativen Realisierungsformen, bei denen Elemente von ÖPP genutzt werden. In den letzten 5 Jahren wurden Hochbaumaßnahmen mit ÖPP-Elementen im Wert von ca. 3 - 4,5 Mrd. € realisiert. 100 Ausschreibungen sind statistisch erfasst. Das sind etwa 3% bis 5% aller jährlichen Beschaffungsvorgänge im Hochbau. Je nach Interessenlage der öffentlichen Hand kamen verschiedene Modelle zur Anwendung, zum überwiegenden Teil handelt es sich hierbei jedoch nicht um Konzessionsmodelle. Der so genannte Lebenszyklus-Ansatz, d.h. eine umfassende Aufgabenübertragung von Planung, Bau, Finanzierung, Betrieb und

Verwertung von der öffentlichen Hand auf einen privaten Anbieter wurde in Deutschland aber bisher nicht umgesetzt.

Im Bereich des öffentlichen Hochbaus hat das in der Vorbemerkung erwähnte Gutachten folgende mögliche Modelle für ÖPP auf Vertragsbasis klassifiziert:

- Erwerbermodell
  Der private Auftragnehmer übernimmt bei diesem Modell Planung, Bau, Finanzierung und den Betrieb einer Immobilie, die von der öffentlichen Hand genutzt wird; die Laufzeit beträgt i.d.R. 20 – 30 Jahre. Zum Vertragsende geht das Eigentum an Grundstück und Gebäude auf den öffentlichen Auftraggeber über. Das Entgelt besteht in einer regelmäßigen Zahlung an den Auftragnehmer; es wird bei Vertragsschluss festgesetzt und besteht aus den Komponenten für Planung, Bau, Betrieb (Facility Management), Finanzierung und Erwerb der Immobilie incl. Grundstück.

- Inhabermodell
  Das Inhabermodell ähnelt dem Erwerbermodell. Im Gegensatz zu diesem betrifft das Projekt aber ein Grundstück des Auftraggebers. Auf diesem wird ein Gebäude neu errichtet oder saniert. Der öffentliche Auftraggeber wird bzw. bleibt daher bereits mit der Errichtung bzw. Sanierung Eigentümer des Gebäudes.

- Facility-Management-Leasingmodell
  Der private Auftragnehmer übernimmt hier Planung, Bau, Finanzierung und Betrieb einer Immobilie. Anders als beim Erwerbermodell besteht jedoch keine Verpflichtung zur Übertragung des Gebäudeeigentums am Ende der Vertragslaufzeit. Der Auftraggeber hat vielmehr ein Optionsrecht, die Immobilie entweder zurückzugeben oder zu einem vorab fest kalkulierten Restwert zu erwerben. Neben der Kaufoption möglich sind auch Mietverlängerungsoptionen oder Verwertungsabreden. Als Nutzungsentgelt zahlt der Auftraggeber regelmäßige Raten („Leasingraten“) an den

Auftragnehmer in bei Vertragsschluss feststehender Höhe; Bestandteile dieser Raten ist das Entgelt für die (Teil-)Amortisation der Planungs-, Bau- und Finanzierungskosten einerseits und den Betrieb (Facility Management) andererseits. Der Preis, zu dem der öffentliche Auftraggeber das Eigentum am Ende der Vertragslaufzeit erwerben kann, ist ebenfalls bereits im Zeitpunkt des Vertragsschlusses festgelegt.

- Vermietungsmodell

  Das Vermietungsmodell entspricht weitgehend dem Leasingmodell, jedoch ohne Kaufoption mit zuvor festgelegtem Kaufpreis. Allenfalls kann das Gebäude zum im Zeitpunkt des Vertragsablaufs zu ermittelnden Verkehrswert erworben werden. Der Auftraggeber zahlt regelmäßige Raten an den Auftragnehmer in bei Vertragsschluss feststehender Höhe; Bestandteile dieser Raten sind das Entgelt für Gebrauchsüberlassung („Miete“) und den Betrieb (Facility Management).

- Contractingmodell

  Das Vertragsmodell erfasst (Ein-)Bauarbeiten und betriebswirtschaftliche Optimierungsmaßnahmen von bestimmten technischen Anlagen oder Anlagenteilen durch den Auftragnehmer in einem Gebäude des öffentlichen Auftraggebers. Die Laufzeit beträgt ca. 5 – 15 Jahre, das Entgelt besteht in regelmäßigen, bei Vertragsschluss festgesetzten Zahlungen zur Abdeckung von Planungs-, Durchführungs-, Betriebs- und Finanzierungskosten des Auftragnehmers.

- Konzessionsmodelle

  Bei den Konzessionsmodellen übernimmt der Auftragnehmer Planung, Bau-, Finanzierung, Betrieb und u.U. auch den Eigentumsübergang einer Immobilie. Im Unterschied zu anderen Modellen erhält der Auftragnehmer kein festes Entgelt, sondern das Recht, seine Kosten durch Erhebung von Nutzungsentgelten (Entgelte oder Gebühren) zu decken, die Dritte für die Benutzung der Gebäude bzw. Anlagen zu entrichten haben (sog.

Drittnutzerfinanzierung). Hinsichtlich des Eigentumsübergangs zum Vertragsablauf sind unterschiedliche Regelungen möglich (z.B. automatischer Eigentumsübergang auf den Auftraggeber ohne Schlusszahlung, Entschädigung zu einem fest vereinbarten Preis oder zum Verkehrswert, Verlängerungsoptionen). Der Auftraggeber kann sich gegebenenfalls im Rahmen einer Anschubfinanzierung auch an den Kosten des Auftragnehmers beteiligen oder Zuschüsse zum laufenden Betrieb zusichern. Liegt der ganz überwiegende Schwerpunkt auf der Erbringung von Dienstleistungen des Facility Managements, Betriebs oder der Finanzierung, so liegt eine Dienstleistungskonzession vor. Enthält die Vertragsleistung jedoch einen nicht nur unerheblichen Anteil an Bauleistungen (Errichtung/Sanierung eines Bauwerks), so ist die Konzession nach der deutschen Rechtsprechung als Baukonzession zu qualifizieren.

Frage 1 b): Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

In Deutschland gibt es kein besonderes ÖPP-Gesetz. Zu einzelnen Fragestellungen finden sich spezielle Regeln in Gesetzen oder Verwaltungsvorschriften. So ist z.B. die Möglichkeit der Aufgabenerbringung durch Private in einigen Gesetzen ausdrücklich geregelt (vgl. z.B. § 1 FStrPrivFinG, § 16 Krw-/AbfG, § 18 a WHG). Die bisherigen Erfahrungen in Deutschland haben gezeigt, dass ÖPP-Projekte mit den geltenden vergaberechtlichen Vorschriften gut verwirklicht werden können.

2. Wahl des Vergabeverfahrens

Frage 2: Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP

auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Der wettbewerbliche Dialog ist ein Verfahren, das die neuen europäischen Vergaberechtsrichtlinien neu eingeführt haben. Das Verfahren wurde auf der Grundlage theoretischer Überlegungen entwickelt; praktische Erfahrungen mit diesem Instrument gibt es bislang noch nicht. Der wettbewerbliche Dialog ist außerdem ein Verfahren, dessen Einführung den Mitgliedsstaaten freisteht.

Die Bundesregierung hält es keineswegs für ausgeschlossen, dass das Verfahren des wettbewerblichen Dialogs für die Durchführung bestimmter ÖPP ein mögliches geeignetes Verfahren darstellt. Die Frage nach seiner besonderen Eignung für ÖPP ist jedoch verfrüht. Aus deutscher Sicht müssen zunächst die Umsetzung dieses neuen Instruments durch die Mitgliedstaaten sowie erste praktische Erfahrungen abgewartet werden, bevor eine genauere Bewertung des wettbewerblichen Dialogs möglich ist.

Wenn der wettbewerbliche Dialog das einzige geeignete Verfahren für ÖPP wäre, hieße dies zudem, dass ÖPP-Projekte bislang nicht zufriedenstellend hätten realisiert werden können. In Deutschland wie in anderen Ländern wurden jedoch auch unter dem bislang geltenden Vergaberecht ÖPP ohne Probleme durchgeführt. Insbesondere stellt das Verhandlungsverfahren mit vorgeschaltetem EU-weitem Teilnahmewettbewerb aus deutscher Sicht ein Verfahren dar, das bei vielen ÖPP in Betracht kommt und mit dem gute Erfahrungen gemacht worden sind. Das Verhandlungsverfahren unterliegt bestimmten Voraussetzungen, die in der Richtlinie 2004/18/EG niedergelegt sind. Unter den genannten Voraussetzungen dürfen öffentliche Auftraggeber auf das Verhandlungsverfahren jedoch ohne weiteres zurückgreifen. Die Richtlinien gehen davon aus, dass in diesen Fällen die anderen Verfahren ungeeignet sind oder sich als ungeeignet erwiesen haben (vgl. Art. 30 Abs. 1 a) der RL 2004/18/EG) und es daher die Flexibiltät des Verhandlungsverfahrens erfordert.

Die Bundesregierung geht hier nicht von so strengen Voraussetzungen aus wie dies die Kommission tut. Das Verhandlungsverfahren ist nicht auf solche wenigen Sonderfälle beschränkt, in denen Art oder Umfang der Arbeiten schlechthin unwägbar sind (z.B. Bauen auf archäologischem Grund). Vielmehr kommt es auch bei öffentlichen Aufträgen in Betracht, bei denen die rechtliche oder finanztechnische Konstruktion sehr vielschichtig ist und zudem Teil des Angebots sein soll, wie dies bei umfangreicheren ÖPP häufig der Fall ist. In diesen Fällen ist die Leistung nicht hinreichend eindeutig und erschöpfend beschreibbar, um eine einwandfreie Preisermittlung zu ermöglichen. Der Auftraggeber kann also die vertraglichen Spezifikationen im Vorfeld noch nicht genau festlegen .

Außerdem ist der wettbewerbliche Dialog an strenge Voraussetzungen geknüpft. Er ist nur bei „besonders komplexen“ Leistungen zulässig, wie es in Deutschland z.B. der Neubau des Flughafens Berlin – Schönefeld wäre. Es muss für den öffentlichen Auftraggeber objektiv unmöglich sein, die Mittel zu bestimmen, die seinen Bedürfnissen gerecht werden, oder zu beurteilen, was der Markt bieten kann (vgl. Erwägungsgrund 31 der Richtlinie 2004/18/EG). Es ist zumindest fraglich, ob diese Voraussetzungen bei ÖPP-Projekten wie z.B. dem Ausbau eines Autobahnabschnitts oder dem Betrieb einer Schule erfüllt sind. Zudem wirft der urheberrechtliche Schutz der vorgeschlagenen innovativen Lösungen Probleme auf. Der Gewinn an Flexibilität gegenüber dem Verhandlungsverfahren ist fraglich.

Frage 3: Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Es gibt in Deutschland im Bereich von ÖPP keine Regelungen oder Praktiken, die gegen Gemeinschaftsrecht verstoßen.

3. Anforderungen des Primärrechts an Dienstleistungskonzessionen, Aufträge unterhalb der Schwellenwerte und nicht prioritäre Dienstleistungen (Rz. 29 ff.)

In den Rz. 28 ff., insbesondere 30 ff. legt die Kommission dar, welche Anforderungen das Primärrecht ihrer Ansicht nach an die Ausschreibung von Dienstleistungskonzessionen stellt. Die Kommission leitet insbesondere aus den primärrechtlichen Grundsätzen der Gleichbehandlung und Transparenz sehr detaillierte Anforderungen ab.

Die Bundesregierung hält dies nicht für zwingend und hat starke Zweifel, dass aus dem Primärrecht so detaillierte Anforderungen hergeleitet werden können. Das Primärrecht kann nach Ansicht der Bundesregierung nicht dergestalt ausgelegt werden, dass bei Dienstleistungskonzessionen, die von den vergaberechtlichen Richtlinien nicht erfasst sind, letztlich die gleichen Anforderungen gelten wie bei öffentlichen Aufträgen. So detaillierte Anforderungen werden auch durch die bisherige Rechtsprechung des EuGH nicht getragen. In der Rechtssache *Telaustria* (C-324/98) hat der Gerichtshof festgestellt, dass bei Dienstleistungskonzessionen die primärrechtlichen Grundsätze der Nichtdiskriminierung und der Transparenz gelten und der Auftraggeber kraft der Verpflichtung zur Transparenz zugunsten potenzieller Bieter einen **angemessenen Grad von Öffentlichkeit** sicherstellen muss, der den Dienstleistungsmarkt dem Wettbewerb öffnet und die Nachprüfung ermöglicht, ob die Vergabeverfahren unparteiisch durchgeführt wurden. Es wurde vom EuGH jedoch nicht festgestellt, welche konkreten vom Auftraggeber zur Herstellung der Transparenz zu treffen sind (wie z.B. vorherige Bekanntmachung der Absicht der Konzessionserteilung und der Regeln für die Auswahl). In der Rechtssache *Deutsche Bibliothek* hat der EuGH schließlich lediglich festgestellt, dass Konzessionsverträge über von der Richtlinie 92/50/EWG grundsätzlich erfasste Dienstleistungen von dieser Richtlinie ausgeschlossen sind.

Zudem nimmt die Kommission in der Fußnote 34 an, dass dieselben Grundsätze auch für sogenannte nicht prioritäre Dienstleistungen (vgl. Anhang IIB der RL 2004/18/EG bzw. Anhang XVIIB der RL 2004/17/EG) und Aufträge unterhalb der Schwellenwerte gelten. Auch dem kann die Bundesregierung nicht beipflichten. Dienstleistungskonzessionen, nicht prioritäre Dienstleistungen und Aufträge unterhalb der Schwellenwerte können nicht pauschal über einen Kamm geschert werden. Insbesondere nicht prioritäre Dienstleistungen sind schon deswegen anders zu behandeln, als sie - anders als z.B. Dienstleistungskonzessionen - in den Vergaberichtlinien geregelt sind. Auf das Primärrecht kann daher bei diesen Dienstleistungen nicht uneingeschränkt zurückgegriffen werden. Die Vergaberichtlinien sehen in den Artikeln 35 Abs. 4 iVm. 21 RL 2004/18/EG und 43 iVm. 32 RL 2004/17/EG für nicht prioritäre Dienstleistungen ausdrücklich nur eine Verpflichtung zur Ex-post-Transparenz vor.[1] Angesichts dieser expliziten und differenzierten Entscheidung im Sekundärrecht ist es daher sinnwidrig, aus dem Primärrecht eine Verpflichtung zur vorherigen Bekanntmachung zu folgern, wie dies die Kommission in Rz. 30 tut. Die differenzierte Behandlung der verschiedenen Dienstleistungen in den Anhängen II A und B bzw. XVII A und B wäre damit hinfällig.

Aufträge unterhalb der Schwellenwerte unterfallen den Vergaberichtlinien zwar nicht. Es darf aber auch hier die Wertung, die der europäische Gesetzgeber mit der Festlegung eines Schwellenwertes getroffen hat, nicht unterlaufen werden. Die Auslegung des Primärrechts darf nicht dazu führen, dass für unterschwellige Aufträge letztlich die gleichen Regeln gelten und die Schwellenwerte damit sinnlos werden. Das Urteil des EuGH in der Sache *Vestergaard* stützt die Ansicht der Kommission hier nicht. Dieses Urteil begründet jedenfalls keine Bekanntmachungspflicht bzw. die Erforderlichkeit förmlicher Regeln. Denn in dem dem Urteil zugrundeliegenden Fall ging es um die europarechtliche Zulässigkeit einer Leistungsbeschreibung, die eine bestimmte nationale Marke forderte, also um einen klaren Verstoß gegen die Dienstleistungsfreiheit und das Diskriminierungsverbot (EuGH, Rechtssache C-59/00 – Vestergaard, Rz. 24, 26). Der Gerichtshof hat in der Entscheidung aber auch klargestellt, dass die strengen besonderen Verfahrensvorschriften, die in den Richtlinien niedergelegt sind, im Fall öffentlicher Aufträge von geringem Wert nicht angemessen sind (vgl. EuGH, Vestergaard, Rz. 19).

Frage 4: Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

[1] Vgl. Art. 21 der RL 2004/18/EG: Aufträge über Dienstleistungen gemäß Anhang II Teil B unterliegen nur Artikel

Von Seiten der befragten Wirtschaftsverbände wurden im Zusammenhang mit der Vergabe und Abwicklung von Konzessionsverträgen positive Erfahrungen geschildert.

Frage 5: Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Das derzeitige Gemeinschaftsrecht gewährleistet aus Sicht der Bundesregierung die diskriminierungsfreie Beteiligung ausländischer Bieter an Konzessionsverfahren. Es bestehen keine Anhaltspunkte, dass in diesem Bereich kein Wettbewerb herrscht. In diesem Sinne äußerten sich auch die befragten Wirtschaftsteilnehmer.

Im übrigen weist die Bundesregierung darauf hin, dass die Tatsache, wie hoch der Anteil der ausländischen Unternehmen im Bereich von Dienstleistungskonzessionen ist, nicht als Gradmesser für das Bestehen von Wettbewerb bzw. als Rechtfertigung für zusätzliche gemeinschaftsrechtliche Regelungen herangezogen werden kann. Auch in den von den EG-Vergaberichtlinien erfassten Bereichen ist der Anteil grenzüberschreitender Bieter gering. Es gibt verschiedenste (tatsächliche) Gründe, wieso sich Unternehmen um öffentliche Aufträge oder Konzessionsverträge in anderen Mitgliedstaaten nur in beschränktem Maße bewerben (mangelndes Interesse, höhere Kosten aufgrund von Übersetzungen etc.). Dies gilt in gleichem Maße sowohl für durch Vergaberichtlinien geregelte öffentliche Aufträge als auch für diesen Richtlinien nicht unterliegende Dienstleistungskonzessionen.

23 und Artikel 35 Absatz 4.

4. Notwendigkeit zusätzlicher Regelungen für Dienstleistungskonzessionen und ÖPP allgemein

Frage 6: Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Die Bundesregierung hält zusätzliche Regelungen für nicht erforderlich. Dies gilt sowohl für den Bereich der Dienstleistungskonzessionen als auch für ÖPP auf vertraglicher Basis allgemein. In diesem Zusammenhang möchte die Bundesregierung daran erinnern, dass die Frage der normativen Regelung von Dienstleistungskonzessionen im Rahmen der Verhandlungen zum Legislativpaket diskutiert wurde, eine Einbeziehung von Dienstleistungskonzessionen in das Vergaberecht aber letztlich abgelehnt wurde. Die Bundesregierung ist daher erstaunt, dass nur wenige Tage nach dem Inkrafttreten der neuen Richtlinien erneut der Vorschlag gemacht wird, Dienstleistungskonzessionen besonderen gemeinschaftsrechtlichen Regelungen zu unterziehen.

Angesichts des in Artikel 5 Abs. 2 EGV und Art. 9 der europäischen Verfassung verankerten Subsidiaritätsprinzips besteht eine Kompetenz der Gemeinschaft nur insoweit, als die mit den verfolgten Maßnahmen angestrebten Ziele auf der Ebene der Mitgliedstaaten nicht ausreichend verwirklicht werden können. Vor diesem Hintergrund besteht eine Notwendigkeit gemeinschaftsrechtlicher Regelungen der Vergabe von Dienstleistungskonzessionen nicht. Ein Regelungsbedürfnis auf gemeinschaftlicher Ebene hat die Kommission in dem Grünbuch auch nicht dargelegt. Auch die der Bundesregierung übersandten Stellungnahmen sowohl von Seiten öffentlicher Auftraggeber als auch von Seiten der Wirtschaft haben nicht gezeigt, dass ein solches Bedürfnis besteht.

Eine Kompetenz zum Tätigwerden der Gemeinschaft besteht nur, wenn dies für die Realisierung der Grundfreiheiten und des Binnenmarktes notwendig ist. Dass sich größere Freiheiten für Unternehmen ergeben würden, im Binnenmarkt tätig zu sein, wenn zusätzliche Regeln geschaffen würden, leuchtet jedoch nicht ein. Es ist eher davon auszugehen, dass die bestehenden Freiräume durch gemeinschaftsrechtliche Regelungen beschränkt, die Bildung von ÖPP verkompliziert und behindert und die Grundfreiheiten dadurch letztlich sogar eingeengt würden.

Eine klare, einheitliche Definition des Konzessionsbegriffs, der eine Abgrenzung der verschiedenen Konzessionsarten in den einzelnen Mitgliedsstaaten ermöglichen würde, besteht nicht. Es gibt Konzessionen unterschiedlichster Art, bei denen nicht klar ist, ob sie unter den Dienstleistungskonzessionsbegriff der neuen Richtlinien fallen und bei denen sich eine einheitliche Behandlung verbietet (vgl. z.B. Wegekonzessionen im Energiebereich, Schankkonzessionen für Gaststätten, Taxikonzessionen). Auch durch die Mitteilung der Kommission zu Auslegungsfragen im Bereich Konzessionen im Gemeinschaftsrecht wurden diese Fragen nicht geklärt. Zudem reicht der Begriff der Konzession – je nach Auslegung – weit in den Bereich des öffentlichrechtlichen Zulassungsrechts hinein. Auch im Grünbuch wird nicht deutlich, welche Konzessionen von den Aussagen der Kommission erfasst sind: Teilweise ist von Dienstleistungskonzessionen die Rede, teilweise aber auch von Konzessionen allgemein.

Die Bundesregierung ist zudem nicht überzeugt, dass eine zusätzliche Regulierung, deren Notwendigkeit und Sinnhaftigkeit bislang nicht dargelegt wurde, das erwünschte Ziel der Kommission (stärkere Beteiligung ausländischer Unternehmen an Dienstleistungskonzessionen und damit stärkere Realisierung des Binnenmarktes) erreichen würde. Eine etwaige Zurückhaltung ausländischer Marktteilnehmer hat andere Ursachen als fehlende Regelungen (s.o.) Auch die Vergaberichtlinien haben bislang nicht zu einer stärkeren grenzüberschreitenden Vergabe von Aufträgen geführt. Die Bundesregierung befürchtet, dass weitere gemeinschaftsrechtliche Regeln im Gegenteil eher zu einer Überregulierung und regulatorischen Last führen. Dies würde die Initiative und das Engagement im Hinblick auf neue innovative Kooperationen zwischen öffentlicher Hand und privatem Sektor eher lähmen und die Bildung von ÖPP letztlich behindern.

Unzulänglichkeiten bei der Anwendung des geltenden Rechts dürfen nicht als Rechtfertigung für zusätzliche Regelungen genommen werden. Sofern in Einzelfällen aufgrund einer Nichtbeachtung vergaberechtlicher Regelungen kein ausreichender Wettbewerb stattgefunden hat, liegt dies nicht an unzureichenden Regeln, sondern an deren mangelhafter praktischer Umsetzung und Befolgung. Dem kann jedoch durch konsequente Anwendung des Vergaberechts beigekommen werden.

Frage 7: Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Nein. Dies ergibt sich bereits aus der negativen Beantwortung der **Frage 6**. Ein eigenes gemeinschaftsrechtliches Regelwerk für ÖPP stünde zudem großen Schwierigkeiten gegenüber, da es keine feste Definition für ÖPP gibt und diese in den unterschiedlichsten Erscheinungsformen auftreten. Angesichts der auch erwünschten schnellen Entwicklung und kreativen Möglichkeiten im Bereich von Kooperationen zwischen öffentlicher Hand und privatem Sektor würden gesetzliche Regelungen schnell veralten und sich als normativer Hemmschuh erweisen. Die Bundesregierung hält es daher für schädlich, die Entwicklung von ÖPP durch zusätzliche gesetzliche Regelungen zu beschränken. Die geltenden Regeln sind ausreichend, um die vergaberechtlichen Fragen im Zusammenhang mit ÖPP zu lösen.

Als hilfreich würde es die Bundesregierung dagegen ansehen, wenn die Kommission eine Art Handreichung oder Handbuch erarbeiten (lassen) würde, in dem - aufbauend auf den Antworten der Mitgliedstaaten und sonstigen interessierten Kreisen - verschiedene Formen von ÖPP und die vergaberechtlichen Konsequenzen dargestellt werden. Darin könnte z.B. die Abgrenzung zwischen Baukonzession und Bauauftrag präzisiert werden.

5. Behandlung Privat initiierter ÖPP

Aus den Ausführungen der Kommission in den Rz. 37 ff. wird nicht ganz deutlich, was genau mit privat initiierten ÖPP gemeint ist. Privat initiierte ÖPP mit eigenen gesetzlich niedergelegten Verfahren wie offenbar in Italien und Spanien (vgl. Fn. 37 des Grünbuchs) gibt es in Deutschland nicht. Natürlich gibt es Fälle, in denen der Anstoß für ein Projekt vom privaten Sektor kommt. Sofern es sich um einen öffentlichen Auftrag handelt, der unter das Vergaberechts fällt, muss der öffentliche Auftraggeber auch in diesen Fällen ein normales Vergabeverfahren durchführen. Die Bundesregierung sieht allerdings wie die Kommission das Problem, dass die grundsätzlich wünschenswerte Initiative privater Unternehmen, Vorschläge für ÖPP-Projekte zu machen, möglicherweise dadurch gehemmt wird, dass im Rahmen einer Ausschreibung ein anderes Unternehmen den Zuschlag erhält und die investierte Zeit und Mühe umsonst war. Die Bundesregierung wäre daher an Vorschlägen der Kommission interessiert, wie öffentliche Auftraggeber unter dem geltenden europäischen Vergaberecht die Initiative Privater in diesen Fällen honorieren können,. Dies gilt ebenso für Vorschläge der KOM, wie das Know–how potentieller späterer Verfahrensteilnehmer bereits in der Vorbereitungsphase von ÖPP (nicht nur privat initiierter) unter Beachtung des Gleichbehandlungsgebotes nutzbar gemacht werden kann.

Frage 8: Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Ja, für privat initiierte ÖPP gelten in Deutschland keine Sonderregeln (s. Vorbemerkung). Sie werden wie andere Aufträge, die unter das Vergaberecht fallen, ausgeschrieben.

Frage 9: Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz

und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Da privat initiierte ÖPP wie sonstige ÖPP behandelt werden, werden bei Einhaltung der bestehenden Regeln auch bei privat initiierten ÖPP die Grundsätze der Transparenz und Gleichbehandlung gewahrt.

6. Vertragliche Rahmenbedingungen von ÖPP

In den Rz. 44 ff. macht die Kommission Ausführungen zu den vertraglichen Rahmenbedingungen von ÖPP. Bei diesbezüglichen Vergaben ist aus Sicht der Bundesregierung darauf zu achten, dass keine Anforderungen gestellt werden, die ÖPP in der Praxis unausführbar machen und sie von vornherein zum Scheitern verurteilen. Die Ausführungen der Kommission erscheinen hier zum Teil realitätsfern. Zwar ist aus vergaberechtlicher Sicht wünschenswert, wenn die vertraglichen Rahmenbedingungen eines Projekts im Voraus so detailliert wie möglich feststehen – in der Praxis wird dies in vielen Fällen aber kaum machbar sein. Bei so komplexen Projekten, wie es ÖPP häufig sind, ist es in der Praxis kaum möglich, Vertragsbedingungen zu entwickeln, die alle nur irgendwie denkbaren Gegebenheiten zu jedem möglichen Zeitpunkt erfasst. Häufig wird im Zeitpunkt des Aufrufs zum Wettbewerb noch nicht in allen Einzelheiten abschließend feststehen, wie das Projekt verlaufen wird. Dies wird gerade in Fällen so sein, in denen das Verhandlungsverfahren in Betracht kommt und genau aus diesem Grund ein geeignetes Verfahren ist. Die Einzelheiten der Vertragsdurchführung, insbesondere auch der Risikoaufteilung und der Finanzierungsmodalitäten, sind dann Gegenstand der Verhandlungen und stehen erst nach deren Abschluss fest.

Bei ÖPP handelt es sich in der Regel um langfristige Projekte, bei denen eine gewisse Flexibilität bestehen muss, um zu verhindern, dass sie wirtschaftlich sinnlos werden. Die ÖPP-Beziehungen müssen sich weiterentwickeln – wie die Kommission in Rz. 47 richtig bemerkt - , um sich an Veränderungen des makroökonomischen oder technischen Umfelds anzupassen. Nicht alle Änderungen können nach Ansicht der Bundesregierung aber durch

Preisanpassungs- oder Revisionsklauseln vorhergesehen werden. Auch darüber hinaus sind nachträgliche einvernehmliche Änderungen der vertraglichen Beziehungen der Partner nach unserer Ansicht möglich, sofern sie im Zeitpunkt der Vergabe nicht vorhersehbar waren und die Änderungen nicht dazu dienen, die Grundsätze von Transparenz und Gleichbehandlung zu umgehen. Denn diese Änderungen beurteilen sich grundsätzlich nach Vertragsrecht, unter gleichzeitiger Beachtung des nationalen Haushaltsrechts. Dass solche Änderungen nur möglich sein sollen, wenn dies aus Gründen der öffentlichen Ordnung, Sicherheit oder Gesundheit erforderlich ist – wie die Kommission in Rz. 49 behauptet, stellt aus unserer Sicht zu hohe Anforderungen, die durch das Gemeinschaftsrecht nicht gerechtfertigt sind. Art. 46 EGV, den die Kommission zur Begründung ihrer Auffassung in Fn. 43 zitiert, gibt hier nach unserer Ansicht nach nicht den Maßstab vor, da es nicht um den Zugang zu einem öffentlichen Auftrag geht, sondern um Modifikationen einer bereits bestehenden vertraglichen, privatrechtlichen Beziehung.

Die Bundesregierung hält es insgesamt für wichtig, bei der Beurteilung von Vergabeverfahren im Zusammenhang mit ÖPP nicht zu formalistisch vorzugehen, sondern neben den Prinzipien der Gleichbehandlung und Transparenz, die natürlich nicht missachtet werden dürfen, auch die Grundsätze der Wirtschaftlichkeit und Sparsamkeit von ÖPP im Auge zu behalten. Dies gebietet der Grundsatz der Verhältnismäßigkeit. Auch die Kommission betont in Rz. 46 die Notwendigkeit, das wirtschaftliche und finanzielle Gleichgewicht des Projekts zu gewährleisten. Würde jede denkbare Vertragsänderung oder –weiterentwicklung aber mit einer erneuten Ausschreibungspflicht verbunden, wäre die für das Gelingen von ÖPP-Projekten auch erforderliche Kontinuität in Gefahr. Ob eine Ausschreibungspflicht besteht, ist eine Einzelfallentscheidung (vgl. auch Antwort zu Frage 10).

Frage 10: Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Nach dem Zuschlag gilt nach unserer Ansicht grundsätzlich kein Vergaberecht mehr, sondern Zivilrecht. Zwar gibt es Fälle, wo eine Änderung der Vertragsbedingungen dem Abschluss eines neuen Vertrages gleichkommt und daher neu auszuschreiben ist. Die Aussage, dass jede inhaltliche Änderung in Bezug auf den Vertragsgegenstand dem

Abschluss eines neuen Vertrages gleichzusetzen ist, ist aus unserer Sicht aber zu weitgehend und zu pauschal. Es muss vielmehr in jedem Einzelfall geprüft werden, ob die Änderung dergestalt ist, dass sie wie ein neuer Vertrag zu behandeln sind.

Sofern sich die Kommission zur Bekräftigung ihrer Ansicht, welche Anforderungen sich aus dem Gemeinschaftsrecht an die Phase nach Auswahl des privaten Partners ergeben, auf Rechtsprechung des EuGH stützt, sind diese Verweise häufig ungenau. So folgt aus Rz. 54 der Rechtssache C-87/94 (Kommission gegen Belgien – Bus Wallons) kein Verbot jeglicher Intervention nach Auswahl des privaten Partners (vgl. Rz. 42 und Fn. 38 des Grünbuchs). Dort heisst es: „Das **Verfahren zum Vergleich der Angebote** musste somit in jedem Abschnitt sowohl den Grundsatz der Gleichbehandlung der Bieter als auch den Grundsatz der Transparenz wahren, damit alle Bieter **bei der Aufstellung ihrer Angebote** über die gleichen Chancen verfügen.“ Diese Aussage bezieht sich auf die Phase des eigentlichen Vergabeverfahrens, **vor** der Auswahl des privaten Partners. Auch in der zitierten Rechtssache C-243/89 (Kommission gegen Dänemark – Storebaelt-Brücke) ging es nicht um Änderungen nach dem Zuschlag. Der EuGH hat in der Rechtssache C-337/98 (Kommission gegen Frankreich, Rz. 44 ff.) weder festgestellt, dass im Verlauf einer ÖPP vorgenommene Änderungen generell den Grundsatz der Gleichbehandlung in Frage stellen würde, noch dass **jede inhaltliche Änderung** in Bezug auf den Vertragsgegenstand dem Abschluss eines neuen Vertrages gleichzusetzen sei (so Grünbuch, Rz.49, Fn. 42, 44). Der EuGH betont in der Entscheidung „Kommission gegen Frankreich“ (Rz. 44) vielmehr, dass es darauf ankommt, ob die nach dem dem Abschluss der ersten Verhandlungen eingeleiteten Verhandlungen **wesentlich andere Merkmale** aufwiesen als die zuvor geführten und damit den Willen der Parteien zur **Neuverhandlung wesentlicher Vertragsbestimmungen** erkennen ließen. In dem zitierten Verfahren C337/98 konnte die Kommission dies nicht darlegen. Der EuGH wies die Vertragsverletzungsklage der Kommission gegen Frankreich ab.

Frage 11: Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der

Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Grundsätzlich nein. Die Ergebnisse der von der Task-Force begleiteten Pilotprojekte (s. Vorbemerkung) bleiben abzuwarten. Ein befragter Wirtschaftsverband nannte in diesem Zusammenhang sog. „Evergreen“-Klauseln (womit anscheinend Klauseln gemeint sind, die vom Auftragnehmer den jeweils neusten technischen Stand einfordern) und automatische Vertragsverlängerungsklauseln.

Frage 12: Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Nein.

Frage 13: Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Nein. Interventionsklauseln, wonach Fremdkapitalgeber sich für bestimmte Situationen das Recht vorbehalten, einen neuen Projektmanager zu ernennen oder selbst das Projektmanagement zu übernehmen (sog. step-in-rights), sind in der Praxis üblich und unverzichtbar. Anderenfalls wäre die Fremdfinanzierung von ÖPP-Projekten nicht möglich und viele dieser Projekte würden von vornherein scheitern. Finanzinstitute stellen regelmäßig den größten Teil der Finanzierungsmittel einer ÖPP und sind damit am Risiko der ordnungsgemäßen Vertragserfüllung in hohem Maße beteiligt. Ihr Interesse, an der ÖPP beteiligte Partner, die ihre Verpflichtungen nicht mehr ordnungsgemäß erfüllen können, innerhalb einer angemessenen Frist austauschen zu können, ist legitim.

Aus deutscher Sicht führen diese Klauseln in der Praxis nicht zu Problemen. Sie kommen nur in Fällen unvorhergesehener, negativer Verläufe von ÖPP zum Tragen. In der Praxis kommt es nur sehr selten zur Ausübung der Interventionsrechte, da der Austausch „ultima ratio“ ist und zunächst angemessene Nachbesserungsfristen bestehen.

Fraglich ist in diesem Zusammenhang, ob auch Interventionsklauseln, die Teil eines von einem Bieter angebotenen Lösungsvorschlags im Rahmen des wettbewerblichen Dialogs sind, dem Grundsatz der Vertraulichkeit gemäß Art. 29 Abs. 3, 3. Unterabsatz i.V.m. Abs. 6 der Richtlinie 2004/18/EG unterliegen. Hierzu wäre eine klarstellende Auslegung im Kontext einer oben (vgl. Antwort zu Frage 7) angesprochenen Handreichung sinnvoll.

Frage 14: Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Nein. Das Vertragsrecht fällt, wie die Kommission richtig bemerkt, in die Zuständigkeit der Mitgliedstaaten. Eine Einmischung der Gemeinschaft in diesen Bereich hätte unübersehbare Probleme für das Verhältnis zwischen nationalem und Gemeinschaftsrecht zur Folge. Ein weiterer Grund gegen eine gemeinschaftsrechtliche Klärung vertraglicher Rahmenbedingungen ist die Vielfalt und Verschiedenartigkeit der möglichen vertraglichen Regelungen. Gemeinschaftsrechtliche Vorgaben für vertragliche Rahmenbedingungen würden die Möglichkeiten von ÖPP einengen und unflexibel machen. Zudem ist auch bei diesem Punkt zu beachten, dass die praktischen Erfahrungen mit ÖPP in vielen Mitgliedstaaten noch gering sind.

7. Unteraufträge

Die Rechtslage hinsichtlich der Vergabe von Unteraufträgen ist aus Sicht der Bundesregierung nicht problematisch. Die Kommission hat in dem Grünbuch leider auch nicht deutlich gemacht, wieso aus ihrer Sicht Regeln für die Vergabe von Unteraufträgen notwendig sind, welche rechtlichen Fragen die Vergabe von Unteraufträgen aufwirft (vgl. Rz. 51) und warum diese Fragen auf Gemeinschaftsebene geklärt werden müssen.

Grundsätzlich kann eine Projektgesellschaft im Rahmen einer ÖPP Unteraufträge frei vergeben (wobei bestimmte Sonderregeln bei Baukonzessionen gelten). Wenn sie selbst öffentlicher Auftraggeber ist und es sich bei dem Unterauftrag um einen öffentlichen Auftrag handelt, müssen diese Unteraufträge ausgeschrieben werden.

Aus Sicht der Bundesregierung ist eine Ausschreibung dann nicht erforderlich, wenn der Hauptauftrag ausgeschrieben wurde und der Unterauftrag bereits Teil des Angebots war: Ein öffentlicher Auftraggeber bewirbt sich in einem Ausschreibungsverfahren um einen Auftrag und nimmt in seinem Angebot bereits darauf Bezug, dass er den Auftrag mit einem bestimmten Unterauftragnehmer ausführen wird. In diesem Fall wäre eine isolierte Ausschreibung des Unterauftrags zum einen nicht möglich, weil dies das ursprüngliche Angebot des Hauptauftragnehmers hinfällig machen würde, zum anderen auch überflüssig, weil der Unterauftrag bereits im Rahmen des Hauptangebots bewertet worden ist. Auch eine vorherige „bedingte“ Ausschreibung durch den öffentlichen Auftraggeber als potentiellen Auftragnehmer kommt nicht in Betracht, da eine Ausschreibung einen unbedingten Willen zum Vertragsschluss voraussetzt.

Maßgeblich für die Anwendung des Vergaberechts ist, ob im konkreten Fall ein öffentlicher Auftrag vorliegt. Dies setzt voraus, dass der (Unter-) Auftrag des als öffentlicher Auftraggeber zu qualifizierenden Beschaffenden auf Deckung eines in seinem eigenen Verantwortungsbereich aufgetretenen Beschaffungsbedarfs abzielt. Eine andere Situation liegt daher z.B. vor, wenn ein öffentlicher Auftraggeber aufgrund eines privatrechtlichen Vertrages von einem Privaten beauftragt wird und dann seinerseits einen Unterauftrag vergibt. Denn in diesem Fall erwächst die Notwendigkeit des öffentlichen Auftraggebers, Leistungen im Wege des Nachunternehmereinsatzes an Dritte zu vergeben, nicht dem eigenen Beschaffungsbedarf, sondern aus einer privatrechtlichen vertraglichen Verpflichtung
Hierfür bedarf es jedoch keiner zusätzlichen, differenzierenden Regelungen. Dieses Ergebnis ergibt sich vielmehr bereits aus der Definition des öffentlichen Auftrags. Ohnehin stellt sich die Frage bei der Vergabe von Unteraufträgen durch die als öffentlicher Auftraggeber zu qualifizierende ÖPP-Gesellschaft nicht, weil es hier immer um einen Beschaffungsbedarf der öffentlichen Hand geht.

Frage 15: Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Nein, s. Vorbemerkung.

Frage 16: Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, Ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Diese Frage ist unklar formuliert. Von welchem Anwendungsbereich gesprochen, dem der Vergaberichtlinien? Die Bundesregierung sieht weder für neue gemeinschaftsrechtliche Regeln noch für eine Erweiterung des Anwendungsbereichs der Vergaberichtlinien Bedarf.

Frage 17: Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Die Bundesregierung hält eine gemeinschaftliche Initiative zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen – aus den oben genannten Gründen – nicht für erforderlich.

8. Institutionalisierte ÖPP

In den Ziffern 53 ff. des Grünbuchs beschäftigt sich die Kommission mit der Gründung von gemischtwirtschaftlichen Unternehmen, an denen sowohl die öffentliche Hand als auch Private beteiligt sind (sog. institutionalisierte ÖPP). Vergaberechtliche Fragen stellen sich bei solchen Konstellationen unter folgenden Gesichtspunkten: Ist bei der Wahl des privaten Partners eines gemischtwirtschaftlichen Unternehmen Vergaberecht anzuwenden (**dazu unter**

a))? Wann ist ein gemischtwirtschaftliches Unternehmen öffentlicher Auftraggeber (**unter b)**)? Findet auf die Erteilung eines Auftrags an ein gemischt-wirtschaftliches Unternehmen Vergaberecht Anwendung (Inhouse-Problematik) (**unter c)**)? Wie sind Privatisierungen zu beurteilen (**unter d)**)?

a) Die Kommission stellt in Rz. 57 richtig dar, dass der Vorgang der Gründung eines gemischtwirtschaftlichen Unternehmens als solcher nicht in den Anwendungsbereich des Vergaberechts fällt. Vergaberecht findet dann Anwendung, wenn gleichzeitig Aufgaben auf den Privaten übertragen werden, nicht dagegen, wenn der Private eine rein finanzielle Beteiligung an dem Unternehmen hält.

In diesem Zusammenhang bemängelt die Kommission, dass es Fälle gibt, in denen sich gemischtwirtschaftliche Unternehmen an Ausschreibungen beteiligen, bevor ihre Gründung abgeschlossen ist. Dies hält die Kommission für nicht zufriedenstellend. Aus Sicht der Bundesregierung vertritt die Kommission hier eine etwas lebensfremde Sichtweise. Gemischtwirtschaftliche Unternehmen werden in vielen Fällen eigens zu dem Zweck gegründet, eine bestimmte durch einen Auftrag vergebene Aufgabe zu erfüllen. Ihre Gründung würde ins Leere laufen, wenn sie den Auftrag letztlich nicht bekäme. In solchen Fällen, aus rein formalistischen Gründen zu verlangen, dass der Gründungsprozess der Gesellschaft zunächst durchgeführt wird, damit sie sich dann um den Auftrag bewerben kann, und sie ggf. danach wieder aufzulösen, ist wenig praktikabel und widerspricht dem Grundsatz der Wirtschaftlichkeit. Solche Anforderungen bergen viel eher die von der Kommission in Rz. 63 angesprochene Gefahr, dass dann der bereits gegründeten Gesellschaft in Umgehung des Vergaberechts Aufträge zugeschoben werden, um ihrer Gründung überhaupt einen Sinn zu geben. Wichtiger als die Frage, in welchem Gründungsstadium sich das gemischtwirtschaftliche Unternehmen befindet, ist aus Sicht der Bundesregierung, dass vor der Vergabe eines Auftrags an ein gemischtwirtschaftliches Unternehmen überhaupt eine Ausschreibung stattfindet.

b) Ein gemischtwirtschaftliches Unternehmen unterliegt dem Vergaberecht, wenn es öffentlicher Auftraggeber gemäß der Definition in Art. 1 Abs. 9 der RL 2004/18/EG ist, d.h. wenn es zu dem besonderen Zweck gegründet wurde, im Allgemeininteresse liegende Aufgaben nicht gewerblicher Art zu erfüllen und staatlich beherrscht ist. Hier kann fraglich sein, wann ein gemischt-wirtschaftliches Gebilde staatlich beherrscht ist, insbesondere wenn die öffentliche Hand nur Minderheitsgesellschafter ist. Die Bundesregierung würde es daher begrüßen, wenn die Kommission auch zu diesem Punkt in der unter Frage 7 erwähnten Handreichung Stellung nehmen würde.

c) Fraglich ist, unter welchen Voraussetzungen die Erteilung eines Auftrags an ein gemischtwirtschaftliches Unternehmen dem Vergaberecht unterfällt. Der EuGH hat hierzu in der Rechtssache Teckal (C-107/98) festgestellt, dass dann kein öffentlicher Auftrag vorliegt, wenn eine Gebietskörperschaft über den fraglichen Auftragnehmer eine Kontrolle ausübt wie über ihre eigenen Dienststellen und wenn der Auftragnehmer seine Tätigkeit im wesentlichen für die Gebietskörperschaft oder die Gebietskörperschaften verrichtet, die seine Anteile innehaben. Solche Aufträge unterfallen von vornherein nicht dem Vergaberecht. Die Reichweite dieser Rechtsprechung ist in den Einzelheiten noch nicht geklärt. Die Bundesregierung ist aber der Ansicht, dass die Kommission hier von zu engen Voraussetzungen ausgeht, wenn sie meint, dass die Beauftragung eines gemischt-wirtschaftlichen Unternehmens unter keinen Voraussetzungen ein „Inhouse"-Geschäft darstellen kann. Eine so enge Interpretation würde letztlich auch dazu führen, dass institutionalisierte ÖPP gar nicht erst gegründet würden.

Die Beteiligung eines Privaten an einer privatrechtlichen Gesellschaft schließt ein Inhousegeschäft nicht von vornherein aus. Es muss in jedem Einzelfall geprüft werden, ob die vom EuGH in der Rechtssache Teckal aufgestellten Kriterien einschlägig sind. „Kontrolle wie über eine Dienststelle" kann jedenfalls nicht heißen, dass der öffentliche Teil genau die identischen Aufsichtsbefugnisse wie über eine Dienststelle haben muss. Hier kommt es z.B. auf die Stimmverhältnisse innerhalb der Gesellschaft und die Verteilung des wirtschaftlichen Risikos an, aber auch auf die vertraglichen Weisungs- und Einflussmöglichkeiten des konkreten Auftrags. Anhaltspunkte hierfür können z.B. die in Art. 1 Abs. 9 der RL 2004/18/EG niedergelegten Kriterien geben.

d) Verkäufe von Anteilen an Gesellschaften im Eigentum der öffentlichen Hand fallen per se nicht unter das Vergaberecht. Denn hierbei handelt es sich um einen Verkauf, nicht um einen

Einkauf. Anderes gilt wiederum nur dann, wenn mit der Anteilsübertragung eine Aufgabenübertragung verbunden ist und Leistungen eingekauft werden. Die Bundesregierung hält es für unzulässig, hier von einem „Deckmantel der Kapitalübertragung" zu sprechen und Anteilsverkäufen damit von vornherein einen anrüchigen Anstrich zu geben. Es bleibt dabei, dass Kapitalübertragungen grundsätzlich nicht dem Vergaberecht unterliegen und in jedem Einzelfall geprüft werden muss, ob mit der Kapitalübertragung ein öffentlicher Auftrag verbunden ist.

Frage 18: Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Bei ordnungsgemäßer Anwendung des Vergaberechts lassen sich auch vergaberechtliche Probleme im Zusammenhang mit institutionalisierten ÖPP zufriedenstellend lösen.

Frage 19: Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Die Bundesregierung hält zusätzliche gemeinschaftsrechtliche Regelungen in diesem Bereich für nicht erforderlich. Eine Handreichung, in der die verschiedenen Situationen im Hinblick auf die Beteiligung von Privaten an gemischtwirtschaftlichen Unternehmen und die vergaberechtlichen Konsequenzen dargestellt werden, könnte hilfreich sein. Eine solche Handreichung sollte jedoch nicht aus rein rechtlicher theoretischer Sicht verfasst werden, sondern praktische Beispiele und Belange berücksichtigen.

Allgemein und unabhängig von den in diesem Grünbuch aufgeworfenen Fragen:

Frage 20: Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Dies ist eine sehr komplexe Frage, deren Beantwortung in Deutschland noch weiterer praktischer Erfahrungen bedarf. Die Bundesregierung möchte sich in Ihrer Stellungnahme gerne auf die vergaberechtlichen Aspekte von ÖPP beschränken. Was das Vergaberecht angeht, ist die Bundesregierung der Ansicht, dass angesichts der ohnehin schon sehr komplizierten Regeln weitere rechtliche Vorschriften die Einrichtung von ÖPP behindern würde. Die vergaberechtlichen Fragestellungen von ÖPP lassen sich mit dem geltenden rechtlichen Instrumentarium zufriedenstellend lösen. Maßgeblich ist, dass diese Regeln eingehalten werden.

Frage 21: Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

ÖPP-Formen oder bewährte Verfahrensweisen aus Drittländern sind nicht bekannt.

Frage 22: Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Einen Informations- und Erfahrungsaustausch bewertet die Bundesregierung grundsätzlich positiv. Dies gilt insbesondere, als manche Mitgliedstaaten wie z.B. Großbritannien im Bereich ÖPP bereits intensive und langjährige Erfahrungen haben, während das Phänomen ÖPP in anderen Mitgliedstaaten erst am Anfang seiner Entwicklung steht. Es ist jedoch wichtig, dass ein solches Netzwerk keinen umfangreichen und bürokratischen Apparat schafft. Die (freiwillige) Verlinkung von nationalen Netzwerken oder Kompetenzzentren bietet sich an. Das Netzwerk sollte sich nicht auf rein theoretische Fragen beschränken, sondern in der Praxis mit ÖPP Beteiligten die Möglichkeit zum Austausch bieten. Die Bundesregierung würde weitere Vorschläge der Kommission zu einem solchen Netzwerk begrüßen.

20. Juli 2004

Beitrag der Senatsverwaltung für Finanzen des Landes Berlin zur Konsultation „Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen“

Mit dem Grünbuch zu öffentlich-privaten Partnerschaften (ÖPP) hat die Kommission eine Diskussion darüber eröffnet, ob die derzeitigen Vorschriften verbessert werden sollten, um die Entwicklung von ÖPP zu begleiten. Das Grünbuch enthält keine konkreten Vorschläge zur Modifizierung bestehender Vorschriften.

Grundsätzliche Anmerkung:

Die geltenden Verdingungsordnungen sind für die Durchführung von ÖPP zu starr. Ein Merkmal von ÖPP ist, dass die ihr zugrunde liegenden Einzelleistungen zu Beginn z.T. nur relativ global beschreibbar sind und oftmals erst durch Ideenfindungsprozesse und gemeinsame Entwicklung detailliert werden können.

Die Kommission versucht diesen Prozessen dadurch zu entsprechen, dass sie einen wettbewerblichen Dialog einer förmlichen Ausschreibung vorschalten würde. Offenbar vertritt sie dann jedoch die Auffassung, dass im weiteren Verfahren allein die Verdingungsordnungen in ihrer derzeit geltenden und unbedingten Form anzuwenden sind.

Ein wettbewerblicher Dialog ist grundsätzlich zu begrüßen. Allerdings dürfte er nicht mit der erwünschten Offenheit von Seiten der privaten Interessenten geführt werden können, da diese sich als Ideengeber verstehen dürften, Nutznießer ggf. aber Dritte und nicht sie selbst werden könnten. Denn nach dem hier herrschenden Verständnis über das Grünbuch soll der öffentliche Marktpartner als Ergebnis des Dialogs unter Einbezug der ihm nützlichen Erkenntnisse daraus eine konkrete, dann nicht mehr „verhandelbare/wandelbare“ Ausschreibung durchführen. Impulse, die ein Partner des Dialogs einbringt, könnten von einem Dritten aus der Ausschreibung entnommen und in das eigene Angebot eingebracht werden. Hinzu kommt, dass der öffentliche Marktpartner ggf. Gefahr läuft, unbeabsichtigt gegen Urheberrechte zu verstoßen.

Vielmehr sollte eine Ausschreibung mit einer möglichst konkreten ggf. aber nicht abschließenden Zielstellung an den Anfang gesetzt werden, der sich dann mit ausgewählten Bietern der wettbewerbliche Dialog anschließt. Es wäre dann Aufgabe der Vergabestelle, als Ergebnis der Verhandlungen die ÖPP mit dem privaten Partner einzugehen, der aus Sicht der Vergabestelle das interessanteste und auf der verhandelten Grundlage wirtschaftlichste Angebot abgibt. Dies heißt jedoch auch, dass vergaberechtliche Prüfungen nur dann angestrengt werden dürften, wenn Vermutungen einer diskriminierenden oder den allgemeinen Verfahrensregeln wiedersprechenden Vergabe erhärtet vorliegen.

Fragenkomplexe:

Frage 1:

Im Land Berlin erfolgte noch keine Umsetzung einer umfassenden ÖPP. Primär werden Hochbaumaßnahmen mit Dritten bis zu deren Fertigstellung realisiert. Grundlage sind die vom zuständigen Ausschuss des Abgeordnetenhauses von Berlin herausgegebenen vorläufigen Verfahrensregeln, die auf der Grundlage der Landeshaushaltsordnung (LHO) § 7 „Wirtschaftlichkeit und Sparsamkeit" beruhen; vor dem Eingehen einer Partnerschaft ist dem zuständigen Ausschuss die Wirtschaftlichkeit nachzuweisen.

Fragen 2 und 3:

Es ist zweckmäßig, den wettbewerblichen Dialog in nationales Recht umzusetzen. Allerdings wird, wie weiter oben in den „Grundsätzlichen Anmerkungen" dargestellt, ein flexibler Umgang in der Anwendung erwartet.

Fragen 4 bis 7:

Das Land Berlin hat an einem Verfahren zur Vergabe einer Konzession teilgenommen und auch selbst ein entsprechendes Verfahren betrieben. In einem Fall wurde das Vorhaben umgesetzt.

Da oberster Grundsatz jeglicher Verfahren das Diskriminierungsverbot ist, können sich selbstverständlich Gesellschaften oder Gruppierungen auch aus anderen Staaten beteiligen.

Es ist kein weiterer Regulierungsbedarf erkennbar, es sei denn er führt zur Endbürokratisierung und berücksichtigt auch hier den wettbewerblichen Dialog.

Fragen 8 und 9:

Es liegen noch keine Erfahrungen mit privat initiierten ÖPP vor. Es ist nicht erkennbar, warum ausländische Akteure bei privat initiierten ÖPP anders gehandelt werden könnten als nationale Akteure. Werden auf Initiative Privater ÖPP-Vorhaben angestoßen, so unterliegen sie den einschlägigen Bestimmungen der Vorankündigung, und der Ausschreibung durch die Vergabestelle, so dass alle interessierten Akteure Kenntnis davon haben können. Die Grundsätze von Transparenz, Gleichbehandlung und das Diskriminierungsverbot ergeben sich daraus.

Fragen 10 bis 14:

Bei den vom Land Berlin realisierten Projekten handelte es sich um klar umrissene und zeitlich begrenzte Maßnahmen, die keinen Diskriminierungsansatz bieten.

Grundsätzlich muss jedoch angezweifelt werden, dass es in einem sich ständig verändernden Umfeld gelingt, bei einer über Jahre angelegten ÖPP den Vorstellungen der Kommission, die sie mit dem Diskriminierungsverbot verbindet, zu entsprechen; sie führt dazu selbst in Tz. 48 ein durchaus realistisches Beispiel an. Insoweit besteht zwangsläufig die Möglichkeit, dass es zu inhaltlichen Änderungen im Zuge der Partnerschaft kommt. Hieraus einen erneuten Marktwettbewerb (Tz. 49) abzuleiten, scheint aufgrund der damit einhergehenden zeitlichen Komponenten, der Störungen bei der Leistungserfüllung und möglicher Schadensersatzforderungen des privaten Partners nicht angemessen.

Fragen 15 bis 17:

In der Regel wird die Vergabestelle bei komplexeren Aufgaben bereits von sich aus die potenziellen privaten Partner auffordern, die Unterauftragnehmer zu benennen, mit denen sie das gemeinsame Vorhaben realisieren möchten. Daher ist in solchen Fällen der Kreis der Leistungsersteller bereits weitgehend bekannt. Oftmals handelt es sich auch um Bieterkonsortien.

Werden die Aufgaben einem einzigen Vertragspartner übertragen, so ist dieser für die vertragsgemäße Erfüllung in der Gesamtverantwortung. Deshalb werden ihm auch entsprechende Freiheiten bei der Vergabe von Unteraufträgen eingeräumt werden müssen. Abgesehen davon hat jeder öffentliche Partner ein Interesse daran, dass bestimmte Volumina an Unteraufträgen allein deshalb ausgeschrieben werden, damit der regionale Markt die Chance hat, in Bieterverfahren für Unteraufträge einzutreten. Ergänzende Initiativen auf Gemeinschaftsebene werden daher als nicht erforderlich angesehen.

Fragen 18 bis 22:

Erfahrungen über institutionalisierte ÖPP liegen bislang nicht vor. Ein nennenswerter Bedarf dürfte jedoch gegeben sein. Dessen Befriedigung kann dadurch befördert werden, dass die Verfahrensregeln flexibilisiert werden; siehe „Grundsätzliche Anmerkungen“ und die Antworten zum Fragenkomplex 10 bis 14. Dementsprechend wird der Aufbau eines Netzwerks befürwortet.

Öffentliches Beschaffungswesen
Konsultation „Grünbuch zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Sehr geehrte Damen und Herren,

mit Interesse habe ich Ihre Pressemitteilung zu dem o.g. Thema gelesen. Für die Rechtsanwendung würde es sicherlich hilfreich sein, wenn ein Regulierungsrahmen für diese öffentlich-privaten Partnerschaften, insbesondere auch für den Bereich von Dienstleistungskonzessionen, geschaffen würde.

In diesem Zusammenhang würde ich gern noch auf einen weiteren Gesichtspunkt hinweisen, der zunehmend Auswirkungen auf den Wettbewerb hat, aber nicht unmittelbar auf einer öffentlich-privaten Partnerschaft basiert. Es geht um den Austausch von Leistungen zwischen öffentlichen Auftraggebern, die dann zu privaten Unternehmen in Konkurrenz treten.

Die öffentlichen Auftraggeber schreiben Aufträge aus, auf die sich sowohl private Unternehmen, aber auch andere öffentliche „Auftraggeber“ bewerben, weil sie die ausgeschriebene Leistung nicht nur für den eigenen Zuständigkeitsbereich erbringen wollen, sondern darüber hinaus noch Kapazitäten vorhalten, die sie am Markt anbieten. Das klassische Beispiel ist die Abfallentsorgung. Die rein privaten Unternehmen haben in der Regel keine Möglichkeit in einem Wettbewerb einen Auftrag von einem öffentlichen Auftraggeber zu bekommen, sobald sich ein anderer öffentlicher Partner als Auftragnehmer bewirbt, da diese rein öffentlichen Auftragnehmer steuerlich begünstigt sind und erheblich günstiger kalkulieren können. Darüber hinaus tragen sie kein Insolvenzrisiko, wie dies bei einem privaten Unternehmen der Fall ist. Eine rein öffentliche „Partnerschaft“, zum Beispiel zwischen benachbarten Kommunen, die in bestimmten Bereichen durchaus sinnvoll ist, um gemeinsam bestimmte Zielsetzungen zu verfolgen, wird dann problematisch, wenn es um die Vergabe eines Auftrages im Wege eines Wettbewerbes geht. Für die im Wettbewerb stehenden privaten Unternehmen ist es dann praktisch nicht mehr möglich, einen

COM(2004) 327 final

GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

Observations by the Central PPP Unit, Department of Finance of IRELAND

Introduction

1. The Central PPP Unit in the Department of Finance is responsible for leading, driving and coordinating the Public-Private Partnership process in Ireland, which is a significant element of Ireland's National Development Plan/Community Support Framework 2000-2006. The principal role of the Central PPP Unit is to provide guidance on best practice in the appraisal and procurement of PPP projects with a particular focus on establishing and providing value for money.

2. The Central PPP Unit welcomes the Green Paper as a positive response to recent development in the European Union and as a constructive contribution by the Commission to the Initiative for Growth in relation to increased investment in infrastructure.

General Comments

3. The Irish authorities are committed to the use of Public-Private Partnerships (cf *Framework for Public Private Partnerships, November 2001,* attached).

4. As well as continuing to develop guidance for Government and other public agencies in the use of PPPs, through the Central PPP Unit and groups established on both a cross-departmental and social partnership basis, the Irish Government has set specific targets for projects financed through Public Private Partnership. These amount to €3.6 billion in total public funding for PPPs, in addition to a target of €1.3 billion for PPPs funded by user charges over the same period, giving a total target for PPP investment of almost €5 billion by 2008. The Government has also established the National Development Finance Agency to advise public bodies on the financing of all capital projects, including PPPs, and, where appropriate, to provide financing.

5. Ireland has gained valuable experience in the use of PPP arrangements, including both public and private funding. Examples which have been procured include development and maintenance of schools, development and operation of toll roads and bridges, development and operation of environmental infrastructure, and operation of light rail. Our observations on the Green Paper are based on this experience.

6. Generally, we do not consider that there is a need for additional legislative initiatives to facilitate the use of PPPs - while ensuring the Treaty principles of equality of treatment, transparency and non-discrimination. We note that if the Commission were minded to consider such action, it would be subject to regulatory impact assessment and we would urge the Commission to ensure any such assessment would be thorough and comprehensive, having regard to the complexity of the sector.

Responses to Questions

Question 1. In broad terms, the types of purely contractual PPPs in Ireland include:
(a) Concessions, which may include a capital injection from the Exchequer towards part of the capital costs or contributions to operational costs (e.g.roads, waste treatment/recovery);
(b) Design, Build, Finance and Operate (e.g. schools, colleges)
(c) Design, Build and Operate (waste water treatment, water supply).
There are also some service contracts, in relation to the operation of a specific asset or set of assets, for a minimum of five years.
Less complex examples that are or have been used in some sectors include Design and Build, and Design, Build and Finance.

It is not clear what is meant by these set-ups being subject to specific supervision (legislative or other) in Ireland. In relation to competition and public procurement, they are subject to the provisions of the Guidelines on Procurement – Competitive Process (the latest version was issued by the Department of Finance in June 2004). More generally, the State Authorities (Public Private Partnership Arrangements) Act, 2002 was enacted to provide legal certainty regarding the powers of State authorities to enter into PPP arrangements for the performance of functions of the State authority. The National Development Finance Agency Act, 2002 established the Agency of the same name to advise State authorities of what are the optimal means of financing public investment projects, to advise authorities on all aspects of financing of projects by means of PPP, and where appropriate to provide financing.

Question 2
At this time, we do not have a conclusive view as to whether, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. We consider that we do not have a sufficient basis on which to form a view at this time. We are aware that there are concerns in the private sector regarding the possible implementation of the new directive, in terms of possible difficulties with the operation of the competitive dialogue procedure and also in relation to the basis for selection of procedure.
The challenge of clearly resolving all issues relating to PPPs at a sufficiently early stage could mean that the competitive dialogue may not be flexible enough to address these issues satisfactorily (as against, say, a transparent, non-discriminatory and competitive negotiated procedure). Following the transposition, we will have to consider whether the use of the competitive dialogue is so well adapted, having regard to the requirements of other policies and legislation – for example, provisions for the protection of employees; and also to the requirements of private finance. (It is noted that, for certain issues, it may be feasible to resolve them at pre-tender stage but at significant additional cost to the bidders – which may be a disincentive to bid and so have negative implications for the overall competitiveness of the tender process.)
We note that the procedures already applied in Ireland for PPPs, in advance of the introduction of the competitive dialogue procedure, have worked well without prejudice to these fundamental rights, in our view.

Question 3
On the basis of our experience, we are not aware that there are any other points which may pose a problem in terms of Community law on public contracts.

Question 4
The Central PPP Unit does not directly organise awards of concessions, which are the responsibility of the procuring agencies. However, the Central PPP Unit has been involved with procuring agencies in the development of procedures and the management of awarding concessions – which have consistently been carried out on a competitive basis. It is clear from our experience that these arrangements generally operated satisfactorily, in terms of providing equality, transparency and competition.

Question 5
On the basis of our experience, we consider that the current legal framework is satisfactory to allow concrete and effective participation of non-national companies or groups in the procedures for award of concessions. Concessions of which we are aware in Ireland have frequently been awarded to non-national companies or groups. The existing framework clearly guarantees competition, in our view.

Question 6
A Community legislative initiative to regulate the procedures for awards of concessions does not appear to be desirable or necessary.

Question 7
In our opinion, the Commission does not need to propose legislative action. In addition, it is our view that there are no objective grounds for any action that may be considered to cover all contractual PPPs, irrespective of whether these are designated as contracts and concessions. Identical award arrangements would not appear appropriate for such different contractual arrangements in terms of risk transfer.

Question 8
We do not have sufficient experience of private initiative projects in Ireland to be in a position to comment.

Question 9
We have no comment.

Question 10
Our experience of the phase following the selection of the private partner, so far, is that the contractual framework has ensured the principles of equality of treatment and transparency by setting out clearly the terms and conditions for performance, without any direct or indirect discriminatory impact. It is standard practice to make the contract terms available in the descriptive documents, which terms set out clearly the distribution of risks and performance criteria. (Of course, a criterion by which the

value for money of the PPP bids is appraised before award of contract, generally known as the Public Sector Benchmark, is not released as this might prejudice competition as well as the optimum distribution of risks between the public and private sectors.)

The duration of contracts has generally been set by reference to the requirements for remuneration of the capital and is typically 20 to 30 years. It is not clear to us why transparency would also require that the elements employed to establish the duration be communicated in the descriptive documents – a clear statement of the duration would appear to be sufficient for open competition.

Question 11

We are not aware of cases where the conditions of execution may have had a discriminatory effect or provided an unjustified barrier to the freedom to provide services or freedom of establishment.

Question 12

We are not aware of practices or mechanisms for evaluating PPP tenders which have a discriminatory effect. The comments of the enterprises may be of more interest to the Commission in this regard.

Question 13

We do not consider that "step-in" arrangements, as provided for in Irish PPPs, may present a problem in terms of transparency and equality of treatment. The provisions are set out clearly at the stage of competing for tender and parties are free to take part in tenders. In so far as they may be exercised in the course of a contract, having regard to the nature of the risk transfer, such arrangements are taking place between private actors. Finally, step-in arrangements, by their very nature, are effected in unforeseen circumstances and are incorporated in contracts on grounds of public policy, public security or public health – because the cessation of service which could arise in the absence of step-in would pose an unacceptable risk to policy, security or health.

We are unaware of other "standard clauses" which are likely to present similar problems.

Question 14

We do not consider that there is a need to clarify certain aspects of the contractual framework of PPPs at Community level.

Question 15

We are not aware of specific problems encountered in relation to subcontracting. (The issue of a project company being itself in the role of contracting body has not arisen, to our knowledge, as a relevant issue in the context of PPPs in the Irish administrative framework.)

Question 16
We do not consider that the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justifies more detailed rules and/or a wider field of application in the case of subcontracting.

Question 17
We do not consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting.

Question 18 and Question 19
We do not have sufficient recent experience of institutionalised PPPs to comment on these questions.

Question 20
We have not identified specific measures or practices that act as barriers to the introduction of PPPs at the European level. The complexity of PPPs as a means of procurement does, of course, present a series of challenges in terms of the skills and knowledge of the public sector, the interaction of various public policies, and the capacity of the private sector.

Question 21
We are aware of developments in a number of countries outside the European Union (e.g. South Africa, Canada, Australia). In general, the PPP models are broadly similar to the kinds of structures used in the EU. However, it is not possible to apply models directly from other jurisdictions as the administrative, legal and socio-economic contexts are substantially different. Consequently, the principal lessons to be learnt in terms of good practice are relevant to the overall approach rather than to specific measures or practices.

Question 22
We are open to the suggestion of collective consideration of questions relating to PPPs among the actors concerned, which would also allow for the exchange of best practice. However, if the Commission were to establish such a network, careful consideration should be given as to the appropriate lead Directorate, in so far as the questions to be considered may not be primarily questions of procurement, and other Directorates (e.g. TREN, REGIO) may also have an interest. For example, DG TREN already organises an informal PPP exchange.

Financing and European Funds
PPP Division

Comments on the “Green Paper on public-private partnerships and community law on public contracts and concessions”

1. In Poland there is a specific legislation for PPP/BOT projects in road infrastructure (Act on Toll Motorways and National Road Fund). Also, a new PPP law is being prepared that will address a much wider range of projects. It will allow setting up contractual as well as institutional PPPs. There will be no preference for the PPP projects and they must offer value for money to be implemented. We have attached both the draft PPP law (which is still undergoing minor changes) and Act on Toll Motorways (without the latest amendment). The project of the PPP law has already been accepted by the Government and passed to the Parliament. The PPP law will also be accompanied by the introductory law, which has been recently passed to the Government for approval.

2. In our opinion, competitive dialogue procedure is an extremely useful tool that will allow output-based procurement, thus improving value for money offered by PPPs. However, we also think that the procurement procedure itself will become much longer and therefore more expensive. It will also require more supervision to ensure the equality of treatment of the bidders.

6,7. We are much in favor of specific legislation that would cover all contractual PPPs, including concessions. This is mostly due to the fact that we believe that there is a need for stable, homogeneous legal environment within the European Union. In our opinion, this would help reducing project cost as an effect of decreased legal risks and by attracting more bidders. The differences in procedures for the award of concessions and PPPs in general among the EU countries do not guarantee genuine competition. However, it should be noted that to achieve that, the new EU directives 17/2004 and 18/2004 on public procurement would have to be revised.

8. We believe that the rules on advertising are clear and adequate, giving all potential operators equal access to information.

9. In our view there is a need for specific legislation/guidance from the EC regarding treatment of private initiative/unsolicited proposals. It is especially important in case of PPP projects, where costs of preparing an offer are very high. The advantages for the first mover during the call for competition should either be disallowed, or there should be clear rules on how to proceed in case of private initiative. Certain countries have developed such rules, which could be a basis for further discussion (South Africa, Switzerland).

13. The Polish draft law on PPPs includes certain provisions on how to proceed in case of a takeover of an undertaking:

> 1. An entity selected in the course of the procedure applicable to the selection of a private partner may enter into all or a part of the rights and obligations of the private partner under the public private partnership contract.
>
> 2. .Prior to the entry into the rights and obligations of the private partner as referred to in Clause 1, the public entity may contract the performance of the obligations of the private partner in accordance with the procedure set out in Article 66 of the public procurement law, for a period of up to 12 months. This period can be extended upon consent of the Chairman of the Public Procurement Office.
>
> 3. The entry into all or a part of the obligations of the private partner as referred to in Clause 1 above shall become effective upon the transfer by the competent public administration body, by way of an administrative decision, of all or a part of the rights and obligations under a licence, permit or other administrative decision onto the transferee, unless the relevant regulations exclude the possibility of such transfer. The transfer shall take place on request of the private partner or the transferee.
>
> 4. In case of termination of the public private partnership contract Clause 2 shall apply accordingly.

17. Yes, we believe that there is a need for legal initiative on subcontracting at Community level in order to limit legal uncertainties. It should be aimed at achieving the balance between the freedom of subcontracting and protection of public interest.

22. Establishing a network to facilitate exchange of the best practice would certainly be a good move. We feel that all Member States would benefit from it, especially those that have limited experience with PPPs. It could also address some of the other issues i.e. PPPs cofinanced from the EU funds.

Draft

dated 5 July 2004

Act

of 2004

on Public Private Partnership

Section 1

General Provisions

Art. 1.1. A public private partnership within the meaning of this act shall be defined as a contract-based cooperation between a public entity and a private partner, aimed at performance of a public task, whereby the private partner shall bear in full or in part the financial outlay to implement an undertaking being the subject of such cooperation, or shall provide for such outlay to be borne by third parties.

2. Under the public private partnership contract the private partner shall undertake to the public entity to carry out the undertaking in exchange for remuneration.

3. The remuneration shall mean a payment of a certain amount of money by the public entity or the right of the private partner to draw profits or gain other benefits from the undertaking.

Art. 2.1. The public private partnership may be a form of implementing an undertaking, in accordance with the procedure and principles set out herein, in case when it results in benefits for the public interest that outweigh the benefits resulting from other methods of carrying out such undertaking.

2. The benefit for the public interest shall mean in particular: savings on the expenses of the public entity or higher standard of the services to be provided, as well as improved technical parameters or reduced inconvenience for the environment.

Art. 3 The private partner shall not disclaim the responsibility for the failure to comply with the standards of service and principles applicable to the use of the facilities or operation of the equipment hereinafter referred to as the “asset component”.

Art. 4 1. The term public entity within the meaning of this act shall include a government agency, a local self-government unit or an association of local self-government units.

2. The term public entity shall also include:

1) a state-owned institution of higher learning;
2) a research and development entity;
3) an independent public healthcare establishment;
4) an institution of culture owned by the state or self-government;

5) the Polish Academy of Science (Polska Akademia Nauk) and institutions established by it;

6) a state agency;

7) a company where the entity referred to in Clause 1 exercises the majority of the voting rights accruing from shares or has a decisive vote in the appointment of the majority of the members in its managing or supervisory authority;

8) a state-owned company;

9) the Polish Sports Confederation (Polska Konfederacja Sportu);

10) the National Health Fund (Narodowy Fundusz Zdrowia).

3. The execution of public tasks in the form of public private the public entity referred to in Clause 2, sub-clauses 2-4 may only take place upon consent of the founder, the overseeing agency or the organizing agency.

4. The exclusion or limitation of the possibility of the public entity to carry out public tasks in the form of a public private partnership shall be only done pursuant to the articles of association or the deed of the company with respect to the entity referred to in Clause 2, sub-clause 7.

5. Public entities may enter into an agreement or an understanding to cooperate with a private partner in execution of their joint public task in the form of a public private partnership and designate, at the same time, one of them as the public entity authorized to carry out the procedure referred to in Article 14 and enter into a contract with the private partner for and on their behalf.

Art. 5 1. The term private partner means an entrepreneur within the meaning of the regulations on business activity, as well as a foreign entrepreneur, provided that it meats the conditions applicable to conducting a business activity in the Republic of Poland.

2. The private partner may also mean a non-governmental organization, a church or other association of religious denomination.

3. Private partners may enter into an agreement or an understanding to jointly bid for award of a public private partnership contract and appoint an attorney to represent them in the procedure of awarding such public private partnership contract and to execute it.

4. The entity referred to in Article 4, Clause 2, sub-clauses 2-3 and 7-8 shall not act as the private partner with respect to its founder, overseeing agency or organizing agency.

Art. 6 1. An undertaking means the execution of an investment in respect of public tasks within the scope of the public entity, if it covers operation, maintenance or management of an asset that is the subject of such investment or is connected with it, or provision of public services related thereto.

2. An undertaking may also include the design of the investment referred to in Clause 1.

3. An undertaking shall also include the performance of public utility tasks or provision of public services for a period exceeding 3 years, if it covers the operation, maintenance or management of an asset that is necessary for this purpose.

Art. 7 **An undertaking may also consist in:**

1) promotion of economic and social development, including revitalization or development of a town or a part thereof, or another area:

   a) carried out based on a design plan provided by the public entity; or

   b) combined with its design by the private partner

- provided that the remuneration of the private partner shall not take form of a payment of an amount of money by the public entity;

2) a pilot, promotional, scientific, educational or cultural undertaking that supports the performance of public tasks, if the majority the remuneration of the private partner comes from other sources than the funds of the public entity.

Art. 8. The delegation of an undertaking to a private partner for performance under a public private partnership contract shall not cover the preparation of drafts of any normative acts or resolution of any individual cases concerning public administration.

Section 2

Preparation of a public private partnership

Art. 9.1 The competent minister for the relevant division of the governmental administration or the executive body of a local self-government unit shall prepare a draft of long-term directions and policies in respect of carrying out public tasks, taking into account the possible application of a public private partnership.

2. The long-term directions and public policy principles shall define:

1) validity term of at least 10 years;

2) principles of their updating;

3) diagnostics of the situation in the area concerned;

4) plan and time schedule of actions in the area concerned;

5) forms of performance of public tasks;

6) method of monitoring the performance of public tasks.

Art. 10. 1. The draft of long-term directions and principles of public policy shall be prepared taking into account the spatial development concept of the country, the development plans and the regional development strategy.

2. The draft may include assumptions for changes in the documents referred to in Clause 1 above, in case when such documents are developed by the entity that prepared the draft.

Art. 11.1. The draft referred to in Article 9, Clause 1 shall be subject to announcement in the Public Information Bulletin and shall be subject to public consultation including non-governmental organizations and business, social and cultural communities involved in the areas covered by the project.

2. The date and duration of the consultation referred to in Clause 1 above shall be set by the entity that prepared the draft. The duration of the consultation shall not be less than 30 days of the date of the announcement of the draft in the Public Information Bulletin.

Art. 12.1 The Council of Ministers upon a motion of the minister who prepared the draft referred to in Article 9, Clause 1 as submitted upon the lapse of the time allowed for public consultation along with information on the process and results of such consultation, approves, by way of a resolution, the long-term directions and principles of the public policy. Accordingly, the decision-making body of a self-government unit shall approve the draft prepared by the executive body of such unit.

2. The approved long-term directions and principles of the public policy shall be announced in:

1) the Official Journal of the Republic of Poland “Monitor Polski”- with respect to documents approved by the Council of Ministers;

2) in the voivodship official journal – with respect to documents approved by decision-making bodies of local self-government units;

3) the Public Information Bulletin.

Art. 13. An entity interested in being selected as the private partner for implementation of a certain undertaking in the form of a public private partnership may submit an application to the public entity with a proposal to implement such undertaking.

2. The entity that submitted the application referred to in Clause 1 above shall not receive any special treatment from the public entity during the procedure of selecting the private partner.

Art. 14. 1. Prior to the decision to implement a certain undertaking in the form of a public private partnership, having regard to the provisions of the long-term directions and principles of performance of public tasks, the public entity shall prepare an analysis of such undertaking to determine its efficiency and the threats involved in its implementation in such form, and in particular:

1) the risks involved in the implementation of the contemplated undertaking, taking into account different methods of sharing these risks between the public entity and the private partner and the impact on the public debt level;

2) the economic and financial aspects of the contemplated undertaking, including the comparison of the costs of implementing the undertaking in the form of a public private partnership with the costs of its implementation in another form;

3) comparison of the social benefits and threats involved in the implementation of the undertaking in the form of a public private partnership with the benefits and threats involved in the its implementation in another form;

4) legal status of the assets, if the legal title to the assets is to be transferred or established by the public entity for the benefit of the private partner;

5) technical arrangements of the contemplated undertaking, unless it constitutes the subject of the undertaking;

6) amount of the anticipated profit of the private partner.

2. The competent minister for economic affairs may define, by way of an ordinance, the mandatory elements of the methodology of the analyses referred to in Clause 1 above, taking into account the transparency, relevance and reliability of the analyses to be performed.

Art. 15. If the analyses referred to in Article 14, Clause 1 have shown that the undertaking requires, at least in part, financing from the public funds, the consent for implementation of such undertaking shall be given by:

1) the competent minister for public finance matters – in respect of tasks financed from the state budget;

2) the decision-making body of a local self-government unit – in respect of tasks financed from the budget of such unit;

3) the decision-making body of an association of local self-government units – in respect of tasks financed from the budget of such association.

Art. 16. The information about the planned implementation of a certain undertaking on a public private partnership basis shall be announced in the Public Procurement Bulletin.

Art. 17. In justified cases, and in particular in respect to preparation of the analyses referred to in Article 14, Clause 1, the public entity may rely on the assistance of a qualified advisor having the necessary knowledge and experience in respect of the undertaking that constitutes the subject of the public private partnership.

Section 3

Contribution of the public entity to the undertaking

Art. 18. 1. The contribution of a public entity to the undertaking shall be governed by a public private partnership contract.

2. The contribution of a public entity to an undertaking may specifically consist in:

1) own contribution to the implementation of the undertaking, including any Community funds, and non-reimbursable funds received from other countries, organizations and international institutions and private entities, or

2) the remuneration of the private partner.

3. The contribution of a public entity to an undertaking shall not cover in full the expenditures incurred by the private partner, unless the relevant separate regulations provide otherwise.

Art. 19.1. The own contribution may specifically consist in:

1) bearing a part of the implementation costs of the undertaking, including additional payments for the services provided by the private partner within the undertaking;

2) an enterprise within the meaning of Article 55[1] of the Civil Code of 23 April 1964 (Journal of Laws 1964 No. 16, item 93, as amended[1]), an immovable or movable property, licences and other intangible assets, if they are used for implementation of the undertaking.

2. The bearing of a part of the costs as referred to in Clause 1, sub-clause 1 above, by the public entity that is a governmental administration body or a local-self government unit shall take form of a subsidy (*dotacja)* within the meaning of the public finance regulations.

3. The own contribution referred to in Clause 1 shall be provided to the private partner with designation for specific purposes as set out in the public private partnership contract.

Art. 20.1. The own contribution referred to in Article 19, Clause 1, sub-clause 1, provided to a private partner, shall be exempted from the income tax to the extent and on the terms set out in separate regulations.

2. The transfer by a public entity of the own contribution referred to in Article 19, Clause 1, sub-clause 2 to a private partner or another entity designated in the public private partnership contract shall not result in imposition of the income tax, subject to the terms set out in separate regulations.

Art. 21. In the event when a public entity provides a real property to a private partner or another entity designated in a public private partnership contract for the purpose of the performance of such contract, as well as for use or for use and enjoyment of profits, the commune council may exempt such real property from the real estate tax, on the terms set out in the act on taxes and local charges of 12 January, 1991 (Journal of Laws 2002 No. 9, item 84, as amended[2])

Art. 22. In determining the remuneration of the private partners specific attention shall be given to the expected costs of the performance of the undertaking to be incurred by the private partner and the planned profit of the private partner, with due regard to ensuring and securing the public interest.

Art. 23. If the own contribution referred to in Article 19, Clause 1 has not been transferred or disbursed by the public entity in the amount or on the dates set out in the public private partnership contract, the private partner shall be entitled to interest, compensation or contractual damages, as appropriate.

Art. 24.1. The own contribution of the public entity referred to in Article 19, Clause 1, that has not been used in accordance with the intended purpose, shall be subject to repayment. In case of financial contribution, interest shall also due as of the date of payment of such funds.

2. Any claim for interest shall not exclude any claims for indemnity that may be brought by the public entity against the private partner.

Art. 25. The total amount up to which the governmental administration bodies may incur financial obligations under public private partnership contracts shall be set in the budget law.

Art. 26. In adopting the budget, the competent authority shall take into account:

1) the amounts spent on the payment of the obligations under the public private partnership contract;
2) the consequences of renunciation, temporary suspension or limitation of the scope of the undertaking implemented on a public private partnership basis;
3) the amounts spent on the compensation for the private partner under the public private partnership contract.

Section 4

Principles and procedure for selecting the private partner

Art. 27. 1. To the extent that is not regulated herein, the provisions of the public procurement law of 29 January 2004 (Journal of Laws No. 19 item 177, Journal of Laws No. 96, item 959) hereinafter referred to as the "public procurement law" shall apply to the selection of the private partner and public private partnership contracts.

2. The principal procedures for selecting the private partner include open tender, limited tender and negotiations with announcement. The provision of Article 55 of the public procurement law shall not apply.

3. In case when the public procurement law makes the performance of a certain action dependent of the contract value, such value shall be determined based on the total estimated value of the remuneration referred to in Article 1, Clause 3.

Art.28.1. The best tender as defined herein shall meat the tender that offers the best balance of the remuneration and other criteria concerning the subject of the contract, including:

1) the division of the tasks and risks relating to the undertaking between the public entity and the private partner, and
2) the dates and amount of the expected payments in consideration of the monetary amounts to be paid by the public entity, if any.

2. The provisions of Article 91, Clause 3 of the public procurement law shall not apply.

Art. 29. 1. The provisions of Article 142 Clause 2 of the public procurement law shall not apply to public private partnership contracts.

2. The public entity that takes the decision to enter into a public private partnership contract for periodic and continuous performance, for a period exceeding 3 years shall consider the prerequisites referred to in Article 142, Clause 3 of the public procurement law.

Art. 30. In case of particularly complex public procurement contracts or undertakings that require application of innovative solutions, the public entity may undertake to cover, for all bidders on equal terms, a part of the tender preparation costs as defined in the specification for the private partner selection.

Art. 31. To the extent that the specification for the private partner selection sets out the terms of amending or supplementing the public private partnership contract, Article 67, Clause 1, sub-clauses 6 and 7, and Article 144 of the public procurement law shall not apply to public private partnership contracts.

Art. 32. In the event that new circumstances would make the performance of a public private partnership contract contrary to the public interest, the public entity may renounce the contract on the terms and according to the procedure set out therein. The provisions of Article 145 of the public procurement law of shall not apply.

Section 5

Public private partnership contract

Art. 33.1. The public private partnership contract shall specify:

1) the purpose and the subject of cooperation and its time schedule;
2) the total value of funds designated for the implementation of the complete undertaking that constitutes the subject of the contract, independently of the source of their origination;
3) the obligations of the private partner, including its obligations with respect to the financing of the undertaking that constitutes the subject of the cooperation;
4) the obligations of the public entity, including the size, terms and timeframe for making the own contribution, if such contribution is envisaged, as well as the principles of handling such contribution;
5) the specification of quality norms, requirements and standards applicable to the performance of the public task;
6) the principles of selection of subcontractors, the scope of their responsibilities and the conditions on which the public entity may refuse to approve the subcontractors;
7) the powers of the public entity in respect of the ongoing control of the performance of the task by the private partner and the principles of periodical joint assessment of the execution of the undertaking to be carried out by the parties including the implementing recommendations;
8) the term the contract has been entered into for and the conditions of extension or early termination of the contract, as well as the conditions and method of its early termination before lapse of the term it was entered for and the principles of mutual settlements and the compensation due in such case;
9) the conditions and procedure for amendment of the contract and the change in the scope of the undertaking that constitutes the subject thereof, if such possibility was envisaged in the terms of the public contract;

10) the form, amount and principles of determining and transferring the remuneration;

11) the mechanism to ensure that the level of the profit generated by the private partner that is deemed allowed will not be exceeded;

12) the scope and principles of liability of the parties for non-performance or improper performance of the contract, including in case of an extraordinary change of relationships and occurrence of a force majeure event;

13) the division of the risks involved in the execution, performance and termination of the contract;

14) the terms and scope of the insurance of the undertaking to be implemented, as well as any additional warranties and agreements and undertakings of the parties in this regard;

15) the procedure and terms of settlement of any disputes arising in connection with the contract, and the method of selecting the mediator, if the parties select mediation as the dispute settlement procedure.

2. The public private partnership contract shall be made in writing or may otherwise be null and void, unless separate regulations require any specific form.

Art. 34. The public private partnership contract may cover implementation of more than one undertaking referred to in Article 6, and Article 7, Clause 1.

Art. 35.1. The public private partnership contract may provide that the public entity and the private partner shall establish a company for the purpose of its performance.

2. The purpose and subject of the activity of the company referred to in Clause 1 above shall not go beyond the scope defined in the public private partnership contract.

3. A public entity that is a governmental administration body and established a company referred to in Clause 1 above, shall exercise the rights accruing under the shares in such company owned by the State Treasury.

4. In the public private partnership contract the parties may agree the date and terms, on which the public entity shall acquire the shares held by the private partner in the company referred to in Clause 1 above.

5. The creation of the company referred to in Clause 1 above shall not release the private partner from the responsibility referred to in Article 3.

Art. 36.1. The following acts shall require a consent of all shareholders in the company referred to in Article 35, Clause 1:

1) disposal or encumbrance of an asset;

2) amendment of the deed or the articles of association of the company.

2. The public entity shall have the pre-emptive right to purchase the shares of the private partner in the company referred to in Article 35, Clause 1 within 6 months of the date of communication by the private partner of the intention to dispose thereof.

3. Any disposal by the private partner of the shares in breach of Clause 2 above shall be invalid.

Art. 37.1. Unless the public private partnership contract provides otherwise, upon termination of the contract, the private partner shall transfer the asset that is the subject of the public private partnership contract to the public entity or other entity designated in the contract, in non-deteriorated conditions, subject to wear and tear resulting from its proper use.

2. The transfer of the asset that is the subject of the public private partnership contract by the private partner or the company referred to in Clause 1 to the public entity by the date set out in the

public private partnership contract shall not result in imposition of the income tax, in accordance with the terms set out in separate regulations.

Art. 38. The public entity shall have the right to demand a financial security from the private partner in respect of the potential losses resulting from non-performance or improper performance of the public private partnership contract.

Art. 39. In case when two or more entities are represented as either party to the public private partnership contract, they shall be jointly and severally responsible for non-performance or improper performance of such contract, unless the public private partnership provides otherwise.

Art. 40. In selection of providers of services, supplies or construction works for the private partner in connection with the preparation, execution or performance of the public private partnership the Article 121, Clause 2 of the public procurement law shall apply accordingly, unless the private partner is a contracting party within the meaning of the public procurement law.

Art. 41. Public private partnership contracts shall be governed by the Polish law.

Art. 42. A public private partnership contract shall be invalid by virtue of the law in case when:

1) the competent authority has not prepared or approved the long-term directions and principles of public policy in the relevant area of public tasks;
2) the analyses referred to in Article 14, Clause 1 have not been carried out;
3) the consent referred to in Article 15 has not been obtained;
4) the information referred to in Article 16 has not been announced;
5) the private partner has not obtained the consents, permits, licences or other administrative decisions required to execute the undertaking;
6) occurrence of any of the prerequisites referred to in Article 146, Clause 1 of the public procurement law.

Art. 43. Within 7 days of the signing of a public private partnership contract, the public entity shall provide a copy of such contract to the competent minister for economic affairs, and in case of contracts that affect the public debt, also to the competent minister for public finance.

Section 6

Dispute resolution

Art. 44. 1. The list of arbitrators maintained by the Chairman of the Public Procurement Office shall include arbitrators authorised to examine appeals against dismissals or rejections of protests lodged in the course of the private partner selection procedure.

2. The arbitrator who examines the appeal in respect of Clause 1 should possess knowledge of the issues pertaining to public private partnership.

3. The knowledge of the issues referred to in Clause 2 shall be confirmed with a positive result of an examination carried out on the terms referred to in the public procurement law.

4. Any observer of the Chairman of the Public Procurement Office in the private partner selection procedure must be an arbitrator who meets the conditions set out in Clauses 2 and 3.

Art. 45. If mediation is the dispute resolution procedure selected by the parties in the contract, they shall be obliged to finalise it within 30 days of the date of the notice to select the mediator issued by either party.

Art. 46. Any disputes concerning the public private partnership contract or arising in connection with such contract shall come within domestic jurisdiction.

Section 7.
Takeover of the undertaking

Art. 47. In case of:

1) reassignment of the authority in respect of the performance of a public task from the hitherto public entity onto another public entity
2) liquidation or transformation of the public entity

- the public entity that has assumed the authority in respect of the performance of a public task, takes over by virtue of the law the respective rights and obligations, including the responsibility for the liabilities of the public entity that was hitherto a party to the public private partnership contract.

Art. 48.1. An entity selected in the course of the procedure applicable to the selection of a private partner may enter into all or a part of the rights and obligations of the private partner under the public private partnership contract.

2. Prior to the entry into the rights and obligations of the private partner as referred to in Clause 1, the public entity may contract the performance of the obligations of the private partner in accordance with the procedure set out in Article 66 of the public procurement law, for a period of up to 12 months. This period can be extended upon consent of the Chairman of the Public Procurement Office.

3. The entry into all or a part of the obligations of the private partner as referred to in Clause 1 above shall become effective upon the transfer by the competent public administration body, by way of an administrative decision, of all or a part of the rights and obligations under a licence, permit or other administrative decision onto the transferee, unless the relevant regulations exclude the possibility of such transfer. The transfer shall take place on request of the private partner or the transferee.

4. In case of termination of the public private partnership contract Clause 2 shall apply accordingly.

Section 8
Competent authorities

Art. 49.1. The tasks of the competent minister for economic affairs in respect of this law shall include specifically:

1) gathering and developing and promoting best practices in public private partnership, including in particular contract clauses, principles applicable to the management and supervision of public

private partnership undertakings and the standards of public services provided on a public private partnership basis, as well as cost reduction methods for such undertakings and services;

2) preparation of information materials and training on public private partnership;

3) carrying out reviews, analyses and assessments of the operation of public private partnership, with particular emphasis on the current status and prospects for financial involvement of the private sector;

4) maintaining a register of public private partnership contracts.

2. To carry out the tasks referred to in Clause 1 above, the competent minister for economic affairs shall establish a budgetary enterprise named the Centre of Public Private Partnership.

Section 9

Final provision

Art. 50. This law shall enter into force in accordance with the procedure and on the terms set out in the law on the implementing regulations for the public private partnership law.

[1] The amendments to the above-mentioned law were announced in Journal of Laws 1971 No. 27, item 252; 1976 No. 19, item 122; 1982 No. 11, item 81, No. 19, item 147 and No. 30, item 210; 1984 No. 45, item 242; 1985 No. 22, item 99; 1989 No. 3, item 11; 1990 No. 34, item 198, No. 55, item 321 and No. 79, item 464; 1991 No. 107, item 464 and No. 115, item 496; 1993 No. 17, item 78; 1994 No. 27, item 96, No. 85, item 388 and No. 105, item 509; 1995 No. 83, item 417; 1996 No. 114, item 542, No. 139, item 646 and No. 149, item 703; 1997 No. 43, item 272, No. 115, item 741 and No. 117, item 751 and No. 157, item 1040; 1998 No. 106, item 668 and No. 117, item 758; 1999 No. 52, item 532; 2000 No. 22, item 271, No. 74, item 855 and 857, No. 88, item 983 and No. 114, item 1191; 2001 No. 11, item 91, No. 71, item 733, No. 130, item 1450 and No. 145, item 1638; 2002 No. 113, item 984 and No. 141, item 1176; 2003 No. 49, item 408, No. 60, item 535, No. 64, item 592 and No. 124, item 1151 and 2004 No. 91, item 870 and No. 96, item 959.

RATIONALE

1. Background issues

The main objective of the draft law on public private partnership [PPP] is to stimulate public sector investments, specifically into infrastructure, by providing optimum legal framework for public undertakings with participation of private entities and removing the obstacles that result in considerable risk of PPP undertakings for both parties under the current legal framework. In a broader context, the law is aimed at eliminating psychological barriers concerning the role and function of the government in the execution of public tasks with participation of a private partner. The law is intended to enable the public entities and private partners to establish a relationship in the form of a PPP contract to carry out public tasks. It is also to prevent such situations where a PPP undertaking becomes a political instrument or is vulnerable to political pressures.

The key economic and legal issue in case of PPP is how the parties understand, and properly reflect in the PPP contract they are bound by, the distribution of the risks involved in the implementation of a specific public task undertaking on such basis, usually over a long time period. In such a broad and often complex setting, it is a rather new issue for the Polish administration and policy.

The draft law does not provide for creation of any new institutions of the administrative and business law as the existing legal measures – once the proposed changes are made and taking into account the harmonisation of the Polish legislation with EU regulations – are sufficient for PPP contracts to be effectively executed. The draft takes into account the law on public benefit activity and volunteerism (so-called small PPP) and other laws, so that other solutions similar to PPP that are already provided for under other laws.

It should be pointed out that where amendments to other laws are proposed, they refer to their latest versions (such as in case of the public procurement act). The intention was to ensure that, from the very beginning, the draft of the PPP law is consistent with the European Commission Guidelines for successful public private partnership and refers to the most current version of other legislative acts.

The approach used in the design of the PPP draft law assumes that changes are to be introduced in two dimensions: at a general level in the PPP law and in a separate law implementing the PPP law, which provides for amendment of several dozen of specific regulations. This is intended to show the direction of changes and the implications that the adoption of the PPP law will have for other legislation. The design of PPP law as a framework law is to enable PPP projects in each segment of infrastructure and public services and therefore the modifications of general solutions adopted in the draft may be introduced in specific regulations, if necessary for individual divisions of the administration or public tasks.

According to the assumptions, PPP was not meant to have the features of a new nominate contract but rather was to be understood as a new method or organisation of carrying out a public undertaking, on the basis of an agreement that has the necessary elements in respect of the distribution of the risks between the parties. It should be noted that PPP may take different legal forms (based on a legal relationship) and therefore the main emphasis was put on the definition of the procedure and the terms of cooperation between the private and public partner, including the fundamental provisions of the contract that for the basis for the partnership.

Consequently, the definition of a public private partnership within the meaning of the draft law consists of two elements: (I) the contract itself, including specific provisions as to the terms of the implementation of a certain undertaking, and (II) the procedure of arriving at such contract, which constitutes the constructive element of PPP.

2. General provisions

The introductory section of the draft includes a general definition that specifies the PPP features in terms of substance by indicating that it means a cooperation between a public entity and a private partner, based on a contract, which is aimed at performance of a public task (Article 1.1 of the draft). PPP is a method of carrying out a public undertaking jointly with a private partner or by the private partner itself, with due regard to several presumptions, the most important being that this form of public task performance should ensure benefits for the public interest that outweigh the benefits resulting from other methods of carrying out the relevant public task or specific undertaking (Article 2), where detailed analyses are to provide the basis for ascertaining that this is the case, as provided in Article 14. Moreover, as implied by Article 1.1, the private partner is to incur expenditures to carry out the undertaking that is the subject of PPP, or ensure that such expenditures are incurred by third parties. Finally, the remuneration due to the private partner may take different forms (Article 1.1).

It should be noted that the performance of task by private partners on PPP basis does not release the public entity from the responsibility for the performance of its statutory tasks, regardless of whether they are carried out directly or through a private partner.

The initiative to enter into a PPP contract comes always from the public entity. This is implied by EU directives concerning public procurement and the public procurement law, to which the reference is made in Article 27.1 of the draft as regards the selection of a private partner and PPP contracts. This reflects the basic presumption of PPP, namely that the performance of public tasks, including provision of public services, although it takes place through a private partner, remains an obligation of the public entity and is subject to its decision and responsibility. Thereby, the difference should be drawn between a PPP undertaking and normal business undertakings pursued jointly by a public entity (e.g. self-government) and a private investor, which are not related to the performance of public tasks (e.g. Article 10 of the municipal utility services law).

It should be added that the law requires from the public entity that is the formal initiator of PPP starts such undertaking on the basis of consciously defined public policy in the relevant area of the public administration (Article 9 and the following). This approach is an important prerequisite of a rational decision-making process, not only in terms of the content, but also on the political dimension, since the public discussion on the shortcomings and advantages of different methods of carrying out public tasks develops social participation attitudes, on the one hand, and, on the other, strengthens the confidence as to the direction to be followed, also in the financial aspect, and finally reduces the ease of taking politically motivated decisions (including e.g. decision to terminate PPP when the relationship was established by a political predecessor of the party being currently in power).

3. Undertaking that constitutes the subject of PPP

In accordance with Article 1.1, the draft law concerns a specific form (PPP) of public task performance. The law is not intended to extent the public authority on any areas that are beyond the scope of its operation; therefore PPP – from the viewpoint of a public entity – concerns those tasks that it is required or authorised to perform under separate regulations.

PPP, i.e. the cooperation between a public entity and a private partner aimed at performance of a public task, refers to execution of a specific undertaking that constitutes the subject of a public private partnership contract.

The potential scope of PPP was defined broadly, taking into account the needs of the public sector as they are currently identified, through appropriate definition of the term "undertaking". According to Article 6.1 undertaking means implementation of an investment in respect of public tasks. The above provision constitutes a basis for implementation of investments in those public task areas where the existing investment needs – particularly those relating to the obligations resulting from the participation of Poland in the European structures – cannot be met with traditional ways used by public entities, specifically such as roads, railways and environmental protection. On the other hand, Article 6.3 concerns those public tasks where certain infrastructure already exists but the quality of services leaves a lot to be desired, in particular as a source of social discontent, the examples being healthcare or social welfare, as well as public order.

In addition, public private partnership may concern other initiatives, including revitalisation (Article 7). The condition of entering into cooperation in such areas of public tasks is, however, that they have to be organised in such a way that the remuneration of the private partner does not take the form of a payment of an amount of money by the public entity.

In determining the form of remuneration the public entity should above all look for the possibility to provide the remuneration of the private partner in the form of profits from the undertaking that constitutes the subject of cooperation or ensuring other benefit for the private partner. The situation when the entire remuneration consists of a payment of an amount of money by the public entity is only allowed as an exception, if separate regulations so provide.

The ability to raise capital contributions from the private sector for implementation of public undertakings is an important feature of PPP. It is also vital in the view of the need to mobilise the financial capacity of Poland to draw from the structural funds from the EU.

4. Preparation of public private partnership

The procedure of arriving at the conclusion that a specific public task is to be carried out on PPP basis is the central issue for the public entity. The decision to opt for PPP cannot be driven by immediate political interest or pressures coming from the potential private partners (investors). For this reason it was deemed necessary that the competent minister for the relevant division of the governmental administration and the executive body of a local self-government unit prepare long-term directions and principles of the public policy in the relevant public tasks area (e.g. education, water and sewage systems, social policy), which, after diagnostics of the situation in the relevant areas and definition of an action plan and time-schedule, shall recommend the PPP model to the public as the most rational one (Article 9 and the following).

Undoubtedly, the competent minister and the executive body of a local self-government unit, will take the decision to select PPP as the form of carrying out a public task that is recommended in the long-term directions and principles of the public policy in the relevant area of administration based on the existing needs and the capabilities of the entity concerned to finance them. Public private partnership may be a form of carrying out public tasks as long as it has been designated as such in the above-mentioned document.

However, prior to taking the decision to execute a certain undertaking on PPP basis, the analyses referred to in Article 14.1 have to be performed in order to confirm the rationale for such decision.

5. Terms applicable to financing of PPP undertakings from public funds

Financial arrangements constitute one of the fundamental regulations that should be addressed in detail by the parties. Even though it is assumed that the private partner is to provide – at least in part – the financing of the PPP undertaking, a PPP project may often consist in an attempt to achieve savings (efficiency improvement) of such undertaking, within the expenditures incurred by the public entity. The law provides for such a financing model of PPP undertakings that enables flexible structuring in the contract. Consequently, the possible options include:

- financing without contribution of funds by the public entity;
- partial financing from the funds of the public entity, and, exceptionally,
- full financing from the funds of the public entity.

In the latter two cases, Section 3 of the law shall apply to the funds provided by the public entity. The above section relates to the contribution of the public entity in the undertaking. The contribution of the public entity (its level, form, terms of providing) shall be defined in the PPP contract (Article 18.1).

The level of its contribution shall be decided by the public entity after carrying out the analyses referred to in Article 14.1, and in particular the economic and financial aspects. The above analyses should be carried out on case-by-case basis with a view to minimising the contribution of the public entity. If the public entity decides that the undertaking, at least in part, requires financing from the public funds, the consent of the competent authority is necessary (Article 15).

The remuneration of the private partner will in principle take the form of a monetary consideration, though the payment does not have to originate from the budget; it may, for instance, consist in granting the private partner the right to charge fees from the users or draw proceeds from the undertaking. In such case the contract should regulate in detail the terms of tariff or fee increase, the method of charging the fees and all instruments for consumer protection against the consequences of the emergence of a potential private monopoly.

On the other hand, the takeover of the ownership of a real property by the private partner does not constitute a potential payment option (although it may be a form of contribution to the undertaking as a specific contribution in-kind – e.g. land or a building). Such contribution of the public entity by definition is not intended to constitute the remuneration for the private partner, and is also subject to restitution upon the termination of the contract (Article 37). This regulation prevents potential conflicts with local communities that are often concern discontent with such “privatisation” of the common public property. This also limits the possibility of speculation, eliminates the problems related to the valuation of such property, and reduces the risk of corruption. Specifically, it is vital that the contract regulates the terms on which the public property is to be used by the private partner.

The principles of remunerating the private partner remain transparent and clear, also for the users at large. This reduces the mental resistance against handing over public tasks to the private sector.

6. Principles and procedure for selection of a private partner

There were to possible methods that could be used in defining the procedure for selection of a private partner. The first one was to develop a completely separate procedure for PPP purposes. The second consisted in leveraging the existing selection procedures as set out in the public procurement law, assuming that some regulations of this law would be modified or excluded to adjust the procedures described therein to the specific of PPP projects. It seems that the latter approach, the one that was used, offers more benefits from the viewpoint of the PPP law itself, as it avoids detailed regulation of these matters in the law while enhancing the consistence of the legal framework as a whole.

The public procurement law will be directly applicable to the private partner selection procedure and to the PPP contract itself, with due regard to the provisions of the draft law (Article 27).

In case of PPP only the part of the undertaking for which a private partner has been selected constitutes the subject of the procurement contract. As to the selection of the best tender, it is assumed that the remuneration of the private partner is not always the best indication of the bid in case of PPP, since the proposed division of risks (Article 28) also has to be considered, which is not such a crucial issue in contractual relationships in case of “normal” public procurement contracts.

As far as the contract term is concerned, it is commonly believed that the regulation of the public procurement law, which requires a consent of the Chairman of the Public Procurement Office for entry into any contract for a term exceeding 3 years, is one of the main obstacles to the development of PPP projects in Poland. PPP contracts are by their nature long-term contracts with terms reaching even 20 years or more. The above requirement has been removed in respect of those PPP contracts for which it would constitute unnecessary and excessive restriction of the freedom to contract (Article 29).

In some cases a part of the costs related to preparation of the tenders by the bidders may be covered by the public entity. The proposed mechanism is intended to provide an incentive for the bidders to develop creative solutions in their tenders. The high costs involved in the preparation of such tenders are often a barrier, which may discourage investment of major effort and funds into development of innovative solutions (Article 30).

As far as renouncement of the contract against compensation is concerned (Article 32), the proposed solution is an attempt to reconcile two objectives. On the one hand, it is meant to provide the public entity with the option to renounce the PPP contract on the grounds of the general public interest clause. On the other hand, the current regulations of the public procurement law that provide only for payment of a part of the remuneration in such case, discourage private investors from becoming involved in undertakings where the public partner may withdraw based on an ambiguous public interest criterion.

7. Public Private Partnership Contract

The PPP contract is intended to be the fundamental legal document that defines the rights and obligations of the public entity and the private partner. The PPP contract is to be a contract based on the contract notion within the meaning of the civil law, which is discerned from other contracts by its specific objective and detailed principles of diving the risks related to its execution and performance. The essence of the PPP is that both parties derive benefits from the performance the contractual provisions. The structure of individual contracts should be aimed at ensuring that individual risks rest with the party that is most capable of controlling them, and the responsibilities are split according to the competencies, which will maximise the economic efficiency. The contract must allow for sufficient degree of flexibility and control to ensure that the objectives set by each party are achieved.

The PPP contract shall define in detail the obligations of the parties. Its specific function is to provide comprehensive description of the entire project and the questions related to the associated agreements (e.g. consulting agreement, construction contract, operation contract, etc.) and third parties (specifically banks that provide financing of the undertaking on the part of the private partner). The purpose of the PPP contract is to coordinate all agreements that constitute the so-called contract package for the execution of the PPP project. Such agreements, as the instruments that support the execution of the undertaking and define its subsequent stages, are subject to the general provisions of the Civil Code.

The contract must ensure fair sharing of risks and benefits. In particular, a transparent and equitable price-setting mechanism should be envisaged, so that the private sector is not threatened by the market developments, and, on the other hand, to protect the service user against the drive of the private sector to gain quick, unjustified profits.

The main provisions of the contract are set out in Article 33 of the draft law. Such highlighting of perhaps obvious elements of the contract is necessary in the view of public interest protection.

8. Dispute resolution

According to Article 33.1.15, the procedure and principles of dispute resolution shall be defined in the contract. It should be noted that the reference to mediation in this provision is not accidental. The draftsmen believe that any disputes resulting from the PPP contract should be first resolved through an amicable procedure. This is based on the view that a PPP undertaking involves two types of entities: entrepreneurs who are used to the commercial law standards and communes familiar with formal administrative procedures. The intention is that any frictions resulting from the different mindsets of such parties are addressed in the most expedient and effective manner possible through an informal procedure such as mediation. A court or arbitration proceedings should be used as the last resort and each time be preceded with an attempt of a mediator to reconcile the interests of both parties. This will reduce the risk that each, even trivial controversy between the parties to a PPP undertaking will involve a threat that the work is suspended until the court judgement is issued.

9. Takeover of the undertaking

The draft law recognises that due to various circumstances the originally selected private partner may not be able to perform the contract it has entered into. Independently of the claims against the private partner in this regard, the public entity may select a new partner in accordance with the procedure set out in Section 4 of the draft law. On one hand it is related to the fact that PPP is a form of carrying out a pubic task and as such it should be continued, and on the other, it is protective measure against circumvention of the provisions of the law concerning the selection of a private partner.

10. Competent authorities

The draft law assumes that most of the tasks of the public administration in respect of PPP will be carried out by the competent minister for economic affairs (Article 49). In particular, it will promote good practices in public private partnership and review the operation of public private partnership.

11. Final provisions

The final provisions link the entry of the law into force to a separate law on the implementing regulations for the public private partnership law. This is due to the fact that in order to introduce the possibility of entering into PPP contracts in the administrative practice and business transactions, a comprehensive review of the entire legal system is required and a large number of legislative acts has to be amended.

Assessment of regulatory implications of the draft law on the public private partnership

1. Entities affected by the proposed regulation:

The regulations of the proposed law affect the public sector through creation of the legal framework that facilitates the performance of public tasks. At the same time, the above regulations affect the entities of the private sector that enter into cooperation with the public sector in respect of the implementation of public task undertakings.

2. Findings from consultations:

The draft law was put for discussion between the ministries and social partners, among other things, through its publication in the website of the Ministry of Economy, Labour and Social Policy. The draft was submitted for review by the Joint Government and Local Self-Government Commission, and sent to the Council for Public Benefit Activity, the Council of Entrepreneurship and the Trade Unions Forum. All remarks have been considered and in most cases taken into account, including in particular the incorporation of all remarks of the Office of the Committee for European Integration concerning the alignment of the proposed provisions with the EU legislation. Some reservations were to a certain extent due to wrong interpretation of the proposed regulations, or lack of full understanding of the legislator's intentions and assumptions, and for that part an attempt was made to modify such provisions so as to ensure the adequate level of transparency.

3. Impact of the regulation on:

a) Public finance sector

The implementation of the law will not result directly in any budget expenditures. Instead, it will bring about a different philosophy in financing of public tasks. The potential benefits for the public sector are related to the fact that private partners take over the financing of the expenditures required to carry out public tasks. It is an effective measure of raising capital, particularly in the view of the shortage of public funds. At the same time, PPP will support absorption of the EU aid. The public entity seeking financial support from the EU may report the contribution of a private investor as the required project co-financing. Thereby, the pressure on the budgets of local self-governments and the national government will be eased.

It will be possible to allocate the budget expenditures primarily for the maintenance of the administration institutions, and to a lesser extent for public investment.

The long-term nature of PPP contracts will support introduction of long-term financial planning.

A broad application of PPP may contribute to major savings as a result of reduced investment costs and the costs of providing public utility services. Such savings are generated despite generally higher cost of capital incurred by the private partner as compared to the situation when the public sector is the borrower. Based on the British experience the benefits from PPP range on average between 10 and 20 per cent. Taking a simplified assumption that the share of Poland in the value of PPP projects implemented in the Western Europe will be proportional to the size of the population, based on the data for years 1985-2000 the estimated yearly value of PPP transactions in our country would average US$ 1.5 billion. The savings on the projects implemented in Poland will concern the reduction of the total investment costs, lower operating costs and limited risk exposure on the part of the public entity.

b) Labour market

The law will have positive impact on the labour market through increase in the volume of infrastructure projects implemented on the initiative of the public sector. The development of adequate infrastructure will also support the emergence and development of businesses, including inflow of foreign investment, which will also positively influence the labour market.

c) Internal and external competitiveness of the economy

With regard to internal competitiveness of the economy, the law will have positive impact, particularly on those areas of the municipal utility services where user fees are charged. It is expected that the costs of such public services will be subject to verification.
In terms of external competitiveness, the faster development of infrastructure investments will result in improved competitiveness of Poland. This in turn will have positive impact on attracting foreign investors to our country.

Moreover, a positive impact on the business sector is expected are a result of broader access of private entities to the market segment of public investments and services. Although the cooperation with the private sector with regard to the performance of public tasks is also possible prior to the entry of the proposed law into force, the existing barriers considerably hinder its development. With regulation of the PPP issues new business opportunities become available for private entrepreneurs. The application of PPP formula enables long-term commitment of private capital in those undertakings that so far have not been accessible for private entities through public procurement, or due to formal or financial considerations. Considerable opportunities for application of this formula exist in the area of investments in transportation, communication, environmental protection, municipal utility services, heat generation, as well as healthcare services, social welfare, real estate management, development planning and cultural activities.
An accelerated growth of enterprises, including small and medium ones is expected in a number of industries. Firstly, the business involved directly in the execution of PPP projects, i.e. from the construction and infrastructure investments sector are expected to develop. Secondly, it is anticipated that manufacturing company that will supply goods for the contractors of such investments will also grow. Thirdly, consulting and legal firms are likely to grow, as they will be engaged in the preparation of PPP projects, both by the public and the private party.

The law will stimulate the growth of the financial and capital market by increasing the demand for financing to carry out PPP investments. It is expected that the quantity and volume of loans taken by the private sector for execution of public investments will increase.

d) Regional situation and development

The law will have a positive impact on the situation and development of the regions by accelerating investments into infrastructure. This will result in improved competitiveness of individual regions in Poland and facilitate inflow of investments to those regions in other sectors of the economy.

The law will also enable increased absorption of the EU structural funds. This will be possible as the financing provided by the private partner will constitute a part of the own contribution required to obtain the structural funds, and thereby self-government units will be able to complete a larger number of infrastructure investments at the same time.

e) State structure and the society

The regulation of PPP issues is particularly needed by local self-governments that are responsible for carrying out the majority of public tasks and infrastructure projects. This form enhances the execution opportunities for many investment projects and ensures co-financing in EU supported projects.

The major impact of the law will consist in the increased participation of the private sector in the performance of public tasks, particularly in the area of transportation, technical (specifically environmental) and social infrastructure. Stronger involvement of the private sector is expected in financing, preparation and execution of infrastructure investments, as well as in management of this infrastructure combined with its operation and maintenance up to the required standard. This involvement should not only contribute to a growth in the volume of infrastructure projects implemented on the initiative of public sector entities but also their more efficient and effective execution with lower financial expenditures and use of modern technologies. Last but not least, the social needs should be met faster and up to higher quality standards.

The regulation may contribute to increased supply of public services and accelerated execution of numerous investment projects, which will contribute to improvement in the standard of living of the society.

Broader application of the PPP formula in financing of public tasks should lead to improved quality of the provided services and reduction in their costs. However, it should not be excluded that in some cases, depending on the results of economic and financial analyses where full costs of service provision by the pubic sector are taken into account, the charges for facility and service users could increase.

Portuguese comments on the «Green Paper on PPPs and the Community law on public contracts and concessions»

September 23, 2004

1 PPPs and the Community law on public contracts and concessions

Efficiency We see PPPs as an important instrument for introducing private sector efficiency in the development of public projects in infrastructure and provision of public services. Not just in management activities but also in the actual definition of the projects. That's why we always associate PPPs with flexibility. In order to obtain value-for-money in the public tenders for PPPs we need a lot of flexibility in the tender documents. At the same time we need a clear prior definition of the expected final results of the PPP and a set of tender rules that assure competition and non-discrimination.

Competition We consider that internal market and competition principles are not just matters of European concern, but also of national concern, as competition — a wide competition — is essential to obtain value-for-money in public procurement. So we endeavour a lot of efforts to obtain economic competition in PPP tender procedures — not just legal, formal competitiveness, but real, effective competitiveness.

Innovation The challenge of obtaining effective competitiveness is a hard one, because the most interesting PPPs (from the point of view of the public sector) are the ones in which the bidders are able to introduce a lot of innovation. That prevents us from using some traditional ways of tendering (for instance, defining precisely the kind of works and services needed and then evaluating the bid price for those requirements), in favour of more flexible (but always clearly stated) evaluation criteria, involving price, technical ability, quality, and (very important) satisfaction of required performance.

Long-term The need for the design of a long-term contratual relationship creates an additional burden, implying the evaluation of incentive mechanisms (payments, fines and penalties) that are designed by the public sector but subject to a considerable degree of improvement by the bidders (that can propose additional commitment and incentive mechanisms).

So, we consider that, at present time, PPPs and concessions should be ruled by the principles of the European Treaties (including the internal markets and competition principles) and by national laws.

We still need to develop innovative ways of tendering PPPs. We also need to experiment with innovative approaches designed in the «new» public tendering EU directives (2004/17 and 2004/18) in order to learn more and extend those experiments to PPPs.

EU public procurement rules have improved competition and non-discrimination rules but are still unsatisfactory in what relates to obtaining value-for-money and effectiveness in traditional procurement — cost overruns and delays are common in most EU countries. So a lot of care is needed in designing rules for sensitive schemes like PPPs.

We need to call attention to the fact that different national legal environments (namely, different environmental appraisal regulations) will imply that the optimal tender procedures will be different from country to country. Also the different degrees of risk accepted by public partners (and different degrees of risk of projects tendered as PPPs) will call for different tender rules.

At the same time we advocate that **no EU directive** should be designed for PPPs at the present time, we strongly recommend that some kind of **PPP observatory** should be established, in order to collect and diffuse information on PPPs, as well as providing a forum for discussion and analysis of PPP experiences. That Observatory should be a very small body, providing information services and using resources from research institutes and national PPP units for the required analysis of information.

2 Portuguese PPP experience

The Portuguese government has developed innovative experiences in the management of public services and in the conception and construction of large public infrastructures. Several of them involve long-term contracts between a public body and a private consortium, requiring that the private partner runs a public service using a public infrastructure or that the private partner conceives and constructs a public infrastructure (using private or public finance) and makes it available for the public sector for a long period (typically 30 years) or operates a public service on it — those contracts are the so called public–private partnerships, or PPP.

In the last decade several PPP were implemented in Portugal, mainly in the transport sector (highways, rail and tram). The first projects demonstrated the effectiveness of PPPs for the rapid development of infrastructure and the improvement of service to end-users. Those first projects, being welcomed by their users and by the public in general, fostered the diffusion of PPP schemes to other areas, with PPPs being now studied in sectors like health, water and waste management, student accommodation, and prisons.

Having been launched, maintained and expanded by a series of governments, from different political parties, those PPP created a cross-party consensus on the need to develop PPP schemes, albeit with different aims and emphasis, dependent on the political positioning of each party.

Regarding the water sector one should mention a recent government decision (Resolução do Conselho de Ministros nº 72/2004, June 16th) defining guidelines for the restructuring of this sector which will allow for an increasing number of PPP schemes. A large PPP hospital programme is currently under way (ten new hospitals to be contracted in the next few years, including the provision of clinical services and every other service in the hospitals), with bids already submitted in the first public tender, a second one invited, and several other tenders in preparation. In the port business, the concession of terminals is common, mainly for freight handling.

While still being used in the traditional fields of infrastructure (two new large highway concessions are currently being tendered, several tram and train concessions are being negotiated or prepared), the PPP potential for efficiency is still expanding to new fields, and including a large component of service provision to end-users, as witnessed in the PPP hospital programme.

3 Recent institutional changes

The main driver of the first decade of PPPs in Portugal was the need for faster development of infrastructure and high quality public services. In recent years, severe budgetary constraints created incentives for using PPP as a substitute for direct public investment. In a move to keep the focus of PPPs on efficiency, incorporating lessons from past experience and preparing for new PPP programmes, the government applied some institutional changes in the course of 2002 and 2003:

- definition of appraisal procedures for PPP projects, requiring the justification of the PPP, the choice of an optimal PPP model, the existence of adequate long-term budgetary appropriation, the definition of a public sector comparator and the intervention of experts from the Finance Ministry (Decree-Law n.º 86/2003, April 26th);

- creation of a PPP Unit, in Parpública SA, with generic responsibilities for the surveillance of public–private relationships and collection, analysis, and diffusion of information on PPPs, and provision of expertise to sectoral ministries, as well as specific roles in evaluation and appraisal of PPP projects and tender documentation, evaluation of bids in public tenders, and negotiations with private partners (see the decree-law Decreto-Lei n.º 86/2003, April 26th; and the joint order Despacho Normativo n.º 35/2003, published in the official journal, *Diário da República, I Série – B*, in August 20th);

- consolidation of prior rules for the creation of long-term budgetary appropriations for PPP programmes and projects (Lei de Enquadramento Orçamental, Law n.º 91/2001, August 20th, changed and republished by Organic Law n.º 2/2002, August 28th).

Parpública SA (a state firm fully owned by the Treasury Department and involved in the management and privatisation of public shares and assets in the hands of government) had a PPP team operating since year 2000, presenting advise to the Treasury Secretary and several government departments. Parpública SA received the above mentioned responsibilities in August 2003, having reinforced his PPP Unit then.

Besides data collection and analysis, and a lot of internal, external and internacional debate on PPP matters, the PPP Unit is currently involved in the appraisal of several new large projects, mainly in the transport (highways, railways and tramways) and health sectors, at different stages (evaluation of departmental proposals, preparation of tender documents, bid evaluation) and in the supervision of signed contracts (refinancing and renegotiations).

For the development of large specific programs, like the PPP hospital programme, ministers rely on special purpose departments, like Parcerias.Saúde, the Health Ministry PPP Unit, who work in association with Parpública SA.

4 Specific questions

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

We have a lot of contractual PPPs, now launched under new legislation, as described above. EU internal market and competition principles are implemented by those rules.

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

The different kinds of risk-taking involved in different PPPs will require different provisions in order to safeguard the principles of the Treaty (not just the internal market and competition principles but also principles regarding public sector efficiency and general interest). For some complex PPPs the competitive dialogue procedure may be just enough, but in others we would expect that less clear goals will require more strict rules of procedure. So eventually some specific procedures for PPPs and concessions will be enacted.

But a new directive on PPPs and concessions should only be designed some years after the transposition of the «new directives» (2004/17 and 2004/18), in order for them to be fully exploited and developed. New procedures should try to focus on very complex PPPs and concessions, trying to obtain the maximum flexibility in procurement, in order to obtain value-for-money out of innovative bidder approaches.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

Being long-term contracts, PPPs will be subject to change along the life of contracts. So, the way change is introduced (or the way it is managed, as change will generally occur independently of the will of partners) will certainly matter and should studied in order to design rules that prevent uncompetitive behaviour.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

(see above)

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

Within the current framework, several different tender schemes were launched in Portugal, with a wide range of results, but always guarantying competition among European bidders.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

As stated above, that Community legislative initiative is not considered desirable, at this moment.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

As considered above, different degrees of project-risk and different degrees of risk-transfer will require different tender arrangements. And, at the present moment, introducing EU legislative action could jeopardise moves towards more innovative and efficient procedures.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

There are no private initiative PPPs in Portugal. This kind of projects introduces some competitiveness concerns and innovative possibilities, so the European experiences with them should be carefully studied and diffused. Collecting and diffusing information on them should be a task for a EU PPP Observatory.

9. In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

(see answer to previous question)

10. In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

As we tend to use competitive negotiations (with at least two bidders) in the PPP tenders, the selection of preferred bidder is coincident with BAFO (best and final offer) and financial closure — so most negotiations are already made at BAFO, and contract signature follows shortly the adjudication.

11. Are you aware of cases in which the conditions of execution — including the clauses on adjustments over time — may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

We are not aware of such cases in Portugal.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

The use of several practices and mechanisms may result in some sort of discriminatory effect (like discriminating against small firms or in favour of financial partners) but we are not aware of practices or mechanisms that have originated some kind of discrimination against non-nationals.

13. Do you share the Commission's view that certain «step-in» type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other «standard clauses» which are likely to present similar problems?

We do not consider «step-in» and similar provisions as matters of concern in terms of transparency and competitiveness, as they are essential for the financial stability of partnerships (and also for some reduction in risks and costs) and their rules are described in the contracts.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

No, not at present time.

15. In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

We are not aware of such specific problems. Note that we treat PPPs as contracts for the provision of a stream of services (highway services or railway transportation, for instance), so we try to concentrate on output and performance, and not to rule conditions for subcontracting. In effect, subcontracting is one option for the private partner, subject to a small set of requirements. An please note that most of our PPPs involve a construction consortium as partner, so reducing the risks of subcontracting.

16. In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

No, we really consider there is no need for new subcontracting rules as long as there is a competitive procedure for the selection of the private partner.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

No, there is no such need.

18. What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

We, at central government level, have no experience with institutional PPPs.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form ? If not, why not?

Probably a more clear definition of public firms and the boundary between definitions of public and private firms would help in clearing the processes in institutionalised PPP projects. For the moment, there is no need for new EU rules, but that clear definition would help in guarantying that, at least once, there is some kind of competitive procedure in the development of institutional PPPs.

In general and independently of the questions raised in this document:

20. In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

Too many rules and too strict rules would be a major constraint on PPP development.

21. Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of «good practice» in this framework which could serve as a model for the Union? If so, please elaborate.

The answer to this question should be given by a collective effort of all interested parties, with the help of that EU PPP Observatory we would like to be provided.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

As considered above, we would sincerely welcome the establishment of a EU PPP Observatory, with a small information office (for collecting and diffusing information on PPPs) and a network of research institutes, PPP units and PPP partners.

■

The Opinion of Slovak Republic (the Office for Public Procurement) on Green Paper on Public-Private Partnership and Community Law on Public Contracts and Concessions

Introduction
The Slovak Republic does not dispose of definite legal framework and of definite rules that would adjust process and relationships within PPPs.
The Slovak Republic does not have in substance any experiences with PPPs (particularly on the level of state institutions).
The Slovak Republic welcomes the initiative of European Commission in this area because this initiative can help concrete Member states to lay down comparable framework/rules for PPPs.
Owing to the aforementioned it is advisable to look at our answers in the survey "Green Paper".

Answers to questions in Green Paper:

1. In the Slovak Republic, we know only concession procurement on works (Article 50 in the Act No.523/2003 on public procurement) as one of form of PPP set-up. This concession procurement is included in the Act No. 523/2003 on public procurement and on amendment of the Act No. 575/2001 Coll. on the organization of central state administration as amended. We would like to add the new forms of PPP set-ups into new preparing legislation in the next future.

2. We suppose that competitive dialogue procedure will be right form for using PPPs after the transposition into national law. This is good idea.

3. We do not consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts.

4. We have not yet organised or participate in a procedure for the award of a concession within Union. The Ministry of Economy and the Ministry of Transport, Posts and Telecommunication are interested in involving the private sector in construction of highways and hence there is opportunity to organise a procedure for the award of some form of PPPs.

5. Our opinion is that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concession and there is genuine competition guaranteed in this framework.

6. We do not think that there is next Community legislative initiative, designed to regulate the procedure for the award of concession, desirable. In our view, regulation the procedure for the award of concession should be let on concrete member state.

7. It would be useful to cover all contractual PPPs in legislation by adding rough framework also of other forms of PPPs than concessions because in current and new directives there are rules governing only concessions.

   The answers to questions 5, 6, 7 are our assumption because of no experiences in this area.

8. We have no experiences with private initiative PPP schemes; PPP is in our country only at the commencement of using.

9. It should be guaranteed compliance with the principles of transparency, non-discrimination and equality of treatment by adding the rough framework of PPP into the legislation because directives respect these principles.

10. We have no experiences with the phase, which follows the selection of the private partner in contractual PPPs but the state administration body, and other contracting authorities invite in most cases of public procurement an international advisor to choose the best project (tender).

11. In Slovakia, there were not recorded any problems or barriers to provide services or freedom of establishment.

12. We have not encountered any practices or mechanisms for evaluating tenders, which have had a discriminatory effect.

13. In this regard, we share the Commission´s view.

14. We do not have knowledge about the impact on financial situation of contracting authorities in public-private partnership, whether state liabilities will increase and thereby the debt and deficit of public finance.

15. Because we have no experiences with PPPs, we are not aware of specific problems encountered in relation to subcontracting. We think provided that the conditions stated in new directives (Article 60 of Directive 2004/18/EC) will be fulfilled, it is on agreement between two sides (public and private partner) what extent of subcontracting being agreed on.

16. In our opinion, the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, do not justify more detailed rules or a wider field application in the case of the phenomenon of subcontracting.

17. We consider that there is not a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting; these rules are sufficiently stipulated in new directives.

18. We do not have any knowledge about institutionalised PPPs.

19. Unfortunately, we do not know to express our opinion to this question.

20. No measures or practices act as barriers to the introduction of PPPs within European Union, using PPPs depends on legislation of each member state and on the will to exploit the advantages of PPPs. In Slovak Republic there is few knowledge about this theme and no experiences in this field and therefore it is hard to begin.

21. We do not know other forms of PPPs, which have been developed in countries outside the Union (we have heard some information about PPPs from USA and Japan but we can not regard them relevant).

22. We will be pleased if the Commission will establish such a network, which would allow for the exchange of best practice concerning PPPs. Our government is planning to use PPPs in the next future but the first stage is legislation.

Elaborated by Mr. Ján Beka (European Affairs and International Cooperation Department of the Office for Public Procurement) and approved by Mrs. Katarína Némethová (Head of this Department).

Bratislava, July 2004

Asunto: Aportación de la representación española en el Comité Consultivo para los Contratos Públicos de la Comisión Europea en relación con las cuestiones que se plantean en el Libro verde sobre la colaboración público-privada y el Derecho comunitario en materia de contratación pública y concesiones (CPP), presentado por la Comisión.

La Comisión Europea, a través de su Dirección de Política de Contratos Públicos ha expresado sus consideraciones sobre el desarrollo de la colaboración público - privada (CPP) y su relación con el Derecho comunitario, respondiendo a las iniciativas del Parlamento, del Consejo y del Comité Económico y Social Europeo para la adopción de una iniciativa legislativa por parte de la Comisión, ha presentado el denominado Libro verde sobre la colaboración público-privada y el Derecho comunitario en materia de contratación pública y concesiones (CPP).

Este documento tiene por finalidad expresar la opinión sobre el contenido del Libro verde desde la representación española en el Comité Consultivo para los Contratos Públicos.

1. Introducción.

El contenido del documento presenta un pormenorizado análisis de las cuestiones que afectan a las diferentes posibilidades de la gestión de actividades propias de las Administraciones públicas mediante el recurso a nuevas formas de naturaleza contractual en el que destaca el notable esfuerzo realizado por los servicios de la Comisión.

No obstante, desde la perspectiva de la delegación española en el Comité Consultivo para los Contratos Públicos se considera necesario realizar determinadas consideraciones que tratan de reflejar los antecedentes de tramitación de la Directiva 92/50/CEE, del Consejo, de 18 de junio de 1992, sobre coordinación de los procedimientos de adjudicación de los contratos públicos de servicios y el desarrollo de la llamada colaboración público - privada en España cuyos antecedentes son remotos en el tiempo.

1.1. La Directiva 92/50/CEE, en su propuesta de la Comisión al Consejo, documento COM (90) 372, publicado en el Diario Oficial de las Comunidades Europeas C 23, de 31 de enero de 1991, incluía en su articulado a las concesiones de servicios en su ámbito objetivo.

La falta de una regulación específica definidora del concepto concesión de servicios, para su aplicación común a todos los Estados miembros, y la inclusión, sin otra precisión más concreta, de un término ausente de una completa regulación, dio lugar a una clara división de posturas en el grupo de Contratos públicos del Consejo que elaboró el texto de la Directiva, discrepancias que se mantuvieron en el Comité de Representantes Permanentes, toda vez que como tal referencia a las concesiones de servicios postulada por la Comisión en su presupuesta implicaba la incorporación a un mercado plenamente abierto de tal figura contractual que tenían un ámbito definido y desarrollado en los países cuyo sistema normativo se encuentra en las técnicas del Derecho administrativo francés, con normas propias reguladoras de tales concesiones y de aplicación habitual, pero que no se correspondía por otros Estados en los que tal concepto de concesión de servicios ni se encontraba regulado ni recibía aplicación alguna. La consecuencia lógica de tal incorporación suponía, como señalamos, una aportación al mercado de técnicas contractuales de unos Estados miembros que no recibían correspondencia alguna por parte de los restantes, consecuencia que se reforzaba ante la ausencia de una definición clara y explicita que implicará el sometimiento de tal técnica concesional a todos los Estados miembros. Así sucedía en el caso de España que mantiene una amplia tradición en el desarrollo de la figura concesional en el ámbito de los llamados contratos de gestión de servicios públicos.

La exclusión de la concesión de la Directiva 92/50/CEE y su efecto ha sido valorada por el Tribunal de Justicia de las Comunidades Europeas, que refleja en su texto los motivos que dieron lugar a la exclusión de las concesiones de servicios del ámbito de la Directiva[1].

En tal sentido, el Consejo manifestó que para proceder a incluir a las concesiones de servicios en las Directivas sobre coordinación de los procedimientos de adjudicación de los contratos, se debía proceder a realizar un exhaustivo estudio que expusiera el alcance y las consecuencias de su aplicación [2].

1.2. Las figuras concesionales en el marco de la contratación pública, cuya importancia desde la perspectiva económica es absolutamente trascendente, ha venido formando parte del ordenamiento jurídico regulador de los contratos públicos en el Derecho español, tanto respecto de la concesión de obras públicas como respecto de la gestión de servicios públicos o de aprovechamiento y explotación de bienes de las Administraciones Públicas. Así, ya la Ley general de obras públicas de 13 de abril de 1877 y su Reglamento general de 6 de julio del mismo año contienen normas reguladoras de las concesiones de obras a particulares, tanto en el ámbito de la Administración del Estado como en el ámbito de las Corporaciones locales. Posteriormente la Ley de Administración y Contabilidad de 1 de julio de 1911, modificada por la Ley de 20 de diciembre de 1952, regula en su capítulo V las cuestiones relacionadas con la contratación pública, para regularse mediante una normas especificas en la Ley 198/1963, de 28 de diciembre, de Bases de Contratos del Estado, y en su Texto articulado, aprobado por Decreto 923/1965, de 8 de abril, aspectos concretos de estas figuras concesionales. Completan este marco normativo, respecto de los municipios y provincias, el Reglamento de Contratación

[1] Sentencia Teleaustria y Telefonadress, de 7 de diciembre de 2000, en el asunto C-324/98; apartados 46, 47 y 48. Apartado 48: "*... en el transcurso del procedimiento legislativo, el Consejo suprimió toda referencia a las concesiones de servicios públicos, principalmente a causa de las diferencias existentes entre los Estados miembros en materia de delegación de la gestión de servicios públicos y en las modalidades de dicha delegación, que podrían crear una situación de enorme desequilibrio en la apertura de los mercados de concesiones de servicios públicos...*".

[2] Id. apartado 50 "*...el Consejo no aceptó la propuesta de la Comisión de incluir en la Directiva 90/531 normas relativas a las concesiones de servicios públicos, basándose en que tales concesiones sólo se conocían en uno de los Estados miembros y en que no resultaba oportuno regularlas sin haber llevado a cabo un estudio detallado sobre las diversas formas de concesión de servicios públicos existentes en los Estados miembros en los mencionados sectores*".

de las Obras y Servicios de las Entidades Municipales, aprobado por Decreto de 2 de julio de 1924, y el posterior Reglamento de Contratación de las Corporaciones Locales, aprobado por Decreto de 19 de enero de 1953, y el Reglamento de Servicios de las Corporaciones Locales, aprobado por Decreto de 17 de junio de 1955. En el ámbito patrimonial son diferentes las leyes y reglamentos reguladores de las relaciones de tal carácter cuya enumeración carece de trascendencia a los efectos de esta aportación.

1.3. Por otra parte debe especificarse previamente a la presentación de los siguientes comentarios que la licitación de los llamados contratos de gestión de servicios públicos, entre los que se incluyen las concesiones de servicios, se realiza siguiendo los mismos procedimientos de adjudicación que se establecen en las Directivas 2004/18/CE y 2004/17/CE, y aplicando las mismas reglas sobre capacidad, requisitos, publicidad, igualdad y transparencia, con la única y lógica excepción de que tales licitaciones no se publican en el Diario Oficial de la Unión Europea, ni se someten a los dilatados plazos de recepción de candidaturas y ofertas que las citadas Directivas se establecen. Tales licitaciones y la adjudicación del correspondiente contrato se publica en los Diarios Oficiales correspondientes de la Administración que otorga el contrato de la misma forma que en los contratos de importe inferior al establecido en la Directiva 2004/18 respecto de los contratos de obras, de suministro y de servicios.

Desde la perspectiva de la concurrencia de empresas podemos indicar que se encuentra abierta no solo a las empresas nacionales sino también a todas las empresas de los Estados miembros de la Unión Europea y del Espacio Económico Europeo que reúnan las condiciones que para cada contrato se exijan, así como a las empresas de terceros países que acrediten la reciprocidad de trato respecto de las empresas españolas.

La regulación concreta de las concesiones de servicios se encuentra hoy en los artículos 154 a 170 de la Ley de Contratos de las Administraciones Públicas, Texto refundido aprobado por Real Decreto Legislativo 2/2000, de 16 de junio, y en los artículos 183 a 186 del Reglamento General de la Ley de Contratos de las Administraciones Públicas, aprobado por Real Decreto 1098/2001, de 12 de octubre, normas que son de aplicación general tanto al Estado como a los entes territoriales (Comunidades autónomas, provincias y municipios), así como por los artículos 114 a 137 y concordantes del Reglamento de Servicios de las Corporaciones Locales.

La duración de tales contratos se extiende en el tiempo en función de su objeto. El artículo 157 de la Ley de Contratos de las Administraciones Públicas determina que estos contratos no podrán tener carácter perpetuo o indefinido y su duración se especificará en el pliego. Su duración máxima, incluidas las prórrogas, no puede superar cincuenta años en los contratos que comprendan la ejecución de obras y la explotación de servicio público. No podrá superar veinticinco años en los contratos que comprendan únicamente la explotación de un servicio público no relacionado con la prestación de servicios sanitarios en cuyo caso la duración máxima será de diez años.

De cuanto se expone se puede apreciar que aun cuando las concesiones de servicios no se encuentran incorporadas al Derecho comunitario ello no impide que su adjudicación se regule, en la práctica, por las mismas reglas y que el acceso a las mismas no está reservado a empresas españolas sino que se encuentra abierto a las empresas del resto de países en las mismas condiciones que se aplican para los restantes contratos.

2. Cuestiones, respuestas y comentarios.

2. En cuanto se refiere a las diferentes cuestiones e interrogantes que se plantean en el Libro verde sobre la colaboración público-privada y el Derecho comunitario en materia de contratación pública y concesiones (CPP) expresamos a continuación nuestra opinión.

Como hemos resaltado, la experiencia de la Administración Pública española se encuentra ampliamente desarrollada en el sentido expresado por las dos alternativas expuestas en el documento, si bien con un claro y evidente predominio de la relación contractual en la que se enmarca, entre otras modalidades, la concesión como sistema principal, siendo por lo general, y salvo muy determinadas excepciones, los supuestos en los que el órgano de contratación (poder / entidad adjudicador) quien determina los elementos fundamentales de la concesión, si bien existe la posibilidad de la que la propuesta pueda ser planteada por el sector privado que, una vez valorada por la entidad adjudicadora, decide si procede la dar curso a la propuesta procediendo a la apertura a la concurrencia de las empresas interesadas en obtener la concesión. En tal sentido describiremos en las correspondientes cuestiones aquellos datos detallados que permitan apreciar tales precisiones.

Cuestión 1. ¿Qué tipos de operaciones de CPP puramente contractual conoce? ¿Se ha creado en su país algún marco específico (legislativo o de otro tipo) para esta clase de operaciones?

Respuesta. Como indicamos, la gestión de servicios públicos, bajo forma contractual, se encuentra regulada en los artículos 154 a 170 de la Ley de Contratos de las Administraciones Públicas, Texto refundido aprobado por Real Decreto Legislativo 2/2000, de 16 de junio, y en los artículos 183 a 186 del Reglamento General de la Ley de Contratos de las Administraciones Públicas, aprobado por Real Decreto 1098/2001, de 12 de octubre, normas que son de aplicación general a todas las Administraciones Públicas, así como por los artículos 114 a 137 y concordantes del Reglamento de Servicios de las Corporaciones Locales.

Entre las distintas modalidades podemos referir las siguientes:

a) Concesión, por la que el empresario gestionará el servicio a su propio riesgo y ventura.

b) Gestión interesada, en cuya virtud la Administración y el empresario participarán en los resultados de la explotación del servicio en la proporción que se establezca en el contrato.

c) Concierto con persona natural o jurídica que venga realizando prestaciones análogas a las que constituyen el servicio público de que se trate.

d) Sociedad de economía mixta, en la que la Administración participe, por sí o por medio de una entidad pública, en concurrencia con personas naturales o jurídicas.

Cuestión 2. En opinión de la Comisión, la transposición al Derecho nacional del procedimiento de diálogo competitivo permitirá que las partes interesadas dispongan de un procedimiento particularmente adaptado a la adjudicación de contratos calificados de contratos públicos durante la puesta en marcha de una CPP de tipo puramente contractual, al tiempo que se protegen los derechos fundamentales de los operadores económicos. ¿Comparte esta opinión? Si su respuesta es negativa, ¿por qué?

Respuesta. Es evidente que por lo reciente de la adopción de la Directiva se desconoce la virtualidad de aplicación del nuevo procedimiento de dialogo competitivo y si en su proyección futura constituirá un sistema que aporte beneficios a la contratación pública. De todos es bien sabido, y así se puso de manifiesto en diversas reuniones del Comité Consultivo para los Contratos Públicos, que las soluciones que puede aportar el diálogo competitivo podían obtenerse mediante la aplicación de supuestos concretos del procedimiento negociado. Será el tiempo y la práctica aplicada por los diferentes poderes adjudicadores quien aporte respuestas a la pregunta, pero, en principio, un detenido estudio de la gestión del servicio público que se pretende concertar aportará las soluciones alternativas para lograr una gestión efectiva.

Conscientes de que tales aspectos deben estar previamente definidos por el órgano de contratación, la Ley de Contratos en el artículo 158 exige que se determinen en el expediente los aspectos de carácter jurídico, económico y administrativo y, en su caso, las tarifas que hubieren de percibirse de los usuarios, los procedimientos para su revisión, y el canon o participación que, en su caso, hubiera de satisfacerse a la Administración. Concordante con tal precepto el artículo 183 del Reglamento general de la Ley exige que los proyectos de explotación deberán referirse a servicios públicos susceptibles de ser organizados con unidad e independencia funcional y que los mismos comprenderán un estudio económico - administrativo del servicio, de su régimen de utilización y de las particularidades técnicas que resulten precisas para su definición, que deberá incorporarse por el órgano de contratación al expediente de contratación antes de la aprobación de este último.

En tal sentido, respecto de las Corporaciones locales, el artículo 115 del Reglamento de Servicios de las Corporaciones Locales dispone cual será el contenido mínimo del pliego:

> "*Artículo 115. En toda concesión de servicios se fijarán las cláusulas con arreglo a las cuales se otorgare, que serán las que se juzguen convenientes y, como mínimo, las siguientes:*
>
> *1.1 Servicio objeto de la concesión y características del mismo.*
>
> *2.1 Obras e instalaciones que hubiere de realizar el concesionario y quedaren sujetas a reversión, y obras e instalaciones a su cargo, pero no comprendidas en aquélla.*
>
> *3.1 Obras e instalaciones de la Corporación cuyo goce se entregare al concesionario.*
>
> *4.1 Plazo de la concesión, según las características del servicio y las inversiones que hubiere de realizar el concesionario sin que pueda exceder de cincuenta años.*
>
> *5.1 Situación respectiva de la Corporación y del concesionario durante el plazo de vigencia de la concesión.*

6.1 Tarifas que hubieren de percibiese del público, con descomposición de sus factores constitutivos, como base de futuras revisiones.

7.1 Clase, cuantía, plazos y formas de entrega de la subvención al concesionario, si se otorgare.

8.1 Canon o participación que hubiere de satisfacer, en su caso, el concesionario a la Corporación.

9.1 Deber del concesionario de mantener en buen estado las obras e instalaciones.

10. Otras obligaciones y derechos recíprocos de la Corporación y el concesionario.

11. Relaciones con los usuarios.

12. Sanciones por incumplimiento de la concesión.

13. Régimen de transición, en el último período de la concesión en garantía de la debida reversión o devolución, en su caso, de las instalaciones, bienes y material integrantes del servicio.

14. Casos de resolución y caducidad.

En lo que se refiere a las concesiones de obras públicas la Ley de Contratos de las Administraciones Públicas, en su artículo 227 determina el alcance y contenido del estudio de viabilidad que precede a la tramitación de cualquier concesión de tal carácter.

"1. Con carácter previo a la decisión de construir y explotar en régimen de concesión una obra pública, el órgano que corresponda de la Administración concedente acordará la realización de un estudio de viabilidad de la misma.

2. El estudio de viabilidad deberá contener, al menos, los datos, análisis, informes o estudios que procedan sobre los puntos siguientes:

a) Finalidad y justificación de la obra, así como definición de sus características esenciales.

b) Previsiones sobre la demanda de uso e incidencia económica y social de la obra en su área de influencia y sobre la rentabilidad de la concesión.

c) Valoración de los datos e informes existentes que hagan referencia al planeamiento sectorial, territorial o urbanístico.

d) Estudio de impacto ambiental cuando éste sea preceptivo de acuerdo con la legislación vigente. En los restantes casos, un análisis ambiental de las alternativas y las correspondientes medidas correctoras y protectoras necesarias.

e) Justificación de la solución elegida, indicando, entre las alternativas consideradas si se tratara de infraestructuras viarias o lineales, las características de su trazado.

f) Riesgos operativos y tecnológicos en la construcción y explotación de la obra.

g) Coste de la inversión a realizar, así como el sistema de financiación propuesto para la construcción de la obra con la justificación, asimismo, de la procedencia de ésta.

3. La Administración concedente someterá el estudio de viabilidad a información pública por el plazo de un mes, prorrogable por idéntico plazo en razón de la complejidad del mismo y dará traslado del mismo para informe a los órganos de la Administración Gene-

ral del Estado, las Comunidades Autónomas y Corporaciones Locales afectados cuando la obra no figure en el correspondiente planeamiento urbanístico que deberán emitirlo en el plazo de un mes.

4. El trámite de información pública previsto en el apartado anterior servirá también para cumplimentar el concerniente al estudio de impacto ambiental, en los casos en que la declaración de impacto ambiental resulte preceptiva.

5. Se admitirá la iniciativa privada en la presentación de estudios de viabilidad de eventuales concesiones. Presentado el estudio será elevado al órgano competente para que en el plazo de tres meses comunique al particular la decisión de tramitar o no tramitar el mismo o fije un plazo mayor para su estudio que, en ningún caso, será superior a seis meses. El silencio de la Administración o de la entidad que corresponda equivaldrá a la no aceptación del estudio.

En el supuesto de que el estudio de viabilidad culminara en el otorgamiento de la correspondiente concesión tras la correspondiente licitación, su autor tendrá derecho, siempre que no haya resultado adjudicatario y salvo que el estudio hubiera resultado insuficiente de acuerdo con su propia finalidad, al resarcimiento de los gastos efectuados para su elaboración, incrementados en un 10 por 100 como compensación, gastos que podrán imponerse al concesionario como condición contractual en el correspondiente pliego de cláusulas administrativas particulares. El importe de los gastos será determinado por la Administración concedente en función de los que resulten acreditados por quien haya presentado el estudio, conformes con la naturaleza y contenido de éste y de acuerdo con los precios de mercado.

6. La Administración concedente podrá acordar motivadamente la sustitución del estudio de viabilidad a que se refieren los apartados anteriores por un estudio de viabilidad económico-financiera cuando por la naturaleza y finalidad de la obra o por la cuantía de la inversión requerida considerara que éste es suficiente. En estos supuestos la Administración elaborará además, antes de licitar la concesión, el correspondiente anteproyecto o proyecto para asegurar los trámites establecidos en los apartados 3 y 4 del artículo 228".

Es decir, frente a la incertidumbre la norma exige que se proceda a un estudio previo del ámbito de desarrollo de la gestión del servicio público y de las variables que han de considerarse, así como de la concesión, como requisito previo a la licitación del correspondiente contrato, con la advertencia de que tal estudio forma parte integrante del contrato o lo que es lo mismo se integra en la definición de los derechos y obligaciones que asumen las partes.

Cuestión 3. En lo que se refiere a este tipo de contratos, ¿existen, en su opinión, otros elementos, diferentes de los relativos a la elección del procedimiento de adjudicación, que puedan plantear problemas en relación con el Derecho comunitario en materia de contratación pública? En caso afirmativo, ¿cuáles y por qué motivos?

Respuesta. Como se señala en la respuesta a la cuestión anterior, deben solucionarse problemas derivados de la ausencia de un estudio previo que determine con el alcance necesario una completa definición de los elementos que intervienen, tales como población de hecho y sus variables, usos o consumos mínimos y máximos de los usuarios previstos, proyección temporal de la gestión, tarifa remuneradoras de la gestión a percibir de los usuarios, procedimiento de revisión y variables que intervienen en el mantenimiento del equilibrio económico de la concesión, incidencia de los costes de explotación del concesionario y de su control, etc.

Cuestión 4. ¿Alguna vez ha organizado o deseado organizar un procedimiento de adjudicación de concesión o ha participado o deseado participar en un procedimiento de este tipo en la Unión Europea? ¿Qué experiencia conserva de ello?

Respuesta. La pertenencia de los representantes españoles en el Comité Consultivo para los Contratos Públicos a un órgano de carácter consultivo en materia de contratación, excluye la posibilidad de acreditar la participación directa en la gestión de concesiones, lo que no impide tener, por razón del ejercicio consultivo, un acceso directo a la problemática generada en la misma. La principal experiencia que se puede aportar es que se aprecia una ausencia de estudios y proyectos completos que definan la concesión y los elementos que intervienen, ausencia que se ve reforzada por la falta de control de los gastos de explotación del concesionario ligados a la concesión lo que en algunos casos da lugar a propuestas de modificación de la concesión inclusive respecto de la duración de la misma produciendo un efecto indeseado y que puede afectar a la libre concurrencia y a la oferta de otros candidatos que de conocer las posibles modificaciones podrían haber presentado una oferta disferente.

Cuestión 5. ¿Considera que el marco jurídico comunitario actual es lo suficientemente preciso como para garantizar la participación concreta y real de empresas o agrupaciones no nacionales en los procedimientos de adjudicación de concesiones? ¿Cree que, en general, se garantiza una competencia real en este marco?

Respuesta. Sí.

Cuestión 6. ¿Cree que es conveniente una iniciativa legislativa comunitaria destinada a regular el procedimiento de adjudicación de concesiones?

Respuesta. Sí, pero con una condición básica imprescindible. Que exista una completa definición de la concesión de manera que en todos los Estados miembros se trate la cuestión de la misma manera, evitando que el uso de prácticas distintas para una finalidad común ocasione beneficios a unos Estados miembros y a sus empresas y perjudique a otros que al abrir sus mercados, sin las obligadas correspondencias, no recibe una igual de trato.

Cuestión 7. De manera más general, si considera que es necesario que la Comisión proponga una nueva acción legislativa, ¿cree que hay razones objetivas para que en dicho acto se contemplen todas las CPP de tipo contractual, tanto si se consideran contratos públicos como concesiones, para someterlas a regímenes de adjudicación idénticos?

Respuesta. Sí. La oportunidad de establecer una regulación completa de los diferentes objeto de los contratos aconseja que la iniciativa de la Comisión sea completa.

Cuestión 8. De acuerdo con su experiencia, ¿tienen los operadores no nacionales el acceso garantizado a las fórmulas de CPP de iniciativa privada? En particular, cuando los poderes adjudicadores invitan a presentar una iniciativa, ¿se suele dar una publicidad adecuada a la invitación, de manera que la información llegue a todos los operadores interesados? ¿Se organiza un procedimiento de selección realmente competitivo para la puesta en marcha del proyecto seleccionado?

Respuesta. Tanto el Reglamento de Servicios de las Corporaciones Locales como la Ley de Contratos de las Administraciones Públicas, respecto del contrato de concesión de obras públicas, establece tal posibilidad.

Al respecto el artículo 117 del citado Reglamento establece:

> *"1. Cuando algún particular solicitare por su propia iniciativa la concesión de un servicio deberá presentar memoria sobre el que se tratare de establecer y en la que justifique la conveniencia de prestarlo en régimen de concesión.*
>
> *2. La Corporación examinará la petición y, considerando la necesidad o no del establecimiento del servicio y la conveniencia para los intereses generales de su gestión por concesión, la admitirá a trámite o la rechazará de plano.*
>
> *3. Si se pidiere subvención de fondos, la Corporación deberá expresar, en el supuesto de admisión, si acepta o rechaza en principio la cláusula y, en caso afirmativo, la partida del presupuesto a cuyo cargo hubiere de imputarse."*

También sobre esta iniciativa los artículos 122 y 123 del Reglamento establecen:

> *"Artículo 122. 1. Aprobado por la Corporación el proyecto que, redactado por particulares o por la misma Corporación, hubiere de servir de base a la concesión del servicio, se convocará licitación pública para adjudicarla.*
>
> *2. Podrá tomar parte en la licitación cualquier persona, además de los presentadores de proyectos en el concurso previo si se hubiere celebrado.*
>
> *3. Si el proyecto proveyera la subvención con fondos públicos al concesionario, la Corporación podrá disponer que la licitación verse sobre la rebaja en el importe de aquélla.*
>
> *4. En otro caso, y en el de igualdad en la baja, la licitación se referirá al abaratamiento de las tarifas-tipo señaladas en el proyecto, y si se produjera empate, sucesivamente a los siguientes extremos: Ventajas a los usuarios económicamente débiles; mayor anticipación en el plazo de reversión, si la hubiere, y más rendimiento para la Administración, en forma de canon o participación en los beneficios.*
>
> *5. La Corporación podrá, sin embargo, disponer que la licitación se refiera simultáneamente a todos o varios de los extremos señalados en los párrafos 3 y 4 u otros que ordenare, asignando a cada uno de ellos uno o más puntos, fijados en las bases de la convocatoria, para efectuar la adjudicación a quien obtuviere la puntuación más alta.*

6. En los supuestos regulados en los párrafos 3 y 4, los licitadores presentarán, en plicas separadas, sus propuestas relativas a cada uno de los extremos que sucesivamente comprendiera la licitación, indicando en el sobre a cuál de ellos se refiere para limitar la apertura a los que fueren relevantes.

Artículo 123. 1. El peticionario iniciador a que alude el artículo 117 tendrá derecho de tanteo si participare en la licitación y entre su propuesta económica y la que hubiere resultado elegida no existiera diferencia superior a un 10 por 100.

2. El propio derecho corresponderá en iguales circunstancias al titular del proyecto que hubiere resultado elegido en el concurso previo de proyectos, de haberse celebrado, si en las bases se le otorgare, como premio, tal derecho a tenor de lo previsto en el apartado c) del párrafo 2 del artículo 118.

3. Podrá ejercerse este derecho en el acto de la apertura de plicas, que se prolongará al efecto treinta minutos después de la adjudicación provisional.

4. Si hicieren uso del derecho de tanteo las personas a que se refieren los párrafos 1 y 2, se otorgará, de las dos, a quien hubiere presentado la propuesta más económica, y si existiera empate entre ambas, se resolverá por pujas a la llana, en la forma dispuesta por la norma 4. a del artículo 34 del Reglamento de Contratación de las Corporaciones locales, partiendo de la propuesta sobre la que se ejercitara el indicado privilegio.

5. En el acto de la licitación se hará constar si se hizo uso o no de derecho de tanteo."

Respecto de las concesiones de obras públicas los artículos 222 y 227 de la Ley de Contratos de las Administraciones Públicas disponen:

"Artículo 222. Contratos de concesión de obras públicas a instancia de particulares o de otras Administraciones Públicas.

Con independencia de la iniciativa de la Administración competente para licitar posibles concesiones, podrá iniciarse el procedimiento a instancia de personas naturales o jurídicas o de otras Administraciones que se propongan construir y explotar una obra de las reguladas en esta Ley, siempre que el solicitante, además de cumplir los requisitos generales establecidos en ella, acompañe su petición del correspondiente estudio de viabilidad previsto en el artículo 227 con el contenido previsto en el apartado 2 de dicho artículo. Esta solicitud iniciará el procedimiento establecido en dicho artículo".

"Artículo 227. Estudio de viabilidad.

5. Se admitirá la iniciativa privada en la presentación de estudios de viabilidad de eventuales concesiones. Presentado el estudio será elevado al órgano competente para que en el plazo de tres meses comunique al particular la decisión de tramitar o no tramitar el mismo o fije un plazo mayor para su estudio que, en ningún caso, será superior a seis meses. El silencio de la Administración o de la entidad que corresponda equivaldrá a la no aceptación del estudio.

En el supuesto de que el estudio de viabilidad culminara en el otorgamiento de la correspondiente concesión tras la correspondiente licitación, su autor tendrá derecho, siempre que no haya resultado adjudicatario y salvo que el estudio hubiera resultado insuficiente de acuerdo con su propia finalidad, al resarcimiento de los gastos efectuados para su elaboración, incrementados en un 10 por 100 como compensación, gastos que

> *podrán imponerse al concesionario como condición contractual en el correspondiente pliego de cláusulas administrativas particulares. El importe de los gastos será determinado por la Administración concedente en función de los que resulten acreditados por quien haya presentado el estudio, conformes con la naturaleza y contenido de éste y de acuerdo con los precios de mercado".*

De cuanto se expone respecto de la propuesta de una iniciativa privada de una concesión se aprecia que toda propuesta debe ser abierta a la concurrencia pública de aquellos candidatos que estén interesados en su explotación, por lo que la apertura de un procedimiento competitivo está asegurada, aplicándose el correspondiente procedimiento de adjudicación del contrato, que como hemos señalado es el mismo que el que se regula en la Directiva 2004/18/CE para los contratos de obras, suministros y servicios, exclusión hecha de las nuevas figuras y sistemas que en esta última Directiva se incluyen respecto de las Directivas 92/50, 93/36 y 93/37. En tales procedimientos la publicidad se realiza por medio de los Diarios oficiales y, por lo general, figura en los correspondientes portales de Internet de los órganos de contratación.

A la licitación pueden concurrir no solo empresas españolas sino también todas las empresas de los Estado miembros de la Unión Europea y del Espacio Económico Europeo que reúnan las condiciones que para cada contrato se exijan, así como a las empresas de terceros países que acrediten la reciprocidad de trato respecto de las empresas españolas y que reúnan tales condiciones.

Cuestión 9. ¿Cuál sería, en su opinión, la mejor fórmula para el desarrollo de operaciones de CPP de iniciativa privada en la Unión Europea en las que se garantice el respeto de los principios de transparencia, no discriminación e igualdad de trato?

Respuesta. La aplicación de las normas contenidas en la Directiva 2004/18/CE de manera que a toda iniciativa privada puedan acceder todos los candidatos que tuvieran interés, salvaguardando los posibles derechos de los proponentes.

Cuestión 10. ¿Cuál es su experiencia en relación con la etapa posterior a la selección del socio privado en las operaciones de CPP contractuales?

Respuesta. Se reitera la respuesta a la cuestión 4.

Cuestión 11. ¿Conoce algún caso en el que las condiciones de ejecución (incluidas las cláusulas de adaptación en el tiempo) hayan podido tener efectos discriminatorios o hayan podido constituir un obstáculo injustificado a la libre prestación de servicios o a la libertad de establecimiento? En caso afirmativo, describa el tipo de problemas encontrados.

Respuesta. No.

Cuestión 12. ¿Conoce alguna práctica o mecanismo de evaluación de ofertas con efectos discriminatorios?

Respuesta. No. Sería contrario a la legislación española sobre contratos y a la legislación sobre competencia.

Cuestión 13. ¿Está de acuerdo con la afirmación de la Comisión según la cual determinadas fórmulas de tipo step-in pueden plantear problemas en términos de transparencia e igualdad de trato? ¿Conoce otras «cláusulas tipo» cuya aplicación pueda plantear problemas similares?

Respuesta. Compartimos la opinión de la Comisión.

Se desconocen otros tipos de cláusulas.

Cuestión 14. ¿Considera necesario aclarar a escala comunitaria determinados aspectos correspondientes al marco contractual de las operaciones de CPP? En caso afirmativo, ¿a qué aspecto o aspectos debería referirse dicha aclaración?

Respuesta. Como se viene indicando en las anteriores respuestas a las diferentes cuestiones la legislación española es precisa en la definición de conceptos y reglas que permiten concretar los aspectos necesarios para el desarrollo del procedimiento de adjudicación de los contratos que tienen por objeto la adjudicación de las concesiones. Tales normas aportan básicamente la aplicación de los principios de transparencia, apertura de la concurrencia, publicidad y trato por igual a los candidatos, como principios propios del Tratado.

Entendemos que tales normas deben reflejar una posición de mínimos en el desarrollo de una nueva norma comunitaria de manera que, junto con una acertada definición de las concesiones de aplicación por igual en todos los Estados miembros, el desarrollo del procedimiento de adjudicación sea el mismo en todo el ámbito comunitario.

Cuestión 15. En el marco de las operaciones de CPP, ¿sabe de algún problema concreto que se haya planteado en materia de subcontratación? Descríbalo.

Cuestión 16. En su opinión, el fenómeno de las operaciones de CPP de tipo contractual, al implicar el traspaso de un conjunto de tareas a un único socio privado, ¿justifica la introducción de normas más detalladas o la ampliación del ámbito de aplicación en lo que se refiere a la subcontratación?

Cuestión 17. De manera más general, ¿considera que debería adoptarse una iniciativa complementaria a escala comunitaria para aclarar u organizar las normas relativas a la subcontratación?

Respuesta a las cuestiones 15, 16 y 17. La figura de la subcontratación en los contratos de gestión de servicios públicos, y en las concesiones como modalidad de su régimen contractual, requiere que el concesionario realice de forma directa el desarrollo de la concesión limitándose las posibilidades de subcontratación a prestaciones auxiliares, pero en ningún caso a la prestación principal. En tal sentido el artículo 170 de la Ley de Contratos de las Administraciones Públicas dispone que "en el contrato de gestión de servicios públicos, la subcontratación sólo podrá recaer sobre prestaciones accesorias".

Tal precisión, en nuestra opinión, especialmente por la naturaleza y objeto de la prestación, aconseja que se introduzcan normas limitativas de tal posibilidad de subcontratación. Lo contrario, puede producir una efectiva y peligrosa falta de control de los elementos y variables propias del sistema concesional (p.ej. ausencia de control de los costes de explotación del concesionario).

Cuestión 18. ¿Cuál es su experiencia en materia de puesta en marcha de operaciones de CPP de tipo institucionalizado? En concreto, ¿su experiencia le lleva a pensar que el Derecho comunitario en materia de contratación pública y concesiones se respeta en el caso de operaciones de CPP institucionalizada? Si su respuesta es negativa, ¿por qué?

Las decisiones de crear entidades públicas para la prestación de servicios propios de la Administración se enmarcan en el desarrollo de las competencias de autoorganización de las Administraciones Públicas y la posibilidad de encomienda de desarrollo de una prestación de servicio público tiene su base jurídica en la disponibilidad e los medios propios de una Administración decisión que no colisiona con los derechos de terceros.

Cuestión distinta debe ser la posible privatización de tal entidad pública que en la medida que afecte a la apertura de la concurrencia pudiera ser regulada.

Cuestión 19. ¿Considera que debe tomarse una iniciativa a escala comunitaria para aclarar o precisar las obligaciones de los organismos adjudicadores en cuanto a las condiciones en las que deben ser convocados los operadores potencialmente interesados por un proyecto de tipo institucionalizado? En caso afirmativo, ¿en qué puntos particulares y en qué forma? Si su respuesta es negativa, ¿por qué?

En principio debe ser analizada la posible solución con la finalidad de disponer de elementos necesarios para poder adoptar una decisión.

Cuestión 20. ¿Qué medidas o prácticas cree que constituyen obstáculos a la puesta en marcha de operaciones de CPP en el seno de la Unión Europea?

Respuesta. En principio se desconocen dado el sistema abierto que se regula en la legislación española. No obstante, como señalamos anteriormente una norma unificada con definiciones comunes a todos los Estados miembros puede significar una medida que eviten posibles obstáculos.

Cuestión 21. ¿Conoce otras formas de CPP desarrolladas en terceros países? ¿Conoce ejemplos de «mejores prácticas» desarrolladas en este marco, que puedan servir de inspiración a la Unión? En caso afirmativo, ¿cuáles?

Respuesta. No.

Cuestión 22. De forma más general, y teniendo en cuenta la necesidad de importantes inversiones en ciertos Estados miembros a fin de lograr un crecimiento *económico social y sostenible, ¿estima que sería útil una reflexión colectiva sobre estas cuestiones, que se llevaría a cabo a intervalos regulares entre los sectores concernidos, y que permitiría un intercambio de mejores practicas?, ¿considera que la Comisión debería propiciar una red de este tipo?*

Respuesta. Sin duda alguna.

Madrid, 18 de octubre de 2004

REGERINGSKANSLIET

2004-09-03 Fi2004/2588

Finansdepartementet

Commission européenne
Consultation "Livre vert sur les PPP et le droit communautaire des marché publics et des concessions" C 100 2/005
B-1049 Bryssel

Den svenska regeringens synpunkter på Kommissionens grönbok om offentlig-privata partnerskap och EG-rätten om offentlig upphandling och koncessioner, (KOM (2004) 327 slutlig

Inledning

Den svenska regeringen, som har inhämtat yttrande från Nämnden för offentlig upphandling, Konkurrensverket, Svenska Kommunförbundet och Landstingsförbundet, Föreningen Svenskt Näringsliv, Vägverket samt Banverket, lämnar följande synpunkter på grönboken.

Nämnden för offentlig upphandling är tillsynsmyndighet för den offentliga upphandlingen i Sverige.
Konkurrensverket är den centrala förvaltningsmyndigheten för konkurrensfrågor.
Svenska Kommunförbundet är en sammanslutning av Sveriges kommuner. Förbundet skall tillvarata kommunernas intressen, främja deras samverkan och tillhandahålla dem service.
Landstingsförbundet är landstingens/regionernas intresse-, bransch- och arbetsgivarorganisation.
Föreningen svenskt näringsliv skall främja företagens gemensamma intressen.
Vägverket är central förvaltningsmyndighet med ett samlat ansvar, sektorsansvar, för hela vägtransportsystemet.
Banverket är central förvaltningsmyndighet med ett samlat ansvar, sektorsansvar, för hela järnvägstransportsystemet.

Sammanfattningsvis anser den svenska regeringen att det finns ett behov av lagstiftning på gemenskapsnivå som reglerar hur det offentliga kan samarbeta med det privata avseende koncessioner och andra typer av avtal, där de privata leverantörerna tillför ekonomiska medel och/eller tar en ekonomisk risk. Alla typer av sådana avtal bör omfattas av samma lagstiftning, dvs. sådana offentliga kontrakt som i dag inte omfattas av gällande upphandlingslagstiftning.

Det är naturligtvis inte möjligt att ta ställning till hur en sådan gemenskapslagstiftning skall vara utformad i detalj innan offentlig-privata partnerskap klart definierats i EG-rätten. Dock bör en ny lagstiftning klargöra hur de grundläggande EG-rättsliga principerna är tillämpliga avseende offentliggörandet av upphandlingar, möjligheten till förhandling under hela upphandlingsförfarandet, möjligheten till förändring av ingångna avtal samt innehålla särskilda bestämmelser avseende s.k. ”step-in”-klausuler och rättsmedel.

En av målsättningarna i det fortsatta arbetet bör vidare vara att göra regelverket för offentlig-privat samarbete lätt att förstå och lätt att tillämpa. I annat fall finns en risk att regelverket snarare försvårar en effektiv samverkan.

Kommissionens frågor

Fråga 1.
I Sverige finns det inte någon allmänt vedertagen definition av begreppet offentlig-privata partnerskap och det finns inte någon särskild lagstiftning som reglerar sådana förfaranden. Projekt avseende offentlig-privata partnerskap kan indelas i följande huvudsakliga grupper:

A Koncessioner

Renodlade byggkoncessioner är svåra att finna och det är tveksamt om det förekommit några tjänstekoncessioner i den betydelse som Kommissionen angivit i sitt tolkningsmeddelande[1] och enligt vad som kan utläsas av EG-domstolens domar[2].

”Tredje mansupphandling”
Med ”tredjemansupphandling” avses ett koncessionsliknande förfarande varigenom en upphandlande myndighet för annans räkning upphandlar en nyttighet som ett led i myndighetens åligganden enligt lag. Myndigheten själv skall inte tillgodogöra sig nyttigheten eller betala för den.

I svensk domstol har således ett kontrakt, enligt vilket ett bilbärgningsföretag gavs i uppdrag att forsla undan fordon uppställda i strid med lag, av domstol förklarats inte vara offentlig upphandling[3]. Upphandlingen hade genomförts av Rikspolisstyrelsen. Bortforslingen avsåg inte polisens egna fordon, utan privatägda och betalningsskyldighet för bortforslingen ålåg fordonsägaren.

[3] RegR dom i mål nr 1080-1995 från den 7 juli 1995, RÅ 1995 not 252

B Upphandlingskontrakt - Byggentreprenader

De flesta offentlig-privata partnerskapkontrakt är att beteckna som byggentreprenadkontrakt. På senare tid diskuteras ofta alternativa finansieringsformer. Bland annat har kommuner, regioner och näringsliv tillskjutit medel för att starten av samhällsekonomiskt viktiga vägprojekt skall kunna tidigareläggas. Den fasta förbindelsen över Öresund har finansierats genom broavgifter.

Joint ventures och andra typer av samarbetskontrakt

Staten är sällan part i sådana projekt medan det hos kommunerna och landsting är betydligt vanligare. De offentlig-privata partnerskap som existerar idag bland kommuner och landsting sker framför allt inom idrott-, kultur- och fritidsområdet. Intresset är också stort ute i landet för mer kunskap om offentlig-privat partnerskap inom dessa områden. Orsaken till detta är framför allt att man från kommunernas sida vill söka externt eller alternativt engagemang och finansiering för uppgifter som inte tillhör de obligatoriska uppgifterna. Detta innebär också att det i många fall inte bara är kommunen och en privat aktör som är involverad i projektet utan även en eller flera ideella föreningar, som tillsammans bildar ett offentligt-privat partnerskap. Det har för kommuner eller landsting hittills inte varit intressant att söka offentlig-privata partnerskap inom t.ex. infrastrukturområdet dvs. områden som kräver stora finansiella investeringar, eftersom det i dessa fall är betydligt billigare att låna pengar. Sveriges kommuner har möjlighet att låna pengar för att finansiera en investering.

C Kundvalssystem

Det finns olika typer av kundvalssystem. De flesta används på kommunal nivå. Gemensamt för dessa är att en kommuninvånare erhåller en anvisning eller check som berättigar honom/henne att mot denna erhålla en viss tjänst. Detta innebär i vissa fall att privata utförare bedriver en kommunal verksamhet på uppdrag av kommunen.

Frågan hur dessa förhåller sig till reglerna för offentlig upphandling har varit föremål för flera utredningar, bl.a. Upphandlingskommittén SOU 2001:31. Utredningen har kommit fram till att om ett uppdragsförhållande föreligger, infaller upphandlingsskyldighet. Den svenska regeringen har angivit att frågan om kundvalssystem inom äldreomsorg, sjukvård, barnomsorg m.m. skall utredas vidare (prop. 2001/02:142, sid. 86). Något slutligt ställningstagande finns således inte.

För närvarande kan det endast sägas att graden av den upphandlande enhetens inblandning får avgöra huruvida transaktionen är att beteckna som ett ömsesidigt kontrakt med ekonomiska villkor eller någon annan form av överenskommelse. I de fall när en kommun tillhandahåller en lista på leverantörer, dvs. väljer dem som får tillhandahålla tjänsterna samt garanterar betalningen, uppstår det ett kontrakt mellan kommunen och leverantören, även om det är kommuninvånaren som väljer vilken av de anvisade leverantörerna som skall anlitas. Sådana situationer uppstår framför allt vid obligatoriska uppgifter för en kommun, såsom tillhandahållande av förskoleverksamhet eller äldreomsorg. Det finns dock fall när en kommuninvånare erhåller en check som får användas för vissa tjänster även utanför den egna hemkommunen, såsom fotvård. Sådana är närmast att beteckna som en form av individuellt bistånd till den enskilde och omfattas sannolikt inte av reglerna om offentlig upphandling. Härutöver finns andra typer av kundvalssystem i vilka kommunens ansvar för tjänstens tillhandahållande är delat eller inte lagstadgat och dessa är svårare att bedöma.

”Avknoppning”

En form av privatisering som möjligen kan hänföras till offentlig-privata partnerskap är s.k. avknoppning. Detta innebär att en personalgrupp erbjuds att i bolags- eller föreningsform utföra uppgifter vilka de dittills utfört som anställda. En offentlig arbetsgivare kan därmed privatisera delar av sin verksamhet samtidigt som man tar till vara den upparbetade kompetensen.

Frågan om man utan föregående upphandling under en begränsad tidsperiod får överlämna driften av en verksamhet till en grupp av tidigare anställda har utretts flera gånger men har ännu inte lett till någon lagstiftning. Frågan huruvida ett sådant överlämnande kan ske utan föregående upphandling har inte bedömts på ett likartat sätt i olika utredningar.

Fråga 2.

När föremålet för upphandlingen är av särskilt komplicerad natur skulle den nya möjligheten till s.k. konkurrenspräglad dialog kunna vara lämpad för ingående av partnerskap. Koncessioner och andra former av avtal mellan det offentliga och det privata, där den privata partnern tillför ekonomiska medel och/eller tar en ekonomisk risk, bör dock inte omfattas av de regler som gäller ”normala” bygg- och tjänsteupphandlingar. Avtalens konstruktion torde kräva att de upphandlande enheterna och deras privata och/eller offentliga partners ges mer långtgående möjligheter att förhandla, även efter det att anbudsgivarna avlämnat sina anbud, än de som finns i upphandlingsdirektiven. Därmed är den konkurrenspräglade dialogen inte tilläckligt flexibel för dessa typer av avtal.

Det har dock framförts farhågor från näringslivet att den konkurrenspräglade dialogen försvåras av de juridiska och praktiska oklarheter som fortfarande föreligger. Dessa oklarheter berör bl.a. förutsättningarna för att inleda proceduren, riskerna för att priser förhandlas och hanteringen av företagshemlig information.

Fråga 3.

Den faktorn att anbudsgivarna tar på sig en ekonomisk risk bör innebära möjligheter att förändra ingångna avtal, t.ex. i de fall de ekonomiska kalkylerna visar sig ohållbara, något som i ”vanliga” upphandlade avtal enligt upphandlingsreglerna normalt inte är tillåtet.

Risken med att låta det nu befintliga regelverket även omfatta upphandling av tjänstekoncessioner samt andra avtal där det privata tillför ekonomiska medel och/eller tar en ekonomisk risk är att de privata leverantörerna avstår från att delta i sådana upphandlingar. De privata företagen avstår därmed från att bidra med ekonomiska medel till offentliga projekt, vilket strider mot hela grundidén med koncessionsförfarandet och de avtal avseende offentlig-privat samarbete som avses i detta yttrande.

Det kan föreligga stora svårigheter att upprätta ett förfrågningsunderlag enligt EG-rätten om offentlig upphandling med avseende på krav som får ställas på leverantören och finansiärer för den långa avtalsperiod som erfordras samt att beskriva upphandlingsföremålet som uppfyller kravet på transparens samtidigt som beskrivningen inte får hindra en önskad teknisk utveckling under avtalsperioden. Likaså är ersättning och frågor om avtalsförhållandets upphörande komplicerade att reglera vid långa avtalstider och ekonomiskt stora åtaganden. Över en 20- till 30-årsperiod kan så grundläggande förutsättningar för avtalet ändras, att konsekvenserna av avtalsvillkor för sådana långt i framtiden liggande händelser kan bli vanskliga att förutse. Svårigheterna att tillgodose kravet på transparens, öppenhet och förutsebarhet i förfrågningsunderlaget blir därmed uppenbara.

Vidare är den blandning av åtaganden som ofta förutsätts ett problematiskt förhållande vid användningen av offentlig-privata partnerskap. Det kan bli så att reglerna för offentlig upphandling inte täcker allt som partnerskapet är tänkt att omfatta. Hur skall man t.ex. i ett partnerskap som berör fast egendom särskilja ev. hyresarrangemang (som inte omfattas av upphandlingsreglerna)?

Ett exempel som visar att EG-rätten om offentlig upphandling inte är lämpad för denna typ av projekt är följande: en kommun blir uppvaktad av ett antal små fotbollsföreningar inom kommunen om önskemål att bygga en fotbollshall. Föreningarna har i samråd kontaktat näringslivet och funnit någon som är villig att bygga billigt och andra som är beredda att ställa upp som sponsorer. Men de vill att kommunen står som ekonomisk garant för projektet. Man vill alltså att kommunen skall ingå i ett flerpartssamarbete, det ena företaget bygger byggnaden, det andra står som garanterad sponsor för en tid av t.ex. 10 år, föreningarna i samverkan skall äga och driva hallen, medan kommunen står som ekonomisk garant och utlovar att man kommer att hyra hallen ett visst antal timmar per vecka till förmån för allmänheten och skolor för en lång tid framåt. Men kommunen vill aldrig och har heller inte för avsikt att i framtiden äga hallen. Frågan är vilken upphandlingsform som passar in på detta och hur man faktiskt skall gå till väga. Reglerna om offentlig upphandling är inte anpassade för sådana projekt.

Fråga 4.
Vägverket har uppgett att verket för något år sedan utrett möjligheten att genomföra ett offentligt-privat partnerskap som avsåg tillhandahållandet av vägtjänster, byggande och drift av väg för en period om 25-30 år. Arbetet bedrevs i projektform och gick ut på att ta fram förfrågningsunderlag med användande av gällande regelverk på upphandlingsområdet. Syftet var att på ett kostnadseffektivt sätt tillvarata goda idéer och nya lösningar. Ett projektbolag bestående av bl. a. byggentreprenör och finansiär skulle finansiera, bygga och handha driften av väg mot en årlig ersättning från staten. Det var enligt verket tveksamt om projektet skulle falla in under

koncessionsbegreppet och den privata finansieringen visade sig emellertid innebära en betydande fördyring som svårligen skulle kunna uppvägas av eventuella effektivitetsvinster, vilket var en av huvudorsakerna till att projektet slutligen avbröts.

Vägverket gjorde den erfarenheten från projektet att det var svårt att hitta en lämplig upphandlingsform och vidare att det var svårt att hantera sådana projekt inom ramen för upphandlingsreglerna. Problem som uppstod var hur projektbolaget skulle kvalificeras och vilka krav i övrigt som behövde ställas med hänsyn till den långa avtalstiden. Vidare kunde det skönjas en tveksamhet från projektbolaget att stanna kvar som avtalspart även under driftsskedet. En uppenbar svårighet att finna former för att garantera ett långtgående engagemang kunde konstateras. Eftersom just ett efterföljande långtgående ansvar för driften av den anläggning man skapat var tänkt som en drivkraft för att skapa en kostnadseffektiv anläggning i det långa perspektivet fanns här en viss intressekonflikt inbyggd. Vägverket genomför också för närvarande ett projekt där samma part som bygger vägen, Norrortsleden i Stockholm, också efter vägens färdigställande har funktionsansvaret under en längre avtalstid. Det är inte fråga om privat finansiering, men i övrigt finns vissa beröringspunkter mellan detta projekt och offentligt-privata partnerskap, såsom att långtgående funktionsansvar ställs på entreprenören.

Såvitt Svenska Kommunförbundet känner till har ingen kommun gjort en koncessionsupphandling. Det som liknar koncessioner inom det kommunala området hanteras idag som tjänsteupphandlingar, tex. renhållning och vissa vårdtjänster. Generellt sett kan man ha flera invändningar mot koncessionsupphandlingar. För det första blir det ofta billigare för kommunen att själv genomföra investeringen genom lån hos riksgälden. För det andra är det ingen fördel för konkurrenssituationen att ha långvariga koncessioner. Meningen med att konkurrensutsätta en kommunal verksamhet genom driftentreprenad är att åstadkomma ”bäst värde för pengarna”. Detta görs genom att regelbundet konkurrenspröva tjänsten. Svenska Kommunförbundet råder kommunerna att inte ha längre avtalstider än fem år, undantag kan naturligtvis förekomma. Orsaken till detta är också att det är omöjligt att förutspå finansiell ställning och kompetens hos det vinnande anbudet efter ca 10 år. Vidare kan man heller inte avgöra om man får ett bra pris eftersom det är omöjligt att förutspå prisutvecklingen alltför långt in i framtiden, det finns inga lämpliga index för ändamålet. Detta gör att koncessioner inte varit aktuella.

Fråga 5.
Den svenska regeringen anser att befintlig gemenskapsrättslig lagstiftning inte är tillräcklig för att ge vägledning till vare sig upphandlande myndigheter eller till anbudsgivare avseende tjänstekoncessioner och andra sådana kontrakt som inte lyder under några sekundärrättsliga regler.

Fråga 6.
Ja, mycket talar för att legala ramar för förfarandet bör fastställas och att upphandling av rörelsemässigt stora koncessioner bör regleras på EU-nivå. Målet bör vara så enhetliga regler som möjligt. Ett lagstiftningsinitiativ bör

dock föregås av ytterligare klarlägganden avseende definitioner av de kontraktstyper som initiativet kommer att omfatta. Överhuvudtaget bör inriktningen på ett eventuellt lagstiftningsarbete vara tydlighet och enkelhet. Reglerna bör inte heller bli alltför detaljerade eller omfattande. Det är vidare önskvärt att det klargörs hur de EG-rättsliga grundprinciperna skall tillämpas på området.

Fråga 7.
Det vore enligt svenska regeringens mening fördelaktigt att ge ramar för alla typer av samarbete mellan det offentliga och det privata. Att endast delvis reglera sådana avtal som det här är fråga om, riskerar att leda till svåra gränsdragningsproblem. Koncessioner och övriga typer av avtal mellan upphandlande enheter och leverantörer, där de senare bidrar med ekonomiska medel och/eller tar en ekonomisk risk, bör omfattas av samma lagstiftning.

Fråga 8.
Såvitt känt har någon sådan form av direkt uppmaning till privata aktörer att lämna egna initiativ hittills inte förekommit i Sverige.

Från kommunalt håll framhålls att de mindre kommunerna sällan har resurser eller möjlighet att komma med nya idéer vad gäller projektering, anläggning och resursanvändning av gemensamhetsanläggningar t.ex. en idrottshall. Detta har emellertid de större byggbolagen. De har resurser att lägga ner tid och pengar i planering och ekonomisk kalkylering av ett projekt, som sedan presenteras för en kommun. Det är tänkbart att kommunen uppvaktas av ett byggföretag som har en bra idé om hur man kan få god ekonomi i ett projekt genom att bygga kringfunktioner och som i vissa fall ligger utanför den kommunala kompetensen, dvs. kommunen kan inte själv realisera idén. Kommunen skulle förplikta sig endast att hyra del av objektet och ev. i framtiden äga denna del av anläggningen. Kommunerna är i sådana fall förpliktade att upphandla enligt lagen om offentlig upphandling. Här uppstår en intressekonflikt. Det är inte säkert att byggbolaget som kom med idén och gjort grundarbetet vinner upphandlingen. Kommunen å sin sida kan hamna i en upphovsrättstvist med de första bolaget om vem som har rätt till de upphovsrättsligt skyddade materialet som legat till grund för förfrågningsunderlaget, t.ex. ritningar. Om ett bolag förlorar alltför många idéprojekt så är det klart att detta inte gynnar privata PPP-initiativ.

I de fall där kommuner eftersökt en avtalsrättslig privat partner har dock detta skett via ett upphandlingsförfarande. Detta garanterar även de icke-nationella aktörernas tillgång till marknaden. Något fall där en icke-nationell partner lämnat anbud är dock inte känt. Orsaken till detta kan vara flera, men huvudsakligen beror nog detta på att en PPP-lösning kräver lokal närvaro och att även internationella aktörer arbetar genom egna nationella bolag.

Fråga 9.
Offentlig-privata partnerskap på privat initiativ bör regleras på samma sätt som koncessioner, se svaren under fråga 5 och 6. Risken att principerna om

insyn, icke-diskriminering och likabehandling inte beaktas är annars avsevärd.

Ett problem att beakta i sammanhanget är att offentlig privata partnerskap på privat initiativ förutsätter att företaget utvecklar idéer utan någon som helst garanti för att engageras i ett eventuellt följande projekt.

Fråga 10.
Det är oerhört viktigt att förfrågningsunderlaget håller god kvalitet för att därigenom kunna styra och medverka i PPP-lösningen på bästa sätt. Det har också visat sig viktigt att det finns en politisk enighet vid valet av PPP-lösning. I annat fall riskerar den privata partnern att mötas av en splittrad offentlig partner vilket medför att det ömsesidiga förtroendet som eftersträvas inte kan uppnås.

I Sverige har vi haft en situation där ett flertal entreprenader genomförts på ett sätt som resulterat i dålig byggkvalitet. Fukt- och mögelskador med tillhörande innemiljöproblematik har varit resultatet i ett flertal större projekt inom bostads- och lokalmarknaden. Projekten har blivit försenade, lett till kraftigt ökade kostnader och slutligen har entreprenör och byggherre mötts i rättsliga tvister. Dessa problem har varit föremål för ett flertal utredningar där olika modeller har analyserats i syfte att hitta lösningar som passar samtliga parter. Bland annat har frågan om garantitid diskuterats flitigt, som idag är två år. Ett exempel där längre garantitider hade inneburit ett annat utfall för byggherren är byggnationen av Moderna museet i Stockholm. Fel i byggskedet ledde till fuktskador men eftersom detta inte uppdagades förrän efter två år stod den offentliga byggherren risken och fick bära den allra största kostnaden för ombyggnad medan entreprenören endast tvingades betala en mindre del. En annan modell som diskuterats för att komma till rätta med problemen med dålig byggkvalitet och alldeles för höga kostnader och långdragna rättsliga tvister har varit att samarbeta i partnerskap. Så kallade partnerskapsavtal med incitamentskonstruktioner har provats på en del håll i Sverige. Längre avtal med entreprenören där denne även ansvarar för byggnaden en bra bit in i förvaltningsskedet har varit en modell för att ge största möjliga incitament till att bygga så bra och kostnadseffektivt som möjligt. Tanken är att försöka skapa projekt där man redan före start skapar en situation där samtliga parter har gemensamma mål och värderingar. Kraft kan då läggas på att bygga bra istället för inbördes argumentation och tvister. Detta sätt att arbeta har utvecklats mer och mer de senare åren och har inneburit att PPP-lösningar blivit än mer populärt att diskutera för de offentliga fastighetsföretagen vid uppförande av byggnader.

Ytterligare en modell är ”rethinking construction”. Modellen består bl. a. av det man kallar ”strategic partnering”, som innebär att man bygger upp laganda och erfarenhet i de konstellationer som ska arbeta tillsammans genom längre avtal som innefattar byggnation av ett flertal projekt efter varandra. På så vis ökar kunskapen och byggkvaliteten blir bättre. Vid vanliga byggentreprenader byter man vanligen ”lag” efter att ett projekt är avslutat (jmf bilindustrin där samma team bygger bil efter bil). När det är en offentlig byggherre som är inblandad blir den nationella upphandlingslagstiftningen aktuell och det förekommer idag tveksamheter kring hur man kan genomföra dessa projekt inom ramen för lagstiftningen om offentlig upphandling. Det är viktigt att se till att vi har en lagstiftning, på både EU-nivå som nationell nivå, som stödjer bra lösningar inte motverkar dem.

Fråga 11.
Ett problem är att det är svårt att avgöra vad som är lämplig tidslängd för ett avtalsrättsligt offentligt-privat partnerskap. Om man har för långa avtalstider så påverkar det konkurrensen negativt. Det innebär att nya företag har svårt att etablera sig och samtidigt kan det vara svårt att utnyttja konkurrensfördelarna om avtalstiden överskrider 5 – 7 år. Å andra sidan kan det vara önskvärt att uppnå ett syfte med avtalet som kanske bara låter sig göras genom att ett längre avtalsförhållande uppstår. Avtalstiden borde vara en fråga att diskutera på EU-nivå, eftersom det har så stor betydelse för konkurrensen.

Vidare är det tänkbart att krav på säkerheter och andra finansiella krav kan medföra att endast stora aktörer kan delta i offentlig-privata partnerskap.

Fråga 12.
När en upphandlande enhet söker bevis för kvalitet och kompetens efterfrågar man ofta erfarenheter från liknande projekt, krav på finansiell ställning, referenser etc. Detta kan emellertid uppfattas som diskriminerande, eftersom det innebär att nystartade företag får svårt att komma in på marknaden.

Fråga 13.
Den svenska regeringen delar kommissionens uppfattning att dessa så kallade ”step-in”-upplägg medför problem vid upphandlingar av koncessioner och offentlig-privata partnerskap. De är framför allt svåra att förena med principen om förutsebarhet.

Samtidigt kan det konstateras att privata företag skulle få stora svårigheter att finansiera sina åtaganden vid koncessioner och andra typer av avtal med en ekonomisk risk, om inte finansieringsinstituten ges ”step-in”-möjligheter. Om det är så att kommissionen avser att föreslå särskild lagstiftning avseende de typer av avtal varom det här är fråga bör den ta hänsyn till denna faktor, möjligtvis genom att begränsa möjligheten till att gälla under en viss tidsperiod. Under denna period kan den upphandlande enheten välja att antingen själv överta åtagandet eller genomföra en ny upphandling, antingen av en tjänstekoncession eller av en tjänst.

Fråga 14.
En ny lagstiftning bör klargöra hur de grundläggande EG-rättsliga principerna är tillämpliga avseende offentliggörandet av upphandlingar, möjligheten till förhandling under hela upphandlingsförfarandet, möjligheten till förändring av ingångna avtal samt innehålla särskilda bestämmelser avseende s.k. ”step-in”-klausuler och rättsmedel.

Gemenskapslagstiftning som kan komma i konflikt med de nationella civilrättsordningarna bör dock undvikas så långt möjligt.

Fråga 15.
Inga särskilda problem i detta avseende beträffande just offentlig-privata partnerskap.
Det kan dock vara av intresse att ett förslag om s.k. byggentreprenadavdrag för närvarande är föremål för beredning inom Regeringskansliet. Förslaget innebär i korthet följande: Den som ger någon ett uppdrag att utföra bygg- eller anläggningsverksamhet skall göra ett avdrag från den ersättning som betalas ut. Avdraget belopp tillhör uppdragstagaren och skall betalas in till ett konto hos Skatteverket. Genom förfarandet skall skatteinbetalningar säkerställas. En uppdragsgivare som inte gör föreskrivet avdrag från utbetald ersättning kan göras ansvarig för uppdragstagarens skatter och avgifter. Syftet med förslaget är att förhindra det skatteundandragande som sker genom svartarbete i bygg- och anläggningsbranschen.

Fråga 16.
I sådana avtal som det här är fråga om är det av särskild vikt för den upphandlande enheten att känna till sin motparts ekonomiska och finansiella ställning samt tekniska kapacitet, eftersom den upphandlande enheten kan riskera att själv behöva överta driften av dyra och komplicerade projekt. Däremot är det inte nödvändigt att särskilda bestämmelser införs vad gäller underleverantörer vid avtalsmässiga offentlig-privata partnerskap.

Fråga 17.
Ett sådant initiativ bedöms inte behövligt.

Fråga 18.
Från kommunalt håll anses att kravet på upphandling vid kommuns köp från sitt helägda bolag enligt Teckal-domen medför att institutionella offentlig-privata partnerskap inte är särskilt attraktiva.

Från näringslivet ses en risk att institutionella offentlig-privata partnerskap kan användas för att kringgå reglerna om offentlig upphandling.

Fråga 19.
Svensk rättspraxis på området anger tydligt att en upphandlande enhet inte har möjlighet att utan offentlig upphandling tilldela ett kontrakt till en annan juridisk person, även i de fall den äger mer än hälften av denna person. Det innebär att det i dag inte är möjligt för upphandlande enheter att teckna avtal med en annan juridisk person det själv äger utan konkurrensutsättning, oavsett om ägandet till en minoritet ägs av ett annat rättssubjekt eller om enheten själv äger hela. Det innebär t.ex. att även i det fall en upphandlande enhet och ett annat rättssubjekt gemensamt startar ett bolag, kan inte den upphandlande enheten garantera den andra partnern några ekonomiska fördelar av samarbetet. För svensk del är det därmed inte nödvändigt att kommissionen tar initiativ i den här frågan.

Fråga 20.
Den svenska regeringen anser att bristen på klargörande rättsregler kan hindra upphandlande enheter att inleda offentlig-privata partnerskap. Risken att bryta mot befintliga rättsregler, och därmed riskera överprövningar och

skadestånd, är för stor. Privata bolag är också tveksamma till att bidra med tid, kraft och ekonomiska medel, om de riskerar att projekten havererar.

I övrigt kan reglerna om myndighetsutövning ställa upp hinder med tanke på begränsningar i rätten att delegera sådan samt även tillgodoseende av den svenska offentlighetsprincipen som kan göra privata företag tveksamma till att gå in i sådana avtal.

Från näringslivets sida har framhållits att bristen på politisk vilja att ge upp sina interventionsmöjligheter och rädsla för konkurrens med egenregiverksamheten genom tillämpning av reglerna för offentlig upphandling.

Fråga 21.
Från svensk sida har vi inte kännedom om andra sådana former av offentlig-privata partnerskap i andra länder utanför unionen.

Fråga 22.
Den svenska regeringen anser det mycket önskvärt, både för upphandlande enheter i Sverige, men särskilt för upphandlande enheter i de nya medlemsländerna, att få tillgång till praxis och erfarenhet av offentlig-privata partnerskap.

Eftersom det är av stor betydelse att de gemenskapsrättsliga reglerna tolkas på likartat sätt i alla medlemsländer, vore det önskvärt att kommissionen tog initiativet till att bilda ett sådant nätverk. Nätverket bör bestå av teknisk, finansiell och juridisk expertis från alla medlemsländer.

Med vänliga hälsningar

COM (2004) 327 final

Green Paper on Public Private Partnership

Observations by the Dutch Government

Summary
The Dutch government attaches great importance to Public-Private Partnerships (PPP's) because standard practice has shown that PPP's are a suitable method in order to realise projects in an efficient way. Therefore the Dutch government welcomes, with expressions of gratitude to the European Commission, the presentation of the Green Paper.

There are several ways in which PPP's are applied in the Netherlands. PPP's can be subdivided into two categories: object-related PPP's and area-related PPP's. Object-related PPP's are projects related to specific objects such as a motorway or a railway. In almost all cases different types of DBFMO-contracts (including concessions) are applied. Those PPP's are usually strict contractual PPP's.
In case of area-related PPP's an area is being developed completely in order to build, for example, houses, offices, shops as well as the infrastructure and the green areas. It is possible that the aspects that are profitable, such as the sale of prepared sites for the construction of houses and offices, can be used in order to finance the aspects, which are not profitable (for instance the infrastructure and the green areas). The object in this method is in most cases only for a small percentage made up of public works. In a number of cases a special legal body is set up for area-related PPP's, which makes these projects usually an institutionalised PPP. Besides that, one can use a contractual PPP.

The realisation of a PPP-agreement is complex as the success of it is depending on several (uncertain) factors. Often a project is awarded even before the development of it has started. So that at that very moment detailed data is not available yet. Therefore it is crucial with PPP's that the parties make good arrangements in order to steer well clear off conflicts, cases for arbitration or summary proceedings at a later stage.

Candidates often have to make (high) costs in order to be considered for a contract. When the competition is taking place in different stages and the communication between parties is only on paper without any form of consultation and the absence of the possibility that one or more parties drop out in the meantime, tender costs could increase tremendously. Tender costs that could go up too high can prevent a bidder from taken part in the competition. In consideration 41 in the directive (2004/18) the possibility of a staged application of the negotiation procedure and the competitive dialogue is laid down, in which case the number of tenders may be limited step by step, by applying the award criteria. With the application of this staged procedure, the tender costs for the contracting authority as well as for the candidates will be limited and the principle of proportionality will be taken into consideration.

Confidentiality in the processing of the information of the candidates plays also a crucial part in the realisation of a PPP-agreement. Candidates must be assured that innovative solutions are not passed on to other candidates and that the contracting authority will refrain from cherry picking. When these requirements are not met, it may stop candidates from taking part in the PPP-competition.

The processing of the factors mentioned above requires thoroughness and stresses the need for a frequent exchange of information, to negotiate between times or to discuss the realisation of a PPP-agreement. In other words: in order to realise a PPP-agreement there must be a possibility to negotiate or to consult. With the realisation of a PPP-agreement the Community law with regard to public procurement and concession agreements must be complied with. When the negotiation procedure is being applied, this procedure will be in principle the negotiated procedure with prior publication of a contract notice, since this procedure, compared to the negotiation procedure without prior publication of a contract, has the advantage that with publication the Treaty provisions of transparency, non-discrimination and equal treatment are complied.

The variety of types of PPP's, the share of public provisions that can vary strongly, as well as the possibility to negotiate and the differences in national legislation, requires flexibility in legislation and not new or more legislation. The current European legislation offers, in the opinion of the Dutch government, enough opportunities to realise a PPP. The Dutch government holds the opinion that the competitive dialogue will result in a positive contribution to this realisation of a PPP.

With regard to the explanation of European legislation, the Dutch government points out the Guidelines for Successful Public-Private Partnerships (European Commission, DG Regional Policy, 2003). These guidelines offer sufficient transparency of the European legislation.

An European level PPP-facility would stimulate the application of PPP's further, through for example the finance of appealing projects. This facility could help new projects in relative new branches in financing the high additional and tender costs and in offering longer terms. After the building of a track record the additional and tender costs will decrease. This facility will therefore be temporarily.

The Hague, September 2004

UK GOVERNMENT RESPONSE TO THE EUROPEAN COMMISSION'S GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS, MAY 2004

The UK Government welcomes the debate on the suitability of the existing Community framework on specific characteristics of PPPs and the valuable contribution of the European Commission's Green Paper on public-private partnerships (PPPs) and community law on public contracts and concessions to this debate.

The UK Government's objective is to deliver world-class public services whilst laying the foundation for a flexible and productive economy. Achieving that objective requires the right public infrastructure through investment, accompanied by a reform of public services, and a pragmatic, flexible approach to how they are delivered. The UK PPP/Private Finance Initiative programme plays an important role in the delivery of the Government's investment plan for public services.

The UK Government's approach to public service reform is based on four key principles:

- that it is the Government's job to set standards, designed to ensure that citizens have the right to high quality services wherever they live;
- that these standards can only be delivered effectively by devolution of responsibility to the frontline;
- that more flexibility is required for public service organisations to deliver the diversity of service provision needed to respond to the wide range of customer aspirations;
- that public services need to offer expanding choice for the customer.

The current UK approach to PPPs is based on equity, efficiency and accountability; ensuring that we secure the most cost effective infrastructure over the long term. Effective competition and a flexible approach have an essential role to play in ensuring the delivery of public service investment through PPPs meets these criteria.

The UK believes that there is an important Community role in:

- simplifying, clarifying and modernising the current EC legal framework for public procurement through two new directives on public works and utilities;
- policing the Single Market and competition rules which apply to the procurement of public services

The UK also recognises the value of disseminating best practice and guidance at Community level, as a catalyst in ensuring that PPPs in Member States are developed in a transparent and competitive manner. However it remains unconvinced of the value to be added by a common legislative framework and obligations for PPPs at EU level. Currently Member States are in the process of implementing the two new procurement directives (2004/18/EC and 2004/17/EC), which recognises concepts discussed in the Green Paper e.g. competitive dialogue. Separate legislation to create a uniform approach in the EU would result in a resource intensive task with compliance burdens for businesses, reducing the competitive market appetite for competing for public service contracts, as well as undermining the flexibility needed to develop successful PPPs within the context of national circumstances.

A cautious approach should be taken to expanding the Community's role in setting the legislative framework for PPPs. The Green Paper does not put forward a compelling case that an enhanced Community role would provide greater clarity and greater benefit for Member States and their citizens.

UK RESPONSE TO QUESTIONS SUBMITTED FOR DISCUSSION

(Q1) What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

1. The most commonly used form of contractual PPP in the UK is the Private Finance Initiative (PFI), where the public sector contracts to purchase quality services on a long-term basis so as to take advantage of the private sector management skills incentivised by having private finance at risk. This includes concessions and franchises, where a private sector partner takes on the responsibility for providing a public service, including maintaining, enhancing or constructing the necessary infrastructure.

2. There is no specific law for PPPs in the UK and where appropriate PPPs will be subject to EC procurement rules following the UK Regulations implementing the public procurement directives. Where the procurement directives do not cover PFI projects, such as for service concession contracts, these projects will be advertised in OJEU.

3. *UK PPPs are managed through the dissemination of best practice and guidance. Contract standardisation is rigorously enforced to reduce the burden of bid costs, helping ensure the promotion of competition and transparency. A value for money appraisal is also carried out at three key stages of the procurement process with the aim of ensuring that there is no inherent bias between procurement options, and that the flexibility exists to choose alternative procurement routes where they offer better value for money. This ensures in particular that the most economically advantageous procurement option is undertaken.*

4. *The National Audit Office (NAO) and other UK audit bodies are the primary bodies charged with assessing the Government's PFI programme. In this capacity they audit procurement policy, the conduct of procurement and the value for money of selected projects. The Public Accounts Committee (PAC) frequently follows up on reports produced by the NAO placing Government policy under parliamentary scrutiny.*

***(Q2)* In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?**

5. *The competitive dialogue procedure will provide a suitable framework for the award of such contracts, as indeed it was designed to do, replicating many of the features of a competitive negotiated procedure. The Commission, in the Green Paper points to the flexibility of the competitive dialogue procedure, which it was instrumental in ensuring.*

The successful application of the procedure is dependent upon the broad interpretation of this flexibility.

6. *In contrast, in paragraph 24, the Commission gives an unusually narrow interpretation of the circumstances in which a competitive negotiated procedure can be used for Works contracts. The UK believes that the narrow interpretation of provisions, whether concerning the use of the existing negotiated procedure for works contracts or the new competitive dialogue procedure would unnecessarily hamper good procurement of PPPs without delivering benefits in terms of transparency, openness or minimising barriers to trade.* **(Q3) In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.**

Deleted: ¶
¶

7. *No, we are not aware of any problems.*

(Q4) Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

8. *Yes, both works and services concession contracts have been awarded as part of the UK's PFI/PPP programme. The award of these contracts have followed a fully competitive route in line with UK policy of achieving value for money and following the EC Treaty and the EC procurement rules, where appropriate.*

(Q5) Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

9. *The UK experience has been that the provisions of the Treaty regarding non-discrimination, together with UK national requirements of obtaining value for money and contract standardisation have been sufficient to ensure genuine competition and participation from non-national companies. Concessions have been awarded to non-national companies such as Skanska (Swedish) and Bouygues (French).*

(Q6) In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

10. *While the UK Government agrees with the Commission's intention to bring service concessions into the existing procurement framework, separate legislation in this area would be redundant. As UK procuring authorities are required to adopt a fully competitive award procedure (principles of transparency and equal treatment of tenders) for concessions, the current situation has not caused practical problems in the UK context. Separate legislation would also have the drawbacks of causing legal uncertainty as to which set of rules would apply where, taking a long time to negotiate and*

implement, during which time the PPP market would have developed and changed considerably.

11. *However the UK does not strongly support the differential treatment of works and service concession contracts and if there were to be any legislative action, it could be sensible to align the provisions for works and services concession contracts. This would be achieved more effectively by amending the public sector public procurement directive, rather than by introducing a new legislative measure.*

(Q7) More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPPs, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

12. *The flexibility that drives innovation afforded at present would be hindered if all contractual PPPs were subject to identical award rules. The need for distinction between contracts and concession contracts is essential, as in the former, the economic operator is fully exposed to market forces, which is not necessarily the case for concessionaires. Therefore a moderate approach needs to be taken in the award of concession contracts and on the award of contracts by concessionaires, not themselves subject to the Directive. As already mentioned this would be achieved more effectively by amending the public sector public procurement directive, rather than by introducing a new legislative framework (Q6).*

(Q8) In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

13. *The UK is not aware of any particular problems caused by selection procedures in the UK as they are designed to observe the Treaty rules and promote competition.*

14. *The UK does not normally undertake private initiative PPP schemes.*

(Q9) In your view, what would be the best formula to ensure the development of private initiative PPPs in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

15. *Private initiative PPPs are already subject to the principles of transparency, non-discrimination and equality of treatment. The best formula for ensuring their further development is for the Commission to continue to play its role as catalyst, transferring knowledge of best practice in PPP structuring and procuring.*

(Q10) In contractual PPPs, what is your experience of the phase which follows the selection of the private partner?

17. *UK experience of the phase following the selection of the private partner has not shown up any significant problems and PFI market participants and public authorities are generally content with existing procedures.*

18. *The phase following the selection of the private partner, prior to contract award, provides the contracting authority with the opportunity to discuss and develop precise solutions to meet its output requirements. The focus on public sector output requirements and private sector total costing in delivering those outputs is an integral part of developing PPPs, as both parties are required to focus on the long-term need for and implications of investment.*

19. *By defining services as outputs, the public sector can take advantage of the private sector's capacity to innovate in competing to meet those requirements. This allows the public sector to harness some of the increased efficiency that can come from contestability in service delivery. Balancing competitiveness and transparency with the need to maintain bid costs at a manageable level is imperative in order to make it more appealing to potential bidders to enter the competition process. Any change to this process would have a negative impact on attaining best value for money by procuring [contracting] authorities, and any increase in bid costs, as a result would tend to damage rather than improve access by private operators and competition for procurements.*

(Q11) Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

20. *Paragraph 46 refers to the need to fix the length of contracts to ensure that the private partners investment is paid off and a reasonable return on the invested capital is secured. The lengths of PPP contracts should be set to take into account the benefits of whole life costing of assets provided, rather than to ensure a set level of financial reward for the private sector. As a result, fixing contract lengths to financial returns would diminish the flexibility individual PPPs require, and diminish their value for money for the public sector.*

21. *We agree strongly with the Commission's statement advocating the evolution of PPP relationships, and we would reiterate the need for flexibility in contracts to allow genuine partnership working and innovation over the contract period. Two key factors in the development of PPPs: structure/clauses of the contracts and the advertisement of the contract ensure that there are no barriers to effective competition. Community level control over the relationship aspect of PPPs is not pertinent as the level of advancement appropriate is best determined by the circumstances of individual projects.*

(Q12) Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

22. *No. Tenders are evaluated in accordance with community law and Treaty principles.*

23. *The current UK approach to PPPs is based on equity, efficiency and accountability; ensuring that we secure the most cost effective infrastructure over the long term. The National Audit Office (NAO) and other audit bodies, and the Public Accounts Committee (PAC) ensure accountability and effective competition by investigating, reporting and making recommendations based on their investigations of significant individual PFI projects. They also conduct systematic reviews of important PFI policy areas or other aspects of the PPP/PFI programme.*

Deleted:

(Q13) Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

24. *The UK Government does not believe that "step-in" arrangements present problems in terms of transparency and equality of treatment; on the contrary, they are intrinsically linked to the rationale for PPP. The fundamental premise behind a PPP is the transfer of risk to the private sector. With the private sector's capital at risk and not just its profit, there is a powerful incentive to build and maintain assets so that high service standards are delivered throughout the contract life with assets more likely to be built on time, as payments only begin when they are available. Contractors also have the incentive to build with an asset's whole-life cost in mind, as it is they who will bear those costs during the operational phase of the project.*

Deleted:

25. *Step-in rights form an integral part of a funders security over any project, allowing the private sector consortium as a whole to become comfortable with placing their finance at risk to service delivery. As such they are an integral part of PPP, and of the approach a bidding consortium proposes to meet service delivery requirements over the long term. Such rights are for use in exceptional circumstances and to ensure that services continue to be provided. Where financial institutions exercise step-in rights this would not lead to any undue discrimination as these arrangements do not contradict the edicts of transparency and equality of treatment, and the financiers involved will act to secure the most economically advantageous proposal to continue meeting service delivery requirements. Step-in rights are established in the contract when competed and it is not the contracting authority that is responsible for exercising these rights. If this security were not to be provided, it would jeopardise the participation of financial institutions.*

(Q14) Do you think there is a need to clarify certain aspects of the contractual framework of PPPs at Community level? If so, which aspects should be clarified?

26. *No, we do not feel that are any gains from further Community level intervention on aspects of contractual PPPs.*

(Q15) In the context of PPPs, are you aware of specific problems encountered in relation to subcontracting? Please explain.

27. *No, we are not aware of problems.*

(Q16) In your opinion does the phenomenon of contractual PPPs, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

28. *No. It should not be necessary to interfere in the relationship between the private sector partner and its sub-contractors.*

29. *Treaty principles are observed when all PPP/PFI contracts are awarded to a project company by a public sector contracting body. Any subsequent sub-contracting conducted by the private sector entities should not be subject to further regulation beyond the initial competition. The private sector entity should be free to operate on a commercial basis without prejudice to public sector procurement rules. The Commission statement in Paragraph 52 '...private partners are free to sub-contract part or all of a public contract...' supports this view and we do not feel there are any gains from applying further rules to contractual PPPs and subcontracting.*

(Q17) In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

30. *No. Proper application of existing rules should enable effective competition to operate, and it should not be necessary to have extra regulation.*

(Q18) What experience do you have of arranging institutionalised PPPs and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

31. *The NATS (National Air Traffic Services) PPP would probably be regarded by the European Commission as an institutionalised PPP. The UK Government sold a controlling shareholding in NATS to the Airline Group (a consortium of seven airlines) in July 2001, with BAA also taking a minority shareholding in 2003. Community law on public contracts and concessions was not applicable to the process for selecting the strategic partner for NATS. However, the process for selecting the Airline Group followed the principles of freedom of establishment, i.e. the Airline Group were selected following an open competitive tendering process and on the basis that their offer was the most economically advantageous when assessed against pre-determined selection criteria.*

(Q19) Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

32. *Paragraphs 53-69 could potentially be interpreted as covering a very wide variety of institutions and contractual arrangements and we regard it as important that any proposals for change very clearly define the circumstances in which they would apply. Bearing in mind that caveat, we regard it as important in circumstances where the framework cannot be described as a* procurement *that we should be free to choose a PPP partner without having to negotiate with other firms or to auction involvement in the PPP company.*

33. *However, we have read the Green Paper as primarily concerned about a Government entering a JV which then participates in a procurement, on the grounds that it leads to a favoured bid. We recognise that this could be an area for concern but would be reluctant to approve of any initiative at Community level to deal with what the Green Paper refers to as "institutionalised PPPs" outside of the normal procurement framework. In our view, if an "institutionalised PPP" is accompanied by the award of a contract then the relevant procurement regime (whether works, services, supply etc) should apply and should provide safeguards against discrimination, unequal treatment etc. If the procurement rules do not apply to the conferring of a task upon the JV e.g. because it is a sale of an undertaking to the PPP company rather than a procurement of a service then, in our view, general Treaty principles (e.g. non-discrimination, freedoms of movement of capital and services) should be sufficient to guard against abuse by Member States.*

(Q20) In your view which measures or practices act as barriers to the introduction of PPPs within the European Union?

34. *Uncertainty, whether about legal aspects or changes to contractual practices, creates market difficulties and therefore slows down the development of PPPs. The Commission will need to consider whether the impact of any proposals it might make would reduce uncertainty, or have the potential to increase it. It is also important to ensure that inflexibility does not become a barrier to the adoption of PPPs within the European Union, and particularly their adaptation to national circumstances.*

(Q21) Do you know of other forms of PPPs which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate.

35. *There are a wide variety of PPP-type contracts or institutions employed both within and outside the Union. Many structures are adapted to fit particular national circumstances or individual projects, and so they are unlikely to be very broadly*

applicable standard frameworks. However, the UK has noted the successful adoption of PFI-type structures in several Australian states, and in Canada.

(Q22) More generally, given the considerable investments needed in certain member states in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would allow for the exchange of best practice would be useful? Do you consider that the commission should establish such a network?

36. *Sharing of knowledge and experience of successful structures between different national circumstances would be a positive step in furthering development of PPPs in the different member states. The existing Advisory Committee on Public Contracts or the European Public Procurement Network might well be a suitable vehicle for such exchanges.*

23 July 2004

Dear Sir,

EC GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS

The Economic Development and Transport Committee of the National Assembly recently considered this consultation document.

The Committee has no direct experience of managing contracts of the kind described in the paper and we are therefore unable to answer many of the detailed and specific questions set out. However, we have a number of general comments on this type of contract which we would like the European Commission to take into account.

While some members have concerns about the principles underlying this kind of contract, the Committee nonetheless agreed that where contracts of this type were used they should be properly established on the basis of clear principles.

Members considered that the key requirement for any such contract was for it to be set out as simply as possible and for there to be complete transparency in its content. This is important in ensuring that any obligations on behalf of either the public or the private sector are clearly understood and open to public scrutiny.

Members noted that commercial confidentiality was sometimes cited as a reason for requiring details not to be disclosed – but considered that this should not uncritically be used as a reason for reducing transparency. They considered that commercial operators might have to accept that if they wish to enter into this kind of agreement they would need to be more open that would normally be the case.

Members recognised the need for financing organisations to retain ‘step in’ rights to protect the interest of both the public service body in the partnership and the public who would benefit from the service contractors.

They also welcomed the approach of using ‘framework agreements which, while often more complex to set up, offered a more flexible approach to further contracts while still protecting the need for open competition.

27 July 2004

Dear Secretary-General

Green Paper on public-private partnerships and Community law on public contracts and concessions

The Local Government and Public Services Committee of the National Assembly for Wales considered the European Commission's 'Green Paper on public-private partnerships and Community law on public contracts and concessions' at its meeting on 7 July. Please find attached a report setting out the Committee's views.

I am sending a copy of this letter to the Minister for Finance, Local Government and Public Services, Chairs of the European and External Affairs Committee and Economic Development and Transport Committee.

Yours sincerely

Ann Jones

Report on the European Commission Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions

July 2004

Background

On 7 July 2004, the National Assembly for Wales' Local Government and Public Services Committee[1] considered the European Commission Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions[2]. This report identifies the key issues subsequently agreed unanimously by the Committee.

The Committee noted that the aim of the Green Paper is to launch a debate on the desirability of adapting European Community rules on public procurement and concessions to accommodate the development of public-private partnerships (PPPs). It aims to improve the current rules in order to ensure that economic operators have access to PPPs under conditions of legal clarity and real competition. It describes the ways in which the rules and the principles deriving from Community law on public contracts and concessions are applied when a private partner is being selected, and for the subsequent duration of the contract, in the context of different types of PPP. It also asks a set of questions intended to find out more about how these rules and principles work in practice, so that the Commission can determine whether they are sufficiently clear and suitable for the requirements and characteristics of PPPs.

The Committee noted that paper does not touch on the decision to contract out public services or keep them in the public sector, which the Commission notes remains within the competence of the public authorities of Member States.

The UK Government supports the increased use of PPPs in both national and Trans-European infrastructure delivery, expressing the view that the use of private finance can offer better value for money than conventional public investment. To this end, the UK is keen to ensure the right conditions for the development and implementation of PPPs are in place.

The Committee's view

The Committee supports a Community legislative initiative to regulate the procedure for the award of concessions and inclusion of detailed provisions applicable to such awards. Whilst the Committee recognises the current principles and rules governing the award of contracts, it felt that further emphasis should be placed on transparency of procurement, for both contractual and PPP concessions.

In terms of the selection of private partners, the Committee felt that the criteria should be extended to reflect the wider principle of Sustainable Development, which uniquely within the European Union, the National Assembly for Wales has a legal duty to pursue[3]. In particular the selection criteria should focus on social and environmental benefits, as well as economic advantages. Further to this, the Committee felt it would be necessary to define, more precisely, the term 'economically advantageous'.

As a general point, the Committee highlighted the need to explicitly refer to protection of employee rights within any proposed legislative action designed to co-ordinate the procedures for the award of concessions, and safeguard against the development of a two-tier workforce within the public sector.

An die
Europäische Kommission
Konsultation „Grünbuch zu öffentlich-privaten
Partnerschaften und den gemeinschaftlichen
Rechtsvorschriften für öffentliche Aufträge
und Konzessionen“
C 100 2/005
B-1049 Brüssel

Wien, am 9. Juli 2004
Dr.S/SE

**Grünbuch zu öffentlich-privaten Partnerschaften
und den gemeinschaftlichen Rechtsvorschriften
für öffentliche Aufträge und Konzessionen,
KOM(2004)327 endg. vom 30.04.2004;
Stellungnahme**

Sehr geehrte Damen und Herren!

Auf Einladung der Kommission an alle mit den im vorliegenden Grünbuch aufgeworfenen Fragen befassten Organisationen Stellung zu nehmen, erlauben sich die unterzeichneten Verbände ihre akkordierte gemeinsame Stellungnahme zur Kenntnis zu bringen.

Grundsätzlich ist positiv festzuhalten, dass die Kommission der aus verschiedenen Gründen immer wichtiger werdenden Zusammenarbeit zwischen öffentlichen Stellen und Privatunternehmen zwecks Finanzierung und Betrieb von Infrastrukturen und zwecks Bereitstellung von Dienstleistungen eine erhöhte Aufmerksamkeit zuwendet, um Rechtsunsicherheiten auf beiden Seiten so weit als möglich zu vermeiden.

Zurecht widmet die Kommission dem bereits vorhandenen gemeinschaftlichen Rechtsrahmen breiten Raum für jene Fälle, in denen öffentliche Stellen eine definierte Dienstleistung, die über den Markt erreichbar ist, durch Dritte – wozu eben auch das weite Feld von ÖPP zählt – erbringen will. Es ist unbestritten, dass derartige Dienstleistungen grundsätzlich dem Wettbewerb in Gestalt der Durchführung eines diskriminierungsfreien und transparenten Vergabeverfahrens geöffnet wird. Damit wird nicht nur dem Wettbewerbsprinzip, sondern auch den Grundregeln des EG-Vertrages Rechnung getragen.

Diese grundsätzlich anzuerkennende Ausschreibungspflicht besteht jedoch nicht absolut. Im Grünbuch wird zwar ausdrücklich darauf verwiesen, dass die Gebietskörperschaften entscheiden können, ob sie Dienstleistungen selbst (direkt) erbringen wollen oder ob sie damit Dritte beauftragen.

Allerdings wird jedoch der sog. In-house-Erbringung von Dienstleistungen gerade im Bezug auf institutionelle ÖPP mit beherrschender Stellung der öffentlichen Hand, insb. von Gemeinden/Regionen zu wenig – wenn überhaupt – Aufmerksamkeit geschenkt, was sich als grundsätzlicher Mangel dieses Grünbuches erweist. Nach Auffassung der unterzeichneten Verbände muss die Entscheidungsfreiheit der Gebietskörperschaften, insb. der Gemeinden, ob sie Dienstleistungen von allgemeinem wirtschaftlichem Interesse wie ÖPNV, Wasserversorgung, Entsorgung und andere Aufgaben der kommunalen Daseinsvorsorge durch eigene Unternehmen u.a. auch durch solche IÖPP, an denen sie mit qualifizierter Mehrheit beteiligt sind, selbst erbringen wollen oder ob sie diese Aufgaben an Dritte u.a. auch an IÖPP (etwa mit geringerer Beteiligung) vergeben wollen, jedenfalls erhalten bleiben.

Zu weiteren Aspekten des Grünbuches wird im Einzelnen auf die Beantwortung des Fragenkatalogs der Kommission verwiesen (Beilage).

Die unterzeichneten Verbände ersuchen die Kommission die obige Stellungnahme in ihre weiterführenden Überlegungen und Schlussfolgerungen zum Thema öffentlich-private Partnerschaften und gemeinschaftliche Rechtsvorschriften für öffentliche Aufträge und Konzessionen einfließen zu lassen und verbleiben

mit freundlichen Grüßen

BEANTWORTUNG des FRAGENKATALOGS zum GRÜNBUCH der Europäischen Kommission „zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen (ÖPP)“ KOM(2004)327 endg. vom 30. April 2004

1) Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt?
Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

ÖPP auf Vertragsebene reichen von einer Privatisierung von Aufgaben über Teilung der Aufgaben, Outsourcing bestimmter Bereiche, Finanzierung der Infrastruktur, Entlastung öffentlicher Hände zur Vermeidung von finanziellen Engpässen bis zur Nutzung des Know-hows privater Unternehmen.

Als Form treten sowohl das Betreibermodell, als auch das Konzessionsmodell in Erscheinung.

In Österreich gibt es keine spezifischen gesetzlichen Regelungen für ÖPP: Die Anwendung des allgemeinen Gesellschaftsrechts und überhaupt des bestehenden nationalen Rechtsrahmens ist ausreichend.

2) Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Dieser Auffassung der Kommission kann zugestimmt werden.

3) Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Bei ÖPP auf Vertragsbasis kann davon ausgegangen werden, dass die anzuwendenden gemeinschaftlichen Rechtsregeln keine unüberbrückbaren Hindernisse für die Betrauung von ÖPP mit Dienstleistungen im allgemeinen wirtschaftlichen Interesse darstellen. Eine andere Sichtweise betrifft die institutionellen ÖPP (siehe dort).

4) Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der EU organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

Zu dieser Frage können seitens der unterzeichnenden Verbände keine Aussagen getroffen werden.

5) Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen?
Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Auf Grund der direkten Anwendung der Bestimmungen des Primärrechts der Gemeinschaft bei Dienstleistungskonzessionen (Art. 43 bis 49 EG-Vertrag; siehe EuGH Rs Telaustria) einerseits und der zusätzlichen Anwendung von Bestimmungen des EU-Vergaberechts bei Baukonzessionen andererseits ist nach Auffassung der Verbände weitgehend ein auch zwischenstaatlicher Wettbewerb sichergestellt.

6) Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Aus der Beantwortung der Frage 5 ergibt sich, dass ein gemeinschaftlicher Rechtsakt für die Festlegung eines Verfahrensrahmens für Konzessionsvergaben entbehrlich ist.

7) Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Die unterzeichnenden Verbände halten weitere gemeinschaftliche Rechtsakte über den bestehenden Rechtsrahmen hinaus für nicht erforderlich, sodass auch eine Angleichung der Verfahren für öffentliche Aufträge und Konzessionen im Zusammenhang mit ÖPP auf Vertragsbasis abzulehnen ist.

8) Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet?
Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können?
Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Durch die Umsetzung des neuen Verfahrens, des sog. wettbewerblichen Dialogs nach Art. 29 der RL 2004/18/EG in die nationalen Rechte der Mitgliedstaaten wird letztlich ermöglicht, dass alle interessierten Akteure an den betreffenden ÖPP-Vorhaben teilnehmen können, sodass auf dieser Basis effektiver Wettbewerb besteht. Das Instrument des „wettbewerblichen Dialogs“ kann auch als „geeignetes Verfahren“ die Gründung von ÖPP in jenen Fällen erleichtern, wo Gemeinden/Regionen sich dafür entscheiden, eine spezielle Dienstleistung im allgemeinen wirtschaftlichen Interesse auszuschreiben, d.h. nicht selbst oder durch Unternehmen wahrzunehmen, die unter den Begriff „In-house“ fallen (siehe dort, Beantwortung der Frage 18).

9) Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der EU unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Für eine privat initiierte ÖPP bedarf es über den bestehenden Rechtsrahmen hinaus keiner weiteren Gewährleistung. Wenn die Idee des initiierenden Unternehmens und die dadurch gewonnenen Erkenntnisse allen später teilnehmenden Unternehmen bekannt gegeben werden können, sodass ein gleicher Informationsstand für alle herstellbar ist, wäre dies im Sinne eines breiten Wettbewerbs eine Möglichkeit, dieses Thema zu behandeln.

10) Welche Erfahrungen haben Sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Zu dieser Frage können seitens der unterzeichnenden Verbände keine Ziel führenden Aussagen getroffen werden.

11) Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

In den Mitgliedsunternehmen der unterzeichnenden Verbände sind keine derartigen Fälle bekannt. Im Übrigen existieren innerstaatliche gesetzliche Regelungen, die Rechtssicherheit für alle Parteien gewährleisten.

12) Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Derartige Praktiken oder Mechanismen sind den unterzeichnenden Verbänden aus dem Bereich ihrer Mitglieder nicht bekannt.

13) Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können?
Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Diese Problematik ist den unterzeichnenden Verbänden nicht bekannt.

14) Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Im Hinblick darauf, dass die vertraglichen Rahmenbedingungen für die Ausführung von Projekten eng mit nationalen Rechtsvorschriften verknüpft sind, sollte – wie bisher – kein abgeleitetes Gemeinschaftsrecht – auch in Teilbereichen – geschaffen werden.

15) Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Bei ÖPP-Konstruktionen sind uns keine besonderen Probleme mit der Vergabe von Unteraufträgen bekannt. Die unterzeichnenden Verbände weisen jedoch darauf hin, dass bei exzessiver Vergabe von Unteraufträgen Probleme grundlegender Art auftreten. Je länger die Kette von Unteraufträgen ist, desto schwieriger sind derartige Konstruktionen für vergebende Einrichtungen und Behörden – als die Garanten öffentlicher Dienstleistungen – kontrollierbar.

Die Unterbeauftragung könnte auf den ersten Blick zwar Effizienzgewinne nach sich ziehen, auf der anderen Seite kann die Vergabe von Unteraufträgen jedoch nachhaltigem Wirtschaften entgegen wirken, weil Qualitätsverluste festzustellen sind, die eine von den Bürgern zu Recht erwartete hochwertige Erbringung von Dienstleitungen im allgemeinen Interesse beeinträchtigen. Zudem stellen auch die Arbeitnehmervertretungen zunehmend fest, dass die Vergabe von Unteraufträgen die Umgehung gesetzlicher Bestimmungen arbeits- und sozialrechtlicher Natur begünstigt.

16) Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Im Zusammenhang mit ÖPP auf Vertragsbasis bedarf es keiner weiteren Regeln für die Vergabe von Unteraufträgen, zumal es den vergebenden öffentlichen Stellen möglich ist, auf die Gestaltung des Inhalts von Unteraufträgen Einfluss zu nehmen.

17) Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der bestehenden Regeln für die Vergabe von Unteraufträgen ist entbehrlich.

18) Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Aus der Sicht öffentlicher/gemeinwirtschaftlicher Unternehmen, die eine Minderheitsbeteiligung privater Wirtschaftsteilnehmer aufweisen, kann eine solche Einrichtung institutionalisierter ÖPP in der Vergangenheit nur positiv beurteilt werden, da durch den (die) privaten Partner finanzielle Unterstützung sowie in zahlreichen Fällen auch Know-how eingebracht wird, anderseits die öffentlichen Partner weiterhin eine bestimmende Kontrolle über die Erbringung von Dienstleistungen im allgemeinen Interesse ausüben und jederzeit erforderliche Anpassungen an sich im Laufe der Zeit ändernden Umfeldbedingungen vornehmen können, die eine auf Dauer gerichtete Qualität dieser Dienstleistungen sicherstellen.

IÖPP auf kommunaler Ebene mit bestimmender, d.h. qualifizierter Mehrheit der Anteile der Gemeinde im Sinne von Art. 2 Abs.1 lit.b der RL 2004/17/EG des Europäischen Parlaments und des Rates vom 31.03.2004 (Amtsblatt EU, L 134/1 vom 30.04.2004) sind Ausdruck der Subsidiarität, der wirtschaftlichen Gemeindehoheit und Freiheit der Gemeinde in eigenen Angelegenheiten – wozu die Daseinsvorsorgeleistungen wie ÖPNV, Wasser, Abwasser, Entsorgung u.dgl. gehören – selbst zu entscheiden, ob bzw. in welcher Weise diese Dienstleistungen für den Bürger erbracht werden sollen.

Umso bedauerlicher ist nach Ansicht der unterzeichnenden Verbände die Lücke im vorliegenden Grünbuch, keine Aussagen über Reichweite eines In-house-Tatbestandes zu treffen, sondern vielmehr auf künftige Entscheidungen des EuGH zu verweisen, was für die für IÖPP notwendige Rechtssicherheit nicht förderlich ist.

In dieser Hinsicht versagt das Grünbuch als Wegweiser der Kommission, zu Fragen entscheidender Natur dezidiert Stellung zu nehmen.

19) Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Eine diesbezüglich von der Kommission angesprochene Initiative auf Gemeinschaftsebene ist entbehrlich, da eine solche wiederum nur einen kleinen Teilaspekt umfassen würde, der im übrigen durch das primäre Gemeinschaftsrecht (Transparenz, Gleichbehandlung) hinlänglich bestimmt ist.

20) Welche Maßnahmen oder Verfahren behindern in der EU die Einrichtung von ÖPP?

Bis dato sehen wir keine Maßnahmen oder Verfahren, die die Einrichtung von ÖPP behindern. Allerdings besteht die Gefahr, dass durch überschießende Regelungen die Gestaltungsfreiheit des Auftraggebers zu sehr beeinträchtigt wird und daher die Realisierung von Projekten und die Erbringungen von Dienstleistungen im Rahmen von ÖPP unattraktiv werden.

21) Kennen Sie andere ÖPP-Formen aus Drittländern?
Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Derzeit sind den unterzeichnenden Verbänden keine derartigen Erfahrungen aus Drittländern bekannt.

22) Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen?
Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

Die Erbringung von Dienstleistungen im allgemeinen Interesse ist in allen Mitgliedstaaten ein entscheidendes Element des wirtschaftlichen und sozialen Zusammenhalts, sodass über Wege, Mittel und Verfahren, diese sicherzustellen, jede Erfahrung und Kenntnis bewährter Vorgangsweisen sinnvoll und nützlich ist.

Auch im Rahmen der EU könnte ein solches Netzwerk an Informationsquellen Vorteile für alle Interessierten bringen.

STELLUNGNAHME

zum

GRÜNBUCH
ZU ÖFFENTLICH-PRIVATEN PARTNERSCHAFTEN UND DEN GEMEINSCHAFTLICHEN RECHTSVORSCHRIFTEN FÜR ÖFFENTLICHE AUFTRÄGE UND KONZESSIONEN

Das 3P- Public Private Partnership – Forum (kurz „3P“) ist eine ÖPP Plattform, die von zahlreichen österreichischen Unternehmen und Institutionen unterstützt und getragen wird. 3P vertritt damit die Interessen zahlreicher an ÖPP interessierter Marktteilnehmer in Österreich mit dem Ziel, die Akzeptanz6 von ÖPP in Österreich zu erhöhen und die Umsetzung von PPP Projekten in Österreich zu fördern.

Die folgende Stellungnahme zum Grünbuch der Europäischen Kommission dient einerseits dem Zweck, unser Verständnis der neuen gemeinschaftsrechtlichen Vorschriften (insbesondere zum wettbewerblichen Dialog) wiederzugeben und andererseits auch Anregungen oder Bedenken der Förderer von 3P zu gemeinschaftsrechtlichen Themen der öffentlichen Auftragsvergabe und ÖPP zu formulieren.

I. ÖPP's auf Vertragsbasis

1. Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

3P sind Formen von ÖPP auf Vertragsbasis bekannt, zB Konzessions-, Betreiber-, Betriebsführungs-, Belehnungs-, Contracting- und Finanzierungsmodelle sowie direkte und indirekte Nutzerfinanzierungsmodelle.

Es gibt in Österreich kein Gesetz, das für PPP's/ÖPP's besondere Regelungen trifft, welche von den allgemein geltenden abweichen. In einigen Sondermaterien (zB Schieneninfrasturkturfinanzierungsgesetz) setzt der österreichische Gesetzgeber den Begriff PPP voraus, führt ihn aber keiner besonderen Regelung zu.

I.1. Auswahl des privaten Partners

I.1.1. Partnerschaft auf Vertragsbasis: als öffentlicher Auftrag eingestufte Beauftragung

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

ALLGEMEINES

Bislang fehlte es Auftraggebern an institutionalisierten Möglichkeiten, mit privaten Unternehmen verschiedene am Markt etablierte Strukturen zu erörtern, unter anderem um die Eignung des Projekts für eine ÖPP zu prüfen. Bei der Strukturierung von ÖPPs spielt die konkrete Aufgaben- und Risikoverteilung und damit die Finanzierbarkeit regelmäßig eine wesentliche Rolle. Da neben den Interessen der unmittelbaren Projektteilnehmer auch Aspekte von finanzierenden Parteien zu berücksichtigen sind,

sind ÖPPs tendenziell „besonders komplexe“ Projekte. Diese Komplexität gepaart mit den erwähnten fehlenden Möglichkeiten der Erkundung möglicher Strukturen ist wohl ein Grund, dass ÖPPs in Österreich zahlenmäßig bislang nicht sehr verbreitet sind.

Um Auftraggebern zumindest zu ermöglichen, solch komplexe Projekte in einem Verhandlungsverfahren zu vergeben, wurde sowohl von privaten Unternehmern als auch Auftraggebern ein leichterer Zugang zum Verhandlungsverfahren gefordert. Dies wird durch den wettbewerblichen Dialog nunmehr umgesetzt, den wir als Sonderform des Verhandlungsverfahrens mit vorheriger Bekanntmachung verstehen. Schließlich dürfen gem Art 29 (3) RL 2004/18 alle Aspekte des Auftrags erörtert werden.

Da der wettbewerbliche Dialog im Gegenzug zum „klassischen“ Verhandlungsverfahren aber zu einem früheren Zeitpunkt ansetzt und auch eine Verhandlung über das Projekt an sich, dh die Ausschreibungsunterlage, ermöglicht, bietet er auch eine formelle Lösung für die sogenannte Vorarbeitenproblematik (aufholbare oder nicht aufholbare Wettbewerbsvorteile eines Bieters wegen Mitarbeit bei der Erstellung der Ausschreibungsunterlage).

Im allgemeinen erwarten wir, dass die Anzahl der ÖPPs in Österreich durch die Einführung des wettbewerblichen Dialogs und die damit verbundene Möglichkeit zur breiten Nutzung nationalen und internationalen Know-hows bei deren Strukturierung und Umsetzung steigen wird.

Besondere Komplexität

Der wettbewerbliche Dialog steht Auftraggebern nur für *besonders komplexe* Vorhaben zur Verfügung. Aus unserer Sicht sind klassische ÖPP Projekte, bei denen der private Partner auch die Finanzierung zu übernehmen bzw zu besorgen hat, regelmäßig *besonders komplex*.

Wir verstehen den wettbewerblichen Dialog aber auch als eine Lösung für eines der größten praktischen Probleme für öffentliche Auftraggeber. Nach geltendem Recht ist es Aufgabe des Auftraggebers, bereits vor Ausschreibung des Vorhabens festzulegen, ob er einen zB einen Bauauftrag oder eine Baukonzession ausschreibt. Dementsprechend kommen unterschiedliche Regeln zur Anwendung. Neben den bestehenden erheblichen Abgrenzungsschwierigkeiten zwischen Auftrag und Konzession, steht der Auftragnehmer gegebenenfalls vor dem Problem, bei der Ausschreibung und vor Beginn eines Verhandlungsverfahrens nicht abschließend beurteilen zu können, zu welcher Risikoverteilung und allenfalls zu welchem öffentlichen Zuschusserfordernis die Verhandlungen über ein ÖPP Projekt führen werden. Dies können aber entscheidende Parameter für die Qualifikation eines Vorhabens als Bauauftrag oder Baukonzession sein. Sofern es einem Auftraggeber bei einem bestimmten Projekt tatsächlich (und objektiv nachvollziehbar) nicht möglich sein sollte, die Risikoverteilung und sonstige für die vergaberechtliche Qualifikation des

Vorhabens entscheidende Kriterien vorab zu beurteilen, sollte dem Auftraggeber für dieses Vorhaben der wettbewerbliche Dialog offen stehen. In diesem Dialog könnten Risikoverteilung und die finanziellen Leistungen des Auftraggebers rein im Interesse der wirtschaftlich bestmöglichen Lösung diskutiert werden, ohne für die Findung dieser Lösung hinderliche vergaberechtliche Beschränkungen.

Rechte am eingebrachten Know-how

Einerseits soll bieterspezifisches Know-how in die Lösungsfindung einfließen, andererseits sind die Rechte der einzelnen Teilnehmer an ihrem Know-how angemessen zu wahren. Um zu verhindern, dass proprietäres Know-how in einem wettbewerblichen Dialog an andere Bieter fließt, sollte das Verfahren streng formalisiert ablaufen und eine Pflicht für den Auftraggeber zur Dokumentation der einzelnen Dialogphasen vorgesehen werden. Die Bestimmung des Art 29 (3) RL 2004/18, wonach vertrauliche Informationen oder Lösungsvorschläge nicht ohne Zustimmung des teilnehmenden Bieter weitergegeben werden können, wird daher ausdrücklich begrüßt. Nur durch eine detaillierte Dokumentation des Verfahrens- und Dialogablaufs wird diese Vertraulichkeit aber auch nachvollziehbar und somit dem notwendigen Rechtsschutz zugänglich.

Im Allgemeinen befürchten private Unternehmen, dass der wettbewerbliche Dialog zu einer Abschöpfung ihres Know-hows ohne adäquate Gegenleistung führen könnte. Die Bieter könnten aufgrund einer starken Position des Auftraggebers dazu gezwungen sein, ihr Know-how preis zu geben und müssten dabei das Risiko eingehen, bei der anschließenden Vergabe einem Unternehmen zu unterliegen, das dieses Know-how nicht hatte und in die Erlangung des Know-hows auch keine Investitionen tätigen musste. Unternehmen, die bestimmtes Know-how kostenintensiv erwerben, werden zwangsläufig höhere Kosten haben und zu einem höheren Preis anbieten, als Unternehmen, die lediglich vom Know-how anderer profitieren. Eine obligatorische Aufwandsentschädigung wurde von der Europäischen Kommission und dem Europäischen Parlament im Vorfeld zwar diskutiert, letztendlich aber nicht in den endgültigen Richtlinientext aufgenommen. Dies ist aus Sicht der privaten Unternehmen, von deren Know-how der wettbewerbliche Dialog und die öffentlichen Auftraggeber profitieren sollen, bedauerlich. Den Bietern würde durch eine Zusicherung der Abgeltung ihrer Aufwendungen ein angemessener Anreiz zur Preisgabe ihres Know-hows gegeben. Fehlt dieser Anreiz, besteht für den Auftraggeber die Gefahr, dass Bieter wichtige Informationen zurückbehalten und nicht in die Lösungsfindung einbringen. Bei Zurückbehaltung von projektdienlichen Informationen besteht aber die Gefahr ungleicher Wissensstände unter den Bietern. Jedenfalls bestünde ein Gegenanreiz für die Bieter, der dem Grundgedanken des wettbewerblichen Dialogs zuwiderlaufen würde. Wir gehen aber davon aus, dass es nunmehr Sache des nationalen Gesetzgebers ist, eine solche Entgeltlichkeit vorzusehen, um den Erfolg des wettbewerblichen Dialogs zu sichern.

Die Richtlinie lässt in diesem Zusammenhang auch offen, ob und in welchem Umfang Auftraggeber schon vorab (zB in der Beschreibung) die Zustimmung der Bieter zur Weitergabe von Informationen verlangen können. Sofern eine solche Vorabzustimmung möglich ist, sollte sie jedenfalls nur gegen Leistung eines angemessenen Entgelts zulässig sein.

Wettbewerblicher Dialog – geschlossener Teilnehmerkreis?

Nach Art 29 (6) RL 2004/18 hat der Auftraggeber, nachdem er die Teilnehmer vom Abschluss des Dialogs informiert hat, diese aufzufordern, ein endgültiges Angebot zu legen. Die Bestimmung könnte daher so verstanden werden, dass nur die Teilnehmer des Dialogs ein solches Angebot legen können. Da Bieterwechsel während eines Vergabeverfahrens grundsätzlich unzulässig sind, müssten Bieter folglich bereits bei Abgabe ihres Antrags zur Teilnahme am Dialog – und damit bevor die konkrete Lösung überhaupt feststeht – allen Eventualitäten vorbeugen und gegebenenfalls Bietergemeinschaften bilden oder sich die Dienste von Subunternehmern sichern. Dies könnte die Effizienz des Dialogs und der Ermittlung der bestmöglichen Lösung beeinträchtigen. So erscheint es denkbar, dass nicht alle Teilnehmer am Dialog eine letztendlich ermittelte Lösung auch (alleine) umsetzen können; diesen Bietern wäre ansonsten die Chance auf Zuschlag verwehrt.

Da eine Einladung auch anderer Bieter zur Angebotslegung als der Teilnehmer am Dialog in Art 29 der RL nicht explizit ausgeschlossen ist, wäre klarzustellen, ob es dem Auftraggeber auch offen steht, andere Bieter zur Legung eines Angebots für die Umsetzung der ermittelten Lösung(en) einzuladen. Sollte dies möglich sein, wäre lediglich sicherzustellen, dass die anderen (am Dialog nicht teilnehmenden) Bieter die gleichen Informationen erhalten, wie die Teilnehmer am Dialog, um eine Vorarbeitenproblematik zu vermeiden. Insbesondere in solchen Verfahren, wo die Bieter einer Informationsweitergabe zustimmen, sollte diese Vorgansgweise möglich sein.

Wir schlagen daher vor, in Form einer interpretierenden Mitteilung klarzustellen, ob der Auftraggeber ausschließlich die Teilnehmer am Dialog oder auch andere Bieter zur Abgabe eines Angebots einladen kann.

Verfahrensfragen

Dem Vorhaben und dem Grundgedanken des wettbewerblichen Dialogs dienlich wäre uE auch, dem Auftraggeber die Wahl zwischen allen auf das entsprechende Vorhaben sonst anwendbaren Verfahren zu geben und ihn nicht auf ein offenes Verfahren zu beschränken (in diese Richtung scheint Art 29 (6) aber zu deuten, wenn er von einer Einladung zur Legung eines *endgültigen* Angebots spricht). Es ist nicht klar nachvollziehbar, warum einem Auftraggeber für ein Projekt grundsätzlich die Wahl verschiedener Verfahren offen stehen kann, diese Wahl aber nach Abschluss des wettbewerblichen Dialogs verschlossen sein soll. In diesem Zusammenhang sei darauf hingewiesen, dass die Richtlinie nicht regelt, in welchem Detaillierungsgrad über verschiedene Lösungen Dialog geführt werden darf bzw soll.

Ähnliches gilt für die Entscheidung, ob ein Auftrag oder eine Konzession vergeben wird, welche Verfahrensart zu wählen ist (wenn es sich um keine Konzession handelt, wo die Verfahrenswahl frei ist), und, welche Auftragsart vorliegt. Gerade wenn über rechtlich komplexe Konstruktionen diskutiert wird, kann sich im Laufe des Dialogs ergeben, dass der am Ende abzuschließende Vertrag kein Auftrag, sondern eine Konzession sein wird, oder umgekehrt. Da die Lösungen der Teilnehmer am Wettbewerb voneinander deutlich abweichen dürften, können manche als Konzession und manche als Auftrag einzustufen sein, nachdem rechtliche und finanzielle Unklarheiten erörtert worden sind. In vielen Fällen wird es dem Auftraggeber daher unmöglich sein, diese Entscheidung schon vor Beginn der Dialogphase zu treffen. Ist die Kommission der Ansicht, dass die Festlegung, ob Konzession oder Auftrag und die Vertragsart schon vor der Dialogphase zu erfolgen haben, wären (ähnlich der Schätzung des Auftragswertes) Mindestkriterien hilfreich, wie der Auftraggeber dabei vorzugehen hat.

Wird im Zuge des Dialogs über ein Infrastrukturvorhaben ein Konzessionsmodell als bestmögliche Lösung ermittelt, bleibt unklar, ob der Auftraggeber mit den Bietern auch den Konzessionsvertrag (der zu Beginn des Dialogs noch nicht existierte) im Dialog bis ins letzte Detail diskutieren und „verhandeln“ darf/muss. Eine solches „Ausverhandeln“ aller Punkte wäre aber notwendige Voraussetzung, stünde dem Auftraggeber für die Vergabe anschließend nur noch das offene Verfahren zur Verfügung.

Wir schlagen daher vor, in Form einer interpretierenden Mitteilung klarzustellen, ob (A) dem Auftraggeber nach Abschluss des Dialogs andere als das offene Verfahren zur Verfügung stehen, (B) sofern dem Auftraggeber auch andere Verfahren zur Verfügung stehen, bis zu welchem Detaillierungsgrad die einzelnen Lösungen im wettbewerblichen Dialog erörtert werden können, (C) wie Vorsorge dafür getroffen werden kann, dass sich Festlegungen der Bekanntmachung insbesondere hinsichtlich der Abgrenzung Auftrag/Konzession als unrichtig oder unvollständig erweisen.

Zuschlagskriterien

Nach Art 29 (4) RL 2004/18 kann der Auftraggeber den Dialog in „verschiedene aufeinanderfolgende Phasen“ einteilen, „um so die Zahl der in der Dialogphase zu erörternden Lösungen anhand der in der Bekanntmachung angegebenen Zuschlagskriterien zu verringern“. Dies wirft gleich mehrere Fragen auf: So scheint Art 29 (4) der RL anzudeuten, dass Lösungen nach den „Zuschlagskriterien“ auszuwählen sind. Da Zuschlagskriterien im allgemeinen jene Kriterien sind, nach denen einem Bieter der Zuschlag für ein Vorhaben zu erteilen ist, könnte Art 29 (4) so verstanden werden, dass die Zuschlagskriterien und die „Auswahlkriterien“ iSd Art 29

(4) der RL die selben sein müssen. Dies wäre nicht erforderlich und kann für die Umsetzung innovativer Strukturen unter Umständen hinderlich sein. Insbesondere in jenen Fällen, in denen die genaue Struktur eines ÖPPs noch nicht feststeht (und der wettbewerbliche Dialog der Findung eben dieser Struktur dient), kann es zweckmäßig sein, separate Kriterien für Auswahl und Zuschlag zuzulassen. Es müssen nur beide Arten von Kriterien im Vorhinein vollständig bekannt gegeben werden und den selben Anforderungen genügen, die das Vergaberecht auch sonst hinsichtlich Objektivität, Auftragsbezogenheit und Nichtdiskriminierung usw an Zuschlagskriterien stellt.

Gemäß Art 29 (5) der RL setzt der öffentliche Auftraggeber den Dialog mit den ausgewählten Bietern fort, bis er - erforderlichenfalls nach einem Vergleich - die Lösung bzw. die Lösungen ermitteln kann, mit denen seine Bedürfnisse erfüllt werden können. Wir gehen davon aus, dass auch dieser Vergleich der verschiedenen Lösungen – ähnlich dem Ausscheiden von Lösungen - anhand der in der Einladung bekannt zugebenden Zuschlagskriterien zu erfolgen hat. Auch dies wäre klarzustellen.

Da der wettbewerbliche Dialog nur für besonders komplexe Projekte zur Verfügung steht, deren genaue Definition dem öffentlichen Auftraggeber gerade nicht möglich ist, ist zu erwarten, dass es dem Auftraggeber auch erhebliche Schwierigkeiten bereiten wird, sämtliche Zuschlagskriterien für eine noch nicht feststehende Lösung im Vorhinein festzulegen. Die Möglichkeit einer Festlegung der Zuschlagskriterien erst nach Abschluss der Dialogphase wurde im Vorfeld der Richtlinie 2004/18 diskutiert, letztendlich aber nicht umgesetzt. Die Praxis wird zeigen, inwiefern die nunmehr gewählte Lösung, dass die Zuschlagskriterien bereits vor Auswahl der Lösung fixiert werden müssen, die Umsetzung innovativer Lösungen (von denen der Auftraggeber bei Beginn des wettbewerblichen Dialogs keine Kenntnis hatte und daher auch bei der Formulierung der Zuschlagskriterien nicht berücksichtigen konnte) beeinflussen wird.

Da sich die Lösungsvorschläge, die im Rahmen des Dialoges ermittelt werden, erheblich voneinander unterscheiden können, ist deren unmittelbarer Vergleich bei der Zuschlagsentscheidung schwierig. Das gilt umso mehr bei ÖPPs, die durch lange Laufzeiten und komplexe Strukturen gekennzeichnet sind. Weiters sind Abstufungen bei der Risikoübernahme oder anderen wesentlichen wirtschaftlichen und rechtlichen Fragen denkbar. Als Zuschlagskriterien kommen uE hauptsächlich Funktionalitäten und Life Cycle Costs in Frage. Interpretationshilfen auf Gemeinschaftsebene, welche Zuschlagskriterien zulässig sind, wären wünschenswert.

Ausscheiden nur von Lösungen oder auch von Bietern?

Gemäß Art 29 (4) RL kann der Auftraggeber einzelne Lösungen ausscheiden. Nicht völlig klar ist nach dem Richtlinientext, ob mit dem Ausscheiden der Lösung jedenfalls ein Ausscheiden des die Lösung anbietenden Bieters verbunden ist bzw sein muss oder ob der entsprechende Bieter weiter am Dialog und der anschließenden Vergabe des Vorhabens und zwar hinsichtlich anderer Lösungen teilnehmen kann.

Nachträgliche Erläuterungen und Bestätigungen – Umfang und Zeitpunkt unklar

Gem Art 29 (7) RL 2004/18 können nach Ermittlung des Bestbieters von diesem Erläuterungen und Bestätigungen verlangt werden. Das, obwohl auch im wettbewerblichen Dialog der Grundsatz gilt, dass die einlangenden Angebote nach objektiven Kriterien vergleichbar sein müssen und Erläuterungen nach der Angebotsbewertung, bei welcher das betreffende Angebot verbindlich und für den Auftraggeber klar verständlich sein muss und gemäß Art 29 (6) RL 2004/18 alle erforderlichen Einzelheiten enthalten muss, überflüssig sein sollten. Der Grund, warum gerade im wettbewerblichen Dialog ein solches Vorgehen vorgesehen wurde, ist nicht eindeutig erkennbar. Um den Grundsatz der Gleichbehandlung und der Transparenz zu wahren, sollten solche Erläuterungen und Bestätigungen in einem Stadium erfolgen, in dem den anderen Bietern noch Rechtsmittel zur Verfügung stehen. Weiters fehlt eine Eingrenzung, worauf sich diese Erläuterungen und Klarstellungen beziehen dürfen und wie andere Bieter davon – zur Wahrung ihrer Rechte - ausreichend Kenntnis erlangen.

Wir schlagen vor, in Form einer interpretierenden Mitteilung klarzustellen, in welchem – nur sehr eingeschränkten – Umfang solche nachträglichen Erläuterungen und Bestätigungen zulässig sind, und dass sichergestellt sein muss, dass solche Erläuterungen und Bestätigungen nur unter voller Wahrung eines effektiven vergaberechtlichen Rechtsschutzes der anderen Bieter zulässig sind.

Widerruf möglich?

Die RL lässt offen, unter welchen Voraussetzungen ein Auftraggeber einen wettbewerblichen Dialog abbrechen bzw seine Einladung widerrufen kann. Da nur „besonders komplexe“ Projekte (wie insbesondere ÖPPs) für den wettbewerblichen Dialog zugelassen werden, besteht die Möglichkeit, dass ein Auftraggeber im Verlauf eines wettbewerblichen Dialogs feststellt, dass keine der angebotenen Lösungen für ihn adäquat ist. Da gerade wettbewerbliche Dialoge hohen Aufwand für alle Beteiligten bedeuten werden, ist diese Frage von Relevanz.

Wir regen daher an, durch eine interpretierende Mitteilung klarzustellen, unter welchen (allgemeinen) Voraussetzungen ein Auftraggeber den wettbewerblichen Dialog abbrechen kann.

Risikoverteilung

Wesentlich für die ökonomische Attraktivität eines ÖPP aus Sicht der privaten Partner ist die Verteilung der Risiken zwischen der öffentlichen Hand einerseits und ihren privaten Partnern andererseits. Je früher private Partner in ein Projekt eingebunden werden, desto größer ist die Tendenz, ihnen mehr und mehr Projektrisiken zu übertragen (zB Genehmigungsrisiken). Es kann daher nicht ausgeschlossen werden, dass Auftraggeber mit wenig ÖPP-Erfahrung den wettbewerblichen Dialog als Rechtfertigung für die Überwälzung von Risiken verwenden könnten, die vom Bieter trotz früherer Einbindung nicht kontrollierbarer oder nicht kalkulierbar sind. Entscheidend für den Erfolg des wettbewerblichen Dialogs wird das Verständnis der Auftraggeber sein, dass eine frühere Einbindung der privaten Unternehmen in die Lösungsfindung zwar erhebliche Synergien und Kostenersparnisse bringen kann, gewisse Risiken, wie insbesondere das Genehmigungsrisiko, dadurch aber nur wenig kalkulierbarer und beherrschbarer werden und daher vom Privaten auch weiterhin kaum übernommen werden können.

I.1.2. Partnerschaft auf Vertragsbasis: als Konzession eingestufte Beauftragung

4. **Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?**
5. **Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?**
6. **Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?**
7. **Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?**

Zu den Fragen 4 bis 7:

Aufgrund der regelmäßig hohen Komplexität von ÖPPs handelt es sich bei ÖPP-Projekten meist um gemischte Vorhaben. Eine klare Abgrenzung zwischen Auftrag und Konzession einerseits aber auch zwischen Bau- und Dienstleistungskonzession andererseits kann daher schwierig sein. Wesentlich für einen effektiven Wettbewerb bei ÖPP-Projekten ist aber eine klare rechtliche Einschätzbarkeit des Projekts und des damit zusammenhängenden Rechtsschutzes der Bieter. In Form einer interpretierenden Mitteilung sollte die Kommission – dem Beispiel von Eurostat mit seiner Mitteilung vom 11.2.2004 folgend - klarstellen, wie die am Markt gegenwärtig üblichsten ÖPP Modelle vergaberechtlich einzustufen sind. Als Beispiel seien sogenannte „Verfügbarkeitsmodelle“ genannt, die wir vorschlagen, pauschal als Konzessionen einzustufen (s. schon zu Frage 2).

Entscheidend ist aus unserer Sicht nicht eine Gleichschaltung von Konzessionen und Aufträgen, sondern Rechtssicherheit durch eine Präzisierung der Abgrenzungskriterien zwischen den einzelnen Kategorien. Die Mitteilung der Kommission zu Auslegungsfragen im Bereich Konzessionen (2000/C 121/02) stellt zwar klar, dass die Tragung des finanziellen Nutzungsrisikos durch den Konzessionär wesensimmanent für eine Konzession ist. Zahlt der Staat für die Leistung des Konzessionärs, schadet das noch nicht, solang das sich aus der Nutzung ergebende Risiko nicht beseitigt wird. Wie das beim Konzessionär verbleibende Risiko zu quantifizieren ist (Geld?) und ab wann der Staat dieses Risiko überwiegend trägt, ist offen und verursacht in der Praxis Abgrenzungsprobleme.

I.2. Fragen im Zusammenhang mit der Auswahl eines Wirtschaftsteilnehmers im Rahmen einer privat initiierten ÖPP

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

In Österreich bestehen keine besonderen Regeln für privat initiierte ÖPPs, „Aufrufe zu privaten Initiativen“ sind der österreichischen Vergaberechtsordnung daher unbekannt.

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der

Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

In Österreich bestehen keine besonderen Regeln für privat initiierte ÖPPs, dh weder spezielle Verfahrensregelen noch Bestimmungen, die solch privat initiierte Projekte speziell fördern würden. In der Regelung des § 21 Abs 3 BVergG 2002, wonach ein Unternehmen, das an der Erarbeitung der Ausschreibungsunterlagen auch nur mittelbar beteiligt war, von der Teilnahme an der Ausschreibung unter Umständen auszuschließen ist, wird in der Praxis oftmals sogar eine abschreckende Regelung gegen solche privaten Initiativen gesehen.

Private Initiativen für die Lösung öffentlicher Aufgabenstellungen in Form von ÖPPs sind aus Sicht von 3P jedenfalls zu unterstützen. Aus österreichischer Sicht könnte sehen wir den wettbewerblichen Dialog bereits als ersten Schritt in diese Richtung, da der Auftraggeber aufgrund einer privaten Initiative einen wettbewerblichen Dialog einleiten und den Lösungsvorschlag dort mit anderen Bietern umfassend erörtern und mit anderen Lösungsvorschlägen vergleichen kann. Problematisch könnte in diesem Zusammenhang aber die Möglichkeit sein, ganze Lösungsvorschläge für vertraulich zu erklären (siehe Art 29 (3)). Im Interesse der Wahrung des vergaberechtlichen Grundsätze könnte erwogen werden, vorzusehen, dass auf die private Initiative in der Einladung zum wettbewerblichen Dialog oder der Verdingungsunterlage hingewiesen werden muss.

I.3. Die Phase nach der Auswahl des privaten Partners

I.3.1. Vertraglicher Rahmen

10. Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

12. Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Interventions- oder Step-In-Klauseln genauso wie Revisionsklauseln sind den Bietern zwar im Vergabeverfahren bekannt, können aber so weitgehende Gestaltungsmöglichkeiten eröffnen, dass ein fairer Bieterwettbewerb gefährdet ist oder unkalkulierbare Risken überwälzt werden. Andererseits sind sie für günstige Finanzierungskonditionen wichtig. Weniger problematisch sind in diesem Zusammenhang Step-In-Klauseln, weil diese idR die bestehenden Leistungspflichten nicht ändern, solange die Qualifikation des eintretenden Partners gewährleistet ist. Aber auch die Probleme im Zusammenhang mit Revisionsklauseln erscheinen mit den bestehenden Mitteln des Vergaberechts lösbar, insbesondere mit den bestehenden Vorschriften über die Kalkulierbarkeit von Risiken, die der Auftraggeber auf die Bieter überwälzt, mit den Kriterien für die Vergleichbarkeit der Angebote und mit dem Rechtsrahmen über Optionen. Abgeleitetes Gemeinschaftsrecht zu vertraglichen Aspekten erscheint deshalb nicht erforderlich.

I.3.2. Die Vergabe von Unteraufträgen für bestimmte Aufgaben

15. Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Nach unserer Ansicht weisen ÖPP-Modelle keine spezielle Affinität zu Problemen mit Subvergabe auf.

16. Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

17. Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Subaufträge sind geeignet, KMU’s einen Zugang zu öffentlichen Aufträgen zu verschaffen, weil sie bei Projekten, die für ÖPP-Konstruktionen geeignet sind, für eine Mitwirkung in einem Bieterkonsortium zu klein sind. In wie weit also, darf ein Auftraggeber Subvergaben verlangen?

Ein weiterer Aspekt der Subvergabe liegt im Risiko des Auftraggebers, dass die Subauftragnehmer wesentliche Leistungsteile besorgen sollen, ihre Aufgabe aber schlecht erfüllen. Dann stehen ihm nur Ansprüche gegen den Hauptauftragnehmer zur Verfügung, der aber den mangelhaften Leistungsteil selbst nicht besorgen kann. Unlängst hat der EuGH[1] Aussagen getroffen, in wie weit ein Auftraggeber Subvergaben verbieten darf, damit aber bei weitem nicht alle Streitfragen geklärt.

Wichtig sollte bei Subvergaben nicht sein, dass der Hauptauftragnehmer mit Subauftragnehmern seine Eignung nachweisen kann, wie bisher in der Rechtsprechung des EuGH überbetont. Vielmehr sind die Interessen von Auftraggebern und Auftragnehmern in den Vordergrund zu stellen, dass auf Subunternehmer zurückgegriffen werden darf/muss, um preislich kompetitive Angebote legen zu können, und gleichzeitig eine ordnungsgemäße Erfüllung zu sichern. Das beinhaltet, dass die Zahl der Subauftragnehmer und Art sowie Umfang der auf sie übertragbaren Leistungsteile sachgerecht limitiert werden dürfen. Insoweit besteht Liberalisierungsbedarf.

Was oben über Revisions- und Step-In-Klauseln hinsichtlich der Hauptauftragnehmer gesagt wurde, gilt auch hinsichtlich der Subauftragnehmer.

II. INSTITUTIONALISIERTE ÖPP

II.1. Einrichtung einer Partnerschaft durch die Gründung eines gemeinsamen Adhoc-Wirtschaftsgebildes des öffentlichen und des privaten Sektors

II.2. Übernahme der Kontrolle über ein öffentliches Unternehmen durch einen privaten Akteur

18. Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

In Österreich gibt es bis dato wenige institutionalisierte ÖPP von Bedeutung. Zu nennen sind u.a. das LKW-Mautsystem (Betreibermodell) und die 2004 erteilte Konzession für ein Behörden Bündelfunksystem (BOS-Austria). Im kommunalen Bereich sind immer wieder Betreibermodelle für Abfall- und Abwasserentsorgung, das Management von Krankenanstalten oder die Erbringung von EDV-Dienstleistungen ein Thema.

Generell fällt auf, dass bezüglich der rechtlichen Rahmenbedingungen für institutionalisierte ÖPP relativ große Rechtsunsicherheit herrscht. Das betrifft insbesondere die vergaberechtlichen Bestimmungen, die auf die Besonderheiten institutionalisierter ÖPP nicht Bedacht nehmen. Das betrifft z.B.

- die Veräußerung von Beteiligungen der öffentlichen Hand im Rahmen eines Vergabeprojektes (wenn eine ÖPP durch die Veräußerung von Anteilen an einer Gesellschaft erfolgen soll, die bisher im alleinigen Eigentum der öffentlichen Hand gestanden ist) – die vergaberechtlichen Bestimmungen betreffen nur die Vergabe von Aufträgen, hier kommt es jedoch gleichzeitig zu einer „Teilprivatisierung" und somit zu einer Übertragung einer Vielzahl von Rechten und Pflichten; Soweit nämlich bestehende öffentliche Wirtschaftskörper mit Konzessionen oder schon (in house) erteilten Aufträgen von Privaten Bietern übernommen werden, könnte das Vergaberecht umgangen werden. Schließlich verfügen diese öffentlich beherrschten Wirtschaftskörper über Aufträge, die sonst ausgeschrieben werden müssten. Notwendig sind Klarstellungen, wann bloß die Privatisierungsgrundsätze des Beihilfenrechts anzuwenden sind (wo der enthaltene Auftragsbestand ohnedies in die Unternehmensbewertung einfließt) und wo die Vergaberegeln. Insbesondere ist nicht hinreichend klar, wie stark der Konnex zwischen der Gründung/Ausgliederung dieses

Wirtschaftskörpers einerseits und einem ÖPP-Projekt andererseits sein darf, damit keine Umgehung des Vergaberechts vorliegt.

- die Änderung der Beteiligungsverhältnisse an der ÖPP auf Seite des Auftragnehmers, die nach Auftragserteilung erforderlich sein könnte (z.B. aufgrund eines „Step-in-Rights“ einer finanzierenden Bank) – hier würde ein nachträglicher Wechsel des Auftragnehmers vorliegen;
- generell die Abgrenzung zwischen Projektgesellschaft (institutionalisiertem ÖPP) und Gesellschafter derselben, zumal letztere üblicherweise ursprünglich als Bieter auftreten, die Ausführung dann jedoch durch die Projektgesellschaft erfolgt;
- die Möglichkeit aufgrund einer Option die 100% Beteiligung an der ÖPP wieder an sich zu ziehen – generell stellt sich nach dem derzeitigen Vergaberegime die Frage, in welchem Maße der Auftraggeber Optionen vorsehen darf;
- die Frage, unter welchen Umständen eine in-house Vergabe vorliegt;
- die Frage, inwiefern eine ÖPP durch die Beteiligung der öffentlichen Hand möglicherweise selbst wieder öffentlicher Auftraggeber wird;

Diese Rechtsunsicherheit kann auch zu einer fehlerhaften Anwendung der Vergaberegeln durch öffentliche Auftraggeber führen. Um dieses Risiko zu vermeiden, gibt es Tendenzen bei öffentlichen Auftraggebern innovative Lösungsansätze für ÖPP erst gar nicht in Betracht zu ziehen. In gewissen Fällen kommt es sogar dazu, dass ÖPP aufgrund vergaberechtlicher Überlegungen strukturiert werden, um sie an die vergaberechtlich vorgesehenen Auftragsarten anzupassen. Es sollte daher eine Klarstellung getroffen werden, die die erforderliche Flexibilität für die Anwendung unterschiedlicher ÖPP-Strukturen gewährt.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Wie zu Frage 18 bereits ausgeführt, wäre eine Initiative zur Klärung der betreffenden Verpflichtungen wichtig.

Auch hinsichtlich institutionalisierter ÖPP’S sind insbesondere folgende Aspekte zu berücksichtigen(s. auch unter Frage 18)

- inwiefern überhaupt eine Veräußerung von Anteilen im Rahmen einer Teilprivatisierung vergabepflichtig ist, selbst wenn diese die Erbringung von Leistungen an die öffentliche Hand impliziert;
- Bewertungsmechanismus der Angebote, wenn die Übertragung von Gesellschaftsanteilen an der ÖPP mit der Erbringung von Leistungen an die öffentliche Hand verbunden ist;
- die Veränderung der Beteiligungsverhältnisse an der ÖPP nach Auftragserteilung;
- Verhältnis Projektgesellschaft zu öffentlichem Auftraggeber und zu Gesellschaftern derselben;
- unter welchen Umständen eine in-house Vergabe vorliegt;
- inwiefern die ÖPP selbst als öffentlicher Auftraggeber gilt;
- spezielles Vergabeverfahren für derartige ÖPP, u.U. in Form eines wettbewerblichen Dialogs mit nachgeschalteter Vergabe im Verhandlungsweg (ähnlich einem Verhandlungsverfahren, das jedoch derzeit nur auf die in den Vergaberichtlinien vorgesehenen Auftragkategorien anwendbar ist).

Hinsichtlich der Form einer solchen Initiative gilt, dass die Verbreitung von ÖPP bereits gemeinschaftsweit eingesetzt hat. Je rascher eine Maßnahme kommt, desto hilfreicher erscheint sie aus momentaner Sicht. Also befürwortet 3P interpretative Klarstellungen der Kommission, va in Form von Mitteilungen. Neue Rechtsakte sollten nur erlassen werden, wenn unbedingt notwendig.

III. Allgemein und unabhängig von den im Grünbuch aufgeworfenen Fragen:

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Wie mehrfach betont, ist Rechtssicherheit und Klarheit für die Verbreitung von ÖPP's von entscheidender Bedeutung und zwar aus allen Blickwinkeln. Wie ebenfalls erwähnt, wäre eine integrierende Betrachtung/eine Zusammenschau, die über den Bereich des Vergaberechts hinaus den status quo aller relevanten Bereiche des Gemeinschaftsrecht aus der Sicht von ÖPP berücksichtigt und Widersprüche beseitigt, in einer ersten Phase vordringlicher als eine Neukodifizierung.

Neben dem Vergaberecht stellen sich den beteiligten Parteien bei ÖPP-Projekten aber auch zahlreiche weitere komplexe rechtliche Fragen. Aspekte des Wettbewerbsrechts sind ebenso zu beachten wie das Regime des Beihilfenrechts und Förderungen. Wünschenswert und für ÖPP jedenfalls förderlich wäre eine umfassende Mitteilung der Kommission über die wesentlichen gemeinschaftsrechtlichen Fragestellungen bei ÖPP. Dadurch wäre eine erhöhte Rechtssicherheit (und damit gesteigerter

Wettbewerb) nicht nur bei der Vergabe sondern auch bei der Umsetzung von ÖPPs gewährleistet.

21. Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

ÖPP stellen eine Möglichkeit zur effizienteren und kostengünstigeren Umsetzung von Investitionsprojekten dar. Auf Grund der geringen Erfahrung in einzelnen Mitgliedstaaten besteht Unsicherheit bei der Abwicklung von ÖPP-Projekten. Der Aufbau eines Netzwerkes wird sicher dazu beitragen, diese Unsicherheiten abzubauen und die Umsetzung von Investitionen durch ÖPP Projekte voranzutreiben. Unabhängige Initiativen, welche die Bedürfnisse öffentlichen Hand genauso berücksichtigen wie die Interessen der Wirtschaftsteilnehmer, können einen Beitrag leisten.

INDUSTRIELLEN VEREINIGUNG

MARKT-D1-PPP@cec.eu.int

Wien, am 23. Juli 2004

Stellungnahme zum Grünbuch der Europäischen Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen KOM (2004) 327 endg

Die Industriellenvereinigung dankt für die Übermittlung des Grünbuchs der Europäischen Kommission zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen und erlaubt sich, hiezu folgende Stellungnahme abzugeben bzw. die ihm Rahmen des Grünbuches gestellten Fragen wie folgt zu beantworten:

Grundsätzliches

Die rein vergaberechtlichen Fragestellungen bilden bei der Realisierung von ÖPP-Projekten nur einen Teilaspekt der rechtlichen Betrachtung. Nach den bisherigen Erfahrungen ist festzuhalten, dass auch die Anforderungen aus anderen Rechtsgebieten, die noch aus der tradierten Abgrenzung zwischen hoheitlichem und privatwirtschaftlichem Handeln der öffentlichen Hand resultieren, eine Umsetzung von ÖPP in der Praxis erschweren. Über Erfolg oder Scheitern von ÖPP-Projekten entscheidet auch die Fähigkeit zur Auflösung steuer-, beihilfen-, gesellschafts-, arbeits-, verfassungs- und verwaltungsrechtlicher Fragestellungen.

1. **Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?**

In Österreich gibt es – wie auch in anderen EU-Mitgliedstaaten – keine gesetzliche Definition von ÖPP. Charakteristisch für alle ÖPP-Modelle ist, dass es sich im Unterschied zur klassischen öffentlichen Auftragsvergabe nicht um eine Auftraggeber-Auftragnehmer bzw Kunde-Dienstleister Beziehung handelt, sondern dass die öffentliche Hand mit privaten Akteuren echte Kooperationen zum beiderseitigen Nutzen eingeht.

Ungeachtet der Tatsache, dass für jedes ÖPP ein Bündel von speziell auf das jeweilige Projekt zugeschnittenen Vertragswerken zu erstellen ist, lassen sich ÖPP-Modelle typischerweise in drei Kategorien unterteilen:

- Betreibermodelle
- Konzessionsmodelle
- Institutionalisierte Kooperationsmodelle: Beteiligung der öffentlichen Hand und der Privatwirtschaft an einer gemeinsamen gemischt-wirtschaftlichen Gesellschaft.

Alle drei Kategorien von ÖPP-Modellen wurden in Österreich in der Vergangenheit bereits verwirklicht.
Es gibt im öffentlich-rechtlichen Bereich Sondergesetze, die ausdrücklich den Gebietskörperschaften bzw. den öffentlichen Unternehmen die Umsetzung von ÖPP erlauben. (z.B ASFINAG-ErmächtigungsG, ÖBB-StrukturG)

2. Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Es ist zuzustimmen, dass die Durchführung eines Vergabeverfahrens zur Auswahl des privaten Partners gerade bei sehr komplexen ÖPP-Projekten öffentliche Auftraggeber vor erhebliche Probleme stellt. Bei komplexen ÖPP Projekten wurde daher schon bisher auf das Instrument des Verhandlungsverfahrens mit Bekanntmachung zurückgegriffen und mit den ausgewählten Bewerbern ein konkretes ÖPP-Modell als ein Paket an langfristigen Leistungsverträgen (Errichtung, Betrieb, Finanzierung etc) ermittelt.

Das Hauptproblem bei der Vergabe komplexer Beschaffungsvorhaben wie insbesondere ÖPP kann auch das Verfahren des wettbewerblichen Dialogs nicht lösen: Jedenfalls erfordert die Durchführung – ob im klassischen Verhandlungsverfahren oder nach dem neuen Verfahren des wettbewerblichen Dialogs – vom öffentlichen Auftraggeber eine klare Beschreibung seiner Beschaffungsziele, somit wenigstens eine eindeutige funktionale Leistungsbeschreibung in Form einer konkreten Aufgabenstellung, die den Zweck der Leistung und die an die Leistung gestellten Anforderungen des Auftraggebers in technischer, wirtschaftlicher und unter Umständen gestalterischer Hinsicht klar erkennen lässt.

Neu am wettbewerblichen Dialog ist, dass die Phase der Herausarbeitung des Leistungsgegenstandes im Wege von Verhandlungen nunmehr explizit als eigene Dialogphase des Verfahrens gestaltet wurde und das „Last and Best Offer“ aller Bieter in der daran anschließenden Angebotsphase, an der alle Bewerber teilnahmeberechtigt sind, ebenfalls institutionalisiert wird.
Für den Bieter birgt der wettbewerbliche Dialog die Gefahr, dass der öffentliche Auftraggeber das substanziell beste Know-How eines (oder mehrerer) Marktteilnehmer an sich zieht, um die so ermittelte Ideallösung in der anschließenden Angebotsphase der „billigsten“ Realisierung zuzuführen.

Kritisch betrachtet werden muss auch die Möglichkeit des öffentlichen Auftraggebers mit dem bereits gekürten Bestbieter „Nachverhandlungen“ in gewissem Umfang führen zu können (Art 29 Abs 7 EU-Vergaberichtlinie 2004/18/EG). Diese Möglichkeit darf nicht dazu führen, dass nach Abschluss der Bestbieterermittlung in intransparenter Weise für die Mitbewerber vertragliche Anpassungen vorgenommen werden, die – wären sie dem Leistungswettbewerb aller Bieter unterzogen worden – zu einer Änderung der Bieterreihung geführt hätten.
Unklar ist aus derzeitiger Sicht, wie im Rahmen des wettbewerblichen Dialogs eine nicht diskriminierende Festlegung der Zuschlagskriterien erfolgen soll.

Grundsätzlich sollte für ÖPP die freie Wahl zwischen dem offenen, dem nicht offenen und den Verhandlungsverfahren bzw. dem wettbewerblichen Dialog möglich sein.

3. Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Während vergaberechtliche Verstöße des öffentlichen Auftraggebers, darunter insbesondere die falsche Wahl der Verfahrensart gemäß den EU-Rechtsmittelrichtlinien vor den nationalen Vergabekontrollinstanzen bekämpft werden können, bleibt effizienter Rechtsschutz im Fall der gänzlichen Missachtung des Vergaberechts („Freihandvergabe“ bzw. „Direktvergabe“) durch den Auftraggeber weitgehend versagt. Das Problem der Rechtsschutzlücke bei Freihandvergaben stellt sich nicht nur bei der Vergabe von ÖPP, ist hier jedoch von besonderer Tragweite, da typischerweise langfristige Verträge abgeschlossen werden.
Zwar kann nach dem österreichischen Vergaberecht ein Bieter im Fall einer zu Unrecht erfolgten Direktvergabe (Freihandvergabe) vor der zuständigen Vergabekontrollinstanz den Antrag auf Feststellung stellen, dass die freihändige Vergabe rechtswidrig war und in Verstoß gegen das EU-Vergaberecht erfolgte. Der Eingriff in den abgeschlossenen Vertrag ist aber auch durch einen positiven Feststellungsbescheid nicht mehr möglich. Auch der EuGH geht in seiner Rechtsprechung von der Bestandskraft unter Missachtung des Vergaberechts geschlossener Verträge aus.

Weiters sind die Abgrenzungsfragen zwischen Bau- und Dienstleistungsaufträgen bzw. Bau- und Dienstleistungskonzessionen nach wie vor nicht klar geregelt. Generell kollidiert die erwünschte frühzeitige Einbindung von Privaten zur Optimierung des ÖPP Projektes immer wieder mit dem Interesse des Auftraggebers, erst dann zu vergeben, wenn die Leistungsbeschreibung genau präzisiert ist, aber auch mit dem Interesse des Auftragnehmers, keine Genehmigungsrisken übernehmen zu wollen.

4. Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

In Österreich wurden in der Vergangenheit mehrere große Dienstleistungskonzessionsprojekte. Seit Inkrafttreten des Bundesvergabegesetzes 2002 in Österreich (1.9.2002) unterliegt die Vergabe einer Dienstleistungskonzession gemäß der

Rechtsprechung des EuGH einem Vergaberegime „light“: Die öffentlichen Auftraggeber sind zur öffentlichen Bekanntmachung und zur Einhaltung der Grundsätze des Vergaberechts verpflichtet, der Rechtsschutz ist in der Regel nicht vor den eigens dafür eingerichteten Vergabekontrollbehörden, sondern der ordentlichen Gerichtsbarkeit angesiedelt.

5. Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Der Wettbewerb bei ÖPP-Projekten in der EU ist sehr intensiv. Ohne Kenntnisse der Bedingungen vorort ist jedoch eine Teilnahme am Wettbewerb wenig erfolgversprechend. Wichtig erscheint vielmehr, dass für Vergabe- und wettbewerbsrechtliche Verstöße einen raschen und wirksamen Rechtschutz gibt.

6. Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Ein gemeinschaftsrechtlicher Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe ist nicht erforderlich. Jedoch sollte die Mitteilung der Kommission zu Auslegungsfragen im Bereich Konzessionen im Gemeinschaftsrecht in einigen Punkten noch Präzisierungen erfahren. So wurde in den neuen EU-Vergaberichtlinien eine Definition der Dienstleistungskonzession eingefügt. Aus dieser Definition geht jedoch gerade jenes Tatbestandselement, dass nach der Mitteilung der Kommission ausschlaggebend für die Abgrenzung zwischen Dienstleistungsauftrag und Dienstleistungskonzession ist, nämlich die Tragung des wirtschaftlichen Risikos durch den Konzessionsnehmer, nicht explizit hervor.

Fraglich ist auch, ob Nutznießer einer Dienstleistungskonzession die Allgemeinheit sein muss, oder ob auch die Vergabe einer Dienstleistungskonzession für einen beschränkten Empfängerkreis bzw zugunsten der öffentlichen Hand selbst denkbar ist, sofern nur eine Risikotragung durch den Konzessionsnehmer erfolgt.

7. Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Ein eigenes Gesetzgebungsvorhaben für ÖPP wird nicht für sinnvoll erachtet.

8. Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des

ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

9. Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Auch privat initiierte ÖPP sind ihrem tatsächlichen Inhalt nach entweder als öffentlicher Auftrag oder aber als Dienstleistung- bzw. Baukonzession zu qualifizieren. Entsprechend muss der Aufruf zur Teilnahme am Vergabeverfahren von den Vergabestellen im EU-Amtsblatt wie die Vergabe jedes anderen öffentlichen Auftrags bekannt gemacht werden.

Geht die Initiative für ein ÖPP von einem privaten Wirtschaftsteilnehmer, der selbst als Partner der öffentlichen Hand an der Realisierung des von ihm entwickelten Projektes interessiert ist, so stellt sich das Problem der Vorarbeitenproblematik für diesen Wirtschaftsteilnehmer. Die Vergabestelle wird in der nachfolgenden Ausschreibung darauf achten müssen, dass allfällige Wettbewerbsvorteile dieses Unternehmens in der Projektierungsphase neutralisiert werden, damit sich das initiierende Unternehmen selbst auch an der Ausschreibung beteiligen kann, ohne dass gegen den Grundsatz der Bietergleichbehandlung verstoßen wird.

Privat initiierte ÖPP haben, sofern es sich um öffentliche Aufträge handelt den selben Regeln zu unterliegen wie von der öffentlichen Hand initiierte ÖPP. Eine gesonderte Regelung in Unterscheidung „öffentlich initiierte" und „privat initiierte" ÖPP ist abzulehnen.

10. Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Sofern in der laufenden Abwicklung eines ÖPP Projektes zwischen den Vertragsparteien Vertragsanpassungen vorgenommen werden, die grundsätzlich eine Neuausschreibungspflicht auslösen müssten, wird davon der Mitbewerber keine Kenntnis erlangen und daher auch nicht mit vergaberechtlichen Mitteln dagegen vorgehen können. Entsprechend gibt es auch nur wenige Entscheidungen der Vergabekontrollbehörden im Zusammenhang mit Vertragsanpassungen.

Unbestritten muss im Gegenzug jedoch gerade bei komplexen ÖPP Projekten den Vertragsparteien die Möglichkeit zur Vertragsanpassung innerhalb der bereits in den Ausschreibungsunterlagen vorgezeichneten Grenzen möglich sein (ausschreibungsneutrale derivative Vertragsanpassung wie Preisgleitklauseln, Verlängerungsoptionen etc).

11. Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

13. Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Es ist vielfach üblich, dass sich die öffentliche Hand im Rahmen von ÖPP das Recht zur außerordentlichen Kündigung des Vertrages bei Eintritt bestimmter Umstände (z.B. Strukturänderungen des privaten Partner o.ä.) oder andere Kontrollmöglichkeiten bzw. einseitige Möglichkeiten zum Vertragseingriff vorbehält.

Während des laufenden Vergabeverfahrens können derartige in den Ausschreibungsunterlagen enthaltene Klauseln von den Bietern im Wege eines Nachprüfungsverfahrens vor den österreichischen Vergabekontrollinstanzen bekämpft werden, wenn dem Auftragnehmer durch sittenwidrige Klauseln ein unkalkulierbares Risiko auferlegt wird oder es sich um diskriminierende Bestimmungen handelt.

Nach Abschluss des Vergabeverfahrens sind allfällige sittenwidrige oder gröblich benachteiligende Klauseln in den Ausführungsbedingungen eine Angelegenheit der Vertragsabwicklung zwischen Auftraggeber und Auftragnehmer, welche mit Mitteln des nationalen Zivilrechts zu lösen sind.

12. Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Es sind auch aus der vergaberechtlichen Rechtsprechung in Österreich zahlreiche Fälle bekannt, in denen sich öffentliche Auftraggeber unzulässiger oder diskriminierender Zuschlagskriterien bedient haben bzw. grundsätzlich tauglichen Zuschlagskriterien bei der Durchführung der Bewertung der Angebote unzulässige oder diskriminierende Bedeutung beigemessen haben.

Typische Fehler betreffen die Verwendung von Eignungskriterien als Zuschlagskriterien, wobei insbesondere die Verwendung von Referenzen als Zuschlagskriterium eine vergaberechtliche Grauzone darstellt. Probleme auch oft die Bewertung von vergaberechtlich grundsätzlich zulässigen subjektiven Kriterien (z.B. Benutzerkomfort, Ästhetik etc) durch mangelnde Sachkunde der bewertenden Vergabekommission, bloße Bewertung im Schulnotensystem ohne verbale Begründung, willkürliche Elemente bei der Punktevergabe. Weitere Schwierigkeiten ergeben sich durch die fehlende Transparenz der Zuschlagskriterien oder der Bewertungsmethoden.

14. Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Vertragliche Bestimmungen in ÖPP-Verträgen und deren Zulässigkeitsgrenzen sind Angelegenheit der jeweiligen nationalen Zivilrechte. Eine Regelung auf Gemeinschaftsebene ist nicht erforderlich.

Generell ist bei ÖPP die Wechselwirkung zwischen den betroffenen Rechtsmaterien zu beachten. Die Anforderungen des Vergaberechts sind mit denen des Beihilfenrechts, des Vertragsrechts, der Finanzierungsbedingungen, der EUROSTAT-Regeln und dem öffentlich-rechtlichen Rahmen in den einzelnen Sektoren in Einklang zu bringen. Gerade die interdisziplinäre Betrachtung wäre nicht nur auf der Ebene der Mitgliedsstaaten, sondern auch auf der EU-Ebene eine dringende Aufgabe.

15. **Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?**
16. **Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eine Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?**
17. **Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?**

Die Spielregeln für Unteraufträge sind klar definiert. Ausführlichere Regeln sind nicht notwendig.

Eine ausdrückliche Klarstellung im Rahmen einer auslegenden Mitteilung der Kommission wäre sinnvoll, dass sowohl die technische wie auch die finanzielle und wirtschaftliche Leistungsfähigkeit durch Beziehung eines Subunternehmers substitutiert werden kann, sofern der Bieter bereits mit Abgabe seines Angebotes verbindlich nachweist, dass ihm die Mittel des Subunternehmers im Auftragsfall tatsächlich zur Verfügung stehen werden.

18. **Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?**

Der typische Fall eines institutionalisierten ÖPP ist die Gründung eines gemischt-wirtschaftlichen Unternehmens, an dem sowohl die öffentliche Hand als auch der private Partner beteiligt sind. Hier stellt sich die nach wie vor ungelöste Frage der Reichweite des In-house-Privilegs. Selbst wenn der Vorgang der Gesellschaftsgründung, in die gleichzeitig die Vergabe eines initialen öffentlichen Auftrages an die Gesellschaft verbunden war, EU-weit öffentlich ausgeschrieben wurde, stellt sich die Frage, ob die öffentliche Hand als Gesellschafter ausschreibungsfrei Aufträge an ihr Tochterunternehmen vergeben darf und bis zu welcher Grenze die Gesellschaft ihre Leistungen auch am Markt anbieten darf, ohne dass das In-house-Privileg verloren geht.

Während bei 100% Eigengesellschaften und gemischt-öffentlichen Unternehmen das Vorliegen eines In-house-Geschäfts in der Rechtsprechung bereits ausdrücklich bejaht wurde, bestehen zur Frage der In-house-Vergabe an gemischt-wirtschaftliche Unternehmen noch keine positiven Entscheidungen der Vergabekontrollinstanzen. Das vorliegende Grünbuch verweist zwar allgemein auf den Ausnahmetatbestand des In-house-Privilegs und dessen Voraussetzungen, äußert sich aber nicht näher zu deren Grenzen und Reichweite.

Leider hat die Regelung der In-house-Vergabe auch keinen Eingang in die neuen EU-Vergaberichtlinien gefunden. Zur Beseitigung dieser Rechtsunsicherheit sollte die Kommission eine auslegende Mitteilung veröffentlichen.

19. Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Ein gemeinschaftlicher Rechtsakt ist nicht erforderlich. Die Kommission sollte eine auslegende Mitteilung erlassen, in der dargestellt wird, in welchen Fällen die Gründung eines institutionalisierten ÖPP ausschreibungspflichtig ist und in welchen Fällen eine In-house-Vergabe möglich ist.

20. Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Behindert werden ÖPP-Modelle oft nicht nur durch vergaberechtliche Notwendigkeiten, sondern auch durch Rechtsprobleme in anderen Bereichen. U.a. können ÖPP-Modelle z.B. mehrwertsteuerrechtlich unerwünschte Konsequenzen nach sich ziehen (Vorsteuerabzug).

Behinderungen für ÖPP ergeben sich weiters durch

- zu zögerliche Liberalisierungen und Marktöffnungen in bestimmten Sektoren, z.B. Schienenverkehr
- finanzielle Restriktionen, z.B. bei der Schieneninfrastruktur
- mangelnde Vernetzung der verschiedenen nationalen ÖPP-Initiativen über die Kommission
- offene Fragen beim Wachstums- und Stabilitätspakt bezüglich der Kriterien Budgetdefizit und öffentliche Verschuldung.

21. Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Das sog. Verfügbarkeitsmodell (Konzessionär trägt Planungs- und Ausführungsrisken, nicht aber das Nutzungs- bzw. Frequenzrisiko) ist im Hinblick auf die Risikoverteilung und Bankability zurzeit das am besten nutzbare Modell mit den geringsten privaten Finanzierungskosten. Daher könnte es insbesondere auch im Verkehrsinfrastrukturbereich forciert Anwendung finden.

22. Denken Sie dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

In einigen Mitgliedstaaten wird versucht, eine wissenschaftliche Begleitung von ÖPP Projekte und die Evaluierung von Best-Practice-Modellen durchzuführen, da insbesondere in einer umfassenden Wirtschaftlichkeitsprüfung der Schlüssel zum Erfolg von ÖPP liegt. Die Koordinierung eines derartigen Netzwerks unter Einbindung der Auftraggeber- und der Auftragnehmerseite wäre wünschenswert.

Wir ersuchen um Berücksichtigung unserer Stellungnahme in der weiteren Bearbeitung.

Mit freundlichen Grüßen
Industriellenvereinigung

An die Europäische Kommission

Konsultation „Grünbuch zu öffentlich-privaten Partnerschaften“

C 100 2/005
B-1049 Brüssel
MARKT-D1-PPP@cec.eu.int

Wien, am 15. Juli 2004
Zl.: 035-1/150704/Dr

Konsultation „Grünbuch zu öffentlich-privaten Partnerschaften“

Sehr geehrte Damen und Herren!

Seitens des Österreichischen Gemeindebundes erlauben wir uns zum oben erwähnten Grünbuch folgende Stellungnahme abzugeben:

Die so genannten gemischten Partnerschaften aus privaten Investoren und der öffentlichen Hand (Public-Private-Partnerships/PPP) haben in den letzten Jahren an Bedeutung gewonnen. Sie sind vielfach durchaus geeignet, den öffentlichen Interessen zur dauerhaften und flächendeckenden Leistung in entsprechender Qualität und zu einem angemessenen Preis zu entsprechen. Die Europäische Kommission will daher offenbar EU-weite Regeln für öffentlich-private Partnerschaften festlegen. Bisher gilt für ihre grenzüberschreitende Vergabe das EU-Recht für öffentliche Beschaffungsvorgänge.
Im Hinblick auf die im Grünbuch aufgeworfenen Fragen zu öffentlich - privaten Partnerschaften nimmt der Österreichische Gemeindebund folgende Position ein: :
Das Grünbuch will vor allem den Binnenmarkt stärken und Markteintrittshindernisse beseitigen. Soziale Konsequenzen oder die Möglichkeit der praktischen Umsetzung, insbesondere in kleinen Kommunen, werden nicht berücksichtigt.

Der Inhalt des Grünbuches ist nicht überzeugend, da er sich mit der bisher ausufernden Diskussion über die vergaberechtlichen Aspekte der PPP befasst, andere Probleme aber gänzlich unberührt lässt.

Die Frage nach einer europäischen Regelung ist im Zusammenhang mit bestehenden nationalen Regeln zu sehen. In Österreich beinhaltet das Bundesvergabegesetz komplexe Regeln für die Vergabe öffentlicher Aufträge, die Kommunen haben daher schon dadurch zum Teil aufwändige Vergabeverfahren einzuhalten.

Es steht fest, dass der freie Markt kein Garant für Qualität oder Flächendeckung ist. Eine zu starke Betonung der Rolle des Marktes für den Anwendungsbereich von PPP birgt die Gefahr der Überregulierung durch Vorschriften des Vergaberechtes. Öffentlich-private Partnerschaften werden von den Kommunen üblicherweise flexibel genutzt, eine Überregulierung könnte die Attraktivität dieser Organisationsform und die positiven Effekte im Sinne der oben genannten öffentlichen Interessen erheblich vermindern. Eine Überregulierung kann etwa zur Verteuerung und zur Zerschlagung von funktionierenden regionalen Strukturen führen.

Aus Sicht der Kommunen erscheinen viele im Grünbuch aufgeworfene Fragen realitätsfern. Die Kommission geht von Ausschreibungen und Konzessionen großen Ausmaßes aus und vergisst die besondere Lage kleiner Kommunen. Für kleine Einheiten und Aufträge von geringem Umfang hätte auch im Grünbuch auf Freistellungsregelungen verwiesen werden müssen. Auch für Inhouse-Vergabe sollten die Vergaberegeln nicht angewendet werden.

Bei einer Abwägung von Wettbewerbsüberlegungen gegenüber anderen Interessen, insbesondere der öffentlichen Hand, erscheint uns wesentlich festzustellen, dass der Wettbewerb grundsätzlich öffentlichen Interessen im Sinne der Konsumenten zu dienen hat und daher kein Wert an sich ist. Außerdem ist zu sagen, dass PPPs rechtlich und finanztechnisch komplizierte Konstruktionen mit sich bringen. Schon im Rahmen normaler Auftragsvergaben im Anwendungsbereich des Vergaberechts zeigt sich, dass derartige Regelungen den Vergabeprozess naturgemäß wesentlich verkomplizieren. Bei den um ein vielfaches aufwändigeren und komplexeren Umsetzungsschritten eines PPP-Projekts würden „vergaberechtliche“ Bestimmungen viele PPP-Projekte von vornherein unmöglich machen und damit insgesamt letztlich die negativen wirtschaftlichen Auswirkungen überwiegen.

Grundsätzlich kann unseres Erachtens mit den derzeitigen Regelungen für das öffentliche Beschaffungswesen auch im Bereich der PPP das Auslangen gefunden werden. Der Österreichische Gemeindebund spricht sich daher vehement gegen eine eigene Richtlinie für PPP aus. Diese Einschätzung betrifft Auftrags- wie Konzessionsvergabe sowie vertragliche und institutionalisierte PPP gleichermaßen.

Sollte es dennoch zu derartigen – unserer Ansicht nach insgesamt kontraproduktiven Regelungen - kommen, so sollten aus den genannten Gründen zumindest die Überlegungen zur vertraglichen Laufzeit von PPP (Pkt 46 – 50 des Grünbuchs) und zu institutionalisierten PPP fallen gelassen werden. Diese würden besonders massive Eingriffe in die Autonomie u.a. der Gemeinden mit sich bringen , soferne sie nicht als dispositive Empfehlungen verstanden werden.Auch die Entscheidungsfreiheit der Kommunen über die Art der Erbringung von Dienstleistungen und die Vergabe von Dienstleistungskonzessionen muss gewahrt bleiben. Insbesondere dürfen Regelungen des Vergaberechts nicht die kommunale Zusammenarbeit beeinträchtigen. Der Zusammenschluss mehrerer kommunaler Einrichtungen zur Erbringung gemeinsamer Leistungen ist für viele Kommunen die einzige Möglichkeit, Dienstleistungen selbst anbieten zu können. Für den Zusammenschluss von Kommunen zur Erbringung gemeinsamer Aufgaben sollten daher Freistellungsregeln zur Anwendung gelangen.

Wir können unsere Enttäuschung darüber nicht verbergen, dass den Kommunen durch das vorliegende Grünbuch keine Perspektive zur Erleichterung für die Errichtung von PPP´s gegeben werden konnte.

Mit freundlichen Grüßen

Für den Österreichischen Gemeindebund:

Grünbuch zu ÖPP und den
gemeinschaftlichen Rechtsvorschriften für öffentliche
Aufträge und Konzessionen

Wien, 30.Juli 2004
Dr. Sl
Kl.89982
069-32/724/04

Europäische Kommission
E-Mail: MARKT-D1-PPP@cec.eu.int

Grundsätzlich begrüßt der Österreichische Städtebund die Bemühungen der Europäischen Kommission durch die eingeleitete Konsultation zum Grünbuch eine Diskussion zu eröffnen, die Positionen der Mitgliedstaaten und der betroffenen Gebietskörperschaften zu erkunden und in der Folge eine Erhellung der derzeit noch offenen Fragen herbei zu führen.

Einleitend ist fest zu stellen, dass die Europäische Kommission mit diesem Grünbuch versucht, die unterschiedlichen Gestaltungsformen der Öffentlichen-Privaten-Partnerschaften (ÖPP) zu erfassen und entsprechend dem Binnenmarktprinzip deren Beauftragung unter den Regeln des Primärrechtes, des abgeleiteten Rechts und der Judikatur zu erläutern.

Unter Hinweis darauf, dass insbesondere die lokale Ebene sich der Partnerschaft mit dem Privatsektor für die Erbringung der öffentlichen Dienstleistungen in den Bereichen Abfallwirtschaft, Wasserversorgung oder Energieversorgung bedient, betont die Kommission, dass auch unter dem Aspekt der

Erbringung von Leistungen von allgemeinem Interesse die Rechtsvorschriften für öffentliche Aufträge und Konzessionen eingehalten werden müssen.

Grundsätzlich kann jedoch eine Kompetenz der Kommission im Bereich der Dienstleistungen von allgemeinem Interesse – sofern es sich nicht um große grenzüberschreitende Netze handelt - hinterfragt werden. Bisher hat sich die Kommission in ihren Überlegungen auch nur mit diesen Dienstleistungen beschäftigt. Wenn sie nunmehr ihr Anliegen der Marktöffnung auf die lokale bzw. regionale Ebene trotz der dort gegebenen Vielfalt – wie sie ja selbst feststellt – herabbricht, besteht die Gefahr der Zerstörung gut funktionierender Strukturen und damit indirekt eine Beeinflussung der Eigentumsstrukturen, insbesondere der lokalen Ebene.

Wenn die Ergebnisse der bisherigen Liberalisierungen der großen Netze betrachtet werden, so kann festgestellt werden, dass die ehemaligen staatlichen Monopole durch privatrechtlich organisierte Oligopole oder sonstige Zusammenschlüsse ersetzt wurden, welche wieder den Markt beherrschen und einschränken. Die Preisgestaltung auf dem Treibstoffsektor ist das beste Beispiel für dieses private Marktverhalten.

Die Kommission begründet ihr Anliegen der Marktöffnung mit der Notwendigkeit, die Qualität der Dienstleistungen zu erhöhen, ohne jedoch einen Nachweis vorzulegen, dass die lokale Ebene bei der Erbringung dieser durch eigene Unternehmen den Erfordernissen der Bürger nicht gerecht wird und daher private Partner herangezogen werden müssten.

Es darf daher angezweifelt werden, dass das Aufbrechen des kleinräumigen Marktes durch den Ausschreibungszwang automatisch zu einer Verbesserung der Dienstleistung führen wird.

Die Kommission verweist in ihrem Grünbuch darauf, dass es im Wesentlichen um jene Vorschriften geht, die nach der Entscheidung, eine Aufgabe an einen Dritten zu übertragen, anzuwenden sind. In diesen Fällen unterscheidet sie zwischen Partnerschaften basierend auf einer reinen Vertragsbeziehung zur Erbringung bestimmter Leistungen und einer solchen aufgrund eines Gesellschaftsvertrages.

Bezüglich der als Auftrags- bzw. Konzessionsverhältnis anzusehenden Partnerschaft verweist die Kommission auf die Möglichkeit des neuen Instrumentes des wettbewerblichen Dialogs, welcher sicher als Erleichterung zu begrüßen ist, jedoch hinsichtlich des Verfahrens auf den bisher schon zu beachtenden Grundsätzen der Transparenz, Gleichbehandlung und des Vertragsrechtes fußt.

Schwierigkeiten bereitet das von der Kommission als institutionalisierte ÖPP bezeichnete Vertragsverhältnis, weil es mit den bekannten Unsicherheiten – unklare Regeln für das Auswahlverfahren des Partners, Beauftragung mit der Erbringung der (Dienst-)Leistung belastet ist. Durch das Grünbuch scheinen diese nicht abschließend angesprochen zu sein. Insbesondere zieht sich die Kommission hinsichtlich der Auswahl des Partners auf das Kriterium des wirtschaftlich günstigsten Angebots in Bezug auf die zu erbringende Leistung zurück, wobei klare und objektive Kriterien gefordert werden.

Auch für die Gründung des Wirtschaftsgebildes müssen die Bedingungen klar festgelegt werden, „bevor die Aufgabe, die einem privaten Partner übertragen werden soll, im Wettbewerb vergeben werden“ (RZ 58 f).

Daraus wäre zu folgern, dass für die Gründung und Beauftragung eines „gemischtwirtschaftlichen“ Unternehmens zwei Ausschreibungen durchzuführen sind – erstens, um das günstigste Angebot für die Hereinnahme des Privaten zu eruieren und dann für die Vergabe der Leistung im Wettbewerb. Nicht behandelt wird die Frage der Abgrenzung zwischen einer rein finanziellen Beteiligung eines Privaten und der Leistungserbringung weiterhin durch den öffentlichen Partner im Rahmen eines gemischtwirtschaftlichen Unternehmens.

In diesem Zusammenhang gibt die Kommission keinerlei Hinweise, bis zu welchem Beteiligungsgrad eines Privaten sie eine ÖPP als inhouse-fähig ansieht. Es ist unbefriedigend, ausschließlich auf das Urteil des Europäischen Gerichtshofes in der Causa Teckal zu verweisen, wonach nur dann eine Ausnahme von den Vorschriften möglich ist, wenn eine Kontrolle ausgeübt wird, die der über eine eigene Dienststelle gleichkommt. Dies bedeutet, dass erst im Nachhinein bei der Prüfung im Einzelfall festgestellt wird, ob diese Bedingung erfüllt ist und damit keine Verletzung von EU-Recht vorliegt.

Auch hinsichtlich der zweiten Bedingung – der Wirtschaftstätigkeit im Wesentlichen für die den Aufwand tragende Gebietskörperschaft – ergibt sich eine Benachteiligung der öffentlichen Hand. Im überwiegenden Maße werden ÖPP aus finanziellen Gründen eingegangen und dabei wird das Know-how von der öffentlichen Seite eingebracht. Dieses Know-how könnte auch eine Basis für wirtschaftliches Handeln darstellen und an andere Gebietskörperschaften „weiterverkauft“ werden. Die TransparenzRL wäre ausreichende

Grundlage dafür, dass unzulässiger Transfer von Kosten hintan gehalten würde.

Der Österreichische Sdtädtebund geht jedenfalls davon aus, dass die Dienstleistung von allgemeinem wirtschaftlichem Interesse, welche in Form von „In-house" erbracht wird – sei es durch einen Regiebetrieb oder durch eine eigene Gesellschaft – nicht ausgeschrieben werden muss. Das Gleiche gilt, wenn mehrere Gemeinden einen Zweckverband, d.h. einen in Österreich verfassungsrechtlich abgesicherten Zusammenschluss von Gemeinden zur Erfüllung einzelner Leistungen der Daseinsvorsorge vereinbaren.

Die Vergabe von Dienstleistungen von allgemeinem wirtschaftlichem Interesse an private Institutionen ist mit vielen Imponderabilien verbunden. Einerseits werden den auflaufenden Transaktionskosten kein Augenmerk gewidmet. Soll eine Gemeinde die ordnungsgemäße Erbringung der Dienstleistung gewährleisten, so bedarf es andererseits für eine effiziente Kontrolle auch eines ausreichenden Maßes an Know-how, welches aufrecht erhalten werden muss.

Die Kommission verweist richtigerweise auf die Problematik der Laufzeit der Verträge und zieht als Grenze die Dauer der Amortisation samt Verzinsung des eingesetzten Kapitals (RZ 46). Hier zeigt sich jedoch voll das Problem der notwendigen Erneuerung und Instandhaltung, z. B. der baulichen Anlagen. Wenn lediglich auf die Amortisationszeit abgestellt wird, kann sich daraus in Folge des marktwirtschaftlichen Prinzips ergeben, dass so lange wie möglich keinerlei oder nur im geringsten Maße Instandhaltungsaufwendungen getätigt werden, weil sowieso nach der Amortisation der Investitionen der

Vertrag endet, die Anlage an die öffentliche Hand zurückfällt und diese die wegen des Alters in die Höhe schnellenden Reparaturkosten zu tragen hat.

Der Österreichische Städtebund kann auch nicht den Ausführungen der Kommission (RZ 47) folgen, wo es um Vertragsänderungen oder Revisionsklauseln geht. Dementsprechend müssten entweder wegen des technischen Fortschrittes etwaige technische Verbesserungen vorhergesehen und in den Vertrag – mit entsprechendem Preis - eingebaut oder erst später neu ausgehandelt werden, wobei der öffentlichen Hand dann ein Monopolist mit entsprechender Marktmacht gegenübersteht.

In der RZ 49 beschränkt die Kommission die nicht durch Vertrag gedeckten Änderungen auf jene nach einem unvorhergesehenen Ereignis bzw. aus Gründen der öffentlichen Ordnung, Sicherheit oder Gesundheit. Andere Änderungen würden einen erneuten Aufruf zum Wettbewerb implizieren. Dies würde jedoch zu einer Beendigung des Vertragsverhältnisses mit dem bisherigen Partner oder dessen Wiedereinstieg zu einem Preis führen, dessen Marktgerechtigkeit zweifelhaft ist.

Die Ausführungen in RZ 51f sind nicht eindeutig klärend. Einerseits wird von einer Projektgesellschaft gesprochen, welche selbst die Rolle einer Vergabestelle erfüllt, wobei Ausschreibungszwang vorliegt, andererseits ist es ihr möglich, mit Dritten Verträge zu schließen, wenn sie keine Aufträge vergibt. Um welche Verträge handelt es sich dann?

Zusammenfassend ist Folgendes fest zu halten:

Die Kommission bestätigt in ihrem Grünbuch, dass die Kommunen in ihrer Entscheidung frei seien, ob sie eine Leistung selbst erbringen oder sich dafür Dritter bedienen.

Wenn die zweite Lösung zur Anwendung gelangt – was offenkundig von der Kommission präferiert wird, weil sie auf den Rückzug des Staates und die Auslagerung von Aufgaben verweist - , dann sind jedoch die Regeln des Binnenmarktes und Wettbewerbes sowie des Primärrechtes anzuwenden. Dies je nachdem, um welche Form der ÖPP es sich handelt. Dadurch kommt jedoch im Wesentlichen der Zwang zur „Ausschreibung“, wenn auch nicht immer in der strengen Form der Vergaberichtlinien, zum Tragen, weil Transparenz, Gleichbehandlung und Verhältnismäßigkeit nicht auf anderem Wege gewährleistet werden können.

Diese Kriterien müssen auch schon bei der Auswahl des Partners beachtet werden.

Es ist erschreckend, dass die Kommission ernsthaft versucht, die in der Realität gegebene Vielfalt an Formen der Leistungserbringung sowie der Nutzung finanzieller Ressourcen und des regionalen Know-hows in ein starres Schema zu pressen. Bedenklich ist, dass auf Kostenelemente, die mit den von der Europäischen Union vorgeschriebenen Verfahren (z. B. der Ausschreibung) verbunden sind (Transaktionskosten), nicht einmal ansatzweise eingegangen wird.

Nach Ansicht des Österreichischen Städtebundes steht fest, dass – obwohl der kommunale Bereich als Ausdruck des Subsidiaritätsprinzips und der kommunalen Selbstbestimmung ausdrücklich durch Rat und Parlament vom europäischen Vergaberecht mit seinem Ausschreibungszwang bezüglich der Dienstleistungskonzession ausgenommen wurde - sukzessive der

Handlungsspielraum der öffentlichen Hand bei der Erbringung von Dienstleistungen von allgemeinem Interesse eingeschränkt und sie gegenüber dem privaten Wirtschaftsteilnehmer krass benachteiligt wird. Dies steht auch im Widerspruch zur Betonung der Beachtung der national statuierten Gegebenheiten.

Der Bildung von Oligopolen und von internationalen Unternehmen mit einer ausgeprägten Marktbeherrschung wird offensichtlich nicht mit der gleichen Akribie nachgegangen wie es bei Aktivitäten der öffentlichen Hand geschieht. Dem unterpreislichen Angebot mit dem Ziel, bestehende Strukturen zu zerstören, wie es bereits jetzt im Markt geschieht, hat die Kommission offensichtlich nichts entgegen zu setzen. Oder sie besinnt sich vielleicht doch, in Bereichen der Daseinsvorsorge nicht harmonisieren zu sollen, wo die europäische Vielfalt angepasst an die sozialen Bedürfnisse der Bürger auf demokratische Weise gelebt wird.

Stellvertretend

Stellungnahme der

Österreichischen Vereinigung für das Gas- und Wasserfach (ÖVGW)

zum Grünbuch der Kommission der Europäischen Gemeinschaften

zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Allgemeines

Die ÖVGW ist die Interessensvertretung der Wasserwerke Österreichs. Unsere 205 Mitglieds-Wasserwerke versorgen mehr als 5,6 Mio. Einwohner in Österreich mit bestem Trinkwasser. Die Wasserversorgung in Österreich besteht aus sehr vielen (ca. 3000) kleinen Versorgungsunternehmen. Die Versorgungsstruktur in Österreich hat sich bewährt und bietet den Konsumenten eine qualitativ hochwertige Wasserversorgung zu günstigen Preisen. Die Stellungnahme der ÖVGW zum Grünbuch ÖPP erfolgt ausschließlich aus den Gesichtspunkten der Trinkwasserversorgung.

Die Trinkwasserversorgung erfolgt in Österreich zum größten Teil durch kommunale Unternehmen. Diese Unternehmen sind entweder als Teil der kommunalen Verwaltung (Eigenbetrieb, Regiebetrieb, Magistratsabteilung, etc.) aber vereinzelt auch in Rechtsformen des Privatrechtes (z.B. Aktiengesellschaft, GMBH) organisiert, die aber durchwegs im Mehrheitseigentum der öffentlichen Hand stehen.

Grundsätzlich ist die Vergabe von öffentlichen Bau- und Dienstleistungsaufträgen an Dritte sowie Konzessionen in Österreich seit langem ausreichend gesetzlich und EU-konform geregelt und daher verpflichtend. Konzessionen für Wasserversorgungen wurden allerdings bisher nur in wenigen Ausnahmefällen ausgeschrieben bzw. vergeben. Dies hängt unter anderem auch mit der kleinräumigen Struktur der Wasserversorgung in Österreich zusammen. Vor allem für kleinere und mittlere Einheiten bzw. Kommunen wird die Durchführung einer Konzessionsausschreibung aufgrund des damit verbundenen komplexen Vergabeverfahrens, der notwendigen komplexen rechtlichen Regelungswerke und der damit verbundenen hohen Kosten nicht sinnvoll möglich sein.

Generell ist zu berücksichtigen, dass Wasser eine lokale Ressource darstellt und internationale, weit reichende Wasserleitungsnetze aus technischer Sicht nicht sinnvoll realisierbar sind. Damit handelt es sich bei der Wasserversorgung immer um eine lokale Tätigkeit, die auch in der Regel mit gemeinwirtschaftlichen Auflagen verbunden ist. Daraus folgt, dass die Wasserversorgung generell nicht geeignet ist, den Wettbewerb zwischen den Mitgliedsstaaten zu beeinträchtigen. Auch ist jedenfalls sicherzustellen, dass das Eigentum und die Verfügbarkeit der Ressource Wasser immer in der Entscheidungsfreiheit der Nationalstaaten liegt.

Aus Sicht der ÖVGW sind öffentlich-private Partnerschaften (ÖPP) grundlegend von öffentlichen Aufträgen zu unterscheiden. Bei ÖPP-Modellen handelt es sich um äußerst komplexe und auf einen langen Zeitraum angelegte Partnerschaften, die auch über den Zeitablauf noch optimiert und angepasst werden müssen. Das Risiko und die Verantwortung für das Ergebnis (d.h. eine hochwertige Wasserversorgung zu verträglichen Preisen) liegen in der Regel beim privaten Unternehmer. Damit können ÖPP-Modelle nicht sinnvoll durch die herkömmlichen Ausschreibungsverfahren abgedeckt werden.

Position der ÖVGW

Die ÖVGW lehnt eine Verpflichtung für Kommunen zur Vergabe von Konzessionen oder zur zwangsweisen Durchleitung von Wasser durch fremde Netze im Bereich der Wasserversorgung grundsätzlich ab. Die Kommunen müssen auch in Zukunft die Möglichkeit haben, die Trinkwasserversorgung im eigenen Bereich entsprechend den räumlichen Gegebenheiten und den Anforderungen der Konsumenten selbst durchzuführen und zu gestalten.

Die ÖVGW wendet sich generell gegen eine Verschärfung der Ausschreibungsverpflichtungen, die über die derzeitigen nationalen bzw. EU-Vorschriften hinausgehen würden. Die ÖVGW erachtet die derzeit gültigen Regelungen und Bestimmung für völlig ausreichend bzw. sogar zu umfangreich. Generell ist die ÖVGW der Meinung, dass die Wasserversorgung - als Aufgabe der Daseinsvorsorge und Dienstleistung von allgemeinem Interesse und mit gemeinwirtschaftlichen Verpflichtungen verbunden - nicht dazu geeignet ist, den Wettbewerb zwischen den Mitgliedsstaaten negativ zu beeinflussen.

Die ÖVGW lehnt eine Ausschreibungsverpflichtung bei der Wahl des privaten Partners bei der Gründung von gemischtwirtschaftlichen Unternehmen durch Kommunen ab. Entscheidet sich eine Kommune, einen privaten Partner zu beteiligen, dann muss sie diesen Partner frei wählen können, da eine derartige Ausschreibungsverpflichtung in keiner Weise den Wettbewerb im Wassermarkt fördern und keinen erkennbaren Vorteil für die Kunden bringen würde.
Im Übrigen würde das Selbstbestimmungsrecht der Gemeinden in einer so wichtigen Angelegenheit sehr stark beschnitten.

Die ÖVGW lehnt eine verpflichtende Ausschreibung für die Vergabe von Dienstleistungskonzessionen für die Wasserversorgung ab. Generell müssen die Kommunen weiterhin das Recht behalten frei zu entscheiden, ob sie eine Konzession in einem Ausschreibungsverfahren an Dritte vergeben wollen. Im Fall einer Konzession wird nur das Recht zur wirtschaftlichen Betätigung an ein privates Unternehmen übertragen. Damit liegt kein öffentlicher Auftrag einschließlich Entlohnung für den privaten Unternehmer vor und ist das Vergaberecht nicht anwendbar. Das private Unternehmen agiert in diesem Fall auf eigenes wirtschaftliches Risiko. Die ÖVGW hält diese Vorgangsweise für begründet und schlägt daher vor, dass Dienstleistungskonzessionen auch in Zukunft nicht ausgeschrieben werden müssen. Insbesondere für kleine Versorgungsunternehmen im Umkreis von großen Versorgungsunternehmen gibt es oftmals keine andere wirtschaftlich vertretbare Möglichkeit als mit einem angrenzenden großen Versorgungsunternehmen eine Partnerschaft einzugehen.

Unter dem Hinweis auf die besondere Situation der Trinkwasserversorgungswirtschaft fordert die ÖVGW, dass eine Inhousegesellschaft auch dann als solche anerkannt wird, wenn mehrere Kommunen daran beteiligt sind und diese Inhousegesellschaft die Aufgabenerfüllung für ihre Gesellschafter erbringt. So müssen aus Sicht der ÖVGW beispielsweise Wasserverbände (Zusammenschluss mehrerer Kommunen im Bereich der Wasserversorgung), welche die Aufgabenerfüllung für ihre Verbandsmitglieder durchführen, auch weiterhin ohne Verpflichtung zur Ausschreibung gegründet werden können. Es handelt sich dabei nicht um einen Fall von Übertragung einer Wirtschaftstätigkeit an Dritte und es ist das Vergaberecht daher nicht anwendbar.

Die ÖVGW fordert grundsätzlich, dass eine Ausschreibung von Baukonzessionen nach dem Vergabegesetz nicht erforderlich ist, wenn der Aufwand der Ausschreibung die zu erwartenden wirtschaftlichen Vorteile übersteigt. Hierbei ist insbesondere die gewachsene und kleinräumige Struktur der Wasserversorgung in Österreich zu berücksichtigen. Damit verbunden sollen jedenfalls kleinere Kommunen (z.B. bis 10.000 Einwohner) bei Konzessionssystemen aufgrund der komplexen Vergabeverfahren und notwendigen komplexen rechtlichen Regelwerke nicht dem Vergabe-bzw. Beihilfenrecht unterliegen. Die im Vergaberecht normierten Schwellenwerte für Bau- bzw. Dienstleistungsaufträge wären jedenfalls aus Sicht der ÖVGW für Konzessionssysteme aufgrund der angeführten Komplexität als bei weitem zu niedrig anzusehen.

Zu den Fragen des Grünbuches ÖPP:

Frage 1:

Derzeit existieren in Österreich nur sehr wenige Beispiele für ÖPP-Modelle. Aufgrund der Komplexität der Verfahren ist keine massive Ausweitung dieser Modelle zu erwarten. Für Kommunen besteht die Möglichkeit, die Wasserversorgung auf öffentlich-rechtlicher Basis (im Wege der Hoheitsverwaltung z.B. auf Basis eines Gemeinderatsbeschlusses) oder auf privatrechtlicher Basis (mit den Konsumenten werden privatrechtliche Verträge abgeschlossen) durchzuführen. Die zweite Möglichkeit steht auch privaten Unternehmen grundsätzlich offen. Spezifische Rahmenbedingungen über das bestehende (und EU-konforme) Vergaberecht für ÖPP-Modelle existieren in Österreich nicht. Grundsätzlich gelten die gesetzlichen Bestimmungen des allgemeinen Vertragsrechtes.

Frage 2:

Grundlegend ist zu sagen, dass der wettbewerbliche Dialog ein Verfahren im Zusammenhang mit der Vergabe von öffentlichen Aufträgen ist. Aus Sicht der ÖVGW sind öffentlich-private Partnerschaften (ÖPP) grundlegend von öffentlichen Aufträgen zu unterscheiden. Bei ÖPP-Modellen handelt es sich um äußerst komplexe und auf einen langen Zeitraum angelegte Partnerschaften, die auch über den Zeitablauf noch optimiert und angepasst werden müssen. Das Risiko und die Verantwortung für das Ergebnis (d.h. eine hochwertige Wasserversorgung zu verträglichen Preisen) liegen in der Regel beim privaten Unternehmer. Damit können ÖPP-Modelle nicht sinnvoll durch die herkömmlichen Ausschreibungsverfahren abgedeckt werden. Somit ist auch der wettbewerbliche Dialog aus Sicht der ÖVGW nicht geeignet, die Vergabe von ÖPP-Modellen zu regeln.

Frage 3:

Nein

Frage 4:

Die bisherigen Erfahrungen in Österreich zeigen, dass die Vertragserrichtung zu Konzessionsvergaben sehr umfangreicher Verträge und Regelungen bedarf. Die Kosten der Abwicklung des Vergabeverfahrens sowie die Vertragserrichtung insbesondere bei kleinen und mittleren Kommunen haben daher erhebliche Auswirkungen auf die Gesamtkosten des Projektes und damit auf die Kosten für die Dienstleistung.
Die ÖVGW fordert daher, dass eine Ausschreibung nach dem Vergabegesetz jedenfalls dann nicht erforderlich ist, wenn der Aufwand der Ausschreibung die zu erwartenden wirtschaftlichen Vorteile übersteigt. Die Ausschreibungspflicht für Dienstleistungskonzessionen wird jedenfalls abgelehnt.

Frage 5:

Ja. Auch ausländische Unternehmen haben grundsätzlich die Möglichkeit, Konzessionen in Österreich zu erhalten. Auch besteht für Industrie, Gewerbe, Landwirtschaft aber auch für die privaten Haushalte in Österreich die Möglichkeit, selbst Wasser zu fördern und so den Bedarf durch Eigenversorgung zu decken.

Frage 6:

Nein. Generell ist zu berücksichtigen, dass Wasser eine lokale Ressource darstellt und internationale, weit reichende Wasserleitungsnetze aus technischer Sicht nur in absoluten

Sonderfällen sinnvoll realisierbar sind. Damit handelt es sich bei der Wasserversorgung nahezu immer um eine lokale Tätigkeit, die in der Regel auch mit gemeinwirtschaftlichen Auflagen verbunden ist. Daraus folgt, dass die Wasserversorgung generell nicht geeignet ist, den Wettbewerb zwischen den Mitgliedsstaaten zu beeinträchtigen. Auch ist jedenfalls sicherzustellen, dass das Eigentum und die Verfügbarkeit der Ressource Wasser immer in der Entscheidungsfreiheit der Nationalstaaten liegt. Ein gemeinschaftlicher Rechtsakt wäre nur sinnvoll in einer nach europäischer Hinsicht überregionalen Infrastruktur, welche aber wie vorstehend ausgeführt fast nicht möglich ist. Die allgemeinen Grundsätze Gleichbehandlung, Transparenz, Verhältnismäßigkeit und gegenseitige Anerkennung sind bereits zum gegenwärtigen Zeitpunkt verpflichtend, ein weiterer gemeinschaftlicher Rechtsakt würde keine praktischen Vorteile bringen.

Auch ist bei Dienstleistungen von allgemeinem (wirtschaftlichen) Interesse ein hohes Risiko für den Bürger verbunden, da er auf die Erbringung dieser Dienstleistung angewiesen ist. Damit ist bei der Wahl eines Partnerunternehmens durch die Kommune ein besonderes Vertrauensverhältnis unbedingt erforderlich, was durch eine Ausschreibungspflicht gefährdet wäre. Die bereits bestehenden Regelungen gewährleisten die erforderliche Neutralität seitens der Kommune, weitere Regeln sind nicht erforderlich.

Frage 7:

Nein. Siehe auch Beantwortung Frage 2 und 6.

Frage 8:

Ja

Frage 9:

Grundsätzlich werden privat initiierte ÖPP in Österreich eine untergeordnete Rolle spielen, da eine derartige Initiative zumeist vom kommunalen Wasserversorger ausgehen müsste und aufgrund der kleinräumigen Wasserversorgung oftmals nicht sinnvoll möglich ist.
Sobald Anreize oder Belohnungen für Initiatoren von privat initiierten ÖPP geschaffen werden, wie in Absatz 41 beschrieben ist die Wahrung der Transparenz und Gleichbehandlung nach Meinung der ÖVGW nicht möglich.

Frage 10:

Bisher liegen in Österreich keine Erfahrungen vor.

Frage 11:

Der ÖVGW sind keine Fälle bekannt.

Frage 12:

Der ÖVGW sind keine Fälle bekannt.

Frage 13:

Der ÖVGW sind keine Fälle bekannt.

Frage 14:

Die ÖVGW fordert grundsätzlich, dass eine Ausschreibung von Baukonzessionen nach dem Vergabegesetz nicht erforderlich ist, wenn der Aufwand der Ausschreibung die zu erwartenden wirtschaftlichen Vorteile übersteigt. Hierbei ist insbesondere die gewachsene und kleinräumige

Struktur der Wasserversorgung in Österreich zu berücksichtigen. Damit verbunden sollen jedenfalls kleinere Kommunen (z.B. bis 10.000 Einwohner) bei Konzessionssystemen aufgrund der komplexen Vergabeverfahren und notwendigen komplexen rechtlichen Regelwerke nicht dem Vergabe- bzw. Beihilfenrecht unterliegen. Die im Vergaberecht normierten Schwellenwerte für Bau- bzw. Dienstleistungsaufträge wären jedenfalls aus Sicht der ÖVGW für Konzessionssysteme aufgrund der angeführten Komplexität als bei weitem zu niedrig anzusehen.

Frage 15:

In Österreich sind keine Probleme bekannt.

Frage 16:

Nein

Frage 17:

Nein

Frage 18:

In Österreich werden die Rechtsvorschriften eingehalten.

Frage 19:

Nein

Frage 20:

Zu viele Verfahrensvorschriften verteuern und behindern damit die Einrichtung von öffentlich-privaten Partnerschaften.

Frage 21:

Nein

Frage 22:

Ein derartiges Netzwerk zum Erfahrungssaustausch existiert im Wasserbereich durch die EUREAU bereits.

Stellungnahme des Österreichischen Wasser- und Abfallwirtschaftsverbandes (ÖWAV) zum Grünbuch der Kommission der Europäischen Gemeinschaften zu öffentlich-privaten Partnerschaften und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen

Allgemeines

Der Österreichische Wasser- und Abfallwirtschaftsverband (ÖWAV) ist ein **gemeinnütziger Verein**. Er versteht sich als **unabhängiger Anwalt** für die Erreichung der nachhaltigen Ziele der Wasser-, Abwasser- und Abfallwirtschaft in Österreich und vertritt die Gesamtheit der Wasser- und Abfallwirtschaft in Österreich.

Der ÖWAV bildet eine **neutrale und unabhängige Plattform** aller fachlichen Kräfte mit hoher Sachkompetenz, die den **Interessensausgleich** in der österreichischen Wasser-, Abwasser- und Abfallwirtschaft suchen.

Grundsätzlich sind die Vergabe von öffentlichen Bau- und Dienstleistungsaufträgen an Dritte sowie Konzessionen in Österreich seit langem gesetzlich geregelt und daher verpflichtend. Konzessionen für Wasserversorgung und Wasserentsorgung wurde allerdings bisher nur in wenigen Ausnahmefällen ausgeschrieben.

Position des ÖWAV

Der ÖWAV spricht sich gegen eine verpflichtende Ausschreibung von Konzessionen durch öffentliche Unternehmen aus. Die Kommunen müssen auch in Zukunft die Möglichkeit haben, die Trinkwasserver- und Abwasserentsorgung im eigenen Bereich entsprechend der räumlichen Gegebenheiten und der Anforderungen der Konsumenten zu gestalten. Der ÖWAV wendet sich dabei generell gegen eine Ausschreibungsverpflichtung, die über die derzeitigen nationalen Vorschriften hinausgeht.

Der ÖWAV lehnt eine Pflicht zur Ausschreibung bei der Wahl des privaten Partners im Rahmen der Gründung von gemischtwirtschaftlichen Unternehmen durch Kommunen ab, solange diese Unternehmen hauptsächlich den Ver- oder Entsorgungsauftrag der Kommune erfüllen. Eine derartige Ausschreibungsverpflichtung fördert in keiner Weise den Wettbewerb im Wassermarkt und bringt keinen erkennbaren Vorteil für die Kunden.

Der ÖWAV spricht sich gegen eine Pflicht zur Ausschreibung für die Vergabe von Dienstleistungskonzessionen an ausgegliederte Gesellschaften im Mehrheitseigentum des öffentlichen Auftraggebers (gemischtwirtschaftliche Unternehmen) **aus**, solange diese Unternehmen nur gemeinwirtschaftliche Aufgaben im eigenen Wirkungsgebiet der Kommune wahrnehmen. Derartige Unternehmen werden mit einem begrenzten Unternehmenszweck und Wirkungsgebiet gegründet, um der Kommune die Gestaltungsmöglichkeiten und die Kompetenz der Versorgungsaufgabe zu erhalten. Diese Unternehmen können sich daher nur an einer einzigen Ausschreibung des Mehrheitseigentümers beteiligen.
Durch eine derartige Vorschrift wäre daher keine Belebung des Wettbewerbes im Wassermarkt zu erwarten sondern eher die gegenteilige Wirkung, dass die Kommunen von einer öffentlich-privaten Partnerschaft absehen.

Der ÖWAV ersucht dringend darum, dass eine Ausschreibung nach dem Vergabegesetz nicht erforderlich sein sollte, wenn der Aufwand der Ausschreibung die zu erwartenden wirtschaftlichen Vorteile übersteigt. Diese Möglichkeit besteht bereits bei den geltenden öffentlichen Ausschreibungsverfahren.

Zu den Fragen des Grünbuches ÖPP:

Frage 1:
In den Ballungsräumen gibt es privatrechtliche vertragliche Regelungen über den Betrieb von Wasserver- und Entsorgungsanlagen. Diese Verträge stellen in der Regel für den Auftragnehmer (zumeist große städtischen Ver- und Entsorger) nur einen kleinen Teil der Gesamttätigkeiten dar. Für den Auftraggeber stellen diese Verträge effiziente Lösungen im Interesse der Konsumenten dar.
Für diese Verträge gelten grundsätzlich die gesetzlichen Bestimmungen des Vertragsrechtes.

Frage 2:
Mit der angeführten Beschreibung sind die Folgen insbesondere für kleine und mittlere Wasserver- und Entsorger nicht abschätzbar. Es muss damit gerechnet werden, dass es aufgrund der Komplexität von ÖPP zu einer Überforderung der Betriebe kommt und in weiterer Folge die Transparenz und die Gleichbehandlung im Vergabeverfahren verloren geht. Nach Auffassung des ÖWAV könnte derselbe Zweck mit einem bereits möglichen 2-stufigem Verfahren besser erfüllt werden.

Frage 3:
Nein

Frage 4:
Die bisherigen Erfahrungen in Österreich zeigen, dass die Vertragserrichtung zu Konzessionsvergaben nach dem Vergaberecht sehr umfangreicher Verträge bedarf. Die Kosten der Abwicklung des Vergabeverfahrens sowie die Vertragserrichtung insbesondere bei Kleinanlagen haben daher erhebliche Auswirkungen auf die Gesamtkosten des Projektes und damit auf die Kosten für die Dienstleistung.
Der ÖWAV fordert daher, dass eine Ausschreibung nach dem Vergabegesetz nicht erforderlich ist, wenn der Aufwand der Ausschreibung die zu erwartenden wirtschaftlichen Vorteile übersteigt. Diese Möglichkeit besteht bereits bei den geltenden öffentlichen Ausschreibungsverfahren.

Frage 5:
Ja

Frage 6:
Nein. Ein gemeinschaftlicher Rechtsakt wäre nur sinnvoll in einer nach europäischer Hinsicht überregionalen Infrastruktur.

Frage 7:
Nein

Frage 8:
Ja

Frage 9:
Grundsätzlich werden privat initiierte ÖPP in Österreich eine untergeordnete Rolle spielen, da eine derartige Initiative zumeist vom kommunalen Wasserver- Entsorger ausgehen wird.
Sobald Anreize oder Belohnungen für Initiatoren von privat initiierten ÖPP geschaffen werden, wie in Absatz 41 beschrieben ist die Wahrung der Transparenz und Gleichbehandlung nach Meinung des ÖWAV nicht möglich.

Frage 10:
Bisher liegen in Österreich keine Erfahrungen vor.

Frage 11:
Es sind keine Fälle bekannt.

Frage 12:
Es sind keine Fälle bekannt.

Frage 13:
Es sind keine Fälle bekannt.

Frage 14:
Nach Meinung des ÖWAV (siehe Frage 4) sollte von der Kommission eine Grenze festgelegt werden, ab wann Konzessionsvergaben im Vergabeverfahren durchgeführt werden müssen. Wie bereits ausgeführt können die Kosten für die Vertragserrichtung das Gesamtprojekt unwirtschaftlich machen.

Frage 15:
In Österreich sind keine Probleme bekannt.

Frage 16:
Nein

Frage 17:
Nein

Frage 18:
In Österreich werden die Rechtsvorschriften eingehalten.

Frage 19:
Nein

Frage 20:
Zu viele Verfahrensvorschriften verteuern und behindern damit die Einrichtung von öffentlich-privaten Partnerschaften.

Frage 21:
Nein

Frage 22:
Ein derartiges Netzwerk zum Erfahrensaustausch existiert im Wasserbereich durch die EUREAU und EWA bereits.

Europäische Kommission
Konsultation „Grünbuch zu öffentlich-privaten
Partnerschaften und den gemeinschaftlichen
Rechtsvorschriften für öffentliche Aufträge
und Konzessionen“
C 100 2/005
B-1049 Brüssel

Wien, am 5. August 2004

Dr.S/SE
E-Mail: vkoe@voewg.at

**Grünbuch „zu öffentlich-privaten Partnerschaften
und den gemeinschaftlichen Rechtsvorschriften
für öffentliche Aufträge und Konzessionen (ÖPP)“,
KOM(2004)327 endg. vom 30.04.2004;
Anmerkungen aus kommunaler Sicht**

Sehr geehrte Damen und Herren!

Im Nachhang zu der gemeinsamen Stellungnahme des Verbandes kommunaler Unternehmen Österreichs (VKÖ) und des Verbandes der Öffentlichen Wirtschaft und Gemeinwirtschaft Österreichs erlaubt sich der VKÖ, Ihnen noch folgende Überlegungen aus kommunaler Sicht zum Grünbuch ÖPP zur Kenntnis zu bringen:

Zu den erklärten Zielen der Europäischen Union gehört nach eigenen Worten die Schaffung eines „Europas der Bürger“.

Die jüngsten Wahlen zum Europäischen Parlament haben u.a. aber auch gezeigt, dass Europa und das Handeln der Organe der EU enger an die Bürger herangebracht werden müssen, um diesem eigenen Anspruch gerecht werden zu können. Das bedeutet, dass alle Maßnahmen der EU mehr als in der Vergangenheit auf die täglichen Bedürfnisse der Bürger einzugehen haben. Entscheidungen, die sich auf lokaler Ebene unmittelbar auf die Grundbedürfnisse der Bürger auswirken, sollen nicht durch eine allzu rigide Anwendung des gemeinschaftsrechtlichen Wettbewerbsprinzips unterbunden werden.

Zu Recht erklärt die Kommission, „dass Dienstleistungen im allgemeinen Interesse möglichst bürgernah organisiert und geregelt sein sollten und dass dabei das Subsidiaritätsprinzip strengstens eingehalten werden müsse“ (Abschnitt 3.1 des Weißbuches DAI). Zu begrüßen ist ferner, dass die Kommission die essentielle Rolle anerkennt, die den Mitgliedstaaten und ihren regionalen und lokalen Behörden auf dem Gebiet der Dienstleistungen im allgemeinen Interesse zukommt.

In diesem Zusammenhang ist auch Art. I-5 Abs. 1 der EU-Verfassung, die vom Europäischen Rat von Brüssel am 25.6.2004 angenommen wurde, zu beachten: Wenn darin festgelegt wird, dass die Europäische Union die nationale Identität der Mitgliedstaaten einschließlich der Selbstverwaltung zu achten hat, ist an alle Organe der EU, insb. auch an die Kommission die Forderung zu richten, die Erbringung von Dienstleistungen im allgemeinen (nicht)/wirtschaftlichen Interesse durch Städte und Gemeinden nicht nur zu ermöglichen, sondern zu fördern, auch wenn dies Abstriche am reinen Wettbewerbsprinzip erforderlich macht.

In Österreich aber auch in anderen Mitgliedstaaten der EU besitzt die kommunale Selbstverwaltung der Gemeinden eine lange Tradition. Diese politische und wirtschaftliche Selbstverwaltung ist – und dies ist im gegebenen Zusammenhang besonders hervorzuheben – auch ein wesentliches Element bürgernaher, gelebter Demokratie. Die Gemeinden und ihre Unternehmen tragen eine besondere Verantwortung für die Sicherung einer nachhaltigen qualitätsvollen Daseinsvorsorge ihrer Bürger, für die Gestaltung des kommunalen Lebensraumes und für die Stabilität der infrastrukturellen Grundlage wirtschaftlicher Aktivitäten.

Dienstleistungen von allgemeinem wirtschaftlichem Interesse bilden ein Fundament des europäischen Gesellschaftsmodells und leisten einen wichtigen Beitrag für die Zielsetzung der EU bezüglich eines sozialen und territorialen Zusammenhalts. Daher ist entscheidend, dass diese Dienstleistungen von im weitesten Sinn kommunalen Unternehmen örtlich erbracht und auch örtlich verantwortet werden. Über die grundsätzlichen Fragen bezüglich Leistungserbringung, Durchführung von Investitionen, welche Leistungen in welcher Qualität zu welchen Preisen erbracht werden sollen, entscheidet die gemeindliche Volksvertretung, die somit im hohen Maße berufen ist, Wünsche, Bedürfnisse, Interessen der örtlichen Bürgerschaft zu berücksichtigen. Nur auf diese Weise kann auch auf im Zeitablauf sich ändernde Rahmenbedingungen sofort reagiert werden und die erforderlichen Dienstleistungen jederzeit und flexibel angepasst werden.

Grundsätzlich stehen somit die Dienstleistungen der sog. Daseinsvorsorge im Spannungsfeld zwischen dem Subsidiaritätsprinzip – in OE vor allem auch der Gemeindeautonomie (dem Recht der Gemeinden die Organisation der Erbringung von gemeinwirtschaftlichen Dienstleistungen selbst zu bestimmen) –, dem Anspruch auf nachhaltige Versorgungssicherheit und Qualitätssicherung für alle Bürger, der Berücksichtigung traditionell gewachsener Strukturen und lokaler Besonderheiten sowie der Rechtssicherheit in einem gemeinsamen Europa und der Beachtung von relevantem Gemeinschaftsrecht.

An die EU und ihre Organe ist aber die Forderung zu richten, im Rahmen der Möglichkeiten, die der EG-Vertrag (und die künftige EU-Verfassung) bietet, mehr als bisher den Gestaltungsspielraum der Gemeinden zu achten.

Das von der Kommission extensiv interpretierte Wettbewerbsprinzip, das im Ergebnis dazu führt, dass letztlich auch die Erbringung von Dienstleistungen im wirtschaftlichen Interesse im lokalen/ kommunalen Bereich im Wege eines rigiden Ausschreibungsverfahrens vergeben werden muss, zwingt aber nach Auffassung des VKÖ nicht in jedem Fall zu einer derartigen Vorgangsweise.

Unbestritten ist zunächst die Entscheidungsfreiheit der lokalen Gebietskörperschaften/ Gemeinden Dienstleistungen im allgemeinen wirtschaftlichen Interesse wie ÖPNV, Wasserversorgung, Entsorgung und andere Aufgaben der kommunalen Daseinsvorsorge entweder selbst oder durch eigene Unternehmen zu erbringen oder durch Dritte ausführen zu lassen.

Gemäß Der EuGH-Rechtsprechung („Teckal“) kann von einem „Dritten“ dann nicht gesprochen werden, wenn eine Gemeinde ein von ihr wie eine Verwaltungsabteilung beherrschtes Unternehmen mit einer Dienstleistung beauftragt (sog. In-house-Prinzip).

Nach Ansicht des VKÖ ist dieser Beherrschungstatbestand im Sinne einer für die Rechtssicherheit unerlässlichen einheitlichen Begriffsdefinition wie im Art. 2 Abs.1 lit. b der Richtlinie 2004/17/EG des EP und des Rates vom 31.3.2004 (Amtblatt EU – L 134/1 vom 30.4.2004) auszulegen und somit auf qualifiziert mehrheitlich von der/den betreffenden Gemeinde(n) beherrschte Unternehmen, wenn sie überwiegend Dienstleistungen für die Bürger ihrer Trägergemeinde(n) erbringen, anzuwenden.

Wenn die zuletzt angeführten Voraussetzungen vorliegen, ist angesichts des gegenwärtigen Entwicklungsstandes des Gemeinsamen Marktes davon auszugehen, dass eine derartige Beauftragung von in OE vorzufindenden kleinen und mittleren kommunalen Unternehmen seitens der Trägergemeinde weder geeignet ist, den Wettbewerb in der Gemeinschaft spürbar zu verfälschen noch die Entwicklung des innergemeinschaftlichen Handelsverkehrs in einem Ausmaß zu beeinträchtigen, welches dem Interesse der Gemeinschaft zuwiderläuft.

Die Vereinbarkeit einer derartigen Interpretation des den Bürgern dienenden In-house-Prinzips bei Erfüllung von kommunalen Daseinsvorsorgeleistungen widerspricht daher nicht nur nicht den Interessen der Gemeinschaft im Sinne des letzten Satzes von Art. 86 Abs.2 EG-Vertrag bzw. Art. III-55 der künftigen Verfassung der EU, sondern ermöglicht die Erbringung örtlicher vom Bürger/Konsumenten mitgestalteter und beeinflussbarer Daseinsvorsorgeleistungen insb. durch kleine und mittlere kommunale Unternehmen, die bei uneingeschränkter Anwendung eines Ausschreibungszwanges im höchsten Maß gefährdet wäre. Eine solche Gefährdung wäre schon deshalb bedenklich, weil die Gemeindebürger das kommunale Unternehmen über einen großen Zeitraum im Wege ihres Steueraufkommens bzw. durch Selbstfinanzierung über den Preis der Dienstleistung aufgebaut und zum inneren Wert des Unternehmens erheblich beigetragen haben.

Die Kommission sollte daher ihre durch den Vertrag (Art. 86 Abs. 3) bzw. durch die künftige Verfassung (Art. III-55 Abs. 3) eingeräumten rechtlichen Möglichkeiten nutzen, um den oben dargelegten Interessensausgleich herbei zu führen. Mit einer derartigen rechtlich abgesicherten Lösung wäre sowohl dem Wettbewerbsprinzip des Gemeinsamen Marktes Rechnung getragen, als auch Art. I-5 Abs.1 der künftigen Verfassung der EU erfüllt und die Selbstverwaltung der Gemeinden als Element der nationalen Identität der Mitgliedstaaten sichergestellt.

Der Verband kommunaler Unternehmen Österreichs ersucht daher die Kommission, diese Überlegungen in ihre Schlussfolgerungen einfließen zu lassen und verbleibt

mit freundlichen Grüßen

Grünbuch PPP-Stellungnahme

Die Wirtschaftskammer Österreich erlaubt sich, zum vorliegenden Grünbuch der Europäischen Kommission zu öffentlich-privaten Partnerschaften wie folgt Stellung zu nehmen bzw. die im Grünbuch gestellten Fragen wie folgt zu beantworten:

Im Allgemeinen:

Die Wirtschaftskammer Österreich begrüßt die Initiative der Europäischen Kommission, mit der Vorlage des Grünbuchs zu öffentlich-privaten Partnerschaften (ÖPP) und den gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen, eine breite Diskussion unter allen betroaffenen Interessengruppen zu diesem Thema zu eröffnen.

Aus Sicht der österreichischen Wirtschaft sollte bei jedem Projekt vorab bewertet werden, ob die Abwicklung über PPP einen Zusatznutzen gegenüber einer klassischen öffentlichen Auftragsvergabe bringt.

Weiters bilden die rein vergaberechtlichen Fragestellungen bei der Realisierung von ÖPP-Projekten nur einen Teilaspekt der rechtlichen Betrachtung. Nach den bisherigen Erfahrungen in Österreich ist festzuhalten, dass auch die Anforderungen aus anderen Rechtsgebieten, die noch aus der tradierten Abgrenzung zwischen hoheitlichem und privatwirtschaftlichem Handeln der öffentlichen Hand resultieren, eine Umsetzung von ÖPP in der Praxis erschweren. Über Erfolg oder Scheitern von ÖPP-Projekten entscheidet auch die Beantwortung von

steuer-, beihilfen-, gesellschafts-, arbeits-, verfassungs- und verwaltungsrechtlichen Fragestellungen.

Zu den Fragen im Einzelnen:

Frage 1: Welche Formen von ÖPP auf Vertragsbasis sind Ihnen bekannt? Gibt es in Ihrem Land spezifische (gesetzliche oder andere) Rahmenbedingungen für derartige Konstruktionen?

In Österreich gibt es – wie auch in anderen EU-Mitgliedstaaten – bis dato keine gesetzliche Definition von ÖPP. Charakteristisch für alle ÖPP-Modelle ist, dass es sich im Unterschied zur klassischen öffentlichen Auftragsvergabe nicht um eine Auftraggeber/Auftragnehmer bzw. Kunde/Dienstleister-Beziehung handelt, sondern dass die öffentliche Hand mit privaten Akteuren Kooperationen zum beiderseitigen Nutzen eingeht.

In Österreich kommen ÖPP-Modelle in zunehmendem Maße vor allem im Bereich Verkehr und Infrastruktur zum Einsatz, was zu einer deutlichen Beschleunigung bei der Realisierung bestimmter Projekte führen sollte. Dies ist besonders im Hinblick auf die noch nicht realisierten erweiterungsbezogenen Verkehrsinfrastrukturprojekte von Bedeutung, bei welchen aufgrund massiver Planungs- und Realisierungsversäumnisse in den letzten Jahren, der Faktor Zeit eine sehr große Rolle spielt.

Die grundsätzlichen Motive für ÖPP-Modelle gelten aufgrund der hohen Investitionskosten in besonderem Maße für Verkehrsinfrastruktur. Die Praxis hat bisher gezeigt, dass ÖPP-Modelle in der Regel dann zum Einsatz kommen, wenn eine gänzliche Überlassung an Private politisch oder wirtschaftlich (Rentabilitätslücke, oftmals auch „Anschubfinanzierung“) nicht möglich ist, auf eine private Beteiligung an der Finanzierung und am Management jedoch aus budgetären Gründen nicht verzichtet werden soll. Der erhebliche Finanzbedarf und die hohen Risiken bei großen Infrastrukturprojekten erfordern somit oftmals ein Zusammenwirken von privaten Unternehmen und öffentlicher Hand, um eine Projektrealisierung zu ermöglichen bzw. zu beschleunigen.

Ungeachtet der Tatsache, dass für jedes ÖPP ein Bündel von speziell auf das jeweilige Projekt zugeschnittenen Verträgen zu erstellen ist, lassen sich ÖPP-Modelle typischerweise in drei Kategorien unterteilen:

- Betreibermodelle
- Konzessionsmodelle
- Institutionalisierte Kooperationsmodelle

Alle drei Kategorien von ÖPP-Modellen wurden in Österreich in der Vergangenheit bereits verwirklicht.

Im öffentlich-rechtlichen Bereich gibt es einige österreichische Sondergesetze, die ausdrücklich den Gebietskörperschaften bzw. den öffentlichen Unternehmen die Umsetzung von ÖPP erlauben, z.B. ASFINAG-Ermächtigungsgesetz, ÖBB-Strukturgesetz, E- und Telekom-Control-Gesetz.

Bisher wurden in Österreich 2 konkrete ÖPP-Modelle im Bereich Verkehrsinfrastruktur realisiert:

B1 (Umfahrung Ebelsberg bei Linz) sowie der

Güterterminal Graz-Süd/Werndorf.

Weitere ÖPP-Modelle befinden sich derzeit in Planung; dies sind im Bereich Straße:

Autobahn A5 (Nordautobahn);

Teile der Schnellstraße S1 (Wiener Außenring Schnellstraße);

Teile der Schnellstraße S2 (Wiener Nordrand Schnellstraße).

Im Rahmen des Projekts „ÖPP-Konzessionsmodell Ostregion“ wird von der ASFINAG bis Ende 2004 eine Ausschreibung für die drei genannten Projekte erstellt. Die Einholung der Angebote der privaten Betreiber und die Ermittlung des Bestbieters soll bis Ende 2005 abgeschlossen sein.

Im Bereich Schiene befinden sich folgende Projekte in Planung:

Summerau-Spielfeld-Straß;

Brenner-Basis-Tunnel;

Bahnhofsprojekte in Wien.

Aus Sicht der praktischen Umsetzung von ÖPP-Modellen im Bereich Verkehrsinfrastruktur liegen die Vorteile derartiger Modelle in der Kombination der jeweils speziellen besonderen Kompetenzen von privatem und öffentlichem Partner. ÖPP-Modelle können dennoch kein Wundermittel darstellen, da auch bei Verkehrsprojekten letztlich die Nachfragesituation ausschlaggebend für die betriebswirtschaftliche Rentabilität des Projekts ist.

Aus Sicht der österreichischen Wirtschaft sollten in jedem Fall die bisherigen Erfahrungen österreichischer Infrastrukturunternehmen, insb. von ASFINAG (Autobahn- und Schnellstraßen Finanzierungs- AG) und SCHIG (Schieneninfrastrukturfinanzierungs-GmbH), mit PPP-Modellen, im Rahmen der durch das Grünbuch initiierten Diskussion entsprechend berücksichtigt werden. Selbst wenn die grundsätzliche Haltung der genannten Unternehmen zu PPP durchaus ambivalent sein kann bzw. sein dürfte, erscheint doch zumindest die Sichtweise der in 100% Eigentum der öffetnlichen Hand stehenden Unternehmen als wichtiger Baustein in der PPP – Diskussion.

In Österreich kann wohl auch die Durchführung der Kfz-Zulassung und Vergabe von Kennzeichen durch private Versicherungsunternehmen als öffentlich-private Partnerschaft bezeichnet werden, die unter der Aufsicht der Behörden erfolgt. Gesetzliche Bestimmungen regeln die Voraussetzungen, unter denen diese Aufgaben von der Behörde an grundsätzlich beliebig viele private Versicherer vergeben werden können.

Frage 2: Nach Auffassung der Kommission wird die Umsetzung des wettbewerblichen Dialogs in einzelstaatliche Rechtsvorschriften den betroffenen Parteien ein Verfahren an die Hand geben, das sich ganz besonders für die Vergabe öffentlicher Aufträge in Zusammenhang mit der Einrichtung einer ÖPP auf Vertragsbasis eignet und gleichzeitig die Grundrechte der Wirtschaftsteilnehmer wahrt. Stimmen Sie dem zu? Falls nein, warum nicht?

Die Durchführung eines Vergabeverfahrens zur Auswahl des privaten Partners stellt gerade bei sehr komplexen ÖPP-Projekten öffentliche Auftraggeber vor erhebliche Probleme. Bei komplexen ÖPP-Projekten wurde daher in Österreich schon bisher auf das Instrument des Verhandlungsverfahrens mit Bekanntmachung zurückgegriffen und mit den ausgewählten Bewerbern ein konkretes ÖPP-Modell als ein Paket von langfristigen Leistungsverträgen hinsichtlich Errichtung, Betrieb, Finanzierung etc abgeschlossen.

Das Hauptproblem bei der Vergabe komplexer Beschaffungsvorhaben kann jedoch auch das Verfahren des wettbewerblichen Dialogs nicht lösen: Die Durchführung – ob im klassischen Verhandlungsverfahren oder nach dem neuen Verfahren des wettbewerblichen Dialogs – erfordert vom öffentlichen Auftraggebern eine Beschreibung seiner Beschaffungsziele, d.h. zumindest eine eindeutige funktionale Leistungsbeschreibung in Form einer konkreten Aufgabenstellung, die den Zweck der Leistung und die an die Leistung gestellten Anforderungen des Auftraggebers in technischer, wirtschaftlicher und unter Umständen gestalterischer Hinsicht klar erkennen lässt (Art 29 EU-Vergaberichtlinie 2004/18/EG als „Bedürfnisse“ des öffentlichen Auftraggebers bezeichnet).

Neu am wettbewerblichen Dialog ist, dass die Phase der Herausarbeitung des Leistungsgegenstandes im Wege von Verhandlungen nunmehr explizit als eigene Dialogphase des Verfahrens gestaltet wurde und das „Last and Best Offer“ aller Bieter in der daran anschließenden Angebotsphase, an der alle Bewerber teilnahmeberechtigt sind, ebenfalls institutionalisiert wird. Für den Bieter könnte der wettbewerbliche Dialog die Gefahr in sich bergen, dass der öffentliche Auftraggeber nach der „Rosinenmethode“ die am Markt verfügbare beste Lösung ermittelt und damit substanzielles Know-How eines (oder mehrerer) Marktteilnehmer(s) an sich zieht, um die so ermittelte Ideallösung in der anschließenden Angebotsphase der „billigsten“ Realisierung zuzuführen. Kritisch muss auch die Möglichkeit des öffentlichen Auftraggebers betrachtet werden, mit dem bereits gekürten Bestbieter „Nachverhandlungen“ in gewissem Umfang führen zu können (Art 29 Abs 7 EU-Vergaberichtlinie 2004/18/EG).

Grundsätzlich sollte für ÖPP die freie Wahl zwischen dem offenen, dem nicht offenen und dem Verhandlungsverfahren bzw. dem wettbewerblichen Dialog möglich sein.

Das neue Verfahren des wettbewerblichen Dialogs kann zwar nach einzelstaatlicher Umsetzung grundsätzlich die Realisierung von ÖPPs erleichtern, allerdings gelingt es nur dann, wenn die geistigen Eigentumsrechte potentieller Bieter entsprechend abgesichert sowie Verhandlungen klar und transparent geregelt werden.

Frage 3: Sehen Sie in Bezug auf diese Aufträge neben der Wahl des Vergabeverfahrens andere Punkte, die mit dem Gemeinschaftsrecht über öffentliche Aufträge in Konflikt stehen könnten? Wenn ja, nennen Sie diese und begründen Sie!

Während vergaberechtliche Verstöße des öffentlichen Auftraggebers, insbesondere die falsche Wahl der Verfahrensart, gemäß den EU-Rechtsmittelrichtlinien vor den nationalen Vergabekontrollinstanzen bekämpft werden können, bleibt ein effizienter Rechtsschutz im Fall der gänzlichen Missachtung des Vergaberechts durch den Auftraggeber (z.B. „Freihandvergabe“ bzw. „Direktvergabe“) weitgehend versagt. Das Problem der Rechtsschutzlücke bei Freihandvergaben stellt sich zwar nicht nur bei der Vergabe von ÖPP, ist hier jedoch von besonderer Tragweite, da typischerweise langfristige Verträge abgeschlossen werden. Zwar kann nach dem österreichischen Vergaberecht ein Bieter im Fall einer zu Unrecht erfolgten Direktvergabe (Freihandvergabe) vor der zuständigen Vergabekontrollinstanz den Antrag auf Feststellung stellen, dass die freihändige Vergabe rechtswidrig war und ein Verstoß gegen das EU-Vergaberecht erfolgte. Der Eingriff in den abgeschlossenen Vertrag ist aber auch durch einen positiven Feststellungsbescheid nicht mehr möglich. Auch der EuGH geht in seiner Rechtsprechung (nach dem Grundsatz „pacta sunt servanda“) von der Bestandskraft unter Missachtung des Vergaberechts geschlossener Verträge aus.

Weiters sind die Abgrenzungsfragen zwischen Bau- und Dienstleistungsaufträgen bzw. Bau- und Dienstleistungskonzessionen nach wie vor nicht klar geregelt. Generell kollidiert die erwünschte frühzeitige Einbindung von Privaten zur Optimierung des ÖPP-Projektes immer wieder mit dem Interesse des Auftraggebers, erst dann zu vergeben, wenn die Leistungsbeschreibung genau präzisiert ist, aber auch mit dem Interesse des Auftragnehmers, keine unbeherrschbaren Genehmigungsrisiken übernehmen zu wollen.

Die Frage der frühzeitigen Verschränkung von privater Seite mit der öffetnlichen Hand muss nicht zwangsläufig eine geänderte Risikostruktur zur Folge haben. So könnte etwa eine Zusammenarbeit ohne weiteres schon vor Genehmigungs- oder Bewilligungsakten stattfinden, ohne dass deswegen das Risiko der Genehmigung auf den Privaten übergeht.

Die oftmals geäusserte Frage „Wie geht ein Privater mit Genehmigungsrisken um, wenn er schon frühzeitig etwa in einer Projektgesellschaft mit der öffentlichen Hand zusammenarbeitet“ kann somit nur mit „gar nicht“ beantwortet werden; soll heissen: öffentliches Risiko muss öffentliches Risiko bleiben, unabhängig davon, ob die PPP Strukturen früher oder später geschaffen werden.

Frage 4: Haben Sie bereits einmal ein Verfahren zur Vergabe einer Konzession in der Europäischen Union organisiert, daran teilgenommen bzw. ein solches organisieren oder daran teilnehmen wollen? Welche Erfahrungen haben Sie gemacht?

In Österreich wurden in der Vergangenheit mehrere große Dienstleistungskonzessionsprojekte umgesetzt. Seit Inkrafttreten des Bundesvergabegesetzes 2002 unterliegt die Vergabe einer Dienstleistungskonzession gemäß der Rechtsprechung des EuGH einem Vergaberegime „light“: Die öffentlichen Auftraggeber sind zur öffentlichen Bekanntmachung und zur Einhaltung der Grundsätze des Vergaberechts verpflichtet, der Rechtsschutz ist in der Regel nicht vor den Vergabekontrollbehörden, sondern bei ordentlichen Gerichten angesiedelt.

Frage 5: Halten Sie das derzeitige Gemeinschaftsrecht für präzise genug, um die konkrete und effektive Teilnahme von Gesellschaften oder Gruppierungen aus anderen Staaten an den Konzessionsvergabeverfahren sicherzustellen? Sind Sie der Ansicht, dass in dieser Hinsicht normalerweise ein tatsächlicher Wettbewerb herrscht?

Verbesserungsmöglichkeiten im Vergaberecht in Bezug auf ÖPP wird es - wie oben unter 2 und 3 erörtert - wegen der Komplexität der Materie immer geben.

Der Wettbewerb bei ÖPP-Projekten in der EU ist unserer Erfahrung nach sehr intensiv. Ohne Kenntnis der Bedingungen vor Ort ist jedoch eine Teilnahme am Wettbewerb wenig erfolgversprechend. Wichtig erscheint, dass es für vergabe- und wettbewerbsrechtliche Verstöße einen raschen und wirksamen Rechtschutz gibt.

Frage 6: Halten Sie einen Vorschlag für einen gemeinschaftlichen Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe für wünschenswert?

Ein gemeinschaftsrechtlicher Rechtsakt zur Festlegung eines Verfahrensrahmens für die Konzessionsvergabe ist nicht erforderlich. Jedoch sollte die Mitteilung der Kommission zu Aus-

legungsfragen im Bereich Konzessionen im Gemeinschaftsrecht noch einige Präzisierungen erfahren. So wurde z.B. in den neuen EU-Vergaberichtlinien zwar eine Definition der Dienst-leistungskonzession eingefügt, aus dieser Definition geht jedoch gerade jenes Tatbestandselement, das nach der Mitteilung der Kommission ausschlaggebend für die Abgrenzung zwischen Dienstleistungsauftrag und Dienstleistungskonzession ist, nämlich die Tragung des wirtschaftlichen Risikos durch den Konzessionsnehmer, nicht explizit hervor.

Frage 7: Allgemeiner gefragt: Wenn Sie ein neues Gesetzgebungsvorhaben der Kommission für erforderlich halten, gibt es dann objektive Gründe dafür, in diesem Rechtsakt sämtliche ÖPP auf Vertragsbasis zu behandeln und sie ein und demselben Regelwerk für die Vergabe zu unterwerfen, ganz gleich ob die Vorhaben als öffentliche Aufträge oder als Konzessionen einzustufen sind?

Ein eigenes Gesetzgebungsvorhaben für ÖPP wird nicht für sinnvoll erachtet.

Frage 8: Ist Ihrer Erfahrung nach der Zugang der ausländischen Akteure zu privat initiierten ÖPP gewährleistet? Für den Fall, dass die Vergabestellen zur Initiative aufrufen, wird dieser Aufruf dann angemessen bekannt gemacht, so dass alle interessierten Akteure Kenntnis davon haben können? Wird für die Ausführung des ausgewählten Projekts ein Auswahlverfahren auf Basis eines effektiven Wettbewerbs organisiert?

Auch privat initiierte ÖPP sind ihrem tatsächlichen Inhalt nach entweder als öffentlicher Auftrag oder als Dienstleistungs- bzw. Baukonzession zu qualifizieren. Entsprechend muss der Aufruf zur Teilnahme am Vergabeverfahren von den Vergabestellen - wie die Vergabe jedes anderen öffentlichen Auftrags - im EU-Amtsblatt bekannt gemacht werden.

Geht die Initiative für ein ÖPP von einem privaten Wirtschaftsteilnehmer aus, der selbst als Partner der öffentlichen Hand an der Realisierung des von ihm entwickelten Projektes interessiert ist, so stellt sich das Problem der Vorarbeitenproblematik für diesen Wirtschaftsteilnehmer. Die Vergabestelle wird in der nachfolgenden Ausschreibung darauf achten müssen, dass allfällige Wettbewerbsvorteile dieses Unternehmens in der Projektierungsphase neutralisiert werden, damit sich das initiierende Unternehmen selbst auch an der Ausschreibung beteiligen kann, ohne dass gegen den Grundsatz der Bietergleichbehandlung verstoßen wird.

Frage 9: Wie könnte Ihrer Auffassung nach die Entwicklung privat initiierter ÖPP in der Europäischen Union unter Wahrung der Grundsätze der Transparenz und der Gleichbehandlung und ohne Verstoß gegen das Diskriminierungsverbot gewährleistet werden?

Privat initiierte ÖPP haben, wie in Punkt 8. bereits ausgeführt, den selben Regeln zu unterliegen wie von der öffentlichen Hand initiierte ÖPP. Eine gesonderte Unterscheidung in „öffentlich initiierte“ und „privat initiierte“ ÖPP ist abzulehnen.

Frage 10: Welche Erfahrungen haben sie in der Phase im Anschluss an die Auswahl des privaten Partners im Rahmen von ÖPP auf Vertragsbasis gemacht?

Wenn in der laufenden Abwicklung eines ÖPP-Projektes zwischen den Vertragsparteien Vertragsanpassungen vorgenommen werden, die eine Neuausschreibungspflicht auslösen könnten, werden die Mitbewerber selten davon Kenntnis erlangen und daher kaum mit vergaberechtlichen Mitteln dagegen vorgehen. Dementsprechend gibt es auch sehr wenige Entscheidungen der Vergabekontrollbehörden im Zusammenhang mit Vertragsanpassungen.

Unbestritten muss jedoch gerade bei komplexen ÖPP Projekten den Vertragsparteien die Möglichkeit zur Vertragsanpassung innerhalb der bereits in den Ausschreibungsunterlagen vorgezeichneten Grenzen möglich sein (ausschreibungsneutrale derivative Vertragsanpassung wie Preisgleitklauseln, Verlängerungsoptionen etc).

Frage 11: Sind Ihnen Fälle bekannt, in denen die Ausführungsbedingungen, einschließlich der Klauseln zur Anpassung im Zeitverlauf, eine diskriminierende Wirkung entfalten konnten oder eine ungerechtfertigte Behinderung der Dienstleistungs- oder Niederlassungsfreiheit darstellten? Falls ja, bitte beschreiben Sie die Art der aufgetretenen Probleme!

Es ist vielfach üblich, dass sich die öffentliche Hand im Rahmen von ÖPP das Recht zur außerordentlichen Kündigung des Vertrages bei Eintritt bestimmter Umstände (z.B. Strukturänderungen des privaten Partner o.ä.) oder andere Kontrollmöglichkeiten bzw. einseitige Möglichkeiten zum Vertragseingriff vorbehält.

Während des laufenden Vergabeverfahrens können derartige in den Ausschreibungsunterlagen enthaltene Klauseln von den Bietern im Wege eines Nachprüfungsverfahrens vor den österreichischen Vergabekontrollinstanzen bekämpft werden, wenn dem Auftragnehmer durch sittenwidrige Klauseln ein unkalkulierbares Risiko auferlegt wird oder es sich um diskriminierende Bestimmungen handelt.

Nach Abschluss des Vergabeverfahrens sind allfällige sittenwidrige oder gröblich benachteiligende Klauseln in den Ausführungsbedingungen eine Angelegenheit der Vertragsabwicklung zwischen Auftraggeber und Auftragnehmer, welche mit Mitteln des nationalen Zivilrechts zu lösen sind.

Frage 12: Sind Ihnen Praktiken oder Mechanismen zur Bewertung von Angeboten bekannt, die eine diskriminierende Wirkung haben?

Typische Fehler betreffen die Verwendung von Eignungskriterien als Zuschlagskriterien, wobei insbesondere die Verwendung von Referenzen als Zuschlagskriterium eine vergaberechtliche Grauzone darstellt. Probleme machen oft die vergaberechtlich grundsätzlich zulässigen subjektiven Kriterien (z.B. Benutzerkomfort, Ästhetik etc.), vor allem bei mangelnder Sachkunde der bewertenden Vergabekommission. Weitere Schwierigkeiten können sich durch die mangelnde Transparenz der Zuschlagskriterien oder Bewertungsmethoden ergeben.

Frage 13: Sind Sie wie die Kommission der Auffassung, dass bestimmte Interventionsklauseln in Bezug auf die Grundsätze der Transparenz und der Gleichbehandlung problematisch sein können? Sind Ihnen andere Typen von Klauseln bekannt, deren Anwendung zu ähnlichen Problemen führen kann?

Siehe Antworten zu den Fragen 2 und 11.

Frage 14: Halten Sie es für erforderlich, dass bestimmte Aspekte der vertraglichen Rahmenbedingungen für ÖPP auf Gemeinschaftsebene geklärt werden? Falls ja, was sollte geklärt werden?

Vertragliche Bestimmungen in ÖPP-Verträgen und deren Zulässigkeitsgrenzen sind Angelegenheit der jeweiligen nationalen Zivilrechte. Eine Regelung der vertraglichen Rahmenbedingungen auf Gemeinschaftsebene ist daher grundsätzlich nicht erforderlich.
Ungeachtet dessen ist bei ÖPP die Wechselwirkung zwischen den betroffenen Rechtsmaterien zu beachten. Die Anforderungen des Vergaberechts sind mit denen des Beihilfenrechts, der Finanzierungsbedingungen, der EUROSTAT-Regeln und dem öffentlich-rechtlichen Rahmen in den einzelnen Sektoren in Einklang zu bringen. Gerade die interdisziplinäre Betrachtung wäre nicht nur auf der Ebene der Mitgliedsstaaten, sondern auch auf der EU-Ebene eine notwendige Aufgabe.

Frage 15: Sind Ihnen bei ÖPP-Konstruktionen besondere Probleme mit der Vergabe von Unteraufträgen bekannt? Welche?

Die Spielregeln für Unteraufträge sind unseres Erachtens relativ klar definiert. Wir vertreten den Standpunkt, dass nur die Auswahl des privaten Partners, nicht aber die Vergabe des Unterauftrages auszuschreiben ist.

Frage 16: Rechtfertigt die Existenz von ÖPP auf Vertragsbasis, die die Übertragung eines Aufgabenpakets an einen einzigen privaten Partner impliziert, ihrer Auffassung nach, dass ausführlichere Regeln für die Vergabe von Unteraufträgen eingeführt werden und/oder dass der Anwendungsbereich erweitert wird?

Unseres Erachtens sollte die Vergabe von Unteraufträgen keiner erweiterten oder detaillierteren Regelung unterzogen werden.

Frage 17: Halten Sie, allgemeiner gesprochen, eine ergänzende Initiative auf Gemeinschaftsebene zur Klärung oder Umgestaltung der Regeln für die Vergabe von Unteraufträgen für erforderlich?

Grundsätzlich wäre eine ausdrückliche Klarstellung im Rahmen einer auslegenden Mitteilung der Kommission sinnvoll, dass sowohl die technische als auch die finanzielle und wirtschaftliche Leistungsfähigkeit durch Beiziehung eines Subunternehmers substituiert werden kann, sofern der Bieter bereits mit Abgabe seines Angebotes verbindlich nachweist, dass ihm die Mittel des Subunternehmers im Auftragsfall tatsächlich zur Verfügung stehen werden.

Frage 18: Welche Erfahrungen haben Sie mit der Einrichtung institutionalisierter ÖPP gemacht? Lassen Ihre Erfahrungen Sie zu der Schlussfolgerung gelangen, dass die gemeinschaftlichen Rechtsvorschriften für öffentliche Aufträge und Konzessionen bei institutionalisierten ÖPP-Konstruktionen eingehalten werden? Falls nein, warum nicht?

Der typische Fall eines institutionalisierten ÖPP ist die Gründung eines gemischtwirtschaftlichen Unternehmens, an dem sowohl die öffentliche Hand als auch der private Partner beteiligt sind. Hier stellt sich die nach wie vor ungelöste Frage der Reichweite des In-house-Privilegs. Selbst wenn der Vorgang der Gesellschaftsgründung, in die gleichzeitig die Vergabe eines initialen öffentlichen Auftrages an die Gesellschaft verbunden war, EU-weit öffentlich ausgeschrieben wurde, stellt sich die Frage, ob die öffentliche Hand als Gesellschafter ausschreibungsfrei Aufträge an ihr Tochterunternehmen vergeben darf und bis zu welcher Grenze die Gesellschaft ihre Leistungen auch am Markt anbieten darf, ohne dass das In-house-Privileg verloren geht.

Während bei 100% Eigengesellschaften und gemischt-öffentlichen Unternehmen das Vorliegen eines In-house-Geschäfts in der Rechtsprechung bereits ausdrücklich bejaht wurde, bestehen zur Frage der In-house-Vergabe an gemischt-wirtschaftliche Unternehmen noch keine positiven Entscheidungen der Vergabekontrollinstanzen. Das vorliegende Grünbuch verweist zwar allgemein auf den Ausnahmetatbestand des In-house-Privilegs und dessen Voraussetzungen, äußert sich aber nicht näher zu deren Grenzen und Reichweite.

Leider hat die Regelung der In-house-Vergabe auch keinen Eingang in die neuen EU-Vergaberichtlinien gefunden. Zur Beseitigung dieser Rechtsunsicherheit sollte die Kommission eine auslegende Mitteilung veröffentlichen.

Frage 19: Halten Sie eine Initiative auf Gemeinschaftsebene für erforderlich, um die Verpflichtungen zu klären oder zu vertiefen, die die öffentlichen Auftraggeber in Bezug auf den Wettbewerb zwischen potenziell an einem institutionalisierten ÖPP-Projekt interessierten Wirtschaftsteilnehmern haben? Falls ja, welche Aspekte halten Sie für besonders wichtig und welche Form sollte eine solche Initiative haben? Falls nein, warum nicht?

Ein gemeinschaftlicher Rechtsakt ist nicht erforderlich. Die Kommission sollte eine auslegende Mitteilung erlassen, in der dargestellt wird, in welchen Fällen die Gründung eines institutionalisierten ÖPP ausschreibungspflichtig ist und in welchen Fällen eine In-house-Vergabe möglich ist.

Frage 20: Welche Maßnahmen oder Verfahren behindern in der Europäischen Union die Einrichtung von ÖPP?

Behindert werden ÖPP-Modelle oft nicht nur durch vergaberechtliche Notwendigkeiten, sondern auch durch Rechtsprobleme in anderen Bereichen. U.a. können ÖPP-Modelle z.B. mehrwertsteuerrechtlich unerwünschte Konsequenzen nach sich ziehen (Vorsteuerabzug).

Behinderungen für ÖPP ergeben sich weiters durch

- zu zögerliche Liberalisierungen und Marktöffnungen in bestimmten Sektoren, z.B. Schienenverkehr
- finanzielle Restriktionen, z.B. bei der Schieneninfrastruktur
- offene Fragen beim Wachstums- und Stabilitätspakt bezüglich der Kriterien Budgetdefizit und öffentliche Verschuldung
- mangelnde Kenntnis von Best Practices
- überzogene Riskenüberwälzung an Private (die Folge besteht entweder in hohen Risikobepreisungen, beschränktem Wettbewerb bzw. in der Verunmöglichung der Finanzierung – etwa dadurch dass öffentliche Risken überwälzt werden)

Frage 21: Kennen Sie andere ÖPP-Formen aus Drittländern? Kennen Sie aus Ihren Erfahrungen in solchen Ländern bewährte Verfahrensweisen, die auch für die EU beispielgebend sein könnten? Falls ja, welche?

Das sog. Verfügbarkeitsmodell (Konzessionär trägt Planungs- und Ausführungsrisken, nicht aber das Nutzungs- bzw. Frequenzrisiko) ist im Hinblick auf die Risikoverteilung und Bankability zurzeit das am besten nutzbare Modell mit den geringsten privaten Finanzierungskosten. Daher könnte es insbesondere auch im Verkehrsinfrastrukturbereich forciert Anwendung finden.

Frage 22: Denken Sie, dass es nützlich wäre, im Hinblick auf den großen Investitionsbedarf einzelner Mitgliedstaaten zum Erreichen einer sozialen und dauerhaften Entwicklung gemeinsam und in regelmäßigen Abständen über diese Fragen unter den betroffenen Akteuren nachzudenken und bewährte Verfahrensweisen auszutauschen? Sollte die Kommission nach Ihrer Auffassung ein derartiges Netzwerk aufbauen?

In einigen Mitgliedstaaten wird versucht, eine wissenschaftliche sowie praktische Begleitung von ÖPP-Projekten durch spezialisierte Tash Forces und die Evaluierung von Best-Practice-Modellen durchzuführen, da insbesondere in einer umfassenden Wirtschaftlichkeitsprüfung der Schlüssel zum Erfolg von ÖPP liegt. Die Koordinierung eines derartigen Netzwerks unter Einbindung der Auftraggeber- und der Auftragnehmerseite auf europäischer Seite wäre wünschenswert.

Wir befürworten es, wenn in regelmäßigen Abständen ein Gedanken- und Erfahrungsaustausch zwischen den betroffenen Akteuren stattfindet; dadurch könnten insbesondere bewährte Verfahrensweisen aus anderen Mitgliedstaaten diskutiert werden. Ein von der Kommission initiiertes Netzwerk wäre hierfür sehr dienlich.

Wir bitten um Berücksichtigung unserer Überlegungen und verbleiben

Mit freundlichen Grüßen

Univ.Doz. Dr. Hanspeter Hanreich
Abteilungsleiter

Union des Villes et Communes de Wallonie asbl

Observations à propos du «Livre vert sur les partenariats public-privé et le droit communautaire des marchés publics et des concessions»

Préalable:

Dans un souci de lisibilité, la structure du livre vert est reprise dans les commentaires ci-après. Les titres, sous-titres et paragraphes sont ceux du livre vert. Les textes en italique sont extraits du livre vert.

1. L'ÉVOLUTION DU PARTENARIAT PUBLIC-PRIVÉ: CONSTATS ET DÉFIS

1.1. Le phénomène «partenariat public-privé»

1. Comme le soulèvent les auteurs du livre vert, le terme partenariat public-privé (ci-après «PPP») n'est pas défini dans le droit communautaire.

On s'accorde généralement pour désigner par cette appellation les modes de collaboration qu'entretiennent des autorités publiques avec des entreprises privées dans la poursuite d'un objectif commun.

Des intérêts financiers justifient la plupart du temps le recours à cette technique par l'autorité publique.
Le rôle et la responsabilité de chaque partenaire sont à examiner au cas par cas.

Retenons cependant que la caractéristique principale du PPP est la composante publique-privée du partenariat.

2. Les auteurs du livre vert partent du constat que le développement du PPP s'inscrit dans "*l'évolution du rôle de l'Etat dans la sphère économique, passant d'un rôle d'opérateur direct à un rôle d'organisateur, de régulateur et de contrôleur*".

Nous ne pouvons pas souscrire à ce point de vue. Il existe, en effet, une série de cas dans lesquels l'autorité publique veut encore assurer un rôle d'opérateur direct. Plus précisément, nombre de services publics locaux sont encore fournis directement par les pouvoirs locaux. Songeons par exemple, à tout ce qui a trait à l'exploitation d'infrastructures telles que des centres sportifs, à la distribution d'eau, les bibliothèques publiques, les hôpitaux, …

1.2. Le défi du marché intérieur: assurer le développement du PPP dans des conditions de concurrence effective et de clarté juridique

1. «*Toute attribution de mission réalisée par la voie d'un acte unilatéral échappe à tout encadrement de droit dérivé*», mentionnent les auteurs du livre vert.

Il est important de relever cet élément.

Les autorités publiques doivent pouvoir décider librement de créer seules ou ensemble un nouvel être juridique. Il s'agit du choix du mode d'organisation d'un service public. Or, comme l'a rappelé l'avocat général La Pergola «*il n'y a pas lieu de s'étendre davantage sur le fait qu'une autorité publique est libre de l'organisation de sa structure, de manière à ce qu'elle puisse mieux répondre aux besoins du public. Le choix d'un modèle d'organisation par un service public ne signifie donc pas que l'on doive appliquer des dispositions qui doivent régler une toute autre situation bien déterminée, à savoir la fourniture d'un service par un particulier à une institution publique contre rémunération*» (CJCE, 10 nov. 1988, aff.C-360/99, *Rec.* , 1998, I, pp. 6821 et svtes).

Effectivement, les choix posés en matière de gestion de services publics par l'autorité publique peuvent s'analyser autrement que comme "une attribution de tâches".

Ils peuvent en effet s'inscrire dans une réorganisation administrative, spécialement organisée par le droit interne. Ce type de choix ne peut être qualifié de «marché public» ou de «concession» car il ne peut s'analyser en une *«attribution d'une mission d'activité économique prestée par un tiers au bénéfice de l'autorité et ce, contre rémunération*».

Nous songeons par exemple, à la mise en place d'une entité distincte de la commune (régie, intercommunale) qui aura pour objet une mission particulière d'intérêt général. A défaut de pouvoir exercer cette mission, elle perdrait toute raison d'être. On ne voit pas, alors, quel serait l'intérêt pour les pouvoirs locaux de créer semblables structures, si elles sont vouées à rester des "coquilles vides".

"Soumettre une structure publique locale décentralisée à une mise en concurrence préalable, y compris pour les missions d'intérêt économique général dont les statuts l'ont chargée, n'est-ce pas l'exposer à la possibilité d'être dépouillée de la substance même de ces missions, et donc au risque subséquent de n'avoir plus, à terme, aucune viabilité économique?"[1]

2. Il est fait état de la nécessité d'adopter des règles communautaires applicables au choix des entreprises appelées à coopérer avec une autorité publique dans le cadre d'un PPP.

Il nous paraît que l'application potentielle de la législation relative aux marchés publics ou la communication interprétative de la commission sur les concessions en droit communautaire *(Communication interprétative sur les concessions en droit communautaire, J.O.C.E., C-121*) sont des outils pertinents auxquels il convient de se rallier pour connaître les règles applicables.

La création d'un troisième outil de référence ne risque-t-il pas de créer des confusions? Ne risque-t-on pas de créer des difficultés de qualification juridique des opérations envisagées?

[1] A.L. Durviaux et N. Thirion, Les modes de gestion des services publics locaux, la réglementation relative aux marchés publics et le droit communautaire, J.T., n°6122, 2004, p.25.

2. Le PPP purement contractuel et le droit communautaire des marchés publics et des concessions

2.1. La phase de sélection du partenaire privé

2.1.1. Partenariat de type purement contractuel: acte attributif qualifié de marché public

Il doit être fait application des règles relatives aux marchés publics pour la sélection du partenaire privé, dans la mesure où le contrat peut être qualifié de marché public, le cas échéant en recourant à la procédure de «dialogue compétitif» si l'opération est complexe[2].

Le dialogue compétitif peut s'avérer intéressant, notamment quand le pouvoir adjudicateur ne sait pas très bien techniquement ce à quoi il peut ou doit s'engager.

Il ne semble cependant pas qu'il faille considérer que cette technique soit la panacée, les pouvoirs publics ne risquent-ils pas de perdre la maîtrise de leur marché? Relevons aussi la complexité de ce type de procédure.

2.1.2. Partenariat de type contractuel: acte attributif qualifié de concession

Le régime applicable lors de la phase de passation des concessions de services a fait l'objet d'une communication interprétative à laquelle les pouvoirs publics locaux wallons se réfèrent lorsqu'ils passent semblable convention.

Une réglementation communautaire en la matière n'apparaît pas nécessaire, les objectifs de mise en concurrence étant atteints via l'application des mécanismes de transparence et d'égalité de traitement préconisés.

La mise en place d'une nouvelle législation venant s'adjoindre aux textes existants en matière de concessions ne risque-t-elle pas de porter atteinte à l'efficacité administrative? Enfin, il ne nous semble pas qu'un contentieux particulier existe en la matière.

Par ailleurs, si la Commission estime qu'il faut créer les conditions d'un environnement plus compétitif, il faut également veiller à ce que le service public soit préservé, plus précisément les conditions d'accès de tout un chacun à celui-ci.

2.2. Questions spécifiques à la sélection d'un opérateur économique dans le cadre d'un PPP d'initiative privée

L'hypothèse visée est "*celle d'un opérateur économique formulant une proposition détaillée de projet, éventuellement à l'invitation de l'administration*".

[2] Par dialogue compétitif, il y a lieu d'entendre la procédure à laquelle tout opérateur économique peut demander à participer et dans laquelle le pouvoir adjudicateur conduit un dialogue avec les candidats admis à cette procédure, en vue de développer une ou plusieurs solutions aptes à répondre à ses besoins et sur la base de laquelle ou desquelles les candidats sélectionnés seront invités à remettre une offre (Article 11, c) de la directive du 31 mars 2004 relative à la coordination des procédures de passations des marchés publics de travaux, de fourniture et de services).

Il nous paraît que les mécanismes existants, à savoir les mécanismes prévus par la législation relative aux marchés publics (marchés de promotion, concessions de travaux publics et la publicité en découlant), permettent à suffisance d'assurer les objectifs de mise en concurrence de tous les opérateurs potentiels.

A nouveau, on peut craindre que la mise en place d'une nouvelle réglementation venant s'adjoindre aux textes existants en matière de passation de marchés publics et de concessions, soit susceptible de porter atteinte à l'efficacité administrative.

2.3. La phase postérieure à la sélection du partenaire privé

2.3.1 L'encadrement contractuel du projet

Il ne nous paraît pas qu'il y ait lieu de légiférer sur les modalités d'exécution des PPP.

En effet, dans le canevas proposé, soit il s'agit d'opérations pouvant être qualifiées de marchés publics, auxquels cas les règles d'exécution de ce régime juridique sont suivies.

Soit il s'agit de concessions et ces règles seront alors le plus souvent établies dans les documents contractuels.

D'une manière plus générale, il pourra être difficile de prévoir un cadre juridique d'exécution spécifique aux PPP dans la mesure où chaque projet peut requérir des règles d'exécution propres et adaptées à la situation concrète.

Rappelons enfin que le contrat administratif est particulier en raison du caractère public d'un des deux co-contractants. A ce sujet, l'autorité doit pouvoir en tout temps proposer des modifications liées à des motifs d'intérêt public, "*la faculté dont jouit l'Administration de pouvoir ordonner unilatéralement des modifications aux conditions initiales du marché constitue un droit originaire et inaliénable de la "Puissance publique", justifié par la nécessité d'adapter en toutes circonstances le service public aux besoins forcément changeants de la collectivité*"[3] étant entendu que ces modifications ne doivent pas aboutir à un changement d'objet du contrat.

Ainsi, si comme le souligne les auteurs du livre vert *"… les droits fondamentaux des opérateurs économiques … doivent être préservés*», ceux des autorités publiques et surtout l'efficacité et la simplification administratives, doivent l'être également.

2.3.2 La sous-traitance de certaines tâches

Il ne paraît pas qu'il faille légiférer en matière de sous-traitance. Les marchés publics et les concessions se caractérisent par leur composante *intuitu personae*. Il en découle que la sous-traitance de tout ou partie de la tâche confiée ne pourra intervenir que moyennant l'accord préalable de l'autorité publique.

[3] M.A. Flamme et csrts, Commentaire pratique de la réglementation des marchés publics, éd. CNC asbl, 6è éd. 1996-1997, p. 687

3. Le PPP institutionnalisé et le droit communautaire des marchés publics et des concessions

3.1. Mise en place d'un partenariat impliquant la création d'une entité ad hoc détenue conjointement par le secteur public et le secteur privé

- Ce type de PPP implique la mise en place d'une entité conjointement détenue par le partenaire privé et le partenaire public.

«Si l'opération consistant à créer une entité au capital mixte n'est pas en elle-même visée par le droit des marchés publics et des concessions, ces règles et principes devraient être appliqués lorsqu'une telle opération s'accompagne d'une attribution de mission par le biais d'un acte pouvant être qualifié de marché public, voire de concession.
Le choix d'un partenaire privé appelé à effectuer de telles missions dans le cadre du fonctionnement d'une entité mixte ne saurait donc être fondé exclusivement sur la qualité de son apport en capital ou de son expérience, mais devrait prendre en compte les caractéristiques de son offre – économiquement la plus avantageuse - quant aux prestations spécifiques à fournir».

En pratique, ces règles peuvent être particulièrement difficiles à mettre en œuvre.

Cela étant, à supposer que le droit des marchés publics soit le cas échéant d'application, il n'apparaît pas nécessaire de légiférer spécifiquement en la matière, sauf à prévoir des procédures de mise en concurrence plus souples que celles des marchés publics.

- Le livre vert stipule que «*les autorités publiques ne peuvent pas assortir leur position d'actionnaire dans une telle entité de privilèges exorbitants ne procédant pas d'une application du droit normal des sociétés*».

Nous ne pouvons partager ce point de vue. Ce type de structure n'est pas assimilable à des structures de droit privé du fait, précisément, de la participation d'un partenaire public. A ce titre, il parait indispensable de ménager aux autorités publiques des mécanismes (présidence des organes de gestion, majorité des voix, …) leur permettant de s'assurer que les objectifs à atteindre en termes d'intérêt public, de qualité des services offerts et de politique des prix fixés à l'entité soient respectés.

- Le livre vert considère que "*la pratique visant à confondre les phases de constitution de l'entité et d'attribution de tâches n'est pas satisfaisante au regard des dispositions applicables en matière de marchés publics et de concessions*".

On doit insister sur le fait qu'au niveau local, les communes peuvent prendre l'initiative de constituer une entité distincte en vue de l'exercice de certaines missions de service public d'intérêt général. Ces entités peuvent être constituées à l'initiative d'une commune seule (régie) ou de plusieurs communes (intercommunales). Elles se caractérisent par le fait qu'elles réalisent l'essentiel de leur activité avec la (ou les) commune(s) qui la détient (détiennent).

Le plus souvent, l'objet social de la structure consiste précisément dans l'exercice de la mission. Il s'agit d'un choix d'organisation administrative, lequel échappe au champ d’application du droit communautaire. Ce type d’acte ne peut être donc analysé en tant que mesure économique mais bien comme une prérogative de puissance publique.

La Commission semble ne pas tenir compte de cette réalité, existant depuis des décennies dans nombre d’Etats membres. Ces entreprises publiques sont nombreuses. Ces outils ont été choisis par les autorités publiques dans un souci d’efficacité accrue et donc de meilleur service au citoyen (tant en qualité qu’en termes de prix).

En qualifiant systématiquement "d'économique" toute activité dont l’attribution devrait se faire en respectant les procédures de marchés publics ou de mise en concurrence préalable, on s’engage dans la privatisation absolue de tous les services publics et la disparition des entreprises publiques locales. **De plus, très concrètement, on voit mal comment une autorité pourrait mettre en concurrence avec le marché sa décision de créer une structure publique dotée d’un objet social déterminé**.

Ne s’agit-il pas d’une immixtion dans la liberté de choix qu’ont les Etats membres quant à la définition de leurs services publics, et, corrélativement, du choix du mode d’organisation de ceux-ci?

Il s’agit d’un pan entier de l’autonomie locale qui disparaîtrait, au détriment, in fine, des utilisateurs. Les services publics locaux bénéficient en effet aux citoyens de la collectivité territoriale desservie et leur permettent de profiter de ces services à des conditions accessibles, même là où l'activité est moins rentable et a un coût mutualisé sur l'ensemble de la collectivité.

- Le livre vert rappelle que "*l’application du droit communautaire des marchés publics et des concessions ne dépend pas du caractère public, privé ou mixte du co-contractant de l’organisme adjudicateur. Selon l’arrêt Teckal, celui-ci est d’application dès lors qu’un organisme adjudicateur décide de confier une tâche à un tiers, sauf si l’entité en cause répond aux caractéristiques d’une entité «in house*»" (à savoir: l’autorité publique doit exercer sur l’entité distincte un contrôle analogue à ses propres services et l’entité distincte doit réaliser l’essentiel de son activité avec l' (ou les) autorité(s) publique(s) qui la détient (détiennent)).

Le livre vert n’envisage pas formellement les formes de collaboration public-public. Toutefois, quand il souligne que toute attribution de missions à une entité, quel que soit son statut, privé ou **public**, doit respecter les principes du Traité ou la réglementation relative aux marchés publics, il appréhende cette forme de collaboration.

A cet égard, l’interprétation des critères de relation in house dégagés par la Cour doivent rester raisonnables. Plus précisément, la notion de «contrôle analogue» à exercer par l’autorité publique sur l’entité distincte ne peut signifier un contrôle quasi identique, auquel cas cette condition ne sera jamais remplie. En effet, une entité ne peut, par hypothèse, exercer sur une entité tierce un contrôle identique à celui qu’elle exerce sur ses propres services.

4. CONCLUSIONS

1. Les législations et principes existants sont suffisants pour appréhender les PPP. Il ne paraît pas nécessaire de légiférer davantage. La sur-réglementation induit le risque de qualification erronée de l'opération envisagée et, corrélativement, l'émergence d'une nouvelle forme de contentieux.

Toutefois, s'il devait être décidé de mettre en place un cadre juridique *sui generis* pour l'attribution des PPP, il y aura lieu de veiller à ce que les procédures mises en place ne soient pas trop lourdes afin de favoriser leur développement ainsi que l'efficience administrative.

2. Le livre vert n'envisage pas les formes de collaboration public-public, tout en soulignant que toute attribution de missions à une entité, quel que soit son statut, privé ou public, doit respecter les principes du Traité ou la réglementation relative aux marchés publics.

A cet égard, il est indispensable que le principe d'autonomie locale, dont le choix du mode de gestion est une composante, soit respecté. Soit il est admis que la mise en place d'entités détenues par une ou plusieurs communes constitue une opération de réorganisation administrative échappant au droit communautaire. Soit, si la durée de la structure mise en place ainsi que les éléments de contrôle de l'autorité publique sur son entité sont considérés comme autant d'éléments s'opposant à cette qualification, il y a lieu de qualifier la relation entre l'autorité publique et son entreprise publique locale *d'in house*.

3. Si les droits fondamentaux des opérateurs économiques et la compétitivité doivent être respectés, il en va de même des principes d'efficacité administrative et des caractéristiques propres au caractère public d'un des deux partenaires.

Voka-input EU-Groenboek Publiek Private Samenwerking

1 Aanpak Voka-inbreng EU-Groenboek Publiek Private Samenwerking

De Europese Commissie stelt vast dat PPS in Europa aan belang wint en onder vele vormen verschijnt. De Commissie stelt zich de vraag of de juridische constructies die voorzien zijn in de Richtlijnen voldoen om PPS mogelijk te maken en of de interne markt niet wordt bedreigd door de verschillende types van PPS-aanpak van de verschillende lidstaten. Daartoe organiseert de Commissie een open debat d.m.v een Groenboek (teksten te vinden op *www.europa.eu.int/comm/internal_market/ppp*)

Het Groenboek van de Commissie bevat een verkennende tekst met 22 vragen. De Voka-werkgroep PPS besloot op een beperkt aantal daarvan te antwoorden. En daarnaast enige algemene bekommernissen weer te geven. De vragen die worden beantwoord zijn de nrs 1,2,7,8,13,19,20.

2 Algemene overwegingen t.a.v Groenboek

PPS is in essentie een procesaanpak om de kwaliteit van een project structureel te verbeteren in termen van prijs/kwaliteit. PPS is daarom niet beperkt tot een specifiek beleidsdomein of type van project. Dit betekent anderzijds echter niet dat alle projecten beter in PPS worden uitgevoerd. Een aantal aspecten van een project en eigenschappen van PPS kunnen toepassing van PPS in een concreet geval de weg staan. Conclusie: het is van primordiaal belang om vooraf te kunnen bepalen of een project als dusdanig voor PPS in aanmerking komt. Als dan ook een beter resultaat (in termen van bvb kwaliteit, snelheid,…) verwacht kan worden dan met een meer klassieke aanbestedingsmethodiek, dan dient de overheid in principe te kiezen voor de PPS-aanpak.

In een aantal nota's van de Vlaamse regering worden sinds 1999 definiërende elementen van PPS geschetst: vroege private betrokkenheid, alternatieve risico-deling of -toewijzing, dienstenconcept i.p.v productconcept voor een project, werken met outcome-criteria, nastreven van scopeverbreding en de combinatie van maatschappelijke en commerciële doelstellingen. Deze definiëring is cruciaal omdat vanuit beleidsmiddens, zowel Vlaams als Europees, onterecht soms de nadruk wordt gelegd op het financierende karakter van PPS. De private sector kan niet en zal niet de verantwoordelijkheid voor de financiering van basisinfrastructuur op zich kunnen nemen. De overheid neigt nog te veel naar de keuze voor PPS voor complexe of moeilijk financierbare projecten. Dit doet afbreuk aan de waarde die PPS voor concrete projecten en voor de sociaal-economische ontwikkeling in het algemeen kan hebben.

PPS is een belangrijke hefboom om de kwaliteit van projecten in een breed veld van beleidsdomeinen te verbeteren. In Vlaanderen is PPS sinds 1999 een structureel beleidsthema. Een Kenniscentrum PPS is opgezet om de introductie in Vlaanderen te faciliteren. En een decreet PPS is door het Vlaams Parlement gestemd om een aantal juridische drempels te elimineren die de toepassing van PPS in de weg staan.

Een aantal concrete projecten zitten in Vlaanderen in de pijplijn op verschillende beleidsterreinen, vb scholenbouw, luchthavenontwikkeling, wegeninfrastructuur, afstandsleren, huisvesting, enz. Grosso modo is

PPS in Vlaanderen in een opstartfase. De nieuwe Vlaamse regering, na de verkiezingen van 13.06.04, dient, wat de werkgevers betreft, een evaluatie van de eerste gerealiseerde projecten door te voeren en op basis daarvan een gecontroleerde verbreding. De werkgevers hebben de aanpak in Vlaanderen rond PPS gesteund en vinden dat PPS in de toekomst nog sterker een beleidsthema moet worden. Een aantal drempels moet echter nog weggewerkt worden.

Voka stelde in het verleden reeds dat voor PPS drie succescriteria bestaan: juridische facilitering en omkadering, operationele ondersteuning en doorbreken van de klassieke rollenpatronen tussen publieke en private partijen in projecten.
In Vlaanderen is aan het eerste aspect gewerkt d.m.v een faciliterend decreet. Het uiterst nuttige initiatief van het EU-Groenboek moet ook als expliciete doelstelling hebben om structureel meer PPS te versterken. Het nieuwe standpunt van Eurostat over de opname in de overheidsboekhouding van PPS-projecten zal eveneens een structurele versterking van PPS mogelijk maken.
Operationele ondersteuning is er in Vlaanderen d.m.v het Kenniscentrum PPS. Dit verkeert nog in de opbouwfase. Maar het heeft al een aantal instrumenten ontwikkeld die de monitoring en evaluatie van PPS mogelijk maken.
Het derde aspect van het doorbreken van de klassieke rollenpatronen in de publieke en private sector is nog weinig opgeschoten, daarvoor is er nog te weinig projectervaring. Daarnaast is er de vraag vanuit de private sector of de PPS-beleidsaanpak structureel van aard is. Dat is een voorwaarde om er zich als bedrijfsleven meer fundamlenteel naar te oriënteren. Het hangt dus ook samen met de 'dealflow' in PPS. Instrumenteel hierbij moet het Kenniscentrum voldoende communiceren over wat PPS betekent en overleggen met de private sector over bevordering en uitvoering van PPS-projecten.

De overheid kan een aantal acties ondernemen om PPS sneller uit de verkennende fase te halen, specifiek met betrekking tot studiekosten, know how transfers, projectenbundeling en transparantie in procedures. Dergelijke vertrouwenwekkende maatregelen zullen het klimaat voor PPS structureel verbeteren. Deze thema's komen ook aan bod in het Groenboek, daarom enige verdere toelichting:
-PPS-projecten vergen door hun innovatieve opzet vaak grotere studiekosten dan klassieke projecten. Die extra kosten kunnen vanuit bedrijfs-economisch perspectief gezien worden als een investering die nodig is om een opdracht binnen te halen. Anderzijds bestaat het risisco dat een aantal bedrijven met know how afhaken omdat er teveel kandidaten worden gevraagd dergelijke kosten te maken in de aanbesteding, terwijl het nog niet duidelijk is of de overheid ook zinnens is om structureel van PPS gebruik te gaan maken op het betreffende beleidsdomein. Dan wordt het onzeker of de investering door bedrijven in andere projecten kan terugverdiend worden. Het risico is dat bedrijven anticiperend niet meer meedoen en dat het aanbod daardoor verschraalt. In Nederland heeft de overheid een 'budgetfaciliteit' ingesteld die bij exorbitante studiekosten kon tussenkomen. Precies om die aanbodverschraling te voorkomen. Ook in Vlaanderen, op het moment dat er veel pilotprojecten zijn op diverse beleidsterreinen en er nog niet echt sprake is van een bundeling van projecten op een bepaald beleidsdomein, dient te worden overwogen of een tegemoetkoming in studiekosten zinvol is. Misschien kan ook Europa hier een stimulerende of co-financierende rol in opnemen, gezien PPS toch ook voor de EU een belangrijk beleidsthema is.
-In PPS-projecten wordt vaak een systeem van aanbesteding gebruikt waarbij de overheid tracht om know how van de private sector te werven om een betere projectdefinitie te maken. Knelpunt is dat de inbreng van de verschillende private actoren dan wordt samengebracht in een nieuw projectvoorstel wat aan de inschrijvers publiek wordt gemaakt. Op dat moment kan men stellen dat de intellectuele eigendomsrechten van private partners wordt misbruikt. Bovendien heeft de aanbestedende overheid vaak de neiging om alle innovatieve aspecten die in het voorbereidende traject boven water zijn gekomen in het definitieve projectvoorstel te cumuleren. Daardoor kan interne inconsistentie ontstaan en vraagt de overheid naar een project dat geen enkele van de kandidaten goed kan uitvoeren en dat sowieso moeilijk uitvoerbaar is.
-PPS kent als dusdanig hogere transactiekosten dan klassieke projecten. Maar door leereffecten kan deze substantieel hogere transactiekost worden teruggedrongen. Bundeling van projecten door de overheid kan hier soelaas bieden. De overheid moet na een (aantal) pilootprojecten op een bepaald beleidsdomein de PPS-aanpak durven prolifereren en met een zekere standaardisering uitpakken van het aanbestedingsproces. Dit biedt voor de private sector perspectief op een daadwerkelijke markt met voldoende volume om zich te

specialiseren. Op die manier is het ook mogelijk om sneller leereffecten te genereren en een groter aantal geïnteresseerden naar de projecten te mobiliseren.
-Transparantie over de aanpak door de overheid van de aanbesteding is cruciaal. In een beleidsdomein waar de overheid op PPS inzet, dient ze meteen ook aan te geven hoe ze in die markt PPS gaat ontplooien en onder welke voorwaarden. Op die manier kan een lange termijn-perspectief ontstaan voor bedrijven waardoor ze eerder geneigd zullen zijn om van begin af aan in die markt te stappen. Aspecten als timing, evaluatiecriteria, omgaan met intellectuele rechten en studiekosten,... zijn voor de private sector fundamenteel om een idee te krijgen van de aanpak van de overheid en de mate waarin ze zelf moeten investeren in de ontluikende markt.

3 Groenboek vraag per vraag

3.1 Vraag 1

Welke soorten strikt contractuele PPS-constructies kent u? Bestaat in uw land voor die constructies een specifiek (al dan niet wettelijk) kader?

-Het onderscheid in het Groenboek tussen contractuele en geïnstitutionaliseerde PPS is slechts tot op zekere hoogte zinvol. Immers ook participaties door publieke en private partijen in een nieuw op te richten of opgerichte entiteit zijn vaak contractueel vastgelegd. Dat beide types PPS misschien wel te onderscheiden zijn naar vereisten i.v.m aanbesteding is dan een puur formele opdeling, die losstaat van de praktijk van projecten. Institutionele PPS is, los van de aanbestedingsmethodiek, intrinsiek complexer als formule dan een innovatieve aanbesteding in contractuele PPS (zoals een combinatie van de elementen uit Design-Build-Finance-Maintain-Operate-Transfer). Onder andere omdat de overheid als participant in een juridisch vehikel de rolverdeling met de private actoren continu ter discussie kan stellen. Bovendien is een publieke actor aan geheel andere wetmatigheden onderworpen dan private actoren wat voor wrijving kan zorgen bij beheer en werking van het vehikel. De overheid behoudt steeds een dubbele pet van enerzijds aandeelhouder/contractant en anderzijds wetgever/beleidsmaker. Het evenwicht vinden in een organisatorische vorm waarin elke partij zich kan terugvinden blijft hoe dan ook een complexe oefening.
-De zin van een wettelijke regeling als dusdanig m.b.t PPS is een heikel punt. Enerzijds is de essentie van PPS precies de flexibiliteit van het concept op het terrein. Een wettelijke regeling kan grenzen maken die de creativiteit van de private sector beknotten. Anderzijds is een wettelijk, juridisch kader wél zinvol om voor bvb financiers en aannemers transparantie te scheppen in projecten. Dat kader is nodig om de transactiekosten zo laag mogelijk te houden en de slaagkans van PPS te vergroten. Voka hoopt dat de Commissie door de publicatie van haar Groenboek niet impliciet reeds gekozen heeft voor een richtlijn of mededeling over aanbesteding i.k.v PPS. Dit debat vergt een evenwichtsoefening tussen voldoende rechtszekerheid voor projecten en de marktontplooiing enerzijds en anderzijds de ruimte voor creativiteit in projecten.
-In Vlaanderen noch België bestaan specifieke wettelijke regelingen m.b.t contractuele of institutionele PPS.
In Vlaanderen is een PPS-decreet gestemd wat een beperkt aantal juridische drempels wegneemt die PPS belemmeren. Zo wordt het domeinrecht enigszins aangepast zodat zakelijke rechten op publiek domein mogelijk worden en wordt het mogelijk om te bouwen vlak naast autosnelwegen of zelfs overheen autosnelwegen. In de memorie van toelichting van het decreet wordt bovendien een omschrijving gegeven van de kenmerken van PPS. Het Kenniscentrum PPS wordt ook aangewezen als 'bewaker' van het concept t.a.v de Vlaamse regering.
Op Belgisch federaal niveau bestaat het systeem van de 'promotie-opdracht', wat een zeer strakke en gedetailleerde procedure is die het mogelijk maakt om een aantal aspecten van een project te integreren.

3.2 Vraag 2

De Commissie is van mening dat de omzetting in nationaal recht van de procedure voor de concurrentiegerichte dialoog de partijen bij het opzetten van een strikt contractuele PPS doet beschikken over een procedure die buitengewoon geschikt is voor het plaatsen van opdrachten die als overheidsopdracht zijn *gekwalificeerd, zonder dat de fundamentele rechten van ondernemingen in gevaar gebracht worden. Deelt u dit standpunt? Zo nee, waarom niet?*

-Er is in België nog geen jurisprudentie of praktijkervaring om de effectiviteit van de concurrentiegerichte dialoog te evalueren, vermits deze Richtlijn nog niet is omgezet in nationaal recht.
-De procedure van de concurrentiegerichte dialoog biedt voor complexe PPS-projecten geen goede oplossing omdat de gunningscriteria bepaald moeten worden vooraleer voldoende inzicht bestaat in de wijze waarop de behoeften kunnen worden ingevuld. Op basis van de ingediende offertes, voorafgaand aan de definitieve keuze, zijn onderhandelingen bovendien uitgesloten. De concurrentiegerichte dialoog voert een overdreven formalisering in van de marktverkenning, die vandaag op relatief informele basis gebeurt.
-In ieder geval blijft de onderhandelingsprocedure een uitzondering, ook met de nieuwe regels, wat intrinsiek een beperking betekent van de mogelijkheden om in de markt de beste oplossing voor een probleem te vinden. De Richtlijn verlegt het zwaartepunt van onderhandelingsmogelijkheden naar vooraan in de procedure. Op die manier is de 'competitive dialogue' een alternatief voor de onderhandelingsprocedure. Maar onderhandelingsmogelijkheden later in de aanbesteding blijven ook interessant, en worden met dit systeem niet toegelaten. De principiële vraag rijst of er niet verder gegaan kan worden om onderhandeling toe te staan bij contractvorming.
-Complexe projecten, in 'culturele' zin, i.e pilootprojecten voor een bepaald beleidsdomein waar men op grote schaal initiatieven plant, moeten gemakkelijker dan vandaag in onderhandelingsprocedure genomen kunnen worden.

3.3 Vraag 7

Meer in het algemeen, indien u een nieuw wetgevend initiatief van de Commissie nodig acht: zijn er volgens u, objectieve redenen om die wetgeving te richten op alle soorten contractuele PPS-projecten, ongeacht of deze als overheidsopdrachten of als concessieovereenkomsten zijn gekwalificeerd, zodat er hiervoor één gunningsregeling komt?

Neen, een wetgevend initiatief is niet per definitie nodig. Maar een interpretatieve mededeling kan zinvol zijn. De overheid als aanbestedende dienst moet eerst wel een idee hebben over de risico's die men wil verdelen of toedelen in een potentieel project, en daarna de gepaste aanbestedingsmethodiek kiezen. Desnoods kan dit door vooraf een procedure te organiseren over de scope en vorm van het project. Om dan pas daarna het uitgewerkte project zelf aan te besteden. Vanuit dat perspectief stelt § 34 uit het groenboek een vals probleem.
Een wetgevend initiatief van de Commissie zou een rem kunnen betekenen op de creativiteit waarmee PPS uitgevoerd kan worden.

3.4 Vraag 8

Hebt u de ervaring dat bij PPS-formules op particulier initiatief de toegankelijkheid voor buitenlandse ondernemers wordt gewaarborgd? Wordt, met name, voldoende bekendheid gegeven aan oproepen aan aanbestedende diensten om een initiatief voor te stellen, zodat alle belangstellende ondernemers op de hoogte zijn? Wordt voor de uitvoering van het geselecteerde project een selectieprocedure op basis van reële concurrentie georganiseerd?

-De huidige reglementering voorziet te weinig mogelijkheden om projecten op particulier initiatief te laten uitvoeren door de partij die het innovatief idee lanceert.
-De drempels naar buitenlandse markten, specifiek de grotere markten als Frankrijk en Duitsland zijn problematisch voor buitenlandse ondernemingen. Vaak worden selectiecriteria toegepast die verhinderen dat buitenlandse bedrijven kunnen meedingen. Projecten worden op maat van een aantal binnenlandse doelpartijen geschreven of geconcipieerd.

3.5 Vraag 13

Bent u het met de Commissie eens dat bepaalde 'step in'-constructies problemen in verband met de transparantie en de gelijke behandeling kunnen opleveren? Kent u andere 'standaardclausules' die soortgelijke problemen kunnen geven wanneer zij worden toegepast?

'Step in'-rechten zijn een fundamentele voorwaarde die, niet alleen in PPS, wordt gebruikt door de financiële sector als ultieme hefboom naar oplossing van een probleem. Intrinsiek is het systeem vergelijkbaar met een hypotheek. Zonder dergelijke verzekeringsconstructie, een vorm van garantie, zal PPS niet kunnen groeien. 'Step in' is geen concurrentie-vervalsende praktijk maar noodzaak om het financiële plaatje van een PPS-project rond te krijgen.

3.6 Vraag 19

Acht u een initiatief op Gemeenschapsniveau nodig ter verduidelijking of precisering van de verplichtingen van aanbestedende instanties ten aanzien van de voorwaarden verbonden aan een oproep tot mededinging tussen mogelijk in een geïnstitutionaliseerd PPS-project geïnteresseerde ondernemingen? Zo ja, met betrekking tot welke specifieke punten en in welke vorm? Zo nee, waarom niet?

Ja, een initiatief wat sterker de proportionaliteit van transparantievereisten zou beklemtonen is wenselijk. Bekendmaking en transparantie vooraf zijn immers de basis van een faire aanbestedingsprocedure.

3.7 Vraag 20

Welke maatregelen of praktijken acht u een belemmering voor de totstandkoming van PPS in de Europese Unie?

Reeds eerder in deze nota werden een aantal globale en specifieke elementen naar voor gebracht die belemmerend werken t.a.v de proliferatie van PPS. De vraag dient echter andersom te worden geformuleerd: '*Welke elementen zullen de proliferatie van PPS ten goede komen?*'.
Globaal verdienen in dit perspectief volgende elementen de aandacht van de Commissie:

-De respectievelijke overheden dienen een niet-opportunistisch en enthousiasmerend discours te voeren over PPS. PPS is als zodanig geen financieringsinstrument voor complexe projecten waarvoor de overheid geen publieke middelen kan of wil vrijstellen. Door dit te insinueren verzwakt de interesse van de private sector en verwatert het concept, PPS wordt dan een containerbegrip. Dit is funest. PPS moet zeer sterk en consistent worden gepromoot als een instrument van bestuurlijke kwaliteit. PPS kan in een aantal situaties een superieure projectuitkomst genereren. Kwestie is te zoeken waar PPS kan, en hoe projecten moeten worden gerealiseerd in PPS. PPS kan snel uitgroeien tot een van de structurele hefbomen voor sociaal-economische ontwikkeling in Europa. Een aanpak om snel tot bundeling van projecten te komen (marktvolume genereren) en zo het vertrouwen van de private sector te vergroten en de transactiekosten van PPS-projecten te verlagen is zinvol.

-Het aspect financiering is in PPS natuurlijk erg belangrijk. Ook daar zou wat meer creativiteit van de Europese en nationale/regionale overheden projecten ten goede kunnen komen. Financiering met budgettaire middelen volstaat niet meer om alle maatschappelijke noden in te vullen, rekening houdend met de strenge Maastrichtnormen. Dat is dweilen met meerdere kranen open. Een debat over bvb. gebiedsgerichte financieringsinstrumenten, over de inzet van fiscale maatregelen, over de aanwending van de middelen van kilometerheffing enz. kan een structurele bijdrage leveren aan de ontwikkeling van projecten. In niet-Europese landen zijn innovatieve financieringsconcepten vaak basis van succesvolle projecten. Een benchmark zou hier ook soelaas kunnen bieden.

-In de klassieke aanbestedingsregels wordt van de private sector geen initiatief verwacht naar projecten. De aanbestedingsrichtlijnen zijn geschreven vanuit het initiatiefrecht van de overheid en een strakke procesregie

die weinig creativiteit toelaat. PPS is een aanpak die precies wél op zoek gaat naar creativiteit in projecten en projectuitvoering.
Klassiek redeneren overheden door de aard van de aanbestedingsregels te vaak in 'product'-termen, i.p.v in 'diensten'-termen. De recent aangepaste ESR-regeling van Eurostat is hier een fundamentele stap in de goede richting en laat toe dat ook overheden net zoals huishoudens en bedrijven meer in een baten en lasten-stelsel gaan redeneren op basis van economische levensduur en dienstverleningsconcepten.
Zowel de private als de publieke sector zijn als het ware 'gerodeerd' geraakt in een rollenpatroon wat tegengesteld is aan de vereisten van een PPS-project. Bij PPS wordt gezamenlijk gewerkt naar een doelstelling. Er is een minder strikte scheiding meer tussen opdrachtgever en opdrachtnemer omdat inbreng wordt gewaardeerd, en zelfs verwacht, van beide partijen. Vertrouwen is de basis van de samenwerking. Het vertrouwen en het gezamenlijk werken naar een doelstelling betekent dat ook veel opener kan gesproken worden over wie welke risico's best draagt in een project. Kortom, PPS staat haaks op de filosofie van de bestaande aanbestedingssystematiek. Dit betekent daarom niet dat de bestaande aanbestedingsregels overboord moeten. De Commissie dient echter wel na te denken over de manieren waarop PPS de grenzen kan aftasten en waar nodig een aanpassing nuttig kan zijn om creativiteit en innovativiteit meer ruimte te bieden. Specifiek de aspecten van transparantie en complexiteit van het aanbestedingsproces en de problematiek van know how transfer verdienen hier aandacht.

4 Conclusie

Voka gaat er van uit dat het initiatief tot Groenboek van de Commissie vertrekt vanuit de vraag hoe PPS kan bevorderd worden om in Europa een structurele hefboom te worden van sociaal-economische ontwikkeling. *Voka steunt dit initiatief voluit en vraagt dat de Commissie PPS sterk zou promoten als instrument van bestuurlijke kwaliteit i.p.v alternatieve financiering.*

De huidige juridische omkadering volstaat mogelijk niet om PPS voldoende ruimte te geven. Maar tegelijk stelt zich de vraag of eventuele aanpassing/concretisering van de aanbestedingsregels op een aantal domeinen niet eerder een belemmering zal zijn voor de creativiteit die PPS precies wil mobiliseren. Anderzijds is dan weer duidelijk dat voor marktpartijen heldere regels een voorwaarde zijn om massaal mee te werken aan een beleidsthema als PPS. *Voka vraagt dat de Commissie op een bijzonder voorzichtige wijze omgaat met deze spanning en terughoudend omgaat met het introduceren van nieuwe juridische regels ten behoeve van PPS.*

De transactiekosten in een PPS-project zijn intrinsiek groter dan bij een 'klassiek' project. De Commisdsie dient een aantal instrumenten te ontwikkelen die de transactiekosten structureel kunnen verlagen. Daarom verdienen aspecten zoals transparantie en complexiteit van de aanbestedingsprocedure, de problematiek van 'know how'-transfer en de ruimte tot onderhandelen in de procedure, aandacht om PPS te faciliteren. Daarbij mag de Commissie niet veronachtzamen dat PPS ook een kwestie is van aangepaste rollenpatronen tussen publiek en privaat. Dit vergt niet alleen een aanpassing in gedrag maar zelfs van de manier waarop ondernemingen zich structureren naar kapitaal, samenwerkingsverbanden, openheid voor maatschappelijke tendensen en signalen enz. *Voka gaat ervan uit dat de Commissie mee nadenkt over de wijzigende rollenpatronen tussen publiek en privaat die vereist zijn om tot succesvolle PPS te komen en specifiek een aantal maatregelen of instrumenten uitwerkt die de transactiekosten in PPS-projecten kunnen verlagen.*

NOTA

GROENBOEK OVER PUBLIEKPRIVATE SAMENWERKING EN HET GEMEENSCHAPSRECHT INZAKE OVERHEIDSOPDRACHTEN EN CONCESSIEOVEREENKOMSTEN

1. Voorafgaande bedenkingen.

1.1 Publiek of privaat

Een eerste bedenking bij het lezen van het groenboek is de verwarring die er bestaat in het onderscheid tussen publieke en private sector. In de Belgische context worden OCMW-instellingen beschouwd als publiek initiatief, terwijl vzw- en commerciële instellingen worden ondergebracht onder het private initiatief. Dienen algemene en psychiatrische ziekenhuizen en rusthuizen met een vzw-statuut in de Europese context beschouwd te worden als publieke sector of als private sector ?

De Gemeenschap heeft reeds richtlijnen uitgevaardigd om de regels inzake overheidsopdrachten te vereenvoudigen en te verduidelijken. In de Richtlijn 2004/18 wordt een publiekrechtelijke instelling in artikel 1, punt 9 als volgt gedefinieerd:

Onder „publiekrechtelijke instelling” wordt iedere instelling verstaan:

a) die is opgericht met het specifieke doel te voorzien in behoeften van algemeen belang die niet van industriële of commerciële aard zijn;

b) die rechtspersoonlijkheid bezit, en

c) waarvan ofwel de activiteiten in hoofdzaak door de staat, de territoriale lichamen of andere publiekrechtelijke instellingen worden gefinancierd, ofwel het beheer onderworpen is aan toezicht door deze laatste, ofwel de leden van het bestuursorgaan, het leidinggevend of het toezichthoudend orgaan voor meer dan de helft door de staat, de territoriale lichamen of andere publiekrechtelijke instellingen zijn aangewezen.

De bepaling in punt c), met name activiteiten die' in hoofdzaak' door de staat worden gefinancierd, wordt doorgaans geïnterpreteerd als meer dan 50 % financiering. Concreet betekent dit dat niet alleen de ziekenhuizen en de rusthuizen met een openbaar statuut maar ook de ziekenhuizen en rusthuizen met een vzw-statuut (en zelfs rusthuizen met een commercieel statuut) als publieke partner en niet als private partner worden beschouwd.
Een samenwerking tussen twee ziekenhuizen of twee rusthuizen met respectievelijk een OCMW- en een vzw-statuut is, met andere woorden, geen publiekprivate samenwerking maar wel een publiekpublieke samenwerking.

1.2 PPS in het licht van de commercialisering en liberalisering van de gezondheidszorg.

In het witboek over diensten van algemeen belang wordt op pagina 17 verwezen naar het groenboek over publiekprivate samenwerking en het Gemeenschapsrecht inzake overheidsopdrachten en concessieovereenkomsten.

"In de praktijk maken de lidstaten in toenemende mate gebruik van publiekprivate regelingen, zoals ontwerp-bouw-financiering-exploitatiecontracten, concessies en de oprichting van gemengde ondernemingen voor de uitvoering van infrastructuurprojecten of diensten van algemeen belang …"

Het groenboek over publiek private samenwerking sluit nauw aan bij de ideologie van de richtlijn Bolkestein. De bedenkingen die naar aanleiding van deze richtlijn werden doorgegeven, zijn ook van toepassing op het opentrekken van de markt voor private partijen om in een bouwproject van ziekenhuizen en rusthuizen te stappen. Voornamelijk de toepassing van het oorsprongland-beginsel betekent dat de investeringsnormen, de controle en de inspectie van de Vlaamse overheid hiermee op de helling komen te staan.

2. PPS en de Belgische context

Het groenboek is bedoeld om een debat op gang te brengen over de regels die moeten toegepast worden wanneer is besloten een opdracht of een taak aan een derde toe te vertrouwen in het kader van overheidsopdrachten en concessieovereenkomsten op het verschijnsel PPS. In welke mate kan binnen een PPS-project meer ruimte verzekerd worden voor concurrentie zodat meerdere private partners wensen deel te nemen aan het project, hetgeen op zijn beurt de kans op slagen van een dergelijk project groter maakt. De wet op de overheidsopdrachten is een beperking om in alle vrijheid te kiezen waar en wanneer wat gebouwd wordt en door wie maar het is zeker niet de enige factor die bepalend is voor het al dan niet slagen van een PPS-project.

2.1 De subsidiëring en het huidig wettelijk kader.

Vooreerst dient opgemerkt te worden dat in België de wet op de overheidsopdrachten een federale bevoegdheid is terwijl de bouw en de infrastructuur van de zorgsectoren een gemeenschapsbevoegdheid is. Het VIPA (Vlaams Infrastructuurfonds voor Persoonsgebonden Aangelegenheden) is het fonds van de Vlaamse overheid dat 60 % van de investeringen direct subsidieert in de ziekenhuizen en de rusthuizen met een openbaar of vzw-statuut.

Commerciële initiatieven die in de rusthuissector aanwezig zijn, zijn hiervan uitgesloten. De resterende 40 % van de investering wordt gefinancierd via een bankenlening die gewaarborgd wordt door het VIPA. In de rusthuizen worden de financiële lasten van de lening gedragen door de bewoner. In de ziekenhuizen daarentegen worden deze lasten doorgerekend in het gedeelte van de verpleegdagprijs Volksgezondheid, hetgeen een federale bevoegdheid is.

De tussenkomsten onder vorm van subsidie of garantie op kredietverlening moeten ook in een PPS-constructie behouden blijven. Om dit te realiseren zijn er echter nog heel wat aanpassingen nodig aan het wettelijk kader. Maar de trend naar publiek private samenwerking wordt echter gedreven vanuit een eerder neoliberale ideologie waarbij het private initiatief garant staat voor efficiëntie en doelmatigheid. De verschuiving naar de private sector komt dus vooral voort uit financiële overwegingen.

In België zijn de ervaringen met PPS zeer beperkt zodat er vandaag geen cijfergegevens beschikbaar zijn over de effecten van samenwerking tussen private en publieke sector op de kwaliteit, de toegankelijkheid, de kosten enzovoort. Zijn commerciële rusthuizen wel degelijk goedkoper of niet, daarover is niets bekend. Dit betekent echter niet dat zorginstellingen niet samenwerken met de private partner. Sommige diensten waaronder bijvoorbeeld de keuken, het onderhoud, worden uitbesteed.

Vandaag zijn de middelen van VIPA echter ontoereikend wat resulteert in lange wachtlijsten. Omwille van de budgettaire tekorten wordt PPS door de politieke overheden wel degelijk gezien als een wondermiddel. Indien een verlaging van de overheidssubsidiëring echter onvoldoende wordt gecompenseerd door de kostenvoordelen van een PPS-project, zal de patiënt of de bewoner meer zelf betalen hetgeen de betaalbaarheid en de toegankelijkheid in het gedrang kan brengen.

2.2 De markt moet klaar zijn voor PPS

De markt moet ook klaar zijn voor PPS. Dit wil zeggen dat er een minimaal aantal mogelijke aanbieders op de markt aanwezig moeten zijn zodat er in de aanbesteding ook sprake kan zijn van concurrentie. PPS is vooral een mentaliteitsverandering, een andere werkwijze voor zowel de publieke, de private partner als voor de banken. In België is men daar nog niet klaar voor.
De publieke partner moet evolueren van bouwheer naar toezichthouder, de private partner zal een lange termijnvisie moeten ontwikkelen en de banken zullen bij de appreciatie van een kredietverlening rekening moeten houden met de volledige looptijd van het PPS-project.

Niettegenstaande er in Vlaanderen een PPS-decreet en een PPS-kenniscentrum bestaat, is de leercurve voor zowel de private als de publieke partner nog zeer beperkt waardoor de transactiekosten relatief hoog zijn en dit een rem betekent voor de ontwikkeling van PPS. Een standaardisatie van processen en contracten zal belangrijk zijn om de duur van de aanbesteding te verkorten en transactiekosten te verlagen.

2.3 De aard van de investering

In sommige regio's zou het kunnen gebeuren dat bij gebrek aan ruimte een combinatie moet gezocht worden tussen verschillende publieke en private functies. Het bouwen van een serviceflat bijvoorbeeld in het centrum van de stad zou moeten gecombineerd worden met de creatie van winkelruimte en woongelegenheden. Een dergelijk plan zou dan via PPS kunnen uitgevoerd worden waarbij de aanwezigheid van bepaalde marktpartijen soms een gegeven is. De serviceflat zou dan geen andere keuze meer hebben om het door haar opgedragen werk te laten uitvoeren door een bepaalde opdrachtnemer, omdat het gewenste werk anders niet tot stand kan komen.De toepassing van een openbare of niet-openbare procedure heeft dan ook geen zin want anders zou dit toch maar leiden tot schijnmededinging. In functie van de aard van de investering zou er meer duidelijkheid moeten komen wanneer de richtlijnprocedures al dan moeten toegepast worden.

I. MOENS

Summary of the response from the Danish Public Service Unions on the Commission Green Paper on Public Private Partnerships

The Green Paper focuses too much on economic, financial and competitive issues. A horizontal approach would have been more appropriate thus focussing more on workers rights and democratic participation.

Many partnerships do not take workers rights and social conditions into account. Public authorities should highlight and take account of employees' social demands.

In Denmark we have experienced both contractual and institutional PPPs. But public authorities are somewhat uncertain concerning the regulatory basis. Contractual PPPs are not many in Denmark probably because local authorities (wrongly) find EU-regulations limiting.

Negotiated tendering is not much used in Denmark. On the other hand contracts are often adjusted during the contract period as well as they are prolonged. Unfortunately these possibilities cause less transparency for employees and users.

The length of the contract period is often a problem. Long contract periods can hamper competitiveness and cause even bigger lack of transparency.

Institutional PPPs are regulated via EU public procurement rules as well as national regulations. A more clear EU regulation is needed to open up for more use of institutional PPPs.

Experiences in Denmark on PPPs are both positive and negative. PPPs should not be seen as a panacea in regard to openness, transparency, effectiveness and efficiency, quality of public services, social and environmental considerations. Bad public procurement is not automatically solved through PPPs.

There is a lack of national and European evaluation on PPPs. We therefore propose the Commission to set up a task force in order to gather information and exchange knowledge and experience on PPP projects in the member states.

Strengthening of local public services in the single market

Joint declaration by

the Association of the mayors of French large cities (AMGVF)
the French federation of local public utilities (FNSEM)
the German association of cities and towns (DST)
and the German association of local public utilities (VKU)

1. European framework

The publication of the Green Paper on Services of General Interest and the Green Paper on Public-Private Partnerships/Concessions has given rise to draw up our joint declaration. With the publication of these papers an intensive discussion has centred on the question of how services of general interest should be treated at the European level. For the local authorities and local utilities in France and Germany the future development of these services is of crucial importance because most of the essential utility services are organised at the local level.

Under the system of **local self-government** the local level is in charge of creating, within the scope of its competences, the public facilities required to secure the economic, social and cultural well-being of its inhabitants and the private sector of the economy. Local self-government explicitly includes all local public-sector economic activities based on the right to create and maintain facilities and undertakings for the well-being of residents as part of essential public service provision. This right of local self-government is to be enshrined in the future constitutional treaty (Article I-5) and will thus become a fundamental principle of the European social model. Closely related to this principle is the European Union's principle of subsidiarity, under which the best level for performing a particular function is the one closest to the citizen. The principle of subsidiarity means that it is primarily a matter for the competent national, regional and local authorities to define, organise and supervise services of general interest and to ensure their proper financing. We therefore insist that any rules concerning the question of defining essential services as well as their design, organisation and evaluation should take full account of local self-government and the principle of subsidiarity.

The Treaty of Amsterdam (Art. 16 EC Treaty) as well as the future constitutional treaty (Art. III-6) recognise the important role played by services of general economic interest in connection with the common values of the European Union. For these services contribute significantly to the strengthening of social and territorial cohesion. The local availability of services in the public interest therefore has an important function within the process of European integration. Yet this integration process will be endangered if the EU gives priority to competition rules over the general interest. The signatories to this declaration therefore urge that **public service obligations** be regarded as **equally important** as the need for competition and be adequately safeguarded in Community law.

On the basis of this framework, any future regulations concerning the local should take particular account of the following points:

2. Freedom of choice in the provision of local public services

The provision of services of general economic or non-economic interest is primarily the responsibility of the local level in Germany and France. This level is – unless regulations to the contrary apply under sector-specific laws – free to decide not only whether a need should be fulfilled as a service of general economic and non-economic interest but also how this should be done. The authorities are entitled to a wide freedom of choice as to how they meet their practical social responsibilities for essential services to the local community – either acting alone (direct performance, or by entrusting in-house undertakings and quasi-public local utilities or by contracting out to external third parties in the public and/or private sector) or by acting in co-operation with other local or regional authorities. The local utilities set up to meet these needs are frequently characterised by their primary public service orientation in the provision of essential services. It is decisive in this respect that the providers of local services can be influenced in the place where the service needs actually arise. Such a direct local influence guarantees that the interests, demands and complaints of citizens at the local level are responded to directly and flexibly thanks to very short lines of communication and thus enable consumer interests to be protected effectively. These arrangements also ensure that the services on offer are primarily designed to meet public service obligations rather than serve special interests.

Since the **freedom of choice of the local authorities** in the provision of services helps to secure high-quality delivery to the public without delay and without bureaucratic obstacles, it must be upheld. However, this vital scope for local self-government will be diminished not only by stronger regimentation of municipal public services under new European rules but also by an unbalanced emphasis on competition at the expense of public service obligations at the European level. European laws governing the conditions under which services of general interest are provided threaten to undermine the direct influence of citizens on the services available to them. The implementation of the future constitutional treaty (Art. III-6) must therefore take full account of this freedom of choice of municipalities.

3. A wider scope of in house necessary for local authorities

Rules to make tendering compulsory would be irreconcilable with the above-mentioned freedom to determine public service provision, i.e. with the local authorities' freedom to choose **how** they wish to provide their services. A binding Europe-wide obligation to put local services of general economic interest out to tender would remove the organisational autonomy of local authorities, substantially restricting the capacity for municipal economic activity by in-house undertakings and undermine the existing utility structures.

For in-house undertakings it has to be guaranteed that, whatever the finally agreed definition of "in-house" and its scope will be, local authorities must keep the freedom to choose between different ways of operating. While taking into account the strongly divergent national contexts, criteria for control over an enterprise by a local authority enabling an "in-house" situation should be defined in the light of the principle of subsidiarity. The criteria of at least more than 50 % ownership of the enterprise by the local authority must be fulfilled in every case.

Moreover, a binding Europe-wide obligation to put local services of general economic interest out to tender would boost the trend towards greater concentration, ultimately leading to anti-competitive market domination by a few companies who will then act as an oligopoly. The consequences of compulsory tendering would clearly contradict the principle of subsidiarity as well as the principle of the neutrality as regards the public or private status of companies, since in many cases it would result in the loss of a local authority's own public utilities.

A resolution of this fundamental (constitutional) conflict between European law on competition and the single market, on the one hand, and the obligation of the European Union to uphold the principles of subsidiarity, of faithful observance of Community obligations, of proportionality and of the neutrality of the national systems of property ownership, on the other hand, can only be achieved by granting the local and regional authorities a right of auto-production of their services of general interest. On this point, the local utility associations and local authority associations supporting this declaration welcome the fact that the European Parliament, in its resolution of 14 January 2004 concerning the Green Paper on Services of General Economic Interest, has recognised such a right of auto-production and has explicitly emphasised this right in favour of the municipalities. It is vital that the municipalities, in seeking to perform the functions and services for which they are responsible, continue to be able in future to have the choice of either entrusting these responsibilities (without a tendering procedure) to their own undertakings or awarding contracts (subject to tendering) to private third parties. In the light of the principle of subsidiarity and the organisational autonomy established under this framework, the performance of responsibilities entrusted to undertakings financed and predominantly influenced by the local authority must be treated in the same way as the direct performance of responsibilities by the "local council" itself.

In the markets for local services of general economic interest, the local authorities should therefore be free (without any tendering requirements) to choose to provide such services themselves or via undertakings, of whatever organisational form, that are effectively municipally owned or controlled.

Importantly, this freedom also includes the right to enter into co-operative arrangements with other local authorities in order to perform common municipal duties, again without compulsory tendering. This kind of co-operation, which in Germany, for example, takes the form of a Zweckverband, or inter-municipal utility consortium and acts as an important element of local self-government, is not a procurement mechanism but an arrangement to define the division of responsibilities within the public sector that flow from the organisational autonomy of the authorities. Thus, auto-production in its proper sense means not only the provision of a service by a single authority but also several local authorities acting jointly to discharge their responsibilities.

4. Conclusion

With regard to the above mentioned facts 3 principles are to be emphasized:

- Freedom of choice of local authorities which must continue to be entitled to decide either to directly produce local services or to entrust either enterprises whose shares are held, completely or partially, by the local authority or public and/or private-sector companies with the provision of local public services.

- In-house definition must allow authorities - without any tendering requirements - to freely choose to provide such services themselves or via undertakings, of whatever organisational form, that are effectively municipally owned or controlled.

- Rejection of any solution which would lead to a situation in which the local public enterprise is subject to compulsory tendering procedures on two sides: with regard to the relations with the local authority and with regard to contracts by which the enterprise satisfies its own needs.

RESPONSE OF THE ACE TO THE COMMISSION CONSULTATION
On the
Green Paper on Public-Private Partnerships
Published by the European Commission on the 30th April 2004 – COM(2004)327final

Background

The Architects' Council of Europe (ACE)[1] has taken note of the increasing importance that the European Commission has, in recent years, attached to the concept of Public-Private Partnerships (PPP's) for the acquisition of large-scale public infrastructure and buildings. It has monitored the steps that the Commission has undertaken in relation to this important model for acquisitions by public entities and has participated in public debates and consultations on the subject.

In parallel, the ACE has followed with intense interest and involvement the development and adoption of the new directives on Public Procurement[2]. It is currently engaged in an exercise that will seek to ensure the proper and appropriately considered transposition of the requirements of the directives into national law for the provision of architectural services.

There are strong links between the procedures set down in the Public Procurement directives and the topic of PPP's which cannot be ignored. In this respect it is crucially important that all public authorities are made aware that the rules set down in the Public Procurement directives must be applied to PPP's as these are one form of public procurement.

The Green Paper – General Remarks

There seems to be a commonly held view that the use of PPP's by cash-strapped governments and public bodies is a panacea for the acquisition of important public infrastructure and buildings and that it is a method that provides quality and value for money. The ACE believes that, based on the experience of the architectural profession in Europe, this is far from proven at the present time. In particular, there is increasing evidence that the use of the Private Finance Initiative (PFI – an example of one type of PPP) in the UK for the procurement of public buildings such as schools and hospitals is leading to the creation of a poor quality built environment that it set to be a significant burden on future generations. These concerns about the situation in the UK have been expressed, not only by the architectural profession, but also by the independent Commission on Architecture and the Built Environment (CABE) and in the national press.

The Green Paper sets out a very abstract discussion on a few restricted forms of PPP's using terminology that deliberately obfuscates the subject matter. It is therefore difficult to welcome the Green Paper as a positive contribution to the current debate on the use of PPP's. Furthermore the technique of asking specific questions (22 in all) has the potential to ensure that interested parties are not permitted to express particular points of view that arise from their experience of PPP's, as the questions are not phrased in such a way as to allow for the expression of those points of view.

[1] The Architects Council of Europe (ACE) is an organisation, based in Brussels, whose Membership consists of the professional representative organisations of all twenty-five European Union (EU) Member States and all Accession States as well as Switzerland and Norway. As such it is an organisation that represents the interests of over 450,000 Architects from Europe. The ACE was founded in 1990 and its principal function is to monitor and influence developments at EU level highlighting those areas of EU Policy that have a direct impact on architectural practice, policy and the built environment.

[2] Reference number 2004/18/EC, published in the Official Journal of the EU on the 30th April 2004.

Given these limitations the ACE, in this response, starts by discussing its particular interest in the topic of PPP's, setting down its considerable concerns about the potential impact of these methods of procurement on the quality of the built environment, the impact on sustainability and the impact on the quality of life of the citizens of Europe. An Annexe to this position paper will provide answers, where possible, to the questions posed in the Green Paper, but it is the text of the following pages that should be considered as being the position of the ACE.

The Construction Sector in Europe

Architectural services form an essential part of the professional services required by the construction sector in Europe in the conception and realisation of the projects that lead to the materialisation of the built environment. It is in this environment that the citizens of Europe work, rest and play. It is therefore essential to ensure that the quality of the built environment provides the best possible stage on which we can all live productive and happy lives.

Furthermore the built environment is a principal carrier of the cultural identity of our society and it reflects, in a very permanent way, the aspirations, skills and identity of each succeeding generation. It is crucial that these cultural and social aspects of the world we construct about us is understood and respected as we contemplate how best to procure works that will reflect these values.

Beyond the cultural and social importance of the sector, the construction sector is the single most important industrial sector in Europe today and its economic significance in terms of GDP is very great. Some statistics from 2003 illustrate the point very well:

The Construction Sector in Europe (EU-15), in 2003, represented:

28.2% of industrial employment
7.2% of total employment
9.8% of Gross Domestic Product in the EU-15
51.2% of Gross Fixed Capital Formation
and
its turnover for the year was **€910 billion**[3]

There are various estimates of the proportion of the turnover that is accounted for by public buildings and works, but it can be said with reasonable certainty that it is above 50%. This underlines the importance that should be given to ensuring that any model for procurement in the sector is correctly and equitably devised and administered.

A final factor that forms a crucial aspect of the sector is the fact that 93% of all enterprises active in the industry are Small and Medium-sized Enterprises (SME's). In its position paper on the Green Paper, the European Builders Confederation, that represents the crafts and small contractors sector, estimates that 85% of contracts that their members sign are for publicly funded works. It is therefore essential that any procurement methods do not rob these enterprises of their livelihood.

The Role of the Architect in PPP

All construction projects have an impact on the existing built and natural environments and they each contribute to the quality of life of our citizens. Each construction project requires a team of various persons and companies to work co-operatively together to achieve the objectives of the project on behalf of the client, whilst taking account of its wider impacts. It is essential, for the proper functioning of such a team, that all aspects pertinent to the works in hand are expertly covered by the appropriate professional or craftsman. Each person in the team must clearly understand their role and their duty.

Within such a team the architect generally possesses the skills to be responsible for the conversion of the clients' requirements for space or the housing of a particular function into a design for the building or works that takes full account of all the constraints placed on the project. The architect also learns the skill of being able to see the way in which all parts of the project must be integrated and, thereby, to understand the required input of each of the other persons in the team.

[3] Source: European Construction Industry Federation report "Construction in Europe – Key Figures" published May 2004

Furthermore the architect is, through training and experience, well placed to perceive the wider social, cultural and sustainability impacts of the project and is, finally, bound by deontological rules to act independently of vested interests in the achievement of the best outcome for the works.

For these reasons the ACE believes that the architect has a central and critical role to play in the design and execution of all construction projects including PPP projects, no matter which model of PPP is chosen by the contracting body. The ACE equally believes that it is crucial to the overall success of a construction project that the architect is permitted, by the terms of the contractual arrangement, to effectively take full account of all the economic, environmental, cultural and social aspects of the project in hand. In other words, it is not so important to ensure that the architect has a direct contractual relationship with the client as it is to ensure that the terms of any appointment, contract or sub-contract should impose an obligation on the contracting authority or operator to take full account of these wider, holistic issues.

It is important to be aware that a public body has a binding responsibility to ensure that the expenditure of public funds is carried out in the most economically advantageous way. In this respect the taking into account of the wider range of environmental, social and cultural issues at the outset of a project usually delivers significantly better value for money over the useful lifetime of the building or works. Therefore there is economic advantage to be gained by the use of a more holistic approach to procurement.[4]

The Nature of PPP's in Construction

The forms of PPP's that are generally used in construction projects are "Contractual PPP's" where a single private operator is charged with the design, construction, financing, operation and maintenance of the works. There are, of course, many variations where one or more of these functions is not contracted to the operator, but it is generally the case that all five functions are undertaken by the private operator.

The private operator is recompensed for taking on the contract by being able to levy a charge for the services it provides throughout a defined period of the service life of the project, or by way of monies paid by the public body for the use of the final facilities provided. It effect many of the PPP's in construction are little more than complex hire-purchase agreements between the public body and the private operator.

There are many difficulties with this approach to the procurement of buildings, of which the main ones are:

1. The private operators main interest is the profit margin it can achieve over the life of the contract.
2. As the period for which the private operator is to be responsible for the operation and maintenance of the completed building is defined at the outset, the specification of materials and equipment used in the construction often only have a design life equal to or just greater than this pre-defined period. Therefore the long-term serviceability of the buildings is not safeguarded and, all too often, poor quality materials are used.
3. Public bodies often choose to use a PPP so as to defer the capital costs of the project over a period of years in the belief that this makes good financial sense. In fact the result of engaging in PPP's is to increase the indebtedness of the public body and to increase the sums that must be expended monthly. The fact is that the cost of the contract over its full life will significantly exceed the costs that would have been incurred through traditional procurement as the private operator will ensure that a profit is made on the contract and it will not be able to borrow money at a better rate than the public body. In fact it is possible to envisage that cut-backs to essential services might ultimately result as public bodies struggle to pay the costs of these long-term commitments.
4. As the PPP approach to procurement of a building is a usually only viewed in economic terms (by both parties) the social, cultural and sustainability impacts are frequently missing from the criteria that constitute the terms of the contract. This lacuna is compounded by the false belief, on the part of many public bodies, that it is sufficient for them to simply provide

[4] This fact has been eloquently demonstrated in the contents of the Commission staff working paper entitled "Buying Green! A Handbook on Environmental Public Procurement" dated the 18th August 2004 and referenced SEC(2004) 1050

functional projects that adequately house the required activities desired by their policies or undertakings. This is not the case as it is our public bodies that are responsible to ensure the creation and maintenance of high quality environments for citizens and to ensure that true value for money is achieved when expending public funds.

5. Due to the complexity and scale of PPP projects, it is very costly to prepare a proposal to win a PPP contract. In the preparation of a proposal it is typically necessary to prepare full architectural, structural and services designs for the project, pricing each element fully in order that the proposer can be certain that the offer to be made is realistic. It is clear that it is not possible to succeed in winning every contract competed for and so there is a lot of wasted costs associated with the selection of a contractor for a PPP. These costs must be recuperated somehow and they are added, over time, to the general level of inflation in construction costs. Furthermore an operator can only afford to lose a few bids and so over time it is the large and very large operators that end up bidding with all the medium and smaller operators falling out of the market. This leads to a situation where there are so few operators in the market for PPP's that the principles of fair competition and the free market, so cherished by the European Commission, no longer operate.
6. In the circumstances described above, where the market can no longer provide a wide range of potential bidders for PPP contracts, there are two serious losses that accrue. The first is a loss of flexibility in the manner in which a PPP is executed as these large organisations that can afford to bid generally have heavy, inflexible management structures by which they abide. The second is the fact that there is no longer any viable route through which "new blood" can be brought into the process, thus depriving the public of innovative and creative approaches to these projects that would otherwise be available.
7. Once a PPP contract is awarded the successful bidder knows the bottom line for the contract and knows that any savings it can make along the way will be added directly to that bottom line. This frequently leads to the modification of the approved designs, particularly of the details of those designs, resulting in a significant lowering of the quality and appearance of the finished product. Furthermore the operator will often rely on "in-house" expertise and established approaches to construction at the expense of innovative and creative approaches, thus retarding the overall development of this crucial industry.
8. Some public bodies believe that the use of PPP's means that they do not have to apply the EU rules for Public Procurement as it is private money that is being used to construct a project. The Commission has been very clear on this point and has stated that the full requirements of the public procurement directives do apply to PPP's. The ACE believes that this message must be reinforced to ensure fair competition in the use of PPP's.

On the positive side it is the case that some PPP's can deliver much needed large-scale infrastructure and buildings more quickly than traditional procurement methods permit, particularly where several separate projects are "bundled" into one PPP. However this "bundling" further restricts competition and closes the market to potentially better contractors or operators for individual buildings.

The Position of the ACE

It is the view of the ACE that there is a limited role for the PPP procedure in the procurement of some large-scale infrastructures and buildings. In fact the ACE can see that the PPP model is suited to the procurement of large-scale infrastructure (such as roads, tunnels, tram systems etc) whereas it is not suited to the procurement of buildings. This is because of the specific cultural and social impact of buildings on their immediate surroundings and the need for their expression to be linked to the region in which they are located. Such factors cannot be readily incorporated into the criteria and clauses of legally binding contracts and yet they are essential to the long-term success of such works.

The manner in which a PPP is conceived and structured is crucial to the result that is delivered to the client. The ACE firmly believes that the architect must be involved in all stages of a building project regardless of the model used by the client to procure the project. In particular the architect must be:

a. The principal interlocutor between the client and the project team as it is the architect who is best equipped to comprehend the overall factors and impacts of the project.
b. Permitted to act independently to conceive of the best design solution to the problems posed by the project proposal whilst taking into account the extended impact of the project in economic, environmental, social and cultural terms.

c. Closely involved in the detail design of the building.
d. Permitted to monitor works on site and be able to influence the manner in which the works are executed, regardless of the PPP model chosen. This role is particularly crucial in the event of a design-build solution where the need to have regard for the life cycle costing is more acute.
e. Adequately remunerated for the work and services provided.

In return the ACE believes that the architect must shoulder the responsibilities and consequences of the decisions he or she takes and that those decisions must be taken with the best interests of society at their heart.

Specifically, in relation to the involvement of the architect in the preparation of proposals for PPP's, the ACE believes that remuneration for the giving of ideas and designs must be guaranteed by the terms of the call for proposals and that the architect used in the preparation of a successful bid is retained for the later stages of work. In this way, it is possible to ensure that the ideas encapsulated in the project design are carried forward by their initiator.

Conclusions

Given that the annual value of the Public Procurement market in the EU is approximately €1,500 billion and that the annual value of the Public Procurement in construction is approximately €450 billion, it is imperative that the writing and structure of PPP contracts for this significant sector are properly conceived to ensure that the resulting works are fit for their function, contribute positively to the environment, encourage social cohesion and provide long-term value for money.

The achievement of this objective is a truly challenging, but the architectural profession is ready to do its part to succeed in this goal.

End of paper
20th September 2004

ANNEXE 1

Answers of the ACE to the specific questions in the Green Paper on PPP's:

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

Most of the PPP's that architects are involved in are contractual in nature and the ACE is aware that there are a variety of set-ups for such PPP's. There are various typical set-ups for PPP's used in the procurement of buildings ranging from "design and build" to "design, build, finance, operate and maintain". The variations between the various forms usually relate to the number of functions committed to the operator.

Other variations arise with the method for financing the realisation of the project. Some PPP's rely on full financing by the private sector, some are fully financed by the public body and others are mixes of the two. On rare occasions the operator designs and builds for the public body in return for the acquisition of publicly owned land on which the contractor then builds a commercial scheme (such as housing) to recuperate all the costs it has incurred.

The ACE, as a European representative organisation, does not have any particular knowledge of specific legislation in the various Countries of the EU to which contractual PPP's are subject.

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

The ACE does not share this point of view. The new Directives on Public Procurement bring in the possibility that competitive dialogue may be used in the case of "particularly complex" projects. Such a procedure foresees that the public body would enter into discussions with a limited number of bidders and that all aspects of the projects would be open for discussion. These bidders are pre-selected on the basis of generic information such as track record, economic status and other technical factors. For construction projects it is the quality of the architectural concept that counts the most and it is frequently the case that the best solutions to complex projects come from micro or small architectural firms who would not pass the criteria of the selection phase. Therefore the competitive dialogue process is discriminatory and brings with it the risk that the best design solution will not be achieved for the project.

The ACE believes that the use of processes that permit the emergence of the best design solution are the only processes that should be used for construction works. One such process is the architectural design contest which, unlike the competitive dialogue procedure, permits the selection of the top performer based on substantial material grounds. This arises because of the requirement for anonymity of the participants, which results in the fact that only the "offer" is available for assessment. Furthermore, the selection process used to decide on the best contribution (prize-winner) is undertaken by a qualified, competent and independent jury, which is an essential precondition for a purely quality-based selection.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

It is clear that PPP's can be conducted on the basis of already existing Community law. However, it is questionable whether the common legal framework of the Community is rightly balanced in this respect since a PPP has to be conducted under the requirements of the public procurement directive, but they are often categorised as services concessions or franchises. It is hard to understand the reason why building concessions are regulated in the new Community law on public procurement in great detail, but services, service concessions and franchises are only subjected to primary Community law. The existing legal status could therefore be used by public authorities to "escape" into primary Community law.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

As the ACE is a European representative organisation, it is not in a position to organise, participate in any such procedure. Therefore the ACE offers no response to this question.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

It appears to the ACE that the approach of the Commission and of the Community legal framework robustly strives to ensure that there is effective participation of non-national companies in the awarding of PPP's. However, the ACE is concerned that genuine competition is not guaranteed by the current framework as it allows for the use of many criteria that could permit the elimination of viable candidates from consideration. The factor that needs to be underwritten to improve this situation is the transparency of the assessment procedures used by awarding authorities in the decision on whom to award a contract. An extension of the use of the PPP model will further reduce the opportunities for genuine competition as it is a model that inherently favours the large scale organisation. It must be recalled that about 93% of all enterprises in the construction sector are either micro or small enterprises and that they do not have the resources required to prepare bids for PPP's.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

Following on from the answer to question 5 above, a Community legislative initiative is desirable only if it can lay down procedures that take account of the structure of the construction sector and thereby allow for the participation of the majority of enterprises in such procedures. It is highly undesirable that procedures might emerge over time that would mean the majority of public works contracts would become PPP's.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPP's, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

See answer to question 6.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

This is a difficult question to answer due to lack of statistics. However, it is clear that the procedures foreseen by EU legislation in the field of public procurement (of which PPP must be seen as a sub-set) do open national markets to competition from other EU countries. Unfortunately it is not possible to assess whether the restrictions and requirements set down by national laws for the participation of such extra-national competitors do, in fact, provide for genuine competition.

9. In your view, what would be the best formula to ensure the development of private initiative PPP's in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

The selection of a contractual partner in a private initiative PPP has to be carried out under the basic rules of equal treatment and non-discrimination, as a private initiative PPP is also a form of public procurement. In cases where the participants develop project proposals without the request of the public administration, the application of the rules on public procurement is indeed rather difficult and problematic. Such propositions might be of high quality, and consist of high technical, innovative and economic solutions for existing problems. But the use by public authorities of such proposals as the basis of a PPP is usually impossible, if only for reasons of copyright. Acquisition of the rights of use on the other hand must, once again be seen, and treated, as a public procurement in itself. A call for tenders concerning such a project could lead to the use of parts of the developed proposal by competitors as if they were their own concepts, without being covered by copyright law. Naturally, in this case it is not guaranteed that the initiator of the proposal will be awarded the contract. There is a need here for a remedy of compensation through the law on public procurement in favour of the initiators of such private PPP's.

10. In contractual PPP's, what is your experience of the phase which follows the selection of the private partner?

The ACE offers no response to this question.

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

The ACE offers no response to this question.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

The ACE is not aware of any such practices that could not be dealt with through the remedies procedures foreseen by EU law..

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

The ACE sees that there is a need, in certain limited cases, to have a "step-in" procedure. However, it believes that any such arrangement should be governed by the same level of transparency and non-discrimination as the parent procedures for the relevant PPP

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPP's at Community level? If so, which aspects should be clarified?

The ACE, through its Members and in discussions among delegates from those Members, is aware of significant problems with the use of the PPP model for construction contracts. Principal among these has been the belief, on the part of many public bodies, that because the financing of a project was being sourced from private funds, no use of or recourse to the requirement of the Public Procurement procedures was necessary. This has led, in many cases, to the award of significant contracts of public works without the making of an open call for tenders or expressions of interest from suitable parties. This is clearly anti-competitive and discriminatory, closing many opportunities to both national and non-national operators and is therefore in breach of community law.
There is a need to clarify the fact that the use of the PPP model falls within the scope of the requirements of the Public Procurement directives, even when the money is coming from private sources.

15. In the context of PPP's, are you aware of specific problems encountered in relation to subcontracting? Please explain.

The ACE is aware of specific problems that arise in relation to the use of sub-contracting within PPP agreements. The PPP model for the procurement of buildings is the one model where the architect is often a sub-contractor to the building contractor. This is a problematic situation as it dis-empowers the architect from influencing, in an effective way, the manner in which the construction on site is carried out and on the specification of the materials to be used. It also means that the architect is not permitted to act in the best interests of the client as there is no direct contract (and sometimes not even direct contact) with the client.
This situation carries the risk that the building that results form a PPP will not adequately achieve the requirements of the client and will not be of sufficient quality to give long-term value for money.

16. In your opinion does the phenomenon of contractual PPP's, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

Yes – this is particularly the case because of the fact that when a public body hands over the fulfilment of a public duty to a private body, that private body must then be treated, for the purposes of the particular transfer, as a public body. Rules and procedures will have to be devised to ensure that these duties are then adequately fulfilled by such a private body. See also the answer to question 15.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

For the current procedures on Public Procurement there is probably no need for further initiatives to clarify or adjust the rules on sub-contracting. However if the Community decides to initiate legislation on PPP's then careful consideration of the rules on subcontracting will most certainly be needed.

18. What experience do you have of arranging institutionalised PPP's and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not ?

The ACE offers no response to this question.

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

The ACE believes that an initiative does need to be taken, as the principles of public procurement should have an effect in this regard. Especially important is the need to clarify the extent to which the private bidder appears as a "public authority" within an institutionalised PPP.

20. In your view which measures or practices act as barriers to the introduction of PPP's within the European Union?

The ACE offers no response to this question.

21. Do you know of other forms of PPP's which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework which could serve as a model for the Union? If so, please elaborate*.*

The ACE offers no response to this question.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

The exchange of best practice and the regular review of the uptake of new approaches to procurement is always useful. It is therefore desirable that a properly balanced network of actors within the field be established so that these matters can be kept under review.
This question stands out from al the other questions in the use of the phrase *"…social and sustainable economic development"* and it is a surprise to the ACE that it is the only time that it has been mentioned in the set of questions. Clearly the principle objective of the EU at this time is to find the means through which such development can take place and so this matter of equitable social and sustainable development should be at the heart of the debate. Given the dis-empowerment of the architect in the usual approach to PPP's for construction projects, the ACE is very concerned that the widespread use of this model will lead to a noticeable and significant deterioration of the quality of the built environment and hence in the quality of life for the citizens of the EU.

REACTION TO THE COMMISSION GREEN PAPER ON

PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND
(COM(2004) 327 FINAL OF 30.4.2004)

Brussels, July 30th, 2004

1. CEDAG [1] welcomes this initiative from the Commission, which aims at submitting to a large consultation the crucial issue of public-private partnerships (PPP), because of the importance of this topic in the European social model as well as within a series of debates currently going at that level, as is the case for services in the internal market or services of general interest.
2. CEDAG regrets, on the other hand, that the green paper remains silent on the issue of diversity of entrepreneurial forms, which is central in the European social model. Social economy enterprises are indeed a part of the private sector, but deserve particular consideration. Still, contrary to the companies where the last say always remains with the shareholder, social economy enterprises are characterized by their accountability towards a wide range of stakeholders, what qualifies them in the first place for missions where one cannot take the risk of letting private interests take the lead on the general interest.
3. This is particularly the case in issues like health care, personal services, education and long life learning, whose contribution to the knowledge economy and to the Lisbon objectives may never be overlooked. In those domains, one may consider both types of arrangements evoked by the green paper, contractual and institutional partnerships.
4. CEDAG thus considers that any initiative taken by the Commission in this respect should include an impact analysis, particularly for services provided by social economy enterprises. It indeed needs :
    - to be avoided that social economy enterprises would be discriminated in their access to PPP operations, for instance by procedures which would be only meet the needs of private for-profit companies ;
    - to make sure that those partnerships take into account the whole range of needs at stake (risks of de-budgeting or of unequal risk-sharing between the "partners", …).
5. CEDAG also stresses the ambiguity of the term « partnership » which tends to make lose out of sight that the prime responsibility of the public sector does not so much lie in engaging in partnerships with the private sector than in a regulatory role without which neither economic efficiency, nor social cohesion can find any profit. It is clear that this regulating function will be so the more efficient where it will go together with a large involvement of the organised civil society, according to what is regularly recalled by the Commission in her proceedings on governance.

[1] CEDAG (European Committee for non-profit organizations) is an international non-profit organization under Belgian law, whose members are about 30 national, regional or sectoral associations coming from 12 member countries of the European Union, and whose main aim is to promote and implement active citizenship.

6. CEDAG is also concerned by the growing use of the tender calls procedures as it is used in public contracts, and tends to be referred to as the main or unique way to have a partnership with public bodies.

   If one may not challenge the need for those public bodies to secure their contracts by using this framework, tender calls should not become the only way of having contractual partnerships with them.

   Associations may not be considered as mere providers competing with other types of providers. They have to keep command on their programmes, including their implementation. This principle of autonomy is at the heart of their dynamics. Financial relations between public bodies and associations have to give priority to grants based on a preliminary framework agreement where objectives play a central role.

7. As a conclusion, CEDAG calls for decision criteria where the contribution of social economy enterprises is better taken into consideration, as well as for their better involvement in the follow-up of the PPP process.

Livre vert sur les partenariats public-privé et le droit communautaire des marchés publics et des concessions

AVIS DE LA CEDEC

La CEDEC – Confédération Européenne des Distributeurs d'Energie Communaux – représente au niveau Européen des entreprises municipales qui distribuent e.a. l'électricité et le gaz. Ces entreprises fournissent un service d'intérêt économique général et se sentent particulièrement concernées par la consultation lancée par la Commission européenne dans le cadre du Livre Vert sur les PPP.

La CEDEC a pris connaissance du Livre vert de la Commission sur les partenariats public-privé (ci-après «PPP») avec beaucoup d'intérêt. Ce livre vert a pour objet d'amorcer un débat sur la meilleure façon d'assurer que les PPP puissent se développer dans un contexte de concurrence efficace et de clarté juridique.

La CEDEC se réjouit qu'un débat ait été lancé sur les services d'intérêt général (Livre Blanc SIG de mai 2004). Elle souhaite faire remarquer qu'étant donné que les PPP sont principalement utilisés, soit pour réaliser des infrastructures de services d'intérêt général, soit pour fournir le service, SIG et PPP sont indissociables. Il convient dès lors de lier les réflexions sur le PPP et les SIG. En tout cas, il y a lieu de veiller à ce que d'éventuelles propositions législatives en matière de PPP ne devancent pas le débat sur les SIG.

Les PPP sont, dans la majorité des cas, utilisés pour répondre à des besoins de services d'intérêt général, fournis sous la responsabilité publique et comportant des missions spécifiques avec, par conséquent, des obligations particulières pour les entreprises qui souhaitent fournir ces services.

Les auteurs du livre vert partent du postulat que le développement du PPP s'inscrit dans l'évolution du rôle des autorités publiques dans la sphère économique, passant d'un rôle d'opérateur direct à un rôle d'organisateur, de régulateur et de contrôleur.

Toutefois, il existe de nombreux cas dans lesquels les autorités publiques locales souhaitent continuer à assurer un rôle d'opérateur direct. En témoigne le grand nombre de services publics locaux fournis directement par les pouvoirs locaux.

La CEDEC est d'avis qu'une initiative législative communautaire visant à donner un caractère obligatoire à la procédure de passation de concession, n'est pas nécessaire, ni souhaitable, ce pour les raisons qu'elle développe ci-dessous.

- *Respecter l'autonomie locale*

  Les SIG ne constituent pas un simple enjeu économique mais participent au modèle social européen, à la cohésion économique, sociale, territoriale de l'Union.

  Le modèle consistant à mettre en concurrence toute activité économique que l'autorité publique souhaiterait confier à un tiers, ne s'accorde pas avec la réalité dans beaucoup d'Etats membres où les entreprises publiques fournissent leurs services à l'intérieur des limites de chaque collectivité territoriale respective.

Conformément à l'article I.5 du Traité constitutionnel, l'Union respecte l'autonomie régionale et locale. Les Etats membres doivent garder la liberté de choix quant à la définition de leurs services publics, et, corrélativement, du choix du mode d'organisation de ceux-ci.

L'autorité publique doit pouvoir disposer d'une réelle liberté contractuelle, d'une véritable possibilité de négociation avec les entreprises, afin de prendre en compte les spécificités locales d'intérêt général.

- *Eviter l'appauvrissement des services offerts aux citoyens*

  Si la Commission estime qu'il faut créer les conditions d'un environnement plus compétitif, il faut également veiller à ce que le service public soit préservé, plus précisément les conditions d'accès de tout un chacun à celui-ci.

  En effet, les services publics locaux profitent aux citoyens de la collectivité territoriale desservie et leur permettent d'avoir accès à des services de qualité à des conditions abordables.

  Les marchés publics classiques sont des contrats de court terme et ponctuels où le critère d'attribution essentiel du marché est le prix. Or, une mission d'intérêt général touche le long terme et le critère du prix ne peut pas être le seul à entrer en considération.

  Il y a lieu en effet d'éviter que le prix soit le seul critère déterminant pour l'octroi de concessions. Les critères d'appréciation des différentes offres doivent porter non seulement sur les prix, mais aussi sur des paramètres qualitatifs comme la qualité du service, les conditions de l'emploi et le respect de l'environnement. En outre, l'exécution de missions d'intérêt général implique la continuité du service.

- *Eviter la création de nouveaux oligopoles privés*

  En qualifiant systématiquement toute activité "d'économique" dont l'attribution devrait se faire en respectant les procédures de marchés publics ou de mise en concurrence préalable, les autorités publiques courent le risque de perdre leurs propres entreprises publiques quand elles lancent un PPP, parce qu'elles ne savent pas qui, finalement, obtiendra l'adjudication.

  L'obligation de mettre en concurrence n'importe quel service économique établira (d'une manière irréversible) et accélérera le processus de privatisation. La disparition d'entreprises publiques spécialement créées pour offrir un service d'intérêt général conduira en effet à réduire le nombre d'acteurs présents sur le marché. Ce processus conduira à la création de nouveaux oligopoles privés.

La Commission doit veiller à ce que les entreprises locales puissent combattre à armes égales. À défaut, le risque réel existe que nombre de services publics locaux de qualité soient demain privatisés au grand dam des citoyens et au détriment de l'intérêt général.

Toutefois, si l'autorité locale souhaite recourir à une entreprise privée parce qu'elle estime que cela peut contribuer au renforcement du fonctionnement de l'autorité locale, il semble acceptable que des règles et procédures communes soient établies visant à encadrer les procédures d'établissement de partenariats.

L'Arrêt Teckal

Le fait que l'autorité publique responsable de la fourniture du service puisse rester libre de créer un organe spécifique pour ses besoins d'intérêt général est essentiel à sa capacité de choix. Les conditions actuelles de la jurisprudence Teckal sont trop restrictives à cet égard.

L'interprétation des critères de relation in house doit rester raisonnable. Plus précisément, la notion de «contrôle analogue» à exercer par l'autorité publique sur l'entité distincte ne peut signifier un contrôle quasi identique, auquel cas cette condition ne sera jamais remplie. En effet, une entité ne peut, par définition, exercer sur une entité tierce un contrôle identique à celui qu’elle exerce sur ses propres services.

CEEP ANSWER TO THE GREEN PAPER ON PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON PUBLIC CONTRACTS AND CONCESSIONS (COM (2004) 327 – 30.04.2004)

INTRODUCTION

On 30 April 2004 the European Commission published a green paper on « Public-Private Partnerships and Community Law on Public Contracts and Concessions ». CEEP takes note of this initiative, as PPP have, and will continue to have, growing importance in the European and even global economic arena. The Commission has always encouraged PPP, as evidenced by a number of texts issued since 1993, and we support this. However we expected the long-awaited green paper to address this major theme in a broad manner, and not just within the limitations of the relations between PPP and the law on public contracts.

We refer to the CEEP Opinion from July 2003 on Contractual Public Private Partnerships (see Annex 1), where we exposed the economic side of PPP, namely the problems of high transaction costs, the need for democratic control (especially with long-term contracts), the effects on public budgets and on the stability pact as well as the commercial problem to deal with, caused by the binding to one single contractor.

On the following pages, we will try to respond to the green paper itself and to the 22 questions, despite of the fact, that we are confused about the different policies of the General Directorates of the Commission: on the one hand encouraging PPP, on the other hand complicating the setting up of institutional PPP via public procurement and concession policy. We believe that every entity that wants to establish a PPP should not be hindered by a restrictive legal framework.

Not to legislate on concessions

The very recent directives 2004/17 and 2004/18 about «procurement» introduce new modalities, which may improve flexibility in public procurement allowing for innovation to be extended to PPP. It is necessary to give time for Member States to transpose and to enterprises to experiment these new modalities. It would be confusing to operators and suppliers to assimilate a new directive on PPP including concessions. It could be interpreted as an inclination on the part of the Commission, to outline in a complete and definite manner the notion of concession, which however has the merit in its current configuration of having been in use over a long time, according to national regulations and traditions, and has contributed to many achievements which have been beneficial to the community.

Such an eventuality would then go much further than the «Commission's Interpretative Communication on concessions in Community law», of April 2000. This document was essentially meant to recall the principles of the EC Treaty, especially as regards transparency and equality of treatment, in other words the obligation to put into competition in a non-discriminatory manner the awarding of public contracts. The planned framing of the law on concessions would in fact consist in applying to them in addition procedures for putting into competition similar to those required by the «public procurement» directives. In particular, the new procedure of «competitive dialogue» would be highlighted.

Yet these procedures are particularly complex and costly, especially the competitive dialogue. Certainly the latter appears to be relatively flexible in that it allows exchanges of views for the purpose of clarifying the issues and the content of invitations to tender. However, it remains stuck in complex precaution procedures and subject to delays and administrative, legal and technical costs. Barring exceptions, we believe one can be satisfied, in the field of concessions, with the general provisions figuring in the Treaty, firstly because most contracts of concessions do not have the lack of precision supposed in the cases subject to public procurement procedures (including the compettitve dialogue planned in the Directives 2004/17 and 2004/18 that is not meant to be used for awarding concessions), and concessions can be adequately controlled by the awarding authorities after a more flexible contraction process, secondly because operators are expected to bear a certain degree of risk represented by the direct remuneration contributed by users, and are thus given a sense of responsibility in due proportion, and thirdly because the EC Treaty must be able to be self-sufficient as often as possible, which seems to be the case here. Moreover it is preferable that over-regulation does not discourage private operators from entering into a PPP. We actually believe that there is no need for a new European legislative framework.

It should be noted that the provisions of the Treaty are complemented in some cases (without changing them), by national law, which in general does not seem to us to have presented a problem so far, given the very limited number of disputes observed in this area. We are therefore surprised that the green paper states (without any other explanation), that «several representatives of interested groups consider that the Community rules (…) are insufficiently clear and lack homogeneity between the different Member States».

Thus, if ever a community regulation was to be absolutely established in spite of our recommendation, it ought to be as flexible, light and mere as possible. Transparency, non-discrimination and equal treatment are the important principles to be fulfilled.

The long life of PPP and their uncertainties

PPP are for the most part long-term, even very long-term projects, which indeed is one of the basic reasons for their social usefulness. As the future is unpredictable, the risks are higher both for awarding authorities and for operators alike. Of course, prudence requires these risks to be evaluated, anticipated and covered as best as possible in the terms of the contracts. But with growing uncertainty over time it is impossible to predict everything even by multiplying the pages of these contracts, and at the same time increasing their complexity and technical costs.

The green paper tends to compensate for these drawbacks by proposing to limit the term of contracts in such a way that the remuneration of operators is «reasonable». But it does not explain this concept, which in our view should rather derive from the laws of the market: the winning competitor is in fact supposed to have offered the most reasonable conditions. Furthermore, according to a very solid financial principle, it is normal that the remuneration be commensurate with the risk taken. These considerations mean that the economic problem posed by the advent of the distant future has no solution: to be convinced of this, one only has to observe that Community law says nothing on the life of such contracts.

Under these conditions, one has to rely on stronger principles than those of the internal market and of competition: this is the sense of article 16 and 86-2 of the EC Treaty which states that the performance of a service of general economic interest shall not be hindered by the rules on competition. The concrete consequence of all this is that in the case of a possible unpredictable event, classical rules of public order relating to public services have to be put into practice (continuity, equality, adaptability, quality etc.), which legitimates the further establishment by the public authorities of additional clauses to the basic contracts, although risking at the same time the inevitable loss of a certain degree of market power. Failing this, long-term contracts no longer have any justification, as they are liable to be called into question along the way.

Relaxing the conditions of auto-production

By the means of a fresh laid notion, the green paper rightly distinguishes between contractual PPP and «institutionalised» PPP (IPPP). With regard to the latter it is worth noting that historically, certain Member States have had and still have a strong and longstanding tradition of auto-production, with services of general interest being generally carried out within local administrations. Then came the gradual formation of public enterprises distinct from the public authorities but 100 % owned by them. In a third stage some of these enterprises acquire to some degree private capital.

A very sensitive problem facing the appropriate public authorities at this stage and given these very gradual changes lies in the possibility which they wish to retain, of awarding their public services unhindered to enterprises with which they are associated. This can be explained not only by cultural, regional or traditional reasons, but by the wish of the public authorities to retain direct influence on the provision of public services in the general interest permanently, without refraining, in the case of public enterprises, from the efficiency gains of an entrepreneurial provision of the service and, in case of institutionalised PPPs, additionally from the advantages from the use of private know-how, private co-financing, etc. Besides, public authorities on the local level may risk, because of national legislation prohibiting their entities from operating outside of their territory, the disappearance of such an entity in case that it looses the tendering procedure in its home territory.

In the light of these considerations the problem arises of the scope of **«in house»** activities, being able to receive their missions without having to be subject to the uncertainties of being put into competition. And yet, as stated in paragraph 63 of the green paper, the Teckal case dating from end 1999, which is the current legal reference, imposes very draconian constraints for admitting IPPP in its definition of «in house». The green paper adds, but unfortunately without providing other explanations, that three prejudicial questions have been referred to the Court of Justice with the aim of obtaining additional clarifications on the impact of the Teckal case ; but it would appear that these prejudicial questions will not fundamentally change the existing situation. It seems to us to be high time to give the floor to the politicians so that they can go beyond the purely legal aspects or «economic considerations», and act appropriately. We feel in fact that there are margins for manœuvre, which would enable

the «Teckal» criteria to be made more flexible, without calling into question the full control by public authorities over their IPPP operators.
In particular this could be obtained by a simple majority of public funds at the level of 51 %. In this respect the directive 2004/17 (Art. 23) provides us with an example in retaining the concept of «affiliated undertaking», in other words in the case in point, «any enterprise on which the awarding authority can exert, directly or indirectly, a dominant influence» through one of the three criteria of simple majority defined in article 2, paragraph 1, point b.
Similar considerations could be made on the legal basis of article I-5 of the text of the Constitution for Europe which states as follows: "The Union shall respect the national identity of the Member States, inherent in their fundamental structures, political and constitutional, inclusive of regional and local self-government. It shall respect their essential State functions, including those for ensuring the territorial integrity of the State, and for maintaining law and order and safeguarding internal security". In other words, the sense of regional and local responsibility, (which is moreover acknowledged by the Union), is so strong for certain Member States, that one have to pay attention not to question their equilibrium of subsidiarity. The state is still playing a role in the economy and the observation of the Commission that the state is "moving from a role of direct operator to one of organiser, regulator and controller" cannot be supported in a general way.
Furthermore, it is difficult to understand the geographical conditions of speciality (principle of territoriality) imposed by case law on «in house» enterprises (when meantime business conditions of speciality are not required), which in fact run contrary to the principles of freedom of establishment and of circulation of capital.

In this field, there should be also some reflection on the establishment of **de minimis rules** particularly on the application of public procurement law concerning small and mainly locally acting PPP. This could provide for more flexibility and legal security in the process of setting up PPP. Possible criteria could be the pure local dimension, the criteria laid down in the Monti-package, a public legal form, etc. Alternatively, less strict rules for those PPP could be taken into account.

For innovative public contracts

In the field of IPPP, there are other eventualities, which are not explored, in the green paper. The concerned cases where several public authorities form a group or cooperate with one another in order to entrust missions of public service or of general interest which would be common to them. This eventuality is far from being theoretical in the increasingly complicated context of the modern economy and of the promotion of cooperation between local authorities in many suburban zones. It must be stressed that many IPPP are in fact «public-public partnerships» and to be considered like in-house activities. Public-public partnerships like "intercommunalles", "Zweckverbände" and numerous French société economique mixte are a form of pure administrative reorganisation and should not implicate any awarding and therefore no procurement.
Generally, if at all necessary, it would be neither fair nor pertinent to require a double round of putting into competition. It would be possible in certain cases, such as observed in Italy for example, to expand the methods of putting into competition when these are necessary, by choosing either a competitive selection of the private partner (with an appropriate visibility of the tasks to be accomplished in fine), or a competitive selection of the entities awarded the charge of a public service.

Much more generally it seems to us that the green paper is too rigid in its economic and legal categories, which does not encourage innovative industrial and financial initiatives. Thus the reduction of the scope of public contracts to public procurement and concessions alone does not in our view leave sufficient place and consideration for the diversity of the current (PFI, new French ordinance on partnership contracts between public and private sectors, right of local self-administration in Germany, Merloni law in Italy, etc) or future formulas.

For soft instruments

To sum up, it should be noted that the subject of the fulfilment of public projects is very old. It first appeared when the concept of a state took shape and when these new entities carried out or had executed missions of collective interest (army, granaries, *panem et circences*, royal workshops etc.). We should therefore not be surprised that certain Community rules of relatively recent creation can be or have been «not applied or badly applied». Should one react to this situation by over-regulation or by coercive and contentious measures? We do not think so, and recommend rather less harsh measures. We believe that the Communication of 2000 on concessions has already been most beneficial in promoting awareness on the part of many of those involved in the articles of the treaty. Similarly let us note that in France for example the technique of 'adossement', described in substance at the end of paragraph 50 of the green paper[1], is no longer used. In the same way it is probable that directives 2004/17 and 18, which were under discussion for a long time before being adopted, will accelerate the dissemination of Community concepts relating to transparency and equality of treatment for public procurement contracts.
We therefore advocate non-aggressive actions such as a reminder and re-circulation of the rules of the treaty, and compendiums of good (or bad) practices. If one were at all costs to legislate further on concessions– which itself would constitute a failure – it would be advisable to envisage rules which are as light and flexible as possible, and in any case much more flexible than the rules on public procurement contracts. Finally also, the subject of **«in house»** seems in our view to require significant and urgent measures in the direction of more flexibility.

Along the same lines, let us add that for their part the particularities, especially industrial ones, of public enterprises, which manage networks, have been taken into account in directives 93/38/EEC and 2004-17/EC. The rules are more flexible than those imposed on State administrations or local municipalities. Measures relating to public–private partnership relations should not be equated with procedures concerning "*tendering authorities*" and those concerning "*tendering bodies*" in the sense of directives 93/38/EEC and 2004-17/EC.

Other issues that should have been addressed by the green paper

The green paper addresses 22 formal questions but lots of practical questions remain, especially in the field of IPPP, such as,

[1] Extension of the period of an already existing motorway concession, in order to cover the cost of works to complete a new section (generally with a worse profitability)

- As long as only cases falling under the application of the public procurement directives are concerned, there is no major problem. But how to shape the procedure when a third partner must be found ? In the ex novo case : One call for tender? Or two (if the transparent method for the search for the private or public partner can be considered as a call for tender)? More difficult: How to define the procedure when a concession is in question when looking for a partner?

- How to harmonise company law with the necessity to limit temporally the participation of the private or public (third) partner? Company law assumes that such participation is of a long-term nature.

- What will happen to PPP currently set up without any prior call for tender and what about PPP set up according to national legislation that do not (fully) comply with the EC rules? Fines? Amnesty? Transition periods? Re-completion of the different contracts and economic entities taking into account all the financial risks and those concerning the continuity of the services in question? This would mean that both the private and the public partner lose their investments.

- Why should, under such circumstances, a private partner be interested in setting up a PPP?

- What could be the benefit for the public partner if the private partner invests no more than what it gets back once the contract comes to an end?

ANSWERS TO THE QUESTIONS

1. What types of purely contractual PPP set-ups do you know of? Are these set-ups subject to specific supervision (legislative or other) in your country?

The term PPP applies to a large number of issues and investments, and operation projects. Contractual PPPs are often an answer to specific rules and reflect a huge diversity. Consequently, various forms (from privatisation, outsourcing, financing) and different models (operating model, concession model, management model, …) of PPPs exist. PPPs respond to a broad spectrum of needs. In general, they are successful, like the large number shows. However, there are also some examples for failures.
The scope of the Green Paper is too small to answer the question with all its various aspects in an adequate way. However, we collected some examples (contractual as well as institutionalised PPP) of good/bad practices (see below the annex 2). Also in the annex 2 we provide three national set-ups and regulation on PPP. CEEP will be happy to provide more information if needed.

In the context of question number one, CEEP thinks that a more precise definition of the term "public" would be interesting and should perhaps even be compulsory. Why are there, for example, different definitions in the transparency directive and other documents of the Commission? We noted that the official papers of the Commission do not give the same meaning to "public". We think that it is essential to give a more precise definition of what is called "public".
The problems of a common understanding and common definitions apply, by the way, to many terms, which play a key role in this Green Paper.

2. In the Commission's view, in the context of a purely contractual PPP, the transposition of the competitive dialogue procedure into national law will provide interested parties with a procedure which is particularly well adapted to the award of contracts designated as public contracts, while at the same time safeguarding the fundamental rights of economic operators. Do you share this point of view? If not, why not?

Some elements of the newborn "competitive dialogue" can be regarded as a potentially adequate instrument, but its scope of application is too restricted. For example there is no need for a prognosis (as foreseen in Art. 29 par.1) or at least three candidates (following Art. 44 no 3 par. 2). Its preconditions have to be widened (e.g. allowing sub criterion like quality) and the competitive dialogue must be tailor-made for its use as a means of supporting the public authorities as well as their public or private contractors when creating public procurement type PPPs. One crucial sub criterion must be 'trust'. Furthermore, no a link must be made between service concessions and the competitive dialogue. In this field, the negotiated procedure must remain the normal procedure and must not be replaced by a new tool, which is not tried out and for which the specifications are not known yet. We suppose that the competitive dialogue could be a useful instrument within the public procurement legislation. It has the advantage of being flexible in the sense that a discussion can take place between public contractor and operator. However, it has the disadvantage of being complex, heavy and costly. Therefore one has to be prudent.

The competitive dialogue in the public procurement directive is aimed at a situation where the contracting authority does not know what to do relatively to its contract. However, in the case of most PPPs and most concessions, the public authority perfectly knows its needs and what it wants. On the contrary, our experience on concessions shows that the principles of the Treaty are sufficient.

In the unlikely case that the Commission does not share our view, any procedure has to be light and easy, and the freedom of choice of the public authority, which is close to the needs of the citizens, has to be respected. There would be a strong need for flexibility with the definition of award criteria (like trust).
As far as they are concerned, public enterprises managing networks, as'' "*tendering bodies*", content themselves with the procedures set out in directives 2004-17/EC when awarding contracts which could be described as PPP. These procedures do not reflect that of the competitive dialogue which is much more cumbersome. Public network enterprises should therefore not come within the scope of application of any new provisions with regard to PPP, while the current rules already ensure respect of the basic principles of the Treaty.

3. In the case of such contracts, do you consider that there are other points, apart from those concerning the selection of the tendering procedure, which may pose a problem in terms of Community law on public contracts? If so, what are these? Please elaborate.

CEEP sees no problematic point as concerns service concessions, because public procurement law should not be applied unto them for the moment present and never should. Furthermore it is not suitable in the mentioned case. One reason among others is that service concessions imply a constant providing and are not a single case of procurement. That is in particular the case of public transport services in city regions. The same applies for the institutional PPPs.
But there is a general problem rising from some national laws: certain national provisions at municipal level in some Member States forbid local enterprises from being active outside the area of municipality.
Last but not least and becaue of the very diverse conditions of risk and risk transfer, Member States need a flexiblility to adapt to adequate solutions.

4. Have you already organised, participated in, or wished to organise or participate in, a procedure for the award of a concession within the Union? What was your experience of this?

See question one and Annex 2 and 3 in regard to IPPP.

5. Do you consider that the current Community legal framework is sufficiently detailed to allow the concrete and effective participation of non-national companies or groups in the procedures for the award of concessions? In your opinion is genuine competition normally guaranteed in this framework?

The sectoral legislation as well as horizontal law (competition law, revised directive on public procurement, etc) allow *a priori* to ensure effective participation. In the case of the

revised public procurement law, this is too recent as if we could answer the question appropriately. We need some time in order to first gain experiences for us to and establish a true opinion.
Looking at Services of General Economic Interest (SGEI), we have to consider that the requirements are very complex and, for this tendering procedure, must be as flexible as the situation given. There might be some problems contracting SGEI; which need special consideration. The public tendering procedures are just not flexible enough regarding the performance of SGEI.

Competition is guaranteed through European law, and the existing legal framework allows participation. If there are sometimes no offers/competitors, it is due to the high costs and low interest from private investors. Sometimes, there are simply no real, solvable markets.

One can assume that as time goes on, more and more responses originate from non-national and overseas suppliers.

6. In your view, is a Community legislative initiative, designed to regulate the procedure for the award of concessions, desirable?

In principle we do not see a need for new legislative initiatives. Especially not, if it implies public procurement rules. We refer to our introduction part where we stressed that we are not in favour of rules for concessions. However, we have to consider, that in some cases some interpretation of European standards (e.g. in-house and de minimis rules) is desirable.
Within the existing system, there is no room for considering aspects such as self-administration of authorities or local democracy (including some freedom on how to organise services at the respective level). Therefore, it should be discussed how to introduce the target of more respect towards, and better compliance with, national political and constitutional structures in the context of Community law on public procurement contracts and concessions. This would be a new category within the single market concept. Such an argument could be based, as a sort of pre-impact, on the draft Constitutional Treaty, particularly on its article I 5. The first two sentences of this article read as follows: *“The Union shall respect the equality of Member States, before the Constitution as well as their national identities, inherent in their fundamental structures, political and constitutional, inclusive of regional and local self-government. It shall respect their essential State functions, including those for ensuring the territorial integrity of the State, and for maintaining law and order and safeguarding national security”.*

The optimal recognition of the principle of self administration (that includes the right of self organisation) of public authorities would be the acknowledgement of a right of choice for the public authorities providing them with more freedom to decide under certain conditions (which have to be defined more accurately) whether they submit a service to tender or not.

7. More generally, if you consider that the Commission needs to propose new legislative action, in your opinion are there objective grounds for such an act to cover all contractual PPP, irrespective of whether these are designated as contracts or concessions, to make them subject to identical award arrangements?

The reasons and the establishing of PPPs are as different and individual as those of concessions, contractual and institutionalised PPPs. There is **only one common feature: Transparency of the reasons should be guaranteed**.

There are **no objective grounds** for the mentioned act, for:

- the nature of concession consists in the (partial or total) **risk transfer** from public authorities to private contractors, and the formal agreement by which to shape the risk sharing has to be left to contractual initiatives by parties, due to the enormous difficulties related to the classification and examination of all the possible risk causes in all different contexts and the possible contractual mechanism to manage them, being a basic condition to give up a Community legislation on this subject ;
- the **duration of the concession** agreement, has to be determined considering the investment depreciation and remuneration, but could also involve some renegotiation procedure related to monitoring activities carried out by public authorities that are quite difficult to regulate on Community basis ;
- an obligatory public tendering for contractual PPPs and service concessions would contribute to oligopoly markets and discriminate SMEs, which cannot pay strategic prices.

8. In your experience, are non-national operators guaranteed access to private initiative PPP schemes? In particular, when contracting authorities issue an invitation to present an initiative, is there adequate advertising to inform all the interested operators? Is the selection procedure organised to implement the selected project genuinely competitive?

CEEP agrees with the principle that everybody should have access. However, the proposed service directive and its “country of origin principle” may pose various problems of coherence in this field.

We also believe that equality of treatment does not only mean adequate advertising, but it implies other relevant difficulties, among which we mention

- the formal assignment of task that may lead to the exclusion of a bidder from a procedure, since the nature of the formal assignment of task is not really clear that may lead to the exclusion of a bidder from a procedure (the participation criteria should be designed in order to allow the maximum possible number of participants)
- the possibility of potential equal knowledge among participants is not only related to procedure advertising, but it relies on the immediate availability of all relevant material concerning the awarding procedures, including public funds’ availability and regulation. Meanwhile it is sure that progress has to be made on the advertising in advertising issues: e-procurement is in particular a good way to contribute to this improvement.

9. In your view, what would be the best formula to ensure the development of private initiative PPP in the European Union, while guaranteeing compliance with the principles of transparency, non-discrimination and equality of treatment?

The principles of transparency, non-discrimination and equality of treatment have to be respected at any time, but it does not only mean including the PPP initiatives only under the field on public contracts, since it involves many other relevant aspects. CEEP is convinced that it would be **unrealistic to apply calls of tender** for private initiative PPPs: private companies would be very reserved regarding the risk that its idea is probably performed by another company that would get the performance contract as a result of being successful in a public tendering procedure, even if there was a kind of reward for the initiating company. On the contrary, **introducing the public procurement procedure could lead to the end of any private initiatives** (like organisation of social and cultural projects and so on).

To manage such initiatives **the related legislation has to adequately balance many different problems**, one of which – but not the only one – is the respect of public procurement legislation.
On this matter, an interesting example is the Italian law on Project Financing, concerning the realization of public works through public authorities initiatives in which there is an adequate consideration for private proposals also on the definition of the projects to be realized. There were huge expectations about the effects of this legislation (called Merloni Law), but the final results achieved are disappointing, due to the very limited use of these instruments by operators. The main reason is related to a **"crowding out normative effect"**, consisting of the great attention that the Merloni Law pays to the respect of public contracts' legislation that has lead to neglect the financial implications.

10. In contractual PPP, what is your experience of the phase which follows the selection of the private partner?

There is no overall answer to this question because every single case has to be considered differently. Generally spoken it can be stated that a positive result depends a lot on a good preparatory work. A risk and cost balance has to be prepared in advance, and SGI's adaptability principle has to be put in action for further modifications to be dealt with.

11. Are you aware of cases in which the conditions of execution – including the clauses on adjustments over time – may have had a discriminatory effect or may have represented an unjustified barrier to the freedom to provide services or freedom of establishment? If so, can you describe the type of problems encountered?

CEEP is not aware of such cases.

12. Are you aware of any practices or mechanisms for evaluating tenders which have a discriminatory effect?

CEEP is not aware of such practices or mechanisms.

13. Do you share the Commission's view that certain "step-in" type arrangements may present a problem in terms of transparency and equality of treatment? Do you know of other "standard clauses" which are likely to present similar problems?

"Step-in" arrangements are **usual and necessary instruments** developed in the field of civil law and are necessary to adapt the theoretical conceptions and contracts to reality and the further developments. The arrangements do not cause problems while guaranteeing transparency and equality of treatment.

"Step-in" arrangements are a consequence of reality, which cannot be completely governed by bureaucracy. PPP contracts are normally long-term contracts. Should there be changes in condition, a normal contract adjustment should be possible. An obligatory public procurement would endanger the continuity of services. For lack of these requisites, no private investor would be willing to participate in a PPP.

14. Do you think there is a need to clarify certain aspects of the contractual framework of PPP at Community level? If so, which aspects should be clarified?

Transparency of the intention should be guaranteed. Besides, the public partner should have the greatest possibility of selection of a partner and to create the legal framework (the contract) and the conditions. Creating complicated rules in this field would reverse the aim of a PPP: Instead of avoiding inefficiency and heaviness, this would lead to even more bureaucracy (publishing all the aspects and states, surveyance etc.). Today there are already examples where the costs are higher than the value of the contract. The principle of appropriateness should be strictly applied.

15. In the context of PPP, are you aware of specific problems encountered in relation to subcontracting? Please explain.

A PPP can be a contracting authority, therefore subcontracts have to be awarded; this is not the case for service concessions. Recently it has been observed that social and employment rules are bypassed through subcontracting. Certainly one of the reasons is, that the longer the chain of subcontracts, the less control the contracting authority has regarding the public service (loss of quality, non-sustainable handling) can be assigned.

16. In your opinion does the phenomenon of contractual PPP, involving the transfer of a set of tasks to a single private partner, justify more detailed rules and/or a wider field application in the case of the phenomenon of subcontracting?

The performance of a private partner, which has been found in accordance with the EC rules, falls under its responsibility. There is no further need for even more rules and procedures that has to be fulfilled. Tendering out of subcontracts would lead to a more expensive main contract. Every additional obligation applies more efforts, inappropriate expenses and delays.

17. In general, do you consider that there is a need for a supplementary initiative at Community level to clarify or adjust the rules on subcontracting?

A further initiative would mean completely regulated markets and limit personal initiative. Therefore we see no need for a supplementary initiative.

18. What experience do you have of arranging institutionalised PPP and in particular, in the light of this experience, do you think that Community law on public contracts and concessions is complied with in such cases. If not, why not?

19. Do you think that an initiative needs to be taken at Community level to clarify or define the obligations of the contracting bodies regarding the conditions requiring a call for competition between operators potentially interested in an institutionalised project? If so, on what particular points and in what form? If not, why not?

Combined answer to questions 18 and 19:

The consideration by the European Commission for the first time of the existence of the institutional PPP constitutes a happy and significant advance. This type of frequent PPP is in fact on the rise throughout the European Union (more than 3000 enterprises out of the 17000 EPL listed). At the local level, an increasing number of IPPPs contribute to improving the services. As a consequence, they feel that a good and trustful cooperation with a third partner is of utmost importance and that the authority should be able to keep its direct influence on the supply of a service.

In Annex 2 and 3 we provide some examples of national set-ups on PPP and some practical examples.

CEEP is of the opinion that there is **no need for a European directive or regulation**, but some clarifications are necessary in positive EU legislation, like a clear definition of in-house and de-minimis rules. Sometimes, national legislation is needed. It is up to the Member States to decide **how to shape** their PPP legislation. In some countries, the legislators have adapted to European rules on PPP by introducing a separate national legislation (e.g. Italy).

In the field of institutionalised PPPs, the free mode of a partner should be guaranteed. Not only legal but also practical aspects point to this: The public entities are responsible for the result of an institutionalised project or the performance of an SG(E)I. So, they have a crucial interest in the success of the project and should also be able to have a strong influence upon it. They can control public enterprises for instance; whereas this is not sure when the choice of a partner is just the result of a fix procedure and a public entity is nothing else than the administrator of such a procedure.
CEEP underlines that the choice of the partner has always to follow the principles of transparency and non-discrimination. Furthermore, a **balance of interest** with the competition rules and with Aritcle 86 II and 16 of the Treaty has to be made.

Having in mind the principle of subsidiarity, we notably present the "**freedom of choice"** criterion, which is based on the Article I-5 of the future constitution and already practiced in the field of national constitutional and positive law. It gives the public authority the choice between three solutions in order to organize SGIs. Within the range of solutions, the public authority guarantees the Treaty principle and is responsible for democratic control.

Freedom of choice means several options, among which we mention the following three:

1. Public procurement

or

2. The establishment of a mixed ownership enterprise (MOE), ensuring the complete and rigorous respect of national and community legislations; in case public authorities want to entrust their own enterprise there must be a possibility without public tendering;

or

3. The setting up of a totally public enterprises (auto-production),

The first option is a literal implementation of the community law on public contracts to the concession of SGIs.

The second solution, the mixed owned enterprises or IPPPs, is more complex, involves more opportunities and risks. The following illustrates this:

The Italian reform approved by the end of 2003 is based on the fundamental idea of allowing to public authorities a range of solutions within the framework of EU Treaty principles, balancing different questions in a way that appears very forward-looking. According to such reform, the organization of SGI's prescribes three forms: a) public procurement; b) MOE with the compulsory tendering procedure for the selection of the private partner, according to Italian and European legislation; c) in house providing (IHP) in the literal definition of the Teckal Case.

The efficient functioning of mixed ownership enterprises (MOE) asks for a clear and certain legal framework concerning the forms of cooperation between public and private partners, probably identifying this solution with what has been called Institutional Public Private Partnership (IPPP). This solution requires an adequate ruling on:

- - the boundaries between the management activities, on one hand, and programming, monitoring and regulating activities on the other hand, providing for a coherent separation of roles and responsibilities among the different subjects involved, with particular attention to the contract administration and the assignment of tasks, that should also introduce rules on risks allocation and management between the service provider (Institutionalised PPP) and the authority entrusted of controlling (contracting authorities);

- - the appropriate degree of flexibility in defining the allocation of management tasks and responsibilities between the partners when the selected private partner does not have the control over the enterprise, because of a minority shareholding participation ;

- - the selection procedure, that has to be simplified as much as possible, to meet in the short term the requirement and the ever increasing needs and expectations of the citizens;

- - the subject-matter of the contract or concession, in order to clarify in advance that the activities carried out by the company are the ones foreseen in the selection procedure;

- - the concession duration, in order to establish ex ante that the procedure refers to a service provision for a predetermined and not extendable period of time, unless the repetition of the initial procedure.

In the third option, public authorities currently exercises a control over its own enterprise, which is similar to that which they exercise over their own departments and, at the same time, that enterprise carries out the essential part of its activities with the controlling authorities. The third option is the application of the commonplace concept elaborated in the Teckal Case by the European Court of Justice (note CEEP proposes below and in the introduction “relaxing the conditions of autoproduction” to enlarge the Teckal criteria). The third option includes the notion of public public cooperation (intercommunales, Zweckverbände, etc).

Whatever the finally agreed definition of “in-house” and its scope, local authorities must keep the freedom to choose between different ways of operating and the extremely divergent national contexts have to be taken into account. Therefore, CEEP believes that it is up to each Member State to define the criteria for control over an enterprise by a local authority enabling an “in-house” solution to be established. Only the criterion of at least 50 + X % ownership of the enterprise by the local authority must be retained for all Member States.

20. In your view, which measures or practices act as barriers to the introduction of PPP within the European Union?

Our experience shows that the barriers differ widely. Within national conditions incertitude, there is no interest for the private sector to invest. Other barriers mentioned are the fiscal aspects, state aid aspects, problems with VAT if a private company receives financial support, etc. Furthermore, public authorities sometimes lack the human and financial resources to define the criteria.

On the other hand, the large and increasing number of PPPs shows that there are no major problems and that too strict rules lead to a restriction of flexibility. The more, we fear that there would be even more barriers through new European rules

21. Do you know of other forms of PPP, which have been developed in countries outside the Union? Do you have examples of "good practice" in this framework, which could serve as a model for the Union? If so, please elaborate.

We agree that an exchange of views in order to find models of good practices is desirable and that it should not only be looked at PPPs from a purely legal viewpoint. Thanks to the freedom of organisation of PPPs we have lots of experience and many people outside Europe as visitors are, keen on getting information about how our PPP work. This shows the necessity of free organisation under the Treaty principles. Structural funds for PPP and the exchange with the new Member States have had positive effects. The same applies for development aid and joint ventures.

22. More generally, given the considerable investments needed in certain Member States in order to pursue social and sustainable economic development, do you think a collective consideration of these questions pursued at regular intervals among the actors concerned, which would also allow for the exchange of best practice, would be useful? Do you consider that the Commission should establish such a network?

CEEP proposes that an observatory of PPPs should be put in place at European level. Such an observatory should be independent and look at public procurement, contractual PPPs, concessions and institutionalised PPPs. We feel a need for results from an observatory before considering further improvements. The observatory in question could be combined with the SGI observatory and monitor transparency, non-discrimination and the proper functioning of PPPs, which contribute to the quality of services. Such an observatory should involve the social partners and the civil society.
The observatory should analyse and provide a platform of exchange of good practices. It should not have any prejudicing effect and comply with the principle of subsidiarity.
We draw the attention of the Commission to the fact that an interesting network of exchange and benchmarking in the mentioned field exists already within CEEP.

ANNEX 1
to the CEEP Answer to the Green Paper on Public-Private Partnerships and Community Law on Public Contracts and Concessions

CEEP OPINION ON CONTRACTUAL PUBLIC PRIVATE PARTNERSHIP (CEEP.2003/AVIS16)

CEEP POSITION ON CONTRACTUAL PUBLIC PRIVATE PARTNERSHIPS (PPPs)

1. Introduction

There is a trend towards an increased involvement of the private sector in the development and funding of operation and investment for services of general interest (SGI). This should be welcome as in certain circumstances it may bring improvements in the quality of these services and, by making available resources which could not be obtained by other means, notably for capital investment, thus making it possible to implement projects considered vital in socio-economic terms. However, this shift towards the private sector can only be accepted under the condition that there is no systematic promotion or policy towards fulfillment of public tasks through the private sector instead of the public sector. The concerned state or sub-state level must have the possibility to choose how the services are operated and provided, including provision with their own enterprises or through various forms of PPPs. The limitations which the Stability Pact places on the level of government debt also provides an inducement to governments to adopt such forms of partnerships. The EU indeed supports the use of private funding, for example for the development of Trans-European Networks as reiterated in the Commission's communication "Developing the trans-European transport network: Innovative Funding Solutions – Interoperability of Electronic Road Toll Collection Systems" of April 23rd 2003.

There are cases in which greater reliance on the private sector has been rather successful (e.g., the liberalization of air transport), for example in effecting changes in management culture. In other cases, however, the consequences have been extremely damaging, not only in terms of the effects on ultimate costs to public authorities but also on the quality of service provided. The privatisation of rail infrastructure in the UK is a case in point.

This position statement aims to set out the potential difficulties in the use of such partnerships, and to identify the conditions for the successful use of private funding for services of general interest. Because of the adverse impact which some forms of PPP may have on public finance and on the quality of public services provided, it raises the question to what extent the appropriate use of PPPs can be a matter of European concern. Or should it better be kept at national level, according to the principle of subsidiarity? Which added value could a European framework provide, given the fact that a legal basis for Community action is not obvious and that the Commission is committed to article 295 of the treaty which guarantees the ownership structure of a Member State?

Finally this paper defines the field of action in which the EU, within the scope of the communities competencies could help ensure that the users of SGIs and the taxpayers who in part finance them may reap the benefits of public private partnership while avoiding the risks it may pose. 2

The paper addresses primarily the form of contractual PPPs. The neighbouring sector of institutional PPPs needs a separate consideration. In particular, given the special interest of mixed economy companies in the perspective of public private financing, the CEEP plans to issue a specific opinion paper on that subject at a later point of time as well as some reflections about the relation between public procurement and PPP.

2 Definition

Various definitions coexist concerning PPPs, illustrating the wide margin for interpretation of the concept. One of the broadest is used by the United Nations Development Program UNDP: « The term PPP describes a spectrum of possible relationships between public and private actors for the co-operative provision of infrastructure and/or services ».

PPPs can take various organisational forms, some of them institutional such as mixed economy companies, some of them of more contractual form like concessions.

Mixed economy companies are public private partnerships that are not limited to a more or less formal method of co-financing. They take the form of enterprises, which are both financed and managed jointly, and to which the implementation of the common project is entrusted jointly by public and private actors. The CEEP considers this form of PPP as particularly adapted to the operation of SGIs, as experience has shown that it distinguishes itself from other forms of PPPs by its stability and security over time. Given the special interest of mixed economy companies in the perspective of public private financing, the CEEP plans to issue a specific opinion paper on that subject at a later point of time.

Based on a few core characteristics of PPPs, the present note outlines some of the problems that contractual PPPs most commonly face. In this respect, we consider the situation of a public authority, which, respecting its obligations wishes or has to retain the overall responsibility for a service or infrastructure.

This applies to among others SGIs which cater for a social demand which has been commonly acknowledged as vital for the collectivity and which cannot be satisfied by private initiative alone. In this situation, it is up to the public authority to meet this demand by an “in-house” solution or by relying on public, private or mixed operators to provide the service on its behalf and who are, in exchange, compensated financially or otherwise for the cost of meeting those public service obligations which cannot be provided on a purely commercial basis.

All forms of PPPs differ from public procurement contracts in the degree of cooperation between the operator and the public authority: from the funding to the conception and realisation of a project, or the provision of a service, the operator plays a vital role going

[2] At a later point in this paper CEEP tries to asset closer the legal basis of any EU action, especially with regards to subsidarity and Art. 295 of the treaty.

far beyond a classic client/supplier relationship.3 PPPs involve a greater transfer of responsibility to the contractor. Instead of the placing of contracts for individual parcels of work or services, on a “gross cost” basis, PPPs tend to involve a much broader package, with remuneration including a greater degree of risk – e.g. an annual service charge including incentives for performance, or from direct receipts from final users, or infrastructure usage charges.

Compensation by the public authorities may take a number of forms:

1. At the minimum, it may involve non-financial compensation – for example the granting of exclusive rights, e. g. to compensate for a requirement to provide universal service, or the grant of commercial or land rights (e. g. property development at stations on a new rail line)
2. Financial assistance to cover operational losses
3. Direct financing of infrastructure by the authority: The authority may pay directly (or via the operator) an annual service charge to an infrastructure manage charged with building, maintaining and/or renewing the infrastructure. Here there is a choice from a whole variety of combinations concerning the functions of design, build, finance, manage, transfer. In each case public financial support covers not only the direct financial shortfall expected on a particular operation but also the funding of investment required and the risk borne by the contractor involved.
4. Transparent internal or external cross subsidies

3 The risks posed by private involvement

The varied experience gained in recent years of different forms of public-private partnerships highlights the problems to which they may give rise and helps in identifying the factors conducive to success or failure in implementing PPPs. Past experience points to a number of factors that should be considered in the design and evaluation of any proposed PPP:

Specification risk

The creation of a PPP requires that public service requirements be incorporated within a long-term contract, e. g. through contractual obligations or through appropriate incentives or penalties. It is however in many cases very difficult to draw up a contract which caters for all the combinations of circumstances affecting the provision of a public service at a given moment. – let alone one which will allow for changes in public service requirements, operating constraints, economic circumstances etc. over time.

- Private partners may be tempted to do work to minimum acceptable standard, in order to reduce expenditure (note the case of Railtrack);

- It is a major challenge to integrate such factors as environmental, social, safety, and aesthetic aspects within the contract, to measure performance in these areas, to transform them into legally enforceable terms and to make appropriate financial allowance for them.

[3] See also : Interview with Jonathan Todd ; Commission’s spokesman in : *Le Moniteur* ; april 25th 2003

- It may prove difficult to ensure that the contractor gives due weight to impacts arising after the end of his contact and in particular to activities with long-term and uncertain pay-offs which depend on research and/or development and long-term environmental and social liabilities.

Technological risk

Private lenders are reluctant to lend if a project is dependent on new or unproven technology. With many PPPs it is necessary to select consortia, typically including suppliers of key equipment, to undertake the work. This inevitably imposes a constraint on the technical choices available to the client, who cannot “cherrypick” for example the individual suppliers offering the best technical solutions to his main requirements.

Meanwhile technical innovations arising after a contract has been placed may either:

- Allow a contractor to reduce his costs, in which case it may be difficult for a client to obtain a share in these gains; or
- Create the possibility of improving the service to users - which however it may only be possible to achieve through a contract variation, at disproportionate cost.
- If the contractor is unwilling or unable to procure the new technology concerned, it may be necessary to forgo such improvements completely. In general, by locking the client into a single supplier, the client will suffer over time because he will not be able to go to the market periodically in order to flush out the best available technology and the most competitive prices then prevailing.

Contract management risks

- Depending on the organisational form of the project, the necessary division of responsibility between infrastructure and service providers, may blur lines of responsibility and make it difficulty to achieve an optimal adjustment between client requirements and the facilities provided.

- Inflexible contractual obligations may take precedence over real user requirements and priorities as well as their possible evolution: often, the public authority may have almost no right to intervene if no special provisions are made in the contract.

- The legal efforts to enforce contracts in practice, or, in the worst cases, to terminate contracts due to unsatisfactory performance, have proven to be considerable and result in the diversion of efforts on both sides.

Completion risk

Experience has shown that one of the key issues concerning PPPs is the risk whether or not completion will be achieved, known as completion risk. This risk is rarely accepted by commercial project lenders/investors, who will tend to cover themselves by turning towards other private sponsors (guarantors) or possibly other parties.

Even if this risk can be absorbed in a number of different ways, it generally results in complex financial arrangements.

In the simplest structure, project sponsors would guarantee repayment of the loan until completion is achieved. A contract for infrastructure project financing would give the project lenders recourse to the company responsible for construction of the project if completion is not achieved on time.

The remedies awarded to banks for breach of the contract will usually include a level of liquidated damages sufficient to cover the debt service. Among other methods of covering completion risk, we can quote “the analysis of the bankability of the project".

Such complex financial arrangements obviously require from the public partner specific skills in this field for financial analysis purposes.

Market considerations

Where investment is involved, private finance usually requires a long-term contract concession to be given to a single supplier or consortium. Not only does this reduce the range of contractors who are able to compete (excluding de facto small and medium enterprises) and effectively suspends competition for the period concerned, but it also locks the public authority into a single supplier. In this regard, one can identify risks of:

- Setting up a rigid contract, which may become increasingly out of line with public service requirements as time goes on.
- Higher costs and constraints on choice in dealing with improvements requested by client, new legal requirements etc. in a “single contractor” situation.
- The opportunity for the contractor or consortium to make excess profits, which can be used to help, lower the prices of bids they may make for other projects.

Even when mitigated by the possible intervention of a regulator, these impacts cannot be fully excluded.

Financial implications

Private contractors require a higher return on capital and need also to charge sufficient to outweigh the risks they are taking on: because of the scale of their activities, governments are much better able to bear major risks. The use of private finance is thus usually considerably more expensive than raising funds through government borrowing.

In practice, moreover, private finance creates new risks, in terms of the bankruptcy or failure to perform of the supplier. In addition to the very heavy set up time of some PPPs, they more generally require a long-term commitment of annual funding by government which cannot be reduced except at heavy cost e.g. in the event of a financial crisis or if the asset concerned becoming redundant. That long-term commitment may be so heavy (e.g. €1.5 billion per annum for the London Underground PPP) as to risk crowding out other investment in future and adding significantly to future government indebtedness.

Private finance may thus – as in the case of Railtrack - result not only in higher annual outlays in the future, but also increase the potential liabilities if things go wrong. One has to be careful about contract clauses referring to excess profits, gifts of land but also to some forms of state guarantees, which might be considered as state aids.

During the contract period, the potential financial benefits of private finance due to e.g. sub-contracting or technical developments accrue to the contractor, not to the funding authority. Meanwhile, the involvement of private finance in services of general interest might, in some cases, lack transparency and accountability, as cost and performance data may be treated as “commercially confidential”.

4. How real is Risk sharing ?

One of the key justifications used for the employment of private finance is the transfer of financial risk away from government and taxpayer to the private sector. Such financial failures, however, as that of Railtrack or Air Traffic Control in the UK clearly showed the limits on the ability of private operators to bear the different types of risk (mentioned in paragraph 2) involved in providing many public services.

In the end, where a service is essential, government will simply have to spend whatever is necessary to ensure the service continues (if for example a private supplier goes bankrupt or fails to deliver the required service, or cannot raise funding because of the collapse of the stock market). Indeed, many PPPs include some form of explicit government guarantee.

Such a guarantee can be justified in terms of public opinion and consumer satisfaction since it is the public authority that is held responsible if a PPP gives unsatisfactory results (financially speaking or, more often, in terms of service quality).

This means that in such cases the transfer of risk to the private sector is illusory. The resort to private finance does not avoid debt: it simply disguises them potential debts by turning them into “contingent liabilities”. The risks should be fully recognised in evaluating the use of private finance.

5. Conditions for success of public-private partnerships

The prime objective in using private partnership should be to make use of the potential efficiencies of the private sector and its ability to deliver and not simply to use it as a method of raising finance. This requires appropriate expertise and resources for the public sector client to manage the contract effectively.

The **specifications** should be as clear as possible, but have to be sufficiently complete, however, to **fully reflect public service requirements** and cater for principal risks, even at the stake of complex contractual clauses. Beyond the necessary tools for performance measurement, the specification should include incentives, which align the profitability for the operator as closely as practicable with the public interest. The specifications should be readily enforceable and allow for the evolution of requirements to meet potentially changing needs during the life of the contract.

The **duration** of the contract should allow for reasonable compensation of the investments made in order to secure the necessary investment and to compensate the contractor for the up-front effort (training, marketing etc.) involved and to allow for the necessary learning curve.

On the other hand, the relatively long duration required by these financial considerations must avoid locking the client (e.g. the public authority) into a single supplier and allow for maximum play of competition e.g. through the right of clients to require sub-contracting.

In cases where the involvement of private finance cannot be achieved while observing these guidelines, there may be serious doubts about the advantages of using that form of finance. EU rules on public indebtedness must not tend to induce governments into economically disadvantageous transactions with the private sector. This means that governments should not be allowed to disguise the real liabilities, which may arise through the resort to private funding. The strict definition of government debt should be completed by a realistic assessment of the probability, likely timing, and scale of the ultimate liabilities to government under both private and public regimes.

6 Conclusion

Having looked at the contractual PPPs, the CEEP recognizes the contribution that private sector involvement can make in the provision of public services, or large scale projects where such partnerships might add value by e.g.

- Encouraging the use of management methods combining “private” know-how and approaches towards some aspects of customer awareness with experienced public service management.
- allowing more effective control of costs
- making available additional funding, at reasonable cost, which could not otherwise be procured.

However, in many cases, experience has shown that the use of private finance fails to achieve these objectives, and that it may create very large financial risks. Whether due to lack of experience or financial pressures, it may also sometimes undermine the service provided.

PPPs may offer less transparency to the client than is required of publicly funded projects, as much of the information concerned might be claimed to be commercially sensitive by the contractor, making it difficult for example to establish whether excessive profits are being made or whether the financial position of a private partner is deteriorating to the point where the public service could be at risk.

Extreme care is therefore needed in selecting which projects are suitable for the use of PPP. It is vital that a full, and realistic, analysis is made of the benefits, the costs, and the scale and timing of the risks which may be incurred.

In any case, to ensure the long term development of the partnership considered, adequate provisions must be made in particular with reference to both:

- the specifications of services of general interest : complete freedom to specify in details what service characteristics are needed and the associated requirements for the private partner to comply with relevant charters or certification requirements, even if they may conflict with the public procurement directives.
- the selection of partners : the choice of the most appropriate award criteria should be left in the hands of the public authority with respect to the crucial aspect of the competencies and of the technical and financial means required for ensuring the

project completion as well as other criteria ("soft criteria") that the public authority considers as relevant.

The CEEP considers it to be necessary to point out the fundamental differences between public procurement contracts and PPPs. Public procurement is essentially limited to set up a classic client/ supplier relationship whereas PPPs are generally based on long-term financial and management cooperation. This aspect of PPPs confronts EU procurement law with a major challenge, as recently pointed out by Commissioner Frits Bolkestein.[4]

Therefore, the CEEP has the view that the existing public procurement rules within the directives existing frame are often inappropriate for contractual PPPs which are long term or complex projects and require sound relations between parties. CEEP stresses the close link between PPP and service concessions. It calls on the Commission to clarify this ambiguity without damaging the advantages and characteristics of the setting up of PPPs and to develop with the parties concerned other possibilities (e.g. the "competitive dialogue", already mentioned by Commissioner Bolkestein).

The CEEP considers that the legal basis of any EU legislation is rather narrow and basically limited to PPPs that involve EU funds, for example concerning Trans-European Networks.

As far as a legal basis may exist, any form of EU action should be defined the most precisely possible and target a limited number of key aspects of PPPs in order to ensure its added value to current practices:

- The Commission's Green paper on concessions and public-private partnerships should strictly apply the principle of subsidiarity. It could be used to define possible indicators for identifying projects and activities which are likely to benefit from the use of private finance, and, if necessary, recommendations for the successful implementation of PPPs.
- It is of utmost importance that PPPs will not influence the provision of services of general interest in a way that their quality or sustainability is reduced. Possible EU recommendations should ensure that PPPs will not have any negative impacts on the quality, the social and/or environmental aspects of a service or infrastructure project as well as in the perspective of research and development, transparency and ethics.
- Any eventual EU action should provide legal certainty for public authorities and contracting parties without limiting the variety of organisational forms of PPPs by further EU legislation.
- There is a degree of inconsistency between competition rules and some forms of PPPs. Indeed, depending on their organisational form, PPPs may create little opportunity for smaller companies to compete for contracts and, once concluded, close down substantial markets for decades.
- PPP projects should fully conform to EU orientations regarding transparency and be based on a realistic view of the potential impact on medium/long-term government indebtedness. Any eventual EU action should include new criteria and procedures for estimating impacts on government indebtedness, requiring a clear and frank

[4] Speech by Commissioner Frits Bolkestein, Holland, Noordijk, 08 November 2002

assessment of the liabilities associated with both public and private finance and an estimate of the impact on government finances beyond annual budgets.

ANNEX 2

Some examples of national set-ups on PPP

1.1. FRENCH case on IPPP:

Since 1926 **France** has had a legal system allowing the collaboration of public and private partners within so-called « mixed economy » enterprises (SEM). In parallel to types of contractual partnerships in the form of concession, since the beginning of the (20th) century institutionalised forms have been offered to the public authorities as a response to the exercise of public services (social housing, water, transport etc). In 1983, it is the legal status of the local mixed economy enterprise which is given a legal framework. France thus decides that local municipalities will hold the majority capital and be within the decision-making bodies and that these local public enterprises will be commercial companies in common law .

The Green Paper addresses institutionalised PPP in a limited number of forms. The example in France of constitution of local public enterprises shows us a broader diversity. In fact, four types of institutionalised PPP can be defined :

- a PPP where a large enterprise holds a stake and in the end carries out the mission assigned to the EPL (a large international proxy group of SGEI). This is the only type of IPPP taken into account by the Green Paper which analyses it in simplistic and even theoretical terms, as it only considers the very precise case where only a public municipality and a private partner are involved. Such a situation does not exist in France as a Sem must contain at least seven shareholders.
- PPP with participation of a private partner for the operation of a public service (contributing know-how, local involvement of small and medium sized enterprises, etc.). The initial impetus is public and the search for a partner in the enterprise project comes later. It is possible to make an evaluation of this public involvement in a context which goes beyond simple economic inventory but follows a method of global assessment measuring the impact of these enterprises with regard to sustainable development, town and country planning, solidarity, balance of population and so on. The EPL can in the case in point be the criterion for the execution of a mission by a public enterprise.
- PPP with other public partners and the involvement of local municipalities. Some sectors of activity do not have economic prospects which are sufficient for acquiring an interest. The absence or low degree of return on capital investment prevent participation in these PPP from becoming attractive. The long period of operations for development and urban renewal without prospects for profit is an example which can justify the strong involvement of public partners.
(example: Sem of development and of management of social housing)
- Public Private Partnership with public funding that help to secure ideas of firms build up initially thanks to private funding and which justify an implication of public authorities. Economic interventionism by a Public Private Partnership (local authorities and communities and local firms) by appreciating the benefits for the territories that is more important than the capital used.

EPLs do not suffer in France from the system of exception with respect to the rules of putting into competition for operating a SGEI or the provision of a service by a local municipality.

In the framework of the « Sapin law » in force since 1993 for the rules of transparency of concessions, the municipality which decides to call on the Sem to carry out the mission proceeds according to the rules of common law. From this perspective, a recognition of the Sem as a fully-fledged means of management of local public services

might need legislative modification by an initial attribution without putting into competition, while the private partner would probably be selected through invitation to tender.
Except in cases of « in house » services which correspond to the current case law definition from the CJEC, EPLs apply in the context of responses to municipalities' invitations to tender for the provision of works, supplies or services in accordance with the market directives 2004-17 and 2004-18 and the national Code of public procurement, transposition text.

1.2. FRENCH case on CPPP:

Until France's recent adoption of specific legislation on PPP contracts (order of 4 September 2003 on hospital long leases, order of 19 June 2004 on PPP contracts) France had already equipped itself gradually with legislation aiming primarily at offering more guarantees to private investors likely to participate in the development of the public domain and to provide more flexibility to local public authorities in their real estate investments.

Thus it was that the law of 5 January 1988 on improvement of decentralization came to limit the scope of the principles of inalienability and non-applicability of statutory limitation to the public domain by defining a specific system of long lease, which could be granted on the public or private domain of local authorities. The law of 25 July 1994 reformed the system of occupation of the public domain by the State in order to favor the revival of economic activity, and opening up the right of granting occupants of the domain securities with real rights.
Moreover it opens up the possibility of financing works through leasing agreements, constructions and installations carried out in the framework of occupation authorizations containing real rights. In addition in some areas the legislator has created contractual instruments specific to certain sectors: the law of 29 August 2002 on directions and programming for internal security, while extending the scope of application of the administrative long lease, not only authorizes the State to take a lease, with option to purchase, on works required for the needs of justice, police and national constabulary developed on the basis of an authorization of temporary occupation of its public domain, but also allows the financing of these constructions through leasing agreements. The law of 27 January 2003 relating to military programming extends the procedure of rental with option to purchase to buildings to be constructed on the public domain of the State for army needs. Lastly, the law of 18 March 2003 on internal security adopts the same system as that applicable for internal security.

Two recent orders have established more global legislation on public-private partnership contracts, firstly in the hospital area, the order of 4 September 2003 authorizing from then on the conclusion of long leases on real estate properties belonging to a health establishment, and the order of 19 June 2004 instituting in France a third category of administrative contracts, called partnership contracts, characterized by a public payment throughout the contract period, capable of being linked to performance criteria assigned to the contracting partner.

All this legislation responds in particular to the concern for legal security expressed both by the public authorities and by investors. A number of so called complex arrangements had in fact developed aiming at providing an operational solution to the difficulty, and even impossibility of mounting certain operations. These arrangements, such as long lease completed by a non-detachable convention and a leasing contract, presented the complexity of which derived from the flood of contracts what presented an juridical insecurity, was in fact the object of different doctrinal interpretations and random case law.

2. GERMAN case

Over the past few years a trend has been seen in Germany as in other Member States of the European Union toward Public Private Partnerships (PPPs) for constructing public infrastructures and providing public services. PPPs are one of several options that can be chosen by German public authorities on the national, the regional and – guaranteed by the German Constitution – the local level to fulfil public tasks. Other options are own provision within the public administration, including regies, with own enterprises or enterprises under the common control of more than one public authority, and the commissioning of third parties. With the latter option a variant of a PPP can also be concerned, namely if contractual relations exist between the public and private actors for the **cooperative** provision of infrastructures and/or services. These PPPs are called contractual PPPs; they are distinguished from mixed-ownership enterprises with the participation of public authorities and private actors – called institutional PPPs (IPPPs).

Mixed-ownership enterprises in Germany represent a special form of PPPs organised for long-term partnership cooperation, to the extent that they are formed according to the rules of company law and are not simply oriented toward single commissions by public authorities. Public authorities choose this organisational form in order to retain their **direct** influence on the provision of public services in the general interest **permanently**, without giving up advantages from the use of private know-how, private co-financing, etc. This type of PPP is of great importance especially on the municipal level in Germany.

In the choice entitled to public authorities as to what services they will offer and which structure they are going to choose, it is a matter of decisions on a case by case basis which are taken by them in the light of national, regional or local conditions. This freedom in regard to organising public services is taken in Germany as part of the fundamental political and constitutional structure of the member states, including regional and local self-government, which has to be respected by the European Union according to Article I-5 of the future European Constitution.

IPPPs come into being in Germany either through public authorities founding a new enterprise in the legal form of a private law company jointly with private actors, or through the selling of company shares of existing companies by public authorities to private actors resp. the acquisition of shares in private companies by public authorities, whereby public enterprises can also take the place of public authorities. The degree of formalisation and the institutionalisation of the partnership are quite varied.

The private partners in IPPPs also vary considerably: in part they are SMEs that are specialised in the management of public services, in part they are regional enterprises as partners above all of local authorities or enterprises, and in part they are large enterprise groups operating nationally, EU-wide or world-wide.

To the extent that German public authorities do not enter into IPPPs for fiscal purposes alone, they are in the main concerned with eliminating or at least with reducing the disadvantages of the private sector as well as the public sector: Purely private-economy enterprises are primarily profit oriented; as far as they are also dealing with the supply of citizens with public services, this is not in the foreground of their activity. Public enterprises in Germany, on the other hand, are obligated to an optimum provision with public services – an obligation that they have to satisfy according to the principle of economic efficiency. Services of general economic interest, which are subject to various European regulations, are primarily concerned here, but services of general interest that are non-economic, for which EU competences do not exist, are concerned as well.

IPPPs involve both chances and risks for the provision of public services. Amongst the opportunities seen by public authorities in Germany are the fact that IPPPs can offer them the possibility of pursuing strategic objectives such as for example gaining external know-how, common use of synergy effects with private partners, improvement of sales channels, more efficient provision of service or increases in profitability. In contrast with the complete handover of the fulfilment of tasks to third parties, IPPPs are chosen to make it possible for public authorities, even in the event of budget problems that stand in the way of purely public provision of service, to retain direct influence on the provision of services and direct monitoring rights. In order to take the chances and to limit or avoid the risks, great attention is paid to the choice of the appropriate private partner and to the contractual formulation of the IPPP. In order for an IPPP to be successful, care is taken in the choice of the private partner for example so that a certain complementarity of objectives of both partners is present, that there is a basis for trust, and that the risk of insolvency of the fellow shareholder is low. To avoid a situation where the public authorities are dependent on the private partner in the future, their possibility for decisive influence is guaranteed in the consortium contract; for risks such as insolvency of the private partner or its intention to sell its shares on – in the case of IPPPs at regional or local level additionally the withdrawal of activities from the region or district – usually unambiguous regulations are taken which make the further guaranteeing of the service possible for the public authority and avert dangers to it. In the weighting of chances and risks, in addition to regional and local conditions, the respective sectors and the kind and extent of the private participation play a considerable role. As far as the chances are made use of, IPPPs in Germany allow in general both the goal of optimum supply and that of economic efficiency to be pursued.

3. ITALIAN case:

By the end of 2003 Italian Parliament approved a Reform of Articles 113 and 113 bis of the Legislative Decree of 18 August 2000, N° 267 (comprehensive legal text governing local activities) and Article 35 of the Law of 28 December 2001, N° 448 (Finance 2002), whose main innovations are the following:

Abrogation of transition period

All the provisions originally made in paragraphs 2, 3, 4, 5 and 16 of the said Article 35 (Art. 14, §3, LD 269/2003), have been removed, introducing a provision stating that the concessions assigned without transparent procedures shall lapse by 31 December 2006, without the necessity of any further deliberation by public authorities.

Separation of infrastructure and service management

To improve competition, the Reform provides for the separation between the infrastructure and the service management, asking for liberalization of the latter whenever the technical conditions are not of natural monopoly.

Management of SGI's

The most interesting innovation is certainly the enlargement of the range of possible organization modes of SGI's management, according to the following three forms (Art. 113, § 5):

1) Public procurement procedures;

2) the establishment of a mixed ownership enterprise (MOE) in which the private partner has to be selected through competitive bidding procedures, assuring the complete and rigorous respect of national and community legislations;

3) the establishment of a completely public enterprise (100% public ownership) in which public authorities exercise over it a control which is similar to that which they exercise over their own departments and, at the same time, that enterprise carries out the essential part of its activities with the controlling authorities (in house providing, IHP)

Point 2) has been introduced following some of the more recent examples of the organisation of SGI's, that has raised the interest of both public authorities and multinational enterprises.

4. Portuguese case on PPP:

During the 90's several initiatives were launched to build infrastructures under PPP concepts. Budget consolidation needed to respect the Stability and Growth Pact lead the Portuguese Government to opt for private financing of infrastructures. The first large contract was the Vasco da Gama Bridge inaugurated in 1998. It was followed by several high-way projects. The intention of the Portuguese Government of applying contractual PPP proceedings to other sectors (Health for instance) raised the question of coordination by the Ministry of Finance. So, dated 26th April, Decree-Law 86/2003 was published. This Decree defines PPP as "a contract or a group of contracts through which a private partner accepts the obligation before a public partner of developing an activity that fulfils a collective objective, with the financing the responsibility for the investment and the operation belonging to the private partner". This definition applies if instead of a private partner the partnership involves a public enterprise, a cooperative or a non for profit organisation.

A PPP is justified if it compares favourably with a public sector comparator in terms of efficiency and cost of the service to be supplied. The PPP must ensure an effective transfer of risks to the private sector and the creation of new risks must be prevented if they cannot be compensated by the reduction of other risks.

Any Ministry that intends to launch a PPP must notify formally the Minister of Finance (or the entity in charge). The Minister of Finance and the Minister of the sector involved issue a joint order that creates a Commission to assist and follow the preparation of the process. Once the process is complete the two Ministers approve together the conditions to be respected in the launching of the partnership, including the model of procurement, the demonstration of public interest, the justification for the adopted model of PPP and the long term financing with explicit reference to impact on public budget.

PARPUBLICA, a public joint stock company, was designated by the Minister of Finance to coordinate the PPP process.

ANNEX 3

Some application examples with negative consequences:

One can think that the current complicated rules of the public procurement procedures constitute an obstacle because they create a fix and rigid and costly system and superfluous administrative work.

Some examples of Germany:

- The public Transport Enterprise of the City of Leipzig is also a public authority in the sense of past Dir. 93/37. After many years of application of the procedure and experience with it, one can state that the Enterprise never received an acceptable offer (concerning the price) from outside Germany. Moreover, the cheapest offers came always by the region itself. It seems that the tender candidates are just overcharged (above all the small enterprises); a participation of all the tender procedures all over Europe is just too complicated and too expensive form them; they seem to prefer to make business in the fields they know.

- In March 2003, a procedure following Dir. 92/50 took place for the public rail transport system of the region 'Nord-Harz' of the German Land 'Sachsen-Anhalt (e. g., for the routes Magdeburg-Halberstadt-Thale, Halle-Halberstadt, Halberstadt-Vienenburg, Halle-Körnern-Bernburg and Halberstadt-Blankenburg with a total of 2,8 millions of train kilometres per year) for the period 2005 – 2017. This was the first step of the pursuit of putting to tender 40 % of the total regional train net within the next six years pursuant to a contract between the Deutsche Bahn and the Land Sachsen-Anhalt. This contract aims at introducing a fully competitive system. Next steps will be the rest of the Diesel net, the whole x net and the electric net. However, on 30th September 2003, the contracting entity (The Nahverkehrsservice Sachsen-Anhalt, NASA), stopped the procedure because no one of the received offers fulfilled the formal conditions. The chairman of NASA, explained that the rules would not allow to demand or to ask for subsequent improvements. Furthermore, he explained that there were serious doubts from the very beginning of the procedure whether the service put to tender would be too complex and too long-termed; but meanwhile the relevant legal obligation to do so has been lightened by national courts. This example shows clearly that the formal conditions of procedures are sometimes so complicated that it hinders the conclusion of a contract.

- The Ministry of Economy of the German Land (independent region) Hessen instructed the competent authorities in March 2004 to conclude contracts for public transport only on the basis of tendering procedures. As a reason there was communicated that this would be the consequence 'of European Law and its recent developments'. There is no basis for an absoluteness of a tendering procedure in national law: It can be made, but it is no general duty. Moreover, it is neither the consequence of European Primary Law nor of European Secondary Law (Reg. 1191/91 or Dir. 93/38). A tendering procedure can be made, but there is no absolute and forcing duty for this. On the contrary, a direct award is possible as another possibility (the corresponding paragraphs of Dir. 93/38 and the new Dir. 04/17 are already mentioned in this paper). This possibility was also confirmed by the ECJ in its decision Altmark Trans, C-280/00. This abuse of European Law for a modification of national rules without any further legal basis leads to a major confusion and to serious difficulties on national level.

- A specialised Leipzigian (public) enterprise participated in a public procurement procedure concerning the business management of facilities of water supply of a municipality (that was also the contracting authority). One of the preconditions for the candidates was a proven experience in business management of facilities of water supply of a municipality with a number of inhabitants that was the double of this of the contracting authority. The Leipzigian candidate could haven proven experiences concerning facilities of a municipality with the number of inhabitants comparable to this of the contracting authority, but no experience as demanded in the procedure. So, the Leipzigian Enterprise was excluded from the procedure.

- In connexion with sub-contracting there have been noted certain difficulties concerning equality of treatment. In some tendering procedures (as to public procurement as well as to PPP), the contracting authorities exclude as a precondition that the contractors may conclude sub-contracts, although this is not forcing following the European Law. This leads to a discrimination of these candidates who would only able to fulfil a contract by concluding sub-contracts and means a preference for those companies that are capable to fulfil the contracts also exclusively by own forces. The noted problems could be solved through the creation of a right for candidates to conclude also sub-contracts if they want to or the condition that an exclusion of sub-contracts could be only made on the basis of a good reasoning.

Some practices in Sweden

- Sports-, events-arena, The City of Sundsvall (Mid-North Sweden = 100.000 habitants) - a kind of contractual PPP.

The municipality faced too high investment-costs, 3 times more than the financial restraints permitted, when it intended to renovate the arena. It was – a strong popular interest in the local regional community to carry out this improvement of quality and to maintain and develop the brand of the City as an attractive centre for sports, leisure and thus for business location and economic prosperity and employment.

The local business community called on the City to initiate discussions how a desired complete renewed arena with new modern facilities could be accomplished- and financed. The first step was to confirm the eligibility for EU- funding through the structural funds, as the city is located in such a region. But- the EU-structural funds prescribe a significant private part of a “project”. This led to the animation of interest from a private real estate company, with its main activities in the region to take the third part of the costs. This was possible as the private company through building -and then let as any landlord - new commercial premises (offices and restaurants) in connection to the arena-park. The City and the real estate company made a contract where all the tendering –responsibility was given to the latter, thus all the sub-contractors were outside any public procurement law as the responsible body was not the city in question. It has been regarded as a successful project-design of PPP, according to an independent evaluation, concerning most of the objectives, which were set up. It has encouraged the City to continue with this partner- model in a next project- to build a new theatre.

The national law concerning public procurement and the tools to follow up are since more than 10 years integrated and are regarded as a natural element of public daily life. Or-as in this first case- a kind of surrender from the traditional public authority –role in favour of a more private business- dominated procedure could by some be regarded as a way to by-pass-legally- rules at the National level, which are seen as sometimes more strict than only in accordance with EU- legislation. The report from this case gives at least no new arguments for the need of European interference to remove any obstacles for private involvement in originally public projects.

- Another somewhat similar project is “the new Norrlandsopera”, the City of Umea, also in the north of Sweden (100.000 habitants)

The slogan of this University-City was “Culture as a driving force for growth”. One main difference from case 1 above was that a private real-estate company bought the old opera- building and the surrounding site, where the latter could also be an object for the developer/ new landlord to get an opportunity to commercial land-use. The same everlasting financial constrains for the municipalityto invest was also in this case a significant reason for this contract. Thus, the City now has a leasing-contract for the Opera house. The private investor was particularly happy to get a reliable tenant on long term (25 years) and estimates that their professional know- how in land- use and management will be profitable.
Although the costs to run the Opera- and new facilities for even concerts, restaurant and so fort- from the public-side increased it has not been more expensive net. Thanks to mainly increased state-aid from the state -government and the regional authorities.
One result or conclusion is also that a PPP- solution can have as an implication that the local authorities let land go to private interests. Nothing particular in EU- or National legal framework has been reported to neither hinder nor encourage this PPP- case.

- Haparanda-a joint Sewage Plant Company.

This case is quite another IPPP- body. The municipality (10.000 habitants) is also situated in the North of Sweden. What is unique is that it is also based on a cross-boarder co-operation, with the Finnish City of Tornea (25.000 habitants), as the main object was to purify the sewage water from both sides of the common river, the latter also constitutes the national boarder line. The third part besides the two public “P”s was a brewery, a subsidy company of the biggest brewery- group in Finland.
The background was briefly the needs of investments in order to fulfil strong requirements to reduce pollution and get a large –scale cost-effective solution for all the partners. In the case of the brewery – it would otherwise be forced to invest in an own sewage plant to purify its sewage. That would have been a very expensive and also complicated, according to the representatives of the brewery. The rates of the use of the former sewageplant, located on the Swedish side were: Haparanda (Sweden): 25 %, Tornea (Finland) 50%, the private brewery (Lapin Kulta –Hartwalls), 25%. When finally a joint company is set up the private partner only owns 10% of the shares. It should be reminded that it is a non- profit company without any dividend, also in accordance to national water and sewage –act.
Another reason from the private partner to join the project was to get more of right of access, control and impact on the sewage- matters, through its member of the board of directors. It had some experiences of having been sometimes “-not quite fair”- criticised concerning its pollution by the authorities, including the local; Now when it is under the

same “umbrella” as the authorities it feels more comfortable and safe, as the control measures from the environmental authorities have the joint public-private company as *one* object. The brewery could also escape the higher costs it would have got by investing and run an own sewage plant.

From the public side this project is regarded as only one in a kind of new and successful tradition of national cross-boarder co-operation. Other such objects will be joint district heating and waste treatment, also including private partners.
Concerning the EU- dimension you can- once again- not find any report on remarkable problems nor in this third case concerning the legal frame work- needs or obstacles. EU is however really present as the internal market and other new stipulations since 1994 and the membership of the two countries are seen as facilitating more of cross- boarder co- operation and thus contribute to cost-effective solutions and contributing to prosperity in an otherwise even more thinly- populated or remote area close to the North polar circle.

EUROPEAN SECTION OF UNITED CITIES AND LOCAL GOVERNMENTS

CEMR Response to the European Commission's Green Paper on

PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

Background document:

Green Paper on PUBLIC-PRIVATE PARTNERSHIPS AND COMMUNITY LAW ON CONTRACTS AND CONCESSIONS

COM(2004) 327

Introduction

1. The Council of European Municipalities and Regions (CEMR) welcomes the Commission's initiative in publishing the Green Paper on Public-Private Partnerships. Given the growing role and importance of PPPs, it is timely to commence a discussion about the legal framework and options for the future, to ensure that the positive role of PPPs across the 25 EU countries, and at all levels, can be promoted. Local and regional governments across Europe value the opportunities that, in many circumstances, PPPs offer to increase investment and to achieve creative and cost-effective infrastructure and service developments. PPPs have been shown to provide many advantages, and often yield important savings to the public sector partner; but this is not always the case, and it is also important to learn the lessons from less successful ones. We therefore feel that the Commission needs to engage in a wider consultation process that examines this broader experience, to help all of us to learn.

2. We note that, in his speech of 17th May 2004, to a Brussels conference on PPPs and concessions, Commissioner Bolkestein emphasized that the Green Paper

> "s'inscrit dans le cadre de l'initiative lancée l'année dernière par la Commission, avec la Banque Européenne d'Investissement, pour stimuler la croissance en Europe. Il s'agit notamment pour la Commission d'étudier les meilleurs moyens d'accroître la par-

> ticipation du secteur privé au financement de projets qui stimuleront la croissance et créeront des emplois ».

He commented that in this context, PPPs are an attractive tool, used more and more by national or local governments to carry out infrastructure projects or the management of missions of general interest. He then emphasized the importance for the actors of legal security, given the long duration of most PPPs, and the important financial stakes involved.

3. The Green Paper, accordingly, is about the European-level legal rules that apply, or should apply, to PPPs. In this context, we think it is worth citing, at the outset, paragraph 17 of the Green Paper, which raises issues to which we will return:

> "The aim of this Green Paper is to launch a debate on the application of Community law on public contracts and concessions to the PPP phenomenon. Once underway such a debate will concentrate on the rules that should be applied when *taking a decision to entrust a mission or task to a third party*. This takes place downstream of the economic and organisational choice made by a local or national authority, and can in no way be perceived as attempting to make a value judgement regarding the decision *to externalise the management of public services or no*t; this decision remains squarely within the competence of public authorities. Indeed, Community law on public contracts and concessions is neutral as regards the choice exercised by Member States to provide a public service themselves or *to entrust it to a third party*." (Our italics)

4. Though not the only issue of interest to us, the definition of what is a "third party", and what European rules do or should apply, in the context of public-sector undertakings or publicly controlled mixed entities (institutional PPPs), is at the heart of our concerns.

5. Moreover, it is important to bear in mind the aim of the Green Paper – it is to "launch a debate". This debate, we believe, will be greatly enhanced by the quality and content of responses to the Green Paper – but we believe the next stage will be even more important. Once the Commission has considered the responses, it is vital that (unless there is an overwhelming consensus) clear options for the future are more clearly identified and subjected to a wider dialogue.

6. We would wish to make a final point by way of introduction. Our response to this Green Paper is for the most part of a rather technical nature, which itself reflects the somewhat technical nature of the Green Paper itself. But we believe that there is a need for a wider political debate about the future of local and regional public services within the EU. Several wholly inter-connected issues are currently being treated separately by the different services of the Commission. There is the

debate on the future of Services of General Interest, where the Commission has now published its White Paper. There is the debate on the relationship between public service compensation and state aids (the current "Monti package"). And now there is the Green Paper on PPPs, raising key questions in relation to wholly owned, as well as mixed public-private, local government undertakings. We believe it is time to discuss openly the proper balance that needs to be struck between, on the one hand, the principles of local and regional self-government and of subsidiarity, and on the other, the rules of competition that need to apply in the European interest.

The local and regional perspective

7. In our response to the Green Paper on Services of General Interest, CEMR emphasized that our members, of different political parties and coming from different national and local traditions, have no a priori view on whether services should be provided in-house or externally. For us, what is important is that the choice is made by the democratic processes at regional or local level, in the interests of the citizens.

8. Moreover, we cannot accept the sweeping generality of the proposition, in paragraph 3 of the Green Paper, that:

   > "The development of the PPP is also part of the more general change in the role of the State in the economy, moving from a role of direct operator to one of organiser, regulator and controller".

   This may be true to some extent, in particular in relation to certain national governments. But a very high proportion of the most fundamental public services are delivered by local authorities, and we are clear that there is no absolute rule about the advantage of externalising all or most services. It is on the contrary necessary to be pragmatic, to consider the pros and cons of the different modes of service delivery, in each practical context.

9. In general terms, we see advantages and disadvantages in each of the possible methods of service delivery. We may summarise them, highly indicatively, as follows:

   (a) Direct provision by the public authority itself

   Possible advantages: retention of ongoing democratic control, with ability to make changes and to innovate without rigid contractual framework; more flexibility to adapt level of service to changing citizen needs and to the financial situation of the authority; better in-house understanding of the service.

Possible disadvantages: less state of the art management know-how; possible higher cost base and less efficiency; no access to private investment to enhance service.

(b) Outsourcing to the private sector through contract:

Possible advantages: sector-specific private management know-how and experience; increased productivity and efficiency, leading to lower costs; access to private capital investment to improve service; release of public authority's senior management from the day-to-day management responsibility for major services.

Possible disadvantages: rigidity of contractual framework, which restricts major innovation and new developments during the life of the contract; loss of democratic control over the service for the life of the contract; risk of service failure in mid-contract if the contractor gets into financial difficulties; lock-in to an annual contract price which may lead to cuts in other higher priority services if the authority hits financial problems in subsequent years.

(c) Mixed public-private entity, with public control

Possible advantages: a combination of private sector management know-how and investment, allied to a greater degree of democratic involvement and sensitivity to citizen needs; greater internal flexibility to respond to public authority's changing circumstances.

Possible disadvantages: disagreements between public and private partners; lack of commercial experience on the public authority's side.

(d) Mixed public-private entity, with private control

In general, the advantages and disadvantages in this case approximate to those set out in (b) above.

10. Of course, these are to some extent generalisations that do not apply in many cases. Many publicly run services are efficient, innovative and high quality, whilst some private sector operators are less than competent. On the other hand, some directly provided services are in practice quite rigid, with change being seen as unacceptable, and the interests of the workforce taking precedence over citizens' needs. But our key point is that there is, and must continue to be, a range of possible means of delivering a public service which Community legal rules should avoid restricting, and where over-regulation will have damaging consequences. We must avoid hollowing out local democracy by removing the key decisions from locally elected people.

The existing legal framework for PPPs

11. Within the overall purpose of the Green Paper, we find the distinction drawn between contractual PPPs and institutional PPPs to be helpful conceptually (though some of our members indicate that a few PPPs may combine both aspects). For local and regional government, a key problem area at present relates to the uncertainty that applies to the institutional PPP, i.e. the mixed public-private legal entity. In order to explore the issues and our proposed way forward, it is useful to recap our understanding of the current legal position, which is not wholly identical to that of the Commission as set out in the Green Paper.

12. The principal Community legal framework is now provided (once operational) by the Public Procurement Directive 2004/18/EC, which regulates, in particular where the value exceeds the defined threshold:

    - Public works contracts
    - Public supply contracts
    - Public service contracts
    - Public works concession contracts (on a more limited basis),

    which are let by a "contracting authority", which includes national, regional or local authorities, or bodies governed by public law (such bodies being, per Article 1(9) of the 2004 Directive, legal entities established to meet general interest needs, not of an industrial or commercial character, and mainly financed, managed or controlled by public authorities).

13. In any event, for such contracts, the contracting authority is legally obliged to follow the procedures laid out in the Directive. For contracts below the financial threshold, Article 2 (headed "Principles of awarding contracts") provides that:

    > "Contracting authorities shall treat economic operators equally and non-discriminatorily and shall act in a transparent way."

14. The difference between a public works contract and a public works concession is that, in the case of a concession, the consideration for the works to be carried out consists either solely in the right to exploit the work (i.e. in particular to charge end users), or in this right together with payment. Likewise, in the case of a public service concession, the consideration is the right to exploit the service, or in that right plus payment.

15. Most importantly for the purpose of the discussion on PPPs, whether contractual or institutional, *"service concessions" are explicitly excluded from the ambit of the Directive (Article 17)*, save for one limited point. Even Article 2 does not apply as such. To give one simple example of

a service concession, a contract to another legal entity to run a municipally owned-swimming pool, under which the operator charges fees to users, is a service concession, not covered by the Directive's rules, even where the operator receives a compensation from the local authority for the purpose (say) of subsidising swimming by the elderly or unemployed.

16. For contracts that are covered by the Directive, the contracting authority must follow the prescribed rules for the tendering and letting of the contract, subject only to the few special cases set out in the Directive. There is only one exception to this obligation, which does not appear on the face of the Directive, but which results from European Court of Justice case law, based on very similar previous respective Directives. This is the ***Teckal*** case, which is of great interest, for obvious reasons, to local government. The crucial point of the judgement, in this context, is at paragraph 50:

> "…it is, in principle, sufficient if the contract was concluded between, on the one hand, a local authority and, on the other, a person legally distinct from that local authority. The position can be otherwise only in the case where the local authority exercises over the person concerned a control which *is similar to that which it exercises over its own departments* and, at the same time, *that person carries out the essential part of its activities with the controlling local authority or authorities*." (Our italics).

As the Green Paper indicates, this issue of controlled entities (often known as "in-house", though this is a confusing term) is currently the subject of several pending cases before the ECJ. The Commission is seeking to place a very narrow interpretation on the Teckal exception (in our view to the point of defining the exception out of existence), whilst we suggest it should be given an effective meaning, namely whether the control is broadly similar to that exercised if the service were run directly by the municipality – i.e. does the local authority really control the legal entity in question.

17. We now come to the question – what if any are the European-level legal rules that apply to service concessions, given that they are not covered by the Directive (not even Article 2)? If we look to the Treaties, there is no explicit reference to them. Paragraph 8 of the Green Paper asserts the following:

> "It nonetheless remains true that any act, whether it be contractual or unilateral, whereby a public entity entrusts the provision of an economic activity to a third party must be examined in the light of the rules and principles resulting from the Treaty, particularly as regards the principles of freedom of establishment and freedom to provide services (Articles 43 and 49 of the EC Treaty), which encompass in particular the principles of trans-

> parency, equality of treatment, proportionality and mutual recognition."

18. This very broad claim, which the Commission considers arises from the totality of the case law, was also reflected in the Commission's Interpretative Communication on Concessions under Community Law, issued in 2000. It is to be noted that this interpretation appears at first sight curious, since Article 43 of the Treaty relates to freedom of establishment, and Article 49 prohibits restrictions on the freedom to provide services within the Community. Neither Article, therefore, bears any direct relationship to the issues in question. We are not able to accept that the sweeping generalisation in paragraph 8 is a fully accurate summary of the legal position. We acknowledge that the ECJ has gone some way to accept the Commission's view in the ***Telaustria*** case of 2000, but we note that this relies mainly on the principle of non-discrimination. The key passage is the following (paragraphs 60 – 62):

> "In that regard, it should be borne in mind that, notwithstanding the fact that, as Community law stands at present, such contracts are excluded from the scope of [the Directive], the contracting entities concluding them are, nonetheless, bound to comply with the fundamental rules of the Treaty, in general, and the principle of non-discrimination on the ground of nationality, in particular.
>
> As the Court held in [another case], that principle implies, in particular, an obligation of transparency in order to enable the contracting authority to satisfy itself that the principle has been complied with.
>
> That obligation of transparency which is imposed on the contracting authority consists in ensuring, for the benefit of any tenderer, a degree of advertising sufficient to enable the services market to be opened up to competition and the impartiality of procurement procedures to be reviewed."

19. It is important to note that the Court's decision in the Telaustria case explicitly referred to the fact that the beneficiary undertaking under the service concession was a *private* undertaking, and one can understand the Court's concern to ensure that the non-discrimination principle applied via advertising etc. This is crucial. It does not in any way follow, in our view, that a decision by a local or regional government to grant a service concession to its own wholly-owned public undertaking, or to a mixed undertaking in which it has the controlling interest, is unlawful. Since there is no Community law requiring a local authority to tender or privatise services which it chooses to deliver itself (a principle emphasized in paragraph 19 of the Green Paper), it would be quite wrong – save in a blindly legalistic world that ignores all other realities - to con-

sider a wholly owned undertaking, wholly or mainly serving the local authority's territory, as being a third party for such a purpose.

20. Likewise, we consider that a mixed enterprise over which the local authority has a dominant control is itself to be considered as an extension of the local authority for the purposes of the general principles of the Treaty, or as a legitimate exercise of its democratic and administrative power of decision over its own affairs. After all, since the principle of non-discrimination does not apply to a decision to run a service in-house (even though that prevents other service providers from being able to tender for the task), it is quite illogical to prevent the authority from deciding to run the same service concession through a body over which it has legal and effective control.

21. That said, we accept that all public authorities should act transparently, that is, they must be able to justify decisions made (including a decision not to tender) on proper public interest grounds. But as we have set out above, the choice of means of service delivery is a pragmatic one, based on the perceived advantages and disadvantages of each of the options. This is also the essence of local self-government. Provided the authorities act for proper public interest purposes, the existing law, in our view, does not require every service concession to be tendered – but where a service concession is opened to private undertakings (or privately controlled mixed undertakings), the principle of non-discrimination must apply, as per the Telaustria case.

Should Concessions be regulated by European Community Legislation?

22. From the above analysis – on which we are willing to continue a dialogue with the Commission’s services – it is clear that the present distinction between public works and service contracts on the one hand, and public works and service concessions on the other, is fundamental, whether we are discussing relationships with private sector operators, or with public-private undertakings.

23. It is relevant to note that the new public procurement legislative package is extremely recent, and the European legislators (Parliament and Council) have therefore very recently declined to use the opportunity to include concessions in the new Directives, save to the limited extent referred to above in relation to works concessions. So we believe this places a high burden of proof on the Commission in any event to justify a new legislative package, with all the costs associated with the endeavour.

24. We believe that no such case is remotely made out in the Green Paper, even as the basis of consultation at this stage. On the other hand, we see strong reasons to maintain the existing legal distinction in relation to concessions. Of course, there may be some cases which are borderline as to their definition – but that is quite normal. In general, the rule in such cases is to err on the side of caution, i.e. in this area, to

treat the transaction as a service *contract* if there is a reasonable chance that it will be so defined.

25. The main objective reason for the distinction between contracts and concessions (as respectively defined) is the transfer of risk in the case of concessions. By definition, the “concessionaire” needs flexibility downstream of the letting of the concession in order to achieve the necessary income from users of the service. The service concession contractual documentation is not normally as complex and prescriptive as that which is required in the case of classical service contracts for which the operator does not receive payments from users of the service. Yet the Directive – and the Green Paper – make clear that there is only very limited scope to vary the terms of a contract without requiring a retendering (which by its nature is lengthy, costly and, if translated to the world of concessions, likely to deter making what would otherwise be sensible changes to a service in the light of practice).

26. Accordingly, most of our members are strongly against the concept of new Community legislation to regulate concessions. If, contrary to our conclusion, the Commission considers following full consultation that there is a case for some European-level legislation, we propose that it be limited to complex, long-life, high value concessions (which can be the case with some kinds of contractual PPPs) where the contract/concession borderline might be unclear at the outset. In all other cases, we believe the value of having a more simple, cheaper and more flexible process – taking into account advice such as that contained in the Commission’s 2000 Interpretative Communication on Concessions - far outweighs any benefits of the Community public procurement regime. Furthermore, if there is to be any such legislation, it is essential that there be a clear exemption for local and regional publicly-owned or controlled undertakings (i.e. going beyond the Teckal exception), on the grounds set out above.

Purely Contractual PPPs

27. In essence, the concept of purely contractual PPPs raises few issues of principle – though many of practice – which do not apply to all forms of public procurement processes geared towards the involvement of the private sector. As we have seen from the analysis of the current European Community legislative and Treaty framework, contractual PPPs are either public contracts or concessions, as respectively defined. Since the very notion of contractual PPPs is rather inchoate (see paragraph 21 of the Green Paper) it would not seem possible or desirable to legislate specifically for them, separate from other analogous contracts.

28. Accordingly, we agree that for PPP contracts that fall within the Public Procurement Directive, the new competitive dialogue procedure appears to offer an appropriate means of enabling the respective parties to resolve the issues satisfactorily. Of course, this will need to be kept

under close review of the coming years, in order to check whether in the light of experience any specific modifications in the procedure are required. This is where trans-national exchange of experience will be particularly important.

29. In relation to PPP concessions, since the partner is by definition a private one, the Treaty rules laid down in the Telaustria case will apply, in relation to transparency, advertising and impartiality of procurement procedures. For the reasons set out above, most of our members oppose any new legal regulation at European level of concessions. We suggest that further guidance is given by the Commission to public authorities in relation to possible borderline issues that have arisen or may arise, to use the Procurement Directive process in any case of reasonable doubt.

30. We are not aware of any cases of particular difficulty in relation to the phase following the selection of the private partner such as to justify new legislation. We have already raised the complex issue of the need, on the one hand, to enable sensible variations to the contract to reflect real needs in the light of experience (but without changing the contract's character), and on the other hand to prevent any unjustifiable benefit to the successful candidate/partner, that substantially disadvantages the unsuccessful tenderers. These are competing public interests, and we believe the existing law on contracts and concessions is sufficiently robust. Again, transnational exchange of experience over the coming years will help to identify problems, of over-rigidity or of excessive flexibility.

31. The issue of "private initiative PPPs" causes us some concern. We appreciate the need for common basic rules to apply to procurement, chief amongst which is the need for advertising and competition for the private contractor/partner. Yet there are circumstances where it is positively in the public interest for a private company to propose an innovative way of resolving an investment problem or new service solution, e.g. in relation to a piece of contaminated land. We are not convinced that the solutions put forward in the Green Paper are sufficient to ensure the continued interest of the private sector in making such proposals, if the only result is to be sucked into a complex and lengthy procurement process in which they have no better chance of success than others who, by definition, have not come up with the creative concept. We have not reached a final view on this issue, and believe that options should be kept open during a fuller debate than the limited period of this Green Paper.

Institutionalised PPPs

32. This section of the Green Paper raises extremely important issues, in particular for local and regional authorities which – as paragraph 35 of the Paper indicates – often choose to have recourse to mixed public-private legal entities for the delivery of public service tasks and mis-

sions. As indicated above, such mixed entities may combine the advantages of access to private sector investment and know-how with public control and adaptability. We confess that we have found this section of the Green Paper in places somewhat difficult to follow and therefore to address. We hope that what follows deals with the key issues nonetheless.

33. Fundamentally, we have a basic concern to avoid an excessive administrative and financial cost that would be involved in any legal situation that would or might involve a double tendering – i.e. one process of competitive tendering for the selection of the private partner, followed by another tendering process for the attribution of the public contract or concession. This is particularly onerous in the case of public contracts under the Public Procurement Directives, but also important in the case of concessions.

34. We have experience of involvement in double tendering situations, which confirms our worries in this regard. We may cite an example under then (early 1990s) applicable UK practice and legislation, in relation to the letting of a major contract for the reconstruction of a large waste incineration plant, which had been owned and run by a public waste authority covering seven London boroughs. The plant required major investment to meet EU environmental standards, and the authority considered that this would be best achieved by a public-private joint venture company. The authority advertised for possible partners, and went through a selection process. Because of the legal, financial and administrative complexity, it was essential to use external consultants and lawyers to assist, which was itself expensive. The process was lengthy. In tandem, the letting of the contract itself had to be prepared, including creation of a detailed technical specification etc. Once the joint venture company was formed, the formal public procurement process was opened, under which the JV company had to compete with other (private sector) companies. Following evaluation, the JV company was awarded the contract, not without the threat of legal proceedings from one of the competing bidders (though this was not pursued). The whole process lasted about 4 years, took up an huge amount of organisational energy and focus, and cost a great deal of money just to get to the stage of award of contract.

35. We propose that, in order to avoid cost and unnecessary regulation, double tendering should be avoided. One way to do so is to enable public authorities to decide, if they consider it appropriate, to invite tenders to carry out a defined task by using a public-private company only. The tender documentation would make clear the proposed legal format, as well as the technical specification etc., and the competitive dialogue procedure would be used to make the choice. In this way, all private sector partners would have the chance to bid without discrimination etc., but the public sector's choice of legal construction and means of delivery would be respected.

36. We now look at more specific scenarios. The Green Paper identifies two different situations in relation to public-private legal entities. The first (3.1) deals with “partnerships involving the creation of an ad hoc entity held jointly by the public sector and the private sector.” The second (3.2) deals with “control of a public entity by a private operator”. In our view, each of these needs to be subdivided into two scenarios. Under the first, the creation of the new entity may involve the private sector controlling the new entity, or it may involve the public sector controlling the new entity. Likewise under the second – where the title is misleading – there are two scenarios. The first involves an existing wholly publicly owned legal entity which becomes a mixed public-private entity by the new involvement of one or more private sector partners, but in which the public authority retains the controlling interest. The second involves cases where the private sector is granted a controlling interest in a legal entity that was previously owned, or controlled, by the public authority. We take each scenario separately.

(a) The creation of a new mixed entity controlled by the private sector

37. In this case, we consider that a public authority wishing to let a contract or concession to such a mixed but privately controlled legal entity should have two options. First, to treat the new entity as if it were a private undertaking, and follow the requisite legal procedures in relation to public contracts and concessions, as per the legal analysis set out above. The mixed entity takes its chances in the marketplace. The second option would be that outlined above – the key decision would be made at the outset to award the contract to a mixed entity, and the advertising and tendering (according to the relevant legal processes for contracts or concessions) would be for a private sector partner which best met (a) the requirements as legal partner in the company, and (b) the requirements in relation to the technical specification etc.

(b) the creation of a new mixed entity controlled by the public sector

38. In this case, the considerations should we believe be somewhat different. There is a fundamental difference between a publicly controlled, and a privately controlled, company. In the case of potential concessions, we consider that it must be the right of the public authority to decide whether to run a service itself, to do so via a legal entity it owns or controls, or to tender it. In the case of public contracts covered by the procurement Directives, the Teckal case provides a limited exception to the duty to tender etc., and if the private sector owns more than a modest interest in the company, the Teckal exception may not be deemed to apply.

39. In such a case, we propose that it should be possible to tender on the basis set out in (a) above, i.e. via a single tendering process which covers the choice of legal partner, and the award of the contract to carry out to the task. We should add that, if and when the Public Procurement Directives fall to be amended, the opportunity should be

taken to expressly permit the grant by public authorities of tasks to publicly controlled legal entities, whether wholly or dominantly owned by the public authority, and thereby broaden and make explicit the Teckal exception.

40. In the case of concessions, we strongly believe that the existing law enables (and in principle should enable) the public authority to grant to its publicly owned or controlled legal entity the task of running the concession, without an obligation to advertise or tender. This is part of the freedom of choice which logically derives from the principle that it is not for the EU to define what services should be run by the public sector itself, directly or via its undertakings, and what services it should put out to tender or privatise. This general principle is now all the more relevant, given the direct reference in Article 5.3 of the new European Constitution to the principle of local and regional self-government. The essence of local self-government involves a choice of how services within the municipality's competence are to be delivered, in the interests of its citizens.

41. This leaves the question of whether there are, at EU level, legal rules that require a specific process in relation to the selection of the private partner for the mixed legal entity. We believe that any public democratic authority must be able to justify to its citizens the reasons why it has made a decision – i.e. it should comply with the principle of transparency as a matter of good public administration. Whilst this will often involve advertising in some form, there may also be good reasons to select a partner without recourse to advertising. One example (though not involving a profit-making partner) might be the creation of a mixed entity involving a locally-operating charity that specialises, for example, in the care of children in need. There may be powerful reasons, based on local circumstances and knowledge, to grant a relevant concession to a partnership between the local authority and the charity, without advertising for other possible bidders.

(c) changing a wholly owned public legal entity to a mixed public-private entity, still controlled by the public authority

42. This case involves an existing wholly publicly owned legal entity which becomes a mixed public-private entity by the new involvement of one or more private sector partners, but in which the public authority retains the controlling interest. By definition, the legal entity will already have a public service task allocated to it, which – unless the law requires otherwise – will continue after the injection of a private sector dimension, either for an indefinite period, or until the end of the prescribed term already foreseen.

43. If the wholly-owned legal entity has previously been selected following a tendering process, then the choice of private partner raises no major issue in terms of European legal rules. Here again, the key principles are transparency and good public administration, i.e. the selection of

the private partner must be made on clear public interest grounds. Whilst this will often involve advertising etc., as stated in paragraph 41 above, there may also be rational grounds for selecting a particular partner without advertisement, though the decision should be explicit, and demonstrate clearly the advantage of the selection. The principle of non-discrimination must of course be adhered to, i.e. the selection of the private partner must be fully justifiable in the public interest on grounds other than national origin.

44. If on the other hand, the publicly owned legal entity has been granted a public service task without taking part in a tender, the situation requires further consideration. In the case of public works and service contracts, under existing law the Teckal exception, as currently understood, may no longer apply. In such a case, the duty under the Directive to tender may arise. Once again, we recommend that the need to double tender should be avoided, so that the public authority letting a contract should be able to tender on the basis that the service will be delivered by an institutional PPP, uniting the phases of choice of partner and award of contract (see above) in a single process. We also recommend that the Directives should be amended to widen the Teckal exception to cover all publicly controlled companies delivering public services limited to a specific locality. In other cases (service concessions etc.), where the Procurement Directives do not apply, the issue is simpler, i.e. the choice of the private sector partner needs to follow the principles of transparency and good public administration.

(d) changing a wholly owned public legal entity into a mixed public-private entity, controlled by the private sector partner
